SECTION 003100
AVAILABLE PROJECT INFORMATION

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section references other information relevant to the construction of this Project that is available project information.
- B. At the request of the Owner, the information identified below represents services that have been provided by others, not as an Architect's Consultant, regarding conditions that affect this Project that are beyond the responsibilities of the Architect and Architect's Consultants. Reference to such information herein is solely for the convenience of the Owner. Architect makes no representation, express or implied, as to the accuracy or validity of the information.
- C. Bidders are expected to examine the site and the information available from the Owner to determine for themselves the conditions to be encountered.
- D. If conditions other than those indicated in the information available from the Owner are encountered before or during construction, notify the Owner before work continues.

1.2 PROPERTY SURVEY

- A. The Owner's Surveyor has performed a property survey and the some of the survey information is included on the Drawings for the convenience of the Contractor. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- D. The Owner retained the following company:

1.3 GEOTECHNICAL REPORT

- A. The Owner's Geotechnical Consultant has made subsurface borings at the Project site, has performed an investigation of the geotechnical conditions, and has prepared a report of the investigation that contains specific requirements of the Contractor. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
- B. The information was obtained for use in preparing the foundation design but is indicative only of the soil conditions where the borings are taken.
- C. Copies of the documents are available from the Owner.
- D. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- E. The Owner retained the following company:

1.4 INFECTION CONTROL RISK ASSESSMENT REPORT

- A. The Owner's Risk Assessment Consultant has assessed the environmental impact of the work on the existing, adjacent healthcare functions, and has prepared an Infection Control Risk Assessment (ICRA) report that includes specific requirements of the Contractor. These Documents and attachments are not part of the Contract Documents prepared by the Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. The ICRA establishes strategic infection control provisions and requirements for the purpose of controlling the dissemination of airborne micro-organism contaminants encountered or generated during the construction process through the use of containment protocols and environmental monitoring.
- C. Copies of the documents are available from the Owner.
- D. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- E. The Owner retained the following company:

1.5 EXISTING CONDITIONS REPORT

- A. The following existing conditions that will affect or influence the construction of this Project include the following:

1.6 CIVIL CONSTRUCTION DOCUMENTS

- A. The Owner's Civil Engineering Consultant has developed civil designs for the Owner's property and has prepared construction documents. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- D. The Owner retained the following company:

1.7 LANDSCAPING CONSTRUCTION DOCUMENTS

- A. The Owner's Landscape Architect Consultant has developed landscaping designs for the Owner's property and has prepared construction documents. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- D. The Owner retained the following company:

1.8 MEDICAL EQUIPMENT DOCUMENTS

- A. The Owner's Medical Equipment Planning Consultant has developed medical equipment documents for the Owner's facility and has prepared construction documents. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- D. The Owner retained the following company:

1.9 DEMOLITION CONTRACT DOCUMENTS

- A. The Owner's Demolition Consultant has determined demolition provisions for the Owner's existing property and has prepared documents indicating demolition requirements. These Documents and attachments are not part of the Contract Documents prepared by the Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- D. The Owner retained the following company:

1.10 WIND TUNNEL TEST REPORT

- A. The Owner's Wind Investigation Consultant has conducted wind tunnel testing of the building design and has prepared a report. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- D. The Owner retained the following company:

1.11 AVIATION AIRSPACE REQUIREMENTS

- A. The Federal Aviation Agency has assessed the impact of the Work on the existing, adjacent facilities and areas, and has prepared a report that includes specific requirements of the Contractor. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
 - 1. Report No.
- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.

1.12 RADIATION PROTECTION REPORT

- A. The Owner's Radiation Protection Consultant has determined the radiation protection that is required, and has prepared a report that contains specific requirements of the Contractor. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- D. The Owner retained the following company:

1.13 ENVIRONMENTAL STUDY AND ASSESSMENT REPORT

- A. The Owner's Environmental Consultant has assessed the impact on the surrounding environment, and has prepared a report that contains specific requirements of the Contractor. These Documents and attachments are not part of the Contract Documents prepared by the Architect.
- B. Copies of the documents are available from the Owner.
- C. Copies of the documents are included in the Contract Documents prepared by the Architect for the convenience of the Owner.
- D. The Owner retained the following company:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.14 TAX EXEMPTION STATUS INFORMATION

A. This Project qualifies for exemption from taxes as indicated in the letter following this Section.

PART 3 - (NOT USED)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 007200
GENERAL CONDITIONS

PART 1 - GENERAL

1.1 GENERAL

- A. The General Conditions of this Contract are available from the Owner, hereinafter referred to as the "General Conditions."
- B. The General Conditions of this Contract are are referenced in the Owner-Contractor Agreement, hereinafter referred to as the "General Conditions."
- C. The General Conditions shall apply to each, and every Section of the Work as though written in full therein and are part of the Contract Documents.
- D. A copy of the General Conditions is included in this Project Manual. The General Conditions shall apply to each, and every Section of the Work as though written in full therein and are part of the Contract Documents.

PART 2 - (NOT USED)

PART 3 - (NOT USED)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 007300
SUPPLEMENTARY CONDITIONS

PART 1 - GENERAL

1.1 GENERAL

- A. The Supplementary Conditions modify, change, delete from or add to the General Conditions and shall apply to each, and every Section of the Work as written in full therein.
- B. The following paragraphs and subparagraphs take precedence over the General Conditions. Where any part of the General Conditions is modified or deleted by the Supplementary Conditions, the unaltered provisions remain in effect.
- C. Correlation and Intent of the Contract Documents:
 - 1. Sections of Division 01 - General Requirements govern the execution of all sections of the specifications.
 - 2. Summary paragraphs placed at the beginning of the Sections present a brief indication of the principal Work included in that Section, but do not limit Work to subject mentioned nor purport to itemize Work that may be included.
 - 3. The Relation of Specifications and Drawings shall be equal authority and priority. Should they disagree in themselves, or with each other, bids shall be based on the most expensive combination of quality and quantity of work indicated. The appropriate Work, in the event of the above mentioned disagreements, shall be determined by the Architect.
 - 4. Should the Drawings disagree themselves, figures shall govern over scaled measurements, large scaled Drawings shall govern over small scale Drawings, the greater quantity of work or materials shall be furnished and performed; the descriptive writings shall govern over legends indicating material or conditions and the Agreement takes precedence over all other Contract Documents.
 - 5. Should there be a conflict in Contract Documents, the Contractor shall proceed in the more expensive manner unless determined otherwise by the Architect.
 - 6. Instructions, directions and requirements as specified shall be considered to be followed by the phrase "unless otherwise specified or indicated".

1.2 INTERPRETATION

- A. In the interest of brevity the Contract Documents frequently omit modifying words such as "all" and "any" and articles such as "the" and "an," but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement.

1.3 INFORMATIONAL SUBMITTALS

- A. Informational Submittals: Informational submittals may be identified as such in the Contract Documents.

1.4 PROFESSIONAL CERTIFICATION

- A. When professional certification of performance criteria of materials, systems or equipment is required by the Contract Documents, the Architect shall be entitled to rely upon the accuracy and completeness of such calculations and certifications.

SECTION 011000

SUMMARY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Project information.
2. Phased construction.
3. Work by Owner.
4. Work under separate contracts.
5. Future work.
6. Purchase contracts.
7. Owner-furnished, Owner-installed (OFOI) products.
8. Owner-furnished, Contractor-installed (OFCI) products.
9. Worker conduct and appearance - work rules.
10. Healthcare facility renovation work.
11. Access to site.
12. Coordination with occupants.
13. Work restrictions.
14. Specification and drawing conventions.
15. Miscellaneous provisions.

1.2 PROJECT INFORMATION

Project Identification: ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL

1. Project Location: Arlington, Texas
- B. Owner: Arlington Independent School District
1. Owner's Representative: <Insert name and contact information for Owner's representative>.
- C. Architect: HKS Inc,
- D. Architect's Consultants: The Architect has retained the following design professionals who have prepared designated portions of the Contract Documents:
1. <Insert title of design discipline>: <Insert name and contact information for consultant>.
- E. Other Owner Consultants: The Owner has retained the following design professionals who have prepared designated portions of the Contract Documents:
1. <Insert title of design discipline>: <Insert name and contact information for consultant>.
<Insert title of design discipline> has prepared the following portions of the Contract Documents:
 - a. <Insert description of scope of service for other Owner consultant>.
- F. Contractor: <Insert name and contact information for Contractor> has been engaged as Contractor for this Project.
- G. Construction Manager: <Insert name and contact information for Construction Manager>.
1. Construction Manager has been engaged for this Project to serve as an advisor to Owner and to provide assistance in administering the Contract for Construction between Owner

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

and Contractor, according to a separate contract between Owner and Construction Manager.

2. Construction Manager for this Project is Project's constructor. In Divisions 01 through 33 Sections, the terms "Construction Manager" and "Contractor" are synonymous.

H. Design-BUILDER: <Insert name and contact information for Design-BUILDER>.

1. Design-BUILDER has been engaged for this Project to provide architectural and engineering services and to serve as Project's constructor. In Divisions 01 through 33 Sections, the terms "Design-BUILDER" and "Contractor" are synonymous.

I. Project Web Site: A project Web site administered by Architect will be used for purposes of managing communication and documents during the construction stage.

1. See Division 01 Section "Project Management and Coordination" for requirements for establishing, administering, and using the Project Web site.

1.3 PHASED CONSTRUCTION

- A. The Work shall be conducted in multiple phases as indicated on the drawings, with each phase substantially complete and ready for occupancy before commencement of subsequent phases.
- B. Before commencing Work of each phase, submit an updated copy of Contractor's construction schedule showing the sequence, commencement and completion dates, and move-out and -in dates of Owner's personnel for all phases of the Work.

1.4 WORK BY OWNER

- A. General: Cooperate fully with Owner so work may be carried out smoothly, without interfering with or delaying work under this Contract or work by Owner. Coordinate the Work of this Contract with work performed by Owner.
- B. Preceding Work: Owner will perform the following construction operations at Project site. Those operations are scheduled to be substantially complete before work under this Contract begins.
 1. <Insert a brief description of work performed by Owner>.
- C. Concurrent Work: Owner will perform the following construction operations at Project site. Those operations will be conducted simultaneously with work under this Contract.
 1. <Insert a brief description of work performed by Owner>.
- D. Subsequent Work: Owner will perform the following additional work at site after Substantial Completion. Completion of that work will depend on successful completion of preparatory work under this Contract.
 1. <Insert a brief description of work performed by Owner>.

1.5 WORK UNDER SEPARATE CONTRACTS

- A. General: Cooperate fully with separate contractors so work on those contracts may be carried out smoothly, without interfering with or delaying work under this Contract or other contracts. Coordinate the Work of this Contract with work performed under separate contracts.
- B. Preceding Work: Owner [has awarded] [will award] separate contract(s) for the following construction operations at Project site. Those operations are scheduled to be substantially complete before work under this Contract begins.
 1. <Insert name of the Contract>: To <Insert name of separate Contractor> [to] [for] <Insert a brief description of work performed under separate contract>.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Concurrent Work: Owner [has awarded] [will award] [and will assign to Contractor] separate contract(s) for the following construction operations at Project site. Those operations will be conducted simultaneously with work under this Contract.
 - 1. <Insert name of the Contract>: To <Insert name of separate Contractor> [to] [for] <Insert a brief description of work performed under separate contract>.
- D. Subsequent Work: Owner [has awarded] [will award] separate contract(s) for the following additional work to be performed at site following Substantial Completion. Completion of that work will depend on successful completion of preparatory work under this Contract.
 - 1. <Insert name of the Contract>: To <Insert name of separate Contractor> [to] [for] <Insert a brief description of work performed under separate contract>.

1.6 FUTURE WORK

- A. The Contract Documents include requirements that will allow Owner to carry out future work following completion of this Project; provide for the following future work:
 - 1. <Insert description of future work requiring consideration during construction of the Work of this Contract>.

1.7 PURCHASE CONTRACTS

- A. General: Owner has negotiated purchase contracts with suppliers of material and equipment to be incorporated into the Work. Owner will assign these purchase contracts to Contractor. Include costs for purchasing, receiving, handling, storage if required, and installation of material and equipment in the Contract Sum, unless otherwise indicated.
 - 1. Contractor's responsibilities are same as if Contractor had negotiated purchase contracts, including responsibility to renegotiate purchase and to execute final purchasing agreements.
- B. Purchase Contracts Information:
 - 1. <Insert product name>: See Division <Insert MF04 Division number> Section "<Insert MF04 Section name>."
 - a. Purchase Contract Firm and Representative: <Insert name and contact information for purchase contract firm and representative.>
 - b. Purchase Contract Scope: [Furnishing material] [Material and installation labor] <Insert description of contract>.
 - c. Purchase Status: [Price negotiated by Owner, to be incorporated in the Contract Sum by Contractor; see Division 01 Section "Allowances" for cash allowance for purchase contract] [Price negotiated and incorporated in the Contract Sum by Contractor] [Product reserved by Owner] [Order placed and deposit paid by Owner] [Order to be placed by Contractor] <Insert description of status of purchase contract>.
 - d. Quantity: <Insert quantity ordered>.
 - e. Other Requirements: <Insert special requirements>.

1.8 OWNER-FURNISHED, OWNER-INSTALLED (OFOI) PRODUCT

- A. The specific product is not in this contract, and actual installation of the product will be made by the Owner.
- B. Products will be indicated as follows:
 - 1. Product prefixed with "Space for"
 - 2. N.I.C.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Owner Furnished - Owner Installed
 4. Product noted as "Future"
 - C. Roughing-in for Owner Furnished, Owner Installed Product is provided by applicable Sections governing the type of work. Obtain rough-in requirements from Owner.
- 1.9 OWNER-FURNISHED, CONTRACTOR-INSTALLED (OFICI) PRODUCT
- A. Install products indicated as follows:
 1. "Owner Furnished, Contractor Installed".
 2. "Reuse".
 3. "Relocate".
 - B. Provide labor, transportation, materials, tools, appliances and utilities necessary for the following:
 1. Relocated Products:
 - a. Removing installed product from the Owner's existing facility, as required.
 - b. Transportation of product from Owner's facility to the job site.
 2. Receiving and storage of Owner furnished, Contractor installed product, as required.
 3. Providing materials and components for the product as necessary to install in an operating condition, but not including repairing of existing damages to the product.
 4. Modification of product only as specified under the particular item.
 5. Installation of product in this project, complete and in operating condition, including the adjusting and calibration of the product as necessary for proper operation.
 6. Testing of product.
 7. Paying of fees, licenses, and taxes in conjunction with the installation of the product.
 8. Roughing-in and final utility connections for the Owner furnished, Contractor installed product remains the work of Sections governing the specific utility.
- 1.10 WORKER CONDUCT AND APPEARANCE - WORK RULES
- A. General: The conduct and appearance of each worker at the jobsite is of paramount importance. The Owner reserves the right to require any worker to be reassigned to work outside the Owner's property.
 1. Privacy: Where applicable, conduct work of the Contract with the maximum effort to maintain the privacy of the Owner's operations, staff, and clientele. Do not permit workers to peer into other areas of the building visible from the work area. Invasion of privacy is a major infraction of the work rules.
 2. Conduct and Demeanor: Construction workers shall treat other construction workers, Owner's staff, clientele, and visitors (as applicable) professionally with respect and courtesy.
 3. Physical Appearance: Require each worker to dress appropriately in a clean, neat, and professional manner.
 4. Radios and Television: The use of entertainment devices including personal devices with headphones or earphones is prohibited at all times. Control the volume of communication radios and loudspeakers to avoid creating a nuisance.
 5. Tobacco Products: The use of tobacco products is prohibited.
 6. Language: The use of foul language is prohibited.
 7. Loud Conduct: Screaming, yelling, and unnecessary loud conduct is prohibited.
 8. Physical Actions: Running, horseplay, fighting, and other unprofessional conduct is prohibited. Fighting is a major infraction of the work rules.
 9. Stealing: Stealing of any material, objects, furnishings, equipment, fixtures, supplies, clothing, or other items is prohibited and a major infraction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

10. Sexual Harassment: All forms of physical and verbal sexual harassment including, without limitation: touching; whistling; sexually explicit stories, jokes, drawings, photos, and representations; exhibitionism; and all other sexually oriented offensive behavior is prohibited.
 11. Roaming: Construction personnel shall not be allowed to roam, or wander about, the existing facilities.
 12. Eating: Construction personnel shall not use the existing Dining Area for breakfast, lunch, or dinner.
 13. Parking: Construction personnel shall only park in designated areas reserved for construction parking.
 14. Penalties: First infraction of the work rules shall result in a verbal warning from the Owner. Second infractions shall result in being requested to leave the Owner's property. Owner's decision in such matters shall be final with no exceptions.
- B. Warnings and Dismissal: For minor infraction of the rules, the Owner may issue a warning. Only one warning will be allowed per worker, and a second infraction shall result in immediate dismissal of the worker from the Owner's property. For major infractions such as invasion of privacy, the worker shall be dismissed immediately without warning and possibly subject to criminal prosecution.
- C. Notification of Workers: Clearly notify and educate each worker about these Work Rules and the requirements for worker conduct and appearance.
- 1.11 HEALTHCARE FACILITY RENOVATION WORK
- A. Interim Life Safety Measures (ILSM): The following Interim Life Safety Measures (ILSM) as established by the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) shall be implemented, documented and enforced in and adjacent to all construction areas:
1. Ensure that exits provide free and unobstructed egress. Personnel shall receive training, and the Hospital shall be notified if alternative exits must be designated. Buildings/areas under construction must maintain escape facilities for construction workers at all times. Means of egress in construction areas must be inspected daily.
 2. Ensure free and unobstructed access to emergency department/service and for emergency forces.
 3. Ensure that fire alarm, detection, and suppression systems are not impaired. A temporary, but equivalent, system shall be provided, and the Hospital shall be notified, when any fire system is impaired. Temporary systems must be inspected and tested monthly.
 4. Ensure temporary construction partitions are smoke tight and built of non-combustible or limited combustible materials that will not contribute to the development or spread of fire.
 5. Provide additional fire-fighting equipment and use training for personnel.
 6. Prohibit smoking in or adjacent to all construction areas.
 7. Develop and enforce storage, housekeeping, and debris-removal practices that reduce the flammable and combustible fire load of the building to lowest level necessary for daily operations.
 8. Conduct a minimum of two fire drills per shift per quarter.
 9. Increase hazard surveillance of buildings, grounds, and equipment with special attention to excavations, construction areas, construction storage, and field offices.
 10. Train personnel, and notify the Hospital, when structural or compartmentation features of fire safety are compromised.
 11. Conduct organization wide safety education programs to assure awareness of deficiencies, construction hazards, and these ILSM.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.12 ACCESS TO SITE

- A. General: Contractor shall have full use of Project site for construction operations during construction period. Contractor's use of Project site is limited only by Owner's right to perform work or to retain other contractors on portions of Project.
- B. General: Contractor shall have limited use of Project site for construction operations as indicated on Drawings by the Contract limits and as indicated by requirements of this Section.
- C. Use of Site: Limit use of Project site to work in areas indicated. Do not disturb portions of Project site beyond areas in which the Work is indicated.
 - 1. Confine constructions operations to work in areas indicated on drawings.
 - 2. Allow for Owner occupancy of site and use by the public.
 - 3. Keep driveways and entrances serving premises clear and available to Owner, Owner's employees, and emergency vehicles at all times.
 - 4. Do not use drives and entrances for parking or storage of materials.
 - 5. Schedule deliveries to minimize use of driveways and entrances.
 - 6. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.
 - 7. Coordinate use of premises under direction of Owner.
 - 8. Assume full responsibility for the protection and safekeeping of Products under this Contract, stored on the site.
 - 9. Move any stored Products, under Contractor's control, which interfere with operations of the Owner or separate contractor.
 - 10. Obtain and pay for the use of additional storage or work areas needed for operations.
- D. Condition of Existing Building: Maintain portions of existing building affected by construction operations in a weathertight condition throughout construction period. Repair damage caused by construction operations.

1.13 COORDINATION WITH OCCUPANTS

- A. Full Owner Occupancy: Owner will occupy site and existing and/or adjacent building(s), as applicable, during entire construction period. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's day-to-day operations. Maintain existing exits unless otherwise indicated.
 - 1. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from Owner and approval of authorities having jurisdiction.
 - 2. Notify Owner not less than 72 hours in advance of activities that will affect Owner's operations.
- B. Partial Owner Occupancy: Owner will occupy the premises during entire construction period, with the exception of areas under construction. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's operations. Maintain existing exits unless otherwise indicated.
 - 1. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities. Do not close or obstruct walkways, corridors, or other occupied or used facilities without written permission from Owner and authorities having jurisdiction.
 - 2. Provide not less than 72 hours' notice to Owner of activities that will affect Owner's operations.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Owner Limited Occupancy of Completed Areas of Construction: Owner reserves the right to occupy and to place and install equipment in completed portions of the Work, prior to Substantial Completion of the Work, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and limited occupancy shall not constitute acceptance of the total Work.
1. Architect will prepare a Certificate of Substantial Completion for each specific portion of the Work to be occupied prior to Owner acceptance of the completed Work.
 2. Obtain a Certificate of Occupancy from authorities having jurisdiction before limited Owner occupancy.
 3. Before limited Owner occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Owner will operate and maintain mechanical and electrical systems serving occupied portions of Work.
 4. On occupancy, Owner will assume responsibility for maintenance and custodial service for occupied portions of Work.

1.14 WORK RESTRICTIONS

- A. Work Restrictions, General: Comply with restrictions on construction operations.
1. Comply with limitations on use of public streets and with other requirements of authorities having jurisdiction.
- B. On-Site Work Hours: Limit work in the existing building to normal business working hours of <Insert time> a.m. to <Insert time> p.m., Monday through Friday, unless otherwise indicated.
1. Weekend Hours: <Insert restrictions on times permitted for weekend work>.
 2. Early Morning Hours: <Insert restrictions or references to regulations by authorities having jurisdiction for restrictions on noisy work>.
 3. Hours for Utility Shutdowns: <Insert Owner's restrictions>.
 4. Hours for [Core Drilling] <Insert noisy activity>: <Insert Owner's restrictions>.
- C. On-Site Work Hours: Coordinate the limitations relative to working hours in the existing building with Owner.
- D. Existing Utility Interruptions: Refer to Division 01 Section "Execution" for requirements.
- E. Noise, Vibration, and Odors: Coordinate operations that may result in high levels of noise and vibration, odors, or other disruption to Owner occupancy with Owner.
1. Notify Owner not less than 72 hours in advance of proposed disruptive operations.
 2. Obtain Owner's written permission before proceeding with disruptive operations.

1.15 SPECIFICATION AND DRAWING CONVENTIONS

- A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
1. Abbreviated Language: Language used in Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words implied, but not stated, shall be interpolated as the sense requires. Singular words will be interpreted as plural and plural words interpreted as singular where applicable as the context of the Contract Documents indicates.
 2. Imperative mood and streamlined language are generally used in the Specifications. Requirements expressed in the imperative mood are to be performed by the Contractor. At certain locations in the Text, subjective language is used for clarity to describe

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

responsibilities that must be fulfilled indirectly by the Contractor, or by others when so noted.

3. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
4. Specification requirements are to be performed by Contractor unless specifically stated otherwise.

B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

C. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:

1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings.

1.16 MISCELLANEOUS PROVISIONS

A. <Insert miscellaneous provisions>.

PART 3 - EXECUTION (Not Used)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 012100

ALLOWANCES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements governing allowances.
 - 1. Certain items are specified in the Contract Documents by allowances. Allowances have been established in lieu of additional requirements and to defer selection of actual materials and equipment to a later date when direction will be provided to Contractor. If necessary, additional requirements will be issued by Change Order.
- B. Types of allowances include the following:
 - 1. Lump-sum and unit-cost allowances.
 - 2. Contingency allowances.
 - 3. Testing and inspecting allowances.

1.2 SELECTION AND PURCHASE

- A. At the earliest practical date after award of the Contract, advise Architect of the date when final selection and purchase of each product or system described by an allowance must be completed to avoid delaying the Work.
- B. At Architect's request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.
- C. Purchase products and systems selected by Architect from the designated supplier.

1.3 SUBMITTALS

- A. Proposals: Submit proposals for purchase of products or systems included in allowances, in the form specified for Change Orders.
- B. Material Invoices: Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each allowance.
- C. Labor Documentation: Submit time sheets and other documentation to show labor time and cost for installation of allowance items that include installation as part of the allowance.
- D. Coordination: Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.4 COORDINATION

- A. Coordinate allowance items with other portions of the Work. Furnish templates as required to coordinate installation.

1.5 LUMP-SUM AND UNIT-COST ALLOWANCES

- A. Allowance shall include cost to Contractor of specific products and materials ordered by Owner or selected by Architect under allowance and shall include taxes, freight, and delivery to Project site.
- B. Unless otherwise indicated, Contractor's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to products and materials ordered by

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Owner or selected by Architect under allowance shall be included as part of the Contract Sum and not part of the allowance.

- C. Unused Materials: Return unused materials purchased under an allowance to manufacturer or supplier for credit to Owner, after installation has been completed and accepted.

1. If requested by Architect, retain and prepare unused material for storage by Owner. Deliver unused material to Owner's storage space as directed.

1.6 CONTINGENCY ALLOWANCES

- A. Use the contingency allowance only as directed by Architect for Owner's purposes and only by Change Orders that indicate amounts to be charged to the allowance.
- B. Contractor's overhead, profit, and related costs for products and equipment ordered by Owner under the contingency allowance are included in the allowance and are not part of the Contract Sum. These costs include delivery, installation, taxes, insurance, equipment rental, and similar costs.
- C. Change Orders authorizing use of funds from the contingency allowance will include Contractor's related costs and reasonable overhead and profit margins.
- D. At Project closeout, credit unused amounts remaining in the contingency allowance to Owner by Change Order.

1.7 TESTING AND INSPECTING ALLOWANCES

- A. Testing and inspecting allowances include the cost of engaging testing agencies, actual tests and inspections, and reporting results.
- B. The allowance does not include incidental labor required to assist the testing agency or costs for retesting if previous tests and inspections result in failure. The cost for incidental labor to assist the testing agency shall be included in the Contract Sum.
- C. Costs of services not required by the Contract Documents are not included in the allowance.
- D. At Project closeout, credit unused amounts remaining in the testing and inspecting allowance to Owner by Change Order.

1.8 ADJUSTMENT OF ALLOWANCES

- A. Allowance Adjustment: To adjust allowance amounts, prepare a Change Order proposal based on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place where applicable. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.
 1. Include installation costs in purchase amount only where indicated as part of the allowance.
 2. If requested, prepare explanation and documentation to substantiate distribution of overhead costs and other margins claimed.
 3. Submit substantiation of a change in scope of work, if any, claimed in Change Orders related to unit-cost allowances.
 4. Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count.
- B. Submit claims for increased costs because of a change in scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or Contractor's handling, labor, installation, overhead, and profit.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of work has changed from what could have been foreseen from information in the Contract Documents.
2. No change to Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

- A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF ALLOWANCES

- A. Schedule of Allowances to be determined.
- B. Face Brick: Allow the unit cost of \$XXX per 1,000 for purchase and delivery of Face Brick.
- C. Door Hardware: Allow the lump sum of \$XXX for purchase and delivery of Door Hardware.
- D. Wall Covering: Allow the unit cost of \$XXX per sq. yd. for purchase and delivery of Wall Covering.
- E. Carpeting: Allow the unit cost of \$XXX per sq. yd. for purchase and delivery of Carpeting.
- F. Elevator Car Enclosures: Allow the unit cost of \$XXX per car for purchase and delivery of Elevator Car Enclosures.
- G. Graphics: Allow the lump sum of \$XXX for purchase, delivery, and installation of Graphics.
- H. Landscaping: Allow the lump sum of \$XXX for purchase, delivery, and installation of Landscaping.
- I. Trowelable Polymer-Modified Cementitious Underlayment: Refer to Division 09 Section "Floor Preparation for Renovation Work" for allowance description and price.
- J. Self-Leveling Cementitious Underlayment: Refer to Division 09 Section "Floor Preparation for Renovation Work" for allowance description and price.
- K. Moisture Floor Treatment: Refer to Division 09 Section "Floor Preparation for Renovation Work" for allowance description and price.

SECTION 012200

UNIT PRICES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for unit prices.

1.2 DEFINITIONS

- A. Unit price is an amount incorporated in the Agreement, applicable during the duration of the Work as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, added to or deducted from the Contract Sum by appropriate modification, if the scope of Work or estimated quantities of Work required by the Contract Documents are increased or decreased.

1.3 PROCEDURES

- A. Unit prices include all necessary material, plus cost for delivery, installation, insurance, applicable taxes, overhead, and profit.
- B. Measurement and Payment: See individual Specification Sections for work that requires establishment of unit prices. Methods of measurement and payment for unit prices are specified in those Sections.
- C. Owner reserves the right to reject Contractor's measurement of work-in-place that involves use of established unit prices and to have this work measured, at Owner's expense, by an independent surveyor acceptable to Contractor.
- D. List of Unit Prices: A schedule of unit prices is included in Part 3. Specification Sections referenced in the schedule contain requirements for materials described under each unit price.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF UNIT PRICES

- A. Schedule of Unit Prices to be determined.
- B. Item No. 1 - Rock Excavation:
1. Description: Rock excavation in accordance with Division 31 Section Earthwork.
 2. Unit of Measurement: Cubic yard of rock excavated.
- C. Item No. 2 - Drilled Piers, 36 in (900 mm), 30 in (750 mm), 24 in (600 mm), and 18 in (450 mm) diameters:
1. Description: Change in length of drilled piers from lengths indicated in accordance with Division 31 Section Drilled Piers, includes drilling and placing concrete and reinforcement (add for additional length for each diameter; deduct for reduced length for each diameter - not less than 65% of add cost).
 2. Unit of Measurement: Linear foot of pier, for each pier diameter.
- D. Item No. 3 - Cased Piers, 36 in (900 mm), 30 in (750 mm), 24 in (600 mm), and 18 in (450 mm) diameters:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Description: Change in length of cased piers from lengths indicated in accordance with Division 31 Section Drilled Piers, includes drilling and placing concrete and reinforcement (add for each pier diameter; deduct for reduction of base bid casing for each pier diameter - not less than 65% of add cost).
 2. Unit of Measurement: Linear foot of cased pier, for each pier diameter.
- E. Item No. 4 - Prestressed Precast Concrete Piles:
1. Description: Change in length of pile from lengths indicated in accordance with Division 31 Section Prestressed Precast Concrete Piles.
 2. Unit of Measurement: Linear foot of pile driven.
- F. Item No. 5 - Reinforcing Steel:
1. Description: Adding additional reinforcing steel from amount indicated in accordance with Division 3 Section Reinforcing Steel, includes furnishing, fabricating, and installing.
 2. Unit of Measurement: Ton of reinforcing steel installed.
- G. Item No. 6 - Structural Steel Framing:
1. Description: Adding additional structural steel from amount indicated in accordance with Division 5 Section Structural Steel Framing, includes furnishing, fabricating, and installing.
 2. Unit of Measurement: Ton of structural steel installed.
- H. Item No. 7 - Carpet:
1. Description: Wool carpet type 1 including urethane foam carpet cushion and tackless strip in accordance with Division 9 Section Sheet Carpeting.
 2. Unit of Measurement: Square yard of carpet installed.
- I. Item No. 8 - Fire Alarm Devices:
1. Description: Fire alarm system devices as follows, including outlet boxes, wiring, connectors, and coverplates:
 - a. Fire alarm smoke detectors
 - b. Fire alarm audio / visual devices
 - c. Fire alarm visual only devices
 - d. Fire alarm pull stations
 2. Unit of Measurement: Each device installed.
- J. Item No. 9 - Electrical Devices:
1. Description: Electrical system devices as follows, including outlet boxes, wiring, connectors, and coverplates:
 - a. Duplex receptacles
 - b. Quad receptacles
 - c. Exit lights
 - d. Telephone / data devices
 2. Unit of Measurement: Each device installed.
- K. Item No. 10 - Electrical Outlets:
1. Description: Galvanized steel outlet boxes, including general duty type, 125-volt, duplex receptacles, connectors and satin finish stainless steel wallplates.
 2. Unit of Measurement: Each outlet installed.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- L. Item No. 11 - Trowelable Polymer-Modified Cementitious Underlayment:
 - 1. Description: Refer to Division 09 Section "Floor Preparation for Renovation Work" Unit Price.
- M. Item No. 12 - Self-Leveling Cementitious Underlayment:
 - 1. Description: Refer to Division 09 Section "Floor Preparation for Renovation Work" Unit Price.
- N. Item No. 13 - Moisture Floor Treatment:
 - 1. Description: Refer to Division 09 Section "Floor Preparation for Renovation Work" Unit Price.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 012300

ALTERNATES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for alternates.

1.2 DEFINITIONS

- A. Alternate: An amount proposed by bidders and stated on the Bid Form for certain work defined in the bidding requirements that may be added to or deducted from the base bid amount if Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.
1. Alternates described in this Section are part of the Work only if enumerated in the Agreement.
 2. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to incorporate alternate into the Work. No other adjustments are made to the Contract Sum.

1.3 PROCEDURES

- A. Documentation: Show compliance with requirements for accepted alternates and the following, as applicable:
1. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate accepted alternates.
 2. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
 3. Samples, where applicable or requested.
 4. Certificates and qualification data, where applicable or requested.
 5. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
 6. Research reports evidencing compliance with building code in effect for Project, from ICC-ES.
 7. Detailed comparison of Contractor's construction schedule using accepted alternates with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
 8. Cost information, including change in the Contract Sum.
- B. Coordination: Revise or adjust affected adjacent work as necessary to completely integrate work of the alternate into Project.
1. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate.
- C. Notification: Immediately following award of the Contract, notify each party involved, in writing, of the status of each alternate. Indicate if alternates have been accepted, rejected, or deferred for later consideration. Include a complete description of negotiated revisions to alternates.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Execute accepted alternates under the same conditions as other work of the Contract.
- E. Schedule: A schedule of alternates is included at the end of this Section. Specification Sections referenced in schedule contain requirements for materials necessary to achieve the work described under each alternate.
- F. Acceptance of Alternates will be exercised at option of Owner in any order or combination.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF ALTERNATES

- A. Schedule of Alternates to be determined.
- B. ALTERNATE NO. 1: <Title of Alternate>
 - 1. Refer to Division <DIVISION NUMBER> Section "<NAME OF SECTION>"
 - 2. [Add] [Delete] [Change] [Description of Alternate].
- C. ALTERNATE NO. 2: <Title of Alternate>
 - 1. Refer to Division <DIVISION NUMBER> Section "<NAME OF SECTION>"
 - 2. [Add] [Delete] [Change] [Description of Alternate].
- D. ALTERNATE NO. 3: <Title of Alternate>
 - 1. Refer to Division <DIVISION NUMBER> Section "<NAME OF SECTION>"
 - 2. [Add] [Delete] [Change] [Description of Alternate].
- E. ALTERNATE NO. 4: <Title of Alternate>
 - 1. Refer to Division <DIVISION NUMBER> Section "<NAME OF SECTION>"
 - 2. [Add] [Delete] [Change] [Description of Alternate].

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 012500
SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for substitutions.

1.2 DEFINITIONS

- A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.
1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
 2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required in order to meet other Project requirements but may offer advantage to Contractor or Owner.

1.3 SUBMITTALS

- A. Substitution Requests: Submit electronic copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
1. Substitution Request Form: Submit electronic file using Architect's Substitution Request Form.
 2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
 - a. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable.
 - b. Coordination information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.
 - c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
 - d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
 - e. Samples, where applicable or requested.
 - f. Certificates and qualification data, where applicable or requested.
 - g. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
 - h. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
 - i. Research reports evidencing compliance with building code in effect for Project, from ICC-ES.
 - j. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.

- k. Cost information, including a proposal of change, if any, in the Contract Sum.
 - l. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
 - m. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
3. Architect's Action: If necessary, with reasonable promptness, Architect will request additional information or documentation for evaluation. Architect will notify Contractor of acceptance or rejection of proposed substitution with reasonable promptness. Acceptance of proposed substitution does not constitute approval or inclusion in Contract Documents. Pay applications certification, change orders, and certificate of substantial completion will contain such qualification.

1.4 QUALITY ASSURANCE

- A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.5 PROCEDURES

- A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

- A. Prior to starting Substitution Process, review proposed recommendations with Architect.
- B. Contractor's submittal and Architect's acceptance of Shop Drawings, Product Data or Samples for construction activities not complying with Contract Documents does not constitute acceptable or valid request for substitution, nor does it constitute approval.
- C. Contractor Representations: By making substitution request, Contractor:
 - 1. Recognizes burden of proof of equality for requested substitution rests with Contractor.
 - 2. Represents and warrants that Contractor has personally investigated requested substitution and determined that it is equal to or superior in all respects to specified Work.
 - 3. Represents and warrants that Contractor will provide same warranties for requested substitution that Contractor would for specified Work.
 - 4. Certifies that cost data presented is complete and includes all related costs under this Contract except for Architect's redesign cost, and waives all claims for additional costs related to requested substitution which may subsequently become apparent.
 - 5. Will coordinate installation of accepted substitution, making such other changes as may be required to make Work complete in all respects.
 - 6. Represents and warrants that accepted substitution will perform same as specified Work would have performed. Should accepted substitution fail to perform as required, Contractor shall replace accepted substitution with specified Work at no additional cost to Owner.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change.
1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:
- a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
 - b. Requested substitution provides sustainable design characteristics that specified product provided.
 - c. Substitution request is fully documented and properly submitted.
 - d. Requested substitution will not adversely affect Contractor's construction schedule.
 - e. Requested substitution has received necessary approvals of authorities having jurisdiction.
 - f. Requested substitution is compatible with other portions of the Work.
 - g. Requested substitution has been coordinated with other portions of the Work.
 - h. Requested substitution provides specified warranty.
- E. Substitutions for Convenience:
1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:
- a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
 - b. Requested substitution does not require extensive revisions to the Contract Documents.
 - c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
 - d. Requested substitution provides sustainable design characteristics that specified product provided.
 - e. Substitution request is fully documented and properly submitted.
 - f. Requested substitution will not adversely affect Contractor's construction schedule.
 - g. Requested substitution has received necessary approvals of authorities having jurisdiction.
 - h. Requested substitution is compatible with other portions of the Work.
 - i. Requested substitution has been coordinated with other portions of the Work.
 - j. Requested substitution provides specified warranty.

PART 3 - EXECUTION (Not Used)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 012600
CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

1.2 MINOR CHANGES IN THE WORK

- A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, using Architect's Supplemental Instructions Form.

1.3 PROPOSAL REQUESTS

- A. Owner-Initiated Proposed Change: Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time using Architect Proposed Change Form. If necessary, the description will include supplemental or revised Drawings and Specifications.
 - 1. Proposed Changes issued by Architect are not instructions either to stop work in progress or to execute the proposed change.
 - 2. Within time specified in Proposed Change or with reasonable promptness, when not otherwise specified, after receipt of Proposed Change, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.
 - a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
 - c. Include costs of labor and supervision directly attributable to the change.
 - d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
 - e. Include updated Submittal Schedule showing effect of the change.
- B. Contractor-Initiated Proposed Change: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Architect using Contractor's Standard Form.
 - 1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
 - 2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - 3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
 - 4. Include costs of labor and supervision directly attributable to the change.
 - 5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times,

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

and activity relationship. Use available total float before requesting an extension of the Contract Time.

6. Include updated Submittal Schedule showing effect of the change.
7. Comply with requirements in Division 01 Section "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.

1.4 ADMINISTRATIVE CHANGE ORDERS

- A. Allowance Adjustment: If applicable, see Division 01 Section "Allowances" for administrative procedures for preparation of Proposed Change for adjusting the Contract Sum to reflect actual costs of allowances.
- B. Unit-Price Adjustment: If applicable, see Division 01 Section "Unit Prices" for administrative procedures for preparation of Proposed Change for adjusting the Contract Sum to reflect measured scope of unit-price work.
- C. Alternates: If applicable, see Division 01 Section "Alternates" for administrative procedures for preparation of Proposed Change for adjusting the Contract Sum to reflect measured scope of alternate work.

1.5 CHANGE ORDER PROCEDURES

- A. Upon Owner's approval of a Proposed Change, Architect will issue a Change Order for signatures of Owner and Contractor using Architect's Change Order Form.

1.6 CONSTRUCTION CHANGE DIRECTIVE

- A. Construction Change Directive: Architect may issue a Construction Change Directive using Architect's Construction Change Directive Form. Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
 1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.
- B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
 1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 012900
PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.

1.2 SCHEDULE OF VALUES

- A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.
1. Coordinate line items in the schedule of values with other required administrative forms and schedules, including the following:
 - a. Application for Payment forms with continuation sheets.
 - b. Submittal schedule.
 - c. Accepted Alternates.
 2. Submit the schedule of values to Architect at earliest possible date, but no later than seven days before the date scheduled for submittal of initial Applications for Payment.
 3. Subschedules for Phased Work: Where the Work is separated into phases requiring separately phased payments; provide subschedules showing values coordinated with each phase of payment.
 4. Subschedules for Separate Elements of Work: Where the Contractor's construction schedule defines separate elements of the Work; provide subschedules showing values coordinated with each element.
 5. Subschedules for Separate Design Contracts: Where the Owner has retained design professionals under separate contracts who will each provide certification of payment requests, provide subschedules showing values coordinated with the scope of each design services contract.
- B. Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.
1. Identification: Include the following Project identification on the schedule of values:
 - a. Project name and location.
 - b. Name of Architect.
 - c. Architect's project number.
 - d. Contractor's name and address.
 - e. Date of submittal.
 2. Arrange the schedule of values in tabular form, in format accepted by Architect, with separate columns to indicate the following for each item listed:
 - a. Related Specification Section or Division.
 - b. Description of the Work.
 - c. Name of subcontractor.
 - d. Name of manufacturer or fabricator.
 - e. Name of supplier.
 - f. Change Orders.
 - g. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 1) Labor.
 - 2) Materials.
 - 3) Equipment.
3. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with Project Manual table of contents. Provide multiple line items for principal subcontract amounts, where appropriate.
 4. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
 5. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.
 - a. Differentiate between items stored on-site and items stored off-site. If required, include evidence of insurance or bonded warehousing.
 6. Provide separate line items in the schedule of values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
 7. Allowances (If Applicable): Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances (if applicable), as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities.
 8. Alternates (If Applicable): Provide a separate line item in the schedule of values for each accepted alternate.
 9. Change Orders: Provide a separate line item in the schedule of values for each change order.
 10. Separate Owner-Consultant Contracts: Provide a separate line item in the schedule of values for each separate Owner-Consultant related Work item.
 11. Purchase Contracts: When applicable, provide a separate line item in the schedule of values for each purchase contract. Show line-item value of purchase contract. Indicate owner payments or deposits, if any, and balance to be paid by Contractor.
 12. Each item in the schedule of values and Applications for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.
 - a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place may be shown either as separate line items in the schedule of values or distributed as general overhead expense, at Contractor's option.
 13. Schedule Updating: Update and resubmit the schedule of values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.
- 1.3 ARCHITECTS COST DATA
- A. In addition to the Schedule of Values, submit itemized cost data reporting using Architect's Project Cost Summary Form. Initial submission shall be included with contractors first Application for Payment. Final updated submission shall be included with contractors final Application for Payment.
- 1.4 APPLICATIONS FOR PAYMENT
- A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments as certified by Architect and paid for by Owner.
 1. Initial Application for Payment, Application for Payment at time of Substantial Completion, and final Application for Payment involve additional requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Payment Application Times: The date for each progress payment is indicated in the Agreement between Owner and Contractor. The period of construction work covered by each Application for Payment is the period indicated in the Agreement.
1. If the Agreement does not state payment dates, establish dates at preconstruction conference.
 2. Submit draft, or pencil, copy of Application for Payment seven days prior to due date for review by Architect.
- C. Application for Payment Forms: Unless directed otherwise by Owner, use AIA Document G702 and AIA Document G703 as form for Applications for Payment.
- D. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Architect will return incomplete applications without action.
1. Entries shall match data on the schedule of values and Contractor's construction schedule. Use updated schedules if revisions were made.
 2. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.
- E. Stored Materials: If accepted by Owner, include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on-site and items stored off-site.
1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment, for stored materials.
 2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
 3. Provide summary documentation for stored materials indicating the following:
 - a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
 - b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
 - c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.
- F. Transmittal: Submit 3 signed and notarized original copies of each Application for Payment to Architect by a method ensuring receipt within 24 hours. One copy shall include waivers of lien and similar attachments if required.
1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.
- G. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's liens from General Contractor, subcontractors, sub-subcontractors, and suppliers for construction period covered by the previous application.
1. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
 2. When an application shows completion of an item, submit conditional final or full waivers.
 3. Owner reserves the right to designate which entities involved in the Work must submit waivers.
 4. Waiver Delays: Submit each Application for Payment with Contractor's waiver of mechanic's lien for construction period covered by the application.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Submit final Application for Payment with or preceded by conditional final waivers from every entity involved with performance of the Work covered by the application who is lawfully entitled to a lien.
- 5. Waiver Forms: Submit executed waivers of lien on forms, acceptable to Owner.
- H. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:
 - 1. List of subcontractors.
 - 2. Schedule of values.
 - 3. Contractor's construction schedule (preliminary if not final).
 - 4. Products list (preliminary if not final).
 - 5. Schedule of unit prices.
 - 6. Submittal schedule (preliminary if not final).
 - 7. List of Contractor's staff assignments.
 - 8. List of Contractor's principal consultants.
 - 9. Copies of building permits.
 - 10. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
 - 11. Initial progress report.
 - 12. Report of preconstruction conference.
 - 13. Certificates of insurance and insurance policies.
 - 14. Performance and payment bonds.
- I. Application for Payment at Substantial Completion: After Architect issues the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.
 - 1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.
 - 2. When applicable, this application shall reflect Certificate(s) of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.
- J. Final Payment Application: Submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:
 - 1. Evidence of completion of Project closeout requirements.
 - 2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
 - 3. Updated final statement, accounting for final changes to the Contract Sum.
 - 4. AIA Document G706, "Contractor's Affidavit of Payment of Debts and Claims."
 - 5. AIA Document G706A, "Contractor's Affidavit of Release of Liens."
 - 6. AIA Document G707, "Consent of Surety to Final Payment."
 - 7. Evidence that claims have been settled.
 - 8. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
 - 9. If applicable, final liquidated damages settlement statement.

PART 3 - EXECUTION (Not Used)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 013100
PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:
 - 1. General coordination procedures.
 - 2. Coordination drawings.
 - 3. Requests for Information (RFIs).
 - 4. Project Web site.
 - 5. Project meetings.

1.2 DEFINITIONS

- A. Project communications documents shall be defined as the following:
 - 1. Letters.
 - 2. Memoranda.
 - 3. E-Mail Communications/Internet Communications/Project Management Software Communications.
 - 4. RFI (Request for Information - Contractor).
 - 5. RFI-A (Request for Information - Architect).

1.3 FORMAT

- A. Letters and Memoranda: Submit in formats acceptable to the Architect.
- B. E-Mail Communications/Internet Communications/Project Management Software Communications: Submit in forms and formats acceptable to and as approved by the Architect.
- C. RFI (Request for Information - Contractor): Submit using Architect's Request for Information Form, or on other forms approved by the Architect.
- D. RFI-A (Request for Information - Architect): Architect will submit to Contractor using Architect's standard form.

1.4 PROJECT COMMUNICATIONS DOCUMENTS

- A. Letters and Memoranda documents shall be submitted in a timely manner so as to facilitate project delivery and coordination. Routing of communications shall be as established in the Contract, the Contract Documents and the Pre-Construction Conference. Communications documents shall be transmitted or forwarded in a manner consistent with the schedule and progress of the work.
- B. E-Mail Communications, Internet Communications, and Project Management Software programs must be compatible with the Architect's and Owner's computer systems and equipment. The responsibility for all costs for management of these systems, including, but not limited to, licensing, onsite training or other training necessary for the proper operation of such systems, shall be by the Contractor. The Contractor shall keep written records and hard file copies of all electronic communications. Failure of the Contractor to keep such records shall waive the Contractor's right to rely on such communications and such communications shall be deemed to have not taken place.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. RFI (Request for Information - Contractor) shall be defined and limited to a request from the Contractor seeking interpretation or clarification of the requirements of the Contract Documents. Such requests shall comply with the following requirements:
1. RFI requests shall be submitted in a timely manner, well in advance of related work, and allow sufficient time for the resolution of issues relating to the request for interpretation or clarification. Contractor shall schedule the submission of RFI's so as to moderate and manage the flow of RFI requests. RFI's shall be submitted in a manner consistent with the schedule and progress of the work, and shall not be submitted in a sporadic and/or excessive manner.
 2. RFI requests shall be numbered in a sequential manner and contain a detailed description of the areas of work requiring interpretation or clarification. Include drawing and specification references, sketches, technical data, brochures, or other supporting data as deemed necessary by the Architect, for the Architect to provide the interpretations and clarifications requested.
 - a. The Contractor shall include a "Proposed Solution" to the issue requiring interpretation or clarification.
 3. RFI's submitted to the Contractor by Sub-Contractors, vendors, suppliers, or other parties to the work shall be reviewed by the Contractor prior to submission to the Architect. If the Architect deems that such RFI requests have not been adequately reviewed by the Contractor, such requests will be returned to the Contractor for further action. Sub-Contractor's RFI shall contain a "Proposed Solution".
 4. RFI requests shall not contain submittals, substitutions requests, routine communications, correspondence, memos, claims, or any information required by other areas of the Contract Documents. RFI requests containing such information will be returned to the Contractor without action by the Architect.
 5. RFI requests are limited to a request for interpretation or clarification of the requirements of the Contract Documents. Interpretations provided by the Architect shall not change the requirements of the Contract or the Contract Documents. If the Contractor determines that the Architect's response to an RFI gives cause for a change in the Contract or the Contract Documents, the Contractor shall promptly, within 5 working days, give written notice to the Architect of request for adjustments. Requests for adjustments to the Contract shall be submitted in a manner consistent with the terms and conditions of the Contract Documents.
 6. If the Architect, after review, determines that any RFI has been submitted in an incomplete manner, is unnecessary, or does not otherwise comply with the requirements of this Section, the RFI will be returned without action to the Contractor. The Contractor shall delete the original submittal date from the RFI log and enter a new submittal date at the time of re-submittal.
 7. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log weekly. Use software log that is part of Project Web site. Software log with not less than the following:
 - a. Project name.
 - b. Name and address of Contractor.
 - c. Name and address of Architect.
 - d. RFI number including RFIs that were returned without action or withdrawn.
 - e. RFI description.
 - f. Date the RFI was submitted.
 - g. Date Architect's response was received.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

8. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven days if Contractor disagrees with response.
 - a. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.

D. RFI-A (Request for Information - Architect) shall be defined as a request by the Architect for information relating to the obligations of the Contractor under the Contract.

1. After receipt of an RFI-A the Contractor shall provide a written response to the Architect within 5 working days. Responses shall be thorough, complete and shall contain all information requested by the Architect.
2. An RFI-A shall be limited to a request by the Architect for information related to the project. The RFI-A shall not be construed as authorizing or directing a change in the Contract or the Contract Documents.

E. Revisions to Construction Documents: Responses to requests for information (RFI) shall not serve as construction documents; and the Contractor shall not incorporate RFI responses into construction of the Project, unless such answers bear the seal and signature of a licensed design professional.

1.5 INFORMATIONAL SUBMITTALS

A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1. Name, address, and telephone number of entity performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

B. Key Personnel Names: Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home, office, and cellular telephone numbers and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in project meeting room, in temporary field office, and Project Web site. Keep list current at all times.

1.6 GENERAL COORDINATION PROCEDURES

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations included in different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.
 - 1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.
- C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
 - 1. Preparation of Contractor's construction schedule.
 - 2. Preparation of the schedule of values.
 - 3. Installation and removal of temporary facilities and controls.
 - 4. Delivery and processing of submittals.
 - 5. Progress meetings.
 - 6. Preinstallation conferences.
 - 7. Project closeout activities.
 - 8. Startup and adjustment of systems.
- D. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials.

1.7 COORDINATION DRAWINGS

- A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.
 - 1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:
 - a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
 - b. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
 - c. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
 - d. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
 - e. Indicate required installation sequences.
 - f. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.
- B. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:
 - 1. File Preparation Format: Same digital data software program, version, and operating system as original Drawings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. File Submittal Format: Submit or post coordination drawing files using Portable Data File (PDF) format.
3. BIM File Incorporation: When applicable, develop coordination drawing files from Building Information Model (BIM) established for Project.
 - a. Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve component conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.
4. If approved by Owner, Architect will furnish Contractor one set of digital data files of Drawings for use in preparing coordination digital data files.
 - a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
 - b. Digital Data Software Program: Drawings are available in Autodesk Revit and/or Autocad; and compatible with Microsoft Windows operating system.
 - c. Distribution: Digital data files shall be distributed via the Architect's file transfer site with acceptance of Architect's data licensing agreement.

1.8 PROJECT WEB SITE

- A. Use Architect's Project Web site implementing Architect's electronic project management software system for purposes of managing project communication and documentation until Final Completion.

1.9 PROJECT MEETINGS

- A. General: Schedule and conduct meetings and conferences at Project site unless otherwise indicated.
 1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times.
 2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
 3. Minutes: Record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner and Architect, within 3 days of the meeting.
 4. Attendance: Document attendance of all participants.
- B. Preconstruction Conference: Architect will schedule and conduct a preconstruction conference before starting construction.
 1. Conduct the conference to review responsibilities and personnel assignments.
 2. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
- C. Preinstallation Conferences: Conduct a preinstallation conference at Project site before each construction activity that requires coordination with other construction.
 1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect of scheduled meeting dates.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, and coordination with adjacent activities. Prepare agenda appropriate to Work.
 3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
 4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
 5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.
- D. Project Closeout Conference: Schedule and conduct a project closeout conference, at a time convenient to Owner and Architect, at a time to be decided prior to the scheduled date of Substantial Completion.
1. Conduct the conference to review requirements and responsibilities related to Project closeout.
 2. Attendees: Authorized representatives of Owner, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
 3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:
 - a. Preparation of record documents.
 - b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
 - c. Submittal of written warranties.
 - d. If applicable, requirements for completing sustainable design documentation.
 - e. Requirements for preparing operations and maintenance data.
 - f. Requirements for delivery of material samples, attic stock, and spare parts.
 - g. Requirements for demonstration and training.
 - h. Preparation of Contractor's punch list.
 - i. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
 - j. Submittal procedures.
 - k. If applicable, coordination of separate contracts.
 - l. If applicable, Owner's partial occupancy requirements.
 - m. Installation of Owner's furniture, fixtures, and equipment.
 - n. Responsibility for removing temporary facilities and controls.
 4. Minutes: Entity conducting meeting will record and distribute meeting minutes.
- E. Progress Meetings: Conduct progress meetings at regular intervals.
1. Coordinate dates of meetings with preparation of payment requests.
 2. Attendees: In addition to representatives of Owner and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
 3. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
 - 1) Review schedule for next period.
 - b. Review present and future needs of each entity present, including the following or as needed:
 - 1) Interface requirements.
 - 2) Sequence of operations.
 - 3) If applicable, resolution of BIM component conflicts.
 - 4) Status of submittals.
 - 5) If applicable, status of sustainable design documentation.
 - 6) Deliveries.
 - 7) Off-site fabrication.
 - 8) Access.
 - 9) Site utilization.
 - 10) Temporary facilities and controls.
 - 11) Work hours.
 - 12) Hazards and risks.
 - 13) Progress cleaning.
 - 14) Quality and work standards.
 - 15) Status of correction of deficient items.
 - 16) Field observations.
 - 17) Status of RFIs.
 - 18) Status of proposal requests.
 - 19) Pending changes.
 - 20) Status of Change Orders.
 - 21) Documentation of information for payment requests.
4. Minutes: Entity responsible for conducting the meeting will record and distribute the meeting minutes to each party present and to parties requiring information.
- a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.
- F. Coordination Meetings: Conduct Project coordination meetings on an as-needed basis. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and preinstallation conferences.
- 1. Attendees: Each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meetings shall be familiar with Project and authorized to conclude matters relating to the Work.
 - 2. Agenda: Review items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
 - a. Review present and future needs of each contractor present, including the following:
 - 1) Interface requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 2) Sequence of operations.
- 3) If applicable, resolution of BIM component conflicts.
- 4) Status of submittals.
- 5) Deliveries.
- 6) Off-site fabrication.
- 7) Access.
- 8) Site utilization.
- 9) Temporary facilities and controls.
- 10) Work hours.
- 11) Hazards and risks.
- 12) Progress cleaning.
- 13) Quality and work standards.
- 14) Change Orders.

PART 2 - PRODUCTS

2.1 ARCHITECT'S ELECTRONIC PROJECT MANAGEMENT SOFTWARE

- A. General: So as to expedite electronic review process, process all documents through a web-based software service. Sending documents via email, FTP or paper will not be accepted.
 1. Basis of Design (Product Standard):
 - a. Newforma, Inc.; Newforma Project Cloud, web-based software.
 - 1) Website: www.NewformaProjectCloud.com
 - 2) E-mail: projectcloud@newforma.com
 - 3) Phone: (800) 303-4650
- B. Performance Requirements:
 1. Project License:
 - a. Cloud based (no hardware required).
 - b. Unlimited user accounts.
 - c. Functionality to support subcontractors, contractors, architects and consultants.
 - d. Provide access to data for all project team members at no cost to the individual users.
 2. Training and Support:
 - a. Dedicated project training.
 - b. Phone support.
 3. Archive:
 - a. Export all data to an offline archive at the completion of the project.
 - b. Provide archive to architect, contractor and owner.
 - c. Archive shall include all attachments, meta data, review comments and time stamp history.
 4. Submittals and RFIs:
 - a. Customizable logs and reporting accessible by all users.
 - b. Logs shall automatically update as submittals and RFIs are processed.
 - c. Automated routing of submittals and RFIs to design team based on trade.
 - d. Automated email notifications when submittal or RFI has been assigned or returned to a user.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- e. Automated weekly email to design team users of overdue items.
 - f. Automatic sequential numbering per spec section for submittals.
 - g. Two sets of due dates - one overall due date and a consultant due date.
 - h. Built-in web-based markup tools to support a concurrent review of submittal and RFI.
5. Submittal Register:
- a. Software vendor shall take specifications and build the required list of submittals and import into the software.
6. Drawing Management:
- a. Provide current set of drawings and specifications through a centralized index.
 - b. Automated association of PDFs to the centralized index.
 - c. Manage drawing revisions with customizable review states.
 - d. Drawings shall be accessible offline via mobile devices.
7. File Sharing:
- a. Integrated file sharing tool (FTP) to transfer any miscellaneous files such as BIM and CAD files.
 - b. Access permissions (view/edit) at a folder level.
8. Punch List and other Field Task Management:
- a. Unlimited customizable field task types including punch list.
 - b. Locate and assign tasks from a mobile device.
 - c. No additional fees to individual users to access mobile apps.
 - d. Data shall be accessible offline on mobile devices.

PART 3 - EXECUTION (Not Used)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 013200
CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work.
- B. Related Section:
 - 1. Provide Construction Photographs in accordance with Division 01 Section "Photographic Documentation".

1.2 DEFINITIONS

- A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.
 - 1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
 - 2. Predecessor Activity: An activity that precedes another activity in the network.
 - 3. Successor Activity: An activity that follows another activity in the network.
- B. Major Area: A story of construction, a separate building, or a similar significant construction element.
- C. Milestone: A key or critical point in time for reference or measurement.
- D. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine when activities can be performed and the critical path of Project.
- E. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.
- F. Network Diagram: A graphic diagram of a network schedule, showing activities and activity relationships.
- G. Event: The starting or ending point of an activity.
- H. Float: The measure of leeway in starting and completing an activity.
 - 1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
 - 2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
 - 3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.
- I. Fragnet: A partial or fragmentary network that breaks down activities into smaller activities for greater detail.

1.3 SUBMITTALS

- A. Format for Submittals: Submit required submittals in the following format:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. PDF electronic file.
 - B. Startup Construction Schedule.
 - C. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.
 - D. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.
 - E. CPM Reports: Concurrent with CPM schedule, submit each of the following reports. Format for each activity in reports shall contain activity number, activity description, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.
 1. Activity Report: List of all activities sorted by activity number and then early start date, or actual start date if known.
 2. Logic Report: List of preceding and succeeding activities for all activities, sorted in ascending order by activity number and then early start date, or actual start date if known.
 3. Total Float Report: List of all activities sorted in ascending order of total float.
 4. Earnings Report: Compilation of Contractor's total earnings from the Notice to Proceed until most recent Application for Payment.
 - F. Construction Schedule Updating Reports: Submit with Applications for Payment.
 - G. Daily Construction Reports: Submit at weekly intervals.
 - H. Material Location Reports: Submit at monthly intervals.
 - I. Site Condition Reports: Submit at time of discovery of differing conditions.
 - J. Special Reports: Submit at time of unusual event.
- 1.4 COORDINATION
- A. Coordinate preparation and processing of schedules and reports with performance of construction activities and with scheduling and reporting of separate contractors.
 - B. Coordinate Contractor's construction schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests, and other required schedules and reports.
 1. Secure time commitments for performing critical elements of the Work from entities involved.
 2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.1 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

- A. Time Frame: Extend schedule from date established for the Notice to Proceed to date of final completion.
 1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Activities: Treat each story or separate area as a separate numbered activity for each main element of the Work. Comply with the following:
1. Procurement Activities: Include procurement process activities for the following long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
 2. Submittal Review Time: Include review and resubmittal times indicated in Division 01 Section "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's construction schedule with submittal schedule.
 3. Startup and Testing Time: Include no fewer than 7 days for startup and testing.
 4. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Architect's administrative procedures necessary for certification of Substantial Completion.
 5. Punch List and Final Completion: Include not more than 30 days for completion of punch list items and final completion.
- C. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule (where applicable), and show how the sequence of the Work is affected.
1. Phasing: Arrange list of activities on schedule by phase.
 2. Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
 3. Products Ordered in Advance: Include a separate activity for each product.
 4. Owner-Furnished Products: Include a separate activity for each product.
 5. Work Restrictions: Show the effect of the following items on the schedule:
 - a. Coordination with existing construction.
 - b. Limitations of continued occupancies.
 - c. Uninterruptible services.
 - d. Partial occupancy before Substantial Completion.
 - e. Use of premises restrictions.
 - f. Provisions for future construction.
 - g. Seasonal variations.
 - h. Environmental control.
 6. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:
 - a. Subcontract awards.
 - b. Submittals.
 - c. Purchases.
 - d. Mockups.
 - e. Fabrication.
 - f. Sample testing.
 - g. Deliveries.
 - h. Installation.
 - i. Tests and inspections.
 - j. Adjusting.
 - k. Curing.
 - l. Building flush-out.
 - m. Startup and placement into final use and operation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

7. Construction Areas: Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities to provide for the following:
 - a. Structural completion.
 - b. Temporary enclosure and space conditioning.
 - c. Permanent space enclosure.
 - d. Completion of mechanical installation.
 - e. Completion of electrical installation.
 - f. Substantial Completion.
 8. Other Constraints include but are not limited to the following:
 - a. Roads.
 - b. Parking.
 - c. Landscape.
- D. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, punch list activities, Substantial Completion, and final completion.
- E. Recovery Schedule: When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, and equipment required to achieve compliance, and date by which recovery will be accomplished.
- F. Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.
- 2.2 STARTUP CONSTRUCTION SCHEDULE
- A. Bar-Chart Schedule: Submit startup, horizontal, bar-chart-type construction schedule within 14 days of date established for the Notice of Award.
 - B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first 60 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.
 - C. Startup Network Diagram may be submitted in lieu of Bar-Chart Schedule.
- 2.3 CONTRACTOR'S CONSTRUCTION SCHEDULE (BAR CHART/GANTT CHART)
- A. Bar Chart/Gantt Chart Schedule: Submit a comprehensive, fully developed, horizontal, Gantt-chart-type, Contractor's construction schedule within 30 days of date established for the Notice to Proceed. Base schedule on the startup construction schedule and additional information received since the start of Project.
 - B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line.
 1. For construction activities that require three months or longer to complete, indicate an estimated completion percentage in 10 percent increments within time bar.
- 2.4 CONTRACTOR'S CONSTRUCTION SCHEDULE (CPM SCHEDULE)
- A. General: Prepare network diagrams using AON (activity-on-node) format.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Startup Network Diagram: Submit diagram within 14 days of date established for the Notice to Proceed. Outline significant construction activities for the first 60 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.
- C. CPM Schedule: Prepare Contractor's construction schedule using a time-scaled CPM network analysis diagram for the Work.
 - 1. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 30 days after date established for the Notice to Proceed.
 - a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates, regardless of Architect's approval of the schedule.
 - 2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
 - 3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
 - 4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule in order to coordinate with the Contract Time.
- D. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.
 - 1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:
 - a. Preparation and processing of submittals.
 - b. Purchase of materials.
 - c. Delivery.
 - d. Fabrication.
 - e. Installation.
 - f. Punch list and final completion.
 - 2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
 - 3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
 - 4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.
 - a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.
- E. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment, fragnet, to demonstrate the effect of the proposed change on the overall project schedule.
- F. Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float." Identify critical activities. Prepare tabulated reports showing the following:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Contractor or subcontractor and the Work or activity.
 2. Description of activity.
 3. Main events of activity.
 4. Immediate preceding and succeeding activities.
 5. Early and late start dates.
 6. Early and late finish dates.
 7. Activity duration in workdays.
 8. Total float or slack time.
 9. Average size of workforce.
 10. Dollar value of activity (coordinated with the schedule of values).
- G. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:
1. Identification of activities that have changed.
 2. Changes in early and late start dates.
 3. Changes in early and late finish dates.
 4. Changes in activity durations in workdays.
 5. Changes in the critical path.
 6. Changes in total float or slack time.
 7. Changes in the Contract Time.
- H. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.
1. In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
 2. In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
 3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
 4. Prepare list for ease of comparison with payment requests; coordinate timing with progress meetings.
 - a. In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.
 - b. Submit value summary printouts one week before each regularly scheduled progress meeting.

2.5 REPORTS

- A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:
1. List of subcontractors at Project site.
 2. List of separate contractors at Project site.
 3. Approximate count of personnel at Project site.
 4. High and low temperatures and general weather conditions, including presence of rain or snow.
 5. Accidents.
 6. Meetings and significant decisions.
 7. Unusual events (see special reports).
 8. Stoppages, delays, shortages, and losses.
 9. Meter readings and similar recordings.
 10. Emergency procedures.
 11. Orders and requests of authorities having jurisdiction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

12. Change Orders received and implemented.
13. Construction Change Directives received and implemented.
14. Services connected and disconnected.
15. Equipment or system tests and startups.
16. Partial completions and occupancies.
17. Substantial Completions authorized.

- B. Material Location Reports: At monthly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site.
- C. Site Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.6 SPECIAL REPORTS

- A. General: Submit special reports directly to Owner within one day of an occurrence. Distribute copies of report to parties affected by the occurrence.
- B. Reporting Unusual Events: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

PART 3 - EXECUTION

3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

- A. Scheduling Consultant: Engage a consultant to provide planning, evaluation, and reporting using CPM scheduling.
1. In-House Option: Owner may waive the requirement to retain a consultant if Contractor employs skilled personnel with experience in CPM scheduling and reporting techniques. Submit qualifications.
 2. Meetings: Scheduling consultant shall attend all meetings related to Project progress, alleged delays, and time impact.
- B. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.
1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
 2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
 3. As the Work progresses, indicate final completion percentage for each activity.
- C. Distribution: Distribute copies of approved schedule to Architect-Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Post copies in Project meeting rooms and temporary field offices.
2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 013233
PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Preconstruction photographs.
2. Periodic construction photographs.
3. Final completion construction photographs.
4. Preconstruction video recordings.
5. Periodic construction video recordings.
6. Web-based construction photographic documentation.

1.2 INFORMATIONAL SUBMITTALS

A. Qualification Data: For photographer and Web-based photographic documentation service provider.

B. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph or video recording. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.

C. Digital Photographs: Submit image files within 3 days of taking photographs.

1. Digital Camera: Minimum sensor resolution of 12 megapixels.
2. Format: Minimum 4288 by 2848 pixels, in unaltered original files, with same aspect ratio as the sensor, uncropped, date and time stamped, in folder named by date of photograph, accompanied by key plan file.
3. Image File Naming Convention (separate by an underscore _):
 - a. Project Job Number / Year-Month-Day / Image Number . file extension
4. Identification: Provide the following information with each image description in file metadata tag:
 - a. HKS Job Number and Add Service Number (e.g. 07425.000).
 - b. Name of Project.
 - c. Name and contact information for photographer.
 - d. Name of Architect.
 - e. Name of Contractor.
 - f. Date photograph was taken.
 - g. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - h. Unique sequential identifier keyed to accompanying key plan.

D. Video Recordings: Submit video recordings within 7 days of recording.

1. Video Recordings, General:
 - a. Submit in digital video disc format acceptable to Architect.
 - b. Submit by posting to Project Web site.
 - c. Submit by posting to Web-based photographic documentation service provider's Web site.
2. Identification: With each submittal, provide the following information:
 - a. Name of Project.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Name and address of photographer.
 - c. Name of Architect.
 - d. Name of Contractor.
 - e. Date video recording was recorded.
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - g. Weather conditions at time of recording.
 - 3. Transcript: Provide Portable Data (PDF) Electronic File. Include a cover page with same label information as corresponding video recording. Include name of Project and date of video recording on each page.
- E. Web-Based Photographic Documentation: Submit time-lapse sequence video recordings simultaneously with recording.
- 1. Real-time posting: Post in real-time, time-lapse sequence video recordings:
 - a. Post to Project Web site.
 - b. Post to Web-based photographic documentation service provider's Web site.
 - 2. Periodic Posting: Monthly on digital video disc.
 - 3. Identification: For each recording, provide the following information:
 - a. Name of Project.
 - b. Name and contact information for photographer.
 - c. Name of Architect.
 - d. Name of Contractor.
 - e. Date(s) and time(s) video recording was recorded.
 - f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - g. Weather conditions at time of recording.
- 1.3 QUALITY ASSURANCE
- A. Photographer Qualifications: An individual who has been regularly engaged as a professional photographer of construction projects for not less than three years.
 - B. Web-Based Photographic Documentation Service Provider: A firm specializing in providing photographic equipment, Web-based software, and related services for construction projects, with record of providing satisfactory services similar to those required for Project.
- 1.4 USAGE RIGHTS
- A. Obtain and transfer copyright usage rights from photographer to Owner for unlimited reproduction of photographic documentation.

PART 2 - PRODUCTS

2.1 PHOTOGRAPHIC MEDIA

- A. Digital Images: Provide images in JPG format, produced by a digital camera with minimum sensor size of megapixels, and at an image resolution of not less than 4288 by 2848 pixels.
- B. Digital Video Recordings: Provide high-resolution, digital video disc in format acceptable to Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 WEB-BASED PHOTOGRAPHIC DOCUMENTATION

- A. Project Camera: Provide fixed exterior camera installation, mounted to provide unobstructed view of construction site from location approved by Architect.
 - 1. Provide 4 fixed-location camera(s), with the following characteristics:
 - a. Remotely controllable view with mouse-click user navigation for horizontal pan, vertical tilt, and optical zoom of 500 percent minimum.
 - b. Capable of producing minimum 3 megapixel pictures.
 - c. Provide power supply, active high-speed data connection to service provider's network, and static public IP address for each camera.
- B. Web-Based Image Access: Password-protected access for Project team administered by Contractor, providing current image access and archival image access by date and time, with images downloadable to viewer's device.
 - 1. Provide public viewer open access to most recent project camera image.

PART 3 - EXECUTION

3.1 CONSTRUCTION PHOTOGRAPHS

- A. Photographer: Engage a qualified photographer to take construction photographs.
- B. General: Take photographs using the maximum range of depth of field, and that are in focus, to clearly show the Work. Photographs with blurry or out-of-focus areas will not be accepted.
 - 1. Maintain key plan with each set of construction photographs that identifies each photographic location.
- C. Digital Images: Submit digital images exactly as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.
 - 1. Date and Time: Include date and time in file name for each image.
 - 2. Field Office Images: Maintain one set of images accessible in the field office at Project site, available at all times for reference. Identify images in the same manner as those submitted to Architect.
- D. Preconstruction Photographs: Before starting construction, take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Architect.
 - 1. Flag construction limits before taking construction photographs.
 - 2. Take a minimum of 20 photographs to show existing conditions adjacent to property before starting the Work.
 - 3. Take a minimum of 20 photographs of existing buildings either on or adjoining property to accurately record physical conditions at start of construction.
 - 4. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.
- E. Periodic Construction Photographs: Take 20 photographs monthly, coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken.
- F. Time-Lapse Sequence Construction Photographs: Take 20 photographs as indicated, to show status of construction and progress since last photographs were taken.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Frequency: Take photographs monthly, coinciding with the cutoff date associated with each Application for Payment.
 2. Vantage Points: Following suggestions by Architect and Contractor, photographer to select vantage points. During each of the following construction phases, take not less than 2 of the required shots from same vantage point each time to create a time-lapse sequence as follows:
 - a. Commencement of the Work, through completion of subgrade construction.
 - b. Above-grade structural framing.
 - c. Exterior building enclosure.
 - d. Interior Work, through date of Substantial Completion.
 - G. Drones (If Applicable): Flight Schedule per mutual agreement between the Owner and Contractor to show status of construction and progress.
 - H. Final Completion Construction Photographs: Take 20 color photographs after date of Substantial Completion for submission as project record documents. Architect will inform photographer of desired vantage points.
 1. Do not include date stamp unless directed otherwise by Architect.
 - I. Additional Photographs: Architect may request photographs in addition to periodic photographs specified. Additional photographs will be paid for by Change Order and are not included in the Contract Sum.
 1. Three days' notice will be given, where feasible.
 2. In emergency situations, take additional photographs within 24 hours of request.
 3. Circumstances that could require additional photographs include, but are not limited to, the following:
 - a. Special events planned at Project site.
 - b. Immediate follow-up when on-site events result in construction damage or losses.
 - c. Photographs to be taken at fabrication locations away from Project site.
 - d. Substantial Completion of a major phase or component of the Work.
 - e. Extra record photographs at time of final acceptance.
 - f. Owner's request for special publicity photographs.
- 3.2 CONSTRUCTION VIDEO RECORDINGS
- A. Video Recording Photographer: Engage a qualified videographer to record construction video recordings.
 - B. Recording: Mount camera on tripod before starting recording unless otherwise necessary to show area of construction. Display continuous running time and date. At start of each video recording, record weather conditions from local newspaper or television and the actual temperature reading at Project site.
 - C. Narration: Describe scenes on video recording by dubbing audio narration off-site after video recording is recorded. Include description of items being viewed, recent events, and planned activities. At each change in location, describe vantage point, location, direction (by compass point), and elevation or story of construction.
 1. Confirm date and time at beginning and end of recording.
 2. Begin each video recording with name of Project, Contractor's name, videographer's name, and Project location.
 - D. Transcript: Provide a typewritten transcript of the narration. Display images and running time captured from video recording opposite the corresponding narration segment.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Preconstruction Video Recording: Before starting construction, record video recording of Project site and surrounding properties from different vantage points, as directed by Architect.
 - 1. Flag construction limits before recording construction video recordings.
 - 2. Show existing conditions adjacent to Project site before starting the Work.
 - 3. Show existing buildings either on or adjoining Project site to accurately record physical conditions at the start of construction.
 - 4. Show protection efforts by Contractor.
- F. Periodic Construction Video Recordings: Record video recording monthly, coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last video recordings were recorded. Minimum recording time shall be 30 minutes(s).
- G. Time-Lapse Sequence Construction Video Recordings: Record video recording to show status of construction and progress.
 - 1. Frequency: During each of the following construction phases, set up video recorder to automatically record one frame of video recording every 5 minutes, from same vantage point each time, to create a time-lapse sequence of 30 minutes in length as follows:
 - a. Commencement of the Work, through completion of subgrade construction.
 - b. Above-grade structural framing.
 - c. Exterior building enclosure.
 - 2. Timer: Provide timer to automatically start and stop video recorder so recording occurs only during daylight construction work hours.
 - 3. Vantage Points: Following suggestions by Architect and Contractor, photographer shall select vantage points.

3.3 WEB-BASED CONSTRUCTION PHOTOGRAPHIC DOCUMENTATION

- A. Live Streaming Construction Site Images: Provide Web-accessible image of current site image from viewer-controlled location camera(s), updated at 15 minute intervals during daytime operation.
- B. Time-Lapse Sequence Construction Site Recordings: Provide video recording from a fixed-location camera to show status of construction and progress.
 - 1. Frequency: Record one frame of video recording every 15 minutes, from same vantage point each time, to create a time-lapse sequence of construction activities.
 - 2. Timer: Provide timer to automatically start and stop video recorder so recording occurs only during daylight construction work hours.
- C. Maintain cameras and Web-based access in good working order according to Web-based construction photographic documentation service provider's written instructions until final completion. Provide for service of cameras and related networking devices and software.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 013300
SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

1.2 DEFINITIONS

- A. Action Submittals: Written and graphic information and physical samples that require Architect's review. Architect's responsive action is required.
- B. Digital Signature: A digital signature or digital signature scheme is a mathematical scheme for demonstrating the authenticity of a digital message or document.
- C. Electronic Signature: An electronic signature is any legally recognized electronic means that indicates that a person adopts the contents of an electronic message.
- D. Informational Submittals: Written and graphic information other than action submittals that require Architect's review. Architect's responsive action is required on informational submittals that do not comply with the information given and design concept expressed in the Drawings and Specifications.
- E. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

1.3 SUBMITTALS

- A. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.
 - 1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
 - 2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
 - 3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.
 - a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.
 - 4. Format: Arrange the following information in a tabular format:
 - a. Scheduled date for first submittal.
 - b. Specification Section number and title.
 - c. Submittal category: Action; informational.
 - d. Name of subcontractor.
 - e. Description of the Work covered.
 - f. Scheduled date for Architect's final release or approval.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

- A. Architect's Digital Data Files: If approved by Owner, Architect will furnish Contractor one set of digital data files of Drawing files for use in preparing submittals. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
 - 1. Distribution: Digital data files shall only be distributed with acceptance of HKS data licensing agreement.
- B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
 - 1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
 - 2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
 - 3. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
 - a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
- C. Processing Time: Allow sufficient and reasonable time for submittal review, including time for resubmittals. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
 - 1. The Architect's action will be taken in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness while allowing sufficient time in the Architect's professional judgment to permit adequate review.
- D. Paper Submittals: Architect reserves the right to require paper submittals.
- E. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:
 - 1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
 - 2. Name file with submittal number, including revision identifier.
 - a. File Naming Convention (separate by dashes - or underscores _):
 - 1) Specification Number / Revision Number / Submittal Sequence (A, B, C, etc.).pdf
 - 3. Provide means for insertion to permanently record Contractor's review and approval markings and action taken by Architect.
 - 4. Transmittal Form for Electronic Submittals: Use software-generated form from electronic project management software or electronic form acceptable to Owner, containing the following information:
 - a. Project name.
 - b. Date.
 - c. Name and address of Architect.
 - d. Name of Contractor.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- e. Name of firm or entity that prepared submittal.
 - f. Names of subcontractor, manufacturer, and supplier.
 - g. Category and type of submittal.
 - h. Submittal purpose and description.
 - i. Specification Section number and title.
 - j. Specification paragraph number or drawing designation and generic name for each of multiple items.
 - k. Drawing number and detail references, as appropriate.
 - l. Location(s) where product is to be installed, as appropriate.
 - m. Related physical samples submitted directly.
 - n. Indication of full or partial submittal.
 - o. Transmittal number, numbered consecutively.
 - p. Submittal and transmittal distribution record.
 - q. Other necessary identification.
 - r. Remarks.
5. Metadata: Include the following information as keywords in the electronic submittal file metadata:
- a. HKS Job Number and Add Service Number (e.g. 14424.000)
 - b. Project name.
 - c. Number and title of appropriate Specification Section.
 - d. Manufacturer name.
 - e. Product name.
 - f. Submittal revision number.
6. Utilize electronic project management software program to process submittals when feasible with the type and extent of submittals. Refer to Division 01 Section "Project Management and Coordination" for description of electronic project management software.
- F. Options: Identify options requiring selection by Architect.
- G. Deviations and Additional Information: On page, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by Architect on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.
- H. Resubmittals: Make resubmittals in same form as initial submittal.
- 1. Note date and content of previous submittal.
 - 2. Note date and content of revision in file name and clearly indicate extent of revision.
 - 3. Resubmit submittals until they are marked with notation from Architect's action stamp not requiring additional submittals.
- I. Distribution: Furnish electronic copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.
- J. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with appropriate notation from Architect's action stamp indicating for construction. Retain a separate copy for Owner to be delivered to Owner with Project Closeout documents.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

- A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
1. Submit electronic submittals as PDF electronic files directly to Architect's Project Web site specifically established for Project.
 - a. Architect will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
 - b. Provide PDF electronic files from scanned paper originals at 300 dpi, minimum.
 2. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
 - a. Provide a digital signature with digital certificate on electronically submitted certificates and certifications where indicated.
 - b. When one or more individual Specification Sections includes requirements for notarized signature on certificates and certifications, provide a notarized statement on original paper copy certificates and certifications where indicated.
- B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
 2. Mark each copy of each submittal to show which products and options are applicable.
 3. Include the following information, as applicable:
 - a. Manufacturer's written recommendations.
 - b. Manufacturer's installation instructions.
 - c. Mill reports.
 - d. Standard product operating and maintenance manuals.
 - e. Certification that products are appropriate for installation indicated.
 - f. Manufacturer's catalog cuts.
 - g. Manufacturer's product specifications.
 - h. Standard color charts.
 - i. Statement of compliance with specified referenced standards.
 - j. Testing by recognized testing agency.
 - k. Application of testing agency labels and seals.
 - l. Notation of coordination requirements.
 - m. Availability and delivery time information.
 4. For equipment, include the following in addition to the above, as applicable:
 - a. Wiring diagrams showing factory-installed wiring.
 - b. Printed performance curves.
 - c. Operational range diagrams.
 - d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
 5. Submit Product Data before or concurrent with Samples.
 6. Submit Product Data in the following format:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. PDF electronic file.
- C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.
- 1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
 - a. Identification of products.
 - b. Dimensions.
 - c. Fabrication and installation drawings.
 - d. Roughing-in and setting diagrams.
 - e. Wiring diagrams showing field-installed wiring, including power, signal, and control wiring.
 - f. Shopwork manufacturing instructions.
 - g. Templates and patterns.
 - h. Design calculations.
 - i. Schedules.
 - j. Compliance with specified standards.
 - k. Notation of coordination requirements.
 - l. Notation of dimensions established by field measurement.
 - m. Relationship and attachment to adjoining construction clearly indicated.
 - n. Seal and signature of professional engineer.
 - 2. Wiring Diagrams: Differentiate between manufacturer-installed and field-installed wiring.
 - 3. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches (212 by 275 mm), but no larger than 30 by 42 inches (750 by 1050 mm).
 - 4. Submit Shop Drawings in the following format:
 - a. PDF electronic file.
 - 5. BIM File Incorporation: When applicable, develop and incorporate Shop Drawing files into Building Information Model established for Project.
 - a. Prepare Shop Drawings in the following format: Same digital data software program, version, and operating system as the original Drawings.
 - b. Refer to Division 01 Section "Project Management and Coordination" for requirements for coordination drawings.
- D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
- 1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
 - 2. Identification: Attach label on unexposed side of Samples that includes the following:
 - a. Generic description of Sample.
 - b. Product name and name of manufacturer.
 - c. Sample source.
 - d. Number and title of applicable Specification Section.
 - e. Specification paragraph number and generic name of each item.
 - 3. For projects where electronic submittals are required, provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record. This is in addition to physical samples.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
 - a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
 - b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.
5. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
 - a. Number of Samples: Submit 4 full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.
6. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
 - a. Number of Samples: Submit 4 sets of Samples. Architect will retain 2 Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record sample.
 - 1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
 - 2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least 4 sets of paired units that show approximate limits of variations.
- E. Coordination Drawing Submittals: Comply with requirements specified in Division 01 Section "Project Management and Coordination."
- F. Contractor's Construction Schedule: Comply with requirements specified in Division 01 Section "Construction Progress Documentation."
- G. Application for Payment and Schedule of Values: Comply with requirements specified in Division 01 Section "Payment Procedures."
- H. Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with requirements specified in Division 01 Section "Quality Requirements."
- I. Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified in Division 01 Section "Closeout Procedures."
- J. Maintenance Data: Comply with requirements specified in Division 01 Section "Operation and Maintenance Data."
- K. Sustainable Construction Submittals: Where applicable, comply with requirements specified in Division 01 sustainable construction requirements Section.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- L. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.
- M. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.
- N. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
- O. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
- P. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.
- Q. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.
- R. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
- S. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
- T. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
 - 1. Name of evaluation organization.
 - 2. Date of evaluation.
 - 3. Time period when report is in effect.
 - 4. Product and manufacturers' names.
 - 5. Description of product.
 - 6. Test procedures and results.
 - 7. Limitations of use.
- U. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
- V. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
- W. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- X. Design Data: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.2 DELEGATED-ENGINEERING SERVICES

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
- B. Delegated-Engineering Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file and three paper copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
 - 1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.
- C. BIM File Incorporation: Where applicable, incorporate delegated-design drawing and data files into Building Information Model established for Project.
 - 1. Prepare delegated-design drawings in the following format: Same digital data software program, version, and operating system as the original Drawings.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

- A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.
- B. Project Closeout and Maintenance Material Submittals: See requirements in Division 01 Section "Closeout Procedures."
- C. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ARCHITECT'S ACTION

- A. Action Submittals: Architect will review submittal, make marks to indicate corrections or revisions required, and return it. Architect will stamp and mark submittal appropriately, as follows:
 - 1. Final but Restricted Release: When submittals are marked "Accepted as Noted," the Work covered by the submittal may proceed provided it complies with both the Architect's notations and corrections on the submittal and requirements of the Contract Documents. Final acceptance will depend on that compliance.
 - 2. Returned for Resubmittal: When submittal is marked "Revise Resubmit," do not proceed with the Work covered by the submittal, including purchasing, fabrication, delivery, or

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

other activity. Revise or prepare a new submittal in accordance with the Architect's notations. Resubmit without delay. Repeat if necessary to obtain a different action mark.

- a. Do not permit submittals marked "Revise Resubmit" to be used at the Project site, or elsewhere where construction is in progress.
- 3. Submittals Not Required: Where a submittal is primarily for record purposes, special processing, or other Contractor activity, the submittal will be returned, marked "Not Reviewed; Submittal not required by Contract Documents".
- B. Architect's Acceptance of Shop Drawings, Samples or Product Data which deviates from the Contract Documents does not authorize changes to the Contract Sum. Submit in writing at the time of submission any changes to the Contract Sum affected by such Shop Drawings, Samples or Product Data, otherwise, claim for extras will not be considered.
- C. Informational Submittals: Architect will review submittal, and return it in accordance with submittal Processing Time indicated if it does not comply with requirements. Architect will stamp and mark submittal appropriately.
- D. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect. Review shall not be final until complete submittal has been reviewed by Architect.
- E. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.
- F. Submittals not required by the Contract Documents may be returned by the Architect without action.
- G. Electronic File of Submittal Documents: Provide Architect with an independent electronic archive of project submittal documents using electronic project management software as defined in Division 01 Section "Project Management and Coordination".

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 014000
QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for quality assurance and quality control.
- B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.
 - 1. Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
 - 2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
 - 3. Requirements for Contractor to provide quality-assurance and -control services required by Architect, Owner, or authorities having jurisdiction are not limited by provisions of this Section.

1.2 DEFINITIONS

- A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by Architect.
- C. Mockups: Full-size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under Sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Mockups establish the standard by which the Work will be judged.
 - 1. Integrated Exterior Cladding Mockups: Mockups of the exterior envelope erected separately from the building but on Project site, consisting of multiple products, assemblies, and subassemblies.
 - 2. Typical Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes, doors, windows, millwork, casework, specialties, furnishings and equipment, and lighting.
 - 3. Preconstruction Laboratory Mockups: Full-size physical assemblies constructed at testing facility to verify performance characteristics.
- D. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria.
- E. Product Testing: Tests and inspections that are performed by an NRTL (Nationally Recognized Testing Laboratories), an NVLAP (National Voluntary Laboratory Accreditation

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Program), or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.

- F. Source Quality-Control Testing: Tests and inspections that are performed at the source, e.g., plant, mill, factory, or shop.
- G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.
- H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.
- I. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.
 - 1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).
- J. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction and with the qualification requirements of individual specification section governing their work.

1.3 CONFLICTING REQUIREMENTS

- A. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements to Architect for a decision before proceeding.
- B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.
- C. If work is required in a manner that makes it impossible to produce such work of the quality required by or reasonably inferred from the Contract Documents, or should discrepancies appear among the Construction Documents, the Contractor shall request in writing an interpretation from the Architect before proceeding with the work. If the Contractor fails to make such request, no excuse will be entertained thereafter for failure to carry out work in the required manner or to produce required guarantees, warranties, or bonds, and the Contractor shall not be entitled to any change in the Contract Sum or the Contract Time on account of such failure.

1.4 CONTRACTOR'S QUALITY-CONTROL PLAN

- A. Quality-Control Plan, General: Submit quality-control plan prior to preconstruction conference. Submit in format acceptable to Architect. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities. Coordinate with Contractor's construction schedule.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Quality-Control Personnel Qualifications: Engage qualified full-time personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.
 - 1. Project quality-control manager may be the Project superintendent or be an individual with no other Project responsibilities, as accepted by the Architect.
 - C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.
 - D. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:
 - 1. Contractor-performed tests and inspections including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections.
 - 2. Special inspections required by authorities having jurisdiction and indicated on the "Statement of Special Inspections."
 - 3. Owner-performed tests and inspections indicated in the Contract Documents, including tests and inspections indicated to be performed by the Commissioning Authority when Commissioning is included in the Project.
 - E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring work into compliance with standards of workmanship established by Contract requirements and approved mockups.
 - F. Monitoring and Documentation: Maintain testing and inspection reports including log of approved and rejected results, including Owner acceptance of nonconforming work. Include work Architect has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming work into compliance with requirements. Comply with requirements of authorities having jurisdiction.
- 1.5 REPORTS AND DOCUMENTS
- A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:
 - 1. Date of issue.
 - 2. Project title and number.
 - 3. Name, address, and telephone number of testing agency.
 - 4. Dates and locations of samples and tests or inspections.
 - 5. Names of individuals making tests and inspections.
 - 6. Description of the Work and test and inspection method.
 - 7. Identification of product and Specification Section.
 - 8. Complete test or inspection data.
 - 9. Test and inspection results and an interpretation of test results.
 - 10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
 - 11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
 - 12. Name and signature of laboratory inspector.
 - 13. Recommendations on retesting and reinspecting.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of technical representative making report.
 2. Statement on condition of substrates and their acceptability for installation of product.
 3. Statement that products at Project site comply with requirements.
 4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
 5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 6. Statement whether conditions, products, and installation will affect warranty.
 7. Statement whether conditions, products, and installation exceed manufacturer's statements.
 8. Other required items indicated in individual Specification Sections.
- C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of factory-authorized service representative making report.
 2. Statement that equipment complies with requirements.
 3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 4. Statement whether conditions, products, and installation will affect warranty.
 5. Other required items indicated in individual Specification Sections.
- D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.6 QUALITY ASSURANCE

- A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.
- B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
- E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.
- G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 329; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.
1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
 2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.
- H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.
- J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:
1. Contractor responsibilities include the following:
 - a. Provide test specimens representative of proposed products and construction.
 - b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
 - c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
 - d. Build site-assembled test assemblies and mockups using installers who will perform same tasks for Project.
 - e. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.
 - f. When testing is complete, remove test specimens, assemblies, mockups, and laboratory mockups; do not reuse products on Project.
 2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.
- K. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up to comply with the following requirements, using materials indicated for the completed Work:
1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Show typical components, attachments to building structure, and requirements of installation.
 2. Clean exposed faces of mock-up.
 3. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 5. Protect accepted mock-up from the elements with weather-resistant membrane.
 6. Obtain Architect's acceptance of mock-ups before starting fabrication.
 7. Maintain mock-ups during construction in an undisturbed condition as a standard for review of the completed Work.
 8. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor, submitted to Architect in writing, and accepted by Architect in writing.
 9. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.
- L. Integrated Exterior Cladding Mockups: See Division 01 Section Visual Mock-Ups.
- M. Typical Room Mockups: See Division 01 Section Visual Mock-Ups.
- N. Preconstruction Laboratory Mockups: See Division 01 Section "Preconstruction Laboratory Mockup Testing for Building Enclosure Systems."
- 1.7 QUALITY CONTROL
- A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.
1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
 2. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor.
- B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.
1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
 2. Where services are indicated as Contractor's responsibility, engage a qualified testing agency to perform these quality-control services.
 - a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.
 3. Notify testing agencies at least 48 hours in advance of time when Work that requires testing or inspecting will be performed.
 4. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
 5. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
 6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. **Manufacturer's Field Services:** Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Division 01 Section "Submittal Procedures."
- D. **Manufacturer's Technical Services:** Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.
- E. **Retesting/Reinspecting:** Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.
- F. **Testing Agency Responsibilities:** Cooperate with Architect and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.
 - 1. Notify Architect and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
 - 2. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
 - 3. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
 - 4. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
 - 5. Do not perform any duties of Contractor.
- G. **Associated Services:** Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
 - 1. Access to the Work.
 - 2. Incidental labor and facilities necessary to facilitate tests and inspections.
 - 3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
 - 4. Facilities for storage and field curing of test samples.
 - 5. Delivery of samples to testing agencies.
 - 6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
 - 7. Security and protection for samples and for testing and inspecting equipment at Project site.
- H. **Coordination:** Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
 - 1. Schedule times for tests, inspections, obtaining samples, and similar activities.
- I. **Schedule of Tests and Inspections:** Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Coordinate and submit concurrently with Contractor's construction schedule.
 - 1. **Distribution:** Distribute schedule to Owner, Architect, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.
 - a. Prepare in tabular form and include the following:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 1) Specification Section number and title.
- 2) Entity responsible for performing tests and inspections.
- 3) Description of test and inspection.
- 4) Identification of applicable standards.
- 5) Identification of test and inspection methods.
- 6) Number of tests and inspections required.
- 7) Time schedule or time span for tests and inspections.
- 8) Requirements for obtaining samples.
- 9) Unique characteristics of each quality-control service.

1.8 SPECIAL TESTS AND INSPECTIONS

- A. Special Tests and Inspections: Owner may engage a qualified to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Owner, and as follows:
1. Notifying Architect and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
 2. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect with copy to Contractor and to authorities having jurisdiction.
 3. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
 4. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
 5. Retesting and reinspecting corrected work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

- A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:
1. Date test or inspection was conducted.
 2. Description of the Work tested or inspected.
 3. Date test or inspection results were transmitted to Architect.
 4. Identification of testing agency or special inspector conducting test or inspection.
- B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Architect's reference during normal working hours.

3.2 REPAIR AND PROTECTION

- A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas in a manner that eliminates evidence of patching. Comply with the Contract Document requirements for cutting and patching in Division 01 Section "Execution."
- B. Protect construction exposed by or for quality-control service activities.
- C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

SECTION 014200
REFERENCES

PART 1 - GENERAL

1.1 DEFINITIONS

- A. General: Basic Contract definitions are included in the Conditions of the Contract.
- B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
- C. "Directed": A command or instruction by Architect. Other terms, including "requested," "authorized," "selected," "required," and "permitted," have the same meaning as "directed."
- D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms, including "shown," "noted," "scheduled," and "specified," have the same meaning as "indicated."
- E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
- H. "Provide": Furnish and install, complete and ready for the intended use.
- I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

1.2 INDUSTRY STANDARDS

- A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
- B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
 - 1. For standards referenced by applicable building codes, comply with dates of standards as listed in building codes.
- C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.
 - 1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.3 ABBREVIATIONS AND ACRONYMS

- A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they are to mean the recognized name of the entities indicated in Gale's

SECTION 014323
SPECIAL INSPECTIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Special Inspections required by Authorities Having Jurisdiction including supplementary work necessary to complete inspections.

1.2 RESPONSIBILITY

- A. Special Inspections do not relieve the Contractor of the responsibility to provide construction in accordance with the Contract Documents.

1.3 INSPECTOR'S RESPONSIBILITY

- A. Special Inspector shall be acceptable to the Authorities Having Jurisdiction for this project.
- B. Special Inspector shall be completely familiar with the Contract Documents relating to inspection responsibility.

1.4 COOPERATION

- A. Contractor shall cooperate with and assist Special Inspector in performing Special Inspections. Special Inspector shall have access to the project without restriction.
 - 1. Contractor shall advise Special Inspector in advance of construction schedules and planned operations to assure timely and appropriate observation and inspection of items requiring Special Inspections.
 - 2. Contractor shall make available approved Shop Drawings to the Special Inspector at jobsite.

1.5 OWNER'S RESPONSIBILITY

- A. Cost of employing the Special Inspector shall be the responsibility of the Owner.
- B. Final interpretation of the Contract Documents shall rest with the Architect and Engineers of Record.

1.6 GENERAL DUTIES OF SPECIAL INSPECTOR

- A. Special Inspector shall cooperate with the Contractor on timely observations and inspections of Work. Special Inspector shall not supervise or direct the Work.
- B. Special Inspector shall immediately alert the Contractor of discrepancies and deviations from the Contract Documents and approved Shop Drawings.
- C. Special Inspection Reports shall be submitted within 24 hours of the time and date of the observation and inspection.
 - 1. Special Inspector shall submit his reports to the Authorities Having Jurisdiction for the project. In addition, Special Inspector shall submit copies of reports to the Owner and to the Contractor.
 - 2. Upon completion of the building and prior to the issuance of a Certificate of Occupancy, a signed and sealed statement by the Special Inspector shall be submitted to the Authorities Having Jurisdiction, stating the portion of the project subject to Special Inspections has been constructed in accordance with the Contract Documents. This statement shall be provided in accordance with the governing building codes and ordinances.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.7 SCHEDULE OF SPECIAL INSPECTIONS

- A. Refer to Summary of Special Inspections.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 01 43 39 – MOCK-UP WALL CONSTRUCTION

PART 1 – GENERAL

1.1 DESCRIPTION

- A. An Envelope Pre-construction meeting shall be held with all of the subcontractors responsible for erecting the envelope related materials.
 - 1. Attendees shall include (but are not limited to): General Contractor, framing and sheathing subcontractor, masonry subcontractor, weather barrier subcontractor, storefront and glazing subcontractor, roofing and sheet metal subcontractors, ACM and metal panel subcontractor, mechanical and electrical subcontractors, and any other trade that will install products in the exterior building envelope, or penetrate through the exterior envelope.
- B. Work includes: Constructing mock-up, including all reviewed submittals required by the Contract Documents, to establish compliance with the design intent as well as the specified requirements to provide a complete and watertight facility.
- C. Providing a photo manifest of as-built conditions as the mock-up is being constructed. Photos shall be kept at the job site during construction for reference.
- D. Mock-up fabrication must be completed and reviewed and approved by the Owner and Architect prior to starting installation of building envelope construction.

1.2 RELATED REQUIREMENTS

- A. Individual sections of these specifications for each material indicated for use in the mock-up wall construction.

1.3 SUBMITTALS

- A. Section 01 30 00 – Administrative Requirements, for submittal procedures.
- B. Shop Drawings: Indicate dimensions, layout, joints, construction details, methods of anchorage, etc. as required for items to be installed in the mock-up wall construction.
- C. All submittals for materials required in the mock-up walls shall be approved prior to beginning work on the mock-up wall construction.

1.4 PURPOSE

- A. The mock-up wall panels are to be constructed as indicated on the drawings, including toothed masonry construction to allow exposed flashings, etc. Construction of the mock-up walls are intended to:
 - 1. Provide an acceptable quality standard for the completed work.
 - 2. Identify color and finish selections of the various materials used, as well as the acceptable range of color and variations within those materials.
 - 3. Establish the required coordination between trades and the sequence of necessary installations to provide a complete and watertight building envelope.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.5 QUALITY ASSURANCE

- A. Coordination of product submittals and construction installation:
 - 1. Prior to each submittal, carefully review and coordinate all aspects of each item being submitted.
 - 2. Verify that each item being submitted is in conformance in all respects with the specified requirements.
 - 3. By affixing the Contractor's signature to each submittal for the mock-up, the contractor certifies that this coordination has been performed.
 - 4. Contractor shall construct the site built mock-up with the same manner of specified construction as the new construction.
 - 5. Contractor shall construct the site built mock-up with the same workmanship and quality as being implemented on the new construction.
 - 6. All material to be installed shall be reviewed by architect and consultants for conformance.

PART 2 – PRODUCTS

2.1 MOCK-UP REQUIREMENTS

- A. Build mock-ups to verify selections made under sample submittals and to demonstrate aesthetic effects and qualities of materials and execution. Mock-up wall construction shall be coordinated by the General Contractor and constructed by the subcontractor responsible for the actual construction work. All conditions and materials to be used on the job shall be included in the mock-up. Build mock-ups to comply with the listed requirements, using materials indicated for the completed Work.
- B. Contractor shall start the construction of the mock-up based on, but not limited to, the following list:
 - 1. Foundation if subgrade is present
 - 2. Waterproofing membrane
 - 3. Damproofing material
 - 4. Flexible Through-Wall Flashing Membrane
 - 5. Metal Through-Wall Flashing
 - 6. Preformed Flashing Pieces
 - 7. Face Brick with Mortar and Weeps
 - 8. CMU with mortar and weeps
 - 9. Wall Ties
 - 10. Weather Barrier
 - 11. Portland Cement Plaster
 - 12. Metal Panels, Wall and Soffit
 - 13. Metal Roof Panels
 - 14. Low Slope Roof System
 - 15. Weeps
 - 16. Window Unit
 - 17. Louver Unit
 - 18. ICF Wall Systems with weather barriers
- C. Samples and Manufacturer's Submittals: Submit prior to delivery or installation.
 - 1. Samples of all building system components including all specified accessories.
 - 2. Submit samples of proposed warranties complete with any addenda necessary to meet the warranty requirements as specified.
 - 3. Submit latest edition of manufacturer's specifications and installation procedures. Submit only those items applicable to this project.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. A written statement from the materials manufacturer approving the installer, specifications and drawings as described and/or shown for this project and stating the intent to guarantee the completed project.
 5. Follow submitted shop drawings, product data of all sheet metal.
- D. Scale and Measurements: Make Shop Drawings accurately to a scale sufficiently large enough to show all pertinent aspects of the item and its method of connection to the work.
- E. Shop Drawings and Product Data: Provide manufacturer's approved details of all conditions, projection conditions, and any additional special job conditions which require details other than indicated in the drawings.
1. Manufacturer's Details: All termination details and other details normally required by the manufacturer's Technical Specifications, including both standard details and special details, shall be furnished by the Contractor and shall be approved in writing by the manufacturer, the company project manager, and the Owner's representative prior to final installation.
- F. Provide manufacturer's approved details, of all perimeter conditions, project conditions, and any additional special job conditions which require details other than indicated in the drawings.

2.2 MANUFACTURER'S LITERATURE

- A. Work provided on the mock-up shall follow all of the submitted literature from manufacturers.
- B. Manufacturer's literature shall be the minimum for basis of design and shall be in conjunction with construction documents. All manufacturers' warranties shall remain in effect as specified.

2.3 SAMPLES

- A. Provide sample or samples identical to the precise article proposed to be provided.

2.4 COLORS AND PATTERNS

- A. Unless the precise color and pattern are specifically called out in the Contract Documents, and whenever a choice of color or pattern is available in the specified products, submit accurate color and pattern charts to the Architect/Project Manager for selection in advance of the Envelope Pre-Construction meeting.
- B. Contractor shall coordinate with Architect for exact layout or design of patterns and textures and how they are to be installed on the mock-up.

PART 3 – EXECUTION

3.1 ENVELOPE PRE-CONSTRUCTION MEETING

- A. Convene a minimum of one week prior to initiation of the mock-up wall construction.
- B. Verify that all required submittals have been approved and that color/finish selections have been made.
- C. Establish coordination between trades and establish sequencing of material installations to ensure a complete and watertight assembly.
- D. Distribute meeting minutes and agreed upon sequencing to all subcontractors.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Construct mock-up walls in accordance with the established procedures and installation sequencing.

3.2 INSTALLATION OF MATERIALS

- A. Contractor shall install all materials on mock-up in same manner required for the main structure. Refer to specification sections for basis of design of all material being installed on this mock-up.
- B. During installation, Contractor shall maintain a photo manifest of mock-up construction for Architect and Owner to review.
- C. Quality of installation is of utmost importance and shall be monitored for completeness and conformance with the design intent and manufacturer's installation recommendations.
- D. Once mock-up is complete, it shall be reviewed by the Architect and Owner's Representative for conformance to construction documents.
- E. Contractor shall install material in same sequencing as required by industry standards.

3.3 INSTALLATION OF WINDOWS AND ASSOCIATED FLASHING

- A. Installer shall coordinate the installation of the window with associated trades to maintain proper compatibility of material.
- B. Installation shall be in accordance with referencing specifications.
- C. Install all perimeters flashing as detailed to create a sealed and watertight condition which includes the installation of the intermediate bead of sealant and backer rod prior to the installation of the membrane.
- D. Once window and flashing has been installed, Contractor shall notify Architect, Owner and Consultants for review for conformance and shall provide a water test of all wall flashing. Contractor shall notify Architect, Owner and Consultants to observe the testing. All tests shall be in accordance with referencing specifications.

3.4 INSTALLATION OF FLASHING AT THROUGH-WALL LOCATION

- A. Installer shall coordinate the installation of the wall flashing with associated trades to maintain proper compatibility of material.
- B. Installation shall be in accordance with referencing specifications.
- C. Once flashing has been installed, Contractor shall notify Architect, Owner and Consultants for review for conformance and shall provide a water test of all wall flashing. Contractor shall notify Architect, Owner and Consultants to observe the testing. All tests shall be in accordance with referencing specifications.
- D. Maintain a photo manifest of all installed locations throughout the construction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.5 CONSTRUCTION SCHEDULE

- A. Once installation sequences have been determined and mock-up wall construction has been approved, modify the Construction Schedule to reflect the established sequencing of material installations and testing requirements. Distribute revised schedule.

END OF SECTION 01 43 39

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 014519
FIELD TESTING FOR AIR AND WATER LEAKAGE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Field testing of cladding systems in accordance with performance requirements indicated, including joints in adjacent construction designed to remain permanently closed and watertight.
 - 1. Resistance to water leakage.
 - 2. Resistance to air leakage.
- B. Owner will engage a qualified testing agency and pay costs of initial testing.
- C. Contractor shall engage a qualified testing agency and pay cost of testing.
- D. Contractor shall be responsible for and pay costs of remedial work and subsequent re-testing.
- E. Contractor shall perform out of sequence work as required to allow testing to occur at normal intervals.
- F. Related Requirements:
 - 1. Refer to Division 01 Building Enclosure Commissioning for field observations and performance testing activities.

1.2 DEFINITIONS

- A. Water Leakage: Uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces, or water that is not contained and drained to the exterior, or water that may damage adjacent materials or finishes. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.
 - 1. Uncontrolled: Infiltrated water that is not captured, controlled or managed by flashings, gutters, and sills to drain to exterior, or water that wets perimeter containment system, wall insulation or exposed interior surfaces.
 - a. Water present within the adjacent wall system or adjacent construction assembly is considered water leakage.
 - 2. Controlled: Infiltrated water that is captured, controlled or managed by flashings, gutters, and sills to drain to exterior, or water that does not wet perimeter containment system, wall insulation or exposed interior surfaces

1.3 SUBMITTALS

- A. Contractor Testing Agency Qualifications:
 - 1. Submit qualifications for proposed Independent Testing Agency.
 - 2. Include qualifications statement for personnel conducting and signing test reports.
 - 3. Test Procedures: Submit testing documentation including but not limited to following:
 - a. Testing schedule.
 - b. Testing sequence including procedures and protocols.
 - c. Testing instrumentation and types of equipment.
 - 4. Test Locations: Submit drawings indicating proposed test locations and designated test procedure; include plans and elevations.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Field Quality Control Reports: Written report of testing and inspection required by Field Quality Control.

1.4 QUALITY ASSURANCE

- A. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated.

1.5 CONTRACTOR RESPONSIBILITIES

- A. Coordinate with Testing Agency. Provide labor, materials and equipment used for testing by testing agency personnel.
 - 1. Contractor shall be responsible for coordinating and scheduling tests.
 - 2. Provide powered scaffold, hose, water supply, communication system and manpower to perform tests. Schedule any work necessary, such as out of sequence sealant work, so that testing can be performed.
- B. Satisfactory results of testing do not relieve Contractor from conforming to requirements of Contract Documents, shop drawings, and project specifications. Installation work on remainder of building shall match area checked, unless otherwise instructed in writing.
- C. Pending actual performance, extent of or absence of water leakage in initial water penetration test, and measures adopted by the Contractor to eliminate leakage, Architect will determine need and scope of additional tests and test methods. Remedial measures are subject to approval by Architect and shall maintain standards of quality and durability.
- D. Remedial measures found necessary and effective in eliminating leakage in area checked shall be used in fabricating and installing remainder of the work.
- E. Notify Architect and testing agency when wall construction is ready for testing. Provide safe access for Architect and Testing Agency to interior and exterior of test locations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Refer to Technical Sections for performance requirements of each system or product to be tested.
- B. Water Spray Test: Selective field testing will be conducted in accordance with AAMA Standard 501.2 Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtainwalls, and Sloped Glazing Systems.
 - 1. Water Spray Test without Air Pressure Difference: Designated areas shall be tested in accordance with AAMA 501.2 and shall not evidence water penetration.
- C. Field Chamber Water Penetration Test: Selective field testing will be conducted in accordance with ASTM E 1105 Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Curtain Walls, and Doors by Uniform or Cyclic Static Air Pressure Difference - Procedure A.
 - 1. Water Penetration Test with Static Air Pressure Difference: Designated areas shall be tested in accordance with ASTM E 1105 at a minimum static air pressure differential specified for laboratory testing in Performance Requirements and shall not evidence water penetration.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Field Chamber Air Leakage Test: Selective field testing will be conducted in accordance with ASTM E 783 Standard Test Method for Field measurement of Air leakage Through Installed Exterior Window and Doors.
1. Air Leakage Test with Static Air Pressure Difference: Designated areas shall be tested according to ASTM E 783 at 1.5 times the rate specified for laboratory testing in Performance Requirements Article but not more than 0.09 cfm/sq. ft. (0.45 L/s per sq. m) at a minimum static air pressure differential specified for laboratory testing in Performance Requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
1. Respective manufacturer's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Exterior wall construction shall be completed and shall be fully glazed to provide complete wall installation. Work shall be done in accordance with approved shop drawings and specifications.
1. Sealants shall be fully cured as recommended by manufacturer.

3.4 FIELD QUALITY CONTROL

- A. Owner Testing Agency: Owner will employ and pay a qualified independent testing agency to perform field quality control.
- B. Contractor Testing Agency: Contractor shall employ and pay a qualified independent testing agency to perform field quality control.
- C. Testing and Inspections, General: Testing and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
1. Performance Requirements: Systems shall be tested in accordance with definitions and at performance requirements, without reduction for field installation, as indicated in Technical Sections.
 2. Interior Finishes: Indoor side of wall in this area shall be unfinished and left open and unobstructed, permitting full length of joints to be examined from indoor side.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Do not install framing system trim and sealants prior to testing.
 - b. Where testing is performed with interior construction in place, Contractor shall remove interior construction as needed to allow inspections.
 - 3. All joints or other conditions within designated areas where leakage may occur will be tested.
 - a. If operable joints such as those around doors and operable parts of windows occur within wall area involved, appropriate modifications both of procedure and performance requirements will be made in respect to such joints.
 - 4. Correction of Deficiencies:
 - a. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - b. Materials and installation failing to meet specified requirements shall be replaced at Contractor's expense.
 - c. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 - 5. Prepare test and inspection reports.
- D. Architect Designated Test Procedures and Locations:
- 1. Field Testing shall be performed at intervals and locations including but not limited to the following:
 - a. Water Spray Test per AAMA 501.2: Test at intervals and locations as directed by Architect; however, not less than the following:
 - 1) Four locations at 5% completion, four locations at 50% completion, and four locations at 90% completion.
 - b. Field Chamber Water Penetration Test per ASTM E 1105: Test at intervals and locations as directed by Architect; however, not less than the following:
 - 1) Two locations at 5% completion, two locations at 50% completion, and two locations at 90% completion.
 - c. Field Chamber Air Leakage Test per ASTM E 783: Test at intervals and locations as directed by Architect; however, not less than the following:
 - 1) Two locations at 10% completion, two locations at 50% completion, and two locations at 90% completion, in conjunction with Field Chamber Water Penetration Testing.
 - d. Perform one on more tests at locations with a re-glazed lite.

3.5 TEST REPORTS

- A. Testing laboratory shall be responsible for conducting and reporting tests, state in report whether test specimen conforms to requirements of Contract Documents and approved drawings, and specifically note any deviations.
 - 1. Include written documentation describing remedial work, including repairs and modifications required.
 - 2. Required corrections shall be performed in presence of Architect.
- B. Testing shall be witnessed by the Architect; acceptance of test assembly and test results shall be determined by the Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Test reports shall be prepared according to testing standard indicated. Testing laboratory shall submit reports directly to Owner and Architect.

3.6 REMEDIAL WORK BY CONTRACTOR

- A. In event of failure to meet test requirements, Contractor and subcontractors shall redesign, rework, and/or re-fabricate, reship and re-erect assemblies as required until test requirements are met, at no additional cost to Owner.
 - 1. For each failed test, Contractor shall provide three additional consecutively successful test on like specimens at locations selected by the Architect.
- B. Wherever leakage has occurred, joints shall be made watertight in manner acceptable to Architect.
- C. Remedial work involving use of curing-type compounds shall be allowed to cure for one week minimum, but not less than manufacturer's written recommendation, before re-checking for leakage.
- D. After required remedial work and curing time are completed, repaired joints shall be retested.
- E. If leakage continues, additional remedial measures shall be performed; checking shall be repeated until joints in designated area are found to be acceptable.
 - 1. Re-checking, when required, shall be performed at the Contractor's expense by testing laboratory originally employed.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 014541
PRECONSTRUCTION LABORATORY MOCKUP TESTING FOR BUILDING ENCLOSURE SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Construction of mock-up of Building Enclosure Systems for testing and coordination with testing laboratory services employed by Owner.
 - 1. Including but not limited to Delegated Engineering, labor, materials, and accessories indicated, specified, or required to complete installation and performance testing of exterior wall specimen (mock-up) in a laboratory.
- B. Related Requirements:
 - 1. Refer to Division 01 Section Field Test for Air and Water Leakage.

1.2 DEFINITIONS

- A. Water Leakage: Uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces, or water that is not contained and drained to the exterior, or water that may damage adjacent materials or finishes. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.
 - 1. Uncontrolled: Infiltrated water that is not captured, controlled or managed by flashings, gutters, and sills to drain to exterior, or water that wets perimeter containment system, wall insulation or exposed interior surfaces.
 - 2. Controlled: Infiltrated water that is captured, controlled or managed by flashings, gutters, and sills to drain to exterior, or water that does not wet perimeter containment system, wall insulation or exposed interior surfaces

1.3 DELEGATED ENGINEERING REQUIREMENTS

- A. Delegated Engineering Responsibility: Contractor shall engage a qualified professional engineer to provide engineering for products and systems required to comply with the design intent of Contract Documents.
 - 1. Contract Documents Design Intent: Drawings and Specifications indicate design intent for products and systems and do not necessarily indicate or specify total Work required. Contract Documents shall not be construed as an engineered design; furnish and install Work required for a complete installation.
 - 2. Delegated Engineer Professional Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated with a record of successful in-service performance. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.
 - 3. Submittals: Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified professional engineer.
 - 4. Coordination of Work:
 - a. Product Variations: In the event of minor differences between products and systems of acceptable or available manufacturers, Contractor shall notify Architect of such differences and resolve conflicts in a timely manner. Failure of Contractor to provide notification shall be construed as acceptance of conditions indicated,

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

and changes caused by minor differences between products and Contract Documents shall be included in the Work at no additional cost to Owner.

- b. Allowable Adjustments: Minor dimension and profile adjustments may be made in interest of fabrication or erection methods or techniques or ability to satisfy design intent, provided design intent is maintained as determined by Architect. Proposed deviations shall include a detailed analysis of impact to adjacent substrates or other building systems, including related design or construction cost impacts. If accepted by Architect, deviations causing changes in materials, constructability, substrates, or conditions shall be included in the Work at no additional cost to Owner.

1.4 ACTION SUBMITTALS

- A. Shop Drawings: Show details of fabrication and installation. Submit mock-up Shop Drawings prior to fabrication and testing of mock-up unit.
 - 1. Include plans, elevations, and details, including thickness of metals and glass, methods of glazing, methods of anchoring, fastening and jointing, finishes of materials, perimeter sealants and other pertinent data and information.
 - a. Include project specific building maintenance unit tie-back retention mechanisms.
 - 2. Shop drawings shall contain seal of a Structural Engineer currently registered in licensing jurisdiction of the project and a written statement that the framing system conforms to project requirements, applicable codes, and specified conditions.
 - 3. Final acceptance of Shop Drawings will be determined after mock-up testing and compliance with aesthetic and performance requirements.
- B. As Built Mock-Up Drawings: Upon completion of testing, Contractor shall immediately provide "as built" mock-up drawings showing any modifications or additions required to meet performance requirements.
- C. Test Procedures: Laboratory shall submit testing documentation including but not limited to, following:
 - 1. Testing schedule.
 - 2. Testing sequence including procedures and protocols.
 - 3. Testing instrumentation and types of equipment.
 - 4. Statement of qualifications for personnel conducting and signing test reports.
- D. Test Reports.

1.5 INFORMATION SUBMITTALS

- A. Delegated Engineering Submittal: For products and systems indicating compliance with performance requirements. Include structural analysis, calculations and other performance data signed and sealed by the qualified professional engineer responsible for their preparation.
- B. Mock-up Construction Schedule: After review and approval by laboratory, contractor shall submit detailed schedule for construction of mock-up

1.6 COSTS OF TESTS

- A. Cost of laboratory testing fees only (excluding set-up charges) for first series of tests shall be paid for by Owner. Cost of set-up charges, including mobilization and travel, shall be paid for by each subcontractor.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. In the event of failures require retesting, Contractor shall pay additional laboratory fees and any fees and expenses incurred by Owner, Architect, and Consultants, as result of retesting.
- C. Subcontractors shall be responsible for failure of their work to meet test requirements without adjustment to Contract Sum or Contract Schedule.

1.7 CONTRACTOR RESPONSIBILITIES

- A. Satisfactory results of testing do not relieve Contractor from conforming to requirements of Contract Documents, shop drawings, and project specifications.
- B. Remedial measures found necessary and effective in eliminating unacceptable test results shall be used to fabricate and install the building enclosure on the project, unless directed otherwise in writing.
- C. Notify Architect and Owners Consultant a minimum of two weeks in advance of when mock-up construction begins and when mock-up will be ready for testing. Architect and Owner Consultant will observe testing.
 - 1. No pre-testing of any kind is allowed without consent of the Architect and Owner.

PART 2 - PRODUCTS

2.1 CONSTRUCTION

- A. Mockup Construction: Contractor shall arrange for erection of test chamber at approved testing laboratory, including simulated structural supports suitable for construction of mock-ups of exterior wall construction of size and configuration indicated.
 - 1. Build preconstruction laboratory mockups at testing agency facility using personnel, products, and methods of construction that will be used at Project site.
- B. Construct full size Mock-up of typical Building Corner Unit, as shown on the Architectural Drawings, two full building stories in height, including inside and outside corners, plus their connections and supporting elements.
 - 1. Details of the mock-up and test procedure shall be formally approved prior to the commencement of testing or the mock-up shall be deemed unacceptable.
- C. Mockups shall be complete with corners, splice joints, sealants, glass and glazing, anchors, and finishes, with details complete and identical to those proposed for use in building. Do not use excessive amounts of sealant, nor other special measures or techniques not representative of those to be used in building. Finish various components to show maximum variation that will exist in actual building construction between adjacent and non-adjacent components.
 - 1. Allow sufficient time for chemically curing sealants to achieve their proper cure as recommended by manufacturer.
- D. Set up and complete installation of mock-ups at testing laboratory. Mock-ups shall be used to demonstrate quality of materials, finishes and workmanship as well as compliance with performance requirements.
 - 1. Upon completion of satisfactory tests, dismantle mock-ups and remove from premises.
- E. Testing will be performed at one of the following facilities:
 - 1. Construction Consulting Laboratory, Carrollton, Texas.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Mockup Installation: Install products and materials in accordance with specified requirements. Include flashings, anchors, interior trim and aluminum covers to demonstrate performance and engagement will not be affected by testing.
- B. Simulate building conditions including the arrangement of structural members and anchorages that will exist within the building.
- C. Glass shall be the same type and manufacturer that will be used on the project, unless approved otherwise by substitution. Provide not less than one additional lite for each type and size of glass.
 - 1. Provide additional accessory materials including, but not limited to gaskets, removable covers and similar items so as not to delay testing should these items need to be replaced during testing.
- D. Finish various components to show the maximum variation between adjacent and non-adjacent components that will exist in the actual building construction.

3.2 TESTING PROCEDURES

- A. Performance Requirements:
 - 1. **Building Enclosure Systems shall be tested in accordance with Performance Requirements, without reduction, as indicated in Technical Sections.** Variations in criteria over the surface of the building, such as wind pressure, shall be accounted for in testing mock-up.
 - a. Apparatus used for conducting tests shall meet requirements of each test procedure and shall be calibrated as prescribed therein.
- B. Air Infiltration:
 - 1. In accordance with ASTM E283 Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
- C. Water Penetration:
 - 1. Static Pressure: In accordance with ASTM E331 Standard Test Method for Water penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
 - 2. Dynamic Pressure: In accordance with AAMA 501.1 Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors using Dynamic Pressure.
- D. Structural:
 - 1. In accordance with ASTM E330/E330M Standard Test Method for Structural performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.
- E. Interstory Drift (Horizontal Displacement):
 - 1. In accordance with AAMA 501.4 Recommended Static Test Method for Evaluating Window Wall, Curtain Wall and Storefront Systems Subjected to Seismic and Wind-Induced Inter-Story Drift.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Vertical Interstory Movement (Vertical Displacement):
 - 1. In accordance with AAMA 501.7 Recommended Static Test Method for Evaluating Windows, Window Wall, Curtain Wall and Storefront Systems Subjected to Vertical Inter-Story Movements.
- G. Thermal Cycling:
 - 1. In accordance with AAMA 501.5 Test Method for Thermal Cycling of Exterior Walls..

3.3 TESTING

- A. Preconstruction Laboratory Mockup Testing: Test preconstruction laboratory mockups according to requirements in "Performance Requirements" Article. Perform the following tests in the following order:
 - 1. Structural: ASTM E330/E330M at 50 percent of positive test load.
 - 2. Air Leakage: ASTM E283.
 - 3. Water Penetration under Static Pressure: ASTM E331.
 - 4. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - 5. Structural: ASTM E330/E330M at 100 percent of positive and negative test loads. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 - c. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - 6. Interstory Drift (Horizontal Displacement): AAMA 501.4 at 100 percent of design displacement. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 - c. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - 7. Vertical Interstory Movement (Vertical Displacement): AAMA 501.7. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 - c. Water Penetration under Dynamic Pressure: AAMA 501.1.
 - 8. Thermal Cycling: In accordance with AAMA 501.5. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 - 9. Structural: ASTM E330/E330M at 100 and 150 percent of positive and negative test loads. Repeat the following:
 - a. Air Leakage: ASTM E283.
 - b. Water Penetration under Static Pressure: ASTM E331.
 - 10. Concentrated Load on Building Maintenance Unit Tieback.
- B. If mock-up fails to achieve acceptable performance, repair defects and deficiencies on mock-up, repeat testing and inspection until acceptable performance is achieved, and then restart test sequence beginning with test prior to failed test.
- C. Re-glazing Procedure: Contractor shall demonstrate re-glazing procedure at conclusion of testing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.4 TEST REPORTS

- A. Report for tests shall include date of test and date of report, identification of specimen (manufacturer, source or supply, dimensions, model, type, materials, and other pertinent information).
- B. Testing agency shall inspect specimen and report noted deviations to mock-up shop drawings.
- C. For Air Infiltration under Uniform Static Air Pressure, include:
 - 1. Statement or tabulation of pressure difference exerted across specimen during test and corresponding rate of air leakage for each specimen tested, calculated in accordance with ASTM E 283.
- D. For Water Penetration under Uniform Static Air Pressure and Dynamic Air Pressure, include:
 - 1. Statement or tabulation of pressure difference or differences exerted across specimen and water application rates during test. For dynamic test statement of engine speed (rpm) and air stream velocity (mph).
 - 2. Record of points of water penetration on indoor face of test specimen, and of water leakage.
- E. For Structural Performance Under Uniform Static Air Pressure Difference, include:
 - 1. Tabulation of pressure differences exerted across specimen during test and deflections and permanent deformations at locations specified for each specimen tested.
 - 2. Duration of test loads.
 - 3. Record of visual observations of performance.
 - 4. When tests are made to check conformity of specimen to particular specification, identification or description of that specification.
 - 5. Statement that tests were conducted in accordance with this method, or full description of any deviations from this method.
 - 6. Statement as to whether or not tape or film, or both, were used to seal against air leakage, and whether in judgment of test agency, tape or film influenced results of test.
 - 7. If several essentially identical specimens of component are tested, results for specimens shall be reported, each specimen being properly identified, particularly with respect to distinguishing features or differing adjustments. Separate drawing for each specimen will not be required if differences between them are noted on drawings provided.
- F. For Structural Performance Under Vertical Displacement Resistance, include:
 - 1. Statement or tabulation of vertical displacements applied to the specimen
 - 2. Statement that tests were conducted in accordance with this method, or full description of any deviations from this method
 - 3. Record of visual observations of performance documenting failures and non-compliant performance
- G. For Structural Performance Under Horizontal Displacement Resistance, include:
 - 1. Statement or tabulation of service level and design level horizontal displacements applied to the specimen
 - 2. Statement that tests were conducted in accordance with this method, or full description of any deviations from this method
 - 3. Record of visual observations of performance documenting failures and non-compliant performance

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

H. Testing laboratory shall be responsible for conducting and reporting tests, shall state in report whether test specimen conforms to requirements of Contract Documents' approved drawings, and shall specifically note any deviations therefrom.

1. Include written documentation describing remedial work, including repairs and modifications required.

I. Test reports shall be prepared according to testing standard indicated. Testing laboratory shall submit reports directly to Owner and Architect

3.5 CORRECTION OF WORK BY CONTRACTOR

A. In event of failure to initially meet test requirements called for hereinabove, Contractor and respective subcontractors shall, as required, redesign, rework, and/or refabricate, reship and re-erect and retest mock-up assemblies until said requirements are met, at no additional cost to Owner.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 015000

TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.

1.2 USE CHARGES

- A. General: Installation and removal of and use charges for temporary facilities shall be included in the Contract Sum. Allow other entities to use temporary services and facilities without cost, including, but not limited to, Owner's construction forces, Architect, occupants of Project, testing agencies, and authorities having jurisdiction.
- B. Sewer Service: Pay sewer-service use charges for sewer usage, indicated by utility company meter readings, by all entities for construction operations.
- C. Water Service: Pay water-service use charges for water used, indicated by utility company meter readings, by all entities for construction operations.
- D. Electric Power Service: Pay electric-power-service use charges for electricity used, indicated by utility company meter readings, by all entities for construction operations.

1.3 INFORMATIONAL SUBMITTALS

- A. Site Plan: Show temporary facilities, utility hookups, staging areas, and parking areas for construction personnel.
- B. Moisture-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage.
 - 1. Describe delivery, handling, and storage provisions for materials subject to water absorption or water damage.
 - 2. Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
 - 3. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.
- C. Dust- and HVAC-Control Plan at Renovation Work: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Identify further options if proposed measures are later determined to be inadequate. Include the following:
 - 1. Locations of dust-control partitions at each phase of work.
 - 2. HVAC system isolation schematic drawing.
 - 3. Location of proposed air-filtration system discharge.
 - 4. Waste handling procedures.
 - 5. Other dust-control measures.
- D. Temporary Utility Reports: Make available on request, reports of tests, inspections, meter readings, and similar procedures performed on temporary utilities.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Implementation and Termination Schedule: Make available on request a schedule indicating implementation and termination of each temporary utility.

1.4 QUALITY ASSURANCE

- A. Standards: Comply with ANSI A10.6 "Requirements for Demolition Operations", NECA's "Temporary Electrical Facilities," and NFPA 241 "Standard for Safeguarding Construction, Alteration, and Demolition Operations".
 - 1. Trade Jurisdictions: Assigned responsibilities for installation and operation of temporary utilities are not intended to interfere with trade regulations and union jurisdictions.
- B. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.
- C. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.
- D. Accessible Temporary Egress at Renovation Work: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1.
- E. Regulations: Comply with industry standards and applicable laws and regulations of authorities having jurisdiction, including but not limited to, the following:
 - 1. Building Code requirements.
 - 2. Health and safety regulations.
 - 3. Utility company regulations.
 - 4. Police, Fire Department and Rescue Squad rules.
 - 5. Environmental protection regulations.
 - 6. City ordinances and regulations.

1.5 PROJECT CONDITIONS

- A. Temporary Use of Permanent Facilities: Engage Installer of each permanent service to assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. General: Provide new materials. Undamaged, previously used materials in serviceable condition may be used if approved by Architect. Provide materials suitable for use intended.
- B. Materials and equipment may be new or used, but must be adequate in capacity for the required usage, must not create unsafe conditions, and must not violate requirements of applicable codes and standards.
- C. Chain-Link Fencing: Minimum 2 inch (50 mm), 0.148 inch (3.8 mm) thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet (1.8 m) high with galvanized-steel pipe posts; minimum 2-3/8 inch (60 mm) OD line posts and 2-7/8 inch (73 mm) OD corner and pull posts, with 1-5/8 inch (42 mm) OD top rails.
- D. Portable Chain-Link Fencing: Minimum 2 inch (50 mm), 0.148 inch (3.8 mm) thick, galvanized-steel, chain-link fabric fencing; minimum 6 feet (1.8 m) high with galvanized-steel pipe posts; minimum 2-3/8 inch (60 mm) OD line posts and 2-7/8 inch (73 mm) OD corner and

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

pull posts, with 1-5/8 inch (40 mm) OD top and bottom rails. Provide concrete or galvanized-steel bases for supporting posts.

- E. Wood Enclosure Fence: Plywood, 8 feet (2.4 m) high, framed with four 2 by 4 inch (50 by 100 mm) rails, with preservative-treated wood posts spaced not more than 8 feet (2.4 m) apart.
- F. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10 mil (0.25 mm) minimum thickness, with flame-spread rating of 15 or less per ASTM E 84 and passing NFPA 701 Test Method 2.
- G. Polyethylene Sheet: Reinforced, fire-resistive sheet, 6 mil (0.14 mm) minimum thickness, with Class A flame-spread rating per ASTM E 84 and passing NFPA 701 Test Method 2.
 - 1. Basis of Design (Product Standard): Abatement Technologies, Inc.; SAFE-FLEX ICRA Awareness Barrier.
- H. Dust Containment Barrier for Doors: reinforced, fire-resistive polyethylene sheet, 10 mil (0.25 mm) minimum thickness with Class B flame-spread rating per ASTM E 84 and designed to be used for securing temporary construction doors so as to minimize and mitigate particle control during construction.
 - 1. Basis of Design (Product Standard): Abatement Technologies, Inc.; Aire Guardian Door Guard Reusable Barrier.
- I. Dust-Control Adhesive-Surface Walk-off Mats: Provide mats minimum 36 by 60 inches (900 by 1500 mm).
- J. Insulation: Unfaced mineral-fiber blanket, manufactured from glass, slag wool, or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.

2.2 TEMPORARY FACILITIES

- A. Field Offices, General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.
- B. Common-Use Field Office: Of sufficient size to accommodate needs of Owner, Architect, and construction personnel office activities and to accommodate Project meetings specified in other Division 01 Sections. Keep office clean and orderly. Furnish and equip offices as follows:
 - 1. Furniture required for Project-site.
 - 2. Conference room of sufficient size to accommodate. Provide electrical power service and 120-V ac duplex receptacles. Furnish room with conference table, chairs, and tack and marker boards.
 - 3. Drinking water and private toilet.
 - 4. Heating and cooling equipment necessary to maintain a uniform indoor.
 - 5. Lighting fixtures capable of maintaining average illumination at desk height.
- C. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment for construction operations.
 - 1. Store combustible materials apart from building.

2.3 EQUIPMENT

- A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.
 - 1. Comply with NFPA 10 and NFPA 241 for classification, extinguishing agent, and size required by location and class of fire exposure.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Self-Contained Toilet Units: Single-occupant units of chemical, aerated recirculation, or combustion type; vented; fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material.
- C. Drinking-Water Fixtures: Containerized, tap-dispenser, bottled-water drinking-water units, including paper cup supply.
- D. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.
 - 1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
 - 2. Heating Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
- E. Air-Filtration Units for Renovation Work: Primary and secondary HEPA-filter-equipped portable units with four-stage filtration. Provide single switch for emergency shutoff. Configure to run continuously.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

- A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.
- B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

- A. Locate temporary utilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify utilities as required.
- B. Provide each utility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until utilities are no longer needed or are replaced by authorized use of completed permanent utilities.
- C. Engage appropriate local utility company to install temporary service or connect to existing service. Where utility company provides only part of the service, provide the remainder with matching, compatible materials and equipment. Comply with utility company recommendations.
 - 1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.
 - 2. Provide adequate capacity at each stage of construction. Before temporary utility is available, provide trucked-in services.
 - 3. Obtain easements to bring temporary utilities to Project site where Owner's easements cannot be used for that purpose.
- D. Storm Sewers and Drainage: If sewers are available, provide temporary connections to remove effluent that can be discharged lawfully. If sewers are not available or cannot be used, provide drainage ditches, dry wells, stabilization ponds, and similar facilities. If neither sewers nor drainage facilities can be lawfully used for discharge of effluent, provide containers to remove and dispose of effluent off-site in a lawful manner.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Filter out excessive soil, construction debris, chemicals, oils, and similar contaminants that might clog sewers or pollute waterways before discharge.
 2. Connect temporary sewers to municipal system as directed by sewer department officials.
 3. Maintain temporary sewers and drainage facilities in a clean, sanitary condition. After heavy use, restore normal conditions promptly.
 4. Provide temporary filter beds, settlement tanks, separators, and similar devices to purify effluent to levels acceptable to authorities having jurisdiction.
- E. Water Service: Install water service and distribution piping in sizes and pressures adequate for construction. Sterilize temporary water piping before use in accordance with requirements of authorities having jurisdiction.
- F. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.
1. Existing Toilets in Occupied Facilities: Use of Owner's existing toilet facilities will not be permitted or allowed.
- G. Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed.
- H. Isolation of Work Areas in Occupied Facilities: Prevent dust, fumes, and odors from entering occupied areas.
1. Prior to commencing work, isolate the HVAC system in area where work is to be performed according to coordination drawings.
 - a. Disconnect supply and return ductwork in work area from HVAC systems servicing occupied areas.
 - b. Maintain negative air pressure within work area using HEPA-equipped air-filtration units, starting with commencement of temporary partition construction, and continuing until removal of temporary partitions is complete.
 2. Maintain dust partitions during the Work. Use vacuum collection attachments on dust-producing equipment. Isolate limited work within occupied areas using portable dust-containment devices.
 3. Perform daily construction cleanup and final cleanup using approved, HEPA-filter-equipped vacuum equipment.
- I. Ventilation and Humidity Control: Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.
1. Provide dehumidification systems when required to reduce substrate moisture levels to level required to allow installation or application of finishes.
- J. Electric Power Service: Provide electric power service and distribution system of sufficient size, capacity, and power characteristics required for construction operations.
- K. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- L. Telephone Service: Provide temporary telephone service in common-use facilities for use by all construction personnel. Provide telephone line(s) for each field office.
- M. Electronic Communication Service: Provide internet access of not less than 15-Mbps download and 5-Mbps upload speed for use by Architect and Owner to access Project electronic documents and maintain electronic communications

3.3 SUPPORT FACILITIES INSTALLATION

- A. General: Comply with the following:
 - 1. Locate field offices, storage sheds, sanitary facilities, and other temporary construction and support facilities for easy access.
 - 2. Maintain support facilities until Architect schedules Substantial Completion inspection. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities, under conditions acceptable to Owner.
- B. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate to support loads and to withstand exposure to traffic during construction period. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.
 - 1. Provide dust-control that is nonpolluting and nontracking. Reapply as required to minimize dust.
- C. Traffic Controls: Provide temporary traffic controls at junction of temporary roads with public roads. Include warning signs for public traffic and "STOP" signs for entrance onto public roads. Comply with requirements of authorities having jurisdiction.
 - 1. Protect existing site improvements to remain including curbs, pavement, and utilities.
 - 2. Maintain access for fire-fighting equipment and access to fire hydrants.
- D. Parking: Coordinated parking with Owner's requirements.
- E. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water.
 - 1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
 - 2. Before connection and operation of permanent drainage piping system, provide temporary drainage where roofing or similar construction is completed.
 - 3. Remove snow and ice as required to minimize accumulations.
- F. Project Signs: Coordinated signs with Owner's requirements and requirements of authorities having jurisdiction.
- G. Waste Disposal Facilities: Comply with requirements specified in Division 01 Section "Construction Waste Management and Disposal."
- H. Comply with progress cleaning requirements in Division 01 Section "Execution."
- I. Existing Elevator Use in Occupied Facilities: Use of Owner's existing elevators will be permitted, provided elevators are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore elevators to condition existing before initial use, including replacing worn cables, guide shoes, and similar items of limited life.
 - 1. Do not load elevators beyond their rated weight capacity.
 - 2. Provide protective coverings, barriers, devices, signs, or other procedures to protect elevator car and entrance doors and frame. If, despite such protection, elevators

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

become damaged, engage elevator Installer to restore damaged work so no evidence remains of correction work. Return items that cannot be refinished in field to the shop, make required repairs and refinish entire unit, or provide new units as required.

- J. Existing Stair Usage in Occupied Facilities: Use of Owner's existing stairs will be permitted, provided stairs are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore stairs to condition existing before initial use.
 - 1. Provide protective coverings, barriers, devices, signs, or other procedures to protect stairs and to maintain means of egress. If stairs become damaged, restore damaged areas so no evidence remains of correction work.

- K. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

- A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.
- B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.
 - 1. Comply with work restrictions specified in Division 01 Section "Summary."
- C. Temporary Erosion and Sedimentation Control: Provide measures to prevent soil erosion and discharge of soil-bearing water runoff and airborne dust to undisturbed areas and to adjacent properties and walkways, according to requirements of 2003 EPA Construction General Permit or authorities having jurisdiction, whichever is more stringent.
- D. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.
- E. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.
- F. Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using environmentally safe materials.
- G. Site Enclosure Fence: Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.
 - 1. Extent of Fence: As required to enclose entire Project site or portion determined sufficient to accommodate construction operations.
- H. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.
- I. Temporary Egress: Maintain temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- J. Covered Walkway: Erect protective, covered walkway for passage of individuals through or adjacent to Project site. Coordinate with entrance gates, other facilities, and obstructions. Comply with regulations of authorities having jurisdiction and requirements indicated on Drawings.
- K. Temporary Enclosures: Provide temporary, weathertight, enclosures for protection of construction, in progress and completed, including, but not limited to, vertical and horizontal openings, from exposure, foul weather, other construction operations, and similar activities.
- L. Temporary Partitions: Provide floor-to-ceiling dustproof partitions to limit dust and dirt migration and to separate areas from fumes and noise.
 - 1. Construct dustproof partitions with gypsum wallboard with joints taped on occupied side, and fire-retardant-treated plywood on construction operations side.
 - 2. Construct dustproof partitions with two layers of 6 mil (0.14 mm) polyethylene sheet on each side. Cover floor with two layers of 6 mil (0.14 mm) polyethylene sheet, extending sheets 18 inches (450 mm) up the sidewalls. Overlap and tape full length of joints. Cover floor with fire-retardant-treated plywood.
 - a. Construct vestibule and airlock at each entrance through temporary partition with not less than 48 inches (1200 mm) between doors. Maintain walk-off mats in vestibule, for dust control.
 - 3. Where fire-resistance-rated temporary partitions are indicated or are required by authorities having jurisdiction, construct partitions according to the rated assemblies.
 - 4. Seal joints and perimeter. Equip partitions with gasketed dustproof doors and security locks where openings are required.
 - 5. Protect air-handling equipment.
 - 6. Provide walk-off mats at each entrance through temporary partition.
- M. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241 and authorities having jurisdiction; manage fire-prevention program.

3.5 MOISTURE CONTROL

- A. Contractor's Moisture-Protection Plan: Avoid trapping water in finished work. Document visible signs of discoloration that may appear during construction.
- B. Exposed Construction Phase: Before installation of weather barriers, when materials are subject to wetting and exposure, protect as follows:
 - 1. Protect porous materials from water damage.
 - 2. Protect stored and installed material from flowing or standing water.
 - 3. Keep porous and organic materials from coming into prolonged contact with concrete.
 - 4. Remove standing water from decks.
 - 5. Keep deck openings covered or dammed.
- C. Partially Enclosed Construction Phase: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture, protect as follows:
 - 1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
 - 2. Keep interior spaces reasonably clean and protected from water damage.
 - 3. Periodically collect and remove waste containing cellulose or other organic matter.
 - 4. Discard or replace water-damaged material.
 - 5. Do not install material that is wet.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

6. Discard, replace, or clean stored or installed material that begins to show discoloration.
 7. Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.
- D. Controlled Construction Phase of Construction: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:
1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
 2. Use permanent HVAC system to control humidity.
 3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits. Refer to technical specification sections for additional and more stringent criteria.
- 3.6 OPERATION, TERMINATION, AND REMOVAL
- A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.
- B. Maintenance: Maintain facilities in good operating condition until removal.
1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
 2. Maintain markers for underground lines. Protect from damage during excavation operations.
- C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.
- D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.
1. Materials and facilities that constitute temporary facilities are property of Contractor.
 2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
 3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Division 01 Section "Closeout Procedures."

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

SECTION 01 5639

TREE PROTECTION, REMOVAL, AND PRUNING

PART 1 - GENERAL

1.1 DESCRIPTION

- A. Furnish all work and materials, appliances, tools, equipment, facilities, transportation, and services necessary for and incidental to performing all operations in connection with the protection, pruning, care, and removal of trees.
- B. The Contractor shall provide protection and care of existing trees or other designated plant material in order to maintain a healthy, vigorous condition.
- C. The Contractor shall perform tree removal, stump grinding and pruning as specified, utilizing acceptable horticultural standards as adopted by the Texas Association of Landscape Contractors (TALC) or Texas Nurseryman Association.
- D. Such work shall include, but is not limited to, the following:
 - 1. Protection of existing trees and landscape to remain from the following types of damage:
 - a. Compaction of root zone by foot, vehicular traffic or material storage.
 - b. Trunk and branch damage from equipment operations, material storage, or from nailing or bolting.
 - c. Root poisoning from spilled solvents, gasoline, paint, and other noxious materials.
 - d. Branch damage due to improper pruning or trimming.
 - e. Damage from lack of water due to:
 - 1) Cutting or altering natural water migration patterns near root zones.
 - 2) Failure to provide adequate watering.
 - f. Damage from alteration of soil pH factor caused by depositing lime, concrete, plaster or other base materials near roots.
 - g. Damage to root zone by coverage of soil.
 - 2. Pruning roots where indicated or specified.
 - 3. Removal and grinding of stump.
 - 4. Removal of understory vegetation.
 - 5. Removal and pruning of tree branches and roots adjacent to new construction and excavation or where construction access route is to occur to reduce damage to tree canopy and roots.
 - 6. Application of wound treatment to Quercus species branch cuts.
 - 7. Removal of existing gravel drives, asphalt roads, road bedding and existing concrete curbs and/or sidewalk within root zone areas of existing trees to remain. NO excavating procedures shall take place under or around the trees.
 - 8. Removal of abandoned existing utilities to prevent damage to root systems above.
 - 9. Removal of dead wood and broken or hanging branches from the existing trees.
 - 10. Application of mulch product and root stimulant at trees to be root pruned and trees to be protected.
 - 11. Placement of plywood over mulch in areas between tree protection fencing and face of vertical features or retaining walls to prevent compaction of soils.
 - 12. Watering and maintenance of root pruned trees.
 - 13. Supplemental hand watering as needed to existing trees.
 - 14. Documentation of tree removal, damage and treatment shall be recorded and submitted.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

- E. All work of this section is to be performed and supervised by ISA Certified Arborist with minimum of ten (10) years of experience.

1.2 PROJECT CONDITIONS AND DOCUMENTATION SUBMITTAL

- A. Verify and examine site conditions with the Owner's Representative. Proceed when official notice is given to the Contractor that the work site is ready. Proceed with tree protection prior to any site work, demolition or grading.
- B. Document the condition of every tree to remain and every tree to be protected by dated photograph submitted to the Owner. Submit six (6) photographs per tree showing the tree, branching, and roots at various angles. Photograph existing trees to remain with Owner's representative present to verify and record tree designation and health at time of commencing site work. Provide one (1) copy of photos to Owner. Contractor to maintain one (1) copy of tree photos and record of tree health in notebook (or pdf file) for entire construction period.
- C. TREE STATUS REPORTS - Submit quarterly (4) reports issued by Arborist regarding the status of tree health, for the remaining trees within the area of construction contract, and care along with recommendations to preserve tree health. Existing trees have not been regularly irrigated and are susceptible to stress due to the site construction conditions and duration. The report shall include a narrative from the Arborist and a minimum of two (2) photos per tree to document the tree's health or any damage. Additional reports shall be required should tree damage (e.g. loss of large branches or limbs) occur due to construction or act of God (snow, ice, wind) which are due within one week of the event.
1. Submit a written inventory in Excel spreadsheet format of all trees on the site. The report must be prepared and submitted by Contractor's Arborist. The Arborist shall record the tree identification number and size in caliper inches (as shown on the drawings). The spread sheet shall record all trees on site including type of protection, care, and the type of damage received (e.g. part of root zone removed due to excavation, compaction of root zone due to vehicular access or construction, etc.). The inventory shall document the type of treatment that damaged trees received. A sample inventory follows which is not meant to be comprehensive.

XYZ Project – TREE INVENTORY of Health, Damage, Repair and Removal					
Prepared by XYZ Arborist, License/Certification No.; Date					
Tree No.	Tree ID	Caliper Inches Remain Removed		Status	Treatment*
01	Post Oak	26		Protected; no change	M
02	Live Oak		10	Removed per plans	-
03	Red Oak	12		Damage - 20% of root zone removed	RP, CT, M
04	Cedar Elm	14		Damage – 30% of root zone removed	RP, CT, M
05	Hackberry		15	Removed due to ice storm damage	--
06	Pecan	24		Removed 2 limbs for construction access	M, W
07	Post Oak	12		Damage – root zone compaction	Aeration, M
08	Live Oak	18		Damage – canopy loss, large branch broken by concrete truck	M, WP, RP
ETC.					
TOTAL INCHES REMOVED			25		

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

**A* Aeration – Performed hydraulic aeration of root zone, 24" on center.*

**CT – Performed canopy trimming to remove branches proportional to root loss*

**M – Mulch applied to root zone*

**RP – Root pruning and root stimulant applied*

**W, WP – Branch trimmed and Wound paint applied for Quercus*

Describe other treatments

2. The inventory shall include photos of damaged and trees to show status of health, damage, and signs of insect, disease, mite, pests, mistletoe, mosses, lichen or stress/decline. Submit at least four (4) photos per tree from various angles/viewpoints arranged on 8-1/2 x 11 format with trees labeled corresponding to "Tree Inventory" and site plan. Use a digital camera with at least 5.0 megapixels of resolution to document observations.
3. Submit inventory with corresponding photos in digital format (pdf) and with one copy printed on 8-1/2 x 11 paper and organized into three-hole binder. The four (4) photos per tree shall be organized onto one (1) sheet of paper.
4. Tree photographs must be accompanied by assessment of tree health and existing damage by the Contractor's ISA Certified Arborist.
5. The photo documentation and assessment will serve as a benchmark for future comparisons when a tree is damaged or in decline after any on-site clearing, grubbing, grading, or other work activity.
6. Receive approval of tree photo documentation prior to starting tree protection and site work.
7. Proceeding with site work without approval on pre-construction tree assessment from the Owner's Authorized Representative will make the Contractor responsible for existing damage.
8. The inventory shall include photos of tree protection fencing in place prior to site work at all locations. Include at least four (4) photos of fencing in place prior to construction activities at each location.
9. Monthly Tree Assessments shall be performed by the Contractor's arborist throughout the duration of construction and landscape establishment period. Monthly Tree Assessments shall be submitted in accordance with submittal requirements.
10. Submit inventory as work progresses and at end of project as part of Final Acceptance.
11. Prior to Closeout and with approval of the Owner's Representative a final Post-Construction Tree Assessment shall be performed. The Post Construction Tree Assessment shall be performed no more than two (2) months prior to Project Closeout.

1.3 ARBORIST INVOLVEMENT AND QUALIFICATIONS

- A. Submit resume and relevant tree preservation experience of ISA Certified Arborist prior to commencing work. Arborist shall have a minimum of ten (10) years of experience in tree preservation and care. The Arborist shall submit ten (10) example tree preservation projects along with the project site address and project representative's name and phone number.
- B. Submit manufacturer's product information for root sealant, limb sealant, root stimulant, or other item recommended by the Arborist.
- C. The Contractor is required to his Arborist prior to any construction activity near the protected trees. The Contractor Arborist's report shall be the guide for any construction activity within the vicinity of trees identified for preservation.
- D. The Arborist shall be required to regularly monitor the health of the trees being preserved. The Arborist shall inspect trees monthly and issue monthly assessment reports documenting tree health and tree care measures employed to preserve or enhance the tree's health.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

1.4 SEQUENCING

- A. Coordinate installation of protection devices and other related units of Work specified in other Sections to ensure that protection of existing trees is complete prior to any site work, demolition or grading.
- B. Trees designated for root or branch pruning must be pruned prior to commencing site work or demolition.

1.5 DAMAGES

- A. Trees that are designated to remain but, during the course of construction, are removed, severely damaged, in significant decline or have died due to Contractor's work or neglect shall be replaced and/or damages paid by the Contractor to the Owner per the schedule below at the Contractor's expense.
- B. For trees four (4) inch caliper or greater, the Owner's Authorized Representative will assess the following damages for damaged, dead or dying, or removed trees to be paid by the Contractor to the Owner.

Tree size – Diameter/Caliper in Inches	Replacement Tree or Value Each tree
Equal to 4 and up to 6	\$ 1,500.00
Equal to 6 and up to 8	\$ 3,000.00
Greater than 8 and up to 12	\$ 6,000.00
Greater than 12 inches	\$ 1,000 per caliper inch

Size will be determined by measuring caliper at twelve (12) inches above grade for trees from four (4) to twelve (12) inch caliper and at six (6) inches above grade for trees from zero (0) to four (4) inch in caliper.

Trees that are larger than twelve (12) inch in caliper shall be measured at four (4) feet above natural ground elevation, or from top of stump, if removed.

Multi-trunk trees shall be measured at twelve (12) inches above grade of each trunk. The largest trunk's diameter shall be counted as 100% caliper; the remaining trunks shall be counted at 50% caliper.

- C. For Damaged trees twelve (12) inch caliper and greater – If a major branch is damaged, the cost will be assessed by the percentage of the tree canopy that is lost. For example, if the loss of a branch results in one-fifth of the canopy loss, then the penalty on a twenty (20) inch tree would be one-fifth or \$4,000.00.
- D. Slight Damage: shall be defined as damage that may heal.
 - 1. Examples include but are not limited to: scaring of the trunk into the cambial layer one-half ($\frac{1}{2}$) inch to two (2) inches in width but less than one-third ($\frac{1}{3}$) trunk circumference or breaking of limbs less than two (2) inches in diameter or limbs less than one-third ($\frac{1}{3}$) trunk caliper, whichever is less.
 - 2. Slight damage shall also include removal or lying down of protective tree fencing prior to end of construction, storing equipment or supplies within the critical root zone (CRZ), or disposing of paint or concrete within the CRZ but not closer to the trunk than 50% radius of the CRZ. Slight damage to trees shall be assessed at a rate of \$100.00 for each instance. Each day tree fencing is not properly placed, equipment or supplies are stored within CRZ or fill is stored within the CRZ shall be considered one instance.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

- E. Moderate Damage: shall be defined as damage that contributes to the poor health and reduced longevity of the tree.
 - 1. Examples include but are not limited to: scaring of the trunk into the cambial layer greater than two (2) inches but less than one-third (1/3) the trunk circumference or breaking of limbs more than two (2) inches in diameter but less than one-third (1/3) trunk caliper.
 - 2. Moderate damage shall also include compaction of soil, grading or filling in 20% of the CRZ on one of four sides but outside the 50% radius of the CRZ, disposing of paint or concrete within 50% radius of the CRZ. Moderate damages shall be calculated at a rate of one-half (½) the assessed value of the tree per each instance of damage.
- F. Severe Damage: shall include removal or damage no defined as slight or moderate.
 - 1. Examples include but are not limited to: scaring of the trunk to the cambial layer greater than one-third (1/3) the trunk circumference, uprooting or causing a tree to lean, damage to a scaffolding branch or branch greater than one-third (1/3) of trunk caliper.
 - 2. Severe damage shall also include compaction of soil, grading or filling more than 20% of the CRZ, or within 50% radius of the CRZ or on more than one (1) of four (4) sides. Cutting one-third (1/3) of the buttress roots within three (3) times the distance of the DBH of the trunk, or cutting four (4) roots four (4) inches or greater in diameter within four (4) foot of the trunk shall also be considered severe damage.
 - 3. Severely damaged trees shall be designated by the Owner's Authorized Representative and shall be scheduled for removal. The Contractor shall pay the Owner penalty as described in the table above.
- G. Assessment of Tree Mitigation: The Owner's Authorized Representative opinion is final regarding tree damage penalties. The Owner's Authorized Representative may exercise the right to stop any work if any level of tree damages are being incurred due to the execution of the work until the Contractor and develop a work plan which prevents further damage to the existing trees.
- H. Trees that must be removed due to damage caused by the Contractor shall be removed at the Contractor's expense.
- I. All damages shall be paid to the Owner. Failure to replace or pay for damaged trees shall result in a breach of contract and the Contractor will be automatically assessed damages. Damages as described herein shall be deducted from payments otherwise due to the Contractor.

1.6 WATER

Potable water is available on site.

PART 2 - PRODUCTS

2.1 WOUND PAINT

For trees within protection fencing area that may need limb pruning/removal, use petroleum or latex base tree wound paint, dark gray, brown or black in color. Spray type paints are acceptable for use on genus Quercus only.

2.2 TREE PROTECTION FENCING

- A. Refer to the drawings for the location of proposed tree protection fencing.
- B. Fencing: Non-movable chain link fencing.
 - 1. All elements hot dip galvanized and unless otherwise shown.
 - 2. All elements consist of the following:
 - a. Chain link fencing: Nine (9) gauge, two (2) inch mesh, four (4) foot height.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

- b. Posts: two and three-eighths (2 3/8) inches outside diameter, minimum, steel driven and set a minimum of two (2) feet into ground. Posts are set maximum eight (8) feet on center.
 - c. Brace rails: one and five-eighths (1 5/8) inch outside diameter, minimum.
 - d. Stretcher bars: one-quarter (1/4) inch by three-quarter (3/4) inch, minimum.
- C. Orange Safety Fencing for trees (as shown on plans):
 - 1. Orange safety fencing: polyvinyl mesh, four (4) foot height.
 - 2. Posts: Metal T-posts, minimum of four (4) foot above finished grade and two (2) feet below grade.
- D. Refer to drawings for additional fencing requirements.
- E. Temporary enclosures and wrapping
 - 1. The Contractor shall protect tree trunks and root zones from damage. If fencing is not possible due to proximity of construction, then the Contractor is obligated to wrap the trunk with material sufficient to protect the trunk from any damage. The Contractor is obligated to protect the root zone from compaction and damage. The Contractor may use 2x4 pieces wired together to protect the trunk to a minimum height of eight (8) feet above grade. Mulch, gravel and plywood boards should be used to cover 100% of the root zone.
 - 2. Miscellaneous materials: burlap, coarsely shredded hardwood mulch, septic (rounded) gravel.
 - 3. The Contractor shall be aware and flag, if necessary, existing overhead canopies of trees to remain. Equipment shall operate with lowered boom or cranes to protect the existing tree canopies from damage.

2.3 MULCH AND COMPOST

- A. Mulch – Commercially available decomposed coarsely shredded hardwood mulch at three (3) inch depth. Mulch shall have been decomposing for a minimum of sixty (60) days.

Shredded tree mulch – Undecomposed, twice shredded hardwood mulch from on-site trees that do not include invasive tree species. This mulch must be utilized with a compost bottom layer that shall be one-half (1/2) to one (1) inch and the undecomposed hardwood added for a minimum three (3) inch combined thickness.
- B. Compost - commercially available, mature, fully decomposed compost that complies with Section 32 9200 Turf and Grasses.

2.4 MISCELLANEOUS PRODUCTS

- A. Tree Fertilizer: Fertilize all trees with a combination of PHC for trees 27-9-9 and Mycor Tree Injectable. Mix 8 pounds of PHC for trees and A and B packets of Mycor Tree Injectable per one hundred (100) gallons of water.
- B. Herbicides, Insecticides, Miticides and Fungicides: Legal commercial quality non-staining materials with original manufacturers' containers, properly labeled with guaranteed analysis, least toxic required.
- C. Water: Clean fresh, free of substances toxic to plant growth.
- D. Sterilant: Use a horticulturally accepted sterilant for sterilizing pruning equipment.
- E. Root Sealant: Use a horticulturally accepted sealant appropriate for each species of tree.
- F. Erosion Control Net (Jute Mesh): Shall be heavy, twisted jute mesh, weighing approximately 1.22 pounds per linear yard and four (4) feet wide with mesh openings of approximately one (1) inch square.
- G. Plywood: three-quarter (3/4) inch non-treated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

2.5 MACHINERY AND EQUIPMENT

- A. Machinery or tools requirements listed under this Section are NOT intended to be restrictive of specific manufacturers or models, unless so stated. Specific mention of the manufacturers is intended as a guide to illustrate the final product of the maintenance operations desired.
- B. All equipment and pruning tools shall be maintained in a safe working condition, and cutting edges shall be sharp at all times.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Verify trees to remain and trees to remove with Owner's Authorized Representative. Verify health of trees to remain and provide photo documentation prior to commencing demolition or site work.
- B. Verify locations of existing utilities in area of tree removal and root grinding. Contractor shall protect all utility lines to remain.
- C. Verify locations of existing utilities and old pavements to be removed in areas of trees to remain. Contractor shall protect tree's root systems.
- D. Verify staging of access into site for removal or trees, and protection of trees and areas to be preserved. Utilize existing pavement surfaces to be demolished to prevent compaction of soils into protected areas.
- E. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the Owner.

3.2 TREE PRESERVATION

- A. Protect and preserve trees, understory trees, shrubs, native grasses, and plants not to be removed by the use of fencing, temporary enclosures, wrapping or other means. TREE PROTECTION MUST OCCUR PRIOR TO ANY SITE WORK, DEMOLITION, EXISTING ABANDONED UTILITY REMOVAL, OR GRADING.
- B. Abandoned Utilities to be Removed: Determine locations of underground utilities and perform work in a manner which is intended to avoid possible damage to trees and protected vegetation. Hand excavate or use air-spade technology where required.
- C. Tree protection must receive approval of the Owner's Authorized Representative prior to starting any site work.
- D. Protected trees shown to remain must maintain a full 75% existing undisturbed root zone minimum to be counted as a protected site tree per the local city code or ordinance.
- E. Protect trees shown with approved fencing as indicated on the drawings and as needed to protect from construction activities.
- F. Per assessment report, protect existing understory trees and shrubs to remain under and adjacent to existing trees to remain.
- G. Repair injuries, abrasions and other damage to plants by cleanly removing broken members, loose and torn bark, and shape edges in order to permit drainage of rainwater from wounds. Paint wounds with an approved tree wound paint. Provide photo documentation of all tree injuries and repairs.
- H. Where depth of soil over root system of existing plantings is to be modified by final grading, provide the following:
 - 1. Where increase of one (1) foot or more in elevation is shown, spread continuous layer of rock aggregate, graded one quarter (1/4) inch to two (2) inches, six (6) inches deep from trunk to drip line of branches prior to installation of fill.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

2. Provide proper aeration by installing within perimeter of spread, a system of four (4) inch clay drain tile. Install vertically flush with soil surface and penetrating into layer of aggregate fill.
- I. Install tree guard fencing at a minimum of three (3) feet past the tree drip line or as noted on the drawings.
- J. Do not install gates in tree guard fencing. Do not stack or store any equipment inside the tree fence.
- K. Do not clean construction equipment, dump liquids, nor perform field maintenance on vehicles in the vicinity of the trees to be preserved.
- L. Apply three (3) inches of coarsely shredded hardwood mulch over tree root zone within fencing, unless shown otherwise.
- M. Install plywood over mulch in areas reflected on plans for access between the tree protection fencing and the face of building or edge of retaining wall construction.
- N. Trees inside fencing with native turf areas to remain: DO NOT install mulch or disturb soils in areas shown without mulch due to in-situ soils ability to percolate and drain.

3.3 TREE, LIMB, AND VEGETATION REMOVAL

- A. Receive approval from the Owner's Authorized Representative in the field for trees and vegetation to be removed. Trees that have died or have been approved for removal shall be removed by felling with chain saws. Fell trees to avoid injuring protected trees and vegetation or damaging utilities and existing pavement or structures. Use felling methods that comply with OSHA and American Association of Nurserymen.
- B. Undergrowth identified and designated for removal within existing tree stands to be preserved shall be removed by hand with machinery and tools that do not harm the root systems, trunks, limbs, or any other part of the trees, understory trees, understory shrubs or native grasses designated to be preserved.
- C. Grind stumps to a depth of eighteen (18) inches within a three (3) foot diameter of the trunk in areas where rough grading does not exceed two (2) feet of cut. Remove ground mulch from area and fill hole with select fill or site stockpiled topsoil compacted to 90% proctor density. Trees will not need to have stumps ground that are removed within area of building construction and excavation or where rough grading exceeds two (2) feet of cut.
- D. Trees within heavily rooted zones of other trees will have stumps ground to same depth as above, but grind main root laterals out three (3) feet from tree. DO NOT grind over or into other tree's root systems.
- E. Arborist shall prune trees to remove limbs and branches that hinder Contractor's work. Owner's Authorized Representative shall approve any pruning that removes more than ten (10) percent of the tree's canopy.
- F. Prune branches of trees per approved horticultural practices, for balanced overall canopy appearance, and to prevent one-sided canopy pruning to provide for:
 1. Construction equipment access clearance to fourteen (14) feet height from finished grades.
 2. Building vertical face clearance to allow scaffolding, lifts and equipment access.
 3. Building projected finished roof or parapet elevation clearance of five (5) feet.
 4. Fire truck access lanes and drives clearance of fourteen (14) feet above finished pavement elevation.
- G. Prune trees to remove dead wood, broken branched, mistletoe and suckers from canopies as needed. Thin prune by removing no more than twenty (20) percent of growth. Sterilize pruning tools between individual plants to keep down spread of disease.
- H. Neatly cut limbs and branches to be trimmed or removed close to the bole of the tree or main branches. Paint cuts more than one and one-quarter (1 1/4) inches in diameter with an approved tree wound paint. Use 3-cut process to remove branches.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

- I. Limb up trees to provide seven (7) foot minimum clearance over adjacent pedestrian walks, plazas, or accessible pavements to be constructed. Tree shall be limbed up by Arborist to provide balanced shape and to allow for interior branch development.
- J. Remove poison ivy and other vines from tree trunks, treat and remove roots of ivy to prevent reestablishment (If applicable).
- K. Hand grub to remove small seedling trees, excessive surface vegetative debris, seeds, nuts and trash. Retain a minimum layer or naturally decomposed surface litter over top of existing grade below tree canopy. Grubbing shall not extend into the surface roots of the tree to remain to prevent damage to the surface roots. Apply coarsely shredded hardwood mulch over root zone if area previously had excessive debris depth to help retain surface moisture over root zone.
- L. Remove all branches and debris. Legally dispose of vegetation, branches and debris off site.
- M. Leave site in a clean and orderly manner.

3.4 ROOT PRUNING

- A. Root pruning as indicated on the drawings must occur prior grading or excavation in the root zone.
- B. Arborist – Major root pruning (one (1) inch caliper and larger) should be supervised by an ISA Certified Arborist where indicated on the plan or if roots are exposed due to grading or excavation. Use sharp instruments that leave a clean cut, with no ragged edges.
- C. Root pruning guidelines:
 - 1. Do not mechanically trench under trees, Trench using Air Spade Technology offered by Root Flare Services, Dallas, TX (or approved equal), hand dig or bore underneath. If roots greater than one (1) inch are encountered and severed, dig back along the root and find solid root wood, then cut flush and treat with an acceptable root sealant immediately. If the roots cannot be treated immediately, cover with moist burlap to prevent desiccation until they can be treated.
 - 2. Any roots broken and disturbed during construction trenching operations shall be immediately cleanly cut and sprayed with root sealant. Do not leave uncut, frayed roots without immediate treatment. Owner is to inspect any trench before filling occurs.
 - 3. Temporarily cover exposed roots with wet burlap to prevent roots from drying out.
 - 4. Do not remove more than 25 % of the tree's roots, with no more than 20% from one side.
 - 5. For trees twelve (12) inches in diameter and less, roots should not be removed within four (4) feet of the outer edge of the tree trunk base. Trees other than Post Oaks with diameter more than twelve (12) inches should be allowed an additional twelve (12) inches for every three (3) inches of trunk diameter measured at a point three (3) feet above the ground. Root prune all trees adjacent to proposed pavement locations.
 - 6. Oak trees with diameter more than twelve (12) inches should be allowed an additional twelve (12) inches for every one (1) inch of trunk diameter measured at a point three (3) feet above the ground.
 - 7. Root prune all trees adjacent to proposed pavement and excavation locations with proper pruning technique to provide clean cuts at roots with no ragged edges. Do not cut within five (5) feet of trunk.
- D. Arborist will review root pruning prior to backfilling.
- E. Backfill the excavation as soon as possible after sealing cuts with root sealant and water the soil around the roots to avoid leaving air pockets.
- F. Backfill with five (5) parts native topsoil and one (1) part compost.
- G. Apply root fertilizer / stimulator to root zone of trees where root pruning has occurred. Apply fertilizer at rates recommended by manufacturer. Inject fertilizer at depths prescribed by manufacturer.
- H. The Arborist must receive field approval from Owner's Authorized Representative or the Landscape Architect for tree and root pruning not shown in the drawings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

3.5 BORING NEAR TREES

- A. Bores within the root zone of large trees shall be horizontal directional bores. For pipe installation, mechanically bore the tunnel under the roots with a horizontal directional drill and hydraulic or pneumatic air excavation technology. In all cases, install the utility pipe immediately, backfill with soil and soak within the same day.
- B. Installation shall be tunnel bored beneath the tree and roots per the following chart:

Trenching Distance	
When the Tree Diameter (at 4.5' height) is	Trenching will be Replaced with Boring at this Min. Distance (10x tree diameter) from the Face of the Tree in any Direction
6-9" measured at 6"	5- 8'
10-14" measured at 54"	10 - 13'
15-19" measured at 54"	14- 16'
19-24" measured at 54"	17-19'
Over 25" measured at 54"	20'+
Depth of Tunneling	
9" or less measured at 6"	2.0'
10-14" measured at 54"	2.5'
15-19" measured at 54"	3.0'
More than 19" measured at 54" depth of tunnel	3.5'

Bore pits shall be located at a minimum distance as specified by trenching distance table above.

3.6 WATERING

- A. The Contractor shall provide watering as needed to keep existing trees to remain in vigorous condition.
- B. The Contractor shall water protected trees during construction by deep root watering trees once every two weeks during the months of June, July, August, and September. Should drought of more than three (3) weeks occur from October through May, the Contractor shall provide additional deep root watering of protected trees as needed to keep trees in healthy, growing condition. A dripping hose or gator bag or other means may be used to deep root water the trees. Soil should be saturated within the drip line after deep root watering.
- C. For large masses of protected trees, water trees that are located along the outside edge of protected area as described above.

3.7 MAINTENANCE OF EXISTING TREES

- A. Trees shall be continuously and routinely inspected for distress caused by construction activities. Notify Owner's Authorized Representative at first sign of distress.
- B. Maintain fence taut, stable and secure until soil preparation and seeding activity is needed within the fenced area.
- C. The Contractor shall maintain a three (3) inch cover of mulch on the tree root zone though out construction on individual trees. After initial mulch application re-apply mulch twice per year. Mulch shall be refreshed to specified depth within seven (7) calendar days of January 1 and July 1. Use erosion control net (jute mesh) as needed to secure mulch in place from potential heavy erosion adjacent to drainage.
- D. Remove mulch when sodding commences within tree root zone.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TEXAS

- E. For masses of protected trees, unmown grass should be left within fifteen (15) feet of the trunk line along the outside edge of the trees.
- F. Native and existing turf grasses are to be retained and maintained, if necessary, during project construction period. If grass stops growing within tree protective fencing, or if the tree shows signs of stress such as leaf drop, sucker growth, wilting, or if tree shows signs of insects or disease, the Contractor shall notify the Owner immediately. It is the Contractor's responsibility to maintain the health of the trees during the construction period.
- G. Any Fire Ant mounds around or on top of a tree root zone of a specimen tree shall be treated immediately and the mound removed physically. Do not allow the mound to build on the tree trunk as this will cover the tree root flare and possibly cause injury or death. Ensure that any chemical application to the Fire Ant mound is safe for application atop tree root zones. Ant mounds do not need to be treated in tree masses.

3.8 DISPOSAL

- A. Haul off and legally dispose of any debris from the work of this section.
- B. Dispose of debris off the Site only with permission of property owner where such debris is to be deposited and in accordance with codes and regulations of the jurisdictional authorities.
- C. Burning and burying debris on the Worksite is prohibited.

3.9 CLEAN-UP

Remove and dispose of any debris, trash, protective materials, enclosures and fencing upon completion of the Work.

3.10 FINAL ACCEPTANCE

- A. The trees designated for protection will be examined as part of final acceptance when all site work has reached final acceptance.
- B. The Arborist shall issue a final Post Construction Tree Assessment regarding the status of the tree health for each specimen tree and for the large tree groupings. The report should identify if future care is required to maintain the health of the specimen trees. The report should identify what specific treatment the trees should receive coordinated with a time schedule to the treatment to promote tree health.
- C. If grading impacts the critical root zone, the Contractor's Arborist will be required to report specifically on the impacted tree. The Arborist shall recommend tree treatment and maintenance after final acceptance.
- D. Request inspection for final acceptance at least thirty (30) calendar days from project close out.
- E. Receive approval from the Owner's Authorized Representative for the work of this section completed.

END OF SECTION

THIS PAGE INTENTIONALLY BLANK

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 016000

PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.

1.2 DEFINITIONS

- A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.
 - 1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
 - 2. New Products: Items that have not previously been incorporated into another project or facility. Products salvaged or recycled from other projects are not considered new products.
 - 3. Comparable Product: Product that is demonstrated and approved through submittal process to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
- B. Substitutions: Changes in products, materials, and equipment from those required by the Contract Documents and proposed by Contractor. Refer to Division 01 Section "Substitution Procedures".
- C. Basis-of-Design Product Specification: Where a specific manufacturer's product is named and accompanied by the words "Product Standard," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of other manufacturers
- D. Hazardous Substances Prohibited by Law: Including, but not limited to, any product, material, element, constituent, chemical, substance, compound, or mixture, which is defined in, included under, or regulated by any environmental laws.
- E. Environmental Laws: Applicable local, state, and federal laws, rules, ordinances, codes, regulations, and requirements in effect at the time Contractor's services are rendered, any amendments for Contractor's services rendered after the effective date of any such amendments.

1.3 SUBMITTALS

- A. Comparable Products: Comply with requirements in Division 01 Section "Submittal Procedures." Show compliance with requirements. Submit request for consideration of each comparable product. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
- B. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 01 Section "Submittal Procedures." Show compliance with requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Contractor Affidavit: Submit an affidavit on construction company letterhead signed by an officer of the company, notarized by a notary public, which certifies compliance with the environmental laws controlling hazardous substances for the construction of this Project.

1.4 QUALITY ASSURANCE

- A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.
- B. Compliance: Contractor shall take whatever measures deemed necessary to insure that all employees, suppliers, vendors, fabricators, subcontractors, or their assigns, to comply with hazardous substance requirements.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.
- B. Delivery and Handling:
 - 1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
 - 2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
 - 3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
 - 4. Inspect products on delivery to ensure compliance with the Contract Documents and to ensure that products are undamaged and properly protected.
- C. Storage:
 - 1. Store products to allow for inspection and measurement of quantity or counting of units.
 - 2. Store materials in a manner that will not endanger Project structure.
 - 3. Store products that are subject to damage by the elements, under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation.
 - 4. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
 - 5. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
 - 6. Protect stored products from damage and liquids from freezing.

1.6 PRODUCT WARRANTIES

- A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
 - 1. Manufacturer's Warranty: Written warranty furnished by individual manufacturer for a particular product, required by the Contract Documents to provide specific rights for Owner, and specifically endorsed by manufacturer to Owner.
 - 2. Warranties: Prepare a written document, on manufacturer's standard form, modified to include Project-specific information, that contains appropriate terms and identification, properly executed.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Submittal Time: Comply with requirements in Division 01 Section "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

- A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.
1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
 2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
 3. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
 4. Where products are accompanied by the term "as selected," Architect will make selection.
 5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
 6. Products and materials brought onto the Project Site, and products and materials incorporated into the Work, shall comply with environmental laws.
- B. Product Selection Procedures:
1. Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
 2. Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.
 3. Products:
 - a. Restricted List (Acceptable Manufacturers/Fabricators and Products): Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will be considered unless otherwise indicated.
 - b. Nonrestricted List (Available Manufacturers/Fabricators and Products): Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed, or an unnamed product, that complies with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product.
 4. Manufacturers:
 - a. Restricted List (Acceptable Manufacturers/Fabricators): Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will be considered unless otherwise indicated.
 - b. Nonrestricted List (Available Manufacturers/Fabricators): Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed, or a product by an unnamed manufacturer, that complies

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

with requirements. Comply with requirements in "Comparable Products" Article for consideration of an unnamed manufacturer's product.

5. Basis-of-Design Product (Product Standard): Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers, or unnamed manufacturer's product.
 - C. Descriptive Specification Requirements: Where Specifications describe a product, or assembly, listing exact characteristics required, without use of a brand or trade name, provide a product, material or assembly that provides the characteristics and otherwise complies with Contract requirements.
 - D. Performance Specification Requirements: Where Specifications require compliance with performance requirements, provide products that comply with these requirements, and are recommended by the manufacturer for the application indicated. General overall performance of a product is implied where the product or material is specified for a specific application.
 1. Manufacturer's recommendations may be contained in published product literature, or by the manufacturer's certification of performance.
 - E. Compliance with Standards, Codes and Regulations: Where Specifications only require compliance with imposed code, standard or regulation, select product that complies with standards, codes or regulations specified.
 - F. Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.
 1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Division 01 Section "Substitution Procedures" for proposal of product.
 - G. Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's color, gloss, pattern, density, or texture" or similar phrase, select a product (and manufacturer) that complies with other specified requirements.
 1. Standard Range: Where Specifications include the phrase "standard range of colors, patterns, textures" or similar phrase, Architect will select color, pattern, or texture from manufacturer's product line that does not include premium items.
 2. Custom Range: Where Specifications include the phrase "custom range of colors, patterns, textures" or similar phrase, Architect will select color, pattern, or texture from manufacturer's product line that includes both standard and premium items.
 3. Special Custom Range: Where Specifications include the phrase "special custom range of colors patterns, textures" or similar phrase, Architect will select a new color, pattern, or texture different from those normally produced by the manufacturer.
 - H. Allowances (If Applicable): Refer to provisions of individual Specification Sections and of Division 01 Section "Allowance" for allowances that control product selection and for procedures required for processing such selections.
- 2.2 COMPARABLE PRODUCTS
- A. Conditions for Consideration: Architect will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied,

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Architect may return requests without action, except to record noncompliance with these requirements:

1. Evidence that the proposed product does not require revisions to the Contract Documents; that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
5. Samples, if requested.

PART 3 - EXECUTION

3.1 RESTRICTION OF HAZARDOUS SUBSTANCES

- A. Contractor agrees that it shall not knowingly after reasonable diligence and effort, incorporate into the Work any hazardous substance other than as may be lawfully contained within products, except in accordance with applicable environmental laws. Further, in performing any of its obligations hereunder, Contractor shall not cause any release of hazardous substances into, or contamination of, the environment, including soil, the atmosphere, any watercourse or ground water, except in accordance with applicable environmental laws. In the event that Contractor engages in any of the activities prohibited in this paragraph, to the fullest extent permitted by law, Contractor hereby indemnifies and holds harmless Owner and its partners, members, officers, directors, agents, employees and consultants from and against any and all claims, damages, losses, causes of action, suits and liabilities of every kind, including, but not limited to, expenses of litigation, court costs, punitive damages and attorney's fees, arising out of, incidental to or resulting from the activities prohibited.
- B. In the event Contractor observes on the Project Site any substance which Contractor reasonably believes to be a hazardous substance, and which is being introduced into the Work, or exists on the Project Site, in a manner violative of any applicable environmental laws, Contractor shall immediately notify Owner and report the condition to Owner in writing. The Work in the affected area shall not thereafter be resumed except by written authorization of Owner if in fact a hazardous substance has been encountered and has not been rendered harmless. In the event that Contractor fails to give Owner proper notification hereunder, upon knowingly observing a hazardous substance at the Project Site, to the fullest extent permitted by the law, Contractor hereby indemnifies and holds harmless Owner, and all of its partners, members, officers, directors, agents, employees and consultants from and against all claims, damages, losses, causes of action, suits and liabilities of every kind, including, but not limited to, expenses of litigation, court costs, punitive damages and attorneys' fees, arising out of, incidental to, or resulting from Contractor's failure to stop the Work.
- C. If Owner believes that hazardous substances may have been located, generated, manufactured, used or disposed of on or about the Project Site by Contractor or any of its employees, agents, subcontractors, suppliers, or invitees, Owner may have environmental studies of the Project Site conducted as it deems appropriate, and Contractor shall be responsible for the cost of such studies to the extent that Contractor or any of its employees, agents, subcontractors, suppliers or invitees are responsible for the presence of any hazardous substances.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 017300
EXECUTION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:
 - 1. Construction layout.
 - 2. Field engineering and surveying.
 - 3. Installation of the Work.
 - 4. Cutting and patching.
 - 5. Coordination of Owner-installed products.
 - 6. Progress cleaning.
 - 7. Starting and adjusting.
 - 8. Protection of installed construction.
 - 9. Correction of the Work.

1.2 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.
- B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.3 SUBMITTALS

- A. Land Surveyor Qualification Data: For land surveyor or professional engineer.
- B. Land Surveyor Certificates: Submit certificate signed by land surveyor or professional engineer certifying that location and elevation of improvements comply with requirements.
- C. Cutting and Patching Plan: Submit plan describing procedures at least 10 days prior to the time cutting and patching will be performed, requesting approval to proceed. Include the following information:
 - 1. Extent: Describe reason for and extent of each occurrence of cutting and patching.
 - 2. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building appearance and other significant visual elements.
 - 3. Products: List products to be used for patching and firms or entities that will perform patching work.
 - 4. Dates: Indicate when cutting and patching will be performed.
 - 5. Utilities and Mechanical and Electrical Systems: List services and systems that cutting and patching procedures will disturb or affect. List services and systems that will be relocated and those that will be temporarily out of service. Indicate length of time permanent services and systems will be disrupted.
 - a. Include description of provisions for temporary services and systems during interruption of permanent services and systems.
 - 6. Structural Elements: Where cutting and patching involve adding reinforcement to structural elements, submit details and engineering calculations showing integration of reinforcement with original structure.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

7. Architect's Approval: Obtain approval of cutting and patching proposal before cutting and patching. Approval does not waive right to later require removal and replacement of unsatisfactory work.
- D. Certified Surveys: Submit two copies signed by land surveyor or professional engineer.
- E. Final Property Survey: Submit 6 copies showing the Work performed and record survey data.
- F. Retention System Certification: Submit a statement certified by the Contractor's registered structural engineer that the design of components of the excavation support system is in compliance with provisions of the Contract Documents and the local building code, and is in keeping with generally accepted engineering practice.
 1. Submit, if requested, design calculations, specifications and erection drawings, bearing the Contractor's registered structural engineer's stamp, to the local building code official.
 2. Submit complete excavation support system shop drawings for information coordination purposes only.
 3. Architect/Engineer will neither review nor approve excavation support system shop drawings.

1.4 QUALITY ASSURANCE

- A. Land Surveyor Qualifications: A professional land surveyor or engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.
- B. Retention System Engineering: Each component of the excavation support system shall be designed by a registered structural engineer, in accordance with the local building code, and registered structural engineer shall be engaged by the Contractor.
- C. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.
 1. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection
 2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.
 3. Miscellaneous Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.
 4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction on the exterior or in occupied spaces in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
 - a. If possible, retain original Installer or fabricator to cut and patch exposed Work listed below. If it is impossible to engage original Installer or fabricator, engage another recognized, experienced, and specialized firm.
- D. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

1.5 WARRANTY

- A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during cutting and patching operations, by methods and with materials so as not to void existing warranties.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. General: Comply with requirements specified in other Sections.
 - 1. For projects requiring compliance with sustainable design and construction practices and procedures, use products for patching that comply with requirements in Division 01 sustainable construction requirements Section.
- B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
 - 1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Existing Conditions: The existence and location of site improvements, utilities, and other construction indicated as existing are not guaranteed. Before beginning work, investigate and verify the existence and location of mechanical and electrical systems and other construction affecting the Work.
 - 1. Before construction, verify the location and points of connection of utility services.
- B. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, and other construction affecting the Work.
 - 1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping; underground electrical services, and other utilities.
 - 2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.
- C. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions. Record observations.
 - 1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 1. Respective manufacturer/fabricator's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Existing Utility Information: Furnish information to local utility that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.
- C. Existing Utility Interruptions at Renovation Work: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
 1. Notify Owner not less than 72 hours in advance of proposed utility interruptions.
 2. Do not proceed with utility interruptions without Owner's written permission.
- D. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- E. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.
- F. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information to Architect according to requirements in Division 01 Section "Project Management and Coordination."

3.4 CONSTRUCTION LAYOUT

- A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect promptly.
- B. General: Engage a land surveyor or professional engineer to lay out the Work using accepted surveying practices.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
 2. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
 3. Inform installers of lines and levels to which they must comply.
 4. Check the location, level and plumb, of every major element as the Work progresses.
 5. Notify Architect when deviations from required lines and levels exceed allowable tolerances.
 6. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.
- C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.
- D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.
- E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

3.5 FIELD ENGINEERING

- A. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.
1. Do not change or relocate existing benchmarks or control points. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.
 2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.
- B. Benchmarks: Establish and maintain a minimum of 2 permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.
1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
 2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
 3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.
- C. Certified Survey: 30 days after completion of each work component/activity, including, but not limited to, foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.
- D. Final Property Survey: Engage a land surveyor or professional engineer to prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor or professional engineer, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.
2. Recording: At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.6 INSTALLATION

- A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
 1. Make vertical work plumb and make horizontal work level.
 2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
 3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
- B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated, unless indicated otherwise in the Contract Documents.
- C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.
- D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.
- E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.
- F. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.
- G. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.
- H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located, aligned, and coordinated with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.
 1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
 2. Allow for building movement, including thermal expansion and contraction.
 3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- J. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.7 CUTTING AND PATCHING

- A. Cutting and Patching, General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.
- B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.
- C. Temporary Support: Provide temporary support of work to be cut.
- D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
- E. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching according to requirements in Division 01 Section "Summary."
- F. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to prevent interruption to occupied areas.
- G. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
 1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
 2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
 3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
 4. Excavating and Backfilling: Comply with requirements in applicable Division 31 Sections where required by cutting and patching operations.
 5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
 6. Proceed with patching after construction operations requiring cutting are complete.
- H. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other Sections, where applicable.
 1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
 2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will minimize evidence of patching and refinishing.
 - a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
 - b. Restore damaged pipe covering to its original condition.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
 - a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.
 - b. Patch fire rated assemblies with materials to match existing and maintain assembly fire rating.
 4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
 5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.
 - I. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.
- 3.8 OWNER-INSTALLED PRODUCTS
- A. Site Access: As applicable, provide access to Project site for Owner's construction personnel.
 - B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.
 1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
 2. Preinstallation Conferences: Include Owner's construction personnel at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.
- 3.9 PROGRESS CLEANING
- A. General: Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.
 1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
 2. Do not hold waste materials more than 7 days during normal weather or 3 days if the temperature is expected to rise above 80 deg F (27 deg C).
 3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
 - a. Use containers specifically intended for holding types of waste materials identified where applicable, e.g. blue colored containers with labeling and symbols for bio-waste.
 - B. Site: Maintain Project site free of waste materials and debris.
 - C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.
 1. Remove liquid spills immediately.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.
 - D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.
 - E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.
 - F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.
 - G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Division 01 Section "Temporary Facilities and Controls." and Division 01 Section "Construction Waste Management and Disposal", whichever is the more restrictive.
 - H. Remove construction markings not required and graffiti immediately, repairing or replacing damaged material.
 - I. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.
 - J. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
 - K. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.
- 3.10 STARTING AND ADJUSTING
- A. As applicable, coordinate startup and adjusting of equipment and operating components with commissioning requirements in Division 01 specification sections.
 - B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.
 - C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.
 - D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - E. Manufacturer's Field Service: Comply with qualification requirements in Division 01 Section "Quality Requirements."
- 3.11 PROTECTION OF INSTALLED CONSTRUCTION
- A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.
 - B. Comply with manufacturer's written instructions for temperature and relative humidity.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 017419.13
CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for the following:
 - 1. Salvaging nonhazardous demolition and construction waste.
 - 2. Recycling nonhazardous demolition and construction waste.
 - 3. Disposing of nonhazardous demolition and construction waste.

1.2 DEFINITIONS

- A. Construction Waste: Building, structure, and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.
- B. Demolition Waste: Building, structure, and site improvement materials resulting from demolition operations.
- C. Disposal: Removal of demolition or construction waste and subsequent salvage, sale, recycling, or deposit in landfill, incinerator acceptable to authorities having jurisdiction, or designated spoil areas on Owner's property.
- D. Diversion: Avoidance of demolition and construction waste sent to landfill or incineration. Diversion does not include using materials for landfill, alternate daily cover on landfills, or materials used as fuel in waste energy processes.
- E. Material Stream: A flow of materials coming from a job site into markets for building materials. Examples of material streams include deconstructed materials sent to reuse markets, commingled waste sent to mixed-waste recycling facility, source separation where each material is sent to a specific facility, manufacturers' or suppliers' take-back of materials, and reuse of deconstructed materials on-site.
- F. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.
- G. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.
- H. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.
- I. Source Separation: The act of keeping different types of waste materials separated starting at the first instance a material is considered waste.

1.3 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition and construction waste becomes property of Contractor.

1.4 SUBMITTALS

- A. Waste Management Plan: Submit plan within 14 days of date established for commencement of the Work.
- B. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Include the following information:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Material category.
2. Generation point of waste.
3. Total quantity of waste in **tons (tonnes)**.
4. Quantity of waste salvaged, both estimated and actual in **tons (tonnes)**.
5. Quantity of waste recycled, both estimated and actual in **tons (tonnes)**.
6. Total quantity of waste recovered (salvaged plus recycled) in **tons (tonnes)**.
7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.

C. Qualification Data: For waste management coordinator and refrigerant recovery technician.

1.5 QUALITY ASSURANCE

- A. Waste Management Coordinator Qualifications: Experienced firm, with a record of successful waste management coordination of projects with similar requirements.
- B. Waste Management Conference(s): Conduct conference(s) at Project site to comply with requirements in Section 013100 "Project Management and Coordination." Review methods and procedures related to waste management including, but not limited to, the following:
1. Review and discuss waste management plan including responsibilities of each contractor and waste management coordinator.
 2. Review requirements for documenting quantities of each type of waste and its disposition.
 3. Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
 4. Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
 5. Review waste management requirements for each trade.

1.6 WASTE MANAGEMENT PLAN

- A. General: Develop and implement a Construction Waste Management Plan (CWMP) consisting of waste identification, waste reduction work plan, waste diversion goal, whether separated or comingled and cost/revenue analysis. Distinguish between demolition and construction waste. Indicate quantities by weight or volume but use the same units of measure throughout the CWMP.
- B. Waste Identification: Indicate anticipated types and quantities of waste generated by the Work. Include estimated quantities and assumptions for estimates.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Achieve end-of-Project rates for salvage/recycling nonhazardous solid waste generated by the Work. Practice efficient waste management in the use of materials in the Work. Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials for the following.
1. Demolition Waste:
 - a. Landscape Debris and Soil: Do not include as part of demolition waste quantities.
 2. Construction Waste:
 - a. Divert 50% by weight or higher when mandated by local ordinance.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 PLAN IMPLEMENTATION

- A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.
 - 1. Comply with operation, termination, and removal requirements in Division 1 Section "Temporary Facilities and Controls."
- B. Waste Management Coordinator: Engage a waste management coordinator to be responsible for implementing, monitoring, and reporting status of waste management work plan.
 - 1. Periodic Observations: Contractor's qualified waste management coordinator shall periodically inspect waste collection bins to ensure collection is proceeding in accordance with requirements.
- C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.
 - 1. Distribute waste management plan to everyone concerned.
 - 2. Distribute waste management plan to entities when they begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.
- D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Designate and label specific areas on Project site necessary for separating materials that are to be salvaged, recycled, reused, donated, or sold.
 - 2. Comply with Division 1 Section "Temporary Facilities and Controls" for controlling dust and dirt, environmental protection, and noise control.

3.2 SALVAGING DEMOLITION WASTE

- A. Salvaged Items for Reuse in the Work: Salvage items for reuse and handle as follows:
 - 1. Not allowed unless noted otherwise.
 - 2. Clean, repair, service, and refinish salvaged items, unless noted otherwise.
 - 3. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
 - 4. Store items in a secure area until installation.
 - 5. Protect items from damage during transport and storage.
 - 6. Install salvaged items to comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make items functional for use indicated.
- B. Salvaged Items for Sale and Donation: Not permitted on Project site.
- C. Salvaged Items for Owner's Use: Salvage items for Owner's use and handle as follows:
 - 1. Clean salvaged items.
 - 2. Pack or crate items after cleaning. Identify contents of containers with label indicating elements, date of removal, quantity, and location where removed.
 - 3. Store items in a secure area until delivery to Owner.
 - 4. Transport items to Owner's storage area designated by Owner.
 - 5. Protect items from damage during transport and storage.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.3 RECYCLING WASTE, GENERAL

- A. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to Contractor.
- B. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.
- C. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.
 - 1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin.
 - a. Inspect containers and bins for contamination and remove contaminated materials if found.
 - 2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 - 3. Stockpile materials away from construction area. Do not store within drip line of remaining trees.
 - 4. Store components off the ground and protect from the weather.
 - 5. Remove recyclable waste from Owner's property and transport to recycling receiver or processor as often as required to prevent overfilling bins.

3.4 RECYCLING DEMOLITION WASTE

- A. General: Grind, chip, separate, sort, stack and store as necessary to process waste material.

3.5 RECYCLING CONSTRUCTION WASTE

- A. General: Grind, crush, remove reinforcing and metals, separate, sort, stack and store as necessary to process waste materials
- B. Packaging:
 - 1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
 - 2. Polystyrene Packaging: Separate and bag materials.
 - 3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.
 - 4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.
- C. Wood Materials:
 - 1. Lumber Treated with Heavy-Metal Preservatives: Do not grind, chip, or incinerate; must be reused or landfilled.

3.6 DISPOSAL OF WASTE

- A. General: Except for items or materials to be salvaged or recycled, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
 2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. General: Except for items or materials to be salvaged or recycled, remove waste materials and legally dispose of at designated spoil areas on Owner's property.
- C. Burning: Do not burn waste materials.
- D. Disposal: Remove waste materials from Owner's property and legally dispose of them.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 017700
CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:
 - 1. Substantial Completion procedures.
 - 2. Final completion procedures.
 - 3. Warranties.
 - 4. Final cleaning.
 - 5. Repair of the Work.

1.2 SUBMITTALS

- A. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.
- B. Certified List of Incomplete Items: Final submittal at Final Completion.
- C. Certificates of Release: From authorities having jurisdiction.
- D. Certificate of Insurance: For continuing coverage.
- E. Field Report: For pest control inspection.
- F. Schedule of Maintenance Material Items: For maintenance material submittal items specified in other Sections.

1.3 SUBSTANTIAL COMPLETION PROCEDURES

- A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's punch list), indicating the value of each item on the list and reasons why the Work is incomplete.
- B. Submittals Prior to Substantial Completion: Complete the following prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
 - 1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
 - 2. Submit closeout submittals specified in other Division 01 Sections, including project record documents, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.
 - 3. Submit closeout submittals specified in individual Divisions 02 through 33 Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
 - 4. Submit maintenance material submittals specified in individual Divisions 02 through 33 Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Architect. Label with manufacturer's name and model number where applicable.
 - a. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

and name and number of related Specification Section. Obtain Owner's signature for receipt of submittals.

5. Submit test/adjust/balance records.
- C. Procedures Prior to Substantial Completion: Complete the following prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.
1. Advise Owner of pending insurance changeover requirements.
 2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
 3. Complete startup and testing of systems and equipment.
 4. Perform preventive maintenance on equipment used prior to Substantial Completion.
 5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training video recordings specified in Division 01 Section "Demonstration and Training."
 6. Advise Owner of changeover in heat and other utilities.
 7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
 8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
 9. Complete final cleaning requirements, including touchup painting.
 10. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.
- D. Inspection: Submit a written request for inspection to determine Substantial. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.
1. Reinspection: Request, in writing, reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
 2. Results of completed inspection will form the basis of requirements for final completion.
- E. Warranties required by the Contract Documents shall commence on the date of Substantial Completion of the Work or designated portion thereof unless otherwise provided in the Certificate of Substantial Completion.
- 1.4 FINAL COMPLETION PROCEDURES
- A. Submittals Prior to Final Completion: Before requesting final inspection for determining final completion, complete the following:
1. Submit a final Application for Payment according to Division 01 Section "Payment Procedures."
 2. Certified List of Incomplete Items: Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list). Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
 3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
 4. Submit pest-control final inspection report.
- B. Inspection: Submit a written request for final inspection for acceptance. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.5 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

- A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction
 1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
 2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
 3. Include the following information at the top of each page:
 - a. Project name.
 - b. Date.
 - c. Name of Architect.
 - d. Name of Contractor.
 - e. Page number.
 4. Submit list of incomplete items in the format agreed upon by the Owner and Architect.

1.6 PROJECT WARRANTIES

- A. Time of Submittal: Submit written warranties for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated, or when delay in submittal of warranties might limit Owner's rights under warranty.
- B. Partial Occupancy: Submit properly executed warranties within minimum number days, as required by the Contract, of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.
- C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.
 1. Warranty Electronic File: Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.
- D. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 FINAL CLEANING

- A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
- B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.
 - 1. Complete the following cleaning operations, as applicable, before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:
 - a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
 - b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
 - c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
 - d. Remove tools, construction equipment, machinery, and surplus material from Project site.
 - e. Remove snow and ice to provide safe access to building.
 - f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
 - g. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
 - h. Sweep concrete floors broom clean in unoccupied spaces.
 - i. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
 - j. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
 - k. Remove labels that are not permanent.
 - l. Remove all graffiti and construction writing.
 - m. Wipe surfaces of mechanical and electrical equipment and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
 - n. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
 - o. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
 - p. Clean ducts, blowers, and coils if units were operated without filters during construction or that display contamination with particulate matter on inspection.
 - q. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
 - r. Leave Project clean and ready for occupancy.
- C. Pest Control: Comply with pest control requirements in Division 01 Section "Temporary Facilities and Controls." Prepare written report.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Construction Waste Disposal: Comply with waste disposal requirements in Division 01 Section "Temporary Facilities and Controls." and Division 01 Section "Construction Waste Management and Disposal", whichever is the more restrictive and as follows:

1. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on Owner's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove waste materials from Project site and dispose of lawfully.

3.2 REPAIR OF THE WORK

- A. Complete repair and restoration operations before requesting inspection for determination of Substantial Completion.
- B. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, provide replacements. Remove and replace operating components that cannot be repaired. Restore damaged construction and permanent facilities used during construction to specified condition.
1. Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other damaged transparent materials.
 2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that already show evidence of repair or restoration.
 - a. Do not paint over "UL" and other required labels and identification, including mechanical and electrical nameplates. Remove paint applied to required labels and identification.
 3. Replace parts subject to operating conditions during construction that may impede operation or reduce longevity.
 4. Replace all lamps and starters to comply with requirements for new fixtures.
- C. All Warranties remain in effect.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 017823
OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:
 - 1. Operation and maintenance documentation directory.
 - 2. Emergency manuals.
 - 3. Operation manuals for systems, subsystems, and equipment.
 - 4. Product maintenance manuals.
 - 5. Systems and equipment maintenance manuals.

1.2 DEFINITIONS

- A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.
- B. Subsystem: A portion of a system with characteristics similar to a system.

1.3 CLOSEOUT SUBMITTALS

- A. Manual Content: Operations and maintenance manual content is specified in individual Specification Sections to be reviewed at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.
- B. Format: Submit operations and maintenance manuals in the following format:
 - 1. PDF electronic file. Assemble each manual into a composite electronically indexed file. Submit on digital media acceptable to Owner.
 - a. Name each indexed document file in composite electronic index with applicable item name. Include a complete electronically linked operation and maintenance directory.
 - b. Enable inserted reviewer comments on draft submittals.
- C. Initial Manual Submittal: Submit draft copy of each manual at least 30 days before commencing demonstration and training. Architect will comment on whether general scope and content of manual are acceptable.
- D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and before commencing demonstration and training. Architect will return copy with comments.
 - 1. Correct or revise each manual to comply with Architect's comments. Submit copies of each corrected manual prior to commencing demonstration and training.

PART 2 - PRODUCTS

2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

- A. Directory: Prepare a single, comprehensive directory of emergency, operation, and maintenance data and materials, listing items and their location to facilitate ready access to desired information. Include a section in the directory for each of the following:
 - 1. List of documents.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. List of systems.
 3. List of equipment.
 4. Table of contents.
- B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
- C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
- D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.
- E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."
- 2.2 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS
- A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
1. Title page.
 2. Table of contents.
 3. Manual contents.
- B. Title Page: Include the following information:
1. Subject matter included in manual.
 2. Name and address of Project.
 3. Name and address of Owner.
 4. Date of submittal.
 5. Name and contact information for Contractor.
 6. Name and contact information for Architect.
 7. Names and contact information for major consultants to the Architect that designed the systems contained in the manuals.
 8. Cross-reference to related systems in other operation and maintenance manuals.
- C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.
1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.
- D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.
- E. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.
1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. File Names and Bookmarks: Enable bookmarking of individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

2.3 EMERGENCY MANUALS

- A. Content: Organize manual into a separate section for each of the following:
 1. Type of emergency.
 2. Emergency instructions.
 3. Emergency procedures.
- B. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:
 1. Fire.
 2. Flood.
 3. Gas leak.
 4. Water leak.
 5. Power failure.
 6. Water outage.
 7. System, subsystem, or equipment failure.
 8. Chemical release or spill.
- C. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.
- D. Emergency Procedures: Include the following, as applicable:
 1. Instructions on stopping.
 2. Shutdown instructions for each type of emergency.
 3. Operating instructions for conditions outside normal operating limits.
 4. Required sequences for electric or electronic systems.
 5. Special operating instructions and procedures.

2.4 OPERATION MANUALS

- A. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:
 1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
 2. Performance and design criteria if Contractor has delegated design responsibility.
 3. Operating standards.
 4. Operating procedures.
 5. Operating logs.
 6. Wiring diagrams.
 7. Control diagrams.
 8. Piped system diagrams.
 9. Precautions against improper use.
 10. License requirements including inspection and renewal dates.
- B. Descriptions: Include the following:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Product name and model number. Use designations for products indicated on Contract Documents.
 2. Manufacturer's name.
 3. Equipment identification with serial number of each component.
 4. Equipment function.
 5. Operating characteristics.
 6. Limiting conditions.
 7. Performance curves.
 8. Engineering data and tests.
 9. Complete nomenclature and number of replacement parts.
- C. Operating Procedures: Include the following, as applicable:
1. Startup procedures.
 2. Equipment or system break-in procedures.
 3. Routine and normal operating instructions.
 4. Regulation and control procedures.
 5. Instructions on stopping.
 6. Normal shutdown instructions.
 7. Seasonal and weekend operating instructions.
 8. Required sequences for electric or electronic systems.
 9. Special operating instructions and procedures.
- D. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.
- E. Piped Systems: Diagram piping as installed, and identify color-coding where required for identification.

2.5 PRODUCT MAINTENANCE MANUALS

- A. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.
- B. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.
- C. Product Information: Include the following, as applicable:
1. Product name and model number.
 2. Manufacturer's name.
 3. Color, pattern, and texture.
 4. Material and chemical composition.
 5. Reordering information for specially manufactured products.
- D. Maintenance Procedures: Include manufacturer's written recommendations and the following:
1. Inspection procedures.
 2. Types of cleaning agents to be used and methods of cleaning.
 3. List of cleaning agents and methods of cleaning detrimental to product.
 4. Schedule for routine cleaning and maintenance.
 5. Repair instructions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.
- F. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.
 - 1. Include procedures to follow and required notifications for warranty claims.

2.6 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

- A. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.
- B. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.
- C. Manufacturers' Maintenance Documentation: Manufacturers' maintenance documentation including the following information for each component part or piece of equipment:
 - 1. Standard maintenance instructions and bulletins.
 - 2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
 - 3. Identification and nomenclature of parts and components.
 - 4. List of items recommended to be stocked as spare parts.
- D. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:
 - 1. Test and inspection instructions.
 - 2. Troubleshooting guide.
 - 3. Precautions against improper maintenance.
 - 4. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 - 5. Aligning, adjusting, and checking instructions.
 - 6. Demonstration and training video recording, if available.
- E. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.
 - 1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
 - 2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.
- F. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.
- G. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.
- H. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Include procedures to follow and required notifications for warranty claims.

PART 3 - EXECUTION

3.1 MANUAL PREPARATION

- A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.
- B. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.
- C. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.
 1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
 2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.
- D. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
 1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.
- E. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.
 1. Do not use original project record documents as part of operation and maintenance manuals.
 2. Comply with requirements of newly prepared record Drawings in Division 01 Section "Project Record Documents."
- F. Comply with Division 01 Section "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 017839
PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for project as constructed record documents, including the following:
 - 1. Record Drawings.
 - 2. Record Specifications.
 - 3. Record Product Data.
 - 4. Miscellaneous record submittals.

1.2 SUBMITTALS

- A. Record Drawings: Comply with the following:
 - 1. Number of Copies: Submit copies of record Drawings as follows:
 - a. Initial Submittal:
 - 1) Submit PDF electronic files of scanned record.
 - 2) Architect will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.
 - b. Final Submittal:
 - 1) Submit PDF electronic files of scanned record.
- B. Record Specifications: Submit annotated PDF electronic files of Project's Specifications, including addenda and contract modifications.
- C. Record Product Data: Submit annotated PDF electronic files and directories of each submittal.
- D. Miscellaneous Record Submittals: See other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit-annotated PDF electronic files and directories of each submittal.

PART 2 - PRODUCTS

2.1 ELECTRONIC PROJECT MANAGEMENT SOFTWARE

- A. Electronic File of Project Record Documents: Provide Architect with an independent electronic archive of accepted project record documents using electronic project management software as defined in Division 01 Section "Project Management and Coordination", in addition to the printed documents described elsewhere in this Section.

2.2 RECORD DRAWINGS

- A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.
 - 1. Preparation: Mark record prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
 - b. Accurately record information in an acceptable drawing technique.
 - c. Record data as soon as possible after obtaining it.
 - d. Record and check the markup before enclosing concealed installations.
 - e. Cross-reference record prints to corresponding archive photographic documentation.
2. Content: Types of items requiring marking include, but are not limited to, the following:
- a. Dimensional changes to Drawings.
 - b. Revisions to details shown on Drawings.
 - c. Depths of foundations below first floor.
 - d. Locations and depths of underground utilities.
 - e. Revisions to routing of piping and conduits.
 - f. Revisions to electrical circuitry.
 - g. Actual equipment locations.
 - h. Duct size and routing.
 - i. Locations of concealed internal utilities.
 - j. Changes made by Change Order or Construction Change Directive.
 - k. Changes made following Architect's written orders.
 - l. Details not on the original Contract Drawings.
 - m. Field records for variable and concealed conditions.
 - n. Record information on the Work that is shown only schematically.
3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.
4. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
5. Mark important additional information that was either shown schematically or omitted from original Drawings.
6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

2.3 RECORD SPECIFICATIONS

- A. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
 2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
 3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
 4. Note related Change Orders, record Product Data, and record Drawings where applicable.
- B. Format: Submit record Specifications as scanned PDF electronic file(s) of marked-up paper copy of Specifications.

2.4 RECORD PRODUCT DATA

- A. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
 2. Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
 3. Note related Change Orders, record Specifications, and record Drawings where applicable.
- B. Format: Submit record Product Data as scanned PDF electronic file(s) of marked-up paper copy of Product Data.
1. Include record Product Data directory organized by Specification Section number and title, electronically linked to each item of record Product Data.

2.5 MISCELLANEOUS RECORDS

- A. Assemble miscellaneous records submittals required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.
- B. Format: Submit miscellaneous record submittals as scanned PDF electronic file(s) of marked-up miscellaneous record submittals.
1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

PART 3 - EXECUTION

3.1 RECORDING AND MAINTENANCE

- A. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and revisions to project record documents as they occur; do not wait until end of Project.
- B. Maintenance of Record Documents and Samples: Store record documents and Samples in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to project record documents for Architect's reference during normal working hours.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 017846.13
EXTRA STOCK AND MAINTENANCE MATERIALS - ARCHITECTURAL

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Extra stock and maintenance material requirements for contract closeout.

1.2 SUBMITTALS

- A. Extra Stock and Maintenance Materials: Furnish maintenance materials, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Owner. Label with manufacturer's name and model number.
1. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item and name and number of related Specification Section. Obtain Owner's signature for receipt of submittals.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Store materials in containers and packaging as recommended by manufacturer.

PART 2 - PRODUCTS

2.1 SCHEDULE OF EXTRA STOCK AND MAINTENANCE MATERIALS

- A. A Schedule of Materials is attached to this Section.

2.2 SCHEDULE OF EXTRA STOCK AND MAINTENANCE MATERIALS

- A. 04 4200 - Exterior Stone Cladding:
1. Stone Cladding Units: 2%; amount installed, full-size units, each shape and thickness.
- B. 07 2400 - EIFS:
1. Maintenance Kit: Consisting of the following items:
- a. Printed Maintenance Instructions.
 - b. Adhesive: 1 gallon (3.8 L).
 - c. Base Coat Material: 1 gallon (3.8 L).
 - d. Finish Coat Material: 1 gallon (3.8 L), each color, from same batch as installed finish coat.
 - e. Reinforcing Mesh: 20 sf (1.8 sq m).
 - f. Insulation Board: 20 sf (1.8 sq m).
- C. 07 3113 - Asphalt Shingles:
1. Asphalt Shingles: 100 sq. ft. (9.3 sq. m), unbroken bundles, each type, composition, color, pattern, and size.
- D. 07 3127 - Simulated Slate Roofing:
1. Simulated Slate Roofing: 100 sq. ft. (9.3 sq. m), unbroken bundles, each type. Components from same production run as materials installed.
- E. 07 3200 - Roof Tiles:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Roof Tiles and Accessories: 2%; amount installed, each type, composition, color, pattern, and size. Components from same production run as materials installed.
- F. 07 4646 - Fiber Cement Siding:
 1. Fiber Cement Materials and Accessories: 2%; amount installed, full size units, each type.
- G. 07 7600 - Roof Pavers and Pedestals:
 1. Roof Pavers and Pedestals: 2%; amount installed, each type, composition, color, pattern, and size. Components from same production run as materials installed.
- H. 08 4400 - Glazed Aluminum Framing Systems:
 1. Glass: 1%; total square footage installed, each glass type in sizes determined by the Architect.
 2. Entrance Door Hardware: 3 sets; operating hardware.
 3. Glazing Gaskets: 500 LF; typical glazing gaskets.
 4. Finish Coating: 2 gallons; each architectural metal finish coating system and color.
- I. 08 7100 - Door Hardware:
 1. Locksets: To be determined.
 2. Closers: To be determined.
 3. Exit Devices: To be determined.
 4. Electrical Parts: To be determined.
 5. Guestroom Locksets: 3 per 100; guestroom locksets only.
 6. Maintenance Tools and Instructions: 1 complete set, specialized tools and maintenance instructions.
- J. 09 3000 - Tiling:
 1. Tile and Trim: 2%, amount installed, each type, composition, color, pattern, and size.
 2. Grout: 2%, amount installed, each type, composition, and color.
- K. 09 5113 - Acoustical Panel Ceilings:
 1. Ceiling Panels: 2%; amount installed, full size units.
 2. Suspension System Components: 2%, amount installed, each grid, exposed molding and trim component.
 3. Hold Down Clips: 2%; amount installed.
 4. Impact Clips: 2%; amount installed.
- L. 09 5135 - Snap-In Metal Pan Ceilings:
 1. Metal Pans: 1%, amount installed, full-size units.
 2. Suspension System Components: 1%, amount installed, each grid and exposed molding and trim component.
- M. 09 5423 - Linear Metal Ceilings:
 1. Ceiling Components: 1%, amount installed, each pan, carrier, accessory, and exposed molding and trim.
- N. 09 5436 - Suspended Decorative Grids:
 1. Suspension System Components: 1%, amount installed, each component.
- O. 09 6340 - Stone Flooring:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Stone Flooring and Trim: 2%, amount installed, each type, composition, color, pattern, and size.
 2. Grout: 2%, amount installed, each type, composition, and color.
- P. 09 6400 - Wood Flooring:
1. Wood Flooring: 1%, amount installed, each type, color, and finish.
- Q. 09 6500 - Resilient Flooring:
1. Resilient Tile Flooring: 1 box for each 50 boxes of amount installed, each type, color, pattern, class, wearing surface, and size.
 2. Resilient Sheet Flooring: 10 linear ft (3 linear m) in roll form and full roll width for each 500 linear ft (150 linear m) of amount installed, each color, pattern, and type.
- R. 09 6513 - Resilient Base and Accessories:
1. Resilient Base: 10 linear ft (3 linear m) for each 500 linear ft (150 linear m) of amount installed, each type, color, pattern, and size.
- S. 09 6520 - Interlocking Rubber Tile Flooring:
1. Rubber Tile: 5%, amount installed, each type, color, pattern, and size.
- T. 09 6566 - Resilient Athletic Flooring:
1. Resilient Athletic Flooring: 2%; amount installed, each type, color, pattern, class, wearing surface, and size.
- U. 09 6800 - Carpeting:
1. Tile Carpeting: 5%, amount installed but not less than 10 SY; amount installed, full-size units, each color and type.
 2. Sheet Carpeting: 10 linear ft (3 linear m) in roll form and full roll width, for each 500 linear ft (150 linear m) amount installed, each color, pattern, and type.
 3. Carpet Cushion: 10 linear ft (3 linear m) in roll form and full roll width, for each 500 linear ft (150 linear m) amount installed, each type.
- V. 09 6900 - Access Flooring:
1. Access Flooring Panel Type 1 - Typical Areas: 25 panels.
 2. Access Flooring Panel Type 2 - Data Areas: 10 panels.
 3. Access Flooring Panel Type 3 - MRI-related Areas: 10 panels.
 4. Pedestals: 10 units.
 5. Stringers: 10 units.
 6. Grommets: 10 units
 7. Fasteners: As required for each extra component.
 8. Adhesive: One case.
- W. 09 7200 - Wall Covering:
1. Wall Covering: 5%; amount installed, full-size units, each type.
- X. 09 7723 - Fabric Wrapped Panels:
1. Fabric: 10%, amount installed but not less than 10 yds, each fabric, color, and pattern.
 2. Attachment Devices: 5%, amount installed but not less than five full-size units.
- Y. 09 8433 - Acoustical Wall Panels:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Wall Panels: 2%; amount installed, full-size units, each type.
- Z. 09 9100 - Painting:
 1. Painting: 5%, amount installed but not less than 1 gallon; each material and color.
- AA. 09 9413 - Textured Interior Coatings:
 1. Textured Interior Coatings: 5%, amount installed but not less than 1 gallon; each material and color.
- BB. 09 9600 - High Performance Coatings:
 1. Refer to Division 9 section High Performance Coatings for requirements.
- CC. 09 9613 - Multi-Colored Interior Coatings:
 1. Coatings: 5%, amount installed but not less than 1 gallon; each material, color and pattern.
- DD. 09 9623 - Graffiti Resistant Coatings:
 1. Graffiti Resistant Coatings: 5%, amount installed but not less than 5 gallons; each material and color.
- EE. 09 9653 - Elastomeric Coatings:
 1. Elastomeric Coatings: 5%, amount installed but not less than 1 gallon, each color
- FF. 09 9663 - Textured Acrylic Coatings:
 1. Textured Acrylic Coatings: 5%, amount installed but not less than 1 gallon, each color.
- GG. 09 8433 - Acoustical Wall Panels:
 1. Wall Panels: 2%, amount installed, full size units.
- HH. 10 2115 - Cubicle Specialties:
 1. Curtain Carriers and Track End Caps: 3%, amount installed but not less than 10 units, full-size units, each size.
 2. Curtains: 10%, amount installed but not less than 2 units, full-size units.
- II. 10 2238 - Operable Panel Partitions:
 1. Refer to Division 10 section Operable Panel Partitions for requirements.
- JJ. 10 2613 - Wall and Corner Guards:
 1. Wall and Corner Guards: 2%, amount installed but not less than 2 units, full-size units of maximum length, including plastic cover and aluminum retainer, each type and color. Components from same production run as materials installed.
- KK. 10 5116 - Wood Lockers:
 1. Locker Doors: 2 doors, full-size units, each type and color, complete with door hardware.
 2. Locker Hardware: 5%, amount installed but not less 2 each of hinges, pulls, hooks, and locks, each type and finish.
- LL. 10 5503 - USPS-Delivery Postal Specialties
 1. Key Blanks: 25 for each type of compartment-door lock.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

MM. 12 2113 - Horizontal Louvered Blinds:

1. Horizontal Louvered Blinds: 5%, amount installed but not less than 2 units, each size, color, texture, pattern, and gloss.

NN. 12 2413 - Roller Window Shades:

1. Roller Window Shades: 5%, amount installed but not less than 2 units; full-size units, each size, color, texture, and pattern.

OO. 12 6300 - Stadium Seating:

1. Refer to Division 12 section Stadium Seating for requirements.

PP. 32 1813 - Synthetic Grass Field Turf:

1. Refer to Division 32 section Synthetic Grass Field Turf for requirements.

QQ. 32 1826 - Synthetic Grass Turf:

1. Refer to Division 32 section Synthetic Grass Turf for requirements.

RR. FF&E:

1. FF&E: All remaining decorative, FF&E unused material.

PART 3 - EXECUTION (NOT USED)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 017910

DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:
 - 1. Demonstration of operation of systems, subsystems, and equipment.
 - 2. Training in operation and maintenance of systems, subsystems, and equipment.
 - 3. Demonstration and training video recordings.

1.2 SUBMITTALS

- A. Instruction Program: Submit outline of instructional program for demonstration and training, including a list of training modules and a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include learning objective and outline for each training module.
 - 1. Indicate proposed training modules using manufacturer-produced demonstration and training video recordings for systems, equipment, and products in lieu of video recording of live instructional module.
- B. Qualification Data: For facilitator instructor videographer.
- C. Attendance Record: For each training module, submit list of participants and length of instruction time.
- D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.
- E. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.
 - 1. Identification: On each copy, provide an applied label with the following information:
 - a. Name of Project.
 - b. Name and address of videographer.
 - c. Name of Architect.
 - d. Name of Construction Manager.
 - e. Name of Contractor.
 - f. Date of video recording.
 - 2. Transcript: Prepared in PDF electronic format. Include a cover sheet with same label information as the corresponding video recording and a table of contents with links to corresponding training components. Include name of Project and date of video recording on each page.
 - 3. At completion of training, submit complete training manual(s) for Owner's use in PDF electronic file format on compact disc or digital video disk.

1.3 QUALITY ASSURANCE

- A. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Division 01 Section "Quality Requirements," experienced in operation and maintenance procedures and training.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.
- C. Videographer Qualifications: A professional videographer who is experienced photographing demonstration and training events similar to those required.
- D. Preinstruction Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to demonstration and training including, but not limited to, the following:
 - 1. Inspect and discuss locations and other facilities required for instruction.
 - 2. Review and finalize instruction schedule and verify availability of educational materials, instructors' personnel, audiovisual equipment, and facilities needed to avoid delays.
 - 3. Review required content of instruction.
 - 4. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.

1.4 COORDINATION

- A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.
- B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.
- C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.1 INSTRUCTION PROGRAM

- A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.
- B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:
 - 1. Basis of System Design, Operational Requirements, and Criteria: Include the following:
 - a. System, subsystem, and equipment descriptions.
 - b. Performance and design criteria if Contractor is delegated design responsibility.
 - c. Operating standards.
 - d. Regulatory requirements.
 - e. Equipment function.
 - f. Operating characteristics.
 - g. Limiting conditions.
 - h. Performance curves.
 - 2. Documentation: Review the following items in detail:
 - a. Emergency manuals.
 - b. Operations manuals.
 - c. Maintenance manuals.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. Project record documents.
 - e. Identification systems.
 - f. Warranties and bonds.
 - g. Maintenance service agreements and similar continuing commitments.
3. Emergencies: Include the following, as applicable:
- a. Instructions on meaning of warnings, trouble indications, and error messages.
 - b. Instructions on stopping.
 - c. Shutdown instructions for each type of emergency.
 - d. Operating instructions for conditions outside of normal operating limits.
 - e. Sequences for electric or electronic systems.
 - f. Special operating instructions and procedures.
4. Operations: Include the following, as applicable:
- a. Startup procedures.
 - b. Equipment or system break-in procedures.
 - c. Routine and normal operating instructions.
 - d. Regulation and control procedures.
 - e. Control sequences.
 - f. Safety procedures.
 - g. Instructions on stopping.
 - h. Normal shutdown instructions.
 - i. Operating procedures for emergencies.
 - j. Operating procedures for system, subsystem, or equipment failure.
 - k. Seasonal and weekend operating instructions.
 - l. Required sequences for electric or electronic systems.
 - m. Special operating instructions and procedures.
5. Adjustments: Include the following:
- a. Alignments.
 - b. Checking adjustments.
 - c. Noise and vibration adjustments.
 - d. Economy and efficiency adjustments.
6. Troubleshooting: Include the following:
- a. Diagnostic instructions.
 - b. Test and inspection procedures.
7. Maintenance: Include the following:
- a. Inspection procedures.
 - b. Types of cleaning agents to be used and methods of cleaning.
 - c. List of cleaning agents and methods of cleaning detrimental to product.
 - d. Procedures for routine cleaning
 - e. Procedures for preventive maintenance.
 - f. Procedures for routine maintenance.
 - g. Instruction on use of special tools.
8. Repairs: Include the following:
- a. Diagnosis instructions.
 - b. Repair instructions.
 - c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
 - d. Instructions for identifying parts and components.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- e. Review of spare parts needed for operation and maintenance.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Division 01 Section "Operations and Maintenance Data."
- B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

- A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.
- B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.
 - 1. Owner will furnish Contractor with names and positions of participants.
- C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.
 - 1. Schedule training with Owner with at least seven days' advance notice.
- D. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.
- E. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a demonstration performance-based test.
- F. Cleanup: Collect used and leftover educational materials and remove from Project site. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

3.3 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

- A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.
 - 1. At beginning of each training module, record each chart containing learning objective and lesson outline.
- B. Video: Provide video resolution as requested by Owner converted to .mp4 format file type, on electronic media.
 - 1. Electronic Media: Read-only format compact disc acceptable to Owner, with commercial-grade graphic label.
 - 2. File Hierarchy: Organize folder structure and file locations according to project manual table of contents. Provide complete screen-based menu.
 - 3. File Names: Utilize file names based upon name of equipment generally described in video segment, as identified in Project specifications.
 - 4. Contractor and Installer Contact File: Using appropriate software, create a file for inclusion on the Equipment Demonstration and Training DVD that describes the following

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

for each Contractor involved on the Project, arranged according to Project table of contents:

- a. Name of Contractor/Installer.
 - b. Business address.
 - c. Business phone number.
 - d. Point of contact.
 - e. E-mail address.
- C. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to adequately cover area of demonstration and training. Display continuous running time.
1. Film training session(s) in segments not to exceed 15 minutes.
 - a. Produce segments to present a single significant piece of equipment per segment.
 - b. Organize segments with multiple pieces of equipment to follow order of Project Manual table of contents.
 - c. Where a training session on a particular piece of equipment exceeds 15 minutes, stop filming and pause training session. Begin training session again upon commencement of new filming segment.
- D. Light Levels: Verify light levels are adequate to properly light equipment. Verify equipment markings are clearly visible prior to recording.
1. Furnish additional portable lighting as required.
- E. Narration: Describe scenes on video recording by audio narration by microphone while video recording is recorded. Include description of items being viewed.
- F. Transcript: Provide a transcript of the narration. Display images and running time captured from videotape opposite the corresponding narration segment.
- G. Preproduced Video Recordings: Provide video recordings used as a component of training modules in same format as recordings of live training.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 018112.13
HEALTH AND ENVIRONMENTAL PERFORMANCE REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes general requirements and procedures for health and environmental performance requirements.

1.2 DEFINITIONS

- A. Bio-based Materials: Bio-based products and materials other than wood must be tested using ASTM Test Method D6866 or equivalent method ISO 16620-2, or be certified to the USDA BioPreferred Voluntary Labeling Initiative that includes verification via ASTM 6866 testing. Exclude hide products, such as leather and other animal skin material.
- B. CDPH Standard Method: California Department of Public Health (CDPH) Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, v. 1.1-2010 or newer, for the emissions testing and requirements of products and materials
- C. Composite Wood and Agrifiber: Products such as particleboard, medium density fiberboard (MDF), plywood, wheatboard, strawboard, panel substrates, and door cores that are a composite of wood and/or plant material pressed and adhered together.
- D. Cradle to Gate Assessment: Analysis of a product's partial life cycle, from resource extraction (cradle) to the factory gate (before it is transported for distribution and sale). It omits the use and the disposal phases of the product.
- E. Cradle to Grave: Analysis of a product's full life cycle, from resource extraction (cradle) to the disposal phase (grave).
- F. Cradle to Cradle Certification: End use product has been certified by the Cradle to Cradle Product Innovation Institute
- G. Declare Label: International Living Future Institute, Declare Product Label indicating all ingredients have been evaluated and disclosed down to 1000 ppm.
- H. Environmental Product Declaration (EPD): An independently verified report based on life-cycle assessment studies that have been conducted according to a set of common rules for each product category and peer-reviewed.
 - 1. Product-Specific Declarations: A product with a publicly available, critically reviewed life-cycled assessment conforming to ISO 14044 that has at least a cradle to gate scope.
 - 2. Industry-Wide (Generic) EPD: Provide products with third-party certification (Type III), including external verification, in which the manufacturer is explicitly recognized as a participant by the program operator. EPD must conform to ISO 14025 and EN 15804 or ISO 21930 and have at least a cradle to gate scope.
 - 3. Product Specific Type III EPD: A product with a third-party certification, including external verification, in which the manufacturer is explicitly recognized by the program operator. EPD must conform to ISO 14025 and EN 15804 or ISO 21930 and have at least a cradle to gate scope.
- I. GBCI: Green Business Certification Institute; the Certification body that oversees LEED and WELL Certifications.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- J. GWP: Global Warming Potential; the heat absorbed by any greenhouse gas in the atmosphere typically reported in carbon dioxide equivalent.
 - K. Health Product Declaration (HPD): End use product has published a complete Health Product Declaration in compliance with the Health Product Declaration Open Standard and with a chemical inventory of the product to at least 1000 ppm or to at least 100 ppm with no known GreenScreen v1.2 Benchmark Level 1 Chemicals.
 - L. Indoor Air Quality (IAQ) Management Plan: Plan developed by the Contractor to provide a healthy indoor environment for workers and building occupants during construction. Plan must meet or exceed the recommendations of the Sheet Metal and Air Conditioning Contractors National Association (SMACNA) IAQ Guidelines for Occupied Buildings Under Construction, 2nd edition, 2007, ANSI/SMACNA 008"2008, Chapter 3.
 - M. Inside the Building: Defined as inside the weatherproofing system.
 - N. Life Cycle Assessment: An evaluation of the environmental effects of a product from cradle to grave, as defined by ISO 14040-2006 and ISO 14044-2006.
 - O. Mindful Materials: a design industry initiative that provides a common platform for manufacturers to clearly communicate transparency and optimization information for their building products. www.mindfulmaterials.com
 - P. Product: A permanently installed building product is an item that arrives on the project site either as a finished element ready for installation or as a component to another item assembled on-site. The product unit is defined by the functional requirement for use in the project; this includes the physical components and services needed to serve the intended function of the permanently installed building product. In addition, similar product within a specification, each contributes as a separate product.
 - Q. Product Category Rules: A set of rules, requirements, and guidelines for developing Environmental Product Declarations.
 - R. Program Operator: An organization that ensures EPDs meet the product category rules (PCRs) for the associated product category. The program operator doesn't do the actual life-cycle assessments. UL Environment is the leading program operator in the United States.
 - S. Volatile Organic Compound (VOC): Carbon compounds considered indoor air contaminants that are odorous, irritating, and/or harmful to the comfort and wellbeing of installers and occupants. VOC content measurements are available for wet-applied products.
 - T. Volatile Organic Compounds (VOC) Emissions Test: Refer to CDPH Standard Method definition.
 - U. Wet Applied Products: Materials and products installed in wet form that have South Coast Air Quality Management District (SCAQMD) rules relating to VOC associated with them. These include the following:
 - 1. SCAQMD Rule 1113: Architectural Coatings
 - 2. SCAQMD Rule 1168: Adhesive and Sealant Applications
- 1.3 PRECONSTRUCTION AND COORDINATION MEETINGS
- A. Preconstruction Conference: Conduct conference with Owner and Architect at a mutually agreed upon time within 21 days prior to commencement of the Work.
 - 1. Participants:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Owner.
 - b. Owner's Commissioning Agent.
 - c. Architect.
 - d. Architect's Consultants.
 - e. Contractor, including superintendent.
 - f. Contractor's Major Subcontractors
 - g. If requested, other concerned parties needed to conduct the conference.
 2. Minimum Agenda: Include, but not be limited to, following topics:
 - a. Review Health and Environmental Performance requirements and Contractor's Action Plans for meeting requirements.
 - b. Submittal requirements and approval sequence.
 - c. Review Contract Document requirements.
 - d. Review inspection and testing requirements.
 3. Record discussions, including decisions and agreements, and prepare report.
- B. Coordination Meetings: Conduct meetings with Owner and Architect at a mutually agreed upon times.
1. Requirements: Participants, minimum agenda and meeting minutes similar to preconstruction conference.
- 1.4 GENERAL ADMINISTRATIVE REQUIREMENTS
- A. Work Includes: Provide materials and procedures necessary to obtain health and environmental performance goals required in this Section.
1. Refer to other sections for additional materials and procedures necessary to obtain sustainable design goals.
- 1.5 SUBMITTALS
- A. Health and Environment Performance Requirements Documentation:
1. Construction and Demolition Waste Management: Comply with plan requirements of Division 1 Section "Construction Waste Management and Disposal."
 2. Construction Indoor-Air-Quality (IAQ) Management Plan:
 - a. Construction IAQ Management Plan developed in accordance with Sheet Metal and Air Conditioning National Contractors Association (SMACNA) IAQ Guidelines for Occupied Buildings under Construction, Version indicated.
 - b. Product data for temporary filtration media.
 - 1) Provide minimum MERV 8 filtration when mechanical system is used during construction.
 - c. Product data for filtration media used during occupancy.
 - d. Construction Documentation: Six photographs at three different times during the construction period, along with a brief description of the SMACNA approach employed, documenting implementation of the IAQ management measures, such as protection of ducts and on-site stored or installed absorptive materials.
 - e. Prohibit smoking inside the building and within 25 feet of the building openings during construction. Smoking includes tobacco smoke, as well as smoke produced from the combustion of cannabis and controlled substances and the emissions produced by electronic smoking devices.
 3. Mindful Materials Plan:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Identify at least 25 products that will be used in this project that meet the identified Mindful Materials transparency or optimization documentation.
 - b. Include certifications and optimization data by manufacturer that products supplied comply with the identified Mindful Material transparency or optimization documentation.
- B. Product Data: Manufacturer's technical literature for interior applied adhesives, sealants, paints and coatings indicating VOC content in grams/Liter (g/L).
 - 1. Include Certifications by manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs) and General Emissions Requirements indicated in this Section
- C. Health and Environmental Performance Requirements Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with Health and Environmental Performance action plans.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Provide products and procedures necessary. The Contractor shall provide additional materials and procedures necessary to obtain performance requirements indicated.
 - 1. Exclusions: Special equipment, such as elevators, escalators, process equipment, and fire suppression systems, is excluded from the credit calculations. Also excluded are products purchased for temporary use on the project, e.g. formwork for concrete.

2.2 BUILDING PRODUCT DISCLOSURE AND OPTIMIZATION

- A. Provide submittals that ensure 25 different products that comply with Mindful Materials Material Ingredient Disclosure or Environmental Profile requirements.
- B. Material Ingredient Disclosure
 - 1. Comply with any of the following programs to demonstrate the chemical inventory of the product to at least 0.1% (1000 ppm), which meet one of the following disclosure criteria
 - a. Cradle to Cradle (C2C) certifications, version 3 bronze or above
 - b. Cradle to Cradle Material Health Certificate
 - c. Declare Product Labels
 - d. HPD
 - e. Living Product Challenge
- C. Environmental Profile
 - 1. Environmental Product Declaration
 - a. Product specific Type III EPD, must meet the following standards
 - b. ISO 14025
 - c. ISO 21930 or EN 15804
 - d. EPD must be at least Cradle-to-Gate Scope

2.3 TOXIC MATERIAL REDUCTION

- A. General: the following limitations apply to materials installed within the weather-proofing membrane of the Project.
- B. Antimicrobials

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. No antimicrobials are present that make a health claim.
 - C. Bisphenol A (BPA).
 1. No product that contains Bisphenol A.
 - D. Cadmium
 1. Use no interior or exterior paints containing intentionally added cadmium.
 2. Cadmium is limited in the following components to 0.01% (100 ppm):
 - a. Fire alarms
 - b. Electrical meters
 - c. Electrical sensors
 - d. Thermostats
 - e. Load breaker switches
 - E. Perfluorinated Compound Limitation
 1. No perfluorinated compounds (PFCs) are present in the following condition:
 - a. At levels equal to or greater than 100 ppm in components that constitute at least 5% by weight of a furniture or furnishing (drapes/curtains) assembly.
 - F. Flame Retardant Limitation
 1. Halogenated flame retardants are limited in the following components to 0.01% (100 ppm) to the extent allowable by local code:
 - a. Window and waterproofing membranes, door and window frames and siding.
 - b. Flooring, ceiling tiles and wall coverings.
 - c. Piping and electrical cables, conduits and junction boxes.
 - d. Sound and thermal insulation.
 - e. Upholstered furniture and furnishings, textiles and fabrics.
 - G. Phthalate (Plasticizers) Limitation
 1. DEHP, DBP, BBP, DINP, DIDP or DNOP (often found in polyvinyl chloride [PVC]) are limited in the following components to 0.01% (100 ppm):
 - a. Flooring, including resilient and hard surface flooring and carpet.
 - b. Wall coverings, window blinds and shades, shower curtains, furniture and upholstery.
 - c. Plumbing pipes and moisture barriers.
 - H. Isocyanate-Based Polyurethane Limitation
 1. Isocyanate-based polyurethane products are not used in:
 - a. Interior finishes.
 - I. Urea-Formaldehyde Restriction
 1. Urea-formaldehyde is limited in the following components to 100 ppm:
 - a. Furniture or any composite wood products.
 - b. Laminating adhesives and resins.
 - c. Thermal insulation.
- 2.4 LOW-EMITTING MATERIALS
- A. Refer to Division 01 Section Construction Requirements for VOCs.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.5 VOLATILE ORGANIC COMPOUND (VOCs) LIMITS

- A. General Emissions Requirements: Products must demonstrate they have been tested and determined compliant in accordance with California Department of Public Health, (CDHP), Standard Method, version indicated, using the applicable exposure scenario. Manufacturers documentation demonstrating compliance must state the range of Total VOCs (TVOC) after 14 days measured as specified in the CDHP Standard Method CATEGORIES as follows:
1. 0.5mg/m³ or less,
 2. Between 0.5 and 5.0 mg/m³ or,
 3. 5.0 mg/m³ or more.

2.6 PAINTS AND COATINGS

- A. Paints and Coatings: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits.
1. South Coast Air Quality Management District (SCAQMD): Use only paints and coatings that comply with the limits for VOC content when calculated according to the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, or the South Coast Air Quality Management District (SCAQMD) Rule 1113, effective June 5, 2016.
 2. California Department of Public Health (CDPH): Compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers", version indicated.
 - a. At least 75 percent of paints and coatings.

2.7 ADHESIVES AND SEALANTS

- A. Adhesives and Sealants: For field applications that are inside the weatherproofing system, adhesives and sealants shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits.
1. South Coast Air Quality Management District (SCAQMD): For field applications that are inside the weatherproofing system, use adhesives and sealants that comply with the limits for VOC content when calculated according to South Coast Air Quality Management District (SCAQMD) Rule #1168, requirements in effect on October 6, 2017.
 - a. Exception: The provisions of SCAQMD Rule 1168 do not apply to adhesives and sealants subject to state or federal consumer product VOC regulations.
 2. California Department of Public Health (CDPH): For field applications that are inside the weatherproofing system, compliance with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers", version indicated.
 - a. At least 75 percent of adhesives and sealants (by volume or surface area).
- B. Flooring: Flooring shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
1. At least 75 percent of flooring (by cost or surface area).

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Composite Wood: Composite wood, agrifiber products, and adhesives shall be made using ultra-low-emitting formaldehyde (ULEF) resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde (NAF).
 - 1. At least 75 percent of composite wood (by cost or surface area).
- D. Insulation: Insulation inside the weatherproofing membrane shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The insulation material category includes all thermal and acoustic boards, batts, rolls, blankets, sound attention fire blankets, foamed-in place, loose-fill, blown, and sprayed insulation.

PART 3 - EXECUTION

3.1 NONSMOKING BUILDING

- A. Smoking of any kind is not permitted within the building or within 25 feet (8 m) of entrances, operable windows, outdoor-air intakes, decks, patios, balconies, rooftops and other regularly occupied exterior building spaces. Applicable during construction.

3.2 CONSTRUCTION WASTE MANAGEMENT

- A. Comply with Division 1 Section "Construction Waste Management and Disposal."

3.3 CONSTRUCTION IAQ MANAGEMENT

- A. Comply with SMACNA's "SMACNA IAQ Guideline for Occupied Buildings under Construction."

3.4 COMBUSTION MINIMIZATION

- A. Engine Exhaust Reduction:
 - 1. Signage, visible from pick-up, drop-off and parking areas indicates:
 - a. Idling with vehicle engines on for more than 30 seconds is prohibited.
- B. Construction Equipment:
 - 1. To reduce particulate matter emissions from both on-road and non-road diesel fueled vehicles and construction equipment, the following requirements are met:
 - a. All non-road diesel engine vehicles comply with the U.S. EPA Tier 4 PM emissions standards or local equivalent when applicable. Engines may be retrofitted with verified technology (required to be U.S. EPA or California Air Resources Board approved) at the time the equipment is first placed on the job site.
 - b. All on-road diesel engine vehicles meet the requirements set forth in the U.S. EPA model year 2007 on-road standards for PM, or local equivalent when applicable. Engines may be retrofitted with verified technology (required to be U.S. EPA or California Air Resources Board approved) at the time the equipment is first placed on the job site.
 - c. All equipment, vehicles and loading/unloading are located at least 25 ft. (7.5 m) away from air intakes and operable openings.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 018116.16
CONSTRUCTION REQUIREMENTS FOR VOCs

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Volatile Organic Compound (VOC) limits for adhesives, sealants, paints and coatings.
- B. Related Sections:
 - 1. Refer to Division 01 Section for Health and Environmental Performance Requirements.

1.2 DEFINITIONS

- A. CDPH Standard Method: California Department of Public Health (CDPH) Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, v. 1.1-2010 or current version, for the emissions testing and requirements of products and materials.
- B. Volatile Organic Compounds (VOC) Emissions Test: Refer to CDPH Standard Method v1.1 definition.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for interior applied adhesives, sealants, paints and coatings indicating VOC content in grams/Liter (g/L).
 - 1. Include Certifications by manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs) and General Emissions Requirements indicated in this Section.

PART 2 - PRODUCTS

2.1 VOLATILE ORGANIC COMPOUND (VOCs) LIMITS

- A. General Emissions Requirements: Products must demonstrate they have been tested and determined compliant in accordance with California Department of Public Health, (CDHP), Standard Method, version indicated, using the applicable exposure scenario. Manufacturer's documentation demonstrating compliance must state the range of Total VOCs (TVOC) after 14 days measured as specified in the CDPH Standard Method CATEGORIES as follows:
 - 1. 0.5mg/m³ or less,
 - 2. Between 0.5 and 5.0 mg/m³ or,
 - 3. 5.0 mg/m³ or more.

2.2 PAINTS AND COATINGS

- A. Paints and Coatings: For field applications that are inside the weatherproofing system, paints and coatings shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits
 - 1. Air Quality Resources and Management: Use only paints and coatings that comply with the limits for VOC content when calculated according to the California Air Resources Board (CARB) 2007, Suggested Control Measure (SCM) for Architectural Coatings, or the South Coast Air Quality Management District (SCAQMD) Rule 1113, effective February 5, 2016.
 - 2.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Product Type	Allowable VOC Content (g/L)
Bond Breaker	350
Clear wood finishes - Varnish	275
Clear wood finishes - Sanding Sealer	275
Clear wood finishes - Lacquer	275
Colorant - Architectural Coatings, excluding IM coatings	50
Colorant - Solvent Based IM	600
Colorant - Waterborne IM	50
Concrete - Curing compounds	100
Concrete - Curing compounds for roadways & bridges	350
Concrete surface retarder	50
Driveway Sealer	50
Dry-fog coatings	50
Faux finishing coatings - Clear topcoat	100
Faux finishing coatings - Decorative Coatings	350
Faux finishing coatings - Glazes	350
Faux finishing coatings - Japan	350
Faux finishing coatings - Trowel applied coatings	50
Fire-proof coatings	150
Flats	50
Floor coatings	50
Form release compounds	100
Graphic arts (sign) coatings	150
Industrial maintenance coatings	100
Industrial maintenance coatings - High temperature IM coatings	420
Industrial maintenance coatings - Non-sacrificial anti-graffiti coatings	100
Industrial maintenance coatings - Zinc rich IM primers	100
Magnesite cement coatings	450
Mastic coatings	100
Metallic pigmented coatings	150
Multi-color coatings	250
Non-flat coatings	50
Pre-treatment wash primers	420
Primers, sealers and undercoaters	100
Reactive penetrating sealers	350
Recycled coatings	150
Roof coatings	50
Roof coatings, aluminum	100
Roof primers, bituminous	350
Rust preventative coatings	100
Stone consolidant	450
Sacrificial anti-graffiti coatings	50
Shellac- Clear	730
Shellac - Pigmented	550

Specialty primers	100
Stains	100
Stains, interior	250
Swimming pool coatings - repair	340
Swimming pool coatings - other	340
Traffic Coatings	100
Waterproofing sealers	100
Waterproofing concrete/masonry sealers	100
Wood preservatives	350
Low solids coatings	120

2.3 ADHESIVES AND SEALANTS

- A. Adhesives and Sealants: For field applications that are inside the weatherproofing system, adhesives and sealants shall comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:

1. Air Quality and Resources Management: For field applications that are inside the weatherproofing system, use adhesives and sealants that comply with the limits for VOC content when calculated according to South Coast Air Quality Management District (SCAQMD) Rule #1168, requirements in effect on October 6, 2017:
- 2.

Architectural Applications	Allowable VOC Content (g/L)
Indoor carpet adhesives	50
Carpet pad adhesives	50
Outdoor carpet adhesives	150
Wood flooring adhesives	100
Rubber floor adhesives	60
Subfloor adhesives	50
Ceramic tile adhesives	65
VCT and asphalt tile adhesives	50
Dry wall and panel adhesives	50
Cove base adhesives	50
Multipurpose construction adhesives	70
Structural glazing adhesives	100
Single ply roof membrane adhesives	250
Specialty Applications:	
PVC welding	510
CPVC welding	490
ABS welding	325
Plastic cement welding	250
Adhesive primer for plastic	550
Computer diskette manufacturing	350
Contact adhesive	80
Special purpose contact adhesive	250
Tire retread	100
Adhesive primer for traffic marking tape	150
Structural wood member adhesive	140
Sheet applied rubber lining operations specialty	250

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Top and Trim adhesive	250
Substrate Specific Applications:	
Metal to metal substrate specific adhesives	30
Plastic foam substrate specific adhesives	50
Porous material (except wood) substrate specific adhesives	50
Wood substrate specific adhesives	30
Fiberglass substrate specific adhesives	80
Sealants:	
Architectural sealant	250
Marine deck sealant	760
Nonmember roof sealant	300
Roadway sealant	250
Single-ply roof membrane sealant	450
Other sealant	420
Sealant Primers:	
Architectural non-porous sealant primer	250
Architectural porous sealant primer	775
Modified bituminous sealant primer	500
Marine deck sealant primer	760
Other sealant primer	750
Other:	
Other adhesives, adhesive bonding primers, adhesive primers or any other primers	250

- a. Exception: The provisions of SCAQMD Rule 1168 do not apply to adhesives and sealants subject to state or federal consumer product VOC regulations.

PART 3 - EXECUTION (NOT USED)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 019113

GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. OPR and BoD documentation are included by reference for information only.

1.2 SUMMARY

- A. Section includes general requirements that apply to implementation of commissioning without regard to specific systems, assemblies, or components.
- B. Related Documents:
 - 1. OPR and BoD documentation are included by reference for information only.

1.3 DEFINITIONS

- A. BoD: Basis of Design. A document that records concepts, calculations, decisions, and product selections used to meet the OPR and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.
- B. Commissioning Plan: A document that outlines the organization, schedule, allocation of resources, and documentation requirements of the commissioning process.
- C. CxA: Commissioning Authority.
- D. OPR: Owner's Project Requirements. A document that details the functional requirements of a project and the expectations of how it will be used and operated. These include Project goals, measurable performance criteria, cost considerations, benchmarks, success criteria, and supporting information.
- E. Systems, Subsystems, Equipment, and Components: Where these terms are used together or separately, they shall mean "as-built" systems, subsystems, equipment, and components.

1.4 COMMISSIONING TEAM

- A. Members Appointed by Contractor(s): Individuals, each having the authority to act on behalf of the entity he or she represents, explicitly organized to implement the commissioning process through coordinated action. The commissioning team shall consist of, but not be limited to, representatives of Contractor, including Project superintendent and subcontractors, installers, suppliers, and specialists deemed appropriate by the CxA.
- B. Members Appointed by Owner:
 - 1. CxA: The designated person, company, or entity that plans, schedules, and coordinates the commissioning team to implement the commissioning process. Owner will engage the CxA under a separate contract.
 - 2. Representatives of the facility user and operation and maintenance personnel.
 - 3. Architect and engineering design professionals.

1.5 OWNER'S RESPONSIBILITIES

- A. Provide the OPR documentation to the CxA and Contractor for information and use.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Assign operation and maintenance personnel and schedule them to participate in commissioning team activities.
- C. Provide the BoD documentation, prepared by Architect and approved by Owner, to the CxA and Contractor for use in developing the commissioning plan, systems manual, and operation and maintenance training plan.

1.6 CONTRACTOR'S RESPONSIBILITIES

- A. Contractor shall assign representatives with expertise and authority to act on its behalf and shall schedule them to participate in and perform commissioning process activities including, but not limited to, the following:
 - 1. Evaluate performance deficiencies identified in test reports and, in collaboration with entity responsible for system and equipment installation, recommend corrective action.
 - 2. Cooperate with the CxA for resolution of issues recorded in the Issues Log.
 - 3. Attend commissioning team meetings held as follows:
 - a. Weekly.
 - b. Biweekly.
 - c. Monthly.
 - d. Variable.
 - 4. Integrate and coordinate commissioning process activities with construction schedule.
 - 5. Review and accept construction checklists provided by the CxA.
 - 6. Complete construction checklists as Work is completed and provide to the Commissioning Authority as follows:
 - a. Format:
 - 1) Paper.
 - 2) Electronic.
 - b. Submit:
 - 1) Daily.
 - 2) Weekly.
 - 7. Review and accept commissioning process test procedures provided by the Commissioning Authority.
 - 8. Complete commissioning process test procedures.

1.7 CxA'S RESPONSIBILITIES

- A. Organize and lead the commissioning team.
- B. Provide commissioning plan.
- C. Convene commissioning team meetings.
- D. Provide Project-specific construction checklists and commissioning process test procedures.
- E. Verify the execution of commissioning process activities using random sampling. The sampling rate may vary from 1 to 100 percent. Verification will include, but is not limited to, equipment submittals, construction checklists, training, operating and maintenance data, tests, and test reports to verify compliance with the OPR. When a random sample does not meet the requirement, the CxA will report the failure in the Issues Log.
- F. Prepare and maintain the Issues Log.
- G. Prepare and maintain completed construction checklist log.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- H. Witness systems, assemblies, equipment, and component startup.
- I. Compile test data, inspection reports, and certificates; include them in the systems manual and commissioning process report.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 024100

DEMOLITION

PART 1 -GENERAL

1.01 WORK INCLUDED

- A. Furnish labor, materials, equipment, and incidentals necessary for every type of required demolition.
- B. Furnish equipment of every type required to demolish and transport construction debris away from the site.

1.02 QUALITY ASSURANCE [Not Used]

1.03 SUBMITTALS

Submittals shall be in accordance with Section 013323 – Shop Drawings, Product Data, and Samples.

1.04 STANDARDS

Work shall be performed in accordance with the codes and ordinances of the agency having jurisdiction over the Place of Record.

1.05 DELIVERY AND STORAGE

Stockpile construction debris at the site only as long as necessary to arrange hauling to a disposal site. Stack materials neatly and handle in an orderly manner until removed from site. Construction debris shall be placed in trash containers. Do not allow trash to blow around the construction site.

1.06 JOB CONDITIONS

- A. Contractor shall visit the site and determine the extent of demolition required and the site conditions that might affect his proposal. Include costs of covering all aspects of the demolition as part of the proposal.
- B. The drawings shall be carefully reviewed to determine the extent of necessary demolition. Property lines and limits of demolition shall be accurately located prior to beginning site demolition. Demolition outside the limits indicated on the plans, or outside the property lines shall not be performed.
- C. Material removed from the construction site during demolition, and any equipment not otherwise designated to remain the property of the Owner shall become the property of the Contractor and shall be promptly removed from the construction site.
- D. Remove and dispose of off-site all drilled pier spoils.

PART 2 - PRODUCTS [Not Used]

PART 3 - EXECUTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.01 PREPARATION

- A. Mark areas to be cleared and grubbed prior to commencing clearing additional requirements. Program Manager shall approve clearing and grubbing limits prior to commencement of clearing operations.
- B. The clearing limits shall not extend beyond the project limits, plus adequate distance as approved by the Program Manager to allow for construction procedures.

3.02 BACKFILLING

- A. Backfill cavities resulting from demolition. Fill cavities occurring within the limits of building, structures, or pavements in accordance with the requirements of other sections of the specifications. Backfill and compact cavities outside the construction limits to the same density as the surrounding earth.
- B. Except where further excavation extends beyond the cavities resulting from work performed under this section, fill holes with appropriate backfill material and compact to the density of the surrounding undisturbed soil. Finish the site by blading or other methods to smooth the area, remove ditches, mounds, or other natural or manmade irregular features. Blend grades together in a smooth uniform manner.

3.03 EXISTING LANDSCAPING

- A. Remove trees and brush of all sizes and description within the limits of construction. Cut trees approximately 12" above ground line and grub out and remove the remaining stumps and roots. Remove root systems larger than one (1) inch to 12" below the lowest foundation line.
- B. Protect trees and landscaping not designated to be removed from damage. Contractor and Program Manager shall visit the site and mark trees that are to remain. In the event that these trees are in close proximity to the construction, wrap trunks with 2" x 4" timber and take precautions to prevent damage to limbs and root systems.
- C. Scrape the entire site within the limits of construction, including structures, building, streets, parking lots or other pavements clear of brush, under-growth, or other vegetation.
- D. Felled trees, brush, lumber, concrete, and other debris shall become the property of the Contractor and shall be promptly removed from the site.
- E. Areas that have gravel parking or areas that are HMAC surfaces shown to be removed will be excavated down to natural soil. All gravel will be stockpiled on site as per Engineer. Gravel may be used in other areas requiring gravel if approved by Engineer. All HMAC surfaces shall be disposed of legally off site.

3.04 EXISTING STRUCTURES

Remove any concrete or masonry structures within the limits of the construction, or as otherwise indicated, including concrete slabs, foundations, brick or other masonry work, concrete steps, septic tanks, sidewalks, pavements, curbs and gutters or other components.

3.05 BURIED STRUCTURES

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Remove underground structures such as abandoned manholes, vaults, septic tanks and distribution field piping, inlets, buried trash, or debris.

3.06 UNDERGROUND UTILITIES

Take precautions during excavation procedures to guard against damage to active underground piping. In the event that inactive or abandoned pipelines are uncovered, determine that the lines are inactive, then remove buried piping within the limits of construction, or 4'-0" beyond the limits of buildings or other structures, or as needed to clear excavations. Plug both ends of such abandoned piping with concrete plugs.

3.07 FIELD QUALITY CONTROL

No burning will be permitted on the site.

3.08 CLEAN AND ADJUST

At conclusion of demolition, remove all remaining trash and debris from the construction site. Clean site to remove wind-blown paper, trash, or other debris.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

THIS PAGE INTENTIONALLY BLANK

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 02 4119

SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes selective removal and subsequent offsite disposal of portions of existing building indicated on drawings and as required to accommodate new construction.

1.2 DEFINITIONS

- A. Remove: Detach items from existing construction and legally dispose of them off-site, unless indicated to be removed and salvaged or removed and reinstalled.
- B. Remove and Salvage: Detach items from existing construction and deliver them to Owner's designated storage area.
- C. Remove and Reinstall: Detach items from existing construction, prepare them for reuse, and reinstall them where indicated.
- D. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

1.3 MATERIALS OWNERSHIP

- A. Except for items or materials indicated to be reused, salvaged, reinstalled, or otherwise indicated to remain Owner's property, demolished materials shall become Contractor's property and shall be removed from Project site.

1.4 SUBMITTALS

- A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
- B. Proposed Dust-Control and Noise-Control Measures: Submit statement or drawing that indicates the measures proposed for use, proposed locations, and proposed time frame for their operation. Identify options if proposed measures are later determined to be inadequate.
- C. Schedule of Selective Demolition Activities: Indicate the following:
 - 1. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's on-site operations are uninterrupted.
 - 2. Interruption of utility services.
 - 3. Coordination for shutoff, capping, and continuation of utility services.
 - 4. Use of elevator and stairs.
 - 5. Locations of temporary partitions and means of egress.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

6. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.

- D. Inventory: After selective demolition is complete, submit a list of items that have been removed and salvaged.
- E. Predemolition Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including finish surfaces, that might be misconstrued as damage caused by selective demolition operations. Submit before Work begins.

1.5 QUALITY ASSURANCE

- A. Demolition Firm Qualifications: An experienced firm that has specialized in demolition work similar in material and extent to that indicated for this Project.
- B. Professional Engineer Qualifications: Comply with Division 01 Section "Quality Requirements."
- C. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction. Comply with applicable regulations, codes and ordinances.
- D. Standards: Comply with ANSI A10.6 and NFPA 241.
- E. Predemolition Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to selective demolition including, but not limited to, the following:
 - 1. Inspect and discuss condition of construction to be selectively demolished.
 - 2. Review structural load limitations of existing structure.
 - 3. Review and finalize selective demolition schedule.
 - 4. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
- F. Do not disable or disrupt building fire or life safety systems without 3 days prior written notice to Owner.
- G. Building survey for ACM is the responsibility of the contractor. A copy of this survey must be submitted to the Asbestos Designated person in maintenance.
- H. Notification of demolition and associated fees will be handled by the contractor and a copy sent to the asbestos designated person in maintenance. This is for all demolitions with or without asbestos as required by DSHS.

1.6 PROJECT CONDITIONS

- A. Occupied Buildings:
 - 1. Owner will occupy portions of building immediately adjacent to selective demolition area. Conduct selective demolition so Owner's operations will not be disrupted. Provide not less than 72 hours' notice to Owner of activities that will affect Owner's operations.
 - 2. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Owner assumes no responsibility for condition of areas to be selectively demolished. Conditions existing at time of inspection for bidding will be maintained by Owner as far as practical.
- C. Hazardous Materials: If materials suspected of containing hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Hazardous materials will be removed by Owner under a separate contract.
- D. Storage or sale of removed items or materials on-site will not be permitted.
- E. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.
 - 1. Maintain fire-protection facilities in service during selective demolition operations.

1.7 WARRANTY

- A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during selective demolition, by methods and with materials so as not to void existing warranties.

PART 2 - PRODUCTS

2.1 REPAIR MATERIALS

- A. Use repair materials identical to existing materials.
 - 1. If identical materials are unavailable or cannot be used for exposed surfaces, use materials that visually match existing adjacent surfaces to the fullest extent possible.
 - 2. Use materials whose installed performance equals or surpasses that of existing materials.
- B. Comply with material and installation requirements specified in individual Specification Sections.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that utilities have been disconnected and capped.
- B. Survey existing conditions and correlate with requirements indicated to determine extent of selective demolition required.
- C. Inventory and record the condition of items to be removed and reinstalled and items to be removed and salvaged.
- D. When unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure the nature and extent of conflict. Promptly submit a written report to Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Engage a professional engineer to survey condition of building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective demolition operations.
- F. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.

3.2 UTILITY SERVICES

- A. Existing Utilities: Maintain services indicated to remain and protect them against damage during selective demolition operations.
- B. Occupied Buildings: Do not interrupt existing utilities serving occupied or operating facilities unless authorized in writing by Owner and authorities having jurisdiction. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and to authorities having jurisdiction.
 - 1. Provide at least 72 hours' notice to Owner if shutdown of service is required during changeover.
- C. Utility Requirements: Locate, identify, disconnect, and seal or cap off indicated utilities serving areas to be selectively demolished.
 - 1. Arrange with Owner to shut off indicated utilities.
 - 2. If utility services are required to be removed, relocated, or abandoned, before proceeding with selective demolition provide temporary utilities that bypass area of selective demolition and that maintain continuity of service to other parts of building.
 - 3. Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing.

3.3 PREPARATION

- A. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.
 - 2. Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction.
 - 3. Protect existing site improvements, appurtenances, and landscaping to remain.
- B. Temporary Facilities: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
 - 1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
 - 2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
 4. Cover and protect furnishings, and equipment that have not been removed.
- C. Temporary Enclosures: Provide temporary enclosures for protection of existing building and construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.
1. Where heating or cooling is needed and permanent enclosure is not complete, provide insulated temporary enclosures. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.
- D. Temporary Partitions: Erect and maintain dustproof partitions and temporary enclosures to limit dust and dirt migration and to separate areas from fumes and noise.
- E. Temporary Shoring: Provide and maintain shoring, bracing, or structural support to preserve stability and prevent movement, settlement, or collapse of construction to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished. Strengthen or add new supports when required during progress of selective demolition.

3.4 POLLUTION CONTROLS

- A. Dust Control: Use water mist, temporary enclosures, and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations.
1. Do not use water when it may damage existing construction or create hazardous or objectionable conditions, such as ice, flooding, and pollution.
 2. Wet mop floors to eliminate trackable dirt and wipe down walls and doors of demolition enclosure. Vacuum carpeted areas.
- B. Disposal: Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
1. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
- C. Cleaning: Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

3.5 SELECTIVE DEMOLITION

- A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:
1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.
 2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces. Temporarily cover openings to remain.
 4. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
 5. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, verify condition and contents before starting flame-cutting operations.
 6. Maintain portable fire-suppression devices during flame-cutting operations.
 7. Maintain adequate ventilation when using cutting torches.
 8. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
 9. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
 10. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
 11. Dispose of demolished items and materials promptly.
 12. Return elements of construction and surfaces that are to remain to condition existing before selective demolition operations began.
- B. Existing Facilities: Comply with building manager's requirements for using and protecting elevators, stairs, walkways, loading docks, building entries, and other building facilities during selective demolition operations.
- C. Removed and Salvaged Items: Comply with the following:
1. Clean salvaged items.
 2. Pack or crate items after cleaning. Identify contents of containers.
 3. Store items in a secure area until delivery to Owner.
 4. Transport items to Owner's storage area designated by Owner.
 5. Protect items from damage during transport and storage.
- D. Removed and Reinstalled Items: Comply with the following:
1. Clean and repair items to functional condition adequate for intended reuse. Paint equipment to match new equipment.
 2. Pack or crate items after cleaning and repairing. Identify contents of containers.
 3. Protect items from damage during transport and storage.
 4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make item functional for use indicated.
- E. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Architect, items may be removed to a suitable, protected storage location during selective demolition and reinstalled in their original locations after selective demolition operations are complete.
- 3.6 PATCHING AND REPAIRS
- A. General: Promptly repair damage to adjacent construction caused by selective demolition operations.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Repairs: Where repairs to existing surfaces are required, patch to produce surfaces suitable for new materials.

- 1. Completely fill holes and depressions in existing concrete or masonry that are to remain with an approved masonry patching material applied according to manufacturer's written recommendations.

3.7 DISPOSAL OF DEMOLISHED MATERIALS

- A. General: Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.
- B. Burning: Do not burn demolished materials.
- C. Disposal: Transport demolished materials off Owner's property and legally dispose of them.

3.8 SELECTIVE DEMOLITION SCHEDULE

- A. Refer to the drawings.

ARLINGTON, TX

SECTION 030150
CONCRETE PATCHING

PART 1 - GENERAL

1.1 SUMMARY

- A. Work required for this section includes non-structural concrete patching and supplementary items necessary to complete their installation.

1.2 ACTION SUBMITTALS

- A. Product Data: Submit copies of manufacturers' technical literature for specified products. Submittal(s) shall identify location(s) of Contractor's intended application of product(s).
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer(s) Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
- B. Fire Rated Assemblies: Perform patching of fire rated assemblies using materials and procedures to maintain fire rating of existing assembly.

1.5 PROJECT CONDITIONS

- A. Environmental Limitations: Do not apply patching and repair material when air and substrate temperatures are outside limits permitted by manufacturer.
- B. Hot-Weather Requirements: Protect repair work when temperature and humidity conditions produce excessive evaporation of water from patching materials. Provide artificial shade and wind breaks, and use cooled materials as recommended by manufacturer.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 MATERIALS, GENERAL

- A. Source Limitations: Obtain each type of cement of the same brand from the same manufacturer's plant, each aggregate from one source, and each admixture from the same manufacturer.

2.3 MATERIAL

- A. Epoxy-Resin Bonding Adhesives: ASTM C 881, Type II.
1. Suitable for use on dry or damp surfaces.
 2. Epoxy Adhesive for Bonding Plastic Concrete to Hardened Concrete: Conform to requirements of ACI 503.2-92 (R97), unless modified herein.
 3. Epoxy Adhesive for Bonding Hardened Concrete, Steel, Wood, Brick, and other Materials to Hardened Concrete: Conform to requirements of ACI 503.1-92 (R97), unless modified herein.
 4. Manufacturers:
 - a. BASF
 - b. Euclid Chemical Company
 - c. Sika Corporation
 - d. W.R. Meadows
- B. Latex Bonding Agents, Admixtures, and Adhesives: ASTM C 1059, Type II.
1. Acceptable at non-structural and structural bonding applications, interior or exterior, unless noted otherwise in Contract Documents.
 2. Use only acrylic or styrene butadiene latex based adhesives.
 3. Manufacturers and Products:
 - a. Euclid Chemical Company; SBR Latex
 - b. L & M Construction Chemicals; Everbond
 - c. W.R. Meadows, Inc.; ACRY-LOK
- C. Polyvinyl Acetate Bonding Agents: ASTM C 1059, Type I.
1. Acceptable at non-structural and structural bonding applications, interior surfaces not subject to water exposure or high humidity during construction or in-service.
 2. Manufacturers and Products:
 - a. Euclid Chemical Company; Euco Weld.
 - b. L & M Construction Chemicals; Everweld.
 - c. W.R. Meadows, Inc.; Intralok.
- D. Patching Mortar: Packaged, dry mix polymer-modified, cementitious patching mortar complying with ASTM C 928 that contains a non-redispersible latex additive as either a dry powder or a separate liquid that is added during mixing.
- E. Coarse Aggregate: Washed aggregate complying with ASTM C 33, Size No. 8, Class 5S. Add only as permitted by patching mortar manufacturer.
- F. Epoxy Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Shore A hardness of 80 per ASTM D 2240.
- G. Self-Leveling Concrete Underlayment - Non-traffic-bearing:
1. Description: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 in (3 mm) to 1 in (25 mm) and that can be feathered at edges to match adjacent floor elevations. Interior use only, unless exterior application recommended by manufacturer within written literature.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
3. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
4. Aggregate: Well-graded, washed sand as recommended by underlayment manufacturer.
5. Compressive Strength: 4,000 psi minimum at 28 days when tested according to ASTM C 109.
6. Substrate Preparation: As recommended by product manufacturer.
7. Basis of Design (Product Standard): Ardex, Inc.; "Ardex K-15".
8. Manufacturers: (Consult manufacturer for specific product and compatibility with substrate conditions. Subject to Architect's and Engineer's review and approval.)
 - a. Ardex, Inc.
 - b. BASF
 - c. Euclid Chemical Co.

H. Self-Leveling Concrete Topping - Traffic-bearing:

1. Description: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/2 in (12 mm) to 2 in (50 mm). Consult manufacturer for thickness exceeding 2 in (50 mm). Interior use only, unless exterior application recommended by manufacturer within written literature.
2. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
3. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
4. Aggregate: Well-graded, washed gravel, 1/8 in (3 mm) to 3/8 in (10 mm) or coarse sand as recommended by topping manufacturer for specific application thickness. No coarse aggregate permitted for thicknesses of 1 in (25 mm) or less.
5. Compressive Strength: 5,000 psi minimum at 28 days when tested according to ASTM C 109.
6. Substrate Preparation: As recommended by product manufacturer.
7. Basis of Design (Product Standard): Ardex Inc.; "Ardex SD-T".
8. Manufacturers: (Consult manufacturer for specific product and compatibility with substrate conditions. Subject to Architect's and Engineer's review and approval.)
 - a. Ardex, Inc.
 - b. BASF
 - c. Euclid Chemical Co.
 - d. Sika Corp.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Respective manufacturer/fabricator's written installation instructions.
2. Accepted submittals.
3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Concrete Removal: Saw-cut perimeter of areas indicated for removal to a depth of at least **1/2 in (12 mm)**. Make cuts perpendicular to concrete surfaces and no deeper than cover on reinforcing. Remove loose and deteriorated concrete.
- C. Preparation of Floor Joints: Saw-cut joints full width to edges of spalls and to a depth of at least **3/4 in (19 mm)**. Clean out debris and loose concrete; vacuum or blow clear with compressed air.
- D. Surface Preparation for Patching Mortar: Clean concrete by scarifying or sand blasting to remove dirt, oils, films, and other materials detrimental to patching application. Allow surface to dry before applying mortar.
- E. Surface Preparation for Toppings: Remove delaminated material and deteriorated concrete surface material. Roughen surface of concrete by shot blasting, to produce a surface profile recommended by manufacturer. Sweep and vacuum roughened surface to remove debris followed by low-pressure water cleaning.

3.4 APPLICATION

- A. Epoxy Bonding Agent: Apply to reinforcing bars and concrete by brush, roller, or spray according to manufacturer's written instructions, leaving no pinholes or other uncoated areas. Apply to reinforcing bars in at least two coats, allowing first coat to dry before applying second coat. Apply patching mortar or concrete while epoxy is still tacky. If bonding agent dries, recoat before placing patching mortar or concrete.
- B. Latex Bonding Agent, Type II: Mix with Portland cement and scrub into concrete surface according to manufacturer's written instructions. If bonding agent dries, recoat before placing patching mortar or concrete.
- C. Latex Bonding Agent, Type I: Apply to concrete by brush roller or spray. Allow to dry before placing patching mortar or concrete.
- D. Patching Mortar: Unless otherwise recommended by manufacturer, apply as follows:
 1. Wet substrate thoroughly and then remove standing water. Scrub slurry of neat patching mortar into substrate, filling pores and voids.
 2. Place patching mortar by troweling toward edges of patch to force intimate contact with edge surfaces. For large patches, fill edges first and then work toward center, always troweling toward edges of patch. At fully exposed reinforcing bars, force patching mortar to fill space behind bars by compacting with trowel from sides of bars.
 3. For vertical patching, place material in lifts of not more than **1 in (25 mm)** or less than **1/4 in (6 mm)**. Do not feather edge.
 4. For overhead patching, place material in lifts of not more than **1/2 in (12 mm)** or less than **1/8 in (3 mm)**. Do not feather edge.
 5. After each lift is placed, consolidate material and screed surface.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

6. Where multiple lifts are used, score surface of lifts to provide a rough surface for application of subsequent lifts. Allow each lift to reach final set before placing subsequent lifts.
 7. Allow surfaces of lifts that are to remain exposed to become firm and then finish to match adjacent surface.
 8. Wet-cure cementitious patching materials, including polymer-modified, cementitious patching materials, for not less than seven days by water-fog spray or water-saturated absorptive cover.
- E. Epoxy Joint Filler: Install in nonmoving floor joints where indicated.
1. Install filler to a depth of at least 1 in (25 mm). Use fine silica sand no more than 1/4 in (6 mm) deep to close base of joint. Do not use sealant backer rods or compressible fillers below joint filler.
 2. Install filler so that when cured, it is flush at top surface of adjacent concrete. If necessary, overfill joint and remove excess when filler has cured.
- F. Topping or Underlayment: Mix and apply self leveling components according to manufacturer's written instructions.
1. Apply primer over prepared substrate at manufacturer's recommended spreading rate.
 2. Apply to produce uniform, level surface.
 3. Add aggregate for thicker areas as recommended by manufacturer.
 4. Apply a final layer without aggregate if required to produce smooth surface.
 5. Feather edges to match adjacent floor elevations.
 6. Cure according to manufacturer's written instructions.
 7. Prevent contamination during application and curing processes.
 8. For areas which are to have finish flooring, use self-leveling concrete underlayment.
 9. For areas which will be exposed as wearing surface, use self-leveling concrete topping.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 031100

CONCRETE FORMING

PART 1 - GENERAL

1.01 WORK INCLUDED

- A. Furnish material and labor to form, tie, brace and support wet concrete, reinforcing steel and embedded items until the concrete has developed sufficient strength to remove forms.

1.02 QUALITY ASSURANCE

A. DESIGN CRITERIA

Forms shall be designed for the pressure exerted by a liquid weighing 150 pounds per cubic foot. The rate of placing the concrete, the temperature of the concrete, and all other pertinent factors shall be taken into consideration when determining the depth of the equivalent liquid. An additional design live load of 50 pounds per square foot shall be used on horizontal surfaces.

B. ALIGNMENT CONTROL

True alignment of walls and other vertical surfaces having straight lines or rectangular shapes shall be controlled and checked by the following procedures:

1. Forming shall be arranged with provisions for adjusting the horizontal alignment of a form, after the form has been filled with concrete to grade, using wedges, turn-buckles, or other adjustment methods. Establish a transit line or other reference so that adjustments can be made to an established line while the concrete in the top of the form is still plastic.
2. Adjusting facilities shall be at intervals which permit adjustments to a straight line. Concrete shall not be placed until adequate adjusting facilities are in place.

1.03.1 SUBMITTALS

- A. Submittals shall be in accordance with Section 013300, SUBMITTAL PROCEDURES and shall include drawings or descriptions of construction joint locations.

1.04 STANDARDS

The applicable provisions of the following standards shall apply as if written here in their entirety:

- A. American Concrete Institute (ACI) specifications:
ACI 361 Specifications for Structural Concrete for Buildings
ACI 318 Building Code Requirements for Reinforced Concrete
- B. American Institute of Steel Construction (AISC) publication: AISC Manual of Steel Construction
- C. American Iron and Steel Institute (AISI) publication: American Plywood Association (APA) standards

1.05 DELIVERY AND STORAGE

- A. Lumber for forms shall be stacked neatly on platforms raised above ground.

1.06 JOB CONDITIONS

- A. The Contractor shall notify the Engineer upon completion of various portions of the work required for placing concrete so that compliance with the plans and specifications may be monitored. The Engineer will authorize the Contractor to proceed with the placement after this has been completed and corrections, if required, have been made.
- B. In hot weather, both sides of the face forms may be required to be treated with oil to prevent warping and to secure tight joints.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 2 - PRODUCTS

2.01 MATERIALS

- A. LUMBER: Properly seasoned and of good quality; free from loose or unsound knots, knot holes, twists, shakes, decay, splits, and other imperfections which would affect its strength or impair the finished surface of the concrete.
- B. FIBER BOARD FORM LINING: Hardboard finished smooth on one (1) side; minimum thickness of 3/16"; thoroughly wet with water at least 12 hours before using.
- C. PLYWOOD FORM LINING: Conforming to APA HDO; exterior exposure waterproof adhesive, 3/8" thick.
- D. FORM OIL: Light, clear oil; shall not discolor or injuriously affect the concrete surface, subsequent coatings, or delay or impair curing operations

2.02 FABRICATIONS

- A. LUMBER: Lumber for facing or sheathing shall be surfaced on at least one (1) side and two (2) edges and sized to uniform thickness. Lumber of nominal 1" thickness or plywood of 3/4" thickness shall be permitted for general use on structures, if backed by a sufficient number of studs and wales.
- B. SPECIAL FORM LUMBER
 - 1. Molding for chamfer strips or other uses shall be made of redwood, cypress, or pine materials of a grade that will not split when nailed, and which can be maintained to a true line without warping. The form shall be mill cut and dressed on all faces. Fillet forms at sharp corners, both inside and outside and at edges, with triangular chamfer strips at all non-contiguous edges exposed to view. Thoroughly oil chamfer strips before installation on forms.
 - 2. Construct forms for railings and ornamental work to standards equivalent to first class mill work.
 - 3. All moldings, panel work, and bevel strips shall be straight and true with neatly mitered joints and designed so that the finished work shall be true, sharp, and clean-cut.
- C. FORMS
 - 1. Forms shall be built mortar-tight and of material sufficient in strength to prevent bulging between supports.
 - 2. Reused forms or form lumber shall be maintained clean and in good condition as to accuracy, shape, strength, rigidity, tightness, and smoothness of surface.
 - 3. All forms shall be so constructed as to permit removal without damage to the concrete. Exercise special care in framing forms for copings, offsets, railing and ornamental work, so that there will be no damage to the concrete when the forms are removed.
- D. METAL FORMS
 - 1. The specifications for "Forms" regarding design, mortar tightness, filleted corners, beveled projections, bracing, alignment, removal, re-use, oiling, and wetting shall apply equally to metal forms.
 - 2. The metal used for forms shall be of such thickness that the forms will remain true to shape. Bolt and rivet heads on the facing sides shall be countersunk. Clamps, pins, or

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

other connecting devices shall be designed to hold the forms rigidly together and to allow removal without injury to the concrete.

3. Metal forms which do not present a smooth surface or line up properly shall not be used. Exercise special care to keep metal free from rust, grease, or other foreign material that discolors the concrete.

E. FORM LININGS

1. Timber forms for exposed concrete surfaces which are to be given a rubbed finish shall be facelined with an approved type of form lining material.
2. If plywood is used for form lining, it shall be made with waterproof adhesive and have a minimum thickness of 3/4". It shall preferably be oiled at the mill and then be oiled or lacquered on the job before using.
3. If fiber board is used, apply water to the screen side on the board. Stack the boards screen side to screen side. Use the smooth hard face as the contact surface of the form. Such surfaces may be formed with 3/4" thick plywood made with waterproof adhesive if backed with adequate studs and wales. The greatest strength of the outer plies should be at right angles to the studding. In this case, form lining will not be required.
4. Carefully align edges and faces of adjacent panels and fill the joints between panels with patching plaster or cold-water putty to prevent leakage. Lightly sand with No.0 sandpaper to make the joints smooth.
5. Forms which are reused shall have all unused form tie holes filled and smoothed as specified above.

F. FORM TIES

1. Metal form ties shall be used to hold forms in place and to provide easy metal removal. The use of wire for ties shall not be permitted.
2. Remove metal appliances which are used inside the forms to hold the forms in correct alignment to a depth of at least 1-1/2" from the surface of the concrete, without undue injury to the surface from chipping or spalling. Such devices, when removed, shall leave a smooth opening in the concrete surface no larger than 1" in diameter.
3. Burning off rods, bolts, or ties shall not be permitted.
4. Metal ties shall be held in place by devices attached to wales. Each device shall be capable of developing the strength of the tie.
5. Metal and wooden spreaders which are separate from the forms shall be wired from the top of form and shall be entirely removed as the concrete is placed.
6. The use of metal form ties which are encased in paper or other material to allow the removal of complete tie, and which leave a hole through the concrete structure, shall not be permitted in the construction of basement or water bearing walls.

G. FALSEWORK

1. Falsework shall be designed and constructed so that no excessive settlement or deformation occurs. Falsework shall provide necessary rigidity.
2. Timber used in falsework centering shall be sound, in good condition and free from defects which impair its strength.
3. Steel members shall be of adequate strength and shape for the intended purpose.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Timber piling used in falsework may be of any wood species which satisfactorily withstands driving and which adequately supports the superimposed load.
5. When sills or timber grillages are used to support falsework Columns, unless founded on solid rock, shale, or other hard materials, place them in excavated pits. Backfill to prevent the softening of the supporting material from form drip or from rains that may occur during the construction process. Sills or grillages shall be of ample size to support the superimposed load without settlement.
6. Falsework not founded on a satisfactory spread footing shall be supported on piling, which shall be driven to a bearing capacity to support the superimposed load without settlement.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Before placing concrete, ensure that embedded items are correctly, firmly, and securely fastened into place. Embedded items shall be thoroughly clean and free of oil and other foreign material. Anchor bolts shall be set to exact locations by the use of suitable anchor bolt templates.

3.02 INSTALLATION

A. Pre-placement

1. During the elapsed time between building the forms and placing the concrete, maintain the forms to eliminate warping and shrinking.
2. Treat the facing of forms with suitable form oil before concrete is placed. Apply oil before the reinforcement is placed. Wet form surfaces which will come in contact with the concrete immediately before the concrete is placed.
3. At the time of placing concrete, the forms shall be clean and entirely free from all chips, dirt, sawdust, and other extraneous matter at the time. Forms for slab, beam and girder construction shall not have tie wire cuttings, nails, matches or any other matter which would mar the appearance of the finished construction. Clean forms and keep them free of foreign matter during concrete placement.

B. PLACEMENT

1. Set and maintain forms to the lines designated, until the concrete is sufficiently hardened to permit form removal. If, at any stage of the work, the forms show signs of bulging or sagging, immediately remove that portion of the concrete causing this condition. If necessary, reset the forms and securely brace against further movement.
2. Provide adequate cleanout openings where access to the bottom of the forms is not otherwise readily attainable.
3. Carefully and accurately place and support reinforcement in concrete structures.

C. REMOVAL

Remove forms so that the underlying concrete surface is not marred or damaged in any way. Forms shall not be removed until the concrete has attained sufficient strength (minimum of 28-day compressive strength) to safely carry the dead load, but in no case less than the number of curing days set forth in the following table.

Forms for concrete paving.

7-day min.
OR
75% design strength

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 031100

CONCRETE FORMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes concrete forming and supplementary items necessary to complete work required for its installation.

1.3 DEFINITIONS

- A. Formwork: Total system of support for freshly placed concrete including mold or sheathing that contacts concrete as well as supporting members, hardware, and necessary bracing.

1.4 PERFORMANCE REQUIREMENTS

- A. Design, engineering and construction of Formwork: Shall be responsibility of Contractor.
- B. Shoring of Concrete Members: Concrete members shall be adequately shored to safely support loads and lateral pressures outlined in "Guide to Formwork for Concrete" (ACI 347) without distortion, excessive deflection or other damage.
- C. Formwork Tolerances: Conform to ACI 301, unless tighter tolerance is specified herein or on drawings, or where stricter tolerance is required to facilitate satisfactory installation requirements of other trades/finishes. Contractor shall be responsible for control of concrete work tolerances to permit satisfactory installation of other trades/finishes.

1.5 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
 - 1. Shop drawings shall not be made by using reproductions of Contract Drawings.
 - 2. Any fabrication of material before approval of drawings will be at risk of Contractor.
 - 3. Fabricator alone shall be responsible for errors of detailing and fabrication.
- B. Formwork Design Statement: Submit written statement sealed and signed by Structural Engineer responsible for formwork design and registered in state of project that design of components of formwork, including reshores are in compliance with provisions of Contract Documents and Building Code, and is in keeping with generally accepted engineering practice. Submit prior to placement of concrete requiring formwork.
- C. Sleeve Locations: Submit plan showing proposed sleeve locations, sleeve material and sleeve sizes for review by Architect and Engineer prior to concrete placement. Include dimensions to centerline of sleeves, tied to building grids where feasible.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Source and field quality-control documentation.
 - 1. Submit test reports as required for indicating compliance with the Quality Control sections below.
- E. Contractor shall submit to the enforcing agency, for acceptance, a quality control or inspection plan that addresses all inspection issues.

1.6 QUALITY ASSURANCE

- A. Codes and Standards: Comply with provisions of following, except as otherwise indicated or where more stringent requirements are shown or specified:
 - 1. International Building Code (IBC) Edition indicated by Drawings, including Special Inspection and Quality Control requirements, chapter 17 of the IBC and any local or State provisions.
 - 2. Following code and standard versions shall be as referenced by IBC chapter 35 or, where not referenced in IBC, the most recent published versions.
 - a. American Concrete Institute (ACI) 301, "Specifications for Structural Concrete".
 - b. ACI 318, "Building Code Requirements for Structural Concrete".

1.7 PROPOSED SUBSTITUTIONS

- A. Substitutions of sections or modifications of details, if proposed by Contractor, shall be submitted for approval prior to submission of shop drawings, and such substitutions shall be made only when approved by Architect, and at no additional cost to Owner. Total amount of credit, if any, shall be stated in writing with submission.
- B. Corrections for inaccuracies that result in change from Structural Drawings or final approved shop drawing details shall be submitted for approval. Such substitutions or corrections shall be made only when approved by Architect.

1.8 HANDLING, STORAGE AND COORDINATION

- A. Storage of materials:
 - 1. Store materials to permit easy access for inspection and identification.
 - 2. Store materials to protect from moisture, sunlight, dirt, oil and contaminants.
- B. Form lumber shall be delivered to job site as far in advance of its use as is practical, and shall be carefully stacked clear of ground in such manner as to facilitate air-drying.
- C. Coordinate installation of formwork. Provide setting diagrams, templates, instructions and directions for installation.
- D. Coordinate openings in formwork, penetrations through formwork and sleeve requirements with final equipment selections and locations by MEP sub-contractors. Verify any changes from approved shop drawings with Engineer of Record prior to the Work.

1.9 FORMWORK LOAD ON EXISTING BUILDINGS

- A. Formwork and formwork loads not permitted on existing buildings unless otherwise indicated on drawings or specified herein.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Design formwork to be self-supporting without reliance on existing building for support or control of formwork deflection.
- C. Existing building occupancy and activity shall not be disturbed or interrupted due to formwork requirements for project.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Specific product, material or manufacturer listed under each item below is "acceptable" only if manufacturer can evidence product compliance with requirements of Contract Documents.
- B. For manufacturers not listed, submit as substitution according to the Conditions of the Contract and Division 01 Specification Sections.

2.2 ACCEPTABLE MANUFACTURERS

- A. Following manufacturers listed are "acceptable" only if manufacturer can evidence product compliance with requirements of Contract Documents.
 - 1. Form Coating:
 - a. Laticrete; L&M Debond.
 - b. Nox-Crete Chemicals; Chemically active form release agent(s).
 - c. W.R. Meadows, Inc.; Duogard II.
- B. For manufacturers not listed, submit as substitution according to the Conditions of the Contract and Division 01 Specification Sections.

2.3 MATERIALS

- A. Forms
 - 1. General: Refer to Division 03 Section "Concrete Finishing" for description, location and irregularity limits for Classes D, C, B and A surfaces.
 - 2. Class D and C Surfaces: Wood forms for surfaces specified to receive Rough-Formed Finish for Class D and C Surfaces, shall be built of material (subject to approval of Architect), of sufficient thickness to be capable of sustaining loads to be imposed thereon, dressed to uniformly smooth contact surfaces, and so constructed as to be readily removable. Forms for round columns may have one vertical seam.
 - 3. Class B and A Surfaces: Wood forms for surfaces specified to receive Smooth-Formed Finish for Class B and A Surfaces shall be constructed of Commercial Standard, moisture-resistant, concrete form plywood, not less than five (5) ply, and at least nine-sixteenths inch (9/16") thick, with one (1) smooth face. Other form materials or liners may be used provided smoothness and appearance of concrete produced will be equivalent to that produced by noted wood forms. Forms for round columns shall be prefabricated seamless type.
 - 4. Plywood: PS-1, MDO, BB Grade, Class I; II features or B-B High Density Concrete Form Overlay.
 - 5. Steel Forms: Minimum 16 ga. sheet, tight fittings, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Form Ties:
1. Form ties for exposed concrete surfaces shall be manufactured to allow a positive break-back of no less than **1 in (25 mm)** inside concrete surface. Ties shall be equipped with a plastic cone of not less than **5/8 in (15 mm)** diameter and **1 in (25 mm)** long which will completely cover hole and prevent leakage of any mortar.
 2. Form ties for unexposed surfaces shall be bolt rods or patented devices. Ties shall be adjustable in length and free of features which would leave a hole larger than **1 in (25 mm)** in diameter, or depressions back of exposed surface of concrete. Ties shall leave no corrodible metal within **1 in (25 mm)** of finished surface of concrete.
 3. Form ties fabricated on project site and wire ties are not acceptable.
- C. Form Coating: Non-staining, non-residual, free of fuel oils, kerosene, waxes or resins.
- D. Corner Chamfer: Meadow Burke, "CSF" Type, **3/4 in (19 mm)** polyvinyl chloride strip corner chamfer.
- E. Sleeves Through Concrete: Vertical and horizontal sleeves through concrete work shall be minimum size required for application, but, in no case greater than **2 in (50 mm)** nominally larger in cross-section than pipe/element intended to pass through sleeve.
1. It shall be expressly understood that sleeve sizes affect structural concrete capacity and performance.
 2. Over-sizing of sleeves to degree greater than stated above will not be permitted unless otherwise authorized by Architect/Engineer.
 3. Refer to structural drawings for additional maximum sleeve diameters/sizes criteria.
 4. Sleeves shall not be placed in beams and girders, or through two-way flat slabs in the vicinity of columns without Architect/Engineer advance approval, if not shown on structural Drawings.

PART 3 - EXECUTION

3.1 STANDARDS

- A. Formwork Design and Engineering: Responsibility of Contractor. Refer to "Performance Requirements" above.
- B. Formwork Construction: Conform to shapes, lines and dimensions of various components of concrete construction shown or scheduled on Drawings.
1. Sufficiently tight and assembled to prevent bulging or leakage of mortar.
 2. Assembled to facilitate removal without damage to concrete.
 3. Provide temporary openings at bottom of walls, columns and elsewhere as required to facilitate cleaning, drainage and inspection. Close such openings securely in advance of pouring concrete.
 4. Construct formwork at Smooth-Formed Finish surfaces to produce concrete surfaces free of unsightly or objectionable form marks for exposed surfaces.
 5. Cleaning Formwork: Formwork once used shall have contact surfaces thoroughly cleaned before reuse.
- C. Formwork Classes and Irregularity Limits: Refer to Section 03 3500 "Concrete Finishing".
- D. Construction Joints: Refer to Section 03 3000 "Cast-in-Place Concrete".

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.2 FORMWORK AT CONCRETE MEMBERS

- A. General: Construct formwork for concrete members to heights, thicknesses, depths, profiles, sizes and shapes as shown or scheduled on Drawings.
- B. Openings: Form openings through concrete members where shown and in accordance with structural details.
 - 1. Do not form openings through concrete members, vertically or horizontally, unless shown by structural Drawings.
 - 2. Where openings for horizontal passage of ducts, conduits, etc.....through concrete members are required but not indicated by structural Drawings, advise Architect/Engineer sufficiently in advance of the work to permit review.
 - 3. Form openings vertically through slabs as required for vertical passage of ducts, pipes, etc...in conformance with structural details.
- C. Keys and Haunches:
 - 1. Provide appropriate keys and haunches in walls to receive edges of concrete floors.
 - 2. Provide appropriate keys at slab construction joints in conformance with structural details.
 - 3. Provide appropriate keys at vertical construction joints through beams, girders and joists as occurs in conformance with structural details.

3.3 MISCELLANEOUS FORMWORK ITEMS, ACCESSORIES AND SLEEVES

- A. General: Construct forms for items of concrete work required for or in connection with satisfactory completion of project, whether each such item is specifically shown or referred to or not.
- B. Form Ties: Form ties shall be employed in such places and at such intervals as to securely hold forms in position during placing of concrete, and to withstand weight and pressure of wet concrete.
 - 1. Ties of a type intended to be entirely removed shall be coated with an approved lubricant to safeguard against damaging concrete during such removal.
 - 2. Use of wire ties will not be permitted.
- C. Form Coating: Coat contact surfaces of wood forms, before placing any metal reinforcement, with form coating.
 - 1. Do not apply form release agent where concrete surfaces are scheduled to receive special finishes or applied coverings which may be affected by agent.
 - 2. Soak contact surfaces of untreated forms with clean water. Keep surfaces wet prior to placing concrete.
- D. Chamfers, Wood Strips, Blockings and Moldings: Place in forms wood strips, blocking, moldings, nailers, etc., as required to produce finished profiles and surfaces shown on Drawings and to provide nailing for wood members or other features required to be attached to concrete surfaces in such manner.
 - 1. Coat wood strips, blocking and moldings with form coating.
 - 2. Exposed external angles of concrete members shall have 3/4 in (19 mm) chamfer strips placed in forms to relieve angles.
- E. Inserts and Embedded Items: Install accessories in accordance with manufacturer's instructions, level and plumb.
 - 1. Coordinate work of other sections in forming and setting slots, recesses, bolts, anchors and other inserts.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Ensure items are not disturbed during concrete placement.

F. Sleeves: Coordinate work of other sections in setting sleeves.

1. Do not install sleeves in any concrete member except where shown on structural Drawings or upon written approval of Engineer.
2. Secure sleeves to avoid displacement during concreting.

G. Recesses and Ledges: Coordinate work of other sections in forming recesses in slabs, and ledges in beams and walls.

1. Notify Architect/Engineer in advance of work if recesses or ledges are deemed as required but not shown by structural drawings.
2. Do not recess slabs if not shown by structural Drawings, without advance review of Architect/Engineer.

3.4 REMOVAL OF FORMWORK

A. General:

1. Formwork shall not be removed until concrete has set sufficiently to permit form removal with complete safety and without loss of serviceability of structure.
2. No construction loads shall be supported on, nor shoring removed from, part of structure under construction except when that portion of structure in combination with remaining forming and shoring system has sufficient strength to support safely its weight and loads placed thereon.
3. Construction loads exceeding basis of design loading, consisting of superimposed dead load plus specified live load, shall not be supported on unshored portion of structure under construction.
4. Exercise care when removing formwork and through wall ties from finished concrete surfaces such that surfaces, edges and corners are not damaged.
5. Cutting ties back from face of concrete is not permitted.
6. Remove formwork in manner such that members are not subjected to stress reversal.
7. Do not remove formwork until measurement of slab surface tolerances is complete.

B. Early Formwork Removal (Typical Standards):

1. Formwork for concrete member soffits that support weight of concrete may be removed earlier as indicated by FORMWORK REMOVAL TABLE – EARLY REMOVAL only if it is demonstrated that the concrete has reached 75 percent of its specified 28-day compressive strength. Concrete compressive strength shall be determined by tests on field-cured cylinders.
2. Minimum period of time for Early Removal of concrete member soffit formwork shall not be less than 72 hours.
3. If concrete strength data based on field-cured cylinders is not available, minimum period of time shall be as specified by FORMWORK REMOVAL TABLE – NORMAL REMOVAL.
4. Formwork removal for sides of concrete members shall comply with requirements specified by FORMWORK REMOVAL TABLE.

PART 4 - QUALITY CONTROL

4.1 INSPECTION STANDARDS

A. Quality control, testing, and inspections shall meet the special inspection requirements of the building code and any local or state provisions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Minimum periodic and continuous inspection requirements are indicated below. Refer to Drawings for supplemental and/or more stringent testing requirements, as required.
2. Provide for more stringent inspection/testing where specified on Drawings or required elsewhere in these Specifications.

4.2 TESTING AGENCY

- A. Owner will employ and pay a qualified independent testing agency to perform the quality control indicated in this section, including special inspections required by the building code.
1. Inspection and testing by Owner's testing agency is for verification and shall not relieve Contractor of his responsibility to furnish materials and workmanship in accordance with Contract Documents.
 2. Retesting of materials or conditions failing to meet specified requirements shall be done at Contractor's expense.
 3. In cases of differences of opinion between Owner's testing agency and the Contractor's inspector regarding conformance, the issue should be brought to the Engineer of Record and the enforcement agency as part of the resolution process.
- B. Scope of Services:
1. Check general arrangement and construction of forms for conformance to shapes, lines and dimensions of members as required by design drawings and specifications.
 2. Check time sequence of form removal and re-shore procedure, considering field measured concrete strength.
 3. Confirm results of field cured concrete test cylinders before stripping of forms.
 4. Verify that forms are properly coated and all debris and ice have been removed from spaces to be occupied by concrete.
- C. Provided Reports: Provide timely written reports which document observations made. Include following information as minimum content:
1. Date of observations.
 2. Conditions observed.
 3. Location of condition(s). Give clear identification of location(s) with reference to floor level and column grids whenever possible.
 4. Acknowledgement of compliant or non-compliant conditions.

4.3 CONTRACTOR

- A. Materials and Workmanship: Owner's employment of a qualified independent testing agency to perform testing/inspection services indicated above shall not operate to relieve Contractor of responsibility to furnish materials and workmanship in accordance with Contract Documents.
- B. Contractor Inspection/Testing: Owner's employment of a qualified independent testing agency to perform testing/inspection services indicated above is for verification and does not prevent Contractor from providing supplemental inspection/testing at Contractor's discretion and expense.
- C. Formwork Installation
1. Verify compliance with shoring and reshoring design.
 2. Check supports of forms for vertical and lateral stability.
 3. Verify positioning of shores to ensure concentric alignment at consecutive levels.
 4. Verify arrangement of forms for conformance to shapes, lines and dimensions of members as specified by design drawings and specifications.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

5. Verify cleanliness of forms prior to concreting.
6. Observe forms during concrete placement to detect abnormal deflections or signs of imminent failure and if detected, halt operations immediately until the deficiencies have been corrected.

D. Early Formwork Removal Time Control and Testing:

1. If early formwork removal is desired by Contractor, additional cylinders and testing performed for this purpose are required and shall be at Contractor's expense.
2. Compressive strength verification shall be made on field cured cylinders during construction work phase.
 - a. Secure composite samples in accordance with ASTM C 172. Each sample shall be obtained from different batch of concrete on random basis, avoiding selection of test batch other than by number selected at random before commencement of concrete placement.
 - b. Mold and field cure 2 specimens (one strength test) from each sample in accordance with ASTM C 31.
 - c. Cure cylinders in accordance with ASTM C 31 procedures for "Curing for Determining Form Removal Time".
 - d. Make at least one strength test (2 specimens) for each 3000 square feet of floor slab or fraction thereof.
 - e. Test cylinders in accordance with ASTM C 39. Early form removal shall be based on average compressive strength of cylinders for concrete under construction where early form removal is desired.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 031500

CONCRETE ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes concrete accessories and supplementary items necessary to complete work required for their installation.

1.3 DEFINITIONS

- A. Adhesive Anchor: post-installed device (bolt, threaded rod, or reinforcing bar) for transferring load(s) to concrete consisting of a steel element used in conjunction with an adhesive compound and embedded in a drilled round hole in hardened concrete. Adhesive Anchor System includes fastening components and necessary accessories recommended by adhesive manufacturer for appropriate installation.
- B. Anchor Spacing: distance between centerline of adjacent anchors
- C. Cast-in-Place Anchor: headed bolt, headed stud, hooked bolt, or reinforcing bar installed before concrete placement
- D. Cracked Concrete: condition of concrete in which the anchor is installed and/or condition which could occur at or near anchor location over service life of anchor
- E. Edge Distance: dimension from anchor/component centerline to free edge of base material in which component is anchored or installed
- F. Embedment Depth: dimension from surface of base material to tip of anchor/component installed in base material
- G. Mechanical Anchor: post installed device for transferring load(s) to concrete by direct bearing, friction or both. Generally includes expansion type, sleeve type and screw type anchors
- H. Post-Installed Anchor: an anchor or dowel installed into hardened concrete of specified 28-day compressive strength. Includes drilled-in bolts, threaded rods and reinforcing bars/dowels.

1.4 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Product Data (General): Manufacturer's printed literature to evidence compliance with these specifications.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Product Data (Mechanical and Adhesive Anchors): Manufacturer's product specifications with recommended design values, physical characteristics, installation instructions, ICC-ES Report(s) and necessary calculations to evidence compliance with these specifications.
- D. Samples:
 - 1. Expansion Joint Filler: Two (2) representative samples, 6 inches x 12 inches.
 - 2. Waterstops: Two 6 inch strips, complete with "quick-release" papers.
 - 3. Concrete Inserts: Construction and finish specified.
 - 4. Mechanical and Adhesive Anchors: Two (2) samples of each respective type and size proposed if requested by Architect/Engineer
- E. Source and field quality-control documentation.
 - 1. Test reports as required for indicating compliance with the Quality Control sections below.
- F. Contractor shall submit to the Engineer and the enforcing agency, for acceptance, a quality control or inspection plan that addresses all inspection issues.
- G. Design calculations for Post-Installed Anchors where/if substitution is proposed from requirements shown on Drawings. Include seal/signature of Engineer responsible for design and licensed to practice in jurisdiction of Project.

1.5 QUALITY ASSURANCE

- A. Codes and Standards: Comply with following provisions, except as otherwise indicated:
 - 1. International Building Code (IBC), edition indicated by Drawings including Special Inspection and Quality Control requirements, Chapter 17 of the IBC and any local or State provisions. All following code and standard versions shall be as referenced by IBC Chapter 35 or, where not referenced in IBC, the most recent published versions.
 - 2. ICC-ES approval and related testing to meet ICC-ES Acceptance Criteria required for mechanical and adhesive anchors.
 - 3. ACI 355.2 (for bolted connections to hardened concrete using expansion type and sleeve type anchors)
 - 4. ACI 355.4 (for bolted connections to hardened concrete using adhesive anchors)
- B. Each type product covered under this Section shall be produced by single manufacturer unless otherwise specified.
- C. Manufacturer: Not less than five (5) years successful production of product. Submit evidence if requested by Architect/Engineer.
- D. Mechanical Anchor and Adhesive Anchor Installer Qualifications:
 - 1. Qualification: Post-installed anchors/dowels shall be installed by personnel having minimum of 3 years experience performing similar installations and having applicable certificate or other evidence of previous training from anchor product manufacturer, subject to approval of Architect/Engineer.
 - 2. Training (As Alternate to Above Qualification): Conduct training (with manufacturer or manufacturer's representative) for installer(s) on project. Training to consist of review of complete installation process for drilled-in anchors, to include but not limited to:
 - a. Hole drilling process/bits
 - b. Hole preparation/cleaning
 - c. Adhesive dispenser/injection technique(s)
 - d. Rebar dowel preparation
 - e. Proof loading/torqueing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Maintain Qualification/Training records on site. Subject to Testing Agency and/or Architect/Engineer review on request.

1.6 PROPOSED SUBSTITUTIONS

- A. Substitution or modifications, if proposed by Contractor, shall be submitted for approval prior to submission of shop drawings, and such substitutions shall be made only when approved by Architect, and at no additional cost to Owner. Total amount of credit, if any, shall be stated in writing with submission.
- B. Substitution of drilled-in anchors for cast-in-place anchors, or alternate type drilled-in anchors, shall not be made without advance proposed substitution and Architect/Engineer's approval.
- C. Corrections for conflicts or inaccuracies that result in change from Structural Drawings or final approved shop drawing details shall be submitted in sketch form for approval. Such substitutions or corrections shall be made only when approved by Architect/Engineer.
- D. Where drilled-in anchors must be substituted for specified anchors due to mis-placement or other reason, Contractor shall be responsible for design/re-design and cost for design/re-design. Assume "cracked" concrete unless otherwise advised in writing by Architect/Engineer. Refer to paragraph 1.4.G above.

1.7 STORAGE AND HANDLING

- A. Storage of materials:
 - 1. Store materials to permit easy access for inspection and identification.
 - 2. Store materials in accordance with manufacturer's recommendations.
 - 3. Note: Adhesive cartridges and capsules have special requirements for temperature/sunlight exposure and shelf life.

1.8 COORDINATION

- A. Coordinate installation of anchorage items to be embedded in or attached to other construction. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.
- B. Coordinate qualifications/training for installers.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Specific product, material or manufacturer listed under each item below is "acceptable" only if manufacturer can evidence product compliance with requirements of Contract Documents.
- B. For manufacturers not listed, submit as substitution according to the Conditions of the Contract and Division 01 Specification Sections.

2.2 MATERIALS

- A. Expansion Joint Filler:
 - 1. Superior-grade, polyethylene, closed cell, expansion joint filler.
 - 2. Strong, ultra-violet stable, resistant to most oils, chemicals, ozone and weathering.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Acceptable manufacturers and product(s):
 - a. ChemRex Inc., Sonneborn Building Products – “Sonoflex F”
 - b. Sealed Air Corporation – “Cellu Joint”
 - c. Williams Products, Inc. – “Everlastic Expand-O-Foam 1380 Series”
 - d. W.R. Meadows, Inc. – “Ceramar”
- B. Waterstops:
 1. Extruded “rope” form, between two protective papers, silicone treated for fast stripping. Bentonite type waterstops not permitted.
 2. In standard cross-section (as extruded) of approximately 1 square inch, 36 inch minimum supplied length.
 3. Primer: As recommended by waterstop manufacturer.
 4. Basis of Design:
 - a. Henry Company – “SF302 Synko-Flex Waterstop”
- C. Concrete Inserts:
 1. Wedge Type Inserts:
 - a. Description: Malleable iron, with 1-1/2 inch stainless steel askew head bolt. Standard or long as required by location.
 - b. Acceptable manufacturers and product(s):
 - 1) Heckmann Building Products, Inc., Cat. No. 425
 - 2) Hohmann & Barnard, Inc., No. HW340 and LW340
 - 3) Dayton/Richmond, Shelf Angle Wedge Inserts – F-7 and F-7-L
 2. Dovetail Anchor Slots: Heckmann Building Products, Inc. No. 100, 1 inch wide back, 1 inch deep, 5/8 inch throat, 20 gage galvanized steel with removable filler.
- D. Mechanical and Adhesive Anchors:
 1. Where specific anchor manufacturer/type is shown on drawings, substitution of alternate anchor is subject to Engineer’s approval.
 2. Size and Embedment: As indicated on Drawings. Where embedment is not indicated, submit proposed embedment prior to installation to Engineer for approval. For adhesive anchorages, use embedment of 12 x anchor/rebar diameter, or, submit proposed embedment prior to installation to Engineer for review.
 3. Material for Bolts, Nuts, and Washers, unless noted otherwise:
 - a. Carbon Steel with Zinc-Plating: ASTM B 633, Type III, Fe/Zn 5. Use at permanent interior environments free of moisture or other potentially corrosive conditions.
 - b. ASTM A 276 or ASTM A 493, Type 316 Stainless Steel: Use at potentially corrosive environments, including but not limited to following:
 - 1) Exterior exposed conditions
 - 2) Potentially wet environments
 - 3) Attachment of exterior cladding materials
 4. Expansion Anchors for Bolted Connections to Concrete (Mechanical Anchor):
 - a. Only expansion anchors with ICC-ES approval and tested to meet the provisions of ACI 355.2 and ICC-ES Acceptance Criteria (AC) 193 are acceptable for use.
 - b. Drawing Reference: Drawing reference to “expansion anchor(s)” shall indicate the use of anchors specified by this paragraph. Sleeve, adhesive, and other type anchors shall only be provided if specifically referenced or otherwise approved in advance of the Work.
 - c. Subject to compliance with requirements, provide one of following:
 - 1) HILTI, Inc. – “Kwik Bolt TZ” (ICC ESR-1917)
 - 2) SIMPSON Strong-Tie Company, Inc. – “Strong Bolt 2” (ICC ESR-3037)
 5. Heavy Duty Sleeve Anchors for Bolted Connections to Concrete (Mechanical Anchor):
 - a. Use ~~Only~~ heavy duty sleeve anchors with ICC-ES approval and tested to meet the provisions of ACI 355.2 and ICC-ES Acceptance Criteria (AC) 193.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Anchors consist of hex head bolts or threaded studs with hex head nut, along with spacer sleeve, expansion sleeve, expansion cone, and washer.
 - c. Anchors shall be torque controlled expansion type bolts exhibiting follow-up expansion under load, with provision for rotation prevention during installation, and specifically designed for high performance in static and dynamic applications.
 - d. Subject to compliance with requirements, provide following:
 - 1) HILTI, Inc. – “HSL-3 Heavy Duty Expansion Anchor” (ICC ESR-1545)
 - 6. Screw Anchors for Bolted Connections to Concrete (Mechanical Anchor):
 - a. Use screw anchors with ICC-ES approval and tested to meet the provisions of ICC-ES Acceptance Criteria (AC) 193 are acceptable for use.
 - b. Pre-drilling of hole requires standard ANSI drill bit with same diameter as anchor and installing anchor will be done with impact wrench.
 - c. Anchors shall have diameter and length marked on head.
 - d. Materials: Use carbon steel, heat treated with zinc-plating or mechanically galvanized at interior environments free of moisture or other potentially corrosive conditions. Screw anchors shall not be used in potentially corrosive environments, including but not limited to exterior exposed conditions, potentially wet environments, and attachments for exterior cladding materials.
 - e. Screw anchors once tightened may be loosened maximum of one turn and re-tightened with torque wrench. Loosening or removal beyond this limitation will void screw anchor.
 - f. Subject to compliance with requirements, provide following:
 - 1) HILTI, Inc. – “Kwik HUS-EZ” (ICC ESR-3027)
 - 2) SIMPSON Strong-Tie Company, Inc. – “Titen HD” (ICC ESR-2713)
 - 7. Adhesive Anchors for Bolted Connections and Rebar Doweling to Concrete:
 - a. Only adhesive anchor systems with ICC-ES approval and tested to meet the provisions of ACI 355.4 and ICC-ES Acceptance Criteria (AC) 308 are acceptable for use.
 - b. Adhesive anchor system for bolted connections consists of threaded steel rod, nut, washer, two component epoxy or hybrid adhesive injection system and manufacturer’s installation instructions.
 - c. Material for Bolts, Nuts and Washers:
 - 1) Carbon steel conforming to ASTM A36, or better, except as noted below.
 - 2) ASTM F 593, Type 316 Stainless Steel: Use at potentially corrosive environments, as noted above par. D.3.
 - d. Adhesive anchor system for rebar doweling consists of Grade 60 reinforcing bar, two component epoxy injection adhesive injection system and manufacturer’s installation instructions.
 - e. Subject to compliance following products are considered acceptable for use:
 - 1) HILTI, Inc. – “HIT RE 500-SD Adhesive System (ICC ESR-2322)
 - 2) HILTI, Inc. – “HIT HY 200 SAFE SET” Anchoring System (ICC ESR-3187), using one of following techniques: HIT-Z Anchor Rods in drilled holes; Standard threaded rods or rebar dowels in holes drilled with Hilti Hollow Drill Bit and VC 20/40 Vacuum System
 - 3) SIMPSON Strong-Tie Company, Inc. – “SET-XP Epoxy-Tie Adhesive System” (ICC ESR-2508)
 - f. Above epoxy adhesive systems require special attention to ambient conditions and cure time prior to loading. Where ambient or other project conditions require alternate product, such as acrylic based adhesive, other product(s) of listed manufacturers may be considered by Engineer. Consult with product manufacturer and submit proposal for review/approval by Engineer prior to use.
- E. Cast-In Place Internally Threaded Rods:
- 1. Following Product is considered acceptable for use.
 - a. HILTI, Inc. – “HCI-WF” (Wood Form) Cast-in Anchor
 - b. HILTI, Inc. – “HCI-MD” (Metal Deck) Cast-in Anchor
 - c. SIMPSON Strong-Tie Company, Inc. – “Blue Banger Hanger –Wood Form (BBWF)”

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. SIMPSON Strong-Tie Company, Inc. – “Blue Banger Hanger – Metal Deck (BBMD)”

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine and verify that receiving substrate surfaces of structure have no defects or errors which would result in poor or potentially defective application, cause latent defects in workmanship and are in compliance with product manufacturer criteria.
- B. Starting installation shall imply acceptable and proper surfaces.

3.2 PREPARATION

- A. Prepare substrate surfaces to insure proper and adequate installation, in accordance with Contract Documents and approved Shop Drawings, and/or manufacturer's requirements.
- B. Field measure and verify dimensions as required.
- C. Protect adjacent areas or surfaces from damage as result of Work of this Section.
- D. Waterstops:
 - 1. Brush clean loose dirt and particles from concrete surfaces.
 - 2. Brush apply 2 to 3 inch wide strip of primer and allow to dry thoroughly (2-3 hours).
- E. Mechanical and Adhesive Anchors:
 - 1. Verify following with anchor manufacturer's printed instructions.
 - a. Drill type and drill bit type/size
 - b. Required clean-out of drilled hole to receive anchor
 - c. Adhesive injection procedure into hole (for adhesive anchor systems)
 - d. Bolt, rod, or dowel insertion procedure into hole
 - e. Adhesive cure time prior to loading (for adhesive anchor systems)
 - f. Nut tightening to proper torque
 - g. Ambient temperature limitations (for adhesive anchor systems)
 - 2. Verify with anchor manufacturer if restrictions exist on type of drilling equipment.
 - 3. Identify position of reinforcing steel and other embedded items prior to drilling/coring holes for anchors. Exercise care in drilling/coring to avoid damaging existing reinforcing or embedded items. Notify Engineer if reinforcing or other embedded items are encountered during drilling.
 - 4. Verify installer qualifications/training.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's latest published requirements, instructions and specifications.
- B. Expansion Joint Filler:
 - 1. Position filler material so it does not protrude above surface of concrete. Provide minimum of ½ inch from surface of concrete to top of filler if sealant is to be used to seal off joint.
 - 2. Interface with Other Products: coordinate and cooperate with adjacent and contiguous materials trades to ensure proper installation.
- C. Waterstops:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Strip protective paper wrapper from one side only of waterstop material.
2. Press waterstop material strip firmly against primed surface throughout length and width of strip.
3. Join strips together with 1 inch overlap to form continuous waterstop.
4. Remove remaining protective paper when ready to install forms and pour concrete.

D. Mechanical and Adhesive Anchors for Connections and Doweling to Concrete:

1. Base Material Strength: Do not drill holes in concrete until concrete has achieved specified 28-day compressive strength.
2. Drill to specified depth of embedment with drill/bit types recommended by anchor/adhesive manufacturer.
3. Avoid over-drilling depth at conditions which will have 3 inches or less concrete below bottom/tip of anchor, so as to avoid spalling at concrete surface behind anchor.
4. Set anchors perpendicular to substrate surface unless otherwise indicated. Skewed or slanted anchor installations with skew/slant exceeding 6 degrees from axis perpendicular to substrate surface shall not be acceptable. All skewed/slanted anchor installations to any degree will be subject to Engineer's discretion and may require remedy at Contractor's cost.
5. Protect threads, where occurs, from damage during anchor installation.
6. Set anchors to manufacturer's recommended torque using manufacturer's recommended procedure.
7. Do not disturb or load set anchor before manufacturer's specified curing time.

3.4 SCHEDULE OF TYPICAL LOCATIONS

- A. Expansion Joint Filler: At concrete expansion joints and at abutting expansion joints between concrete and adjacent structures.
- B. Waterstops: Provide continuous waterstops at below-grade concrete cold joints and where indicated.
- C. Vapor Retarder: Provide vapor retarder membrane beneath concrete slabs-on-grade in accordance with Division 7 Section requirements.
- D. Mechanical and Adhesive Anchors: Where indicated or otherwise required for satisfactory completion of work.

PART 4 - FIELD QUALITY CONTROL FOR POST-INSTALLED ANCHORS

4.1 INSPECTION STANDARDS

- A. Quality control, testing, and inspections shall meet the special inspection requirements of the building code and any local or state provisions.
 1. Minimum periodic and continuous inspection requirements are indicated below. Refer to drawings for supplemental and/or more stringent testing requirements, as required.
 2. Provide for more stringent inspection/testing where specified or required elsewhere in these Specifications.

4.2 TESTING AGENCY

- A. Owner will employ and pay a qualified independent testing agency to perform the quality control indicated in this section, including special inspections required by the building code.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Inspection and testing by owner's testing agency is for verification and shall not relieve contractor of his responsibility to furnish materials and workmanship in accordance with Contract Documents.
 2. Retesting of materials failing to meet specified requirements shall be done at Contractor's expense.
 3. In cases of differences of opinion between Owner's Testing Agency and Contractor's Supervisor regarding conformance, the issue should be brought to the Architect, Engineer of Record and the enforcement agency as part of the resolution process.
- B. Qualification of Testing Personnel: Qualified person employed or retained by approved testing agency acceptable to Building Official as having competence necessary to perform specified inspections. Subject to approval by Architect/Engineer.
- C. Inspection Reports:
1. Provide written inspection report for post-installed anchor installations inspected/tested. Provide following information:
 - a. Date of inspection/test
 - b. Installers name and firm
 - c. Specific location of inspected/tested anchor(s). Use grid designations, member mark(s), graphic description, etc.. in sufficient detail to define anchor(s) location.
 - d. Confirmation indicating that anchor manufacturer's installation recommendations were followed.
 - e. Anchor/adhesive manufacturer and type.
 - f. Notes regarding any non-conforming anchor installation(s).
 - g. When "Field Testing" is performed, provide results of testing.
 - h. Inspector's name with signature
- D. Scope of Testing Services:
1. Visual Inspection: Perform visual inspection of installation procedures at the start of post-installed anchor installations and periodically thereafter. Inspection should be random and periodic in nature and in accordance with SCHEDULE OF POST-INSTALLED ANCHOR FIELD QUALITY CONTROL table below. Purpose is to confirm:
 - a. Qualifications/Training of Contractor's personnel
 - b. Observance of anchor manufacturer's written procedures and recommended equipment
 - c. Visual quality of anchor installation(s) in accordance with anchor manufacturer written recommendations, including but not limited to:
 - 1) Anchor/adhesive type conforms to specified/approved requirements.
 - 2) Anchor/Drill/Bit type(s) conform to anchor manufacturer's written recommendations.
 - 3) Hole dimensions (diameter and depth) and hole cleaning procedures in accordance with anchor manufacturer's written recommendations.
 - 4) Anchor installation torque where required by anchor manufacturer.
 - 5) Anchor orientation with respect to plane of substrate surface (not greater than 6 degree skew from perpendicular in any direction).
 2. Where Testing Agency's Visual Inspection indicate or report unsatisfactory or otherwise questionable post-installed anchor installation(s), the following Field Testing requirements shall be activated and performed at Contractor's expense.
 3. Field Testing of Post-Installed Anchors: Each reported unsatisfactory or otherwise questionable anchor installation and 10% of all anchors of same diameter and type on random basis shall be proof tested by applying pull/tension test load to anchor. Required pull/tension test load shall not be less than 1.5 times nor greater than 2.0 times anchor manufacturer's recommended allowable load.
 - a. Specified anchor size, embedment, spacing and edge distance shall be given consideration in determining pull/tension test load.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Assume uncracked concrete as substrate condition for determining pull/tension test load unless observed/actual conditions warrant otherwise, or Engineer recommends otherwise.
- c. Consult with anchor/product manufacturer for allowable load level and submit to Engineer for review prior to conducting test(s). Engineer may adjust required load level.
- d. Pull/Tension Testing device shall not restrict concrete shear cone type failure mechanism from occurring.
- e. Anchors shall maintain pull/tension test load for minimum of 15 seconds and shall exhibit no discernible movement during tension test as evidenced by loosening of washer under nut, loss of jacking pressure or by supplemental concrete cracking.
- f. Pull/Tension Testing device shall be calibrated by an approved testing laboratory in accordance with recognized standard procedures.
- g. If any of the tested anchors fail to achieve the required pull/tension, all anchors of same diameter and type as failed anchor shall be tested, unless otherwise instructed by Engineer.

4.3 CONTRACTOR

- A. Utilize only qualified/trained installers for post-installed anchors. See paragraph 1.5.D above.
- B. Notify Owner's independent inspection/testing agency in advance of post-installed anchor installations.
- C. Scope of Contractor's Quality Control Services
 - 1. Supervision: Contractor to provide qualified senior field personnel to perform supervision of installation procedures in accordance with SCHEDULE OF POST-INSTALLED ANCHOR FIELD QUALITY CONTROL table below.
 - a. Supervise quality of anchor installation(s), including but not limited to:
 - 1) Utilization of qualified/trained installers
 - 2) Avoidance of reinforcing or embedded items when installing anchors
 - 3) Installers use of proper anchor/drill/bit types
 - 4) Installer procedures for hole cleaning and anchor installation, including torque where required, in accordance with anchor manufacturer's written recommendations
 - 5) Visual confirmation of anchor orientation with respect to plane of substrate surface
 - 2. Where unsatisfactory or otherwise questionable anchor installation(s) are observed during Supervision, notify and retain Testing Agency to perform Field Testing at Contractor's expense in accordance with paragraph 4.2.D.3 above.
- D. Maintain records of post-installed anchor installations. Include following as minimum record:
 - 1. Date(s) of installation
 - 2. Installer name(s), firm(s) and qualification data
 - 3. Location of visually inspected and tested anchor(s), as performed by Testing Agency. Use grid designations, member mark(s), graphic description, etc.. in sufficient detail to record and define anchor(s) location.
 - 4. Visual observations/notes of Testing Agency and from Contractor's Supervision.
 - 5. Results of field pull/tension testing.
- E. Maintain records on site for review by Architect/Engineer or Testing Agency on request, and for permanent job record.

4.4 SCHEDULE OF POST-INSTALLED ANCHOR FIELD QUALITY CONTROL

Table below denotes minimum percentage of post-installed anchors to receive Field Quality Control in accordance with above requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

ITEMS/ / DESCRIPTION	TESTING AGENCY	CONTRACTOR
	*Visual Inspection	*Supervision
Anchors specified by structural documents	25% (at start-up and random periodic basis thereafter)	100%
Anchors substituted for requirements of structural documents	25% (at start-up and random periodic basis thereafter)	100%
Anchors for Non-structural components	10% (at start-up and random periodic basis thereafter)	100%

*Where noted Testing Agency Visual Inspection or Contractor Supervision reveals unsatisfactory or otherwise questionable post-installed anchor installation, field pull/tension testing as specified under paragraph 4.2.D.3 above shall be activated and performed.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 031500

CONCRETE ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes concrete accessories and supplementary items necessary to complete work required for their installation.

1.3 DEFINITIONS

- A. Adhesive Anchor: post-installed device (bolt, threaded rod, or reinforcing bar) for transferring load(s) to concrete consisting of a steel element used in conjunction with an adhesive compound and embedded in a drilled round hole in hardened concrete. Adhesive Anchor System includes fastening components and necessary accessories recommended by adhesive manufacturer for appropriate installation.
- B. Anchor Spacing: distance between centerline of adjacent anchors
- C. Cast-in-Place Anchor: headed bolt, headed stud, hooked bolt, or reinforcing bar installed before concrete placement
- D. Cracked Concrete: condition of concrete in which the anchor is installed and/or condition which could occur at or near anchor location over service life of anchor
- E. Edge Distance: dimension from anchor/component centerline to free edge of base material in which component is anchored or installed
- F. Embedment Depth: dimension from surface of base material to tip of anchor/component installed in base material
- G. Mechanical Anchor: post installed device for transferring load(s) to concrete by direct bearing, friction or both. Generally includes expansion type, sleeve type and screw type anchors
- H. Post-Installed Anchor: an anchor or dowel installed into hardened concrete of specified 28-day compressive strength. Includes drilled-in bolts, threaded rods and reinforcing bars/dowels.

1.4 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
- B. Product Data (General): Manufacturer's printed literature to evidence compliance with these specifications.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Product Data (Mechanical and Adhesive Anchors): Manufacturer's product specifications with recommended design values, physical characteristics, installation instructions, ICC-ES Report(s) and necessary calculations to evidence compliance with these specifications.
- D. Samples:
 - 1. Expansion Joint Filler: Two (2) representative samples, 6 inches x 12 inches.
 - 2. Waterstops: Two 6 inch strips, complete with "quick-release" papers.
 - 3. Concrete Inserts: Construction and finish specified.
 - 4. Mechanical and Adhesive Anchors: Two (2) samples of each respective type and size proposed if requested by Architect/Engineer
- E. Source and field quality-control documentation.
 - 1. Test reports as required for indicating compliance with the Quality Control sections below.
- F. Contractor shall submit to the Engineer and the enforcing agency, for acceptance, a quality control or inspection plan that addresses all inspection issues.
- G. Design calculations for Post-Installed Anchors where/if substitution is proposed from requirements shown on Drawings. Include seal/signature of Engineer responsible for design and licensed to practice in jurisdiction of Project.

1.5 QUALITY ASSURANCE

- A. Codes and Standards: Comply with following provisions, except as otherwise indicated:
 - 1. International Building Code (IBC), edition indicated by Drawings including Special Inspection and Quality Control requirements, Chapter 17 of the IBC and any local or State provisions. All following code and standard versions shall be as referenced by IBC Chapter 35 or, where not referenced in IBC, the most recent published versions.
 - 2. ICC-ES approval and related testing to meet ICC-ES Acceptance Criteria required for mechanical and adhesive anchors.
 - 3. ACI 355.2 (for bolted connections to hardened concrete using expansion type and sleeve type anchors)
 - 4. ACI 355.4 (for bolted connections to hardened concrete using adhesive anchors)
- B. Each type product covered under this Section shall be produced by single manufacturer unless otherwise specified.
- C. Manufacturer: Not less than five (5) years successful production of product. Submit evidence if requested by Architect/Engineer.
- D. Mechanical Anchor and Adhesive Anchor Installer Qualifications:
 - 1. Qualification: Post-installed anchors/dowels shall be installed by personnel having minimum of 3 years experience performing similar installations and having applicable certificate or other evidence of previous training from anchor product manufacturer, subject to approval of Architect/Engineer.
 - 2. Training (As Alternate to Above Qualification): Conduct training (with manufacturer or manufacturer's representative) for installer(s) on project. Training to consist of review of complete installation process for drilled-in anchors, to include but not limited to:
 - a. Hole drilling process/bits
 - b. Hole preparation/cleaning
 - c. Adhesive dispenser/injection technique(s)
 - d. Rebar dowel preparation
 - e. Proof loading/torqueing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Maintain Qualification/Training records on site. Subject to Testing Agency and/or Architect/Engineer review on request.

1.6 PROPOSED SUBSTITUTIONS

- A. Substitution or modifications, if proposed by Contractor, shall be submitted for approval prior to submission of shop drawings, and such substitutions shall be made only when approved by Architect, and at no additional cost to Owner. Total amount of credit, if any, shall be stated in writing with submission.
- B. Substitution of drilled-in anchors for cast-in-place anchors, or alternate type drilled-in anchors, shall not be made without advance proposed substitution and Architect/Engineer's approval.
- C. Corrections for conflicts or inaccuracies that result in change from Structural Drawings or final approved shop drawing details shall be submitted in sketch form for approval. Such substitutions or corrections shall be made only when approved by Architect/Engineer.
- D. Where drilled-in anchors must be substituted for specified anchors due to mis-placement or other reason, Contractor shall be responsible for design/re-design and cost for design/re-design. Assume "cracked" concrete unless otherwise advised in writing by Architect/Engineer. Refer to paragraph 1.4.G above.

1.7 STORAGE AND HANDLING

- A. Storage of materials:
 - 1. Store materials to permit easy access for inspection and identification.
 - 2. Store materials in accordance with manufacturer's recommendations.
 - 3. Note: Adhesive cartridges and capsules have special requirements for temperature/sunlight exposure and shelf life.

1.8 COORDINATION

- A. Coordinate installation of anchorage items to be embedded in or attached to other construction. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.
- B. Coordinate qualifications/training for installers.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Specific product, material or manufacturer listed under each item below is "acceptable" only if manufacturer can evidence product compliance with requirements of Contract Documents.
- B. For manufacturers not listed, submit as substitution according to the Conditions of the Contract and Division 01 Specification Sections.

2.2 MATERIALS

- A. Expansion Joint Filler:
 - 1. Superior-grade, polyethylene, closed cell, expansion joint filler.
 - 2. Strong, ultra-violet stable, resistant to most oils, chemicals, ozone and weathering.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Acceptable manufacturers and product(s):
 - a. ChemRex Inc., Sonneborn Building Products – “Sonoflex F”
 - b. Sealed Air Corporation – “Cellu Joint”
 - c. Williams Products, Inc. – “Everlastic Expand-O-Foam 1380 Series”
 - d. W.R. Meadows, Inc. – “Ceramar”
- B. Waterstops:
 1. Extruded “rope” form, between two protective papers, silicone treated for fast stripping. Bentonite type waterstops not permitted.
 2. In standard cross-section (as extruded) of approximately 1 square inch, 36 inch minimum supplied length.
 3. Primer: As recommended by waterstop manufacturer.
 4. Basis of Design:
 - a. Henry Company – “SF302 Synko-Flex Waterstop”
- C. Concrete Inserts:
 1. Wedge Type Inserts:
 - a. Description: Malleable iron, with 1-1/2 inch stainless steel askew head bolt. Standard or long as required by location.
 - b. Acceptable manufacturers and product(s):
 - 1) Heckmann Building Products, Inc., Cat. No. 425
 - 2) Hohmann & Barnard, Inc., No. HW340 and LW340
 - 3) Dayton/Richmond, Shelf Angle Wedge Inserts – F-7 and F-7-L
 2. Dovetail Anchor Slots: Heckmann Building Products, Inc. No. 100, 1 inch wide back, 1 inch deep, 5/8 inch throat, 20 gage galvanized steel with removable filler.
- D. Mechanical and Adhesive Anchors:
 1. Where specific anchor manufacturer/type is shown on drawings, substitution of alternate anchor is subject to Engineer’s approval.
 2. Size and Embedment: As indicated on Drawings. Where embedment is not indicated, submit proposed embedment prior to installation to Engineer for approval. For adhesive anchorages, use embedment of 12 x anchor/rebar diameter, or, submit proposed embedment prior to installation to Engineer for review.
 3. Material for Bolts, Nuts, and Washers, unless noted otherwise:
 - a. Carbon Steel with Zinc-Plating: ASTM B 633, Type III, Fe/Zn 5. Use at permanent interior environments free of moisture or other potentially corrosive conditions.
 - b. ASTM A 276 or ASTM A 493, Type 316 Stainless Steel: Use at potentially corrosive environments, including but not limited to following:
 - 1) Exterior exposed conditions
 - 2) Potentially wet environments
 - 3) Attachment of exterior cladding materials
 4. Expansion Anchors for Bolted Connections to Concrete (Mechanical Anchor):
 - a. Only expansion anchors with ICC-ES approval and tested to meet the provisions of ACI 355.2 and ICC-ES Acceptance Criteria (AC) 193 are acceptable for use.
 - b. Drawing Reference: Drawing reference to “expansion anchor(s)” shall indicate the use of anchors specified by this paragraph. Sleeve, adhesive, and other type anchors shall only be provided if specifically referenced or otherwise approved in advance of the Work.
 - c. Subject to compliance with requirements, provide one of following:
 - 1) HILTI, Inc. – “Kwik Bolt TZ” (ICC ESR-1917)
 - 2) SIMPSON Strong-Tie Company, Inc. – “Strong Bolt 2” (ICC ESR-3037)
 5. Heavy Duty Sleeve Anchors for Bolted Connections to Concrete (Mechanical Anchor):
 - a. Use ~~Only~~ heavy duty sleeve anchors with ICC-ES approval and tested to meet the provisions of ACI 355.2 and ICC-ES Acceptance Criteria (AC) 193.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Anchors consist of hex head bolts or threaded studs with hex head nut, along with spacer sleeve, expansion sleeve, expansion cone, and washer.
 - c. Anchors shall be torque controlled expansion type bolts exhibiting follow-up expansion under load, with provision for rotation prevention during installation, and specifically designed for high performance in static and dynamic applications.
 - d. Subject to compliance with requirements, provide following:
 - 1) HILTI, Inc. – “HSL-3 Heavy Duty Expansion Anchor” (ICC ESR-1545)
 - 6. Screw Anchors for Bolted Connections to Concrete (Mechanical Anchor):
 - a. Use screw anchors with ICC-ES approval and tested to meet the provisions of ICC-ES Acceptance Criteria (AC) 193 are acceptable for use.
 - b. Pre-drilling of hole requires standard ANSI drill bit with same diameter as anchor and installing anchor will be done with impact wrench.
 - c. Anchors shall have diameter and length marked on head.
 - d. Materials: Use carbon steel, heat treated with zinc-plating or mechanically galvanized at interior environments free of moisture or other potentially corrosive conditions. Screw anchors shall not be used in potentially corrosive environments, including but not limited to exterior exposed conditions, potentially wet environments, and attachments for exterior cladding materials.
 - e. Screw anchors once tightened may be loosened maximum of one turn and re-tightened with torque wrench. Loosening or removal beyond this limitation will void screw anchor.
 - f. Subject to compliance with requirements, provide following:
 - 1) HILTI, Inc. – “Kwik HUS-EZ” (ICC ESR-3027)
 - 2) SIMPSON Strong-Tie Company, Inc. – “Titen HD” (ICC ESR-2713)
 - 7. Adhesive Anchors for Bolted Connections and Rebar Doweling to Concrete:
 - a. Only adhesive anchor systems with ICC-ES approval and tested to meet the provisions of ACI 355.4 and ICC-ES Acceptance Criteria (AC) 308 are acceptable for use.
 - b. Adhesive anchor system for bolted connections consists of threaded steel rod, nut, washer, two component epoxy or hybrid adhesive injection system and manufacturer’s installation instructions.
 - c. Material for Bolts, Nuts and Washers:
 - 1) Carbon steel conforming to ASTM A36, or better, except as noted below.
 - 2) ASTM F 593, Type 316 Stainless Steel: Use at potentially corrosive environments, as noted above par. D.3.
 - d. Adhesive anchor system for rebar doweling consists of Grade 60 reinforcing bar, two component epoxy injection adhesive injection system and manufacturer’s installation instructions.
 - e. Subject to compliance following products are considered acceptable for use:
 - 1) HILTI, Inc. – “HIT RE 500-SD Adhesive System (ICC ESR-2322)
 - 2) HILTI, Inc. – “HIT HY 200 SAFE SET” Anchoring System (ICC ESR-3187), using one of following techniques: HIT-Z Anchor Rods in drilled holes; Standard threaded rods or rebar dowels in holes drilled with Hilti Hollow Drill Bit and VC 20/40 Vacuum System
 - 3) SIMPSON Strong-Tie Company, Inc. – “SET-XP Epoxy-Tie Adhesive System” (ICC ESR-2508)
 - f. Above epoxy adhesive systems require special attention to ambient conditions and cure time prior to loading. Where ambient or other project conditions require alternate product, such as acrylic based adhesive, other product(s) of listed manufacturers may be considered by Engineer. Consult with product manufacturer and submit proposal for review/approval by Engineer prior to use.
- E. Cast-In Place Internally Threaded Rods:
- 1. Following Product is considered acceptable for use.
 - a. HILTI, Inc. – “HCI-WF” (Wood Form) Cast-in Anchor
 - b. HILTI, Inc. – “HCI-MD” (Metal Deck) Cast-in Anchor
 - c. SIMPSON Strong-Tie Company, Inc. – “Blue Banger Hanger –Wood Form (BBWF)”

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. SIMPSON Strong-Tie Company, Inc. – “Blue Banger Hanger – Metal Deck (BBMD)”

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine and verify that receiving substrate surfaces of structure have no defects or errors which would result in poor or potentially defective application, cause latent defects in workmanship and are in compliance with product manufacturer criteria.
- B. Starting installation shall imply acceptable and proper surfaces.

3.2 PREPARATION

- A. Prepare substrate surfaces to insure proper and adequate installation, in accordance with Contract Documents and approved Shop Drawings, and/or manufacturer's requirements.
- B. Field measure and verify dimensions as required.
- C. Protect adjacent areas or surfaces from damage as result of Work of this Section.
- D. Waterstops:
 - 1. Brush clean loose dirt and particles from concrete surfaces.
 - 2. Brush apply 2 to 3 inch wide strip of primer and allow to dry thoroughly (2-3 hours).
- E. Mechanical and Adhesive Anchors:
 - 1. Verify following with anchor manufacturer's printed instructions.
 - a. Drill type and drill bit type/size
 - b. Required clean-out of drilled hole to receive anchor
 - c. Adhesive injection procedure into hole (for adhesive anchor systems)
 - d. Bolt, rod, or dowel insertion procedure into hole
 - e. Adhesive cure time prior to loading (for adhesive anchor systems)
 - f. Nut tightening to proper torque
 - g. Ambient temperature limitations (for adhesive anchor systems)
 - 2. Verify with anchor manufacturer if restrictions exist on type of drilling equipment.
 - 3. Identify position of reinforcing steel and other embedded items prior to drilling/coring holes for anchors. Exercise care in drilling/coring to avoid damaging existing reinforcing or embedded items. Notify Engineer if reinforcing or other embedded items are encountered during drilling.
 - 4. Verify installer qualifications/training.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's latest published requirements, instructions and specifications.
- B. Expansion Joint Filler:
 - 1. Position filler material so it does not protrude above surface of concrete. Provide minimum of ½ inch from surface of concrete to top of filler if sealant is to be used to seal off joint.
 - 2. Interface with Other Products: coordinate and cooperate with adjacent and contiguous materials trades to ensure proper installation.
- C. Waterstops:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Strip protective paper wrapper from one side only of waterstop material.
2. Press waterstop material strip firmly against primed surface throughout length and width of strip.
3. Join strips together with 1 inch overlap to form continuous waterstop.
4. Remove remaining protective paper when ready to install forms and pour concrete.

D. Mechanical and Adhesive Anchors for Connections and Doweling to Concrete:

1. Base Material Strength: Do not drill holes in concrete until concrete has achieved specified 28-day compressive strength.
2. Drill to specified depth of embedment with drill/bit types recommended by anchor/adhesive manufacturer.
3. Avoid over-drilling depth at conditions which will have 3 inches or less concrete below bottom/tip of anchor, so as to avoid spalling at concrete surface behind anchor.
4. Set anchors perpendicular to substrate surface unless otherwise indicated. Skewed or slanted anchor installations with skew/slant exceeding 6 degrees from axis perpendicular to substrate surface shall not be acceptable. All skewed/slanted anchor installations to any degree will be subject to Engineer's discretion and may require remedy at Contractor's cost.
5. Protect threads, where occurs, from damage during anchor installation.
6. Set anchors to manufacturer's recommended torque using manufacturer's recommended procedure.
7. Do not disturb or load set anchor before manufacturer's specified curing time.

3.4 SCHEDULE OF TYPICAL LOCATIONS

- A. Expansion Joint Filler: At concrete expansion joints and at abutting expansion joints between concrete and adjacent structures.
- B. Waterstops: Provide continuous waterstops at below-grade concrete cold joints and where indicated.
- C. Vapor Retarder: Provide vapor retarder membrane beneath concrete slabs-on-grade in accordance with Division 7 Section requirements.
- D. Mechanical and Adhesive Anchors: Where indicated or otherwise required for satisfactory completion of work.

PART 4 - FIELD QUALITY CONTROL FOR POST-INSTALLED ANCHORS

4.1 INSPECTION STANDARDS

- A. Quality control, testing, and inspections shall meet the special inspection requirements of the building code and any local or state provisions.
 1. Minimum periodic and continuous inspection requirements are indicated below. Refer to drawings for supplemental and/or more stringent testing requirements, as required.
 2. Provide for more stringent inspection/testing where specified or required elsewhere in these Specifications.

4.2 TESTING AGENCY

- A. Owner will employ and pay a qualified independent testing agency to perform the quality control indicated in this section, including special inspections required by the building code.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Inspection and testing by owner's testing agency is for verification and shall not relieve contractor of his responsibility to furnish materials and workmanship in accordance with Contract Documents.
 2. Retesting of materials failing to meet specified requirements shall be done at Contractor's expense.
 3. In cases of differences of opinion between Owner's Testing Agency and Contractor's Supervisor regarding conformance, the issue should be brought to the Architect, Engineer of Record and the enforcement agency as part of the resolution process.
- B. Qualification of Testing Personnel: Qualified person employed or retained by approved testing agency acceptable to Building Official as having competence necessary to perform specified inspections. Subject to approval by Architect/Engineer.
- C. Inspection Reports:
1. Provide written inspection report for post-installed anchor installations inspected/tested. Provide following information:
 - a. Date of inspection/test
 - b. Installers name and firm
 - c. Specific location of inspected/tested anchor(s). Use grid designations, member mark(s), graphic description, etc.. in sufficient detail to define anchor(s) location.
 - d. Confirmation indicating that anchor manufacturer's installation recommendations were followed.
 - e. Anchor/adhesive manufacturer and type.
 - f. Notes regarding any non-conforming anchor installation(s).
 - g. When "Field Testing" is performed, provide results of testing.
 - h. Inspector's name with signature
- D. Scope of Testing Services:
1. Visual Inspection: Perform visual inspection of installation procedures at the start of post-installed anchor installations and periodically thereafter. Inspection should be random and periodic in nature and in accordance with SCHEDULE OF POST-INSTALLED ANCHOR FIELD QUALITY CONTROL table below. Purpose is to confirm:
 - a. Qualifications/Training of Contractor's personnel
 - b. Observance of anchor manufacturer's written procedures and recommended equipment
 - c. Visual quality of anchor installation(s) in accordance with anchor manufacturer written recommendations, including but not limited to:
 - 1) Anchor/adhesive type conforms to specified/approved requirements.
 - 2) Anchor/Drill/Bit type(s) conform to anchor manufacturer's written recommendations.
 - 3) Hole dimensions (diameter and depth) and hole cleaning procedures in accordance with anchor manufacturer's written recommendations.
 - 4) Anchor installation torque where required by anchor manufacturer.
 - 5) Anchor orientation with respect to plane of substrate surface (not greater than 6 degree skew from perpendicular in any direction).
 2. Where Testing Agency's Visual Inspection indicate or report unsatisfactory or otherwise questionable post-installed anchor installation(s), the following Field Testing requirements shall be activated and performed at Contractor's expense.
 3. Field Testing of Post-Installed Anchors: Each reported unsatisfactory or otherwise questionable anchor installation and 10% of all anchors of same diameter and type on random basis shall be proof tested by applying pull/tension test load to anchor. Required pull/tension test load shall not be less than 1.5 times nor greater than 2.0 times anchor manufacturer's recommended allowable load.
 - a. Specified anchor size, embedment, spacing and edge distance shall be given consideration in determining pull/tension test load.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Assume uncracked concrete as substrate condition for determining pull/tension test load unless observed/actual conditions warrant otherwise, or Engineer recommends otherwise.
- c. Consult with anchor/product manufacturer for allowable load level and submit to Engineer for review prior to conducting test(s). Engineer may adjust required load level.
- d. Pull/Tension Testing device shall not restrict concrete shear cone type failure mechanism from occurring.
- e. Anchors shall maintain pull/tension test load for minimum of 15 seconds and shall exhibit no discernible movement during tension test as evidenced by loosening of washer under nut, loss of jacking pressure or by supplemental concrete cracking.
- f. Pull/Tension Testing device shall be calibrated by an approved testing laboratory in accordance with recognized standard procedures.
- g. If any of the tested anchors fail to achieve the required pull/tension, all anchors of same diameter and type as failed anchor shall be tested, unless otherwise instructed by Engineer.

4.3 CONTRACTOR

- A. Utilize only qualified/trained installers for post-installed anchors. See paragraph 1.5.D above.
- B. Notify Owner's independent inspection/testing agency in advance of post-installed anchor installations.
- C. Scope of Contractor's Quality Control Services
 - 1. Supervision: Contractor to provide qualified senior field personnel to perform supervision of installation procedures in accordance with SCHEDULE OF POST-INSTALLED ANCHOR FIELD QUALITY CONTROL table below.
 - a. Supervise quality of anchor installation(s), including but not limited to:
 - 1) Utilization of qualified/trained installers
 - 2) Avoidance of reinforcing or embedded items when installing anchors
 - 3) Installers use of proper anchor/drill/bit types
 - 4) Installer procedures for hole cleaning and anchor installation, including torque where required, in accordance with anchor manufacturer's written recommendations
 - 5) Visual confirmation of anchor orientation with respect to plane of substrate surface
 - 2. Where unsatisfactory or otherwise questionable anchor installation(s) are observed during Supervision, notify and retain Testing Agency to perform Field Testing at Contractor's expense in accordance with paragraph 4.2.D.3 above.
- D. Maintain records of post-installed anchor installations. Include following as minimum record:
 - 1. Date(s) of installation
 - 2. Installer name(s), firm(s) and qualification data
 - 3. Location of visually inspected and tested anchor(s), as performed by Testing Agency. Use grid designations, member mark(s), graphic description, etc.. in sufficient detail to record and define anchor(s) location.
 - 4. Visual observations/notes of Testing Agency and from Contractor's Supervision.
 - 5. Results of field pull/tension testing.
- E. Maintain records on site for review by Architect/Engineer or Testing Agency on request, and for permanent job record.

4.4 SCHEDULE OF POST-INSTALLED ANCHOR FIELD QUALITY CONTROL

Table below denotes minimum percentage of post-installed anchors to receive Field Quality Control in accordance with above requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

ITEMS/ / DESCRIPTION	TESTING AGENCY *Visual Inspection	CONTRACTOR *Supervision
Anchors specified by structural documents	25% (at start-up and random periodic basis thereafter)	100%
Anchors substituted for requirements of structural documents	25% (at start-up and random periodic basis thereafter)	100%
Anchors for Non-structural components	10% (at start-up and random periodic basis thereafter)	100%

*Where noted Testing Agency Visual Inspection or Contractor Supervision reveals unsatisfactory or otherwise questionable post-installed anchor installation, field pull/tension testing as specified under paragraph 4.2.D.3 above shall be activated and performed.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 032000

CONCRETE REINFORCING

PART 1 - GENERAL

1.01 WORK INCLUDED

Furnish labor and reinforcing materials required to cut, bend, tie, splice, place and support the reinforcement in the material grades, sizes, quantities, and locations specified.

1.02 QUALITY ASSURANCE

TOLERANCES

Reinforcement shall be placed where specified, with the following maximum tolerances, plus or minus:

- A. Cover 1/4"
- B. Spacings 1/4" in 12"

1.03 SUBMITTALS

Submittals shall be in accordance with Section 013300, SUBMITTALS and shall include:

- A. Record data for layouts (shop drawings with bar lists clearly marked with reference to plans.
- B. Certifications of steel quality, size, grade, and manufacturers origin.

1.04 STANDARDS

The applicable provisions of the following standards shall apply as if written here in their entirety:

- A. American Society for Testing and Materials (ASTM) standards:
ASTM A615 "Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement"
- B. American Concrete Institute (ACI) publications:
ACI 301 "Specification for Structural Concrete for Buildings"
ACI 315 "Details and Detailing of Concrete Reinforcement"
ACI 318 "Building Code Requirements for Reinforced Concrete"
- C. Concrete Reinforcing Steel Institute (CRSI) publication:
CRSI Manual of Standard Practice

1.05 DELIVERY AND STORAGE

Store steel reinforcement above the surface of the ground upon platform skids or other supports. Protect from mechanical injury and surface deterioration caused by exposure to conditions producing rust. When placed in the work, steel reinforcement shall be free from dirt, scale, dust, paint, oil, and other foreign material. Tag and store steel reinforcement for ease of correlation with shop drawings.

1.06 JOB CONDITIONS

- A. Proposed deviations from reinforcing indicated on the plans or specifications shall be approved in writing by the Engineer prior to fabrication.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Bar lengths shall be of the length shown on the plans or tables, not the minimum code length.
- C. Specified cover for reinforcing shall be maintained throughout construction. Bars shall be cut to lengths necessary to allow for proper clearances.
- D. Stirrups shall be hooked.
- E. Steel reinforcing bars shall be produced in the United States of America.
- F. Cover of concrete shall be measured from face of forms to outside face of reinforcement bar, stirrup, or tie.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. STEEL REINFORCING BARS: Billet-Steel bars for concrete reinforcement conforming to ASTM A615; Grade 60 with minimum yield strength of 60,000 psi.
- B. SUPPORTS: Bar supports shall be of the proper type for the intended use. Bar supports shall be uniform high-density polyethylene (plastic) or fiberglass reinforced plastic (FRP) conforming to CRSI Class 1, Maximum Protection.
- C. SPACERS: Pre-cast mortar or concrete blocks.
- D. MECHANICAL BAR SPLICES: Cadweld splices as manufactured by Erico Products, Inc., or equal, installed in strict accordance with the manufacturer's instructions and recommendations. The mechanical devices shall develop at least 125% of the specified yield of the spliced bars.
- E. MECHANICAL THREADED SPLICES: Mechanical threaded connections shall utilize a metal coupling sleeve with internal threads which engage threaded ends of the bars to be spliced and shall develop in tension or compression 125% of the specified yield strength of the bar.

2.02 FABRICATIONS

BENDING: Reinforcement shall be bent cold by machine to shapes indicated on the plans; true to shapes indicated; irregularities in bending shall be cause for rejection. Unless otherwise noted, all hook and bend details and tolerances shall conform to the requirements of ACI 315 and ACI 318.

PART 3 - EXECUTION

3.01 PREPARATION

The reinforcing steel in all concrete walls shall be spaced its proper distance from the face of the forms using chairs.

3.02 INSTALLATION

- A. GENERAL: Place the reinforcement carefully and accurately in the concrete structures. Rigidly tie and support the reinforcement. Welding of any type of reinforcement shall not be permitted.
- B. SPLICES
 - 1. Splicing of bars, except where indicated on the plans, shall not be permitted. Lap splices which are permitted shall have a lap in accordance with ACI 318. Rigidly clamp or wire the bars at all splices, in accordance with ACI. Welding of reinforcing steel splices shall

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

not be permitted.

2. Make mechanical splices using "Cadweld" reinforcing bar connectors, installed in strict accordance with the manufacturer's instructions and recommendations. The mechanical device shall develop at least 125% of the specified yield strength of the bar.
3. Lap splice locations not shown on the plans shall be approved by the Engineer prior to fabrication. Splices shall be kept to a minimum. Splices shall occur only at points of minimum stress. Stagger splices in adjacent bars.

C. PLACEMENT

1. Place steel reinforcement, as indicated on the plans, with the specified tolerances. Hold securely in place during the placing of the concrete. The minimum clear distance between bars shall be per ACI 318. Always pass vertical stirrups around the main tension members and securely attach thereto. Wire reinforcing together at a sufficient number of intersections to produce a sound, sturdy mat or cage of reinforcement that will maintain the reinforcement in correct positions when the concrete is placed.
2. Hold the reinforcing steel in concrete slabs firmly in place with wire supports or "chairs". Sizing and spacing of the chairs shall be sufficient to properly support the steel and shall be in accordance with CRSI Publications "Manual of Standard Practice".
3. Space the reinforcing steel in concrete walls the proper distance from the face of the forms, as indicated on the drawings, using galvanized metal spacers.
4. Where reinforcing conflicts with location of anchor bolts, inserts, etc., required to be cast in concrete, submit prompt notifications so that revisions can be made before concrete is placed. No cutting of reinforcing shall be permitted without the prior approval of the Engineer.

3.03 FIELD QUALITY CONTROL

Concrete shall not be deposited until the Engineer has observed the final placing of the reinforcing steel and has given permission to place concrete.

THIS PAGE INTENTIONALLY BLANK

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 03 20 00

CONCRETE REINFORCING

PART 1 - GENERAL

1.01 WORK INCLUDED

Furnish labor and reinforcing materials required to cut, bend, tie, splice, place and support the reinforcement in the material grades, sizes, quantities, and locations specified.

1.02 QUALITY ASSURANCE

TOLERANCES

Reinforcement shall be placed where specified, with the following maximum tolerances, plus or minus:

- A. Cover 1/4"
- B. Spacings 1/4" in 12"

1.03 SUBMITTALS

Submittals shall be in accordance with Section 01 33 00, SUBMITTALS and shall include:

- A. Record data for layouts (shop drawings with bar lists clearly marked with reference to plans.
- B. Certifications of steel quality, size, grade, and manufacturers origin.

1.04 STANDARDS

The applicable provisions of the following standards shall apply as if written here in their entirety:

- A. American Society for Testing and Materials (ASTM) standards:
ASTM A615 "Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement"
- B. American Concrete Institute (ACI) publications:
ACI 301 "Specification for Structural Concrete for Buildings"
ACI 315 "Details and Detailing of Concrete Reinforcement"
ACI 318 "Building Code Requirements for Reinforced Concrete"
- C. Concrete Reinforcing Steel Institute (CRSI) publication:
CRSI Manual of Standard Practice

1.05 DELIVERY AND STORAGE

Store steel reinforcement above the surface of the ground upon platform skids or other supports. Protect from mechanical injury and surface deterioration caused by exposure to conditions producing rust. When placed in the work, steel reinforcement shall be free from dirt, scale, dust, paint, oil, and other foreign material. Tag and store steel reinforcement for ease of correlation with shop drawings.

1.06 JOB CONDITIONS

- A. Proposed deviations from reinforcing indicated on the plans or specifications shall be approved in writing by the Engineer prior to fabrication.
- B. Bar lengths shall be of the length shown on the plans or tables, not the minimum code length.

- C. Specified cover for reinforcing shall be maintained throughout construction. Bars shall be cut to lengths necessary to allow for proper clearances.
- D. Stirrups shall be hooked.
- E. Steel reinforcing bars shall be produced in the United States of America.
- F. Cover of concrete shall be measured from face of forms to outside face of reinforcement bar, stirrup, or tie.

PART 2 - PRODUCTS

2.01 MATERIALS

- A. STEEL REINFORCING BARS: Billet-Steel bars for concrete reinforcement conforming to ASTM A615; Grade 60 with minimum yield strength of 60,000 psi.
- B. SUPPORTS: Bar supports shall be of the proper type for the intended use. Bar supports shall be uniform high-density polyethylene (plastic) or fiberglass reinforced plastic (FRP) conforming to CRSI Class 1, Maximum Protection.
- C. SPACERS: Pre-cast mortar or concrete blocks.
- D. MECHANICAL BAR SPLICES: Cadweld splices as manufactured by Erico Products, Inc., or equal, installed in strict accordance with the manufacturer's instructions and recommendations. The mechanical devices shall develop at least 125% of the specified yield of the spliced bars.
- E. MECHANICAL THREADED SPLICES: Mechanical threaded connections shall utilize a metal coupling sleeve with internal threads which engage threaded ends of the bars to be spliced and shall develop in tension or compression 125% of the specified yield strength of the bar.

2.02 FABRICATIONS

BENDING: Reinforcement shall be bent cold by machine to shapes indicated on the plans; true to shapes indicated; irregularities in bending shall be cause for rejection. Unless otherwise noted, all hook and bend details and tolerances shall conform to the requirements of ACI 315 and ACI 318.

PART 3 - EXECUTION

3.01 PREPARATION

The reinforcing steel in all concrete walls shall be spaced its proper distance from the face of the forms using chairs.

3.02 INSTALLATION

- A. GENERAL: Place the reinforcement carefully and accurately in the concrete structures. Rigidly tie and support the reinforcement. Welding of any type of reinforcement shall not be permitted.
- B. SPLICES
 - 1. Splicing of bars, except where indicated on the plans, shall not be permitted. Lap splices which are permitted shall have a lap in accordance with ACI 318. Rigidly clamp or wire the bars at all splices, in accordance with ACI. Welding of reinforcing steel splices shall not be permitted.
 - 2. Make mechanical splices using "Cadweld" reinforcing bar connectors, installed in strict accordance with the manufacturer's instructions and recommendations. The mechanical device shall develop at least 125% of the specified yield strength of the bar.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Lap splice locations not shown on the plans shall be approved by the Engineer prior to fabrication. Splices shall be kept to a minimum. Splices shall occur only at points of minimum stress. Stagger splices in adjacent bars.

C. PLACEMENT

1. Place steel reinforcement, as indicated on the plans, with the specified tolerances. Hold securely in place during the placing of the concrete. The minimum clear distance between bars shall be per ACI 318. Always pass vertical stirrups around the main tension members and securely attach thereto. Wire reinforcing together at a sufficient number of intersections to produce a sound, sturdy mat or cage of reinforcement that will maintain the reinforcement in correct positions when the concrete is placed.
2. Hold the reinforcing steel in concrete slabs firmly in place with wire supports or "chairs". Sizing and spacing of the chairs shall be sufficient to properly support the steel and shall be in accordance with CRSI Publications "Manual of Standard Practice".
3. Space the reinforcing steel in concrete walls the proper distance from the face of the forms, as indicated on the drawings, using galvanized metal spacers.
4. Where reinforcing conflicts with location of anchor bolts, inserts, etc., required to be cast in concrete, submit prompt notifications so that revisions can be made before concrete is placed. No cutting of reinforcing shall be permitted without the prior approval of the Engineer.

3.03 FIELD QUALITY CONTROL

Concrete shall not be deposited until the Engineer has observed the final placing of the reinforcing steel and has given permission to place concrete.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 033000

CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.01 QUALITY ASSURANCE

- A. Codes and Standards: Comply with the applicable provisions of the following codes, specifications, and standards:
 - ACI 301 "Specifications for Structural Concrete for Buildings."
 - ACI 304 "Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete."
 - ACI 311 "Recommended Practice for Concrete Inspection."
 - ACI 318 "Building Code Requirements for Reinforced Concrete."
 - ACI 347 "Recommended Practice for Concrete Formwork." Concrete Reinforcing Steel Institute, "Manual for Standard Practice."
- B. Workmanship: Contractor is responsible for correction of concrete work which does not conform to the specified requirements, including strength, tolerance, and finishes. Correct deficient unsatisfactory concrete as directed by Engineer.
- C. Provide testing and inspection service for quality control testing during concrete operations in accordance with General Conditions.

1.02 SUBMITTALS

- A. Shop Drawings: Concrete Reinforcement: Submit in accordance with General Conditions. Include drawings for fabrication, bending, and placement of concrete reinforcement. Comply with the ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete structures"; shows bar schedules, stirrup spacing, diagrams of bent bars, arrangement of concrete reinforcement.

PART 2 - PRODUCTS

2.01 FORM MATERIALS

- A. Forms for Exposed Finish Concrete: Construct formwork for exposed concrete surfaces with plywood, metal, metal-framed plywood-faced or other acceptable panel-type materials to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable size to minimize number of joints. Provide form material with sufficient thickness to withstand pressure of newly placed concrete without bow or deflection. Use plywood complying with U.S. Product Standards PS-1 "B-B High Density Overlaid Concrete Form," Class 1.
- B. Forms for Unexposed Finish Concrete: Form concrete surfaces which will be unexposed in finished structure with plywood, lumber, metal, or other acceptable material. Provide lumber dressed on at least 2 edges and one side for tight fit.

2.02 REINFORCING MATERIALS

- A. Reinforcing Bars: ASTM A 615, Grade 60.
- B. Supports for Reinforcement: Provide supports for reinforcement including bolsters, chairs and spacers, supporting, and fastening reinforcing bars in place. Use wire bar type supports complying with CRSI recommendations. Wood, brick, plastic, and other devices will not be acceptable

2.03 CONCRETE MATERIALS

- A. Portland Cement: ASTM C 150, Type I, domestic manufacture. Use only one brand of cement throughout the project.
- B. Normal Weight Aggregates: ASTM C 33.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Fine Aggregate: Clean, sharp, natural sand free from loam, clay, lumps, or other deleterious substances.
2. Coarse Aggregate: Clean, uncoated, processed aggregate containing no clay, mud, loam, or foreign matter, as follows:
 - a. Crushed stone processed from natural rock or stone.
 - b. Washed gravel, either natural or crushed. Use of pit or bankrun gravel is not permitted.
 - c. Maximum Aggregate Size: 1½".
- C. Water: Clean, fresh, free from oil, acid, organic matter, or other deleterious substances.
- D. Air-Entraining Admixture: ASTM C 260.
- E. Fly ash and calcium chloride or admixture containing more than 0.1% chloride ions are not permitted.

2.04 RELATED MATERIAL

- A. Membrane-Forming Curing Compound: ASTM C309, Type I.
- B. Bonding Compound: Polyvinyl acetate or acrylic base, rewettable type.
Product/manufacturer; one of the following:
Weldcrete; Larsen Products
EucoWeld; Euclid Chemical Co.
Sonocrete; Sonneborn-Contech
Acrylic Bondcrete; The Burke Co.

2.05 PROPORTIONING AND DESIGN OF MIXES

- A. Prepare design mix for concrete, to produce a minimum 28-day compressive strength of 3,600 psi, as indicated on Contract Documents. Use an independent testing facility acceptable to the Architect for preparing and reporting proposed mix designs.
- B. Proportion mixes by laboratory trial batch, using materials to be employed on the project for each class of concrete required, complying with ACI 211.1.
- C. Submit written reports to the Architect of each proposed mix for each class concrete at least 15 days prior to start of work. Do not begin concrete production until mixes have been reviewed by the Architect/Engineer.
- D. Admixtures:
 1. Use air-entraining admixture in exterior exposed concrete. Add air-entraining admixture at the manufacturer's prescribed rate to result in concrete at the point of placement having air content of 5% (±1%) with a maximum water cement ratio of 0.50.
- E. Slump Limits: Proportion and design mixes to result in concrete slump at the point of placement of not less than 3" and not more than 5".

2.06 CONCRETE MIXING

- A. Ready-Mix Concrete: Comply with the requirements of ASTM C94, and as herein specified. No additional water to be added to the batch for material with insufficient slump with approval of Architect/Engineer.
- B. During hot weather, or under conditions contributing to rapid setting of concrete, a shorter mixing time than specified in ASTM C 94 may be required. When the air temperature is between 85° F and 90° F, reduce the mixing and delivery time from 1-2 hours to 75 minutes, and when the air

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

temperature is above 90° F, reduce the mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.01 FORMS

- A. Design, erect, support, brace, and maintain formwork to support vertical and lateral loads that might be applied until such loads can be supported by the concrete structure. Construct formwork so concrete members and structures are of correct size, shape, alignment, elevation, and position.
- B. Design formwork to be readily removable without impact, shock, or damage to cast-in-place concrete surfaces and adjacent materials.
- C. Construct forms complying with ACI 347, to sizes, shapes, lines, and dimensions shown, and to obtain accurate alignment, location, grades, level, and plumb work in finished structures. Solidly butt joints and provide backup at joints to prevent leakage of cement paste.
- D. Fabricate forms for easy removal without hammering or prying against the concrete surfaces.
- E. Chamfer exposed corners and edges as shown, using wood, metal, PVC, or rubber chamfer strips fabricated to produce uniform smooth lines and tight edge joints.
- F. Form Ties: Factory-fabricated, adjustable-length, removable or snap-off metal form ties, designed to prevent form deflection, and to prevent spalling concrete surfaces upon removal. Provide ties so portion remaining within concrete after removal is at least 1½" inside concrete and which will not leave holes larger than 1" diameter in concrete surface.
- G. Provisions for Other Trades: Provide openings in concrete formwork to accommodate work of other trades. Determine size and locations of openings, recesses and chases from trades providing such items. Accurately place and securely support items built into forms.
- H. Cleaning and Tightening: Thoroughly clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, or other debris just before concrete is placed. Retighten forms after concrete placement if required to eliminate leaks.
- I. Forms which are destroyed or damaged and are not capable of supporting the design load shall be replaced with new forms prior to placing concrete.

3.02 PLACING REINFORCEMENT

- A. Comply with the specified codes and standards, and Concrete Reinforcing Steel Institute's recommended practice for "Placing Reinforcing Bars," for details and methods of reinforcement placement and supports.
- B. Clean reinforcement of loose rust and mill scale, earth, ice, and other materials which reduce or destroy bond with concrete.
- C. Accurately position, support, and secure reinforcement against displacement by formwork, construction, or concrete-placement operations. Locate and support reinforcing by metal chairs, runners, bolsters, spacers, and hangers.
- D. Place reinforcement to obtain the minimum coverage for concrete protection. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement operations. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.

3.03 JOINTS

- A. Construction Joints: Locate and install construction joints, which are not shown on the drawings, so

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

as not to impair the strength and appearance of the structure, as acceptable to the Engineer.

- B. Provide keyways at least 1½" deep in all construction joints in grade beams.
- C. Place construction joints perpendicular to the main reinforcement. Continue all reinforcement across construction joints.
- D. Control Joints per details.

3.04 INSTALLATION OF EMBEDDED ITEMS

- A. General: Set and build into the work anchorage devices and other embedded items required for other work that is attached to, or supported by, cast-in-place concrete. Use setting drawings, diagrams, instructions, and directions provided by suppliers of the items to be attached thereto.
- B. Edge Forms and Screed Strips for Slabs: Set edge forms or bulkheads and intermediate screed strips for slabs to obtain the required elevations and contours in the finished slab surface. Provide and secure units sufficiently strong to support the types of screeds required. Align the concrete surface to the elevation of the screed strips by the use of strike-off templates.

3.05 PREPARATION OF FORM SURFACES

- A. Coat the contact surfaces of forms with a form-coating compound before reinforcement is placed.
- B. Do not allow excess form-coating material to accumulate in the forms or to come into contact with concrete surfaces against which fresh concrete will be placed. Apply in compliance with manufacturer's instructions.

3.06 CONCRETE PLACEMENT

- A. Pre-Placement Inspection: Before placing concrete, inspect and complete the formwork installation, reinforcing steel, and items to be embedded or cast-in. Notify other crafts to permit the installation of their work; cooperate with other trades in setting such work. Thoroughly wet wood forms immediately before placing concrete, where form-coatings are not used. Notify the Architect/Engineer at least one (2) working days prior to concrete placement.
- B. Coordinate the installation of joint materials and moisture barrier with placement of forms and reinforcing steel.
- C. General: Comply with ACI 304, and as herein specified.
- D. Deposit concrete continuously or in layers of such thickness that no concrete will be placed on concrete which has hardened sufficiently to cause the formation of seams or planes of weakness within the section. If a section cannot be placed continuously, provide construction joints as herein specified. Deposit concrete as nearly as practicable to its final location to avoid segregation due to rehandling or flowing.
- E. Placing Concrete in Forms: Deposit concrete in grade beam forms in horizontal layers not deeper than 48" and in a manner to avoid inclined construction joints. Place continuously where possible. Start placing at ends of section and progress toward the center. Do not place concrete in beams supported on piers until the concrete in the piers is no longer plastic.
- F. Consolidate place concrete by mechanical vibrating equipment supplemented by hand-spading, rodding, or tamping. Use vibrators designed to operate with vibratory element submerged in concrete, maintaining a speed of not less than 6000 impulses per minute.
- G. Do not use vibrators to transport concrete inside of forms. Insert and withdraw vibrators vertically at uniformly spaced locations not farther than the visible effectiveness of the machine. Do not insert vibrators into lower layers of concrete that have begun to set. At each insertion, limit the duration of vibration to the time necessary to consolidate the concrete and complete embedment of

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

reinforcement and other embedded items without causing segregation of the mix.

- H. Placing Concrete: Deposit and consolidate concrete slabs in a continuous operation, within the limits of construction joints, until the placing of a panel or section is completed.
- I. Consolidate concrete during placing operation so that concrete is thoroughly worked around reinforcement and other embedded items and into corners.
- J. Bring surfaces to the correct level with a straight-edge and strike off. Use bull floats and darbies to smooth the surface, leaving it free of humps or hollow. Do not sprinkle water on the plastic surface. Do not disturb the slab surfaces prior to beginning finishing operations or while seep water is present on slab surface.
- K. Maintain reinforcing in the proper position during concrete placement operations.
- L. Cold Weather Placing: Protect concrete work from physical damage or reduced strength which could be caused by frost, freezing actions, or low temperatures, in compliances with ACI 306.
- M. Hot Weather Placing: When hot weather conditions exist that would seriously impair the quality and strength of concrete, place concrete in compliance with ACI 305.

3.07 FINISH OR FORMED SURFACES

- A. Related Unformed Surfaces: At horizontal offset and similar unformed surfaces occurring adjacent to formed surfaces, strike-off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces.

3.08 PAVING FINISHES

- A. Non-Slip Broom Finish: Apply non-slip broom finish to exterior concrete platforms, steps, and ramps. Immediately after trowel finishing, slightly roughen surface by brooming with fiber bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

3.09 CONCRETE CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperature and maintain without drying at a relatively proper hardening. Start initial curing as soon as free water has disappeared from concrete surface after placing and finishing. Keep continuously moist for not less than 72 hours. Begin Final curing procedures immediately following initial curing and before concrete has dried. Continue final curing for at least 168 cumulative hours (not necessarily consecutive) during which concrete has been exposed to air temperatures above 50° F. Avoid rapid drying at end of final curing period.
- B. Concrete surfaces shall be cured by application of curing compound. Provide membrane curing by applying membrane-forming curing compound to damp concrete surfaces as soon as water film has disappeared. Apply uniformly in 2-coat continuous operation by power-spray equipment in accordance with manufacturer's directions. Apply second coat at right angle to first coat.

3.10 REMOVAL OF FORMS

- A. Formwork not supporting weight of concrete, such as sides of beams, walls, and similar parts of the work, may be removed 48 hours after placing concrete, provide concrete is sufficiently hard to not be damaged by form removal operations, and provided curing and protection operations are maintained.

3.11 RE-USE OF FORMS

- A. Clean and repair surfaces of forms to be re-used in the work. Split, frayed, delaminated, or

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

otherwise damaged form facing material will not be acceptable. Apply new form coating compound materials to concrete contact form surfaces as specified for new formwork.

- B. When forms are extended for successive concrete placement thoroughly clean surfaces, remove fins and laitance, and tighten forms to close joints. Align and secure joints to avoid offsets. Do not use "patched" forms for exposed concrete surfaces.

3.12 MISCELLANEOUS CONCRETE ITEMS

- A. Filling In: Fill-in holes and openings left in concrete structures for passage of work by other trades, after work of other trades is in place. Mix, place, and cure concrete as herein specified, to blend with in-place construction. Provide other miscellaneous concrete filling shown or required to complete the work.

3.13 CONCRETE SURFACE REPAIRS

- A. Patching Defective Areas: Repair and patch defective areas with cement mortar immediately after removal of forms, but only when acceptable to the Architect/Engineer. Remove and replace damaged concrete as directed by Engineer.
- B. Cut out honeycomb, rock pockets, voids over ½" diameter, and holes left by tie rods and bolts, down to solid concrete, but in no case to a depth of less than 1". Make edge of cuts perpendicular to the concrete surface. Before placing cement mortar, thoroughly clean, dampen with water and brush-coat the area to be patched with neat cement grout. Proprietary patching compounds may be used when acceptable to the Architect/Engineer.

3.14 QUALITY CONTROL TESTING DURING CONSTRUCTION

- A. Concrete shall be sampled and tested for quality control during the placement of concrete, as follows:
 - 1. Slump: ASTM C 143: One test for each concrete load at point of discharge; and one for each set of compressive strength test specimens.
 - 2. Compression Test Specimens: ASTM C 31; one set of 4 standard cylinders for each compressive strength test. Mold and store cylinders for laboratory cured test specimens.
 - 3. Compressive Strength Tests: ASTM C 39; one set for each 100 cu. Yds. or fraction thereof, of each concrete class placed in any day or for each 5,000 sq. Ft. of surface area placed; 1 specimen tested at 7 days, 2 specimens tested at 28 days and the remaining specimen held for future testing, if required. Report test results in writing to the Architect and the Contractor on the same day that tests are made. Reports of compressive strength tests shall contain the project identification name and number, date of concrete placement, name of contractor, name of concrete type and class, location of concrete batch in the structure, design compressive strength at 28 days, concrete mix proportions and materials; compressive breaking strength and type of break for both 7-day test and 28-day tests.
- B. Additional Tests: The testing service will make additional tests of in-place concrete when test results indicate specified concrete strengths and other characteristics have not been attained. Test to determine adequacy of concrete will be by cored cylinders complying with ASTM C 42. Contractor shall pay for such test conducted, and any other additional testing as may be required, when unacceptable concrete is verified.
- C. Concrete shall meet the compressive strength as shown on the plans and specifications regardless of ACI 318. ACI 318 shall have no bearing on pass/fail of all site concrete.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 033000

CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes cast-in-place concrete and supplementary items necessary to complete work required for their installation.
- B. Related Documents: Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
- C. Related Sections:
 - 1. Division 01 Section "Quality Requirements" for independent testing agency procedures and administrative requirements.
 - 2. Division 01 Section "Sustainable Design Requirements" for requirements related to project sustainability implementation.

1.2 DEFINITIONS

- A. Contraction Joint: Formed, sawed, or tooled groove in a concrete structure to create a weakened plane and regulate location of cracking resulting from dimensional change of different parts of structure.
- B. Construction Joint: A formed contraction joint at the interface between fresh concrete and hardened concrete.
- C. Control Joint: A sawed or tooled groove contraction joint.
- D. Ground Supported Slab (Slab-on-Grade): A concrete slab bearing on and supported by the ground/soil.
- E. SEOR: Structural Engineer of Record or his/her representative

1.3 PERFORMANCE REQUIREMENTS

- A. Concrete Slump: Selected by Contractor within range indicated herein for placement conditions required.
- B. Concrete Compressive Strength: Designated on drawings as minimum 28-day f'c.
- C. Concrete Shrinkage: Applicable to walls and horizontal surfaces. Maximum average drying shrinkage at 28 days of air storage shall not exceed 0.032 percent. Include test data with Concrete Mix Designs. Note: Use of shrinkage-reducing admixture should be last option after consideration has been given to variables of mix design which help contribute to low shrinkage concrete.
- D. Concrete Modulus of Elasticity: 28-day concrete modulus of elasticity has been assumed and shall be in accordance with ACI 318, chapter 19.2.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Concrete Mix Proportions/Designs: Selected and proposed by Contractor in accordance with requirements herein. Concrete proportions for each mix shall be certified by Independent Testing Laboratory hired by Contractor.
- F. Construction Joint Location Planning: Joint locations selected and proposed by Contractor in accordance with requirements herein and where shown on drawings.

1.4 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
 - 1. Shop drawings shall not be made by using reproductions of Contract Drawings.
 - 2. Fabrication of material before approval of drawings will be at risk of Contractor.
 - 3. Fabricated material and connections shall fit within architectural constraints.
 - 4. Fabricator alone shall be responsible for errors of detailing and fabrication.
- B. Product Data: Manufacturer's certification and test data that following furnished items conform to the specifications for each type of product indicated.
 - 1. Laboratory Test Reports for Concrete Materials and Mix Designs.
 - 2. Material Certificates: Certificates shall be signed by manufacturer and Contractor, certifying that each material item complies with or exceeds specified requirements.
 - a. Concrete Admixtures: Certification from admixture manufacturer that admixture is compatible with other required or proposed admixtures, ingredients and applications.
 - b. Chloride Ion Content: Certification for each mix design that chloride ion content does not exceed specified limits when tested in accordance with ASTM C 1218.
 - c. Coloring Pigment
 - 3. Concrete Mix Designs: Include following information for each mix design:
 - a. Project Identification name.
 - b. Specific location, member, etc. for mix usage. Affix code, mix design number, or other identification symbol to each mix design.
 - c. Type of concrete, i.e. normal weight, lightweight, etc.
 - d. Dry unit weight, (pcf).
 - e. Aggregate type, gradation, and source. Include test results of fine and coarse aggregates for reactivity in presence of cement alkalis in accordance with ASTM C289. Confirm coarse aggregates consist of carbonate composition/properties.
 - f. Admixture types, product identification, supplier and literature.
 - g. Cement type and brand, including fly ash and other supplementary cementitious materials when applicable.
 - h. Placement method intended.
 - i. Other characteristics including, but not limited to, 28-day compressive strength, maximum slump, W/C ratio, and proportions of each material in mix.
- C. Shop Drawings:
 - 1. Contraction Joint Locations in Ground Supported Slabs: Plan showing dimensioned location of proposed contraction joints. Include proposed time frame for installation of control joints in ground supported slabs if by saw-cutting methods.
 - 2. Construction Joint Locations in Structural Slabs: Plan showing dimensioned location of proposed construction joints for concrete slabs.
 - 3. Sleeve Locations: Overlay plan of structural framing/layout showing dimensioned locations and sizes for sleeves thru concrete work.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Permanent Embedded Items in Concrete Not Shown by Structural Drawings: Plan and details showing location, quantity and description of item(s) proposed as permanently embedded in concrete.
- D. Qualification Data: Evidence of installer and fabricator qualifications in conformance with Quality Assurance requirements below.
1. Concrete Plant Certification and Qualifications
 2. Concrete Contractor Qualifications
 3. Concrete Testing Service
 4. Specialized Concrete/Processes: Submit names and qualifications of technical representative(s) and trained installer(s) of specialized concrete/processes prior to product installation.
 5. Trained Installer for Specialized Cementitious Products
- E. Source and field quality-control documentation.
1. Test reports as required for indicating compliance with the Quality Control sections below.
- F. Contractor shall submit to the SEOR and the enforcing agency, for acceptance, a quality control or inspection plan that addresses all inspection issues.
- G. Hot and Cold Weather Concreting Procedures: Detailed procedures for production, transportation, placement, protection, curing and temperature monitoring of concrete during hot and cold weather conditions.

1.5 QUALITY ASSURANCE

- A. Codes and Standards: Comply with provisions of following, except as otherwise indicated or where more stringent requirements are shown, specified, or otherwise apply:
1. International Building Code (IBC) Edition indicated by Drawings including Special Inspection and Quality Control requirements, chapter 17 of the IBC and any local or State provisions.
 2. Following code and standard specifications noted below shall be as referenced by IBC chapter 35 or, where not referenced in IBC, the most recent published versions.
 3. American Concrete Institute ACI 301, "Specifications for Structural Concrete"
 4. ACI 318, "Building Code Requirements for Structural Concrete"
 5. ACI 306.1, "Standard Specification for Cold Weather Concreting".
 6. ACI 117, "Specification for Tolerances for Concrete Construction and Materials".
 7. Concrete Reinforcing Steel Institute (CRSI), "Manual of Standard Practice".
 8. ASTM E 1155, "Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers".
 9. ACI 503.1, "Standard Specification for Bonding Hardened Concrete, Steel, Wood, Brick, and Other Materials to Hardened Concrete with a Multi-Component Epoxy Adhesive".
 10. ACI 503.2, "Standard Specification for Bonding Plastic Concrete to Hardened Concrete with a Multi-Component Epoxy Adhesive".
 - a. Paragraph 2.3.7.1 of above specification is hereby replaced in its entirety with following:
 - 1) Independent Testing Laboratory approved by Architect/Engineer shall evaluate bonding of fresh concrete to existing concrete after fresh concrete has cured for not less than 28 days. Written report prepared by Independent Testing Laboratory shall be submitted to Architect/Engineer for review.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Document Conflict and Priority: In case of concrete work conflict between documents, notify Architect/Engineer prior to submitting proposal or performing work. Most stringent criteria shall govern and be given priority, unless otherwise indicated by Architect/Engineer in writing.
- C. Compatibility of Concrete Admixtures and Surface Treatments: Contractor shall be responsible for:
1. Selection of admixtures and surface treatments compatible with one another.
 2. Specified requirements of concrete work including final surface treatments.
 3. Product manufacturer's instructions for use, limitations and precautions.
- D. Certifications and Qualifications:
1. Concrete Plant: Certified in accordance with National Ready Mixed Concrete Association (NRMCA) Plant Certification Checklist. Minimum of 5 years successful experience in manufacturing ready-mixed concrete complying with ASTM C94.
 2. Concrete Contractor: Minimum of 5 years successful experience with installation and finishing of concrete similar in materials, system and project scope to that indicated.
 3. Concrete Testing Service: Engaged testing service acceptable to Architect to perform material evaluation tests and to evaluate concrete mixes on request of Architect/SEOR.
 4. Specialized Concrete and Processes: Services of a manufacturer's trained technical representative shall be obtained to provide assistance with proportioning, batching, mixing, placing, consolidating and finishing of specialized structural concrete. Technical representative shall provide services until field controls indicate product(s) of specified quality is furnished and Contractor's crews are capable of continued satisfactory work. Provide services for following materials and products:
 - a. Pre-mixed cementitious and polymer-modified cementitious overlay/repair products.
 - b. Concrete with shrinkage-reducing admixture.
 - c. Concrete with corrosion inhibitor admixture.
 5. Trained Installer: Services of trained installer, preferably with product manufacturer's certification as certified installer, shall be obtained to install specialized cementitious products. If installer does not hold manufacturer's certification, installer shall have 5 years minimum successful experience with product installation or similar product installation. Provide services for following materials and products:
 - a. Bonded cementitious and polymer-modified cementitious toppings less than 3" thick.
 - b. Bonded cementitious and polymer-modified mortar for structural bonding applications at concrete surface repairs of structural nature/significance as determined by SEOR.
- E. Testing/Retesting of Materials and Installed Work: May be required at any time during progress of Work as directed by Architect. Such test/retests, not indicated to be performed at Owner's expense, will be at Contractor's expense.
- F. Contractor's Conference: Conduct conference at Project site to comply with requirements of Division 01 Section "Project Meetings" and following:
1. Conduct meeting in advance of Concrete Pre-Construction Conference to review detailed requirements for preparing concrete design mixes and to determine procedures for satisfactory concrete operations.
 2. Review requirements for submittals, status of coordinating work, and availability of materials.
 3. Establish preliminary work progress schedule and procedures for materials inspection, testing and certifications.
 4. Require representatives of each entity directly concerned with cast-in-place concrete to attend conference, including, but not limited to following:
 - a. Contractor's superintendent
 - b. Agency responsible for concrete design mixes

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Agency responsible for field quality control
- d. Ready-mix concrete supplier
- e. Concrete subcontractor
- f. Primary admixture manufacturer(s)
- 5. Minutes of meeting shall be maintained and distributed by Contractor to parties concerned within 5 days of meeting. Transmit minutes also to following parties for information:
 - a. Owner's representative
 - b. Architect
 - c. SEOR

G. Concrete Pre-Construction Conference:

- 1. At least 15 days prior to start of concrete construction, Contractor shall hold meeting to review detailed requirements of concrete mix designs and to determine procedures for producing proper concrete construction.
- 2. At minimum, discuss following:
 - a. Requirements for submittals
 - b. Status of Coordinating Work
 - c. Availability of materials and procedures for materials inspection/testing
 - d. Concrete construction activities critical to time/schedule
 - e. Certifications
 - f. Floor surface tolerance requirements (flatness/levelness)
 - g. Slab construction/control joint planning
 - h. Finishing and curing of floor surfaces. Curing columns, pilasters and walls.
 - i. Requirements for architectural concrete, including but not limited to: mock-up; forming; tolerances; and uniformity of finished concrete in color, texture and appearance.
 - j. Procedures for concreting during hot and cold weather conditions
 - k. Time period for concrete use after water is introduced into mixer
 - l. Control of concrete temperature
 - m. Control of concrete mixing water from all sources within 3% of approved mix design(s)
 - n. Control of concrete moisture/wetness during/after placement and the affects of moisture vapor transmission (MVT) on finish flooring materials
 - o. Contractor's intent, if applicable, to utilize Maturity Method for time sensitive concrete construction. Discuss advance pre-planning for development of strength-maturity relationships.
- 3. Contractor shall require responsible representatives of every party concerned with concrete work to attend conference, including but not limited to following:
 - a. Contractor's superintendent
 - b. Contractor's Laboratory responsible for concrete mix design(s)
 - c. Owner's Testing Agency responsible for field quality control
 - d. Concrete subcontractor
 - e. Ready-mix concrete producer
 - f. Admixture manufacturer representative
 - g. Concrete pumping subcontractor
 - h. Owner's and Architect's/SEOR's representative
 - i. Testing Agency's Floor Flatness/Levelness Inspector
 - j. Finish flooring subcontractor(s)
- 4. Minutes of meeting shall be maintained and distributed by Contractor to parties concerned within 5 days of meeting. Transmit minutes also to following parties for information purposes:
 - a. Owner's representative
 - b. Architect
 - c. SEOR
 - d. Owner's Testing Agency responsible for field quality control

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

5. SEOR may attend conference. Notify SEOR at least 7 days prior to scheduled date of conference.

H. Column and Wall Panel Mockup: Cast mockup(s) for columns/walls of size indicated or as required to demonstrate typical joints, form tie spacing, proposed surface finish texture and color. Maintain mockup(s) exposed to view for duration of Project, after Architect's acceptance of visual qualities. Demolish mockup and remove from site when directed by Architect.

1.6 TOLERANCES

A. Conform to requirements of ACI 117, "Specification for Tolerances for Concrete Construction and Materials", except as modified by requirements of these Contract Documents.

B. Floor finish tolerances for surfaces designated to receive troweled finish shall be measured in accordance with ACI 117, Section 4.8.5, except as modified by these Contract Documents. Refer to Div. 03 Section "Concrete Finishing" for Flatness and Levelness Inspection and finished surface F-number requirements.

1.7 PROPOSED SUBSTITUTIONS

A. Substitutions or modifications, if proposed by Contractor, shall be submitted for approval prior to submission of shop drawings, and such substitutions shall be made only when approved by Architect, and at no additional cost to Owner. Total amount of credit, if any, shall be stated in writing with submission.

B. Corrections for inaccuracies that result in change from Structural Drawings or final approved shop drawing details shall be submitted for approval. Such substitutions or corrections shall be made only when approved by Architect.

1.8 HANDLING, STORAGE AND COORDINATION

A. Storage of materials: Store materials to permit easy access for inspection and identification.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

C. Coordinate openings, penetrations, and sleeve requirements with final equipment selections and locations by MEP sub-contractors. Verify any changes with SEOR prior to the Work.

PART 2 - PRODUCTS

2.1 GENERAL

A. Specific product, material or manufacturer listed under each item below is "acceptable" only if manufacturer can evidence product compliance with requirements of Contract Documents.

B. For manufacturers not listed, submit as substitution according to the Conditions of the Contract and Division 01 Specification Sections.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Chloride Ion Content: Limit water soluble chloride ion concentrations in hardened concrete, at ages from 28 to 42 days, that is contributed from ingredients including water, aggregates, cementitious materials and admixtures to following percent by mass of cementitious materials.
- | | |
|--|-------|
| 1. Concrete protected from moisture in service and dry in service: | 0.15% |
| 2. Concrete not protected from moisture in service and having continuous or intermittent wet/damp cycles in service: | 0.08% |
| 3. Concrete placed on metal deck; Post-tensioned concrete | 0.06% |

2.2 CONCRETE MATERIALS

- A. Cementitious Materials:
1. Portland Cement: ASTM C 150, Type I or Type III.
 2. Supplementary Cementitious Materials:
 - a. Fly Ash: ASTM C 618, Class C or F
 - b. Ground Granulated Blast-Furnace Slag (GGBFS): ASTM C 989, Grade 100 or 120
 - c. Limestone Powder: ASTM C1797, Type C
 3. Blended Hydraulic Cements: ASTM C 595, Type "IP", Type "IS" or Type "IL"
- B. Aggregates: Washed and screened, consisting of hard, durable particles without adherent coatings or other deleterious matter.
1. Fine Aggregate: ASTM C 33, natural sand, manufactured sand, or combination thereof, and shall be so graded from coarse to fine as to produce minimum percentage of voids.
 2. Normal Weight Coarse Aggregate: ASTM C 33, gravel or crushed stone of carbonate composition/properties.
 3. Lightweight Coarse Aggregate: ASTM C 330, suitably processed.
- C. Water: ASTM C 94, paragraph 6.1.3. Free of foreign matter potentially harmful to concrete, reinforcement, or concrete accessories. Free of deleterious amounts of chloride ions.
- D. Admixtures:
1. General:
 - a. Calcium chloride, thiocyanates, or admixtures with more than 0.05 percent chloride ions are not permitted.
 - b. Admixtures or manufacturer listed under each item below is "acceptable" only if manufacturer can evidence product compatibility with other products comprising, related or applied to concrete work.
 2. Air-Entraining Admixture: ASTM C 260; Provide air entraining agent in sufficient quantity to assure controlled entrainment within specified percentage limits required herein.
 - a. Master Builders Solutions: "MasterAir AE400"; "MasterAir AE 90"; "MasterAir AE 200"
 - b. Euclid Chemical Company: "Air-Mix" or "AEA 92"
 - c. Chryso: "Darex AEA" or "Daravair"
 - d. Sika Corporation; "AER" or "AIR"
 - e. SCHEDULE FOR USE:
 - 1) Normal weight concrete exposed to weather: Air content per ACI 318, Table entitled "Total Air Content for Concrete exposed to Cycles of Freezing and Thawing". Exposure F1, unless noted otherwise. [\[Exposure F3 at Parking Garage Slabs.\]](#) Reduce air content by 1 percent where concrete 28-day f'c is greater than 5,000 psi. Reduce air content percent for normal weight concrete at unformed surfaces scheduled to receive troweled finish or dry shake hardeners to 3 percent.
 - 2) Lightweight Concrete Mixes: Air content percent as recommended by concrete supplier, but, not less than 4 percent.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Water-Reducing Admixtures:
 - a. Water-Reducing: ASTM C 494, Type "A";
 - 1) Master Builders Solutions: "MasterPozzoloth Series"
 - 2) Euclid Chemical Company: "Eucon WR" or "Eucon NW"
 - 3) Chryso: "WRDA"
 - 4) Sika Corporation: "Plastocrete 161"
 - b. Water-Reducing and Retarding: ASTM C494, Type "D".
 - 1) Master Builders Solutions: "MasterPozzoloth R Series; or "MasterSet DELVO Series".
 - 2) Euclid Chemical Company: "Eucon Retarder-75"
 - 3) Sika Corporation: "Plastiment"
 - c. Water-Reducing and Accelerating: ASTM C 494, type "C" or "E"; non-corrosive, non-chloride.
 - 1) Master Builders Solutions: "MasterSet FP 20"; "MasterSet AC 534".
 - 2) Euclid Chemical Company: "Accelguard 80"
 - 3) Sika Corporation: "Plastocrete 161FL"
 - d. High-Range Water-Reducing (Superplasticizer): ASTM C 494, Type "F" or "G".
 - 1) Master Builders Solutions: "MasterRheobuild 1000"; "MasterGlenium Series"
 - 2) Euclid Chemical Company: "Eucon 37"
 - 3) Sika Corporation: "Sikament 300"
 - 4) Chryso: "Daracem"
 - e. SCHEDULE FOR USE:
 - 1) Use water-reducing admixture conforming to one or more of above requirements in concrete, unless otherwise noted herein.
 - 2) Use Super-plasticizer where Flowable Concrete is indicated and as required to improve placement and workability; to lower W/C ratio; or for shrinkage or permeability reduction.
 - 3) Use Super-plasticizer in concrete with W/C ratio of 0.42 and less.
4. Shrinkage-Reducing Admixture: For reduction of concrete drying shrinkage by reduction of capillary tension of pore water. Non-corrosive and non-chloride. Consult with admixture manufacturers when used with air-entrained concrete mixes. Use as last option after consideration has been given to variables of mix design which help contribute to low shrinkage concrete.
 - a. Master Builders Solutions: "MasterLife SRA 200 " (at non-air-entrained concrete only); "MasterLife CRA 007" (at air-entrained concrete only)
 - b. Chryso: "Eclipse Floor 200" (at non-air-entrained concrete only); "Eclipse 4500" (at air-entrained concrete only)
 - c. Euclid Chemical Company: Eucon SRA Floor (at non-air-entrained concrete only); Eucon SRA-XT (at air-entrained concrete only)
 - d. SCHEDULE FOR POTENTIAL USE:
 - 1) Horizontal Surfaces including slabs-on-grade, elevated slabs/beams and slabs over metal deck
 - 2) Walls
5. Corrosion Inhibiting Admixture:
 - a. Calcium Nitrite Type: Minimum 30% calcium nitrite.
 - 1) Master Builders Solutions: "MasterLife CI 30"
 - 2) Chryso: "DCI" or "DCI S"
 - 3) Euclid Chemical Company: "Eucon CIA" or "Eucon BCN"
 - b. Amine-Ester Type:
 - 1) Master Builders Solutions: "MasterLife CI 222"
 - c. SCHEDULE FOR USE:
 - 1) At Parking Garage slabs and beams. Apply 1, [2, 3, 4, 5, 6] gallon per cu. yd.
6. Coloring Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, non-fading and resistant to lime and other alkalis.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Product Standard: SIKA Corporation "CHROMIX Admixture" for color-conditioned concrete.
- b. Color: As Selected by Architect.

2.3 CURING MATERIALS

A. Evaporation Retardant:

- 1. Description: Waterborne monomolecular film-forming compound manufactured for application to plastic concrete, preferably leaving no residue after concrete hardens. Residue remaining after concrete hardens shall be removed in accordance with manufacturer's recommendations.
- 2. Manufacturers and Products:
 - a. Euclid Chemical Co.; "Eucobar".
 - b. Lambert Corp.; "Lambco Skin".
 - c. Laticrete International, Inc. "L&M E-Con".
 - d. W.R. Meadows; "EVAPRE".
 - e. SIKA Corporation; "Sika Film".

B. Moisture-Retaining Cover:

- 1. Description: ASTM C 171, curing paper, white opaque polyethylene film, and polypropylene nonwoven fabric with white coating applied to one side, or white burlap-polyethylene sheeting. Polyethylene film not permitted at unformed surfaces. Clear or black polyethylene film permitted at interior formed surfaces with no exposure to sunlight during curing period.
- 2. Manufacturer and Product:
 - a. Curing Paper: Fortifiber Building Systems Group; "Orange Label, Sisaldraft curing paper".
 - b. Polyethylene Film: As recommended by Contractor; submit for Architect's review.
 - c. Polypropylene Nonwoven Fabric:
 - 1) Reef Industries Inc.: "Armorlon Transguard 4000".
 - 2) PNA Construction Technologies: "Hydracure".
 - 3) SIKA Corporation; "UltraCure NCF".
 - d. White Burlap-Polyethylene Sheeting: As recommended by Contractor; submit for Architect's review.

C. Absorptive Cover: AASHTO M 182, Class 2, Burlap cloth made from jute or kenaf, weighing approximately 9 oz. per sq. yd.

D. Liquid Membrane-Forming Curing Compound:

- 1. Description: ASTM C 1315, Type 1, Class A, clear water-based acrylic blend curing compound with 25 percent solid content (minimum); non-yellowing under ultraviolet light after 500 hours of test in accordance with ASTM D 4587; water based, VOC/AIM compliant. Sodium silicate compounds are not acceptable.
- 2. Manufacturers and Products: Selected by Contractor with strict attention given to limitations for usage and removal stated herein.

E. Dissipating Resin Membrane-Forming Curing Compound with Fugitive Dye:

- 1. Description: ASTM C 309, Type 1-D, Class B, water-based and formulated with hydrocarbon resins, which begins chemical break-down after approximately 4 weeks.
- 2. Manufacturers and Products: Selected by Contractor with strict attention given to limitations for usage and removal stated herein.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.4 RELATED MATERIALS

A. General

1. Use materials in strict conformance with manufacturer's written recommended application limitations, precautions and directions.
2. Consult with Manufacturer when specific product name is not listed giving attention to application requirements, compatibility with substrate conditions and ambient conditions. Subject to Architect's/Engineer's review/approval.

B. Bonding Compounds:

1. Latex Bonding Agents, Admixtures and Adhesives: ASTM C 1059, Type II
 - a. Suitable at non-structural and structural bonding applications, interior or exterior, unless noted otherwise in Contract Documents.
 - b. Use only acrylic or styrene butadiene latex based adhesives.
 - c. Manufacturers and Products:
 - 1) Euclid Chemical Company: "SBR Latex"
 - 2) Laticrete International, Inc.: "L & M Everbond"
 - 3) W.R. Meadows, Inc.: "ACRY-LOK"
2. Polyvinyl Acetate Bonding Agents: ASTM C 1059, Type I
 - a. Suitable at non-structural and structural bonding applications, only at interior surfaces not subject to water exposure or high humidity during construction or in-service.
 - b. Manufacturers and Products:
 - 1) Euclid Chemical Company: "Euco Weld"
 - 2) Laticrete International, Inc.: "L & M Everweld"
 - 3) W.R. Meadows, Inc.: "Intralok"
3. Epoxy-Resin Bonding Adhesives: ASTM C 881/C 881M, Types I, II, IV and V.
 - a. Types I and II: Acceptable at non-structural bonding applications.
 - b. Types IV and V: Acceptable at structural bonding applications.
 - c. Suitable for use on dry or damp surfaces.
 - d. Multi-Component Epoxy Adhesive for Bonding to Concrete: Conform to requirements of ACI 548.13-2, unless modified herein.
 - e. Epoxy Resin for Bonding Hardened Concrete, Steel, Wood, Brick, and other Materials to Hardened Concrete with a multi-component Epoxy Adhesive: Conform to requirements of ACI 503.1-92 (R2003) unless modified herein.
 - f. Manufacturers:
 - 1) Master Builders Solutions
 - 2) Euclid Chemical Company
 - 3) Sika Corporation
 - 4) W.R. Meadows

C. Overlay and Repair Mortar

1. Polymer Modified Cementitious Mortar: ASTM C 1059, Type II:
 - a. Suitable at structural and non-structural applications, interior or exterior.
 - b. Manufacturers:
 - 1) Master Builders Solutions
 - 2) Euclid Chemical Company
 - 3) Sika Corporation
 - 4) W.R. Meadows
2. Epoxy Mortar: ASTM C 881/C 881M, Types I and IV
 - a. Suitable at interior applications only, unless otherwise directed by Engineer.
 - b. Appropriate applications include locations susceptible to high wear or high corrosion.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Type I: Suitable at non-structural applications.
 - d. Type IV: Suitable at structural applications.
 - e. Manufacturers:
 - 1) Master Builders Solutions
 - 2) Euclid Chemical Company
 - 3) Sika Corporation
 - 4) W.R. Meadows
 - 3. Self-Leveling Underlayment Compound: Specified in Division 03 Section "Concrete Finishing".
- D. Non-Shrink Grout: ASTM C 1107. Material shall be ready-to-use non-metallic or metallic aggregate product requiring only addition of water at jobsite and shall produce flowable cementitious grouting material having no drying shrinkage at any age.
- 1. Use non-metallic grout for exposed conditions, unless indicated otherwise.
 - 2. Compressive strength at 7 and 28 days: 6,000 psi (7 day); 8,000 psi (28 day) minimum, at flowable consistency.
 - 3. Manufacturers and Products:
 - a. Master Builders Solutions: "Masterflow 815 or 870 Grout"
 - b. Euclid Chemical Company: "Euco NS Grout"
 - c. W.R. Meadows, Inc.: "588-10K"
 - d. Sika Corporation: "SikaGrout 328" or "SikaGrout 928"

PART 3 - EXECUTION

3.1 PROPORTIONING AND DESIGNING CONCRETE MIXES

- A. Contractor shall provide design mixes for each type and class of concrete by either "Field Experience Method" or by "Laboratory Trial Batch Method".
 - 1. Selection of concrete proportions for each mix shall be certified by an Independent Testing Laboratory hired by Contractor.
 - 2. Types and classes of concrete, minimum 28-day compressive strength (f'_c), and maximum nominal coarse aggregate sizes are shown in drawings.
- B. Field Experience Method: Prior established mix designs proportioned in accordance with ACI 211, accompanied by test data indicating acceptable strength history in accordance with ACI 318, unless modified herein.
 - 1. Data shall be no older than 12 months and shall be certified by Independent Testing Laboratory.
 - 2. Data shall be representative of similar ingredients, materials, quality control procedures, placement and ambient conditions expected for this project and under no more restrictive conditions of control over material quality and production methods than on proposed Work.
 - 3. Compressive strength in supporting data shall deviate no more than plus 1,000 psi or minus 500 psi from that specified.
 - 4. Shrinkage limits for mix(es) proposed for walls and horizontal surfaces shall accompany mix design(s) in accordance with requirements below.
- C. Laboratory Trial Batch Method: Establish mix proportions in accordance with ACI 211, and ACI 318, unless otherwise modified herein.
 - 1. Test cylinders at 7 days and at 28 days in accordance with ASTM C 39.
 - 2. Prepare and test additional set of cylinders at 56 days where specified compressive strength is 6,000 psi or higher.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Temperature of concrete in trial batches shall be representative of conditions to be encountered at time of placement.
4. Optimize combination of aggregates, size(s) of coarse aggregates, water (W) content, cement (C) content and W/C relationship to effectively minimize and control shrinkage of concrete.
5. Avoid overdosing cement content to meet W/C relationships as such practice generally results in higher shrinkage characteristics.
6. Shrinkage Test: ASTM C 157; Applies to each mix proposed for walls and horizontal surfaces.
 - a. Average drying shrinkage at 28 days of air storage: 0.032 percent (maximum) determined from following procedure:
 - 1) Mold and cure three specimens for each mix proposed.
 - 2) Store specimens in lime-saturated water until 7 day curing age is attained, including period in the molds.
 - 3) Take initial comparator reading on removal from lime-saturated water, followed by subsequent comparator readings after air storage periods of 4, 7, 14 and 28 days after the initial 7 day curing.
 - b. When shrinkage test results do not meet specified limitation, revise mix as required. Consider following options for reduction of shrinkage:
 - 1) Increase aggregate content in mix.
 - 2) Increase coarse aggregate volume and decrease fine aggregate volume within mix.
 - 3) Evaluate coarse aggregate properties, including but not limited to hardness and clay content.
 - 4) Use shrinkage reducing admixture only when other available options for controlling shrinkage have been considered and dismissed.

D. Mix Design Information: Requirements specified under paragraph 1.5 SUBMITTALS, above.

E. Water-to-Cement Ratio (W/C): Lowest possible value consistent with maximum consolidation, workability and density.

1. Intent is to achieve low porosity concrete, minimize drying shrinkage and to minimize cracking, thus minimizing potential for harmful moisture or ion penetrations, and thereby protecting reinforcement.
2. Maximum W/C ratios for following normal weight concrete classes are as follows, unless otherwise noted herein:

F'c at 28-days (psi)	Air-entrained Concrete	Non-Air-entrained Concrete
3,000	0.50	0.55
3,500 to 4,000	0.45	0.48
4,500 & above	0.40	0.45

F. Supplementary Cementitious Materials (SCM's):

1. Use at Contractor's option, unless otherwise indicated, to improve consistency, placement, finishing and economics.
2. Mixes with higher percentages than indicated may be proposed by Contractor, but are subject to Engineer's approval prior to use. Provide reasoning for higher percentage.
3. Limits below represent percentage of total cementitious material in mix, by weight:
 - a. Fly Ash: 25 percent

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Ground-Granulated Blast-Furnace Slag (GGBFS): 50 percent, except where used in hydraulic blend with other SCM's whereby GGBFS percentage shall be reduced such that sum of SCM's does not exceed 50 percent, by weight, of total cementitious materials.
 - c. Limestone Powder: 10 percent
 - d. Silica Fume: 10 percent
 - 4. Conform to more stringent of above percentage limitations or ACI 318 for concrete subject to exposure to de-icing chemicals
 - 5. Contractor's use of SCM's acknowledges understanding that water demand, challenges with plastic concrete workability/finishing and time for concrete setting and strength gain may be longer than similar mix with Portland Cement only, therefore precautions to avoid premature finishing shall be considered and undertaken.
- G. Admixtures:
- 1. Refer to Part 2 – Products above for SCHEDULE FOR USE under each admixture type.
 - 2. Use admixtures in compliance with manufacturer's directions. Control dosage rates. Do not overdose mixes.
- H. Slump Ranges: Proportion and design mixes to exhibit slump within following ranges at point of deposit.
- 1. Slump ranges indicated assume vibration is used for consolidation of concrete.
 - 2. Slump indicated below may be increased when admixtures are used provided that concrete has same or lower water-cement ratio and does not exhibit segregation potential or excessive bleeding.

Concrete, unless noted otherwise	1" minimum - 5" maximum
Elevated slabs; Slabs-on-grade; Slabs-on-metal deck; Basement Walls; Topping Slabs; Mass Concrete	1" minimum - 4" maximum
Pier Concrete	Flowable Concrete required (see below)
Flowable Concrete (concrete with Super-plasticizer denoted as "SP")	4" maximum slump prior to addition of "SP" 9" maximum slump after addition of "SP"

3.2 GENERAL REQUIREMENTS FOR CONCRETE

- A. Coordination with Other Products/Trades:
- 1. Give various trades and subcontractors ample notification and opportunity to furnish anchors, nailers, pipes, conduits, boxes, inserts, sleeves, frames, vents, wires, supports, or other items required to be built into concrete.
 - 2. Obtain suitable templates or instructions for installation of those items which are required to be placed in forms.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Control of Water: Control water at all times during mixing, placing, finishing, curing and after completion of curing phase.
1. Excess water during mixing and placing phases effects properties of concrete, including but not limited to strength, shrinkage/cracking, set-time and long-term durability.
 2. Excess water after curing phase effects drying of hardened concrete with direct affect on application of finish materials applied with adhesives sensitive to moisture and/or water vapor.
 3. Control of water includes water at place of mixing, truck water, water at jobsite, and moisture due to rain, ice or snow.
 4. Additions of water to batched air-entrained concrete can potentially lead to above normal decreases in concrete strength, therefore shall be avoided.
 5. Contractor is responsible for control of water and affects on concrete and material(s) to be applied to hardened concrete.
- C. Concrete Characteristics:
1. Classes: Concrete shall have characteristics shown on Drawings or as specified herein.
 2. Water Content: Concrete shall not be placed when its total mixing water content is more than 3% (tolerance) greater than indicated by approved mix design(s). Avoid addition of water to ready-mixed concrete at job site unless it is part of amount initially required for proportioned mix design maximum W/C ratio. Addition of water in excess of tolerance stated above to compensate for loss of workability is prohibited. Contractor shall control water addition to ready mixed concrete at job site at all times.
 3. Slump: Concrete shall not be placed when its plasticity, as measured by slump tests, is more than 10 percent greater than maximum slump indicated by approved mix design, unless W/C content is known to be in accordance with specified requirements and valid reason for excessive slump is known.
- D. Mixing Concrete:
1. Batch, mix and transport ready-mixed concrete in accordance with requirements of ASTM C 94.
 2. Concrete shall not be transported or used after period in excess of 90 minutes has elapsed after introduction of water into mixer. When concrete temperature exceeds 86 degrees F, time shall be reduced to 60 minutes.
 3. Agency supplying concrete shall have plant of sufficient capacity and adequate transportation facilities to assure continuous delivery at rate required.
 4. Plant equipment and facilities shall conform to "Certification of Ready Mixed Concrete Production Facilities (Checklist with Instructions)" of National Ready Mixed Concrete Association.
- E. Conveying Concrete:
1. Convey concrete from mixer to place of final deposit by methods which will prevent separation or loss of ingredients.
 2. Concrete to be conveyed by pumping will require approval of Architect for each class of concrete specified before being used.
 3. Equipment for chuting, pumping and pneumatically conveying concrete shall be of size and design as to assure practically continuous flow of concrete at delivery end without separation of materials.
 4. Use of gravity flow or aluminum chutes or conveyors for transporting concrete horizontally is not permitted.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.3 JOINTS

- A. General: Locate joints as indicated on Drawings or, if not shown, at locations approved by Architect/Engineer. Intent of this Specification is to locate joints so as not to adversely affect either structural integrity or appearance of structure, and to control cracking.
- B. Construction Joints: Place joints perpendicular to main reinforcement. Locate joints within middle third of span and continue reinforcement across joint unless otherwise indicated by Drawings. Provide dowels across joints as indicated by Drawings. Dowels shall be supported during concreting operations so as to remain parallel with slab or wall surface and perpendicular to joint.
1. Keyways: 1 ½" deep x d/3 x continuous in walls, slabs and between walls and footings, where "d" denotes specified wall or slab thickness, unless otherwise indicated by Drawings.
 2. Waterstops: Refer to Division 03 Section "Concrete Accessories".
 3. Walls: Space construction joints as follows:
 - a. Horizontal Spacing: 60 feet maximum
 - b. Vertical Spacing: as shown on Drawings.
 4. Allow minimum of 72 hours between placement of adjacent pour areas not separated by expansion joint.
 5. Avoid slab construction joints at areas specified to receive thin-set tile, terrazzo and resilient floor finish materials to greatest extent possible. Slab grinding, chipping or filling at such occurrences to achieve specified floor surface tolerances will be at Contractor's expense.
 6. Preparation of Construction Joints:
 - a. Clean construction joints of all dirt, dust, debris, wood forming, oil, grease, loose fragments and other bond inhibiting materials.
 - b. Bond inhibiting materials which cannot be removed by hand processes shall be removed by mechanical methods such as chipping, grinding and sandblasting.
 - c. Intentional Roughening: Intentionally roughen contact surfaces at construction joints through elevated concrete beams and girders (not grade beams) which are 12" wide or wider. Purpose of intentional roughening is to expose clean aggregate which is solidly embedded in mortar matrix. Intent is to achieve an approximate ¼" surface profile/amplitude. Follow intentional roughening with pressure washing using clean water to remove dust and other loose materials.
 - d. Do not make additional construction joints without Architect/Engineer's approval.
 7. Bonding Requirements at Construction Joints:
 - a. Perform Intentional Roughening at surfaces noted above and where indicated on Drawings.
 - b. Clean Water Pre-Dampening: Minimum requirement at vertical construction joints through elevated structural joists, beams, girders, formed slabs 6 inch thick or greater, consists of pre-dampening surface of previously deposited and hardened concrete.
 - 1) Pre-dampen contact surfaces to condition of "saturated surface dry".
 - 2) Avoid over-soaking or over-saturation to extent which has result of standing water in formwork or otherwise excessive or undesirable water/moisture.
 - 3) Maintain pre-dampened condition until fresh concrete is placed.
 - c. Bonding Compound: Apply approved bonding compound to surfaces designated on Drawings or as otherwise directed by Architect/Engineer. Follow bonding compound manufacturer's written procedure(s) for mixing, application and pot-life limitation.
 - d. Horizontal Construction Joints: Hardened concrete at horizontal joints in exposed work; horizontal construction joints in beams, girders, joists and slabs shall be cleaned and intentionally roughened same as described above. Additional requirements are as follows:
 - 1) Apply approved bonding compound to cleaned and roughened surface of set concrete. Follow written procedure(s) of bonding compound manufacturer for mixing and application.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 2) Apply fresh concrete to prepared surface within time limit (pot-life) recommended by bonding compound manufacturer.
- C. Joints in Slabs-on-Grade: Jointing of slabs-on-grade shall be provided by combination of construction joints and control joints which contribute to define individual "slab panels". Pre-plan joint locations, slab panel sizes and pre-place additional joint reinforcement as indicated on Drawings.
1. Construction Joints: Vertically formed, keyed and doweled as indicated by Drawings. Finish with edging tool having radius of 1/8".
 2. Control Joints: Sawcut or formed with continuous inserts at Contractor's option, as follows:
 - a. Sawcut Option: Perform initial sawcuts no later than 3 hours after final slab surface finishing with equipment suited and designed for early concrete sawcutting (dry cut saw). Perform final sawcuts as soon as possible where required to achieve specified joint size/depth. Coordinate sawcut locations with slab control joint detail to avoid cutting continuous bars to remain. Remove dust and laitance from joints.
 - 1) Initial Sawcuts: 1/8" min. width x 1" min. depth.
 - 2) Final Sawcuts: 1/8" min. width x t/4 depth where "t" denotes slab thickness.
 - 3) Final joint width of joints to receive sealant or grout shall be 1/4".
 - 4) If Initial Sawcuts can be installed to achieve final required joint size, this is permitted.
 - b. Continuous Inserts Option: Form joints by inserting continuous pre-molded plastic, hardboard or fiberboard strips into fresh concrete until top surface of strip is flush with slab surface. Maintain straight and true alignment. Tool slab edges on each side of insert. Remove inserts and clean grooves of loose debris after concrete has hardened. Finished joint shall be 1/4" width x t/4 min. depth, where "t" denotes slab thickness.
 3. Slab Panels shall be approximately rectangular. Locate joints at column centerlines and at intermediate intervals to restrict "slab panel" size to following limits:

Slab Thickness	Max. slab panel side length	Max. slab panel size/area
5"	15'	225 sf
6"	18'	325 sf
7"	21'	440 sf
8"	24'	575 sf
9"	27'	730 sf
10" and greater	30'	900 sf
 4. Slab-on-Grade Placement Options:
 - a. LARGE BLOCK PLACEMENT: Consists of 10,000 sf (maximum) placement area having construction joint at perimeter edges and checkerboard interior control joints thereby defining "slab panels".
 - 1) Plan geometry approximately rectangular (where possible) with no edge longer than 1.5 times shortest edge.
 - 2) Plan placement area size to comply with time limit for initial sawcutting of control joints, where sawcut option is used.
 - b. LANE PATTERN PLACEMENT: Consists of placement lane which is one (1) slab panel in width x full length of slab in direction of lane placement.
 - 1) Plan lane length to comply with time limit for initial sawcutting of control joints, where sawcut option is used.
 - 2) Reduce lane length as required to conform with initial sawcutting time limit.
 5. Expansion Joints and Isolation Joints: Construct as shown by Drawings, typically without dowels unless otherwise indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.4 CONCRETE PLACEMENT

A. General:

1. Complete formwork and reinforcement inspection procedures, including corrections, prior to commencement of concrete placement.
2. Remove debris and hardened or partially hardened concrete which has accumulated on forms or reinforcement before commencement of concrete placement.
3. Deposit concrete in forms as close to its final position as possible to avoid rehandling.
4. Place concrete in reasonably uniform layers, approximately horizontal, and no deeper than 18 inches except that slabs shall be placed in single layer. Avoid unplanned vertical, horizontal or inclined construction joints, or other planes of weakness.
5. Place concrete at rate whereby concrete is plastic at all times and flows readily into spaces.
6. Do not place concrete that has partially set or has been contaminated by foreign materials.
7. Do not retemper concrete or remix after initial set.
8. Do not place concrete on previously deposited concrete which has partially set or hardened sufficiently to cause formation of seams or planes of weakness. If section cannot be placed continuously, provide appropriate construction joint as specified herein.
9. Do not permit concrete to drop freely greater than 8 feet where plastic concrete is likely to collide with reinforcement. Use suitable equipment such as chute, tremie or other approved conveyance where longer drops are necessary.
10. Where concrete can be placed without colliding with reinforcement, no vertical drop distance limitation is imposed.
11. Do not pour directly into excavations where water is standing.
12. Maintain reinforcement in proper position during concreting operations.

B. Vibration and Consolidation: Consolidate each layer of concrete as it is deposited with mechanical vibrators and suitable hand tools. Internal vibrators (spud or poker type) for consolidation shall conform to ACI 309R.

1. Avoid under-vibration, over-vibration and use of vibrators to transport concrete in forms
2. Insert and withdraw vibrators in vertical manner at sufficient points no farther apart than visible effectiveness of vibrator.
3. Do not insert vibrator into lower layers that have begun to set.

C. Hot Weather Concreting:

1. Hot Weather Placement Criteria:
 - a. Concrete work shall conform to requirements of ACI 305.1, "Specification for Hot Weather Concreting", unless modified or more stringent requirements are provided in these Contract Documents.
 - b. Conditions Requiring Hot Weather Concrete Practices: Any combination of high ambient temperature (80 degrees F or higher), high concrete temperature, low relative humidity, and high wind speed that tend to impair quality of freshly mixed or hardened concrete by accelerating rate of moisture loss and rate of cement hydration, or otherwise causing abnormal or detrimental results.
 - c. Maximum Acceptable Fresh Concrete Temperature: 95 degrees F at truck discharge point.
 - d. Delivery/Discharge Time Limitation: When concrete temperature exceeds 86 degrees F, time limitation for delivery/discharge shall be 60 minutes after introduction of water into mixer.
2. Records: Maintain records of outside air temperature, concrete temperature per ASTM C 1064, wind speed, relative humidity and other general weather conditions that might impair concrete quality or strength during hot weather conditions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Actions During Hot Weather Conditions: When hot weather conditions occur or are anticipated, pre-plan and implement following actions, all or in part, as required to maintain acceptable concrete temperature and to minimize possibility of plastic shrinkage cracking. Other actions may be necessary and are responsibility of Contractor.
- a. Concreting Actions:
- 1) Utilize fly ash, GGBFS or both as partial replacements for Portland Cement.
 - 2) Schedule early morning or night concrete placements, unless not permitted by Owner or other governing authority.
 - 3) Cool ingredients before mixing. Mixing water may be chilled or use chopped ice, provided water equivalent of ice is calculated to total amount of mixing water.
 - 4) Use water-reducing retarding admixture when required by conditions.
 - 5) Minimize time between mixing and placement of concrete.
 - 6) Protect slab concrete during stages of placing and finishing against moisture loss due to rapid evaporation by applying fog mist spray above surface and applying monomolecular film, evaporation retarding agent.
 - 7) Plan for continuous curing, preferably moist curing during first 72 hours using absorptive blankets kept continuously wet, or, at appropriate pre-planned locations by applying curing compound. Refer to Div. 03 Section – “Concrete Finishing” for use of curing compounds. Continue curing for minimum of 7 days. Do not change curing methods until concrete is at least 3 days old.
- b. Other Actions:
- 1) Keep equipment cool by spraying with water, however do not permit cooling water to effect water content and properties of fresh concrete.
 - 2) Fog spray forms, reinforcing steel and subgrade just prior to placing concrete. Keep subgrade moisture uniform without puddles or dry areas.
 - 3) Cover reinforcing steel with water-soaked burlap such that steel temperature will not exceed ambient air temperature sufficiently in advance of embedding in concrete.
 - 4) Loosen forms as soon as possible and run curing water down inside. When forms are removed, provide wet blanket curing cover to newly exposed surfaces for minimum of 7 days curing period. After curing period, covering should stay in place without wetting for additional 4 days.

D. Cold Weather Concreting:

1. Cold Weather Placement Criteria:
- a. Concrete work shall conform to requirements of ACI 306.1, “Standard Specification for Cold Weather Concreting”, unless modified or more stringent requirements are provided in these Contract Documents.
 - b. Do not place concrete when outside air temperature at time of placement or at any time during the protection period is 40 degrees F or less unless cold weather concreting practices are followed.
 - c. Apply cold weather concreting practices whenever following conditions exist or are anticipated for more than 3 successive days:
 - 1) Average daily air temperature less than 40 degrees F, where average temperature is average of highest and lowest temperatures occurring during period from midnight to midnight.
 - 2) Air temperature not greater than 50 degrees F for more than one half of any 24 hour period duration.
 - d. Concrete temperature as mixed and delivered to jobsite as follows:

<u>Air Temperature</u>	<u>Min. Conc. Temp.</u>	<u>Max. Conc. Temp.</u>
Above 30 deg. F	60 deg. F	75 deg. F

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

0 to 30 deg. F	65 deg. F	80 deg. F
Below 0 deg. F	70 deg. F	85 deg. F

- e. Concrete temperature as placed and maintained during protection period, measured at surface of concrete, as follows:

<u>Min. Conc. Temp.</u>	<u>Max. Conc. Temp.</u>
50 deg. F	85 deg. F

- f. Maximum concrete surface gradual temperature decrease during any 24 hour period after end of protection period per ACI 306.1 Table 3.2.1.
2. Protection Period: Not less than 3 days. Continue curing as specified herein to facilitate concrete strength gain and minimize cracking.
3. Large Embedded Items in Concrete: Maintain large embedded items above 35 deg. F. prior to placing concrete. Large embedded items are not specifically alerted on the drawings, but generally consist of wide flange steel members, tubes, pipes, channels, ducts, or other similar large items which have potential to damage concrete if embedded as a large frozen mass.
4. Records:
- a. Maintain records of date, time, ambient air temperature, temperature of concrete as delivered and placed, and general weather conditions during cold weather conditions.
 - b. Record air temperature and concrete surface temperatures at regular intervals, but not less than 3 times per 24 hour period. Record concrete surface temperature at several locations including corners and edges to monitor effectiveness of protection provided. Use lowest temperature to represent temperature of section at that time.
 - c. Record maximum and minimum temperatures for each 24 hour period.
5. Actions During Cold Weather Conditions: When cold weather conditions occur or are anticipated, pre-plan and implement following actions, all or in part, as required to maintain acceptable concrete temperature. Other actions may be necessary and are responsibility of Contractor.
- a. Design concrete mixes specifically for cold weather conditions. Use air-entrainment (where acceptable).
 - b. Heat mixing water by blending hot/cold water as suitable for concrete temperature range.
 - c. Uniformly heat aggregates to eliminate ice, snow and frozen lumps of aggregate.
 - d. Cover thawed and heated stockpiles to retain heat.
 - e. Thaw frozen subgrades prior to concrete placement.
 - f. Remove ice, snow and frost from formwork and reinforcing steel.
 - g. Cover metal embeds and wrap protruding reinforcing bars with insulation to avoid heat drain from fresh concrete and to prevent localized freezing of concrete.

3.5 MISCELLANEOUS CONCRETE ITEMS

A. Floor Toppings:

1. Bonded Toppings: Topping slabs less than 3 inches thick shall be considered to be bonded toppings unless indicated otherwise. Topping slabs 3 inches thick and greater which are intended as bonded toppings are noted as such on Drawings. Pre-plan and prepare for placement of bonded topping slabs as follows:
- a. Finish surface of freshly placed concrete to consist of "scratch finish" obtained when base concrete is partially set by texturing with stiff brushes, brooms, or rakes to produce surface profile amplitude of 1/4 inch in one direction. No trowelling permitted.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Apply intentional roughening to concrete surfaces not having scratch finish. Roughen surface by sandblasting or other mechanical methods to achieve minimum surface amplitude of 1/8", or as otherwise recommended by overlay installer and approved by Engineer.
- c. Roughening technique/equipment shall be a process selected by Contractor, however, high-impact techniques (including but not limited to scarifying, scabbling, and roto-milling) are known to result in "bruising" and/or "micro-cracking" thereby weakening tensile/bond strength of surface to receive bonded overlay. Where high impact techniques are used, follow with sandblasting or other approved method(s).
- d. Clean roughened surface by removing deteriorated concrete, and other bond-inhibiting materials from prepared roughened surface.
- e. Pre-Dampen surface with clean water to condition of "saturated surface dry", having no standing or glistening water at time of topping placement. Where topping product manufacturer's instructions do not require pre-dampening of prepared surface, omission of this step may be considered but only with approval of SEOR.
- f. Apply bonding compound as recommended by overlay product manufacturer's written instructions.
- g. Basis of Bonded Topping Design:

<u>Topping Thickness (T)</u>	<u>Product</u>
T = 1/2" to 1"	Polymer-Modified Cementitious (PMC) Mortar
1" < T < 3"	PMC Mortar extended with 3/8" max. aggregate
T = 3" and greater	Conventional concrete as specified in Drawings with bonding compound applied to base concrete.

- h. In lieu of PMC Mortar applications noted above, use of other pre-mixed cement based mortars suitable for thin overlay applications may be considered but only with approval of SEOR. No topping shall be less than 1/2 inch in total thickness.
2. Un-bonded Toppings: Topping slabs 3 inches thick and greater shall be considered as un-bonded toppings unless indicated otherwise. Pre-plan and prepare for placement of un-bonded toppings as follows:
- a. Broom and vacuum clean base surface to receive topping.
 - b. Apply bond breaker compound to base surface when indicated on Drawings.
 - c. Use conventional concrete as specified in Drawings.
- B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by troweling surfaces to hard, dense finish with corners, intersections and terminations slightly rounded.
- C. Column Base Plates, Equipment Bases, and Foundations:
- 1. Grout column base plates, equipment bases and foundations as indicated using specified non-shrink grout. Use non-metallic grout for exposed conditions, unless noted otherwise.
 - 2. Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment to template at correct elevations.
- D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings and associated items. Cast-in-safety inserts and accessories as shown on Drawings. Screed, tamp and finish as required by Division 03 Section "Concrete Finishing".

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Filling In: Fill in holes and openings left in concrete work for passage of work by other trades, unless otherwise shown or directed, after work of other trades is in place. Mix, place and cure concrete as specified to blend with in-place construction. Provide other miscellaneous concrete filling shown or required to complete Work.

3.6 SCREEDING, FINISHING, AND PROTECTING CONCRETE

- A. Refer to Division 03 Section "Concrete Finishing" for screeding and finishing.
- B. Protection:
 - 1. Protect freshly placed concrete from washing by rain or flowing water.
 - 2. Do not allow freshly placed concrete to dry out from time deposited in forms until expiration of curing period.
 - 3. After curing period, control water at areas to receive adhesives, coatings, or other finish material(s) sensitive to moisture or water vapor.
 - 4. Protect concrete surfaces whenever other work is being done adjacent to or above finished concrete surfaces.

3.7 CONCRETE CURING

- A. General Curing Requirements
 - 1. Curing Unformed Surfaces – Interior Concrete Floors Scheduled to Receive Additional Floor Finishes. Intent of this Specification is to utilize moisture curing. Do not use curing compounds on concrete surfaces that are to receive the following finishes:
 - a. Floors to Receive Penetrating Liquid Floor Treatments:
 - 1) Including but not limited to hardeners, sealers, densifiers and water repellents,
 - b. Floors to Receive Polished Finish:
 - c. Floors to Receive Chemical Stain:
 - d. Floors to Receive Urethane Flooring:
 - e. Floors to Receive Adhered Floor Finishes:
 - 1) Including but not limited to cementitious toppings and overlays, waterproofing and other membranes, tiling and underlayments, direct glue wood flooring, resilient flooring, terrazzo, resinous flooring, adhesive applied carpet, paint and other coatings, epoxy overlays and other adhered floor covering systems.
 - 2. Incorrect Use and Removal: If curing compounds are used on surfaces, exterior or interior, formed or unformed, that are scheduled or specified to receive surface-adhered finishes or treatments, then mechanically (bead blast) or chemically remove curing compound completely. Confirm required surface finish with flooring manufacturers and installers.
 - a. Removal: After curing period has elapsed, but not later than 7 days after end of curing period, remove curing compound using method recommended by curing compound manufacturer without damaging or otherwise creating unsuitable concrete surfaces to receive flooring systems. Removal of curing compounds shall be provided at Contractor's expense.
 - 1) Acid etching is not permitted.
 - b. Allow additional time after curing compound removal for concrete surfaces to reach required concrete moisture and water vapor limitations required for successful application of subsequent floor finishes and treatments.
 - c. Dry-Shake Hardener: Consult with hardener manufacturer to confirm curing compound product and application method on surfaces where dry-shake hardener has been applied.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Curing Period: Protect freshly placed and finished concrete for minimum period indicated below from premature drying and excessive cold or hot temperatures. Curing period begins on completion of final finishing.

Cement Type	Minimum Curing Period
Type I Portland Cement	7 days
Type II Portland Cement	10 days
Type III Portland Cement	3 days (when ambient temp. is 73 deg F or higher)
Type IV or V Portland Cement	14 days
Blended Cements	Variable, but, not less than period above for Type of Portland Cement in blended mix.

- C. Curing Time Reduction: Curing times may be reduced from periods noted above at concrete which will have permanent in-service interior exposure to conditioned air if either of following provisions is complied with.

1. When tests are made of field cured cylinders cured by same methods as structure, curing period may be terminated when average compressive strength has attained 75% of specified 28-day compressive strength. Minimum curing period not less than 72 hours.
2. When temperature of structure concrete is maintained at minimum of 50 deg F (10 deg C) for same length of time required for laboratory cured cylinders of same concrete to reach 85% of specified 28-day compressive strength, curing period may be terminated. Minimum curing period not less than 72 hours.

- D. Evaporation Retardant: Apply evaporation retardant to unformed concrete surfaces if hot, dry, or windy conditions are prevalent or anticipated to occur before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

- E. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, columns, walls, and other similar surfaces. If forms remain during curing period, moisture cure after loosening forms. If forms are removed before end of curing period, continue curing by one or a combination of specified curing methods as applicable. Contractor shall select method which is compatible with requirements for subsequent material application on surface.

- F. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces, by one or a combination of specified curing methods as applicable. Contractor shall select method which is compatible with requirements for subsequent material application on surface.

- G. Curing Methods: Cure formed and unformed surfaces by one or a combination of following methods as applicable.

1. Moisture Curing:
 - a. Procedures: Keep concrete surface continuously wet by covering with absorptive cover or by using continuous water-fog spray. Cover concrete surface with specified absorptive cover, thoroughly saturate cover with water, and keep continuously wet. Place absorptive cover to provide coverage of concrete surfaces and edges, with 12 in (300 mm) lap over adjacent absorptive covers. Secure absorptive covers to maintain close contact with

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

concrete surface, withstand wind, and prevent air circulation below cover during entire curing period.

- b. Precautions: Apply following precautions during moisture curing.
 - 1) Water shall be potable meeting requirements of ASTM C 94.
 - 2) Temperature of supply curing water shall not exceed 10 deg F (-9.4 deg C) warmer than internal temperature of concrete or 90 deg F (32 deg C), whichever is lower.
 - 3) Temperature of supply curing water shall not be lower than 15 deg F (-12.2 deg C) cooler than internal temperature of concrete or 50 deg F (10 deg C), whichever is higher.
 - 4) Discontinue moisture curing 24 hours minimum prior to exposure or anticipated exposure of concrete to freezing ambient temperatures.
 - 2. Moisture-Retaining Cover:
 - a. Procedures: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width with sides and ends lapped at least: 4 in (100 mm) for curing paper; and 12 in (300 mm) for polyethylene film or burlap-polyethylene sheeting, and sealed by waterproof tape or adhesive. Immediately repair holes or tears during curing period using cover material and waterproof tape. Secure moisture-retaining cover to maintain close contact with concrete surface, withstand wind, and prevent air circulation below cover during entire curing period.
 - b. Polyethylene film not permitted at unformed surfaces.
 - 3. Curing Compounds:
 - a. Limitations on Use: Refer to General Curing Requirements above.
 - b. Procedures: Apply curing compound to concrete surfaces as soon as final finishing operations are complete (within 2 hours and after surface water sheen has disappeared). Apply uniformly in continuous operation by power spray or roller according to manufacturer's directions. Recoat areas subjected to heavy rainfall within 3 hours after initial application. Maintain continuity of coating and repair damage during curing period.
 - c. Do not use curing compounds which exhibit yellowing or moderate yellowing at surfaces to be permanently exposed in finished Work.
- H. Control of Water after Curing: Continuously monitor and control water, including but not limited to rain, ice or snow, on surfaces after curing period. Rewetting surfaces affects the drying period for hardened concrete and directly affects installation of finish materials applied with adhesives sensitive to moisture or water vapor. Contractor is responsible for controlling water and the resulting effects on concrete and material(s) to be applied to hardened concrete.

3.8 FLOOR SURFACE FLATNESS/LEVELNESS MEASUREMENT AND TOLERANCES

- A. Refer to Division 03 Section "Concrete Finishing" for required floor surface flatness and levelness criteria and related Quality Control.

3.9 FINAL PROCEDURES

- A. Satisfactorily replace imperfect or damaged work and material damaged or determined to be defective, before final completion and acceptance of entire job in conformity with requirements of Drawings and Specifications, at Contractor's expense.
- B. Remove forms, equipment, protective coverings and rubbish from premises upon completion of Work.
- C. Leave finished concrete surfaces in clean and undamaged condition, free of mortar, concrete droppings, loose dirt and mud, and satisfactory to Owner.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 4 - QUALITY CONTROL

4.1 INSPECTION STANDARDS

- A. Quality control, testing, and inspections shall meet the special inspection requirements of the building code and any local or state provisions.
 - 1. Minimum periodic and continuous inspection requirements are indicated below. Refer to Drawings for supplemental and/or more stringent testing requirements, as required.
 - 2. Provide for more stringent inspection/testing where specified on Drawings or required elsewhere in these Specifications.

4.2 TESTING AGENCY

- A. Owner will employ and pay a qualified independent testing agency to perform the quality control indicated in this section, including special inspections required by the building code.
- B. Qualifications of Testing Agency and Personnel:
 - 1. Agency/Laboratory responsible for testing/inspection shall conform to requirements of ASTM C 1077.
 - 2. Field personnel responsible for tests/inspections of concrete required to determine compliance with this specification shall be certified as ACI Concrete Field Testing Technician, Grade I or equivalent.
 - 3. Laboratory personnel performing strength tests for compliance with this specification shall be certified as an ACI Concrete Laboratory Testing Technician, Grade 1 or 2 or by an equivalent written and performance test program.
 - 4. Personnel performing Concrete Plant Inspection shall be certified as ACI Concrete Field Testing Technician, Grade I, and Aggregate Testing Technician, Level 1.
- C. Field Inspection Scope of Services:
 - 1. Secure composite samples in accordance with ASTM C 172. Obtain each sample from different batch of concrete on random basis.
 - 2. Perform sampling at following locations:
 - a. Adjacent to concrete mixer as concrete is delivered from mixer to conveying vehicle, unless otherwise noted.
 - b. At end of discharge hose, when concrete is pumped. Location shall be in reasonable close proximity to placement area, so as to satisfactorily simulate conditions at end of hose.
 - 3. Verify water to cement ratio is not exceeded if water is added to concrete mix in truck or otherwise. Addition of water beyond limits given on approved mix design shall not be permitted.
 - 4. Verify air content in concrete. Re-verify air content in air-entrained concrete if late additions of water occur to concrete mix in truck or otherwise.
 - 5. Molding and Curing of Test Cylinders:
 - a. Mold and cure cylinders (one set for strength testing) from each sample in accordance with ASTM C 31.
 - b. Cylinders may be 6" diameter x 12" length, or 4" diameter x 8" length.
 - c. Quantity of cylinders per set: 4 (minimum) for 6x12 cylinders; 6 (minimum) for 4x8 cylinders.
 - d. Quantity of cylinders per set for high-strength concrete: Minimum quantity of cylinders per set for concrete with specified compressive strength greater than 6000 psi shall be six (6) regardless of size of cylinders.
 - e. Make one set of cylinders for each 150 cu. yd. or fraction thereof, or for each 5,000 square feet of floor slab or wall area, for each mix design of concrete placed in one day.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- f. Make one additional set of cylinders for each truck in which 2.5 gallons per cubic yard or more mixing water has been added to truck after concrete has been batched in Batch Plant. This additional set and subsequent strength tests shall be at Contractor's expense.
 - g. Contractor may elect to mold and cure more than minimum number of cylinders to allow for discarding an individual cylinder strength in accordance with ACI 214R, or for option of having reserve cylinders for potential additional strength tests. Additional cylinder(s) for such purposes shall be at Contractor's expense.
 - h. Refer to paragraphs 4.3.E and 4.3.F for additional testing requirements for early formwork removal and/or time sensitive concrete construction activities.
- 6. Determine slump of concrete sample representative of each set of cylinders and whenever consistency of concrete appears to vary in accordance with ASTM C 143.
- 7. Field Inspection Reports: Inspect each batch of concrete in accordance with approved mix designs, check mixing time of concrete in trucks and report adjustment to amounts of mixing water with reason(s) for adjustment, to assure uniform consistency from truck to truck. Submit Report of Field Inspection of Concrete for each concrete pour. Report shall identify project name, client, concrete supplier, date of placement and name/signature of inspector. Include following information for each truck of concrete.
 - a. Number of cylinders molded and concrete cylinder set numbers taken from truck.
 - b. Truck ticket number and time truck was dispatched and time unloaded.
 - c. Concrete mix designation, number, or other identification.
 - d. Number of yards of concrete in truck.
 - e. Water-to-cement (W/C) ratio, slump, air content, admixtures, concrete temperature and air temperature at time of sampling.
 - f. Descriptive/Graphic Location of placement. Use column grids when possible.
 - g. Other remarks, i.e.. amount of mixing water added, if any, and reason(s); deviations from ASTM Specifications, if any, and reason(s); elapsed time between start of mixing to completion of placement; variations in curing requirements; etc...
 - h. Name of field technician performing sampling and ACI certification ID number.
- 8. Concrete Plant Inspection: Provide qualified inspector with necessary equipment to inspect weighing and batching of controlled concrete at batch plant.
 - a. Provide batch plant inspection during first placement of concrete in structure.
 - b. Provide batch plant inspection on remainder of project on random basis approximately 10 percent of time concrete is being placed on project.
 - c. Inspector shall observe that facilities, scales and truck mixers meet requirements of ASTM C94 "Standard Specification for Ready-Mixed Concrete".
 - d. Confirm that materials used meet requirements of Specifications and that mixture proportions are batched in accordance with approved mix designs.
 - e. Conduct or witness performance by concrete producer of following tests at least once during batch plant inspection:
 - 1) Moisture content determination for fine and coarse aggregate, ASTM C 566.
 - 2) Aggregate gradation, fine and coarse, in accordance with ASTM C 136 and in compliance with ASTM C 33 and ASTM C 330 as applicable.
 - f. Check for adjustment in batch weights to compensate for variations in moisture content, allowing for free moisture contained in fine and coarse aggregate.
 - g. Promptly submit to Architect/Engineer report of certification of weights used in loads of acceptable concrete which has been batched during plant inspection time.
 - 1) Submit report for each batch plant inspection showing test results and observations made during inspection.

D. Laboratory Testing Scope of Services:

- 1. Test concrete cylinders in accordance with ASTM C 39.
- 2. Test each set of cylinders as follows:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. For 6x12 cylinders: Two cylinders shall be tested at 7 days for information and two cylinders shall be tested at 28 days for acceptance.
 - b. For 4x8 cylinders: Three cylinders shall be tested at 7 days for information and three cylinders shall be tested at 28 days for acceptance.
 - c. For concrete with 28-day compressive strength greater than 6,000 psi: Three cylinders shall be tested at 7 days for information and three cylinders shall be tested at 28 days for acceptance regardless of size of cylinders.
 - d. Acceptance test results shall be average of cylinder test results at 28 days unless otherwise noted.
3. Submit timely consecutively numbered Concrete Compressive Strength Reports with following minimum information for each set of strength test cylinders:
- a. Project identification, Client, and concrete supplier.
 - b. Concrete cylinder set number.
 - c. Date of sampling; Date of testing and concrete age.
 - d. Specified 28 day compressive strength requirement, f'c.
 - e. Descriptive Location of placement which cylinders are representative of.
 - f. Compressive strength results from cylinder testing.
 - g. Notation of compliance or non-compliance with specified requirements.
 - h. Remarks in regard to testing procedure(s) which may have impact on results.
4. Report promptly to Architect/SEOR details of non-conforming concrete. Give information concerning locations of concrete pours, quantities, dates and other pertinent facts.

4.3 CONTRACTOR

- A. Materials and Workmanship: Owner's employment of a qualified independent testing agency to perform the testing/inspection services indicated above shall not operate to relieve Contractor of responsibility to furnish materials and workmanship in accordance with Contract Documents.
- B. Contractor Inspection/Testing: Owner's employment of a qualified independent testing agency to perform the testing/inspection services indicated above is for verification and does not prevent Contractor from providing supplemental inspection/testing at Contractor's discretion and expense.
- C. Qualifications of Contractor's Testing/Inspection Personnel: Contractor's personnel performing testing/inspection services are subject to same qualifications as noted by paragraph 4.2.B above.
- D. Re-Testing of Materials: Retesting of materials failing to meet specified requirements shall be done at Contractor's expense.
1. In cases of differences of opinion between Owner's testing agency and the Contractor's inspector regarding conformance, the issue shall be brought to the Architect, SEOR of Record and the enforcement agency as part of the resolution process.
 2. Where resolve of difference of opinions is not possible, joint supplemental testing between Owner's testing agency and Contractor's inspector may be required and will be at Contractor's expense.
 3. Architect's and SEOR's cost for consideration and participation with resolve of non-conforming work may be subject to fee imposition on Contractor.
- E. Early Formwork Removal Time Control and Testing
1. If early formwork removal is desired by Contractor, additional cylinders and testing performed for this purpose are required and shall be at Contractor's expense.
 2. Testing requirements are specified in Division 03 Section "Concrete Forming".
- F. Testing for Start of Early or Time Sensitive Concrete Construction Activities

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. If early or time sensitive concrete construction activities are desired by Contractor, additional cylinders and testing performed for this purpose/confirmation and cured under field conditions are required and shall be at Contractor's expense.
2. Potential early or time sensitive concrete construction activities include, but are not limited to:
 - a. Early formwork or shoring removal.
 - b. Termination of cold weather protection.
3. As an alternative to performing additional cylinders for early or time sensitive concrete construction activities, consideration may be given to the in situ strength of concrete determined by the maturity method in accordance with requirements of ASTM C 1074
 - a. Estimating Concrete Strength by the Maturity Method requires advance pre-planning for development of strength-maturity relationships.
 - b. Maturity Method shall be supplemented with other tests of potential strength of concrete for confirmation, in accordance with ASTM C 1074.
 - c. Contractor shall provide all correlations, field validation testing and other work necessary for use of Maturity Method.
 - d. If Maturity Method is intended, include as topic for discussion during Concrete Pre-Construction Conference.
 - e. Basis of Maturity Method testing: "InSite System"; manufactured and supplied by RPX Technologies; Stillwater, Oklahoma.

SECTION 033500
CONCRETE FINISHING

PART 1 - GENERAL

1.1 SUMMARY

- A. Work required for this Section includes concrete finishing of cast-in-place concrete including supplementary products necessary to complete the concrete installation.
- B. Related Sections:
 - 1. Refer to Division 3 Sections Cast-in-Place Concrete or Concrete Curing for curing and other concrete requirements.

1.2 DEFINITIONS

- A. Curing: Action taken by which hydraulic-cement concrete matures and develops hardened properties over time as result of continued hydration of cement in presence of sufficient water and heat.
- B. Envelope: Vertical distance between two level lines or planes.
- C. Flatness: Degree to which surface approximates plane.
- D. Levelness: Degree to which line or surface parallels horizontal. Horizontal is normal to direction of gravity.
- E. Minimum Local Value: Minimum local F(F) or F(L) value at given floor level, taken within one floor test area defined as Minimum Local Area.
 - 1. Boundaries of Minimum Local Areas may not cross construction joints.
 - 2. Slabs-on-Grade: Minimum Local Area will be bounded by construction and/or control joints, or by column lines and half-column lines, whichever is smaller.
 - 3. Elevated Slabs: Minimum Local Area will be bounded by column lines and/or half-column lines.
- F. Specified Overall Value: Composite value of samples taken at given level, regardless of number of concrete placements required to complete level. Specified overall F-numbers represent minimum values allowed for entire floor, looked at as whole.

1.3 ACTION SUBMITTALS

- A. Product Data: Submit copies of manufacturers' technical literature for specified products.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
 - 2. Submittal(s) shall identify location(s) of Contractor's intended application of product(s).

NORFOLK CASINO
NORFOLK, VIRGINIA

1.4 INFORMATIONAL SUBMITTALS

- A. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control".
- B. Repair Records: At conclusion of project, submit record of repairs as part of job close-out information. Record shall be complete in detail and will serve as Owner's documentation of repairs made to concrete work. Include following information.
 - 1. Location and size of repair. Include individual identification number for each repair and provide dimension(s) from established grids, elevations, and approximate repair size.
 - 2. Statement of reason(s) for repair.
 - 3. Repair material(s) applied.
 - 4. Date of repair application.
 - 5. Name(s) of trained installer used for each repair.

1.5 QUALITY ASSURANCE

- A. Finisher Qualifications: Finisher with not less than 5 years experience with successful concrete finishing and systems similar to scope of this Project, with a record of successful in-service performance and completion of projects for a period of not less than 5 years, and with sufficient production capability, facilities, and personnel to produce required Work.
- B. Installer Qualifications for Specialized Concrete Finishes:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products including but not limited to the following:
 - a. Overlay and repair mortar.
 - b. Crack repair/injection.
- C. Work Plan for Out-of-Tolerance Floor Surfaces:
 - 1. Detailed work plan for areas where remedial measures are necessary to correct unsatisfactory as-built floor flatness/levelness conditions. Include following information:
 - 2. Specific boundaries of area to receive remedial work
 - 3. Methods and products proposed.
 - 4. Grout/topping/underlayment product literature.
- D. Mock-Ups for Specialized Concrete Finishes: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up using materials indicated for the completed Work.
 - 1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.

NORFOLK CASINO
NORFOLK, VIRGINIA

2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.6 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
 1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 3. Record discussions, including decisions and agreements, and prepare report.

1.7 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation
- C. Coordinate openings, penetrations, and sleeve requirements with final equipment selections and locations by MEP sub-contractors. Verify any changes with Engineer of Record prior to fabrication.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers/Fabricators and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers/fabricators listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other available manufacturers/fabricators offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.3 CURING MATERIALS

- A. Refer to Division 3 Sections Cast-in-Place Concrete or Concrete Curing for curing and other concrete requirements.

2.4 VERTICAL AND HORIZONTAL TREATMENTS

- A. **Modified Oleophobic Penetrating Concrete Protectant: Exempt solvent, low VOC, synthetic-modified, silane-siloxane concrete protectant. Clear, penetrating, breathable protectant for use on interior/exterior, horizontal/vertical concrete, natural or synthetic stone surfaces top resist oil, water, food, stains, and many other liquid contaminants.**

- 1. **Manufacturer Products, subject to specified written warranty:**

- a. **Spec Chem: All Shield EX**

2.5 FLOOR AND SLAB TREATMENTS

- A. Slip-Resistive Aggregate Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive aggregate of fused aluminum-oxide granules or crushed emery with emery aggregate containing not less than 50 percent aluminum oxide and not less than 25 percent ferric oxide; unaffected by freezing, moisture, and cleaning materials.
- B. Mineral Dry-Shake Floor Hardener: Factory-packaged dry combination of portland cement, graded quartz aggregate, coloring pigments, and plasticizing admixture. Use coloring pigments that are finely ground, nonfading mineral oxides interground with cement.
 - 1. Colors: As scheduled in Division 01 Section "Design Selections", or where not scheduled, as selected by Architect from manufacturer's full range of standard colors.
 - 2. Consult with manufacturer's trained technical representative where dry-shake floor hardener will be applied over air-entrained concrete.
 - 3. Manufacturers and Products:
 - a. Euclid Chemical Co.; Surflex.
 - b. Lambert Corporation; Colorhard.
 - c. L&M Construction Chemicals, Inc.; Quartzplate FF.

NORFOLK CASINO
NORFOLK, VIRGINIA

- C. Penetrating Liquid Floor Hardener and Sealer (Sealed Concrete): Chemically reactive, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; colorless; that penetrates, hardens, densifies, and seals concrete surfaces. Minimum manufacturer's written warranty of 10 years to effectively harden, densify, and dustproof concrete surfaces.

1. Manufacturer Products, subject to specified written warranty:
 - a. Curecrete Chemical Co., Inc.; Ashford Formula or Ashford Formula ND.
 - b. Euclid Chemical Co.; Euco Diamond Hard.
 - c. L&M Construction Chemicals, Inc.; Seal Hard.
 - d. Sika Corp.; Scofield Formula One Lithium Densifier MP.

2.6 REPAIR MATERIALS

- A. Self-Leveling Concrete Underlayment (Non-wear surface):

1. Description: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 in (3 mm) to 1 in (25 mm) and that can be feathered at edges to match adjacent floor elevations. Interior use only, unless exterior application recommended by manufacturer within written literature.
2. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
3. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
4. Aggregate: Well-graded, washed sand as recommended by underlayment manufacturer.
5. Compressive Strength: 4,000 psi minimum at 28 days when tested according to ASTM C 109.
6. Substrate Preparation: Bead blast as recommended by product manufacturer.
7. Basis of Design (Product Standard): Ardex, Inc.; "Ardex K-15".
8. Manufacturers: (Consult manufacturer for specific product and compatibility with substrate conditions. Subject to Architect's and Engineer's review and approval.)
 - a. ARDEX Engineered Cements.
 - b. Custom Building Products.
 - c. Euclid Chemical Co.
 - d. Sika Corporation.

- B. Self-Leveling Concrete Topping (Wear surface):

1. Description: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/2 in (12 mm) to 2 in (50 mm). Consult manufacturer for thickness exceeding 2 in (50 mm). Interior use only, unless exterior application recommended by manufacturer within written literature.
2. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
3. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
4. Aggregate: Well-graded, washed gravel, 1/8 in (3 mm) to 3/8 in (10 mm) or coarse sand as recommended by topping manufacturer for specific application thickness. No coarse aggregate permitted for thicknesses of 1 in (25 mm) or less.
5. Compressive Strength: 5,000 psi minimum at 28 days when tested according to ASTM C 109.

NORFOLK CASINO
NORFOLK, VIRGINIA

6. Substrate Preparation: Bead blast as recommended by product manufacturer.
 7. Basis of Design (Product Standard): ARDEX Engineered Cements; "Ardex SD-T".
 8. Manufacturers: (Consult manufacturer for specific product and compatibility with substrate conditions. Subject to Architect's and Engineer's review and approval.)
 - a. ARDEX Engineered Cements.
 - b. Custom Building Products.
 - c. Euclid Chemical Co.
 - d. Sika Corp.
- C. Polyurethane Control Joint Filler: Semi-self-leveling, single component, moisture-curing, low-modulus, polyurethane sealant, Shore A hardness of 40-45 per ASTM D 2240, OT Traffic Rating.
1. Basis of Design: TREMCO; Vulkem 455SL.
- D. Overlay and Repair Mortar:
1. General: Use of overlay and repair mortar shall be in accordance with manufacturer's application limitations, precautions, and directions for use, including but not limited to surface preparation, mixing, placing, curing, and compatibility with substrate conditions.
 2. Product types listed below are basis of design, however, it is recognized by Architect/Engineer that high performance cement based overlay/repair mortars are available which may be satisfactory to specific application. Intent is not to omit such products from consideration. Subject to Architect and Engineer's approval prior to use.
 3. Epoxy Mortar:
 - a. Description: ASTM C 881, acceptable at interior applications only, unless otherwise directed by Engineer; appropriate applications include locations susceptible to high wear or high corrosion.
 - 1) Type I: Acceptable at non-structural applications.
 - 2) Type IV: Acceptable at structural applications.
 - b. Manufacturers: (Consult manufacturer for specific product and compatibility with substrate conditions. Subject to Engineer's review and approval.)
 - 1) ARDEX Engineered Cements.
 - 2) Euclid Chemical Company.
 - 3) Sika Corporation.
 4. Polymer Modified Cementitious Mortar:
 - a. Description: ASTM C 1059, Type II, acceptable at structural and non-structural applications, interior or exterior.
 - b. Manufacturers: (Consult manufacturer for specific product and compatibility with substrate conditions. Subject to Engineer's review and approval.)
 - 1) ARDEX Engineered Cements.
 - 2) Euclid Chemical Company.
 - 3) Sika Corporation.
- E. Epoxy Grout Fill:

NORFOLK CASINO
NORFOLK, VIRGINIA

1. General: Use epoxy grout fill in accordance with manufacturer's application limitations, precautions, and directions for use, including but not limited to surface preparation, mixing, placing, curing, and compatibility with substrate conditions.
2. Description: Multi-component, high strength epoxy grout.
3. Manufacturers and Products:
 - a. Sika Corporation; SikaFlow 648.
 - b. Laticrete; L&M EpoGrout 758 Epoxy Structural Grout.

2.7 WATERPROOFING FOR CONCRETE TOPPINGS AT ELEVATED KITCHENS

- A. Faced Chlorinated Polyethylene (CPE) Waterproof Membrane: Non-plasticized, chlorinated polyethylene faced on both sides with high-strength, nonwoven polyester fabric; minimum 0.030 in (0.75 mm) nominal thickness.
 1. Manufacturer and Product: The Noble Company; Nobleseal TS.
- B. Waterproofing Sealant and Seamer: Synthetic co-polymer rubber used to seal seams, penetrations, and edges of waterproofing sheet membrane.
 1. Manufacturer and Product: The Noble Company; NobleSealant 150.
- C. Locations: Kitchens to receive resinous flooring and are located on elevated slabs over occupied space. Install on top of structural slab beneath concrete topping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive concrete finishing, products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 1. Respective manufacturer/fabricator's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants or errors which would result in poor or potentially defective installation or would cause latent defects in Work.

3.4 FINISHING FORMED SURFACES

A. As-Cast Surface Finishes:

1. ACI 301 (ACI 301M) Surface Finish SF-1.0: As-cast concrete texture imparted by form-facing material.
 - a. No formwork facing material is specified.
 - b. Patch voids larger than 1-1/2 inches (38 mm) wide or 1/2 inch (13 mm) deep.
 - c. Remove projections larger than 1 inch (25 mm).
 - d. Tie holes do not require patching.
 - e. Surface Tolerance: ACI 117 (ACI 117M) Class D. Maximum abrupt or gradual irregularity limited to 1 inch (25 mm).
 - f. Locations:
 - 1) Concrete surfaces not exposed to view; such as foundations and crawl spaces.
2. ACI 301 (ACI 301M) Surface Finish SF-1.1: As-cast concrete texture imparted by form-facing material.
 - a. No formwork facing material is specified.
 - b. Patch voids larger than 1 inch (25 mm) wide or 1/2 inch (13 mm) deep.
 - c. Remove projections larger than 1/2 inch (13 mm).
 - d. Tie holes do not require patching.
 - e. Surface Tolerance: ACI 117 (ACI 117M) Class C. Maximum abrupt or gradual irregularity limited to 1/2 inch (13 mm).
 - f. Locations:
 - 1) Concrete surfaces not exposed to public view, such as concrete surfaces concealed by other construction.
3. ACI 301 (ACI 301M) Surface Finish SF-2.0: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams.
 - a. Formwork facing material is specified.
 - b. Patch voids larger than 3/4 inch (19 mm) wide or 1/2 inch (13 mm) deep.
 - c. Remove projections larger than 1/4 inch (6 mm).
 - d. Patch tie holes.
 - e. Surface Tolerance: ACI 117 (ACI 117M) Class B. Maximum abrupt or gradual irregularity limited to 1/4 in (6 mm).
 - f. Locations:
 - 1) Concrete surfaces to receive coating or covering material applied directly to concrete, such as waterproofing, dampproofing, or plastering.
 - 2) Concrete surfaces exposed to view in Parking Garages.
4. ACI 301 (ACI 301M) Surface Finish SF-3.0:
 - a. Formwork facing material is specified
 - b. Patch voids larger than 3/4 inch (19 mm) wide or 1/2 inch (13 mm) deep.
 - c. Remove projections larger than 1/8 inch (3 mm).
 - d. Patch tie holes.

NORFOLK CASINO
NORFOLK, VIRGINIA

- e. Surface Tolerance: ACI 117 (ACI 117M) Class A. Maximum abrupt or gradual irregularity limited to 1/8 in (3 mm).
- f. Locations:
 - 1) Concrete surfaces exposed to view.
 - 2) Concrete surfaces to receive rubbed finishes.

B. Rubbed Finish: Apply the following to as cast surface finishes where indicated on Drawings:

1. Smooth-Rubbed Finish:

- a. Perform no later than one day after form removal.
- b. Moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture.
- c. If sufficient cement paste cannot be drawn from the concrete by the rubbing process, use a grout made from the same cementitious materials used in the in-place concrete.
- d. Maintain required patterns or variances as shown on Drawings or to match mockups approved by Architect.

C. Related Unformed Surfaces:

- 1. At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike-off smooth and finish with texture matching adjacent formed surfaces.
- 2. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.5 VERTICAL AND HORIZONTAL TREATMENTS

- A. **General:** Surface should be dry, well cured (21 day minimum). Substrate must be free of all moisture, curing residue, dust debris, oil, and other contaminants and must be absorptive. All joint sealant, caulks, and patching should be in place before applying.
- B. **Equipment:** Must use a low pressure (<50 psi) non atomizing sprayer.

3.6 FINISHING FLOORS AND SLABS (UNFORMED SURFACES)

- A. **General:** Prior to proceeding with any finishing operation, complete initial placement procedures consisting of deposit in form(s), consolidation, screeding, leveling, bull-floating, and initial re-straightening. Do not commence finishing operation when excess moisture or bleed water remains on surface. Do not wet concrete surfaces during finishing operations.
- B. **Screeding Concrete:**
 - 1. Act of striking off surface of concrete to pre-determined grade conforming to elevations shown on Drawings shall be accomplished with use of rigid screed guides. Use of wet screed guides is to be avoided on elevated surfaces.
 - 2. At elevated placements, metal deck and other formwork continues to deflect for short period after strike off. Subsequent re-straightening of surface often moves concrete paste from over beams into resulting depressions. It is suggested that Contractor plan for initial slab thickness of design depth plus 1/8 in (3 mm) (minimum). Intent shall be to satisfactorily plan for sufficient material to re-straighten slab surface and still maintain specified slab thickness and adequate cover over reinforcing steel.

NORFOLK CASINO
NORFOLK, VIRGINIA

3. Contractor shall include in his bid any additional concrete required to achieve specified slab surface finish tolerance. Finish floor tolerances shall be as specified elsewhere in this Section.
4. Cast-in-Place Concrete Framing System(s):
 - a. Grade for strike off shall be set at predetermined distance above top surface of formwork.
 - b. Minimum slab thickness, as specified on Drawings, shall be maintained throughout slab surface.
 - c. It is anticipated that occasional Local Areas may be identified where actual deflection of formwork during concreting operations differs from that anticipated by Contractor. At such isolated areas, modify procedures by one or combination of following:
 - 1) Modify formwork camber where possible.
 - 2) Where over deflection of formwork occurs, maintain concrete slab design thickness at each end of affected beams and increase slab thickness at mid-span by amount of over deflection experienced.
5. Concrete on Metal Deck over Steel Framing System:
 - a. Grade for strike off shall be set at predetermined distance above top surface of steel floor members.
 - b. It is anticipated that occasional areas will be identified where actual deflection of steel beams during concreting operations differs from that anticipated by Engineer. At such locations, modify procedures by one or combination of following:
 - 1) Residual Camber after concrete placement: Modify fabricated camber in shop where possible for subsequent member placements having same conditions. Where this is not possible, maintain initial thickness at mid-span and increase slab thickness at each end of beam by 1/2 of amount of residual camber. In case of beam with 1/2 in (12 mm) of residual camber, slab thickness at ends of this beam only might be increased by 1/4 in (6 mm).
 - 2) Over-Deflection of Beam during concrete placement: Modify fabricated camber where possible for subsequent member placements having same conditions. Where this is not possible, two options are suggested:
 - a) Option 1: Attach loose shore to underside of this beam only at midspan. Leave initial gap below shore equal to beam camber. As beam deflects during concrete placement, shore will halt deflection at desired point.
 - b) Option 2: Maintain initial concrete slab thickness at each end of this beam only, and increase slab thickness at mid-span by amount of over deflection experienced.
 - c. Provide bench mark on each column for use by finishers as guide when they are completing finishing in these areas. It is suggested that mark be placed at predetermined distance above design grade for use by finishers in the removal of excess material as needed.

C. Scratch Finish:

NORFOLK CASINO
NORFOLK, VIRGINIA

1. Procedure: After placing concrete, finish surface to tolerances of specified overall value of F(F) 15 (floor flatness) and F(L) 13 (floor levelness) when measured according to ASTM E 1155, with minimum local value of F(F) 13 and F(L) 10.
 - a. Slope surfaces uniformly to drains where required.
 - b. While still plastic, texture concrete surface that has been screeded and bull-floated or darbied with stiff brushes, brooms, or rakes to produce surface profile amplitude of 1/4 in (6 mm) in one direction.
 - c. Re-straightening of surface with modified highway straightedge may follow screeding or bull-floating as necessary to maintain flatness/levelness.
 - d. No troweling permitted.
2. Locations to receive Scratch Finish:
 - a. Surfaces to receive bonded concrete floor topping and other bonded cementitious finish flooring material excluding thin-set tile.
 - b. Drive ramps.

D. Float Finish:

1. Procedures:
 - a. After concrete has been placed, consolidated, screeded, and restraightened, concrete shall not be worked further until ready for floating. Begin floating operations when water sheen has disappeared, and/or when mix has stiffened sufficiently to permit proper operation of float.
 - b. Floating with power machine equipped with normal trowel blades is not permitted.
 - c. Floating with power machine equipped with water attachment for wetting concrete surface during finishing is not permitted.
 - d. Consolidate surface with power-driven machine initially equipped with float-shoe blades. Hand float with wood or cork faced floats in locations inaccessible to power-driven machine. Restraighten surface with ten-foot highway straightedge applied at not less than two different angles approximately perpendicular.
 - e. Finish surfaces to following tolerances when measured according to ASTM E 1155.
 - 1) Specified Overall Values: F(F) 18 ; F(L) 15
 - 2) Minimum Local Values: F(F) 15 ; F(L) 10
 - f. Cut down high spots and fill low spots during this procedure to produce planes checking true under straightedge in any direction. Uniformly slope surfaces to drains.
 - g. Follow restraightening operation by final float pass with power machine equipped with "pizza type" metal pan clipped to float blades to uniform, smooth, granular texture.
 - h. Pre-plan floating operations sufficiently in advance to avoid over-finishing and incorporating additional water into surface.
2. Locations to receive Float Finish:
 - a. Surfaces to receive trowel finish.
 - b. Surfaces to be covered with fluid applied or sheet waterproofing.
 - c. Surfaces to be covered with built-up or membrane roofing.
 - d. Surfaces to receive mortar setting bed for tile flooring.
 - e. Surfaces composed of air-entrained concrete.

NORFOLK CASINO
NORFOLK, VIRGINIA

E. Trowel Finish:

1. Procedures: Perform after applying float finish. Intent is to perform minimum troweling effort necessary to achieve satisfactory surfaces. Avoid over-troweling of surfaces and working of water into surfaces. Where bleedwater is present prior to troweling, excess water shall be dragged off or removed by absorption with porous material such as burlap. Incorporate steps to prevent "blistering". If blistering occurs during finishing or otherwise becomes evident after placement, re-evaluate and correct finishing operations immediately.
 - a. Perform first trowel finish operation with power-driven trowel, fitted with blades as flat to surface as possible and driven at slow speed, to produce smooth surface which is relatively free of defects but may still contain some trowel marks.
 - b. Additional trowelings with power-driven trowel or by hand troweling may be necessary, with waiting period between each successive troweling effort.
 - c. Perform final troweling with hand trowels after surface has hardened sufficiently to permit final consolidation of surface, free of trowel marks, and uniform in texture and appearance.
 - d. Avoid degree of troweling effort(s) resulting in surfaces which exhibit a sheen or glossy appearance.
 - e. Avoid trowel patterns at surfaces exposed to view. Resulting trowel patterns at exposed surfaces are subject to Architect's approval.
 - f. Finish surfaces to following F(F) and F(L) tolerances when measured according to ASTM E 1155:
 - 1) Floor levelness does not apply to slabs placed on unsupported form surfaces, such as slabs over unshored metal deck, and to inclined slabs.
 - 2) Slabs-on-Grade:
 - a) Specified Overall Value: F(F)-25/F(L)-20
 - b) Minimum Local Value: F(F)-17/F(L)-14
 - 3) Elevated Cast-in-Place Concrete Framing System:
 - a) Specified Overall Value: F(F)-25/F(L)-20
 - b) Minimum Local Value: F(F)-17/F(L)-14
 - 4) Elevated Concrete on Metal Deck and Steel Beam Framing System:
 - a) Specified Overall Value: F(F)-25
 - b) Minimum Local Value: F(F)-17
 - g. Repair defects of sufficient magnitude to telegraph through floor covering by grinding or by application of topping. Refer to Remedy for Out-of-Tolerance Floor Surfaces article below for additional remedial measures.
2. Locations to receive Trowel Finish:
 - a. Monolithic slab surfaces exposed to view in finished Work, unless noted otherwise.
 - b. Slab surfaces to be covered with resilient flooring, carpet, paint, or other thin film-finish coating system.

F. Partial Trowel and Fine-Broom Finish:

NORFOLK CASINO
NORFOLK, VIRGINIA

1. Procedures: Apply a "partial trowel" finish. Start partial trowel finish with first trowel operation as described above. Perform second troweling with power trowel or by hand trowel, but only if considered necessary to remove trowel marks from initial trowel which may show through fine-broom finish, or, to achieve proper uniform surface texture ready to receive fine-brooming. Immediately after second troweling, and when concrete is still plastic, slightly scarify surface with a fine broom.
2. Locations for Partial Trowel and Fine-Broom Finish:
 - a. Surfaces to receive tile flooring installed with thin-set mortar or other adhesive.
 - b. Surfaces to receive traffic bearing membrane/coating.
3. Confirmation: Consult with floor finish supplier and installer to confirm suitability of partial trowel and fine-broom finish specified. Where supplier or installer anticipates or otherwise recommends other surface preparation techniques for product application, (such as sand, bead, or shot blasting), waiver for partial trowel and fine-broom finish requirement may be considered by Architect. Submit written description of proposed surface finishing technique for Architect's review prior to Work. Written description shall include statements from supplier and installer.

G. Broom Finish:

1. Procedures: Immediately after float finishing, slightly roughen concrete surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.
2. Locations for Broom Finish:
 - a. Exterior concrete platforms and steps.
 - b. Parking garage floors and ramps.
 - c. Where indicated on drawings.

3.7 FLOOR AND SLAB TREATMENTS

A. Aggregate Finish:

1. Procedures: Before final floating, apply slip-resistive aggregate finish where indicated. Apply according to manufacturer's written instructions and as follows:
2. Uniformly spread 25 lb/100 sq. ft. (12 kg/10 sq. m) of slip-resistive aggregate over surface in 1 or 2 applications. Tamp aggregate flush with surface, but do not force below surface.
3. After broadcasting and tamping, apply float finish.
4. After curing, lightly work surface with a steel wire brush or an abrasive stone and water to expose slip-resistive aggregate.
5. Locations:
 - a. Where indicated on drawings.

B. Dry Shake Floor Hardener Finish:

1. Procedures:
 - a. Uniformly apply dry shake materials at rate of 100 lb per 100 sq. ft., unless greater amount is recommended by material manufacturer's trained technical representative.

NORFOLK CASINO
NORFOLK, VIRGINIA

- b. Cast trial slab, not less than 100 sq. ft. in area and approximately square, to determine actual application rate, color, and finish, as acceptable to Architect. Use same concrete mix, finishing, and curing planned for project areas to receive dry shake floor finish.
 - c. Immediately following first floating operation, uniformly distribute by hand or with mechanical spreader approximately two-thirds of dry shake material over concrete surface, and embed by power floating.
 - d. Follow floating operation with second shake application, uniformly distributing remainder of dry shake material with overlapping applications to ensure uniform color, and embed by power floating.
 - e. After broadcasting and floating, apply trowel finish as specified. Cure slab surface with procedure compatible with dry-shake hardener and as recommended by material manufacturer's trained technical representative. Apply curing compound immediately after final finishing.
2. Locations:
- a. Truck dock slab surface.
- C. Penetrating Liquid Floor Hardener and Sealer (Sealed Concrete): Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions including preparation, application, precautions, limitations, and compatibility with other surface conditions.
- 1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
 - 2. Do not apply to concrete that is less than seven days old unless recommended by manufacturer in written literature describing application procedure, but only with prior approval of Architect.
 - 3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.
 - 4. Locations:
 - a. Where indicated on room finish schedule or on drawings, including exposed concrete floors noted or scheduled as having "sealed concrete" or similar wording.

3.8 WATERPROOFING FOR CONCRETE TOPPINGS AT ELEVATED KITCHENS

- A. Installation Quality Standard: Manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.
- B. General Requirements:
 - 1. If required by manufacturer, prime concrete substrate.
 - 2. Install to produce a continuous waterproof membrane of uniform thickness bonded securely to substrate, without wrinkles, bubbles, buckles or kinks.
 - 3. Overlap sheets and seal seams.
 - 4. Turn membrane up wall.
 - 5. Roll installed sheet if required by manufacturer.
 - 6. Cast concrete topping after waterproofing has cured and been tested determined it is watertight.

3.9 CONCRETE CURING

- A. General: Refer to Division 3 Sections Cast-in-Place Concrete or Concrete Curing for curing and other concrete requirements.
- B. Curing Unformed Surfaces - Interior Concrete Floors Scheduled to Receive Additional Floor Finishes. Do not use curing compounds on concrete surfaces that are to receive the following finishes:
 - 1. Floors to Receive Penetrating Liquid Floor Treatments.
 - a. Including but not limited to hardeners, sealers, densifiers and water repellents.
 - 2. Floors to Receive Polished Finish.
 - 3. Floors to Receive Chemical Stain.
 - 4. Floors to Receive Resinous Flooring.
 - 5. Floors to Receive Adhered Floor Finishes.
 - a. Including but not limited to cementitious toppings and overlays, waterproofing and other membranes, tiling and underlayments, direct glue wood flooring, resilient flooring, terrazzo, resinous flooring, adhesive applied carpet, resilient flooring, paint and other coatings, epoxy overlays and other adhered floor covering systems.
- C. Incorrect Use and Removal of Curing Compounds: If curing compounds are used on surfaces, exterior or interior, formed or unformed, that are scheduled or specified to receive surface-adhered finishes or treatments, then mechanically (bead blast) or chemically remove curing compound completely. Confirm required surface finish with flooring manufacturers and installers
 - 1. Removal: After curing period has elapsed, but not later than 7 days after end of curing period, remove curing compound using method recommended by curing compound manufacturer without damaging or otherwise creating an unsuitable concrete surfaces to receive flooring systems. Removal of curing compounds shall be provided at Contractor's expense.
 - a. Acid etching is not permitted.
 - 2. Allow additional time after curing compound removal for concrete surfaces to reach required concrete moisture and water vapor limitations required for successful application of subsequent floor finishes and treatments.
 - 3. Dry-Shake Hardener: Consult with hardener manufacturer to confirm curing compound product and application method on surfaces where dry-shake hardener has been applied.
- D. Control of Water after Curing: Continuously monitor and control water, including but not limited to rain, ice or snow, on surfaces after curing period. Rewetting surfaces affects the drying period for hardened concrete and directly affects installation of finish materials applied with adhesives sensitive to moisture or water vapor. Contractor is responsible for controlling water and the resulting effects on concrete and material(s) to be applied to hardened concrete.

3.10 FLOOR SURFACE TOLERANCES

- A. Specified Overall Value(s) and Minimum Local Value(s) herein represent minimum floor flatness/levelness criteria for project.

NORFOLK CASINO
NORFOLK, VIRGINIA

1. Where normal data collection under provisions of ASTM E 1155 indicate possibility of work below these values, additional data collection may be required to confirm extent, or boundary, of defective work at Contractor's expense.
2. When areas are identified as not meeting specified Minimum Local Value(s), such areas are deemed as out-of-tolerance floor surfaces and shall be replaced or repaired in accordance with "Remedy for Out-of-Tolerance Floor Surfaces" below.

B. Floor Elevation Tolerances: These tolerances supersede ACI requirements.

1. Permissible Vertical Envelope: When tested in accordance with requirements of ASTM E 1155, following percentages of elevation samples on floor slabs at single elevation shall fall within level 3/4 in (19 mm) envelope centered about mean elevation of readings.
 - a. Slabs-on-Grade: 85 percent.
 - b. Shored Elevated Slabs (Before Removal of Shores): 80 percent.
 - c. Elevated Slabs on Metal Deck and Steel Framing: 75 percent.
2. Permissible Arithmetic Mean Deviation of Floor Samples: Arithmetic mean of these elevation samples shall not deviate from design grade more than following amounts:
 - a. Slabs-on-Grade: 3/8 in (10 mm), plus or minus.
 - b. Shored Elevated Slabs (Before Removal of Shores): 1/2 in. (13 mm), plus or minus.
 - c. Elevated Slabs on Metal Deck and Steel Framing: 3/4 in. (19mm), plus or minus

C. Contractor shall take immediate action to correct work that does not meet specified tolerances.

3.11 REMEDY FOR OUT-OF-TOLERANCE FLOOR SURFACES

A. General:

1. Remedial work, testing, retesting, and consulting services necessary to correct out-of-tolerance floor surfaces shall be at Contractor's expense with no extension to construction schedule.
2. Repair and/or replacement procedures, limits, and products shall be in manner that does not diminish desired appearance or serviceability of structure, and acceptable to Architect/Engineer and Owner. Contractor shall submit detailed work plan for areas where remedial measures are necessary, prior to work, and in accordance with Contractor's submittal "Work Plan for Out of Tolerance Floor Surfaces".

B. Remedial Measures:

1. Minimum local areas measuring below specified minimum local value(s) shall be repaired by grinding or by application of topping or underlayment to entire surface of minimum local area, and retested, unless following conditions occur:
 - a. Such area is acceptable to Architect/Engineer and Owner, and written acceptance is provided.
 - b. Repair of such area would diminish desired appearance and/or serviceability of structure, or is in general considered unacceptable to Architect/Engineer and Owner for other reasons, in which case minimum local area(s) shall be replaced and retested.
2. Application of topping or underlayment:

NORFOLK CASINO
NORFOLK, VIRGINIA

- a. Prime floor surface as recommended by topping or underlayment manufacturer.
- b. Add aggregate for thicker areas as recommended by topping or underlayment manufacturer.
- c. Install in accordance with manufacturer's directions.
- d. For interior areas which are to have finish flooring, use self-leveling concrete underlayment.
- e. For areas which will be exposed as wearing surface, use self-leveling concrete topping.

3.12 CONCRETE SURFACE REPAIRS

A. General:

1. Locate surface defects where repair is required by visual inspection of formed and unformed surfaces. Mark location in manner that does not cause further defect. Record and maintain record of such defects for Repair Records Submittal.
2. Remove and replace concrete with surface defects if defects cannot be repaired to satisfaction of Architect/Engineer or Owner.
3. Concrete removal shall be with equipment and procedures which will prevent cracking, micro-cracking, and bruising of sound concrete to remain. Follow initial concrete removal process with sandblasting to remove any remaining deleterious effects.
4. Repairs shall be performed by trained installer, experienced with type repair and repair products required.
5. Avoid cutting reinforcement during repairs, but, where reinforcement is encountered, remove concrete so as to expose reinforcement within repair area for 1 in (25 mm) minimum on all sides.
6. Protect freshly applied repair mortars from exposure to direct sunlight, wind, rain, and frost.
7. Repair procedures outlined below are general in nature and not intended as complete repair preparation or installation instructions. Intent is to provide minimum basic repair criteria allowing for flexibility of means/methods based on experience of trained installers.

B. Surface Defects: Repair and patch surface defects which become evident during construction and warranty periods, when such conditions are exposed to view, or when durability, serviceability, and/or structural integrity of structure is affected by defect. Surface defects requiring attention include, but are not limited to, following.

1. Honeycombs, rock pockets, and voids over 1/4 in (6 mm) in any dimension.
2. Holes left by tie rods, bolts, or other.
3. Exposed reinforcing.
4. Cracks 0.02 in (0.50 mm) wide or wider at interior exposed or non-exposed conditions.
5. Cracks in excess of 0.01 in (0.25 mm) wide at exterior exposed conditions and/or where water tightness is critical as determined by Architect/Engineer.
6. Cracks which penetrate completely through member, regardless of width.
7. Spalls which affect durability, structural integrity, or finish appearance at surfaces exposed to view.
8. Surface crazing which affects durability, structural integrity, or finish appearance at surfaces exposed to view.
9. Stains, discolorations, and texture irregularities at surfaces exposed to view which cannot be corrected by cleaning or rubbing processes.
10. High or low irregularities in unformed surfaces other than as specified for Out-of-Tolerance Floor Surfaces.

C. Repairing Formed Surfaces:

NORFOLK CASINO
NORFOLK, VIRGINIA

1. After form removal, cut out honeycombs, rock pockets, and voids more than 1/2 in (12 mm) in any dimension in solid concrete.
 - a. Mark perimeter of area to be removed with straight-line segments forming rectangular or square repair area on formed surface. Intent is for repair area edges to be linear and repair area shape to be parallelogram.
 - b. Saw cut perimeter of repair area to pre-determined repair depth, but not less than 1/2 in (12 mm). Make edges of cuts perpendicular to concrete surface.
 - c. Remove concrete within repair area by appropriate method to obtain exposed aggregate surface with minimum surface profile of 1/8 in (3 mm).
 - d. Clean substrate of dust, dirt, loose concrete, or other bond inhibiting material.
 - e. Dampen prepared substrate with water to saturated surface dry condition, and brush-coat surface with bonding agent. Pre-dampening may be omitted if not required by repair mortar manufacturer.
 - f. Fill and compact with repair mortar before bonding agent has available exceeded pot life.
 - g. Finish repair surface to match plane and texture of adjacent concrete.
 - h. Cure repair surface by moisture retaining cover for minimum period of 72 hours, but not less than period recommended by repair mortar manufacturer.
 2. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
 3. Repair defects on surfaces exposed to view with patching mortar consisting of blend of white Portland cement and standard Portland cement so that, when dry, patching mortar will match surrounding color.
 - a. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching.
 - b. Prepare substrate to receive patching mortar same as described above, except, repair depth not less than 1 in (25 mm).
 - c. Compact mortar in place and strike off slightly higher than surrounding surface.
 - d. Cure repair surface with moisture retaining cover for 7 days minimum.
 4. Repair cracks exceeding limitations noted above by high or low pressure epoxy injection procedure acceptable to Architect/Engineer. Gravity flow techniques for epoxy resin repair of cracks not permitted.
- D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
1. After concrete has cured at least 14 days, correct high areas by removal with mechanical equipment and procedures which will not cause cracking, micro-cracking, or bruising of sound concrete.
 2. Correct localized non-exposed low areas by cutting out low areas to minimum depth of 1/2 in (12 mm) and 1/8 in (3 mm) surface profile. Apply bonding agent and replace with repair mortar. Finish repaired areas to blend into adjacent concrete.
 3. Correct low interior areas scheduled to receive floor coverings with self-leveling concrete underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.

NORFOLK CASINO
NORFOLK, VIRGINIA

4. Correct low interior areas scheduled to remain exposed with self-leveling concrete topping. Cut out low areas to ensure a minimum repair topping depth of 1/2 in (12 mm) to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
5. Correct low exterior areas to remain exposed with overlay or repair mortar suitable for application. Cut out defective areas to ensure minimum repair mortar depth of 1/2 in (12 mm) and 1/8 in (3 mm) surface profile. Prepare, mix, apply, and cure repair mortar and primer according to manufacturer's written instructions
6. Repair defective areas which cannot be satisfactorily repaired, by cutting out defective area in its entirety and replacing with fresh concrete. Remove defective areas with clean, square cuts. Preserve and expose steel reinforcement with at least 1 in (25 mm) clearance all around. Dampen concrete surfaces in contact with fresh concrete and apply bonding agent. Mix fresh concrete of same materials and mix as original concrete unless smaller coarse aggregate necessary for application. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
7. Repair single holes 1 in (25 mm) or less in diameter with patching mortar. Cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.
8. Repair cracks exceeding limitations noted above by high or low pressure epoxy injection procedure acceptable to Architect/Engineer. Gravity flow techniques for epoxy resin repair of cracks not permitted.

E. Structural Repairs:

1. Definition: Defects described above at structural load-bearing members where structural integrity of structure is jeopardized or of concern to Engineer.
2. Procedures:
 - a. Defects requiring structural repair shall be determined by Engineer.
 - b. Perform structural repairs with prior approval of Engineer for method and procedure using specified bonding compound and/or repair materials.

F. Repair methods not specified above may be considered, subject to approval of Architect/Engineer prior to work.

3.13 JOINT FILLING

- A. Prepare, clean, and install joint filler according to manufacturer's written instructions.
- B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.
- C. Install joint filler full depth in saw-cut joints and in tooled joints. Overfill joint and trim joint filler flush with top of joint after hardening.

NORFOLK CASINO
NORFOLK, VIRGINIA

PART 4 - QUALITY CONTROL

4.1 INSPECTION STANDARDS

- A. Quality control, testing, and inspections shall meet the special inspection requirements of the building code and any local or state provisions.

4.2 TESTING AGENCY

- A. Owner will employ and pay a qualified independent testing agency to perform the quality control indicated in this section, including special inspections required by the building code.
- B. Floor Flatness Inspector to perform floor surface profile measurements shall be certified by manufacturer of floor profile measurement apparatus.
- C. Flatness and Levelness Inspection and Reporting for Floor Slabs:
 - 1. Determine flatness and levelness of interior floor slabs designated to receive troweled finish. Data shall be collected in manner consistent with requirements of ASTM E 1155 and using Type II Apparatus.
 - 2. Coordinate with Contractor to establish measurement program and desired lines for data collection, in accordance with requirements of ASTM E 1155.
 - 3. Mark clearly on floor surface beginning point and ending point of each line of data collection.
 - 4. Those lines of data which will be used to study time-dependent behavior of floor will be collected along chalk line which has been established by Inspector. Each chalk line is to be protected in manner which will allow subsequent data to be collected at same locations.
 - 5. Measurements shall be made within 24 hours after completion of concrete finishing operations.
 - 6. Immediately following data collection, Inspector will process data. Contractor will provide Inspector with actual elevation of "Start" and "End" points for each data line marked by Inspector.
 - 7. Within 48 hours of data collection, Inspector will provide Contractor with written report stating results of floor profile measurements and surface analysis for each slab placement. Report(s) shall include following:
 - a. Key plan showing location of data collected.
 - b. Results required by ASTM E 1155.
 - c. Running tabulation of composite FF and FL values for surfaces installed to date.
 - d. Calculated percentage of elevation samples falling within level 3/4 in (19 mm) envelope, centered about mean elevation of samples taken to date at subject floor level(s).
 - e. Comments on possible cause of floor surface deviations noted during analysis of data.
 - f. Recommendations for adjustments in future construction based on analysis of data.

4.3 CONTRACTOR

- A. Owner's employment of a qualified independent testing agency to perform the testing/inspection services shall not operate to relieve Contractor of responsibility to furnish materials and workmanship in accordance with Contract Documents.

NORFOLK CASINO
NORFOLK, VIRGINIA

- B. Owner's employment of a qualified independent testing agency to perform the testing/inspection services is for verification and does not prevent Contractor from providing supplemental testing/inspection at Contractor's discretion and expense.
- C. Qualifications of Contractor's Testing/Inspection Personnel: Contractor's personnel performing testing/inspection services are subject to same qualifications as Owner's Testing Agency.
- D. Re-testing of conditions failing to meet specified requirements shall be provided at Contractor's expense.
 - 1. In the event of differences between Owner's testing agency and Contractor's inspector regarding conformance, such differences shall be brought to the attention of the Architect, Engineer of Record and enforcement agency as part of the resolution.
 - 2. Where there is no resolution of differences, joint supplemental testing between Owner's testing agency and Contractor's inspector may be required and provided at Contractor's expense.
 - 3. Additional fees for Architect and Engineer of Record participation in resolution of non-conforming work may be required and provided at Contractor's expense.
- E. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 - 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
 - a. Concrete underlayments, self-leveling concrete toppings, and overlay/repair mortars
 - b. Crack repair/injection.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 034100

PLANT-PRECAST STRUCTURAL CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

- A. Perform Work required to complete the plant-precast structural concrete indicated by the Contract Documents and furnish supplementary items necessary for its proper installation.

1.2 QUALITY ASSURANCE

- A. Codes and Standards: Comply with the provisions of the following codes, Specifications and Standards, except as otherwise shown or specified.
 - 1. ACI 301, "Specifications for Structural Concrete for Buildings."
 - 2. ACI 318, "Building Code Requirements for Reinforced Concrete."
 - 3. ACI 304, "Recommended Practice for Measuring, Mixing, Transporting and Placing Cement."
 - 4. ACI 311, "Recommended Practice for Concrete Inspection."
- B. Where provisions of the above Codes and Standards are in conflict with the building code in force for this project, the building code shall govern.

1.3 FABRICATOR QUALIFICATIONS

- A. Only a firm which has had a minimum of 5 years successful experience in fabrication of precast concrete units similar to the units required for this project will be acceptable. Fabricator must have sufficient production capacity to produce the required units without causing delay in the work. Fabricator must be approved by the Architect.
- B. Fabricator must be an active member of the Prestressed Concrete Institute (PCI) and participate in its Plant Certification Program.
- C. Comply with PCI MNL-116 "Manual for Quality Control" for Plants and Production of Precast Prestressed Concrete Products except as herein otherwise specified.
- D. Fabrication tolerances: Fabricate units complying with dimensional tolerances specified in PCI MNL-116, unless noted otherwise.

1.4 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.
- B. Shop Drawings:
 - 1. Submit shop drawings showing complete information for the fabrication and installation of precast concrete units. Indicate member dimensions and cross-section; location, size and type of reinforcement, including special reinforcement and lifting devices necessary for handling and erection.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Submit complete design calculations bearing the seal of a registered engineer for review. Calculations shall include complete stress histories for flexure, shear, torsion, and bearing; camber and deflection; erection stresses; and other information required to verify conformance with governing codes.
3. Show layout, dimensions, and identification of each precast unit corresponding to the sequence and procedure of installation. Indicate welded connections by AWS standard symbols. Detail inserts, connections, and joints, including accessories and construction at openings in precast units.
4. Show location and details of anchorage devices that are to be embedded in other construction.
5. Submit two (2) copies each to the contractor and architect of each and every precast concrete test report.

1.5 DESIGN

- A. Fabricator shall design precast units to withstand lateral pressures, loads, and shipping and erection stresses to conform to Drawings and applicable codes of governing authorities. Submit design notes as indicated on Drawings.
- B. Design precast members to have a minimum compressive strength of the concrete as shown on the Drawings.
- C. Design modifications may be made only as necessary to meet field conditions and to insure proper fitting of work, and only as acceptable to the Architect. Maintain general design concept shown without increasing or decreasing size of members or altering profiles and alignment shown.

1.6 Storm Shelter Requirements

- A. Special Storm Shelter Requirements:
 1. Documents prepared for ICC-500 compliant storm shelters shall meet the requirements of the ICC-500 code. This includes all envelope design requirements, missile impact requirements, baffling for penetrations, impact/laydown requirements, fire resistance rating, joints/gaps/voids in envelope, wind speed requirements, and all other applicable codified requirements set forth in the ICC-500.
 2. Modifying and updating design/fabrication drawings based on responses to third party engineer's peer review are required to address all third party engineer critiques of the documents pertaining to precast scope.
 3. Precast drawings shall indicate requirements of the "Design Information" as stipulated by ICC Section 106 and a "Quality Assurance Plan" as stipulated by ICC-500 section 107.
- B. Reference 03500 – Architectural Precast Concrete for additional information.

1.7 PRODUCT DELIVERY AND HANDLING

- A. Deliver precast concrete units to project site in such quantities and at such times as will assure continuity of installation. Carefully pack precast units for transportation to destination with exercise of reasonable and customary precautions against damage in transit to panels or inserts. Provide adequate protection from damage to arises and from contact with anything which would result in accumulation of dirt, dust, soot, mud, grease, or other staining or disfiguring elements.

1.8 PREPARATION FOR OTHER TRADES

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- A. Do any cutting, notching, forming and drilling of precast items required for the installation of the work of other trades, as shown on approved shop drawings. Provide lifting inserts for lifting and erection of members.
- B. Fully coordinate all penetrations in precast walls with other trades.

1.9 MOCK-UP

- A. Provide one (1) 4'-0" x 4'-0" full size unit "Mock-Up" sample cast from the approved design mixes. This sample beam shall be used to establish the desired abrasive blast finish to be used. Locate mock-ups where directed by Architect.
- B. Sample panels shall be prepared subsequent to approval of concrete design mix and after Architect has approved abrasive blast texture to be used, sample panels shall be protected and retained on the site for the duration of the project.
- C. If initial mock-ups prove unsatisfactory, construct additional mock-ups as necessary until approved by Architect. Promptly remove rejected mock-up from site.
- D. Maintain approved mock-ups in place until removal is directed by Architect. When directed by Architect, completely dismantle mock-up and remove from Site.
- E. Various size abrasives shall be tried on mock-ups to determine the best abrasive to use for finish desired.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Portland Cement: ASTM C 150, Type I or III regular gray Portland Cement. Cement manufacturer shall warrant in writing that the color variation in the cement shall not exceed a total color deviation $E = 1.7$ from the manufacturer's standard, when measured by the Hunterlab Color and Color Difference Meter, Model D-25.
- B. Coarse Aggregates: ASTM C 33. Quality gradation and color of aggregate must be consistent. Samples and analysis of aggregate shall be approved by Architect.
- C. Fine Aggregate: ASTM C 33, Equal to manufactured stone sand.
- D. Concrete Admixtures: Cement-dispersing water-reducing types that follow water-cement ratio law. ASTM C 494, Type A or D, use strictly in accordance with manufacturer's recommendations and as determined by testing laboratory. Use an admixture that will not discolor concrete or in any way affect appearance of concrete. Do not use calcium chloride. Admixtures must be approved by Architect.
- E. Water: Clean, fresh and free from oil and various amounts of vegetable matter, alkalies or other impurities.
- F. Reinforcement and Anchoring Materials:
 - 1. Anchors, Angles and Accessories: Sizes and types indicated, and as required to meet design conditions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Bolts and Nuts: ASTM A 307, low-carbon steel bolts, regular hexagon nuts and carbon steel washers, unless otherwise noted.
 3. Steel Shapes: ASTM A 36.
 4. Prestressing Tendons: Uncoated seven-wire stress relieved or low relaxation strand, ASTM A 416, Grade 270.
 5. Welding Rods: American Welding Society AWS D1.1 Series electrodes of suitable operating characteristics.
- G. Forms: Provide precast plant steel forms of dimensions shown.
- H. Structural Steel Attachments:
1. Items totally embedded in concrete need not have an applied finish, but shall be clean and free of rust.
 2. Items exposed in areas of the building which are not exposed to weathering, shall have exposed surfaces painted with shop coat gray primers.
 3. Items exposed to weathering or corrosive atmosphere, or where otherwise indicated, shall be hot dip galvanized per ASTM A 123.
- I. Bar Supports: Plastic chairs of the color of the concrete.
- J. Grout: Master Builders, Inc. "EMBEKO 636" or Cormix, "Supreme Grout". Mix in accordance with manufacturer's recommendation. Compressive strength of grout shall be not less than 5000 psi at 7 days and 7500 psi at 28 days.
- K. Neoprene Bearing Pads: Section 25 of Standard Specification for Highway Bridges (60 durometer).
- L. Curing Compound: ASTM C 309 clear acrylic curing/sealing compound.

PART 3 - EXECUTION

3.1 FORMS

- A. Unless forms for plant manufactured prestressed concrete units are stripped prior to detensioning, design forms so that stresses are not induced in precast units due to deformation of concrete under prestress.
- B. Rustications and Corner Strips: Nonabsorbent material designed to be compatible with the form surface. Apply rustications so as to prohibit the loss of paste or water between the two surfaces.
- C. Form design shall allow easy removal. Prying against concrete will not be allowed. Thoroughly clean and recondition forms prior to re-use.
- D. Accurately locate required setting anchorage devices, etc., as shown on approved shop drawings, and as required for proper and adequate attachment to supporting structure. Anchorages should be so designed to preclude the necessity for force of any kind during installation and to allow requisite adjustment to line, level and position.

3.2 PLACING REINFORCING

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- A. Comply with the specified codes and standards, and Concrete Reinforcing Steel Institute's recommended practice for "Placing Reinforcing Bars", for details and methods of reinforcement placement and supports, and as herein specified.
- B. Design reinforcement for lateral pressures that will be imposed upon elements due to the weight of the cast-in-place concrete and for handling, lifting, stripping and erection conditions which require additional reinforcement and/or inserts, shall be the responsibility of the Contractor.
- C. Clean reinforcement of loose rust and mill scale, earth, ice, and other materials which reduce or destroy bond with concrete.
- D. Accurately position, support and secure reinforcement against displacement by formwork, construction, or concrete placement operations. Locate and support reinforcing by plastic chairs, runners, bolsters, and spacers as required.
- E. Reinforcing Bars to be Welded: Bars shall have a carbon content not exceeding 0.30 per cent and a manganese content not exceeding 0.60 percent. Reinforcing steel to be welded shall be domestic steel conforming to ASTM A 706, unless otherwise noted. Provide certified copies of the ladle analysis for each lot of bars to be welded. Bars that are to be welded shall be clearly identified with the heat from which they are rolled. Welding shall not be permitted on bars without such identification.
- F. Welding of Bars: Welding of steel bars shall comply with requirements of AWS D12.1. Welding: done by AWS certified welders.
- G. Pretensioning of tendons for prestressed concrete may be accomplished either by the single strand tensioning method or by the multiple-strand tensioning method.
- H. Delay detensioning of prestressed units until the concrete has attained at least 75 per cent of the design ultimate compressive strength as established by test cylinders.

3.3 PREPARATION OF FORM SURFACES

- A. Coat steel forms with a nonstaining, rust-preventative form oil or otherwise protect against rusting. Rust-stained steel formwork is not acceptable.

3.4 CONCRETE PLACEMENT

- A. General: Comply with ACI 304, and as herein specified.
- B. Deposit concrete continuously or in layers of such thickness that no concrete will be placed on concrete which has hardened sufficiently to cause formation of seams or planes of weakness within the section. If a section cannot be placed continuously, provide construction joints as herein specified. Deposit concrete as nearly as practical to its final location to avoid segregation due to rehandling or flowing.
- C. Consolidate placed concrete by mechanical vibrating equipment supplemented by hand-spading, rodding or tamping. Use vibrators designed to operate with vibratory element submerged in concrete, maintaining a speed of not less than 7000 vibrations per minute.

3.5 CURING METHODS

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- A. Perform curing of concrete by moist curing, by moisture-retaining cover curing, by membrane curing, or by combinations thereof, as herein specified.
 - 1. Provide moisture curing by the following methods:
 - a. Keep concrete surface continuously wet by covering with water.
 - b. Continuous water-fog spray.
 - c. Covering concrete surface with an absorptive cover, thoroughly saturating cover with water and keeping continuously wet. Place absorptive cover to provide coverage of concrete surfaces and edges, with 4" lap over adjacent absorptive covers.
 - d. Curing by low-pressure steam, by steam vapor, by radiant heat and moisture, or other similar process may be employed to accelerate concrete hardening and to reduce the curing time.

3.6 FINISHED SURFACES

- A. Precast Beams and Column Units: Formed surfaces shall be produced in forms that impart a smooth finish to the concrete (e.g., plastic-lined or metal). Small surface holes caused by air bubbles, and normal form joint marks, will be tolerated, but no major or unsightly imperfections, honeycomb, or structural defects will be permitted.
- B. Sandblast Finish: Portions of precast elements to be sandblasted shall match sample prepared by the Contractor and approved by the Architect.
- C. Exposed Aggregate Finish:
 - 1. Placing Aggregate: Place the finish aggregate material on the bottom of the form on top of a screeded layer of sand. Stones shall be tightly set together using smaller aggregate as may be required to fill voids between the larger stones. Bed to one-half their diameter. It is intended to have little or no cement showing on the outside face.
 - 2. Pouring: The concrete panels shall be poured on top of the finished aggregate to the thickness shown in the drawings and finished to yield a light uniform sand finish.
 - 3. Cleaning: Clean panels with water and brushes immediately after panel is raised to remove sand and dirt. Use water hose nozzle velocity as required.
 - 4. Pieces of exposed aggregate that become loose or fall out during the lifting and/or cleaning operation shall be replaced with an approved epoxy in a workmanlike manner. The epoxy material shall be used in accordance with the manufacturer's recommendations.
- D. Patching: Areas which have been patched must be indistinguishable from surrounding areas.

3.7 DIMENSIONAL TOLERANCES

- A. Members shall be straight and true. Bowed or deformed members will not be accepted. The following tolerances shall not be exceeded:
 - 1. Length for units - plus or minus 3/8".
 - 2. Width (overall) for units - plus or minus 1/4".
 - 3. Depth for units - plus or minus 1/4".
 - 4. Position of blockouts and inserts - plus or minus 3/8".
 - 5. Horizontal deviation from straight line - 1/8" in 10', total not to exceed 3/8".
 - 6. Twist - end to end 1/4 degree.

3.8 COLD WEATHER PLACING

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- A. Protect concrete work from physical damage or reduced strength which could be caused by frost, freezing actions, or low temperatures, in compliance with ACI 306 and as herein specified.
- B. When air temperature has fallen to or is expected to fall below 40 Deg. F., uniformly heat water and aggregates before mixing as required to obtain a concrete mixture temperature of not less than 50 Deg. F., and not more than 80 deg. F. at point of placement.

3.9 HOT WEATHER PLACING

- A. When hot weather conditions exist that would seriously impair the quality and strength of concrete, place concrete in compliance with ACI 305 and as herein specified.
- B. Cool ingredients before mixing to maintain concrete temperature at time of placement below 90 deg. F. Mixing water may be chilled, or chopped ice may be used to control the concrete temperature provided the water equivalent of the ice is calculated to the total amount of mixing water.
- C. Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that the steel temperature will not exceed the ambient air temperature immediately before embedment in concrete.

3.10 PATCHING

- A. Before commencing any patching, Contractor shall confirm patching procedures with Architect and establish by trial mix the formula for patching of finish.

3.11 SETTING GROUT

- A. Grout shall be mixed only in such quantities as are needed for immediate use. No retempering shall be permitted and materials which have been mixed for a period exceeding thirty (30) minutes shall in no case be used upon any portion of the work.

3.12 PROTECTION

- A. Take proper precautions to protect the work of other trades over which or against which precast concrete work occurs.

3.13 DAMAGED MATERIAL

- A. Any cracked or broken items shall not be set but shall be replaced with satisfactory work. Patching of minor defects, by skilled mechanics, will be permitted, but hiding of large defects or those which affect the appearance of the items will not be permitted.

3.14 HANDLING AND ERECTION

- A. Prior to commencement of erection operations, check relevant job site conditions insofar as they affect the future installation of precast elements. Any discrepancies or variations or other conditions that may prevent the satisfactory and proper execution of erection operations will be duly noted and corrective action taken prior to the execution of the erection operations.
- B. Elements shall be erected by competent tradesmen and accurately set in the positions assigned to them on the approval installation and/or erection drawings, and securely anchored in final position. Joints shall be treated in conformity with detail Drawings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Erection procedures shall be determined by the Contractor and shall represent the most economical procedures, methods and sequences possible and consistent with Drawings and Specifications.
- D. Precast units shall be adequately braced and supported during erection to insure proper alignment and safety and such bracing or support shall be maintained until there are adequate permanent connections.
- E. Units shall be erected with particular care both with regard to damage to the exposed exterior surface of the members, including previously erected units, and with regard to their tolerances in respect to line, plane, and elevation of adjacent units.
- F. The bases of precast concrete columns shall be grouted in accordance with the manufacturer's recommendations immediately after connecting members are set, plumb, shimmed and aligned.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 034500
ARCHITECTURAL PRECAST CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Plant precast reinforced architectural concrete units and supplementary items necessary for installation.
 - 1. Architectural precast concrete cladding units.
 - 2. Insulated, architectural precast concrete units.
 - 3. Masonry-faced, architectural precast concrete units.
 - 4. Stone-faced, architectural precast concrete units.
- B. Related Requirements:
 - 1. Refer to Division 01 Section Field Test for Air and Water Leakage.

1.2 DEFINITIONS

- A. Design Reference Sample: Sample of approved architectural precast concrete color, finish and texture, approved by Architect.

1.3 DELEGATED ENGINEERING REQUIREMENTS

- A. Delegated Engineering Responsibility: Contractor shall engage a qualified professional engineer to provide engineering for products and systems required to comply with the design intent of Contract Documents.
 - 1. Contract Documents Design Intent: Drawings and Specifications indicate design intent for products and systems and do not necessarily indicate or specify total Work required. Contract Documents shall not be construed as an engineered design; furnish and install Work required for a complete installation.
 - 2. Delegated Engineer Professional Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated with a record of successful in-service performance. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.
 - 3. Submittals: Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified professional engineer.
 - 4. Coordination of Work:
 - a. Product Variations: In the event of minor differences between products and systems of acceptable or available manufacturers, Contractor shall notify Architect of such differences and resolve conflicts in a timely manner. Failure of Contractor to provide notification shall be construed as acceptance of conditions indicated, and changes caused by minor differences between products and Contract Documents shall be included in the Work at no additional cost to Owner.
 - b. Allowable Adjustments: Minor dimension and profile adjustments may be made in interest of fabrication or erection methods or techniques or ability to satisfy design intent, provided design intent is maintained as determined by Architect. Proposed deviations shall include a detailed analysis of impact to adjacent substrates or other building systems, including related design or construction cost impacts. If accepted by Architect, deviations causing changes in materials, constructability,

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

substrates, or conditions shall be included in the Work at no additional cost to Owner.

1.4 ACTION SUBMITTALS

- A. Product Data: Manufacturer/fabricator's technical literature for each product and system indicated.
 - 1. Include manufacturer/fabricator's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Design Mixtures: Manufacturer/fabricator's detailed ingredients list for each concrete mixture. Include compressive strength and water-absorption tests.
- C. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work. Indicate details at building corners.
 - 1. Indicate separate face and backup mixture locations and thicknesses.
 - 2. Indicate welded connections by AWS standard symbols. Detail loose and cast-in hardware and connections.
 - 3. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
 - 4. Indicate locations, extent, and treatment of dry joints if two-stage casting is proposed.
 - 5. Indicate relationship of units to adjacent materials.
 - 6. Indicate joints, reveals, and extent and location of each surface finish.
 - 7. Thin Masonry Facing Units: Indicate locations and details of thin masonry facing units, including corner units, special shapes, and joint treatments.
 - 8. Stone Facing Units: Indicate locations and details of stone facing units, anchors, and joint treatments.
 - 9. Design Modifications: If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.
- D. Concrete-Faced Unit Samples for Verification Purposes: Design reference samples for verification of design intent, for each type of finish indicated on exposed surfaces of architectural precast concrete units, in sets of three, representative of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches (300 by 300 by 50 mm).
- E. Thin Masonry Facing Unit Samples for Verification Purposes: Exposed surfaces of masonry-faced units for each type of finish indicated, in sets of 3, illustrating full range of color and texture variations expected; approximately 12 in by 12 in by 2 in (300 mm by 300 mm by 50 mm).
- F. Stone Facing Unit Samples for Verification Purposes: Exposed surfaces of stone-faced units for each type of finish indicated, in sets of 3, illustrating full range of color and texture variations expected; approximately 12 in by 12 in by 2 in (300 mm by 300 mm by 50 mm).
- G. Pre-Production Sample Panels: After sample approval and before fabricating architectural precast units, produce sample units for review by Architect. Produce as many sample units as required, but not less than a minimum of two sample panels approximately 16 sq. ft. (1.5 sq. m) in area for review by Architect to verify selections made under Sample submittals. Incorporate full-scale details of architectural features, finishes, textures, and transitions in sample panels.
 - 1. Locate panels as indicated or, if not indicated, as directed by Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Damage part of an exposed-face surface for each finish, color, and texture, and demonstrate adequacy of repair techniques proposed for repair of surface blemishes.
 3. After acceptance of repair technique, maintain one sample panel at manufacturer's plant and one at Project site in an undisturbed condition as a standard for judging the completed Work.
 4. Demolish and remove field sample units when directed by Architect.
- H. Range Samples: After sample panel approval and before fabricating architectural precast concrete units, produce a minimum of three sets of samples, approximately 16 sq. ft. (1.5 sq. m) in area, representing anticipated range of each color and texture on Project's units. Maintain one set of range samples at Project site and remaining sets at manufacturer's plant as color and texture approval reference.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Delegated Engineering Submittal: For products and systems indicating compliance with performance requirements. Include structural analysis, calculations and other performance data signed and sealed by the qualified professional engineer responsible for their preparation.
- B. Product Test Reports: Written reports based on evaluation of comprehensive tests performed by qualified testing agency indicating that each product complies with requirements.
1. Results that materials, including water, in concrete mix are free of ferrous or other material which will cause surface staining during curing operations or upon exposure to weather.
 2. Results that aggregates have a stain index of less than 20 according to ASTM C 641.
- C. Source Quality-Control Submittals:
1. Source Quality-Control Programs: For architectural precast manufacturer.
- D. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control" Article.
- 1.6 QUALITY ASSURANCE
- A. Manufacturer Qualifications: Manufacturer with not less than 10 years of experience in the successful production and in-service performance of products and systems similar to scope of this Project.
1. Certification Program Participant: Participates in one of following:
 - a. PCI's plant certification program and designated a PCI-certified plant for Group A, Category A1 - Architectural Cladding and Load Bearing Units.
 - b. APA's "Plant Certification Program for Production of Architectural Precast Concrete Products" and designated an APA-certified plant.
- B. Installer Qualifications:
1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 3. Manufacturer/Fabricator Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer/fabricator to install products.
- C. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Design Standards: Comply with **ACI 318 (ACI 318M)** and design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of architectural precast concrete units indicated.
- E. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products" unless more stringent requirements are indicated.
- F. Welding: Qualify procedures and personnel according to AWS qualification requirements and following:
 - 1. AWS D1.1/D.1.1M, "Structural Welding Code - Steel".
 - 2. AWS D1.4, "Structural Welding Code - Reinforcing Steel".

1.7 MOCKUPS

- A. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up using materials indicated for the completed Work.
 - 1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.
 - 2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 - 3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
 - 4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
 - 5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.8 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
 - 1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 - 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 - 3. Record discussions, including decisions and agreements, and prepare report.
- 1.9 DELIVERY, STORAGE, AND HANDLING
- A. Delivery: Deliver units in such quantities and at such times to limit unloading units temporarily on ground. Support units during shipment on nonstaining shock-absorbing material.
 - B. Storage: Store units with adequate dunnage and bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping, or other physical damage.
 - C. Handling: Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses which would cause cracking or damage. Lift and support units only at designated points shown on Shop Drawings.
- 1.10 COORDINATION
- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- 1.11 SEQUENCING
- A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer/fabricator. Provide secondary materials only as recommended by manufacturer/fabricator of primary materials.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Design Standards: Comply with **ACI 318 (ACI 318M)** and design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of architectural precast concrete units indicated.
- C. Structural Loads: Engineer products and systems to withstand loads within limits of allowable working stresses of the materials involved under conditions indicated including, but not limited to gravity, wind, seismic, and erection design loads and thermal movements established by authorities having jurisdiction, applicable building codes, and as indicated.
 - 1. Wind Loads: As indicated on Drawings or Wind Analysis Report.
 - 2. Other Loads: As indicated on Drawings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Structural Movement: Engineer system to withstand movements of supporting structure including, but not limited to inter-story drift, twist, column shortening, long-term creep and deflection from uniformly distributed and concentrated live loads:
 - 1. Live Load Deflection: Accommodate differential vertical deflection of floors:
 - a. Deflection: As indicated on Drawings.
 - 2. Inter-story Drift: Accommodate inter-story drift between adjacent floors perpendicular and/or parallel to the wall:
 - a. Design Displacement: As indicated on Drawings.
- E. Seismic Performance: Systems shall withstand the effects of earthquake motions determined in accordance with the building code and authorities having jurisdiction.
- F. Building Maintenance Equipment: Engineer units supporting building maintenance equipment to resist pull-out and horizontal shear forces transmitted from equipment.
- G. Vehicular Impact Loads: Engineer precast units acting as vehicular barriers for passenger cars to resist a single 6000 lb (26.7 kN) service load and 10,000 lb (44.5 kN) ultimate load applied horizontally in any direction to the unit, with anchorages or attachments capable of transferring this load to the structure. Engineer units assuming the load to act at a height of 18 in (450 mm) above the floor or ramp surface on an area not to exceed 1 sq ft (0.93 sq m).
- H. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
 - 1. Temperature Change (Range): 120 deg F (49 deg C), ambient; 180 deg F (82 deg C), material surfaces.
- I. Dimensional Tolerances: Engineer products and systems to accommodate dimensional tolerances of framing members and adjacent construction.

2.3 MOLD MATERIALS

- A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that will provide continuous and true precast concrete surfaces within fabrication tolerances indicated; non-reactive with concrete and suitable for producing required finishes.
- B. Mold-Release Agent: Commercially produced liquid-release agent that will not bond with, stain or adversely affect concrete surfaces and will not impair subsequent surface or joint treatments of concrete.
- C. Form Liners: Units of face design, texture, arrangement, and configuration indicated. Furnish with manufacturer/fabricator's recommended liquid-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent surface or joint treatments of concrete.

2.4 REINFORCING MATERIALS

- A. Reinforcing Bars: One of both of the following as required:
 - 1. Reinforcing Bars: ASTM A 615 / A 615M, Grade 60 (Grade 420), deformed.
 - 2. Low-Alloy-Steel Reinforcing Bars: ASTM A 706 / A 706M, deformed.
- B. Steel Bar Mats: ASTM A 184 / A 184M, fabricated from ASTM A 615 / A 615M, Grade 60 (Grade 420) or ASTM A 706 / A 706M, deformed bars, assembled with clips.
- C. Plain-Steel Welded Wire Reinforcement: ASTM A 185, fabricated from as-drawn or galvanized steel wire into flat sheets.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Deformed-Steel Welded Wire Reinforcement: ASTM A 497 / A 497M, flat sheet.
- E. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 117.

2.5 CONCRETE MATERIALS

- A. Portland Cement: ASTM C 150, Type I or Type III, gray for non-exposed backup concrete, unless otherwise indicated.
 - 1. For surfaces exposed to view in finished structure, mix gray, white, tan, or a combination to produce exposed finish color selected, of same type, brand, and mill source.
- B. Supplementary Cementitious Materials: Not to be used in face mixture; allowed in back of unit mixture only
 - 1. Fly Ash: ASTM C 618, Class C or F, with maximum loss on ignition of 3 percent.
 - 2. Silica Fume Admixture: ASTM C 1240, with optional chemical and physical requirement.
 - 3. Metakaolin Admixture: ASTM C 618, Class N.
 - 4. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
- C. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C 33, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.
 - 1. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining. Uniformly or gap graded to match approved sample.
 - 2. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand of same material as coarse aggregate, unless otherwise approved by Architect.
- D. Coloring Admixture: ASTM C 979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, non-fading, and alkali resistant.
- E. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.
- F. Air-Entraining Admixture: ASTM C 260, certified by manufacturer/fabricator to be compatible with other required admixtures.
- G. Chemical Admixtures: Certified by manufacturer/fabricator to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.

2.6 ANCHORS, CONNECTORS, AND MISCELLANEOUS MATERIALS

- A. General: Select anchors and connectors for type, grade, and class required to comply with performance requirements and produce connections suitable for environmental exposure.
 - 1. Shop-Primed Finish: For steel items and connections exposed to interior and conditioned areas, prepare surfaces of non-galvanized steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3 and shop-apply lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI 79 or SSPC-Paint 25 according to SSPC-PA 1.
 - 2. Zinc-Coated Finish: For steel items and connections exposed to exterior and unconditioned areas, Zinc coated by hot-dip process in accordance with ASTM A123/A123M, after fabrication, or ASTM A153/A153M, as applicable.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Galvanizing Repair Paint: Touch up damaged galvanized surfaces in accordance with ASTM A780/A780M or SSPC-Paint 20.
 - B. Carbon-Steel Shapes and Plates: ASTM A 36 / A 36M.
 - C. Carbon-Steel-Headed Studs: ASTM A 108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or B, with arc shields and with minimum mechanical properties of PCI MNL 117, Table 3.2.3.
 - D. Carbon-Steel Plate: ASTM A 283 / A 283M.
 - E. High-Strength, Low-Alloy Structural Steel: ASTM A 572/A 572M.
 - F. Carbon-Steel Structural Tubing: ASTM A 500, Grade B.
 - G. Deformed-Steel Wire or Bar Anchors: ASTM A 496 or ASTM A 706/A 706M.
 - H. Carbon-Steel Bolts and Studs: ASTM A 307, Grade A / ASTM F 568M, Property Class 4.6; carbon-steel, hex-head bolts and studs; carbon-steel nuts, ASTM A 563 / A 563M; and flat, unhardened steel washers, ASTM F 844.
 - I. Welding Electrodes: Comply with AWS standards.
 - J. Accessories: Cast-in structural steel anchors, inserts, plates, angles, clips, hangers, shims, bearing pads, and other similar accessories required to install units.
- 2.7 GROUT MATERIALS
- A. Nonmetallic, Non-shrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, Portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C 1107 of consistency suitable for application within a 30-minute working time.
- 2.8 THIN MASONRY UNITS AND ACCESSORIES
- A. Thin Brick Units: ASTM C 216, Type FBX or ASTM C 1088, Grade Exterior, Type TBX, not less than 1/2 in (12 mm) at the narrowest point, with a tolerance of plus or minus 1/16 in (1.6 mm).
 - 1. Special Shapes: Include corners, edge corners, and end edge corners.
 - 2. Back Surface Texture: Scored, combed, wire roughened, ribbed, keybacked, or dovetailed.
 - 3. Initial Rate of Absorption: Less than 30 g/30 sq. in. (30 g/194 sq. cm) per minute; ASTM C 67.
 - 4. Efflorescence: Tested according to ASTM C 67 and rated "not effloresced."
 - 5. Surface Coating: Thin brick with colors or textures applied as coatings shall withstand 50 cycles of freezing and thawing; ASTM C 67 with no observable difference in applied finish when viewed from 10 ft (3 m).
 - B. Thin Brick Facing Units - Basis of Design: As scheduled or as indicated in Design Selections.
 - C. Thin Calcium Silicate Facing Units - Basis of Design: As scheduled or as indicated in Design Selections.
 - D. Stone Facing - Basis of Design: As specified in Division 04 Section "Exterior Stone Cladding".
 - E. Anchors: Stainless steel, ASTM A 666, Type 304, of temper and diameter required to support loads without exceeding allowable design stresses.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Fit each anchor leg with neoprene grommet collar of width at least twice the diameter and of length at least five times the diameter of anchor.
- F. Sealant for Flexible Filler: ASTM C 920, low-modulus, neutral-curing silicone sealant complying with requirements in Division 07 Section "Joint Sealants" and that is nonstaining to stone substrate.
- G. Epoxy for Rigid Filler: ASTM C 881/C 881M, 100 percent solids, sand-filled nonshrinking, nonstaining of type, class, and grade to suit application.
 1. Elastomeric Anchor Sleeve: **1/2 in (12 mm)** long, Type A durometer hardness of 60, ASTM D 2240.
- H. Bond Breaker: One of the following:
 1. Polyethylene sheet, ASTM D 4397, **6 to 10 mils (0.15 to 0.25 mm)** thick.
 2. Preformed, compressible, resilient, nonstaining, nonwaxing, closed-cell polyethylene foam pad, nonabsorbent to liquid and gas, **1/8 in (3.2 mm)** thick

2.9 INSULATED PANEL ACCESSORIES

- A. Polyisocyanurate Board Insulation: Rigid, cellular polyisocyanurate thermal insulation complying with ASTM C 591, square edged.
 1. Thickness: **2 in (50 mm)** with R-Value of 10.
 2. Density: Capable of withstanding design loads within limits and under conditions indicated.
- B. Extruded Polystyrene Board Insulation: Rigid, cellular polystyrene thermal insulation complying with ASTM C 578, square edged.
 1. Thickness: **2 in (50 mm)** with R-Value of 10.
 2. Density: Capable of withstanding design loads within limits and under conditions indicated.
- C. Wythe Connectors: Manufactured to connect wythes of precast concrete panels and configured for insulation thickness.
 1. Provide corrosion and alkali resistant glass-fiber and vinyl-ester polymer connectors, stainless steel pin connectors or epoxy coated carbon fiber mesh.
 2. Proven Accelerated Aging Testing: Provide reports indicating compliance with accelerated aging equivalent to 100 years of service in concrete.

2.10 GUTTER DRAINAGE SYSTEM

- A. Gutter drainage system at back of units may be either prefabricated silicone system or fabricated galvanized sheet steel system as indicated on the Drawings.
- B. Prefabricated Silicone Gutter Drainage System: Flame-resistant extruded silicone collection channel system used to collect moisture or condensation on the back side of the units. Include accessories such as end dams, weep baffles and silicone weeps as necessary to drain collected moisture to the exterior of the building.
 1. Available Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, manufacturers offering products that may be incorporated into the Work include but are not limited to those listed below:
 - a. Basis of Design: 2DS; "Secondary Drainage Systems - Precast".

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Fabricated Galvanized Sheet Steel Gutter Drainage System: Galvanized sheet steel collection channel system used to collect moisture or condensation on the back side of the units. Include accessories such as end dams, weep baffles, and silicone weeps as necessary to drain collected moisture to the exterior of the building.
 - 1. Zinc-Coated (Galvanized) Sheet Steel: ASTM A 653, G90 coating designation; structural quality, not less than 0.0312 in (0.79 mm) (20 gage) unless otherwise indicated.
 - 2. Solder for Galvanized Sheet Steel: ASTM B 32, 60 percent lead and 40 percent tin with low antimony, as recommended by manufacturer.
 - 3. Fabricate gutter drainage system to cross section indicated with clips and accessories required for secure watertight installation. Meet recommendations of SMACNA for fabrication details and metal thicknesses.
- D. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.
- E. Joint Sealant: Silicone construction sealant as specified in Division 07 Section "Joint Sealants".

2.11 CONCRETE MIXTURES

- A. Mix Designs: Prepare design mixtures for each type of precast concrete required.
 - 1. Limit use of fly ash and silica fume to 20 percent of Portland cement by weight; limit metakaolin and silica fume to 10 percent of Portland cement by weight. Not allowed in face of unit mix.
- B. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at architectural precast concrete fabricator's option.
- C. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 (ACI 318M) or PCI MNL 117 when tested according to ASTM C 1218/C 1218M.
- D. Normal-Weight Concrete Mixtures: Proportion face and backup mixtures by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:
 - 1. Compressive Strength: 5000 psi (34.5 MPa) minimum at 28 days.
 - 2. Maximum Water-Cementitious Materials Ratio: 0.45.
- E. Water Absorption: 6 percent by weight or 14 percent by volume according to PCI MNL 117.
- F. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.
- G. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

2.12 MOLD FABRICATION

- A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing and detensioning operations. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during concrete placement. Coat form liner with form-release agent.
 - B. Maintain molds to provide completed units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.
 1. Form joints are not permitted on faces exposed to view in the finished Work.
 2. Edges and corners shall be uniformly chamfered or radius as indicated on the Drawings.
- 2.13 THIN MASONRY FACINGS
- A. Form Liner Templates: Place accurately to provide grid for thin masonry facings. Provide solid backing and supports to maintain stability of liners while placing thin masonry and during concrete placement.
 - B. Thin Masonry Unit Placement: Securely place face down into form liner pockets and place concrete backing mixture.
 - C. Clean faces and joints of brick facing.
- 2.14 STONE FACINGS
- A. Preparation: Before placing, clean stone surfaces to remove soil, stains, and foreign materials. Thoroughly scrub stones with fiber brushes and thoroughly drench with clear water. Use only mild cleaning compounds that contain no caustic or harsh filler or abrasives.
 - B. Stone Placement:
 1. Accurately position stone facings to comply with requirements and in locations indicated.
 2. Install anchors, supports, and other attachments indicated or necessary to secure stone in place.
 3. Keep concrete reinforcement a minimum of **3/4 in (19 mm)** from back surface of stone.
 4. Use continuous spacers to obtain uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances.
 - C. Stone to Precast Anchorages: Fill anchor holes with sealant filler and install anchors in numbers, types and locations required to satisfy specified performance criteria:
 1. Not less than 2 anchors per stone unit of less than **2 sq ft (0.19 sq m)** in area.
 2. Not less than 4 anchors per stone unit of less than **12 sq ft (1.1 sq m)** in area.
 3. Anchors spaced not more than **24 in (600 mm)** on centers horizontally and vertically for stone units larger than **12 sq ft (1.1 sq m)** in area.
 4. Locate anchors minimum **6 in (150 mm)** from stone edge.
 - D. Fill anchor holes with sealant filler and install anchors. Provide one of the following:
 1. Install polyethylene sheet to prevent bond between back of stone facing and concrete substrate and to ensure no passage of precast matrix to stone surface.
 2. Install **1/8 in (3 mm)** polyethylene-foam bond breaker to prevent bond between back of stone facing and concrete substrate and to ensure no passage of precast matrix to stone surface. Maintain minimum projection requirements of stone anchors into concrete substrate.
- 2.15 FABRICATION
- A. Fabrication Quality Standards: In addition to standards listed elsewhere, comply with following, unless otherwise specified in this Section:
 1. PCI MNL 117.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Accepted submittals.
 3. Contract Documents.
- B. General: Fabricate units straight and true to size and shape with exposed edges and corners precise and true so each finished unit complies with fabrication quality standard, product tolerances, and position tolerances for cast-in items.
- C. Connection Hardware:
1. Fabricate cast-in anchors, inserts, plates, angles, and other anchorage hardware with sufficient anchorage and embedment to comply with delegated engineering.
 2. Accurately position for attachment of loose hardware, and secure in place during precasting operations.
 3. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
 4. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing architectural precast concrete units to supporting and adjacent construction.
- D. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete.
- E. Cast-in openings larger than 10 in (250 mm) in any dimension. Do not drill or cut openings without Architect's approval.
- F. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement:
1. Clean reinforcement of loose rust and mill scale and other materials that reduce or destroy bond with concrete.
 2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.
 3. Place reinforcement to maintain at least 3/4 in (19 mm) minimum coverage. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 4. Place reinforcing steel to maintain at least 3/4 in (19 mm) minimum concrete cover. Increase cover requirements for reinforcing steel to 1-1/2 in (38 mm) when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
 5. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by delegated engineering. Offset laps of adjoining widths to prevent continuous laps in either direction.
- G. Reinforce architectural precast concrete units to resist handling, transportation, and erection stresses.
- H. Placing Concrete:
1. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
 2. Place face mixture to a minimum thickness after consolidation of greater of 1 in (25 mm) or 1.5 times maximum aggregate size, but not less than minimum reinforcing cover specified.
 3. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in units.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Place backup concrete mixture to ensure bond with face-mixture concrete.
 5. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air on surfaces. Use equipment and procedures complying with PCI MNL 117.
- I. Hot and Cold Weather Concrete Placement: Comply with PCI MNL or ACI 306.1 procedures for cold weather concrete placement and ACI 305R recommendations for hot weather concrete placement.
 - J. Handling Units: Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that will not show in finished structure.
 - K. Curing: Cure concrete, according to PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture.
 - L. Defective Units: Discard and replace units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs meet requirements in PCI MNL 117 and Architect's and Owner's approval.
- 2.16 FABRICATION TOLERANCES
- A. Fabricate architectural precast concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished unit complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.
 - B. Brick-Faced Architectural Precast Concrete Units: Restrict the following misalignments to 2 percent of number of bricks in a unit.
 1. Alignment of Mortar Joints:
 - a. Jog in Alignment: 1/8 in (3 mm).
 - b. Alignment with Panel Centerline: Plus or minus 1/8 in (3 mm).
 2. Variation in Width of Exposed Mortar Joints: Plus or minus 1/8 in (3 mm).
 3. Tipping of Individual Bricks from the Panel Plane of Exposed Brick Surface: Plus 1/16 in (1.5 mm); minus 1/4 in (6 mm) less than or equal to depth of form liner joint.
 4. Exposed Brick Surface Parallel to Primary Control Surface of Panel: Plus 1/4 in (6 mm); minus 1/8 in (3 mm).
 5. Individual Brick Step in Face from Panel Plane of Exposed Brick Surface: Plus 1/16 in (1.5 mm); minus 1/4 in (6 mm) less than or equal to depth of form liner joint.
 - C. Stone Veneer-Faced (Smooth Finish) Architectural Precast Concrete Units:
 1. Variation in Cross-Sectional Dimensions: For thickness of walls from dimensions indicated: Plus or minus 1/4 in (6 mm).
 2. Variation in Joint Width: 1/8 in in 36 in (3 mm in 900 mm) or a quarter of nominal joint width, whichever is less.
 3. Variation in Plane between Adjacent Stone Units (Lipping): 1/16 in (1.5 mm) difference between planes of adjacent units.
- 2.17 CONCRETE-FACED UNIT FINISHES
- A. Finishes, General: Exposed faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints shall be uniform, straight, and sharp. Finish exposed-face surfaces of architectural precast concrete units to match approved design reference sample, sample panels, mockups and as follows:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Finish Selections: As scheduled or as indicated in Design Selections; match approved sample units for aesthetic purposes.
 2. Design Reference Sample: <Insert description and identify fabricator and code number of sample>.
 3. As-Cast-Surface Finish: Provide surfaces to match approved sample for acceptable surface, air voids, sand streaks, and honeycomb, with uniform color and texture.
 4. Textured-Surface Finish: Impart by form liners.
 5. Exposed-Aggregate Finish: Use chemical-retarding agents applied to concrete forms and washing and brushing procedures to expose aggregate and surrounding matrix surfaces after form removal.
 6. Sand- or Abrasive-Blast Finish: Use abrasive grit, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
 7. Acid-Etched Finish: Use acid and hot-water solution equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
- B. Exposed Top, Bottom, and Sides Surfaces: Finish exposed surfaces to match face surface finish.
- C. Exposed Back Surfaces: Finish exposed back surfaces with smooth, steel-trowel finish.
- D. Unexposed Surfaces: Finish unexposed surfaces with float finish.
- 2.18 SOURCE QUALITY CONTROL
- A. Owner Testing Agency: Owner may employ an independent testing agency to evaluate architectural precast concrete fabricator's quality-control and testing methods.
1. Allow Owner's testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with Owner's testing agency and provide samples of materials and concrete mixtures as may be requested for additional testing and evaluation.
- B. Contractor Quality-Control Testing: Establish and maintain a quality-control program for manufacturing architectural precast concrete panels in accordance with PCI MNL 117.
1. Strength of precast concrete units will be considered deficient if units fail to comply with **ACI 318 (ACI 318M)** requirements for concrete strength.
 2. Quality Control Testing: If there is evidence that strength of precast concrete units may be deficient or may not comply with **ACI 318 (ACI 318M)** requirements, precaster will employ an independent testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C 42/C 42M.
 - a. A minimum of three representative cores will be taken from units of suspect strength, from locations directed by Architect.
 - b. Cores will be tested in an air-dry condition.
 - c. Strength of concrete for each series of 3 cores will be considered satisfactory if average compressive strength is equal to at least 85 percent of 28-day design compressive strength and no single core is less than 75 percent of 28-day design compressive strength.
 - d. Test results will be made in writing on same day that tests are performed, with copies to Architect, Contractor, and precast concrete fabricator. Test reports will include the following:
 - 1) Project identification name and number.
 - 2) Date when tests were performed.
 - 3) Name of precast concrete fabricator.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 4) Name of concrete testing agency.
 - 5) Identification letter, name, and type of precast concrete unit(s) represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.
3. Patching: If core test results are satisfactory and precast concrete units comply with requirements, clean and dampen core holes and solidly fill with precast concrete mixture that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.
 4. Defective Units: Discard and replace recast architectural concrete units that do not comply with acceptability requirements in PCI MNL 117, including concrete strength, manufacturing tolerances, and color and texture range. Chipped, spalled, or cracked units may be repaired, subject to Architect's approval. Architect reserves the right to reject precast units that do not match approved samples, sample panels, and mockups. Replace unacceptable units with precast concrete units that comply with requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.
- B. Acceptance of Building Structural Frame: Do not install units until supporting cast-in-place concrete building structural framing has attained minimum allowable design compressive strength, supporting structural steel framing, or other structure is complete.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 1. PCI MNL 127 Standards and Guidelines for the Erection of Precast Concrete Products.
 2. Respective manufacturer/fabricator's written installation instructions.
 3. Accepted submittals.
 4. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer/fabricator's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.

3.4 ERECTION

- A. Erection: Install units level, plumb, in alignment, and square within specified allowable tolerances.
 1. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
 2. Remove projecting lifting devices and use sand-cement grout to fill voids within recessed lifting devices flush with surface of concrete.
 3. Unless otherwise indicated, maintain uniform joint widths of 3/4 in (19 mm).

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Attachments, General: Connect units in position by bolting, welding, or grouting.
- C. Bolted Connections: Use lock washers, lock nuts, or other acceptable means to prevent loosening of bolted connections.
- D. Welding: Perform welding in compliance with AWS D1.1/D1.1M and AWS D1.4 with qualified welders.
 - 1. Protect units from damage by field welding or cutting operations, and provide noncombustible shields as required.
 - 2. Repair damaged galvanized steel surfaces by cleaning and applying a coat of galvanizing repair paint to galvanized surfaces.
 - 3. Repair prime painted steel by cleaning and re-priming damaged painted surfaces.
- E. Grouting Connections:
 - 1. Grout connection block-outs after final adjustment.
 - 2. Retain grout in place until hard enough to support itself.
 - 3. Pack spaces with stiff grout material, tamping until voids are completely filled.
 - 4. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces.
 - 5. Keep grouted joints damp for not less than 24 hours after initial set.
 - 6. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.

3.5 ERECTION TOLERANCES

- A. Erect architectural precast concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.
- B. Gutter Drainage System: Securely attach gutter drainage system to back of units using powder actuated fasteners as indicated on the Drawings. Seal joints with silicone joint sealant as specified in Division 07 Section "Joint Sealants". Slope system to positive drain to weeps.

3.6 FIELD QUALITY CONTROL

- A. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
 - 1. Refer to Division 01 Section Field Test for Air and Water Leakage.
 - 2. Refer to Owner's Building Enclosure Commissioning Plan for Field Observations and Performance Testing Activities.
- B. Special Inspections: Owner will engage a qualified special inspector to perform special inspections and prepare reports:
 - 1. Erection of architectural precast concrete.
 - 2. Testing agency will report test results promptly and in writing to Contractor and Architect.
- C. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 - 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Prepare test and inspection reports.

3.7 REPAIRS

- A. Repair exposed surfaces of units to match color, texture, and uniformity of surrounding precast architectural concrete if permitted by Architect and Owner. Architect and Owner reserves right to reject repaired units that do not comply with requirements.
- B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired Work, when viewed in typical daylight illumination from a distance of 20 ft (6 m).
- C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A 780.
- D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
- E. Remove and replace damaged units if repairs do not comply with requirements.

3.8 CLEANING

- A. Clean surfaces of precast concrete units exposed to view.
- B. Cleaning: After erection and completion of joint treatment, clean exposed surfaces of units to remove weld marks, other markings, dirt, and stains.
 - 1. Perform cleaning procedures, if necessary, according to manufacturer/fabricator's written recommendations.
 - 2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

3.9 FINISH SCHEDULE

- A. PCXX - Exposed Face Surfaces:
 - 1. Exposed Aggregate:
 - 2. Sandblast: [Light] [Medium] [Heavy]
 - 3. Color Additive:
 - 4. Cement Color:
- B. PCXX - Thin Brick Facing Units:
 - 1. Manufacturer:
 - 2. Product Series:
 - 3. Color Name and Number:
 - 4. Face Style:
 - 5. Color Selection:
 - 6. Face Size:
- C. PCXX - Thin Calcium Silicate Facing Units:
 - 1. Manufacturer:
 - 2. Product Series:
 - 3. Color Name and Number:
 - 4. Face Style:
 - 5. Color Selection:
 - 6. Face Size:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL

1. Stone Facing:
2. Cement Color:

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 035416
HYDRAULIC CEMENT UNDERLAYMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes hydraulic-cement-based, polymer-modified, self-leveling underlayment for application below interior floor coverings.
- B. Related Sections:
 - 1. Division 09 Sections for patching and leveling compounds applied with floor coverings.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings: Show details of installation, including plans indicating substrates, locations, and average depths of underlayment based on survey of substrate conditions.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required.
 - 1. Product Certificates: Signed by manufacturers of underlayment and floor-covering systems certifying that products are compatible.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
- B. Product Compatibility: Manufacturers of underlayment and floor-covering systems certify in writing that products are compatible.

1.5 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to comply with manufacturer's written instructions to prevent deterioration from moisture or other detrimental effects.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ventilation, ambient temperature and humidity, and other conditions affecting underlayment performance.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Place hydraulic-cement-based underlayments only when ambient temperature and temperature of substrates are between 50 and 80 deg F (10 and 27 deg C).

1.8 COORDINATION

- A. Coordinate application of underlayment with requirements of floor-covering products and adhesives, specified in Division 09 Sections, to ensure compatibility of products.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section Substitution Procedures.

2.2 HYDRAULIC-CEMENT-BASED UNDERLAYMENTS

- A. Underlayment: Hydraulic-cement-based, polymer-modified, self-leveling product that can be applied in minimum uniform thickness of 1/4 inch (6 mm) and that can be feathered at edges to match adjacent floor elevations.
 1. Manufacturers and Products:
 - a. ARDEX Engineered Cements; K-15 Self-Leveling Underlayment Concrete.
 - b. Euclid Chemical Company (The); Super Flo-Top.
 - c. Sika Corp.; SikaLevel 110SL.
 2. Cement Binder: ASTM C 150, Portland cement, or hydraulic or blended hydraulic cement as defined by ASTM C 219.
 3. Compressive Strength: Not less than 4000 psi (27.6 MPa) at 28 days when tested according to ASTM C 109/C 109M.
 4. Underlayment Additive: Resilient-emulsion product of underlayment manufacturer, formulated for use with underlayment when applied to substrate and conditions indicated.
- B. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch (3 to 6 mm); or coarse sand as recommended by underlayment manufacturer.
 1. Provide aggregate when recommended in writing by underlayment manufacturer for underlayment thickness required.
- C. Water: Potable and at a temperature of not more than 70 deg F (21 deg C).
- D. Primer: Product of underlayment manufacturer recommended in writing for substrate, conditions, and application indicated.
- E. Corrosion-Resistant Coating for Metal Substrates: Recommended in writing by underlayment manufacturer for metal substrates.
- F. Reinforcement for Wood Substrates: For underlayment applied to wood substrates, provide galvanized metal lath or other corrosion-resistant reinforcement recommended in writing by underlayment manufacturer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer/fabricator's written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
 - 1. Treat nonmoving substrate cracks according to manufacturer's written instructions to prevent cracks from telegraphing (reflecting) through underlayment.
 - 2. Fill substrate voids to prevent underlayment from leaking.
- B. Concrete Substrates: Mechanically remove, according to manufacturer's written instructions, laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants that might impair underlayment bond.
- C. Nonporous Substrates: For ceramic tile, quarry tile, and terrazzo substrates, remove waxes, sealants, and other contaminants that might impair underlayment bond, and prepare surfaces according to manufacturer's written instructions.
- D. Wood Substrates: Mechanically fasten loose boards and panels to eliminate substrate movement and squeaks. Sand to remove coatings that might impair underlayment bond and remove sanding dust.
 - 1. Install underlayment reinforcement recommended in writing by manufacturer.
- E. Metal Substrates: Mechanically remove, according to manufacturer's written instructions, rust, foreign matter, and other contaminants that might impair underlayment bond. Apply corrosion-resistant coating compatible with underlayment if recommended in writing by underlayment manufacturer.
- F. Adhesion Tests: After substrate preparation, test substrate for adhesion with underlayment according to manufacturer's written instructions.

3.4 APPLICATION

- A. General: Mix and apply underlayment components according to manufacturer's written instructions.
 - 1. Close areas to traffic during underlayment application and for time period after application recommended in writing by manufacturer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Coordinate application of components to provide optimum underlayment-to-substrate and intercoat adhesion.
 3. At substrate expansion, isolation, and other moving joints, allow joint of same width to continue through underlayment.
- B. Apply primer over prepared substrate at manufacturer's recommended spreading rate.
- C. Apply underlayment to produce uniform, level surface.
1. Apply a final layer without aggregate to product surface.
 2. Feather edges to match adjacent floor elevations.
- D. Cure underlayment according to manufacturer's written instructions. Prevent contamination during application and curing processes.
- E. Do not install floor coverings over underlayment until after time period recommended in writing by underlayment manufacturer.
- F. Remove and replace underlayment areas that evidence lack of bond with substrate, including areas that emit a "hollow" sound when tapped.
- 3.5 PROTECTION
- A. Protect underlayment from concentrated and rolling loads for remainder of construction period.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 04 05 23 – THROUGH-WALL AND WALL SUBSTRATE FLASHING SYSTEM

PART 1 - GENERAL

1.1 GENERAL

- A. Contractor shall review American Concrete Institute 530.1 mandatory specification checklist for additional requirements necessary for specific project.
- B. Flashing system shall be provided and installed by a qualified waterproofing contractor.
- C. It is the intent of this specification that the new work will provide a watertight facility (restricted to the location where work is to be performed). The attached specifications describe the minimum acceptable standards of construction and finish.
- D. Contractor shall water test all through-wall flashings once veneer is twelve inches (12") above installed flashing. Coordinate test with Architect and Consultant.
- E. Manufacturer of cloak flashing shall have a representative inspect the installed work a minimum of two times per week. The representative shall not be the installer.
- F. All vertical flashing to be installed full height of the vertical surface in shingle fashion.
- G. Refer to all aluminum window, curtain wall and storefront specifications for flashing to window coordination.
- H. The basis of design intent is to have windows installed, flashed, and water tested prior to veneer installation.
- I. Refer to Specification Section 01 43 39 Mock Up Wall Construction for Further information.
- J. Provide and maintain a photo manifest of all flashing installed throughout the project showing the floor plan locations where the flashing has been installed. Keep on file in the job trailer at all times for reference.

1.2 QUALITY ASSURANCE

- A. At a scheduled pre-construction meeting with all trades, contractor shall review flashing for the project and how the flashing shall be sequenced with the following: below grade waterproofing, air and vapor system, window installation, sealant installation, relief angles and roofing.
- B. Material Manufacturer's Inspection Paid for By Contractor: Minimum of one inspection per week during installation, shall be made during Project schedule by authorized representative of product system manufacturer to ensure that said Project is installed in accordance with manufacturer's requirements. Manufacturer shall provide a written report to the Owner's representative within five days of each inspection stating acceptance of Contractor procedures and outlining items of non-compliance with manufacturer's requirements.
- C. Contractor shall provide a photo manifest of through-wall installation, including all starts, stops, and transitions in plane. Photos shall be documented and located on a floor plan for reference.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.3 SUBMITTALS

- A. Shop Drawings: Contractor shall provide from the manufacturer a review of the flashing design for the project and location of preformed shapes on reduced floor plan.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in manufacturer's original, unopened containers and rolls with all labels intact and legible including labels indicating appropriate warnings, storage conditions, lot numbers, and usage instructions. Materials damaged in shipping or storage shall not be used.
- B. Manufacturer's packaging and/or roll plastic is not acceptable for exterior storage. Tarpaulin with grommets shall be minimum acceptable for exterior coverings. All materials stored as above shall be a minimum of four inches (4") off the substrate, and the tarpaulin tied off with rope.
- C. Deliver materials in sufficient quantity to allow continuity of work.
- D. Handle and store material in such a manner as to avoid damage.
- E. Protect materials against damage by construction traffic.
- F. Storage: All materials should be stored under cover to avoid site damage. During cool weather construction, store materials inside at 50° F or higher.
- G. The proper storage of materials is the sole responsibility of the contractor and damaged materials shall be discarded, removed from the project site, and replaced prior to application.

1.5 SITE CONDITIONS

- A. Job Condition Requirements: Coordinate the work of the contractor with the work to be performed by the Owner's personnel, to ensure proper sequencing of the entire work. The contractor shall follow local, state, and federal regulations, safety standards, and codes. When a conflict exists, use the stricter document.
- B. Protection of Work and Property:
 - 1. Work: The contractor shall maintain adequate protection of all his work from damage and shall protect the Owner's and adjacent property from injury or loss arising from this contract. He shall provide and maintain at all times any OSHA required danger signs, guards, and/or obstructions necessary to protect the public and his workmen from any dangers inherent with or created by the work in progress. All federal, state, and city rules and requirements pertaining to safety and all EPA standards, OSHA standards, NESHAP regulations shall be fulfilled by the contractor as part of his proposal.
 - 2. Property: Protect existing planting and landscaping as necessary or required to provide and maintain clearance and access to the work of this contract. Examples of two categories or degrees of protection are generally as follows: a) removal, protection, preservation, or replacement and replanting of plant materials; b) protection of plant materials in place, and replacement of any damage resulting from the contractor's operations.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Damage to Work of Others: The contractor shall repair, refinish, and make good any damage to the building or landscaping resulting from any of his operation. This shall include, but is not limited to, any damage to plaster, tile work, wall covering, paint, ceilings, floors, or any other finished work. Damage done to the building, equipment, or grounds shall be repaired at the successful contractor's expense holding the Owner harmless from any other claims for property damage and/or personal injury.
- D. Measurements: It will be the contractor's responsibility to obtain and/or verify any necessary dimensions by visiting the job site, and the contractor shall be responsible for the correctness of same. Any drawings supplied are for reference only.
- E. Cleaning and Disposal of Materials:
 - 1. Contractor shall keep the job clean and free from all loose materials and foreign matter. Contractor shall take necessary precautions to keep outside walls clean.
 - 2. All waste materials, rubbish, etc., shall be removed from the Owner's premises as accumulated. Rubbish shall be carefully handled to reduce the spread of dust. At completion, all work areas shall be left clean and all contractor's equipment and materials removed from the site.
 - 3. Debris shall be deposited at an approved disposal site.

1.6 WARRANTY

- A. Flashing Manufacturer: Project shall be installed in such a manner that the flashing material manufacturer will furnish a written ten (10) year materials warranty from the date of substantial completion of the completed project.

PART 2 – PRODUCTS

2.1 BUILT-IN FLASHING MEMBRANE

- A. The built-in flashing membrane shall be 40 mil flexible sheet material, consisting of a blend of elastomeric and thermal plastic polymers, The membrane shall be reinforced with synthetic fibers, calendared into sheet form, rolled and cut to width.
- B. The built-in flashing membrane shall be 25 mil flexible sheet material, consisting of a blend of elastomeric and thermal plastic polymers, The membrane shall be reinforced with synthetic fibers, calendared into sheet form, rolled and cut to width. To be installed at all vertical wall and opening applications only.
- C. Flashing Cloaks shall be pre-formed, three dimensional flexible units used for all exterior, interior corners, level changes, stop ends, and special applications.

Physical Properties

Elongation	175%	ASTM D412
Tensile Strength	650 psi	ASTM D412
Tear Strength	280 psi	ASTM D624
Low Temperature Flexibility	-25° F Pass	ASTM D146
Water Absorption	Less than 0.1%	ASTM D471

- D. Flashing color shall be as selected by Architect and/or shall match mortar color. Reference manufacturer's list of colors for selection.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 RELATED MATERIALS FOR BUILT-IN FLASHING MEMBRANE

- A. Flashing Membrane Adhesive: Flashing adhesive exceeds the requirements of TTS00230C Type II, Class B, ASTM C 92094. The product shall be terra cotta (dull red) in color.

Physical Properties

Hardness Shore A	24 ± 3	ASTM C 661
Shear Strength	75 psi	ASTM D 1002
Tack Free Time	25 minutes	ASTM C 679
Slump (sag)	Zero slump	ASTM C 697
Shrinkage	No measurable shrinkage after 14 days	
Low Temperature Flexibility	-20° F pass 1/4 inch mandrel	
Service Temperature	-40° F to 200° F continuous service	
Shelf Life	One year	

2.3 RELATED MATERIALS FOR SURFACE ADHERED FLASHING MEMBRANE

- A. Asphalt Primer: Shall be a two-sided, self-adhering tape used to seal the top of cloaks against the back-up wythe. Adhesive may be used as an alternative.

- B. Substrate Primer:

Physical Properties

Solids by Weight	68%	
Viscosity	758 cps	
Weight per Gallon	9.3 lbs.	
Elongation	>656% no Breakage, Exceeded Travel of Instron	ASTM D 2370
Tensile Strength	85.1 psi	ASTM D 2370
pH	10	
Hardness Shore A	59	
Peel Strength	Aluminum No Fail at 4.60 pli	
	Concrete No Fail at 3.86 pli	

- C. Mastic: Shall be used at all laps and joints, and top terminations.

2.4 WALL DRAINAGE SYSTEM FOR FLASHING INSTALLATION INTO EXISTING WALL

- A. Collection device shall be a dovetail shaped material to place in the cavity of brick masonry walls for collecting mortar droppings above the level of the weep holes and flashing. The 90% open weave construction material shall be High Density Polyethylene (HDPE) mesh for thickness of 0.4 – 1.0 inch, or recycled polyester mesh for 2.0 inch thickness.
- B. Material shall not oxidize, rot, promote mold or fungus, or react with other common building materials such as mortar, cement, asphalt, modified bitumen, PVC, copper, or galvanized metal; shall be Mortar Net, or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine conditions for compliance with requirements for installation tolerances and other specific conditions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.2 GENERAL

- A. Laying Masonry Walls: Use an inverted lintel CMU or fully grouted hollow CMU as a base for flashing at sills, floor joints, and other similar conditions.
- B. Preparation: All sharp protrusions and mortar droppings must be removed from the substrate, and the surface must be clean and dry.
- C. Where brick work occurs above the roof elevation, provide solid protection of the existing roof system until work is complete.
- D. Flashing shall be fully supported when crossing the cavity except at sill and coping locations.
- E. Flashing shall be fully adhered around all wall penetrations prior to veneer installation.
- F. Grout Cant strip shall be installed at back of brick ledge to provide positive slope for new membrane flashing.
- G. Taper Cant down where preformed pieces are to be installed.

3.3 INSTALLATION OF BUILT-IN FLASHING MEMBRANE

- A. Flashing membrane and flashing cloaks shall be installed in a bed of fresh mortar and should stop three eighths of an inch from front face of masonry.
- B. Weep holes shall be provided immediately above all flashing at 24-inch centers. A minimum of two weeps shall be installed above any wall opening. Weeps shall be seated on flashing, NOT on mortar bed.
- C. All joints in the flashing membrane shall be lapped a minimum of four inches (4") using flashing membrane adhesive.
- D. Flashing membrane shall be installed and extend up eight inches (8") above finished grade level.
- E. Flashing Cloaks and end dams shall be installed at all window and door heads and sills and at all elevation transitions.
- F. Vertical flashing at wall openings shall extend into the wall opening four inches (4"). The door/window frame shall be installed with the flashing extending onto the back of the frame a minimum of two inches (2").
- G. Cleaning: Flashing membrane shall not be damaged by cavity cleaning after installation. Precautions to be taken during subsequent work are:
 - 1. Use of cavity battens to prevent mortar droppings;
 - 2. Removal of droppings before they harden;
 - 3. Never use implements such as steel rods for cleaning the cavity; and
 - 4. Inspection of cavity flashing for damage as the work proceeds.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.4 FLASHING MEMBRANE ADHESIVE

- A. Application:
1. Flashing adhesive shall be applied to clean, dry and relatively smooth surfaces.
 2. When joint two (2) pieces of flashing membrane, or joining flashing membrane to Cloaks:
 - a) Apply two (2) one-fourth inch (1/4") beads of adhesive approximately one-half inch (1/2") and one and one-half inch (1-1/2"), respectively, from the edge of the bottom membrane along the entire width of the bottom membrane. Overlap the top membrane over the bottom membrane two inches (2") and roll lap with steel hand roller, causing excess to extrude the entire length of the overlap.
 3. Do not remove excess adhesive.
- B. Safety, Storage and Handling: Keep container tightly closed when not in use. Store at room temperature. Clean up tools and hands with waterless hand cleaner.

3.5 SUBSTRATE PRIMER

- A. Surface Preparation: Areas to be primed should be dry.
- B. Application: Substrate primer may be applied using a soft roller or brush. It can be removed from masonry with soapy water while wet and a solvent-based cleaner if dry (mineral spirits or citrus cleaner).
- C. Coverage: Depending on the condition of the surface, coverage may vary from as little as 150 square feet to 200 square feet per gallon.
- D. Caution:
1. Substrate primer should not be applied when temperatures are below 40° F or when rain is imminent.
 2. Keep substrate primer from freezing.
 3. During hot weather, the product should be stored in a cool shaded area.
 4. Do not thin this product.
 5. Curing rates will vary depending on the ambient temperature relative humidity, wind speed, sky condition and the proper rate of application. Generally speaking, Substrate primer will dry within 15 to 30 minutes when applied at 70° F or above. At 50° F, on a cloudy day, cure time may be extended to as much as one hour.
 6. Check several places on primed area for dryness prior to proceeding with the flashing application.

END OF SECTION 04 05 23

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 042100
MASONRY VENEER

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Exterior, non-load bearing masonry veneer units and supplementary items necessary for installation.

1.2 DEFINITIONS

- A. Masonry Veneer Terminology: Refer to BIA 2 and other referenced quality standards.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each type of product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
 - a. Kind, size, and color of masonry unit.
 - b. Manufactured accessory product.
 - c. Cleaning products, including application procedures.
- B. Shop Drawings: Show details of construction and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work. Including, but not limited to, the following:
 - 1. Flashing: Large-scale details for each element of flashing system showing layout, profiles, methods of joining, and anchorage details; including lintel units, shelf units, corner units, end dam units, conditions showing interface and relationship to adjacent materials, and other special applications.
 - 2. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.
- C. Samples for Verification Purposes: Submit samples for each item listed below of size and construction indicated. Where products involve normal color and texture variations, include sample sets showing the full range of variations expected.
 - 1. Masonry Veneer: Full-size samples for each different unit indicated.
 - 2. Pigmented and Color Aggregate Mortar: Make samples using same sand and mortar ingredients to be used on Project; label samples to indicate type and amount of pigments used.
 - 3. Accessories: Samples of manufactured products, including anchors, ties, cavity drainage material, flashing materials, weeps, vents, and other accessories.
 - 4. Flashing: Samples of each shape, profile, intersection and transition required, not less than 12 in (300 mm) long, including end dam, and splice/lap joint for lintel and shelf angle flashing; demonstrate soldering quality.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required.
- B. Material Certificates: For each type and size of the following:
 - 1. Masonry units.
 - a. Include material test reports substantiating compliance with requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. For brick, include size-variation data verifying that actual range of sizes falls within specified tolerances.
 - c. For exposed brick, include test report for efflorescence according to ASTM C67.
 - 2. Integral water repellant used in decorative CMU.
 - 3. Cementitious materials. Include name of manufacturer, brand name, and type.
 - 4. Mortar admixtures, if any.
 - 5. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
 - 6. Anchors, ties, and metal accessories.
 - C. Mix Designs: For each type of mortar. Include description of type and proportions of ingredients.
 - 1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C109/C109M for compressive strength, ASTM C1506 for water retention.
 - D. Field Quality Control Reports: Written report of testing and inspection required by Field Quality Control.
- 1.5 QUALITY ASSURANCE
- A. Quality Standards: In addition to specified requirements, comply with TMS 402/602 and local building code, whichever is more stringent.
 - B. Installer Qualifications:
 - 1. Experience: Installer personnel with not less than 10 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 10 years of experience installing products and systems similar to scope of this Project.
 - C. Hot and Cold Weather Work Plan: Written plan detailing methods, materials and equipment to be used to comply with weather requirements.
 - D. Masonry Veneer Cleaning Plan: Based on technical information provided by respective manufacturer for each masonry veneer unit to be cleaned, prepare written plan for cleaning exposed masonry veneer surfaces, prepared by commercial cleaning compound manufacturer, with signature of installer indicating acceptance and include following information:
 - 1. Qualifications of applicators.
 - 2. Products to be used and application procedures.
 - 3. Masonry veneer surfaces to be cleaned and required preparations.
 - 4. Environmental requirements by authorities having jurisdiction for use and discharge of cleaning effluents.
 - 5. Protection of surrounding areas, landscaping, and building surfaces adjacent to area of cleaning.
 - E. Sample Panels: Prior to installing masonry, build as many sample panels as required to verify selections made under submittals and to demonstrate aesthetic effects using specified materials:
 - 1. Build approximately 48 in (1200 mm) square for each type of exposed masonry units.
 - 2. Locate at locations indicated or, if not indicated, as directed by Architect.
 - 3. Clean exposed faces with masonry cleaner specified.
 - 4. Where masonry is to match existing masonry, erect panels adjacent and parallel to an existing, south-facing wall.
 - 5. Notify Architect 7 days in advance of the dates and times when panels will be constructed.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

6. Protect accepted approved sample panels with weather-resistant membrane.
7. Maintain during construction in an undisturbed condition as a standard for judging completed Work.
8. Acceptance Approval of panels is for following aesthetic qualities; acceptance approval does not constitute acceptance approval of deviations from Contract Documents, unless specifically accepted approved by Architect in writing:
 - a. Color, texture, and blending of masonry units.
 - b. Color and blending of mortar.
 - c. Relationship of mortar and sealant colors to masonry unit colors.
 - d. Tooling of joints.
 - e. Effectiveness of masonry cleaner.
 - f. Other aesthetic qualities as determined by the Architect.

9. When directed, demolish and remove mock-up from Project site, including foundations.

F. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up using materials indicated for the completed Work.

1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.
 - b. Include control joints and through wall flashing with drip edge.
2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.6 PRE-INSTALLATION CONFERENCE

A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 - 3. Record discussions, including decisions and agreements, and prepare report.
- 1.7 DELIVERY, STORAGE, AND HANDLING
- A. Delivery: Label pallets of masonry veneer units with manufacturers name, product name, and information required to identify products.
 - B. Storage:
 - 1. Masonry Veneer Units: Store on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
 - 2. Cementitious Materials: Store on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
 - 3. Aggregates: Store where grading and other required characteristics can be maintained and contamination avoided.
 - 4. Accessories: Store to prevent corrosion and accumulation of dirt and oil.
- 1.8 PROJECT CONDITIONS
- A. Protection during Work: Prevent excess moisture from entering Work in progress.
 - 1. Cover tops of walls, projections, and sills with water-repellent tarps or heavy plastic sheets at end of each day's Work.
 - 2. Cover partially completed masonry veneer when construction is not in progress.
 - 3. Extend cover minimum of 24 in (600 mm) down both sides and hold cover securely in place.
 - 4. Protect door and window frames from damage.
 - B. Stain Prevention: Prevent mortar and soil from staining exposed masonry veneer. Immediately remove mortar and soil from exposed masonry veneer.
 - 1. Protect base of walls from rain-splashed mud and mortar splatter.
 - 2. Protect sills, ledges, and projections from mortar droppings.
 - 3. Protect surfaces of window and door frames, and other adjacent with painted and integral finishes from mortar droppings.
 - 4. Turn scaffolding planks near Work on edge at end of each day to prevent rain from splashing mortar droppings or dirt onto face of exposed masonry veneer.
 - C. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 402/602.
 - 1. Do not apply when ambient temperature is less than 32 deg F (0 deg C) or when 40 deg F (4.4 deg C) or less and falling.
 - 2. Provide heat and protection (temporary or permanent) as required to protect Work from freezing for not less than 48 hours after application.
 - 3. Distribute heat uniformly to prevent concentration of heat near sources; provide deflection or protective screens.
 - 4. Use liquid cleaning methods only when air temperature is 40 deg F (4.4 deg C) and above and will remain so until masonry veneer has dried, but not less than 7 days after completing cleaning.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 402/602.
 - 1. Protect Work against uneven and excessive evaporation and from strong flows of dry air, both natural and artificial.
 - 2. Apply and cure work as required by climatic and job conditions to prevent dryout during cure period.
 - 3. Provide suitable coverings, moist curing, barriers to deflect sunlight and wind, or combinations of these, as required.

1.9 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section Substitution Procedures.
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other available manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.
- B. Masonry Units: Obtain exposed masonry veneer units of a uniform texture and color, or a uniform blend within ranges accepted for these characteristics.
- C. Cementitious Materials: Obtain cementitious ingredients of a uniform quality, including color, for each component.

2.3 MASONRY UNITS, GENERAL

- A. Masonry Standard: Comply with TMS 602, except as modified by requirements in the Contract Documents.
- B. Defective Units: Referenced standards may allow a certain percentage of units to exceed tolerances and to contain chips, cracks, or other defects exceeding limits stated in standard. Do not install units where defects, including dimensions that vary from specified dimensions by more than stated tolerances, will be exposed in completed Work or will impair quality of completed masonry veneer.
- C. Special Shapes: Provide shapes indicated and as follows for each form of masonry unit required:
 - 1. For applications requiring units of form, color, texture, and size on exposed surfaces that cannot be produced by sawing standard unit sizes.
 - 2. For applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
 - 3. For applications where stretcher units cannot accommodate special conditions including those at corners, movement joints, bond beams, sashes, and lintels.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. For units without cores or frogs and with exposed surfaces finished for ends of sills, caps, and similar applications that would otherwise expose unfinished unit surfaces.

D. Match Existing Masonry Veneer: Wherever "match existing" indicated, provide masonry veneer unit of matching color, texture, and size as existing adjacent masonry veneer work.

2.4 FACE BRICK MASONRY UNITS

A. Product Quality Standard: ASTM C 216 or ASTM C 652, Grade SW, Type FBS.

1. Unit Compressive Strength: Minimum **3000 psi (20.7 MPa)** for average of 5 bricks, and **2500 psi (17.2 MPa)** for individual brick, gross area, according to ASTM C 67, Section 7.
2. Hot and Cold Water Testing:
 - a. Water Absorption: Maximum 17.0 percent for average of 5 bricks, and 20.0 percent for individual brick, according to ASTM C 67, Section 8 for 5 hour boiling test.
 - b. Saturation Coefficient: Maximum 0.78 for average of 5 brick, and 0.80 for individual brick.
 - c. Requirement Waivers:
 - 1) Absorption: Saturation coefficient requirement may be waived if there is maximum 8.0 percent absorption of random sampling of 5 bricks according to ASTM C 67, Section 8 for 24 hour submersion test.
 - 2) Freezing and Thawing: Water absorption and saturation coefficient requirements may both be waived if there is maximum 0.5 percent loss in dry weight of any individual brick according to ASTM C 67, Section 9, for 50 cycles of freezing and thawing.
3. Initial Rate of Absorption: Between 5 and 25 g/m per **30 sq in (0.02 sq m)** according to ASTM C 67, Section 10. Use of coating to establish initial rate of absorption is not permitted and will not be allowed.
4. Efflorescence: Rated "not effloresced" according to ASTM C 67, Section 11.
5. Surface Coloring: Brick with surface coloring, other than flashed or sand-finished brick, shall withstand 50 cycles of freezing and thawing according to ASTM C 67, Section 8, with no observable difference in applied finish when viewed from **10 ft (3 m)** under an minimum illumination of **50 foot-candles (538 lumen/square meter)**.

B. Basis of Design: As scheduled or as indicated in Design Selections.

2.5 CALCIUM SILICATE MASONRY UNITS

A. Product Quality Standard: ASTM C 73, Grade SW.

1. Compressive Strength: Minimum **6600 psi (45.5 MPa)** according to ASTM C 170.
2. Absorption: Maximum 8.8 percent according to ASTM C 97.
3. Density: Minimum **129 pcf (2066 kg/cu m)** according to ASTM C 97.
4. Modulus of Rupture: Minimum **770 psi (5.3 MPa)** according to ASTM C 99.
5. Freeze-Thaw Durability: No observable distress.

B. Basis of Design: As scheduled or as indicated in Design Selections.

2.6 DECORATIVE CONCRETE MASONRY UNITS

A. Product Quality Standard: ASTM C 90.

1. Unit Compressive Strength: Minimum average net area compressive strength of **1900 psi (13.1 MPa)** for 3 units, and minimum **1700 psi (11.7 MPa)** for individual unit.
2. Weight Classification: Medium weight.

B. Integral Water Repellent: Provide units made with integral water repellent.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Description: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive according to ASTM E 514, with test period extended to 24 hours, show no visible water or leaks on back of test specimen.
2. Manufacturers and Products:
 - a. Addiment Inc.; Block Plus W-10.
 - b. Grace Construction Products; Dry-Block.

C. Basis of Design: As scheduled or as indicated in Design Selections.

2.7 PRE-FACED CONCRETE MASONRY UNITS

- A. Product Quality Standard: ASTM C 90, with manufacturer's standard smooth resinous facing complying with ASTM C 744.
 1. Unit Compressive Strength: Units with minimum average net-area compressive strength of **1900 psi (13.1 MPa)** for 3 units, and minimum **1700 psi (11.7 MPa)** for individual unit.
 2. Weight Classification: Lightweight.
- B. Basis of Design: As scheduled or as indicated in Design Selections.

2.8 SHELF ANGLES AND LINTELS

- A. Steel Angle Lintels: Materials complying with Division 05 Section Metal Fabrications for loose masonry lintels (Designation MF), with schedule as shown on the Drawings.
- B. Cast-in-Place Concrete Lintels: Concrete materials complying with Division 03 Section Cast-in-Place Concrete for color, texture, and compressive strength indicated or required, and with reinforcing bars to support loads indicated.
- C. Precast Concrete Lintels: As specified in Division 03 Section Architectural Precast Concrete.
- D. Masonry Lintels: Prefabricated or built-in-place masonry lintels as shown of the Drawings made from masonry units with reinforcing bars placed as indicated and filled with coarse grout. Cure prefabricated lintels before handling and installing.

2.9 MORTAR MATERIALS

- A. Portland Cement:
 1. Material Quality Standard: ASTM C 150, Type I; except Type III may be used for cold-weather construction.
 2. Color: Natural gray color or white cement as required to produce mortar color required.
 3. Manufacturers:
 - a. LafargeHolcim.
 - b. Lehigh Cement Co.
 - c. Lone Star Industries, Inc.
 - d. Rinker Materials.
 - e. Royal White Cement.
 4. Types of Cements Not permitted:
 - a. Masonry Cement: ASTM C 91.
 - b. Mortar Cement: ASTM C 1329.
- B. Hydrated Lime:
 1. Material Quality Standard: ASTM C 207, Type S.
 2. Manufacturers:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Graymont Dolime (OH) Inc.
 - b. Rockwell Lime Co.
- C. Portland Cement-Lime Mix: Packaged blend of Portland cement and hydrated lime containing no other ingredients.
 - 1. Product Quality Standard: ASTM C 144.
 - 2. Mortar Exposed to View: Use washed aggregate consisting of natural sand or crushed stone.
 - 3. Joints Less Than $\frac{1}{4}$ in (6 mm) Thick: Use aggregate graded with 100 percent passing No. 16 sieve.
- D. Aggregate for White Mortar: Natural white sand or ground white stone, as required to match approved sample.
- E. Aggregate for Colored Mortar: Natural sand or ground marble, granite, or other sound stone, as required to match approved sample.
- F. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Use only pigments with a record of satisfactory performance in masonry mortar.
 - 1. Quantity Limitations: Pigments shall not exceed 10 percent of Portland cement by weight for mineral oxides or 2 percent for carbon black.
 - 2. Manufacturers and Products:
 - a. Bayer Corp., Industrial Chemicals Div.; Bayferrox Iron Oxide Pigments.
 - b. Davis Colors; True Tone Mortar Colors.
 - c. Solomon Grind-Chem Service, Inc.; SGS Mortar Colors.
- G. Colored Portland Cement-Lime Mix: Packaged blend made from Portland cement and hydrated lime and mortar pigments, all complying with specified requirements, and containing no other ingredients.
 - 1. Quantity Limitations: Pigments shall not exceed 10 percent of Portland cement by weight or 2 percent for carbon black.
 - 2. Manufacturers and Products:
 - a. Capital Materials Corp.; Riverton Portland Cement Lime Custom Color.
 - b. Holcim (US) Inc.; Rainbow Mortamix Custom Color Cement/Lime.
 - c. LafargeHolcim; Eaglebond.
 - d. Lehigh Cement Company; Lehigh Custom Color Portland/Lime Cement.
- H. Water-Repellent Mortar Admixture for Decorative Concrete Masonry Units:
 - 1. Description: Liquid water-repellent mortar admixture intended for use with concrete masonry veneer units, containing integral water repellent by same manufacturer.
 - 2. Manufacturers and Products:
 - a. Addiment Inc.; Mortar Tite.
 - b. Grace Construction Products; Dry-Block Mortar Admixture.
 - c. Master Builders, Inc.; Color Cure Mortar Admix or Rheomix Rheopel.
- I. Water: Potable, clean and free of amounts of oils, acids, alkalies, salts, organic materials, or other substances that are deleterious to mortar or any metal within the wall.

2.10 REINFORCEMENT

- A. Masonry Joint Reinforcement, General: ASTM A 951/A 951M.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Masonry Joint Reinforcement for Multi-wythe Masonry: As specified in Division 04 Section Concrete Unit Masonry.

2.11 VENEER ANCHORS AND TIES

- A. General: For attaching masonry veneer to a back-up structure, use two-piece assemblies that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall; suitable for attachment conditions indicated.
1. Corrugated ties are not permitted.
- B. Structural Performance Characteristics: Capable of withstanding a 100-lbf (445-N) load in both tension and compression without deforming or developing play in excess of 0.05 in (1.3 mm).
- C. Materials for Adjustable Masonry Veneer Anchors: Use one of the following. Mill-galvanized ties are not permitted.
1. Hot-Dip Galvanized Carbon-Steel Wire: ASTM A 82 / A 82M with ASTM A 153 / A 153M, Class B-2 coating.
 2. Steel Sheet, Galvanized after Fabrication: ASTM A 1008 / A 1008M, commercial sheet, hot-dip galvanized after fabrication to comply with ASTM A 153 / A 153M, Class B coating.
 3. Stainless Steel Wire: ASTM A 580 / A 580M, AISI Type 304.
 4. Stainless Steel Sheet: ASTM A 167, A 240, or A 666, AISI Type 304.
 5. Stainless-Steel Bars and Shapes for Stone Trim: ASTM A 276 or ASTM A 666, Type 304.
- D. Adjustable Anchors for Connecting to Concrete, CMU or Structural Steel:
1. Description: Two-piece adjustable veneer anchoring system.
 - a. Anchors: Zinc alloy barrel, flanged head, screw and eye, with drilling threads suitable for structural substrate.
 - b. Ties: Hot-dip galvanized, carbon-steel wire, 3/16 in (5 mm) pre-coated diameter, triangular shaped ties, size as required to provide maximum bond, not less than 2 in (50 mm).
 2. Basis of Design:
 - a. Heckmann Building Products, Inc.; POS-I-TIE Masonry Veneer Anchor System with Triangle Tie (with ThermalGrip CI Washers at Cavity Insulation).
 - b. Hohmann & Bernard, Inc.; Thermal Concrete 2-Seal Wing Nut Adjustable Thermal Veneer Anchor (with Wing Nut Anchor at Cavity Insulation).
 3. Basis of Design:
 - a. Heckmann Building Products, Inc.; POS-I-TIE Masonry Veneer Anchor System with Seismic Triangle Wire Tie (with ThermalGrip CI Washers at Cavity Insulation).
 - b. Hohmann & Bernard, Inc.; Thermal Concrete 2-Seal Wing Nut Adjustable Thermal Veneer Anchor with Seismic Hook to Accept Continuous Wire (with Wing Nut Anchor at Cavity Insulation).
- E. Adjustable Masonry Veneer Anchors for Sheathed Steel Studs Walls:
1. Anchor Plate: Minimum 0.0713 in (14 gage) (1.81 mm) uncoated base metal thickness, with raised strap stamped vertically into center to provide a slot between strap and plate for interlocking wire tie, with one screw hole at top and one at bottom; with rubberized asphalt flexible flashing material either adhered to back of plate, or loose for separate mounting.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Wire Tie: Minimum **3/16 in (5 mm)** diameter, bent into triangle shaped tie; length as required to extend at least halfway through masonry veneer but with minimum **5/8 in (15 mm)** cover on outside face of masonry veneer.
 3. Manufacturers and Products:
 - a. Heckmann Building Products, Inc.; 315D Screw-On Anchor Plate with 316 Triangle Wire Ties.
 - b. Hohmann & Barnard, Inc.; DW-10HS Veneer Anchor with Vee Byne-Tie.
 - c. Prosoco; Masonry Veneer Tie (Anchor Plate and Wire Tie).
 - d. Wire-Bond; Type III Screw-On Anchor 1004 with 1100 Series Triangular Wire Tie.
- F. Adjustable Masonry Veneer Anchors for Sheathed Steel Studs Walls with Insulation in Cavity:
1. Anchor Plate: Minimum **0.0713 in (14 gage) (1.81 mm)** uncoated base metal thickness, with projecting horizontal tabs of length to allow for insulation thickness, with holes or slots to receive pintel legs, with two screw holes; with rubberized asphalt flexible flashing material either adhered to back of plate, or loose for separate mounting.
 2. Insulation Retainer: Manufacturer's standard designed to hold cavity insulation in place.
 3. Wire Pintel: Minimum **3/16 in (5 mm)** diameter, bent into open-end rectangle box shaped tie with 2 legs bent down to slip into anchor slot; length as required to extend at least halfway through masonry veneer but with minimum **5/8 in (15 mm)** cover on outside face of masonry veneer.
 4. Manufacturers and Products:
 - a. Hohmann & Barnard, Inc.; HB-213-2X Adjustable Veneer Anchor (Anchor Plate, Insulation Retainer and Wire Pintel).
 - b. Prosoco; Masonry Veneer Tie (Anchor Plate, Insulation Retainer and Wire Tie).
 - c. Wire-Bond; RJ-711 Adjustable Veneer Anchor (2401 Anchor Plate, Insulation Retainer and 2402 Wire Pintel).
- G. Stack Bond Adjustable Masonry Veneer Anchors for Sheathed Steel Studs Walls:
1. Anchor Plate: Minimum **0.1017 in (12 gage) (2.58 mm)** uncoated base metal thickness, with projecting horizontal tabs, with holes or slots to receive pintel legs, with two screw holes; with rubberized asphalt flexible flashing material either adhered to back of plate, or loose for separate mounting.
 2. Plate Pintel: Minimum **0.1017 in (12 gage) (2.58 mm)** uncoated base metal thickness, with down-turned leg to slip into anchor slot; with punched shear lugs for holding pencil rod.
 3. Pencil Rod: Deformed wire, **3/16 in (5 mm)** in diameter.
 4. Manufacturers and Products:
 - a. Hohmann & Barnard, Inc.; HB-213-2X SIS Seismic Veneer Anchor (HB-213 Adjustable Veneer Anchor, Wire Pintel with Seismicclip Interlock System).
 - b. Wire-Bond; RJ-721 Anchoring System (2421 Slotted Anchor Plate and 2422 Seismic Plate Pintel with Continuous Seismic Wire).
- H. Stack Bond Adjustable Masonry Veneer Anchors for Sheathed Steel Studs Walls with Insulation in Cavity:
1. Anchor Plate: Minimum **0.1017 in (12 gage) (2.58 mm)** uncoated base metal thickness, with projecting horizontal tabs of length to allow for insulation thickness, with holes or slots to receive pintel legs, with two screw holes; with rubberized asphalt flexible flashing material either adhered to back of plate, or loose for separate mounting.
 2. Insulation Retainer: Manufacturer's standard designed to hold cavity insulation in place.
 3. Plate Pintel: Minimum **0.1017 in (12 gage) (2.58 mm)** uncoated base metal thickness, with down-turned leg to slip into anchor slot; with punched shear lugs for holding pencil rod.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Pencil Rod: Deformed wire, 3/16 in (5 mm) in diameter.
5. Manufacturers and Products:
 - a. Hohmann & Barnard, Inc.; HB-213-2X SIS Seismic Veneer Anchor (HB-213 Adjustable Veneer Anchor, Insulation Retainer, Wire Pintel with Seismicclip Interlock System).
 - b. Wire-Bond; RJ-721 Anchoring System (2421 Slotted Anchor Plate, Insulation Retainer and 2422 Seismic Plate Pintel with Continuous Seismic Wire).

I. Irregular Bond/Coursing Adjustable Masonry Veneer Anchors for Walls with Insulation in Cavity:

1. Description: Two-piece adjustable veneer anchoring system.
 - a. Anchors: Zinc alloy barrel, flanged head, screw and eye, with drilling threads suitable for structural substrate.
 - b. Insulation Retainer: Manufacturer's standard designed to hold cavity insulation in place.
 - c. Ties: Hot-dip galvanized, carbon-steel wire, 3/16 in (5 mm) pre-coated diameter, triangular shaped ties, size as required to provide maximum bond, not less than 2 in (50 mm).
2. Basis of Design:
 - a. Heckmann Building Products, Inc.; POS-I-TIE Masonry Veneer Anchor System (with ThermalGrip CI Washers).
 - b. Hohmann & Barnard, Inc.; Thermal Concrete 2-Seal Wing Nut Adjustable Thermal Veneer Anchor (with Wing Nut Anchor at Cavity Insulation).

J. Polymer-Coated Steel Drill Screws for Steel Studs:

1. Material Quality Standard: ASTM C 954.
2. Description: Self-drilling, hex washer head with bonded EPDM washer, screw of size and length required to penetrate steel stud flange by not less than 3 exposed threads; corrosion protective organic polymer coating with salt-spray resistance to red rust of more than 800 hours per ASTM B 117.
3. Manufacturers and Products:
 - a. Elco Construction Products; Dril-Flex with Stalgard finish.
 - b. ITW Buildex; Teks Maxiseal with Climaseal finish.

2.12 MISCELLANEOUS ANCHORS

- A. Dovetail Slots in Concrete for Shelf Angles: As specified in Division 03 Section Concrete Accessories unless indicated otherwise.

2.13 EMBEDDED FLASHING MATERIALS

- A. Sheet Metal Flashing: Metal flashing to comply with SMACNA's Architectural Sheet Metal Manual and as follows:

1. Material:
 - a. Quality Standard: ASTM A 240 / A 240M or A 666, Type 304.
 - b. Quality Standard: ASTM A 240 / A 240M or A 666, Type 316.
 - c. Description: Stainless steel, 2D annealed finish, not less than 0.0250 in (24 ga) (0.64 mm) thick, unless noted otherwise.
2. Solder:
 - a. Material Quality Standard: ASTM B 32, Grade Sn60.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Description: Solder with acid flux of type recommended by stainless steel sheet manufacturer; use a noncorrosive rosin flux over tinned surfaces.
- B. Sealant for Sheet Metal Flashing: Exterior non-sag silicone sealant, Class 100/50, as specified in Division 07 Section Joint Sealants.
- C. Sealant for Use at Concealed Joints: Contractor's option, one of the following:
 - 1. Butyl: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.
 - 2. Silicone: ASTM C 920, single-component, neutral cure silicone sealant.
 - a. Basis of Design: Dow; Dowsil 758 Silicone Weather Barrier Sealant.
- D. Rubberized-Asphalt Flexible Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.040 inch (1.02 mm).
 - 1. Manufacturers and Products:
 - a. Carlisle Coatings & Waterproofing; CCW-705-TWF Thru-Wall Flashing.
 - b. Dayton Superior Corporation, Dur-O-Wal Division; Dur-O-Barrier Thru-Wall Flashing.
 - c. GCP Applied Technologies; Perm-A-Barrier Wall Flashing.
 - d. Heckmann Building Products Inc.; No. 82 Rubberized-Asphalt Thru-Wall Flashing.
 - e. Hohmann & Barnard, Inc.; Textroflash.
 - f. W. R. Meadows, Inc.; Air-Shield Thru-Wall Flashing.
 - g. Polyguard Products, Inc.; Polyguard 400.
 - 2. Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.
 - 3. Compatibility: Flexible flashing shall be compatible with air and water barrier and approved by air and water barrier manufacturer in writing.
- E. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

2.14 ACCESSORIES

- A. Weeps and Vents: Provide one of the following:
 - 1. Plastic Weep and Vent:
 - a. Description: One-piece flexible extrusion made from ultraviolet light resistant polypropylene copolymer, consisting of honeycomb matrix of multiple cells, designed to fill head joint with outside face held back **1/8 in (3 mm)** from exterior face of masonry veneer.
 - b. Color: As selected by Architect from manufacturer's standard colors available.
 - c. Manufacturers and Products:
 - 1) Advanced Building Products, Inc.; Mortar Maze Weep Vents.
 - 2) Heckmann Building Products, Inc.; No. 85 Cell Vent.
 - 3) Hohmann & Barnard, Inc.; QV - Quadro-Vent.
 - 4) Wire-Bond; Cell Vent
 - 2. Mesh Weep and Vent:
 - a. Description: Compressed, 200 denier polyester with 90 percent open mesh and bonded with flame retardant adhesive.
 - b. Color: As selected by Architect from manufacturer's standard colors available.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Basis of Design: Mortar Net USA, Ltd.; Mortar Net Weep Vents.
 - B. Cavity Drainage Material:
 - 1. Description: Composed of either reticulated, nonabsorbent mesh made from polyethylene strands, or, polymer core geomatrix composed of woven nylon strands, molded and shaped in open weave configuration to maintain drainage at weeps without being clogged by mortar droppings, size as required to extend across entire width of cavity.
 - 2. Manufacturers and Products:
 - a. Advanced Building Products, Inc.; Mortar Break II.
 - b. Heckmann Building Products, Inc.; No. 84 Weep-Thru Mortar Deflector.
 - c. Mortar Net USA, Ltd.; Mortar Net.
 - d. Polyguard Products, Inc.; Termi-Net.
 - e. Wire-Bond; Cavity Net II.
 - C. Bond Breaker Strips:
 - 1. Material Quality Standard: ASTM D 226, Type I.
 - 2. Description: Asphalt-saturated organic roofing felt (No. 15 asphalt felt).
 - D. Termination Bars: ASTM A 666, Type 304 formed stainless steel flat bars; 1 in by 1/8 in (25 mm by 3 mm) thick; predrilled at 8 in (200 mm) centers. No aluminum or plastic bars allowed.
 - 1. Anchors: Same type screws as used to attach veneer wall ties.
 - E. Cavity Wall Insulation: As specified in Division 07 Section Thermal Insulation.
 - F. Barrier Sealing Tape: Air and water barrier sheet material laminated to adhesive coated rubberized asphalt or butyl. Refer to Division 07 Section Air and Water Barriers.
 - G. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, trowel grade or low viscosity provided by waterproofing manufacturer.
 - H. Asphalt Mastic Dampproofing: Water-based, cold-applied, non-flammable, asphalt mastic emulsion with refined asphalt, non-asbestos mineral fibers, and clay fillers complying with ASTM D 1227, Type II, Class 1. Brush, roller, or trowel grade allowed. Include primer and accessories as required.
- 2.15 MASONRY VENEER CLEANERS
- A. Commercial Cleaning Compounds: Products as recommended and approved by masonry veneer and mortar manufacturers.
 - 1. Description: Manufacturer formulated, general purpose cleaner for removing mortar stains, efflorescence, and other construction related stains from new masonry veneer surfaces, with following suitability requirements:
 - a. Suitable for masonry veneer units and mortar installed, without discoloring or damaging masonry veneer materials.
 - b. Suitable for conditions at project site, including, but not limited to, windows, doors, other exterior wall elements, and adjacent walks or landscaping.
 - 2. Manufacturers:
 - a. Diedrich Technologies, Inc.
 - b. EaCoChem.
 - c. Prosoco, Inc.
 - B. Cleaning Restrictions: Following methods are not permitted nor will they be allowed:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Hydrochloric acid.
2. Muratic acid.
3. Pressurized water blasting.
4. Abrasive blasting.

2.16 METAL FLASHING FABRICATION

- A. Field Measurements: Where metal flashing is to fit, cope, or be tailored to other construction, check actual dimensions of other construction by accurate field measurements before fabrication of metal flashing.
- B. Fabrication Procedures: Fabricate continuous flashings in sections 8 ft (2.4 m) long minimum, but not exceeding 12 ft (3.6 m). Provide splice plates at joints of formed, smooth metal flashing.
 1. Shop form flashing on a bending brake.
 2. Shape, trim and hand seam on bench as far as practical with proper tools.
 3. Form exposed metal Work without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated.
 4. Make angle bends and folds for interlocking metal with full regard for expansion and contraction to avoid buckling or fullness in metal after installation.
 5. Form materials to shape indicated with straight lines, sharp angles and smooth curves.
 6. Fold and hem exposed edges of flashings.
- C. Flashing Joinery: Fabricate interior and exterior corners, intersections, and complex flashing conditions in shop, rather than in field, with properly folded, constructed and continuous soldered joints. Field fabricated units are not permitted and will not be allowed.

2.17 MORTAR MIX

- A. General: Mix cementitious materials in a mechanical batch mixer with a sufficient amount of water to produce a workable consistency for minimum 3 minutes to 5 minutes; do not hand mix.
 1. Admixture Limitation: Do not use admixtures including air-entraining agents, accelerators, retarders, water repellent agents, antifreeze compounds, calcium chloride or other admixtures, unless otherwise indicated.
 - a. Decorative Concrete Masonry Units: Use water-repellent admixture in the mortar for decorative concrete masonry units only.
 2. Cementitious Limitation: Limit cementitious materials in mortar to Portland cement and lime.
 3. Ingredient Measurement: Measure in a one cubic foot batching box before mixing for component materials not pre-blended, prepackaged or containerized.
 4. Aggregate Moisture Content: Monitor moisture content of aggregates and exercise caution when mixing to avoid over or under-sanding of mortar.
- B. Pre-blended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a pre-blended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project.
- C. Mortar Mix:
 1. Mix Quality Standard: ASTM C 270, Proportion Specification for Portland cement-lime mortars, Type N.
 2. Mortar Color: Standard gray, unless indicated otherwise.
 3. Colored Pigmented Mortar: Select and proportion pigments with other ingredients to produce color required; limit mineral oxide pigments to maximum 10 percent of cement content by weight, and maximum 2 percent for carbon black pigment.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Colored Aggregate Mortar: Produce mortar of color required by use of colored aggregates in combination with selected cementitious materials.
5. Match Existing Mortar: Wherever "match existing" indicated, provide masonry mortar of matching color and texture as existing adjacent masonry veneer work.
6. Basis of Design: As scheduled or as indicated in Design Selections.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 1. Applicable portions of BIA Technical Notes on Brick Construction, if no other installation quality standard applies to condition.
 2. TMS 602 and local building code requirements.
 3. Respective manufacturer's written installation instructions.
 4. Accepted submittals.
 5. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.

3.4 INSTALLATION OF MASONRY VENEER

- A. Installation Performance Requirements: Ensure masonry cavity is properly isolated from building interior to prevent water infiltration from infiltrating out of masonry cavity into other components of building such as window and door jambs and building interiors.
- B. Openings: Leave for equipment to be installed before completion of masonry veneer; after installation of equipment, complete masonry veneer to match construction immediately adjacent to opening.
- C. Cutting: Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, un-chipped edges. Install cut units with cut surfaces and, where possible, cut edges concealed.
- D. Blending of Masonry Veneer Units: Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed. If color blending is a critical aspect of Work, manufacturer shall provide instructions for blending.
- E. Mortar Workability: Maintain by remixing or retempering; mortar with added color pigments shall not be re-tempered. Discard mortar that has begun to stiffen or is not used within 2.5 hours after initial mixing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Match Existing Masonry Veneer: Match coursing and bonding of existing masonry veneer.

3.5 SHELF ANGLES AND LINTELS

- A. Steel Shelf Angles: Erection as specified in Division 05 Section Metal Fabrications.
- B. Steel Loose Lintels: Set where indicated or required, with not less than 8 in (200 mm) of bearing at each jamb, unless otherwise indicated.
- C. Precast Concrete Lintels: Set where indicated, with not less than 8 in (200 mm) of bearing at each jamb, unless otherwise indicated.
- D. Masonry Lintels: Construct in place using formwork and shoring of sufficient strength to support Work, until strength has been achieved and assembly is cured.

3.6 LAYING MASONRY VENEER WALLS

- A. General: Lay out walls in advance for accurate spacing of surface bond patterns, uniform joint thicknesses, accurate location of openings, movement-type joints, returns, and offsets. Avoid using of less than half-size units at corners, jambs, and where possible at other locations.
- B. Bond Patterns:
1. Exposed Masonry Veneer: Match coursing of existing masonry, unless otherwise indicated.
 2. Exposed Masonry Veneer: One-half running bond or one-third running bond as indicated.
 3. Exposed Masonry Veneer: Stack bond as indicated.
 4. Concealed Masonry Veneer: Lay units in a wythe in running bond or bonded by lapping not less than 2 in (50 mm) lap.
 5. Corners: Bond and interlock each course of each wythe. Do not use units with less than nominal 4 in (100 mm) horizontal face dimensions at corners or jambs.
 6. Mitered corners are not allowed.
- C. Stopping and Resuming Work: In each course, rack back one-half unit length for one-half running bond pattern or one-third unit for one-third running bond pattern; do not tooth. When resuming Work, clean masonry veneer surfaces that are to receive mortar, remove loose masonry veneer units and mortar.
- D. Built-In Work:
1. As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry veneer around built-in items.
 2. Fill space between steel frames and masonry veneer solidly with mortar, unless otherwise indicated.

3.7 MORTAR BEDDING AND JOINTING

- A. General Procedures:
1. Do not disturb previously laid units.
 2. Spread mortar for bed joint only so far ahead of laying units that mortar will be plastic when units are laid.
 3. Butter end of unit with ample mortar so that head joint is completely filled with mortar when placed.
 4. Do not deeply furrow bed joints or slush head joints.
 5. Avoid over-plumbing and pounding of corners and jambs to fit stretcher unit after setting in place. Where adjustments must be made after initial setting, remove mortar and replace with fresh mortar.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

6. Rock closures into place with both head joints and closure space spread with ample mortar. Place against adjacent units so that both horizontal and vertical joints are completely filled.
 - B. Mortar Joint Thickness: Minimum 3/8 in (10 mm) wide for head and bed joints.
 - C. Hollow Masonry Veneer Units: Lay with face shells fully bedded in mortar and with head joints of depth equal to bed joints; with entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.
 - D. Solid Masonry Veneer Units: Lay with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and place into wall construction. Do not deeply furrow bed joints or slush head joints.
 - E. Joint Tooling: Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness, unless otherwise indicated.
 1. Make mortar joints straight, clean, and uniform in thickness. Tool joints to produce dense surface well bonded to edges.
 2. Joints which are not tight at time of tooling shall be raked out, pointed, and then tooled.
 3. Tool when mortar is partially set but still sufficiently plastic to bond.
 4. Use a tool which compacts mortar, pressing excess mortar out of joint rather than dragging it out.
 5. Tool vertical joint first.
 - F. Stone and Cast-Stone Trim Units: Lay with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and place into wall construction. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with water.
 1. Rake out mortar joints for pointing with sealant.
 2. Prepare and apply sealant of type and at locations indicated to comply with applicable requirements in Division 7 Section Joint Sealants.
- 3.8 MASONRY CAVITIES, WEEPS, AND VENTS
- A. Cavity Cleaning: Keep cavity clean of mortar droppings and other materials. Strike joints facing cavity flush.
 - B. Mortar Protection: Install cavity drainage material at base of cavity to protect bottom of cavity from mortar droppings that would prevent weeps from draining infiltrated water.
 - C. Cavity Wall Insulation: As specified in Division 07 Section Thermal Insulation. In addition, install continuous strip of cavity insulation, minimum 3 in (75 mm) wide, at edges of cavities adjacent to jamb of through-wall openings.
 - D. Weeps: Install weeps at maximum 32 in (800 mm) on centers in head joints of first course of masonry veneer immediately above embedded flashings.
 - E. Vents: Install vents at maximum 32 in (800 mm) on centers in head joints of topmost course of masonry veneer immediately below shelf angles, and at top of each continuous cavity.
- 3.9 ANCHORING MASONRY VENEER
- A. Adjustable Anchors for Connecting to Concrete, CMU or Structural Steel: Anchor masonry veneer to structural members where masonry veneer abuts or faces structural members to comply with following, with anchors embedded in masonry veneer joints and attached to structure:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Unless otherwise indicated, provide an open space not less than **1 in (25 mm)** in width between back of masonry veneer and structural member. Keep open space free of mortar or other rigid materials.
 2. Anchor masonry veneer to structural members with anchors embedded in masonry joints and attached to structure.
 3. Space anchors vertically and horizontally as required for coursing with one anchor for every **2 sq ft (1858 sq cm)** of masonry veneer; stagger alternating anchors in each row.
 4. Asphalt Mastic Dampproofing Substrate: Apply a coating of liquid membrane behind through-wall attachments that penetrate asphalt mastic dampproofing.
 5. Sheet Membrane Substrate: Apply a coating of liquid membrane behind through-wall attachments that penetrate sheet membrane.
- B. Adjustable Masonry Veneer Anchors for Sheathed Steel Studs Walls: Anchor masonry veneer to sheathed steel studs with proper anchors.
1. Unless otherwise indicated, provide an open space not less than **2 in (50 mm)** in width between back of masonry veneer and face of sheathing or **1 in (25 mm)** from face of cavity insulation.
 2. Keep open space free of mortar or other rigid materials.
 3. Locate anchor plate portion of wall tie to allow maximum vertical differential movement of tie up and down.
 4. Space anchors at **16 in (400 mm)** on center vertically and **16 in (400 mm)** on center horizontally as required for coursing.
 5. Install additional anchors within **12 in (300 mm)** of openings and at maximum **8 in (200 mm)** on center around perimeter.
 6. Attach each anchor through sheathing to steel studs with 2 metal fasteners each.
 - a. Air and Water Barrier: Install a strip of barrier flashing tape behind through-wall attachments that penetrate air and water barrier. Seal all penetrations with weather barrier sealant
 7. Embed wall tie, in proper orientation, at least halfway through masonry veneer but with at least **5/8 in (15 mm)** cover on outside face of masonry veneer.
 8. Seismic Anchors and Ties: Install pencil rod continuous horizontally.
 9. Stack Bond Anchors and Ties: Install pencil rod continuous horizontally.

3.10 EMBEDDED FLASHINGS

- A. General: Drawings may not necessarily indicate or describe full extent of Work required for completion of embedded flashing.
- B. Reglets and Nailers: Install for flashing and other related construction where they are shown to be built into masonry.
- C. Scheduled Locations: In addition to conditions shown on Drawings, install embedded flashings within masonry cavity at following locations to direct downward flow of infiltrated water within cavity to exterior:
 1. Shelf angles with end dams at through-wall openings; and with lap joints.
 2. Lintels with end dams or laps.
 3. Jambs at through-wall openings, full height from sill to head.
 4. Other obstructions.
- D. Preparation: Substrate surfaces shall be smooth and free from projections that could puncture flashing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Flashing Installation: Provide continuous support for flashings and ensure positive drainage to exterior.
1. Install sheet metal flashing true to line and levels indicated; minimize quantity of lap joints by using longest units possible.
 2. Set shaped sheet metal units in proper locations with outside hemmed edges flush with building face location indicated; attach cavity side flanges to sheathed steel stud wall with screw fasteners driven into studs.
 3. At continuous shelf angles, terminate horizontal flashings at through-wall openings with properly folded and constructed sheet metal end dams with a depth equivalent to one masonry veneer course, with continuous soldered joints.
 4. At lintels, terminate horizontal flashings at end of lintel with properly folded and constructed sheet metal end dams with a depth equivalent to one masonry veneer course, with continuous soldered joints.
 5. At lap joints of horizontal flashings, form neat and aligned joints by interlocking splice plate within hemmed edge of sheet metal flashing profile; apply sealant and rubberized asphalt flashing as indicated to create water-resistant joint.
 6. Set shaped sheet metal units at jambs of through-wall openings and lap inside of end dams at horizontal flashings below; coordinate installation with rigid cavity insulation.
 7. Seal cavity edges of sheet metal flashings within masonry cavity to sheathing with continuous rubberized asphalt flashing.
- F. Examination and Repair: Immediately prior to laying masonry veneer, examine exposed surfaces of flashing and seal penetrations and damaged areas with rubberized asphalt flashing material before covering with masonry veneer.
- G. Asphalt Mastic Dampproofing Application: Apply continuous layer of product, without pinholes or holidays, at below grade masonry veneer locations and as indicated on drawings. Apply at coverage rate instructed by manufacturer.
1. Repair voids and damage. Patch with additional layer of asphalt mastic dampproofing extending **6 in (150 mm)** beyond repaired areas in all directions.

3.11 MASONRY VENEER EXPANSION JOINTS

- A. General: Install masonry veneer expansion joints materials as Work progresses. Do not allow materials to span masonry veneer expansion joints without provision to allow for in-plane wall or partition movement. Maintain joints free and clear of mortar.
- B. Vertical Expansion Joints:
1. Locate where indicated but not to exceed **25 ft (7.6 m)** on center, and within **10 ft (3 m)**, **4 ft (1.22 m)** preferred, of each side of outside corner. Keep vertical joints straight, true, and continuous from top to bottom of masonry veneer.
 2. Form open joint of width indicated for installation of sealant and backer rod specified in Division 07 Section "Joint Sealants".
- C. Horizontal Joints: Build in horizontal pressure-relieving joints below shelf angles and where indicated; construct of width required for installation of sealant and backer rod specified in Division 07 Section "Joint Sealants". Locate not less than **3/8 in (9 mm)** wide horizontal pressure-relieving joints beneath shelf angles supporting masonry veneer and attached to structure behind masonry veneer.

3.12 INSTALLATION TOLERANCES

- A. Conspicuous Lines:
1. Vertical: For such conditions as external corners, door and window jambs, reveals, and masonry veneer expansion joints, maximum variation of the following from plumb:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. $\frac{1}{8}$ in (3 mm) in 10 ft (3 m).
 - b. $\frac{1}{4}$ in (6 mm) in 20 ft (6 m).
 - c. $\frac{1}{2}$ in (12 mm) overall.
 2. Horizontal: For such conditions as exposed lintels, sills, door and window heads, parapets, and reveals, maximum variation of the following from level:
 - a. $\frac{1}{8}$ in (3 mm) in 10 ft (3 m).
 - b. $\frac{1}{4}$ in (6 mm) in 20 ft (6 m).
 - c. $\frac{1}{2}$ in (12 mm) overall.
 - B. Exposed Head Joints:
 1. Vertical Alignment: Maximum variation of the following from plumb:
 - a. $\frac{1}{4}$ in (6 mm) in 10 ft (3 m).
 - b. $\frac{1}{2}$ in (12 mm) from plumb top to bottom of wall.
 2. Thickness: Maximum variation from width indicated of plus or minus $\frac{1}{8}$ in (3 mm); maximum variation from adjacent bed joint and head joint thicknesses $\frac{1}{8}$ in (3 mm).
 - C. Exposed Bed Joints: Maximum variation from width indicated of plus or minus $\frac{1}{8}$ in (3 mm), with a maximum thickness limited to $\frac{1}{2}$ in (12 mm); maximum variation from bed joint thickness of adjacent courses of $\frac{1}{8}$ in (3 mm).
 - D. Flush Alignment: Maximum variation of $\frac{1}{16}$ in (1.5 mm) except due to warpage of masonry veneer units with tolerances specified for warpage of units.
 - E. Stack Bond: For exposed head joints and bed joints, maximum variation from a straight line of $\frac{1}{16}$ in (1.5 mm) from one masonry veneer unit to next.
- 3.13 FIELD QUALITY CONTROL
- A. Special Inspections: Owner will engage a qualified special inspector to perform special inspections and prepare reports:
 1. Special inspections in accordance with TMS 402/602 and the Building Code.
 2. Testing agency will report test results promptly and in writing to Contractor and Architect.
 - B. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 2. Prepare test and inspection reports.
- 3.14 ADJUSTING
- A. Repairs for Damage: Remove and replace masonry veneer units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units and install fresh mortar, pointed to eliminate evidence of replacement.
 - B. Pointing: During tooling of joints, enlarge any voids or holes, except weeps and vents, and completely fill with mortar. Point up all joints including corners, openings, and adjacent

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

construction, to provide a neat, uniform appearance. Prepare joints for application of sealants, where indicated.

3.15 CLEANING

- A. In-Progress Cleaning: As soon as practical, clean masonry veneer as Work progresses by dry brushing to remove mortar fins and smears prior to tooling joints.
- B. Protection: Prior to Final Cleaning, protect surrounding areas, landscaping, adjacent surfaces, and vehicles from contact with cleaning products.
- C. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry veneer as follows:
 - 1. Protect adjacent and nearby materials, especially windows and glass, to avoid damage.
 - 2. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 - 3. Test cleaning methods on mock-ups; leave one half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of permanent masonry veneer.
 - 4. Clean masonry veneer by means recommended by cleaning product manufacturer using masonry cleaner compound as recommended and approved by masonry veneer and mortar manufacturers.
 - 5. Avoid drifting of cleaning spray caused by wind.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 047500
ADHERED MASONRY VENEER

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Adhered masonry veneer and supplementary items necessary for installation.
1. Exterior, Framed Construction: Thick set installation including building paper, metal lath, MVIS scratch coat mortar and veneer setting bond coat mortar.
 2. Exterior, CMU Construction: Thick set installation including metal lath, MVIS air and water barrier, scratch coat mortar and veneer setting bond coat mortar.
 3. Exterior, Framed Construction: Thin set installation including building paper, exterior cementitious backer units, MVIS air and water barrier and veneer setting bond coat mortar.
 4. Exterior, CMU or Concrete Construction: Thin set installation including MVIS air and water barrier and veneer setting bond coat mortar.
 5. Exterior, Framed Construction with Continuous Insulation: Thin set installation with continuous insulation including sub-framing system, continuous mineral wool cavity insulation and exterior cementitious backer units, MVIS air and water barrier and veneer setting bond coat mortar.
 6. Interior, Framed Construction: Thin set installation including exterior cementitious backer units, MVIS veneer setting bond coat mortar.
 7. Interior, CMU or Concrete Construction: Thin set installation including MVIS veneer setting bond coat mortar.
- B. Related Requirements:
1. Refer to Division 01 Section Field Test for Air and Water Leakage.

1.2 DELEGATED ENGINEERING REQUIREMENTS FOR INSTALLATIONS USING SUB-FRAMING SYSTEMS

- A. Delegated Engineering Responsibility: Contractor shall engage a qualified professional engineer to provide engineering for products and systems required to comply with the design intent of Contract Documents.
1. Contract Documents Design Intent: Drawings and Specifications indicate design intent for products and systems and do not necessarily indicate or specify total Work required. Contract Documents shall not be construed as an engineered design; furnish and install Work required for a complete installation.
 2. Delegated Engineer Professional Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated with a record of successful in-service performance. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.
 3. Submittals: Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified professional engineer.
 4. Coordination of Work:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Product Variations: In the event of minor differences between products and systems of acceptable or available manufacturers, Contractor shall notify Architect of such differences and resolve conflicts in a timely manner. Failure of Contractor to provide notification shall be construed as acceptance of conditions indicated, and changes caused by minor differences between products and Contract Documents shall be included in the Work at no additional cost to Owner.
- b. Allowable Adjustments: Minor dimension and profile adjustments may be made in interest of fabrication or erection methods or techniques or ability to satisfy design intent, provided design intent is maintained as determined by Architect. Proposed deviations shall include a detailed analysis of impact to adjacent substrates or other building systems, including related design or construction cost impacts. If accepted by Architect, deviations causing changes in materials, constructability, substrates, or conditions shall be included in the Work at no additional cost to Owner.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
 - a. Kind, size, and color of masonry unit.
 - b. Manufactured accessory product.
 - c. Setting and grout products.
 - d. Cleaning products, including application procedures.
 - 2. MVIS Membrane Air and Water Barrier:
 - a. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.
 - b. Include data on air and water-vapor permanence based on testing according to referenced standards.
 - c. Include VOC content of each material, and applicable legal limit in the jurisdiction of the project.
- B. Shop Drawings: Show details of construction, including dimensioned drawings, plans, elevations, sections, and details of components to be incorporated into Work including, but not limited to, the following:
 - 1. Masonry Veneer Units: Show sizes, profiles, and coursing.
 - 2. Special Masonry Veneer Shapes: Submit large-scale details for each shape required or indicated.
 - 3. Wall panel assembly including sub-framing and attachments.
 - a. Shop drawings shall contain seal of a professional engineer currently registered in licensing jurisdiction of the project and a written statement that the framing system conforms to project requirements, applicable codes, and specified conditions.
 - 4. Flashing: Large-scale details for each element of flashing system showing layout, profiles, methods of joining, and anchorage details; including lintel units, shelf units, corner units, end dam units, conditions showing interface and relationship to adjacent materials, and other special applications.
 - 5. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.
 - 6. Accessories: Show sizes, coursing, and locations.
 - 7. Movement Joints: Show expansion and control joint locations in substrate and veneer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Samples for Verification Purposes: Submit samples for each item listed below of size and construction indicated. Where products involve normal color and texture variations, include sample sets showing the full range of variations expected.
1. Masonry Units: Full-size samples for each different type of veneer unit indicated.
 2. Pigmented and Color Aggregate Mortars and Grouts: Make samples using same sand and mortar ingredients to be used on Project. Label Samples to indicate types and amounts of pigments used.
 3. Accessories: Samples of manufactured products, including flashing materials and other accessories.
 4. Flashing: Samples of each shape, profile, intersection and transition required, not less than 12 in (300 mm) long, including end dam and splice/lap joint for flashing; demonstrate soldering quality.
 5. Exposed Sealants: For each type and color of joint sealant required. Install joint sealants in 1/2 in (12 mm) wide joints formed between two 6 in (150 mm) long strips of material matching the appearance of construction adjacent to joint sealants.
 6. MVIS Fluid Applied Air and Water Barrier Assembly: Minimum 8-1/2 in by 11 in (212 mm by 275 mm).
- D. List of Materials Used in Constructing Wall Mock-ups:
1. Product, material, and equipment names, model numbers, lot numbers, batch numbers, source of supply, and other information required to identify items used. Include mix proportions for mortar and source of aggregates.
 2. Receipt of list does not constitute acceptance of deviations from Contract Documents, unless such deviations are specifically accepted by Architect in writing.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required.
1. Submit valid UL Evaluation Report or Evaluation Service Report (ESR) issued by International Code Council (ICC-ES) for cladding systems used in Project.
- B. Delegated Engineering Submittal: For products and systems indicating compliance with performance requirements. Include structural analysis, calculations and other performance data signed and sealed by the qualified professional engineer responsible for their preparation.
- C. Pre-Construction Test Reports: Written reports from independent testing agency required by "Quality Assurance".
1. Submit Bond Strength Test Reports for mortar adhesion.
- D. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control".
- E. Warranty:
1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations, and exclusions.

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Instructions: Include in operation and maintenance manual as required by Division 01 Section "Closeout Procedures". Submit manufacturer's instructions for maintenance of installed work, including methods and frequency for maintaining optimum

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

condition under anticipated use. Include precautions against cleaning materials and methods which may be detrimental to finishes and performance.

1.6 QUALITY ASSURANCE

- A. Quality Standards: In addition to specified requirements, comply with ACI 530.1/ASCE 5/TMS 402 for adhered masonry veneer classification and prescriptive requirements and local building code, whichever is more stringent.
- B. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 10 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 10 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.
- C. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1093 to conduct the testing indicated.
- D. Pre-Construction Setting Mortar Testing: Employ and pay an independent testing agency to perform pre-construction testing to establish compliance of proposed Work with requirements.
 - 1. General Requirements: Test mortar for composition to establish code compliance and standard for field testing specified under "Field Quality Control" Article.
 - 2. Bond Strength Test Method: ANSI 137.1 / ASTM C 482 Test Method for Bond Strength of Ceramic Tile to Portland Cement.
 - 3. Reports: Interpret test results and prepare certified reports.
 - 4. Retesting: Retesting of materials failing to meet requirements shall at Contractor's expense.
- E. Hot and Cold Weather Work Plan: Written plan detailing methods, materials and equipment to be used to comply with weather requirements.
- F. Masonry Veneer Cleaning Plan: Based on technical information provided by respective manufacturer for each masonry veneer unit to be cleaned, submit written plan for cleaning exposed masonry veneer surfaces, prepared by commercial cleaning compound manufacturer, with signature of installer indicating acceptance and include following information:
 - 1. Qualifications of applicators.
 - 2. Products to be used and application procedures.
 - 3. Masonry veneer surfaces to be cleaned and required preparations.
 - 4. Environmental requirements by authorities having jurisdiction for use and discharge of cleaning effluents.
 - 5. Protection of surrounding areas, landscaping, and building surfaces adjacent to area of cleaning.
- G. Sample Panels: Prior to installing masonry, build as many sample panels as required to verify selections made under submittals and to demonstrate aesthetic effects using specified materials:
 - 1. Build approximately 48 in (1200 mm) square for each type of exposed masonry units.
 - 2. Locate at locations indicated or, if not indicated, as directed by Architect.
 - 3. Clean exposed faces with masonry cleaner specified.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Where masonry is to match existing masonry, erect panels adjacent and parallel to an existing, south-facing wall where available.
 5. Notify Architect 7 days in advance of the dates and times when panels will be constructed.
 6. Protect accepted sample panels with weather-resistant membrane.
 7. Maintain during construction in an undisturbed condition as a standard for judging completed Work.
 8. Acceptance of panels is for following aesthetic qualities; acceptance does not constitute acceptance of deviations from Contract Documents, unless specifically accepted by Architect in writing:
 - a. Color, texture, and blending of masonry units.
 - b. Color and blending of mortar.
 - c. Relationship of mortar and sealant colors to masonry unit colors.
 - d. Tooling of joints.
 - e. Effectiveness of masonry cleaner.
 - f. Other aesthetic qualities as determined by the Architect.
 9. When directed, demolish and remove sample panels from Project site, including foundations.
- H. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up using materials indicated for the completed Work.
1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.
 2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
 4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
 5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.
- 1.7 PRE-INSTALLATION CONFERENCE
- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 3. Record discussions, including decisions and agreements, and prepare report.
- 1.8 DELIVERY, STORAGE, AND HANDLING
- A. Delivery: Label pallets of masonry veneer units with manufacturers name, product name, and information required to identify products.
 - B. Storage:
 1. Masonry Veneer Units: Store on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
 2. Cementitious Materials: Store on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
 3. Aggregates: Store where grading and other required characteristics can be maintained and contamination avoided.
 4. Accessories: Store to prevent corrosion and accumulation of dirt and oil.
- 1.9 PROJECT CONDITIONS
- A. Protection during Work: Prevent excess moisture from entering Work in progress.
 1. Cover tops of walls, projections, and sills with water-repellent tarps or heavy plastic sheets at end of each day's Work.
 2. Cover partially completed masonry veneer when construction is not in progress.
 3. Extend cover minimum of 24 in (600 mm) down both sides and hold cover securely in place.
 4. Protect door and window frames from damage.
 - B. Stain Prevention: Prevent mortar and soil from staining exposed masonry veneer. Immediately remove mortar and soil from exposed masonry veneer.
 1. Protect base of walls from rain-splashed mud and mortar splatter.
 2. Protect sills, ledges, and projections from mortar droppings.
 3. Protect surfaces of window and door frames, and other adjacent materials with painted and integral finishes from mortar droppings.
 4. Turn scaffolding planks near Work on edge at end of each day to prevent rain from splashing mortar droppings or dirt onto face of exposed masonry.
 - C. Cold Weather Requirements: Comply with building code and referenced quality standard whichever is more stringent, and the following:
 1. Provide heat and protection (temporary or permanent) as required to protect Work from freezing after application.
 2. Distribute heat uniformly to prevent concentration of heat near sources; provide deflection or protective screens.
 3. Do not use frozen materials or materials mixed or coated with ice or frost.
 4. Do not build on frozen substrates.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

5. Remove and replace masonry veneer damaged by frost or freezing conditions.
- D. Warm Weather Requirements: Comply with building code and referenced quality standard whichever is more stringent, and the following:
 1. Protect Work against uneven and excessive evaporation and from strong flows of dry air, both natural and artificial.
 2. Apply and cure work as required by climatic and job conditions to prevent dryout during cure period.
 3. Provide suitable coverings, moist curing, barriers to deflect sunlight and wind, or combinations of these, as required.
- 1.10 COORDINATION
 - A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- 1.11 WARRANTY
 - A. MVIS Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design and installation of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 1. Warranty Period: Installer shall warrant the products to be free from material and labor Defects for a period of 15 years from date of Substantial Completion.
 - B. Installer's Warranty: Furnish installer's written material and labor warranty signed by an authorized representative using installer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material or workmanship defects caused by manufacture or design and installation of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, loss of adhesion.
 - b. Deterioration of materials beyond normal weathering.
 2. Warranty Period: Installer shall warrant the products to be free from material and labor Defects for a period of 5 years from date of Substantial Completion.
 - C. If exploratory work is required to determine the cause of the defects, the cost of such work shall be borne by the Contractor if the work is found to be defective as judged by the Architect.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products specified to establish a standard of quality. Other acceptable manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and do not change intended aesthetic, functional and performance requirements as judged by Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Selections: As scheduled or as indicated in Design Selections.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials
- B. Masonry Units: Obtain exposed masonry veneer units of a uniform texture and color, or a uniform blend within ranges accepted for these characteristics.
- C. Cementitious Materials: Obtain cementitious ingredients of a uniform quality, including color, for each component.
- D. Defective Units: Do not install units where defects, including dimensions that vary from specified dimensions by more than stated tolerances, will be exposed in completed Work or will impair quality of completed masonry.
- E. Special Shapes: Provide shapes indicated and as follows for each form of masonry veneer unit required:
 1. For applications requiring units of form, color, texture, and size on exposed surfaces that cannot be produced by sawing standard unit sizes.
 2. For applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
 3. For applications where stretcher units cannot accommodate special conditions including those at L-shape corners, substrate construction and movement joints, bond beams, sashes, and lintels.
 4. For units with exposed surfaces such as ends of sills, caps, and similar applications that would otherwise expose unfinished unit surfaces.

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Structural Loads: Engineer products and systems to withstand loads within limits of allowable working stresses of the materials involved under conditions indicated including, but not limited to gravity, wind, seismic, and erection design loads and thermal movements established by authorities having jurisdiction, applicable building codes, and as indicated.
 1. Wind Loads: As indicated on Drawings.
 2. Other Loads: As indicated on Drawings.
- C. Structural Movement: Engineer system to withstand movements of supporting structure including, but not limited to inter-story drift, twist, column shortening, long-term creep and deflection from uniformly distributed and concentrated live loads.
 1. Live Load Deflection: Accommodate differential vertical deflection of floors:
 - a. Deflection: As indicated on Drawings.
- D. Seismic Performance: Systems shall withstand the effects of earthquake motions determined in accordance with the building code and authorities having jurisdiction.
- E. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
 1. Temperature Change (Range): 120 deg F (49 deg C), ambient; 180 deg F (82 deg C), material surfaces.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Dimensional Tolerances: Engineer products and systems to accommodate dimensional tolerances of framing members and adjacent construction.
- G. Adhesion Performance: Adhesion between masonry veneer unit and backing shall have shear bond strength of not less than 180 psi (kPa) according to ANSI 137.1 / ASTM C 482.
- H. Shape Limitations of Individual Units:
 - 1. Maximum Weight at Exterior Locations: Not to exceed 15 lb/sq ft (73.2 kg/sq m).
 - 2. Maximum Weight at Interior Locations: Not to exceed 20 lb/sq ft (97.6 kg/sq m).
 - 3. Maximum Dimension in Any One Face: Not to exceed 36 in (900 mm).
 - 4. Overall Face Area: Not to exceed 720 sq in (0.464 sq m).
 - 5. Thickness:
 - a. Not less than as indicated.
 - b. Not more than 2-5/8 in (65 mm).
- I. Shape Limitations of Individual Units - Exterior Porcelain Tile:
 - 1. Maximum Weight at Exterior Locations: Not to exceed 9 lb/sq ft (43.9 kg/sq m).
 - 2. Maximum Dimension in Any One Face: Not to exceed 24 in (600 mm).
 - 3. Overall Face Area: Not to exceed 432 sq in (0.28 sq m).
 - 4. Thickness:
 - a. Not less than as indicated.
 - b. Not more than 5/8 in (15 mm).

2.4 THIN BRICK MASONRY UNITS

- A. Product Quality Standard: ASTM C 216, Type FBX or ASTM C 1088, Grade Exterior, Type TBX, not less than 1/2 in (12 mm) at the narrowest point, with a tolerance of plus or minus 1/16 in (1.5 mm).
 - 1. Special Shapes: Include corners, edge corners, and end edge corners.
 - 2. Back Surface Texture: Scored, combed, wire roughened, ribbed, keybacked, or dovetailed.
 - 3. Initial Rate of Absorption: Less than 30 g/30 sq. in. (30 g/194 sq. cm) per minute; ASTM C 67.
 - 4. Efflorescence: Tested according to ASTM C 67 and rated "not effloresced."
 - 5. Surface Coating: Thin brick with colors or textures applied as coatings shall withstand 50 cycles of freezing and thawing; ASTM C 67 with no observable difference in applied finish when viewed from 10 ft (3 m).

2.5 SUBFRAMING

- A. Metal Sub-framing and Furring: Provide manufacturer standard sections as required for support and alignment of panels.
 - 1. Sub-girts, Zee Clips, Base or Sill Angles or Channels: Provide manufacturer's standard sections as required for support and alignment of system, type as recommended by panel manufacturer.
 - a. Metallic Coated Steel Sheet: ASTM C645, cold-formed, metallic-coated steel sheet, ASTM A792/A792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated.
 - 1) Thickness: Not less than 0.063 inch, 16 gage nominal thickness.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Aluminum Sheet: Clear anodized sheet, ASTM B209 (ASTM B209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - 1) Thickness: Not less than 0.064 inch, 14 gage nominal thickness.
- c. Aluminum Extrusions: ASTM B 221 / B 221M, alloy and temper recommended by panel manufacturer for type of use.
- 2. Fasteners for Sub-framing and Furring: Self-tapping screws, bolts, nuts, and other suitable fasteners, Series 300 stainless steel of size, corrosion resistance, holding power, and other properties required to comply with performance requirements.
 - a. Provide fasteners with EPDM or PVC sealing washers.

2.6 THERMAL INSULATION

- A. Refer to Division 7 Section Thermal Insulation for mineral wool cavity insulation requirements.

2.7 EXTERIOR CEMENTITIOUS BACKER UNITS

- A. Cementitious Backer Units: ASTM C1325, Type A.
 - 1. Manufacturer and Product: National Gypsum Company; PermaBase Cement Boards.
 - a. Thickness: 1/2 inch (12.7 mm) (13 mm).
 - 2. Comply with UL Evaluation Report UL ER22158-01.
- B. Fasteners: Wafer head screws, Series 300 stainless steel of size, corrosion resistance, holding power, and other properties required to comply with performance requirements, as recommended by manufacturer for this installation.
- C. Joint Treatments: Cement mortar and 4 in wide alkali-resistant, fiberglass mesh tape as recommended by manufacturer.

2.8 MVIS AIR AND WATER BARRIER, FLUID APPLIED

- A. Performance Requirements - MVIS Air and Water Barrier Assembly:
 - 1. General: Air and water barrier shall be capable of performing as a continuous vapor-permeable air barrier and as a liquid-water drainage plane. Air and water barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to embedded flashing, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
 - a. Assembly shall perform as a drainage plane flashed to discharge condensation or water penetration to the exterior.
 - b. Assembly shall accommodate movements of building materials by providing expansion and control joints as required, with accessory air and water seal materials at such locations, changes in substrate and perimeter conditions.
 - c. Assembly shall be capable of withstanding positive and negative combined design wind pressures on the envelope without damage or displacement.
 - d. Assembly shall be joined in an airtight and flexible manner to the air and water barrier material of adjacent assemblies, allowing for the relative movement of assemblies due to thermal and moisture variations and creep, and anticipated seismic movement.
 - 2. Connections to Adjacent Materials: Provide connections to prevent air leakage and water migration at the following locations:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Foundation and walls, including penetrations, ties and anchors.
 - b. Walls, windows, curtain walls, storefronts, louvers or doors.
 - c. Different wall assemblies and fixed openings within those assemblies.
 - d. Wall and roof connections.
 - e. Floors over unconditioned space.
 - f. Walls, floor and roof across construction, control and expansion joints.
 - g. Walls, floors and roof to utility, pipe and duct penetrations.
 - h. Seismic and expansion joints.
 - i. Other leakage pathways in the building envelope.
3. MVIS Air and Water Barrier: Liquid membrane with an installed dry film thickness according to manufacturer's written instructions, over smooth, void-free substrates.
- a. Basis of Design: Laticrete MVIS Air and Water Barrier, spray or roller applied air and moisture barrier material.
4. Sheathing Joint Treatments: Self-curing liquid rubber polymer and flexible, non-woven fabric mesh designed for use with air and water barrier as recommended by manufacturer.
- a. Basis of Design: Laticrete; Waterproofing/Anti-Fracture Fabric.
- B. Accessory Materials:
1. General: Accessory materials recommended by air and water barrier manufacturer to produce a complete air and water barrier assembly and compatible with primary air and water barrier material.
- a. Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air and water barrier manufacturer to produce a complete air and water barrier assembly and that are compatible with primary air and water barrier material and adjacent construction to which they may seal.
2. One-Piece Electrical Box: Rigid reinforced polyethylene electrical box designed to prevent leaks at air and water barrier, with fixed or adjustable flange to suit installation conditions, with clear hinged weatherproof in-use cover.
- a. Basis of Design: Arlington Industries, Inc.; In Box.

2.9 MORTAR

- A. Material Quality Standards: ANSI A118 Series as indicated.
- B. Mortar:
1. Material Quality Standard: ANSI A118.4, manufacturer's premium, single component system for mixing at time of installation.
2. Basis of Design:
- a. Laticrete International, Inc.; Laticrete MVIS Masonry Veneer Mortar.
 - b. Laticrete International, Inc.; Laticrete MVIS Hi-Bond Masonry Veneer Mortar.
- C. Latex-Portland Cement Sanded Grout for Joints Greater than 1/8 in (3 mm) Wide:
1. Material Quality Standard: ANSI A118.7, with following physical properties:
- a. Manufacturer's premium polymer modified sanded grout product.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Integral antimicrobial product added during manufacturing to resist mold and mildew growth.
 - 2. Basis of Design:
 - a. Laticrete International, Inc.; Premium Masonry Pointing Mortar.
- 2.10 JOINT SEALANTS
 - A. Refer to Division 7 Section Joint Sealants for sealing joints.
 - 1. Provide silicone sealant recommended by MVIS manufacturer in locations required for MVIS System Warranty.
- 2.11 EMBEDDED FLASHINGS
 - A. Sheet Metal Flashing: Metal flashing, where flashing is exposed or partly exposed and where indicated, complying with SMACNA's "Architectural Sheet Metal Manual" and as follows:
 - 1. Material:
 - a. Material Quality Standard: ASTM A 240 / A 240M or A 666, Type 304.
 - b. Material Quality Standard: ASTM A 240 / A 240M or A 666, Type 316.
 - c. Description: Stainless steel, 2D annealed finish, not less than 0.0250 in (24 ga) (0.64 mm) thick, unless noted otherwise.
 - 2. Solder:
 - a. Material Quality Standard: ASTM B 32, Grade Sn60.
 - b. Description: Solder with acid flux of type recommended by stainless steel sheet manufacturer; use a noncorrosive rosin flux over tinned surfaces.
 - B. High-Temperature Rubberized Asphalt Flashing:
 - 1. Description: Minimum 40 mils (1.0 mm) thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
 - 2. Thermal Stability: ASTM D 1970; stable after testing at 240 deg F (116 deg C).
 - 3. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F (29 deg C).
 - 4. Available Manufacturers and Products:
 - a. Carlisle Coatings & Waterproofing; CCW WIP 300HT.
 - b. Grace Construction Products; Ultra.
 - c. Henry Company; Blueskin PE200 HT.
 - d. Metal-Fab Manufacturing, LLC; MetShield.
 - e. Owens Corning; WeatherLock Metal High Temperature Underlayment.
 - 5. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.
- 2.12 METAL LATH
 - A. Metal Lath:
 - 1. Product Quality Standard: ASTM C 847 with ASTM A 653 / A 653M, G60 (Z180), hot-dip galvanized zinc coating.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Description: Expanded, diamond mesh lath, 3.4 lb/sq yd (1.8 kg/sq m), of following types:
 - a. Self-furred (dimpled) over solid substrates.
 3. Manufacturers:
 - a. Alabama Metal Industries Corp. (AMICO); a Gibraltar Industries Company.
 - b. California Expanded Metal Co. (CEMCO).
 - c. Clarkwestern Dietrich Building Systems.
 - d. Marino / WARE.
 - e. Niles Building Products Co.
 - f. Phillips Manufacturing Co.
- B. Lath Tie Wire: ASTM A 641 / A 641M, Class 1 galvanized, not less than 0.0475 in (18 ga) (1.2 mm) diameter, soft temper.
- C. Strip Lath Reinforcement:
1. Product Description: Strips of expanded, self-furred, diamond mesh lath, 3.4 lb/sq yd (1.8 kg/sq m), not less than 6 in (150 mm) wide, with smooth edges.
 2. Material Quality Standard: Hot-dip galvanized steel, ASTM A 653 / A 653M, G60 (Z180) zinc coating.
 3. Available Manufacturers and Products:
 - a. Alabama Metal Industries Corp. (AMICO); Striplath.
 - b. California Expanded Metal Co. (CEMCO); Stripite.
 - c. Clarkwestern Dietrich Building Systems; Striplath.
- D. Inside Corner Reinforcement:
1. Product Description: Strips of galvanized expanded metal lath, minimum 3 in (75 mm) wide flanges, folded to 105 degrees, with smooth edges.
 2. Material Quality Standard: Hot-dip galvanized steel, ASTM A 653 / A 653M, G60 (Z180) zinc coating.
 3. Manufacturers and Products:
 - a. Alabama Metal Industries Corp. (AMICO); Cornalath.
 - b. California Expanded Metal Co. (CEMCO); Cornerite.
 - c. Clarkwestern Dietrich Building Systems; Cornerite.
- E. Screw Fasteners for Attaching Metal Lath to Sheathed Steel Studs:
1. Product Quality Standard: ASTM C 1063.
 2. Description: Self-drilling and self-tapping screws with pan or wafer type head of size to engage 3 strands of lath; fabricated from corrosive resistant or nonferrous metal; in lengths required to achieve minimum penetration of 3/8 in (10 mm) beyond stud.
- F. Power Actuated Fasteners for Metal Lath to Cementitious Substrates:
1. Product Quality Standard: ANSI A10.3.
 2. Product Description: Low velocity, powder actuated fasteners, stainless steel drive pins, length as required for minimum 3/4 in (19 mm) long penetration, with washers sized engage 3 strands of lath; powder loads suitable for application indicated; sufficient to correctly attach or anchor metal lath to substrate indicated without failure.
 3. Available Manufacturers:
 - a. Hilti Corp.
 - b. ITW Ramset/Red Head.
 - c. Powers Fasteners.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. Simpson Strong Tie Anchor Systems.

2.13 RELATED MATERIALS

A. Building Paper:

1. Product Quality Standard: Fed. Spec. UU-B-790a, Type 1, Grade D, Style 2.
2. Description: Two-ply asphalt saturated Grade D vapor permeable sheathing paper.
3. Minimum Physical Properties and Performance Requirements:
 - a. Water Penetration Resistance: 110 minutes according to ASTM D 779.
 - b. Water Vapor Transmission: 10 perms Minimum Vapor Transmission according to ASTM E 96, Procedure A.
4. Manufacturer and Product: Fortifiber Corp.; Two Ply Jumbo Tex.

2.14 MASONRY VENEER CLEANERS

A. Commercial Cleaning Compounds: Products as recommended and approved by masonry veneer and mortar manufacturers.

1. Description: Manufacturer formulated, general purpose cleaner for removing mortar stains, efflorescence, and other construction related stains from new masonry veneer surfaces, with following suitability requirements:
 - a. Suitable for masonry veneer units and mortar installed, without discoloring or damaging masonry veneer materials.
 - b. Suitable for conditions at project site, including, but not limited to, windows, doors, other exterior wall elements, and adjacent walks or landscaping.
2. Manufacturers:
 - a. Diedrich Technologies, Inc.
 - b. EaCoChem.
 - c. Prosoco, Inc.

B. Cleaning Restrictions: Following methods are not permitted nor will they be allowed:

1. Hydrochloric acid.
2. Muratic acid.
3. Pressurized water blasting.
4. Abrasive blasting.

2.15 METAL FLASHING FABRICATION

A. Field Measurements: Where metal flashing is to fit, cope, or be tailored to other construction, check actual dimensions of other construction by accurate field measurements before fabrication of metal flashing.

B. Fabrication Procedures: Fabricate continuous flashings in sections 8 ft (2.4 m) long minimum, but not exceeding 12 ft (3.6 m). Provide splice plates at joints of formed, smooth metal flashing.

1. Shop form flashing on a bending brake.
2. Shape, trim and hand seam on bench as far as practical with proper tools.
3. Form exposed metal Work without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated.
4. Make angle bends and folds for interlocking metal with full regard for expansion and contraction to avoid buckling or fullness in metal after installation.
5. Form materials to shape indicated with straight lines, sharp angles and smooth curves.
6. Fold and hem exposed edges of flashings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Flashing Joinery: Fabricate interior and exterior corners, intersections, and complex flashing conditions in shop, rather than in field, with properly folded, constructed and continuous soldered joints. Field fabricated units are not permitted and will not be allowed.

2.16 SETTING MORTAR AND GROUT MIX

- A. General Procedures:
 - 1. Mix to comply with referenced quality standards and manufacturers' written instructions.
 - 2. Add materials, water, and additives in accurate proportions.
 - 3. Use type of mixing equipment, speeds, containers, time, and other procedures to produce uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to most restrictive of the following standards:
 - 1. ACI 530.1/ASCE 5/TMS 402 and local building code.
 - 2. Respective manufacturer's written installation instructions.
 - 3. Accepted submittals.
 - 4. Contract Documents.
 - 5. ANSI A108.5.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
 - 1. Verify that concrete substrates are dry and free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with adhered masonry veneer.
 - a. If necessary, shot-blast concrete substrate with an apparatus recommended by setting materials manufacturer.
 - b. Repair damaged and deteriorated concrete.
 - c. Use patching and fill material to fill holes and depressions in substrates.

3.4 INSTALLING BUILDING PAPER

- A. Install building paper barrier over the face of air and water barrier:
 - 1. Beginning at bottom of substrate wall, align horizontally; pull taut to eliminate fish mouths, wrinkles, buckles, and kinks; install in shingled manner to shed water without interception by exposed edges.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Offset building paper joints from sheet air and water barrier; lap horizontal joints 6 in (150 mm); lap vertical end joints 12 in (300 mm); stagger end laps; lap 12 in (300 mm) at inside and outside corners; lap flashing 6 in (150 mm).

3.5 INSTALLING METAL LATH

- A. Installation of Metal Lath at Sheathed Steel Stud Walls covered with Building Paper and Air and Water Barrier:
 1. Install multiple sheets of metal lath to form continuous plane over substrates.
 2. Layout and arrange so that metal lath joints will not occur over vertical and horizontal laps of previously installed weather resisting sheets.
 3. Begin installation at bottom of substrate wall; install with long dimension at horizontal and stagger vertical end laps.
 4. Lap horizontal sides not less than 1/2 in (12 mm), and securely tie between steel stud supports with lath tie wire at not more than 9 in (225 mm) on centers vertically.
 5. Securely attach metal lath to each steel stud support with screw fasteners at not more than 7 in (175 mm) on centers vertically.
 6. Lap vertical ends not less than 1 in (25 mm).
 - a. If lap occurs over a steel stud support, securely attach with screw fasteners at not more than 7 in (175 mm) on centers vertically.
 - b. If lap does not occur over a steel stud support, securely tie with lath tie wire at not more than 9 in (225 mm) on centers vertically.
 7. Screw fasteners shall extend through not less than 3 strands of metal lath, weather resisting sheets, gypsum sheathing and into steel stud; tip of fastener shall extend beyond stud not less than 3/8 in (10 mm).
 8. Expansion Joints: Do not extend metal lath behind or across expansion joints; attach each side of metal lath to separate joint accessory flange.
 9. Control Joints: Extend metal lath behind or across control joints. Install control joints on top of metal lath without cutting the lath behind the control joint.
 10. Do not attach metal lath to horizontal deflection track at top of wall framing.

3.6 INSTALLATION OF SUBFRAMING

- A. Subframing and Supports: Install sub-framing, furring, and other panel support members and anchorages according to panel manufacturer's written recommendations and delegated engineering submittal for this installation.

3.7 INSTALLATION OF CEMENTITIOUS BACKER UNITS

- A. Install panels and treat joints according to manufacturer's written instructions for type of application indicated.
- B. Comply with UL Evaluation Report UL ER22158-01.

3.8 INSTALLATION OF MVIS AIR AND WATER BARRIER

- A. Apply air and water barrier material to form a seal with strips and transition strips and to achieve a continuous air and water barrier according to air and water barrier manufacturer's written instructions and details. Apply air and water barrier material within manufacturer's recommended application temperature ranges.
- B. Transition and Detailing Treatment: Install appropriate materials to treat cementitious backer unit joints, expansion joints, drift joints, rough openings, transitions, terminations, penetrations and similar surface irregularities. Transitions and detailing can be performed before or after air and

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

water barrier membrane application. Ensure installation is performed in accordance with manufacturers written installation instructions and details.

- C. One-Piece Electrical Box: Install in accordance with manufacturer's recommendations. Cover shall project from face of wall surface enough to allow hinged cover to fully open for access.
- D. Do not cover air and water barrier until it has been tested and inspected by Owner's testing agency.
- E. Correct deficiencies in or remove air and water barrier that does not comply with requirements; repair substrates and reapply air and water barrier components.

3.9 INSTALLATION OF ADHERED MASONRY VENEER UNITS

- A. Openings: Leave for equipment to be installed before completion of masonry veneer; after installation of equipment, complete masonry veneer to match construction immediately adjacent to opening.
- B. Cutting: Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, un-chipped edges. Install cut units with cut surfaces and, where possible, cut edges concealed.
- C. Layout: Lay out walls in advance for accurate spacing of surface bond patterns, uniform joint thicknesses, accurate location of openings, movement-type joints, returns, and offsets. Avoid using of less than half-size units at corners, jambs, and where possible at other locations.
 - 1. Masonry veneer shall not be placed over building expansion or control joints. Provide movement joints and continue construction, control, and expansion joints in building structure or substrate construction through masonry veneer work and as indicated on Drawings.
 - 2. Provide movement joints where masonry veneer work abuts a restraining structure or dissimilar assembly.
 - 3. When metal trim or sealant/backer is used for joint, width shall not be less than width of joint in building structure.
- D. Blending of Masonry Veneer Units: Mix units for exposed unit masonry from several pallets or cubes as they are placed to produce uniform blend of colors and textures. If color blending is a critical aspect of Work, manufacturer shall provide instructions for blending.
- E. Work Pattern: Begin Work at bottom of wall and proceed up, or begin and proceed down wall, according to manufacturer's instructions.
- F. Built-In Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry veneer around built-in items.
- G. Thick Set Adhering Method - Metal Lath and Scratch Coat Substrate: Adhere masonry veneer units to cured scratch coat using bond coat mortar according to manufacturer's instructions:
 - 1. Scratch Coat: Nominal 1/2-inch-thick (12.7 mm) layer of latex modified Portland cement mortar shall be applied, encapsulating the lathing. The surface of this mortar shall be scored horizontally, resulting in a scratch coat.
 - 2. Adhering Veneer: Masonry veneer units shall be adhered to the mortar scratch coat with a nominal 1/2-inch-thick (12.7 mm) setting bed of latex modified Portland cement mortar applied to create a full setting bed for the back of the masonry veneer units. Masonry veneer units shall be worked into the setting bed resulting in a nominal 3/8-inch (9.5 mm) setting bed after the masonry veneer units are applied.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Use sufficient setting mortar so a slight excess will be forced out the edges of masonry units as they are set. Tap units into place, completely filling space between units and scratch coat to provide 100 percent coverage according to manufacturer instructions.
 - b. Remove excess mortar; do not allow mortar to dry on face of units.
 - H. Thin Set Adhering Method - Framed Construction with Cementitious Backer Unit Substrate: Adhere masonry veneer units to CBU using bond coat mortar according to manufacturer's instructions:
 - 1. Adhering Veneer: Masonry veneer units shall be adhered to the CBU substrate with a nominal 1/2-inch-thick (12.7 mm) setting bed of latex modified Portland cement mortar applied to create a full setting bed for the back of the masonry veneer units. Masonry veneer units shall be worked into the setting bed resulting in a nominal 3/8-inch (9.5 mm) setting bed after the masonry veneer units are applied.
 - a. Use sufficient setting mortar so a slight excess will be forced out the edges of masonry units as they are set. Tap units into place, completely filling space between units and CBU to provide 100 percent coverage according to manufacturer instructions.
 - b. Remove excess mortar; do not allow mortar to dry on face of units.
 - I. Thin Set Adhering Method - Masonry or Concrete Construction: Adhere masonry veneer units to masonry or concrete substrates using bond coat mortar according to manufacturer's instructions:
 - 1. Adhering Veneer: Masonry veneer units shall be adhered to the masonry or concrete substrate with a nominal 1/2-inch-thick (12.7 mm) setting bed of latex modified Portland cement mortar applied to create a full setting bed for the back of the masonry veneer units. Masonry veneer units shall be worked into the setting bed resulting in a nominal 3/8-inch (9.5 mm) setting bed after the masonry veneer units are applied:
 - a. Use sufficient setting mortar so a slight excess will be forced out the edges of masonry units as they are set. Tap units into place, completely filling space between units and masonry or concrete to provide 100 percent coverage according to manufacturer instructions.
 - b. Remove excess mortar; do not allow mortar to dry on face of units.
 - J. Joints:
 - 1. Using a grout bag, fill joints with setting mortar.
 - 2. Finish joints that will remain exposed with a tool slightly larger than joint width to form a concave profile. Tool joints after mortar has taken its initial set and in such a manner as to squeeze mortar back into joint.
- 3.10 EMBEDDED FLASHINGS
- A. General: Drawings may not necessarily indicate or describe full extent of Work required for completion of embedded flashing.
 - B. Reglets and Nailers: Install for flashing and other related construction where they are shown.
 - C. Scheduled Locations: In addition to conditions shown on Drawings, install embedded flashings at following locations to direct infiltrated water to exterior:
 - 1. Heads, jambs and sills at through-wall openings.
 - 2. Other obstructions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Preparation: Substrate surfaces shall be smooth and free from projections that could puncture flashing.
- E. Flashing Installation:
 - 1. Install true to line and levels indicated; minimize quantity of lap joints by using longest units possible.
 - 2. Set in proper locations with outside hemmed edges flush with building face location indicated; securely attach to substrate with same fasteners as used for attaching metal lath.
 - 3. Terminate ends of horizontal flashings with properly folded and constructed end dams with a depth of not less than indicated, with continuous soldered joints.
 - 4. At lap joints of horizontal flashings, form neat and aligned joints by interlocking splice plate within hemmed edge of sheet metal flashing profile; apply sealant and rubberized asphalt flashing as indicated to create water-resistant joint.
- F. Examination and Repair: Immediately prior to installing masonry veneer, examine exposed surfaces of flashing and seal penetrations and damaged areas with rubberized asphalt flashing material before covering with masonry veneer.

3.11 MASONRY VENEER EXPANSION JOINTS

- A. General: Install masonry veneer expansion joints materials as Work progresses. Do not allow materials to span masonry veneer expansion joints without provision to allow for in-plane wall or partition movement. Maintain joints free and clear of mortar.
 - 1. Movement joints including expansion, deflection and control joints shall align through substrate and masonry veneer.
- B. Distance between Control Joints: 1/2 in (12 mm) wide joints not more than 12 ft (3.6 m) on center each direction and a length-to-width ratio of 2-1/2 to 1.
 - 1. Vertical Surfaces: Not more than 144 sq. ft. (13.4 sq. m).
 - 2. Horizontal Surfaces: Not more than 100 sq. ft. (9.3 sq. m).
- C. Form open joint of width indicated for installation of sealant and backer rod specified in Division 07 Section "Joint Sealants".
- D. Build in horizontal pressure-relieving joints where indicated; construct of width required.

3.12 INSTALLATION TOLERANCES FOR BRICK

- A. Conspicuous Lines:
 - 1. Vertical: For such conditions as external corners, door and window jambs, reveals, and masonry veneer expansion joints, maximum variation of the following from plumb:
 - a. 1/8 in (3 mm) in 10 ft (3 m).
 - b. 1/4 in (6 mm) in 20 ft (6 m).
 - c. 1/2 in (12 mm) overall.
 - 2. Horizontal: For such conditions as exposed lintels, sills, door and window heads, parapets, and reveals, maximum variation of the following from level:
 - a. 1/8 in (3 mm) in 10 ft (3 m).
 - b. 1/4 in (6 mm) in 20 ft (6 m).
 - c. 1/2 in (12 mm) overall.
- B. Exposed Head Joints:
 - 1. Vertical Alignment: Maximum variation of the following from plumb:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. 1/4 in (6 mm) in 10 ft (3 m).
 - b. 1/2 in (12 mm) from plumb top to bottom of wall.
 - 2. Thickness: Maximum variation from width indicated of plus or minus 1/8 in (3 mm); maximum variation from adjacent bed joint and head joint thicknesses 1/8 in (3 mm).
 - C. Exposed Bed Joints: Maximum variation from width indicated of plus or minus 1/8 in (3 mm), with a maximum thickness limited to 1/2 in (12 mm); maximum variation from bed joint thickness of adjacent courses of 1/8 in (3 mm).
 - D. Flush Alignment: Maximum variation of 1/16 in (1.5 mm) except due to warpage of masonry veneer units with tolerances specified for warpage of units.
 - E. Stack Bond: For exposed head joints and bed joints, maximum variation from a straight line of 1/16 in (1.5 mm) from one masonry veneer unit to next.
- 3.13 FIELD QUALITY CONTROL
- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 - 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
 - B. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
 - 1. Refer to Division 01 Section Field Test for Air and Water Leakage.
 - 2. Refer to Division 01 Building Enclosure Commissioning Plan for Field Observations and Performance Testing.
 - C. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 - 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 - 2. Prepare test and inspection reports.
 - D. Contractor Testing Agency: Employ and pay a qualified independent testing agency to perform field quality control.
 - 1. Testing: Testing agency will test and evaluate Work during construction as necessary but not less than at following times during Work.
 - a. First day.
 - b. 5 percent.
 - c. 15 percent.
 - d. 30 percent.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- e. 60 percent.
 - f. 90 percent.
- 2. Bond Strength Test Method: ANSI 137.1 / ASTM C 482 Test Method for Bond Strength of Ceramic Tile to Portland Cement.
 - 3. Inspections: Testing agency will visit project site periodically at random, but not less than once during each week of masonry veneer Work, to inspect progress and to ascertain if Work complies with Contract Documents. Allow inspectors access to scaffolding and Work areas, as needed to perform inspections. Inspections will include verification that:
 - a. Materials are properly stored.
 - b. Installation is within specified construction tolerances.
 - c. Proper mortar ingredients and mixing techniques are being used.
 - d. Mortar time on board is within specified limits.
 - e. Setting mortar bed is within specified limits.
 - f. Joints are being properly tooled.
 - g. Flashing assembly is being properly fabricated and installed.
 - h. Masonry veneer expansion joints are being installed as indicated or as specified.

3.14 ADJUSTING

- A. Repairs for Damage: Remove and replace masonry veneer units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units and install fresh mortar, pointed to eliminate evidence of replacement.
- B. Pointing: During tooling of joints, enlarge any voids or holes, except weeps and vents, and completely fill with mortar. Point up all joints including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for application of sealants, where indicated.

3.15 CLEANING

- A. In-Progress Cleaning: As soon as practical, clean masonry veneer as Work progresses by dry brushing to remove mortar fins and smears prior to tooling joints.
- B. Protection: Prior to Final Cleaning, protect surrounding areas, landscaping, adjacent surfaces, and vehicles from contact with cleaning products.
- C. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry veneer as follows:
 - 1. Protect adjacent and nearby materials, especially windows and glass, to avoid damage.
 - 2. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 - 3. Test cleaning methods on mock-ups; leave one half of panel uncleaned for comparison purposes. Obtain Architect's acceptance of sample cleaning before proceeding with cleaning of permanent masonry veneer.
 - 4. Clean masonry veneer by means recommended by cleaning product manufacturer using masonry cleaner compound as recommended and approved by masonry veneer and mortar manufacturers.
 - 5. Avoid drifting of cleaning spray caused by wind.

3.16 ADHERED MASONRY SCHEDULE

- A. Basis of Design: AMVXX
 - 1. Manufacturer:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Product Series:
 3. Color Name and Number:

SECTION 051200

STRUCTURAL STEEL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes structural steel and supplementary items necessary to complete work required for its fabrication, erection, and installation.
- B. Related Sections:
 - 1. Division 01 Section "Quality Requirements" for independent testing agency procedures and administrative requirements.
 - 2. Division 05 Section Metal Fabrications for miscellaneous steel fabrications and other metal items not defined as structural steel.
 - 3. Division 05 Section "Metal Stairs."
 - 4. Division 09 painting Sections and Division 09 Section "High-Performance Coatings"

1.3 DEFINITIONS

- A. Structural Steel: Elements of structural-steel frame, as classified by AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

1.4 PERFORMANCE REQUIREMENTS

- A. Connections: Provide details for connections required by the Structural Documents to be selected or completed by structural-steel fabricator to withstand LRFD Factored loads indicated and comply with other information and restrictions indicated.
 - 1. Select and complete connections using schematic details indicated and AISC 360
 - 2. Engineering Responsibility: Fabricator's responsibilities include using a qualified Professional Engineer registered in the state of the project to prepare and submit the structural analysis data for structural-steel connections.

1.5 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections.
 - 1. Shop drawings shall not be made by using reproductions of Contract Drawings.
 - 2. Shop drawing shall be submitted through General Contractor to Architect. Any fabrication of material before approval of drawings will be at risk of Contractor.
 - 3. Fabricated material and connections shall fit within architectural constraints.
 - 4. Fabricator alone shall be responsible for errors of detailing and fabrication.
- B. Product Data: Submit manufacturer's certification and test data that following furnished items conform to the specifications for each type of product indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Shop Drawings: Submit in advance of fabrication, complete shop drawings necessary for fabrication of each component of the structural steel frame. Shop drawings shall be prepared under direct supervision of a Registered Professional Engineer and include the following:
1. Erection drawings ("E" Sheets) shall include dimensions for alignment and elevation of each member, locations of members and attachments, and required number and location of shear connectors on each member.
 2. Indicate piece marks for field assembly, bill of materials, and material specifications
 3. Piece drawings shall include member size, length and camber. Show details of cuts, copes, bevels, connections, splices, holes, and other pertinent data.
 4. Setting drawings, templates and directions for installation of anchor bolts and other anchorage devices embedded in concrete or masonry work.
 5. Indicate welds by standard AWS D1.1/D1.1M symbols, distinguish between shop and field welds, show size, length, and type of each weld.
 - a. Special conditions shall be fully explained by added notes or details.
 - b. Welding symbols for groove welds shall indicate groove depth required to obtain specified effective throat thickness for welding process and position of welding to be used.
 - c. Details of groove welds, joints, and preparation of base material shall be referenced to pre-qualified joints specified in AWS D1.1/D1.1M and shall clearly distinguish between complete joint penetration and partial joint penetration.
 - d. Fillet weld symbols shall indicate required weld size to obtain required effective throat thickness and effective length.
 6. Indicate bolt type, size, and length. Indicate the bolt hole type and size. Distinguish between shop and field bolts. Identify pre-tensioned and slip-critical high-strength bolted connections. Indicate special washers or plate washers where necessary.
 7. For structural-steel connections indicated to comply with design loads, include structural analysis data signed and sealed by the qualified Professional Engineer responsible for their preparation registered in the state of the project.
- D. Mill test reports.
1. Fabricator/Erector shall provide affidavit stating that structural steel furnished meets requirements of ASTM Specifications for grade furnished.
 2. Steel material not represented by certified mill test reports shall be tested by the Testing Agency in accordance with ASTM at the contractor's expense.
- E. Welding certificates: Provide an affidavit that each welder in the fabrication process or on site holds current qualifications per AWS D1.1/D1.1M. Maintain records on site for review by the owner's inspection agency for erector's welders.
- F. Welding Procedures:
1. Provide Welding Procedure Specifications (WPS) and Procedure Qualification Records (PQR) according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing.
 2. Procedures for both shop and field weld processes shall be prepared similar to AWS sample written procedures and shall be submitted to the Engineer of Record, be made available to testing agency, and posted next to welding equipment prior to use.
 3. The WPS shall contain the actual values and allowed ranges to be used for the welding so that complete setup and weld completion instruction is provided to welders; as a minimum the WPS shall list the following:
 4. The written WPS should be developed by a competent welding engineer, and the individual welding parameters should be within the electrode manufacturer's range of operation.
 5. For WPS which require qualification, Procedure Qualification Records (PQR) shall also be submitted for acceptance. Production welding heat input shall be limited based on the PQR.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- G. Erection Procedures:
 - 1. Submit descriptive data to illustrate structural steel erection procedures, include the following:
 - a. Sequence of erection.
 - b. Temporary guying and bracing required during erection prior to making permanent connections.
- H. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.
- I. Qualification Data: Submit evidence of installer and fabricator qualifications in conformance with Quality Assurance requirements below.
- J. Source and field quality-control documentation.
 - 1. At completion of fabrication, per the building code special inspection requirements, the fabricator shall submit a certificate of compliance to the Engineer of Record and enforcement agency stating that the work was performed in accordance with the approved construction documents.
 - 2. Submit test reports as required for indicating compliance with the Quality Control sections below.
 - 3. Submit to Testing Agency reports of non-destructive testing required of them. These reports shall be on AWS D1.1/D1.1M suggested forms. Qualification of the fabricator's inspectors and NDT personnel shall be submitted to enforcement agency for acceptance, if required.
- K. Contractor shall submit to the Engineer of Record and the enforcing agency, for acceptance, a quality control or inspection plan that addresses all inspection issues, including in process and final inspection that are addressed in AWS D1.1/D1.1M.

1.6 QUALITY ASSURANCE

- A. Codes and Standards: Comply with provisions of following, except as otherwise indicated:
 - 1. International Building Code 2021 Edition (IBC). All following code and standard versions shall be as referenced by IBC chapter 35, or, where not referenced in IBC, the most recent published versions.
 - 2. Special Inspection and Quality Control requirements, chapter 17 of the International Building Code and any local or state provisions or amendments.
 - 3. American Institute of Steel Construction (AISC) 303 "Code of Standard Practice for Steel Buildings and Bridges."
 - 4. AISC 360 "Specification for Structural Steel Buildings".
 - 5. OSHA 1926 Subpart R – Safety and Health Regulations for Construction - Steel Erection.
 - 6. RCSC "Specification for Structural Joints using ASTM A 325 or A 490 Bolts."
 - 7. AISC Standards "AISC Quality Criteria and Inspection Standards."
 - 8. American Welding Society (AWS) D1.1/D1.1M "Structural Welding Code - Steel."
 - 9. ASTM A 6 "General Requirements for Rolled Steel Plates, Shapes, Sheet Piling and Bars for Structural Use."
 - 10. Steel Structures Painting Council - "Steel Structures Painting Manual", Volumes 1 and 2.
- B. Fabricator Qualifications:
 - 1. A qualified fabricator who participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Standard for Steel Building Structures, Category STD.
 - 2. Shall have 5 years experience.
 - 3. NDE Certification of personnel for non-destructive testing.
- C. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CSE.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint Endorsement P1 or SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."
- E. Welding Qualifications: Qualify procedures and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- F. Material shall be properly identified in accordance with the building code from mill source, to fabrication, and through erection on site.
- G. Contractor's Conference: Conduct conference at project site to comply with requirements of Division 01 Section "Project Meetings" and following:
 - 1. Conduct meeting sufficiently in advance of Steel Pre-Construction Conference to review detailed requirements for preparing shop drawings, fabrication of steel, and procedures for satisfactory steel erection operations. Review requirements for submittals, status of coordinating work, and delivery of materials. Establish preliminary work progress schedule and procedures for materials inspection, testing, and certifications. Require representatives of each entity directly concerned with steel fabrication, erection, and inspection to attend conference.
 - 2. Minutes of meeting shall be recorded, typed and printed by Contractor and distributed to parties concerned within 5 days of meeting. One copy of minutes shall also be transmitted to the Owner, Architect, and Engineer of Record for information purposes.
- H. Pre-Installation Conference: Conduct conference at project site:
 - 1. At least 15 days prior to start of steel construction, Contractor shall hold meeting to review detailed requirements steel erection, deck placement, and related submittal requirements. Additionally, review procedures for materials inspection, testing, and certifications. At minimum, discuss following items as pertains to project.
 - a. Verification of submittals
 - b. Requirements and procedures for any outstanding submittals necessary to begin construction.
 - c. Status of coordinating work.
 - d. Availability of materials for inspection.
 - e. Field weld procedures, inspections, and welder certificates.
 - f. Field testing and inspection requirements.
 - g. Material and product certifications and handling procedures.
 - 2. Contractor shall require responsible representatives of every party who is concerned with steel erection work to attend conference.
 - 3. Minutes of meeting shall be recorded, typed and printed by Contractor and distributed to parties concerned within 5 days of meeting. One copy of minutes shall also be transmitted to the Owner, Architect, and Engineer of Record for information purposes.

1.7 PROPOSED SUBSTITUTIONS

- A. Substitutions of sections or modifications of details, if proposed by Contractor, shall be submitted for approval in sketch form prior to submission of shop drawings, and such substitutions shall be made only when approved by Architect, at no additional cost to Owner. Total amount of credit, if any, shall be stated in writing with submission.
- B. Corrections for inaccuracies that result in change from Structural Documents or final approved shop drawing details shall be submitted in sketch form for approval. Such substitutions or corrections shall be made only when approved by Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to site at such intervals to ensure uninterrupted progress of work.
- B. Storage of materials:
 - 1. Store materials to permit easy access for inspection and identification.
 - 2. Keep steel members off ground and spaced by using pallets, platforms, or other supports. Protect steel members and packaged materials from corrosion and deterioration.
 - 3. Do not store materials on structure in a manner that might cause distortion or damage to members or supporting structures. Repair or replace damaged materials or structures as directed.
- C. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.
 - 1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
 - 2. Store electrodes in rod ovens and heat in accordance with AWS D1.1/D1.1M prior to use in welding.

1.9 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation
- C. Coordinate openings, penetrations, and sleeve requirements with final equipment selections and locations by MEP sub-contractors. Verify any changes with Engineer of Record prior to fabrication.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Specific product, material or manufacturer listed under each item below is "acceptable" only if manufacturer can evidence product compliance with requirements of Structural Documents.
- B. For manufacturers not listed, submit as substitution according to the Conditions of the Contract and Division 01 Specification Sections.

2.2 STRUCTURAL STEEL MATERIALS

- A. Plate and Bar: ASTM A 36 or ASTM A 572, Grade 50 as noted.
- B. Welding Electrodes and Filler Metal for Welding:
 - 1. Welding materials must be used within the positions, thicknesses, temperatures and other parameters provided by the manufacturer.
 - 2. Provide filler metal conforming to AWS D1.1/D1.1M for each welding process used:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.3 BOLTS, CONNECTORS, AND ANCHORS

- A. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts; ASTM A 563 heavy hex carbon-steel nuts; and ASTM F 436 hardened carbon-steel washers.
 - 1. Finish: Plain or Hot-dip zinc coating, ASTM A 153, Class C where steel elements are galvanized.
 - 2. Direct-Tension Indicators: ASTM F 959, Type 325 (ASTM F 959M, Type 8.8,) compressible-washer type.
 - a. Finish: Plain or mechanically deposited zinc coating, ASTM B 695, Class 50 where steel elements are galvanized.
 - 3. Bolts shall be new and shall not be reused.
 - 4. Bolts shall be well lubricated at time of installation.
- B. Shear Connectors or Headed Stud Anchors for Concrete Embeds: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.
- C. Miscellaneous Materials and Accessories: As specified hereinafter under various items of work and/or as indicated on drawings or required for good construction practice.

2.4 FINISHES

- A. Galvanizing Repair Paint: High-zinc-dust-content paint for galvanizing welds and repair painting galvanized steel, with dry film containing not less than 93 percent zinc dust by weight, and complying with DOD-P-21035A; MPI#18, MPI#19 or SSPC-Paint 20; or ASTM A 780.

2.5 GROUT

- A. Metallic or Nonmetallic Shrinkage-Resistant Grout: ASTM C 1107, Material shall be ready to use/factory packaged product requiring only addition of water at jobsite.
 - 1. Grout shall be flowable material suitable for application having no drying shrinkage at any age.
 - 2. Grout shall provide a 30 minute working time.
 - 3. Compressive strength of grout shall be not less than 6,000 psi at 7 days and 8,000 psi at 28 days.
- B. Subject to compliance with requirements, acceptable Shrinkage-Resistant Grout manufacturers are as follows:
 - 1. L&M Construction Chemicals - "Duragrout"
 - 2. Euclid Chemical Co. - "NS Grout"
 - 3. BASF - "Master Flow 928 Grout"

PART 3 - SHOP EXECUTION - FABRICATION

3.1 SHOP STANDARDS

- A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303 and AISC 360. Work shall be delivered to site complete and ready for erection. Sequence of shipments shall be such as to expedite erection and minimize handling of material.
- B. Special Inspection and Quality Control: See specific requirements in the Quality Control section below.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, workmanship, appearances, welding procedure specifications, weld quality, technique, and methods used in correcting welding work.
1. Only welded joints deemed as being prequalified in accordance with AWS D1.1/D1.1M are approved for use, submit WPS and PQR forms as required under Submittals section.
 2. Welds not specified shall be continuous fillet welds, sufficient to transmit required forces, using minimum size fillet as specified by AWS D1.1/D1.1M or AISC 360.
 3. Fillet welds terminating at ends or sides shall be returned continuously for distance at least twice normal size of weld (end returns).

3.2 SHOP FINISHES

- A. Location for each finish type:
1. Unfinished/Cleaned steel
 - a. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
 - b. Surfaces to be field welded.
 - c. Surfaces to be high-strength bolted with slip-critical connections.
 - d. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
 2. Primed steel
 - a. All steel surfaces not receiving another finish type.
 3. Painted steel
 - a. Surfaces and elements as indicated by the Structural Documents.
 4. Galvanized steel
 - a. All exposed exterior steel
 - b. Galvanize **exposed steel including exterior embeds and welded door frames** attached to structural-steel frame and located in exterior walls.
 - c. Surfaces and elements as indicated by the Structural Documents.
- B. Surface Preparation:
1. Galvanized steel
 - a. Clean and prepare all steel surfaces to be galvanized according to SSPC-SP 2, "Hand Tool Cleaning."
- C. Galvanizing:
1. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123.
 2. Fill vent and drain holes that will be exposed in the finished Work unless they will function as weep holes, by plugging with zinc solder and filing off smooth.
 3. Where steel members on the drawings are specified as galvanized provide galvanized connection products. Where field welding must occur, repair galvanized surface per Repairs and Protections section of this specification.

PART 4 - FIELD EXECUTION – ERECTION

4.1 FIELD STANDARDS

- A. Special Inspection and Quality Control: See specific requirements in the Quality Control section below.

4.2 ERECTION REQUIREMENTS

- A. Base Bearing, and Leveling Plates:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Clean concrete and masonry-bearing surfaces of bond-reducing materials such as oil, grease, and laitance. Roughen concrete surfaces prior to setting plates.
 2. Clean bottom surface of plates prior to setting columns.
 3. Set plates for structural elements level and align to the proper elevation using on wedges, shims, or setting nuts as required.
 4. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before placing grout.
 5. Immediately prior to grout placement verify concrete and base plate surfaces are clean and dampen as required by grout manufacturer.
 6. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts. Addition of water, mixing and placing, shall be in conformance with material manufacturer's instructions. Grout shall be mixed by using a mortar mixer. Batches shall be of size to allow continuous placement of freshly mixed grout. Placing shall be quick and continuous.
 7. Promptly place grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow curing. Exposed surfaces shall have smooth, dense finish.
 8. Base plates must be grouted prior to placement of concrete slabs on framed floors above.
- B. Erection Tolerances: Maintain erection tolerances of structural steel within AISC 303. Each individual member shall be erected, plumbed, leveled and aligned within tolerance.
- C. Erection Sequence:
1. Erect members according to most economical method and sequence available.
 - a. The structure is considered a "Non-Self Supporting Steel Frame" as defined by the AISC 303.
 2. High strength bolted connections shall be in accordance with Field Connection and Field Quality Control specification section requirements.
 3. Welded construction shall be in accordance with Field Connection and Field Quality Control specification section requirements.
- D. Cleanup: Upon completion of erection, Contractor shall remove all false work used.
- 4.3 FIELD CONNECTIONS
- A. Reference Shop Connection section of this specification for specific detailed requirements for High-Strength Bolts and Weld Connections with the following additional requirements.
- B. Weld Connections:
1. Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
 2. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
- 4.4 FIELD FINISHES, REPAIRS, AND PROTECTION
- A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 5 - QUALITY CONTROL

5.1 INSPECTION STANDARDS

- A. Quality control, testing, and inspections for the fabrication and erection of steel elements in the building shall meet the special inspection requirements of the building code and any local or state provisions.
 - 1. Periodic and continuous inspection requirements for structural steel are indicated below and on the Structural Documents and quality assurance plan.
- B. Source Quality Control: Continuous and periodic special inspections by the owner's Testing Agency required by the building code may not be necessary at the fabrication shop when ALL of the following provisions are met:
 - 1. Fabrication is done on the premises of a fabricator registered and approved to perform such work without special inspection.
 - a. Where acceptable to the local and state authority current AISC certification, as indicated in the Quality Assurance section, shall be sufficient evidence of compliance with this item.
 - 2. Approval of the Engineer of Record is obtained prior to fabrication. Approval shall be based upon the Testing Agencies review of the fabricator's written procedural and quality control manuals and periodic auditing of fabrication practices by an approved agency.
 - 3. At completion of fabrication the fabricator submits a certificate of compliance to the Engineer of Record and enforcement agency stating that the work was performed in accordance with the approved construction documents.
- C. Provide Architect and/or testing agency with access to places where material for contract is being fabricated or produced for purpose of inspection. Architect may inspect structural steel at plant before shipment. However, Architect reserves right to reject any material, at any time before final acceptance, which does not conform to requirements of Drawings and Specifications.
- D. The Contractor, Fabricator, and Erector are responsible for clearly indicating to the Testing Agency when the required inspections can be performed with adequate notification time for the Testing Agency to be on site.

5.2 TESTING AGENCY

- A. Owner will employ and pay a qualified independent testing agency to perform the quality control indicated in this section, including special inspections required by the building code.
 - 1. Inspection and testing by owner's testing agency is for verification and shall not relieve contractor of his responsibility to furnish materials and workmanship in accordance with Structural Documents.
 - 2. Retesting of materials failing to meet specified requirements shall be done at Contractor's expense.
 - 3. In cases of differences of opinion between owner's testing agency and the contractor's inspector regarding conformance, the issue should be brought to the Engineer of Record and the enforcement agency as part of the resolution process
- B. Qualification of Personnel:
 - 1. Personnel performing non-destructive testing shall be qualified in accordance with current edition of American Society for Non-Destructive Testing Recommended Practice No. SNT-TC 1A.
 - 2. Personnel performing inspections of welding work shall be currently registered with American Welding Society and shall comply with requirements of AWS Standards for Qualification and Certification of Welding Inspectors, QC1.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

C. Provided Reports:

1. Fabrication and erection reports shall be issued on a weekly basis during steel execution, and will include following information for that week:
 - a. Progress of work
 - b. Location and progress of inspections.
 - c. Results of inspections, noting any deviations from Structural Documents.
 - d. Correction of deviations.
 - e. Non-destructive testing reports:
 - 1) Reports shall be issued on suggested AWS or similar forms containing same information.
 - 2) Interpret test results and state in test report whether or not test specimen conforms to Structural Documents.
2. Submit certified copies of tests and inspections to the following parties:
 - a. Owner
 - b. Architect
 - c. Engineer of Record
 - d. Contractor
 - e. Fabricator
 - f. Erector
3. In addition to the weekly reports the inspector will maintain a single consolidated record of the steel inspections with locations and types of inspections performed. All failed inspections shall be clearly noted for follow up. This record should be maintained on site for tracking purposes.

D. Scope of Services:

1. Furnish qualified Inspectors as duly designated persons who act in behalf of Architect/Owner on inspection and quality matters.
2. Inspect the Fabricator/Erector's written procedural and quality control manuals, materials and workmanship required of Owner's/Purchaser's representatives, as specified in AISC Specification M5. Such inspections are to be made to fullest extent possible in Fabricator's plant.
3. Perform other inspections and tests related to structural steel and supplementary items contained in this specification section
4. Provide reports, interpret results, and report deviations from Structural Documents to the Architect/Owner.
5. Testing Agency Inspections of Manufacturer/Supplier of Structural Products:
 - a. Testing Agency shall verify following products being furnished are represented by manufacturer's certifications and test data.
 - 1) High Strength bolts.
 - 2) Filler metal for welding.
 - 3) Shear studs used as shear connectors.
 - 4) Direct tension indicators.
 - 5) Tension Control Bolts
 - b. The Testing Agency shall verify that the products used in the field match those products submitted.
6. Testing Agency Inspections of Structural Steel Fabricator and Erector:
 - a. Periodically verify camber of beams and girders in a manner which will allow that information to be compared to as-erected condition of beams and girders, and conditions after completion of concrete operations.
 - b. Randomly check dimensions of structural steel shapes and plates for conformity to ASTM A 6 Specifications.
 - c. Visually inspect material surfaces in accordance with ASTM A 6
 - d. Verify and inspect Bolted and Welded Connections as indicated below.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

5.3 CONTRACTOR

- A. The Contractor shall be responsible for establishing, setting and maintaining control points and building lines to be used in plumbing structural steel frame in accordance with AISC Code of Standard Practice.
- B. At locations identified by Testing Agency, Contractor shall record steel elevations prior to, and after, completion of concreting operations.
- C. Upon completion of erection of steel frame and before start of work by other trades that are supported, attached or applied to frame, the Contractor shall make a final survey of frame and submit report certifying compliance with specified tolerances permitted by AISC Code of Standard Practice.

5.4 FABRICATOR AND ERECTOR

- A. Fabricator and Erector shall correct deficiencies in work that test reports and inspections indicate do not comply with the Structural Documents.
- B. The Fabricator and Erector shall provide quality control along with the necessary documentation for portions and stages of work as specified in this section and required by the building code. The inspections and procedures shall assure that work being performed and material or products being furnished conform to Structural Documents.
- C. The Fabricator and Erector are required to furnish their own inspectors. The inspectors shall be qualified to perform the inspections listed, see Testing Agency Qualification of Personnel.
- D. The Fabricator and Erector shall ensure that the following quality control items are performed and proper documentation of each is maintained:
 - 1. Structural Steel Mill Manufacturer/Supplier:
 - a. Inspect and test materials as specified in designated ASTM Specifications and perform ultrasonic testing of materials required of steel mill supplier, reference submittal requirements.
 - 2. Manufacturer/Supplier of Structural Products:
 - a. Inspect and test products as required in designated ASTM Specifications; reference submittal requirements.
 - 3. Structural Steel Fabricator:
 - a. Provide the Testing Agency with documentation of quality control procedures and records as necessary for verification
 - b. Visually inspect column material.
 - c. Materials and products being furnished by Fabricator shall be received and identified in fabrication plant in such a manner that materials or products can be identified as being represented by mill test reports or manufacturer's certificates.
 - d. Inspect materials for compliance to ASTM A6, prior to fabrication.
 - e. Visually inspect shop bolted and shop welded connections, see below.
 - f. Inspect installation of slip-critical high strength bolts for proper bolt tension, see below.
 - g. Inspect installation of shop welded shear connectors, see below.
 - h. Visually inspect to confirm that plies of connected elements have been brought into firm contact.
 - 4. Structural Steel Erector:
 - a. Provide the Testing Agency with documentation of quality control procedures and records as necessary for verification.
 - b. Visually inspect field bolted and field welded connections as indicated below.
 - c. Inspect installation of slip-critical high strength bolts for proper bolt tension, see below.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. Inspect installation of field welded shear connectors, see below.
- e. Visually inspect to confirm that plies of connected elements have been brought into firm contact.
- f. Field inspection of alignment and fit-up:
 - 1) Verify location and setting of anchor bolts by witness of General Contractor's final check prior to setting of steel members.
 - 2) As erection progresses, check connection of members for proper fit-up and adjustment prior to making permanent connections.
 - 3) Verify plumb of columns is within allowable tolerance.
 - 4) Verify that bracing and guying/cables, if required to secure steel framing during erection, are installed in accordance with erection procedures.
 - 5) During erection, verify specified phases of construction and steel erection are complete in accordance with erection procedure before proceeding with additional erection of structural steel.

5.5 WELDED CONNECTIONS

- A. Welded connections shall be tested and inspected according to AWS D1.1/D1.1M and AWS D.1.3/D1.3M as applicable to specific welding work to be performed.
- B. Fabricator and Erector shall provide Testing Agency with names of welders to be employed on Work prior to starting, together with certification that each welder has passed qualification tests using AWS required procedures as applicable to specific welding work to be performed. Testing Agency shall verify welder's qualifications.
- C. Fabricator and Erector:
 - 1. The Fabricator and Erector shall provide continuous visual inspection of all welding work as specified in AWS D1.1/D1.1M and the building code (including fit-ups, cut-outs, clean-up, root passes, fill-in passes, etc.).
 - 2. Visual inspection means that the inspectors visually inspect the welding for adherence to approved welding procedure specification starting with fit-up and proceeding through the welding process. Reliance only upon use of non-destructive examination (NDE) at end of the welding is not permitted. Use visual inspection in conjunction with NDE for sound welds.
 - 3. Welded connections shall be tested and inspected by Fabricator's and Erector's inspector according to AWS D1.1/D1.1M using the following additional inspection procedures as necessary:
 - a. Liquid or Dye Penetrant Inspection: ASTM E 165.
 - b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 - c. Ultrasonic Inspection: ASTM E 164.
 - d. Radiographic Inspection: ASTM E 94.
 - 4. The Fabricator and Erector shall perform ultrasonic testing of complete penetration groove welds for entire weld length, in each joint designated below, in accordance with AWS D1.1/D1.1M, and to following extent:
 - a. 100 percent of welds splicing beams, girders, columns and braces.
 - 5. The Fabricator and Erector inspector shall perform magnetic particle testing for weld length specified in each designated joint, in accordance with AWS D1.1/D1.1M, and to the following extent:
 - a. Fillet welds on continuity plates and backing bar removal areas, test full weld length.
 - b. Flange to web fillet welds, on built-up wide flange members (Type II) in accordance with ASTM E 109. 10 percent of total linear weld length in each designated joint, on each member, shall be inspected at random.
- D. Testing Agency:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. The Testing Agency shall inspect welding procedures used by the Fabricator/Erector as specified in AWS D1.1/D1.1M.
2. The Testing agency shall verify documentation of actual testing performed by the Fabricator/Erector.
3. The Testing Agency shall provide periodic visual inspection of welds as specified in AWS D1.1/D1.1M and the building code. Periodically select welds to visually inspect for adherence to approved welding procedure specification starting with fit-up and proceeding through the welding process as the welding is being performed. At the testing agencies option the following additional inspection procedures may be used to inspect and verify welds:
 - a. Liquid penetrant inspection: ASTM E 165.
 - b. Magnetic particle inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
 - c. Ultrasonic inspection: ASTM E 164
 - d. Radiographic inspection: ASTM E 94
4. The following weld inspections shall be performed by the Testing Agency at the locations and frequency indicated. Extent of testing shall be entire weld length in each designated joint.
 - a. Base metal thicker than 1-1/2 inches shall be ultrasonically inspected for discontinuities directly behind weld after joint completion. Any material discontinuities shall be accepted or rejected on basis of defect rating in accordance with AWS D1.1/D1.1M.
 - b. Ultrasonically test full penetration, moment connection welds in accordance with AWS D1.1/D1.1M, to following extent:
 - 1) 25 percent of welds made by each individual welder shall be tested at random as specified above.
 - 2) If an unacceptable weld is found, two additional welds made by same welder shall be tested at random. If either of these welds is found unacceptable, 100 percent of same welder's welds shall be tested as specified above and welder shall be recertified by Testing Agency, in accordance with qualification tests specified in AWS D1.1/D1.1M, before being allowed to continue welding on this project.
 - c. Column splice welds shall be inspected by ultrasonic testing to following extent:
 - 1) 25 percent of Non-Frame columns
 - 2) 50 percent of Frame Columns
5. Welds found unacceptable shall be repaired by Fabricator/Erector using methods permitted by AWS D1.1/D1.1M, and re-inspected.
6. For each defective weld location an additional location shall be tested.

5.6 BASE PLATE GROUT

- A. For every ten (10) base plates grouted, grout strength shall be tested by the Testing Agency with test cubes made and tested in accordance with Corps of Engineers Specification for Non-Shrink Grout, CRD-C-621 or ASTM C 1107:
 1. Five test cubes shall be made.
 2. Test two cubes at 7 days and two cubes at 28 days.
 3. The fifth test cube shall be used as a hold in case the 28 day test does not meet strength.

SECTION 061053
MISCELLANEOUS ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Miscellaneous rough carpentry and supplementary items necessary for installation.
 - 1. Preservative treated wood materials.
 - 2. Fire retardant treated wood materials
 - 3. Composite plastic lumber materials.

1.2 DEFINITIONS

- A. Boards or Strips: Lumber of less than 2 inches nominal (38 mm actual) size in least dimension.
- B. Dimension Lumber: Lumber of 2 inches nominal (38 mm actual) or greater size but less than 5 inches nominal (114 mm actual) size in least dimension.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 - 1. Preservative-Treated Wood: Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
 - 2. Fire-Retardant-Treated Wood: Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 - a. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D5664.
 - 3. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

1.4 INFORMATIONAL SUBMITTALS

- A. Evaluation Reports: For the following, from ICC-ES:
 - 1. Preservative-treated wood.
 - 2. Fire-retardant-treated wood.
 - 3. Power-driven fasteners.
 - 4. Post-installed anchors.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Stack lumber flat with spacers beneath and between each bundle to provide air circulation. Protect lumber from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.6 PROJECT CONDITIONS

- A. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.

1.7 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Material Compatibility: Provide materials that are compatible with one another under conditions of service and application required, as demonstrated by manufacturer based on testing and field experience.
- C. Structural Loads: Installed materials and fabrications shall withstand loads within limits of allowable working stresses of the materials involved under conditions indicated, including but not limited to, requirements established by authorities having jurisdiction and applicable building codes.
- D. Miscellaneous Rough Carpentry within Roofing System Assemblies: Wood cants, nailers, curbs, equipment support bases, blocking, and similar members in connection with roofing system assembly and flashings shall be fabricated and installed to withstand specified uplift pressures and thermally induced movement without contributing to failure of roofing system or flashings.
- E. Surface Burning Characteristics for Fire-Retardant-Treated Wood: Products and construction identical to assemblies tested for fire resistance according to ASTM E 84/NFPA 255/UL 723 and included under Category BPVV published in Underwriters Laboratories, Inc. (UL) "Fire Resistance Directory"; or listing of another testing and inspecting agency acceptable to authorities having jurisdiction.

2.2 WOOD PRODUCTS, GENERAL

- A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
 - 1. Factory mark each piece of lumber with grade stamp of grading agency.
 - 2. Dress lumber, S4S, unless otherwise indicated.
- B. Maximum Moisture Content of Lumber: 15 percent for 2-inch nominal (38-mm actual) thickness or less, 19 percent for more than 2-inch nominal (38-mm actual) thickness unless otherwise indicated.

2.3 WOOD-PRESERVATIVE-TREATED MATERIALS

- A. Preservative Treatment by Pressure Process: AWPAC U1; Use Category UC4a.
 - 1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.
- D. Application Schedule: Treat miscellaneous carpentry items indicated on Drawings and the following:
 - 1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, air water barriers, and waterproofing.
 - a. Contractor Option - Untreated Wood within Roofing System Assemblies:
Contractor may use untreated wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing assemblies that are concealed within the roofing membrane.
 - 2. Wood sills, sleepers, blocking, furring, stripping, and similar concealed members in contact with masonry or concrete.
 - 3. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
 - 4. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
 - 5. Wood floor plates that are installed over concrete slabs-on-grade.

2.4 FIRE-RETARDANT-TREATED MATERIALS

- A. General: Where fire-retardant-treated materials are indicated, materials shall comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
 - 1. Identification: Identify fire-retardant-treated wood with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - 2. Concealed Wood Blocking: Chemical formulations for fire retardant treatment to contain a compatible, non-bleed, light fast, colored dye to identify and indicate treatment.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested according to ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.
 - 1. Treatment shall not promote corrosion of metal fasteners.
 - 2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D2898.
 - 3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D3201 at 92 percent relative humidity.
- C. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Kiln-dry plywood after treatment to a maximum moisture content of 15 percent.
- D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Application Schedule: Treat miscellaneous carpentry items indicated on Drawings and the following:

1. Concealed blocking within interior partitions.
2. Plywood backing panels supporting equipment at interior locations.

2.5 LUMBER

- A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:

1. Blocking.
2. Nailers.
3. Cants.
4. Furring.
5. Grounds.

- B. Dimension Lumber Items: Construction or No. 2 grade lumber of any of the following species:

1. Hem-fir (north); NLGA.
2. Mixed southern pine or southern pine; SPIB.
3. Spruce-pine-fir; NLGA.
4. Hem-fir; WCLIB or WWPA.
5. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
6. Western woods; WCLIB or WWPA.
7. Northern species; NLGA.
8. Eastern softwoods; NeLMA.

- C. Concealed Boards: 15 percent maximum moisture content of any of the following species and grades:

1. Mixed southern pine or southern pine, No. 2 grade; SPIB.
2. Hem-fir or hem-fir (north), Construction or No. 2 Common grade; NLGA, WCLIB, or WWPA.
3. Spruce-pine-fir (south) or spruce-pine-fir, Construction or No. 2 Common grade; NeLMA, NLGA, WCLIB, or WWPA.
4. Eastern softwoods, No. 2 Common grade; NELMA.
5. Northern species, No. 2 Common grade; NLGA.
6. Western woods, Construction or No. 2 Common grade; WCLIB or WWPA.

- D. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.

- E. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.6 PLYWOOD BACKING PANELS

- A. Equipment Backing Panels: Plywood, DOC PS 1, Exposure 1, fire-retardant treated, in thickness indicated or, if not indicated, not less than 1/2-inch (13-mm) nominal thickness.

1. Panel Grades: According to installation location.
 - a. A-C, exposed at occupied interior locations.
 - b. B-C, exposed at mechanical and electrical equipment rooms.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.7 COMPOSITE PLASTIC LUMBER

- A. Composite Plastic Lumber, General: Products acceptable to authorities having jurisdiction with current model code evaluation reports that show compliance with building code in effect for Project for indicated type of construction.
 - 1. Allowable loads and spans, as documented in evaluation reports or in information referenced in evaluation reports, shall not be less than design loads and spans indicated.
- B. Composite Plastic Lumber: Solid shapes made from a mixture of cellulose fiber and polyethylene or polypropylene.
 - 1. Size: As indicated on drawings.
 - 2. Surface Texture and Color: As selected by Architect from manufacturer's full range.
 - 3. Acceptable Manufacturers:
 - a. Tamko Building Products.
 - b. TimberTech.
 - c. Trex Company, Inc.
 - d. Universal Forest Products.

2.8 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 - 1. Unless indicated otherwise, where carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners of Type 304 stainless steel.
 - a. Contractor Option - Untreated Wood within Roofing System Assemblies: Provide fasteners with Carbon-steel components, zinc plated to comply with ASTM B633, Class Fe/Zn 5.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Screws for Fastening to Metal Framing: ASTM C1002 for drywall studs and ASTM C954 for structural studs, length as recommended by screw manufacturer for material being fastened.
- D. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
- E. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, as appropriate for the substrate.
 - 1. Mechanical Anchors in Masonry or Concrete: ICC-ES AC01 or ICC-ES AC193.
 - 2. Adhesive Anchors in Masonry or Concrete: ICC-ES AC58 or ICC-ES AC308.
 - 3. Material:
 - a. Interior Locations: Carbon-steel components, zinc plated to comply with ASTM B633, Class Fe/Zn 5, unless indicated otherwise.
 - b. Exterior Locations and where Stainless Steel is Indicated: Stainless steel with bolts and nuts complying with **ASTM F593 and ASTM F594, Alloy Group 1 or 2 (ASTM F738M and ASTM F836M, Grade A1 or A4).**

2.9 MISCELLANEOUS MATERIALS

- A. Adhesives for Gluing to Concrete or Masonry: Formulation complying with ASTM D3498 that is approved for use indicated by adhesive manufacturer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products, fabrications, and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
1. Respective manufacturer written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.
- C. Set carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit carpentry accurately to other construction. Locate furring, nailers, blocking, grounds, and similar supports to comply with requirements for attaching other construction.
- D. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.
- E. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
- F. Provide fire blocking in furred spaces, stud spaces, and other concealed cavities as indicated.
1. Fire block concealed spaces between floor sleepers with same material as sleepers to limit concealed spaces to not more than 100 sq. ft. (9.3 sq. m) and to solidly fill space below partitions.
- G. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- H. Comply with AWPAC M4 for applying field treatment to cut surfaces of preservative-treated lumber.
1. Use inorganic boron for items that are continuously protected from liquid water.
 2. Use copper naphthenate for items not continuously protected from liquid water.
- I. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- J. Securely attach carpentry work to substrate by anchoring and fastening as indicated, complying with the requirements of authorities having jurisdiction and the following:
1. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code.
 - a. Select fasteners of appropriate size, type, and length that will not fully penetrate members where opposite side will be exposed to view or will receive finish

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

materials. Make tight connections between members. Predrill members when necessary to avoid splitting wood while installing fasteners. Do not countersink nail heads, unless otherwise indicated. Recess bolts and nuts flush with surfaces, unless otherwise indicated.

2. ICC-ES evaluation report for fastener.

K. Install composite plastic lumber per manufacturer's written instructions.

3.3 INSTALLATION OF WOOD BLOCKING AND NAILER

- A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.
- C. Provide permanent grounds of dressed, pressure-preservative-treated, key-beveled lumber not less than 1-1/2 inches (38 mm) wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

3.4 INSTALLATION OF WOOD FURRING

- A. Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.

3.5 PROTECTION

- A. Protect miscellaneous rough carpentry from weather. If, despite protection, miscellaneous rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 064023
INTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Shop-finished interior architectural woodwork and supplementary items necessary for installation.
- B. Simulated Stone Countertops: Refer to Division 12 Section "Simulated Stone Countertops" for solid surfacing, quartz agglomerate, or cultured marble countertops incorporated into work specified in this Section. Simulated stone trim is specified in this Section.

1.2 DEFINITIONS

- A. Interior architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.
- B. Stair Work and Rails: Rough carriages for stairs are a part of interior architectural woodwork. Platform framing, headers, partition framing, and other rough framing associated with stairwork are specified in Division 06 Section "Miscellaneous Rough Carpentry".
- C. Exposed Surfaces, Semi-Exposed Surfaces, Concealed Surfaces, Types of Cabinet Construction, and other related terms are defined in referenced quality standards.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
 - 2. Wood Veneered Items: Include finishing materials and processes.
 - 3. Fire Retardant Treated Wood: Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work.
 - 1. Show details full size.
 - 2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 - 3. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, and other items installed in architectural woodwork.
 - 4. Wood Paneling with Transparent Finish: For paneling noted or schedule to be blueprint matched work, show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
- C. Samples for Verification:
 - 1. Items with Transparent Finish:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Lumber with or for transparent finish, not less than 50 sq. in. (300 sq. cm) or 5 in (125 mm) wide by 24 in (600 mm) long, for each species and cut, finished on 1 side and 1 edge.
 - b. Veneer leaves representative of and selected from flitches to be used for transparent-finished woodwork.
 - c. Veneer-faced panel products with or for transparent finish, 8 in by 10 in (200 mm by 250 mm), for each species and cut. Include at least one face-veneer seam and finish as specified.
2. Items with Opaque Finish:
- a. Lumber and panel products with shop-applied opaque finish, 50 sq. in. (300 sq. cm) for lumber and 8 in by 10 in (200 mm by 250 mm) for panels, for each finish system and color, with 1/2 of exposed surface finished.
3. Items with Plastic Laminate Finish:
- a. Plastic laminates, 8 in by 10 in (200 mm by 250 mm), for each type, color, pattern, and surface finish, with 1 sample applied to core material and specified edge material applied to 1 edge.
4. Simulated Stone Trim: 6 in (150 mm) long.
5. Cabinets:
- a. Corner Piece: Cabinet-front frame joints between stiles and rails, as well as exposed end pieces, 18 in (450 mm) high by 18 in (450 mm) wide by 6 in (150 mm) deep.
 - b. Cabinet Hardware and Accessories: Exposed cabinet hardware and accessories, one unit for each type and finish.
 - c. Countertops: Section of countertop showing top, front edge, and backsplash construction.
6. Standing and Running Trim: Corner piece showing miter joints.

1.4 INFORMATIONAL SUBMITTALS

1.5 QUALITY ASSURANCE

1. Woodwork Fabricator Certification: Certified participant in AWI's Quality Certification Program or licensee of WI's Certified Compliance Program.
- B. Installer Qualifications:
1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 3. Certification: Certified participant in AWI's Quality Certification Program or licensee of WI's Certified Compliance Program.
- C. Source Limitations for Wood Veneered Items: Engage a qualified woodworking firm to assume undivided responsibility for production of interior architectural woodwork with sequence-matched wood veneers and wood doors with face veneers that are sequence matched with woodwork.
- D. Quality Standard: Unless otherwise indicated, comply with "Architectural Woodwork Standards" for standards and for grades of interior architectural woodwork indicated for construction, finish, installation and other requirements:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Provide manufacturer certification indicating that woodwork complies with requirements of referenced quality standards.
 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with such selections and requirements in addition to the quality standard.
- E. Fire-Test-Response Characteristics: Where fire-retardant materials or products are indicated or required, provide materials and products with specified fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify with appropriate markings of applicable testing and inspecting agency in the form of separable paper label or, where required by authorities having jurisdiction, imprint on surfaces of materials that will be concealed from view after installation.
- F. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up using materials indicated for the completed Work.
1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.
 2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
 4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
 5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.
- G. Mock-ups, Cabinets:
1. One full-size sample of finished base cabinet unit complete with hardware, doors, and drawers, but exclusive of countertop.
 2. One full-size sample of finished wall-mounted cabinet unit complete with hardware, doors, and adjustable shelves.
 3. Accepted sample units will be used as a standard for judging the completed work. Unless otherwise directed, accepted sample units may be incorporated in work. If not incorporated in work, retain accepted sample units at Project site until completion of work and remove sample units from premises when directed by Architect.
- 1.6 PRE-INSTALLATION CONFERENCE
- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
3. Record discussions, including decisions and agreements, and prepare report.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Do not deliver woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.
- B. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.
 1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.

1.9 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- B. Coordinate Shop Drawings and fabrication with hardware requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.
- B. Provide materials that comply with requirements of "Architectural Woodwork Standards" quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.

2.3 MATERIALS

- A. Wood Species and Cut for Transparent Finish:
 - 1. Selections: As scheduled or as indicated in Design Selections.
- B. Wood Species for Opaque Finish: Any closed-grain hardwood unless indicated otherwise.
- C. Fire Retardant Wood Products for Paneling:
 - 1. Medium-Density Fiberboard: ANSI A208.2, minimum Grade 130-MR50, made with binder containing no added urea formaldehyde.
 - 2. Particleboard: ANSI A208.1, Industrial Grade M-2 Exterior Glue, made with binder containing no added urea formaldehyde, 43 pcf (753kgm3) Density.
 - 3. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.
- D. Wood Products for Cabinets:
 - 1. Hardboard for Vertical Dividers Only: AHA A135.4, tempered, smooth two sides, 1/4 in (6 mm) minimum thickness unless indicated otherwise.
 - 2. Medium-Density Fiberboard: ANSI A208.2, minimum Grade 130-MR50, made with binder containing no added urea formaldehyde.
 - 3. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1, made with adhesive containing no added urea formaldehyde.
 - 4. Softwood Plywood: DOC PS 1.
- E. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or, if not indicated, as required by woodwork quality standard.
 - 1. Fire-Rated Laminates: Where indicated or scheduled; NEMA LD 3, grades as follows:
 - a. Vertical Surfaces: General Purpose Type 604 (VGF), 0.032 in (0.79 mm) thick.
 - b. Horizontal Surfaces: General Purpose Type 605 (HGF) 0.048 in (1.2 mm) thick.
 - 2. Manufacturers:
 - a. Formica Corporation.
 - b. International Paper.
 - c. Lamin-Art, Inc.
 - d. Nevamar Company, LLC; Decorative Products Div.
 - e. Pioneer Plastics Corp.
 - f. Westinghouse Electric Corp.; Specialty Products Div.
 - g. Wilsonart International; Div. of Premark International, Inc.
 - 3. Colors, Patterns, and Finishes:
 - a. Selections: As scheduled or as indicated in Design Selections.
- F. Chemical-Resistant, High-Pressure Decorative Laminate: NEMA LD 3, Grade HGP, and as follows:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Laminate has the following ratings when tested with indicated reagents according to NEMA LD 3, Test Procedure 3.9.5:
 - a. Nitric Acid (30 Percent): Moderate effect.
 - b. Sulfuric Acid (77 Percent): Moderate effect.
 - c. Hydrochloric Acid (37 Percent): Moderate effect.
 - d. Phosphoric Acid (75 Percent): No effect.
 - e. Acetic Acid (98 Percent): No effect.
 - f. Formaldehyde: No effect.
 - g. Ethyl Acetate: No effect.
 - h. Ethyl Ether: No effect.
 - i. Phenol (85 Percent): Moderate effect.
 - j. Benzene: No effect.
 - k. Xylene: No effect.
 - l. Butyl Alcohol: No effect.
 - m. Furfural: No effect.
 - n. Methyl Ethyl Ketone: No effect.
 - o. Sodium Hydroxide (25 Percent): No effect.
 - p. Sodium Sulfide (15 Percent): No effect.
 - q. Ammonium Hydroxide (28 Percent): No effect.
 - r. Zinc Chloride: No effect.
 - s. Gentian Violet: No effect.
 - t. Methyl Red: No effect.
 2. Manufacturers and Products:
 - a. Formica Corporation; Lab Grade 840 Black.
 - b. Panolam Industries International Incorporated; Pionite Chemguard.
 - c. Wilsonart International, Div. of Premark International, Inc.; Chemsurf.
 3. Colors, Patterns, and Finishes:
 - a. Selections: As scheduled or as indicated in Design Selections.
- G. PVC Laminate: Fire-retardant acrylic/PVC sheet covered in a decorative rigid PVC veneer, 0.040 in (1 mm) thick.
1. Manufacturer and Product: Spectrim; Ven4ma.
 2. Colors, Patterns, and Finishes:
 - a. Selections: As scheduled or as indicated in Design Selections.
- H. Simulated Stone Trim:
1. Solid Surface Material: Homogeneous-filled plastic resin complying with ISFA 2-01.
 - a. Manufacturers:
 - 1) Avonite Surfaces.
 - 2) E. I. du Pont de Nemours and Company.
 - 3) Formica Corporation.
 - 4) LG Chemical, Ltd.
 - 5) Meganite Inc.
 - 6) Samsung Chemical USA, Inc.
 - 7) Swan Corporation (The).
 - 8) Transolid, Inc.
 - 9) Wilsonart International.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Quartz Agglomerate: Solid sheets consisting of quartz aggregates bound together with a matrix of polymers, resins, and pigment and complying with ISFA 3-01.
 - a. Manufacturers:
 - 1) Cambria.
 - 2) Cosentino USA.
 - 3) E. I. du Pont de Nemours and Company.
 - 4) LG Chemical, Ltd.
 - 5) Meganite Inc.
 - 6) Samsung Chemical USA, Inc.
 - 7) Technistone USA, Inc.
 - 8) Transolid, Inc.
3. Cultured Marble: Gel-coated solid fabrication of filled plastic resin complying with CSA B45.5/IAPMO Z124.
 - a. Manufacturers:
 - 1) Bathroom World Manufacturing Company
 - 2) Cameo Marble
 - 3) Cherry Marble Group.
 - 4) Comar Products, Inc.
 - 5) Craig Baker Marble Co., Inc.
 - 6) Cultured Marble Products
 - 7) Custom Marble Products, Inc.
 - 8) Imperial Marble Corp.
 - 9) Marbleon, Inc.
 - 10) MarCraft, Inc.
 - 11) Mincey Marble Manufacturing, Inc.
 - 12) Princess Marble
 - 13) Roma Marble, Inc.
 - 14) Rynone Manufacturing Corp.
 - 15) Tiffany Marble
4. Colors, Patterns, and Finishes:
 - a. Selections: As scheduled or as indicated in Design Selections.

I. Glass:

1. Tempered Float Glass for Cabinet Doors: ASTM C 1048, Kind FT, Condition A, Type I, Class 1 (clear), Quality-Q3, 6 mm thick, unless otherwise indicated.
2. Mirror Glass for Cabinet Doors: ASTM C 1503, Mirror Select Glazing, Quality-Q3, 6 mm thick, unless otherwise indicated.
3. Decorative Glass for Cabinet Doors: Provide decorative glass complying with Division 08 Section "Glazing".
4. Tempered Float Glass for Cabinet Shelves: ASTM C 1048, Kind FT, Condition A, Type I, Class 1 (clear), Quality-Q3; with exposed edges seamed before tempering, 6 mm thick, unless otherwise indicated.

2.4 FIRE-RETARDANT-TREATED MATERIALS

- A. General: Where fire-retardant-treated materials are indicated or required, use materials complying with requirements in this Article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Do not use treated materials that do not comply with requirements of referenced woodworking standard or that are warped, discolored, or otherwise defective.
 2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 3. Identify fire-retardant-treated materials with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Comply with performance requirements of AWPA C20 (lumber) and AWPA C27 (plywood). Use the following treatment types:
1. Exterior Type: Organic-resin-based formulation thermally set in wood by kiln drying.
 2. Interior Type A: Low-hygroscopic formulation.
 3. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
 4. Kiln-dry materials before and after treatment to levels required for untreated materials.
- C. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
- D. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.

2.5 CABINET HARDWARE AND ACCESSORIES

- A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items specified in Division 08 Section "Door Hardware (Scheduled by Describing Products)."
1. Refer to Interior Design Documents and Schedules for additional hardware selections.
- B. Hinges: Provide number of hinges recommended by hinge manufacturer for size and weight of door.
- C. Butt Hinges: 2-3/4 in (69 mm), 5-knuckle steel hinges made from 0.095 in (2.4 mm) thick metal, and as follows:
1. Semi-concealed Hinges for Flush Doors: BHMA A156.9, B01361.
 2. Semi-concealed Hinges for Overlay Doors: BHMA A156.9, B01521.
- D. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602,
1. Product Standard: Grass; "Tiomos 120 Series", 120 degree swing, self-closing from 10 deg.
 - a. Angle Reduction Clip: Provide angle reducing clip at doors adjacent to walls and corners, door swing to be limited to 85 degrees. Finish: Steel with nickel plating. Manufacturer and Product: Grass; Tiomos Angle Reduction Clip, F072135751.
- E. Back-Mounted Pulls: BHMA A156.9, B02011.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Wire Pulls: Back mounted, solid metal, 4 in (100 mm) long, 5/16 in (8 mm) in diameter.
 - 1. Product Standard: EPCO-MC-402-4, 4 in (100 mm) center to center of screws, 1-5/16 in (34 mm) projection, 5/16 in (8 mm) diameter. Stainless steel.
- G. Catches: Magnetic catches, BHMA A156.9, B03141.
- H. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081.
- I. Shelf Rests: BHMA A156.9, B04013; metal.
 - 1. Product Standard: K & V No. 345, nickel plated.
- J. Drawer Slides: BHMA A156.9, B05091.
 - 1. Heavy Duty (Grade 1HD-100 and Grade 1HD-200): Side mounted; full-extension type; zinc-plated steel ball-bearing slides.
 - 2. Box Drawer Slides: Grade 1HD-100; for drawers not more than 6 in (150 mm) high and 24 in (600 mm) wide.
 - a. Product Standard for 24 in (600 mm) Wide and Less: Full extension; Accuride "7434".
 - b. Product Standard for Wider than 24 in (600 mm): Full extension; Accuride "7432".
 - 3. File Drawer Slides: Grade 1HD-200; for drawers more than 6 in (150 mm) high or 24 in (600 mm) wide.
 - a. Product Standard for 42 in (1050 mm) Wide and Less: Full extension with 1 in (25 mm) over travel; Accuride "3640".
 - 4. Pencil Drawer Slides: Grade 1; for drawers not more than 3 in (75 mm) high and 24 in (600 mm) wide.
 - a. Product Standard for 16 in (400 mm) Wide and Less: Low profile, 75 lb (34 kg) load rating (at 2/3 travel), full extension; Accuride "2632".
 - b. Keyboard Slides: Grade 1HD-100; for computer keyboard shelves.
 - c. Product Standard for Slides Only, 16 in (400 mm) Wide and Less: Adjustable height, 75 lb (34 kg) load rating; Accuride "2109".
 - d. Product Standard for Slides and Tray: Fixed tilt, adjustable height; Accuride "Cbergo-Tray 200".
 - e. Product Standard for Slides, Tray and Accessories: Adjustable tilt, adjustable height, cable management, palm rest, and mouse pad; Accuride "Cbergo-Tray 300".
 - 5. Trash Bin Slides: Grade 1HD-200; for trash bins not more than 20 in (500 mm) high and 16 in (400 mm) wide.
- K. Aluminum Slides for Sliding Glass Doors: BHMA A156.9, B07063.
- L. Door Locks: BHMA A156.11, E07121.
 - 1. Product Standard: K & V No. 984, nickel plated.
- M. Drawer Locks: BHMA A156.11, E07041.
 - 1. Product Standard: K & V No. 986, nickel plated.
- N. Sliding Door Locks:
 - 1. Product Standard: K & V No. 984, nickel plated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- O. Grommets for Cable Passage through Countertops: Molded-plastic grommets and matching plastic caps with slot for wire passage.
1. Size: 1-1/4 in (32-mm) or 2 in (50 mm) OD as indicated.
 2. Color: Brown, black or white as indicated or selected by Architect.
 3. Product Standards: Doug Mockett & Company, Inc "OG or SG Series" or Hafele 429.93.
- P. Concealed Pocket Door Slides (Vertical Swing/Slide/Retract):
1. Description: Side mounted flipper door slide assembly suitable for recessed full overlay door, 42 in (1050 mm) high and less, 30 lb (14 kg) load rating, into concealed pocket within cabinet, painted steel slides with all steel ball bearings.
 2. Product Standard: Accuride "1321".
- Q. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.
1. Satin Stainless Steel: BHMA 630, unless otherwise indicated.
- R. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.
- S. Manufacturers:
1. Accuride.
 2. Julius Blum, Inc.
 3. The Engineered Products Company.
 4. Grass America, Inc.
 5. Hafele America Company.
 6. Hettich America Corporation.
 7. Knappe & Vogt Manufacturing Company (K & V).
 8. Stanley Hardware, Division of the Stanley Works.
- T. Cabinet Accessories:
1. Flat-Screen Computer Monitor and Keyboard Mounting System:
 - a. Product Standard: Hafele; Monitor Suspension System (Flat Screen Monitors).
 2. Counter Support Brackets: Unless noted otherwise, provide brackets factory-primed for field painting.
 - a. Manufacturers and Products:
 - 1) A&M Hardware, Inc.; Work Station Brackets.
 - 2) Rakks/Rangine Corporation; Counter Support Brackets, EH Series.
 3. Table Legs:
 - a. Product Standard: Richelieu; Round Table Legs, Product UC250175, 28 in (711.2 mm) long by 2-1/2 in (62 mm) diameter steel table leg with satin chrome finish.
- U. Tackable Wall Surface: Refer to Division 09 Section "Fabric Wrapped Panels".
- V. Tackable Wall Surface:
1. Fabric Wall Coverings: Provide wall coverings with following surface burning characteristics as determined by testing identical products per ASTM E 84/NFPA 255/UL 723. Identify wall coverings with appropriate markings of applicable testing and inspecting organization.
 - a. Flame Spread: 25 or less; Smoke Developed: 450 or less.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Selections: As scheduled or as indicated in Design Selections.
- 2. Substrate Material: Fiberglass board, ASTM C 612, Class 1 and 2; 6 pcf (96 kgm3) density, compressible, unfaced, with chemically hardened edges.
- 3. Panel Fabrication: Fabricate panels to sizes and configurations indicated; attach facing materials to core (substrate material) to produce installed panels with visible surfaces fully covered and free from waves in fabric weave, wrinkles, sags, blisters, seams, adhesive, or other foreign matter.

2.6 MISCELLANEOUS MATERIALS

- A. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln dried to less than 15 percent moisture content.
- B. Rough Carriages for Stairs: Select Structural grade, kiln dried to 15 percent maximum moisture content.
- C. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.
- D. Handrail Brackets: Cast or Extruded with wall flange drilled and tapped for concealed hanger bolt and with support arm for screwing to underside of rail. Sized to provide 1-1/2 in (38 mm) clearance between handrail and wall.
- E. Adhesives:
 - 1. General: As recommended by woodwork fabricator to suit application.
 - 2. Adhesive for Bonding Plastic Laminate Faces and Edges: PVA as recommended by woodwork fabricator to suit application.
- F. Hanging Clips: Provide manufacturer standard nonferrous-metal or hot-dip galvanized zee hanging clips.

2.7 FABRICATION, GENERAL

- A. Interior Woodwork Grade: Unless otherwise indicated, provide Premium Grade interior woodwork complying with referenced quality standard.
- B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.
- C. Fire Retardant Treated Wood: Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
- D. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
 - 1. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members 3/4 in (19 mm) Thick or Less: 1/16 in (1.5 mm).
 - 2. Edges of Rails and Similar Members More Than 3/4 in (19 mm) Thick: 1/8 in (3 mm).
- E. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.
 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.
- F. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
1. Countertops: Seal edges of openings in countertops.
- G. Install glass to comply with applicable requirements in Division 08 Section "Glazing" and in GANA's "Glazing Manual". For glass in wood frames, secure glass with removable stops.
- 2.8 INTERIOR STANDING AND RUNNING TRIM
- A. Grade for Transparent Finish: Premium.
 - B. Grade for Opaque Finish: Premium.
 - C. Grade for Opaque Finish: Custom.
 - D. Provide split species on trim that faces areas with different wood species, matching each face of woodwork to species and cut of finish wood surfaces in areas finished.
 - E. For trim items wider than available lumber, use veneered construction. Do not glue for width.
 - F. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work.
 - G. Assemble casings in plant except where limitations of access to place of installation require field assembly.
- 2.9 INTERIOR FRAMES AND JAMBS
- A. Grade for Transparent Finish: Premium.
 - B. Grade for Opaque Finish: Premium.
 - C. For frames or jambs wider than available lumber, use veneered construction. Do not glue for width.
 - D. Fire-Rated Interior Frames and Jambs: Products fabricated from fire-retardant particleboard or fire-retardant medium-density fiberboard with veneered, exposed surfaces and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.
 1. Fire Rating: 20 minutes.
- 2.10 STAIR WORK AND RAILS
- A. Grade for Transparent Finish: Premium.
 - B. Grade for Opaque Finish: Premium.
 - C. Cut carriages to accurately fit treads and risers. Glue treads to risers, and glue and nail treads and risers to carriages.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. House wall and face stringers and glue and wedge treads and risers.
2. Fabricate stairs with treads and risers no more than **1/8 in (3 mm)** from indicated position and no more than **1/16 in (1.5 mm)** out of position for adjacent treads and risers.

2.11 FLUSH WOOD PANELING

- A. Grade for Transparent Finish: Premium.
- B. Grade for Opaque Finish: Premium.
- C. Lumber Trim and Edges: If not indicated, trim and edges shall be solid wood lumber compatible with grain and color of veneered panels.
- D. Matching Requirements: As scheduled or as indicated in Design Selections.
- E. Fire-Retardant-Treated Paneling: Provide panels consisting of wood veneer and fire-retardant particleboard or fire-retardant medium-density fiberboard. Panels shall have flame-spread index of 75 or less and smoke-developed index of 450 or less per ASTM E 84.

2.12 FLUSH PLASTIC-LAMINATE PANELING

- A. Grade: Premium.
- B. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:
 1. Faces: Grade HGS, 1.0 mm thick.
 2. Edges: Same as faces.
- C. Concealed Backs of Panels with Exposed Plastic Laminate Surfaces: High-pressure decorative laminate, Grade BKH, 1.0 mm thick.
- D. Fire-Retardant-Treated Paneling: Provide panels consisting of fire-retardant plastic laminate and fire-retardant particleboard or fire-retardant medium-density fiberboard. Panels shall have a flame-spread rating of 75 or less and a smoke-developed rating of 450 or less per ASTM E 84.

2.13 STILE AND RAIL WOOD PANELING FOR TRANSPARENT FINISH

- A. Grade: Premium.
- B. Stiles and Rails: If not indicated, at fabricator's option, stiles and rails may be either lumber or veneered construction with edges banded or with lumber moldings, as indicated, to conceal core and veneer joints.
- C. Panels: Flat or raised panels with veneered faces and solid lumber rims as indicated.
- D. Insert Panels: Blueprint matched in a horizontal sequence for adjacent panels and doors, with continuous vertical matching between adjacent panels. Book and balance or Book, balance, and center match face-veneer leaves within each panel as indicated.
 1. Flitch Requirements: As scheduled or as indicated in Design Selections for requirements concerning flitches reserved by Architect.
- E. Shop-assemble stile and rail paneling into largest units practical for delivery and installation. Provide shop-prepared detachable joints for necessary field connections. Sand and pull joints tight in shop so field joints will comply with joint tolerances for specified grade. Unless otherwise indicated, provide continuous mortise-and-tenon joints between panel units and provide removable temporary protection for joints during handling and delivery.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Outside Corner of Stile and Rail Paneling: Shop-prepare using lock-mitered or mitered-and-splined construction. Assemble, sand, and glue in shop, if site conditions permit.
 - F. Fire-Retardant-Treated Paneling: Provide panels consisting of fire-retardant lumber and fire-retardant particleboard or fire-retardant medium-density fiberboard. Panels shall have a flame-spread rating of 75 or less and a smoke-developed rating of 450 or less per ASTM E 84.
- 2.14 STILE AND RAIL WOOD PANELING FOR OPAQUE FINISH
- A. Grade: Premium.
 - B. Provide fire-retardant treatment of stile and rail paneling as indicated below. For components of paneling fabricated from solid lumber, mill pieces before treatment.
 1. For stiles and rails, use fire-retardant-treated lumber or fire-retardant medium-density fiberboard.
 2. For insert panels, use fire-retardant medium-density fiberboard or fire-retardant particleboard with closed-grain hardwood veneer on face and back or medium density overlay.
 - C. Shop-assemble stile and rail paneling into largest units practical for delivery and installation. Provide shop-prepared detachable joints for necessary field connections. Sand and pull joints tight in shop so field joints will comply with joint tolerances for specified grade. Unless otherwise indicated, provide continuous mortise-and-tenon joints between panel units and provide removable temporary protection for joints during handling and delivery.
 1. Outside Corner of Stile and Rail Paneling: Shop-prepare using lock-mitered or mitered-and-splined construction. Assemble, sand, and glue in shop, if site conditions permit.
- 2.15 INTERIOR ORNAMENTAL WORK
- A. Interior ornamental work includes but is not limited to the following:
 1. Balustrades.
 2. Columns.
 3. Grilles.
 4. Mantels.
 5. Pediment heads.
 6. Pilasters.
 - B. Grade for Transparent Finish: Premium.
 - C. Grade for Opaque Finish: Premium.
- 2.16 WOOD CABINETS FOR TRANSPARENT FINISH
- A. Grade: Premium.
 - B. AWI Type of Cabinet Construction: Flush overlay unless indicated otherwise.
 - C. Lumber Trim and Edges: If not indicated, trim and edges shall be solid wood lumber compatible with grain and color of veneered panels.
 - D. Grain Direction: Vertically for drawer fronts, doors, and fixed panels, unless indicated otherwise.
 - E. Matching Requirements: As scheduled or as indicated in Design Selections.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Semi-exposed Surfaces: Provide surface materials indicated below:
1. Surfaces Other Than Drawer Bodies: Same species and cut indicated for exposed surfaces.
 2. Lumber Trim and Edges: Solid wood of same species and cut indicated for exposed surfaces.
 3. Drawer Sides, Backs and Sub-Fronts: **1/2 in (12 mm)** minimum thickness, as indicated.
 - a. Solid-hardwood lumber, same species indicated for exposed surfaces.
 4. Drawer Bottoms: **1/4 in (6 mm)** minimum thickness, as indicated.
 - a. Hardwood plywood with veneer core.
 5. Drawer Box Construction: One of the following:
 - a. Glued multiple dovetail.
 - b. Glued French dovetail.
 - c. Glued and doweled.
 6. Interior Drawer Box Finish, as indicated:
 - a. Clear catalyzed polyurethane.
- G. Body Members (Ends, Divisions, Bottoms and Sub-Tops): Medium-density fiberboard, **3/4 in (19 mm)** minimum thickness.
- H. Face Frames, Rails, Kicks and Bases: Solid-hardwood lumber or hardwood plywood, **3/4 in (19 mm)** thick minimum thickness. Do not use hardwood plywood if hinge screws enter edge of rail only.
- I. Shelves: Hardwood plywood with veneer core with the following thickness:
1. For Spans Up To **32 in (800 mm)**: **3/4 in (19 mm)**.
 2. For Spans Up To **42 in (1050 mm)**: **1 in (25 mm)**.
- J. Drawer Fronts: Medium density fiberboard, **3/4 in (19 mm)** thick minimum thickness.
- K. Doors:
1. Hinged Flush Type: Medium density fiberboard with minimum thickness of **3/4 in (19 mm)**.
 - a. Maximum cabinet door size: **24 in (600 mm)** width and **84 in (2100 mm)** height.
 - b. Maximum cabinet door size: **20 in (500 mm)** width and **84 in (2100 mm)** height.
 - c. For Doors Larger Than Sizes Above: **1-3/8 in (35 mm)** or **1-3/4 in (45 mm)** doors; refer to Division 8 Section Flush Wood Doors.
 - d. If hinge screws enter only edge of door, provide **3/4 in (19 mm)** lumber edges glued to core prior to laminating.
 2. Sliding Flush Type: As required by referenced quality standard for grade specified.
 3. Stile and Rail Type: As required by referenced quality standard for grade specified.

2.17 WOOD CABINETS FOR OPAQUE FINISH

- A. Grade: Premium.
- B. AWI Type of Cabinet Construction: Flush overlay unless indicated otherwise.
- C. Lumber Trim and Edges: If not indicated, trim and edges shall be solid wood lumber compatible with grain and color of veneered panels.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Panel Product for Exposed Surfaces: Hardwood plywood with veneer core.
- E. Semi-exposed Surfaces: Provide surface materials indicated below:
 - 1. Surfaces Other Than Drawer Bodies: Match materials indicated for exposed surfaces.
 - 2. Lumber Trim and Edges: Solid wood compatible with grain and color of veneered panels.
 - 3. Drawer Sides, Backs and Sub-Fronts: **1/2 in (12 mm)** minimum thickness, as indicated.
 - a. Solid-hardwood lumber.
 - 4. Drawer Bottoms: **1/4 in (6 mm)** minimum thickness, as indicated.
 - a. Hardwood plywood with veneer core.
 - 5. Drawer Box Construction: One of the following:
 - a. Glued multiple dovetail.
 - b. Glued French dovetail.
 - c. Glued and doweled.
 - 6. Interior Drawer Box Finish, as indicated:
 - a. Clear catalyzed polyurethane.
- F. Body Members (Ends, Divisions, Bottoms and Sub-Tops): Medium-density fiberboard, **3/4 in (19 mm)** minimum thickness.
- G. Face Frames, Rails, Kicks and Bases: Solid-hardwood lumber or hardwood plywood, **3/4 in (19 mm)** thick minimum thickness. Do not use hardwood plywood if hinge screws enter edge of rail only.
- H. Shelves: Hardwood plywood with veneer core with the following thickness:
 - 1. For Spans Up To **32 in (800 mm)**: **3/4 in (19 mm)**.
 - 2. For Spans Up To **42 in (1050 mm)**: **1 in (25 mm)**.
- I. Drawer Fronts: Medium density fiberboard, **3/4 in (19 mm)** thick minimum thickness.
- J. Doors:
 - 1. Hinged Flush Type: Medium density fiberboard with minimum thickness of **3/4 in (19 mm)**.
 - a. Maximum cabinet door size: **24 in (600 mm)** width and **84 in (2100 mm)** height.
 - b. Maximum cabinet door size: **20 in (500 mm)** width and **84 in (2100 mm)** height.
 - c. For Doors Larger than Sizes Above: **1-3/8 in (35 mm)** or **1-3/4 in (45 mm)** doors; refer to Division 8 Section Flush Wood Doors.
 - d. If hinge screws enter only edge of door, provide **3/4 in (19 mm)** lumber edges glued to core prior to laminating.
 - 2. Sliding Flush Type: As required by referenced quality standard for grade specified.
 - 3. Stile and Rail Type: As required by referenced quality standard for grade specified.

2.18 PLASTIC-LAMINATE CABINETS

- A. Grade: Premium.
- B. AWI Type of Cabinet Construction: Flush overlay unless indicated otherwise.
- C. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Horizontal Surfaces Other Than Tops: Grade HGP, .038 in (1 mm) thick.
 2. Postformed Surfaces: Grade HGP, .038 in (1 mm) thick.
 3. Doors and Vertical Surfaces: Grade VGS, .028 in (0.7 mm) thick.
 4. Edges: PVC Edge Banding, 0.12 in (3 mm) thick, matching laminate in color, pattern, and finish.
 5. Edges: Grade HGS, .048 in (1.2 mm) thick.
- D. Semi-exposed Surfaces: Provide surface materials indicated below:
1. Surfaces Other Than Drawer Bodies: High-pressure decorative laminate, Grade CLS, .020 in (0.5 mm) thick.
 2. Edges: PVC Edge Banding, .038 in (1 mm) thick, matching laminate in color, pattern, and finish.
 3. Drawer Sides, Backs and Sub-Fronts: 1/2 in (12 mm) minimum thickness, as indicated.
 - a. Solid-hardwood lumber.
 4. Drawer Bottoms: 1/4 in (6 mm) minimum thickness, as indicated.
 - a. Hardwood plywood with veneer core.
 5. Drawer Box Construction: One of the following:
 - a. Glued multiple dovetail.
 - b. Glued French dovetail.
 - c. Glued and doweled.
 6. Interior Drawer Box Finish, as indicated:
 - a. Clear catalyzed polyurethane.
- E. Body Members (Ends, Divisions, Bottoms and Sub-Tops): Medium-density fiberboard, 3/4 in (19 mm) minimum thickness.
- F. Face Frames, Rails, Kicks and Bases: Solid-hardwood lumber or hardwood plywood, 3/4 in (19 mm) thick minimum thickness.
- G. Face Frames and Rails: Solid-hardwood lumber or hardwood plywood, 3/4 in (19 mm) thick minimum thickness.
- H. Kicks and Bases: Solid-hardwood lumber, 1 1/2 (38 mm) thick minimum thickness.
- I. Shelves: Hardwood plywood with veneer core with the following thickness:
1. For Spans Up To 32 in (800 mm): 3/4 in (19 mm).
 2. For Spans Up To 42 in (1050 mm): 1 in (25 mm).
- J. Drawer Fronts: Medium density fiberboard, 3/4 in (19 mm) thick minimum thickness.
- K. Doors:
1. Hinged Flush Type: Medium density fiberboard with minimum thickness of 3/4 in (19 mm).
 - a. Maximum cabinet door size: 24 in (600 mm) width and 84 in (2100 mm) height.
 - b. Maximum cabinet door size: 20 in (500 mm) width and 84 in (2100 mm) height.
 - c. For Doors Larger than Sizes Above: 1-3/8 in (35 mm) or 1-3/4 in (45 mm) doors; refer to Division 08 Section "Flush Wood Doors".
 - d. If hinge screws enter only edge of door, provide 3/4 in (19 mm) lumber edges glued to core prior to laminating.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 2. Sliding Flush Type: As required by referenced quality standard for grade specified.
 - 3. Stile and Rail Type: As required by referenced quality standard for grade specified.
 - L. Concealed Backs of Panels with Exposed Plastic Laminate Surfaces: High-pressure decorative laminate, Grade BKL, .020 in (0.5 mm) thick.
 - M. Concealed Edges of Base Cabinet Panels: Including but not limited to floors, vertical edges, splashes and countertops; Clear Catalyzed Polyurethane.
- 2.19 WOOD COUNTERTOPS
- A. Grade: Premium.
 - B. Type of Top: Panel product for transparent finish (wood veneer laminated over core) as follows:
 - 1. Edge Treatment: Solid wood matching face for species and cut, 3/4 in (19 mm) thick minimum thickness, as indicated.
 - 2. Core Material: Medium-density fiberboard, moisture resistant, binder containing no added urea formaldehyde, 3/4 in (19 mm) thick minimum thickness.
- 2.20 PLASTIC-LAMINATE COUNTERTOPS
- A. Grade: Premium.
 - B. High-Pressure Decorative Laminate Grade:
 - 1. High-Pressure Decorative Laminate Grade for Flat Countertops: Grade HGS, .048 in (1.2 mm) thick.
 - 2. High-Pressure Decorative Laminate Grade for Post-formed Countertops: Grade HGP, .038 in (1.0 mm) thick.
 - C. Grain Direction for Wood Grain Laminates: Parallel to cabinet fronts.
 - D. Edge Treatment: PVC edge banding, 0.12 in (3 mm) thick, matching laminate in color, pattern, and finish, as indicated.
 - E. Edge Treatment: Grade HGS or HGP, .048 in (1.2 mm) thick.
 - F. Core Material for Countertops: Medium-density fiberboard, moisture resistant, binder containing no added urea formaldehyde, 3/4 in (19 mm) thick minimum thickness.
 - G. Core Material for Side and Back Splashes: Medium-density fiberboard, moisture resistant, binder containing no added urea formaldehyde, 1/2 in (12 mm) thick minimum thickness.
 - H. Backer Sheet: Provide plastic-laminate backer sheet, Grade BKL, .020 in (0.5 mm) thick, on underside of countertop substrate.
 - I. Concealed Backs and Edges at Side and Back Splashes: High-pressure decorative laminate, Grade BKL, .020 in (0.5 mm) thick.
- 2.21 SOLID SURFACING COUNTERTOPS
- A. Refer to Division 12 Section "Simulated Stone Countertops".
- 2.22 QUARTZ AGGLOMERATE COUNTERTOPS
- A. Refer to Division 12 Section "Simulated Stone Countertops".

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.23 CULTURED MARBLE COUNTERTOPS

- A. Refer to Division 12 Section "Simulated Stone Countertops".

2.24 STAINLESS STEEL COUNTERTOPS AND SHELVING

- A. Stainless-Steel: 0.0625 in (1.5 mm) thick, stainless-steel sheet, ASTM A 666, Type 304, with No. 4 satin finish.
- B. Countertops: Weld shop-made joints, and grind and polish surfaces to produce uniform, directional, textured, polished finish indicated, free of cross scratches. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
1. Sound-deaden entire undersurface with heavy-build mastic coating.
 2. Extend top down to provide a 1 in (25 mm) thickness and a 1/2 in (12 mm) return flange under frame.
 3. Form backsplash coved to and integral with top surface.
 4. Provide raised marine edge around perimeter of tops containing sinks; pitch two ways to sink to provide drainage without channeling or grooving.
- C. Integral Sinks: Where stainless-steel sinks occur in stainless-steel tops, factory weld into one integral unit, grind welds smooth, and polish, passivate, and rinse.
1. Fabricate stainless-steel sinks with corners rounded and coved to at least a 5/8 in (15 mm) radius. Slope sink-bottoms to outlet. Provide double-wall construction for sink partitions with top edge rounded to at least a 1/2-in (12 mm) diameter.
- D. Fixed Shelving: Fold front and side edges down to provide 1-inch (25 mm) thickness. Fold rear edge up 1-1/2 inch (38 mm) to form a mounting flange. Weld corners. Construct integral wall mounting brackets of 0.0781 inch (2 mm) stainless steel with 1-1/2 inch (38 mm) flange at wall and completely welded to underside of shelf.
- E. Adjustable Shelving: Fold front, side, and rear edges down to provide a 1-inch (25 mm) thickness and mounting flange. Weld corners. Mount on adjustable stainless steel brackets supported by slotted wall standards.

2.25 CLOSET AND UTILITY SHELVING

- A. Grade: Custom.
- B. Shelf Material: 3/4 in (19 mm) solid lumber or veneer-faced panel product with solid-lumber edge.
- C. Cleats: 3/4 in (19 mm) solid lumber.

2.26 SHOP FINISHING

- A. Grade: Provide finishes of same grades as items to be finished.
- B. General: Finish architectural woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.
- C. Shop Priming: Shop apply the prime coat including backpriming, if any, for items specified to be field finished. Refer to Division 09 Painting Sections for material and application requirements.
- D. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to back of paneling and to end-grain surfaces. Concealed surfaces of plastic-laminate-clad woodwork do not require backpriming when surfaced with plastic laminate.

E. Finish:

1. Selections: As scheduled or as indicated in Design Selections.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive interior architectural woodwork and associated work to which interior architectural woodwork will be applied for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 1. Quality standards. (The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with such selections and requirements in addition to the quality standard.)
 2. Respective manufacturer/fabricator's written installation instructions.
 3. Accepted submittals.
 4. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.
- C. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.4 INSTALLATION

- A. Assemble woodwork and complete fabrication at Project site to comply with requirements for fabrication, to extent that it was not completed in the shop.
- B. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 in per 96 in (3 mm per 2400 mm).
- C. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- D. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.
- F. Standing and Running Trim: Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Do not use pieces less than **36 in (900 mm)** long, except where shorter single-length pieces are necessary. Scarf running joints and stagger in adjacent and related members.
 - 1. Fill gaps, if any, between top of base and wall with plastic wood filler, sand smooth, and finish same as wood base if finished.
 - 2. Install wall railings on indicated metal brackets securely fastened to wall framing.
 - 3. Install standing and running trim with no more variation from a straight line than **1/8 in per 96 in (3 mm per 2400 mm)**.
- G. Paneling: Anchor paneling to supporting substrate with concealed panel-hanger clips. Do not use face fastening, unless covered by trim or otherwise indicated.
 - 1. Install flush paneling with no more than **1/16 in per 96 in (1.5 mm per 2400 mm)** vertical cup or bow and **1/8 in per 96 in (3 mm per 2400 mm)** horizontal variation from a true plane.
 - 2. Flush Paneling with Revealed Joints: Install with variations in reveal width, alignment of top and bottom edges, and flushness between adjacent panels not exceeding **1/32 in (0.75 mm)**.
- H. Stairs: Securely anchor carriages to supporting substrates. Install stairs with treads and risers no more than **1/8 in (3 mm)** from indicated position.
- I. Railings:
 - 1. General: Install rails with no more than **1/8 in per 96 in (3 mm per 2400 mm)** variation from a straight line.
 - 2. Stair Rails: Glue and dowel or pin balusters to treads and railings, and railings to newel posts.
 - 3. Wall Rails: Support rails on indicated metal brackets securely fastened to wall framing.
 - a. Space rail brackets as required but not more than **5 ft (1525 mm)** on center.
- J. Cabinets, General: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 - 1. Install cabinets with no more than **1/8 in per 96 in (3 mm per 2400 mm)** sag, bow, or other variation from a straight line.
 - 2. Maintain veneer sequence matching of cabinets with transparent finish.
- K. Base and Wall Cabinets: Set base cabinets straight, level, and plumb. Adjust subtops within **1/16 in (1.5 mm)** of a single plane. Fasten base cabinets to partition framing, or reinforcements in partitions with fasteners spaced **24 in (600 mm)** on center. Bolt adjacent cabinets together with joints flush, tight, and uniform.
 - 1. Where base cabinets are not installed adjacent to walls, fasten to floor at toe space with fasteners spaced **24 in (600 mm)** on center. Secure sides of cabinets to floor, where they do not adjoin other cabinets, with not less than two fasteners.
 - 2. Wall Cabinets: Fasten wall cabinets through back, near top and bottom, at ends and not more than **16 in (400 mm)** on center with No. 10 wafer-head sheet metal screws through

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

metal backing or metal framing behind wall finish or toggle bolts through metal backing or metal framing behind wall finish.

- L. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
 - 1. Where possible make field jointing in the same manner as shop jointing, using dowels, splines, adhesives, and fasteners recommended by manufacturer. Prepare edges to be joined in shop so Project-site processing of top and edge surfaces is not required. Locate field joints where shown on Shop Drawings.
 - 2. Plastic Laminate Countertops: Secure field joints in plastic-laminate countertops with concealed clamping devices located within 6 in (150 mm) of front and back edges and at intervals not exceeding 24 in (600 mm). Tighten according to manufacturer's written instructions to exert a constant, heavy-clamping pressure at joints.
 - 3. Abut top and edge surfaces in one true plane, with internal supports placed to prevent deflection.
 - 4. Simulated Stone Countertops: Refer to Division 12 Section "Simulated Stone Countertops".
 - 5. Install countertops with no more than 1/8 in per 96 in (3 mm per 2400 mm) sag, bow, or other variation from a straight line.
 - 6. Secure backsplashes to tops with concealed metal brackets at 16 in (400 mm) on center and to walls with adhesive.
 - 7. Calk space between backsplash and wall with sealant specified in Division 07 Section "Joint Sealants".
- M. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.

3.5 ADJUSTING AND CLEANING

- A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.
- B. Clean, lubricate, and adjust hardware.
- C. Clean woodwork on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

3.6 WOOD TYPES SCHEDULE

- A. Wood Species and Cut for Transparent Finish:
 - 1. WD01:
 - a. Species and Cut:
 - b. Stain:
 - c. Locations: As indicated on drawings.

3.7 LAMINATE TYPES SCHEDULE

- A. High-Pressure Decorative Laminates (HPDL) Basis of Design (Product Standard):
 - 1. PL01:
 - a. Manufacturer:
 - b. Texture:
 - c. Color:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. Locations: As indicated on drawings.
 - B. Chemical-Resistant, High-Pressure Decorative Laminates (HPDL) Basis of Design (Product Standard):
 - 1. CRPL01:
 - a. Manufacturer:
 - b. Texture:
 - c. Color:
 - d. Locations: As indicated on drawings.
 - C. PVC Laminate Basis of Design (Product Standard):
 - 1. PL11:
 - a. Manufacturer:
 - b. Texture:
 - c. Color:
 - d. Locations: As indicated on drawings.
- 3.8 SIMULATED STONE TRIM SCHEDULE
- A. Simultated Stone Fabrications (Product Standard):
 - 1. SSF01: Solid Surfacing
 - a. Type: [Solid Surfacing][Quartz Agglomerate][Cultured Marble]
 - b. Manufacturer:
 - c. Product:
 - d. Locations: As indicated on drawings.
- 3.9 TACKABLE WALL SURFACE TYPES SCHEDULE
- A. Fabric Wall Surface Basis of Design (Product Standard):
 - 1. FP01:
 - a. Manufacturer:
 - b. Product:
 - c. Selection:
 - d. Locations: As indicated on drawings.
- 3.10 FLUSH WOOD PANELING MATCHING SCHEDULE
- A. Matching Requirements:
 - 1. Matching of Adjacent Veneer Leaves:
 - a. Book match.
 - b. Slip match.
 - c. As indicated on drawings.
 - 2. Matching within Panel Face:
 - a. Running match.
 - b. Balance match.
 - c. Center-balance match.
 - d. As indicated on drawings.
 - 3. Panel-Matching Method: Match panels within each separate area by the following method:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Blueprint-matched panels and components.
 - b. Flitch Requirements:
- 4. Vertical Panel Matching Method: For panels arranged two or more panels high, match as follows:
 - a. Continuous end match; veneer leaves of upper panels are continuations of veneer leaves of lower panels.
 - b. Architectural end book match; veneer leaves are individually book matched from lower panels to upper panels.
 - c. Architectural end slip match; veneer leaves are individually slip matched from lower panels to upper panels.
 - d. Panel end book match; panels are book matched from lower panels to upper panels.
 - e. Panel end slip match; panels are slip matched from lower panels to upper panels.
- 3.11 STILE AND RAIL WOOD PANELING FLITCH REQUIREMENTS SCHEDULE
 - A. Flitch Requirements:
- 3.12 WOOD CABINETS MATCHING SCHEDULE
 - A. Matching Requirements:
 - 1. Matching of Veneer Leaves:
 - a. Book match.
 - b. Slip match.
 - c. Random match.
 - d. As indicated on drawings.
 - 2. Matching Within Panel Face:
 - a. Running match.
 - b. Balance match.
 - c. Center-balance match.
 - d. As indicated on drawings.
 - 3. Veneer Matching within Room: Blueprint matching; Provide cabinet veneers in each room or other space from a single flitch with doors, drawer fronts, and other surfaces matched in a sequenced set with continuous match where veneers are interrupted perpendicular to the grain.
- 3.13 SHOP FINISHING SCHEDULE
 - A. Transparent Finish:
 - 1. Finish System - 5: Conversion varnish.
 - 2. Staining: Match Architect's sample.
 - 3. Staining:
 - 4. Wash Coat for Stained Finish: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
 - 5. Filled Finish for Open-Grain Woods: After staining (if any), apply paste wood filler to open-grain woods and wipe off excess. Tint filler to match stained wood.
 - a. Apply wash-coat sealer after staining and before filling.
 - 6. Sheen: Satin, 31-45 gloss units measured on 60-degree gloss meter per ASTM D 523.
 - B. Opaque Finish:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Finish System - 5: Conversion varnish.
2. Color: Match Architect's sample.
3. Sheen: Semi-gloss, 46-60 gloss units measured on 60-degree gloss meter per ASTM D 523.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 071326
SHEET WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Sheet waterproofing systems and supplementary items necessary for installation at the following applications
 - 1. Vertical post-applied modified bituminous sheet waterproofing at foundation walls.
 - 2. Vertical pre-applied (blindsides) sheet waterproofing at retention system walls.
 - 3. Vertical pre-applied (blindsides) sheet waterproofing at retention system walls with shotcrete foundation walls.
 - 4. Horizontal pre-applied (blindsides) sheet waterproofing below slabs-on-grade over mud slab or prepared subgrade.
- B. Related Requirements:
 - 1. Foundation Drainage System: Refer to Division 33 Section Foundation Drainage System.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include construction details, material descriptions, tested physical and performance properties, and installation instructions for waterproofing.
 - 2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
- B. Shop Drawings: Show locations and extent of waterproofing and details of installation, including plans, elevations, sections, details of components and attachments to other work.
 - 1. Include details of substrate joints and cracks, expansion joints, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
 - 2. Include manufacturer's written approval of shop drawings prior to submission.
- C. Samples: For each exposed product and for each color and texture specified, including the following products:
 - 1. 8-by-8-inch (200-by-200-mm) square of waterproofing and flashing sheet.
 - 2. 4-by-4-inch (100-by-100-mm) square of drainage panels.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
 - 1. Provide written confirmation by the manufacturer that Geotechnical Report has been reviewed and that manufacturer takes no exception to the design of the below grade waterproofing system.
 - 2. Submit the following certifications prior to installation:
 - a. Concrete Substrate: Waterproofing manufacturer shall certify that concrete substrate condition and corrections, if necessary, comply with manufacturer installation guidelines.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Field Quality-Control Reports: Written report of testing and inspection required by "Field Quality Control".
- C. Warranties:
 - 1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations and exclusions.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.
- B. Pre-Construction Subsoil Water Testing: Provide subsoil water testing as recommended or required by waterproofing manufacturer.
 - 1. General Requirements: Test subsoil water for compatibility with waterproofing materials.
 - 2. Test Method: Use manufacturer's standard test method to test for acids, alkalis, brine, or other contaminants that may inhibit performance of waterproofing materials.
 - 3. Specimen Quantity: Obtain and submit as many subsoil water samples required from Project at approximate locations where waterproofing will be installed.
 - 4. Reports: Interpret test results and certify reports indicating requirements for use of waterproofing materials and for corrective measures necessary.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.
 - 1. Build for each typical waterproofing installation including accessories to demonstrate surface preparation, sealing at penetrations, crack and joint treatments, inside and outside corner treatments, and protection.
 - a. Size: 100 sq. ft. (9.3 sq. m) in area.
 - b. Description: Each type of wall and deck installation.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - a. If Architect determines mock-up does not comply with requirements, reconstruct mock-ups until accepted.
 - 3. Accepted mock-ups may become part of completed Work if undisturbed at time of Substantial Completion.

1.5 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
 - 1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 - 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 - 3. Record discussions, including decisions and agreements, and prepare report.
- 1.6 DELIVERY, STORAGE, AND HANDLING
- A. Deliver liquid materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.
 - B. Store liquid materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by waterproofing manufacturer.
 - C. Remove and replace liquid materials that cannot be applied within their stated shelf life.
 - D. Store rolls according to manufacturer's written instructions.
 - E. Protect stored materials from direct sunlight.
- 1.7 PROJECT CONDITIONS
- A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
 - 1. Do not apply waterproofing in snow, rain, fog, or mist.
 - B. Maintain adequate ventilation during preparation and application of waterproofing materials.
- 1.8 COORDINATION
- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- 1.9 WARRANTY
- A. Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design and installation of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 10 years from date of Substantial Completion.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Warranty includes waterproofing, flashings, counter-flashings, insulation, below grade expansion joints and other components of waterproofing system necessary to provide a complete installation.
- B. Installer's Warranty: Furnish installer's written workmanship warranty signed by an authorized representative using installer's standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 2 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.
 - 1. Post-Applied Sheet Waterproofing:
 - a. Basis of Design: GCP Applied Technologies; Bituthene 3000 or 4000.
 - 2. Pre-Applied Sheet Waterproofing for Vertical Applications:
 - a. Basis of Design: GCP Applied Technologies; Preprufe 160R Plus.
 - 3. Pre-Applied Sheet Waterproofing for Shotcrete Applications, Non-Hydrostatic Drained Conditions:
 - a. Basis of Design: GCP Applied Technologies; GCP Applied Technologies; Preprufe 275/275LT.
 - 4. Pre-Applied Sheet Waterproofing for Grout-Injected Shotcrete Applications, Hydrostatic Non-Drained Conditions:
 - a. Basis of Design: GCP Applied Technologies; Preprufe SCS Waterproofing.
 - 5. Pre-Applied Sheet Waterproofing for Horizontal Applications:
 - a. Basis of Design: GCP Applied Technologies; Preprufe 300R Plus.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.
 - 1. Provide waterproofing materials, protection course, and molded-sheet drainage panels from single source from single manufacturer.
 - 2. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Provide sheet waterproofing systems that prevent the passage of liquid water.
- B. Material Compatibility: Provide waterproofing materials that are compatible with one another under conditions of service and application required, as demonstrated by manufacturer based on testing and field experience.

2.4 POST-APPLIED SHEET WATERPROOFING

- A. Post-Applied Sheet Waterproofing: Minimum **60-mil (1.5-mm)** nominal thickness, self-adhering sheet consisting of **56-mils (1.4 mm)** of rubberized asphalt laminated on one side to a **4-mil-(0.10-mm-)** thick, polyethylene-film reinforcement, and with release liner on adhesive side.
 - 1. Manufacturers and Products:
 - a. AVM Industries Inc.; Aussie Mate 580 AL.
 - b. Carlisle Coatings & Waterproofing Inc.; CCW MiraDRI 860/861.
 - c. CETCO Building Materials Group; Envirosheet.
 - d. GCP Applied Technologies; Bituthene 3000 or 4000.
 - e. Meadows, W. R., Inc.; Mel-Rol.
 - f. Polyguard Products, Inc.; Polyguard 650.
 - g. Sika Corporation; SikaShield S-60.
 - h. Soprema; Colphene 3000.
 - 2. Sheet Strips: Self-adhering, rubberized-asphalt strips of same material and thickness as sheet waterproofing.

2.5 PRE-APPLIED (BLINDSIDE) SHEET WATERPROOFING

- A. Pre-Applied (Blindside) Sheet Waterproofing for Vertical Applications: Uniform, flexible, multilayered-composite sheet membrane that forms a permanent bond with fresh concrete placed against it; complete with accessories and preformed shapes for an unbroken waterproofing assembly.
 - 1. Self-Adhering HDPE Sheet Waterproofing:
 - a. Description: Minimum **73-mils (1.85 mm)** thick, uniform, flexible sheet membrane consisting of high-density polyethylene film laminated to a layer of waterproofing adhesive and nonwoven geotextile fabric.
 - 1) Manufacturer and Product: AVM Industries Inc.; Aussie Skin 550G Blindside Waterproofing Membrane.
 - b. Description: Minimum **32-mils (0.8 mm)** thick, uniform, flexible sheets consisting of **16-mils (0.4 mm)** thick HDPE sheet coated with pressure-sensitive rubber adhesive, protective adhesive coating, and release liner.
 - 1) Manufacturer and Product: GCP Applied Technologies; Preprufe 160R Plus.
 - c. Description: Minimum **73-mils (1.85 mm)** thick, uniform, flexible sheet membrane consisting of high-density polyethylene film laminated to a layer of waterproofing adhesive and nonwoven geotextile fabric.
 - 1) Manufacturer and Product: Polyguard Products Inc.; Underseal Blindside Waterproofing Membrane.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Self-Adhering TPO Sheet Waterproofing:
 - a. Description: Minimum 70-mils (1.78 mm) thick, uniform, flexible sheets consisting of 45-mils (1.14 mm) thick reinforced TPO backing sheet with 25-mil (0.64 mm) butyl alloy membrane / adhesive.
 - 1) Manufacturer and Product: Carlisle Coatings & Waterproofings; MiraPly V Vertical Blindside Waterproofing.
 - b. Description: Minimum 1.10-mm thick, uniform, flexible composite sheet consisting of 0.50 mm thick polyolefin membrane with non-woven polypropylene fleece.
 - 1) Manufacturer and Product: Sika; SikaProof A-05.
3. Self-Adhering SBS Modified Bitumen Sheet Waterproofing:
 - a. Description: Minimum 120-mils (3.0 mm) thick, uniform, flexible sheets consisting of self-adhesive SBS modified bitumen with composite reinforcement and release film.
 - 1) Manufacturer and Product: Soprema; Colphene BSW V.
4. Self-Adhering Composite Sheet Waterproofing:
 - a. Description: Minimum 73-mils (1.85 mm) thick, uniform, flexible composite sheet membrane consisting of an elastomeric membrane bonded to a multi-ply plasmatic matrix and non-woven geotextile fabric.
 - 1) Manufacturer and Product: W.R. Meadows; PRECON Vertical Blindside Waterproofing Membrane.
5. Thermoplastic Sheet Waterproofing:
 - a. Description: Minimum 60-mil (1.5 mm) nominal thick PVC, Elvaloy KEE thermoplastic membrane reinforced with 5 oz. (385 mL) weft inserted knit polyester fabric integrally bonded to an Active Polymer Core (APC)
 - 1) Manufacturer and Product: CETCO Building Materials Group; Coreflex 60.
- B. Pre-Applied (Blindside) Sheet Waterproofing for Shotcrete Applications, Non-Hydrostatic Drained Conditions:
 1. Description: Minimum 73-mils (1.85 mm) thick, uniform, flexible sheet membrane consisting of high-density polyethylene film laminated to a layer of waterproofing adhesive and nonwoven geotextile fabric.
 - a. Manufacturer and Product: AVM Industries Inc.; Aussie Skin 550G Blindside Waterproofing Membrane.
 2. Description: Minimum 38-mils (0.95 mm) thick, uniform, flexible sheets consisting of 20-mils (0.5 mm) thick HDPE sheet coated with pressure-sensitive rubber adhesive, protective adhesive coating.
 - a. Manufacturer and Product: GCP Applied Technologies; GCP Applied Technologies; Preprufe 275/275LT.
- C. Pre-Applied (Blindside) Sheet Waterproofing for Grout-Injected Shotcrete Applications, Hydrostatic Non-Drained Conditions:
 1. Description: Minimum 0.17 in (4.3 mm) thick, uniform, flexible composite sheets consisting of a polymer mesh-reinforced cavity backed by a plastic film and faced with a non-woven, semipermeable geotextile barrier.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Manufacturer and Product: GCP Applied Technologies; Preprufe SCS Waterproofing.
- D. Pre-Applied (Blindside) Sheet Waterproofing for Horizontal Applications: Uniform, flexible, multilayered-composite sheet membrane that forms a permanent bond with fresh concrete placed against it; complete with accessories and preformed shapes for an unbroken waterproofing assembly.
- 1. Adhesive-Coated HDPE Sheet Waterproofing:
 - a. Description: Minimum **73-mils (1.85 mm)** thick, uniform, flexible sheet membrane consisting of high-density polyethylene film laminated to a layer of waterproofing adhesive and nonwoven geotextile fabric.
 - 1) Manufacturer and Product: AVM Industries Inc.; Aussie Skin 550G Blindside Waterproofing Membrane.
 - b. Description: Minimum **46-mils (1.2 mm)** thick, uniform, flexible sheets consisting of **30-mils (0.76 mm)** thick HDPE sheet coated with pressure-sensitive rubber adhesive, protective adhesive coating, detackifying surface treatment, an uncoated self-adhering side lap strip, and release liner.
 - 1) Manufacturer and Product: GCP Applied Technologies; Preprufe 300R Plus.
 - c. Description: Minimum **85-mils (2.0 mm)** thick, uniform, flexible sheet membrane consisting of high-density polyethylene film laminated to a layer of waterproofing adhesive and nonwoven geotextile fabric.
 - 1) Manufacturer and Product: Polyguard Products Inc.; Underseal Underslab Waterproofing Membrane.
 - 2. Adhesive-Coated TPO Sheet Waterproofing:
 - a. Description: Minimum **70-mils (1.78 mm)** thick, uniform, flexible sheets consisting of **45 mils (1.14 mm)** thick reinforced TPO backing sheet with **25-mil (0.64 mm)** butyl alloy membrane / adhesive.
 - 1) Manufacturer and Product: Carlisle Coatings & Waterproofings; MiraPly H Horizontal Blindside Waterproofing.
 - b. Description: Minimum **68-mils (1.72 mm)** thick, uniform, flexible polyolefin membrane with hybrid bonding layer, mechanical adhesive bond.
 - 1) Manufacturer and Product: Sika; SikaProof A+ 12.
 - 3. SBS Modified Bitumen Sheet Waterproofing:
 - a. Description: Minimum **140-mils (3.5 mm)** thick, uniform, flexible sheets consisting of SBS modified bitumen with polyester reinforcement.
 - 1) Manufacturer and Product: Soprema; Colphene BSW H.
 - 4. Self-Adhering Composite Sheet Waterproofing:
 - a. Description: Minimum **73-mils (1.85 mm)** thick, uniform, flexible composite sheet membrane consisting of an elastomeric membrane bonded to a multi-ply plasmatic matrix and non-woven geotextile fabric.
 - 1) Manufacturer and Product: W.R. Meadows; PRECON Below Grade Underslab Waterproofing Membrane.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

5. Thermoplastic Sheet Waterproofing:
- a. Description: Minimum 60-mil (1.5 mm) nominal thick PVC, Elvaloy KEE thermoplastic membrane reinforced with 5 oz. (385 mL) weft inserted knit polyester fabric integrally bonded to an Active Polymer Core (APC).
 - 1) Manufacturer and Product: CETCO Building Materials Group; Coreflex 60.

2.6 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
 - 1. When required by waterproofing manufacturer, obtain Engineer of Record's approval to use manufacturer's recommended waterstops to meet warranty requirements.
- B. Primer: Liquid primer recommended for substrate by sheet-waterproofing material manufacturer.
- C. Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by sheet-waterproofing material manufacturer.
- D. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity, provided by waterproofing manufacturer.
- E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating, provided by waterproofing manufacturer.
- F. Mastic and Adhesives: Liquid mastic and adhesives, and adhesive tapes provided by waterproofing manufacturer.
- G. Detail Tape: Two-sided, pressure-sensitive, self-adhering reinforced tape, 4-1/2 in (112 mm) wide, with tack-free protective adhesive coating on one side and release film on self-adhering side; provided by waterproofing manufacturer.
- H. Termination Bars: Aluminum bars or stainless steel bars ASTM A 666, Type 304; 2 types, one flat and one flat with upper flange shaped to receive sealant, locations as indicated; 1 in by 1/8 in (25 mm by 3 mm) thick; predrilled at 8 in (200 mm) centers; with stainless steel fasteners.
- I. Epoxy Grout: High performance, solvent free, impermeable three-part epoxy grout designed to maintain continuity of waterproofing system at structural penetrations.
 - 1. Basis of Design: GCP Applied Technologies; Grout EG 75.
 - a. Locations: Piles, piers, and similar structural penetrations, other locations recommended by waterproofing manufacturer.
- J. Injectable Waterstop: As required by waterproofing manufacturer to ensure watertight installation.
 - 1. Basis of Design: GCP Applied Technologies; INJECTO Tube Groutable Hose Waterstop used with Flex SLV or LV PUnE hydrophobic polyurethane chemical grout as recommended by waterproofing manufacturer for this application.
 - a. Locations: Concrete cold joints at base of foundation, around block-out openings, other locations recommended by waterproofing manufacturer.
- K. Waterstop: Polymer/butyl rubber waterstop strip that expands when in contact with water.
 - 1. Basis of Design: GCP Applied Technologies; Adcor 500S.
 - a. Locations: All typical concrete to concrete cold joints.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- L. Expansion Joint System: Heavy-duty, double-celled, thermoplastic extruded sealing gland flanked by integral side flashing sheets. System shall include manufacturer's standard termination bars and anchors. For blind-side below grade applications.
 - 1. Basis of Design: Sika Corp.; Emseal BG System.
- M. Tieback Covers: Cover system used to maintain waterproofing integrity at soil retention tieback heads. Provide detail components as recommended by manufacturer for application conditions.
- N. Protection Course: As recommended by waterproofing manufacturer for this application.
 - 1. ASTM D6506, semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between two asphalt-saturated fibrous liners and as follows:
 - a. Thickness: Nominal 1/8 inch (3 mm) for vertical applications; 1/4 inch (6 mm) elsewhere.
 - b. Adhesive: Rubber-based solvent type recommended by waterproofing manufacturer for protection course type.

2.7 MOLDED-SHEET DRAINAGE PANELS

- A. Molded-Sheet Drainage Panel with Polymeric Film, Vertical Applications: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing laminated to one side of the core and a polymeric film bonded to the other side (facing waterproofing).
 - 1. Drainage Core: Three-dimensional, non-biodegradable, molded polypropylene or polystyrene.
 - a. Minimum Compressive Strength: 15,000 lbf/sf (718 kPa) according to ASTM D 1621.
 - b. Minimum In-Plane Flow Rate: 15 gpm/ft (188 L/min per m) of unit width at hydraulic gradient of 1.0 and compressive stress of 25 psi (172 kPa) according to ASTM D 4716.
 - 2. Manufacturers and Products:
 - a. AVM Industries Inc.; Drain Board 6020 XL.
 - b. CETCO Building Materials Group; 15XP Prefabricated Drainage Composite.
 - c. GCP Applied Technologies; Hydroduct 220.
 - d. Carlisle Coatings & Waterproofings; CCW MiraDRAIN 6200.
 - e. Polyguard Products Inc.; Polyflow 15P.
 - f. Sika Corporation; SikaDrainage Mat 420.
 - g. Soprema; Sopradrain 15G.
 - h. W.R. Meadows; Mel-Drain 5035 B.
- B. Molded-Sheet Drainage Panel with Polymeric Film, Horizontal Applications: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a woven-geotextile facing laminated to one side of the core and a polymeric film bonded to the other side (facing waterproofing).
 - 1. Drainage Core: Three-dimensional, non-biodegradable, molded polypropylene or polystyrene.
 - a. Minimum Compressive Strength: 18,000 lbf/sf (862 kPa) according to ASTM D 1621.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Minimum In-Plane Flow Rate: 18 gpm/ft (225 L/min per m) of unit width at hydraulic gradient of 1.0 and compressive stress of 25 psi (172 kPa) according to ASTM D 4716.
 - 2. Manufacturers and Products:
 - a. AVM Industries Inc.; Drain Board 6020 XL.
 - b. CETCO Building Materials Group; 15XP Prefabricated Drainage Composite.
 - c. GCP Applied Technologies; Hydroduct 660.
 - d. Carlisle Coatings & Waterproofings; CCW MiraDRAIN 9000.
 - e. Polyguard Products Inc.; Flow 18-H.
 - f. Sika Corporation; SikaDrainage Mat 720.
 - g. Soprema; Sopradrain 18G.
 - h. W.R. Meadows; Mel-Drain 7055.
 - C. High-Capacity, Molded-Sheet Collector-Panel System Wrapped with Geotextile: Composite subsurface collector-panel system by same manufacturer as primary molded-sheet drainage panels; consisting of a high-profile, studded, nonbiodegradable, molded-plastic-sheet drainage core; wrapped with a nonwoven-geotextile facing. Provide system with manufacturer's outlets, connectors, tapes, and other accessories to connect primary molded-sheet drainage panels with piped sub-drainage system.
 - 1. Compressive Strength per ASTM D1621: 9000 psf (431 kPa) minimum.
 - 2. Flow Rate per ASTM D4716: 17 to 80 gpm per ft. (211 to 994 L/min. per m) minimum.
 - 3. Manufacturers and Products:
 - a. AVM Industries Inc.; Bottom Drain.
 - b. CETCO Building Materials Group; Aquadrain 100BD.
 - c. GCP Applied Technologies; Hydroduct Coil 600.
 - d. Carlisle Coatings & Waterproofings; CCW MiraDRAIN HC.
 - e. Polyguard Products Inc.; Totalflow.
 - D. Drainage Panel Auxiliary Materials.
 - 1. Adhesive for Bonding Drainage Panels: Product compatible with drainage panels being bonded and with demonstrated capability to bond securely to substrates indicated without damaging substrates.
 - 2. Miscellaneous Accessories: As required by manufacturer for complete installation assembly, including flanges around piping penetrations and expanded base and tie-in fittings as necessary to coordination with foundation drainage system.
- 2.8 INSULATION PANELS
 - A. Insulation: Comply with Division 7 Section 072100 Thermal Insulation for general building insulation.
- PART 3 - EXECUTION
- 3.1 EXAMINATION
 - A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.
 - B. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of waterproofing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D4263.
3. Verify that compacted subgrade or mud slab is dry, smooth, sound, and ready to receive waterproofing sheet.

C. Excavation Support and Protection System:

1. Fill minor gaps and spaces **1/2 in (12 mm)** wide or wider with wood, metal, concrete, or other appropriate filling material.
2. Cover or fill large voids and crevices with cement mortar.
3. Encase tieback rods, nuts, and plates with detail tape and prepare for covering with waterproofing.

3.2 INSTALLATION, GENERAL

A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:

1. ASTM D 6135.
2. Respective manufacturer's written installation instructions.
3. Accepted submittals.
4. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Excavation Dewatering: Verify that the waterproofing application area is dry and free of standing and uncontrolled water. Should the dewatering system fail at any time during application of waterproofing system, the materials shall be completely removed and work shall start over with new materials once the area is dry and free of water.
- C. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.
- D. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- E. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- F. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- G. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D4258.
1. Install sheet strips of width according to manufacturer's written instructions and center over treated construction and contraction joints and cracks exceeding a width of **1/16 inch (1.6 mm)**.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- H. Bridge and cover isolation joints, expansion joints, and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths according to manufacturer's written instructions.
 - 1. Invert and loosely lay first sheet strip over center of joint. Firmly adhere second sheet strip to first and overlap to substrate.
- I. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D6135.
 - 1. Install membrane strips centered over vertical inside corners. Install **3/4-inch (19-mm)** fillets of liquid membrane on horizontal inside corners and as follows:
 - a. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
 - b. At plaza-deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.
- J. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to ASTM D6135.

3.4 INSTALLATION OF POST-APPLIED SHEET WATERPROOFING

- A. Install modified bituminous sheets according to waterproofing manufacturer's written instructions and per recommendations in ASTM D6135.
- B. Primer: Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.
- C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform **6-inch- (150-mm-)** minimum lap widths and end laps. Overlap and seal seams with liquid membrane, and stagger end laps to ensure watertight installation. Roll membrane and seams with a hard neoprene roller.
 - 1. When ambient and substrate temperatures range between **25 and 40 deg F (minus 4 and plus 5 deg C)**, install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than **60 deg F (16 deg C)**.
 - 2. Apply sheets so that direction of flow of water is over and not against laps.
 - 3. Apply sheet strips under waterproofing membrane at, but not limited to, the following locations:
 - a. Expansion joints.
 - b. Discontinuous deck-to-wall and deck-to-deck joints.
 - c. Under clamping ring at drains.
 - d. Wall angles and corners.
 - e. Substrate cracks.
 - f. Penetrations.
 - g. Isolation, construction and contraction joints.
 - h. Locations where waterproofing membrane may be subjected to unusual strain.
- D. Horizontal Application: Apply sheets from low to high points of decks to ensure that laps shed water.
- E. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.
- F. Waterproofing Tie-Ins: Install waterproofing and accessories to tie into adjacent waterproofing to ensure watertight installation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- G. Termination and Penetration Treatment: Prepare vertical and horizontal surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, and sleeves.
 - 1. Unless indicated otherwise, terminate top edges of sheets under metal counterflashings or with metal termination bars and sealants.
 - 2. Seal all exposed sheet edges at terminations, vertical and horizontal, not concealed by metal counterflashings or metal termination bars and sealants with liquid membrane or mastic.
- H. Damaged Waterproofing: Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Tape perimeter of damaged or nonconforming area extending 6 inches (150 mm) beyond repaired areas in all directions. Apply a patch of sheet waterproofing and firmly secure with detail tape.
 - 1. Patch tears, voids, misaligned or inadequately lapped seams.
 - 2. Slit fishmouths and blisters, overlap flaps, and patch.
- I. Immediately install protection course with butted joints over waterproofing membrane.
 - 1. Molded-sheet drainage panels or insulation panels may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer and installed immediately.

3.5 INSTALLATION OF PRE-APPLIED (BLINDSIDE) SHEET WATERPROOFING

- A. Install blindside sheet waterproofing according to manufacturer's written instructions.
- B. Molded-Sheet Drainage Panels at Vertical Applications: Place and secure over substrate with adhesive, with geotextile filter fabric facing excavation support and protection system. Lap edges and ends of geotextile filter fabric to maintain continuity. Protect installed drainage panels during subsequent construction.
- C. Vertical Applications: Install sheet with appropriate face against substrate. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required by membrane manufacturer. Overlap and seal seams, and stagger and tape end laps to ensure watertight installation. Mechanically fasten to substrate.
 - 1. Seams and Laps: Install 12-inch strip of post-applied membrane sheet strips behind laps and 4-inch strip of membrane detail tape over front of lap. Additionally at field cut seams, provide a 6-inch overlap with a full bed of liquid membrane. Roll membrane and seams with hard neoprene roller.
 - 2. Securely fasten top termination of membrane with continuous metal termination bar anchored into substrate and cover with detail tape.
- D. Horizontal Applications: Install sheet with face against substrate. Accurately align sheets and maintain uniform side and end laps of minimum dimensions required by membrane manufacturer. Overlap and seal seams, and stagger and tape end laps to ensure watertight installation.
 - 1. Seams and Laps: Install 12-inch strip of post-applied membrane sheet strips behind laps and 4-inch strip of membrane detail tape over front of lap. Additionally at field cut seams, provide a 6-inch overlap with a full bed of liquid membrane. Roll membrane and seams with hard neoprene roller.
- E. Corners: Seal lapped terminations and cut edges of sheet waterproofing at inside and outside corners with detail tape.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Seal penetrations through sheet waterproofing to provide watertight seal with detail tape patches or wraps and a liquid-membrane troweling.
- G. Waterproofing Tie-Ins: Install waterproofing and accessories to tie into adjacent waterproofing to ensure watertight installation.
- H. Termination and Penetration Treatment: Prepare vertical and horizontal surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, and sleeves.
- I. Damaged Waterproofing: Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Tape perimeter of damaged or nonconforming area extending **6 inches (150 mm)** beyond repaired areas in all directions. Apply a patch of sheet waterproofing and firmly secure with detail tape.

3.6 INSTALLATION OF INSULATION PANEL

- A. Install insulation panels over waterproofed surfaces. Cut and fit to within **3/4 inch (19 mm)** of projections and penetrations.
- B. On vertical surfaces, set insulation drainage panels in adhesive or tape applied according to manufacturer's written instructions.
 - 1. Install board insulation before installing molded sheet drainage panels.
- C. On horizontal surfaces, loosely lay insulation drainage panels according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

3.7 INSTALLATION OF MOLDED-SHEET DRAINAGE PANEL

- A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesive or another method that does not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

3.8 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 - 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
 - 2. Final Inspection: Arrange for waterproofing system manufacturer's qualified technical representative to inspect waterproofing installation on completion of waterproofing membrane and flashing. Notify Architect and Owner 48 hours in advance of date and time of final inspection.
- B. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
- C. Contractor Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 - 1. Agency shall be certified by waterproofing manufacturer to provide observations and inspections required to provide warranty indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Agency shall prepare reports and digital photographs documenting observations. Reports shall be made available to the Contractor, waterproofing installer, waterproofing manufacturer and Architect.
2. Pre-Applied Sheet Waterproofing: Including but not limited to the following:
 - a. Prior to beginning concrete slab reinforcing installation, inspect waterproofing membrane for rips, tears, and punctures.
 - b. Prior to concrete placement work, inspect concrete installer's tools and notify Contractor to have tools with spikes or other sharp surfaces that could inflict intentional or unintentional damage on the installed waterproofing membrane removed from work area.
 - c. Immediately prior to concrete placement work, inspect waterproofing membrane for rips, tears, and punctures, inspect penetrations at columns and mechanical and electrical piping.
 - d. Continuously inspect concrete placement work, watching for damage to waterproofing membrane.
 - e. Periodically inspect portions of slab that were not placed (block-outs, voids, and leave-outs) for water infiltration of subgrade until concrete is subsequently placed.
3. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
4. Prepare test and inspection reports.
- D. Contractor Flood Testing: Flood test each deck area for leaks, according to procedures in ASTM D5957, after completing waterproofing but before placing overlying construction. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
 1. Flood to an average depth of **2-1/2 inches (64 mm)** with a minimum depth of **1 inch (25 mm)** and a maximum depth of **4 inches (100 mm)**. Maintain **2 inches (51 mm)** of clearance from top of sheet flashings.
 2. Flood each area for 24 hours.
 3. Examine underside of decks and terminations for evidence of leaks during flood testing.
 4. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.
- E. Contractor Electronic Leak-Detection Testing, Electronic Field Vector Mapping (EFVM): Perform leak testing by an electronic detection process to verify entire waterproofing membrane is free of defects. EFVM shall be performed by a qualified testing agency.
 1. Test each deck area for leaks using an electronic leak-detection method that locates discontinuities, holes, open seams, and capillary defects in the waterproofing membrane.
 - a. Perform leak detection of horizontal waterproofing membrane prior to placement of protection board and remaining system components
 2. Perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.
 3. Create a conductive electronic field over the area of waterproofing to be tested and electronically determine locations of discontinuities or leaks, if any, in the waterproofing.
 4. Provide survey report indicating locations of discontinuities, if any.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.9 PROTECTION, REPAIR, AND CLEANING

- A. Do not permit foot or vehicular traffic on unprotected membrane.
- B. Protect waterproofing from damage and wear during remainder of construction period.
- C. Protect installed insulation panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- D. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.
- E. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 071900
WATER REPELLENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes penetrating water repellent and supplementary items necessary to complete work required for its installation.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
 - 1. Certification by water repellent manufacturer that products supplied complies with local regulations controlling use of VOCs.
- B. Warranty:
 - 1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations and exclusions.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.
- B. Regulatory Requirements: Comply with applicable rules of pollution-control regulatory agency having jurisdiction in Project locale regarding VOCs and use of hydrocarbon solvents.
- C. Field Samples: Select one representative surface for each substrate to receive water repellents. Apply water repellent to each substrate, with either partial or full coverage as directed. Comply with application requirements of this Section.
 - 1. Obtain approval of field samples before applying water repellents.
 - 2. Maintain field samples during construction in an undisturbed condition as a standard for judging the completed Work.

1.5 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.6 PROJECT CONDITIONS

- A. Weather and Substrate Conditions: Do not proceed with application of water repellent under any of the following conditions, except with written instruction of manufacturer:
1. Ambient temperature is less than 40 deg F (4.4 deg C).
 2. Concrete surfaces have cured for less than 28 days.
 3. Rain or temperatures below 40 deg F (4.4 deg C) are predicted within 24 hours.
 4. Application is earlier than 24 hours after surfaces have been wet.
 5. Substrate is frozen or surface temperature is less than 40 deg F (4.4 deg C).
 6. Windy condition exists that may cause water repellent to be blown onto vegetation or surfaces not intended to be coated.

1.7 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

1.8 WARRANTY

- A. Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design of product. "Defects" are defined to include but not limited to deterioration or failure to perform as required.
1. Warranty does not include deterioration or failure of coating due to unusual weather phenomena, failure of prepared and treated substrate, formation of new joints and cracks in excess of 1/16 in (1.5 mm) wide, fire, vandalism, or abuse by maintenance equipment.
 2. Warranty Period: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 5 years from date of Substantial Completion

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section Substitution Procedures.
- B. Manufacturers:
1. Advanced Chemical Technologies, Inc.
 2. Anti Hydro International, Inc
 3. L&M Construction Chemicals, Inc.
 4. Nox-Crete Products Group
 5. PROSOCO, Inc.
 6. Textured Coatings of America, Inc.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Provide water repellents with the following properties based on testing manufacturer's standard products, according to test methods indicated, applied to substrates simulating Project conditions using same materials and application methods to be used for Project.
1. Absorption: Minimum 90 percent reduction of absorption after 24 hours in comparison of treated and untreated specimens, per ASTM C642.
 2. Water-Vapor Transmission: Maximum 10 percent reduction in rate of vapor transmission in comparison of treated and untreated specimens, per ASTM E 96.
 3. Water Penetration and Leakage through Masonry: Maximum 90 percent reduction in leakage rate in comparison of treated and untreated specimens, per ASTM E 514.
 4. Durability: Maximum 5 percent loss of water repellency after 2500 hours of weathering in comparison to specimens before weathering, per ASTM G 53.
 5. Permeability: Minimum 80 percent breathable in comparison of treated and untreated specimens, per ASTM D 1653.
 6. Chloride-Ion Intrusion in Horizontal Concrete: Transportation Research Board, National Research Council's NCHRP Report 244, Series II tests.
 - a. Reduction of Water Absorption: 80 percent.
 - b. Reduction in Chloride Content: 80 percent.

2.3 WATER REPELLENTS

- A. Vertical Applications: Silane, 20 Percent Solids: Penetrating water repellent for vertical application. A monomeric compound containing approximately 20 percent alkyltrialkoxysilanes and meeting VOC requirements.
- B. Horizontal Applications: Silane, 40 Percent Solids: Penetrating water repellent for horizontal application. A monomeric compound containing approximately 40 percent alkyltrialkoxysilanes and meeting VOC requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates surfaces to receive water repellents and associated work and conditions under which work will be installed. Do not proceed with installation until unsatisfactory conditions have been corrected in a manner acceptable to Installer. Starting work within a particular area will be construed as applicator's acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
1. Respective manufacturer written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work
- B. Test for pH level, according to water repellent manufacturer's written instructions, to ensure chemical bond to silicate minerals.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Protect adjoining work, including sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live plants and grass.
- D. Coordination with Sealants: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.
 - 1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those used in the work.
- E. Test Application: Before performing water-repellent work, including bulk purchase and delivery of products, prepare a small application in an unobtrusive location and in a manner approved by Architect to demonstrate the final effect (visual, physical, and chemical) of planned application. Proceed with work only after Architect approves test application or as otherwise directed.

3.4 APPLICATION

- A. Apply a heavy-saturation spray coating of water repellent on surfaces indicated for treatment using low-pressure spray equipment. Comply with manufacturer's written instructions for using airless spraying procedure, unless otherwise indicated.
 - 1. Architectural Precast Concrete: At Contractor's option, first application of water repellent on precast concrete units may be completed before installing units. Mask sealant-bond surfaces to prevent water repellent from migrating onto joint surfaces.
- B. Apply a second saturation spray coating, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

3.5 CLEANING

- A. Protective Coverings: Remove protective coverings from adjacent surfaces and other protected areas.
- B. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Repair damage caused by water-repellent application. Comply with manufacturer's written cleaning instructions.

3.6 SCHEDULE

- A. Apply water repellents to following areas:
 - 1. Architectural precast concrete panels.
 - 2. Cast stone units.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 072100
THERMAL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Thermal insulation and supplementary items necessary for installation.
 - 1. Extruded polystyrene foam-plastic board insulation.
 - 2. Mortar faced, extruded polystyrene foam-plastic board insulation.
 - 3. Molded (expanded) polystyrene foam-plastic board insulation.
 - 4. Glass-fiber blanket insulation.
 - 5. Glass-fiber board insulation.
 - 6. Mineral-wool blanket insulation.
 - 7. Mineral-wool board insulation.
 - 8. Thin profile, high thermal blanket insulation.
 - 9. Loose-fill insulation.
 - 10. Spray-applied glass fiber insulation.
 - 11. Polyethylene vapor retarder membrane.
- B. Related Requirements:
 - 1. Refer to Division 03 Section Expanded Polystyrene Foam Block Formwork expanded polystyrene rigid insulation used for foam block fill.
 - 2. Refer to Division 03 Section Lightweight Insulating Concrete for expanded polystyrene rigid insulation used as a component in lightweight insulating concrete under roof membrane.
 - 3. Refer to Division 04 Section Concrete Unit Masonry for insulation installed in masonry cells.
 - 4. Refer to Division 07 Section EIFS for expanded polystyrene rigid insulation used as a component in EIFS.
 - 5. Refer to Division 07 Sections for Roofing sections with insulation specified as part of roofing construction.
 - 6. Refer to Division 09 Section Gypsum Board Assemblies for sound attenuation blankets used as acoustic insulation.

1.2 DEFINITIONS

- A. Mineral Fiber: Insulation composed principally of fibers manufactured from rock, slag, or glass, with or without binders. Mineral fiber includes "glass fiber" insulation and "mineral wool" insulation.
- B. Mineral Wool: A synthetic vitreous fiber insulation made by melting predominantly igneous rock, and/or furnace slag and other inorganic material, physically forming the melt into fibers.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings for Spray-Applied Thermal Insulation: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Indicate locations and types of surface preparations required before applying spray-applied thermal insulation.
 2. Indicate extent of minimum thicknesses needed to achieve required thermal rating, color, and texture.
 3. Treatment of spray-applied thermal insulation after application.
- C. Samples of Spray-Applied Thermal Insulation for Verification: For each exposed product of each color and texture specified, 12-inch (300 mm) square in size.
- D. Insulation Schedule: Include the following information:
1. Insulation type and location.
 2. Insulation manufacturer and product name.
 3. Insulation method of installation and fastening.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer Project Acceptance Document for Spray-Applied Thermal Insulation: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required.
- B. Installer's Certification: Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope unless labeled by manufacturer.
1. For blown-in or sprayed insulation, indicate initial installed thickness, settled thickness, settled R-value, installed density, coverage area, and number of bags installed.
 2. Sign, date, and post the certification in a conspicuous location on Project site.
- C. Product Test Reports for Spray-Applied Thermal Insulation: Written reports based on evaluation of comprehensive tests performed by qualified testing agencies indicating that each product complies with requirements.
1. Certificates: Furnish manufacturer's certification that spray-applied thermal insulation is free of asbestos (including actinolite, amosite, anthophyllite, chrysotile, crocidolite and tremolite), or other toxic materials.
 2. Compatibility and Adhesion Test Reports: From manufacturer indicating the following:
 - a. Materials have been tested for bonding with substrates.
 - b. Materials have been verified by spray-applied thermal insulation manufacturer to be compatible with substrate primers and coatings.
 - c. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- D. Research Reports: For foam-plastic insulation, from ICC-ES.
- E. Field Quality Control Reports for Spray Thermal Insulation: Written report of testing and inspection required by Field Quality Control.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Manufacturer with not less than 5 years of experience in the successful production and in-service performance of products and systems similar to scope of this Project.
- B. Installer Qualifications for Spray-Applied Thermal Insulation:
1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar in scope of this Project.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar in scope of this Project.
3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.

1.6 MOCKUP FOR SPRAY-APPLIED THERMAL INSULATION

- A. Mock-ups: Prior to installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up using materials indicated for the completed Work.
 1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect.
 2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 3. Obtain Architect's acceptance of mock-ups before starting installation.
 4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
 5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.7 PRE-INSTALLATION CONFERENCE

- A. Participants:
 1. Architect.
 2. Contractor, including superintendent.
 3. Installer, including project manager and supervisor.
 4. If requested, Manufacturer's qualified technical representative.
 5. Installers of other construction interfaced with Work.
- B. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 1. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 2. Review Contract Document requirements.
 3. Review accepted submittals.
 4. Review inspection and testing requirements.
 5. Review environmental conditions and procedures for coping with unfavorable conditions.
 6. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
- C. Record discussions, including decisions and agreements, and prepare report.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver insulation materials in original packaging with identification labels intact. Ensure that insulation materials are not exposed to moisture during delivery.
- B. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Protect foam-plastic board insulation as follows:
 - 1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
 - 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
 - 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.
- D. Protect mineral-wool insulation by storing materials off ground, away from harmful conditions, and at temperature conditions recommended by manufacturer. Store in original packaging.

1.9 FIELD CONDITIONS FOR SPRAY-APPLIED THERMAL INSULATION

- A. Environmental Limitations: Do not apply sprayed thermal insulation when ambient or substrate temperature is 34 deg F (1 deg C) or lower, unless temporary protection and heat are provided to maintain temperature at or above this level until material is dry and firm to the touch, completely cured through to substrate.
- B. Ventilation: Ventilate building spaces during and after application of sprayed thermal insulation and provide complete air exchanges in accordance with manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until sprayed thermal insulation is fully cured.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from a single manufacturer. Provide secondary materials only as recommended by the manufacturer of primary materials.
- B. General: Provide insulating materials that comply with requirements and referenced standards in sizes to fit applications indicated, selected from manufacturer's standard thicknesses, widths, and lengths.

2.3 PERFORMANCE REQUIREMENTS, GENERAL

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Fire Rated Assemblies: Provide materials and assemblies selected from UL Fire Resistance Directory for fire-resistance rated designs, or other Testing Agency acceptable to Authorities Having Jurisdiction.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Surface Burning Characteristics: Provide materials and assemblies tested in accordance with ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials.
 - D. Combustibility: Provide materials and assemblies tested in accordance with ASTM E136 Standard Test Method for Assessing Combustibility of Materials.
 - E. Plenum Rated: Provide materials and assemblies tested in accordance with UL 181 Standard Closure Systems for Use with Flexible Air Ducts and Air Connectors, or other independent testing agency acceptable to Authorities Having Jurisdiction.
 - 1. Air Erosion Testing: No evidence of fiber erosion after initial blowdown.
 - 2. Mold Growth and Humidity Testing: No evidence of microbial growth, delamination or other deterioration resulting from high humidity conditions.
- 2.4 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION (EXTRUDED POLYSTYRENE RIGID INSULATION)
- A. Performance Requirements:
 - 1. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
 - 2. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
 - 3. Labeling: Provide identification mark indicating R-value of each piece of insulation **12 inches (305 mm)** and wider in width unless installer provides certification.
 - B. Extruded Polystyrene Board Insulation (XPS): ASTM C578, Type IV, **25-psi (173-kPa)** minimum compressive strength; unfaced.
 - 1. Manufacturers:
 - a. DiversiFoam Products; CertiFoam 25.
 - b. Dow Chemical Company (The); STYROFOAM Square Edge.
 - c. Owens Corning; FOAMULAR 250.
 - 2. Locations:
 - a. Backfilled walls, as indicated on Drawings.
 - b. Planters.
 - C. Extruded Polystyrene Board Insulation (XPS): ASTM C578, Type VI, **40-psi (276-kPa)** minimum compressive strength.
 - 1. Manufacturers:
 - a. DiversiFoam Products; CertiFoam 40.
 - b. Dow Chemical Company (The); STYROFOAM Roofmate or Highload 40.
 - c. Owens Corning; FOAMULAR 400 or 404.
 - 2. Locations:
 - a. Below slabs-on-grade, as indicated on Drawings.
 - b. Pedestrian walkways on split slabs over elevated decks at Grade.
 - c. Pedestrian walkways on split slabs over elevated decks above Grade.
 - d. Vehicular drives on split-slabs over elevated decks in Parking Garages.
 - D. Extruded Polystyrene Board Insulation (XPS): ASTM C578, Type VII, **60-psi (414-kPa)** minimum compressive strength.
 - 1. Manufacturers:
 - a. DiversiFoam Products; CertiFoam 60.
 - b. Dow Chemical Company (The); STYROFOAM Plazamate or Highload 60.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Owens Corning; FOAMULAR 600 or 604.
 - 2. Locations:
 - a. Landscaping or vegetative roofing over elevated decks.
 - E. Extruded Polystyrene Board Insulation (XPS): ASTM C578, Type V, 100-psi (690-kPa) minimum compressive strength.
 - 1. Manufacturers:
 - a. Dow Chemical Company (The); STYROFOAM Highload 100.
 - b. Owens Corning; FOAMULAR 1000.
 - 2. Locations:
 - a. Vehicular drives, truck docks on split-slabs over elevated decks at Grade
 - b. As indicated on Drawings.
- 2.5 MORTAR-FACED, EXTRUDED-POLYSTYRENE FOAM PLASTIC BOARD INSULATION
- A. Performance Requirements:
 - 1. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
 - 2. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
 - 3. Labeling: Provide identification mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width unless installer provides certification.
 - B. Mortar-Faced, Extruded Polystyrene Board Insulation (XPS-MF): ASTM C578, Type VI, 40-psi (276-kPa) minimum compressive strength, tongue-and-groove edges on long dimension, minimum 3/8-inch (10 mm) latex-modified cement mortar topping.
 - 1. Manufacturers:
 - a. Sika, Sarnatherm Lightguard.
 - b. T. Clear Corporation, Lightguard.
 - 2. Locations:
 - a. Pedestrian walkways on pedestal paver assemblies over elevated decks.
 - C. Mortar-Faced, Extruded Polystyrene Board Insulation (XPS-MF): ASTM C578, Type VI, 40-psi (276-kPa) minimum compressive strength, tongue-and-groove edges on long dimension, minimum 15/16-inch (10 mm) latex-modified cement mortar topping.
 - 1. Manufacturers:
 - a. Sika, Sarnatherm Heavyguard.
 - b. T. Clear Corporation, Heavyguard.
 - 2. Locations:
 - a. Pedestrian walkways on pedestal paver assemblies over elevated decks.
- 2.6 GLASS-FIBER BLANKET INSULATION (GLASS MINERAL FIBER BATT INSULATION)
- A. Performance Requirements:
 - 1. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
 - 2. Smoke-Developed Index: Not more than 50 when tested in accordance with ASTM E84.
 - 3. Labeling: Provide identification mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width unless installer provides certification.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Glass-Fiber Blanket Insulation, Unfaced (GF-U): ASTM C665, Type I; passing ASTM E136 for combustion characteristics, free of formaldehyde.
1. Manufacturers:
 - a. CertainTeed Corporation; CertaPro Sustainable Insulation.
 - b. Johns Manville; a Berkshire Hathaway company; Unfaced.
 - c. Knauf Insulation; EcoBatt with ECOSE Technology.
 - d. Owens Corning; EcoTouch Thermal.
 2. Thickness: Full depth of metal stud cavity unless indicated otherwise.
 3. Adhesive or Sealing Tape: Product provided or recommended by manufacturer with demonstrated capability to bond securely to substrates indicated.
 4. Locations:
 - a. Exterior stud framed assemblies.
 - b. As indicated on Drawings.
- C. Glass-Fiber Blanket Insulation, Reinforced-Foil Faced (GF-F): ASTM C665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene, free of formaldehyde.
1. Manufacturers:
 - a. CertainTeed Corporation; CertaPro Sustainable Insulation FSK-25.
 - b. Johns Manville; a Berkshire Hathaway company; FSK-25 Faced.
 - c. Knauf Insulation; EcoBatt with ECOSE Technology, FSK-25 Faced.
 - d. Owens Corning; EcoTouch Thermal FSK-25 Faced.
 2. Thickness: Full depth of metal stud cavity unless indicated otherwise.
 3. Adhesive or Sealing Tape: Product provided or recommended by manufacturer with demonstrated capability to bond foil-faced vapor-retarder membrane securely to substrates indicated.
 4. Locations:
 - a. Exterior stud framed assemblies.
 - b. As indicated on Drawings.
- 2.7 GLASS-FIBER BOARD INSULATION (GLASS MINERAL FIBER SEMI-RIGID INSULATION)
- A. Performance Requirements:
1. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
 2. Smoke-Developed Index: Not more than 50 when tested in accordance with ASTM E84.
 3. Nominal Density: 3 lb/cu. ft. (48 kg/cu. m).
 4. Thermal Resistivity: 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (29.8 K x m/W at 24 deg C).
 5. Labeling: Provide identification mark indicating R-value of each piece of insulation **12 inches (305 mm)** and wider in width unless installer provides certification.
- B. Glass-Fiber Board Insulation, Unfaced (GFB-U): ASTM C612, Type IA; unfaced, passing ASTM E136 for combustion characteristics.
1. Manufacturers:
 - a. CertainTeed Corporation; CertaPRO Commercial Board 300.
 - b. Johns Manville; a Berkshire Hathaway company; Insul-SHIELD 300.
 - c. Knauf Insulation; Insulation Board with Ecosse Technology.
 - d. Owens Corning; 703.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Thickness: As indicated on Drawings but not less than 2-inches (50 mm).
 - C. Glass-Fiber Board Insulation, Faced (GFB-F): ASTM C612, Type IA; faced on one side with foil-scrim-kraft or foil-scrim-polyethylene vapor retarder.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; CertaPRO® Commercial Board 300.
 - b. Johns Manville; a Berkshire Hathaway company; Insul-SHIELD 300.
 - c. Knauf Insulation; Insulation Board with Ecosse Technology.
 - d. Owens Corning; 703.
 2. Thickness: As indicated on Drawings but not less than 2-inches (50 mm).
 - D. Mineral-Wool Blanket Insulation, Unfaced (MW-U): ASTM C665, Type I (blankets without membrane facing); consisting of fibers; passing ASTM E136 for combustion characteristics.
 1. Basis-of-Design Product: ROCKWOOL (Roxul, Inc.); Comfortbatt.
 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. ROCKWOOL (Roxul, Inc.).
 - c. Thermafiber, Inc.; an Owens Corning company.
 3. Thickness: Full depth of metal stud cavity unless indicated otherwise.
 4. Locations:
 - a. Exterior stud framed assemblies.
 - b. As indicated on Drawings.
 - E. Mineral-Wool Blanket Insulation, Reinforced-Foil Faced (MW-F): ASTM C665, Type III (reflective faced); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim kraft, or foil-scrim polyethylene.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Thermafiber, Inc.; an Owens Corning company.
 2. Thickness: Full depth of metal stud cavity unless indicated otherwise.
 3. Locations:
 - a. Exterior stud framed assemblies.
 - b. As indicated on Drawings.
- 2.8 MINERAL-WOOL BOARD INSULATION (MINERAL WOOL SEMI-RIGID INSULATION)
- A. Performance Requirements:
 1. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
 2. Smoke-Developed Index: Not more than 50 when tested in accordance with ASTM E84.
 3. Labeling: Provide identification mark indicating R-value of each piece of insulation 12 inches (305 mm) and wider in width unless installer provides certification.
 - B. Mineral-Wool Board Insulation, Unfaced (MWB-U): ASTM C612, Type IVA; passing ASTM E136 for combustion characteristics.
 1. Basis-of-Design Product: ROCKWOOL (Roxul, Inc.); ROCKBOARD 40.
 2. Manufacturers:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Johns Manville; a Berkshire Hathaway company.
 - b. ROCKWOOL (Roxul, Inc.)
 - c. Thermafiber, Inc.; an Owens Corning company.
3. Nominal Density: 4 lb/cu. ft. (64 kg/cu. m).
 4. Thermal Resistivity: 4.2 deg F x h x sq. ft./Btu x in. at 75 deg F (0.72 m² x K/W at 24 deg C).
 5. Locations:
 - a. Locations other than exterior cavity wall and rainscreen applications.
 - b. As indicated on Drawings.
- C. Mineral-Wool Board, Unfaced (MWB-UEC) - Closed Joint Cladding Assemblies: ASTM C612, Type IVB; passing ASTM E136 for combustion characteristics.
1. Basis-of-Design Product: ROCKWOOL (Roxul, Inc.); Cavityrock.
 2. Manufacturers:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. ROCKWOOL (Roxul, Inc.)
 - c. Thermafiber, Inc.; an Owens Corning company.
 3. Monolithic Nominal Density - Thicknesses up to 2 Inches: Greater than 4.3 lb/cu. ft. (69 kg/cu. m).
 4. Dual Nominal Density - Thicknesses greater than 2 Inches:
 - a. Inner Layer: 3.8 lb/cu. ft. (61 kg/cu. m).
 - b. Outer Layer: 6.24 lb/cu. ft. (100 kg/cu. m).
 5. Thermal Resistivity: 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (0.76 m² x K/W at 24 deg C).
 6. Locations:
 - a. Exterior cavity wall and rainscreen applications, closed joints.
- D. Mineral-Wool Board, Faced (MWB-FEC) - Open Joint Cladding Assemblies: ASTM C612, Type IVB; passing ASTM E136 for combustion characteristics, black mineral fleece facing.
1. Basis-of-Design Product: ROCKWOOL (Roxul, Inc.); Cavityrock Black.
 2. Manufacturers:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. ROCKWOOL (Roxul, Inc.)
 - c. Thermafiber, Inc.; an Owens Corning company.
 3. Monolithic Nominal Density - Thicknesses up to 2 Inches: Greater than 4.3 lb/cu. ft. (69 kg/cu. m).
 4. Dual Nominal Density - Thicknesses greater than 2 Inches:
 - a. Inner Layer: 3.8 lb/cu. ft. (61 kg/cu. m).
 - b. Outer Layer: 6.24 lb/cu. ft. (100 kg/cu. m).
 5. Thermal Resistivity: 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (0.76 m² x K/W at 24 deg C).
 6. Locations:
 - a. Exterior cavity wall and rainscreen applications, open joints.
- E. Mineral-Wool Board, Faced (MWB-FCW): ASTM C612, Type IVA; passing ASTM E136 for combustion characteristics, reinforced foil facing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Basis-of-Design Product: ROCKWOOL (Roxul, Inc.); CURTAINROCK 40 or CURTAINROCK 80, as recommended by manufacturer for project specific installation requirements.
2. Manufacturers:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. ROCKWOOL (Roxul, Inc.)
 - c. Thermafiber, Inc.; an Owens Corning company.
3. Nominal Density: Not less than 4 lb/cu. ft. (64 kg/cu. m).
4. Thermal Resistivity: 4.3 deg F x h x sq. ft./Btu x in. at 75 deg F (0.72 m² x K/W at 24 deg C).
5. Locations:
 - a. Curtain wall applications.

2.9 THIN PROFILE, HIGH THERMAL BLANKET INSULATION

- A. Performance Requirements:
 1. Flame-Spread Index: Not more than 5 when tested in accordance with ASTM E84.
 2. Smoke-Developed Index: Not more than 5 when tested in accordance with ASTM E84.
- B. Silicon Aerogel Insulation: Unfaced, reinforced silicon aerogel insulation blankets.
 1. Basis of Design: Dow; DOWSIL HP-1000 Building Insulation Blanket.
 2. Thickness: As indicated on Drawings but not less than thickness required for an R-19.

2.10 SPRAY-APPLIED THERMAL INSULATION

- A. Performance Requirements:
 1. Flame-Spread Index: Not more than zero when tested in accordance with ASTM E84.
 2. Smoke-Developed Index: Not more than zero when tested in accordance with ASTM E84.
 3. Thermal Conductivity: 4.00/inch R-value (0.25 K-factor) in accordance with ASTM C518.
 4. Noise Reduction Coefficient (NRC): 0.75 at 1 inch (25 mm); 0.95 at 2 inches (50 mm) in accordance with ASTM C423 and ISO 354.
 5. Bond Strength: Minimum 43-lbf/sq. ft. (2.05-kPa) cohesive and adhesive strength based on field testing in accordance with ASTM E736.
 6. Dry Density: 2.2 lb/cu. ft. (36.7 kg/cu. m) in accordance with ASTM D1622/D1622M.
 7. Air Erosion: Maximum weight loss of 0.0 oz./sq. ft. (0 g/sq. m) in 24 hours in accordance with ASTM E859.
 8. Fungus and Bacterial Resistance: No growth in accordance with MIL STD810F.
- B. Self-Supported, Spray-Applied Glass Fiber Insulation (GF-SA): Type 902 bio-soluble white fiberglass conforming to CAN/ULC S102-10 and ASTM E136 and sprayed using manufacturer's liquid water-based bonding adhesive. Does not contain asbestos, crystalline silica, or combustible fibers. Noncombustible in accordance with ASTM E136.
 1. Basis-of-Design Product: Monoglass Inc.: Sonoglass Spray-On Insulation, grey color.
 2. Application Thickness: As indicated on Drawings but not less than 5 inches (125 mm) before tamping.
- C. Substrate Primers: For spray-applied insulation, use manufacturer-approved, spray-applied, stain-blocking primers.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Spray-Applied Insulation Adhesive: Manufacturer's standard water-based, spray-applied adhesive for mixing with fibers at point of discharge during spray application of thermal insulation and for final topcoat of sprayed thermal insulation.

1. Refer to Division 9 Section Painting for interior painting requirements.

- E. Spray-Applied Insulation Sealer: Spray-applied, water-soluble, liquid-copoly emulsion.

1. Basis-of-Design Product: Monoglass Inc.; InsulSeal.

a. Tint Color: Gray, unless indicated otherwise.

2. Locations:

a. Installations exposed to view in finished construction.

b. Installation in crawl spaces.

3. Acoustical Installations: Insulation sealer thickness shall not reduce the acoustical performance of the underlying insulation.

2.11 INSULATION FASTENERS

- A. Power-Driven, Thermal Break Insulation Fasteners: High density polyethylene washer with heat-treated carbon steel pin, zinc plated; capable of holding insulation of specified thickness securely in position with pin type and minimum penetration recommended by manufacturer.

1. Basis-of-Design Product: Ramset I-F Insulation Fastening System, IFS (Steel) and IFC (Concrete or CMU)

2.12 ACCESSORIES

- A. Insulation for Miscellaneous Voids:

1. Glass-Fiber Insulation: ASTM C764, Type II, loose fill; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E84.

2. Spray Polyurethane Foam Insulation: ASTM C1029, Type II, closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.

- B. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to which thermal insulation will be applied for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting Work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:

1. Respective manufacturer's written installation instructions.
2. Accepted submittals.
3. Contract Documents.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Install insulation with manufacturer's R-value label exposed after insulation is installed unless installer provides certification.
- D. For dual density products, install insulation with manufacturer's "THIS SIDE OUT" label exposed after insulation is installed.
- E. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- F. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

3.4 INSTALLATION OF EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION

- A. On vertical surfaces, set insulation units using manufacturer's recommended adhesive in accordance with manufacturer's written instructions.
 - 1. If not otherwise indicated at foundations and slabs, extend insulation a minimum of **24 inches (610 mm)** below exterior grade line.
- B. On horizontal surfaces, loosely lay insulation units in accordance with manufacturer's written instructions. Stagger end joints and tightly abut insulation units.
 - 1. If not otherwise indicated, extend insulation a minimum of **24 inches (610 mm)** in from exterior walls.
- C. Seal joints between insulation units by applying adhesive, mastic, or sealant to edges of each unit to form a tight seal as units are placed. Fill voids in completed installation with adhesive, mastic, or sealant as recommended by insulation manufacturer.

3.5 INSTALLATION OF MORTAR-FACED, EXTRUDED POLYSTYRENE FOAM PLASTIC BOARD

- A. Install mortar-faced board insulation loosely laid, according to manufacturer's written instructions, with tongue-and-groove joints nested. Stagger end joints of adjoining rows and abut insulation.

3.6 INSTALLATION OF MINERAL FIBER BLANKETS AND BOARD INSULATION ON CONCRETE CONSTRUCTION

- A. Butt panels together for tight fit.
- B. Anchor Installation: Install insulation on concrete substrates by Power-Driven, Thermal Break Insulation Fasteners:
 - 1. Space anchors in accordance with insulation manufacturer's written instructions for insulation type, thickness, and application.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Adhered insulation anchors are not allowed.

3.7 INSTALLATION OF EXTERIOR CAVITY-WALL INSULATION

- A. Mineral-Wool Board Insulation: Install insulation fasteners **4 inches (100 mm)** from each corner of board insulation, at center of board, and as recommended by manufacturer.
1. Fit courses of insulation between masonry wall ties and other obstructions, with edges butted tightly in both directions, and with faces flush.
 2. Press units firmly against inside substrates.
- B. Adhered insulation anchors are not allowed.

3.8 INSTALLATION OF INSULATION IN FRAMED CONSTRUCTION

- A. Blanket Insulation: Install in cavities formed by framing members in accordance with the following requirements:
1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
 - a. For partitions with gypsum board on only one side, apply adhesive to backside of gypsum board and press insulation in place to form bond and prevent insulation from sagging within cavity.
 3. Maintain **3-inch (76-mm)** clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 4. For metal-framed wall cavities where cavity heights exceed **96 inches (2438 mm)**, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 5. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings and seal each continuous area of insulation to ensure airtight installation.
 - a. Set units with facing placed as indicated on Drawings.
- B. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
1. Glass-Fiber Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately **2.5 lb/cu. ft. (40 kg/cu. m)**.
 2. Spray Polyurethane Insulation: Apply in accordance with manufacturer's written instructions.

3.9 INSTALLATION OF LOOSE-FILL INSULATION

- A. Loose-Fill Insulation: Apply in accordance with ASTM C1015 and manufacturer's written instructions.
1. Level horizontal applications to uniform thickness as indicated, lightly settle to uniform density, but do not compact excessively.

3.10 INSTALLATION OF SPRAY-APPLIED INSULATION

- A. Spray-Applied Glass Fiber Insulation: Apply spray-applied glass-fiber insulation according to manufacturer's written instructions and using powered spray equipment that introduces water-based adhesive to fibers as they discharge from the spray nozzle, to produce a uniform thickness, free of starved spots or other evidence of thin application or of application patterns.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in installation areas is completed, and other items not indicated to receive insulation are masked.

1. Primer: Prepare and apply primer to gypsum panels and other prepared substrates to receive sprayed thermal insulation.
2. Place insulation in full thickness over the entire area of each substrate to be protected.
 - a. Spray-apply insulation materials to maximum extent possible. Complete coverage by trowel application or other placement method recommended in writing by manufacturer.
 - b. Maintain profile of substrates except fill voids between members, including voids formed by fluted decks above beams and similar voids.
3. Immediately remove droppings and overspray to prevent damage in accordance with manufacturer's written instructions.
4. Board- or spray-tamp surface of spray-applied thermal insulation to provide an even texture and apply coating of adhesive to provide a sound surface.

3.11 INSTALLATION OF VAPOR RETARDERS ON FRAMING

- A. Install multiple membrane sheets to form continuously sealed vapor retarder at interior face of framing; maintain membrane integrity throughout construction phase.
 1. Place vapor retarders on side of construction indicated on Drawings.
- B. Extend vapor retarders to extremities of areas to protect from vapor transmission. Secure vapor retarders in place with adhesives, vapor retarder fasteners, or other anchorage system as recommended by manufacturer. Extend vapor retarders to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.
 1. Before installing vapor-retarder, apply sealing tape to flanges of metal framing, including top and bottom runner tracks, metal studs, and framing around wall openings.
 2. Pull vapor-retarder taut and press into sealing tape and firmly roll to enhance adhesion.
 3. Locate perimeter terminations over framing members or other solid substrates. Include sheet metal flanges or extensions to prevent attachment to sprayed fireproofing directly.
 4. Seal top, sides, and bottom edges to building structure with seaming tape, seal edges at perimeter of wall openings.
- C. Seal vertical joints in vapor retarders over framing by lapping no fewer than two studs and sealing with vapor-retarder tape according to vapor-retarder manufacturer's written instructions. Locate all joints over framing members or other solid substrates.
- D. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarders.
- E. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarders extending 6 in (150 mm) beyond damaged areas in each direction.

3.12 INSTALLATION OF CURTAIN-WALL INSULATION

- A. Install board insulation in curtain-wall construction in accordance with curtain-wall manufacturer's written instructions.
 1. Hold insulation in place by securing metal clips, brackets, pins and straps or integral pockets within window frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place.
 2. Maintain cavity width of dimension indicated on Drawings between insulation and glass.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Install insulation to fit snugly without bowing.
4. Install insulation mullion covers, minimum 8 in (200 mm) width centered over horizontal and vertical aluminum frames within spandrel.

3.13 FIELD QUALITY CONTROL FOR SPRAY-APPLIED THERMAL INSULATION

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
- B. Owner's Testing Agency Field Service for Spray-Applied Thermal Insulation: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
 1. Tests: As determined by Owner testing agency for adhesion/cohesion, density and thickness.
- C. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 2. Prepare test and inspection reports.

3.14 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
- B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.
- C. Remove sprayed thermal insulation from surfaces not required to be insulated.
 1. Broom-clean work areas affected by the Work of this Section.
- D. Protect vapor retarders from damage until concealed by permanent construction.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 07 22 16 – ROOF BOARD INSULATION

PART 1 – GENERAL

1.1 REFERENCES (INCLUDING LATEST REVISIONS)

- A. Comply with governing local, state, and federal regulations, safety standards, and codes.
- B. Testing Laboratory Services: Test results shall meet or exceed established standards.
- C. Underwriters Laboratories, Inc. (Roofing Covering): Class A fire hazard classification.
- D. American Society of Testing Materials (ASTM)
 - 1. C 177 Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus
 - 2. C 209 Methods of Testing Insulating Board (Cellulosic Fiber), Structural and Decorative
 - 3. C 728 Perlite Thermal Insulation Board
 - 4. C 1289 Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
 - 5. D 41 Asphalt Primer Used in Roofing and Waterproofing
 - 6. D 312 Asphalt Used in Roofing
 - 7. D 1621 Test Method for Compressive Properties of Rigid Cellular Plastics
 - 8. D 4601 Asphalt Coated Glass Fiber Base Sheet Used in Roofing
- E. The National Roofing Contractors Association (NRCA) - Roofing and Waterproofing Manual
- F. American National Standards Institute/Single Ply Roofing Industry (ANSI/SPRI)
- G. American Society of Civil Engineers - ASCE 7 Minimum Design Loads for Buildings and Other Structures (for wind uplift criteria)

1.2 QUALITY ASSURANCE

- A. Regulatory Requirements
 - 1. Classified by Underwriter's Laboratories (UL) as Class A roof covering.
 - 2. Follow local, state, and federal regulations, safety standards, and codes.
- B. Installation
 - 1. Installation shall be in accordance with manufacturer's current published application procedures, NRCA general recommendations, and ASCE 7 wind uplift criteria.
 - 2. Roof system manufacturer's technical specifications shall be considered part of this specification and shall be used as reference for specific application procedures.
- C. Contract Documents
 - 1. In the case of an inconsistency between the drawings and specifications or within either document not clarified by addendum, the better quality or greater quantity of work shall be provided in accordance with the Project Manager's/Architect's interpretation.

1.3 SUBMITTALS

- A. Product Data: Submit Manufacturer's product data sheets for each product. Indicate each item or component to be used on project to include thicknesses, sizes, profiles, etc.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Shop Drawings: Layout of roof plan showing crickets, tapered design, tapered insulation pattern, direction of slope, amount of slope, spot elevations indicating thicknesses at high and low points.
 - 1. Submit fastening requirements from manufacturer for each roof zone as per applicable building code.
 - 2. Submit manufacturer's recommended fastener layout/placement pattern for each roof zone. Refer to Factory Mutual Loos Prevention Data Sheet (LPDS) 1-29 for more information.
- C. Certification: Submit roof manufacturer's certification in writing that insulation is acceptable as substrate for application of specified roof system.
- D. Pullout Tests in accordance to ANSI/SPRI FX-1.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Store materials in accordance with manufacturer's recommendations.
- B. When stored outdoors:
 - 1. Tarp and shield insulation from moisture and ultraviolet rays.
 - 2. Elevate insulation above substrate four inches minimum.
 - 3. Secure insulation to resist high winds.
 - 4. Distribute insulation stored on roof deck to prevent concentrated loads that would impose excessive stress or stain on deck or structural members. Verify that structure can accommodate additional loading.
 - 5. Wet insulation, or insulation that has been wet but which has dried, may not be used and shall be removed completely and immediately from the job site.
 - 6. Do not double stack bundles of insulation on the roof top.

1.5 SEQUENCING AND SCHEDULING

- A. Substrate Acceptance: Roof system manufacturer's representative shall inspect roof deck and associated substrates and provide written acceptance of conditions.
- B. Manufacturer's approved roofing contractor shall inspect and approve deck and substrates.
- C. Plan roof layout with respect to roof deck slope to prevent rainwater drainage into completed roofing.
- D. Do not install more insulation than can be covered with complete roof system in same day.

1.6 PRODUCT CONDITIONS

- A. Environmental Requirements:
 - 1. Apply roofing and insulation in dry weather.
 - 2. Do not proceed with roof construction during inclement weather or when precipitation is predicted 40% or more possibility.
 - 3. Do not apply insulation over wet or moist deck or in foggy conditions.
 - 4. Days with wind speeds of 30 mph or greater shall be considered "Bad Weather" days.
- B. Emergency Equipment: Maintain on-site equipment and material necessary to apply emergency temporary seals in the event of sudden storms or inclement weather.
- C. Costs for emergency roofing shall be borne by Contractor.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 2 – PRODUCTS

2.1 INSULATION – FLAT STOCK

- A. All insulation shall be approved in writing by the membrane manufacturer as to thickness, type, and manufacturer. All insulation must be approved for the specific application, Underwriters Laboratory approved, and be listed in the FM Global Approval Guide.
- B. Polyisocyanurate Roof Insulation: Insulation shall be two layers of rigid polyisocyanurate foam board; meeting Federal Specification No. HH-I-1972/1 or 2 with 20 psi minimum compressive strength and 2.0 pcf minimum density. First layer shall be a minimum thickness of two and one-half inch (2-1/2"). R-value over each roof area shall meet or exceed R-33. Board shall be surfaced on two (2) sides with non-asphaltic facer material.

2.2 INSULATION – TAPERED

- A. Factory Tapered Polyisocyanurate for Field of Roof: Shall be tapered polyisocyanurate board, with a 20 psi minimum compressive strength and nominal 2.0 pcf density. Insulation shall be of thickness required for one-fourth inch (1/4") slope per foot to roof drains as shown on drawings with a minimum edge thickness of one and one-half inch (1-1/2"). R-value over each roof area shall meet or exceed R-33. Insulation shall be surfaced on two (2) sides with a non-asphaltic facer material.
- B. Factory Tapered Polyisocyanurate Crickets: Factory cut twenty-four inch by forty-eight inch (24" x 48") polyisocyanurate board cut to one-half inch (1/2") per foot slope used in conjunction with standard thickness of polyisocyanurate board to provide positive slope.

2.3 COVER BOARD

- A. Shall be non-structural glass mat faced, non-combustible, moisture resistant, silicone treated gypsum core panel, manufactured to conform to ASTM C-1177. Thickness shall be 1/2" with a nominal board size of 4' x 8', DEXcell FA as manufactured by Gold Bond Building Products, or approved equal.

2.4 ASPHALT ROOF PRIMER

- A. Quick-dry asphalt-based primer for priming of asphalt roof surfaces, as manufactured by GAF, or approved equal.

Applicable Federal Specification	SS-A-701B
ASTM	D 41
Flash Point	105° F
Viscosity at 80° F (ASTM D 217)	50-60 K.U.
Weight per gallon	7.4 pounds
Drying time (to touch)	Min. 4 hours

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.5 BITUMEN

- A. Shall be ASTM D 312 Type IV extra steep asphalt.
- B. Contractor shall mix with the hot asphalt an additive that eliminates the asphalt odor, such as Trumbull TruLo as manufactured by Owens Corning, or deScent as manufactured by ArrMaz Custom Chemicals, or approved equal.

2.6 FASTENERS

- A. Fasteners and fastening plates and/or termination bars shall be FM Approved and shall be listed in the FM Global Approval Guide, and as recommended by the insulation/fastener manufacturer for the specific application to meet the minimal requirements for wind uplift as required by the local jurisdiction and/or FM Global.

PART 3 – EXECUTION

3.1 PROTECTION OF ROOFING

- A. Provide special protection from traffic on yet to be removed roofing.
- B. Provide special protection from traffic on completed work.

3.2 EXAMINATION AND PREPARATION

- A. Do not install until defects are corrected and deck substrate meets roof system manufacturer's requirements.
- B. Do not apply insulation unless asphalt application temperature, EVT of approximately 375° F to 425° F, can be maintained or when water or moisture is present on substrate. Do not heat asphalt above flashing point, or 525° F.
- C. Examine substrate and related surfaces, and verify that there are no conditions such as inadequate anchorage, foreign materials, moisture, ridges, depressions, or other conditions which would prevent satisfactory installation of roof system.
- D. Start of work constitutes acceptance of deck substrate and site conditions.
- E. Sweep deck substrate clean of dust and debris immediately prior to installation of tapered insulation.

3.3 APPLICATION OF INSULATION – GENERAL INSTRUCTIONS

- A. Manufacturer's Instructions: In regard to attachment, the manufacturer's instructions or specifications shall determine the suitability for an application. Installation must meet ASCE 7 criteria and meet local governing building codes.
- B. Precautions: The surface of the insulation must not be ruptured due to overdriving of fasteners.
- C. Thermal insulation boards shall be laid on the substrate in parallel rows with end joints staggered and butted as close as possible. All joints shall be tight and at the roof perimeter and roof penetrations, insulation shall be cut neatly and fitted to reduce openings to a minimum. All openings one-fourth inch (1/4") or larger shall be filled with insulation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Insulation shall be tapered or feathered at drains and scuppers to provide proper drainage (if applicable).
- E. No more insulation shall be installed than can be covered by the completed roof system by the end of the day or the onset of inclement weather.
- F. Tapered insulation and crickets, when specified, shall be placed in accordance with the drawings and/or as required to minimum of NRCA standards.

3.4 APPLICATION OF INSULATION - ADHERED IN HOT OVER BASE SHEET

- A. Specified flat stock insulation shall be bonded to the specified base sheet with a solid mopping of steep asphalt Type IV, as required by slope (NRCA), at the minimum rate of twenty-five pounds (25#) $\pm 20\%$, per one hundred (100) square feet of surface and immediately walked in place.
- B. The top surface of the first layer of flat stock insulation shall be coated with hot asphalt using twenty-five pounds (25#) $\pm 20\%$, per one hundred (100) square feet of surface, and specified flat stock insulation shall be applied using offset joints, so that each layer breaks joints to a minimum of six inches (6") both ways with the preceding layer, and immediately walked in place.
- C. The top surface of preceding insulation shall be coated with hot asphalt using twenty-five pounds (25#) $\pm 20\%$, per one hundred (100) square feet of surface, and specified tapered insulation shall be applied using offset joints, so that each layer breaks joints to a minimum of six inches (6") both ways with the preceding layer, and immediately walked in place.
- D. The top surface of the preceding insulation shall be coated with hot asphalt using twenty-five pounds (25#) $\pm 20\%$, per one hundred (100) square feet of surface, and specified cover board shall be applied using offset joints, so that each layer breaks joints to a minimum of six inches (6") both ways with the preceding layer, and immediately walked in place.

3.5 BACKNAILING/STRAPPING

- A. On slopes greater than one inch (1") in twelve inches (12"), refer to NRCA and/or manufacturer's guidelines for backnailing procedures and follow the more stringent guidelines for all specified materials.

<u>Slope</u>	<u>Interply& Top Pour</u>	<u>Backnail</u>	<u>Strap</u>
0 - 1/2" per 12"	Type IV	No	No
1/2" - 2" per 12"	Type IV	Yes	Strap if possible
2" - 3" per 12"	Type IV	Yes	Yes

3.6 ADJUSTING

- A. Remove insulation which has been damaged (broken, cracked, punctured, wet, etc.) and install acceptable new units before installation of roof system.

3.7 CLEANING

- A. Remove debris and material wrappers from jobsite. Leave insulation clean and dry, ready to receive roofing membrane.

END OF SECTION 07 22 16

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 072617
BELOW SLAB VAPOR RETARDERS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Below slab vapor retarders and supplementary items necessary for installation.
- B. Adhered and Specialty Floor Finishes at Slab-on-Grade Areas: Refer to floor finish section(s) for concrete moisture barrier treatment at adhered floorings, thin-set terrazzo and wood flooring systems.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, construction details, installation instructions, and recommendations for maintenance.
 - 2. Include manufacturer's standard drawing details for laps, openings, penetrations, corners, and other conditions applicable to this project.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required.
- B. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control" Article.
- C. Warranties:
 - 1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations and exclusions.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.
- B. Mock-Ups: Prior to beginning Work of this Section, install minimum 150 sf (14 sq m) mock-up of below slab vapor retarder using materials indicated for the completed Work; incorporating subgrade construction, sealing at penetrations, and seaming to demonstrate installation of below slab vapor retarder system. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically accepted by Architect in writing. Apply mock-ups to set quality standards for materials and execution.
 - 1. If Architect determines mock-up does not comply with requirements, reconstruct mock-ups until accepted.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.5 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 3. Record discussions, including decisions and agreements, and prepare report.

1.6 PROJECT CONDITIONS

- A. Ambient Conditions: Install below slab vapor retarder within range of ambient and substrate temperatures and moisture conditions as recommended by manufacturer. Protect substrates from environmental conditions that affect performance. Do not apply to a damp or wet substrate or during high humidity conditions including snow, rain, fog, or mist.

1.7 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Available Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, manufacturers offering products that may be incorporated into Work include but are not limited to those listed.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Material Compatibility: Provide materials that are compatible with one another under conditions of service and application required, as demonstrated by manufacturer based on testing and field experience.

2.4 BELOW SLAB VAPOR RETARDERS

- A. Vapor Retarder for Typical Concrete Slab-on-Grade Conditions:
 - 1. Product Quality Standard: ASTM E 1745, Class A, except water vapor permeance property shall not exceed 0.03 perms according to ASTM E 96, Method B.
 - 2. Description: Prefabricated, flexible, lightweight material manufactured from raw or virgin polyethylene or polyolefin resins (post-consumer, recycled resins are not permitted); not less than **15 mil (0.4 mm)** thick.
 - 3. Manufacturers and Products:
 - a. Barrier-Bac; VB-350
 - b. Fortifiber Building Product Systems; Moistop Ultra 15
 - c. W. R. Meadows, Inc.; Perminator, 15-mil
 - d. Raven Industries; VaporBlock 15
 - e. Reef Industries, Inc.; Griffolyn 15-mil Green
 - f. Reef Industries, Inc.; Vaporguard
 - g. Stego Industries LLC; Stego Wrap, 15-mil
- B. Vapor Retarder for Structured Concrete Slab Conditions:
 - 1. Product Quality Standard: ASTM E 1745, Class A, except water vapor permeance property shall not exceed 0.03 perms according to ASTM E 96, Method B.
 - 2. Description: Prefabricated, flexible or semi-flexible, material manufactured of one of following compositions; with one face suited for integral bonding with concrete; not less than **20 mil (0.05 mm)** thick.
 - a. Raw or virgin polyethylene or polyolefin resins (post-consumer, recycled resins are not permitted).
 - b. Multiple ply board composed of a proprietary core with bituminous impregnated material and glass-mat liners, with polyethylene facers.
 - 3. Manufacturers and Products:
 - a. Barrier-Bac; VBC-350
 - b. Grace Construction Products; Florprufe 120
 - c. W. R. Meadows, Inc.; Premoulded Membrane Vapor Seal with Plasmatic Core (PMCP), with felt face toward concrete
 - d. Polyguard Products, Inc.; Underseal
 - e. Stego Industries LLC; Stego Wrap, 15-mil

2.5 ACCESSORIES

- A. Barrier Seaming and Sealing Tape: Manufacturer's standard one-sided or two-sided pressure-sensitive tape of type, material and size for sealing membrane joints and for sealing membrane to other adjacent structures; provided by vapor retarder manufacturer.
- B. Penetration Accessories: Manufacturer's standard pre-molded products or mastic for sealing penetrations; provided by vapor retarder manufacturer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine subgrade and foundation surfaces to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform work according to following, unless otherwise specified:
 - 1. ASTM E 1643, except place vapor retarder on top of granular fill.
 - 2. Respective manufacturer's installation written instructions.
 - 3. Accepted submittals.
 - 4. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and Project specifications for subgrade preparation. Subgrade surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work. Provide smooth, level, and properly compacted and moisture conditioned subgrade in accordance with Geotechnical Engineer's recommendations.
- B. Ensure that subgrade is smooth and even without sharp or protruding objects that might rip, tear, or puncture vapor retarder membrane.

3.4 BELOW SLAB VAPOR RETARDER INSTALLATION

- A. Install multiple sheets to form continuously sealed below slab vapor retarder over properly prepared subgrade prior to concrete slab reinforcing installation.
 - 1. Place vapor retarder membrane in widest width possible over subgrade with longest dimension parallel with direction of concrete placement with proper face toward concrete; pull taut to eliminate fishmouths, wrinkles, buckles, and kinks.
 - 2. Properly dry and clean mating surfaces of vapor retarder membrane prior to application of seaming tape.
 - 3. Overlap sides and ends of vapor retarder membrane not less than 6 in (150 mm) and apply seaming tape.
 - 4. Ensure vapor retarder membrane is continuous from edge to edge of concrete slab.
 - a. Perimeter Seal: Seal vapor retarder to perimeter wall or footing/grade beam with tape per manufacturer recommended installation instructions.
 - 5. Cut vapor retarder membrane carefully around penetrations and seal with either premolded accessories, or on-site collar fabrications using seaming tape or mastic; if field fabricated, comply with manufacturer's recommended details.
 - 6. Repair rips, tears, or punctures with seaming tape, or by cutting out damaged areas and patching with new vapor retarder membrane, overlapping damaged area minimum 6 in (150 mm) in each direction and apply seaming tape.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.

1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
- B. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
- C. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 1. Including but not limited to the following:
 - a. Prior to beginning concrete slab reinforcing installation, inspect vapor retarder membrane for rips, tears, and punctures.
 - b. Prior to concrete placement work, inspect concrete installer's tools and notify Contractor to have tools with spikes or other sharp surfaces that could inflict intentional or unintentional damage on the installed vapor retarder membrane removed from work area.
 - c. Immediately prior to concrete placement work, inspect vapor retarder membrane for rips, tears, and punctures, inspect penetrations at columns and mechanical and electrical piping.
 - d. Continuously inspect concrete placement work, watching for damage to vapor retarder membrane.
 - e. Periodically inspect portions of slab that were not placed (block-outs, voids, and leave-outs) for water infiltration of subgrade until concrete is subsequently placed.
 2. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 3. Prepare test and inspection reports.

3.6 PROTECTION

- A. Protection during Concrete Work: Ensure vapor retarder membrane will be without damage or deterioration during in-place fabrication of concrete slab reinforcing and subsequent placement of concrete.
 1. Prevent vehicles from driving over vapor retarder membrane once it has been placed.
 2. Prevent wood or steel stakes from penetrating vapor retarder membrane.
 3. At locations where portions of slab are not placed (block-outs, voids and leave-outs), provide protection to prevent water infiltration into void that would contaminate subgrade below vapor retarder membrane; maintain until concrete is subsequently placed.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 075013
SINGLE-PLY MEMBRANE ROOFING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Single-ply membrane roofing system and supplementary items necessary for installation.
 - 1. Adhered polyvinyl chloride (PVC) roofing system.
 - 2. Adhered polyvinyl chloride (PVC) roofing system, fleece or felt backing.
 - 3. Adhered thermoplastic polyolefin (TPO) roofing system.
 - 4. Adhered thermoplastic polyolefin (TPO) roofing system, fleece or felt backing.
- B. Related Requirements:
 - 1. Lightweight Insulating Concrete: Refer to Division 03 Section Lightweight Insulating Concrete for embedded insulation board.

1.2 ALLOWANCES

- A. Allowance for Concrete Moisture Barrier/Vapor Retarder: Include allowance to provide Roofing Manufacturer's recommended concrete moisture barrier/vapor retarder for concrete substrates that do not comply with Roofing Manufacturer's concrete moisture content and testing requirements.

1.3 DEFINITIONS

- A. Roofing Terminology: Definitions in ASTM D1079 and glossary in NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to work of this Section.
- B. Roof Edge Regions: Definitions from ANSI/SPRI ED-1 shall be applicable to this project.
- C. PVC: Polyvinyl chloride.
- D. TPO: Thermoplastic polyolefin.

1.4 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work.
 - 1. Show base flashings and membrane terminations.
 - 2. Show layout and thickness of flat insulation.
 - 3. Show layout and thickness of tapered insulation, including slopes.
 - 4. Show crickets and saddles, including slopes.
 - 5. Show roof plan indicating orientation of membrane roofing and fastener spacing.
 - 6. Show insulation and cover board fastening or adhesive patterns for corner, perimeter, and field-of-roof locations.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

7. Show cold-applied adhesive pattern for insulation and cover board installation; typical pattern of a 100 square foot area.
 8. Include project specific details for typical and non-typical conditions.
- C. Samples for Verification Purposes: For the following products:
1. Roofing membrane, 12 in by 12 in (300 mm by 300 mm) square, of color specified, including side and end lap seam.
 2. Flashing sheets.
 3. Roof insulation and cover board.
 4. Termination bars.
 5. Fasteners of each type, length, and finish.
 6. Walkways, of color required.
- D. Wind Uplift Resistance Submittal: For roofing system, indicating compliance with wind uplift performance requirements.
1. Decorative Stone or Pavers: Comply with applicable provisions of ANSI-SPRI RP-4.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with Performance Requirements.
 - a. Submit evidence of compliance with performance requirements.
 2. Roofing manufacturer shall review and approve Shop Drawings in writing prior to submission.
- B. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control".
- C. Concrete Roof Deck - Moisture Content Measurement: Submit recorded readings when requested.
1. Submit moisture content readings to roofing manufacturer.
- D. Substrate Surface Temperature Readings at Cold Fluid-Applied Insulation Adhesive: Submit recorded readings when requested.
1. Submit surface temperature readings to roofing manufacturer.
- E. Warranty:
1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations and exclusions.
- 1.6 CLOSEOUT SUBMITTALS
- A. Maintenance Data: To include in maintenance manuals.
- 1.7 QUALITY ASSURANCE
- A. Installer Qualifications:
1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar in scope of this Project.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed or acceptable to manufacturer to install products.
- B. Insurance Certification: Assist Owner in preparing and submitting roof installation acceptance certification as necessary in connection with fire and extended-coverage insurance on roofing and associated work.
- C. Quality Standards:
1. Unless otherwise recommended by roofing manufacturer, provide roofing system in accordance with recommendations of the NRCA "Roofing and Waterproofing Manual" for roofing type indicated.
 2. Comply with FMG System Loss Prevention Data Sheets 1-28 and 1-28S for design wind loads and wind uplift pressures on roofs for Windstorm Resistance Classification indicated.
 3. Comply with FMG System Loss Prevention Data Sheet 1-29 for roof deck securement and above deck components for Windstorm Resistance Classification indicated.
 4. Comply with FMG System Loss Prevention Data Sheet 1-49 for perimeter flashing for Windstorm Resistance Classification indicated.

1.8 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site to comply with requirements of applicable Division 01 Sections.
1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor (superintendent).
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 - g. Review deck substrate requirements for conditions and finishes, including flatness, presence of moisture, and fastening.
 - h. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- i. Review governing regulations and requirements for insurance and certificates if applicable.
- j. Review temporary protection requirements for roofing during and after installation.
- k. Review roof observation and repair procedures after roofing installation.

3. Record discussions, including decisions and agreements, and prepare report.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.
- B. Store materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored material from direct sunlight.
 - 1. Discard and legally dispose of material that cannot be applied within its stated shelf life.
- C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.
- D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

1.10 PROJECT CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.11 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

1.12 WARRANTY

- A. Manufacturer's Warranty: Furnish manufacturer's written "Total Roofing System" warranty signed by an authorized representative using manufacturer's standard form, without monetary limitation (NDL), agreeing to repair or replace components of roofing system which exhibit defects in materials or workmanship within specified warranty period. "Defects" is defined to include, but not limited to, deterioration or failure to perform as required.
 - 1. Warranty Wind Speed: Minimum 90-mph Peak Gust Wind Speed.
 - 2. Warranty includes roofing, flashings, adhesives, sealants, insulation, fastener systems, cover board, substrate board, roofing accessories and other components of roofing system.
 - 3. Warranty includes lightweight insulating concrete integral with roofing system as specified in Division 03 Section Lightweight Insulating Concrete.
 - 4. Warranty includes roof edge flashings integral with roofing system as specified in Division 07 Section Sheet Metal Flashing and Trim.
 - 5. Warranty Period: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 20 years from date of Substantial Completion.
- B. Installer's Warranty: Furnish installer's written warranty signed by an authorized representative using installer's standard form agreeing to repair or replace components of roofing system

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

which exhibit defects in materials or workmanship within specified warranty period. "Defects" is defined to include, but not limited to, deterioration or failure to perform as required.

1. Warranty includes roofing, flashings, adhesives, sealants, insulation, fastener systems, cover boards, substrate board, roofing accessories, and other components of roofing system.
2. Warranty includes lightweight insulating concrete integral with roofing system as specified in Division 03 Section Lightweight Insulating Concrete.
3. Warranty includes roof edge flashings integral with roofing system as specified in Division 07 Section Sheet Metal Flashing and Trim.
4. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 2 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section Substitution Procedures.
- B. Available Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, manufacturers offering products that may be incorporated into the Work include, but are not limited to, those listed.
- C. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other available manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Installed roofing system and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing system and base flashings shall remain watertight.
 1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G152, ASTM G154, or ASTM G155.
 2. Impact Resistance: Roof membrane shall resist impact damage when tested according to ASTM D3746, ASTM D4272/D4272M, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.
- B. Material Compatibility: Provide roofing system materials that are compatible with one another under conditions of service and application required, as demonstrated by roofing system manufacturer based on testing and field experience.
- C. Wind Uplift Resistance: Design roofing system to resist wind uplift pressures when tested according to FM Approvals 4474, UL 580, or UL 1897. Contractor shall obtain required design data and identify requirements accommodated on submittal drawings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Fire/Windstorm Classification - Field of Roof: Class 1A-90.
 2. Fire/Windstorm Classification - Roof Perimeter / Corner: Class 1A-150 / Class 1A-225.
 3. Hail-Resistance Rating: FM Global Property Loss Prevention Data Sheet 1-34.
 - a. Rating: SH Severe Hail.
 - b. Rating: VSH Very Severe Hail.
- D. SPRI Wind Design Standard for Edge Systems: Provide edge systems tested in accordance with ANSI/SPRI/FM 4435/ES-1 Wind Test Design Standard for Edge Systems Used with Low Slope Roofing Systems and capable of resisting design pressures.
- E. Energy Performance: Provide roofing system that is listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low and steep-slope roof products.
- F. Energy Performance: Provide roofing system with initial solar reflectance not less than 0.70 and emissivity not less than 0.75 when tested according to CRRC-1.
- G. Fire-Test-Response Characteristics: Provide roofing system materials with the fire-test-response characteristics indicated as determined by testing identical products per test method below by UL, FMG, or another testing and inspecting agency acceptable to authorities having jurisdiction. Materials shall be identified with appropriate markings of applicable testing and inspecting agency.
1. Exterior Fire-Test Exposure: ASTM E 108, Class A, for application and roof slopes indicated.
- 2.4 POLYVINYL CHLORIDE (PVC) ROOFING
- A. PVC Membrane Roofing System: ASTM D 4434, Type II glass-fiber reinforced or Type III fabric reinforced membrane.
1. Manufacturers and Products:
 - a. Carlisle SynTec, Inc.; Sure-Flex KEE HP.
 - b. Johns Manville, Inc.; JM PVC - 60 mil MIN.
 - c. Sika Sarnafil Inc.; G410 PVC.
 2. Membrane Thickness: 60 mils (1.5 mm), minimum.
 3. Exposed Face Color: White.
 4. Exposed Face Color: As selected by Architect from manufacturer's standard colors.
 5. Exposed Face Color: Custom color to be determined by Architect.
- B. PVC Membrane Roofing System, Fleece or Felt Backed: ASTM D 4434, Type II glass-fiber reinforced or Type III fabric reinforced membrane, fleece or felt backed.
1. Manufacturers and Products:
 - a. Carlisle Syn Tec, Inc.; FleeceBACK KEE HP.
 - b. Johns Manville, Inc.; JM PVC FB-60 mil MIN.
 - c. Sika Sarnafil Inc.; G410 Feltback PVC.
 2. Membrane Thickness: 60 mils (1.5 mm), minimum.
 - a. Composite Thickness: 115 mils (2.8 mm), nominal.
 3. Membrane Thickness: 80 mils (2.0 mm), minimum.
 - a. Composite Thickness: 135 mils (2.8 mm), nominal.
 4. Exposed Face Color: White.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

5. Exposed Face Color: As selected by Architect from manufacturer's standard colors.
6. Exposed Face Color: Custom color to be determined by Architect.

2.5 THERMOPLASTIC POLYOLEFIN (TPO) ROOFING

- A. TPO Membrane Roofing System: ASTM D 6878, internally fabric or scrim reinforced membrane.
 1. Manufacturers and Products:
 - a. Carlisle SynTec Inc.; Sure-Weld TPO.
 - b. Firestone Building Products Co.; UltraPly TPO.
 - c. Johns Manville, Inc.; JM TPO-60 mil.
 2. Membrane Thickness: 60 mils (1.5 mm), nominal.
 3. Exposed Face Color: White.
 4. Exposed Face Color: As selected by Architect from manufacturer's standard colors.
- B. TPO Membrane Roofing System, Fleece or Felt Backed: ASTM D 6878, internally fabric or scrim reinforced membrane, fleece backed.
 1. Manufacturers and Products:
 - a. Carlisle SynTec Inc.; Sure-Weld FleeceBACK TPO.
 - b. Johns Manville; JM TPO FB 115.
 2. Membrane Thickness: 60 mils (1.5 mm), nominal.
 3. Composite Thickness: 115 mils (2.8 mm), nominal.
 4. Exposed Face Color: White.

2.6 PROTECTION MEMBRANE AT DECORATIVE PAVER OR DECORATIVE STONE ASSEMBLY

- A. Polyvinyl Chloride Protection Membrane: ASTM D 4434, Type III, fabric reinforced 51 mils minimum thickness.
- B. TPO Protection Membrane: ASTM D 6878, internally fabric or scrim reinforced, uniform, flexible TPO sheet, 45 mils minimum thickness.
- C. EPDM Protection Membrane: ASTM D 4637, Type I, non-reinforced, fire-retardant, uniform, flexible EPDM sheet, 45 mils minimum thickness.
- D. KEE Sheet Protection Membrane: ASTM D 6754/D 6754M, fabric reinforced and coated with a proprietary compound utilizing Ketone Ethylene Ester (KEE) as the principle polymer in the hybrid vinyl alloy, 36 mil minimum thickness.

2.7 AUXILIARY ROOFING MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.
 1. Adhesives and Sealants: Comply with VOC limits of authorities having jurisdiction.
- B. "Standing Seam" Extrusions: Surface-applied extrusions that simulate the appearance of a standing seam metal rib roof system; made of same material and color as roofing membrane.
- C. Sheet Membrane Flashing: Manufacturer's standard sheet flashing membrane, of recommended thickness and compatible with roofing membrane, of same color as roofing membrane, and appropriate for Project roofing application.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Clad Sheet Metal Flashing: Manufacturer's standard clad stainless steel flashing, minimum 24 gauge, of same color as roofing membrane
 - E. Pipe / Stack Flashing: Pre-molded flexible membrane pipe collar with aluminum ring bonded to base as recommended by roofing system manufacturer.
 - F. Bonding Adhesive: Manufacturer's standard bonding adhesive.
 - G. Roof Flashing Adhesive: Manufacturer's standard elastomeric contact adhesive for flashing details.
 - H. Fluid Applied, Reinforced Liquid Flashing: Manufacturer's standard two-component polymethyl-methacrylate-based liquid flashing.
 - 1. Basis of Design: Sika Sarnafil Inc.; Liquid Flashing.
 - I. Water Cutoff Mastic: Manufacturer's standard butyl mastic sealant.
 - J. Metal Termination Bars: ASTM A 666, Type 304 formed stainless steel or extruded alloy 6063 aluminum bars; 2 types, one flat and one flat with upper flange shaped to receive sealant, locations as indicated; 1 in by 1/8 in (25 mm by 3 mm) thick; predrilled at 8 in (200 mm) centers; with corrosive resistant fasteners. No plastic bars allowed.
 - K. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing components to substrate, and acceptable to roofing system manufacturer.
 - 1. All fasteners, anchors, nails, straps, bars and other concrete or wood fasteners shall be stainless steel.
 - L. Miscellaneous Accessories: Preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.
 - M. Lap Sealant: Manufacturer's standard single-component sealant, color to match roofing membrane.
 - N. Sealant Pockets (aka Pitch Pans) at Roof Penetrations: Sealant pockets (aka pitch pans) at roofing penetrations are not allowed and will be considered non-conforming work. Refer to drawings for allowable penetration details.
- 2.8 CONCRETE MOISTURE BARRIER / VAPOR RETARDER
- A. Concrete Moisture Barrier/Vapor Retarder: Products and systems formulated to reduce moisture vapor transmission and surface alkalinity from concrete substrates prior to installation of roofing materials. Concrete moisture barrier shall be recommended and approved in writing by roofing system manufacturer.
- 2.9 SUBSTRATE BOARDS FOR VAPOR RETARDER
- A. Substrate Boards: ASTM C1177/C1177M, glass-mat, water-resistant gypsum board or ASTM C1278/C1278M fiber-reinforced gypsum board.
 - 1. Manufacturers and Products:
 - a. Georgia-Pacific Gypsum LLC; DensDeck Prime.
 - b. USG; SECUROCK Gypsum-Fiber Roof Board.
 - 2. Thickness: Minimum 1/2 in (12 mm).

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.10 VAPOR RETARDER

- A. Self-Adhering-Sheet Vapor Retarder: Minimum 40-mil- (1.0-mm-) composite consisting of self-adhering rubberized asphalt and laminated film backing, maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m). Provide primer when recommended by vapor retarder manufacturer.
1. Basis of Design: Carlisle Syntec Systems; VapAir Seal 725 TR Air and Vapor Barrier/Temporary Roof.
 2. Basis of Design: Sika Sarnafil; Sarnavap 32 Self-Adhered.

2.11 ROOF INSULATION

- A. General: Preformed roof insulation boards manufactured or approved by roof membrane manufacturer. Comply with requirements of referenced standards, selected from manufacturer's standard sizes and of thicknesses. Provide accessories recommended by insulation manufacturer for intended use and compatible with roofing membrane.
1. Provide insulation thickness required to maintain minimum aged R-value as indicated on the Drawings.
 2. Insulation board thickness of individual insulation layers to be 2.6 in (65 mm) maximum.
 3. Insulation board size to be 4 ft by 4 ft (1.22 m by 1.22 m) maximum.
 4. Provide factory, tapered insulation boards where indicated for sloping to drains. Fabricate with 1/4 in (6 mm) per 12 in (300 mm) (1:48) taper, unless otherwise indicated.
 5. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.
- B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 2, Grade 2, coated polymer bonded glass-fiber mat facers on both major surfaces.
1. Compressive Strength: 20 psi (138 kPa).
- C. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 2, Grade 3, coated polymer bonded glass-fiber mat facers on both major surfaces.
1. Compressive Strength: 24 psi (172 kPa)

2.12 INSULATION ACCESSORIES

- A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.
- B. Cold Fluid-Applied Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
1. Bead-applied, low-rise, two-component urethane adhesive.
 - a. Basis of Design (Product Standard): OMG Inc.; Olybond 500.
- C. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.

2.13 ROOF COVER BOARDS

- A. Roof Cover Boards: ASTM C1177/C1177M, glass-mat, water-resistant gypsum board or ASTM C1278/C1278M fiber-reinforced gypsum board. Provide in maximum lengths and widths

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

available that will minimize short-edge-to-short-edge butt joints and to correspond to support system indicated.

1. Manufacturers and Products:
 - a. Georgia-Pacific Gypsum LLC; DensDeck Prime.
 - b. USG; SECUROCK Gypsum-Fiber Roof Board.
2. Thickness: Minimum **1/2 in (12 mm)**; or as required to meet performance requirements.
3. Thickness at Vertical Cover Boards (Back of Parapet): **5/8 in (16 mm)**.

- B. Roof Cover Boards: ASTM C1177/C1177M, glass-mat, water-resistant gypsum board. Provide in maximum lengths and widths available that will minimize short-edge-to-short-edge butt joints and to correspond to support system indicated.

1. Manufacturers and Products:
 - a. Georgia-Pacific Gypsum LLC; DensDeck StormX Prime.
2. Thickness: Minimum **5/8 in (16 mm)**.

2.14 FLEXIBLE WALKWAYS

- A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway pads or rolls, approximately **3/16 in (5 mm)** thick, as recommended by roofing system manufacturer.
1. Size: Approximately 36 by 60 inches (914 by 1524 mm).
 2. Color: As selected by Architect.

2.15 FLASHING AND SHEET METAL

- A. Flashing and Sheet Metal: Refer to Division 07 Section Sheet Metal Flashing and Trim.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions, including concrete moisture content, have been corrected in a manner complying with roofing manufacturer recommendations and Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.
1. Verify that roof openings and penetrations are in place and set and braced and that roof drains are securely clamped in place.
 2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thickness of insulation.
 3. Metal Decking Substrates:
 - a. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 05 Section Steel Roof Decking.
 4. Cast-in-Place Concrete or Composite Metal Deck Substrates:
 - a. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Concrete Moisture Testing: Perform one or both of the following tests as recommended by roofing manufacturer. Proceed with installation only after concrete substrates pass testing.
 - 1) Concrete Internal Relative Humidity: Not more than 75 percent, or as recommended by NRCA and roofing system manufacturer, when tested according to ASTM F2170.
 - a) Test Frequency: Perform three test probes for the first 1000 sq. ft. (93 sq. m) and one test probe per each 1000 sq. ft. (93 sq. m), or portion thereof, of roof deck, with no fewer than three test probes.
 - b) Submit test reports within 24 hours of performing tests.
 - 2) Manufacturer Concrete Moisture Test: Roofing manufacturer standard moisture test with measurements or results acceptable to roofing manufacturer.
 - c. Concrete Moisture Barrier/Vapor Retarder: For concrete substrates not meeting moisture test standards specified above, install concrete moisture barrier/vapor retarder to concrete substrate in accordance with manufacturer's written instructions.
 - d. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.
5. At lightweight insulating concrete substrates:
- a. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
 - b. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D 4263 or as recommended by roofing manufacturer.
- B. Substrate Surface Temperature at Cold Fluid-Applied Insulation Adhesive: Confirm that concrete substrate or substrate board surface temperature is a minimum 50 deg F (10 deg C) prior to application of adhesive.
- 3.2 INSTALLATION OF ROOFING, GENERAL
- A. General: Comply with recommendations in FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification and FM Global Property Loss Prevention Data Sheet 1-29.
 - B. Start installation of roofing in presence of roofing system manufacturer's technical personnel and Owner's testing and inspection agency, if applicable.
 - 1. Cooperate with testing and inspecting agencies engaged or required to perform services for installing roofing system.
 - C. Coordinate installation of roofing system so insulation and other components of the roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.
 - 1. Provide tie-offs at end of each day's work to cover exposed roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.
 - 2. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system.
 - 3. Remove and discard temporary seals before beginning work on adjoining roofing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Install roof membrane and auxiliary materials to tie in to existing roofing to maintain weathertightness of transition and not to void warranty for existing roofing system.
- E. Coordinate installation and transition of roofing system component serving as an air barrier with air barrier specified in other sections.
- F. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer's written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.
- G. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.
- C. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

3.4 INSTALLATION OF VAPOR RETARDER

- A. Vapor Retarder: Install according to roofing system manufacturer's written instructions.
- B. Self-Adhering-Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 and 6 inches (90 and 150 mm), respectively.
 - 1. Extend vertically up parapet walls and projections to a minimum height equal to height of insulation and cover board.
 - 2. Continuously seal side and end laps with tape.
- C. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into single-ply roofing.

3.5 INSTALLATION OF INSULATION

- A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.
- B. Install one or more layers of insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2 in (50 mm) or greater, install 2 or more layers with joints of each succeeding layer staggered from joints of previous layer
- C. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.
 - 1. Install base layer of insulation with joints staggered not less than 24 inches (610 mm) in adjacent rows.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - b. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - c. Trim insulation so that water flow is unrestricted.
 - d. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - e. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
 - a. Staggered end joints within each layer not less than 24 inches (610 mm) in adjacent rows.
 - b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
 - c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
 - d. Trim insulation so that water flow is unrestricted. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.
 - 1) Install tapered insulation under area of roofing to conform to slopes indicated.
 - e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
 - f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
 - g. Adhere each layer of insulation to substrate using the following adhesive setting methods in accordance with manufacturer recommendations and performance requirements.
 - 1) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - 2) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
- D. Installation Over Metal Decking:
1. Mechanically attach base layer of insulation using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.
 2. Adhere upper layers of insulation in accordance with manufacturer recommendations and performance requirements.
- E. Installation Over Cast-In-Place Concrete or Composite Metal and Concrete Decks:
1. Adhere base layer of insulation to concrete roof deck in accordance with manufacturer recommendations and performance requirements.
 2. Adhere upper layers of insulation in accordance with manufacturer recommendations and performance requirements.
- 3.6 INSTALLATION OF COVER BOARDS
- A. Install roof cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 in (150 mm) in each direction. Loosely butt roof cover boards together.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
2. At internal roof drains, conform to slope of drain sump.
 - a. Trim cover board so that water flow is unrestricted.
3. Cut and fit cover board tight to nailers, projections, and penetrations.
4. Adhere cover board to insulation using the following adhesive setting methods in accordance with manufacturer recommendations and performance requirements.
 - a. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.
 - b. Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.
5. Score boards, if necessary, to conform to substrate irregularities. Comply with manufacturer's installation recommendations to insure proper adhesion and adhesive set.

3.7 INSTALLATION OF ADHERED ROOF MEMBRANE

- A. Adhere roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.
- B. Unroll roof membrane and allow to relax before installing.
- C. Accurately align roof membrane and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
- D. Bonding Adhesive: Apply to substrate and underside of roof membrane at rate required by manufacturer and allow to partially dry before installing roof membrane. Do not apply to splice area of roof membrane.
- E. Fabric-Backed Roof Membrane Adhesive: Apply to substrate at rate required by manufacturer, and install fabric-backed roof membrane.
- F. In addition to adhering, mechanically fasten roof membrane securely at terminations, penetrations and perimeter of roofing.
- G. Apply roof membrane with side laps shingled with slope of roof deck where possible.
- H. Seams: Clean seam areas, overlap roofing, and hot-air weld side and end laps of roof membrane and sheet flashings to ensure a watertight seam installation.
 1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of roof membrane and sheet flashings.
 2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
 3. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
 4. Tape Seam Installation: Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping roofing membranes according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of roofing membrane terminations.
- I. Spread sealant bed over deck-drain flange at roof drains, and securely seal roof membrane in place with clamping ring.
- J. Install membrane roofing and auxiliary materials to tie in to existing roofing to maintain weather-tightness of transition and to not void warranty for existing roofing system.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.8 INSTALLATION OF BASE FLASHING

- A. Install sheet flashings and preformed flashing accessories and adhere to substrates according to roofing system manufacturer's written instructions.
- B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply bonding adhesive to seam area of flashing.
- C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
- D. Seams: Clean seam areas and overlap and firmly roll sheet flashings into the adhesive. Heat weld side and end laps to ensure a watertight seam installation.
- E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.9 INSTALLATION OF STANDING SEAM EXTRUSIONS

- A. Installation of extrusions shall be performed by installation personnel that have completed a mandatory installation and welding training course required by roofing membrane manufacturer.
- B. Install extrusions parallel with roof slope. Roofing membrane surface must be clean so as to obtain a proper weld between the extrusion and roofing membrane.
- C. Pre-assemble extrusions on the roof to the required length. Join individual lengths using connector and push together. Align extrusion with edge of membrane overlap, do not cover overlap. Check membrane seams and re-weld as required prior to extrusion installation.
- D. Install extrusions parallel with roof slope. Roofing membrane surface must be clean so as to obtain a proper hold between the extrusion and roofing membrane.
- E. Pre-assemble extrusions on the roof to the required length. Join individual lengths using connector and push together. Align extrusion with edge of membrane overlap, do not cover overlap. Check membrane seams and re-prime roof membrane as required prior to extrusion installation. Attach extrusions with butyl tape.

3.10 INSTALLATION OF WALKWAYS

- A. Flexible Walkways: Install walkway products according to manufacturer's written instructions.
 - 1. Provide 6-inch (76-mm) clearance between adjoining pads.
 - 2. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.11 PROTECTION MEMBRANE INSTALLATION AT DECORATIVE STONE AND DECORATIVE PAVER OVERBURDEN ASSEMBLY

- A. Loose-Laid Protection Membrane:
 - 1. Loose-lay protection membrane over roofing membrane in accordance with manufacturer's recommendation.
 - 2. Do not apply bonding adhesive to splice area of protection membrane.
 - 3. Roll protection membrane in place in accordance with manufacturer's recommendations.
 - 4. Adhere protection membrane at edges and other locations in accordance with manufacturer's recommended locations and adhesive.
- B. Clean seam areas, overlap protection membrane, and hot-air weld side and end laps of protection membrane according to manufacturer's written instructions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Decorative Pavers and Pedestals: Refer to Division 07 Section Roof Paver and Pedestal Assemblies.
- D. Decorative Stone: Apply aggregate uniformly over protection membrane to a minimum depth of 3 in (75 mm).

3.12 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 - 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
 - 2. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.
- B. Manufacturer's Cold Fluid-Applied Insulation Adhesive Inspection: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 - 1. Test Cuts: The cold fluid-applied insulation adhesive manufacturer shall perform field quality control test cuts of the cold fluid-applied insulation adhesive installation.
- C. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control, including infrared inspections on installed roof assemblies.
 - 1. Infrared Thermography: Testing agency shall survey entire roof area using infrared color thermography according to ASTM C1153.
 - a. Perform tests before overlying construction is placed.
 - b. After infrared scan, locate specific areas of leaks by electrical capacitance/impedance testing or nuclear hydrogen detection tests.
 - c. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
 - 1) Cost of retesting is Contractor's responsibility.
 - d. Testing agency shall prepare survey report of initial scan indicating locations of entrapped moisture, if any.
- D. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 - 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Prepare test and inspection reports.

3.13 REPAIR, CLEANING, AND PROTECTION

- A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
- B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
- C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

SECTION 07 51 13 – PREMIUM FOUR-PLY BUILT-UP ROOFING

PART 1 - GENERAL

1.1 AREAS COVERED

- A. Refer to roof plans for areas to be included in the scope of work.

1.2 DEFINITIONS

ACM	Asbestos Containing Materials
ANSI	American National Standards Institute
ASCE	American Society of Civil Engineers
ASTM	American Society for Testing and Materials
EPA	Environmental Protection Agency
EPDM	Ethylene Propylene Diene Monomer
EPS	Expanded Polystyrene
EVT	Equiviscous Temperatures
FM	Factory Mutual
IBC	International Building Code
KEE	Ketone Ethylene Ester
NDL	No Dollar Limit
NESHAP	National Emissions Standards for Hazardous Air Pollutants
NRCA	National Roofing Contractors Association
OSHA	Occupational Safety & Health Administration
SBS	Styrene-Butadiene-Styrene
SDI	Steel Deck Institute
SMACNA	Sheet Metal and Air Conditioning Contractors National Association
SPRI	Single Ply Roofing Industry
UL	Underwriters Laboratories, Inc.

1.3 REFERENCES (INCLUDING LATEST REVISIONS)

- A. Comply with governing local, state, and federal regulations, safety standards, and codes.
- B. Testing Laboratory Services: Test results shall meet or exceed established standards.
- C. Underwriters Laboratories, Inc. (Roofing Covering): Class A fire hazard classification.
- D. American Society for Testing and Materials (ASTM)
- E. The National Roofing Contractors Association (NRCA) - Roofing and Waterproofing Manual
- F. Sheet Metal and Air Conditioning Contractors National Association (SMACNA) - Architectural Sheet Metal Manual
- G. American Society of Civil Engineers – ASCE 7

1.4 INSTALLER QUALIFICATIONS

- A. Roofing installer must be:
1. Currently prequalified with the Owner in accordance with Owner's prequalification requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Currently in good standing with the manufacturer.
 3. Installer must be an experienced single firm specializing in the type of roofing repair and/or removal and replacement work required, employing only experienced workers for the class of work in which they are employed, having at least five (5) years successful experience on projects similar in size and scope and acceptable as applicators by the Architect.
 4. Contractor must have successfully completed previous projects warranted by the manufacturer.
- B. It shall remain each Bidder's responsibility to determine his current status with the manufacturer's certification plan.

1.5 MANUFACTURER QUALIFICATIONS

- A. A qualified manufacturer is one that is UL listed and has FM approvals for a membrane roofing system similar to that used for this project for a minimum of fifteen (15) years.

1.6 CONTRACT DOCUMENT QUALITY ASSURANCE

- A. In the case of an inconsistency between the drawings and specifications or within either document not clarified by addendum, the better quality or greater quantity of work shall be provided in accordance with the Architect's interpretation.

1.7 SUBMITTALS

- A. Shop Drawings: Provide manufacturer's approved details of all perimeter conditions, projection conditions, and any additional special job conditions which require details other than indicated in the drawings.
1. Shop drawings shall be engineered drawings, digital or CAD. Hand sketches, copies or tracings of project documents are not acceptable. Manufacturer's details are acceptable provided they are project specific and representative of all specified components and actual conditions.
 2. Submit only product data of all materials and/or components specified to be used on project.
- B. Submit samples of Manufacturer's and Contractor's warranty that is to be issued as Specified upon project completion, complete with any addenda necessary to meet the warranty requirements as specified.
- C. Submit copy of manufacturer's warranty application submitted to manufacturer.
- D. Submit a written statement from the roofing materials manufacturer approving the installer, the project's specified warranty, receipt of contractor's warranty application, specifications and drawings as described and/or shown for this project and stating the intent to guarantee the completed project.
- E. Refer to Specification Section 01 33 00 for additional Submittal requirements.

1.8 SYSTEM DESCRIPTION

- A. Four-ply, Built up Roofing System with asphalt flood coat and gravel applied in moppings of hot asphalt over mopped to covered board, mopped to rigid insulation.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in manufacturer's original, unopened containers and rolls with all labels intact and legible including labels indicating appropriate warnings, storage conditions, lot numbers, and usage instructions. Materials damaged in shipping or storage shall not be used.
- B. Manufacturer's packaging and/or roll plastic is not acceptable for exterior storage. Tarpaulin with grommets shall be minimum acceptable for exterior coverings. All materials stored as above shall be a minimum of four inches (4") off the substrate, and the tarpaulin tied off with rope.
- C. Deliver materials requiring fire resistance classification to the job with labels attached and packaged as required by labeling service.
- D. Deliver materials in sufficient quantity to allow continuity of work.
- E. Handle and store material and equipment in such a manner as to avoid damage. Liquid products shall be delivered sealed, in original containers.
- F. Handle rolled goods so as to prevent damage to edge or ends.
- G. Select and operate material handling equipment so as not to damage existing construction or applied roofing.
- H. Moisture-sensitive products shall be maintained in dry storage areas and properly covered. Provide continuous protection of materials against wetting and moisture absorption. Store roofing and flashing materials on clean raised platforms with weather protective covering when stored outdoors.
- I. Store rolled goods on end.
- J. Protect materials against damage by construction traffic.
- K. The proper storage of materials is the sole responsibility of the contractor and any wet or damaged roofing materials shall be discarded, removed from the project site, and replaced prior to application.
- L. Comply with fire and safety regulations, especially with materials which are extremely flammable and/or toxic. Use safety precautions indicated on labels.
- M. Products, such as emulsions liable to degrade as a result of being frozen shall be maintained above 40° F in heated storage.
- N. No storage of materials shall be permitted on roof areas other than those materials that are to be installed the same day. Any exception must be in written form.
- O. The contractor is to erect a temporary chain link fence, minimum six feet (6') in height, around work area stage and kettles. Fence is to be secured on a daily basis.

1.10 SITE CONDITIONS

- A. Job Condition Requirements:
 - 1. Coordinate the work of the contractor with the work to be performed by other trades, to ensure proper sequencing of the entire work. The contractor is to schedule his work so that adequate time is allowed for other trades to perform their work.
 - 2. Apply roofing in dry weather.
 - 3. Do not apply roofing when ambient temperature is below 45° F.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Proceed with roofing work only when weather conditions are in compliance with manufacturer's recommended limitations, and when conditions will permit the work to proceed in accordance with specifications.
5. Schedule the work so the building will be left watertight at the end of each day. Do not remove more roofing materials than can be reinstalled in any working day.
6. Load placed on the roof at any point shall not exceed the safe load for which the roof is designed.
7. All surfaces to receive new roofing shall be smooth, dry, and free from dirt, debris, and foreign material before any of this work is installed. Competent operators shall be in attendance at all times equipment is in use. Materials shall be stored neatly in areas designated by the Architect.
8. The contractor is to be aware of the potential for roof leaks on the existing roof as a result of ruptured blisters and/or roof mat damage caused by the vacuum process, foot traffic, or material and equipment storage. The contractor is to take all necessary precautions to prevent damage to the existing roof. All damage to the existing roof that could result in roof leaks is to be repaired on a daily basis by the roofing contractor.
9. The contractor shall follow local, state, and federal regulations, safety standards, and codes for the removal, handling, and disposal of asbestos containing materials, if present. When a conflict exists, follow the stricter document.
10. Due caution should be exercised so as not to alter the structural integrity of the deck. When cutting through any deck, care should be taken so as not to damage the deck or any part of the deck, such as post tension cables, etc.
11. All kettles shall have a fume recovery system, automatic thermostat control, and visible temperature gauge all in working order.
12. The contractor is to verify the location of all interior ducts, electrical lines, piping, conduit, and/or similar obstructions. The contractor is to perform all work in such a manner as to avoid contact with the above mentioned items.
13. Surface and air temperatures should be a minimum 40° F during applications of cleaner and waterproof coating and remain above 40° F for a minimum of four (4) hours following applications. Verify compatibility of cleaner with coatings, paints, primers and joint sealers specified. Advise Project Manager/Architect of any problems in this regard prior to commencing cleaning operations.
14. Temporary Sanitary Facilities:
 - a. The contractor shall furnish and maintain temporary sanitary facilities for employees use during this project, including temporary toilets, wash facilities, and drinking water fixtures.
 - b. Toilet units shall be self-contained, single-occupant, of the chemical, aerated recirculation, or combustion type, properly vented and fully enclosed with a glass fiber reinforced polyester shell or similar nonabsorbent material.
 - c. Facilities shall be installed where they will best service the project's needs, with Owner's/Owner's Representative's approval.
 - d. Contractor shall provide toilet tissue, paper towels, paper cups, and similar disposable materials for each facility. Provide covered waste containers for used material.
 - e. All portable facilities shall comply with local laws, codes, and regulations.
 - f. Contractor shall be responsible to see that the units are removed in a timely manner after the completion of the project.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Protection of Work and Property:
1. Work: The contractor shall maintain adequate protection of all his work from damage and shall protect the Owner's and adjacent property from injury or loss arising from this contract. Contractor shall provide and maintain at all times any OSHA required danger signs, guards, and/or obstructions necessary to protect the public and his workmen from any dangers inherent with or created by the work in progress. All federal, state, and city rules and requirements pertaining to safety and all EPA standards, OSHA standards, NESHAP regulations pertaining to asbestos as required shall be fulfilled by the contractor as part of his proposal.
 2. Property: Protect existing planting and landscaping as necessary or required to provide and maintain clearance and access to the work of this contract. Examples of two categories or degrees of protection are generally as follows: a) removal, protection, preservation, or replacement and replanting of plant materials; b) protection of plant materials in place, and replacement of any damage resulting from the contractor's operations.
 3. Finished roof areas shall be protected from damage by the contractor during construction.
 4. Twenty-four Hour Call: The contractor shall have personnel on call 24 hours per day, seven (7) days per week for emergencies during the course of a job. The Owner/Project Manager/Architect is to have the 24 hour numbers for the contact. Contractor must be able to respond to any emergency call and have personnel on-site within two (2) hours after contact. Numbers available to the Owner/Project Manager/Architect are to be mobile, home and office numbers for:
 - a) Job Foreman
 - b) Job Superintendent
 - c) Owner or Company Officer
- C. Damage to Work of Others: The contractor shall repair, refinish, and make good any damage to the building or landscaping resulting from any of his operation. This shall include, but is not limited to, any damage to plaster, tile work, wall covering, paint, ceilings, floors, or any other finished work. Damage done to the building, equipment, or grounds must be repaired at the successful contractor's expense holding the Owner harmless from any other claims for property damage and/or personal injury.
- D. Measurements: It will be the contractor's responsibility to obtain and/or verify any necessary dimensions by visiting the job site, and the contractor shall be responsible for the correctness of same. Any drawings supplied are for reference only.
- E. Use of Premises:
1. The contractor is advised that the Owner will occupy the building at all times, and the contractor must provide all safeguards required to protect personnel and to keep noise levels as low as reasonably possible for each operation.
 2. The contractor shall:
 - a) Coordinate work in such a manner as to not interfere with the normal operation of the building.
 - b) Assume full responsibility for protection and safekeeping of products stored on premises.
 - c) Agree to hold the Owner harmless in any and all liability of every nature and description which may be suffered through bodily injuries, including death of any persons by reason of negligence of the contractor, agents, employees, or subcontractors.
- F. Cleaning and Disposal of Materials:
1. Contractor shall keep the job clean and free from all loose materials and foreign matter. Contractor shall take necessary precautions to keep outside walls clean and shall allow no roofing materials to remain on the outside walls.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. All waste materials, rubbish, etc., shall be removed from the Owner's premises as accumulated. Rubbish shall be carefully handled to reduce the spread of dust. A suitable scrap chute or hoist must be used to lower any debris. At completion, all work areas shall be left broom clean and all contractor's equipment and materials removed from the site.
3. All bituminous or roofing related materials shall be removed from ladders, stairs, railings, and similar parts of the building.
4. Debris shall be deposited at an approved disposal site.

1.11 SEQUENCING AND SCHEDULING

- A. Coordinate roofing schedule with work of other trades.
- B. Plan lay up of roofing membrane with respect to deck slope. Avoid situations where excessive drainage could pass into completed roofing.
- C. Maintain communication with roofing manufacturer's representative to inform of progress and to schedule periodic inspections.
- D. All penetrations shall be made in roof prior to beginning with roof installation.

1.12 PERFORMANCE REQUIREMENTS

- A. Roofing System: Shall prevent water migration into roof assembly or building interior through the roof membrane and/or membrane base flashing.

1.13 QUALITY ASSURANCE

- A. Work of this Section to conform to these specifications, and to the roofing material manufacturer's application instructions. In the event of conflicts between the two, the more stringent requirement shall be observed.
- B. Maintain one copy of each document on site.
- C. Factory Technical Representative: Roofing Contractor is to arrange and schedule the manufacturer's technical representative to be on site the first day of the installation of manufacturer's roofing system. The manufacturer's technical representative shall inspect the work of the contractor at least one time each week during the installation of the roofing system. The manufacturer's technical representative shall perform with the owner's representative and the roofing contractor a final inspection of the roofing system. At the completion of the final inspection, provide to the roofing contractor a list of punch list items (if any) to be correct before technical acceptance of the roofing project and prior to issuance of manufacturer's Twenty (20) Year Full System Warranty. Field reports shall be provided after each inspection within five (5) days of site visit.
- D. Pullout Tests: Conduct pullout test on deck using appropriate fastener prior to roof system installation. Submit pullout results for manufacturer's review to determine specific fastening pattern for this project, minimum uplift requirements shall conform to current ASCE 7 criteria.

1.14 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacture of the products specified, with five (5) years documented experience in the uninterrupted, and unmodified manufacture of the roofing system and component elements of the roofing system specified herein.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Applicator: Company specializing in the work of this Section, having a minimum of five (5) years documented experience applying modified bitumen roofing systems, and approved by the Manufacturer for not less than three (3) years to install the specified roof system so as to achieve a twenty (20) year no dollar limit warranty.

1.15 REGULATORY REQUIREMENTS

- A. Conform to all applicable local codes for roof assembly fire hazard requirements.
- B. Provide certification of inspection confirming approval of design and installation by authority having jurisdiction.
- C. Fire Hazard Classifications: UL Class A.

1.16 PRE-INSTALLATION CONFERENCE

- A. Convene a preinstallation conference two weeks prior to commencing the Work.
- B. Require attendance of parties directly affecting the Work of this Section.
- C. Review condition of roof deck and installation, installation procedures and coordination with related work.

1.17 ENVIRONMENT REQUIREMENTS

- A. Do not apply roofing during inclement weather.
- B. Do not apply roofing membrane to damp or frozen deck or substrate.

1.18 WARRANTY

- A. Roofing - Manufacturer: Project shall be installed in such a manner that the roofing material manufacturer will furnish a written twenty (20) year NDL type warranty from the date of substantial completion of the completed project.
- B. Roofing - Contractor: The contractor, jointly with any subcontractors employed by him, shall guarantee the work required and performed under this contract will be free from defects in workmanship and materials, and that the building will be and remain waterproof for a two (2) year warranty period, after the Owner accepts the work as substantially complete. The warranty shall be in approved notarized written form, to obligate the contractor and his subcontractors, if any, to make good the requirements of the warranty.
- C. Warranty repairs shall be performed by a certified installer. The repairs shall be performed in accordance with the manufacturer's written instructions and recommended procedures so as to not void the warranty (if applicable). Repair of the system, including materials and labor, shall be done at no cost to the Owner.
- D. Provide twenty (20) year Manufacturer's No-Dollar-Limit (NDL) warranty on the above-deck roofing system. Warranty to cover costs of material and labor to replace roofing material which fails to resist the penetration of water due to failure of either material or workmanship, with no penal sum.
- E. Manufacturer's warranty shall cover above deck roofing components against wind uplift resulting from wind pressures based on the requirements of ASCE 7.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. New work shall be installed so as not to affect or void existing manufacturer's warranty.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Samples of all materials used on the project, which are not supplied by the membrane manufacturer, shall be submitted to the membrane manufacturer for written approval prior to work starting.
- B. All materials used on the project shall be asbestos free.
- C. All materials shall be furnished, specified, or approved in writing by the manufacturer holding the existing warranty. OR All materials shall be compatible with the existing modified bitumen roofing system and in accordance to NRCA recommendations and accepted roofing industry standards.
- D. All materials shall be furnished, specified, or approved in writing by the manufacturer issuing the warranty.

2.2 MANUFACTURERS – SHEET AND BITUMINOUS MATERIALS

- A. Tamko Roofing Products
- B. Johns Manville
- C. GAF
- D. Atlas Roof Corporation
- C. Or prior approved equal by Owner / Project Manager

2.3 ASBESTOS CONTAINING MATERIALS

- A. No asbestos containing materials shall be used on job site or incorporated into work.

2.4 PLY SHEETS

- A. Continuous strand glass fiber mat bonded together with resinous binder and coated with weathering grade asphalt; complies with requirements of ASTM D2178, Type VI or 503, Tam-Ply Premium, or approved equal.

2.5 FLASHING MEMBRANE

- A. Granule surfaced modified bitumen flashing materials with polyester reinforced SBS (styrene butadiene styrene-rubber); suitable for mop application with hot asphalt such as "Dynaflex" by Schuller, or Awaplan by Tamko Roofing Products, Inc., or approved equal.
- B. Thickness: 110 mils minimum.
- C. Color: White.

2.6 BITUMEN

- A. Shall be ASTM D 312 Type IV extra steep asphalt.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Shall be Low Fuming Perma Mop ASTM D 312-15 modified asphalt, and as acceptable by roofing manufacturer to comply with warranty requirements.

2.7 BASE SHEET FOR USE OVER CONCRETE ROOF DECK

- A. Shall be Underwriters Laboratory approved.
- B. Shall be premium grade, moisture resistant and flame retardant inorganic venting base sheet, asphalt coated on both sides and surfaced on one side with mineral granules, with a series of closely spaced 1/2" perforations spaced on 4" centers, ASTM D4897, Type II and ASTM D3672, Type II.

2.8 ASPHALT ROOF PRIMER

- A. Quick-dry asphalt-based primer for priming of asphalt roof surfaces, as manufactured by Gardner-Gibson, Inc. / GAF, or approved equal.

ASTM	D 41
Flash Point	105° F
Viscosity at 80° F (ASTM D 217)	50-60 K.U.
Weight per gallon	7.4 pounds
Drying time (to touch)	Min. 4 hours

2.9 ASPHALT PLASTIC ROOF CEMENT

- A. Trowel-applied mastic used on flanges of gravel stops, stacks, vents, and similar applications, as manufactured by Gardner-Gibson, Inc. / Johns-Manville, or approved equal.

ASTM	D 4586
Flash Point	105° F
Weight per gallon (approximate)	11 lbs.
Viscosity @ 80° F (ASTM D 217)	270-330
% Non-Volatile (Fed. Test Method 141)	70% Min.
% Specially Processed Bitumen	30% Min.
% Total Solids, by Volume	75% Min.
Dry film thickness of 1 gal./15 sq. ft.	85 Mils
Drying time	2 to 3 days
Service Temperature, Extended Exposure	-20° to +150° F
Resistance to Oils & Solvents	Poor
Resistance to Sunlight	Good
Resistance to Chemicals	Good
Effects of Weathering	Slight chalking
Water Resistance	
Under Good Drainage Conditions	Excellent
Under Continuous Submersion	Fair

2.10 INSULATION

- A. All insulation shall be in compliance with Section 07 22 16 Roof Board Insulation.
- B. All insulation shall be approved in writing by the membrane manufacturer as to thickness, type, and manufacturer. All insulation must be approved for the specific application, Underwriters Laboratory approved

2.11 SUBSTRATE BOARDS

- A. All substrate boards shall be in compliance with Section 07 22 16 Roof Board Insulation

2.12 CANT STRIP

- A. Structural: Shall be wood where used for structural purposes meeting NRCA, FM Global and Underwriters Laboratory guidelines.
- B. Non-structural: Shall be wood fiber where used for non-structural purposes, conforming to ASTM C208 and C209.

2.13 ROUGH LUMBER

- A. All wood nailers, structural cants, curbs, and other miscellaneous rough carpentry, shall be lumber as recommended by NRCA, and Underwriters Laboratory guidelines.
- B. Vertical Wall Shimming Material: Shall be exterior grade plywood unless otherwise accepted by Project Manager/Architect. Thickness shall be as required for attachment or to make material flashing flush or level with offsets and/or transitions, minimum three-fourths inch (3/4"). Proper selection of material is required to achieve UL guidelines.
- C. Where plywood is not used on the back of the parapet contractor to provide a continuous 22 ga. Sheet metal strap over the face of the studs at the through wall flashing location to accommodate the flashing fasteners.

2.14 FASTENERS

- A. All substrate boards shall be in compliance with Section 07 22 16 Roof Board Insulation.
- B. Fasteners and fastening plates or bars shall be listed in the FM Global Approval Guide, and be as recommended by the fastener manufacturer for the specific application.

2.15 FIBERGLASS COATED MEMBRANE

- A. A non-rotting, non-absorbent woven fiberglass membrane having a vinyl coating designed for membrane reinforcement for all roof repairs. Compatible with either tar or asphalt bitumens, having ten (10) open-weave squares per inch.

2.16 ROOF DRAINS

- A. All roof drains shall be in compliance with Division 22- Plumbing.
- B. Lead Flashing: Shall be four pound (4#) lead, minimum thirty inches by thirty inches (30" x 30"), used for flashing of internal drains
- C. Drains shall be placed no closer than 42" apart.

2.17 LEAD JACKS

- A. Shall be four pound (4#) lead, and of dimensions required to completely cover existing plumbing stack.

2.18 LIQUID FLASHING SYSTEM

- A. Liquid flashing system to be manufacturers recommended system comprising a liquid compound and sheet scrim fabric or equivalent.

2.19 PIPE SUPPORTS

- A. To support conduit or pipe sized up to Ø8" when height adjustment is needed use Model # SS1000A Adjustable Pipe Support. 17" circular base with 12 ga. framing channel, 18"L, attached to 17" circular base using ½" threaded rods, 12"L, with washers and nuts. Height of channel can be adjusted along the length of the ½" threaded rods. Strut clamps are suggested to hold piping or conduit in place.
 - 1. Manufacturers:
 - a) Advanced Support Products, Inc.
- B. To support water or gas piping up to Ø8" or when a roller support with height adjustment is needed use Model # SS1000RA Pipe Support with Adjustable Roller. 17" circular base with SBR heavy duty rubber roller assembly attached to 17" circular base using ½" threaded rods, 12"L, with washers and nuts. Height of roller assembly can be adjusted along the length of the ½" threaded rods.
 - 1. Manufacturers:
 - a) Advanced Support Products, Inc.
- C. To support multiple pipe runs, piping up to Ø12" when height adjustment or pipe suspension is needed use Model # SS4000P, SS6000P or SS8000P Adjustable Support Bridge. SS4000P Adjustable Support Bridge is made of four (4) 17" circular bases and 12ga. framing channel formed to make one "H" shaped support with crossbar. SS6000P Adjustable Support Bridge is made of six (6) 17" circular bases and 12ga. framing channel formed to make two "H" shaped supports with crossbar. SS8000P Adjustable Support Bridge is made of eight (8) 17" circular bases and 12ga. framing channel formed to make three "H" shaped supports with crossbar. Crossbar height is adjustable and offered in 18", 24", 36", and 48" lengths. Use Adjustable Support Bridge with strut clamps or roller accessories or use optional hanger supports to suspend water or gas piping at various heights. Optional hanger supports attached to support frame using ½" threaded rods. Hangers offer complete height adjustments along the length of ½" threaded rods.
 - 1. Manufacturers:
 - a) Advanced Support Products, Inc.

2.20 ROOF WALKWAY PADS

- A. Walkway Pads: Manufacturer's standard walkway pads consisting of modified asphalt, reinforcements and fillers with a ceramic granule surface on both sides. Thickness shall be 1/4" min.

2.21 MECHANICAL FASTENERS FOR FLEXIBLE FLASHING

- A. Concrete: Drive Pin having corrosion resistant mandrel with stainless steel pin, factory equipped with metal clad EPDM washer, Rawl Zamac
- B. Concrete Masonry: Hot-dip galvanized, threaded fastener with integral rubber sealing washer, Tap-Con by Rawl.
- C. Brick Masonry: Hot-dip galvanized, threaded fastener with integral rubber sealing washer, Tap-Con by Rawl.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Wood: Galvanized steel, annular ring roofing nails with integral one inch (1") cap, roofing nail by Simplex.

2.22 ROOF PLAQUE

- A. Contractor shall provide a sixteen inch by sixteen inch (16" x 16") metal plaque on the underside of each of the roof hatches that states the following:
1. Architect name, phone number. As project dictates
 2. School district phone number.
 3. School district emergency phone number,
 4. Contractor name, phone number.
 5. Subcontractor name, phone number.
 6. Roof Consultant, name, phone number.
 7. Roof system, warranty information, and
 8. Roof Manufacturer, phone number.

2.23 EXTERIOR ROOF ACCESS LADDER

- A. Fixed Ladder Design, with the required OSHA Approved fall protection.
- B. Refer to Specification Section 07 72 00 Roof Accessories for further information.

2.24 TERMINATION/PRESSURE BARS

- A. Aluminum strip shall be extruded channel bar with a mill finish, width one inch (1"), thickness 0.100" ± .008", leg height one-fourth inch (1/4") top and bottom, leg angle ninety degrees (90°), for perimeter and curb anchorage, having predrilled holes six inches (6") on center, as manufactured by Olympic Fasteners, or approved equal.

2.25 SELF-ADHERING UNDERLAYMENT FOR TEMPORARY WATERPROOFING

- A. A premium heavyweight, minimum 60 mil, self-adhering high temperature 260 degree min, underlayment, to use as a temporary waterproofing barrier.

2.26 ROOFING AGGREGATE

- A. ASTM D 1863, crushed stone or water worn gravel suitable for use as roof surfacing.
- B. General Characteristics at Time of Application: Hard, durable, with dry surface dry, free of clay, loam, sand, or other foreign substances, and shall conform to size grading and property requirements.
- C. Grading: Aggregate shall conform to sieve analysis as follows:

<u>Sieve</u>	<u>Total Passing</u>
1 inch	<100
3/4 inch	90 to 100
3/8 inch	20 to 55
No. 4	0 to 10
No. 8	0 to 5

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

D. Physical Property Requirements:

Moisture, crushed stone and gravel	2.0% max.
Unit Weight (loose) , min.	60 lbs./cu. ft.
Dust	2.0% max.
Hardness, passing 3.35 mm (No. 6) sieve	20% max.

2.27 MULTI-COMPONENT POLYURETHANE SEALANT

- A. Except as otherwise indicated, provide manufacturer's standard, non-modified, 2-or-more-part, polyurethane-based, elastomeric sealant; complying with either ASTM C 920, Type M, Class 25, or FS TT-S-00227E, Class A; self-leveling grade/type where used in joints of surfaces subject to traffic, otherwise non-sag grade/type, as manufactured by Sonneborn, or approved equal.
- B. Durability: Less than 0.5 square inch adhesion/cohesion loss for three (3) samples of both mortar and aluminum; ASTM C 719 test procedure.
- C. Adhesion in Peel: Fifteen pound (15#) peel strength and 10% maximum loss of bond to substrate; ASTM C 794.
- D. Bituminous Modification: Where joint surfaces contain or are contaminated with bituminous materials, provide manufacturer's modified type sealant which is compatible with joint surfaces (modified with coal-tar or asphalt as required).

2.28 EXPANDED POLYETHYLENE JOINT FILLER

- A. Provide flexible, compressible, closed-cell, polyethylene of not less than 10 psi compression deflection (25%); except provide higher compression deflection strength as may be necessary to withstand installation forces and provide proper support for sealants, surface water absorption of not more than 0.1 pounds per square foot, as manufactured by Sonneborn, or approved equal.

2.29 SEALANT BACKER ROD

- A. Provide compressible rod stock of polyethylene foam, polyurethane foam, polyethylene jacketed polyurethane foam, butyl rubber foam, neoprene foam or other flexible, permanent, durable, non-absorptive material as recommended by sealant manufacturer for back-up of and compatibility with sealant. Where used with hot-applied sealant, provide heat-resistant type which will not be deteriorated by sealant application temperature as indicated.

2.30 FLUID APPLIED URETHANE DECK SEALANT SYSTEM

- A. Shall be a two layer, minimum sixty (60) mil dry film thickness, two-component liquid urethane waterproofing system suitable for concrete deck application (exposed), as manufactured by Gates Engineering, UDC-82, or approved equal.

2.31 DELIVERY AND STORAGE

- A. All materials shall be delivered with appropriate carton and can labels indicating appropriate warnings, storage conditions, lot numbers, and usage instructions. Materials damaged in shipping or storage shall not be used.

2.32 PRECAUTIONS

- A. Some of the indicated materials are extremely flammable and/or toxic. Use precautions indicated on can and carton labels.

2.33 OVERNIGHT SEAL

- A. Hot applied asphalt bitumen shall be provided for the purpose of night sealing the roof system.

2.34 MISCELLANEOUS MATERIALS

- A. Other materials shall be as specified or of the best grade for the proposed use as recommended by the manufacturer.

2.35 EXPANSION JOINTS

- A. Provide field fabricated wood expansion joints where shown on the drawings in size as indicated and acceptable to authorities having jurisdiction.
- B. Expansion joint nailers shall extend upward a minimum of eight inches (8") above finish roof height.
- C. Existing expansion joints shall be replaced with curbed expansion joints which extend a minimum of eight inches (8") above the finished roof surface. New expansion joint cover shall be fabricated of sheet metal in accordance with NRCA and/or SMACNA details and flashed in accordance with roofing material manufacturer's recommended procedures.
- D. Expansion joints at walls and field of the roof shall be curbed as outlined in accordance with NRCA and SMACNA guidelines. The curbs will be flashed as outlined above in Curb Flashings.
- E. Provide structural expansion joint in the field of the roof where the roof span exceeds 200'-0" in any direction.

PART 3 – EXECUTION

3.1 GENERAL

- A. In the instance of a conflict between these specifications and those of the manufacturer and/or current NRCA, Underwriters Laboratory and IBC guidelines, the more stringent specifications (better quality or greater quantity of work) shall take precedence.
- B. The manufacturer's Technical Specifications and current NRCA, Underwriters Laboratory and IBC guidelines shall be considered a part of this specification and should be referred to for more specific application procedures and recommendations.
- C. Application of materials shall be in strict accordance with the manufacturer's recommendations and current NRCA, Underwriters Laboratory and IBC guidelines, except where more stringent requirements are shown or specified. In the instance of a conflict between these specifications and those of the manufacturer and/or current NRCA, Underwriters Laboratory and IBC guidelines, the more stringent specifications shall take precedence.
- D. General Installation:
 - 1. Comply with governing local, state, and federal regulations, safety standards, and codes. When conflict exists, the more restrictive document shall govern.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Protect adjacent areas with tarpaulin or other durable materials.
 3. Contractor shall prevent overspray and be responsible for parking lot areas and/or adjoining areas not part of this contract.
 4. Contractor shall be responsible for sealing, as required, all openings that may allow bitumen migration or drippage, i.e., envelopes, and filler strips.
 5. Prepare surfaces according to manufacturer's or applicator's published instructions. All metal that is to receive bitumen, or come in contact with bitumen or adhesive, shall be first primed with appropriate primer. Any prefinished galvanized sheet steel that is to receive bitumen, or come in contact with bitumen or adhesive, shall be scored, scuffed or abraded before receiving primer application.
 6. Use cleaning materials or primers necessary to render an acceptable surface/substrate.
 7. All surfaces/substrates shall be clean and dry prior to application of materials.
 8. Prior to application of felts and or membrane, all foreign matter, gravel, etc., shall be removed from the insulation and/or substrate. Gravel or debris between the insulation/substrate and plies is not acceptable.
 9. Prior to application of flashing membranes, substrate shall be clean and free of any previously installed roofing materials. Contractor shall ensure that all components of substrate be structurally sound before application of flashing materials.
 10. Bitumen kettle shall have a fume recovery system, and visible thermometer to provide positive monitoring of the bitumen temperature when it is heated in accordance with manufacturer's instructions.
 11. Ambient temperature shall be 40° F and rising.
 12. The underlayment plies and field membrane are to be laid in the direction of maximum roof slope, working from bottom of slope toward ridge.
 13. Wrinkles, buckles, kinks, and fish mouths are not acceptable when laying membranes.
 14. Dry voids of membrane on membrane are not acceptable.
 15. All surfaces that are to receive the self-adhered membranes shall be primed with a fast-drying asphaltic primer.
 16. Application of roofing shall immediately follow the application of any insulation as a continuous operation. Under no circumstance is insulation to be left exposed at the end of the day. Insulation left exposed overnight will be removed and replaced at no cost to the Owner.
 17. Masonry and metal surfaces to receive roofing shall be primed with a uniform coating of approved asphalt primer.
 18. Unless otherwise noted, all layers of roofing shall be installed perpendicular to the slope of the deck; completely free of wrinkles, creases or fishmouths. Membrane application by the "mop and flop" technique will not be permitted.
 19. Asphalt kettles or tankers employed under this Contract shall be equipped with functioning, accurately calibrated, readable thermometers.
 20. Asphalt shall be applied in uniform mopping free of voids or holidays, at a rate recommended by the roofing manufacturer and not more than 25° F above the asphalt's listed Equiviscous temperature (EVT).
 21. Perform work of this Section in accordance with best standards of practice relating to trades involved.
- F. Do not apply roofing materials unless asphalt application temperatures can be maintained within the equiviscous temperature (EVT) range; or when water in any form (i.e., rain, dew, ice, frost, snow, etc.) is present on the deck. Do not heat asphalt above finished blowing temperature, flash point or 525 degrees Fahrenheit.
1. The equiviscous temperature (EVT) is defined by the NRCA as the temperature at which a bitumen attains the proper viscosity for built-up membrane application.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. The EVT range is defined by the NRCA as the recommended bitumen application temperature range. The range is approximately 25 degrees Fahrenheit above or below the EVT. The EVT range is measured in the mop cart or mechanical spreader just prior to the application of bitumen to the substrate.
 3. The proper viscosity for mop application is 125 centipoise. The proper viscosity for mechanical spreader application is 75 centipoise. If both mop and mechanical application is used, the proper viscosity for both is 75 centipoise.
- G. Consider roof system manufacturer's technical specifications part of this specification and use as reference for specific application procedures and recommendations.
- H. Complete roofing, flashing, sheet metal, and other related items daily with exception taken to flood coat and aggregate.

3.2 EXAMINATION

- A. Examine roof deck and related surfaces and verify that there are not conditions such as inadequate anchorage, foreign materials, moisture, ridges, or other conditions which would prevent satisfactory installation of roofing system.
- B. Correct conditions requiring correction or completion prior to installation of roofing system. Notify Owner's representative (Owner's representative, Contractor Officer) of unacceptable conditions.
- C. Do not proceed until defects are corrected.
- D. Verify location of interior ducts, electrical lines, piping, conduit, and similar obstructions. Perform work in manner to avoid contact with above mentioned items.
- E. Verify debris has been removed.
- F. Start of work under this Part Three constitutes acceptance of deck substrate and site conditions by roofing contractor.

3.3 SUBSTRATE PREPARATION

- A. New Construction: Substrate shall be smooth and free of debris, sharp edges, and other surface irregularities prior to work starting. Substrate repair shall be performed as required to minimum of NRCA standards.
- B. Concrete Decks:
 1. Surface irregularities shall be corrected with quick-setting mortar mix.
 2. Joints should be filled with quick-setting mortar mix to provide a level surface.
 3. Concrete must be primed and allowed to dry before applying any asphalt.
 4. The following shall be used and passed as an acceptable means of testing the dryness of a concrete roof deck:
 - a) Use approximately one (1) pint of bitumen that is specified for use in the roof membrane, heated to a temperature that will ensure an application temperature of 400° F.
 - b) Pour the bitumen on the surface of the deck. If the bitumen foams, the deck is NOT dry enough to roof.
 - c) After the bitumen has cooled, an attempt should be made to strip the bitumen from the deck surface. If the bitumen strips clean from the deck, the deck is NOT dry enough to roof.
 5. Prestressed, precast concrete slabs require the following preparation:
 - a) If there is a screeded fill over the slabs, the joints of the slabs should be left open.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b) If screeded fill is not used to cover the slabs, the joints of the slabs shall be sealed with an elastomeric sealant.
- c) After priming, six inch (6") wide self-adhering membrane strips shall be applied over each joint in the deck before laying the venting base sheet.
- d) Before applying the membrane strips to the joints, a leveling fill of quick-setting mortar must be used whenever slab edges are out of plane by more than one-half inch (1/2").

3.4 ASPHALT HEATING

- A. Use low burner flames during initial melt-downs. Circulate asphalt after initial melt-down.
 - 1. Maximum asphalt temperature shall be 25°F below the flash point.
- B. Avoid prolonged heating of asphalt at high temperatures. Reduce the asphalt temperature to below 500°F if asphalt is not being used for periods of four (4) hours or more.
- C. Kettle shall be free of contaminants.
- D. Application rates: Bitumen quantities for waterstop/tie-offs, flashings, miscellaneous detail applications, and minimum kettle capacity are not included in application rates. To account for these factors, add approximately 25 percent additional bitumen on a total job average basis.

3.5 ROUGH CARPENTRY

- A. All rough carpentry shall be in compliance with Section 06 10 53 Miscellaneous Carpentry.
- B. Nailers shall be installed according to NRCA, Underwriters Laboratory, and IBC guidelines.
- C. Wooden nailers shall be installed at Metal edges, drip edges, expansion joints, and on outside perimeter of building.
- D. Metal Edge and drip edge nailers shall be the same height as the new insulation being installed where required.
- E. Nailers shall be raised if necessary by anchoring an additional nailer of appropriate height to the existing nailer if the existing nailer is not to be replaced.
- F. Expansion joint nailers shall extend upward a minimum of eight inches (8") above finish roof height.
- G. Where parapet wall exists, specified vertical wall shimming material shall be installed beginning at roof height up to a minimum of twelve inches (12") above finished roof surface, or as detailed, to provide substrate for horizontal termination of roof to wall flashing system.
- H. Any lumber or shimming required for attachment, or to make material flashing flush or level with offsets and/or transitions, shall be incorporated in these specifications.

3.6 CANTS

- A. Provide 45 degree cant strips (no partials) at all vertical and horizontal surfaces, such as walls, parapet walls, curbs, expansion joints, etc., and as recommended by membrane manufacturer.
- B. Cants shall provide a four (4) inch rise above the roof's surface.
- C. Toe of cant shall be level with the surface to receive new roof membrane and in all cases anchored according to NRCA, Underwriters Laboratory, and IBC guidelines.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Cant strips shall be installed at the intersection of the deck and all vertical surfaces.
- E. If a wood cant is used where insulation exists, cant shall be toe nailed into treated wood nailer the same height as insulation.

3.7 ADHERED BASE SHEET OVER SUBSTRATE

- A. Substrate shall be covered with specified base sheet adhered as follows:
 - 1. The concrete deck shall be primed with concrete primer in accordance with manufacturer's recommended procedures and allowed to dry. Following the application of the primer, adhesion shall conform to the ASCE 7 criteria for wind uplift as dictated by wind zone applicable to location of project. Securement shall be determined by building height, location and geographical area of the United States. It is the contractor's responsibility to consult current codes, publications, literature, and bulletins of IBC and the adhesive manufacturer that are in effect at the time of this project.
- B. If slope dictates, underlayment plies shall be installed using the strapped method going with the slope as required by membrane manufacturer.

3.8 PULLOUT TESTS

- A. Conduct pullout test on deck using appropriate fastener prior to roof system installation. Submit pullout results for manufacturer's review to determine specific fastening pattern for this project, minimum uplift requirements shall conform to current ASCE 7 criteria.

3.9 INSULATION

- A. All insulation shall be in compliance with Section 07 22 16 Roof Board Insulation.
- B. All insulation shall be approved in writing by the membrane manufacturer as to thickness, type, and manufacturer. All insulation must be approved for the specific application, Underwriters Laboratory approved

3.10 ROOF MEMBRANE INSTALLATION

- A. Install roof membrane materials in accordance with manufacturer's current published application instructions.
- B. Asphalt: Apply asphalt bitumen in accordance with EVT concept. Asphalt temperature shall be within 25 degrees of EVT at point of application. If this approximate temperature cannot be maintained at point of application, operations shall be discontinued. Asphalt shall not be heated above finished blowing temperature or maximum temperature of 525 degrees Fahrenheit.
- C. Embed four plies of roofing felt in shingle fashion (starter sheets required), lapping 30" inches into uniform moppings of steep appropriate grade hot asphalt bitumen. Plies may be left exposed as approved by roofing membrane manufacturer. Fiberglass Rolls are 40" inches
- D. Apply roofing felt by mechanically attaching felt layer or by rolling into hot bitumen applied by machine or hand mopping. Shingle felt in, free of buckles and fishmouths. Lay each ply so that flow of water is over or parallel to (but never against) lap. End laps shall be six inches (6") minimum and at least twelve inches (12") apart.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Embed full 40" width of each ply in steep Type IV asphalt bitumen. Apply asphalt uniformly at nominal rate of 25 pounds per 100 square feet (minimum of 23 pounds and maximum of 45 pounds). Total asphalt requirement for each ply per square (25 pounds) is based upon one hundred (100) square feet of felt. Bitumen shall be sufficiently hot to ensure complete bond of ply to ply. Fiberglass Rolls are 40" inches wide
- F. "Brooming in" is required under normal conditions for both felt layer and hand mopping. Brooming is essential in cold weather and must be done promptly and effectively to eliminate voids and to ensure adequate adhesion. Moderately soft commercial broom or squeegee (40" wide) should be used for this purpose. Broom should be pulled while walking off felts.
- G. Backnailing:
 - 1. Provide wood nailer strips secured to deck in areas where decking slope exceeds two inches (2") per foot.
 - 2. Nailer strips shall match thickness of roof insulation and provide securement for both insulation and roof membrane.
 - 3. Place nailer strips and backnail roof membrane in accordance with manufacturer's recommendations based upon slope and location.
- H. Foot and equipment traffic over felt should be held to absolute minimum during application and until asphalt has sufficiently cooled to prevent bitumen displacement.

3.11 BACKNAILING/STRAPPING

- A. On slopes greater than one inch (1") in twelve inches (12"), refer to NRCA and/or manufacturer's guidelines for backnailing procedures and follow the more stringent guidelines for all specified materials.

<u>Slope</u>	<u>Interply& Top Pour</u>	<u>Backnail</u>	<u>Strap</u>
0 - ½" per 12"	Type IV	No	No
½" - 2" per 12"	Type IV	Yes	Strap if possible
2" - 3" per 12"	Type IV	Yes	Yes

3.12 MODIFIED BITUMEN BASE FLASHING

- A. Place cant strips on top of roof insulation or nailer. Nail to deck and to wall or vertical nailer where possible. If not possible to nail, secure by applying plastic roof cement.
- B. Apply flashings only after built-up roofing membrane is in place.
- C. All flashings shall be constructed of flashings of two plies; one ply of SBS modified asphalt glass reinforced base sheet and one ply of modified bitumen flashing membrane.
- D. Overall minimum height of top of flashing membrane above top of roof surface is eight inches (8"); maximum height is fourteen inches (14") unless otherwise noted on drawings. Flashing membrane must extend horizontally a minimum of four inches (4") onto field of roof surface beyond bottom edge or cant strip or as shown on drawings. Side laps shall be four inches (4") minimum and strip in vertical lamps with a four inch (4") wide strip of fiberglass mesh embedded in flashing grade cement.
- E. Set SBS modified base sheet layer and SBS modified granulated bitumen flashing membrane in separate moppings of hot Type IV asphalt at 25 pound per 100 square feet minimum.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Mechanically attach top edge of modified bitumen membrane flashing with screws, waterproof washers, and aluminum compression bar. Fastener spacing shall be six inches (6") on center. Nailing top edge of modified bitumen membrane is not accepted. Three (3) course with plastic cement and fiberglass fabric to seal.
- G. Prime flashing surfaces with asphalt primer and permit to dry prior to application of modified bitumen membrane flashing. Apply asphalt primer at one gallon per 100 square feet minimum.
- H. Metal surfaces are not acceptable for application of base flashing membrane.
- I. Inside and Outside Corners: Cut out and install oval boot at inside and outside corners in accordance with manufacturer's requirements.
- J. Extend hot asphalt one-half inch (1/2") minimum beyond side, field, or end lap.
- K. Fully bond flashing to substrate. Ensure flashing material conforms and adheres to vertical cant and horizontal substrates.
- L. All vertical seams of the new base flashing assembly shall be addressed with a 4" inch strip of the granulated modified membrane.

All vertical seams to be treated with a three course application of mastic and membrane.
- M. Bond flashing materials to substrate 100 percent.

3.13 CANTS

- A. Provide full 45 degree cant strips (no partials) at all intersections of vertical and horizontal surfaces, such as walls, parapet walls, curbs, expansion joints, etc., and as recommended by membrane manufacturer.
- B. Cants shall provide a four (4) inch rise above the roof's surface. (Vertical, not diagonal)
- C. Toe of cant shall be level with the surface to receive new roof membrane and in all cases anchored according to NRCA, Underwriters Laboratory, and IBC guidelines.
- D. Cant strips shall be installed at the intersection of the deck and all vertical surfaces.
- E. If a wood cant is used where insulation exists, cant shall be toe nailed into treated wood nailer under cant the same height as insulation.

3.14 PROJECTION FLASHINGS

- A. Plumbing Vents: Soil vent stack pipes shall receive new lead flashings installed in strict accordance with practices set forth in the NRCA Roofing Manual. The lead shall be carried up and over the top of the stack, and crimped down into the pipe to form a watertight seal. Projections that cannot be sealed thus should be boxed in and flashed as recommended by the roof membrane manufacturer.
- B. Square Projections: Cut a slit in the membrane to correspond with the position of the projection, and lay the membrane in hot asphalt. Apply another layer of membrane in exactly the same fashion, but from the opposite direction. For metal flange-type projections, after doing above, strip in with six inch (6") strips of membrane.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Round Projections: Cut membrane square and eighteen inches (18") from perimeter of projection. Slit square membrane with an "X" of proper size to ensure a close fit and positive seal. Place over projection, and adhere to clean membrane already on the roof.

3.15 CURB FLASHINGS

- A. The flashing substrate shall be free of any dirt and loose material.
- B. The underlayment ply or plies shall be brought to two inches (2") past the top of the cant strip and adhered.
- C. Starting on the roof at least six inches (6") from the toe of the cant of the cant strip, adhere one (1) ply of modified base sheet extending over the cant and up the vertical a minimum of eight inches (8"). Each lap of the membrane shall be a minimum of three inches (3").
- D. Over the top of the modified base sheet starting on the roof at least eight inches (8") from the toe of the cant strip, adhere the finished membrane extending over the cant and up the vertical a minimum of eight inches (8"). Each lap of the finished membrane shall be a minimum of three inches (3"), and shall not coincide with the laps of the underlayment sheet.
- E. All Vertical seams of the new base flashing assembly shall be addressed with a 4" inch strip of the granulated modified membrane.
- E. Fasten the top edge of the flashings on six inch (6") centers using approved termination bar and fasteners. Cover termination bar with 3 course and mastic to seal leading edge of the finished membrane watertight.
- F. An NRCA-approved metal counterflashing shall extend down over the flashing a minimum of four inches (4").

3.16 PIPING/CONDUIT

- A. To support conduit or pipe sized up to Ø8" when height adjustment is needed use Model # SS1000A Adjustable Pipe Support. 17" circular base with 12 ga. framing channel, 18"L, attached to 17" circular base using ½" threaded rods, 12"L, with washers and nuts. Height of channel can be adjusted along the length of the ½" threaded rods. Strut clamps are suggested to hold piping or conduit in place.
 - 1. Manufacturers:
 - a) Advanced Support Products, Inc.
- B. To support water or gas piping up to Ø8" or when a roller support with height adjustment is needed use Model # SS1000RA Pipe Support with Adjustable Roller. 17" circular base with SBR heavy duty rubber roller assembly attached to 17" circular base using ½" threaded rods, 12"L, with washers and nuts. Height of roller assembly can be adjusted along the length of the ½" threaded rods.
 - 1. Manufacturers:
 - a) Advanced Support Products, Inc.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. To support multiple pipe runs, piping up to Ø12" when height adjustment or pipe suspension is needed use Model # SS4000P, SS6000P or SS8000P Adjustable Support Bridge. SS4000P Adjustable Support Bridge is made of four (4) 17" circular bases and 12ga. framing channel formed to make one "H" shaped support with crossbar. SS6000P Adjustable support Bridge is made of six (6) 17" circular bases and 12ga. framing channel formed to make two "H" shaped supports with crossbar. SS8000P Adjustable support Bridge is made of eight (8) 17" circular bases and 12ga. framing channel formed to make three "H" shaped supports with crossbar. Crossbar height is adjustable and offered in 18", 24", 36", and 48" lengths. Use Adjustable Support Bridge with strut clamps or roller accessories or use optional hanger supports to suspend water or gas piping at various heights. Optional hanger supports attached to support frame using ½" threaded rods. Hangers offer complete height adjustments along the length of ½" threaded rods.
 - 1. Manufacturers:
 - a) Advanced Support Products, Inc.
- D. All gas lines, piping, and conduits shall be coated with industrial grade yellow paint

3.17 ROOF DRAINS

- A. All roof drains shall be in compliance with Division 22- Plumbing.
- B. All drain work, including installation of bowl and lines, shall be performed by a licensed professional master plumber.
- C. Drain installation shall comply with local plumbing codes.
- I. Inspect every drain after roofing to ensure proper seal to leader line.
- J. Verify in writing to Architect that all drains and lines are free flowing and watertight prior to substantial completion.

3.18 DRAIN FLASHINGS

- A. Build a sump to the drain and create a smooth transition by installing tapered insulation around the drain. The slope of the drain sump shall not exceed one inch (1") per horizontal foot (8%). The drain sump should be eight foot by eight foot (8' x 8') sump minimum per roof plans.
- B. All drains shall receive new lead flashings. Flashings shall be installed in strict accordance with manufacturer's recommendations and with practices as set forth in the NRCA Roofing Manual.
- C. Drain shall be covered with the roofing membrane and underlayment plies as specified, slitting the membranes over the drain hole and plies extending past the compression ring a minimum of two inches. Cut excess material away from the interior of the drain bowl.
- D. Lead flashings as specified shall be installed and primed with asphalt base primer and allowed to dry prior to application of flashing layers. Prime lead sheet on both sides and cut lead to extend into the drain bowl a minimum of one-inch.
- E. Lead flashing shall be set in plastic roof cement and covered with flashing membranes consisting of one layer of SBS modified base sheet and one layer of SBS modified granule membrane set in hot asphalt. The modified membrane layer shall be installed in a solid bed of asphalt bitumen as specified and shall extend a minimum of six inches (6") past the outer edges of the three by three foot (3' x 3') lead flashing. The modified cap sheet shall be installed in the same manner and extend a minimum of six inches (6") past the proceeding layer. Flashing membranes and lead flashing shall be neatly trimmed one inch (1") past the compression ring.

3.19 EXPANSION JOINTS

- A. Expansion material shall be formed and centered over the roof to roof structural EJ locations as shown on the drawings.
- B. Coordinate the location of the expansion joint framing with Structural, Architectural and Roof drawings.
- C. Framing of the expansion shall be in accordance with the details and as field conditions dictate.
- D. Expansion material shall be formed and located adjacent to roof to rise wall structural EJ locations as shown on the drawings.
- E. Wood Cants shall provide a four inch (4") rise above the roof's surface and extend a minimum of four inches (4") horizontally.
- F. Vertical wood framing shall be attached over horizontal wood blocking as shown and detailed.
- G. Taper the top of the expansion joint as required at tapered roof areas to maintain a minimum height of 8" above finished roof surface.
- H. Provide a field-built wood, structural expansion joint in the field of the roof where the roof span exceeds 200'-0" in any direction.

3.20 METAL FLANGE FLASHINGS

- A. Sheet metal flanges shall be four inches (4") wide and flat, without creases or bends and fully soldered.
- B. Set primed flanges in bed of plastic cement at one gallon per 100 linear foot of four inch (4") wide flange.
- C. Nail flanges three inches (3") on center and stagger.
- D. Prime metal surfaces with asphalt primer on both sides and permit to dry prior to application of modified bitumen flashing strip. Apply asphalt primer at one gallon per one hundred (100) square feet minimum.
- E. All metal flanges covered with flashing membranes consisting of one layer of Type VI fiberglass felt and one layer of the modified membrane. Each layer shall be installed in a solid bed of asphalt bitumen as specified and shall extend a minimum of six inches (6") past the outer edges.

3.21 EDGING FLASHINGS

- A. An NRCA-approved gravel stop/fascia system shall be installed in strict accordance with published instructions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. The roof membrane shall extend over the roof edge and down to base of nailer, and be fastened six inches (6") on center. A metal edge of proper gauge and dimensions shall be mechanically fastened, using a continuous clip fastened six inches (12") on center, to the wood nailer over the membrane. The metal shall have a minimum of a three inch (3") flange, set in asphalt mastic and fastened into nailer a minimum of six inches (6") on center, and a minimum of a four inch (4") fascia (match existing). The metal edge shall have a minimum of one inch (1") gravel stop, and the bottom edge of the new metal edge shall be the same elevation as existing.

3.22 SURFACING

- A. Prior to surfacing, inspect roof membrane to ensure it is in watertight condition. Roof membrane shall be free of dirt, dust, and moisture with damaged areas repaired before surfacing begins.
- B. Manufacturer's and Owner's inspections must be performed and punch list items complete before surfacing can begin. Obtain manufacturer's and Owner's written approval before applying surfacing.
- C. Flood Coat: Apply uniform mopping of Type IV hot asphalt bitumen not less than 60 pounds per 100 square feet over roof surface.
- D. Gravel:
 - 1. Do not stockpile gravel on roof for spreading.
 - 2. Embed gravel in hot bitumen uniformly applied over roof surface at 500 pounds per one hundred (100) square feet minimum with no less than 300 pounds per 100 square feet adhered.
 - 3. Gravel shall be clean and dry enough to adhere to hot bitumen flood coat when installed.
- E. Apply coating to flashings which do not have factory applied mineral surface in accordance with manufacture's recommendations.

3.23 MEMBRANE PROTECTION

- A. Walk Way Pads: Install manufacturer's walk way pads continuously on each side of each air-handling/mechanical unit on the roof in accordance with the manufacturer's recommended procedures.
- B. Where equipment pads, wood sleepers, or walkway slabs are to be installed over the roofing membrane, an additional layer of the roofing membrane shall be installed between the roofing membrane and the pad, sleeper, or slab. Due caution shall be exercised to prevent roofing membrane damage during placement. Where required, membrane shall be welded to field membrane to prevent slippage.

3.24 ROOF PLAQUE

- A. Metal plaque shall be installed on the underside of each roof hatch or on the inside of the maintenance room door. Location of plaque to be determined by Project Manager/Architect.
- B. Plaque shall be fastened with stainless steel screws to the wall surface as necessary at the base of the internal roof hatch ladder

3.25 ROOF HATCH

- A. Check roof hatch for proper operation. Adjust operating mechanism as required. Clean and lubricate joints and hardware.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Provide the required structural members necessary to install the hatch into the roof deck. Refer to structural drawings for further information.
- C. Provide crickets on the high side of hatch curb.

3.26 INSTALLATION OF EXTERIOR ROOF ACCESS LADDER

- A. Provide required structural members to properly install the roof hatch.

Examination:

- 1. Coordinate anchorages. Furnish setting drawings, templates, and anchorage structural loads for fastener resistance.
 - 2. Do not begin installation until supporting structure is complete and ladder installation will not interfere with supporting structure work.
 - 3. If supporting structure is the responsibility of another installer, notify Architect of unsatisfactory supporting work before proceeding.
- B. Installation: Install in accordance with manufacturer's instructions and in proper relationship with adjacent construction.
 - C. Protection:
 - 1. Protect installed products until completion of project.
 - 2. Touch-up, repair or replace damaged products before Substantial Completion.

3.27 TERMINATION OF NEW ROOF TO EXISTING

- A. The final juncture of the new roof shall consist of an NRCA recommended area divider suitably flashed and sealed for a permanent watertight installation. A water cutoff shall be incorporated into the termination to prevent water entering the existing roof from migrating into the new roof system.

3.28 DAILY SEAL

- A. Install temporary water cut-offs at completion of each day's work and remove upon resumption of work.
- B. Ensure that water does not flow beneath completed sections of membrane system, including completion of flashings, terminations, and daily seals. When possible, install starting at highest point of project area, working to lowest point.
- C. Temporarily seal loose membrane edge with hot asphalt. Exercise caution to ensure that membrane is sealed near drains in manner to prevent water migration below membrane and not to impede drainage.
- D. Install primary two-ply night seal beneath daily night seal in such manner to seal both new and existing roof system to roof deck to prevent moisture migration from either old roof or new roof.
- E. Install daily night seals by extending new roof membrane beyond insulation and sealing to existing deck surface using hot asphalt.
- F. When work is resumed, remove and dispose of membrane where asphalt or other sealants were previously applied before resuming installation.

3.29 FIELD QUALITY CONTROL

- A. Follow procedures required by roof system manufacturer for samples, at Owner's request.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Repair sampled areas by filling in cut out area with material to match original construction. Feather in patch consisting of same number of plies as in roof specification following manufacturer's procedures.
- C. Correct deficiencies in roof determined by roof sample analysis and as prescribed by roof system manufacturer. Costs for additional samples required will be borne by Contractor.
- D. Water Testing: Perform water flood test of completed roof areas involved or associated with work under this Contract. Contractor shall, at his expense, correct deficiencies in these areas causing water leakage into facility or water retention on roof surface.

3.30 MANUFACTURER'S FIELD SERVICES

- A. Provide manufacturer's field services as required to qualify for specified warranty.
- B. Roofing materials manufacturer's representative shall visit the site and observe the progress of the Work at a rate of not less than one time per week.
 - 1. Site visits shall be followed up by a written report of findings which is to be transmitted to the Owner's Representative within five (5) days of the site visit.

3.31 ADJUSTING

- A. Restore to original condition or replace work or materials damaged during handling of roofing materials.

3.32 CLEANING

- A. Remove bituminous markings from finished surfaces.
- B. In areas where finished surfaces are marred, or soiled by Work of this Section, consult manufacturer of soiled surface for cleaning advice and conform to their written instructions.
- C. Repair or replace defaced or disfigured finishes caused by Work of this Section.
- D. Roof surface shall be completely cleaned prior to final building move-in. All discharge water to be dealt with in accordance with local EPA requirements.

3.33 PROTECTION OF FINISHED WORK

- A. Protect finished Work under provision of application Section.
- B. Where traffic must continue over finished roof installation, protect surfaces with minimum one-half inch (1/2") wood fiberboard insulation, under five-eighth inch (5/8") thick plywood protective walkways ballasted in place with sandbags or the like.
- C. At all parapet and metal coping cap conditions, provide additional layer of self-adhered underlayment for temporary protection over all parapet and coping caps conditions once roofing has been completed and prior to installation of wood nailers and metal coping cap. Self-adhered underlayment is to cover cavity conditions from roof side of parapet framing to outside of exterior finish to protect cavity from moisture prior to completing parapet cap framing.

END OF SECTION 07 51 13

SECTION 07 62 00 - SHEET METAL AND MISCELLANEOUS ACCESSORIES

PART 1 - GENERAL

1.1 AREAS COVERED

- A. Refer to roof plans for areas to be included in the scope of work.

1.2 DEFINITIONS

ACM	Asbestos Containing Materials
ANSI	American National Standards Institute
ASCE	American Society of Civil Engineers
ASTM	American Society for Testing and Materials
CTEM	Coal-Tar Elastomeric Membrane
EPA	Environmental Protection Agency
EPS	Expanded Polystyrene
EVT	Equiviscous Temperatures
FM	Factory Mutual
IBC	International Building Code
KEE	Ketone Ethylene Ester
NDL	No Dollar Limit
NESHAP	National Emissions Standards for Hazardous Air Pollutants
NRCA	National Roofing Contractors Association
OSHA	Occupational Safety & Health Administration
SBS	Styrene-Butadiene-Styrene
SDI	Steel Deck Institute
SMACNA	Sheet Metal and Air Conditioning Contractors National Association
SPRI	Single Ply Roofing Industry
UL	Underwriters Laboratories, Inc.

1.3 REFERENCES (INCLUDING LATEST REVISIONS)

- A. Comply with governing local, state, and federal regulations, safety standards, and codes.
- B. Testing Laboratory Services: Test results shall meet or exceed established standards.
- C. Underwriters Laboratories, Inc. (Roofing Covering): Class A fire hazard classification.
- D. American Society for Testing and Materials (ASTM)
- E. The National Roofing Contractors Association (NRCA) - Roofing and Waterproofing Manual
- F. Sheet Metal and Air Conditioning Contractors National Association (SMACNA) - Architectural Sheet Metal Manual

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

G. American Society of Civil Engineers – ASCE 7

1.4 INSTALLER QUALIFICATIONS

- A. Roofing installer must be:
1. Currently prequalified with the Owner in accordance with Owner's prequalification requirements.
 2. Currently in good standing with the manufacturer.
 3. Installer must be an experienced single firm specializing in the type of roofing repair and/or removal and replacement work required, employing only experienced workers for the class of work in which they are employed, having at least five (5) years successful experience on projects similar in size and scope and acceptable as applicators by the Project Manager/Architect.
 4. Contractor must have successfully completed previous projects warranted by the manufacturer.
- B. It shall remain each Bidder's responsibility to determine his current status with the manufacturer's certification plan.

1.5 MANUFACTURER QUALIFICATIONS

- A. A qualified manufacturer is one that is UL listed and has FM approvals for a membrane roofing system similar to that used for this project for a minimum of fifteen (15) years.

1.6 CONTRACT DOCUMENT QUALITY ASSURANCE

- A. In the case of an inconsistency between the drawings and specifications or within either document not clarified by addendum, the better quality or greater quantity of work shall be provided in accordance with the Project Manager's/Architect's interpretation

1.7 SUBMITTALS

- A. Product Data: Provide technical data, installation instructions (as applicable) and general recommendations for each specified sheet material and fabricated product.
- B. Shop Drawings: Showing layout, profiles, jointing methods, fastening details, locations, and installation details.
1. Submit shop drawings, product data and mockups of all sheet metal fabrications to be used on project.
 2. Shop drawings shall be single line profile engineered drawings or CAD drawings of each fabrication component on 8-1/2" x 11" sheet and shall indicate date, project name, project number, Architect/Engineer name, name of component, sheet metal type, finish, gauge, securement, and approximate dimensions of finished product. All dimensions shall be field verified prior to fabrication.
 3. Submit manufacturers and contractor's sample warranty documents.
 4. Submit ES-1 certifications of sheet metal fabrication shop and ES-1 certifications of each applicable sheet metal component. (ie: edge metals, copings, & gutters).
- C. Samples: Submit six inch (6") long samples of shop fabricated and/or factory products illustrating component design, finish, color and configuration.

1.8 QUALITY ASSURANCE

- A. Comply with governing local, state, and federal regulations, safety standards, and codes. Provide products of acceptable manufacturers in satisfactory use in similar service for five (5) years. Use experienced installers. Deliver, handle and store materials in accordance with manufacturer's instructions.
- B. Reference Standards: Applicable portions of ASCE, SMACNA, ASTM, and NAAMM publications.

1.9 PRE-INSTALLATION CONFERENCE

- A. Convene a preinstallation conference two weeks prior to commencing the Work.
- B. Require attendance of parties directly affecting the Work of this Section.
- C. Review condition of roof deck and installation, installation procedures and coordination with related work.

1.10 WARRANTIES

- A. Manufacturer's Product Warranty: Submit manufacturer's ten (10) year labor and material warranty signed by the manufacturer's authorized official, guaranteeing to correct failures in product which may occur during the warranty period, without reducing or otherwise limiting any other rights to correction which the Owner/Project Consultant may have under the contract documents. Failure is defined to include product failure which leads to interruption of a watertight installation. Correction may include repair or replacement of failed product.
- B. Contractor's Warranty Period: For roofing flashing and sheet metal, provide a written warranty which shall warrant work to be free of leaks and defects in materials and workmanship for two (2) years, starting from date of substantial completion.
- C. Defects of the sheet metal occurring during the warranty period shall be promptly corrected by the contractor, and defects of the roofing shall be promptly corrected by the manufacturer at no additional cost to the Owner. Upon notification from the Owner or the Owner's representative that evidence of a defect exists, the responsible party shall immediately inform the Owner's representative of the date on which corrective work will be scheduled, and shall notify the Owner's representative when the corrective work has been completed.

PART 2 - PRODUCTS

2.1 SHEET METAL MATERIAL

- A. Stainless Steel for use as pitch pans: Minimum 24-gauge, commercial quality, ASTM A 653/A 653M.
- B. Hot-dipped Galvanized Steel for use as continuous clips: Minimum 22-gauge, G-90, hot-dipped galvanized metal, commercial quality, ASTM A 653/A 653M.
- C. Prefinished Galvanized Sheet Steel (where visible from the ground): Shall be 24-gauge flat stock, prefinished with Kynar finish meeting ASTM A 446, forty-five and one-half inches to forty-eight inches width by one hundred twenty inches in length (45-1/2" - 48" x 120") for use as new metal edge gravel guard, cover plates, downspouts, gutters, coping and miscellaneous metal.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Stainless Steel: QQ-S-766, Class 304 or 316; or ASTM A 167, Type 304 or 316; form and condition most suitable for the purpose.
- E. Prefinished Aluminum: Shall be that most suitable for the purpose.
- F. All existing sheet metal shall be replaced with new metal of like gauge and type, or as specified on drawings.
- G. All prefinished metal color shall be as selected by Owner/Architect from manufacturer's full range of colors, including metallics.
- H. TPO Cladded Metal for Pitch Pans: Shall be G-90 galvanized steel with 25 mil TPO membrane.
- I. TPO Cladded Metal: Shall be G-90 galvanized steel with 25 mil TPO membrane lamination; width shall be four feet (4'), length shall be eight feet (8') or ten feet (10').
- J. PVC Cladded Metal: Shall be G-90 galvanized steel with 25 mil PVC membrane lamination; width shall be four feet (4'), length shall be eight feet (8') or ten feet (10').

2.2 FASTENERS

- A. Fasteners shall be same metal as flashing/sheet metal, or other non-corrosive metal as recommended by sheet manufacturer for the specific application. Match finish of exposed heads with material being fastened.
- B. Fasteners and fastening plates or bars shall be listed in the FM Global Approval Guide.
- C. Fastener for Brick: Shall be one-fourth inch by two inches (1/4" x 2"), zinc with plated steel or stainless steel nail, one piece unit, flat head.
- D. Screws: Self-taping sheet metal type with neoprene washer, as appropriate.
- E. Pop Rivets: Full stainless-steel Series 42 or 44, as appropriate.
- F. Continuous Clip: Concealed hold-down clip type; of same materials as coping, gravel guard, sized to suit application. Use a continuous clip, minimum 22-gauge G-90 galvanized.

2.3 RELATED MATERIAL

- A. Plastic Cement: FS SS-C-153, cutback asphalt type.
- B. Solder: QQ-S-571 composition best suited for purpose; use high tin content, minimum 60/40, for stainless steel and monel alloy.
- C. Copper, Sheet, and Strip: QQ-C-576, ASTM B 370, light cold-rolled temper, minimum 16 ounce.
- D. Sealant (for Sheet Metal): One-component polyurethane, conforming to requirements of FS TT-S-230C, non-staining and non-bleeding.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Miscellaneous Materials:
 - 1. Downspout Boots: Provide and install cast iron by Neenah Foundry Company, or pre-approved equal. Provide powder coating to match adjacent downspout color.
 - 2. Splash Blocks: Concrete, 3000 psi, 28 days. Provide and install with protection pads at all downspouts. Dimensions shall be a minimum eighteen inches wide by thirty-six inches long (18" x 36").
 - 3. Metal Accessories: Provide and install sheet metal clips, straps, anchoring devices, and similar accessory units as required for installation of work, matching or compatible with material being installed, non-corrosive, size, and gauge required for performance.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Verify roof openings, curbs, pipes, sleeves, ducts or vents through roof are solidly set, cant strips and reglets in place, substrates are smooth and clean and nailing strips located.
- B. Verify membrane termination and base flashings are in place, sealed and secure, prior to metal installation.
- C. Beginning of installation means acceptance of conditions.
- D. Compatibility: Provide materials that are recommended by manufacturers to be fully compatible with indicated substrates or provide separation materials as required to eliminate contact between incompatible materials.

3.2 PREPARATION

- A. Field measure site conditions prior to fabricating work. Provide all shop drawings and mock-ups one month prior to installation to the Owner/Project Consultant for approval.
- B. Install starter and edge strips and cleats before starting installation.

3.3 FABRICATION - GENERAL

- A. Shop-fabricate work to greatest extent possible. Comply with details shown, and with applicable requirements of SMACNA "Architectural Sheet Metal Manual" and other recognized industry practices. Fabricate for waterproof and weather-resistant performance; with expansion provisions for running work, sufficient to permanently prevent leakage, damage or deterioration of the work. Form work to fit substrates. Comply with material manufacturer's instructions and recommendations. Form exposed sheet metal work without excessive oil-canning, buckling, and tool marks, true to line and levels as indicated, with exposed edges folded back to form hems.
- B. Fabricate gravel stops/fascia, gutters/downspouts, counterflashings, expansion joints, and copings with new galvanized sheet metal as specified. Fabricate gravel guard and fascia to size and dimensions as indicated on the drawings. Fabricate light metal coping, gutters and downspouts as indicated.
- C. Fabricate pitch pans with new stainless steel as specified.
- B. Form sheet metal on bending brake.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Form materials with straight lines, sharp angles and smooth curves.
- D. Fold back edges on concealed side of exposed edge to form hem (1/4" minimum).
- E. Weld or solder joints on parts that are to be permanently and rigidly assembled.
- F. Limit single-piece lengths to ten feet (10').
- G. Fabricate corner pieces with eighteen inch (18") extensions, mitered and sealed by forming as one piece.
- H. Where installing flashing directly to masonry or dissimilar materials, backpaint with bituminous paint.
- I. Install new metal rooftop projections. New rooftop projection details shall be as recommended in NRCA or SMACNA handbooks. All rooftop projections shall be cleaned, all joints sealed, and painted with a rust inhibitive paint.
- J. All sheet metal shall be sealed and watertight.
- K. Metal work should be secured so as to prevent damage from buckling or wind. Where clips are shown, fabricate as detailed.
- L. All metal to receive bitumen or adhesive shall be first primed with asphalt primer.
- M. All prefinished metal shall be sanded and/or abraded prior to receiving primer.
- N. Separations: Provide for separation of metal from non-compatible metal or corrosive substrates by coating concealed surfaces at locations of contact, with bituminous coating or other permanent separation as recommended by manufacturer/fabricator.
- O. Bed flanges of work in a thick coat of bituminous roofing cement where required for waterproof performance.

3.4 INSTALLATION

- A. General: All sheet metal termination to vertical wall shall have a through-wall with receiver installed on masonry walls or prefabricated "Z" bar flashing pre-installed to fluid applied wall finished prior to installation of sheet metal termination. This applies to edge metal, base flashing closures and all vertical surface intersections. Refer to NRCA, SMACNA, and metal manufacturer's guidelines.
- B. Gravel Guard/Fascia:
 - 1. Shall be installed with expansion joints, ten feet (10') on center, one-fourth inch (1/4") expansion leeway, with a cover plate.
 - 2. Form sections identical to profiles as shown or approved similar, to match existing building.
 - 3. Fabricate corner pieces with minimum eighteen inch (18"), maximum forty-eight inch (48") extensions, formed and sealed with rivets and sealant, as one piece.
 - 4. Hem exposed edges one-half inch (1/2") minimum.
 - 5. Backpaint flashing in contact with masonry or dissimilar materials with bituminous paint. Surface sand before applying primers.
 - 6. Integrate flashing in a manner consistent with detailing.
 - 7. Provide and install continuous clip, minimum 22 gauge.
 - 8. Apply sealant at horizontal juncture of gravel guard metal to exterior vertical wall.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

9. Shall be fabricated in accordance with published details.
 10. Install bead of sealant at metal edge juncture at exterior wall surface.
- C. Coping:
1. Install new pre-manufactured metal coping for a permanent watertight installation.
 2. All coping shall be pre-manufactured to include low profile standing metal seam per local code requirements.
 3. Shall be minimum 24-gauge prefinished Kynar installed in ten foot (10') sections maximum.
 4. Vertical fascia shall extend minimum two and one-half inches (2-1/2") or be minimum one and one-half inches (1-1/2") below bottom of nailer, whichever is greater.
 5. Fabricate corner pieces with minimum eighteen inch (18"), maximum forty-eight inch (48") extensions, formed and sealed with rivets and sealant, as one piece.
 6. Hem exposed edges one-fourth inch (1/4") minimum.
 7. Provide and install continuous clip, minimum 22-gauge.
 8. Shall be fabricated in accordance with published details.
- D. Expansion Joint Field and at Wall:
1. Shall be as outlined by details and be in full compliance with these specifications.
 2. Lock seams and end joints.
 3. Fabricate corner pieces with minimum eighteen-inch (18"), maximum forty-eight-inch (48") extensions, formed and sealed with rivets and sealant, as one piece.
 4. Hem exposed edges one-fourth inch (1/4") minimum.
 5. Back paint flashing in contact with masonry or dissimilar materials with bituminous paint. Surface sand before applying primers.
 6. Integrate flashing in a manner consistent with detailing.
 7. Provide and install continuous clip, minimum 22-gauge or one gauge thicker than flashing.
 8. Shall be fabricated in accordance with published details.
- E. Counterflashing:
1. Provide and install new two-piece sheet metal counterflashing as required for a permanent watertight installation.
 2. Saw cut brick mortar joint to receive friction fit reglet and removable counterflashing as detailed in SMACNA 7th Edition Figure 4-4D.
- F. Scupper, Collector Head and Downspout:
1. Fabrication:
 - a) Fabricate scupper, collector head and downspout of profile and size indicated, taking care that the roof drain leader fits properly into the back of the collector head. Seal the pipe to the collector head for water tightness.
 - b) Field measure site conditions prior to fabricating work.
 - c) Fabricate with required connection pieces.
 - d) Fabricate section square, true, and accurate in size, in maximum possible lengths and free of distortion or defects detrimental to appearance or performance.
 - e) Hem exposed edges of metal.
 - f) Form and seal all metal joints; provide for expansion joints per SMACNA.
 2. Installation:
 - a) Install collector head, downspout, and accessories.
 - b) Join lengths with seams pop riveted and sealed watertight. Flash and seal collector head to downspouts and accessories.
 - c) Seal all metal joints watertight for full metal surface contact.
 - d) Collector Head: SMACNA style profile; submit detail for approval.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- e) Downspouts: Rectangular profile. Seal all joints, six inches by six inches (6" x 6") minimum or as shown on published details.
- f) Support Brackets, Joint Fasteners: Profiled to suit gutters and downspouts.
- g) Anchorage Devices: SMACNA requirements. Type recommended by fabricator.
- h) Collector Head Supports – Kynar.
- i) Downspout Support Straps – Kynar.

G. Pitch Pans – Stainless Steel:

- 1. Install pitch pans of 24-gauge stainless steel according to NRCA standards, minimum of six inches by six inches (6" x 6").
- 2. Pitch pans shall be fabricated to minimum of four inches (4") above the finished roof membrane. Seams of pitch pans shall be soldered inside and out.
- 3. Mastic shall be applied under pitch pan flange a minimum of one-half pound (1/2#) per linear foot.
- 4. All metal flanges shall be primed with asphalt primer prior to flashing installation. Inside of pitch pan shall be cleaned and primed.
- 5. All projections enclosed in pitch pans shall be cleaned in any manner suitable and coated with a rust inhibitive coating as approved by the Owner/Project Consultant. Coating shall be allowed to dry prior to pitch pan fill.
- 6. Base of pitch pans shall be filled around penetration with M-1 sealant. Sprinkle mod bit granules over sealant 1/4" deep.
- 7. Top finish fill shall be coal-tar urethane, with minimum fill to top of pitch pan sides.
- 8. Strip metal flange of pitch pan with modified base sheet set in hot bitumen extending from the outer edge of the flange a minimum of three inches (3") inward to base of pitch pan.

H. Bonnets/Hoods:

- 1. Fabricate and install above all pitch pans, where necessary, or reinstall as applicable, metal bonnets over all pitch pans, NO EXCEPTIONS.
- 2. Bonnets/Hoods shall be manufactured with metal compatible with metal to which bonnet is to be attached.
- 3. On beams and other steel, weld in place bonnets fabricated from one-fourth inch (1/4") steel plate.
- 4. Draw band bonnets fabricated from 22-gauge galvanized steel may be used on circular projections.

3.5 FINISH

- A. Backpaint concealed metal surfaces with bituminous paint where expected to be in contact with cementitious materials or dissimilar metals. Exposed surfaces to be provided with a factory applied fluorocarbon Kynar finish meeting ASTM A 446 and AAMA specification 605.2 for high performance coating.

END OF SECTION 07 62 00

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 07 72 00 – ROOF ACCESSORIES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Roof curbs
 - 2. Equipment supports
 - 3. Wall mounted access ladders
 - 4. Roof supports

1.3 SUBMITTALS

- A. Shop Drawings: Provide manufacturer's approved details of all pertinent conditions, projection conditions, and any additional special job conditions which require details other than indicated in the drawings.
- B. Refer to Specification Section 01 33 00 for Submittal requirements
Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- C. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
 - 1. Size and location of roof accessories specified in this Section.
 - 2. Method of attaching roof accessories to roof or building structure.
 - 3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.

1.4 QUALITY ASSURANCE

- A. Sheet Metal Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.
- B. Factory Technical Representative: Roofing Contractor is to arrange and schedule the manufacturer's technical representative to be on site the first day of the installation of manufacturer's roofing system. The manufacturer's technical representative shall inspect the work of the contractor at least one time each week during the installation of the roofing system. The manufacturer's technical representative shall perform with the owner's representative and the roofing contractor a final inspection of the roofing system. At the completion of the final inspection, provide to the roofing contractor a list of punch list items (if any) to be correct before technical acceptance of the roofing project and prior to issuance of manufacturer's Twenty (20) Year Full System Warranty. Field reports shall be provided after each inspection within five (5) days of site visit.

1.5 DELIVERY, STORAGE, AND HANDLING

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- A. Pack, handle, and ship roof accessories properly labeled in heavy-duty packaging to prevent damage.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify required openings for each type of roof accessory by field measurements before fabrication and indicate measurements on Shop Drawings.

1.7 COORDINATION

- A. Coordinate layout and installation of roof accessories with (roofing membrane and base flashing and) interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
 - 1. With Architect's approval, adjust location of roof accessories that would interrupt (roof drainage routes) (roof expansion joints).

1.8 WARRANTY

- A. The product manufacturer shall provide a one-year full system material warranty necessary to cover replacement of all components of the system against defects in manufacturing. The warranty will not include Acts of God, vandalism, neglect, metal finish or improper spacing of equipment, which would be a result of improper application.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers listed in other Part 2 articles.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers listed in other Part 2 articles.

2.2 METAL MATERIALS

- A. Galvanized Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coated.
- B. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, AZ50 (AZM150) coated.
- C. Prepainted, Metallic-Coated Steel Sheet: Steel sheet metallic coated by hot-dip process and prepainted by coil-coating process to comply with ASTM A 755/A 755M.
 - 1. Galvanized Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coated.
 - 2. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 (Class AZM150) coated.
 - 3. Exposed Finishes: High-Performance Organic Finish (2-Coat Fluoropolymer): Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's written instructions.
 - a) Fluoropolymer 2-Coat System: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with physical properties and coating performance requirements in (AAMA 2604) (AAMA 2605), except as modified below:
 - (1) Humidity Resistance: 1000 hours.
 - (2) Salt-Spray Resistance: 1000 hours.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Aluminum Sheet: (ASTM B 209M), alloy and temper recommended by manufacturer for type of use and mill finish.
1. Color: as selected by Architect from the manufacturer's full range of colors including premium and metallics.
 2. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Acid-chromate-fluoride-phosphate conversion coating; Organic Coating: As specified below). Apply baked enamel complying with paint manufacturer's written instructions for cleaning, conversion coating, and painting.
 - a) Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603 except with a minimum dry film thickness of 1.5 mil, medium gloss.
 - b) Color and Gloss: As selected by Project Manager from manufacturer's full range.
 3. High-Performance Organic Finish (2-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Conversion coating; Organic Coating: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2604 and with coating and resin manufacturer's written instructions.
 - a) Color and Gloss: As selected by Project Manager from manufacturer's full range.
 4. Powder-Coat Finish: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard baked-polymer thermosetting powder finish. Comply with resin manufacturer's written instructions for application, baking, and minimum dry film thickness.
 - a) Color and Gloss: As selected by Project Manager from manufacturer's full range.
- E. Aluminum Extrusions and Tubes: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for type of use, mill finished.
- F. Stainless-Steel Shapes or Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304 or Type 316, No. 2D finish.
- G. Steel Shapes: ASTM A 36/A 36M, hot-dip galvanized to comply with ASTM A 123/A 123M, unless otherwise indicated.
- H. Steel Tube: ASTM A 500, round tube, baked-enamel finished.
- I. Galvanized Steel Tube: ASTM A 500, round tube, hot-dip galvanized to comply with ASTM A 123/A 123M.
- J. Galvanized Steel Pipe: ASTM A 53/A 53M.

2.3 MISCELLANEOUS MATERIALS

- A. Acrylic Glazing: ASTM D 4802, thermoformable, monolithic sheet, category as standard with manufacturer, Type UVA (formulated with UV absorber), Finish 1 (smooth or polished).
- B. Polycarbonate Glazing: Thermoformable, monolithic polycarbonate sheets manufactured by extrusion process, burglar-resistance rated per UL 972 with an average impact strength of 12 to 16 ft-lbf/in. of width when tested according to ASTM D 256, Method A (Izod).
- C. Cellulosic-FiberBoard Insulation: ASTM C 208, Type II, Grade 1, one inch (1") thick.
- D. Glass-FiberBoard Insulation: ASTM C 726, one inch (1") thick.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Polyisocyanurate Board Insulation: ASTM C 1289, one inch (1") thick.
- F. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, complying with AWPA C2; not less than one and one-half inches (1-1/2") thick.
- G. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
- H. Polyethylene Sheet: 6-mil thick, polyethylene sheet complying with ASTM D 4397.
- I. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
 - 1. Slip Sheet: Rosin-sized paper, minimum 3 pounds per 100 square feet.
- J. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by roof accessory manufacturer. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners.
- K. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, or PVC; or flat design of foam rubber, sponge neoprene, or cork.
- L. Elastomeric Sealant: ASTM C 920, polyurethane sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- M. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant, polyisobutylene plasticized, and heavy bodied for hooked-type expansion joints with limited movement.
- N. Roofing Cement: ASTM D 4586, nonasbestos, fibrated asphalt cement designed for trowel application or other adhesive compatible with roofing system.

2.4 ROOF CURBS

- A. Roof Curbs: Provide metal roof curbs, internally reinforced and capable of supporting superimposed live and dead loads, including equipment loads and other construction to be supported on roof curbs. Fabricate with welded or sealed mechanical corner joints and integral formed mounting flange at perimeter bottom. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.
 - 1. Manufacturers:
 - a) ThyCurb; Div. of Thybar Corporation.
 - b) Uni-Curb, Inc.
 - c) Vent Products Company, Inc.
 - 2. Load Requirements: Insert load requirements.
 - 3. Material: Galvanized steel sheet, 0.052 inch thick.
 - 4. Material: Aluminum sheet, 0.090 inch thick.
 - 5. Material: Stainless-steel sheet, 0.078 inch thick.
 - a) Finish: Prime painted.
 - b) Finish: Mill.
 - 6. Liner: Same material as curb, of manufacturer's standard thickness and finish.
 - 7. Factory install wood nailers at tops of curbs.
 - 8. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
 - 9. Factory insulate curbs with one and one-half inch (1-1/2") glass fiberboard insulation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

10. Curb height may be determined by adding thickness of roof insulation and minimum base flashing height recommended by roofing membrane manufacturer. Fabricate units to minimum height of fourteen inches (14"), unless otherwise indicated.
11. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curb units with water diverter or cricket and with height tapered to match slope to level tops of units.

2.5 WALL MOUNTED ACCESS LADDERS

- A. Fixed Ladder Design, as manufactured by O'Keefe's, Inc., or approved equal.
 1. Ladder safety devices or fall-arrest systems are required on ladders over 24 feet.
 2. Ladder safety devices or fall-arrest systems are required on all ladders in high or hazardous areas.
 3. Landing platforms are required at 50 feet above the bottom of the ladder.
 4. Rail and harness fall arrest system as alternate to landing platforms shall be a permissible manufacturer's option.
 - a) Fixed Ladder Bottom Bracket.
 - b) Bottom floor supported bracket.
 - c) Bottom wall supported bracket.
 - d) Bracket as drawn.
- B. Fixed Access Ladder
 1. Tubular Rail Low Parapet Access Ladder with Platform and Return.
 - a) Model 503, as manufactured by O'Keefe's Inc.
- C. Ship Ladder
 1. Ship Ladder with Platform.
 - a) Model 521, as manufactured by O'Keefe's Inc.
 2. Ship Ladder with Platform and Return.
 - a) Model 522, as manufactured by O'Keefe's Inc.
- D. Materials
 1. Aluminum Sheet: Alloy 5005-H34 to comply with ASTM B209.
 2. Aluminum Extrusions: Alloy 6063-T6 to comply with ASTM B221.
- E. Finishes
 1. Mill finish. As extruded.
 2. Clear Anodic Finish: AA-M10C22A41 Mechanical finish as fabricated. Architectural Class I, clear coating 0.018 mm or thicker.
 3. Paint. Urethane over chemically pretreated substrate.
 - a) Fire Red (RAL 2002).
 - b) Alert Orange (RAL 2003).
 - c) Warning Blue (RAL 5005).
 - d) Caution Yellow (RAL 1018).
 - e) Safety Green (RAL 6001).
 - f) As scheduled on drawings.
 4. Furnish touchup kit for each type and color of paint finish provided.
- F. Fabrication
 1. Rungs: Not less than 1-1/4 inches in section and 18-3/8 inches long, formed from tubular aluminum extrusions. Squared and deeply serrated on all sides.
 - a) Rungs shall withstand a 1,500 pound load without deformation or failure.
 2. Channel Side Rails: Not less than 1/8 inch wall thickness by 3 inches wide.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Heavy Duty Tubular Side Rails: Assembled from two interlocking aluminum extrusions no less than 1/8 inch wall thickness by 3 inches wide. Construction shall be self-locking stainless steel fasteners, full penetration TIG welds and clean, smooth and burr-free surfaces.
4. Ship Ladders: Not less than 1-1/4 inches high, 4-1/8 inch deep and 2 feet wide; tread spacing shall be 1 foot on center. Handrails shall be aluminum pipe, not less than 1-1/2 inches in diameter with hemispheric end caps.
5. Walk-Through Rail and Roof Rail Extension: Not less than 3 feet 6 inches above the landing and shall be fitted with deeply serrated, square, tubular grab rails.
6. Landing Platform: 1-1/2 inches or greater diameter, tubular aluminum guardrails and decks of serrated aluminum treads.
7. Security Doors: Formed 1/8 inch thick aluminum sheet. Security panels shall extend on both sides, perpendicular to the door face, to within 2 inches of the wall. Security door shall be furnished with continuous aluminum piano hinge and heavy duty forged steel locking hasps.
8. Ship Ladder Seismic Bottom Support: Manufacturer's standard; two isolation bearings per stringer.
9. Ladder Safety Post: Retractable hand hold and tie off.
10. Rail and Harness Fall Arrest System: Supplied where specified as alternate to safety cage and landing platforms, in accordance with OSHA regulation 1910.28; permanently mounted to ladder rungs and complete with necessary components.

2.6 EQUIPMENT SUPPORTS

- A. To support HVAC Duct use Model # SS2000D Duct Support. SS2000D is two 17" circular bases with 12 ga. framing channel formed to make an "H" shaped support. Framing channel is adjustable in both height and width.
 1. Manufacturers:
 - a). Advanced Support Products, Inc.
- B. To support heavier HVAC equipment use equipment platform Model # HV0505B Base Platform designed by manufacturer to support the weight of the equipment and load requirements. Equipment platform shall consist of (a) 17" circular bases supporting a structural steel frame OR (b) galvanized steel plates, with four holes for approved anchoring per engineering data, supporting a structural steel frame.
 1. Manufacturers:
 - a). Advanced Support Products, Inc.

2.7 ROOF PIPE SUPPORTS

- A. To support conduit or pipe sized up to Ø8" when height adjustment is needed use Model # SS1000A Adjustable Pipe Support. 17" circular base with 12 ga. framing channel, 18"L, attached to 17" circular base using 1/2" threaded rods, 12"L, with washers and nuts. Height of channel can be adjusted along the length of the 1/2" threaded rods. Strut clamps are suggested to hold piping or conduit in place.
 1. Manufacturers:
 - a) Advanced Support Products, Inc.
- B. To support water or gas piping up to Ø8" or when a roller support with height adjustment is needed use Model # SS1000RA Pipe Support with Adjustable Roller. 17" circular base with SBR heavy duty rubber roller assembly attached to 17" circular base using 1/2" threaded rods, 12"L, with washers and nuts. Height of roller assembly can be adjusted along the length of the 1/2" threaded rods.
 1. Manufacturers:
 - a) Advanced Support Products, Inc.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. To support multiple pipe runs, piping up to Ø12" when height adjustment or pipe suspension is needed use Model # SS4000P, SS6000P or SS8000P Adjustable Support Bridge. SS4000P Adjustable Support Bridge is made of four (4) 17" circular bases and 12ga. framing channel formed to make one "H" shaped support with crossbar. SS6000P Adjustable Support Bridge is made of six (6) 17" circular bases and 12ga. framing channel formed to make two "H" shaped supports with crossbar. SS8000P Adjustable Support Bridge is made of eight (8) 17" circular bases and 12ga. framing channel formed to make three "H" shaped supports with crossbar. Crossbar height is adjustable and offered in 18", 24", 36", and 48" lengths. Use Adjustable Support Bridge with strut clamps or roller accessories or use optional hanger supports to suspend water or gas piping at various heights. Optional hanger supports attached to support frame using 1/2" threaded rods. Hangers offer complete height adjustments along the length of 1/2" threaded rods.
1. Manufacturers:
 - a) Advanced Support Products, Inc.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of work.
1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored and is ready to receive roof accessories.
 2. Verify dimensions of roof openings for roof accessories.
 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install roof accessories according to manufacturer's written instructions. Anchor roof accessories securely in place and capable of resisting forces specified. Use fasteners, separators, sealants, and other miscellaneous items as required for completing roof accessory installation. Install roof accessories to resist exposure to weather without failing, rattling, leaking, and fastener disengagement.
- B. Install roof accessories to fit substrates and to result in watertight performance.
- C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
1. Coat concealed side of uncoated aluminum roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing exposed-to-view components of roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene underlayment.
 3. Bed flanges in thick coat of asphalt roofing cement where required by roof accessory manufacturers for waterproof performance.
- D. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.

3.3 ROOF CURB INSTALLATION:

1. Set roof curb so top surface of roof curb is level.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Curb height to maintain a minimum of 10" above finished roof surface,
3. Attach roof curb according to manufacturer's written instructions

3.4 PIPE AND EQUIPMENT SUPPORT INSTALLATION:

1. Install support systems in accordance with manufacturer's instructions and approved shop drawings.
2. Accurately locate and align pre-fabricated pipe supports in locations specified as per approved shop drawings or as required herein and by site conditions to limit pipe and/or conduit deflection to $L/240$, not to exceed 10' (3m) on center. No Isolation pads are required under the 17" circular bases.
3. Should the roofing manufacturer require a separation sheet between the roof and the support system, place a separation sheet or protective pad conforming to the existing roof manufacturer's system under 17" circular bases. Do not adhere to the roof system or 17" circular bases.
4. If required, insert frame structures into 17" circular bases as indicated by manufacturer's instructions.
5. Adjust height of each strut or channel and hanger or roller to its required height and tighten with nut, but do not over-tighten. Check each support for equal weight disbursement. Correct if necessary.
6. Remove any unused materials and packaging from job site. All gas lines, piping, and conduit must be supported on specified stands or hangars.
7. Supports shall be attached to pipes with oversized strapping.
8. Designated pipe/equipment supports shall be removed and replaced with new.
9. Verify that roof surface is smooth and clean to extent needed to receive materials. Surface shall be cleaned by removing any loose gravel and any foreign matter.
10. Install support systems in accordance with manufacturer's instructions and approved shop drawings. Accurately locate and align pre-fabricated pipe supports in locations specified as per approved shop drawings. Pipe supports shall be placed not to exceed ten feet (10') on center and within two feet (2") of all elevation changes, intersections, and corners.
11. Supports shall be set on a double layer of membrane, adhered to the roof surface using specified silyl-terminated polyester sealant, unless noted otherwise by support manufacturer.
12. Provide bond breaker between dissimilar metals.

3.5 INSTALLATION OF EXTERIOR ROOF ACCESS LADDER

- A. Examination:
 1. Coordinate anchorages. Furnish setting drawings, templates, and anchorage structural loads for fastener resistance.
 2. Do not begin installation until supporting structure is complete and ladder installation will not interfere with supporting structure work.
 3. If supporting structure is the responsibility of another installer, notify Architect of unsatisfactory supporting work before proceeding.
- B. Installation: Install in accordance with manufacturer's instructions and in proper relationship with adjacent construction.
- C. Protection:
 1. Protect installed products until completion of project.
 2. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 TOUCH UP

- A. Touch up factory-primed surfaces with compatible primer ready for field painting in accordance with Division 9 painting Sections.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.7 CLEANING

- A. Clean exposed surfaces according to manufacturer's written instructions.

END OF SECTION 07 72 00

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 07 72 00 – ROOF ACCESSORIES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Roof curbs
 - 2. Equipment supports
 - 3. Wall mounted access ladders
 - 4. Roof supports

1.3 SUBMITTALS

- A. Shop Drawings: Provide manufacturer's approved details of all pertinent conditions, projection conditions, and any additional special job conditions which require details other than indicated in the drawings.
- B. Refer to Specification Section 01 33 00 for Submittal requirements
Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- C. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
 - 1. Size and location of roof accessories specified in this Section.
 - 2. Method of attaching roof accessories to roof or building structure.
 - 3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.

1.4 QUALITY ASSURANCE

- A. Sheet Metal Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.
- B. Factory Technical Representative: Roofing Contractor is to arrange and schedule the manufacturer's technical representative to be on site the first day of the installation of manufacturer's roofing system. The manufacturer's technical representative shall inspect the work of the contractor at least one time each week during the installation of the roofing system. The manufacturer's technical representative shall perform with the owner's representative and the roofing contractor a final inspection of the roofing system. At the completion of the final inspection, provide to the roofing contractor a list of punch list items (if any) to be correct before technical acceptance of the roofing project and prior to issuance of manufacturer's Twenty (20) Year Full System Warranty. Field reports shall be provided after each inspection within five (5) days of site visit.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Pack, handle, and ship roof accessories properly labeled in heavy-duty packaging to prevent damage.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify required openings for each type of roof accessory by field measurements before fabrication and indicate measurements on Shop Drawings.

1.7 COORDINATION

- A. Coordinate layout and installation of roof accessories with (roofing membrane and base flashing and) interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
 - 1. With Architect's approval, adjust location of roof accessories that would interrupt (roof drainage routes) (roof expansion joints).

1.8 WARRANTY

- A. The product manufacturer shall provide a one-year full system material warranty necessary to cover replacement of all components of the system against defects in manufacturing. The warranty will not include Acts of God, vandalism, neglect, metal finish or improper spacing of equipment, which would be a result of improper application.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers listed in other Part 2 articles.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers listed in other Part 2 articles.

2.2 METAL MATERIALS

- A. Galvanized Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coated.
- B. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, AZ50 (AZM150) coated.
- C. Prepainted, Metallic-Coated Steel Sheet: Steel sheet metallic coated by hot-dip process and prepainted by coil-coating process to comply with ASTM A 755/A 755M.
 - 1. Galvanized Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coated.
 - 2. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 (Class AZM150) coated.
 - 3. Exposed Finishes: High-Performance Organic Finish (2-Coat Fluoropolymer): Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's written instructions.
 - a) Fluoropolymer 2-Coat System: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with physical properties and coating performance requirements in (AAMA 2604) (AAMA 2605), except as modified below:
 - (1) Humidity Resistance: 1000 hours.
 - (2) Salt-Spray Resistance: 1000 hours.
- D. Aluminum Sheet: (ASTM B 209M), alloy and temper recommended by manufacturer for type of use and mill finish.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Color: as selected by Architect from the manufacturer's full range of colors including premium and metallics.
 2. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Acid-chromate-fluoride-phosphate conversion coating; Organic Coating: As specified below). Apply baked enamel complying with paint manufacturer's written instructions for cleaning, conversion coating, and painting.
 - a) Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 2603 except with a minimum dry film thickness of 1.5 mil, medium gloss.
 - b) Color and Gloss: As selected by Project Manager from manufacturer's full range.
 3. High-Performance Organic Finish (2-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Conversion coating; Organic Coating: Manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2604 and with coating and resin manufacturer's written instructions.
 - a) Color and Gloss: As selected by Project Manager from manufacturer's full range.
 4. Powder-Coat Finish: Immediately after cleaning and pretreating, electrostatically apply manufacturer's standard baked-polymer thermosetting powder finish. Comply with resin manufacturer's written instructions for application, baking, and minimum dry film thickness.
 - a) Color and Gloss: As selected by Project Manager from manufacturer's full range.
- E. Aluminum Extrusions and Tubes: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for type of use, mill finished.
- F. Stainless-Steel Shapes or Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304 or Type 316, No. 2D finish.
- G. Steel Shapes: ASTM A 36/A 36M, hot-dip galvanized to comply with ASTM A 123/A 123M, unless otherwise indicated.
- H. Steel Tube: ASTM A 500, round tube, baked-enamel finished.
- I. Galvanized Steel Tube: ASTM A 500, round tube, hot-dip galvanized to comply with ASTM A 123/A 123M.
- J. Galvanized Steel Pipe: ASTM A 53/A 53M.

2.3 MISCELLANEOUS MATERIALS

- A. Acrylic Glazing: ASTM D 4802, thermoformable, monolithic sheet, category as standard with manufacturer, Type UVA (formulated with UV absorber), Finish 1 (smooth or polished).
- B. Polycarbonate Glazing: Thermoformable, monolithic polycarbonate sheets manufactured by extrusion process, burglar-resistance rated per UL 972 with an average impact strength of 12 to 16 ft-lbf/in. of width when tested according to ASTM D 256, Method A (Izod).
- C. Cellulosic-FiberBoard Insulation: ASTM C 208, Type II, Grade 1, one inch (1") thick.
- D. Glass-FiberBoard Insulation: ASTM C 726, one inch (1") thick.
- E. Polyisocyanurate Board Insulation: ASTM C 1289, one inch (1") thick.
- F. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, complying with AWPA C2; not less than one and one-half inches (1-1/2") thick.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- G. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.
- H. Polyethylene Sheet: 6-mil thick, polyethylene sheet complying with ASTM D 4397.
- I. Felt: ASTM D 226, Type II (No. 30), asphalt-saturated organic felt, nonperforated.
 - 1. Slip Sheet: Rosin-sized paper, minimum 3 pounds per 100 square feet.
- J. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by roof accessory manufacturer. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners.
- K. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, or PVC; or flat design of foam rubber, sponge neoprene, or cork.
- L. Elastomeric Sealant: ASTM C 920, polyurethane sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
- M. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant, polyisobutylene plasticized, and heavy bodied for hooked-type expansion joints with limited movement.
- N. Roofing Cement: ASTM D 4586, nonasbestos, fibrated asphalt cement designed for trowel application or other adhesive compatible with roofing system.

2.4 ROOF CURBS

- A. Roof Curbs: Provide metal roof curbs, internally reinforced and capable of supporting superimposed live and dead loads, including equipment loads and other construction to be supported on roof curbs. Fabricate with welded or sealed mechanical corner joints and integral formed mounting flange at perimeter bottom. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.
 - 1. Manufacturers:
 - a) ThyCurb; Div. of Thybar Corporation.
 - b) Uni-Curb, Inc.
 - c) Vent Products Company, Inc.
 - 2. Load Requirements: Insert load requirements.
 - 3. Material: Galvanized steel sheet, 0.052 inch thick.
 - 4. Material: Aluminum sheet, 0.090 inch thick.
 - 5. Material: Stainless-steel sheet, 0.078 inch thick.
 - a) Finish: Prime painted.
 - b) Finish: Mill.
 - 6. Liner: Same material as curb, of manufacturer's standard thickness and finish.
 - 7. Factory install wood nailers at tops of curbs.
 - 8. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.
 - 9. Factory insulate curbs with one and one-half inch (1-1/2") glass fiberboard insulation.
 - 10. Curb height may be determined by adding thickness of roof insulation and minimum base flashing height recommended by roofing membrane manufacturer. Fabricate units to minimum height of fourteen inches (14"), unless otherwise indicated.
 - 11. Sloping Roofs: Where slope of roof deck exceeds 1:48, fabricate curb units with water diverter or cricket and with height tapered to match slope to level tops of units.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.5 WALL MOUNTED ACCESS LADDERS

- A. Fixed Ladder Design, as manufactured by O'Keefe's, Inc., or approved equal.
 - 1. Ladder safety devices or fall-arrest systems are required on ladders over 24 feet.
 - 2. Ladder safety devices or fall-arrest systems are required on all ladders in high or hazardous areas.
 - 3. Landing platforms are required at 50 feet above the bottom of the ladder.
 - 4. Rail and harness fall arrest system as alternate to landing platforms shall be a permissible manufacturer's option.
 - a) Fixed Ladder Bottom Bracket.
 - b) Bottom floor supported bracket.
 - c) Bottom wall supported bracket.
 - d) Bracket as drawn.
- B. Fixed Access Ladder
 - 1. Tubular Rail Low Parapet Access Ladder with Platform and Return.
 - a) Model 503, as manufactured by O'Keefe's Inc.
- C. Ship Ladder
 - 1. Ship Ladder with Platform.
 - a) Model 521, as manufactured by O'Keefe's Inc.
 - 2. Ship Ladder with Platform and Return.
 - a) Model 522, as manufactured by O'Keefe's Inc.
- D. Materials
 - 1. Aluminum Sheet: Alloy 5005-H34 to comply with ASTM B209.
 - 2. Aluminum Extrusions: Alloy 6063-T6 to comply with ASTM B221.
- E. Finishes
 - 1. Mill finish. As extruded.
 - 2. Clear Anodic Finish: AA-M10C22A41 Mechanical finish as fabricated. Architectural Class I, clear coating 0.018 mm or thicker.
 - 3. Paint. Urethane over chemically pretreated substrate.
 - a) Fire Red (RAL 2002).
 - b) Alert Orange (RAL 2003).
 - c) Warning Blue (RAL 5005).
 - d) Caution Yellow (RAL 1018).
 - e) Safety Green (RAL 6001).
 - f) As scheduled on drawings.
 - 4. Furnish touchup kit for each type and color of paint finish provided.
- F. Fabrication
 - 1. Rungs: Not less than 1-1/4 inches in section and 18-3/8 inches long, formed from tubular aluminum extrusions. Squared and deeply serrated on all sides.
 - a) Rungs shall withstand a 1,500 pound load without deformation or failure.
 - 2. Channel Side Rails: Not less than 1/8 inch wall thickness by 3 inches wide.
 - 3. Heavy Duty Tubular Side Rails: Assembled from two interlocking aluminum extrusions no less than 1/8 inch wall thickness by 3 inches wide. Construction shall be self-locking stainless steel fasteners, full penetration TIG welds and clean, smooth and burr-free surfaces.
 - 4. Ship Ladders: Not less than 1-1/4 inches high, 4-1/8 inch deep and 2 feet wide; tread spacing shall be 1 foot on center. Handrails shall be aluminum pipe, not less than 1-1/2 inches in diameter with hemispheric end caps.
 - 5. Walk-Through Rail and Roof Rail Extension: Not less than 3 feet 6 inches above the landing and shall be fitted with deeply serrated, square, tubular grab rails.
 - 6. Landing Platform: 1-1/2 inches or greater diameter, tubular aluminum guardrails and decks of serrated aluminum treads.

ROOF ACCESSORIES

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

7. Security Doors: Formed 1/8 inch thick aluminum sheet. Security panels shall extend on both sides, perpendicular to the door face, to within 2 inches of the wall. Security door shall be furnished with continuous aluminum piano hinge and heavy duty forged steel locking hasps.
8. Ship Ladder Seismic Bottom Support: Manufacturer's standard; two isolation bearings per stringer.
9. Ladder Safety Post: Retractable hand hold and tie off.
10. Rail and Harness Fall Arrest System: Supplied where specified as alternate to safety cage and landing platforms, in accordance with OSHA regulation 1910.28; permanently mounted to ladder rungs and complete with necessary components.

2.6 EQUIPMENT SUPPORTS

- A. To support HVAC Duct use Model # SS2000D Duct Support. SS2000D is two 17" circular bases with 12 ga. framing channel formed to make an "H" shaped support. Framing channel is adjustable in both height and width.
 1. Manufacturers:
 - a). Advanced Support Products, Inc.
- B. To support heavier HVAC equipment use equipment platform Model # HV0505B Base Platform designed by manufacturer to support the weight of the equipment and load requirements. Equipment platform shall consist of (a) 17" circular bases supporting a structural steel frame OR (b) galvanized steel plates, with four holes for approved anchoring per engineering data, supporting a structural steel frame.
 1. Manufacturers:
 - a). Advanced Support Products, Inc.

2.7 ROOF PIPE SUPPORTS

- A. To support conduit or pipe sized up to Ø8" when height adjustment is needed use Model # SS1000A Adjustable Pipe Support. 17" circular base with 12 ga. framing channel, 18"L, attached to 17" circular base using 1/2" threaded rods, 12"L, with washers and nuts. Height of channel can be adjusted along the length of the 1/2" threaded rods. Strut clamps are suggested to hold piping or conduit in place.
 1. Manufacturers:
 - a) Advanced Support Products, Inc.
- B. To support water or gas piping up to Ø8" or when a roller support with height adjustment is needed use Model # SS1000RA Pipe Support with Adjustable Roller. 17" circular base with SBR heavy duty rubber roller assembly attached to 17" circular base using 1/2" threaded rods, 12"L, with washers and nuts. Height of roller assembly can be adjusted along the length of the 1/2" threaded rods.
 1. Manufacturers:
 - a) Advanced Support Products, Inc.
- C. To support multiple pipe runs, piping up to Ø12" when height adjustment or pipe suspension is needed use Model # SS4000P, SS6000P or SS8000P Adjustable Support Bridge. SS4000P Adjustable Support Bridge is made of four (4) 17" circular bases and 12ga. framing channel formed to make one "H" shaped support with crossbar. SS6000P Adjustable Support Bridge is made of six (6) 17" circular bases and 12ga. framing channel formed to make two "H" shaped supports with crossbar. SS8000P Adjustable Support Bridge is made of eight (8) 17" circular bases and 12ga. framing channel formed to make three "H" shaped supports with crossbar. Crossbar height is adjustable and offered in 18", 24", 36", and 48" lengths. Use Adjustable Support Bridge with strut clamps or roller accessories or use optional hanger supports to suspend water or gas piping at various heights. Optional hanger supports attached to support frame using 1/2" threaded rods. Hangers offer complete height adjustments along the length of 1/2" threaded rods.

ROOF ACCESSORIES

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Manufacturers:
 - a) Advanced Support Products, Inc.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of work.
 1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored and is ready to receive roof accessories.
 2. Verify dimensions of roof openings for roof accessories.
 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install roof accessories according to manufacturer's written instructions. Anchor roof accessories securely in place and capable of resisting forces specified. Use fasteners, separators, sealants, and other miscellaneous items as required for completing roof accessory installation. Install roof accessories to resist exposure to weather without failing, rattling, leaking, and fastener disengagement.
- B. Install roof accessories to fit substrates and to result in watertight performance.
- C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
 1. Coat concealed side of uncoated aluminum roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
 2. Underlayment: Where installing exposed-to-view components of roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene underlayment.
 3. Bed flanges in thick coat of asphalt roofing cement where required by roof accessory manufacturers for waterproof performance.
- D. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.

3.3 ROOF CURB INSTALLATION:

1. Set roof curb so top surface of roof curb is level.
2. Curb height to maintain a minimum of 10" above finished roof surface,
3. Attach roof curb according to manufacturer's written instructions

3.4 PIPE AND EQUIPMENT SUPPORT INSTALLATION:

1. Install support systems in accordance with manufacturer's instructions and approved shop drawings.
2. Accurately locate and align pre-fabricated pipe supports in locations specified as per approved shop drawings or as required herein and by site conditions to limit pipe and/or conduit deflection to L/240, not to exceed 10' (3m) on center. No Isolation pads are required under the 17" circular bases.
3. Should the roofing manufacturer require a separation sheet between the roof and the support system, place a separation sheet or protective pad conforming to the existing roof manufacturer's system under 17" circular bases. Do not adhere to the roof system or 17" circular bases.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. If required, insert frame structures into 17" circular bases as indicated by manufacturer's instructions.
5. Adjust height of each strut or channel and hanger or roller to its required height and tighten with nut, but do not over-tighten. Check each support for equal weight disbursement. Correct if necessary.
6. Remove any unused materials and packaging from job site. All gas lines, piping, and conduit must be supported on specified stands or hangars.
7. Supports shall be attached to pipes with oversized strapping.
8. Designated pipe/equipment supports shall be removed and replaced with new.
9. Verify that roof surface is smooth and clean to extent needed to receive materials. Surface shall be cleaned by removing any loose gravel and any foreign matter.
10. Install support systems in accordance with manufacturer's instructions and approved shop drawings. Accurately locate and align pre-fabricated pipe supports in locations specified as per approved shop drawings. Pipe supports shall be placed not to exceed ten feet (10') on center and within two feet (2") of all elevation changes, intersections, and corners.
11. Supports shall be set on a double layer of membrane, adhered to the roof surface using specified silyl-terminated polyester sealant, unless noted otherwise by support manufacturer.
12. Provide bond breaker between dissimilar metals.

3.5 INSTALLATION OF EXTERIOR ROOF ACCESS LADDER

- A. Examination:
 1. Coordinate anchorages. Furnish setting drawings, templates, and anchorage structural loads for fastener resistance.
 2. Do not begin installation until supporting structure is complete and ladder installation will not interfere with supporting structure work.
 3. If supporting structure is the responsibility of another installer, notify Architect of unsatisfactory supporting work before proceeding.
- B. Installation: Install in accordance with manufacturer's instructions and in proper relationship with adjacent construction.
- C. Protection:
 1. Protect installed products until completion of project.
 2. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 TOUCH UP

- A. Touch up factory-primed surfaces with compatible primer ready for field painting in accordance with Division 9 painting Sections.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.7 CLEANING

- A. Clean exposed surfaces according to manufacturer's written instructions.

END OF SECTION 07 72 00

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 078413
PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes penetration firestopping systems for openings and penetrations through smoke and fire-resistance-rated assemblies, and supplementary items necessary to complete their installation.
 - 1. Penetrations in fire-resistance-rated walls.
 - 2. Penetrations in horizontal assemblies.
 - 3. Penetrations in smoke barriers.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency..
 - 1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Obtain approval of authorities having jurisdiction prior to submittal.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
- B. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control".

1.4 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Installer Qualifications: A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

1.6 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

1.7 PROJECT CONDITIONS

- A. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.
- B. Environmental Limitations: Do not install firestopping systems when ambient or substrate temperatures are outside limits permitted by firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- C. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.8 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- B. Coordinate construction of openings and penetrating items to ensure that penetration firestopping systems can be installed according to specified firestopping system design.
- C. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate firestopping systems.
- D. Notify Owner's inspecting agency at least seven days in advance of firestopping system installations; confirm dates and times on days preceding each series of installations.
- E. Do not cover up firestopping system installations that will become concealed behind other construction until Owner's inspecting agency and building inspector, if required by authorities having jurisdiction, have examined each installation.

PART 2 - PRODUCTS

2.1 FIRESTOPPING, GENERAL

- A. Acceptable Manufacturers: Manufacturer is "acceptable" if firestopping system has been tested and listed by UL or other testing and inspection agency acceptable to authorities having jurisdiction and manufacturer can evidence product compliance with requirements of the Contract Documents.
- B. Compatibility: Provide firestopping systems that are compatible with one another, with the substrates forming openings, and with the items, if any, penetrating firestopping systems, under conditions of service and application, as demonstrated by firestopping system manufacturer based on testing and field experience.
- C. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials and approved by the qualified testing and inspection agency for firestopping systems indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Assemblies: Provide firestopping systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly penetrated.
- C. Fire-Test-Response Characteristics:
 - 1. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
 - 2. Test per testing standards referenced. Provide rated systems complying with the following requirements:
 - a. Penetration firestopping systems shall bear classification marking of a qualified testing agency acceptable to authorities having jurisdiction.
 - 1) UL Fire Resistance Directory.
 - 2) Intertek Group Directory of Listed Building Products.
 - 3) FM Global Building Materials Approval Guide.

2.3 PENETRATION FIRESTOP SYSTEMS

- A. Penetration Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.
 - 1. Classified in Underwriters Laboratories (UL) Fire Resistance Directory, Section XHEZ - Penetration Firestop System", and/or Section XHHW - Fill Void or Cavity Materials for specific project conditions.
- B. Penetrations in Fire-Resistance-Rated Walls: Penetration firestopping systems with ratings determined per ASTM E 814 or UL 1479.
 - 1. F-Rating: Not less than the fire-resistance rating of constructions penetrated.
- C. Penetrations in Horizontal Assemblies: Penetration firestopping systems with ratings determined per ASTM E 814 or UL 1479.
 - 1. F-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated.
 - 2. T-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
 - a. Penetrations located outside wall cavities.
 - b. Penetrations located outside fire-resistive shaft enclosures.
 - c. Penetrations located in construction containing fire-protection-rated openings.
 - 3. W-Rating: Provide penetration firestopping systems showing no evidence of water leakage when tested according to UL 1479.
- D. Penetrations in Smoke Barriers: Penetration firestopping systems with ratings determined per UL 1479.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. L-Rating: Not exceeding 5.0 cfm/sq. ft. (0.025 cu. m/s per sq. m) of penetration opening at and no more than 50-cfm (0.024-cu. m/s) cumulative total for any 100 sq. ft. (9.3 sq. m) at both ambient and elevated temperatures.
- E. Penetrations in Fire-Resistance-Rated Smoke Barriers: In addition to penetration firestopping systems with L-Ratings determined per UL 1479, provide F-Ratings and T-Ratings determined per ASTM E 814 or UL 1479.
- F. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, per ASTM E 84.
- G. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping system manufacturer and approved by qualified testing and inspecting agency for conditions indicated.
 1. Permanent forming/damming/backing materials.
 2. Substrate primers.
 3. Collars.
 4. Steel sleeves.

2.4 FILL MATERIALS

- A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer sleeve lined with an intumescent strip, a flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
- B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture
- C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced intumescent elastomeric sheet bonded to galvanized-steel sheet.
- E. Intumescent Putties: Nonhardening, water-resistant, intumescent putties containing no solvents or inorganic fibers.
- F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.
- G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.
- H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.
- I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants.
- K. Additional Application Requirements:
 1. Firestops exposed to view and/or are scheduled to receive finishes shall be paintable or capable of receiving finish materials.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Firestops exposed to traffic, moisture, and physical damage shall be products that do not deteriorate when exposed to these conditions.
 3. Firestops for water piping penetrations, of any type, shall be moisture-resistant products.
 4. Firestops for floor penetrations with annular spaces exceeding 4 in (100 mm) or more in width and exposed to possible loading and traffic shall be products capable of supporting the floor loads involved either by installing floor plates or by other means.
 5. Firestops for penetrations involving insulated piping shall be products that do not require removal of insulation.
 6. Firestops for cable trays and future penetrations shall be reusable pillows or bags.
- L. Provide firestops within fire resistive walls and partitions containing flush mounted devices such as outlet boxes, electrical cabinets and mechanical cabinets mounted back to back and spaced less than 24 inches on center in accordance with UL Fire Resistance Directory "Wall Opening Protective Materials", Category CLIV.

2.5 MIXING

- A. Penetration Firestopping Materials: For those products requiring mixing before application, comply with penetration firestopping system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Surface Cleaning: Before installing fire-resistive penetration systems, clean penetrations immediately to comply with fire-resistive joint system manufacturer's written instructions and the following requirements.
1. Remove foreign materials from surfaces of openings, joints and penetrating items that could interfere with adhesion of firestopping.
 2. Clean opening and joint substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with firestopping. Remove loose particles remaining from cleaning operation.
 3. Remove laitance and form release agents from concrete.
- C. Priming: Prime substrates where recommended by firestopping manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- D. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed upon completion of Work and that would otherwise be permanently

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

stained or damaged by such contact or by cleaning methods used to remove smears from firestopping materials. Remove tape as soon as it is possible to do so without disturbing firestopping's seal with substrates.

3.3 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.4 INSTALLATION OF PENETRATION FIRESTOPS

- A. General: Install penetration firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications.
- B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.
 - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.
- C. Install fill materials for penetration firestop systems by proven techniques to produce the following results:
 - 1. Completely fill voids and cavities formed by openings, forming materials, accessories, and penetrating items.
 - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 - 3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.5 IDENTIFICATION

- A. Wall Identification: Permanently label walls containing penetration firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches (76 mm) high and with minimum 0.375-inch (9.5-mm) strokes.
 - 1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 feet (4.57 m) from end of wall and at intervals not exceeding 30 feet (9.14 m).
- B. Penetration Identification: Identify each penetration firestopping system with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of penetration firestopping system edge so labels are visible to anyone seeking to remove penetrating items or firestopping systems. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
 - 1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
 - 2. Contractor's name, address, and phone number.
 - 3. Tested System or Engineered Judgement Number.
 - 4. Date of installation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

5. Manufacturer's name.
6. Installer's name.

3.6 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
- B. Special Inspections: Owner will engage a qualified special inspector to perform special inspections and prepare reports as required by the Building Code and Authorities Having Jurisdiction according to ASTM E 2174:
 1. Installation of penetration firestopping.
 2. Testing agency will report test results promptly and in writing to Contractor and Architect.
- C. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 2. Prepare test and inspection reports.

3.7 CLEANING

- A. Clean off excess fill materials and sealants adjacent to openings and joints as work progresses by methods and with cleaning materials approved by manufacturers of firestopping system products and of products in which opening and joints occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping material and install new materials to produce systems complying with specified requirements.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 078446
FIRE RESISTIVE JOINT FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes firestopping systems for joints at perimeter and through smoke and fire-resistance-rated assemblies, and supplementary items necessary to complete their installation.
 - 1. Joints in or between fire-resistance-rated constructions.
 - 2. Joints at exterior curtain-wall/floor intersections.
 - 3. Joints in smoke barriers.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency.
 - 1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Obtain approval of authorities having jurisdiction prior to submittal.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
- B. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control".

1.4 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Installer Qualifications: A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."
- C. Compatibility and Adhesion Testing: Manufacturer of fire stopping material shall be responsible for testing samples of materials that will contact or affect firestopping materials.
 - 1. Use manufacturer's standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of fill materials to joint substrates.
 - 2. Perform tests under environmental conditions replicating those that will exist during installation.
 - 3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 - 4. For materials failing tests, obtain fire-resistant joint sealants manufacturer's written instructions for corrective measures, including the use of specially formulated primers.

1.6 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

1.7 PROJECT CONDITIONS

- A. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.
- B. Environmental Limitations: Do not install firestopping systems when ambient or substrate temperatures are outside limits permitted by firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.
- C. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.8 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- B. Coordinate construction of joints to ensure that joint firestopping systems can be installed according to specified firestopping system design.
- C. Coordinate sizing of joints to accommodate joint firestopping systems.
- D. Notify Owner's inspecting agency at least seven days in advance of firestopping system installations; confirm dates and times on days preceding each series of installations.
- E. Do not cover up firestopping system installations that will become concealed behind other construction until Owner's inspecting agency and building inspector, if required by authorities having jurisdiction, have examined each installation.

PART 2 - PRODUCTS

2.1 FIRESTOPPING, GENERAL

- A. Acceptable Manufacturers: Manufacturer is "acceptable" if firestopping system has been tested and listed by UL or other testing and inspection agency acceptable to authorities having jurisdiction and manufacturer can evidence product compliance with requirements of the Contract Documents.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. FM Global: Manufacturer to provide firestopping products in compliance with FM Global requirements as indicated in "Quality Assurance" Article.
- B. Compatibility: Provide firestopping systems that are compatible with one another and the substrates forming openings, under conditions of service and application, as demonstrated by firestopping system manufacturer based on testing and field experience.
- C. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials. Use only components specified by firestopping system manufacturer and approved by the qualified testing and inspecting agency for firestopping systems indicated.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Assemblies: Provide firestopping systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assembly in which firestopping systems are installed. Joint firestopping systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gasses.
- C. Fire-Test-Response Characteristics:
 1. Perform joint firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
 2. Test per testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:
 - a. Joint firestopping systems shall bear classification marking of a qualified testing agency.
 - 1) UL in its "Fire Resistance Directory.
 - 2) Intertek Group in its Directory of Listed Building Products.
 - 3) FM Global in its "Building Materials Approval Guide.

2.3 JOINT FIRESTOPPING SYSTEMS.

- A. Joints in or between Fire-Resistance-Rated Construction: Provide joint firestopping systems with ratings determined per ASTM E 1966 or UL 2079.
 1. F-Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.
- B. Joints at Exterior Curtain-Wall/Floor Intersections: Provide joint firestopping systems with rating determined per ASTM E 2307.
 1. F-Rating: Equal to or exceeding the fire-resistance rating of the floor assembly.
- C. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079 based on testing at a positive pressure differential of 0.30-inch wg (74.7 Pa).
 1. L-Rating: Not exceeding 5.0 cfm/ft. (0.00775 cu. m/s x m) of joint at both ambient and elevated temperatures.
- D. Exposed Joint Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.
- F. Joints, required for control of movement, at intersection between Rated Wall Assemblies and Nonrated Horizontal Assemblies: Provide joint firestopping with ratings determined by ASTM E 2837.
- G. Perimeter Fire Containment System: Provide systems for establishment of a fire resistive barrier at the portion of perimeter exterior wall (spandrel) that is adjacent to edge of structural floor or roof slabs, which provides and maintains a resistance to the passage of fire from one floor to the floor above. Provide fire resistive rating with movement capabilities equaling or exceeding the rating of the adjacent floor or roof assembly, as determined by ASTM E 2307.
 - 1. Integrity Rating: Measure of system's ability to withstand fire exposure without permitting passage of flame through openings or occurrence of flaming on any element of the unexposed surface of the fill material or floor or on the interior surface of the wall above the fill material.
 - 2. Expansion and Contraction: Perimeter fire containment systems shall accommodate movement of the exterior wall due to thermal expansion and contraction.

2.4 TOP-OF-WALL JOINT FIRESTOPPING

- A. Safing Insulation: Semi rigid board insulation produced by combining slag-wool fibers with thermosetting resin binders and complying with the following:
 - 1. ASTM C 612, Type 1A and 1B.
 - 2. Nominal density of 4 lb/cu. ft.
 - 3. ASTM E119 Fire rating indicated, but not less than 2 hours.
- B. Coating Material: Manufacturers standard fill material or spray applied product for sealing surface of safing insulation and adjacent construction against penetration of fire and smoke.
- C. Fire Resistive Sealants: Intumescent single-component, water based, high solids, elastomeric sealants. Nonsag formulation for openings in vertical and other surfaces requiring a nonslumping, gunnable sealant.

2.5 PERIMETER FIRE CONTAINMENT SYSTEM - EDGE OF SLAB

- A. Safing Insulation: Semi rigid board insulation produced by combining slag-wool fibers with thermosetting resin binders and complying with the following:
 - 1. ASTM C 612, Type 1A and 1B.
 - 2. Nominal density of 4 lb/cu. ft.
 - 3. ASTM E119 Fire rating indicated, but not less than 2 hours.
- B. Coating Material: Manufacturers standard fill material or spray applied product for sealing surface of safing insulation and adjacent construction against penetration of fire and smoke.

2.6 PERIMETER FIRE CONTAINMENT SYSTEM - GLAZED ALUMINUM FRAMING SYSTEMS

- A. Curtainwall Insulation and Mullion Cover: Semi-rigid board insulation produced by combining slag-wool or rock-wool fibers with thermosetting resin binders, aluminum foil scrim backing, and complying with the following:
 - 1. ASTM C 612, Type 3.
 - 2. Nominal density of 8 and 4 lb/cu. ft. as required by test assembly.
 - 3. ASTM E 119 fire rating as indicated, but not less than 2 hours.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Safing Material: Semi-rigid board insulation produced by combining slag-wool fibers with thermosetting resin binders, unfaced, and complying with to the following:
 - 1. ASTM C 612, Type IA and IB.
 - 2. Nominal density of 4 lb/cu. ft.
 - 3. ASTM E 119 fire rating as indicated, but not less than 2 hours.
- C. Coating Material: Manufacturer's standard fill material or spray applied product for sealing top of safing material.
- D. Impaling Pins: 12 gage steel pins swaged to galvanized steel angles for screw attachment to glazed aluminum wall system aluminum framing.
- E. Reinforcing Angles: Galvanized steel angles of size, thickness, and finish suitable for application.
- F. Curtainwall Insulation Tape: Manufacturer's standard pressure sensitive aluminum foil faced tape product for taping curtainwall insulation joints.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions

3.2 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Surface Cleaning: Before installing fire-resistive joint systems, clean joints immediately to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
 - 1. Remove foreign materials from surfaces of joints that could interfere with adhesion of firestopping.
 - 2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with firestopping. Remove loose particles remaining from cleaning operation.
 - 3. Remove laitance and form release agents from concrete.
- C. Priming: Prime substrates where recommended by firestopping manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- D. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed upon completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestopping materials. Remove tape as soon as it is possible to do so without disturbing firestopping's seal with substrates.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.3 INSTALLATION - GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.4 INSTALLATION OF FIRE-RESISTANT JOINT SEALANTS

- A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
 - 1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.
- C. Install fill materials for fire-resistive joint systems by proven techniques to produce the following results:
 - 1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
 - 2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
 - 3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.5 INSTALLATION OF FIRE SAFING PROTECTION

- A. Top of Wall: Install safing insulation to fill gap between top of wall and floor slab above. Cut safing insulation 50 percent wider than gap to be filled to ensure compression fit.

3.6 INSTALLATION OF PERIMETER FIRE CONTAINMENT SYSTEM

- A. Edge of Slab:
 - 1. Edge of Slab: Install safing insulation to fill gap between edge of structural floor/roof slab and back of exterior wall on safing clips spaced as needed to support insulation but not further apart than 24 in (600 mm) o.c. unless not required by tested system. Cut safing insulation 50 percent wider than gap to be filled to ensure compression fit or install vertically as required by tested assembly.
 - 2. Install coating material or smoke seal compound to cover fill material and seal opening.
- B. Glazed Aluminum Framing Systems:
 - 1. Install system to extend the required vertical distance above and below the structural floor/roof slab but not less than to next horizontal mullion.
 - 2. Attach impaling pins to glazed aluminum wall framing, using screws, at corners and around perimeter of glazed unit. Install curtainwall insulation material over impaling pins so that the edges are tight fitting against the aluminum frame and the face of material will be flush with the aluminum frame. Secure units with clinch shields over impaling pins.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

Locate horizontal seams in the curtainwall insulation material, 6 in (150 mm) from top of joint and provide supporting angles as required.

3. Install safing material in the joint between the interior face of aluminum frame (and face of curtainwall insulation material) and the edge of the structural floor or roof slab. Compression fit safing material 50 percent, or as required by tested assembly, into spaces between floor slab and mounting angles. Provide safing clips to support safing material if required by tested system. Install coating material or smoke seal over safing material flush with top of floor/roof slab.
4. Install mullion covers centered over horizontal and vertical aluminum frames within barrier area using the same impaling pins as used to attach the curtainwall insulation material. Secure covers with clinch shields over impaling pins.
5. Install curtainwall insulation tape to seal all meeting edges of insulation with tape centered over the junction of adjacent insulation and all meeting edges of insulation and framing members so that approximately 2 in (50 mm) of tape covers each edge of the adjacent material.

3.7 IDENTIFICATION

- A. Joint Identification: Identify joint firestopping systems with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of joint edge so labels are visible to anyone seeking to remove or joint firestopping system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
 1. The words "Warning - Fire-Resistive Joint System - Do Not Disturb. Notify Building Management of Any Damage."
 2. Contractor's name, address, and phone number.
 3. Tested System or Engineered Judgment Number.
 4. Date of installation.
 5. Manufacturer's name.
 6. Installer's name.

3.8 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
- B. Special Inspections: Owner will engage a qualified special inspector to perform special inspections and prepare reports as required by the Building Code and Authorities Having Jurisdiction according to ASTM E 2393:
 1. Installation of penetration firestopping.
 2. Testing agency will report test results promptly and in writing to Contractor and Architect.
- C. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
- c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

2. Prepare test and inspection reports.

3.9 CLEANING

- A. Clean off excess fill materials and sealants adjacent to openings and joints as work progresses by methods and with cleaning materials approved by manufacturers of firestopping system products and of products in which joints occur.
- B. Provide final protection and maintain conditions during and after installation that ensure joint firestopping systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 079200
JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Joint sealants, backing materials, and supplementary items necessary for installation.
- B. Related Requirements:
 - 1. Refer to Division 01 Section Field Test for Air and Water Leakage.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Samples for Verification Purposes: Samples for each kind and color of joint sealants in 1/2 in (12 mm) wide joints formed between two 6 in (150 mm) long strips of material matching appearance of exposed surfaces adjacent to joint sealants.
- C. Joint-Sealant Schedule: Include the following information:
 - 1. Joint-sealant application, joint location, and designation.
 - 2. Joint-sealant manufacturer and product name.
 - 3. Joint-sealant formulation, primers and backers.
 - 4. Joint-sealant color.

1.3 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
- B. Preconstruction Laboratory Test Schedule: Include the following information for each joint sealant and substrate material to be tested:
 - 1. Joint-sealant location and designation.
 - 2. Manufacturer and product name.
 - 3. Type of substrate material.
 - 4. Proposed test.
 - 5. Number of samples required.
- C. Preconstruction Laboratory Test Reports: For each joint sealant and substrate material to be tested from sealant manufacturer, indicating the following:
 - 1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - 2. Interpretation of test results and written recommendations for primers and substrate preparation are needed for adhesion.
- D. Preconstruction Field-Adhesion-Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control" Article.
- F. Warranties:
 - 1. Provide manufacturer's and installer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations, and exclusions.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.
- B. Sealant, Waterproofing and Restoration Institute (SWRI) Validation Certificate: Each sealant shall be validated by SWRI Sealant Validation Program.
- C. Mock-Ups: Before beginning Work of this Section, install joint sealants in mock-ups of the various assemblies specified in other Sections indicated to receive joint sealants specified in this Section. Mock-ups shall include each form of product and color required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution.

1.5 PRECONSTRUCTION TESTING

- A. Pre-Construction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint urethane and silicone sealants:
 - 1. General Requirements: Test materials forming joint substrates and joint sealant backings for compatibility and adhesion with joint sealants.
 - 2. Adhesion Testing: Use ASTM C794 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
 - 3. Compatibility Testing: Use ASTM C1087 to determine sealant compatibility when in contact with glazing and gasket materials.
 - 4. Specimen Quantity: Submit manufacturer's recommended number of pieces of each type of material, including joint substrates, joint-sealant backings, and miscellaneous materials.
 - a. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 - 5. Reports: Interpret test results and certify reports indicating requirements for primers and substrate preparation needed.
 - a. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures, including use of specially formulated primer.
 - 6. Equivalent Option to Testing: Testing may not be required if joint-sealant manufacturers submit joint preparation data based on previous testing, not older than 12 months, of sealant products for adhesion to and compatibility with joint substrates and other materials matching those submitted.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Pre-Construction Stain Testing: Submit samples of joint substrate materials that will contact or affect urethane and silicone joint sealants to respective joint sealant manufacturers for following testing:
1. General Requirements: Test materials forming joint substrates for resistance to staining caused by joint sealants.
 2. Stain Testing: Use ASTM C1248 to determine stain potential of sealant when in contact with substrates, including stone and stone masonry.
 3. Specimen Quantity: Submit manufacturer's recommended number of pieces of each type of material, including joint substrates, joint-sealant backings, and miscellaneous materials.
 - a. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 4. Reports: Interpret test results and certify reports indicating whether joint sealants stain substrate materials.
 - a. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures.
 5. Equivalent Option to Testing: Testing may not be required if joint-sealant manufacturers submit joint preparation data based on previous testing, not older than 12 months, of sealant products for staining joint substrates and other materials matching those submitted.
- C. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
 2. Conduct field tests for each kind of sealant and joint substrate.
 3. Notify Architect seven days in advance of dates and times when test joints will be erected.
 4. Test Method: Test joint sealants in accordance with Method A, Tail Procedure, in ASTM C1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
 5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
 6. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.6 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
3. Record discussions, including decisions and agreements, and prepare report.

1.7 PROJECT CONDITIONS

- A. Ambient Conditions: Install joint sealants within range of ambient and substrate temperatures and moisture conditions as recommended by manufacturer. Protect substrates from environmental conditions that affect performance.
 1. Do not apply to a damp or wet substrate or during high humidity conditions including snow, rain, fog, or mist.
- B. Weather Conditions Limitation: Proceed with Work only when existing and forecasted weather conditions will permit installation according to manufacturer's instructions and warranty requirements.

1.8 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

1.9 WARRANTY

- A. Manufacturer's Warranty for Urethane Sealants: Furnish manufacturer's written material warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials required to repair or replace work which exhibits material defects caused by manufacture or design of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 1. Warranty Period: Manufacturer shall warrant the products to be free from material Defects for a period of 5 years from date of Substantial Completion.
- B. Manufacturer's Warranty for Silicone Sealants: Furnish manufacturer's written material warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials required to repair or replace work which exhibits material defects caused by manufacture or design of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 1. Warranty Period: Manufacturer shall warrant the products to be free from material Defects for a period of 20 years from date of Substantial Completion.
- C. Installer's Warranty: Furnish installer's written warranty signed by an authorized representative using installer's standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Warranty Period: Installer shall warrant the products to be free from workmanship Defects for a period of 2 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to Conditions of the Contract and Division 01 Section "Substitution Procedures".

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.
- B. Suitability for Contact with Food: Comply with authorities having jurisdiction for joints in repeated contact with food.
- C. Sealant Color: As scheduled or as indicated in Design Selections.

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Material Compatibility: Joint sealants, backings, and other related materials shall be compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint sealant manufacturer based on testing and field experience.

2.4 EXTERIOR ELASTOMERIC SEALANTS

- A. Exterior Pourable Urethane Sealant:
 1. Product Quality Standard: ASTM C 920, Type M, Grade P, Class 25, Use T.
 2. Description: Multi-component, pourable, moisture curing, polyurethane sealant; rated for incline when used on sloped surfaces.
 3. Joint Movement Capability: Plus 25 percent, minus 25 percent.
 4. Primers: Product provided by sealant manufacturer if required by conditions.
 5. Manufacturers and Products:
 - a. Sika Corp.; Sikaflex SL 2.
 - b. Pecora Corp.; Urexpan NR-200.
 - c. Sika Corp., Construction Products Div.; Sikaflex 2c SL.
 - d. Tremco Commercial Sealants & Waterproofing; THC-900/THC-901 or Vulkem 445SSL.
- B. Exterior Non-sag Silicone Sealant:
 1. Product Quality Standard: ASTM C 920, Type S, Grade NS, Class 50 or 100/50.
 2. Description: Single component, non-sag, neutral cure, non-staining as determined by pre-construction stain testing, and non-bleeding, silicone sealant.
 3. Joint Movement Capability:
 - a. Class 50: Plus 50 percent, minus 50 percent.
 - b. Class 100/50: Plus 100 percent, minus 50 percent.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Primers: Product provided by sealant manufacturer if required by conditions.
5. Manufacturers and Products:
 - a. Class 50:
 - 1) Dow; DOWSIL 795 Silicone Building Sealant.
 - 2) Momentive Performance Materials, GE Silicones; Silpruf SCS2000.
 - 3) Pecora Corp.; 864NST.
 - 4) Sika Corp., Construction Products Div.; Sikasil WS-295.
 - 5) Tremco Commercial Sealants & Waterproofing; Spectrem 3.
 - b. Class 100/50:
 - 1) Dow; DOWSIL 790 Silicone Building Sealant.
 - 2) Momentive Performance Materials, GE Silicones; Silpruf LM SCS2700.
 - 3) Pecora Corp.; 890NST.
 - 4) Sika Corp., Construction Products Div.; Sikasil WS-290.
 - 5) Tremco Commercial Sealants & Waterproofing; Spectrem 1.

C. Exterior Air and Water Barrier Silicone Sealant:

1. Description: One part, neutral cure silicone sealant, designed for adhering to low energy surfaces commonly found on sheet air and water barriers.
2. Manufacturers and Products:
 - a. Basis of Design: Dow Corning; Dowsil 758 Silicone Weather Barrier Sealant.

D. Exterior Non-Sag Urethane Sealant for Precast Concrete Seating Bowl:

1. ASTM C 920, Type M, Grade NS, Class 25.
2. Two-part, non-sag, polyurethane rubber sealant. Joint movement capability of +50 percent, -50 percent
3. Acceptable manufacturers and product:
 - a. BASF; MasterSeal NP 2 (Formerly Sonolastic NP 2).
 - b. Pecora Corp.; Dynatrol II.
 - c. Sika Corp., Construction Products Div.; Sikaflex 2c NS
 - d. Tremco Inc.; Dymeric 240 FC.

2.5 INTERIOR ELASTOMERIC SEALANTS

A. Interior Non-sag Silicone Sealant:

1. Product Quality Standard: ASTM C 920, Type S, Grade NS, Class 25.
2. Description: Single component, non-sag, moisture curing, silicone sealant specially formulated with fungicide for use in sanitary non-porous applications.
3. Manufacturers and Products:
 - a. Dow; DOWSIL 786 Silicone Sealant.
 - b. Momentive Performance Materials, GE Silicones; Sanitary SCS1700.
 - c. Pecora Corp.; 898.
 - d. Sika Corp., Construction Products Div.; Sikasil GP
 - e. Tremco Commercial Sealants & Waterproofing; Tremsil 200.

B. Interior Non-sag Urethane Sealant:

1. Product Quality Standard: ASTM C 920, Type S, Grade NS, Class 25 or 35.
2. Description: Single component, non-sag, moisture curing, non-staining as determined by pre-construction stain testing if exposed, polyurethane sealant.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Joint Movement Capability: Plus 25 percent, minus 25 percent, or plus 35 percent, minus 35 percent.
4. Primers: Product provided by sealant manufacturer if required by conditions.
5. Manufacturers and Products:
 - a. Sika Corp.; Sikaflex NP 1.
 - b. Pecora Corp.; Dynatrol I-XL.
 - c. Sika Corp., Construction Products Div.; Sikaflex 1a or Sikaflex Textured Sealant.
 - d. Tremco Commercial Sealants & Waterproofing; Dymonic or Vulkem 116.

C. Interior Non-sag Acrylic Latex Sealant:

1. Product Quality Standard: ASTM C 834, Type and Grade as required by conditions.
2. Description: Single component, non-sag, moisture curing, general purpose, paintable, siliconized acrylic latex sealant.
3. Joint Movement Capability: Plus 7.5 percent, minus 7.5 percent
4. Manufacturers and Products:
 - a. Pecora Corp.; AC 20+.
 - b. Tremco Commercial Sealants & Waterproofing; Tremflex 834.

D. Sprayed Foam Insulating Gap Filler:

1. Description: Low pressure, one-component, expanding, open-cell latex-based insulating foam gap filler; applied with professional hand-held dispensing gun; CFC and HCFC free.
2. Performance Requirements: Class 1 Fire-Retardant per ASTM E 84.
3. Manufacturers and Products:
 - a. Convenience Products; Touch 'N Foam, Easy Fill Latex Foam Sealant.
 - b. DAP Products, Inc.; DAPtex Plus.

E. Acoustical Sealants: As specified in Division 09 Section "Gypsum Board Assemblies".

F. Fire Resistive Sealants: As specified in Division 07 Section "Fire Resistive Joint Firestopping".

2.6 HIGH TEMPERATURE SILICONE SEALANT

A. Exterior/Interior High-Temperature Silicone Sealant:

1. One-component non-slumping silicone sealant for sealing and bonding applications exposed to temperatures as high as 600 deg F (315 deg C).
2. Manufacturer and Product: Dow; DOWSIL 736 Heat Resistant Sealant.

2.7 JOINT SEALANT BACKING

A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

1. Use closed cell (Type C) sealant backing rod at formed sealant joints for typical conditions unless otherwise recommended by sealant manufacturer.
2. Use open cell (Type O) sealant backing rod at interior line of sealant for double sealed condition unless otherwise recommended by sealant manufacturer.

B. Cylindrical Sealant Backings:

1. Product Quality Standard: ASTM C 1330, Type C, Type O, Type B; as approved in writing by joint-sealant manufacturer for joint application indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Description: Extruded polyethylene, polyurethane, or polyolefin in either closed cell structure (Type C), open cell structure (Type O), or bicellular structure with surface skin (Type B) as defined by ASTM Terminology C 717.
3. Size: Diameter approximately 25 percent larger than joint width, unless otherwise directed by manufacturer.
4. Manufacturers and Products:

a. Type C:

- 1) Sika Corp.; MasterSeal 920.
- 2) Nomaco Inc.; Green Rod or HBR.

b. Type O:

- 1) Backer Rod Mfg. Inc.; Denver Foam.
- 2) Nomaco Inc.; Foam-Pak II.

c. Type B:

- 1) Sika Corp.; MasterSeal 921.
- 2) Nomaco Inc.; Dual-Rod or Sof-Rod.

- C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials, or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

2.8 PREFORMED SILICONE SHEETS AND TRANSITIONS

- A. Preformed Cured Silicone Sheet and Transition Strips: Preformed silicone strip and molded pieces designed for flashing and transition applications, including closures between building envelope systems and spanning joints with large and/or dynamic movement.

1. Manufacturers and Products:

- a. Dow; DOWSIL Silicone Transition System.
- b. Momentive Performance Materials, Inc. / GE Silicones; UltraSpan.
- c. Pecora; Sil-Span.
- d. Sika Corp.; Sika Silbridge 400 Transition Sheet.
- e. Tremco Commercial Sealants and Waterproofing; Proglaze Engineered Transition Assembly.

2.9 ACCESSORIES

- A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.
- B. Cleaners for Non-porous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent non-porous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Non-staining, non-absorbent material compatible with joint sealants and surfaces adjacent to joints.
- D. Weep Hole Baffles: PVC-coated, reticulated open cell polyurethane foam, 30 - 40ppi sized for installation at 30 to 50 percent compression.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrate surfaces to receive products and systems and associated Work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting Work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
1. Respective manufacturer's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Cleaning of Joints: Clean out joints immediately before installing joint backings and sealants to comply with joint sealant manufacturer's written instructions and following requirements:
1. Remove foreign material that could interfere with adhesion of joint sealant, including, but not limited to, dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air.
 3. Remove laitance and form-release agents from concrete.
 4. Clean non-porous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants.
 5. Substrate material allowed by sealant's ASTM C 920 Use Classification.
- C. Joint Priming: Prime joint substrates where recommended by joint sealant manufacturer, or as required by pre-construction compatibility and adhesion testing. Apply primer to comply with joint sealant manufacturer's written instructions. Confine primers to areas of joint sealant bond; do not allow spillage or migration onto adjoining surfaces.
- D. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.4 INSTALLATION OF JOINT SEALANTS

- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Joint Sealant Backings: Install type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 - 1. Do not leave gaps between ends of sealant backings.
 - 2. Do not stretch, twist, puncture, or tear backings.
 - 3. Remove absorbent sealant backings that have become wet or damaged before sealant application and replace with dry materials.
 - 4. Install closed cell backer rod at exterior joints unless indicated otherwise on Drawings.
 - a. Use open cell backer rod at interior line of sealant for double sealed conditions.
 - 5. Install bond-breaker tape behind sealants where backings are not used between sealants and backs of joints.
- D. Joint Sealants: Install at same time as backings using proven techniques that comply with following:
 - 1. Place sealants so they directly contact and fully wet joint substrates.
 - 2. Completely fill recesses in each joint configuration.
 - 3. Produce uniform, cross sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
 - 4. Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
 - a. Remove excess sealant from surfaces adjacent to joints.
 - b. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
 - c. Use masking tape to protect surfaces adjacent to recessed tooled joints.
 - 5. Install joint sealants in accordance with ASTM C 1193 as applicable to materials, applications, conditions indicated, and with the following profile configurations:
 - a. Fillet: Figure 5.
 - b. Bridge: Figure 6.
 - c. Butt: Figure 8A (concave tooling), generally hour-glass shape with 2:1 width-to-depth ratio.
- E. Sprayed Foam Insulating Gap Filler: Apply sprayed foam insulating gap filler within exterior wall assemblies using professional hand-held dispensing gun in accordance with manufacturer's written instructions.
 - 1. Prior to installation of wall finish systems, apply sprayed foam insulating gap filler to gaps, cracks, cavities, openings, and voids in exterior wall back-up, including annular space around piping, ducts, conduits, wiring, and electrical outlets to seal off potential air drafts.
 - 2. After sprayed foam sealant is applied, make flush with face of adjacent wall by using method recommended by manufacturer.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

submit written reports of each visit indicating observations, findings, and conclusions of inspection.

1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
- B. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
 1. Refer to Division 01 Section Field Test for Air and Water Leakage.
 2. Refer to Owner's Building Enclosure Commissioning Plan for Field Observations and Performance Testing Activities.
- C. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 2. Prepare test and inspection reports.
- D. Contractor Field Adhesion Testing: Field test urethane and silicone sealant adhesion to joint substrates as follows:
 1. General Requirements: Before installation, field test urethane and silicone sealant adhesion to joint substrates as follows
 - a. Locate test joints where indicated or, if not indicated, as directed by Architect.
 - b. Conduct field tests for each kind of urethane and silicone sealants and joint substrates indicated.
 - c. Notify Architect 7 days in advance of dates and times when test joints will be erected.
 2. Extent of Testing: Test completed and cured sealant joints as follows:
 - a. Perform ten tests for the first 1000 feet (300 m) of joint length for each kind of sealant and joint substrate.
 - b. Perform one test for each 1000 feet (300 m) of joint length thereafter or one test per each floor per elevation.
 3. Test Methods: Joint sealant manufacturer's technical representative shall conduct following tests:
 - a. When Joint Substrates are Identical: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C1193 or Method A, Tail Procedure, in ASTM C1521:
 - 1) Install 24 in (600 mm) long test specimens using same materials, methods for joint preparation, and joint sealant installation required for Work. Allow sealants to cure fully before testing.
 - 2) Make horizontal knife cut across width of sealant joint from one substrate to other substrate.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 3) Make 2 vertical cuts at both sides of substrates, downward starting at horizontal cut, approximately 3 in (75 mm) long.
 - 4) Grasp 3 in (75 mm) long piece of sealant tab firmly 1 in (25 mm) from its bonded edge and pull at not less than 90 degree angle.
 - 5) Substrate adhesion is acceptable if sealant tears cohesively within itself or elongates to a manufacturer determined extension value from 1 in (25 mm) gauge length before releasing from substrate adhesively.
- b. When Joint Substrates are Different: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C1193 or Method A, Tail Procedure, in ASTM C1521:
- 1) Install 24 in (600 mm) long test specimens using same materials, methods for joint preparation, and joint sealant installation required for Work. Allow sealants to cure fully before testing.
 - 2) Make first horizontal knife cut across width of sealant joint from one substrate to other substrate.
 - 3) Make one vertical cut along one side of substrate, downward starting at horizontal cut, approximately 3 in (75 mm) long.
 - 4) Make second horizontal knife cut across width of sealant joint from one substrate to other substrate at opposite end of 3 in (75 mm) long first cut.
 - 5) Grasp 3 in (75 mm) long piece of sealant flap firmly and pull at not less than 90 degree angle.
 - 6) Substrate adhesion is acceptable if sealant tears cohesively within itself or elongates to a manufacturer determined extension value from 1 in (25 mm) gauge length before releasing from substrate adhesively.
4. Reports: Inspect tested joints and report on the following:
- a. Whether sealants filled joint cavities and are free of voids.
 - b. Whether sealant dimensions and configurations comply with specified requirements.
 - c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.
5. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
6. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

3.6 CLEANING

- A. Remove excess sealant or sealant smears adjacent to joints as Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.7 PROTECTION

- A. Protect during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original Work.

3.8 JOINT SEALANT SCHEDULE

A. Exterior Elastomeric Sealant Applications:

1. Exterior Pourable Urethane Sealant:
 - a. Moving joints in exterior concrete walks and drives.
2. Exterior Non-sag Silicone Sealant:
 - a. Moving joints on exterior side of exterior walls.
 - b. Gaps between building materials and components created by items penetrating the primary drainage surface of the exterior building envelope.
 - c. Joints between dissimilar materials on exterior side of exterior walls.
3. Exterior Air and Water Barrier Sealant:
 - a. Exterior moving and non-moving joints sealed to weather barrier materials.
4. Exterior Non-Sag Urethane Sealant:
 - a. Moving joints at precast concrete seating bowl:

B. Interior Elastomeric Sealant Applications:

1. Interior Non-sag Silicone Sealant:
 - a. Non-moving joints in moist or damp areas which are susceptible to mildew.
 - b. Non-moving joints in toilet rooms.
 - c. Non-moving joints in kitchens.
 - d. Non-moving joints in repeated contact with food.
2. Interior Non-sag Urethane Sealant:
 - a. Building joints on interior side of exterior walls where joint movement is anticipated.
3. Interior Non-sag Acrylic Latex Sealant:
 - a. Non-moving joints where another type of sealant is not otherwise specified or scheduled.
 - b. Minimal moving joints due to temperature change.

C. Sprayed Foam Insulating Gap Filler Applications:

1. Exterior non-moving gaps around windows, glazed aluminum walls, doors, and penetrations beneath weather-resistant coverings.
2. Interior non-moving gaps around windows, glazed aluminum walls, doors, and penetrations.

D. Exterior/Interior High-Temperature Silicone Sealant:

1. High-temperature exterior or interior locations.

E. Immersible Elastomeric Sealant Applications:

1. Immersible Non-sag Urethane Sealant:
 - a. Vertical moving and non-moving joints in fountains.
2. Immersible Pourable Urethane Sealant:
 - a. Horizontal moving and non-moving joints in fountains.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.9 COLOR SCHEDULE

A. Joint Sealant Colors:

1. Exterior Pourable Urethane Sealant:
 - a. Color Selection:
 - b. Color Selection: As selected from Manufacturer's Standard Colors.
2. Exterior Non-Sag Silicone Sealant:
 - a. Color Selection:
 - b. Color Selection: As selected from Manufacturer's Custom Colors.
 - c. Color Selection: As selected from Manufacturer's Standard Colors.
3. Exterior Non-Sag Urethane Sealant for Precast Concrete Seating Bowl:
 - a. Color Selection:
 - b. Color Selection: As selected from Manufacturer's Custom Colors.
 - c. Color Selection: As selected from Manufacturer's Standard Colors.
4. Interior Non-Sag Silicone Sealant:
 - a. Color Selection: White.
 - b. Color Selection: Transparent.
 - c. Color Selection: As selected from Manufacturer's Standard Colors.
5. Interior Non-Sag Urethane Sealant:
 - a. Color Selection:
 - b. Color Selection: Special Custom Color as selected.
 - c. Color Selection: As selected from Manufacturer's Custom Colors.
 - d. Color Selection: As selected from Manufacturer's Standard Colors.
6. Interior Non-Sag Acrylic Latex Sealant:
 - a. Color Selection:
 - b. Color Selection: As selected from Manufacturer's Custom Colors.
 - c. Color Selection: As selected from Manufacturer's Standard Colors.
7. Immersible Non-Sag Urethane Sealant:
 - a. Color Selection:
 - b. Color Selection: As selected from Manufacturer's Standard Colors.
8. Immersible Pourable Urethane Sealant:
 - a. Color Selection:
 - b. Color Selection: As selected from Manufacturer's Standard Colors.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 079513
EXPANSION JOINT COVER ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Expansion control assemblies and supplementary items necessary for installation.
 - 1. Floor, wall, and ceiling interior expansion joint covers.
 - 2. Floor / parking deck exterior expansion joint covers.
 - 3. Wall exterior expansion joint covers.
 - 4. Roof / membrane expansion joint covers.
- B. Related Requirements:

1.2 DEFINITIONS

- A. Minimum and Maximum Joint Widths: The extreme joint widths anticipated for an expansion joint.
- B. Nominal Joint Width for Thermal Movement: The anticipated width of an expansion joint at local mean temperature.
- C. Movement Capability: The plus or minus percentage of change relative to the nominal joint width.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings: Show details of fabrication and installation. Distinguish between shop and field-assembled work.
 - 1. Include plans, elevations, sections, details, splices, block-out requirement, attachments to other work, and line diagrams showing entire route of each expansion joint.
 - a. Provide factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.
 - 2. Where expansion joint cover assemblies change planes, provide isometric or clearly detailed drawing depicting how factory-fabricated transitions, terminations and other components interconnect and terminate.
- C. Samples for Verification: For each type of expansion joint cover assembly, full width by 6 inches (150 mm) long in size.
- D. Expansion Joint Cover Assembly Schedule: Prepared by or under the supervision of the supplier. Include the following information:
 - 1. Manufacturer and model number for each joint system.
 - 2. Joint system location cross-referenced to Drawings.
 - 3. Nominal joint width.
 - 4. Movement capability.
 - 5. Classification as thermal or seismic.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

6. Materials, colors, and finishes.
7. Product options.
8. Fire-resistance ratings.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
- B. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control".
- C. Warranty:
 1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations, and exclusions

1.5 QUALITY ASSURANCE

- A. Installer Qualifications:
 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.

1.6 MOCKUPS

- A. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up using materials indicated for the completed Work.
 1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.
 2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
 4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
 5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.7 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
 1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 - 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 - 3. Record discussions, including decisions and agreements, and prepare report.
- 1.8 DELIVERY, STORAGE, AND HANDLING
- A. Deliver materials in manufacturer's original undamaged packages or acceptable bulk containers.
 - B. Store packaged materials to protect them from elements or physical damage.
- 1.9 PROJECT CONDITIONS
- A. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.
- 1.10 COORDINATION
- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
 - B. Coordinate installation of exterior expansion joint assemblies to ensure that transitions are watertight.
- 1.11 WARRANTY
- A. Manufacturer's Warranty for Roofing and Waterproofing Membrane Expansion Joint Systems: Furnish manufacturer's written material warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Manufacturer shall warrant the products to be free from material and labor defects for a period of 20 years from date of Substantial Completion.
 - a. Includes transitions and terminations of expansion joint systems.
 - B. Installer's Warranty for Roof Expansion and Waterproofing Membrane Expansion Joint Systems: Furnish installer's written workmanship warranty signed by an authorized representative using installer's standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 2 years from date of Substantial Completion.
 - a. Includes transitions and terminations of expansion joint systems.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other available manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.3 ASSEMBLY DESCRIPTION

- A. Furnish units in longest practicable lengths to minimize field splicing.
- B. Include factory-fabricated closure materials and transition pieces, T-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous expansion joint cover assemblies.

2.4 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 1. Exterior and Roof Joint Assemblies: Provide moisture barrier and drainage system as required to maintain continuity and watertightness of exterior building enclosure.
 2. Fire-Resistance-Rated / Smoke Barrier Joint Assemblies: Provide fire barrier as required to maintain fire-resistance rating and integrity of smoke barrier assemblies.
 3. Acoustically Rated Joint Assemblies: Provide acoustical barrier as required to maintain acoustical performance of acoustically rated partitions. Refer to Drawings for partition types and STC ratings.
- B. Structural Loads and Movement: Engineer products and systems to withstand loads and movement within limits of allowable working stresses of the materials involved under conditions indicated including, but not limited to gravity, wind sway, seismic, and thermal movements established by authorities having jurisdiction, applicable building codes, and as indicated.
 1. Expansion Joint Design Criteria: Comply with ASTM E 1399 Standard Test Method for Cyclic Movement and Measuring the Minimum and Maximum Joint Widths of Architectural Joint Systems.
 - a. Type of Movement: Thermal and Wind sway.
 - 1) Nominal Joint Width: As indicated on Drawings.
 - 2) Minimum Joint Width: As indicated on Drawings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 3) Maximum Joint Width: As indicated on Drawings.
 - b. Seismic Movement:
 - 1) Joint Movement: As indicated on Drawings.
 - 2. Load Capacity: Vehicular and Pedestrian Design Load and Load Contact Area as recommended by joint manufacturer in accordance with IBC Table 1607.1.
 - C. Seismic Performance: Systems shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7, the building code and authorities having jurisdiction.
 - D. Fire-Resistance Ratings: Provide expansion joint cover assemblies with fire barriers identical to those of systems tested for fire resistance according to UL 2079 or ASTM E1966 by a qualified testing agency acceptable to authorities having jurisdiction.
 - 1. Fire-Resistance Rating: Provide manufacturer's standard fire barrier assembly, not less than that indicated on Drawings and adjacent construction.
 - E. Accessibility Requirements for Floor Expansion Joint Systems: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines (ADAAG)" and ICC A117.1.
- 2.5 ARCHITECTURAL JOINT SYSTEMS, GENERAL
- A. General: Provide architectural joint systems of design, basic profile, materials, and operation indicated. Provide units with capability to accommodate variations in adjacent surfaces.
 - 1. Furnish units in longest practicable lengths to minimize field splicing. Install with hairline mitered corners where joint changes direction or abuts other materials.
 - 2. Include factory-fabricated closure materials and transition pieces, tee-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous joint systems.
- 2.6 ARCHITECTURAL JOINT SYSTEMS FOR BUILDING INTERIORS
- A. Floor-to-Floor Joint Systems: Manufacturers and Products:
 - 1. Type 01:
 - a. Architectural Art Mfg., Inc.; D Series.
 - b. Balco, Inc.; NBA Series.
 - c. Construction Specialties, Inc. (C/S Group); SJ Series.
 - d. InPro Corporation JointMaster; 721 Series.
 - e. MM Systems Corporation; LASB-NB Series. (Basis of Design)
 - f. Sika Corp.; Watson Bowman Acme FNB Series.
 - 2. Type 02:
 - a. Architectural Art Mfg., Inc.; A Series.
 - b. Balco, Inc.; 6FS Series.
 - c. Construction Specialties, Inc. (C/S Group); ALS Series.
 - d. InPro Corporation JointMaster; 300 Series.
 - e. MM Systems Corporation; HFX Series. (Basis of Design)
 - f. Sika Corp.; Watson Bowman Acme SFS Series.
 - 3. Type 03:
 - a. Architectural Art Mfg., Inc.; B Series.
 - b. Balco, Inc.; 95GFTB Series.
 - c. Construction Specialties, Inc. (C/S Group); SGR Series.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. InPro Corporation JointMaster; 222 Series.
 - e. MM Systems Corporation; FDT Series. (Basis of Design)
 - f. Sika Corp.; Watson Bowman Acme TSF Series.
4. Type 04:
- a. Construction Specialties, Inc. (C/S Group); GFT Series.
 - b. InPro Corporation JointMaster; 120 Series.
 - c. MM Systems Corporation; FSNE Series. (Basis of Design)
 - d. Sika Corp.; Watson Bowman Acme CWF Series.
5. Type 05:
- a. Balco, Inc.; 75FP Series.
 - b. Construction Specialties, Inc. (C/S Group); GFT Series.
 - c. InPro Corporation JointMaster; 101 Series.
 - d. MM Systems Corporation; FS Series. (Basis of Design)
 - e. Sika Corp.; Watson Bowman Acme CWF Series.
6. Type 08:
- a. MM Systems Corporation; HFP Series. (Basis of Design)
 - b. Sika Corp.; Watson Bowman Acme HDH Series.
7. Type 09:
- a. Balco, Inc.; CR Series.
 - b. Construction Specialties, Inc. (C/S Group); FYW Series.
 - c. InPro Corporation JointMaster; 516 Series.
 - d. MM Systems Corporation; HSL Series. (Basis of Design)
 - e. Sika Corp.; Watson Bowman Acme AFJ Series.
8. Type 10:
- a. Balco, Inc.; Pan Series.
 - b. Construction Specialties, Inc. (C/S Group); SSR Series.
 - c. InPro Corporation JointMaster; 501 Series.
 - d. MM Systems Corporation; PDS Series. (Basis of Design)
 - e. Sika Corp.; Watson Bowman Acme SPJ Series.
- B. Floor-to-Wall Joint (Corner) Systems: Manufacturers and Products:
1. Type 06:
- a. Balco, Inc.; 95GFVTB Series.
 - b. MM Systems Corporation; FDTE Series. (Basis of Design)
 - c. Sika Corp.; Watson Bowman Acme TSF Series.
2. Type 07:
- a. Construction Specialties, Inc. (C/S Group); GFT Series.
 - b. InPro Corporation JointMaster; 120 Series.
 - c. MM Systems Corporation; FSNE Series. (Basis of Design)
 - d. Sika Corp.; Watson Bowman Acme LPF Series.
3. Type 12:
- a. MM Systems Corporation; HSC-C Series. (Basis of Design)
 - b. Sika Corp.; Watson Bowman Acme HDH-C Series.
4. Type 13:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Construction Specialties, Inc. (C/S Group); SSRW Series.
 - b. InPro Corporation JointMaster; 501 Series.
 - c. MM Systems Corporation; PDSE Series. (Basis of Design)
 - d. Sika Corp.; Watson Bowman Acme SPJ Series.
- 5. Type 14:
 - a. Balco, Inc.; NBAL-EW Series.
 - b. MM Systems Corporation; LASBE-NBR Series. (Basis of Design)
- 6. Type 15:
 - a. Balco, Inc.; 2H6FVS Series.
 - b. InPro Corporation JointMaster; 300 Series.
 - c. MM Systems Corporation; HFXE Series. (Basis of Design)
 - d. Sika Corp.; Emseal SFS Series.
- C. Wall-to-Wall Joint Systems: Manufacturers and Products:
 - 1. Type 22:
 - a. Architectural Art Mfg., Inc.; J Series.
 - b. MM Systems Corporation; KX Series. (Basis of Design)
 - c. Sika Corp.; Emseal Wabo CorridorWrap.
 - 2. Type 23:
 - a. InPro Corporation JointMaster; 101 Series.
 - b. MM Systems Corporation; FSWP Series. (Basis of Design)
 - c. Sika Corp.; Emseal Wabo CorridorWrap.
 - 3. Type 24:
 - a. Architectural Art Mfg., Inc.; G Series.
 - b. Balco, Inc.; WD Series.
 - c. Construction Specialties, Inc. (C/S Group) ASM Series.
 - d. InPro Corporation JointMaster; 811 Series.
 - e. MM Systems Corporation; X-M Series. (Basis of Design)
 - f. Sika Corp.; Emseal Wabo FastWall.
 - 4. Type 25:
 - a. Architectural Art Mfg., Inc.; H Series.
 - b. Balco, Inc.; 6GW Series.
 - c. Construction Specialties, Inc. (C/S Group); AFW Series.
 - d. MM Systems Corporation; FX-K Series. (Basis of Design)
 - e. Sika Corp.; Emseal Wabo Contour II (CTR).
- D. Wall-to-Wall (Corner) Joint Systems: Manufacturers and Products:
 - 1. Type 21:
 - a. Architectural Art Mfg., Inc.; J Series.
 - b. InPro Corporation JointMaster; 101 Series.
 - c. MM Systems Corporation; FSWPL Series. (Basis of Design)
 - d. Sika Corp.; Emseal Wabo CorridorWrap.
 - 2. Type 28:
 - a. Architectural Art Mfg., Inc.; G Series.
 - b. Balco, Inc.; WD Series.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Construction Specialties, Inc. (C/S Group); ASM Series.
 - d. InPro Corporation JointMaster; 811 Series.
 - e. MM Systems Corporation; X-N4M Series. (Basis of Design)
 - f. Sika Corp.; Emseal Wabo FastWall.
3. Type 29:
- a. Architectural Art Mfg., Inc.; H Series.
 - b. Balco, Inc.; 6GWC Series.
 - c. Construction Specialties, Inc. (C/S Group); AFW Series.
 - d. MM Systems Corporation; FX-L Series. (Basis of Design)
 - e. Sika Corp.; Emseal Wabo Contour II (CTR).
4. Type 30:
- a. Architectural Art Mfg., Inc.; R Series.
 - b. InPro Corporation JointMaster; 114 Series.
 - c. MM Systems Corporation; VSWL Series. (Basis of Design)
 - d. Sika Corp.; Watson Bowman Acme CWW Series.
- E. Ceiling-to-Wall (Corner) Joint Systems: Manufacturers and Products:
1. Type 26:
- a. Architectural Art Mfg., Inc.; R Series.
 - b. InPro Corporation JointMaster; 114 Series.
 - c. MM Systems Corporation; VSGL Series. (Basis of Design)
 - d. Sika Corp.; Watson Bowman Acme FSC Series.
 - e. Sika Corp.; Emseal Wabo CorridorWrap (CWCA).
2. Type 27:
- a. Architectural Art Mfg., Inc.; J Series.
 - b. InPro Corporation JointMaster; 101 Series.
 - c. MM Systems Corporation; FSWPL Series. (Basis of Design)
 - d. Sika Corp.; Emseal Wabo CorridorWrap.
3. Type 32:
- a. Architectural Art Mfg., Inc.; G Series.
 - b. Balco, Inc.; WD Series.
 - c. Construction Specialties, Inc. (C/S Group); ASM Series.
 - d. InPro Corporation JointMaster; 811 Series.
 - e. MM Systems Corporation; X-N4M Series. (Basis of Design)
 - f. Sika Corp.; Emseal Wabo FastWall (EWH).
4. Type 33:
- a. Architectural Art Mfg., Inc.; H Series.
 - b. Balco, Inc.; 6GWC Series.
 - c. Construction Specialties, Inc. (C/S Group); AFW Series.
 - d. MM Systems Corporation; FX-L Series. (Basis of Design)
 - e. Sika Corp.; Emseal Wabo Contour II (CTR).
5. Type 34:
- a. Construction Specialties, Inc. (C/S Group); HCW Series.
 - b. InPro Corporation JointMaster; 821 Series.
 - c. MM Systems Corporation; DX Series. (Basis of Design)
 - d. Sika Corp.; Emseal Wabo CorridorWrap (CWCA).

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 6. Type 35:
 - a. Architectural Art Mfg., Inc.; J Series.
 - b. Balco, Inc.; ACL Series.
 - c. Construction Specialties, Inc. (C/S Group); FCSC Series.
 - d. MM Systems Corporation; CX Series for 1 inch and 2 inch joints; VSG Series for joints 2 inches through 5 inches. (Basis of Design)
 - e. Sika Corp.; Emseal Wabo CorridorWrap (CWCA).

F. Ceiling-to-Ceiling Joint Systems: Manufacturers and Products:

- 1. Type 31:
 - a. Architectural Art Mfg., Inc.; J Series.
 - b. InPro Corporation JointMaster; 101 Series.
 - c. MM Systems Corporation; FSWP Series. (Basis of Design)
- 2. Type 36:
 - a. Architectural Art Mfg., Inc.; G Series.
 - b. Balco, Inc.; WD Series.
 - c. Construction Specialties, Inc. (C/S Group); ASM Series.
 - d. InPro Corporation JointMaster; 811 Series.
 - e. MM Systems Corporation; X-M Series. (Basis of Design)
- 3. Type 37:
 - a. Architectural Art Mfg., Inc.; H Series.
 - b. Balco, Inc.; 6GW Series.
 - c. Construction Specialties, Inc. (C/S Group); AFW Series.
 - d. MM Systems Corporation; FX-K Series. (Basis of Design)
- 4. Type 38:
 - a. Construction Specialties, Inc. (C/S Group); HC Series.
 - b. InPro Corporation JointMaster; 821 Series.
 - c. MM Systems Corporation; DX Series. (Basis of Design)
 - d. Sika Corp.; Watson Bowman Acme CES Series.
- 5. Type 39:
 - a. Architectural Art Mfg., Inc.; J Series.
 - b. Balco, Inc.; AC Series.
 - c. Construction Specialties, Inc. (C/S Group); FCS Series.
 - d. MM Systems Corporation; CX Series. (Basis if Design)
 - e. Sika Corp.; Watson Bowman Acme CEB Series.
- 6. Type 40:
 - a. Architectural Art Mfg., Inc.; J Series.
 - b. MM Systems Corporation; KX Series. (Basis of Design)

2.7 FLOOR / PARKING DECK EXTERIOR EXPANSION JOINT COVERS

- A. Exterior Elastomeric-Seal Floor / Parking Deck Joint Cover (Winged Seal): Assembly consisting of elastomeric seal anchored to surface-mounted frames fixed to sides of joint gap.
 - 1. Basis-of-Design Product: Balco; a CSW Industrials Company; RB Series Rubber Block Seal.
 - 2. Manufacturers and Products:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Architectural Art Mfg., Inc.; W Series.
 - b. Balco; a CSW Industrials Company; RB Series Rubber Block Seal.
 - c. InPro Corporation; CR Series.
 - d. Sika Corp.; Watson Bowman Acme ME GEN II Series.
3. Application: As indicated on Drawings.
4. Color: As selected by Architect from manufacturer's standards.
- B. Exterior Preformed Foam Floor / Parking Deck Joint Seals: Manufacturer's standard joint seal consisting of pre-compressed hydrophobic foam backer seal impregnated with a nondrying, water-repellent agent, and factory pre-coated silicone cover to fit joint widths based on design criteria indicated, with factory- or field-applied adhesive for bonding to substrates.
 1. Basis-of-Design Product: Sika EMSEAL; DSM or Emshield DFR Series System Watertight Expansion Joint.
 2. Manufacturers and Products:
 - a. Construction Specialties, Inc. (C/S Group); HF or HFR Series.
 - b. InPro Corporation; 1175 Series Foam Seal.
 - c. Sika EMSEAL; DSM or Emshield DFR Series System Watertight Expansion Joint.
 - d. Sika Corp.; Watson Bowman Acme Wabo FireShield FSH Horizontal Series.
 3. Application: As indicated on Drawings.
 4. Color: As selected by Architect from manufacturer's standards.
- C. Exterior Preformed Foam Floor with Interior Metal Cover Plate: Manufacturer's standard joint seal consisting of pre-compressed hydrophobic foam backer seal impregnated with a nondrying, water-repellent agent, and factory pre-coated silicone cover to fit joint widths based on design criteria indicated, with factory- or field-applied adhesive for bonding to substrates.
 1. Basis-of-Design Product: Sika Corp.; Emseal Emshield SJS-FR with Coverplate.
 2. Manufacturers and Products:
 - a. Sika Corp.; Emseal Emshield SJS-FR with Coverplate.
 3. Application: As indicated on Drawings.
 4. Color: As selected by Architect from manufacturer's standards.
- D. Exterior Metal-Plate Floor / Parking Deck Joint Cover: Assembly consisting of sliding metal cover plate in continuous contact with gaskets mounted on metal frames fixed to sides of joint gap.
 1. Basis-of-Design Product: Balco; a CSW Industrials Company; SBNB Series Shallow Blockout No Bump.
 2. Manufacturers and Products:
 - a. Balco; a CSW Industrials Company; SBNB Series Shallow Blockout No Bump.
 - b. MM Systems Corporation; SSS Series.
 - c. Sika Corp.; Watson Bowman Acme APx Series.
 3. Application: As indicated on Drawings.
 4. Exposed Metal and/or Color: As selected by Architect from manufacturer's standards.
 5. Cover-Plate Design: As selected by Architect from manufacturer's standards.
- E. Exterior Seismic-Pan Floor Joint Cover: Seismic pan assembly with sloped sides allowing extension of unit above floor plane during joint contraction and equipped with springs to return unit back into alignment during joint expansion. Provide manufacturer's recommended sealant at pan edge with an integral gutter system.
 1. Basis-of-Design Product: Balco; a CSW Industrials Company; PJC Series Pan System.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Manufacturers and Products:
 - a. Balco; a CSW Industrials Company; PJC Series Pan System.
 - b. Sika Corp.; Emseal Wabo SPJ Series.
3. Application: As indicated on Drawings.
4. Exposed Metal and/or Color: As selected by Architect from manufacturer's standards.
5. Cover-Plate Design: As selected by Architect from manufacturer's standards.

2.8 WALL EXTERIOR EXPANSION JOINT COVERS

- A. Exterior Elastomeric-Seal Wall Joint Cover: Assembly consisting of continuous elastomeric primary seal and backup seal anchored to frames, fixed to sides of joint gap.
 1. Basis-of-Design: Balco; a CSW Industrials Company; FCVS Series Elastomeric Face Seal Systems.
 2. Manufacturers and Products:
 - a. Balco; a CSW Industrials Company; FCVS Series Elastomeric Face Seal Systems.
 - b. Construction Specialties, Inc. (C/S Group); SC Series.
 - c. InPro Corporation; 615 or 616 Series.
 - d. MM Systems Corporation; VSS Series.
 - e. Sika Corp.; Watson Bowman Acme WeatherSeam Exterior WSW Series.
 3. Application: As indicated on Drawings.
 4. Exposed Metal and/or Color: As selected by Architect from manufacturer's standards.
- B. Exterior Preformed Foam Wall Joint Seals: Manufacturer's standard joint seal consisting of pre-compressed hydrophobic foam backer seal impregnated with a nondrying, water-repellent agent and factory pre-coated silicone cover to fit joint widths based on design criteria indicated, with factory- or field-applied adhesive for bonding to substrates.
 1. Basis-of-Design Product: Sika EMSEAL; Seismic Colorseal Series. Watertight Expansion Joint.
 2. Manufacturers and Products:
 - a. Construction Specialties, Inc. (C/S Group); VF Series.
 - b. InPro Corporation; 1200 Series Foam Seal.
 - c. Sika EMSEAL; Seismic Colorseal Series. Watertight Expansion Joint.
 3. Application: As indicated on Drawings.
 4. Color: As selected by Architect from manufacturer's standards.

2.9 ROOF / MEMBRANE EXTERIOR EXPANSION JOINT COVERS

- A. Membrane Roof / Vegetative Roof Expansion Assemblies: Assembly consisting of a dual-seal, double-flanged, extruded thermoplastic rubber member with provisions for anchoring and sealing to roofing/waterproofing membrane.
 1. Basis-of-Design Product: Sika Corp.; EMSEAL RoofJoint Series.
 - a. Flange Members: Nitrile; as required for roofing membrane.
 2. Application: As indicated on Drawings.
 3. Color: As selected by Architect from manufacturer's standards.
- B. Split Slab Membrane Plaza Deck / Parking Deck Expansion Assemblies: Assembly consisting of a flanged, extruded thermoplastic rubber member anchored to frames with provisions for anchoring and sealing to roofing/waterproofing membrane.
 1. Basis-of-Design Product: Sika Corp.; EMSEAL Migutan-FP Series.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Flange Members: PVC thermoplastic alloy or TPV (thermoplastic vulcanizate); as required for roofing membrane.
 2. Manufacturers and Products:
 - a. Construction Specialties, Inc. (C/S Group); PDA Series.
 - b. Sika EMSEAL; Migutan-FP Series.
 3. Application: As indicated on Drawings.
 4. Exposed Metal and/or Color: As selected by Architect from manufacturer's standards.
- C. Metal-Plate Roof / Seismic Joint Cover: Assembly consisting of sliding metal cover plate in continuous contact with gaskets mounted on metal frames fixed to sides of joint gap.
1. Basis-of-Design Product: Balco; a CSW Industrials Company; FR / FRE-Straight Curb Series or LPR / LPRE - Canted Curb Series.
 - a. Extruded-Aluminum Covers:
 - 1) Covers less than 15 in (375 mm) Wide: Minimum 0.080 in (2 mm) thick.
 - 2) Covers 15 in (375 mm) and Wider: Minimum 0.125 in (3 mm) thick.
 2. Manufacturers and Products:
 - a. Architectural Art Mfg., Inc.; L Series Roof Expansion Covers.
 - b. Balco; a CSW Industrials Company; FR / FRE-Straight Curb Series or LPR / LPRE - Canted Curb Series.
 - c. Construction Specialties, Inc. (C/S Group); Models SRJ and SRJW.
 - d. MM Systems Corporation; Styles RXH / RXJ.
 - e. Sika Corp.; Watson Bowman Acme Models RFC / RFC-C or RFL / RFL-C.
 3. Application: As indicated on Drawings.
 4. Exposed Metal and/or Color: As selected by Architect from manufacturer's standards.
- 2.10 FLEXIBLE GUTTER AND DRAIN TUBE SYSTEM
- A. Description: Manufacturer standard secondary moisture control and collection system consisting of flexible, reinforced neoprene gutter profile that satisfies the required design movement and compresses without damage during full joint closure. Gutter profile shall contain and drain excess amounts of collected moisture through a drain tube that exhibits similar flexibility. System secures to underside of concrete slab substrate by utilizing anchored retainer profile.
1. Basis of Design: Sika Corp.; Watson Bowman Acme WaboGutterFlex, Model USG; total joint opening sizes as required to meet specific joint movement criteria.
 2. Gutter Profile Materials: 0.062 in (1.5 mm) thick single ply fabric reinforced neoprene sheet. Width of profile shall be governed by joint type and movement requirements.
 3. Drain Tube: 1-1/2 in (38 mm) inside diameter by 1/8 in (3 mm) thick wall clear PVC flexible tubing. Length shall be as required for final connection.
 4. Transition Element: Premolded 0.060 in (1.5 mm) thick EPDM tapered profile with pre-taped flange and adhesive for proper bonding to underside of gutter profile.
 5. Retainer Profile: 3/16 in (5 mm) thick aluminum 5052-H32 alloy, mill finish, preformed to receive a continuous bead of edge sealant and pre-drilled for anchors at 16 in (400 mm) on center.
 6. Edge Sealant: Manufacturer recommended one-part polyurethane moisture cure sealant.
 7. Anchors: Manufacturer's standard 1/4 in (6 mm) diameter by 1-3/4 in (44 mm) long countersunk flathead concrete screw anchor. Carbon steel anchor shall receive factory fluoropolymer coating.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Locations: Exterior floor, roof, plaza deck and parking deck joint cover assemblies.

2.11 MATERIALS

- A. Aluminum: **ASTM B221** (**ASTM B221M**), Alloy 6063-T5 for extrusions; **ASTM B209** (**ASTM B209M**), Alloy 6061-T6 for sheet and plate.
1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.
- B. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304 for plates, sheet, and strips.
- C. Elastomeric Seals: Manufacturer's standard preformed elastomeric membranes or extrusions to be installed in metal frames.
- D. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to comply with performance criteria for required fire-resistance rating.
- E. Moisture Barrier: Manufacturer's standard, flexible elastomeric material.

2.12 ALUMINUM FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.
- D. Mill Finish for Floor Covers: AA-M10 (Mechanical Finish: as fabricated; no other applied finish unless buffing is required to removed scratches, welding, or grinding produced in fabrication process).
- E. Clear Anodic Finish for Wall and Ceiling Covers: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

2.13 STAINLESS STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. Run grain of directional finishes with long dimension of each piece.
 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 3. Directional Satin Finish: No. 4.
- C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

2.14 ACCESSORIES

- A. Moisture Barriers: Manufacturer's standard continuous, waterproof membrane within joint and attached to substrate on sides of joint.
1. Provide at exterior joint assemblies and where indicated on Drawings.
- B. Fasteners and Anchors: Manufacturer's recommended standard or stainless steel fasteners and attachment devices: suitable for application and load capacity. Include anchors, clips,

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

- C. Roofing Cement: ASTM D 4586, Type II.
- D. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and to remain watertight as recommended by manufacturer.
 - 1. Refer to Division 7 Section Joint Sealants.
- E. Mineral-Fiber Blanket Insulation: ASTM C 665.
 - 1. Refer to Division 7 Thermal Insulation.
- F. Silicone Extrusions: Classified according to ASTM D 2000, UV stabilized, and do not propagate flame.
- G. Epoxy Grout Fill:
 - 1. General: Use epoxy grout fill in accordance with manufacturer's application limitations, precautions, and directions for use, including but not limited to surface preparation, mixing, placing, curing, and compatibility with substrate conditions.
 - 2. Description: Multi-component, high strength epoxy grout.
 - 3. Manufacturers and Products:
 - a. BASF Construction Chemicals; MasterFlow 648.
 - b. Laticrete; L&M EpoGrout 758 Epoxy Structural Grout.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer's written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Prepare substrates according to expansion joint cover assembly manufacturer's written instructions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Repair concrete slabs and blockouts using manufacturer's recommended repair grout of compressive strength adequate for anticipated structural loadings.
 - C. Coordinate and furnish anchorages, setting drawings, and instructions for installing joint systems. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of joint systems.
- 3.4 INSTALLATION
- A. Comply with manufacturer's written instructions for storing, handling, and installing expansion joint cover assemblies and materials unless more stringent requirements are indicated.
 - B. Metal Frames: Perform cutting, drilling, and fitting required to install joint systems.
 1. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
 2. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation. Notify Architect where discrepancies occur that will affect proper joint installation and performance.
 3. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
 4. Install frames in continuous contact with adjacent surfaces.
 - a. Shimming is not permitted unless specifically allowed by the manufacturer in writing for this installation.
 5. Locate anchors at interval recommended by manufacturer, but not less than 3 in (75 mm) from each end and not more than 24 in (600 mm) on center.
 - C. Elastomeric Seals in Metal Frames: Install elastomeric seals and membranes in frames to comply with manufacturer's written instructions. Install with minimum number of end joints.
 1. Provide in continuous lengths for straight sections.
 2. Seal transitions. Vulcanize or heat-weld field-spliced joints as recommended by manufacturer.
 3. Mechanically lock seals into frames or adhere to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.
 - D. Preformed Foam Joint Seals: Install in compliance with manufacturer's written instructions. Install with minimum number of end joints.
 1. Install each length of seal immediately after removing protective wrapping.
 2. Firmly secure compressed joint seals to joint gap side to obtain full bond using exposed pressure-sensitive adhesive or field-applied adhesive as recommended by manufacturer.
 3. Do not pull or stretch material. Produce seal continuity at splices, ends, turns, and intersections of joints.
 4. For applications at low ambient temperatures, heat foam joint seal material in compliance with manufacturer's written instructions.
 - E. Install with hairline mitered corners where expansion joint cover assemblies change direction or abut other materials.
 - F. Terminate exposed ends of expansion joint cover assemblies with field- or factory-fabricated termination devices.
 - G. Fire-Resistance-Rated Assemblies: Coordinate installation of architectural joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.
 - H. Moisture Barrier: Provide moisture barrier and drainage at exterior joints and where indicated on Drawings. Provide drainage fittings and connect to drains.
 - I. Roof Expansion Assemblies: Extend assemblies over curbs, parapets, cornices, gutters, valleys, fasciae, and other elements in the construction profile, with factory-fabricated intersections and transitions to provide continuous, uninterrupted, waterproof roof expansion assemblies.
 1. Install factory-fabricated transitions between roof expansion assemblies and building architectural joint systems to provide continuous, uninterrupted, watertight construction.
 2. Splice roof expansion assemblies with materials provided by roof expansion assembly manufacturer for this purpose, according to manufacturer's written instructions, to provide continuous, uninterrupted, waterproof roof expansion assemblies.
 3. Provide uniform profile of roof expansion assembly throughout length of each installation; do not stretch polymeric sheets.
 4. Install mineral-fiber blanket insulation to fill joint space within joint and moisture barrier.
 5. Bed anchorage flanges in roofing cement or sealant recommended by manufacturer and securely nail to curbs and cant strips as recommended by manufacturer but not less than **6 in (150 mm)** on center.
 - J. Flexible Gutter and Drain Tube System: Install in accordance with manufacturer written instructions.
 1. Flexible gutter profile shall be continuous along length of joint.
 2. Seal and anchor flexible gutter system to substrate. Refer to manufacturer instructions for capping ends.
 3. Drain tube assemblies shall be spaced at approximately **25 ft (7.5 m)** center to center along length of joint or as indicated on the Drawings.
 4. Attach drain tube assembly. Using hand roller, apply direct pressure to flange ensuring full contact and proper adhesion.
- 3.5 CONNECTIONS AND TRANSITIONS
- A. Prefabricated Joint Transition Assemblies: Coordinate transitions and terminations of expansion joint covers between each type of application and installation. Provide factory-fabricated units at all joint transitions and terminations, including but not limited to waterproofing, exterior walls, soffits, and roof expansion joint cover assemblies.
- 3.6 FIELD QUALITY CONTROL
- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
 - B. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
 1. Refer to Division 01 Building Enclosure Commissioning for Field Observations and Performance Testing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 - 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 - 2. Prepare test and inspection reports.

3.7 PROTECTION

- A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
- B. Provide final protection and maintain conditions in a manner acceptable to manufacturer and Installer that ensures that expansion joint assemblies are without damage or deterioration at time of Substantial Completion.
 - 1. Where construction traffic is anticipated, remove and properly store cover plates or seals and install temporary protection over joints. Reinstall cover plates or seals prior to Substantial Completion of the Work.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 080610
DOOR SCHEDULE

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes Door Schedule for types of doors, frames and door hardware technically specified in various technical Sections of this Project Manual.

1.2 DOOR SCHEDULE

- A. Attached and included as part of this section: Door Schedule.

PART 2 - PRODUCTS - Not Used

PART 3 - EXECUTION - Not Used

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 081113
HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes: Custom hollow metal doors and frames and supplementary items necessary for installation:
 - 1. Interior custom hollow-metal doors and frames.
 - 2. Exterior custom hollow-metal doors and frames.
- B. Related Requirements:
 - 1. Division 08 Section Door Hardware for door hardware for hollow-metal doors.
 - 2. Section 119812 "Detention Doors and Frames" for hollow-metal doors and frames for detention facilities.
 - 3. Division 13 Section Radiation Protection for lead-lined, hollow-metal doors and frames.

1.2 DEFINITIONS

- A. Minimum Thickness: Minimum thickness of base metal without coatings in accordance with NAAMM-HMMA 803.
- B. Exterior: Areas exposed to the elements and areas located in unconditioned spaces.
- C. Interior: Areas located in conditioned spaces.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
 - 2. Door core materials and construction.
 - 3. Factory priming or finishing specifications.
 - 4. Indicate scheduled fire doors that cannot qualify for labeling because of design, size, hardware or other reason.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work.
 - 1. Door schedule indicating door and frame location, type, size, fire protection rating, and swing.
 - 2. Elevations of each door type.
 - 3. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
 - 4. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
 - 5. Locations of reinforcement and preparations for hardware.
 - 6. Details of each different wall opening condition.
 - 7. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
 - 8. Details of anchorages, joints, field splices, and connections.
 - 9. Details of accessories.
 - 10. Details of moldings, removable stops, and glazing.
 - 11. Clearances.
- C. Samples for Verification:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Finishes: For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches (75 by 127 mm).
 2. Fabrication: Prepare Samples approximately 12 by 12 inches (305 by 305 mm) to demonstrate compliance with requirements for quality of materials and construction:
 - a. Doors: Show vertical-edge, top, and bottom construction; core construction; and hinge and other applied hardware reinforcement. Include separate section showing glazing if applicable.
 - b. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.
 - D. Product Schedule: For hollow-metal doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.
- 1.4 INFORMATIONAL SUBMITTALS
- A. Oversize Construction Certification: Documentation for assemblies required to be fire rated and exceeding limitations of labeled assemblies.
 - B. Product Test Reports: Written reports based on evaluation of comprehensive tests performed by qualified testing agency indicating that each product complies with requirements.
 1. Product Approvals: Submit Florida Product Approval or Product Control Notice of Acceptance (NOA) issued by Miami-Dade County Building Code Compliance Office (BCCO) or other product approval acceptable to authorities having jurisdiction for systems used at exterior of building.
 - C. Field Quality Control Reports: Written report of testing and inspection required by Field Quality Control.
- 1.5 CLOSEOUT SUBMITTALS
- A. Maintenance Data: To include in maintenance manuals.
 - B. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.
- 1.6 QUALITY ASSURANCE
- A. Installer Qualifications:
 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - B. Door Inspector Qualifications: Inspector for field quality-control inspections of fire-rated door assemblies complies with qualifications set forth in NFPA 80 and NFPA 101.
 1. Door and Hardware Institute Fire and Egress Door Assembly Inspector (FDAI) certification.
- 1.7 PRE-INSTALLATION CONFERENCE
- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow-metal doors and frames palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
 - 1. Provide additional protection to prevent damage to factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow-metal doors and frames vertically under cover at Project site with head up. Place on minimum **4-inch- (102-mm-)** high wood blocking. Provide minimum **1/4-inch (6-mm)** space between each stacked door to permit air circulation.

1.9 PROJECT CONDITIONS

- A. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.

1.10 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- B. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- C. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.2 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated on Drawings, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.
 - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
 - 2. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than **450 deg F (250 deg C)** above ambient after 30 minutes of standard fire-test exposure.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing in accordance with UL 1784 and installed in compliance with NFPA 105.
- D. Fire-Rated, Borrowed-Lite Assemblies: Assemblies complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing in accordance with NFPA 257 or UL 9.
- E. Windborne-Debris-Impact-Resistance Performance: Comply with impact resistance testing requirements for Wind Zone.
- F. Thermally Rated Exterior Door Assemblies: Provide door assemblies with U-factor of not more than $0.40 \text{ deg Btu/F} \times \text{h} \times \text{sq. ft.}$ ($2.27 \text{ W/K} \times \text{sq. m}$) when tested in accordance with ASTM C1363 or ASTM E1423.
- G. Exterior Door Air Infiltration: Maximum air leakage of 0.20 cfm/sf (0.09 L/s per sq m) when tested according to ASTM E 283 at a minimum static-air-pressure difference of 1.57 lbf/sf (75 Pa).

2.3 INTERIOR CUSTOM HOLLOW-METAL DOORS AND FRAMES

- A. Interior Commercial Doors and Frames: NAAMM-HMMA 861; ANSI/SDI A250.4, Physical Performance Level A.
 - 1. Locations:
 - a. Interior doors and frames.
 - 2. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: $1\text{-}3/4 \text{ inches}$ (44.5 mm).
 - c. Face: Uncoated steel sheet, minimum thickness of 0.042 inch (1.0 mm).
 - d. Door Edge Construction: Seamless, continuously welded with no visible seam.
 - 1) End Channels: Close top and bottom edges with continuous flush channels, minimum thickness of 0.053 inch (1.3 mm), fabricated from same material as face sheets and spot welded to face sheets.
 - e. Core Construction: Steel stiffened.
 - 1) Welded Vertical Steel Stiffeners: Manufacturer's standard vertical steel stiffener extending full-door height, spot welded to face sheets. Fill spaces between stiffeners with mineral-fiber insulation.
 - f. Fire-Rated Core Construction: Manufacturer's standard vertical steel stiffener core for fire-rated doors.
 - 3. Frames:
 - a. Materials: Uncoated steel sheet, minimum thickness of 0.053 inch (1.3 mm), except 0.067 inch (1.7 mm) for openings exceeding 4 feet (1219 mm) wide.
 - b. Sidelite and Transom Frames: Fabricated from same material as adjacent door frame.
 - c. Construction: Close contact edges of corner joints tight with mitered faces; full profile, continuously welded.
 - 1) Knocked down frame construction not permitted.
 - 4. Exposed Finish: Prime.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.4 EXTERIOR CUSTOM HOLLOW-METAL DOORS AND FRAMES

- A. Exterior Commercial Doors and Frames: NAAMM-HMMA 861; ANSI/SDI A250.4, Physical Performance Level A.
1. Locations:
 - a. Exterior doors and frames.
 - b. All doors and frames in parking garages.
 - c. All doors and frames in central energy plants.
 2. Doors:
 - a. Type: As indicated in the Door and Frame Schedule.
 - b. Thickness: 1-3/4 inches (44.5 mm).
 - c. Face: Metallic-coated steel sheet, minimum thickness of 0.053 inch (1.30 mm), with minimum G60 or A60 (ZF180) coating.
 - d. Door Edge Construction: Seamless, continuously welded with no visible seam.
 - 1) End Channels: Close top and bottom edges with continuous flush channels, minimum thickness of 0.053 inch (1.3 mm), fabricated from same material as face sheets and spot welded to face sheets.
 - e. Top Edge Closures: Seal joints against water penetration.
 - f. Bottom Edge Closures: Provide weep hole openings in bottoms of exterior doors to permit moisture to escape.
 - g. Core Construction: Steel stiffened.
 - 1) Welded Vertical Steel Stiffeners: Manufacturer's standard vertical steel stiffener extending full-door height, spot welded to face sheets. Fill spaces between stiffeners with mineral-fiber insulation.
 3. Frames:
 - a. Materials: Metallic-coated steel sheet, minimum thickness of 0.067 inch (1.7 mm), with minimum G60 or A60 (ZF180) coating.
 - b. Construction: Close contact edges of corner joints tight with mitered faces; full profile, continuously welded.
 - 1) Knocked down frame construction not permitted.
 4. Exposed Finish: Prime.

2.5 BORROWED LITES

- A. Borrowed Lite Frames: Fabricate from same materials, construction, and finish as door frame assemblies.
- B. Construction: Close contact edges of corner joints tight with mitered faces; full profile, continuously welded.
1. Knocked down frame construction not permitted.
- C. Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as metal as frames.
- D. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.6 HOLLOW-METAL PANELS

- A. Provide hollow-metal panels of same materials, construction, and finish as adjacent door assemblies.

2.7 FRAME ANCHORS

A. Jamb Anchors:

1. Type: Anchors of minimum size and type required by applicable door and frame standard, and suitable for performance level indicated.
 - a. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 in (1.10 mm) thick.
 - b. Masonry Type: Adjustable Z-clip type or T-shaped anchors to suit frame size, not less than 0.042 in (1.10 mm) thick, with corrugated or perforated straps not less than 2 in (50 mm) wide by 10 in (250 mm) long.
 2. Quantity and Location:
 - a. Stud-Wall Type: Locate anchors not more than 18 in (450 mm) from top and bottom of frame. Space anchors not more than 32 in (800 mm) on centers and as follows:
 - 1) Three anchors per jamb up to 60 in (1500 mm) high.
 - 2) Four anchors per jamb from 60 to 90 in (1500 to 2250 mm) high.
 - 3) Five anchors per jamb from 90 to 96 in (2250 to 2400 mm) high.
 - 4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 in (600 mm) or fraction thereof above 96 in (2400 mm) high.
 - 5) Two anchors per head for frames above 42 in (1050 mm) wide and mounted in metal-stud partitions.
 - b. Masonry Type: Locate anchors not more than 18 in (450 mm) from top and bottom of frame. Space anchors not more than 32 in (800 mm) on centers and as follows:
 - 1) Two anchors per jamb up to 60 in (1500 mm) high.
 - 2) Three anchors per jamb from 60 to 90 in (1500 to 2250 mm) high.
 - 3) Four anchors per jamb from 90 to 120 in (2250 to 3000 mm) high.
 - 4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 in (600 mm) or fraction thereof above 120 in (3000 mm) high.
 3. Postinstalled Expansion Anchor for In-Place Concrete or Masonry: Countersunk, flat or oval head exposed screws and bolts, Minimum 3/8-inch- (9.5-mm-) diameter bolts with expansion shields or inserts, with manufacturer's standard pipe spacer.
- B. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor; fabricated from same material as frames and welded to bottom of jambs and mullions, minimum thickness 0.0428 in (1.10 mm), terminate bottom of frames at top of finish floor.
1. Monolithic Concrete Slabs: Clip type anchors, with two holes to receive fasteners.
- C. Floor Anchors for Concrete Slabs with Underlayment/Topping: Adjustable-type anchors with extension clips, allowing not less than 2-inch (51-mm) height adjustment. Terminate bottom of frames at top of underlayment.
- D. Material: ASTM A879/A879M, Commercial Steel (CS), 04Z (12G) coating designation; mill phosphatized.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. For anchors built into exterior walls and other exterior locations, steel sheet complying with ASTM A1008/A1008M or ASTM A1011/A1011M; hot-dip galvanized in accordance with ASTM A153/A153M, Class B.

2.8 MATERIALS

- A. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B; suitable for exposed applications.
- B. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.
- C. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with minimum **G60 (Z180)** or **A60 (ZF180)** metallic coating. Thickness indicated is for uncoated steel.
- D. Inserts, Bolts, and Fasteners: Hot-dip galvanized in accordance with ASTM A153/A153M.
- E. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.
 1. Available Manufacturers:
 - a. Construction Materials, Inc.
 - b. Heckman Building Products, Inc.
 - c. Hilti Corp.
 - d. ITW Ramset/Red Head.
 - e. Powers Fasteners.
 - f. Simpson Strong Tie Anchor Systems.
 2. Post-Tensioned Concrete: For post-tensioned concrete, fasteners shall not exceed 1 in (25 mm) embedment. Obtain Structural Engineer's written approval for all proposed fasteners in post-tensioned concrete prior to installation.
- F. Mineral-Fiber Insulation: ASTM C665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E136 for combustion characteristics.
- G. Glazing: Comply with requirements in Division 08 Section Glazing.
- H. Bituminous Frame Back Coating for Grouted Frames: Cold-applied asphalt mastic, compounded for **15-mil (0.4-mm)** dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.9 FABRICATION

- A. General Requirements: Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Factory fit and assemble units in manufacturer's plant.
 1. Manufacturing Standards: ANSI/NAAMM-HMMA 861.
- B. Hollow-Metal Doors: Fabricate doors not less than 1-3/4 in (44 mm) thick, seamless hollow metal construction unless otherwise indicated. Construct doors with smooth surfaces and without visible joints or seams on exposed faces.
- C. Door Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum **3/4 inch (19 mm)**

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.

- D. Hollow-Metal Frames: Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as frames.
1. Sidelite and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by welding.
 2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 3. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
 - b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
- E. Hardware Preparation: Factory prepare hollow-metal doors and frames to receive templated mortised hardware, and electrical wiring; include cutouts, reinforcement, mortising, drilling, and tapping in accordance with ANSI/SDI A250.6, the Door Hardware Schedule, and templates.
1. Reinforce doors and frames to receive non-templated, mortised, and surface-mounted door hardware. Minimum Reinforcing Thickness for Door Hardware:
 - a. Hinges and Pivots: 0.167 in (4.2 mm) thickness by 1-1/2 in wide by 6 in (38 mm by 150 mm) longer than hinge.
 - b. Locks, Strikes, Flush Bolts and Closers: 0.093 in (2.3 mm) thickness.
 - c. Surface Mounted Hold Open Arms and Panic Devices: 0.093 in (2.3 mm) thickness.
 - d. Other Surface Applied Hardware: 0.067 in (1.7 mm) thickness.
 2. Comply with BHMA A156.115 for preparing hollow-metal doors and frames for hardware.
 3. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 Sections
- F. Glazed Lites: Provide continuous frame for glazed openings between face sheets; miter corners, weld frame to face sheets, and grind smooth. Provide stops and moldings around glazed lites. Form corners of stops and moldings with butted or mitered hairline joints.
1. Provide stops and moldings around glazed lites, flush with face of door, and with square stops unless otherwise indicated.
 - a. Use same materials as door face sheet for frame and loose stop for flush glazing
 2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
 3. Provide fixed formed frame on outside of exterior and on secure side of interior doors and frames. Provide loose stops and moldings on inside of hollow-metal doors and frames.
 - a. Do not overlap frame molding on face of door.
 4. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.
 5. Provide stops for installation with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches (230 mm) o.c. and not more than 2 inches (51 mm) o.c. from each corner.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.10 STEEL FINISHES

- A. Comply with NAAMM's Metal Finishes Manual for Architectural and Metal Products for recommendations for cleaning, treating, priming, and when specified, finishing.
- B. Uncoated Steel Surface Preparation: Clean surfaces to comply with SSPC-SP 1, Solvent Cleaning; remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 3, Power Tool Cleaning, or SSPC-SP 6/NACE No. 3, Commercial Blast Cleaning.
- C. Metallic-Coated Steel Surface Preparation: Clean surfaces with non-petroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating compatible with primer. Clean welds, mechanical connections, abraded areas and apply galvanizing repair paint.
 - 1. Galvanizing Repair Paint: High-zinc-dust-content paint for re-galvanizing welds and other surfaces; comply with SSPC-Paint 20.
- D. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.
 - 1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
- E. Field Applied Coatings: Comply with Division 09 Section Painting for substrate preparation and painting requirements.

2.11 LOUVERS

- A. Provide louvers for interior doors, where indicated, which comply with SDI 111, with blades or baffles formed of **0.020-inch- (0.5-mm-)** thick, cold-rolled steel sheet set into **0.032-inch- (0.8-mm-)** thick steel frame.
 - 1. Sightproof Louver: Stationary louvers constructed with inverted-V or inverted-Y blades.
 - 2. Fire-Rated Automatic Louvers: Louvers constructed with movable blades closed by actuating fusible link and listed and labeled for use in fire-rated door assemblies of type and fire-resistance rating indicated by same qualified testing and inspecting agency that established fire-resistance rating of door assembly.
- B. Fabricate louvers and mount flush into doors without overlapping moldings on surface of door face sheets. Provide internal support recommended by manufacturer. Provide louvers with minimum of 50% free air area unless indicated otherwise.
- C. Form corners of moldings with hairline joints. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
1. Respective manufacturer's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces. Touch up factory-applied finishes where spreaders are removed.
- C. Drill and tap doors and frames to receive non-templated, mortised, and surface-mounted door hardware.

3.4 INSTALLATION

- A. General: Install hollow-metal doors and frames plumb, rigid, properly aligned, and securely fastened in place. Comply with approved Shop Drawings and with manufacturer's written instructions.
- B. Hollow-Metal Frames: Comply with NAAMM-HMMA 840.
1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces without damage to completed Work.
 - a. Where frames are fabricated in sections, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces. Touch-up finishes.
 - b. Install frames with removable stops located on secure side of opening.
 2. Fire-Rated Openings: Install frames in accordance with NFPA 80.
 3. Floor Anchors: Secure with post-installed expansion anchors.
 - a. Floor anchors may be set with power-actuated fasteners instead of post-installed expansion anchors if so indicated and approved on Shop Drawings.
 4. Sound Rated Partitions: Solidly pack mineral-fiber insulation inside frames.
 5. Exterior Walls: Solidly fill space between frames wall construction with mineral-fiber insulation unless indicated otherwise.
 6. In-Place Concrete or Masonry Construction: Secure frames in place with post-installed expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
 7. Installation Tolerances: Adjust hollow-metal frames to the following tolerances:
 - a. Squareness: Plus or minus **1/16 inch (1.6 mm)**, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus **1/16 inch (1.6 mm)**, measured at jambs on a horizontal line parallel to plane of wall.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Twist: Plus or minus **1/16 inch (1.6 mm)**, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus **1/16 inch (1.6 mm)**, measured at jambs at floor.
- C. Hollow-Metal Doors: Fit and adjust hollow-metal doors accurately in frames, within clearances specified below.
 - 1. Non-Fire-Rated Steel Doors: Comply with NAAMM-HMMA 841 and NAAMM-HMMA guide specification indicated.
 - 2. Fire-Rated Doors: Install doors with clearances in accordance with NFPA 80.
 - 3. Smoke-Control Doors: Install doors in accordance with NFPA 105.
- D. Glazing: Comply with installation requirements in Section 088000 "Glazing" and with hollow-metal manufacturer's written instructions.

3.5 FIELD QUALITY CONTROL

- A. Contractor Inspection Agency: Engage a qualified inspector to perform inspections and to furnish reports to Architect.
- B. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 - 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 - 2. Prepare test and inspection reports.
 - a. Prepare and submit separate inspection report for each fire-rated door assembly indicating compliance with each item listed in NFPA 80 and NFPA 101.
- C. Contractor Inspections:
 - 1. Fire-Rated Door Inspections: Inspect each fire-rated door in accordance with NFPA 80.
 - 2. Egress Door Inspections: Inspect each door equipped with panic hardware, each door equipped with fire exit hardware, each door located in an exit enclosure, each electrically controlled egress door, and each door equipped with special locking arrangements in accordance with NFPA 101.

3.6 ADJUSTMENTS AND REPAIRS

- A. Final Adjustments: Remove and replace defective hollow metal work, including work that is warped, bowed, or otherwise unacceptable.
- B. Factory-Finish Touchup: Clean abraded areas and repair with same material used for factory finish according to manufacturer's written instructions.
 - 1. Inspect hollow metal frames located in wet areas and bathrooms; prepare and reprime damaged areas to prevent rusting and bleed through.
- C. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

SECTION 081170
STEEL FIRE DOOR AND FRAME ASSEMBLY

PART 1 - GENERAL

1.1 SUMMARY

- A. Work required for this section includes preassembled steel fire doors, frames, hardware and supplementary items necessary to complete their installation.
- B. Standard steel fire doors are specified in Division 8 Section "Hollow Metal Doors and Frames".

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, label compliance, fire-resistance ratings, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work.
- C. Door Schedule: Submit schedule of doors and frames using same reference numbers for details and openings as those on Drawings.
- D. Construction Samples: Approximately 12 in (300 mm) by 12 in (300 mm) representing the required construction of doors for Project.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: To include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Manufacturer with not less than 5 years of experience in the successful production and in-service performance of products and systems similar to scope of this Project.
- B. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.
- C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL 10B and UBC 7-2 (1997).
 - 1. Test Pressure: After 5 minutes into the test, the neutral pressure level in furnace shall be established at 40 in (1000 mm) or less above the sill.
 - 2. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a testing agency acceptable to authorities having jurisdiction that

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

- D. Handicap: Provide doors and hardware that complies with applicable requirements of Americans with Disabilities Act (ADA), ANSI A117.1 and State Handicap Requirements.

1.5 PROJECT CONDITIONS

- A. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.

1.6 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver doors and frames to provide protection during transit and storage. Do not use nonvented plastic.
- B. Inspect doors and frames, on delivery, for damage. Minor damage may be repaired provided refinished items match new work otherwise, remove and replace damaged items.
- C. Store doors and frames under cover at building site. Provide wood blocking between stacked doors to permit air circulation.

1.8 WARRANTY

- A. Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design of product. "Defects" are defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 2 years from date of Substantial Completion.
- B. Installer's Warranty: Furnish installer's written workmanship warranty signed by an authorized representative using installer's standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 2 years from date of Substantial Completion

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
 - 1. Openings – "Total Door".
 - 2. Adams Rite Manufacturing Co. – "The Rite Door".

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials

2.3 MATERIALS

- A. Cold-Rolled Steel Sheets: ASTM A 366, CS commercial quality, level sheet steel.
- B. Electrolytic Zinc-Coated Steel Sheets: ASTM A 591 commercial quality, coating Class C; mill phosphatized; suitable for exposed applications; and stretcher leveled or roller leveled to stretcher-leveled flatness.
- C. Honeycomb Core: Resin-impregnated kraft paper with maximum 1 in (25 mm) cells and minimum 42 psi crushing strength.

2.4 DOOR ASSEMBLY

- A. Face Sheets: One of the following laminated with waterproof adhesive to core.
 - 1. 18 gage electrolytic zinc coated steel sheet.
 - 2. 18 gage cold rolled steel sheet.
- B. Stiles and Rails: One of the following manufacturer's standard.
 - 1. 16 gage continuous latch and hinge stiles with 5-3/4 in (144 mm) top and bottom wood rails.
 - 2. 16 gage continuous top and bottom steel channel rails and welded vertical door edges.

2.5 HARDWARE

- A. Exit Device: Manufacturer's standard, recessed in door face, ADA Compliant, one of the following:
 - 1. Locking channels, bars, and strike blocks latching and control mechanism, 1-5/16 in (33 mm) in closed position, 1/8 in (3 mm) in open position.
 - 2. Top vertical rod only panic device with electronic dogging for 1/2 in (12 mm) in open position and 1-1/8 in (28 mm) in closed position.
- B. Hinges: One of the following, manufacturer's standard.
 - 1. 14 gage continuous semi-concealed steel pivoting and suspension mechanism.
 - 2. One half mortised continuous geared electric hinge.
- C. Lever Trim: Manufacturer's standard, ADA compliant, finish to match project finish hardware.
- D. Magnetic Hold Open: Manufacturer's standard for door pocket installation and connected to building fire alarm system.
- E. Closer: Manufacturer's standard, surface mounted on hinge side of door, finish to match door.
- F. Smoke Seal: Manufacturer's standard to meet positive pressure fire compliance of UL 10B and UBC 7-2 (1997).

2.6 FINISH

- A. After fabrication dress and fill all tool marks and surface imperfections fill and sand as required to make all faces and vertical edges smooth, level and free of all irregularities. Chemically treat to insure maximum paint adhesion and coat exposed surfaces, with a rust inhibitive primer to receive following finish.
 - 1. Factory primed only for field applied finish paint coating.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Factory applied primer and manufacturer's standard polyurethane finish coat.
 - a. Color as scheduled or as indicated in Design Selections.
3. Factory applied high pressure decorative laminate.
 - a. Color as scheduled or as indicated in Design Selections.

2.7 DOOR FRAMES

- A. Provide 16 gage, fully welded construction with same label as door, as specified in Division 8 Section, "Hollow Metal Doors and Frames".

2.8 FABRICATION

- A. Fabricate doors and frames rigid, neat in appearance, and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles. Weld exposed joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where practical, fit and assemble units in manufacturer's plant. Clearly identify work that cannot be permanently factory assembled before shipment, to assure proper assembly at Project site.
- B. Hardware Preparation: Prepare doors and frames to receive hardware, including cutouts, reinforcement, mortising, drilling, and tapping. Comply with applicable requirements of ANSI A115 Series specifications for door and frame preparation for hardware.
 1. Reinforce doors and frames to receive surface-applied hardware. Drilling and tapping for surface-applied hardware may be done at Project site.
 2. Locate hardware according to HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 1. Respective manufacturer written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.4 INSTALLATION

- A. General: Install doors and frames according to DHI A115.IG and manufacturer's written instructions.
- B. Install work in accordance with reviewed shop drawings and these specifications using only factory trained installers.
- C. Frames: Set frames accurately in position; plumb; align, and brace securely until permanent anchors are set. After wall construction is complete, remove temporary braces and spreaders, leaving surfaces smooth and undamaged.
- D. Hang doors and adjust for free swinging operation without binding, sticking, sagging or excessive clearances.
- E. When installation is complete, adjust operating hardware for proper operation and function.
- F. Coordinate installation with fire alarm and smoke detection systems interfacing wiring requirements.
- G. Fire-Rated Doors: Install with clearances as specified in NFPA 80.
- H. Smoke Control Doors: Install according to NFPA 105.

3.5 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and readjust operating hardware items just before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including doors or frames that are warped, bowed, or otherwise unacceptable.
- B. Factory-Finish Touchup: Immediately after erection, sand to feather-edge minor scratched, chipped, or damaged areas and apply touchup of compatible air-drying paint. Minor finish imperfections may be repaired provided finish matches new work finish and is approved by Architect; otherwise, remove and replace.

3.6 FINISH SCHEDULE

- A. Manufacturer's standard polyurethane finish coat.
 - 1. Color: Match Architect's sample.
 - 2. Color: As selected by Architect from manufacturer's standards.
 - 3. Color:
- B. High Pressure Decorative Laminate.
 - 1. Color: Match Architect's sample.
 - 2. Color: As selected by Architect from manufacturer's standards.
 - 3. Color:

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 081426
HOLLOW CORE WOOD DOORS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Hollow core wood doors, finishing and supplementary items necessary for installation.
1. Hollow-core flush wood veneer-faced doors for transparent finish.
 2. Hollow-core flush wood doors for opaque finish.
 3. Wood door frames.
 4. Factory priming doors.
 5. Factory finishing doors.
 6. Factory fitting doors to frames and factory machining for hardware.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
 2. Door core materials and construction.
 3. Door edge construction.
 4. Door face type and characteristics.
 5. Door frame construction.
 6. Factory-machining criteria.
 7. Factory priming and finishing specifications.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work. Indicate location, size, and hand of each door; elevation of each type of door; construction details not covered in Product Data; and the following:
1. Door schedule indicating door and frame location, type, size, and swing.
 2. Door elevations, dimension and locations of hardware.
 3. Details of frame for each frame type, including dimensions and profile.
 4. Dimensions and locations of blocking for hardware attachment.
 5. Dimensions and locations of mortises and holes for hardware.
 6. Clearances and undercuts.
 7. Doors to be factory primed or finished and application requirements.
- C. Samples for Verification:
1. Transparent and Opaque Finish Doors: Factory finishes applied to actual door face materials, approximately 8 by 10 inches (200 by 250 mm), for each material and finish. For each wood species and transparent finish, provide set of three Samples showing typical range of color and grain to be expected in finished Work.

1.3 INFORMATIONAL SUBMITTALS

1. Warranty:
 - a. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations and exclusions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.4 QUALITY ASSURANCE

1.5 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Comply with requirements of referenced standard and manufacturer's written instructions.
- B. Package doors individually in opaque plastic bags or cardboard cartons.
- C. Protect doors during transit, storage and handling to prevent damage, soiling and deterioration.
- D. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations:
 - 1. Do not deliver or install doors until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and HVAC system is operating and maintaining temperature and relative humidity at levels designed for building occupants for the remainder of construction period.

1.8 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

1.9 WARRANTY

- A. Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design and installation of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period for Interior Doors: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 5 years from date of Substantial Completion

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Available Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, manufacturers offering products that may be incorporated into the Work include, but are not limited to, those listed.
- C. Manufacturers:
 - 1. Masonite.
- D. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other available manufacturers offering products

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

1. Basis of Design: Masonite; Interior Residential Hollow Core Doors.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.3 WOOD DOORS AND FRAMES, GENERAL

- A. Quality Standard: In addition to requirements specified, comply with ANSI/WDMA I.S. 1A
 1. Performance Grade:
 - a. ANSI/WDMA I.S. 1A Standard Duty: Typical locations.
- B. Low-Emitting Materials: Provide doors made with adhesives and composite wood products that do not contain urea formaldehyde.

2.4 HOLLOW-CORE WOOD VENEER-FACED DOORS FOR TRANSPARENT FINISH

- A. Interior Doors, Hollow-Core Veneer-Faced:
 1. ANSI/WDMA I.S. 1A Grade: Custom.
 2. Species and Cut: As scheduled or indicated in Design Selections.
 3. Vertical Edges: Applied wood-veneer edges of same species as faces and covering edges of faces; sanded eased edges.
 4. Horizontal Edges: Unfaced, sanded smooth, with factory applied seal coat.
 - a. Top Edges Exposed to View: Match exposed vertical edges.
 5. Construction: Standard hollow core.
 6. Blocking: Provide wood blocking with minimum dimensions as follows:
 - a. 5-by-18-inch (125-by-460-mm) lock blocks.

2.5 HOLLOW-CORE WOOD DOORS FOR OPAQUE FINISH

- A. Interior Doors, Hollow Core:
 1. ANSI/WDMA I.S. 1A Grade: Custom.
 2. Faces: Hardboard or MDF.
 - a. Hardboard Faces: ANSI A135.4, Class 1 (tempered) or Class 2 (standard).
 - b. MDF Faces: ANSI A208.2, Grade 150 or Grade 160.
 3. Vertical Edges: Any closed-grain hardwood.
 4. Horizontal Edges: Unfaced, sanded smooth, with factory applied seal coat.
 - a. Top Edges Exposed to View: Match exposed vertical edges.
 5. Construction: Standard hollow core.
 6. Blocking: Provide wood blocking with minimum dimensions as follows:
 - a. 5-by-18-inch (125-by-460-mm) lock blocks.

2.6 WOOD DOOR FRAMES

- A. Interior Frames:
 1. ANSI/WDMA I.S. 1A Grade: Match grade indicated for doors.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Wood Species and Cut: Match species and cut indicated for wood doors unless otherwise indicated.
 3. Wood Moisture Content: Comply with requirements of referenced quality standard.
 4. Profile: Single rabbet unless indicated otherwise on Drawings.
- B. Construction: Solid lumber, particleboard, or medium density fiberboard (MDF) with veneered exposed surfaces.

2.7 FABRICATION

- A. Factory fit doors to suit frame-opening sizes indicated.
1. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
- B. Factory machine doors for hardware that is not surface applied.
1. Locate hardware to comply with DHI-WDHS-3.
 2. Comply with final hardware schedules, door frame Shop Drawings, ANSI/BHMA-156.115-W, and hardware templates.
 3. Coordinate with hardware mortises in frames, to verify dimensions and alignment before factory machining.
- C. Seal edges of doors, edges of cutouts, and mortises with sealer coat after fitting and machining.

2.8 FACTORY PRIMING

- A. Doors for Opaque Finish: Factory prime faces, all four edges, edges of cutouts, and mortises with one coat of wood primer specified in Division 09 Section Painting.

2.9 FACTORY FINISHING

- A. Comply with referenced quality standard for factory finishing.
1. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
 2. Finish faces, all four edges, edges of cutouts, and mortises.
 3. Stains and fillers may be omitted on edges of cutouts, and mortises.
- B. Factory finish doors, unless indicated otherwise.
- C. Transparent Finish:
1. ANSI/WDMA I.S. 1A Grade: Same grade for finish as specified for doors.
 2. ANSI/WDMA I.S. 1A TR-4 Conversion Varnish.
 3. Staining, Effect and Sheen: Match Architect's sample, as scheduled or indicated in Design Selections.
- D. Opaque Finish:
1. ANSI/WDMA I.S. 1A Grade: Same grade for finish as specified for doors.
 2. ANSI/WDMA I.S. 1A OP-4 Conversion Varnish.
 3. Color and Sheen: Match Architect's sample, as scheduled or indicated in Design Selections.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.
- B. Examine doors and installed door frames, with Installer present, before hanging doors.
 - 1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. Reject doors with defects.

3.2 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.

3.3 INSTALLATION

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer's written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.
- B. Hardware: For installation, see Division 8 Section Door Hardware.
- C. Install doors and frames to comply with manufacturer's written instructions and referenced quality standard, and as indicated.
- D. Install frames level, plumb, true, and straight.
 - 1. Shim as required with concealed shims. Install level and plumb to a tolerance of **1/8 inch in 96 inches (3.2 mm in 2400 mm)**.
 - 2. Anchor frames to anchors or blocking built in or directly attached to substrates.
 - a. Secure with countersunk, concealed fasteners and blind nailing.
 - b. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork.
 - 1) For factory-finished items, use filler matching finish of items being installed.
- E. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
 - 1. Clearances:
 - a. Head, Jambs and Pairs of Doors: Provide **1/8-inch (3.2 mm)** maximum at heads, jambs, and between pairs of doors.
 - b. Between Bottom of Door and Top of Threshold: Where threshold is shown or scheduled, provide **1/4-inch (6.4 mm)** maximum from bottom of door to top of threshold unless otherwise indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Between Bottom of Door and Top of Finished Floor Material - No Threshold:
Provide 3/4-inch (19 mm) maximum from bottom of door to top of finished floor material unless otherwise indicated on Drawings.
 - F. Factory-Finished Doors: Restore finish before installation when fitting or machining is required at Project site.
- 3.4 ADJUSTING
- A. Operation: Rehang or replace doors that do not swing or operate freely.
 - B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.
- 3.5 FINISH SCHEDULE
- A. Wood Veneer Faced Doors for Transparent Finish:
 - 1. Species and Cut Selection: Match sample accepted by Architect.
 - 2. Species and Cut Selection:
 - 3. Finish:
 - a. Staining, Effect and Sheen: Match sample accepted by Architect.
 - B. Doors for Opaque Finish:
 - 1. Finish: Match sample accepted by Architect.
 - 2. Finish:
 - a. Color and Sheen: Match sample accepted by Architect.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 083113
ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Access doors and frames and supplementary items necessary for installation.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work.
- C. Ceiling Coordination Drawings for Access Doors at Ceilings: Furnish reflected ceiling plans, drawn to scale, on which ceiling-mounted items including access doors and frames, lighting fixtures, diffusers, grilles, speakers, sprinklers, and special trim are shown and coordinated with each other. Indicate method of attaching door frames to surrounding construction.
- D. Samples for Verification Purposes: For each door face material, at least 3 in by 5 in (75 mm by 125 mm) in size, in specified finish.
- E. Access Door and Frame Schedule: Provide complete access door and frame schedule, including types, locations, sizes, latching or locking provisions, and other data pertinent to installation.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: To include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Fire-Rated Access Doors and Frames: Units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics per the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
 - 1. NFPA 252 or UL 10B for vertical access doors and frames.
 - 2. ASTM E 119 or UL 263 for horizontal access doors and frames.
- B. Size Variations: Obtain Architect's acceptance of manufacturer's standard-size units, which may vary slightly from sizes indicated.

1.5 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- B. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed plumbing, mechanical, or other concealed work, and indicate in the schedule specified in "Submittals" Article.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

\
PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Manufacturers:
 - 1. Metal Doors and Frames:
 - a. Acudor Products, Inc.
 - b. Babcock-Davis.
 - c. Dur-Red Products.
 - d. J. L. Industries, Inc.
 - e. Karp Associates, Inc.
 - f. Larsen's Manufacturing Company.
 - g. Maxam Metal Products, Ltd.
 - h. Milcor Inc.
 - i. Nystrom Building Products.
 - j. Williams Brothers Corporation of America.
 - 2. Glass-Fiber-Reinforced Gypsum (GFRG) Doors and Frames:
 - a. Chicago Metallic Corporation.
 - b. Nystrom Building Products.
- C. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.3 STEEL MATERIALS

- A. Steel Plates, Shapes, and Bars: ASTM A 36 / A 36M.
 - 1. ASTM A 123 / A 123M, for galvanizing steel and iron products.
 - 2. ASTM A 153 / A 153M, for galvanizing steel and iron hardware.
- B. Steel Sheet: Uncoated cold-rolled steel sheet substrate complying with ASTM A 1008 / A 1008M, Commercial Steel (CS), exposed.
- C. Metallic-Coated (Galvanized) Steel Sheet: ASTM A 653 / A 653M, Commercial Steel (CS) with A60 (ZF180) zinc-iron-alloy (galvannealed) coating or G60 (Z180) mill-phosphatized zinc coating; stretcher-leveled standard of flatness; with minimum thickness indicated representing specified thickness according to ASTM A 924 / A 924M.
- D. Steel Finishes: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Surface Preparation for Steel Sheet: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning", to remove dirt, oil, grease, or other contaminants that could impair

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

\

paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning", or SSPC-SP 8, "Pickling".

2. Surface Preparation for Metallic-Coated (Galvanized) Steel Sheet: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas, and apply galvanizing repair paint specified below to comply with ASTM A 780.

- a. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in steel, complying with SSPC-Paint 20.

3. Factory-Primed Finish: Apply shop primer immediately after cleaning and pretreating.

- E. Drywall Beads: Edge trim formed from 0.0299 in (0.7 mm) zinc-coated steel sheet formed to receive joint compound and in size to suit thickness of gypsum board.

- F. Plaster Beads: Casing bead formed from 0.0299 in (0.7 mm) zinc-coated steel sheet with flange formed out of expanded metal lath and in size to suit thickness of plaster.

2.4 STAINLESS-STEEL MATERIALS

- A. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 316. Remove tool and die marks and stretch lines or blend into finish.

1. Finish: Directional No. 4 Satin Finish.

2.5 ALUMINUM MATERIALS

- A. Aluminum Extrusions: ASTM B 221 / B 221M, Alloy 6063-T6.

1. Mill finish, AA-M10 (Mechanical Finish: as fabricated, unspecified).

- B. Aluminum-Alloy Rolled Tread Plate: ASTM B 632 / B 632M, Alloy 6061-T6.

1. Mill finish, AA-M10 (Mechanical Finish: as fabricated, unspecified).

- C. Aluminum Sheet: ASTM B 209 / B 209M, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than strength and durability properties of Alloy 5005-H15; with minimum sheet thickness indicated representing specified thickness according to ANSI H35.2 / H35.2(M).

1. Mill Finish: AA-M10 (Mechanical Finish: as fabricated, unspecified).

2.6 GLASS-FIBER-REINFORCED GYPSUM MATERIALS

- A. Fabrications: Molded, glass-fiber-reinforced gypsum units complying with ASTM C 1381 / C 1381M.

2.7 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

- A. Non-rated Flush Access Doors and Frames with Exposed Trim:

1. Locations:

- a. Masonry wall surfaces.
- b. Ceramic tile wall surfaces.

2. Fabricated from one of the following as scheduled at the end of this Section.

- a. Steel sheet.
- b. Metallic-coated (galvanized) steel sheet.
- c. Stainless-steel sheet.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- \
3. Door: Minimum **0.075 in (1.9 mm)** thick sheet metal, set flush with exposed face flange of frame.
 4. Frame: Minimum **0.060 in (1.5 mm)** thick sheet metal with **1-1/4 in (32 mm)** wide, surface-mounted trim.
 5. Hinges: Continuous piano.
 6. Lock: Key-operated cylinder.
 7. Size: **12 in by 12 in (300 mm by 300 mm)**; unless otherwise indicated.
 8. Basis of Design: Nystrom Building Products, Model NT.
- B. Non-rated Flush Access Doors and Trimless Frames:
1. Locations: Wall and ceiling surfaces as scheduled.
 - a. Gypsum board wall and ceiling surfaces.
 - b. Plaster wall and ceiling surfaces.
 2. Fabricated from one of the following as scheduled at the end of this Section.
 - a. Steel sheet.
 - b. Metallic-coated (galvanized) steel sheet.
 - c. Stainless-steel sheet.
 3. Door: Minimum **0.075 in (1.9 mm)** thick sheet metal, set flush with surrounding finish surfaces.
 4. Frame: Minimum **0.060 in (1.5 mm)** thick sheet metal with drywall bead flange.
 5. Hinges: Continuous piano.
 6. Lock: Key-operated cylinder.
 7. Size: **12 in by 12 in (300 mm by 300 mm)**; unless otherwise indicated.
 8. Basis of Design: Nystrom Building Products, Model NW or NP as applicable.
- C. Non-rated Recessed Access Doors and Trimless Frames:
1. Locations:
 - a. Gypsum board wall and ceiling surfaces.
 - b. Plaster wall and ceiling surfaces.
 2. Fabricated from one of the following as scheduled at the end of this Section.
 - a. Steel sheet.
 - b. Metallic-coated (galvanized) steel sheet.
 - c. Stainless-steel sheet.
 3. Door: Minimum **0.060 in (1.5 mm)** thick sheet metal in the form of a pan recessed **5/8 in (15 mm)** for infill.
 4. Frame: Minimum **0.060 in (1.5 mm)** thick sheet metal with finishing bead and only frame edge exposed.
 5. Hinges: Concealed piano hinge or spring-loaded, concealed-pin type pivoting rod hinge.
 6. Lock: Key-operated cylinder with plastic grommet for access through pan recess.
 7. Size: **12 in by 12 in (300 mm by 300 mm)**; unless otherwise indicated.
 8. Basis of Design:
 - a. Gypsum Board Infill: Nystrom Building Products, Model RW.
 - b. Plaster Infill: Nystrom Building Products, Model RP.
- D. Non-rated, Glass-Fiber-Reinforced Gypsum (GFRG) Flush Access Doors and Trimless Frames, Concealed Hinge:
1. Locations:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- \
- a. Gypsum board wall and ceiling surfaces as scheduled.
 - b. Locations indicated on Drawings.
2. Door: Glass fiber reinforced gypsum door, 5/8-inch (16 mm) deep, rounded corners.
 3. Frame: Glass fiber reinforced gypsum frame
 4. Hinges: Concealed.
 5. Lock: Key-operated cylinder.
 6. Size: 12 in by 12 in (300 mm by 300 mm); unless otherwise indicated.
 7. Basis of Design: Nystrom Building Products; GFRR/GFRS Concealed Hinge Access Doors.
- E. Non-rated, Glass-Fiber-Reinforced Gypsum (GFRG) Flush Access Doors and Trimless Frames:
1. Locations:
 - a. Gypsum board ceiling surfaces as scheduled.
 - b. Locations indicated on Drawings
 2. Door: 1/8 in (3 mm) to 3/16 in (5 mm) thick glass-fiber-reinforced gypsum removable panel with rounded corners.
 3. Frame: 1/8 in (3 mm) to 3/16 in (5 mm) thick glass-fiber-reinforced gypsum with 3 in (75 mm) wide exposed frame.
 4. Hinges: None.
 5. Lock: None.
 6. Size: 12 in by 12 in (300 mm by 300 mm); unless otherwise indicated.
 7. Basis of Design: Chicago Metallic Corporation; GRG Access Doors, Model 8502.00.
- F. Fire-Rated, Insulated, Flush Access Doors and Frames with Exposed Trim:
1. Locations:
 - a. Masonry wall surfaces.
 - b. Ceramic tile wall surfaces.
 2. Fabricated from one of the following as scheduled at the end of this Section.
 - a. Steel sheet.
 - b. Metallic-coated (galvanized) steel sheet.
 - c. Stainless-steel sheet.
 3. Fire-Resistance Rating: Not less than 1-1/2 hours.
 4. Temperature Rise Rating: 250 deg F (139 deg C) at the end of 30 minutes.
 5. Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.036 in (0.9 mm).
 6. Frame: Minimum 0.060 in (1.5 mm) thick sheet metal with 1 in (25 mm) wide, surface-mounted trim.
 7. Hinges: Continuous piano.
 8. Automatic Closer: Spring type.
 9. Latch: Self-latching device operated by flush key with interior release.
 10. Size: 12 in by 12 in (300 mm by 300 mm); unless otherwise indicated.
 11. Basis of Design: Nystrom Building Products, Model IT.
- G. Fire-Rated, Insulated, Flush Access Doors and Trimless Frames:
1. Locations:
 - a. Gypsum board wall and ceiling surfaces.
 - b. Plaster wall and ceiling surfaces.
 2. Fabricated from one of the following as scheduled at the end of this Section.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Steel sheet.
 - b. Metallic-coated (galvanized) steel sheet.
 - c. Stainless-steel sheet.
- 3. Fire-Resistance Rating: Not less than 1-1/2 hours.
 - 4. Temperature Rise Rating: 250 deg F (139 deg C) at the end of 30 minutes.
 - 5. Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.036 in (0.9 mm).
 - 6. Frame: Minimum 0.060 in (1.5 mm) thick sheet metal with drywall bead.
 - 7. Hinges: Continuous piano.
 - 8. Automatic Closer: Spring type.
 - 9. Latch: Self-latching device operated by flush key with interior release.
 - 10. Size: 12 in by 12 in (300 mm by 300 mm); unless otherwise indicated.
 - 11. Basis of Design:
 - a. Gypsum Board: Nystrom Building Products, Model IW.
 - b. Plaster: Nystrom Building Products, Model IP.

2.8 FLOOR ACCESS DOORS AND FRAMES

- A. Floor Doors, General: Equip each door with adjustable counterbalancing springs, heavy-duty hold-open arm that automatically locks door open at 90 degrees, release handle with red vinyl grip that allows for one-handed closure, and recessed lift handle.
- B. Watertight Aluminum Floor Door: Single-leaf opening. Extruded-aluminum gutter frame with NPS 1-1/2 (DN 40) drainage coupling and 1/4 in (6 mm) thick, diamond-pattern, aluminum tread plate door; watertight; loading capacity to support 300-lbf/sf (14.4-kN/sm) pedestrian live load. Aluminum mill finish.
 - 1. Hinges: Heavy-duty, aluminum butt hinges with stainless steel pins.
 - 2. Latch: Stainless steel slam latch with removable outside handle.
 - 3. Lock: Keyed deadbolt lock.
 - 4. Hardware Material: Stainless steel, including latch and lifting mechanism assemblies, hold-open arms, and all brackets, hinges, pins, and fasteners.
 - 5. Size: As indicated on drawings.
 - 6. Basis of Design: Nystrom Building Products, Model FDDP.
- C. Fire Rated Aluminum Floor Door: Single-leaf opening. 1/4 in (6 mm) thick aluminum frame with neoprene cushion and continuous anchor flange, and 1/4 in (6 mm) aluminum door with 1 in (25 mm) recess to receive minimum 1/2 in (12 mm) concrete and finish flooring material; loading capacity to support 150-lbf/sf (7.2-kN/sm) pedestrian live load. Aluminum mill finish with bituminous coating on exterior of frame.
 - 1. Hinge: Type 316 stainless steel, continuous.
 - 2. Latch: Type 316 stainless steel slam latch with inside cable release handle and outside removable key handle with gasketed cover plug.
 - 3. Spring: Compression spring operators enclosed in telescopic tubes.
 - 4. Hold-Open Arm: Hydraulic hold-open system to automatically hold door in open position.
 - 5. Self-Closing: Self-contained pneumatic automatic close and latch system when temperature exceeds 165 deg F (73.9 deg C).
 - 6. Fire Proofing: Intumescent coating on inside of door and frame.
 - 7. Fire-Resistance Rating: Not less than 2 hours.
 - 8. Finish painted in yellow with wording "FIRE DOOR - DO NOT STORE MATERIALS ON SURFACE".
 - 9. Size: As indicated on drawings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

\

10. Basis of Design: The Bilco Company, Type FR Fire Rated Door.
- D. Aluminum Floor Door: Single-leaf opening. Extruded-aluminum angle frame with 1/4 in (6 mm) thick, diamond-pattern, aluminum tread plate door; nonwatertight; loading capacity to support 300-lbf/sf (14.4-kN/sm) pedestrian live load.
 1. Hinges: Heavy-duty, aluminum butt hinges with stainless steel pins.
 2. Latch: Stainless steel slam latch with removable outside handle.
 3. Lock: Keyed deadbolt lock.
 4. Hardware Material: Stainless steel, including latch and lifting mechanism assemblies, hold-open arms, and all brackets, hinges, pins, and fasteners.
 5. Size: As indicated on drawings.
 6. Basis of Design: Nystrom Building Products, Model FHA.
- E. Steel Angle-Frame Floor Door: Single-leaf opening. Galvanized structural-steel frame with 3/16 in (5 mm) thick, diamond-pattern, galvanized structural-steel tread plate door; nonwatertight; loading capacity to support 300-lbf/sf (14.4-kN/sm) pedestrian live load.
 1. Hinge: Type 316 stainless steel butt hinges bolted to door and frame.
 2. Latch: Type 316 stainless steel slam latch with inside lever handle and outside removable key handle.
 3. Spring: Type 316 stainless steel compression springs enclosed in tubes.
 4. Hold-Open Arm: Type 316 stainless steel handle that automatically locks door at 90 deg. when opened.
 5. Fire-Resistance Rating: Not less than 3 hours.
 6. Finish painted in yellow with wording "FIRE DOOR - DO NOT STORE MATERIALS ON SURFACE".
 7. Size: As indicated on drawings.
 8. Basis of Design: Nystrom Building Products, Model FHR Fire Marshall.

2.9 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.
- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.
 1. Gypsum Board Locations: For trimless frames with drywall bead, provide edge trim for gypsum board securely attached to perimeter of frames.
 2. Plaster Locations: For trimless frames with plaster bead for full-bed plaster applications, provide zinc-coated expanded metal lath and exposed casing bead welded to perimeter of frames.
 3. Provide mounting holes in frames for attachment of units to metal framing.
 4. Provide mounting holes in frame for attachment of masonry anchors.
- D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling.
 1. Plaster Locations: For recessed doors with plaster infill, provide self-furring expanded metal lath attached to door panel.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- \
- E. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.
 - 1. For cylinder lock, furnish two keys per lock and key all locks alike.
 - 2. For recessed panel doors, provide access sleeves for each locking device. Furnish plastic grommets and install in holes cut through finish.
 - F. Extruded Aluminum at Floor Doors: After fabrication, apply manufacturer's standard protective coating on aluminum that will come in contact with concrete.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer's written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Advise installers of other work about specific requirements relating to access door and floor door installation, including sizes of openings to receive access door and frame, as well as locations of supports, inserts, and anchoring devices.

3.4 INSTALLATION OF ACCESS DOORS AND FRAMES

- A. Frames with Masonry Anchors: Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.
- B. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

3.5 ADJUSTING AND CLEANING

- A. Adjust doors and hardware after installation for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

3.6 ACCESS DOOR SCHEDULE

- A. Provide access doors where indicated on the drawings and as follows:
 - 1. Steel Access Doors:
 - a. Concealed valves and controls for plumbing and HVAC.
 - b. Fire dampers above non-accessible ceilings.
 - c. Motor operated doors and grilles above non-accessible ceilings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

\

- d. Other locations not scheduled below.
- 2. Fire-Rated Steel Access Doors:
 - a. Rated walls and ceilings.
- 3. Metallic-Coated (Galvanized) Steel Access Doors:
 - a. Exterior locations.
- 4. Stainless Steel Access Doors:
 - a. Ceramic tile and other damp locations.
- 5. Glass-Fiber-Reinforced Gypsum (GFRG) Access Doors:
 - a. Gypsum board walls and ceilings.
- 6. Fire-Rated Floor Access Doors:
 - a. Rated floors.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 084400
GLAZED ALUMINUM FRAMING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Glazed aluminum framing systems and supplementary items necessary for installation.
 - 1. Factory fabricated unitized system, aluminum curtain wall and window wall systems.
 - 2. Factory fabricated unitized system, custom aluminum curtain wall and window wall systems.
 - 3. Aluminum storefront systems.
- B. Related Requirements:
 - 1. Refer to Division 01 Section Field Test for Air and Water Leakage.

1.2 DEFINITIONS

- A. Water Leakage: Uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces, or water that is not contained and drained to the exterior, or water that may damage adjacent materials or finishes. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.
 - 1. Uncontrolled: Infiltrated water that is not captured, controlled or managed by flashings, gutters, and sills to drain to exterior, or water that wets perimeter containment system, wall insulation or exposed interior surfaces.
 - 2. Controlled: Infiltrated water that is captured, controlled or managed by flashings, gutters, and sills to drain to exterior, or water that does not wet perimeter containment system, wall insulation or exposed interior surfaces.
- B. Sloped Glazing: Glass and framing assembly sloped more than 15 degrees from the vertical plane forming a roof. Sloped glazing serves as the roof for an area of the building.

1.3 DELEGATED ENGINEERING REQUIREMENTS

- A. Delegated Engineering Responsibility: Contractor shall engage a qualified professional engineer to provide engineering for products and systems required to comply with the design intent of Contract Documents.
 - 1. Contract Documents Design Intent: Drawings and Specifications indicate design intent for products and systems and do not necessarily indicate or specify total Work required. Contract Documents shall not be construed as an engineered design; furnish and install Work required for a complete installation.
 - 2. Delegated Engineer Professional Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated with a record of successful in-service performance. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.
 - 3. Submittals: Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified professional engineer.
 - 4. Coordination of Work:
 - a. Product Variations: In the event of minor differences between products and systems of acceptable or available manufacturers, Contractor shall notify Architect

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

of such differences and resolve conflicts in a timely manner. Failure of Contractor to provide notification shall be construed as acceptance of conditions indicated, and changes caused by minor differences between products and Contract Documents shall be included in the Work at no additional cost to Owner.

- b. Allowable Adjustments: Minor dimension and profile adjustments may be made in interest of fabrication or erection methods or techniques or ability to satisfy design intent, provided design intent is maintained as determined by Architect. Proposed deviations shall include a detailed analysis of impact to adjacent substrates or other building systems, including related design or construction cost impacts. If accepted by Architect, deviations causing changes in materials, constructability, substrates, or conditions shall be included in the Work at no additional cost to Owner.

1.4 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work.
 - 1. Prepared by manufacturer, not installer.
 - a. Shop drawings not prepared by manufacturer shall include manufacturer's written approval on shop drawings.
 - b. Shop drawings shall contain seal of a structural engineer currently registered in licensing jurisdiction of the project and a written statement that the framing system conforms to project requirements, applicable codes, and specified conditions.
 - 2. Include typical unit elevations at 1/2 in (12 mm) scale and details at full scale.
 - 3. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
 - 4. Indicate where and how the system deviates from Contract Documents.
 - 5. Provide material properties and other information needed for structural analysis including computations, prepared, signed and sealed by a structural engineer licensed to practice in the jurisdiction where the project is located.
 - a. Calculations shall include but not limited to the following:
 - 1) Section properties for framing members.
 - 2) Analysis of framing members.
 - 3) Analysis of anchors and embedded anchors in concrete structure.
 - 4) Analysis of stress in structural silicone.
 - 5) Analysis of glass thicknesses and strength.
 - 6. Submittal shall contain statement explaining how proposed system design will accommodate infiltrated and condensate water.
 - 7. Design Modifications: If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.
 - 8. Include full-size isometric details of typical and special conditions within the system, showing the following:
 - a. Mullion details, including reinforcement and stiffeners.
 - b. Joinery details, including concealed welds.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Anchorage.
 - d. Expansion provisions.
 - e. Glazing details.
 - f. Flashing and drainage details.
 - g. Weather-stripping and weather seals within curtain wall framing.
 - h. Thermally improved details.
 - i. Perimeter weather seals and structural seals.
 - j. Interface with other building construction.
 - k. Identification and detail of perimeter fire containment system.
 - l. De-glazing and re-glazing procedures.
 - 1) Unless indicated otherwise, framing and glass shall be designed to be re-glazed from the exterior using original glass size and gaskets without modification to framing. Comply with manufacturer recommended re-glazing procedure.
 - m. Attachment details, including thickness of curtain wall components, designed to receive lightning protection system.
9. Submit insert/embed drawings including layout and enlarged details. Include detail and engineering calculations for field modifications due to location and/or omitted inserts/embeds.
10. Window System Operators for Operable Window Vent Systems: Show locations, mounting, and details for installing operator components and controls.
- C. Samples for Verification: For each type of exposed finish required, prepared on samples of size indicated below.
- 1. Exposed Finishes: 12 in (300 mm) long sections of extrusions or formed shapes, 6 in (150 mm) squares of sheet or plate, each finish type and color.
 - 2. Sealants and Gaskets: 12 in (304 mm) minimum length for sealant or gasket glazed joint, each type and color.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its products and systems are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
 - B. Delegated Engineering Submittal: For products and systems indicating compliance with performance requirements. Include structural analysis, calculations and other performance data signed and sealed by the qualified professional engineer responsible for their preparation.
 - C. Energy Performance Certificates: For glazed aluminum framing systems, accessories, and components.
 - 1. Basis for Certification: Certified by manufacturer for energy performance ratings as determined in accordance with NFRC.
 - D. U-Value and Condensation Evaluation: Determine wall system U-Value and provide condensation evaluation using NFRC approved version of Lawrence Berkeley National Laboratory THERM software for simulations. Submit isothermal condensation results, including isothermal graphics, for temperature limits of wall system components.
 - E. Product Test Reports: Written reports based on evaluation of comprehensive tests performed by qualified testing agency indicating that each product complies with requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Anchors and Fasteners: Tested and qualified for use in accordance with ICC-ES or other product approval acceptable to authorities having jurisdiction.
 - F. Field Quality Control Reports: Written report of testing and inspection required by Field Quality Control.
 - G. Warranty:
 1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations and exclusions.
- 1.6 CLOSEOUT SUBMITTALS
- A. Maintenance Data: To include in maintenance manuals.
 1. Structural-Sealant Glazing: For structural-sealant glazing, include ASTM C 1401 recommendations for post-installation-phase, quality-control program.
- 1.7 QUALITY ASSURANCE
- A. Installer Qualifications:
 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar in scope to this Project.
 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar in scope to this Project.
 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.
 - a. Subcontractor Responsibility: Work included in this Technical Section shall be performed by a qualified single subcontractor solely responsible for engineering, fabrication and installation of the Work.
 - B. Welding Qualifications: Qualify procedures and personnel according to AWS qualification requirements and the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel".
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum".
 - C. Energy Performance Standards: Comply with NFRC for minimum standards of energy performance, materials, components, accessories, and fabrication. Comply with more stringent requirements when indicated.
 - D. Structural-Sealant Glazing: Comply with ASTM C 1401 "Guide for Structural Sealant Glazing" for design and installation of glazed aluminum wall systems utilizing structural-sealant glazing.
 1. Structural-Sealant Joints: Design reviewed and approved by structural-sealant manufacturer.
 2. Comply with ASTM C 1135 Standard Test Method for Determining Tensile Adhesion Properties of Structural Sealants.
- 1.8 PRECONSTRUCTION TESTING
- A. Preconstruction Sealant Testing: Perform sealant manufacturer's standard tests for compatibility with and adhesion of each material that will be in contact with sealants and for each condition.
 1. Test a minimum five production-run samples each of metal, glazing, and other material.
 - a. Include all adjacent materials with watertight seals to curtain wall systems.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Prepare samples using techniques and primers required for installed assemblies.
3. Perform tests under environmental conditions that duplicate those under which assemblies will be installed.
4. For materials that fail tests, determine corrective measures necessary to prepare each material to ensure compatibility with and adhesion of sealants including, but not limited to, specially formulated primers. After performing these corrective measures on the minimum number of samples required for each material, retest materials.

1.9 MOCKUPS

- A. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up using materials indicated for the completed Work.
 1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.
 2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
 4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
 5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.10 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
 1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - 1) Review construction tolerances for structural frame and construction surveying requirements.
 - b. Review Contract Document Requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Record discussions, including decisions and agreements, and prepare report.
- 1.11 DELIVERY, STORAGE, AND HANDLING
- A. Protect materials according to manufacturer's written instructions.
 - B. Prevent damage to framing, glass and glazing materials from abrasion, soiling, contamination, wetting or condensation, temperature changes, direct exposure to sun, or other causes.
 1. Use crating, stacking and storage procedures that prevent damage to finishes and gaskets.
- 1.12 PROJECT CONDITIONS
- A. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.
- 1.13 COORDINATION
- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
- 1.14 WARRANTY
- A. Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design and installation of product. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Thermal stresses transferring to building structure.
 - c. Glass breakage.
 - d. Noise or vibration created by wind and thermal and structural movements.
 - e. Loosening or weakening of fasteners, attachments, and other components.
 - f. Deterioration of metals and other materials beyond normal weathering.
 - g. Water penetration through fixed glazing and framing areas.
 - h. Air infiltration exceeding performance requirements.
 - i. Adhesive or cohesive sealant failures.
 - j. Failure of operating components.
 2. Warranty Period: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 5 years from date of Substantial Completion
 - B. Installer's Warranty: Furnish installer's written workmanship warranty signed by an authorized representative using installer's standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 2 years from date of Substantial Completion.
 - C. Factory Applied Finish Warranty for Anodic Finishes: Furnish manufacturer's written warranty signed by an authorized representative using manufacturer's standard form agreeing to repair finish or replace work which exhibits finish defects. "Defects" is defined to include but not limited to deterioration or failure of finish to perform as required.
 1. Warranty Period: Manufacturer shall warrant the installation to be free from finish defects for a period of 5 years from date of Substantial Completion.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Manufacturers:
 - 1. Baker Metal Products Inc.
 - 2. Bruce Wall Systems Corporation.
 - 3. C.R. Laurence - US Aluminum.
 - 4. EFCO Corporation, a Pella Company.
 - 5. Harmon Inc.
 - 6. Insulgard Security Products.
 - 7. Kawneer North America; an Alcoa Company.
 - 8. Oldcastle BuildingEnvelope.
 - 9. YKK AP America Inc.
- C. Available Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect.
- D. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.
 - 1. Storefront System: Model TTH600, thermally broken framing system:
 - a. Basis of Design: Insulgard Security Products, Model TTH600
 - 2. Glass Entry Doors; Model TH350 FEMA Doors. Single and double, as indicated on drawings. Wide stile doors.
 - 3. Glass: Model Tor-Gard 40, 1.610 inch glass clad polycarbonate assembly.
 - 4. Hollow Metal Door: Wind and impact resistant with insulated core. Furnish with hollow metal frames and hardware as tested with assembly. Prime finish for field painting.
 - 5. Hollow Metal Door Manufacturers and Products:
 - a. Allegion; Steelcraft "Paladin Series", glass light steel tornado doors (Basis of Design).
 - b. ASSA ABLOY; Ceco Door, "StormPro" tornado resistant assemblies.
 - c. Rocky Mountain Metals, Inc.; Tornado resistant openings.
 - 6. Accessories:
 - a) Anchors: Fully concealed in accordance with requirements of delegated design requirements
 - b) Steel extension anchor plates as required by delegated design.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Failure includes but is not limited to the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Thermal stresses transferring to building structure.
 - c. Glass breakage.
 - d. Noise or vibration created by wind and thermal and structural movements.
 - e. Loosening or weakening of fasteners, attachments, and other components.
 - f. Deterioration of metals and other materials beyond normal weathering.
 - g. Water penetration through fixed glazing and framing areas.
 - h. Air infiltration exceeding performance requirements.
 - i. Failure of operating units
- B. Structural Loads: Engineer products and systems to withstand loads within limits of allowable working stresses of the materials involved under conditions indicated including, but not limited to gravity, wind, seismic, and erection design loads and thermal movements established by authorities having jurisdiction, applicable building codes, and as indicated.
1. Wind Loads: As indicated on Drawings or Wind Analysis Report.
 2. Other Loads: As indicated on Drawings.
- C. Structural Movement: Engineer system to withstand movements of supporting structure including, but not limited to inter-story drift, twist, column shortening, long-term creep and deflection from uniformly distributed and concentrated live loads:
1. Live Load Deflection: Accommodate differential vertical deflection of floors:
 - a. Deflection: As indicated on Drawings.
 - b. Test Performance: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.7 at design displacement and 1.5 times the design displacement.
 2. Inter-story Drift: Accommodate inter-story drift between adjacent floors perpendicular and/or parallel to the wall:
 - a. Design Displacement: As indicated on Drawings.
 - b. Test Performance: Complying with criteria for passing based on building occupancy type when tested in accordance with AAMA 501.4 at design displacement and 1.5 times the design displacement.
 - c. Connections shall permit movement in the plane of the panel for inter-story drift and shall be properly designed sliding type connections using slotted or over-sized holes, or connections permitting movement by bending of steel or other connections providing equivalent sliding and ductile capacity.
 - 1) Connector bodies shall have sufficient ductility and rotational capacity to prevent fracture of concrete or brittle failure near welds.
 - 2) Fasteners embedded in concrete shall be attached to reinforcing steel or otherwise terminated to effectively transfer forces to the reinforcing steel in accordance with applicable Building Code requirements.
- D. Deflection of Framing Members: At design wind load in accordance with the Building Code.
1. Deflection Normal to Wall Plane: Edge deflection of individual glazing lites limited to 1/175 for glass edge lengths up to 13 feet 6 inches (4.1 m), and limited to 1/240 plus 1/4 inch (6.35 mm) for glass edge lengths greater than 13 feet 6 inches (4.1 m) and less than

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

40 feet (12 m), when designed in accordance with AAMA TIR A11-15 and tested in accordance with ASTM E 330/E330M-14.

a. Exceptions:

- 1) Where a sealant joint occurs between a framing member and a relatively stiff building element, framing member deflection not more than 1/2 of nominal joint width, or less if required by sealant manufacturer.

b. Span is defined as the distance between anchor center line.

2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 in (3 mm).

a. Operable Units (Doors or Windows): Provide a minimum 1/16 in (1.6 mm) clearance between framing members and operable units.

3. Cantilever Deflection: Where framing members overhang an anchor point, as follows:

a. Perpendicular to Plane of Wall: No greater than 2L/175 where L is the cantilever length.

4. Deflection of Framing System Interior Trim: Center deflection of interior trim shall not exceed 1/4 in (6 mm) when subjected to a 250 pound (113 Kg) vertical concentrated load. No permanent deformation allowed when load is removed.

a. Window sill extension trim.

b. Slab edge covers.

E. Structural Test Performance: Test according to ASTM E 330/330M as follows:

1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

F. Water Penetration under Static Pressure for Storefront System: Test in accordance with ASTM E 331 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 10 lbf/sf (480 Pa).

G. Water Penetration under Static Pressure for Curtain Wall and Window Wall Systems: Test in accordance with ASTM E 331 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 12 lbf/sf (576 Pa).

H. Water Penetration under Dynamic Pressure for Curtain Wall and Window Wall Systems: Test in accordance with AAMA 501.1 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested in accordance with a dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 12 lbf/sf (576 Pa).

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- I. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.
 - 1. Provide drainage to exterior of wall for water entering at joints or glazing reveals, condensation occurring within assemblies, secondary water from adjacent wall systems and similar conditions.
 - a. Provide internal gutters and weep system to collect and drain water leakage and condensation to the exterior.
 - 1) Stick framed curtain wall systems and punched windows shall have an isolated gutter cavity at each glass perimeter such that leakage is confined to and weeped from the opening where leakage originated.
 - 2) Unitized curtain walls shall have continuous spliced gutters at horizontal stack joints with sealed end caps at termination conditions.
 - 3) Window wall shall have a continuous gutter and weep holes at the glass sill and a continuous gutter at the glass head that drains directly to exterior or directs leakage from spandrel above to the window sill.
 - b. Provide continuous subsill below windows with interlocking mullions.
 - c. Coordinate gutter and weep systems with drainage provisions with adjacent construction.
 - d. Coordinate connection of drainage members at columns, spandrel beams and other areas with limited access.
 - e. The use of carbon steel components for gutter and drainage assemblies is prohibited; provide stainless steel or aluminum components.
- J. Energy Performance: Certified or labeled by manufacturer for energy performance ratings in accordance with NFRC.
 - 1. Thermal Transmittance (U-Factor) - Fixed Vision Glazing and Framing Areas: U-factor as determined in accordance with NFRC 100.
 - a. Maximum U-Factor: As indicated on Drawings, comply with building energy performance model for this project.
 - 2. Thermal Transmittance (U-Factor) - Fixed Spandrel Glazing, Metal Panels and Framing Areas: U-factor as determined in accordance with NFRC 100.
 - a. Maximum U-Factor: As indicated on Drawings, comply with building energy performance model for this project.
 - 3. Solar Heat Gain Coefficient (SHGC) - Fixed Glazing and Framing Areas: Solar Heat Gain Coefficient as determined in accordance with NFRC 200.
 - a. Maximum SHGC: As indicated on Drawings, comply with building energy performance model for this project.
 - 4. Air Leakage - Glazed Aluminum Wall and Storefront:
 - a. Fixed Glazing and Framing Areas: Air leakage for the system of not more than **0.06 cfm/sf (0.30 L/s/sm)** at a minimum static-air-pressure differential of **6.24 lbf/sf (300 Pa)** when tested in accordance with ASTM E 283.
 - 5. Condensation Resistance: Condensation resistance as determined in accordance with NFRC 500.
 - a. Fixed Glazing and Framing Areas: No condensation allowed under design conditions indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- K. Noise Reduction: Test in accordance with ASTM E90, with ratings determined by ASTM E1332, as follows:
 - 1. Outdoor-Indoor Transmission: Minimum Class 34.
- L. Building Maintenance Equipment: Engineer units supporting building maintenance equipment to resist pull-out and horizontal shear forces transmitted from equipment.
- M. Windborne-Debris-Impact-Resistance Performance: Comply with missile impact and cyclic-pressure testing requirements for Wind Zone and facility type.
- N. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
 - 1. Temperature Change (Range): 120 deg F (49 deg C), ambient; 180 deg F (82 deg C), material surfaces.
 - 2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance.
 - a. Fabrication, assembly and erection procedures shall take into consideration the ambient temperature range at the time of each operation.
- O. Structural-Sealant Joints:
 - 1. Design reviewed and approved by structural-sealant manufacturer.
- P. Structural-Sealant: ASTM C1184. Capable of withstanding tensile and shear stresses imposed by glazed aluminum wall systems without failing adhesively or cohesively. When tested for preconstruction adhesion and compatibility, cohesive failure of sealant shall occur before adhesive failure.
 - 1. Adhesive failure occurs when sealant pulls away from substrate cleanly, leaving no sealant material behind.
 - 2. Cohesive failure occurs when sealant breaks or tears within itself but does not separate from each substrate because sealant-to-substrate bond strength exceeds sealant's internal strength.
- Q. Dimensional Tolerances: Engineer products and systems to accommodate dimensional tolerances of framing members and adjacent construction.

2.4 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - 1. Sheet and Plate: ASTM B 209 / B 209M.
 - 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 / B 221M.
 - 3. Extruded Structural Pipe and Tubes: ASTM B 429 / B 429M.
 - 4. Structural Profiles: ASTM B 308 / B 308M.
 - 5. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.
- B. Steel Internal Reinforcement: Shapes and sizes to suit installation meeting delegated engineered performance requirements, as indicated on Shop Drawings.
 - 1. Structural Shapes, Plates, and Bars: ASTM A 36 / A 36M.
 - 2. Cold-Rolled Sheet and Strip: ASTM A 1008 / A 1008M.
 - 3. Hot-Rolled Sheet and Strip: ASTM A 1011 / A 1011M.
 - 4. Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer, complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.5 GLAZED ALUMINUM FRAMING SYSTEMS

- A. Framing Members: Manufacturer's standard formed- or extruded-aluminum framing members of thickness required and reinforced as required to support imposed loads.
 - 1. Structural Thermal Barriers: Provide thermally improved system in compliance with energy model and condensation performance requirements.
 - 2. Field installation of four-sided structural glazing is not allowed.
 - a. Where shop installation of four-sided structural glazing is not feasible, submit proposed field installation locations to Architect for review.
- B. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with non-staining, nonferrous shims for aligning system components.
 - 1. Shims:
 - a. Structural Connections: Series 300 Stainless Steel; ASTM A 36 or ASTM A 283 hot-dipped galvanized steel.
 - 1) Dynamic Connections: Molybdenum disulfide filled nylon lubricated pads or washers.
 - b. Non-Structural Connections: U-shaped polystyrene.
 - c. Static Non-Load Transfer Connections: Korolath high-impact polystyrene pads.
 - 2. For connections where shim height is greater than twice the bolt diameter, provide steel or aluminum shims.
 - a. Plastic shims are acceptable only in locations where shim height is less than twice the bolt diameter or fully bearing locations where there is no bending induced into the bolt anchor.
 - 3. Mechanically restrain shims in dynamic connections to remain in place.
- C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials. Domestically manufactured only.
 - 1. Manufacturers and Products - Self Drilling, Self Tapping Screws:
 - a. Elco; Dril-Flex Structural Self-Drilling Screws.
 - b. Hilti; Kwik-Flex Structural Self-Drilling Screws.
 - 2. Manufacturers and Products - Series 300 Stainless Steel Fasteners:
 - a. Elco; Bi-Flex 300 SS with Stalgard.
 - b. Elco; Alumi-Flex 302 SS with Stalgard.
 - c. SFS; Bi-Met 300.
 - 3. Use Series 300 Stainless Steel fasteners for joining framing members and fasteners located in wet areas including fasteners penetrating the waterline and covered with sealant.
 - 4. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 5. Reinforce members as required to receive fastener threads.
 - 6. Use concealed fasteners; exposed fasteners are not allowed.
 - a. At locations where exposed fasteners are unavoidable and approved by Architect, use exposed fasteners with countersunk Phillips screw heads finished to match framing system.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

7. Storefront: Furnish heavy duty aluminum sill pan with integral welded or fastened and structurally sealed end dams, typical.
- D. Anchors: Three-way adjustable anchors that accommodate fabrication and installation tolerances in material and finish and are compatible with adjoining materials and recommended by manufacturer. Domestically manufactured only.
 1. Concrete and Masonry Inserts:
 - a. Product Quality Standards: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 / A 123M or ASTM A 153 / A 153M requirements.
 - b. Manufacturers:
 - 1) Halfen.
 - 2) Hilti.
 - 3) Jordahl.
 - 4) Unitstrut.
 2. Post Installed Expansion Anchors:
 - a. Product Quality Standards: Tested and qualified for use in accordance with ACI 355.2, ACI 318 and ICC-ES AC193 for cracked, uncracked and seismic concrete recognition.
 - 1) Material and Finish: Stainless steel ASTM F 593 Group 1 (Alloy 304/316), mechanically deposited ASTM B 695 or hot-dip zinc coating ASTM A 153 Class C. Thickness not less than 0.0002 inches.
 - b. Acceptable Manufacturers:
 - 1) Dewalt.
 - 2) Hilti.
 - 3) ITW.
 - 4) Simpson.
 - c. Not Acceptable: Chemical type anchors for overhead dead load connectors.
 3. Threaded Concrete Anchors:
 - a. Product Quality Standards: Tested and qualified for use in accordance with ACI 355.2, ACI 318 and ICC-ES AC193 for cracked, uncracked and seismic concrete recognition.
 - 1) Material and Finish: Carbon steel with corrosion resistant coating, not less than 1000 hours of salt spray resistance according to ASTM B 117; 300 Series Stainless Steel, non-magnetic.
 - 2) Anchor Thickness: 3/8 inch minimum.
 - b. Acceptable Manufacturers:
 - 1) Dewalt.
 - 2) Elco.
 - 3) Hilti.
 - c. Condition of Use: Shall not be used in overhead dead load connections supporting sustained load in tension.
- E. Concealed Flashing: Dead-soft, 0.018 in (0.45 mm) thick stainless steel, ASTM A 240 / A 240M of type recommended by manufacturer.
- F. Framing System Gaskets and Sealants: Refer to Division 08 Section "Glazing."

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. EPDM Gaskets: EPDM shall be isolated from direct contact with silicone; including but not limited to the secondary perimeter silicone seal of insulating glass units.
 - a. Provide silicone gaskets where gaskets are in contact with silicone sealant.
 - G. Pressure Caps: Manufacturer's standard aluminum components that mechanically retain glazing.
 1. Include snap-on aluminum trim that conceals fasteners.
 2. At pressure caps, use ASTM A 193 / A 193M stainless-steel screws.
 - H. Glazed-In Aluminum-Faced Composite Wall Panels: Comply with Division 07 Section "Composite Metal Wall Panels."
 - I. Glazed-In Aluminum-Faced Insulated-Core Metal Panels: Comply with Division 07 Section "Insulated Metal Wall Panels."
 - J. Glazed-in Aluminum Plate Wall Panels: Provide factory-formed, metal plate wall panels fabricated from single sheets of metal formed into profile for installation method indicated. Comply with Performance Requirements indicated in Division 07 Section "Composite Metal Wall Panels."
 1. Material: Tension-leveled, smooth aluminum sheet, **ASTM B 209 (ASTM B 209M)**, **0.125 in (3.18 mm)** thick minimum.
 2. Exterior Finish: Matching framing system.
- 2.6 SUN CONTROL DEVICES
- A. Sunshades: Assemblies consisting of manufacturer's standard outrigger brackets, louvers, and fascia, designed for attachment to curtain wall with mechanical fasteners.
 1. Basis of Design: As scheduled or indicated in Design Selections.
- 2.7 GLAZING
- A. Glazing: Provide glass of types and thicknesses indicated. Fabricate glass to sizes required for openings indicated with edge clearances and tolerances complying with manufacturer's recommendations. Comply with Division 08 Section Glazing.
 1. Glass Types: As scheduled or indicated in Design Selections.
 - B. Glazing Gaskets, Spacers, Setting Blocks, Sealant Backings, and Bond Breakers: Manufacturer's standard permanent, non-migrating types compatible with sealants and suitable for joint movement and assembly performance requirements. Comply with Division 08 Section "Glazing".
 1. Silicone Sealant Compatibility: When in direct contact with silicone sealants, gaskets, spacers and setting blocks shall be heat cured silicone rubber based material which is chemically compatible and with sufficient hardness for the purpose intended and approved in writing by the glazing and curtain wall manufacturers.
 - C. Glazing Sealants: As recommended by manufacturer for joint type.
 1. Structural-Glazing Sealant: ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural-sealant and approved by structural-sealant manufacturer for use in glazed aluminum wall assembly indicated.
 - a. Minimum Tensile Strength: **100 psi (690 kPa)**.
 - b. Modulus of Elasticity: As required by structural-sealant-glazed aluminum wall system design to meet performance requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Manufacturers and Products: Subject to compliance with requirements, provide one of the following:
 - 1) Dow; DOWSIL 983 Structural Glazing Sealant.
 - 2) GE Silicones; SSG4400 Ultraglaze Sealant.
 - 3) Tremco Incorporated; Proglaze SSG.
 - d. Color: Black, unless otherwise scheduled or indicated in Design Selections Summary.
2. Weatherseal Sealant: ASTM C 920 for Type S, Grade NS, Class 50, neutral-curing silicone formulation compatible with system components with which it comes in contact, and recommended by weatherseal-sealant and curtain-wall manufacturers for this use.
- a. Joint Movement Capability: Accommodates a 50 percent increase or decrease in joint width at time of application when measured according to ASTM C 719.
 - b. Color: Black, unless otherwise scheduled or indicated in Design Selections Summary.
3. Bond-Breaker Tape: Manufacturer's standard tetrafluoroethylene-fluorocarbon or polyethylene material to which sealants will not develop adhesion.

2.8 BACK PAN

- A. Back Pan: Provide factory-formed metal pans fabricated from single sheets of metal formed into profile for installation indicated. Maintain air space between pan and interior surface of glass. Provide continuous seal at pan joints and pan perimeter.
- 1. Material: Galvanized G90 steel, minimum 0.034 in (0.86 mm) thickness.
 - 2. Curtain Wall Insulation: Minimum 2-inch thickness.
 - 3. Accessories: Spacers, cold formed framing, furring, brackets, clips, hangers and components required for complete installation.

2.9 SHADOW BOX BACK PAN

- A. Shadow Box Back Pan: Provide factory-formed metal pans fabricated from single sheets of metal formed into profile for installation indicated. Maintain air space between pan and interior surface of glass; ventilate air space when recommended by manufacturer. Provide continuous seal at pan joints and pan perimeter.
- 1. Material: Smooth aluminum sheet, ASTM B 209 (ASTM B 209M), 0.125 in (3.2 mm) thick.
 - 2. Curtain Wall Insulation: Minimum 2-inch thickness.
 - 3. Accessories: Spacers, cold formed framing, furring, brackets, clips, hangers and components required for complete installation
 - 4. Finish: As scheduled or as indicated in Design Selections.

2.10 ACCESSORY MATERIALS

- A. Joint Sealants: For installation at perimeter of glazed aluminum framing systems, as specified in Division 07 Section "Joint Sealants".
- B. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30 mils (0.762 mm) thickness per coat.
- C. Perimeter Fire-Containment System for Curtain Wall Spandrel Conditions: Safing insulation and curtain wall insulation as specified in Division 07 Section "Fire-Resistive Joint Systems".
- D. Thermal Insulating Materials: As specified in Division 07 Section Thermal Insulation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Maintenance Equipment Anchors: As specified in Division 11 Section Building Maintenance Equipment.
- F. Cleaning Agent and Cloth: As recommended by structural-sealant manufacturer.
- G. Linings, Spacers and Sleeves: At dynamic or moving joints, provide type and materials recommended by manufacturer to provide a fully sealed penetration.

2.11 FABRICATION

- A. Do not expose unfinished or cut edges to view.
- B. Shop weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Welds shall be of adequate strength and durability, with jointing tight, flush, smooth and clean. Weld behind finished surfaces so as to cause no distortion and/or discoloration on the finished side. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
 - 1. Field welding aluminum is not allowed.
- C. Fabricate components that, when assembled, have the following characteristics:
 - 1. Profiles that is sharp, straight, and free of defects or deformations.
 - 2. Accurately fitted joints with ends coped or mitered.
 - 3. Physical and thermal isolation of glazing from framing members.
 - 4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
 - 5. Provisions for field replacement of glazing. Provide minimum clearances and depth of glazing packets as recommended by glass manufacturer for thickness and type of glass indicated.
 - a. Structural-Sealant-Glazed Framing Members: Include accommodations for using temporary support device to retain glazing in place while structural-sealant cures.
 - 6. Fasteners, anchors, and connection devices that are concealed from view.
 - 7. Internal guttering systems or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum framing systems to exterior.
 - 8. Components curved to indicated radii.
- D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
- E. For Factory-Assembled and Glazed Frame Units:
 - 1. Rigidly secure non-movement joints.
 - 2. Seal joints watertight unless otherwise indicated.
 - 3. Factory-install glazing to comply with requirements in Division 08 Section "Glazing".
 - 4. Structural-Sealant Units: Prepare surfaces that will contact structural-sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
- F. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.12 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Concealed members may be mill finish, providing that they cannot be seen through the glass, do not contact any structural silicone or are not continually exposed to water immersion.
- D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of accepted Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of accepted Samples and are assembled or installed to minimize contrast.
- E. Selections: As scheduled or as indicated in Design Selections.

2.13 ALUMINUM FINISHES

- A. Finish designations comply with the systems established by the Aluminum Association and AAMA / FGIA for designating aluminum finishes.
- B. Fluoropolymer Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions. Provide dry film thickness, primers, color coats and clear coats required to comply with performance requirements and warranty periods indicated.
 - 1. PVDF Fluoropolymer Finish: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat.
 - 2. FEVE Fluoropolymer Finish: Fluoropolymer finish complying with AAMA 2605 and containing 100 percent fluorinated ethylene vinyl ether (FEVE) resin in color coat.
- C. Baked Enamel Finish or Powder-Coat Finish at Interior Surfaces: At Contractor's option, provide baked enamel or powder coated finish at interior surfaces complying with AAMA 2604 except with a minimum dry film thickness of 1.2 mils (0.03 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Selection: Match exterior mullions unless indicated otherwise.
- D. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.
- E. Clear Anodic Finish at Interior Surfaces: AA-M12C22A31, Class II, 0.010 mm or thicker.
- F. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.
- G. Color Anodic Finish at Interior Surfaces: AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

2.14 COPPER-ALLOY FINISHES

- A. Finish designations for copper alloys comply with the system established for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products".
- B. Buffed Finish, Lacquered: M21-06x (Mechanical Finish: buffed, smooth specular; Coating: clear organic, air drying, as specified below).
- C. Hand-Rubbed Finish, Lacquered: M31-M34-06x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear organic, air drying, as specified below).
- D. Medium-Satin Finish, Lacquered: M32-06x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below).
- E. Statuary Conversion Coating over Satin Finish: M31-C55-06x (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide; Coating: clear, organic, air drying, as specified below)[, with color matching Architect's sample].

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).

2.15 STAINLESS STEEL FINISHES

- A. General: Remove tool and die marks and stretch lines or blend into finish. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.
- B. Directional Satin Finish: No. 4.
- C. Reflective, Directional Polish: No. 7.
- D. Mirrorlike Reflective, Nondirectional Polish: No. 8.
- E. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.16 SOURCE QUALITY CONTROL FOR STRUCTURAL-SEALANT-GLAZED SYSTEMS

- A. Structural-Sealant-Glazed Systems: Perform quality-control procedures complying with ASTM C 1401 recommendations including, but not limited to, assembly material qualification procedures, sealant testing, and assembly fabrication reviews and checks.
 - 1. Structural-sealant-glazed system will be considered defective if it does not pass tests and inspections.
 - 2. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer's written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.
 - 1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
 - 2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

which would result in poor or potentially defective installation or would cause latent defects in Work.

1. Furnish inserts for setting in concrete forming, and similar work required to support glazed aluminum wall system.
2. Field measure and verify governing dimensions, including floor elevations, floor-to-floor heights, minimum clearance between wall system and structural frames and other permissible dimensional tolerances in building frame.
 - a. Survey all embeds and floor elevations to confirm correct location above established benchmarks.

3.4 INSTALLATION OF GLAZED ALUMINUM FRAMING SYSTEMS

A. General:

1. Do not install damaged components.
2. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
3. Rigidly secure non-movement joints.
4. Install anchors with separators and isolators to prevent impediments to movement of joints.
5. Do not cut, trim, weld or braze component parts during erection, in any manner which would damage finish, decrease strength or result in visual imperfection or failure in performance of construction.
6. Weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
7. Seal joints within glazed aluminum framing system according to sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.

B. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum framing systems to exterior.

C. Set continuous sill members and flashing in full sealant bed and install perimeter joint sealants as specified in Division 07 Section "Joint Sealants" to produce weathertight installation.

D. Install components plumb and true in alignment with established lines and grades, and without warp or rack. Secure to structure with non-staining and non-corrosive shims, anchors, fasteners, spacers and fillers. Maintain minimum clearance of 1 in (25 mm) between inside face of framing system and outside face of building structure.

E. Operable window vent systems: Install operable units level and plumb, securely anchored, and without distortion. Adjust weather-stripping contact and hardware movement to produce proper operation.

F. Comply with Division 08 Section Glazing for glass and glazing requirements.

1. Structural-Sealant Glazing:

- a. Prepare surfaces that will contact structural-sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion.
- b. Preparation includes, but is not limited to, cleaning and priming surfaces.

G. Perimeter Fire-Containment System for Curtain Wall Spandrel Conditions: Clean debris from behind framing during erection and provide temporary closures to prevent accumulation of debris. Install spandrel insulation and firestopping securely anchored to prevent dislocation. Comply with requirements of Division 07 Section Fire-Resistive Joint Systems.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- H. Back Pans: Install with EPDM spacers and maintain air space between pan and interior surface of glass. Seal joints in pan and at perimeter of pan.
1. Ventilate air space between shadow box back pan and interior surface of glass when recommended by manufacturer.

3.5 ERECTION TOLERANCES

- A. Erection Tolerances: Install to comply with the following non-accumulating maximum erection tolerances:
1. Plumb: **1/8 in per 10 ft (3 mm per 3 m); 1/4 in per 40 ft (6 mm per 12 m).**
 2. Level: **1/8 in per 10 ft (3 mm per 3 m); 1/4 in per 40 ft (6 mm per 12 m).**
 3. Alignment:
 - a. Where surfaces abut in line or are separated by reveal or protruding element up to **1/2 in (12 mm)** wide, limit offset from true alignment to **1/16 in (1.5 mm).**
 - b. Where surfaces are separated by reveal or protruding element from **1/2 to 1 in (12 to 25 mm)** wide, limit offset from true alignment to **1/8 in (3 mm).**
 - c. Where surfaces are separated by reveal or protruding element of **1 in (25 mm)** wide or more, limit offset from true alignment to **1/4 in (6 mm).**
 4. Location and Plane: Limit variation from plane to **1/8 in per 12 ft (3 mm per 3.6 m); 1/2 in (12 mm)** over total length.

3.6 FIELD QUALITY CONTROL

- A. Manufacturer Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.
- B. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
1. Refer to Division 01 Section Field Test for Air and Water Leakage.
 2. Refer to Division 01 Building Enclosure Commissioning for Field Observations and Performance Testing.
- C. Special Inspections: Owner will engage a qualified special inspector to perform special inspections and prepare reports:
1. Erection of glazed aluminum framing systems in accordance with the Building Code and current ICC-ESR.
 2. Testing agency will report test results promptly and in writing to Contractor and Architect.
- D. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Prepare test and inspection reports.

- E. Contractor Structural-Sealant Compatibility and Adhesion: Testing and inspecting of representative areas of structural-sealant-glazed curtain walls shall take place as installation proceeds to determine compliance of installed assemblies with manufacturer and specified requirements.
1. Structural-Sealant Adhesion: Test structural-sealant according to recommendations in ASTM C 1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
 - a. Test a minimum of six (6) areas on each building facade.
 - b. Repair installation areas damaged by testing.

3.7 CLEANING AND PROTECTION

- A. Remove temporary protective coverings and strippable films, if any, as framing systems are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of installation, clean finished surfaces as recommended by manufacturer. Maintain in a clean condition during construction.
- B. After installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
- C. Replace framing systems and panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

3.8 ARCHITECTURAL METAL FINISH SCHEDULE

- A. Color and Gloss:
- B. Color and Gloss: Match sample accepted by Architect.
- C. Color Anodic Finish:
 1. Color: Light bronze.
 2. Color: Medium bronze.
 3. Color: Dark bronze.
 4. Color: Black.
- D. Basis of Design: AMFXX
 1. Manufacturer:
 2. Product Series:
 3. Color Name and Number:

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 087100

DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Items commercially known as finish or door hardware required for operation of doors, and accessories necessary to complete installation.
- B. Products Furnished But Not Installed Under this Section: Coordinating, purchasing, delivering, and scheduling remain requirements of this Section.
 - 1. Cylinders for locks.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each item of door hardware indicated, specified, or required.
 - 1. Including material descriptions, dimensions of individual components and profiles, finishes, and installation instructions.
 - 2. Index product data sheets according to hardware schedule by use of numbers or letters, or combination.
- B. Shop Drawings for Electrified Hardware:
 - 1. Wiring Diagrams: Indicate power, signal, and control wiring detailed in following forms distinguishing between manufacturer-installed and field-installed wiring:
 - a. System schematic.
 - b. Point-to-point wiring diagrams.
 - c. Riser diagrams.
 - d. Door elevations.
 - 2. Interface: Details between electrified hardware and fire alarm, access control, security, and building control system.
 - 3. Sequence of Operation: Narrative operation description of doors controlled by electrified hardware.
- C. Hardware Set Schedules: Prepared by suppliers AHC detailing fabrications and assembly of door hardware, as well as procedures and diagrams. Coordinate hardware sets with doors, frames, and related Work to ensure proper size, thickness, hand, function, and finish of item.
 - 1. Format: Use same numbering shown on Drawings and Schedules.
 - a. Content: Organize into hardware sets indicating designations of each item required for each door or opening. Include following information:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 1) Type, style, function, size, and finish of each item.
- 2) Manufacturer and product number of each item.
- 3) Fastenings and other pertinent attachment information.
- 4) Location of each set cross referenced to room name and number in which door serves.
- 5) Explanation of abbreviations, symbols, and codes contained in schedule.
- 6) Mounting locations for hardware.
- 7) Door and frame sizes and materials.

- b. Additional Specific Information: Include type of strike plates; length of spindle, hand, backset and bevel of locks; hand and degree opening for closers; length of kickplates; length of rods for flush bolts; type of door stop; and other functions of mechanisms.

2. Keying Schedule: Submit indicating Owner's instructions for keying of locks.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certification for Electrified Hardware: Written data from product manufacturer certifying electrified hardware is approved for use on types and sizes of labeled fire rated doors comply with listed fire rated door assemblies.
- B. Product Test Reports: Written reports for extended cycle testing based on evaluation of comprehensive tests performed by manufacturer or other qualified testing facility and witnessed by a qualified testing agency, for locksets, exit devices and closers.
- C. Manufacturers Project Acceptance Document: Certification that products are approved, acceptable, or suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that warranty will be issued.

1.4 CLOSE-OUT SUBMITTALS

- A. Operation and Maintenance Data: For inclusion in operation and maintenance manual required by Division 01, submit manufacturer's instructions for operation and maintenance of installed Work, including methods and frequency recommended for maintaining optimum condition under anticipated use. Include precautions against cleaning materials and methods which may be detrimental to finishes and performance.
- B. Operational and Maintenance Training: Training materials, including instructor qualifications, required by Close-Out Activities Article.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Maintenance Tools and Instructions: Furnish complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

1.6 QUALITY ASSURANCE

- A. Supplier Qualifications:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Experience: Architectural door hardware supplier that has record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this Project.
 2. Qualification: Recognized architectural hardware supplier with a minimum of 5 years documented experience supplying both mechanical and electromechanical door hardware similar in quantity, type, and quality to that indicated for this Project. Supplier to be recognized as a factory direct distributor by the manufacturer of the primary materials with a warehousing facility in the Project's vicinity. Supplier to have on staff, a certified Architectural Hardware Consultant (AHC) or Door Hardware Consultant (DHC) available to Owner, Architect, and Contractor, at reasonable times during the Work for consultation.
 3. Supplier must be an authorized, factory direct distributor of specified products.
 4. Staff Hardware Expertise: Experienced professional currently certified by DHI as AHC, CDC, and EHC, and experienced in door hardware installations that are comparable in material, design, and extent to this Project that will be responsible for following activities:
 - a. Preparation of submittals, including hardware set schedules.
 - b. Available for consultation to Owner, Architect, and Contractor during course of Work.
 - c. Finalizing keying requirements with Owner.
 5. Electro-Mechanical or Electronic Hardware: When supplied, technician, with minimum of 5 years experience in low voltage installation, shall be available for assistance to Owner, Architect, Contractor, and Installer.
- B. Installer Qualifications:
1. Experience: Company with not less than 10 years experience in performing specified Work similar to scope of this Project; with a record of successful in-service performance; and sufficient capability, facilities and personnel, to produce required Work.
 2. Supervision: Installer shall maintain a competent supervisor who is at Project during times specified Work is in progress, and, who is experienced in installing systems similar to type and scope required for Project.
 3. Manufacturer Training: Technical representatives of manufacturer of locksets, exit devices and closers shall train Installer's installation personnel (supervisor and installers), either at Project or at manufacturers facility, on following:
 - a. Proper installation of products.
 - b. Proper sequence of installation of Work.
 - c. Situations that require special attention or care during installation.
 - d. Situations and conditions that should be avoided.
 - e. Other topics relevant to installation.
- C. Pre-Construction Extended Performance Testing: Manufacturer shall, through its own laboratory testing facilities witnessed and verified by Intertek, Underwriters Laboratories, Inc., or other testing laboratory agency acceptable to Architect, perform pre-construction testing to establish compliance of proposed Work with specified requirements.
1. General Requirements: Test hardware items identified in PART 2 for extended cycle performance.
 2. Test Method: ANSI/BHMA Grade 1.
 3. Reports: Prepare certified reports tabulating test results and indicating if hardware items meet or exceed requirements.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Equivalent Option to Testing: Testing not required if manufacturers has tested hardware items within previous 5 years.
- D. Keying Conference: Before beginning Work of this Section, conduct conference at Project to comply with requirements of applicable Division 01 Sections. Incorporate keying conference decisions into final keying schedule.
1. Required Attendees:
 - a. Owner.
 - b. Architect.
 - c. Contractor, including supervisor.
 - d. Supplier's architectural hardware consultant.
 - e. Hardware installer, including supervisor.
 - f. [Owner's] Security installer, including supervisor.
 - g. Manufacturer's technical representative.
 2. Minimum Agenda:
 - a. Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
 - b. Preliminary key system schematic diagram.
 - c. Requirements for key control system.
 - d. Address for delivery of keys.
 3. Reports: Record discussions, including decisions and agreements reached, and furnish copy of record to each party attending.
- E. Pre-Installation Conference: Before beginning Work of this Section, conduct conference at Project to comply with requirements of applicable Division 01 Sections.
1. Required Attendees:
 - a. Architect.
 - b. Contractor, including supervisor.
 - c. Supplier's architectural hardware consultant.
 - d. Hardware installer, including supervisor.
 - e. [Owner's] Security installer, including supervisor.
 - f. Manufacturer's technical representative.
 2. Minimum Agenda: Installer shall demonstrate understanding of Work required by reviewing and discussing procedures for, but not limited to, following:
 - a. Tour representative areas of required Work, discuss and evaluate for compliance with Contract Documents, including substrate conditions, surface preparations, sequence of installation and other preparatory Work performed by other installers.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review installation procedures, including, but not limited to, following:
 - 1) Installation requirements for each hardware item.
 - 2) Sequence of operation for each type of electrified door hardware

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 3) Relationships between electrified hardware and fire alarm, access control, security, and building control system.
- e. Review required inspection, testing, certifying, and material usage accounting procedures.
- f. Review forecasted weather conditions and procedures for coping with unfavorable conditions.
- 3. Reports: Record discussions, including decisions and agreements reached, and furnish copy of record to each party attending.

1.7 WARRANTY

- A. Manufacturer's Special Warranty: Furnish labor and material warranty for following time periods from date of substantial completion agreeing to repair or replace defects, faulty Work and failures, signed by authorized representative using manufacturer's standard form.
 - A. Mechanical Warranty
 - 1. Locks
 - a. Schlage L Series: 10 years
 - 2. Exit Devices
 - a. Von Duprin: 10 years
 - 3. Closers
 - a. LCN 4000 Series: 30 years
 - 4. Automatic Operators
 - a. LCN: 2 years
 - B. Electrical Warranty
 - 1. Locks
 - a. Schlage: 3 years
 - 2. Exit Devices
 - a. Von Duprin: 3 years
 - 3. Closers
 - a. LCN: 2 years

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of Design: Contract Documents are based on products specified in PART 3 "Door Hardware Sets" Article below to establish a standard of quality. Other manufacturers with products having equivalent characteristics may be considered, provided deviations are minor and does not change intent of Contract Documents as judged by Architect.
- B. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents, provide product by one of manufacturers listed alphabetically below. If not listed, submit as substitution according to Conditions of the Contract and Division 01 Sections.
- C. Available Manufacturers and Products: Subject to compliance with requirements of Contract Documents, manufacturers offering products that may be incorporated into the Work include, but are not limited to, those listed alphabetically below.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 HARDWARE, GENERAL

- A. Single Source Responsibility: Furnish each type of hardware unit from single manufacturer. Electrified door hardware shall be from same manufacturer as mechanical door hardware, unless otherwise indicated. Manufacturers that perform electrical modifications and are listed by testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.
- B. Manufacturer's Nameplate: Hardware units shall not have manufacturer's name or trade name displayed in a visible location except in conjunction with required fire rated labels; manufacturer's identification is permitted on rim of lock cylinders only.
- C. Base Metals: Hardware units of base metal, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units and BHMA A156.18. Do not furnish manufacturer's standard materials or forming methods if different from specified standard.
- D. Fasteners: Hardware units manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to commercially recognized industry standards for application intended, except aluminum fasteners are not permitted. Provide Phillips flat-head screws with finished heads to match surface of door hardware, unless otherwise indicated.
 - 1. Concealed Fasteners: Hardware units that are exposed when door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is only means of securely attaching hardware. Where through bolts are used on hollow door and frame construction, provide sleeves for each through bolt.
 - 2. Steel Machine or Wood Screws: For following fire rated applications:
 - a. Mortise hinges to doors.
 - b. Strike plates to frames.
 - c. Closers to doors and frames.
 - 3. Steel Through Bolts: For following fire rated applications unless door blocking is provided:
 - a. Surface hinges to doors.
 - b. Closers to doors and frames.
 - c. Surface mounted exit devices.
 - 4. Spacers or Sex Bolts: For through bolting of hollow metal doors.
 - 5. Fasteners for Wood Doors: DHI WDHS.2.
- E. Fire-Test-Response Characteristics:
 - 1. Fire Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.
 - 2. Test Pressure: After 5 minutes into test, neutral pressure level in furnace shall be established at 40 in (1000 mm) or less above sill.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Accessibility Requirements: Hardware units and installation shall comply with Americans with Disabilities Act (ADA), ANSI A 117.1, and state and local accessibility standards.
- G. Electrical Requirements: Furnish electrical products that are listed and classified by UL as suitable for purpose specified and indicated.
 - 1. Electrified Functions: Concealed PTFE-jacketed wires, secured at each leaf and continuous through hinge knuckle.
 - 2. Concealed Plug Connectors: Termination of multi-wire bundles up to 8 conductors shall be by 8 position concealed plug connector or by 8 position and 4 position connector for 12 wire applications.

2.3 BUTT HINGES

- A. Product Quality Standard: ANSI/BHMA A 156.1, Grade 1, 2 or 3.
- B. Description:
 - 1. Generic Type: Full-mortise, ball bearings.
 - 2. Weight:
 - a. Doors over 36" wide: Heavy weight anti-friction bearing.
 - b. Doors 36" and less in width: Standard weight anti-friction bearing.
 - 3. Hinge Pins: Except as otherwise indicated, hinge pins as follows:
 - a. Out-Swing Exterior Doors: Non-removable pins (NRP) or safety stud.
 - b. Interior Doors: Non-rising pins.
 - c. Top Tips: Flat button and matching plug, finished to match leaves.
 - d. Bottom Tips: Hole in bottom for easy pin removal.
- C. Templates: Except for hinges to be installed entirely (both leaves) into wood doors and wood frames, provide only template-produced units.
- D. Screws: Phillips flat-head screws with heads to match surface of hinges.
 - 1. Metal Doors and Metal Frames: Machine screws installed into drilled and tapped holes.
 - 2. Wood Doors and Wood Frames: Wood screws.
 - 3. Fire Rated Wood Doors: No. 12 by 1-1/4 in (32 mm), threaded-to-head steel wood screws.
- E. Basis of Design, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- F. Acceptable Manufacturers:
 - 1. Ives Hardware; an Allegion Company (formerly Ingersoll Rand) (IVE). No Substitute

2.4 CONTINUOUS GEARED HINGES

- A. Product Quality Standard: ANSI/BHMA A 156.26, Grade 1, 2 or 3.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Description: Extruded-aluminum, pinless, geared hinge leaves; joined by a continuous extruded-aluminum channel cap; with concealed, self-lubricating thrust bearings; type scheduled in PART 3 "Door Hardware Sets" Article. [Steel pins to hold labeled fire rated doors in place if required by tested listing.]
- C. Screws: Phillips flat-head screws with heads to match surface of hinges. Comply with following:
 - 1. Metal Doors and Metal Frames: Machine screws installed into drilled and tapped holes.
 - 2. Wood Doors and Wood Frames: Wood screws.
 - 3. Fire Rated Wood Doors: No. 12 by 1-1/4 in (32 mm), threaded-to-head steel wood screws.
- D. Basis of Design, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- E. Acceptable Manufacturers:
 - 1. Ives Hardware; an Allegion Company (formerly Ingersoll Rand) (IVE). No Substitute

2.5 FLUSH BOLTS

- A. Manual Flush Bolts:
 - 1. Product Quality Standards:
 - a. ANSI/BHMA A 156.16.
 - b. Underwriters Laboratories, Inc. listed for fire doors.
 - 2. Description:
 - a. Minimum 1/2 in (12 mm) round rods, forged brass or bronze, furnished in pairs, (top and bottom of door); lengths of rod 12 in (300 mm); where door is higher than 84 in (2.13 m), top bolt shall be of sufficient length to locate flush bolt operator 72 in (1.83 m) above finish floor.
 - b. Standard top strike and dustproof bottom strike.
 - 3. Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
 - 4. Acceptable Manufacturers and Products:
 - a. Ives Hardware; an Allegion Company (formerly Ingersoll Rand) (IVE); FB458, FB358 Series with DP1 or DP2 dustproof strike. No Substitute
- B. Automatic Flush Bolts:
 - 1. Product Quality Standards:
 - a. ANSI/BHMA A 156.16.
 - b. Underwriters Laboratories, Inc. listed for fire doors.
 - 2. Description:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Minimum 1/2 in (12 mm) round rods, forged brass or bronze, furnished in pairs, (top and bottom of door); lengths of rod 12 in (300 mm); where door is higher than 84 in (2.13 m), top bolt shall be of sufficient length to locate flush bolt operator 72 in (1.83 m) above finish floor.
 - b. Standard top strike and dustproof bottom strike.
 - 3. Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
 - 4. Acceptable Manufacturers and Products:
 - a. Ives Hardware; an Allegion Company (formerly Ingersoll Rand) (IVE); FB30, FB40 Series with DP1 or DP2 dustproof strike. No Substitute
- C. Constant Latching Flush Bolts:
- 1. Product Quality Standards:
 - a. ANSI/BHMA A 156.16.
 - b. Underwriters Laboratories, Inc. listed for fire doors.
 - 2. Description:
 - a. Constant latching flush bolt at top remaining engaged when active door is opened, retracting only when plunger on face of bolt is depressed.
 - b. Automatic flush bolt at bottom.
 - c. Standard top strike and dustproof bottom strike.
 - 3. Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
 - 4. Acceptable Manufacturers and Products:
 - a. Ives Hardware; an Allegion Company (formerly Ingersoll Rand) (IVE); FB50, FB60 Series with DP1 or DP2 dustproof strike. No Substitute

2.6 KEY CONTROL PROTECTION

- A. Level of Key Control Protection: Restricted patented.

2.7 CYLINDERS

- A. Conventional and Restricted Lock Cylinders: ANSI/BHMA A 156.5, Grade 1 unless Grade 2 is indicated.
- B. Description: Tumbler type, not less than 6 pins.
- C. Permanent Cores:
 - 1. Interchangeable Cores: Core insert, removable by use of a special key; usable with other manufacturers' cylinders.
- D. Temporary Cores – Construction Cores: Cores that are replaceable by permanent cores; provide 10 construction master keys. Replace construction cores with permanent cores as directed by directed by Owner.
- E. Basis of Design, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Acceptable Manufacturers
1. Schlage Commercial Lock Division; an Allegion Company (formerly Ingersoll Rand) (SCH); Everest.EV-29 – Basis of Design. No Substitute

2.8 KEYING

- A. Keying System: Factory registered patented system with patent lasting to 2029, incorporating decisions made in keying conference.

1. Product Quality Standard: ANSI/BHMA A 156.28, Appendix A.
2. Great-Grand Master Key System: Cylinders operated by a change key, a master key, a grand master key, and a great-grand master key.

- B. Keys:

1. Metal: Brass.
2. Metal: Bronze.
3. Metal: Stainless steel.
4. Metal: Nickel silver.
5. Stamping: Permanently inscribe each key with a visual key control number and include notation "DO NOT DUPLICATE".
6. Quantity: In addition to one extra key blank for each lock, provide following:
 - a. Cylinder Change Keys: 3.
 - b. Master Keys: 5.
 - c. Grand Master Keys: 5.
 - d. Great-Grand Master Keys: 5.
 - e. Construction Master Keys: 10.
 - f. Construction Core Control Keys: 5.
 - g. Permanent Core Control Keys: 5.

2.9 MORTISE LOCKS AND LATCHES

- A. Product Quality Standards:

1. ANSI/BHMA A 156.13, Grade 1 Operational and Security, except extended cycle performance testing shall be 6 million cycles minimum.

- B. Description:

1. Mortise Box Construction:
 - a. Heavy duty construction with minimum wrought case thickness of not less than **0.093 in (2.3 mm) thickness.**
 - b. **8 in (200 mm)** by **1-1/4 in (32 mm)** front adjustable to **1/8 in (3 mm)** in **2 in (50 mm).**
 - c. **2-3/4 in (69 mm)** backset.
 - d. Minimum **3/4 in (19 mm)** latchbolt throw, or as required for fire rated doors.
 - e. Minimum **1 in (25 mm)** deadbolt throw.
 - f. Split hubs for split spindles.
 - g. Lever handles supported by internal spring.
 - h. Square, split spindles (with all-thread connector), set-screw receiver/retainer notch.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Strikes: Metal strike plate with extended lip to protect frame, and with metal or plastic strike box.
 - a. Single Swing Doors: Minimum lip projection necessary to project from trim.
 - b. Pairs of Doors: With or without astragal, lip projection not beyond face of lock style of inactive leaf.
 - C. Electrified Locks:
 1. Product Quality Standards:
 - a. ANSI/BHMA A 156.25.
 - b. Underwriters Laboratories, Inc. listed for fire rated doors.
 2. Description: Fail safe type (power off unlocks outside lever); provide transformers and wiring necessary to install and connect to building electrical system.
 - D. Basis of Design, Function, Accessories, Lever Base Metal, Face Plate, Rose, and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
 - E. Acceptable Manufacturers and Products:
 1. (SCH); L9000 Series. No Substitute
- 2.10 EXIT DEVICES
- A. Product Quality Standards:
 - B. Product Quality Standards: ANSI/BHMA A 156.3, Grade 1, except extended cycle performance testing shall be 8 million cycles minimum.
 1. NFPA 101 in means of egress.
 2. Underwriters Laboratories, Inc. listed for fire rated doors.
 3. Listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing according to UL 305.
 4. NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire and panic protection, based on testing according to UL 305 and NFPA 252.
 5. Comply with CBC accessibility five pounds of force requirement.
 - C. Description:
 1. Touch bar type, unless scheduled otherwise.
 2. Exit device to operate with a maximum of five pounds of force.
 3. Concealed vertical rods on pairs of doors, unless surface mounted vertical rods required for fire rated doors.
 4. Mortise lock or rim type devices on single doors only.
 5. Outside trim as scheduled in PART 3 "Door Hardware Sets" Article.
 6. Except on fire rated doors where closers are provided on doors equipped with exit devices, equip units with keyed dogging device to keep latch bolt retracted, when engaged.
 7. Except at doors with thresholds, provide vertical rod devices which hold rods in retracted position when door is open.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Basis of Design, Function, Accessories, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- E. Acceptable Manufacturers and Products:
 - 1. Von Duprin; an Allegion Company (formerly Ingersoll Rand) (VON); 98/99 Series; 33A / 35A on Narrow Stile. No Substitute

2.11 ELECTRIC STRIKES

- A. Product Quality Standard: ANSI/BHMA A 156.31, Grade 1.
- B. Operational Type: Fail-secure with fire rated doors.
- C. Basis of Design, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- D. Available Manufacturers:
 - 1. HES; an Assa Abloy Company (HES). No Substitute

2.12 ELECTROMECHANICAL LOCKS

- A. Product Quality Standard: ANSI/BHMA A 156.25, Grade 1 for type of lock indicated; motor or solenoid driven.
- B. Basis of Design, Function, Accessories, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- C. Acceptable Manufacturers:
 - 1. Schlage Commercial Lock Division; an Allegion Company (formerly Ingersoll Rand) (SCH). No Substitute

2.13 PUSH/PULL TRIM

- A. Product Quality Standard: ANSI/BHMA A 156.6.
- B. Description:
 - 1. Flat Push Plates: 0.050 in (1.3 mm) thick, 4 in wide by 16 in high (100 mm) wide by (400 mm) high); with square corners and beveled edges, secured with exposed screws.
 - 2. Pull-Plate Door Pulls: 0.050 in (1.3 mm) thick plate, 4 in wide by 16 in high (100 mm) wide by (400 mm) high), with square corners and beveled edges; 3/4 in (19 mm) constant-diameter pull, with minimum clearance of 1-1/2 in (38 mm) from face of door; fastened at 8 in (200 mm) o.c., secured with exposed screws.
- C. Basis of Design, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- D. Available Manufacturers:
 - 1. Ives Hardware; an Allegion Company (formerly Ingersoll Rand) (IVE). No Substitute

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.14 CLOSERS

- A. Product Quality Standard: ANSI/BHMA A 156.4, Grade 1, except cycle testing shall be 10 million cycles minimum.
- B. Description: Manual overhead surface and concealed closers.
- C. Size of Units: Except as otherwise specifically indicated, comply with manufacturer's recommendations for size of door control unit depending on size of door, exposure to weather, and anticipated frequency of use.
- D. Access-Free Manual Closers: Where manual closers are indicated for doors required to be accessible, provide adjustable units complying with accessibility requirements for door opening force and delayed action closing.
- E. Basis of Design, Function, Accessories, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- F. Surface Closers Acceptable Manufacturer and Model Series:
 - 1. LCN Closers; an Allegion Company (formerly Ingersoll Rand) (LCN); 4000 Series. No Substitute

2.15 LOW-ENERGY DOOR OPERATORS

- A. Product Quality Standard:
 - 1. BHMA A156.19.
 - 2. UL 325.
- B. Description: Operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated. Coordinate operator mechanisms with door operation, hinges, and activation and safety devices.
- C. Electromechanical Operating System: Self-contained unit powered by permanent-magnet dc motor; with closing speed controlled mechanically by gear train and dynamically by braking action of electric motor, connections for power and activation- and safety-device wiring, and manual operation including spring closing when power is off.
- D. Electrohydraulic Operating System: Self-contained low-pressure unit; with separate cylinders for power and checking, connections for power and activation- and safety-device wiring, manual operation including spring closing when power is off.
- E. Basis of Design, Function, Accessories, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- F. Available Manufacturers and Model Series:
 - 1. LCN Closers; an Allegion Company (LCN); Senior Swing 9000/9500 Series. No Substitute

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.16 STOPS AND HOLDERS

- A. Product Quality Standard for Stops and Bumpers: ANSI/BHMA A 156.16, Grade 1.
- B. Product Quality Standard for Overhead Holders and Stays: ANSI/BHMA A 156.16, Grade 1.
- C. Product Quality Standard for Electromagnetic Door Holders: BHMA A 156.15; coordinate with fire detectors and interface with fire alarm system for fire rated doors.
- D. Product Quality Standard for Door Silencers: ANSI/BHMA A 156.16.
- E. Basis of Design, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- F. Concealed overhead stops and stays have been specified in the hardware groups. Provide surface mounted units if the fire rating of the door is compromised by using a concealed unit.

2.17 PROTECTIVE TRIM UNITS

- A. Product Quality Standard: ANSI/BHMA A 156.6.
- B. Description: Minimum 0.050 in (1.25 mm) thick metal plates with beveled top and 2 sides fabricated in following configurations:
 - 1. Armor Plates: 34 in (800 mm) high by door width, with allowance for frame stops.
 - 2. Kick Plates: 10 in (250 mm) high by door width, with allowance for frame stops.
- C. Fasteners: Exposed fasteners consisting of either machine screws or self-tapping screws.
- D. Width and Thickness: As scheduled in PART 3 "Door Hardware Sets" Article.
- E. Basis of Design, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
- F. Available Manufacturers and Products:
 - 1. IVE Hardware; an Allegion Company (formerly Ingersoll Rand) (IVE); 8400 Series. No Substitute

2.18 DOOR GASKETING

- A. Product Quality Standards: ANSI/BHMA A 156.22, and according to following when required:
 - 1. Air Leakage: Not to exceed 0.50 cfm/ft (0.000774 cu m/s/m) of crack length for gasketing other than for smoke control according to ASTM E 283.
 - 2. Smoke Leakage: Comply with NFPA 105 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated according to UL 1784.
 - 3. Fire Rating: Comply with NFPA 80 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction according to NFPA 252. After 5 minutes into test, neutral pressure level in furnace shall be established at 40 in (1000 mm) or less above sill.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Sound Rating: Listed and labeled by a testing and inspecting agency according to ASTM E 1408.

B. Basis of Design: As scheduled in PART 3 "Door Hardware Sets" Article.

C. Available Manufacturers:

1. Zero International; an Allegion Company (formerly Ingersoll Rand) (ZER). No Substitute

2.19 THRESHOLDS

A. Product Quality Standard: ANSI/BHMA A 156.21.

B. Basis of Design: As scheduled in PART 3 "Door Hardware Sets" Article.

C. Available Manufacturers:

1. Zero International; an Allegion Company (formerly Ingersoll Rand) (ZER). No Substitute

2.20 KEY CONTROL SYSTEM

A. Key Control Cabinet:

1. Product Quality Standard: BHMA A156.5, Grade 1.
2. Description: Metal cabinet with baked-enamel finish; containing key-holding hooks, labels, 2 sets of key tags with self-locking key holders, key-gathering envelopes, and temporary and permanent markers; with key capacity of 150 percent of number of locks.
3. Multiple-Drawer Cabinet: Cabinet with drawers equipped with key-holding panels and key envelope storage, and progressive-type ball-bearing suspension slides. Include single cylinder lock to lock all drawers.

B. Available Manufacturers:

1. Key Control Systems, Inc. (KCS).
2. Lund Equipment Co., Inc. (LUN).
3. MMF Industries (MMF).

C. Key Control System Software:

1. Product Quality Standard: BHMA A156.5, Grade 1.
2. Description: Multiple-index system for recording and reporting key-holder listings, tracking keys and lock and key history, and printing receipts for transactions. Include instruction manual.

2.21 OWNER'S STOCK

A. Provide the following hardware as owner's stock.

1. 2 each Mortise Locks of every function used on the project.
2. 8 each Door Closers
3. 1 each Exit Device of every function used on the project.
4. 2 each Key Cutters
5. 2 each Keying Kits from Key System manufacturer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.22 MISCELLANEOUS DOOR HARDWARE

A. Boxed Power Supplies:

1. Description: Modular unit in NEMA ICS 6, Type 4 enclosure; filtered and regulated; voltage rating and type matching requirements of door hardware served; and listed and labeled for use with fire alarm systems.
2. Basis of Design, Function, Accessories, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.

B. Auxiliary Hardware:

1. Product Quality Standard: BHMA A156.16, Grade 1.
2. Basis of Design, Function, Accessories, Base Metal and Finish: As scheduled in PART 3 "Door Hardware Sets" Article.
3. Available Manufacturers:
 - a. IVES Hardware; an Allegion Company (formerly Ingersoll Rand) (IVE). No Substitute

C. Silicone Sealant: Exterior non-sag silicone sealant as specified in Division 07 Section "Joint Sealants."

2.23 FINISHES

A. Product Quality Standard: ANSI/BHMA A 156.18, as scheduled in PART 3 "Door Hardware Sets" Article.

B. Protection: Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of range of approved samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within range of approved samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Acceptance of Surfaces and Conditions: Examine doors and frames to receive door hardware and associated Work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting Work within a particular area will be construed as acceptance of surface conditions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.
 - 4. ANSI/DHI A 115.IG.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Steel Doors and Frames: Comply with DHI A115 Series.
- C. Surface-Applied Door Hardware: Drill and tap doors and frames according to ANSI A 250.6.
- D. Wood Doors: Comply with DHI A115-W Series.
- E. Electrical: Verify raceway system and other provisions for electrical power are adequate for electrified door hardware installation.

3.4 INSTALLATION

- A. Mounting Heights: Mount door hardware units at heights indicated as follows unless otherwise indicated or required to comply with governing regulations.
 - 1. Custom Steel Doors and Frames: DHI's "Recommended Locations for Builders' Hardware for Custom Steel Doors and Frames."
 - 2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
- B. Hardware Installation:
 - 1. Set hardware items level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
 - 2. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.
 - 3. Do not install surface-mounted hardware items until finishes have been completed on substrates involved.
- C. Key Control System: Tag keys and place on markers and hooks in cabinet, as determined by final keying schedule.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings or in equipment room. Verify location with Architect. [Provide one power supply for each door opening.] [Provide least number of power supplies required to adequately serve doors with electrified door hardware.]
- E. Control Wiring:
 - 1. Raceways: As specified and provided under appropriate Division 26 Section.
 - 2. Connections: Coordinate with appropriate Division 28 Section.
- F. Thresholds: Set thresholds for exterior and acoustical doors in full bed of silicone sealant complying with requirements specified in Division 07 Section "Joint Sealants." Extend full width of opening and notch at door stops.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 - 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.

3.6 ADJUSTMENTS

- A. Post-Occupancy Adjustment: Approximately 6 months after date of substantial completion, qualified technicians of supplier or installer, accompanied by manufacturers technical representatives of locksets, exit devices, closers, and other hardware manufacturers as required, shall perform following Work:
 - 1. Examine and adjust each item of hardware as necessary to restore proper function of doors and hardware to comply with specified requirements.
 - 2. Replace hardware items that have deteriorated or failed due to faculty design, materials, or installation.
- B. Maintenance Service:
 - 1. First Year Maintenance Service: Beginning at date of substantial completion, supplier or installer shall provide 12 months maintenance service by qualified technicians.
 - a. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper hardware operation.
 - b. Provide parts and supplies same as those used in manufacture and installation of original products.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Proposal for Continuing Maintenance Service: Before expiration of first year maintenance service term, supplier shall furnish Owner with continuing maintenance service agreement, renewable yearly, proposing services, obligations, conditions, and terms for continuing maintenance service.

3.7 CLOSE-OUT ACTIVITIES

- A. Operational and Maintenance Training: Train Owner's personnel on maintenance, operation, and adjustment of door hardware at Project using factory-trained and certified technicians. Provide attendees with bound copies of training materials.

3.8 HARDWARE SCHEDULE

- A. Include the cost of hardware group X for any single door opening or XX for any double door opening without an assigned hardware group.

SECTION 087101
DOOR HARDWARE SETS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Items commercially known as finish or door hardware required for operation of doors, and accessories necessary to complete installation.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Refer to Division 8 Section Door Hardware for door hardware product requirements.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Division 8 Section Door Hardware for door hardware execution requirements.

3.2 HARDWARE SCHEDULE

- A. Door Hardware Sets Schedule as follows.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

GLAZING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Glass, glazing, and supplementary items necessary for installation, including glass specified in other Sections where glazing requirements referenced to this Section.
 - 1. Monolithic glass.
 - 2. Laminated glass.
 - 3. Insulating glass.
 - 4. Decorative glazing.
 - 5. Fire-protection-rated glazing.
 - 6. Monolithic polycarbonate plastic glazing.
 - 7. Bullet-resistive glazing.
 - 8. One-way observation mirrored glazing.
 - 9. Glazing sealants and glazing materials.
- B. Enhanced Source Quality Control Standards: Comply with Manufacturer/Fabricator Enhanced Source Quality Control Standards for glass fabrication.
- C. Related Requirements:
 - 1. Refer to Division 01 Section Field Test for Air and Water Leakage.

1.2 ALTERNATES

- A. Alternate for Heat Soaked Fully Tempered Glass: Where fully tempered glass is required due to structural loads and other performance requirements that cannot be met by increased glass thickness, using laminated glass or other means, provide heat soaked fully tempered glass in lieu of fully tempered glass.

1.3 DEFINITIONS

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
- C. Interspace: Space between lites of an insulating-glass unit.

1.4 DELEGATED ENGINEERING REQUIREMENTS

- A. Delegated Engineering Responsibility: Contractor shall engage a qualified professional engineer to provide engineering for products and systems required to comply with the design intent of Contract Documents.
 - 1. Contract Documents Design Intent: Drawings and Specifications indicate design intent for products and systems and do not necessarily indicate or specify total Work required. Contract Documents shall not be construed as an engineered design; furnish and install Work required for a complete installation.
 - 2. Delegated Engineer Professional Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated with a record of successful in-service performance. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Submittals: Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified professional engineer.
 4. Coordination of Work:
 - a. Product Variations: In the event of minor differences between products and systems of acceptable or available manufacturers, Contractor shall notify Architect of such differences and resolve conflicts in a timely manner. Failure of Contractor to provide notification shall be construed as acceptance of conditions indicated, and changes caused by minor differences between products and Contract Documents shall be included in the Work at no additional cost to Owner.
 - b. Allowable Adjustments: Minor dimension and profile adjustments may be made in interest of fabrication or erection methods or techniques or ability to satisfy design intent, provided design intent is maintained as determined by Architect. Proposed deviations shall include a detailed analysis of impact to adjacent substrates or other building systems, including related design or construction cost impacts. If accepted by Architect, deviations causing changes in materials, constructability, substrates, or conditions shall be included in the Work at no additional cost to Owner.
- B. Project Glazing Analysis: Prepared by manufacturer for primary glass or fabricator for fabricated glass units. Analyze each glass type and glazing condition for thermal, wind, impact and additional design loads indicated in glass performance requirements.
1. Provide glass products in the thickness and strengths required to meet or exceed the criteria based on project loads and in-service conditions.
- C. Delegated Engineering – Structural Glass and Other Applications Exceeding Project Glazing Analysis: Contractor shall employ a qualified structural engineer to provide engineering for products and systems including attachment to building structure required to meet design intent of Contract Documents.
1. Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified structural engineer
- 1.5 ACTION SUBMITTALS
- A. Product Data: Manufacturer's technical literature for each product and system indicated.
1. Include manufacturer's specifications for materials, installation instructions, and recommendations for maintenance.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work.
1. Include details of each type of glazing in conjunction with the appropriate framing system; indicate type of glass, sizes, shapes, glazing material, and quantity.
 2. Include details indicating glazing thickness, bite on glass, glass edge clearance, and depth of rabbet.
- C. Glass Samples: For each type of glass product other than clear monolithic vision glass, 12 inches (300 mm) square.
- D. Glass Range Sample Units: For each type of glass product other than clear monolithic vision glass, provide full size range samples representing anticipated range of appearance on the Project. Retain range samples for reference.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Glazing Accessory Samples: For gaskets, sealants and colored spacers, each type and color, in 12-inch (300-mm) lengths.
- F. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.6 INFORMATIONAL SUBMITTALS

- A. Manufacturer Project Acceptance Documents: Certifications by the manufacturer that its products and systems are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
 - 1. Certification attesting application and use of glass for effects of thermal loading under expected service temperature ranges has been reviewed, and specified maximum probabilities of breakage will not be exceeded.
 - a. Certification shall include back pan and shadow box back pan conditions.
 - 2. Certifications attesting performance for specified design wind load criteria, has been reviewed; furnish design factor, statistical probability of breakage and center deflection for the largest size of each thickness and type.
 - 3. Certifications attesting face pressure of heat-strengthened glass units falls within limits specified. Glass determined to be outside these limits shall be replaced at no cost to Owner.
 - 4. Insulated Glass Units: Certification from manufacturer of insulating glass edge sealant indicating that glass edge sealants were tested for compatibility with other glazing materials including sealants, glazing tape, gaskets, setting blocks, and edge blocks.
 - 5. Ceramic Frit Coated Glass: Certification from manufacturer acknowledging strength reduction of frit coating used on the Project.
- B. Delegated Engineering Submittal: For products and systems indicating compliance with performance requirements. Include structural analysis, calculations and other performance data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 1. Include strength/deflection calculations and secondary sealant sightline analysis.
 - a. Provide thermal stress analysis and certification that heat strengthening or tempering complies with requirements and conditions indicated for this Project.
 - 2. Where IGU structural performance based on inner/outer lite combination cannot be determined, fabricator shall assume outer lite only to meet structural requirements.
- C. Product Test Reports: Written reports based on evaluation of comprehensive tests performed by qualified testing agency indicating that each product complies with requirements.
 - 1. Product Approvals: Submit Florida Product Approval or Product Control Notice of Acceptance (NOA) issued by Miami-Dade County Building Code Compliance Office (BCCO) or other product approval acceptable to authorities having jurisdiction for systems used at exterior of building.
- D. Source Quality Control Reports for Enhanced Quality Standards: When requested, provide written reports documenting testing procedures and recorded measurements. Include letter(s) certifying compliance for the following.
 - 1. Distortion Tolerance Measurements: For heat-treated glass 6mm or thicker.
 - 2. Insulating Glass Unit Fabrication and Testing Requirements: For insulating glass units.
 - 3. Glass Color Tolerance Measurements: For monolithic coated glass and insulating coated glass units.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Field Quality Control Reports: Written report of testing and inspection required by Field Quality Control.
- F. Warranty:
 - 1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations and exclusions.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: To include in maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Fabricated-Glass Manufacturer Qualifications: A qualified manufacturer of fabricated glass units who is approved and certified by primary glass manufacturer.
- B. Installer Qualifications:
 - 1. Experience: Installer's personnel with not less than 5 years of experience in the successful performance of Work similar to scope of this Project.
 - 2. Supervision: Installer shall maintain a competent supervisor at Project while the Work is in progress, and who has not less than 5 years of experience installing products and systems similar to scope of this Project.
 - 3. Manufacturer Acceptance: Installer shall be certified, approved, licensed, or acceptable to manufacturer to install products.
 - 4. Certification: Qualified glazing contractor certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors and who employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program.
- C. Reflective- and Low-E-Coated Vision Glass: ASTM C1376, and as follows, whichever is more restrictive.
 - 1. Inspection: At a distance of 10 ft (3 m), in transmission and reflectance at a viewing angle of 90° to the specimen, using a bright uniform background with diffused daylight conditions, without direct sunlight. Vision area shall extend to within 3 in (75 mm) of the perimeter of glass panel.
 - 2. Reflectance and Transmission: Reflectance and transmission may vary slightly and be considered acceptable. Reflectance variations of plus or minus 1.5 percent are permissible.
 - 3. Pinholes: Pinholes greater than 1/16 in (1.5 mm) diameter shall not be allowed within vision area.
 - 4. Scratches: Scratches greater than 1/2 in (12 mm) shall not be allowed within vision area.
 - 5. Verification of Color: Color shall be verified by using a Spectrophotometer placed directly on the specimen.
 - a. Tolerance for Color Variance: ASTM C1376, Total Range (All Units, Each Glass Type) of less than or equal to 4.0 Delta E using CIEDE2000 as defined in ASTM D2244.
- D. Reflective- and Low-E-Coated Spandrel Glass: ASTM C1376, Kind CS, and as follows, whichever is more restrictive.
 - 1. Inspection: At a distance of 15 ft (4.6 m), a viewing angle of 90° to the specimen, using a bright uniform background with diffused daylight conditions, without direct sunlight.
 - 2. Reflectance: Reflectance variations of plus or minus 1.5 percent are permissible.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Verification of Color: Color shall be verified by using a Spectrophotometer placed directly on the specimen.
 - a. Tolerance for Color Variance: ASTM C1376, Total Range (All Units, Each Glass Type) of less than or equal to 4.0 Delta E using CIEDE2000 as defined in ASTM D2244.

E. Anisotropy Measurement: Anisotropy inspection is the measurement of polarized light calculated and presented as Maximum Iridescence or Total Stress in accordance with ASTM C1901-21.

1. Anisotropy shall be monitored using an on-line measurement system to assure that glass produced for this project measures within a consistent and accepted range of results established by baseline measurements on the accepted mockup glass.
 - a. The intent of this requirement is to use measurements taken from mockup glass during the manufacturing process to establish an acceptable range of results as the baseline for the mass production of glass for this project.

1.9 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
1. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
 2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
 4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.10 MOCKUPS

- A. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
1. Provide glazing in mockups to match glazing systems required for Project, including glazing methods.

1.11 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. If requested, Manufacturer's qualified technical representative.
 - e. Installers of other construction interfaced with Work.
 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 3. Record discussions, including decisions and agreements, and prepare report.
- 1.12 DELIVERY, STORAGE, AND HANDLING
 - A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
 - B. Insulating Glass Units: Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.
- 1.13 PROJECT CONDITIONS
 - A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F (4.4 deg C), unless approved otherwise by manufacturer in writing.
- 1.14 COORDINATION
 - A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.
 - B. Coordinate glazing channel dimensions.
 1. Provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.
 2. Achieve proper safety margins for glazing retention under each design load case, load case combination, and service condition.
- 1.15 WARRANTY
 - A. Manufacturer Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design of product. "Defects" are defined to include but not limited to deterioration or failure to perform as required.
 1. Coated Glass: Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.
 - a. Warranty Period: Manufacturer's standard but not less than 10 years after date of Substantial Completion.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Laminated Glass: Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
 - a. Warranty Period: Manufacturer's standard but not less than 10 years after date of Substantial Completion.
 3. Insulating Glass Units: Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is obstruction of vision by dust, moisture, or film on interior surfaces of glass.
 - a. Warranty Period: Manufacturer's standard but not less than 10 years after date of Substantial Completion.
 4. Heat-Soaked Tempered Glass: Breakage of heat-soaked tempered glass units that spontaneously break due to nickel sulfide (NiS) inclusions at a rate exceeding 0.3 percent (3/1000) within specified warranty period.
 - a. Warranty Period: Manufacturer's standard but not less than 10 years after date of Substantial Completion.
 5. Polycarbonate Plastic Glazing: Deterioration of polycarbonate glazing is defined products that break or develop defects from normal use that are attributable to manufacturing process and not to practices for maintaining and cleaning plastic glazing contrary to manufacturer's written instructions. Defects include coating delamination, haze, excessive yellowing, and loss of light transmission beyond the limits stated in plastic glazing manufacturer's standard form.
 - a. Warranty Period: Manufacturer's standard but not less than 5 years after date of Substantial Completion.
- B. Installer Warranty: Furnish installer written workmanship warranty signed by an authorized representative using installer standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. Defects ☐ is defined to include but not limited to deterioration or failure to perform as required.
1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 2 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section Substitution Procedures.
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers/fabricators offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.
 1. Glass Selections: As scheduled or indicated in Design Selections.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Failure includes but is not limited to the following:
 - a. Structural failures including but not limited to excessive deflection.
 - b. Glass breakage.
 - c. Failure of sealants or gaskets to remain watertight and airtight.
 - d. Deterioration of glazing materials.
- B. Fire-Test-Response Characteristics of Plastic Glazing: As determined by testing plastic glazing by a qualified testing agency acceptable to authorities having jurisdiction.
1. Self-ignition temperature of 650 deg F (343 deg C) or higher when tested according to ASTM D1929 on plastic sheets in thicknesses indicated for the Work.
 2. Smoke density of 75 or less when tested according to ASTM D2843 on plastic sheets in thicknesses indicated for the Work.
 3. Flame-spread index of not less than that indicated when tested according to ASTM E84.
- C. Structural Loads: Engineer products and systems to withstand loads within limits of allowable working stresses of the materials involved under conditions indicated including, but not limited to gravity, wind, seismic, and erection design loads and thermal movements established by authorities having jurisdiction, applicable building codes, and as indicated.
1. Glazing to withstand each applicable design load case and load case combination within limits and under conditions determined in accordance with the IBC and ASTM E1300.
- D. Structural Movement: Engineer system to withstand movements of supporting structure including, but not limited to inter-story drift, twist, column shortening, long-term creep and deflection from uniformly distributed and concentrated live loads.
- E. Exterior Glazing:
1. Design Wind Pressure: As indicated on Drawings or Wind Analysis Report.
 2. Other Loads: As indicated on Drawings.
 3. Design Snow Loads: As indicated on Drawings.
 4. Vertical Glazing: For glass surfaces set vertically 15 degrees or less from vertical, design glass to resist design loads based on glass type factors.
 - a. Probability of Breakage for Vertical Glazing: For glass surfaces set vertically 15 degrees or less from vertical, design glass for a probability of breakage not greater than 0.008.
 5. Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass to resist design loads and load combinations based on glass type factors
 - a. Probability of Breakage for Sloped Glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass for a probability of breakage not greater than 0.001.
 6. Maximum Lateral Deflection: At design wind pressure.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/100 times the short-side length or 1 inch (25 mm), whichever is less and keeps glazing retained in place with a suitable margin of safety under design conditions.
 7. Thermal Loads: Design glazing to resist thermal stress breakage induced by conditions including differential shading within individual glass lites, temperatures and limited air circulation.
 - a. Include back pan and shadow box back pan applications.
 8. Windborne-Debris-Impact Resistance: Exterior glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone protection.
 9. Safety Glazing: Where safety glazing is indicated or required, provide glazing that complies with 16 CFR 1201, Category II.
 - a. Human Impact Loads: Locations indicated, and as defined by building code; glazed with safety glass.
 10. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
 - a. For monolithic glass lites, properties are based on units with lites 1/4 in (6 mm) thick.
 - b. For laminated glass lites, properties are based on products of construction indicated.
 - c. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
 - d. U-Factors: Center-of-glazing values, according to NFRC 100, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
 - e. Solar Heat-Gain Coefficient and Visible Light Transmittance: Center-of-glazing values, according to NFRC 200.
 - f. Visible Reflectance: Center-of-glazing values, according to NFRC 300.
 11. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
 - a. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- F. Interior Glazing:
1. Maximum Lateral Deflection: For glass supported on all four edges or two edges, limit center-of-glass deflection to not more than 1/100 times the short-side length or 1/2 in (12 mm), whichever is less, at 10 lb/sq ft (479 Pa) lateral load.
 2. Differential Deflection: For glass installed to walking surfaces, deflection of adjacent unsupported edges shall not exceed glass thickness when subjected to 50 lbf/ft. (730 N/m) applied horizontally to one panel at any point up to 42 inches (1067 mm) above the adjacent walking surface.
 3. Thermal Loads: Design glazing to resist thermal stress breakage induced by conditions including differential shading within individual glazing lites and temperatures.
 4. Safety Glazing: Where safety glazing is indicated or required, provide glazing that complies with 16 CFR 1201, Category II.
 - a. Human Impact Loads: Locations indicated, and as defined by building code; glazed with safety glass.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.4 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
1. NGA/GANA Publications: Glazing Manual and Laminated Glazing Reference Manual.
 2. FGIA/AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR-A7, "Sloped Glazing Guidelines."
 3. FGIA/IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
 4. FGIA/IGMA Publication for Insulating Glass: IGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
 5. FGIA/IGMA Publication Insulating Glazing Tolerances: IGMA TB-1200, "Guidelines for Insulating Glass Dimensional Tolerances."
 6. FGIA/IGMA Publication for Thermal Stress: IGMA TM-1500, "Guidelines to Reduce Instances of Thermal Stress."
 7. NGA/GANA Publications: "Guidelines for the Appearance of Insulating Glass Unit Edges in Commercial Applications at the Time of Installation"
- B. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
1. Acceptable Products: Complying with CSPC 16 CFR 1201, Category II.
 - a. Submit label location and size for Owner approval prior to fabrication. Glass having labels in locations not pre-approved shall be removed and replaced with glass having labels in the correct location at no cost to Owner.
 2. Products Not Permitted: Wired Glass.
- C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.
1. Units shall be certified by IGCC to comply with ASTM E 2190 Standard Specification for Insulating Glass Unit Performance and Evaluation.
- D. Insulating Glass Units: Acceptable products shall comply with the following:
1. ASTM E 546 Standard Test Method for Frost Point of Sealed Insulating Glass Units.
 2. ASTM E 576 Standard Test Method for Frost Point of Sealed Insulating Glass Units in the Vertical Position.
- E. Glass Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than thickness indicated.
1. Exterior Glass Schedule: As indicated on Drawings, or as scheduled or as indicated in Design Selections.
 - a. Exterior Lites: Not less than 1/4 in (6 mm) minimum thickness.
 - b. Tinted Glass: Provide same thickness for each tint color indicated throughout Project.
 2. Interior Glass Schedule: As indicated on Drawings, or as scheduled or as indicated in Design Selections.
 - a. Interior Lites: Not less than 1/4 in (6 mm) minimum thickness.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- F. Glass Strength: Provide Kind HS heat-strengthened float glass or Kind FT fully tempered float glass as required to comply with Performance Requirements, unless otherwise indicated:
1. Provide Kind HS (Heat Strengthened) at exterior conditions and where recommended by manufacturer to comply with performance requirements.
 2. Provide Kind FT (Fully Tempered) as indicated and where recommended by manufacturer to comply with performance requirements or required for safety glazing.
 3. Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with Performance Requirements.
 4. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with Performance Requirements.
 5. Where fully tempered float glass is indicated, provide fully tempered float glass.
 - a. Provide Kind FT fully tempered float glass where recommended by manufacturer to comply with safety glazing requirements.

2.5 GLASS PRODUCTS

- A. Glass Manufacturers and Fabricators:
1. AGC Glass Co. North America, Inc.
 2. Guardian Industries Corporation
 3. Pilkington North America, Inc.
 4. Vitro Architectural Glass (formerly PPG Industries, Inc.)
 5. Saint Gobain.
 6. Viracon.
 7. Interpane.
 8. Tecnoglass.
 9. Oldcastle.
- B. Clear Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.
- C. Low-Iron Float Glass (Ultraclear): ASTM C 1036, Type I, Quality-Q3, Class I, complying with other requirements specified and with visible light transmission not less than 91 percent.
1. Manufacturers and Products:
 - a. AGC Glass Co. North America, Inc.; Krystal Klear.
 - b. Guardian Industries Corp.; Ultrawhite.
 - c. Pilkington North America; Optiwhite.
 - d. Vitro Architectural Glass (PPG Industries, Inc.); Starphire.
- D. Tinted Float Glass: ASTM C1036, Type I, Class 2 (tinted), Quality-Q3.
- E. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion horizontally oriented after completion of field glazing unless Architect's advanced written approval is provided otherwise.
- F. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion horizontally oriented after completion of field glazing unless Architect's advanced written approval is provided otherwise.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- G. Heat Soaking Tempered Glass: Provide heat soak testing for fully tempered products in accordance with EN 14179-1 or EN 14179-2 and manufacturer's recommended heat soak testing process.
1. Locations Schedule:
 - a. As scheduled or indicated in Design Selections or Drawings.
 - b. As indicated in Alternate for Heat Soaked Fully Tempered Glass.
 - c. Locations recommended by manufacturer.
- H. Reflective- and Low-E-Coated Vision Glass: ASTM C 1376, coated by pyrolytic process or vacuum deposition (sputter-coating) process, standard of manufacturer, and complying with other requirements as specified.
1. Kind: Kind CV (coated vision glass), except that Kind CO (coated overhead glass) may be used where the lower edge of the glass is more than **6 ft (1.8 m)** above the adjacent floor level or cannot be approached closer than **10 ft (3 m)**.
- I. Ceramic-Coated Vision Glass: ASTM C 1048, Condition C, Type 1, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3, heat-treated float glass with ceramic enamel; complying with Specification No. 95-1-31 in NGA/GANA's "Engineering Standards Manual", and with other requirements as specified.
- J. Ceramic-Coated Spandrel Glass: ASTM C 1048, Condition B, Type I, Quality-Q3, and with other requirements as specified.
- K. Reflective- and Low-E-Coated Spandrel Glass: ASTM C 1376, Kind CS; coated by pyrolytic process or vacuum deposition (sputter-coating) process, standard of manufacturer, and complying with other requirements as specified.
- L. Bent Glass: ASTM C1464, kind, glass type, bend, and other properties as indicated.
1. Manufacturers and Fabricators:
 - a. Interpane.
 - b. Cristacurva.
 - c. SBG Standard Bent Glass.
- M. Patterned Glass: ASTM C 1036, Type II (patterned and wired glass, flat), Class 1 (clear), Form 3 (patterned), Quality-Q6, Finish F1 (patterned one side), unless otherwise indicated.
- N. Tempered Patterned Glass: ASTM C 1048, Kind FT (fully tempered), Type II (patterned glass, flat), Class 1 (clear), Form 3 (patterned), Quality-Q6, Finish F1 (patterned one side), unless otherwise indicated.
- O. Decorative Film Overlay: Translucent, dimensionally stable, film, 2-mil- (0.05-mm-) minimum thickness, with pressure-sensitive, clear adhesive back for adhering to glass and releasable protective backing.
1. Selections: As scheduled or indicated in Design Selections.
- 2.6 LAMINATED GLASS
- A. Laminated Glass: ASTM C 1172. Comply with testing requirements in 16 CFR 1201 for Category II materials, and with other requirements specified. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
1. Construction: Laminate glass with polyvinyl butyral (PVB) interlayer or SGP Ionoplast interlayer to comply with interlayer manufacturer's written recommendations.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Interlayer Thickness: Provide thickness not less than indicated and as needed to comply with requirements.
 - a. Minimum Thickness: 0.030 in (0.75 mm) unless otherwise indicated.
 - b. Sloped Glazing: 0.030 in (0.75 mm) to 0.060 in (1.5 mm); as needed to comply with performance requirements.
 - c. Wind Borne Debris Impact Resistance: 0.060 in (1.5 mm) to 0.090 in (2.2 mm); as needed to comply with performance requirements.
 - d. Heat Strengthened and Fully Tempered Glazing: 0.060 in (1.5 mm) minimum.
3. Interlayer Color: Clear unless otherwise indicated.
4. Typical Interlayer - Manufacturers and Products:
 - a. DuPont; Butacite.
 - b. Eastman Chemical Company; Saflex.
 - c. Kuraray; SentryGlas.
5. Glass Railing / Windscreen Interlayer - Manufacturers and Products:
 - a. Basis of Design: Kuraray America Inc.; SentryGlas Ionoplast.
6. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
7. Interlayer Color: Clear unless otherwise indicated.

2.7 INSULATING GLASS

- A. Insulating Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190, and in compliance with other specified requirements.
 1. Insulating Glass Unit Thickness Tolerance: Minus 1/16 inch, plus 1/32 inch.
 - a. Units Constructed with Patterned or Laminated Glass: Plus or minus 1/16 inch.
 2. Sealing System: Dual seal, with polyisobutylene primary seal and silicone secondary seal in accordance with ASTM C 1249. Provide insulating glass units free of skips or voids in the primary or secondary seals.
 - a. Primary IGU Seal: Primary IGU sealant shall be fully wetted against glass, applied in a continuous, uninterrupted, properly dimensioned bead with no skips or voids around perimeter, each side of IGU.
 - 1) Primary Seal Width: 5/32-inch.
 - 2) Primary Seal Thickness: 1/16-inch minimum thickness after pressing IGU.
 - 3) Air Spacer Visibility: 3/32-inch maximum visible exposure beyond polyisobutylene primary seal.
 - b. Secondary IGU Seal: Secondary IGU sealant shall be fully wetted against glass and spacer, applied in a continuous, uninterrupted, properly dimensioned bead, filling cavity with sealant completely.
 - 1) Secondary Seal Thickness: As determined by glass manufacturer; meeting minimum design width and depth requirements as determined by glass strength and deflections, plus 1/16-inch tolerance.
 - 2) Corners: IGU corners shall be completely filled with secondary sealant.
 - c. Skips and Voids Between Primary and Secondary Sealant: Maximum of 2-inches long by 1/16-inch-wide discontinuity separated by at least 18-inches. Provide

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

continuous contact between primary and secondary IGU sealant, cleanly tool secondary sealant prior to packing.

- d. Sealant Color: Black, unless otherwise scheduled or indicated in Design Selections.
- 3. Spacer: Provide a hermetically sealed and dehydrated space; lites shall be separated by a spacer with three bent corners and one keyed-soldered corner or four bent corners and one straight butyl injected zinc plated steel straight key joint.
 - a. Spacer Material and Color:
 - 1) Spacer Material and Color: Aluminum with mill or clear anodic finish, unless otherwise scheduled or indicated in Design Selections.
 - b. Spacer Material and Color:
 - 1) Division 8 Section Glazed Aluminum Framing Systems: Aluminum, black color, unless otherwise scheduled or indicated in Design Selections.
 - 2) Division 8 Section Structural Glass Curtainwall System: Stainless Steel, unless otherwise scheduled or indicated in Design Selections.
- 4. Edge Deletion: Delete coating at perimeter of coated lite prior to fabrication of insulating glass units according to coated glass manufacturer's instructions.
- 5. Desiccant: Molecular sieve or silica gel, or blend of both.

2.8 FIRE-PROTECTION-RATED GLAZING

- A. Fire-Protection-Rated Glazing: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on positive-pressure testing in accordance with NFPA 257 or UL 9, including hose-stream test, and complies with NFPA 80.
- B. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label indicates manufacturer's name; test standard; whether glazing is permitted to be used in doors or openings; if permitted in openings, whether glazing has passed hose-stream test; whether glazing meets 450 deg F (250 deg C) temperature-rise limitation; and fire-resistance rating in minutes.
- C. Monolithic Fire-Protection-Rated Ceramic Glazing: Clear, ceramic flat glass; 3/16-inch (5-mm) thickness; complying with 16 CFR 1201, Category II.
 - 1. Manufacturers and Products:
 - a. Technical Glass Products; FireLite.
 - b. Safti First; SuperLite.
 - c. Schott North America, Inc.; Pyran Star.
 - d. Vetrotech; Keralite.
 - 2. Basis of Design: Technical Glass Products; FireLite.
 - a. Locations - Safety Glazing not Required: Where indicated or scheduled for 20, 45, 60, and 90-minute ratings.
- D. Fire-Protection-Rated Laminated Ceramic Glazing: Laminated glass made from two plies of clear, ceramic glass; 8-mm total thickness; complying with 16 CFR 1201, Category II.
 - 1. Manufacturers and Products:
 - a. Technical Glass Products; FireLite Plus (Laminated).
 - b. Safti First; SuperLite (Laminated).
 - c. Schott North America, Inc.; Pyran Star (Laminated).

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. Vetrotech Saint-Gobain; Keralite (Laminated).
- 2. Basis of Design: Technical Glass Products; FireLite Plus.
 - a. Locations - Safety Glazing Required: Where indicated or scheduled for 20, 45-, 60-, 90-, and 120-minute ratings.

2.9 INTERIOR PLASTIC GLAZING

- A. Glazing Publication: Comply with published instructions of plastic glazing manufacturers and with GANA's "Glazing Manual" unless more stringent requirements are indicated. See this publication for definitions of glazing terms not otherwise defined in this Section or in other referenced standards.
- B. Plastic Glazing Labeling: Identify plastic sheets with appropriate markings of applicable testing and inspecting agency, indicating compliance with required fire-test-response characteristics.
- C. Sizes: Fabricate plastic glazing to sizes required for openings indicated. Allow for thermal expansion and contraction of plastic glazing without restraint and without withdrawal of edges from frames, with edge clearances and tolerances complying with plastic glazing manufacturer's written instructions.
- D. Monolithic Polycarbonate Glazing: Polycarbonate sheet; ASTM C 1349, Appendix X1, Type I (standard, UV stabilized), with a polished finish.
 - 1. Manufacturers and Products:
 - a. Altuglas International, Division of Arkema Inc.; Tuffak XL.
 - b. Amerilux International, LLC; Coverlite Solid Polycarbonate.
 - c. General Electric Company; Lexan XL-1.
 - d. Palram Americas; Palsun.
 - e. Sheffield Plastics Inc., a Bayer Material Science Company; Makrolon SL.
 - 2. Nominal Thickness: 0.236 in (6 mm) unless indicated otherwise.
 - 3. Color: Transparent colorless
 - 4. Flame-Spread Index: 25 or less.

2.10 GLAZING GASKETS

- A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:
 - 1. EPDM (peroxide cured) complying with ASTM C 864.
 - 2. Silicone complying with ASTM C 1115.
- B. Soft Compression Gaskets: Extruded or molded closed-cell, integral-skinned gaskets of EPDM, silicone, or thermoplastic polyolefin rubber, complying with ASTM C 509, Type II, black, and of profile and hardness required to maintain watertight seal and compatible with sealants.
 - 1. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.
 - a. Gasket Color: Black, unless otherwise scheduled or indicated in Design Selections. Gaskets concealed from view may be black.
- C. Provide factory pre-molded, vulcanized or heat welded corners, for continuous, joint-free glazing material around sides of the glazing rabbet. Field-cut corners not allowed.
- D. Provide gasket slightly longer than opening to be filled, as recommended by gasket manufacturer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.11 GLAZING SEALANTS

A. General:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Additional Movement Capability: Provide products with the capability, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, to withstand the specified percentage change in the joint width existing at time of installation and remain in compliance with other requirements in ASTM C 920 for uses indicated.

B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 50, Use NT.

1. Manufacturers and Products:

- a. Dow; DOWSIL 795 Silicone Building Sealant.
- b. GE Construction Sealants; Momentive Performance Materials Inc. GE Advanced Materials - Silicones; Silglaze II.
- c. Pecora Corporation; 895.
- d. Sika Corp.; Sikasil WS-295.

2. Color: As selected by Architect from manufacturer's full range of colors.

C. Structural-Glazing Sealant: ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated, and tested for use as structural-sealant and approved by structural-sealant manufacturer for use in glazed aluminum wall assembly indicated.

1. Minimum Tensile Strength: 100 psi (690 kPa).
2. Modulus of Elasticity: As required by structural-sealant-glazed aluminum wall system design to meet performance requirements.
3. Manufacturers and Products: Subject to compliance with requirements, provide one of the following:
 - a. Dow; DOWSIL 983 Structural Glazing Sealant.
 - b. GE Construction Sealants; Momentive Performance Materials Inc. GE Silicones; SSG4400 Ultraglaze Sealant.
 - c. Tremco Incorporated; Proglaze SSG.

4. Color: Black, unless otherwise scheduled or indicated in Design Selections Summary.

D. Glazing Sealants for Fire-Rated Glazing Products: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 50, Use NT. Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated.

2.12 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. AAMA 806.3 tape is for high-performance commercial glazing applications involving continuous pressure from gaskets or pressure-generating stop designs. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.

2.13 ENGINEERED TRANSITION ASSEMBLIES

- A. Engineered Transition Assembly: Provide engineered transition assembly to seal air barrier perimeter to windows, doors and glazed aluminum framing systems.
 1. Basis of Design: Tremco, Inc; Proglaze Engineered Transition Assembly (ETA).
- B. Pre-Engineered Aluminum and Silicone Materials: Mechanically attach system assembly to glazed aluminum framing systems and provide durable seal. Engineered transitions assembly includes the following components:
 1. Silicone Rubber Sheet (SRS): Extruded, 40 durometer, translucent silicone, with lock-in rubber dart.
 2. Silicone Rubber Corners (SRC): Pre-molded, 40 durometer, translucent silicone, with lock in rubber dart
 3. Silicone Sealants: Comply with ASTM C 920, single-component, neutral-curing silicone; Class 100/50, Grade NS, Use O.
 - a. Basis of Design: Tremco Inc.; Spectrem 1, or another approved sealant as recommended by manufacturer.
 4. Extruded Aluminum Attachment (EAA): Alodine finished, pre-engineered profile designed to receive silicone lock-in rubber dart. Pre-drilled extrusion with butyl tape, 100% solid polyisobutylene-cross linked butyl preformed sealant.

2.14 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- C. Setting Blocks:
 1. Silicone material with a Shore, Type A durometer hardness of 85, plus or minus 5.
 2. Type recommended in writing by sealant or glass manufacturer.
- D. Spacers:
 1. Silicone blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
 2. Type recommended in writing by sealant or glass manufacturer.
- E. Edge Blocks:
 1. Silicone material of hardness needed to limit glass lateral movement (side walking).
 2. Type recommended in writing by sealant or glass manufacturer.
- F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.
- G. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.15 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
 - 1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
- B. Butt Glazing: Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.
- C. Grind smooth and polish exposed glass edges and corners.

2.16 SOURCE QUALITY CONTROL

- A. Inspections and Testing: Manufacturer/fabricator shall perform pre-construction source quality-control inspections and testing, including but not limited to the following.
 - 1. Basis of Design for Enhanced Quality Control Standard: Guardian Elite Optical Quality Standards or equivalent enhanced fabrication standard as recommended by glass manufacturer/fabricator and accepted by the Architect to meet the design intent for the Project.
 - 2. Certification: Certifications by the manufacturer/fabricator that its products and systems comply with requirements and that products failing to meet requirements are not incorporated into the Work.
 - 3. Documentation: Inspection and testing records shall be maintained for a period of 10 years from the date of Substantial Completion. Provide inspection and testing records upon request and at no cost to Owner or Architect.
 - 4. Visual Mockup Glass:
 - a. Measurements reviewed and approved for glass panels used in mockups shall establish fabrication tolerances for the Project.
 - b. Glass panels used in visual mockups shall be fabricated to the same fabrication tolerances as glass panels to be used on the Project.
- B. Distortion Tolerance Measurement for Processing Heat-Treated Glass.
 - 1. On-Line Distortion Measurement System: Measure each piece of monolithic, uncoated or coated, heat-treated glass 6 mm or thicker.
 - 2. Roll Wave and Optical Distortion Limits (mD): On-Line Measurement.
 - a. Roll Wave Distortion Limits: Maximum peak-to-valley roll wave of 0.003 inch (0.08 mm) in the central area of the glass lite, and 0.008 inch (0.20 mm) within 12 inches (305 mm) of the leading and trailing edge of the lite, measured in accordance with ASTM C 1651 – Standard Test Method for Measurement of Roll Wave Optical Distortion in Heat-Treated Float Glass.
 - b. Center Kink Distortion Limits: Maximum center-kink of 0.001 inch (0.025 mm) roll wave measured over the surface of the glass perpendicular to the direction of travel through the heat treatment furnace.
 - c. Optical Distortion Limits - Millidiopter (mD) Measurements for Clear or Low-Iron Glass 1/4-Inch (6 mm) to 3/8-Inch (10 mm) Thickness, No Ceramic Frit or Ink: Maximum distortion of plus or minus 100 mD over 95% of the glass surface area, measured in accordance with ASTM C 1652 - Standard Test Method for Measuring Optical Distortion in Flat Glass Products Using Digital Photography Grids.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. Measurement Equipment: On-Line measurement system utilizing high resolution optics measured in diopters.
 - 1) Basis of Design: LiteSentry; Osprey (Version 7 or Higher) Online Distortion Measurement System.
- e. Exclusions: Silk screen, full coverage ceramic frit glass and glass panels 10 mm and thicker are excluded from this requirement.

C. Enhanced Insulating Glass Unit Fabrication and Testing Requirements.

- 1. Sealant Uniformity: Perform IGMA Sealant Uniformity of Mix Test not less than once per shift. Submit test reports upon Architect's request.
- 2. Primary Seal - Sealant Adhesion Testing: Manufacturer recommended IGU adhesion pull testing process on units fabricated at the same time of production and on the same production line using the same processing equipment to produce this Project. Conduct testing each shift or carton change on units not less than 24 in (600 mm) x 24 in (600 mm).
 - a. Adhesion Criteria: Comply with pass/fail requirements of manufacturer published guidelines and/or manufacturer certification requirements.
- 3. Residual Moisture Content: Perform IGMA Residual Moisture Content by Head of Absorption Test. Perform test in accordance with desiccant manufacturer's written recommendations. Submit test reports upon Architect's request.
- 4. Bow/Warp Unit Distortion Tolerance (Concave/Convex): Off-Line Straight Edge Measurement.
 - a. Localized and Overall Bow (Warp) Distortion: Localized and overall bow (warp) per lite shall not exceed one-half of the maximum allowed by ASTM C 1048. Localized warp shall not exceed 1/32 in (0.8 mm) over any 12" span (30mm).
 - b. Air Space Gap Measurement: Visually inspect all units and measure center air space gap on all finished units over 35 square feet.
 - 1) Air Space Gap Tolerance: Maximum plus or minus 1/16 in (1.5 mm) at time of fabrication.
- 5. Sealant Application: No skips/voids in primary or secondary seal. Secondary seal cleaned/tooled prior to packing; no sealant smears on glass surfaces.
- 6. Coating Edge Deletion: Clean, straight and precise.
 - a. Coating Edge Deletion Tolerance: Uniformly remove coating to the greater of 3/8 in (10 mm) from the edge of glass to the edge of the coating, or at least 50% through the primary seal width to the edge of glass.
- 7. Spacers: Metal, bent.
 - a. Spacer connections shall be sealed to ensure IGU is hermetically sealed.

D. Glass Color:

- 1. General: Based on the established color target for each type of glass product, perform quality color control checks using on-line and off-line measurement spectrophotometer instrumentation to ensure compliance with ASTM C1376. Measure each piece of the following glass types:
 - a. Monolithic coated glass.
 - b. Insulating glass units.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Anisotropy (Iridescence): Perform anisotropy (iridescence) scan utilizing detection system approved by glass manufacturer. Perform test in accordance with detection system manufacturer's written instructions. Continuously monitor production and record results. Maintain results for a period of not less than 10 years.
3. Color Variation of Glass Coatings: Provide vacuum deposition coatings on glass complying with color variation limits specified in ASTM C 1376. Perform color monitoring utilizing spectrophotometer equipment approved by glass manufacturer. Perform test in accordance with manufacturer's approved procedure. Test finished insulated glass units in accordance with reflected color specifications and in comparison, to approved mockup control sample. Statistically monitor production and record results. Maintain results for a period of not less than 10 years.
 - a. Tolerance for Color Variance: ASTM C1376, Total Range (All Units, Each Glass Type) of less than or equal to 4.0 Delta E using CIEDE2000 as defined in ASTM D2244.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.
- B. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 2. Presence and functioning of weep systems.
 3. Minimum required face and edge clearances.
 4. Effective sealing between joints of glass-framing members.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 1. Respective manufacturer's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.4 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.
- C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- G. Provide spacers for glass lites where length plus width is larger than 50 in (1270 mm).
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8 in (3 mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
- K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

3.5 TAPE GLAZING FOR INTERIOR INSTALLATIONS

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until right before each glazing unit is installed.
- F. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

3.6 GASKET GLAZING (DRY)

- A. Fabricate compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

3.7 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.8 FIELD QUALITY CONTROL

- A. Owner Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control.
 - 1. Refer to Division 01 Section Field Test for Air and Water Leakage.
 - 2. Refer to Division 01 Building Enclosure Commissioning for Field Observations and Performance Testing.
 - 3. Glass Color Tolerances: Owner testing agency may perform onsite color measurements using spectrophotometer instrumentation to ensure compliance with Tolerances for Color Variation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Onsite Developed Reference Target: Onsite developed reference target shall be the average measurement of not less than 75% of glass units of the same glass type per façade.
 - 1) Tolerance for Color Variance: ASTM C1376, Total Range (All Units, Each Glass Type) of less than or equal to 4.0 Delta E using CIEDE2000 as defined in ASTM D2244.
 - b. Testing agency will prepare survey report indicating locations not complying with specified tolerances.
- B. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
- 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 - 2. Prepare test and inspection reports.

3.9 CLEANING AND PROTECTION

- A. Immediately after installation, remove non-permanent labels and clean surfaces.
- B. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.
- C. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
 - 1. If, despite such protection, contaminating substances do contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
- D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.
- E. Wash glass on both exposed surfaces in each area of Project before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.
 - 1. Coordinate glass cleaning schedule with Owner's requirements.

3.10 GLASS TYPE SCHEDULE

- A. Exterior Glass Schedule: (Note: Provide FT glass where required for safety glazing.)
 - 1. GL01: Insulating Coated Glass - Vision
 - a. Overall Thickness: 1 in (25 mm) nominal.
 - b. Outboard Lite: Clear HS; 1/4 in (6 mm) thick glass with coating on No. 2 surface.
 - c. Air Space: 1/2 in (12 mm); Black spacer; Black sealant.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. Air Space: 1/2 in (12 mm); [Aluminum][Stainless Steel], [Mill Finish][Black], [Air][Argon].
 - e. Inboard Lite: Clear HS; 1/4 in (6 mm) thick glass.
 - f. Basis of Design Manufacturer and Product:
 - g. Remarks: Sealants and Gaskets to be Black color unless indicated otherwise.
 - h. Performance Requirements:
 - 1) Visible Light Transmittance:
 - 2) Exterior (Vis-Out) Reflectance:
 - 3) Winter U-Value:
 - 4) Summer U-Value:
 - 5) Shading Coefficient:
 - 6) Solar Heat Gain Coefficient:
 - 7) Light to Solar Gain Ratio:
2. GL02: Insulating Coated Glass, Ceramic-Coated - Vision
- a. Overall Thickness: 1 in (25 mm) nominal.
 - b. Outboard Lite: Clear HS; 1/4 in (6 mm) thick glass with coating on No. 2 surface.
 - 1) Silk-Screened Ceramic Frit: [Color][Pattern; eg: Pattern of alternating 10 mm horizontal color bands and 10 mm open bands starting at the top with a line on No. 2 surface].
 - 2) Digital Image Ceramic Ink: Custom digital image applied to glass and heat-fused to glass.
 - c. Outboard Lite: Clear HS; 1/4 in (6 mm) thick glass with coating on No. 2 surface.
 - d. Air Space: 1/2 in (12 mm); Black spacer; Black sealant.
 - e. Inboard Lite: Clear HS; 1/4 in (6 mm) thick glass.
 - f. Basis of Design Manufacturer and Product:
3. GL03: Insulating Coated Glass - Vision with Shadow Box Back Panel
- a. Overall Thickness: 1 in (25 mm) nominal.
 - b. Outboard Lite: Clear HS; 1/4 in (6 mm) thick glass with coating on No. 2 surface.
 - c. Air Space: 1/2 in (12 mm); Black spacer; Black sealant.
 - d. Inboard Lite: Clear HS; 1/4 in (6 mm) thick glass.
 - e. Shadow Box Back Panel: Aluminum, 2 mm thick with pre-finished color: [List Color]
 - f. Basis of Design Manufacturer and Product:
4. GL04: Insulating Glass - Vision at Lobby (Low Iron)
- a. Overall Thickness: 1 in (25 mm) nominal.
 - b. Outboard Lite: Clear, Low Iron FT; 1/4 in (6 mm) thick glass with coating on No. 2 surface.
 - c. Air Space: 1/2 in (12 mm); Grey spacer; Grey sealant.
 - d. Inboard Lite: Clear, Low Iron FT; 1/4 in (6 mm) thick glass.
 - e. Basis of Design Manufacturer and Product:
 - f. Remarks: Sealants and Gaskets to be Grey color unless indicated otherwise.
5. GL05: Insulating Laminated Coated Glass - Vision [Wind Borne Debris Impact Resistant, Large Missile Impact][Wind Borne Debris Impact Resistant, Small Missile Impact][Blast-Resistant][Skylight]
- a. Overall Thickness: As required by design.
 - b. Outboard Lite: Clear HS; 1/4 in (6 mm) thick glass with coating on No. 2 surface.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Air Space: 1/2 in (12 mm); Black spacer; Black sealant.
 - d. Inboard Lite: Two plies Clear HS; 1/4 in (6 mm) thick glass; laminated.
 - e. Interlayer: [PVB][SentryGlas Ionoplast], [Clear][Color], [thickness as required for intended use][0.030 in (0.75 mm)][0.060 in (1.5 mm)][0.090 in (2.25 mm)][.100 in. (2.50 mm)].
 - f. Basis of Design Manufacturer and Product:
6. GL06: Laminated Insulating Coated Glass - Vision [Wind Borne Debris Impact Resistant][Blast-Resistant][Skylight]
- a. Overall Thickness: As required by design.
 - b. Outboard Lite: Two plies Clear HS; 1/4 in (6 mm) thick glass; laminated.
 - c. Interlayer: [PVB][SentryGlas Ionoplast], [Clear][Color], [thickness as required for intended use][0.030 in (0.75 mm)][0.060 in (1.5 mm)][0.090 in (2.25 mm)][.100 in. (2.50 mm)].
 - d. Air Space: 1/2 in (12 mm); Black spacer; Black sealant.
 - e. Inboard Lite: Clear HS; 1/4 in (6 mm) thick glass with coating on No. 4 surface.
 - f. Basis of Design Manufacturer and Product:
7. GL07: Insulating Laminated Coated Glass - Acoustical Vision
- a. Overall Thickness: 1.5 in. (38mm), STC 45.
 - b. Outboard Lite: Two plies Clear HS; 1/4 in (6 mm) thick glass; laminated with coating on No. 2 surface. Interlayer: 0.60 in PVB.
 - c. Air Space: 3/4 in (19 mm); Black spacer; Black sealant.
 - d. Inboard Lite: Two plies Clear HS; 1/8 in (3 mm) thick glass; laminated.
 - e. Interlayer: [PVB][SentryGlas Ionoplast], [Clear][Color], [thickness as required for intended use][0.030 in (0.75 mm)][0.060 in (1.5 mm)][0.090 in (2.25 mm)][.100 in. (2.50 mm)].
 - f. Basis of Design Manufacturer and Product:
8. GL08: Laminated Coated Glass - Vision
- a. Overall Thickness: As required by design.
 - b. Outboard Lite: Clear HS; 1/4 in (6 mm) minimum thick glass with coating on No. 2 surface.
 - c. Inboard Lite: Clear HS; 1/4 in (6 mm) minimum thick glass.
 - d. Interlayer: [PVB][SentryGlas Ionoplast], [Clear][Color], [thickness as required for intended use][0.030 in (0.75 mm)][0.060 in (1.5 mm)][0.090 in (2.25 mm)][.100 in. (2.50 mm)].
 - e. Basis of Design Manufacturer and Product:
9. GL09: Laminated Glass - Vision
- a. Overall Thickness: As required by design.
 - b. Outboard Lite: Clear HS; 1/4 in (6 mm) minimum thick glass.
 - c. Inboard Lite: Clear HS; 1/4 in (6 mm) minimum thick glass.
 - d. Interlayer: [PVB][Dupont SentryGlas Ionoplast], [Clear][Color], [thickness as required for intended use][0.030 in (0.75 mm)][0.060 in (1.5 mm)][0.090 in (2.25 mm)][.100 in. (2.50 mm)].
 - e. Basis of Design Manufacturer and Product:
10. GL10: Laminated Glass, Ceramic-Coated - Canopy
- a. Overall Thickness: As required by design.
 - b. Upper Lite: Clear HS; 3/8 in (10 mm) minimum thick glass with ceramic frit on the No. 2 surface.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 1) Silk-Screened Ceramic Frit: [Color][Pattern; eg: Pattern of alternating 10 mm horizontal color bands and 10 mm open bands starting at the top with a line on No. 2 surface].
 - 2) Digital Image Ceramic Ink: Custom digital image applied to glass and heat-fused to glass.
 - c. Lower Lite: Clear HS; **3/8 in (10 mm)** minimum thick glass.
 - d. Interlayer: [PVB][Dupont SentryGlas Ionoplast], [Clear][Color], [thickness as required for intended use][0.030 in (0.75 mm)][0.060 in (1.5 mm)][0.090 in (2.25 mm)][.100 in. (2.50 mm)].
 - e. Basis of Design Manufacturer and Product:
11. GL11: Laminated Glass, Ceramic-Coated - Guardrail
- a. Overall Thickness: As required by design.
 - b. Outboard Lite: Clear HS; **1/4 in (6 mm)** minimum thick glass with ceramic frit.
 - 1) Silk-Screened Ceramic Frit: [Color][Pattern; eg: Pattern of alternating 10 mm horizontal color bands and 10 mm open bands starting at the top with a line on No. 2 surface].
 - 2) Digital Image Ceramic Ink: Custom digital image applied to glass and heat-fused to glass.
 - c. Inboard Lite: Clear HS; **1/4 in (6 mm)** minimum thick glass.
 - d. Interlayer - Basis of Design: SentryGlas Ionoplast; Clear, thickness as required for intended use.
 - e. Basis of Design Manufacturer and Product:
12. GL12: Laminated Glass - Guardrail
- a. Overall Thickness: As required by design.
 - b. Outboard Lite: Clear HS; **1/4 in (6 mm)** minimum thick glass.
 - c. Inboard Lite: Clear HS; **1/4 in (6 mm)** minimum thick glass.
 - d. Interlayer - Basis of Design: SentryGlas Ionoplast; Clear, thickness as required for intended use.
 - e. Basis of Design Manufacturer and Product:
13. GL13: Monolithic Coated Glass
- a. Overall Thickness: **1/4 in (6 mm)** nominal.
 - b. Monolithic Lite: Clear; **1/4 in (6 mm)** thick glass with coating on No. 2 surface.
 - c. Basis of Design Manufacturer and Product:
14. GL14: Monolithic Glass - All Glass Doors and Vestibules
- a. Lite: Clear FT; **3/4 in (19 mm)** minimum thick glass.
15. GL15: Insulating Coated Glass, Ceramic-Coated - Spandrel
- a. Overall Thickness: **1 in (25 mm)** nominal.
 - b. Outboard Lite: Clear HS; **1/4 in (6 mm)** thick glass with coating on No. 2 surface.
 - c. Air Space: **1/2 in (12 mm)**; Black sealant.
 - d. Inboard Lite: Clear HS; **1/4 in (6 mm)** thick glass with ceramic frit on No. 4 surface.
 - 1) Silk-Screened Ceramic Frit: [Color].
 - 2) Digital Image Ceramic Ink: Custom digital image applied to glass and heat-fused to glass.
 - e. Basis of Design Manufacturer and Product:

b. Pattern:

3.11 GLAZING SCHEDULE

A. Tape Glazing:

1. Interior door glass lites.
2. Interior borrowed lights less than 75 united inches.

B. Sealant and Tape Glazing:

1. Exterior door glass lites.
2. Interior borrowed lights greater than 75 united inches.

C. Compression Gasket Glazing:

1. Curtain and window walls
2. Interior store fronts
3. Skylights
4. Sloped glazing
5. Fixed aluminum windows

D. Structural Silicone Glazing: Where indicated on drawings.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 092900
GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Gypsum board assemblies and supplementary items necessary for installation.
 - 1. Grid suspension systems for ceilings.
 - 2. Channel framed suspension systems for ceilings.
 - 3. Metal framing systems for interior partitions.
 - 4. Interior gypsum board and tile backing panels.
 - 5. Gypsum board accessories and finishing systems.

1.2 DEFINITIONS

- A. Gypsum Board Construction Terminology: Refer to ASTM C 11 Standard Terminology Related to Gypsum and Related Building Materials and Systems for definitions of terms not defined in this Section or in other referenced quality standards.
- B. Damage: Stored or installed gypsum board materials shall be classified as defective and nonconforming Work if they have been exposed to wetness or dampness at any time prior to Substantial Completion or if they exhibit evidence of active or dormant mold or mildew.
- C. Concentrated Loads: Wall or partition mounted equipment, wall finishes, stone facings, lead lined doors and frames, or ornamentation exceeding 15 lbs/sf uniform load, 75 lb. point load, or 50 lb/ lf lineal load.

1.3 DELEGATED ENGINEERING REQUIREMENTS

- A. Delegated Engineering Responsibility: Contractor shall engage a qualified professional engineer to provide engineering for products and systems required to comply with the design intent of Contract Documents.
 - 1. Contract Documents Design Intent: Drawings and Specifications indicate design intent for products and systems and do not necessarily indicate or specify total Work required. Contract Documents shall not be construed as an engineered design; furnish and install Work required for a complete installation.
 - 2. Delegated Engineer Professional Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated with a record of successful in-service performance. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.
 - 3. Submittals: Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified professional engineer.
 - 4. Coordination of Work:
 - a. Product Variations: In the event of minor differences between products and systems of acceptable or available manufacturers, Contractor shall notify Architect of such differences and resolve conflicts in a timely manner. Failure of Contractor to provide notification shall be construed as acceptance of conditions indicated, and changes caused by minor differences between products and Contract Documents shall be included in the Work at no additional cost to Owner.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Allowable Adjustments: Minor dimension and profile adjustments may be made in interest of fabrication or erection methods or techniques or ability to satisfy design intent, provided design intent is maintained as determined by Architect. Proposed deviations shall include a detailed analysis of impact to adjacent substrates or other building systems, including related design or construction cost impacts. If accepted by Architect, deviations causing changes in materials, constructability, substrates, or conditions shall be included in the Work at no additional cost to Owner.
 - B. Project Framing Analysis: Analyze each framing condition for design loads indicated in performance requirements.
 - 1. Provide framing products in sizes and thicknesses required to meet or exceed the criteria based on project loads, spans and in-service conditions.
 - 2. Material Quality Standard for Metal Framing Components: Provide components of sizes indicated but not less than that required to comply with ASTM C 754 for conditions indicated.
 - C. Gypsum Board Assemblies Supporting Concentrated Loads - Delegated Engineering Responsibility: Contractor shall employ a qualified professional engineer to provide engineering for products and systems required to support concentrated loads including attachment to building structure required to meet design intent of Contract Documents including, but not limited to, the following.
 - 1. Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified professional engineer responsible for their preparation.
 - 2. Preparation of structural analysis data including engineering calculations, shop drawings and other submittals signed and sealed by the qualified professional engineer responsible for their preparation.
- 1.4 ACTION SUBMITTALS
- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
 - B. Shop Drawings:
 - 1. Include scaled and dimensioned drawings showing locations of control joints.
 - 2. Gypsum Board Location Schedule: Provide detailed schedule in format similar to "Gypsum Board Schedule" at end of this Section indicating gypsum board products to be installed and their respective locations.
 - C. Shop Drawings for Engineered Gypsum Board Assemblies - Concentrated Loads: Scaled and dimensioned drawings showing locations, fabrication, and installation of gypsum board assemblies required to support concentrated loads, including plans, elevations, sections, details of components, and attachments to building structure; include seal and signature of delegated engineering professional responsible for their preparation.
- 1.5 INFORMATIONAL SUBMITTALS
- A. Delegated Engineering Submittal: For products and systems indicating compliance with performance requirements. Include structural analysis, calculations and other performance data signed and sealed by the qualified professional engineer responsible for their preparation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Preconstruction Test Reports for Acoustical Sealant: Compatibility test reports from sealant manufacturer indicating that materials forming joint substrates and joint-sealant backings have been tested for compatibility with sealants; include sealant manufacturer's certification of test results for sealant compatibility and recommendations for primers and substrate preparation needed to obtain adhesion and prevent corrosion of substrate.

1.6 QUALITY ASSURANCE

- A. Code-Compliance Certification of Studs and Tracks: Certification of framing members in accordance with the product-certification program of the Steel Framing Industry Association (SFIA) or a similar organization that provides a verifiable code-compliance program.
- B. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up to comply with the following requirements, using materials indicated for the completed Work:
 - 1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.
 - b. Field Samples for Gypsum Board Finishing: Build 10 ft (3 m) square gypsum board (attached to metal studs) area for each finish level specified. Include not less than one tapered-to-tapered edge gypsum board joint and cut edge-to-cut edge gypsum board joint.
 - 2. Clean exposed faces of mock-up.
 - 3. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 - 4. Demonstrate the proposed range of aesthetic effects and workmanship.
 - 5. Protect accepted mock-up from the elements with weather-resistant membrane.
 - 6. Obtain Architect's acceptance of mockups before starting fabrication.
 - 7. Maintain mock-ups during construction in an undisturbed condition as a standard for review of the completed Work.
 - 8. Acceptance of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor, submitted to Architect in writing, and accepted by Architect in writing.
 - 9. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.7 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.
- B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
- C. Protect metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.9 PROJECT CONDITIONS

- A. Environmental Conditions: Comply with ASTM C 840 requirements or respective gypsum board manufacturer's written recommendations, whichever are more stringent.
- B. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.

1.10 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers and Products: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by testing of products and systems representing those indicated for this Project, without failure due to defective manufacture, fabrication, installation, or other defects in construction.
- B. Structural Movement: Withstand movements of supporting structure including, but not limited to inter-story drift, twist, column shortening, long-term creep and deflection from uniformly distributed and concentrated live loads established by authorities having jurisdiction.
 - 1. Live Load Deflection: Accommodate differential vertical deflection of floors:
 - a. Deflection: As indicated on Drawings.
- C. Seismic Performance: Withstand the effects of earthquake motions determined in accordance with local building code and authorities having jurisdiction.
- D. Horizontal Deflection: For composite and non-composite wall assemblies, limited to deflections and horizontal loading indicated in Metal Framing Schedule.
- E. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated, in accordance with ASTM E119 / NFPA 251 / UL 263, and displaying a classification label from an independent testing agency acceptable to authorities having jurisdiction.
 - 1. Construct fire-resistance-rated partitions in compliance with tested assembly requirements indicated on Drawings.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Rated assemblies to be substantiated from applicable testing using proposed products, by Contractor.
 3. Independent Testing Agencies as evidenced by design designation included in approval manual.
 - a. UL - "Fire Resistance Directory", Category BXUV.
 - b. GA 600 - "Fire Resistance Design Manual".
 - c. Other agencies acceptable to authorities having jurisdiction.
 - F. Smoke-Resistance-Rated Assemblies: For smoke-resistance-rated assemblies, provide materials and construction identical to those tested in accordance with fire-resistance-rated assemblies by an independent testing agency acceptable to authorities having jurisdiction.
 - G. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, in accordance with ASTM E90 and classified in accordance with ASTM E413 by an independent testing agency.
 - H. Dimensional Tolerances: Provide products and systems to accommodate dimensional tolerances of framing members and adjacent construction.
- 2.4 SUSPENDED GRID SYSTEM FOR INTERIOR CEILINGS
- A. Suspension System:
1. Material Quality Standard: ASTM C 645, heavy-duty rating.
 2. Description: Manufacturer's standard direct-hung suspended grid system composed of main beams and cross furring members that interlock to form a modular supporting network for application of gypsum board.
 3. Protective Coating - Standard Applications: ASTM A 653/A 653M, not less than G40 (Z120), hot-dip galvanized coating, unless otherwise indicated.
 4. Protective Coating - High Moisture / Humidity Applications: ASTM A 653 / A 653M, G90 (Z275) hot-dip galvanized coating at high moisture areas such as Kitchens, Saunas, Steam Rooms, and Pool Enclosures.
 5. Main Beams: Inverted T-shaped profile of single or double mounting flange; minimum 1-1/2 in (38 mm) profile height with top bulb and minimum 1-3/8 in (35 mm) wide knurled mounting flange; factory punched for hanger wire, and to receive cross furring members.
 6. Cross Furring Members:
 - a. Tees: Inverted T-shaped profile of single or double mounting flange; 1-1/2 in (38 mm) profile height with top bulb and minimum 1-3/8 in (35 mm) wide knurled mounting flange; with ends formed for positive interlocking with main beam.
 - b. Channels: Inverted hat shaped profile; minimum 7/8 in (21 mm) profile height and minimum 1-3/8 in (35 mm) wide knurled mounting flange; with ends formed for positive interlocking with main beam.
 7. Wall Angle: Angle shaped profile with each leg not less than 1-1/4 in (32 mm).
 8. Curved Members: Where curved ceilings are indicated, members shall be rolled by manufacturer; field fabricated curved members not permitted.
 9. Accessories: Specifically designed as an integral part of suspended grid system.
 10. Manufacturers and Products:
 - a. Armstrong World Industries Inc.; Drywall Grid System.
 - b. Chicago Metallic Corporation; 650-C/670-C Fire-Rated Drywall Grid System.
 - c. United States Gypsum Company (USG Interiors, Inc.); Drywall Suspension System.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

B. Hanger Attachments to Concrete:

1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching hanger wires and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E 488 by a qualified independent testing agency.
 - a. Cast-in-place anchor, designed for attachment to concrete.
 - b. Post-installed chemical anchor.
 - c. Post-installed expansion anchor.
2. Powder-Actuated Fasteners: Suitable for application indicated, ANSI A 10.3; low velocity, powder-actuated fasteners; drive pins and clip angles fabricated from corrosion-resistant materials, with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, an ultimate load capacity not less than 10 times that imposed by construction as determined by testing according to ASTM E 1190 by a qualified independent testing agency.
3. Manufacturers:
 - a. Construction Materials, Inc.
 - b. Heckman Building Products, Inc.
 - c. Hilti Corp.
 - d. ITW Ramset/Red Head.
 - e. Powers Fasteners.
 - f. Simpson Strong Tie Anchor Systems.
4. For post-tensioned concrete, anchors shall not exceed **1 in (25 mm)** embedment. Obtain Structural Engineer's written approval for all proposed anchors in post-tensioned concrete prior to installation.

C. Wire:

1. Material Quality Standard: ASTM A 641 / A 641M, Class 1, zinc-coated, soft annealed, mild steel wire.
2. Tie Wire Minimum Size: Single **0.0625 in** (16 gage) (**1.6 mm**) diameter strand, or double **0.0475 in** (18 gage) (**1.2 mm**) diameter strands. Preformed furring channel clips are acceptable.
3. Hanger Wire Minimum Size: **0.1620 in** (8 gage) (**4.12 mm**) diameter.

D. Rod Hangers: ASTM A 1008 / A 1008M, **7/32 in (0.56 mm)** diameter mild carbon steel rod, with primer painted finish.

E. Flat Hangers: ASTM A 1008 / A 1008M, **1 in by 3/16 in (25 mm by 5 mm)** by length indicated or required, with primer painted finish.

F. Angle Hangers: ASTM A 36 / A 36M, rolled steel angle, **2 in by 2 in (50 mm by 50 mm)**, with primer painted finish.

2.5 SUSPENDED CHANNEL FRAMED SYSTEM FOR INTERIOR CEILINGS

- A. Material Quality Standard: Provide components of sizes indicated but not less than that required to comply with ASTM C 754 for conditions indicated.
- B. Protective Coating - Standard Applications: ASTM A 653/A 653M, not less than G40 (Z120), hot-dip galvanized coating, unless otherwise indicated.
- C. Hanger Attachments to Concrete:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching hanger wires and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E 488 by a qualified independent testing agency.
 - a. Cast-in-place anchor, designed for attachment to concrete.
 - b. Post-installed chemical anchor.
 - c. Post-installed expansion anchor.
2. Powder-Actuated Fasteners: Suitable for application indicated, ANSI A10.3; low velocity, powder-actuated fasteners; drive pins and clip angles fabricated from corrosion-resistant materials, with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, an ultimate load capacity not less than 10 times that imposed by construction as determined by testing according to ASTM E 1190 by a qualified independent testing agency.
3. Manufacturers:
 - a. Construction Materials, Inc.
 - b. Heckman Building Products, Inc.
 - c. Hilti Corp.
 - d. ITW Ramset/Red Head.
 - e. Powers Fasteners.
 - f. Simpson Strong Tie Anchor Systems.
4. For post-tensioned concrete, anchors shall not exceed 1 in (25 mm) embedment. Obtain Structural Engineer's written approval for all proposed anchors in post-tensioned concrete prior to installation.

D. Wire:

1. Material Quality Standard: ASTM A 641 / A 641M, Class 1, zinc-coated, soft annealed, mild steel wire.
 2. Tie Wire Minimum Size: Single 0.0625 in (16 gage) (1.6 mm) diameter strand, or double 0.0475 in (18 gage) (1.2 mm) diameter strands.
 3. Hanger Wire Minimum Size: 0.1620 in (8 gage) (4.12 mm) diameter.
- E. Compression Struts: Metal framing section with L/R ratio of 200 maximum and formed from galvanized sheet steel; with bolted connections with 5/16 in (8 mm) diameter bolts.
- F. Carrying Channels: Cold-rolled, commercial grade galvanized sheet steel, 0.0538 in (16 gage) (1.3 mm) minimum uncoated base metal thickness; 1/2 in (12 mm) wide flanges by 1-1/2 in (38 mm) deep.
- G. Furring Channels: Cold-rolled, commercial grade galvanized sheet steel, 0.0283 in (22 gage) (0.72 mm) minimum uncoated base metal thickness; inverted hat shaped profile; minimum 7/8 in (21 mm) profile height and minimum 1-3/8 in (35 mm) wide knurled mounting flange.

2.6 FRAMING SYSTEMS

- A. Project Framing Analysis: Analyze each framing condition for design loads indicated in performance requirements.
1. Provide framing products in sizes and thicknesses required to meet or exceed the criteria based on project loads, spans and in-service conditions.
- B. Framing Members, General: Comply with ASTM C645 and AISI S220 for conditions indicated.
1. Steel Sheet Components: Comply with ASTM C645 and AISI S220 requirements for metal unless otherwise indicated.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Protective Coating - Standard Applications: ASTM A 653/A 653M, not less than G40 (Z120), hot-dip galvanized coating or coating with equivalent corrosion resistance, unless otherwise indicated.
 - a. Equivalent Protective Coatings: Coating demonstrates equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.
- C. Metal Studs and Floor Track (Runners):
 1. Metal Framing Components for Typical Partitions:
 - a. Stud Description: C-shaped members formed from galvanized sheet steel with 1 1/4 in (32 mm) flange edges bent back 90 degrees and doubled over to form 13/64 in (5 mm) wide minimum return lip; of web depth indicated on Drawings and uncoated base metal thickness indicated in "Metal Framing Schedule" at end of this Section; with web punchouts.
 - 1) Alternative Jamb Stud Members - Contractor's Option: "Heavy Duty" or "King" studs; C-shaped members formed from galvanized sheet steel with 3 in (75 mm) flange width; of web depth indicated on Drawings and uncoated base metal thickness indicated in "Metal Framing Schedule" at end of this Section.
 - b. Track (Runner) Description: U-shaped members formed from galvanized sheet steel with depth compatible with studs and flange dimension indicated to hold studs by friction; of same web size and uncoated base metal thickness as studs.
 - 1) Floor Track (Runner): 1-1/4 in (32 mm).
 - 2) Top of Wall Track (Runner): 3 in (75 mm).
 2. Metal Framing for Shaftwall Partitions:
 - a. Stud Description: C-H, double E, C-T, or I-shaped members formed from galvanized sheet steel; of web depth indicated on Drawings and uncoated base metal thickness indicated in "Metal Framing Schedule" at end of this Section; with web punchouts.
 - b. Track (Runner) and Jamb Description: J-shaped track or jamb members formed from galvanized sheet steel with depth compatible with studs and flange dimension indicated to hold studs by friction; of same web size and uncoated base metal thickness as studs.
 3. Equivalent Products - Deformed Metal Studs and Tracks (Runners):
 - a. Equivalent Gauge Thickness (EQ) Steel Studs and Runners Evaluation Criteria: Certified third-party testing with gypsum board in accordance with ICC-ES AC86 indicating compliance with requirements.
 - b. Material Quality Standard: ASTM A 1003 / A 1003M sheet steel with galvanized coating.
 - c. Stud Description: C-shaped members formed from deformed surface galvanized sheet steel with 1-1/4 in (32 mm) flange edges bent back 90 degrees and bent again to form 3/16 in (5 mm) wide minimum return lip; of web depth indicated on Drawings and uncoated base metal thickness indicated in "Metal Framing Schedule" at end of this Section; with web punchouts.
 - d. Track (Runner) Description: U-shaped members formed from deformed surface galvanized sheet steel with depth compatible with studs and flange dimension indicated to hold studs by friction; of same web size and uncoated base metal thickness as studs.
 - e. Manufacturer and Product: ClarkDietrich Building Systems; ProSTUD.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Flat Straps and Back-Up Plates: Galvanized sheet steel for blocking and bracing in length and width indicated, of same uncoated base metal thickness as adjacent metal studs.
- E. Bridging:
 - 1. Channel: U-shaped members formed from galvanized sheet steel not less than 0.0566 in (16 gage) (1.44 mm) minimum uncoated base metal thickness, with 1/2 in (12 mm) flanges and depth fitting stud punchouts.
 - 2. Clip Angle: 1-1/2 in by 1-1/2 in (38 mm by 38 mm) L-shaped members formed from galvanized sheet steel not less than 0.0713 in (14 gage) (1.81 mm) uncoated base metal thickness.
- F. Rigid Furring Channels: Hat-shaped members formed from galvanized sheet steel not less than 0.0312 in (20 gage) (0.78 mm) minimum uncoated base metal thickness; 7/8 in (21 mm) depth and minimum 1-3/8 in (35 mm) wide knurled mounting flange.
- G. Resilient Furring Channels: 1/2 in (12 mm) deep members formed from galvanized sheet steel not less than 0.0283 in (22 gage) (0.72 mm) minimum bare-metal thickness, designed to reduce sound transmission.
 - 1. Configuration: Asymmetrical or hat shaped.
- H. Sound Isolation Clips: Uni-body molded rubber and galvanized steel mount designed to receive standard galvanized steel furring channels.
 - 1. Basis of Design: Pliteq; GenieClip RST.
- I. Sound Isolation Ceiling Hangers:
 - 1. Resilient Sound Isolation Bracket: Molded rubber isolator and steel hanger bracket designed to receive ceiling suspension system wire ties.
 - a. Basis of Design: Pliteq; GenieClip LB Resilient Sound Isolation Bracket.
 - 2. Spring Isolation Hanger: Spring hanger with channel clip designed to receive gypsum board furring/framing assembly.
 - a. Basis of Design: Kinetics Noise Control; ICC Deck Suspended Ceiling Hanger.
- J. Framing Accessories for Spanning Multiple Floors: Framing manufacturers standard connectors, bracings, brackets, clips, gussets, and other framing devices as required by conditions, formed from galvanized sheet steel complying with requirements of main support system.
- K. Z-Shaped Furring: Members formed from galvanized sheet steel not less than 0.0283 in (22 gage) (0.72 mm) minimum bare-metal thickness, with slotted or non-slotted web, face flange of 1-1/4 in (32 mm), wall attachment flange of 7/8 in (21 mm); depth required to fit insulation thickness indicated.
- L. Pony Wall Framing Connection: ASTM A36 hot rolled steel base plate, Structural Grade 50 Type H Stud connector designed to support cantilevered partial wall systems.
 - 1. Basis of Design: ClarkDietrich; Pony Wall.
- M. Manufacturers:
 - 1. Building Products Division of Consolidated Fabricators Corp.
 - 2. California Expanded Metal Products Co. (CEMCO).
 - 3. ClarkDietrich Building Systems
 - 4. Marino Ware; Division of Ware Industries.
 - 5. MBA Metal Framing.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

6. Scafco Corp.
7. Slip-Type Head Joints: Clips designed for use in head-of-wall deflection conditions that provide a positive attachment of studs to runners while allowing for vertical movement.
 - a. Basis of Design: ClarkDietrich Building Systems; Fast Top Clip FTC3 or FTC5.
8. Anchor Clips: Pre-punched, galvanized anchor clips designed for use in floor n conditions that provide a positive attachment of studs to runners while allowing for horizontal, torsional and vertical (uplift) loads.
 - a. Basis of Design: ClarkDietrich Building Systems; EasyClip T-Series, T685 or T683.

2.7 PRE-ENGINEERED METAL FRAMING COMPONENTS

A. Deflection and Firestop Track (Runner):

1. Description: Proprietary track (runner) formed from galvanized sheet steel manufactured to accommodate movement of building structure without transferring stress to partition (to prevent cracking of gypsum board resulting from deflection of building structure above) while maintaining continuity of fire resistance rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
2. Manufacturers:
 - a. Metal Stud Framing Manufacturer.
 - b. Fire Trak Corp.
 - c. The Steel Network.

B. Flexible Track (Runner):

1. Description: Proprietary track (runner) formed from galvanized sheet steel manufactured to be flexible and adjustable to fit design requirements; in thickness not less than indicated for studs and in width to accommodate depth of studs.
2. Manufacturers:
 - a. Metal Stud Framing Manufacturer.
 - b. Accu-Arc Curved Wall Products.
 - c. Flex-Ability Concepts.
 - d. Radius Track Corp.

C. Headers:

1. Description: Proprietary header assembly formed from galvanized sheet steel manufactured to bear partition load above openings without transferring stress to partition (to prevent cracking of gypsum board); in thickness not less than indicated for studs and in width to accommodate depth of studs.
2. Manufacturers:
 - a. Metal Stud Framing Manufacturer.
 - b. Brady Construction Innovations, Inc.

2.8 GYPSUM BOARD PRODUCTS

- A. Sizes: Maximum lengths and widths available that will minimize short edge-to-short edge butt joints and to correspond to support system indicated.
- B. Typical Paper-Faced Gypsum Board Products:
 1. Paper-Faced Type X Gypsum Board:
 - a. Material Quality Standard: ASTM C 1396 / C 1396M, Type X.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Description: Noncombustible fire resistant gypsum core with paper surfacing on face, back, and long edges; tapered long edges; 5/8 in (15 mm) thick.
 - c. Manufacturers and Products:
 - 1) American Gypsum Company; FireBloc Type X Gypsum Board.
 - 2) CertainTeed Corporation; Type X Gypsum Board.
 - 3) Georgia-Pacific Gypsum LLC; ToughRock Fireguard Gypsum Board.
 - 4) National Gypsum Company; Gold Bond Fire-Shield Gypsum board.
 - 5) United States Gypsum Company (USG); Sheetrock Firecode Core.
2. Sustainable Paper-Faced Type X Gypsum Board: At Contractors option, provide sustainable paper-faced Type X gypsum board or typical paper-faced Type X gypsum board.
- a. Material Quality Standard: ASTM C 1396 / C 1396M, Type X.
 - b. Description: Noncombustible fire resistant gypsum core with paper surfacing on face, back, and long edges; tapered long edges; 5/8 in (15 mm) thick. UL Type Designation ULIX.
 - 1) ISO 14040 Environmental Management, Life Cycle Assessment, Principles and Framework:
 - a) Carbon emissions per Gypsum Association; Industry Standard Type III EPD for North American Type X wallboard with a manufacturing Global Warming Potential of 317.4 kg CO₂-eq./1000MSF.
 - b) Water reduction per Gypsum Association; Industry Standard Type III EPD for North American Type X wallboard having net use of fresh water value of 1.329 m³/1000 ft².
 - c) Primary Energy from non-renewable resources per Gypsum Association; Industry Standard Type III EPD for North American Type X wallboard have a value of 5,291 MJ/1000 ft².
 - c. Basis of Design:
 - 1) United States Gypsum Company, LLC, USG Sheetrock Brand EcoSmart Panels Firecode X.
3. Paper-Faced Type C Gypsum Board:
- a. Material Quality Standard: ASTM C 1396 / C 1396M, Type X.
 - b. Description: Noncombustible fire resistant gypsum core, with additives to enhance fire resistance, with paper surfacing on face, back, and long edges; tapered long edges; 5/8 in (15 mm) thick.
 - c. Manufacturers and Products:
 - 1) American Gypsum Company; FireBloc Type C Gypsum Board.
 - 2) CertainTeed Corporation; Type C Gypsum Board.
 - 3) Georgia-Pacific Gypsum LLC; ToughRock Fireguard C Gypsum Board.
 - 4) National Gypsum Company; Gold Bond Fire-Shield C Gypsum board.
 - 5) United States Gypsum Company (USG); Sheetrock Firecode C Core Gypsum Panels.
4. Paper-Faced Acoustically Enhanced Gypsum Board:
- a. Description: Noncombustible gypsum core, with polymer sound dampening sheet in center, with paper surfacing on face, back and long edges; tapered long edges; 5/8 in (15 mm) thick.
 - b. Manufacturers and Products:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 1) CertainTeed Corporation; SilentFX Acoustical Gypsum Board.
 - 2) National Gypsum Company; Gold Bond SoundBreak Gypsum Board.
 - 3) PABCO Gypsum; QuietRock ES.
5. Paper-Faced Flexible Gypsum Board at Curved Surfaces:
- a. Material Quality Standard: ASTM C 1396 / C 1396M.
 - b. Description: Gypsum core with paper surfacing on face, back and long edges; manufactured to bend to fit tight radii and be more flexible than typical panels without wetting; tapered long edges; 1/4 in (6 mm) thick.
 - c. Manufacturers and Products:
 - 1) American Gypsum Company; 1/4" ClasicRoc Gypsum Board.
 - 2) CertainTeed Corporation; 1/4" Flex Gypsum Board.
 - 3) Georgia-Pacific Gypsum LLC; ToughRock FlexRoc Gypsum Board.
 - 4) National Gypsum Company; Gold Bond High Flex Brand Gypsum board.
 - 5) United States Gypsum Company (USG); Sheetrock 1/4" Flexible Gypsum Panels.
- C. Moisture-Resistant Gypsum Board Products:
1. Moisture-Resistant Paper-Faced Gypsum Board:
 - a. Material Quality Standard: ASTM C 1396 / C 1396M, Type X.
 - b. Description: Enhanced moisture-resistant, noncombustible gypsum core, with moisture-resistant paper surfacing on face, back and long edges; tapered long edges; score of 10 according to ASTM D 3273; 5/8 in (15 mm) thick.
 - c. Manufacturers and Products:
 - 1) American Gypsum Company; M-Bloc Mold and Moisture Resistant Type X Gypsum Board.
 - 2) CertainTeed Corporation; M2Tech Moisture and Mold Resistant Type X Gypsum Board.
 - 3) National Gypsum Company; Gold Bond XP Gypsum Board.
 - 4) United States Gypsum Company (USG); Sheetrock Mold Tough Firecode Gypsum Board.
 2. Moisture-Resistant Paperless Glass-Mat Gypsum Board:
 - a. Material Quality Standard: ASTM C 1658 / C 1658M.
 - b. Description: Enhanced moisture-resistant, noncombustible gypsum core with inorganic, embedded fiberglass mat on both faces; square edges; score or 10 according to ASTM D 3273; 5/8 in (15 mm) thick.
 - c. Manufacturers and Products:
 - 1) Georgia-Pacific Gypsum LLC; DensArmor Plus Fireguard Interior Guard.
 - 2) National Gypsum Company; eXP Interior Extreme Gypsum Panels.
 3. Moisture-Resistant Paper-Faced Shaft-Liner Gypsum Board:
 - a. Material Quality Standard: ASTM C 1396/C 1396M, Type X.
 - b. Description: Enhanced moisture-resistant, noncombustible gypsum core with moisture-resistant paper surfacing on face, back and long edges; tapered long edges; score of 10 according to ASTM D 3273; 1 in (25 mm) thick.
 - c. Manufacturers and Products:
 - 1) American Gypsum Company; M-Bloc Shaft Liner Panels.
 - 2) CertainTeed Corporation; M2Tech Moisture & Mold Resistant Shaftliner.
 - 3) National Gypsum Company; Gold Bond 1 Fire-Shield Shaftliner XP.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 4) USG Corp.; SHEETROCK Mold Tough Gypsum Liner Panels.
4. Moisture-Resistant Paperless Glass-Mat Shaft-Liner Gypsum Board:
 - a. Material Quality Standard: ASTM C 1658 / C 1658M.
 - b. Description: Enhanced moisture-resistant, noncombustible gypsum core with inorganic, embedded fiberglass mat on both faces, double bevel long edges; score of 10 according to ASTM D 3273; **1 in (25 mm)** thick.
 - c. Manufacturers and Products:
 - 1) American Gypsum Company; M-Glass Shaft Liner Panels.
 - 2) CertainTeed Corporaton; GlasRoc Shaftliner Type X.
 - 3) Georgia-Pacific Gypsum LLC; DensGlass Shaftliner.
 - 4) National Gypsum Company; eXP Extended Exposure Shaftliner.
 - 5) USG Corp.; SHEETROCK Glass-Mat Liner Panels
5. Moisture-Resistant Coated Glass-Mat Gypsum Board Products (Tile Backing Panel):
 - a. Material Quality Standard: ASTM C 1178 / C 1178M.
 - b. Description: Enhanced moisture-resistant, noncombustible, gypsum core with inorganic, embedded fiberglass mat on both sides; outside face coated with heat-cured copolymer water-resistant coating; square edges; score or 10 according to ASTM D 3273; **5/8 in (15 mm)** thick.
 - c. Manufacturers and Products:
 - 1) CertainTeed Corporation; Diamondback Tile Backer.
 - 2) Georgia-Pacific Gypsum LLC; DensShield Tile Backer.
 - 3) National Gypsum Company; eXP Tile Backer.
 - 4) USG; Durock Brand Glass-Mat Tile Backerboard.
6. Moisture-Resistant, Abuse-Resistant Gypsum Board Products:
 - a. Material Quality Standard: ASTM **C 1629 (C 1629M)**, Type X, and as follows:
 - 1) Soft Body Impact Test: ASTM E 695, Classification Level 2.
 - 2) Hard Body Impact Test: Annex A1, Classification Level 1.
 - 3) Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
 - b. Paper-Faced Products: Specially formulated, noncombustible, gypsum core with heavy liner paper on back and smooth, heavy abrasive-resistant face paper on face and long edges; manufactured to produce greater resistance to surface indentation and through-penetration than typical gypsum panels; tapered long edges; **5/8 in (15 mm)** thick.
 - 1) Manufacturers and Products:
 - a) CertainTeed Corporation; Air Renew Extreme Abuse.
 - b) National Gypsum Company; Gold Bond Hi-Abuse XP Gypsum Board.
 - c. Paperless Products: Specially formulated, noncombustible, gypsum core with coated, fiberglass mat on both faces; manufactured to produce greater resistance to surface indentation and through-penetration than typical gypsum panels; tapered long edges; **5/8 in (15 mm)** thick.
 - 1) Manufacturers and Products:
 - a) National Gypsum Company; Gold Bond eXP Interior Extreme AR Gypsum Panel.
 - b) USG Corporation; Fiberock Interior Panel, Abuse Resistant.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

7. Moisture-Resistant, Impact-Resistant Gypsum Board Products for Elevator Hoistway Enclosures and Stairwells:
 - a. Material Quality Standard: ASTM C 1629 (C 1629M), Type X, and as follows:
 - 1) Soft Body Impact Test: ASTM E 695, Classification Level 2.
 - 2) Hard Body Impact Test: Annex A1, Classification Level 3.
 - 3) Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
 - b. Paper-Faced Products: Specially formulated, noncombustible, gypsum core with heavy liner paper on back and smooth, heavy abrasive-resistant face paper on face and long edges; manufactured to produce greater resistance to surface indentation and through-penetration than typical gypsum panels; tapered long edges; 5/8 in (15 mm) thick.
 - 1) Manufacturers and Products:
 - a) CertainTeed Corporation; Air Renew Extreme Impact.
 - b) National Gypsum Company; Gold Bond Hi-Impact XP Gypsum Board.
 - c. Paperless Products: Specially formulated, noncombustible, gypsum core with coated, fiberglass mat on both faces; manufactured to produce greater resistance to surface indentation and through-penetration than typical gypsum panels; tapered long edges; 5/8 in (15 mm) thick.
 - 1) Manufacturers and Products:
 - a) USG Corporation; Fiberock Panels, VHI Abuse-Resistant.
 - d. Locations: As indicated on the Drawings and as follows.
 - 1) Elevator Hoistway Enclosures and Stairwells.
 - 2) Fire Service Access Elevator Hoistways Enclosures.
8. Moisture-Resistant, Impact-Resistant Gypsum Board Products:
 - a. Material Quality Standard: ASTM C 1629 (C 1629M), Type X, and as follows:
 - 1) Soft Body Impact Test: ASTM E 695, Classification Level 3.
 - 2) Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.
 - b. Paper-Faced Products: Specially formulated, noncombustible, gypsum core with heavy liner paper on back and smooth, heavy abrasive-resistant face paper on face and long edges; manufactured to produce greater resistance to surface indentation and through-penetration than typical gypsum panels; tapered long edges; 5/8 in (15 mm) thick.
 - 1) Manufacturers and Products:
 - a) CertainTeed Corporation; Air Renew Extreme Impact.
 - b) National Gypsum Company; Gold Bond Hi-Impact XP Gypsum Board.
 - c. Paperless Products: Specially formulated, noncombustible, gypsum core with coated, fiberglass mat on both faces; manufactured to produce greater resistance to surface indentation and through-penetration than typical gypsum panels; tapered long edges; 5/8 in (15 mm) thick.
 - 1) Manufacturers and Products:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a) Georgia-Pacific Gypsum LLC; Dens Armor Plus Impact-Resistant Interior Panels.
- b) National Gypsum Company; Gold Bond eXP Interior Extreme IR Gypsum Panel.
- c) USG Corporation; Fiberock Panels, VHI Abuse-Resistant.

2.9 CEMENTITIOUS BOARDS

A. Cementitious Backer Units:

- 1. Material Quality Standard: ANSI A118.9 or ASTM C 1325.
- 2. Description: Cementitious panels composed of Portland cement, aggregates, glass mesh on both faces, and manufacturer's proprietary ingredients; capable of remaining unaffected by prolonged exposure to water; 1/2 in (12 mm) thick.
- 3. Manufacturers and Products:
 - a. Custom Building Products; WonderBoard.
 - b. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
 - c. National Gypsum Company.
 - 1) Straight: PermaBase Cement Board.
 - 2) Curved: PermaBase Flex Cement Board.
 - d. United States Gypsum Company (USG); DUROCK Interior Cement Board.

2.10 TRIM ACCESSORIES

A. Typical Drywall Trim Accessories:

- 1. Material Quality Standard: ASTM C 1047.
- 2. Description: Trim profile fabricated of galvanized steel sheet; of size suitable for gypsum board thickness; with recessed, perforated flange formed to receive joint compound.
- 3. Trim Products:
 - a. Cornerbead:
 - 1) Purpose: For protecting outside (external) corners.
 - 2) Basis of Design: United States Gypsum Company (USG); Dur-A-Bead Corner Bead, 103.
 - b. Optional Equivalent Products – Structural Laminate Cornerbead System: At Contractor's option, provide high strength tapered co-polymer core cornerbead with tight fibered paperboard facing and joint tape paper backing.
 - 1) Purpose: For protecting outside (external) corners.
 - 2) Basis of Design: Structus Building Technologies; No-Coat Structural Laminate Drywall Corner System.
 - c. LC-Bead (J-Bead):
 - 1) Purpose: For protecting exposed edges of gypsum board where back flange can be used.
 - 2) Basis of Design: United States Gypsum Company (USG); J-Trim, 200-A.
 - d. L-Bead:
 - 1) Purpose: For protecting exposed edges of gypsum board where back flange cannot be used.
 - 2) Basis of Design: United States Gypsum Company (USG); L-Trim, 200-B.
 - e. J-Stop:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- 1) Purpose: For protecting edges of gypsum board that does not require finishing.
- 2) Basis of Design: United States Gypsum Company (USG); J-Stop, 402.
- f. Control Joint:
 - 1) Description: One-piece trim formed with V-shaped slot, with removable strip covering slot opening.
 - 2) Purpose: For conditions requiring expansion and contraction stresses of large areas of gypsum board to be relieved.
 - 3) Basis of Design: United States Gypsum Company (USG); Control Joint, 093.
- g. Control Joint - Fire Rated:
 - 1) Description: One-piece trim formed with V-shaped slot and intumescent tape factory applied to one side of back of control joint, with removable strip covering slot opening.
 - 2) Purpose: For conditions requiring expansion and contraction stresses of large areas of gypsum board to be relieved at fire rated partitions.
 - 3) Basis of Design: Clark Dietrich; Fire Rated Control Joint.
- h. Other Trim or Special Shapes: Products as required by condition.
4. Manufacturers:
 - a. Dietrich Industries, Inc.; Unimast.
 - b. Fry Reglet Architectural Metals.
 - c. Marino Ware; Division of Ware Industries.
 - d. Niles Building Products Co.
 - e. Superior Metal Trim; Division of Delta Star, Inc.
 - f. United States Gypsum Company (USG).
- B. Plastic Drywall Trim Accessories:
 1. Description: Trim profile fabricated of high-impact PVC, of size suitable for gypsum board thickness; with recessed, perforated flange formed to receive joint compound.
 2. Trim Products Profiles: As listed above in "Typical Drywall Trim Accessories".
 3. Manufacturers:
 - a. Alabama Metal Industries Corporation; a Gibraltar Industries Company.
 - b. Phillips Manufacturing Co.
 - c. Plastic Components, Inc.
 - d. Trim Tex Drywall Products.
 - e. Vinyl Corp., a division of ClarkDietrich Building Systems.
- C. Accent Trim Accessories:
 1. Description: Extruded aluminum accessories of profiles and dimensions indicated of alloy and temper with not less than strength and durability properties of ASTM B 221, alloy 6063-T5.
 2. Basis of Design:
 - a. Aluminum Trim Accessory Type 1:
 - 1) Manufacturer:
 - 2) Product:
 - 3) Reveal Dimension:
 - 4) Finish:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Aluminum Trim Accessory Type 2:
 - 1) Manufacturer:
 - 2) Product:
 - 3) Reveal Dimension:
 - 4) Finish:
 - 3. Manufacturers:
 - a. Fry Reglet Architectural Metals.
 - b. Gordon, Inc.
 - c. Pittcon Industries.
 - D. Partitions to Glazed Aluminum Framing Trim Accessories:
 - 1. Partition and Mullion Gap Closure:
 - a. Description: Pre-assembled, spring loaded, partition gap closure fabricated from extruded aluminum with sound attenuating mineral wool insulation, compressible foam between extrusion and interior face of glass and acoustical sealant.
 - b. Manufacturers and Products:
 - 1) Basis of Design: Gordon; Mullion Mate Series 30, Series 40 or Series 60.
 - 2) STC Rating: Not less than Partition STC Rating; refer to Partition Types.
 - 3) Finish: As selected by Architect to match mullion finish, unless indicated otherwise.
 - 2. Sound Barrier Mullion Trim Cap (Demising Partitions between Units):
 - a. Description: Custom sound barrier mullion trim cap fabricated from window mullion jamb extensions filled with sound attenuating mineral wool insulation, compressible foam between extrusion and interior face of glass, fire containment sealant and acoustical sealant. Mullion trim cap shall engage end of partition and cover mullion with profiles indicated on Drawings, width as required for each condition.
 - 1) Basis of Design: Custom configuration as indicated on Drawings.
 - 2) Finish: As selected by Architect to match mullion finish, unless indicated otherwise.
 - 3. Proprietary Sound Barrier Mullion Trim Cap (Demising Partitions between Units):
 - a. Description: Sound barrier mullion trim cap fabricated from extruded aluminum with sound attenuating foam, compressible foam between extrusion and interior face of glass and acoustical sealant.
 - b. Manufacturers and Products:
 - 1) Basis of Design: Mull-it-Over Products; 55 Classic Mullion Trim Cap.
 - 2) STC Rating: 55.
 - 3) Finish: As selected by Architect to match mullion finish, unless indicated otherwise.
- 2.11 FASTENERS
- A. Limitations: Nails and staples are not permitted.
 - B. Fasteners for Attaching Metal Framing to Concrete Structure:
 - 1. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching hanger wires and capable of sustaining, without failure, a load equal to 5 times that

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

imposed by construction as determined by testing according to ASTM E 488 by a qualified independent testing agency.

- a. Cast-in-place anchor, designed for attachment to concrete.
 - b. Post-installed chemical anchor.
 - c. Post-installed expansion anchor.
2. Powder-Actuated Fasteners: Suitable for application indicated, ANSI A 10.3; low velocity, powder-actuated fasteners; drive pins and clip angles fabricated from corrosion-resistant materials, with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, an ultimate load capacity not less than 10 times that imposed by construction as determined by testing according to ASTM E 1190 by a qualified independent testing agency.
3. Manufacturers:
- a. Construction Materials, Inc.
 - b. Heckman Building Products, Inc.
 - c. Hilti Corp.
 - d. ITW Ramset/Red Head.
 - e. Powers Fasteners.
 - f. Simpson Strong Tie Anchor Systems.
4. For post-tensioned concrete, anchors shall not exceed **1 in (25 mm)** embedment. Obtain Structural Engineer's written approval for all proposed anchors in post-tensioned concrete prior to installation.
- C. Metal Framing Screws: Screw fasteners of type, material, size, corrosion resistance, holding power, and other properties required to fasten metal framing and furring members securely to substrates involved; complying with recommendations of gypsum board manufacturers for applications indicated.
- D. Gypsum Board Screws: Steel Drill Screws, ASTM C1002 unless otherwise indicated.
1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.
 2. Cementitious Backer Units: Use screws of type and size recommended by panel manufacturer.
 3. Product Description - Standard Applications: Bugle head, self-drilling, self-tapping, corrosion resistant steel screws with Phillips-head recess of type, size and other properties recommended by gypsum panel manufacturer.
 4. Product Description - High Moisture / Humidity Applications: Bugle head, self-drilling, self-tapping, stainless steel screws with Phillips-head recess of type, size and other properties recommended by gypsum panel manufacturer; for use at high moisture areas such as Kitchens, Showers and Tub Enclosures, Saunas, Steam Rooms, and Pool Enclosures.
- E. Miscellaneous Fasteners: For conditions not indicated, fasteners shall be type, finish, size, and holding power recommended by respective gypsum board manufacturer and conditions.
- 2.12 JOINT TREATMENT MATERIALS
- A. Material Quality Standard: ASTM C 475 / C 475M.
- B. Joint Tape:
1. Paper Tape: Nominal **2 in (50 mm)** wide cross-fibered paper tape with finish suitable for bonding, creased in center for easy folding, and compatible with joint compound.
 2. Mesh Tape: Nominal **2 in (50 mm)** wide self-adhering 10-by-10 fiberglass mesh tape.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

C. Joint Compound:

1. Setting-Type: Job-mixed powder for mixing with water, chemical-hardening compound; includes taping types.
2. Drying-Type: Ready-mixed or job-mixed powder for mixing with water, air-drying, vinyl based compounds; includes taping, topping, and all-purpose types.

2.13 INTERIOR SURFACING COMPOUNDS

A. Level 5 Primer and Surfer: Latex based compound containing polyvinyl acetate (PVA) polymer that can be spray or roller applied to change a Level 4 finish to a Level 5 finish.

1. Manufacturers and Products:

- a. CertainTeed Corporation; ProRoc Level V Wall and Ceiling Primer/Surfer.
- b. United States Gypsum Company (USG); Sheetrock Brand Tuff-Hide Primer-Surfer.

B. Concrete Surfacing Compound: Vinyl-based, factory-formulated product applied in two or more coats as necessary for filling and smoothing to provide monolithic concrete surfaces to match Gypsum Board Level 4 finish.

1. Basis of Design: United States Gypsum Company (USG); Cover Coat Brand Compound.

2.14 RELATED MATERIALS

A. General: Provide auxiliary materials for gypsum board construction that comply with referenced quality standards and recommendations of gypsum board manufacturer.

B. Firestopping Products at Penetrations: As specified in Division 07 Section "Penetration Firestopping".

C. Fiberglass Sound Attenuation Blankets:

1. Material Quality Standard: ASTM C 665, Type I.
2. Description: Unfaced blankets produced by bonding inorganic glass fibers with a thermosetting binder; free of formaldehyde.
3. Surface Burning Characteristics: According to ASTM E 84/NFPA 255/UL 723:
 - a. Flame Spread: Class A - no greater than 25.
 - b. Smoke Developed: No greater than 50.
4. Thickness: Not less than 2-1/2 in (62 mm), unless otherwise indicated.
5. Manufacturers and Products:
 - a. CertainTeed Corporation; CertaPro AcoustaTherm Batts.
 - b. Johns Manville Building Insulation Div.; Sound Control Batts, Formaldehyde Free.
 - c. Knauf Fiber Glass; QuietTherm.
 - d. Owens Corning; Sound Attenuation Batts.

D. Mineral Wool Sound Attenuation Blankets:

1. Material Quality Standard: ASTM C 665, Type I.
2. Description: Unfaced mineral-fiber blanket insulation produced by combining mineral fibers of rock or slag with thermosetting resins; free of formaldehyde.
3. Surface Burning Characteristics: According to ASTM E 84/NFPA 255/UL 723:
 - a. Flame Spread: Class A - no greater than 25.
 - b. Smoke Developed: No greater than 50.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Thickness: Not less than 3 in (75 mm), unless otherwise indicated.
 5. Density: Not less than nominal 2.5 pounds per cubic foot.
 6. Manufacturers:
 - a. Fibrex Insulations, Inc.
 - b. Rock Wool Manufacturing Co.
 - c. Roxul.
 - d. Thermafiber LLC.
- E. Acoustical Sealant:
1. Description: Manufacturer's standard nonsag, paintable, nonstaining sealant complying with ASTM C 834 or ASTM C 920. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies per ASTM E 90 or other acceptable test method.
 - a. Preconstruction Compatibility Testing: Test sealant for compatibility with copper substrates. Testing will not be required if data submitted on previous testing of current sealant products matches those submitted.
 - b. Do not use acrylic, neoprene, and nitrile based sealants that are not recommended for use with copper substrates.
- F. Fire-Resistance Rated and Acoustical Putty Pads:
1. Product Quality Standard: UL 263 (ASTM E 119).
 2. Description: Fire-rated, non-hardening, moldable, intumescent compound formed into sheets designed to seal penetrations, construction gaps, and around electrical boxes against spread of fire, smoke, and toxic gases.
 3. Manufacturers and Products:
 - a. Grace Construction Products; Flamesafe FSP 1077 Putty Pads.
 - b. Hilti; CP 617 Intumescent Acoustic Putty Pads.
 - c. Hilti; CFS-P PA.
 - d. Specified Technologies, Inc; Series SSP Putty Pads.
 - e. Tremco; TREMstop Electrical Box Insert.
 - f. 3M; Fire Barrier Moldable Putty+Pads.
- G. One-Piece Barrier Box:
1. Description: Rigid reinforced polyethylene box designed to fit around electrical boxes to prevent leaks of air and vapor.
 2. Basis of Design: Lessco Air-Vapor Barrier Box.
- H. Fire Resistive Sealants: Intumescent elastomeric sealant as specified in Division 07 Section "Fire-Resistive Joint Firestopping".
- I. Sealants: Sealant as specified in Division 07 Section "Joint Sealants".
- J. Isolation Strips: Adhesive-backed, closed cell neoprene or vinyl foam strips that allow fastener penetration with foam displacement, size as indicated, compressed 50 percent.
- K. Drywall Penetration Barrier Mesh: Barrier mesh, 0.048-inch (16 gauge) steel, 3/4-inch flattened diamond expanded-metal panels as a penetration barrier behind gypsum wallboard walls and/or ceilings, where indicated on Drawings.
1. Barrier-Mesh Clips: Barrier mesh shall be attached to framing members using barrier-mesh clips and appropriate threaded fasteners.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective Manufacturer's written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.
 - 4. ASTM C754 Standard Specification for installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
 - 5. ASTM C840 Standard Specification for Application and Finishing of Gypsum Board.
 - 6. Gypsum Association GA 216.
 - 7. United States Gypsum Company (USG); Gypsum Construction Handbook when no other installation quality standard applies to condition.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Suspended Gypsum Ceilings: Coordinate installation of ceiling suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hanger wires at spacing required to support ceilings and that hangers will develop their full strength.
- C. Coordination with Sprayed Fire-Resistance Materials:
 - 1. Pre-Application Coordination: Before sprayed fire-resistance materials are applied, attach Z shaped clips and offset mounting plates to structural steel members with powder actuated fasteners, leaving portion of flange exposed outside of sprayed fire-resistive materials to attach head of wall track for gypsum board assembly.
 - 2. Post-Application Coordination: After sprayed fire-resistive materials are applied, remove materials only to extent necessary for installation of gypsum board assemblies, attach Z shaped clips and offset mounting plates to structural steel members with powder actuated fasteners, leaving portion of flange exposed outside of sprayed fire-resistive materials to attach head of wall track for gypsum board assembly, and patch with fire-resistive material specified in Division 07 Section "Cementitious Fireproofing" that is required to obtain fire-resistance rating indicated.

3.4 INSTALLATION OF GYPSUM BOARD ASSEMBLIES

- A. Resistance Rated Partitions: Construct fire resistance rated, smoke resistance rated, and sound resistance rated partitions according to respective assembly test reports. Ensure every

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

material used within an assembly shall comply with manufacturers listed and product qualities indicated in respective assembly test report.

- B. Penetrations and Openings: Construct within gypsum board assemblies work as required to properly form penetration or opening to receive firestopping materials specified in following Sections:
 - 1. Division 07 Section "Penetration Firestopping".
 - 2. Division 07 Section "Fire-Resistive Joint Firestopping".
 - C. Control Joints: Install control joints at locations indicated on Drawings, in specific locations approved by Architect for visual effect and according to the following:
 - 1. Spaced not more than 24 to 30 feet in either direction for uninterrupted straight planes of ceilings and walls.
 - 2. Where different substrates occur at ceilings and walls.
 - 3. Where control joints occur in substrates at ceilings and walls.
 - 4. Where L, U, or T shaped ceiling configurations are joined.
 - 5. At less-than-ceiling-height cased opening frames and gypsum board openings over 60 inches in width; extend control joints from both corners at top of frame or opening up to ceiling.
 - 6. Where less-than-ceiling-height door frames occur on walls more than 30 feet in length; extend control joints from top of frame up to ceiling at corner of hinge side of door
 - 7. Where less-than-ceiling-height borrowed lites occur on walls more than 30 feet in length; extend control joints from top of frame up to ceiling and from bottom of frame to floor at both corners.
 - D. Isolation from Building Structure: Isolate gypsum board assemblies from building structure to prevent transfer of loading imposed by structural movement.
 - 1. Provide isolation joints as indicated or required by installation quality standards.
 - 2. Isolate ceiling assemblies abutting or penetrated by building structure.
 - 3. Isolate partition framing and wall furring abutting or penetrated by building structure, except at floor.
 - E. Building Expansion Joints: Avoid bridging building expansion joints with metal framing or furring members; frame both sides of joints independently with framing or furring members, coordinating with building expansion joint products specified in Division 07 Section "Expansion Control".
 - F. Fire-Resistance Rated and Acoustical Putty Pads: Hand apply pads to surfaces indicated, packing tightly into gaps and openings, in such a manner that pad will remain secured to surface; pinch pleat excess material together to close gaps.
 - G. One-Piece Barrier Box: Install in accordance with manufacturer's recommendations as indicated on the Drawings.
 - H. Supplemental Accessories: Install supplementary framing, blocking, reinforcing, and bracing in gypsum board assemblies to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, hand rails, furnishings, or similar construction. Comply with details indicated and recommendations of installation quality standards or manufacturer.
- 3.5 INSTALLING SUSPENDED GRID SYSTEM FOR INTERIOR CEILINGS
- A. Installation Quality Standard: In addition to standards listed elsewhere, perform suspended ceiling work according to following, unless otherwise specified in this Section:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. ASTM C 636 / C 636M Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels.
 2. ASCE/SEI 7, Minimum Design Loads and Associated Criteria for Buildings and Other Structures.
 3. ASTM E 580 / E 580M, Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions.
- B. Pattern: Lay out spaces and arrange suspension system in a regular pattern, parallel or perpendicular to surrounding walls.
- C. Hangers for Ceiling System: Suspend hangers from building structural members and as follows:
1. Install hangers plumb and free from contact with mechanical and electrical equipment, insulation or other objects within ceiling plenum that are not part of supporting structural frame or ceiling suspension system. Within limitations allowed by installation quality standards, splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers required to support suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by installation quality standards.
 3. Secure wire hangers by looping and wire-tying, either directly to structures or to inserts, eyescrews, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause them to deteriorate or otherwise fail.
 4. Secure the appropriate hangers to structure, including intermediate framing members, by attaching to inserts, eyescrews, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 5. Install metal framing components for suspended ceilings so that members are level to within **1/8 in in 12 ft (3 mm in 3.6 m)** as measured both lengthwise on each member and transversely between parallel members.
 6. Attach hangers to structural members.
 7. Do not connect or suspend any ceiling components from ducts, pipes or conduit.
- D. Perimeters: Using gypsum board screws through gypsum board into metal studs, attach perimeter wall angle where suspended grid system meets vertical surfaces unless otherwise indicated; cut main beams and cross furring members to fit into wall angle.
- E. Main Beams:
1. Suspend main beams spaced **48 in (1200 mm)** on center from structure with wire hangers spaced not greater than **48 in (1200 mm)** on center.
 2. Install main beams level within **1/8 in in 12 ft (3 mm in 3.6 m)** with hanger wire taut and tightly wrapped to prevent vertical movement or rotation.
 3. Do not make local kinks or bends in hanger wires as a means of leveling.
- F. Cross Furring Members:
1. Install cross furring members at right angles to main beams, spaced as required and join to main beams with positive interlock.
 2. Install cross furring members to within **1/32 in (0.8 mm)** of their required location and within **0.015 in (0.38 mm)** of same horizontal plane as main beam, and never below continuous member.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Install additional cross furring members at right angles to beams and cross furring members to support ends of recessed light fixtures, diffusers or grilles.

G. Seismic Conditions: Install bracing wires, compression struts, and other components as required by installation quality standard.

3.6 INSTALLING SUSPENDED CHANNEL FRAMED SYSTEM FOR INTERIOR CEILINGS

A. Installation Spacings: Install framing components at spacings indicated but not less than that required by referenced metal framing installation quality standard.

1. Wire Hangers: 4 ft (1200 mm) on centers.
2. Carrying Channels (Main Runners): 1-1/2 in (38 mm), 4 ft (1200 mm) on centers.
3. Metal Furring Channels (Furring Members): 16 in (400 mm) on centers.

B. Seismic Conditions: Install bracing wires, compression struts, and other components as required by installation quality standard.

3.7 INSTALLING METAL FRAMING COMPONENTS

A. Priority: Assemble various assemblies giving priority to partitions with higher rating; extend partition with higher rating intact through partition with lower rating.

B. Joinery and Connections: Install various metal framing components according to details indicated; for situations and conditions not indicated, comply with installation quality standards and with respective manufacturer's recommendations.

C. General Requirements: Construct partition framing of studs, tracks, and headers using screws of number and spacing required.

1. Install studs of uncoated base metal thickness as determined by Metal Framing Schedule at end of this Section.
2. Extend partition framing full height to underside of structure above, except where partitions are indicated to terminate at, or immediately above, suspended ceilings.
3. Continue framing over door frames and openings to provide support for gypsum board.
4. Space studs as indicated on Metal Framing Schedule at end of this section.
5. Cut studs 1 in (25 mm) short of full height to provide deflection relief at head of wall conditions.
6. Install studs so that flanges point in same direction.
7. Attach with screws through each stud flange and track (runner) flange, except top deflection track assemblies.
8. For fire resistance rated, smoke resistance rated, and sound resistance rated assemblies that are required to extend to underside of structure above to obtain ratings, install framing around structural and other members extending below floor slabs or roof decks, as needed to support gypsum board closures and make partitions continuous from floor to underside of structure above.
9. Do not lap studs.
10. At intersections and corners, locate studs no more than 2 in (50 mm) from partition intersections and corners and secure with screws through both flanges of studs and tracks.

D. Metal Track (Runner) Requirements:

1. Floors: Install tracks (runners) using appropriate fasteners spaced not more than 16 in (400 mm) on centers.
2. Head of Wall: Install deep leg deflection tracks using appropriate fasteners to laterally support assembly, and to avoid axial loading of assembly by deflection from building structure above.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3. Head of Wall: Where indicated, install proprietary deflection and firestop track (runner) using appropriate fasteners for the substrate and installation conditions.
- E. Support for Wall Mounted Accessories or Equipment: Install back-up plate or track (runner) turned on its side, using screws as indicated or as required, to studs to properly transfer accessory or equipment load to metal framing.
- F. Openings: Frame single door, double door, above ceiling openings, and below ceiling openings using studs, tracks (runners), clip angles, and headers.
 1. Install 2 studs on each side of each opening in configuration indicated, including strap plates; extend from floor to underside of structure above; do not cut these studs under any circumstances. Include sound attenuation blankets within cavity when partition is scheduled to have a sound resistance rating.
 2. Construct header of appropriate configuration for type of opening to be spanned and secure with clip angles; include sound attenuation blankets within cavity when partition is scheduled to have a sound resistance rating.
 3. Install short intermediate studs **16 in (400 mm)** on center between top track and header.
 4. At partitions indicated to terminate immediately above ceiling, install diagonal bracing at not less than spacing as indicated.
- G. Supplementary Framing: Install around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, and similar items that cannot be supported directly by metal framing.
- H. Penetrations: Maintain fire-resistance rating of assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.
- I. Chase Partitions:
 1. Position double row of studs vertically in tracks (runners), opposite each other in pairs with flanges pointing in same direction.
 2. Attach with screws through each stud flange and track (runner) flange.
 3. Cross brace between rows of studs with one of following at **48 in (1200 mm)** on center maximum vertically, attached to stud webs with screws:
 - a. Coated glass-mat gypsum board, **12 in (300 mm)** high by chase width.
 - b. Metal studs turned on side, webs back-to-back.
- J. Furred Walls:
 1. Erect furring channels vertically, spaced **16 in (400 mm)** on centers maximum, unless otherwise indicated.
 2. Attach with appropriate fasteners, staggered on flanges.
 3. Splice ends by nesting channels **8 in (200 mm)** and securely anchoring to surface.
 4. Miter **24 in (600 mm)** long horizontal furring channels at corners and space **24 in (600 mm)** on centers vertically.
 5. Locate furring channels around perimeter of openings and secure to surfaces.
- K. Control Joints:
 1. Construct metal framing as indicated by installation quality standard to allow gypsum board control joints to function as intended.
 2. For control joints located in fire resistance rated walls and partitions, construct of metal studs and mineral wool, full height of partition, according to assembly fire test reports.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- L. Metal Framing Spanning Multiple Floors: Construct metal framing as required using longest length metal studs possible and attach to building structure with floor bypass clips.
- M. Curved Partitions:
1. Metal Track (Runner) shall comply with one of following:
 - a. Field Fabricated From Straight Components:
 - 1) Cut top and bottom runners (tracks) through leg and web at 2 in (50 mm) intervals for arc length. In cutting lengths of runners allow for uncut straight lengths of not less than 12 in (300 mm) at ends of arcs.
 - 2) Bend runners to uniform curve of radius indicated and locate straight lengths so they are tangent to arcs.
 - 3) Support outside (cut) leg of runners by clinching a 1 in (25 mm) high by runner thickness sheet metal strip to inside of cut legs using metal lock fasteners.
 - b. Field crimped using a crimping tool.
 - c. Manufactured flexible products.
 2. For full height partitions, attach runners to structural elements at floor and ceiling with appropriate fasteners located 2 in (50 mm) from ends and spaced 12 in (300 mm) on centers.
 3. For ceiling height partitions, attach runners to suspended ceilings with toggle bolts or hollow wall anchors located 2 in (50 mm) from ends and spaced 8 in (200 mm) on centers in between where attached to suspended ceilings.
 4. Position studs vertically with open sides facing in same direction and engaging floor and ceiling runners.
 5. Begin and end each arc with a stud and space intermediate studs equally along arcs at stud spacing recommended by gypsum board manufacturer for radii indicated.
 6. Attach studs to runners with 3/8 in (10 mm) long pan head framing screws. On straight lengths at ends of arcs, place studs 6 in (150 mm) on centers with last stud left free standing.
- N. Security Mesh: Where indicated, attach to metal studs before installation of gypsum board.
- O. Installation Tolerances: Install each metal stud metal framing and furring member so that fastening surfaces do not vary more than 1/8 in (3 mm) from plane formed by faces of framing members.

3.8 INSTALLING GYPSUM BOARD PRODUCTS

- A. General Requirements:
1. Install type of gypsum board at location indicated by gypsum board schedule at end of this Section.
 2. Do not install damaged gypsum boards.
 3. Install gypsum boards with finishable face side out.
 4. Butt gypsum boards together for a light contact at edges and ends with not more than 1/16 in (1.5 mm) of open space between panels.
 5. Do not force gypsum boards into place.
 6. Do not place tapered edges against cut edges or ends.
 7. Locate panel joints so that no joint will align with the edge of an opening unless control joints are installed at these locations.
- B. Isolation from Building Structure:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments or surfaces where movement is anticipated. Provide 1/4 in to 1/2 in (6 mm in 12 mm) wide spaces at these locations or as indicated below:
 - a. At top of wall or where partitions intersect open building structure members projecting below underside of floor slabs and roof decks, cut to fit profile formed by coffer, joists, beams, and other structural members; form proper annular joint to receive firestopping at rated partitions and form 3/4 in (20 mm) joint at top of wall at non-rated partitions.
 2. Trim edges with edge trim where edges of gypsum boards are exposed.
 3. Seal joints between edges and abutting structural surfaces with firestopping at rated locations and acoustical sealant at non-rated locations.
- C. Single-Layer Board Assemblies:
1. At typical conditions, install gypsum board vertically (long dimension parallel to metal framing), to minimize short end-to-short end joints unless otherwise indicated or required by assembly fire test reports.
 2. At interior of stairwells and other high walls, install gypsum boards horizontally, unless otherwise indicated or required by assembly fire test reports. Stagger abutting end joints not less than one framing member in alternate courses of gypsum boards.
- D. Multi-Layer Board Assemblies: Apply base layers and face layers vertically (long dimension parallel to metal framing) with joints of base layers located over stud or furring member and face layer joints offset at least one stud space from base layer joints, unless otherwise indicated or required by assembly fire test reports. Stagger joints on opposite sides of partitions.
- E. Ceiling Applications:
1. Apply gypsum board at right angles to main beams of suspension framing to minimize number of abutting end joints and avoid abutting end joints in central area of each ceiling.
 2. Stagger abutting end joints of adjacent panels not less than one framing member.
 3. Locate both edge or end joints of gypsum boards over intermediate supports or gypsum board back-blocking where metal framing is not present.
- F. Typical Wall Applications:
1. Attach gypsum boards to metal studs so that leading edge or end of each board is attached to open (unsupported) edges of stud flanges first.
 2. Stagger vertical joints on opposite sides of partitions.
 3. Do not make joints other than control joints at corners of framed openings.
 4. Attach gypsum boards to framing provided at doors, openings and cutouts. Install gypsum boards over door heads and extend to not less than one stud space - 16 in (400 mm) at each side of door or opening.
 5. Cover both faces of metal framing with gypsum boards as indicated, except in chase walls that are braced internally.
 6. Cut and fit gypsum boards around ducts, pipes, conduits, and other penetrations to form proper annular joint to receive firestopping at rated partitions.
 - a. At non-rated partitions, annual space around ducts, pipes, conduit or other penetrations to be properly sized to receive sealant; 3/4 in (20 mm) maximum.
 - b. "Blow-out" patches are not allowed.
 7. Support both edge and end joints of gypsum boards over metal framing.
- G. Curved Wall Assemblies:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Install 2 layers of flexible gypsum board horizontally and unbroken, to extent possible, across curved surface plus 12 in (300 mm) long straight sections at ends of curves and tangent to them.
 2. On convex sides of partitions, begin installation at one end of curved surface and fasten gypsum boards to studs as they are wrapped around curve. On concave side, start fastening gypsum boards to stud at center of curve and work outward to panel ends.
 3. Fasten base layer to studs with screws spaced 16 in (400 mm) on centers maximum. Center second layer over joints in base layer, and fasten to studs with screws spaced 12 in (300 mm) on centers maximum.
- H. Screw Attachments:
1. Attach gypsum board to metal framing with screw fasteners of type appropriate for gypsum board materials and installation conditions:
 - a. Length shall be as required by condition and penetrating metal framing not less than 3/8 in (10 mm).
 - b. Spacing shall be as recommended by installation quality standard, gypsum board manufacturer, or respective assembly test report.
 - c. Use properly adjusted, positive-clutch electric power tool equipped with adjustable screw-depth head and a Phillips bit. Nails and staples are not permitted.
 2. Drive screws to slightly dimple surface without breaking face paper, fracturing core, or stripping metal framing member around screw shank.
 3. Space screws for non-fire resistance rated partitions and ceilings as recommended by installation quality standards.
 4. Space screws for fire resistance rated partitions as required by assembly fire test reports.
 5. Start field screwing near center and work towards edges.
 6. Space screws not less than 3/8 in (10 mm) from gypsum boards edges.
 7. Do not attach gypsum boards to top runner where wall or partition extends to building structure unless required by fire test reports.
- I. Control Joints: Form control joints and expansion joints at locations indicated with required space between edges of adjoining gypsum boards.
- J. Sound Attenuation Blankets: Install blankets within stud cavities set so that they are held in place by friction with metal studs; ensure blankets are secure within cavity and will not become displaced when second gypsum board side is closed.
- K. Elevator Shaft Cants: Where gypsum board shaftwall assemblies cannot be positioned within 4 in (100 mm) of shaft face of structural beams, floor edges, and similar projections into shaft, install 5/8 in (15 mm) thick gypsum board cants covering tops of projections.
1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 in (600 mm) on centers with screws fastened to shaftwall framing.
 2. Where steel framing is required to support gypsum board cants, install framing at 24 in (600 mm) on centers and extend studs from projection to shaftwall framing.
- L. Sealant:
1. Comply with ASTM C 919 and manufacturers written recommendations for closing off sound-flanking paths around or through gypsum board assemblies, including sealing partitions above acoustical ceilings.
 2. Seal wall assemblies at perimeters, behind control joints, and at openings and penetrations with a continuous bead of sealant material according to following:
 - a. Fire Resistance Sealant: Joints within fire resistance rated assemblies.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- b. Water Resistance Sealant: Joints within non-fire resistance rated assemblies exposed to possible water infiltration.
- c. Acoustical Sealant: All other joints.

3.9 INSTALLING TRIM ACCESSORIES

- A. General: Fasten trim accessories continuously according to accessory manufacturer's instructions using gypsum board screws; installation by clinch-on tool and staples not permitted.
- B. Interior Trim Accessories: Install in the following locations:
 - 1. Corner Beads: Install trim at external corners; use screws at each flange at 9 in (225 mm) on centers, opposite each other.
 - 2. Edge Trim: Install trim where gypsum boards abut dissimilar material, and where edge of gypsum boards would otherwise be exposed; use screws at flange at 9 in (225 mm) on centers.
 - a. LC-Bead (J-Bead): Install trim at exposed conditions where back flange can be attached to framing or supporting substrate before gypsum board installation.
 - b. L-Bead: Install trim at exposed conditions where trim can only be installed after gypsum board installation.
 - c. J-Stop: Install trim at concealed conditions where trim can only be installed after gypsum board installation.
 - 3. Control Joints: Install trim at appropriate locations, ensuring gypsum board is not continuous over joint; use screws at each flange at 6 in (150 mm) on centers.
 - a. Control joints to extend 4 in (100 mm) above finished ceiling at non-rated conditions and extend to structure at rated wall conditions.
- C. Accent Trim Accessories: Install at locations indicated, mitering corners and intersections to form tight, flush and uniform joints; use screws at each flange at 9 in (225 mm) on centers.
- D. Trim Accessories at Exterior Windows: Install at locations indicated, mitering corners and intersections to form tight, flush and uniform joints; use screws at each flange at 9 in (225 mm) on centers or as recommended by manufacturer for manufactured products.

3.10 FINISHING GYPSUM BOARD PRODUCTS

- A. General: Treat board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare surfaces for decoration.
- B. Joint Tape: Finish joints according to the following and as recommended by manufacturer:
 - 1. Typical Paper-Faced Gypsum Board Products: Paper tape.
 - 2. Moisture-Resistant Gypsum Board Products:
 - a. Moisture-Resistant Paper-Faced Gypsum Board: Paper tape.
 - b. Moisture-Resistant Paperless Glass-Mat Gypsum Board: Paper or mesh tape.
 - c. Moisture-Resistant Coated Glass-Mat Gypsum Board - Tile Backer: Mesh tape.
 - 3. Cementitious Backer Units: Mesh tape.
- C. Finishing: Finish boards and units to achieve specified level of finish as indicated in schedule at end of Section:
 - 1. Typical Paper-Faced Gypsum Board: Either or combination of the following as recommended by manufacturer:
 - a. Setting-type joint compounds.
 - b. Drying-type joint compounds.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Moisture-Resistant Paper-Faced Gypsum Board: Setting-type joint compounds.
3. Cementitious Backer Unit: Setting-type joint compounds.

3.11 INTERIOR SURFACING COMPOUNDS

- A. Skim Coat Finishing with Joint Compound - Gypsum Board:
 1. Apply setting-type joint compound or Level 5 Primer and Surfer over entire surface in thickness recommended by manufacturer.
- B. Skim Coat Finishing with Concrete Surfacing Compound - Concrete:
 1. Prepare concrete surfaces for applied finishes.
 - a. Grind ridges, fins, and high areas.
 - b. Remove form oil, efflorescence and greasy deposits.
 - c. Fill offsets, voids, bugholes, rock pockets level with surrounding surfaces with concrete surfacing compound.
 - d. Apply as many coats of concrete surfacing compound as necessary to eliminate cracks.
 - e. Verify that resulting concrete surface is uniformly smooth and free of irregularities.
 2. Apply Concrete Surfacing Compound over entire surface in thickness recommended by manufacturer.

3.12 ADJUSTMENTS

- A. Damaged Materials: Stored or installed gypsum board materials shall be classified as damaged, defective, and nonconforming Work if they have been exposed to wetness or dampness at any time prior to Substantial Completion or if they exhibit evidence of active or dormant mold or mildew. Damaged materials and assemblies shall be replaced with new and dry materials and assemblies.

3.13 PROTECTION

- A. Procedures: Protect products and systems from damage during installation and remainder of construction period according to manufacturer's instructions.

3.14 METAL FRAMING SCHEDULE

- A. Metal Stud Framing Schedule:
 1. Stud Depth: As indicated on Drawings.
 2. Spacing: Maximum 16 in (400 mm) on centers, unless otherwise indicated, or as required to comply with respective assembly test report.
 3. Minimum Performance Requirements: Lateral pressure loads (lb/sq ft) are allowable design values and shall not be reduced further by load combinations. Minimum performance requirements unless otherwise indicated:
 - a. Typical Partitions: L/240 at 5 lb/sq ft (239 Pa) lateral load.
 - b. Elevator Shaft Partitions: L/240 at 7.5 lb/sq ft (359 Pa) lateral load.
 - c. Partitions with Tile Facing: L/360 at 7.5 lb/sq ft (359 Pa) lateral load.
 - d. Partitions with Interior Stone Facing Concentrated Loads: Provide delegated engineering to comply with L/720 at 10 lb/sq ft (479 Pa) lateral load.
 - e. Partitions supporting Lead Lined Doors and Frames: Provide delegated engineering to comply with L/480 at 10 lb/sq ft (479 Pa) lateral load.
 - f. Partitions supporting all other Concentrated Loads: Provide delegated engineering to comply with L/360 at 10 lb/sq ft (479 Pa) lateral load

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Minimum Uncoated Base Steel Thickness:
- a. Typical Gypsum Board Assemblies: As determined by manufacturer's limiting height engineering data unless otherwise indicated.
 - 1) 20 Gauge Drywall Studs: 0.0296 inch (0.75 mm) minimum base steel thickness.
 - a) Typical partitions unless otherwise indicated.
 - 2) 20 Gauge Equivalent Studs: Allowed only when included as part of an approved tested assembly.
 - 3) 20 Gauge Structural Studs: 0.0329 inch (0.84 mm) minimum base steel thickness.
 - a) Partitions supporting ceramic or stone tile.
 - b. 16 Gauge Studs:
 - a) Typical at partitions supporting stone facing unless otherwise indicated.
 - c. Gypsum Board Assemblies required to Support Concentrated Loads: As required by delegated engineering professional but not less than minimum uncoated base metal thickness indicated above.
 - d. Gypsum Board Assemblies required to Withstand Seismic Loads: As required by delegated engineering professional but not less than minimum uncoated base metal thickness indicated above.

3.15 GYPSUM BOARD SCHEDULE

- A. Gypsum Board Schedule, General: Install the designated gypsum board product based on exposure classification to water and / or moisture and applied finish system as follows, unless otherwise indicated or scheduled on the Drawings.
- B. No Exposure: Surfaces not normally exposed to water and / or moisture sources, including but not limited to the following locations:
 - 1. Typical walls and ceilings.
 - a. Paint and Wall Coverings Only: Typical paper-faced gypsum board.
 - b. Tile: Moisture-resistant coated-glass-mat gypsum board.
 - 2. Horizontal fire-rated assemblies and ceilings:
 - a. Paint Only: Paper-faced Type C gypsum board.
 - 3. Walls in acoustical barriers as indicated in the Drawings.
 - a. Paint and Wall Coverings Only: Paper-faced acoustically enhanced gypsum board.
 - 4. Curved walls:
 - a. Paint and Wall Coverings Only: Paper-faced flexible gypsum board; installed in two layers.
 - 5. Shaft-Side Face of Shaft-Liner Assemblies:
 - a. No Finish Required: Moisture-resistant paperless glass mat shaft-liner gypsum board.
 - b. No Finish Required: Moisture-resistant paper-faced shaft-liner gypsum board.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Incidental Exposure: Surfaces immediately adjacent to water and / or moisture sources, including but not limited to the following locations:
 - 1. Walls and ceilings in mechanical equipment rooms and janitor closets.
 - 2. Walls within 24 inches of centerline of drinking fountains, isolated wall-hung lavatories, and countertop sinks and other similar water sources.
 - 3. Interior face of exterior walls.
 - 4. Acceptable gypsum board products for the above listed conditions:
 - a. Paint and Wall Coverings: Moisture-resistant paper-faced or moisture-resistant paperless glass-mat gypsum board.
 - b. Tile: Moisture-resistant coated-glass-mat gypsum board.
 - 5. Top of walls above ceilings adjacent to mechanical equipment in corridors.
 - a. Moisture-resistant paperless glass-mat gypsum board.
- D. Direct Exposure: Surfaces normally soaked, saturated, or regularly and frequently exposed to water and / or moisture, including but not limited to the following locations:
 - 1. Walls and ceilings in commercial kitchens, toilet rooms and bathrooms including bathtubs and showers:
 - a. Paint and Wall Coverings: Moisture-resistant paper-faced or moisture-resistant paperless glass-mat gypsum board.
 - b. Tile: Moisture-resistant coated-glass-mat gypsum board.
 - 2. Walls and ceilings in saunas, steam rooms, gang showers, and pool enclosures:
 - a. Tile Only: Cementitious backer units.
- E. Any Exposure:
 - 1. Moisture-Resistant, Abuse-Resistant Gypsum Board Products: Where indicated on drawings.
 - a. Paint and Wall Coverings: Paper-faced or paperless products.
 - b. Tile: Paperless products.
 - 2. Moisture-Resistant, Impact-Resistant Gypsum Board Products for Enclosing High-Rise Elevator Shafts and Stairwells: Where indicated on drawings.
 - a. Paint and Wall Coverings: Paper-faced or paperless products.
 - b. Tile: Paperless products.
 - 3. Moisture-Resistant, Impact-Resistant Gypsum Board Products: Where indicated on drawings.
 - a. Paint and Wall Coverings: Paper-faced or paperless products.
 - b. Tile: Paperless products.

3.16 GYPSUM BOARD FINISHING SCHEDULE

- A. Gypsum Board Finishing Schedule, General: Finish panels to Levels of Finish indicated below. Apply joint tape over panel joints, except those with trim having flanges not intended for tape. Sand between coats and after last coat to produce a surface free of defects and ready for applied finish system.
 - 1. Levels of Finish: According to ASTM C 840.
- B. Preparation: Apply joint compound at open joints, panel edges, and damaged surface areas.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- C. Level 1: At following locations, embed tape at joints in joint compound unless a higher level of finish is required for fire resistance rated assemblies. Trim accessories to be installed but not embedded in joint compound unless required for fire rating:
1. Ceiling plenum areas above ceilings.
 2. Concealed areas.
 3. Substrate for interior stone facing.
 4. Substrate for interior woodwork.
 5. Unfinished areas designated for future expansion.
 6. Not used.
- D. Level 2: At following locations, embed tape and apply separate first coat of joint compound to tape, fasteners, and trim flanges:
1. Substrate for tiling.
 2. Not used.
- E. Level 3: At following locations, embed tape and apply separate first and second coats of joint compound to tape, fasteners, and trim flanges:
1. Mechanical, electrical, data and elevator equipment rooms.
 2. Stair towers.
 3. Not used.
- F. Level 4: At following locations, embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges:
1. Areas to receive paint.
 2. Areas to receive wall coverings.
 3. Areas to receive veneer plastering.
 4. Not used.
- G. Level 5: At following locations, embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges, and apply skim coat of joint compound or Level 5 Primer and Surfacers over entire surface:
1. Areas to receive whiteboard paint or dry erase board coatings.
 2. Curved ceilings and partitions.
 3. Front of House areas.
 - a. Areas to receive paint.
 - b. Areas to receive wall coverings.
 - c. Areas to receive veneer plastering.
 4. Other areas as indicated on the Drawings.
 5. Not used.

3.17 FIELD QUALITY CONTROL

- A. Owner Acoustical Testing Agency: The Owner may employ and pay a qualified independent testing agency to perform field quality control. Testing and inspections may include the following.
1. Airborne-Sound Testing, Horizontal and Vertical: Perform testing of installed assemblies for noise isolation in accordance with ASTM E 336 Standard Test Method from Measurement of Airborne Sound Attenuation between Rooms in Buildings, ASTC (Apparent Sound Transmission Class) determined by ASTM E413 Classification for Rating Sound Insulation.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Extent of Testing: Testing agency shall randomly select assemblies for testing.
- 2. Structure-Borne Sound Testing, Vertical: Perform testing of installed assemblies for noise isolation in accordance with ASTM E 1007 Standard Test Method for Field Measurement of Tapping Machine Impact Sound Transmission through Floor-Ceiling Assemblies and Associated Support Structures, AIIIC (Apparent Impact Isolation Class) determined by ASTM E989 Standard Classification for Determination of Single-Number Metrics for Impact Noise.
 - a. Extent of Testing: Testing agency shall randomly select assemblies for testing.
- B. Tests and Inspections, General: Tests and inspections shall take place as installation proceeds to determine compliance with specified performance requirements.
 - 1. Correction of Deficiencies:
 - a. Materials and installation will be considered defective if they do not meet specified requirements.
 - b. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
 - c. Perform additional tests and inspections, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 - 2. Prepare test and inspection reports.

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 09 3000

TILING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Modular tiles, membrane underlayments, setting materials, grouting materials, accessories, and supplementary items necessary for installation.

1.2 DEFINITIONS

- A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
- B. Module Size: Actual tile size plus joint width indicated.
- C. Face Size: Actual tile size, excluding spacer lugs.
- D. Ceramic (Mosaic) Tile: Tile formed by either the dust-pressed or plastic method, usually **1/4 in** to **3/8 in** (**6 mm** to **10 mm**) thick, and having a facial area of less than **6 sq in** (**3900 mm²**). Ceramic mosaic tile may be of either porcelain or natural clay composition and they may be either plain or with an abrasive mixture throughout.
- E. LHT: Large and Heavy Tile. Tiles are typically larger than **8 in by 8 in** (**200 mm by 200 mm**) or with at least one side greater than **15 in** (**375 mm**) or weigh **5 psf** (**239 Pa**) or heavier and have an ungauged thickness.
- F. Paver Tile: Glazed or unglazed porcelain or natural clay tile formed by dust-pressed method having a facial area of **6 sq in** (**3900 mm²**) or more.
- G. Porcelain Tile: A ceramic tile or paver tile that is generally made by the dust-pressed method of a composition resulting in a tile that is dense, impervious, fine grained, and smooth with sharply formed face.
- H. Wall Tile: A glazed tile with a body that is suitable for interior use and which is usually non-vitreous and is not required nor expected to withstand excessive impact or be subject to freezing and thawing conditions.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings: Show details of fabrication and installation, including plans, elevations, sections, details of components and attachments to other work. Distinguish between shop and field-assembled work.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Include plans of rooms and elevations of walls showing tile and patterns; include sections showing underlayments, setting materials, and grouting materials.
 2. Include details showing widths and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
- C. Samples for Verification Purposes: Submit samples for each item listed below of size and construction indicated. Where products involve normal color and texture variations, include sample sets showing the full range of variations expected.
1. Tile: Each type and composition of tile and for each color and finish required, at least **12 in (300 mm)** square, mounted on rigid panel, and with grouted joints using product complying with specified requirements and in color approved for completed work.
 2. Tile Trim and Accessories: Full-size units of each type and for each color required.
 3. Stone Thresholds: **6 in (150 mm)** lengths of specified profile.
 4. Metal Edge Strips: **6 in (150 mm)** lengths of specified profile.
- 1.4 INFORMATIONAL SUBMITTALS
- A. List of Materials for Layered Mock-Up for Construction Quality Purposes:
1. Product, material, and equipment names, model numbers, lot numbers, batch numbers, source of supply, and other information required to identify items used.
 2. Receipt of list does not constitute acceptance of deviations from Contract Documents, unless such deviations are specifically approved by Architect in writing.
- B. Master Grade Certificates: Submit for each shipment, type, and composition of tile, signed by tile manufacturer and installer.
- C. Product Test Reports: Written reports based on evaluation of comprehensive tests performed by qualified testing agency indicating that each product complies with requirements.
- D. Field Quality Control Reports: Written report of testing and inspection required by "Field Quality Control".
- E. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that a warranty will be issued.
- F. Qualification Data:
1. For firms and persons specified in "Quality Assurance" to demonstrate their capabilities and experience. Include list of completed projects.
- G. Warranty: Sample of warranty.
1. Provide manufacturer's written warranty covering materials and installation (labor) stating obligations, remedies, limitations, and exclusions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Instructions: Include in operation and maintenance manual required by Division 01 Section "Closeout Requirements". Submit manufacturer's instructions for maintenance of installed work, including methods and frequency for maintaining optimum condition under anticipated use. Include precautions against cleaning materials and methods which may be detrimental to finishes and performance.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Materials: Furnish the following extra materials that match and are from same production runs as products installed, packaged with protective covering for storage and identified with labels describing contents:
 - 1. Furnish quantity of full-size tile and trim units equal to 2 percent of amount installed, for each type, composition, color, pattern, and size.

1.7 QUALITY ASSURANCE

- A. Mock-ups: Prior to fabrication and installation, build mock-up for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up to comply with the following requirements, using materials indicated for the completed Work:
 - 1. Build mock-up in the location and of the size indicated or, if not indicated, as directed by Architect. Contractor shall provide structural support framework.
 - a. Show typical components, attachments to building structure, and requirements of installation.
 - b. Build mock-ups in a layered fashion omitting tile in particular areas to reveal underlayment membranes and setting bed installation including but not limited to the following:
 - 1) Tiled floor conditions at thin-set mortar setting beds.
 - 2) Tiled floor conditions at LHT mortar setting beds.
 - 3) Movement joints at tiled floor conditions.
 - 4) Tiled shower stall including three walls, floor, curb, and threshold.
 - 5) Tiled wall conditions, including one interior corner.
 - 2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
 - 3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
 - 4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
 - 5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.8 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.
- E. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.10 PROJECT CONDITIONS

- A. Environmental Limitations: Install tile only when construction in room is completed and ambient temperature and humidity conditions are being maintained to comply with referenced standards and manufacturer's written instructions.

1.11 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

1.12 WARRANTY

- A. Installer's Warranty: Furnish installer's written workmanship warranty signed by an authorized representative using installer's standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 2 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS AND PRODUCTS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Selections: As scheduled or as indicated in Design Selections.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.
 1. Tile: For each tile, obtain of same color, finish, composition, and type, from same source and production run.
 2. Setting and Grouting Materials: Obtain ingredients of uniform quality for each mortar and grout component from single manufacturer.

2.3 PERFORMANCE REQUIREMENTS

- A. Slip Resistance Requirements for Floor Tile:
 1. Standards: Products and installation shall comply with ANSI A137.1, and state and local accessibility standards.
 2. Floor Tile Slip Resistance: For tile installed on walkway surfaces, provide products with the following value as determined by testing identical products by the DCOF AcuTest Method per ANSI A137.1:
 - a. Walkway Surfaces: Minimum 0.42.

2.4 CERAMIC TILE PRODUCTS

- A. Material Quality Standard: ANSI A137.1 "Specifications for Ceramic Tiling" for types, compositions, and grades of tiling indicated.
 1. Furnish tiling complying with "Standard Grade" requirements, unless otherwise indicated.
- B. Ceramic Tile, General: Thin ceramic surfacing unit made from clay, porcelain, or mixture of ceramic materials, glazed or unglazed, fired above red heat to temperature sufficient to produce specific physical properties and characteristics specified.
- C. Factory Blending: For tile exhibiting color variations, blend tile in factory and package so that tile units taken from one package show the same range in colors as those taken from other packages and match approved samples.
- D. Mounting: Where factory-mounted tile is used, provide back- or edge-mounted tile assemblies as standard with manufacturer. Where tile is intended for installation in wet exposure areas, do not use factory mounted tile assemblies unless tile manufacturer states that this type of mounting is suitable for installation indicated.

2.5 WATERPROOF MEMBRANE UNDERLAYMENTS FOR INTERIOR APPLICATIONS

- A. General: Manufacturer's standard product that complies with ANSI A118.10 and is acceptable to authorities having jurisdiction for use as shower pan waterproofing, as selected from one of the following available options. Include primer, pre-fabricated corners, seaming cement, detail tape, sealant, and other standard accessory products required for application provided by membrane manufacturer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

B. Faced Plastic Waterproof Membrane Underlayments:

1. Faced Chlorinated Polyethylene (CPE):

- a. Description: Non-plasticized, chlorinated polyethylene faced on both sides with high-strength, nonwoven polyester fabric; minimum 0.030 in (0.75 mm) nominal thickness.
- b. Manufacturers and Products:
 - 1) The Noble Company; Nobleseal TS.
 - 2) Laticrete; Hydro Ban Sheet Membrane.

2. Faced Polyvinyl Chloride (PVC):

- a. Description: ASTM D 4551, multiple layers of polyvinyl chloride sheet heat-fused together and to facings of bondable nonwoven polyester; minimum 0.040 in (1.0 mm) nominal thickness.
- b. Manufacturer and Product: Compotite Corporation; Composeal Gold.

3. Locations: Thin-set installations at floors, walls, and ceiling; including thin-set shower pan floor installations.

2.6 CRACK ISOLATION MEMBRANE UNDERLAYMENTS

A. General: Manufacturer's standard product that complies with ANSI A118.12 as selected from one of the following available options. Include primer, pre-fabricated corners, seaming cement, detail tape, sealant, and other standard accessory products required for application provided by membrane manufacturer.

B. Fluid-Applied Crack Isolation Membrane Underlayment: Not permitted or allowed within shower and bathtub areas.

1. Description: Manufacturer's proprietary system consisting of liquid applied component and synthetic fabric sheet reinforcement.
2. Manufacturers and Products:

- a. ARDEX Engineered Cements; Ardex 8 + 9 Waterproofing and Crack Isolation Membrane.
- b. Custom Building Products; 9240 Waterproofing and Crack Isolation Membrane.
- c. Laticrete International Inc.; Laticrete 9235 Waterproof Membrane.
- d. Laticrete International Inc.; Blue 92 Anti-Fracture Membrane.
- e. Mapei Corp.; Mapelastic 400.

C. Faced Chlorinated Polyethylene (CPE) Crack Isolation Membrane Underlayment:

1. Description: Non-plasticized, chlorinated polyethylene faced on both sides with high-strength, nonwoven polyester fabric; minimum 0.030 in (0.75 mm) nominal thickness.
2. Manufacturer and Product: The Noble Company; NobleSeal CIS.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.7 SETTING (MORTAR AND GROUT) MATERIALS

A. Material Quality Standards: ANSI A118 Series as indicated.

B. LHT Latex-Portland Cement Mortar:

1. Material Quality Standard: ANSI A118.4, with the following physical properties:

- a. Manufacturer's premium polymer modified LHT mortar product; gray color. Use white color with light colored stone, translucent marble or light color grout as recommended by manufacturer.
- b. Integral antimicrobial product added during manufacturing to resist mold and mildew growth.
- c. Non-sag capability.
- d. Suitable for use in LHT mortar beds up to **1/2 in (12 mm)** thick.

2. Manufacturers and Products - Floor Tiling:

- a. ARDEX Engineered Cements; X 77 Microtec.
- b. Custom Building Products; ProLite Tile & Stone Mortar.
- c. Laticrete International, Inc.; Laticrete 255 MultiMax.
- d. Mapei Corp.; Ultraflex LFT Mortar.

C. Thin-Set Latex-Portland Cement Mortar (For All Tile Types Except Glass):

1. Material Quality Standard: ANSI A118.4, with the following physical properties:

- a. Manufacturer's premium polymer modified thin-set product; gray color. Use white color with light colored stone, translucent marble or light color grout as recommended by manufacturer.
- b. Integral antimicrobial product added during manufacturing to resist mold and mildew growth.
- c. Non-sag capability.
- d. Suitable for use in thin set mortar beds up to **1/4 in (6 mm)** thick.

2. Manufacturers and Products - Floor Tiling:

- a. ARDEX Engineered Cements; X 77 Microtec.
- b. Custom Building Products; ProLite Tile & Stone Mortar.
- c. Laticrete International, Inc.; Laticrete 254 Platinum Thin-Set Mortar.
- d. Mapei Corp.; Ultraflex 3 Mortar.

3. Manufacturers and Products - Wall Tiling:

- a. ARDEX Engineered Cements; X 77 Microtec.
- b. Custom Building Products; ProLite Tile & Stone Mortar.
- c. Laticrete International, Inc.; Laticrete 255 MultiMax Multipurpose Thin-Set Mortar.
- d. Mapei Corp.; Ultralite Mortar.

D. Latex-Portland Cement Grout for Tile Joints:

1. Unsanded Grout:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Material Quality Standard: ANSI A118.7, with following physical properties:
 - 1) Manufacturer's premium polymer modified unsanded grout product.
 - 2) Integral antimicrobial product added during manufacturing to resist mold and mildew growth.
 - b. Manufacturers and Products:
 - 1) ARDEX Engineered Cements; FG-C Unsanded Grout.
 - 2) Custom Building Products; Prism Surecolor Grout.
 - 3) Laticrete International, Inc.; Permacolor Grout.
 - 4) Mapei Corp.; Ultracolor Plus Grout.
 - c. Locations: Tile Joints less than **1/8 in (3 mm)** wide.
2. Sanded Grout:
- a. Material Quality Standard: ANSI A118.7, with following physical properties:
 - 1) Manufacturer's premium polymer modified sanded grout product.
 - 2) Integral antimicrobial product added during manufacturing to resist mold and mildew growth.
 - b. Manufacturers and Products:
 - 1) ARDEX Engineered Cements; FL Rapid Set, Flexible, Sanded Grout.
 - 2) Custom Building Products; Prism Surecolor Grout.
 - 3) Laticrete International, Inc.; Permacolor Grout.
 - 4) Mapei Corp.; Ultracolor Plus Grout.
 - c. Locations: Tile Joints **1/8 in (3 mm)** wide and larger.

2.8 ELASTOMERIC SEALANTS

A. Sealant Colors: Match color of adjacent grout unless otherwise indicated.

B. Mildew-Resistant Floor or Wall Joint Sealant:

- 1. Material Quality Standard: ASTM C 920, Type S, Grade NS, Class 25, with following physical properties:
 - a. Integral antimicrobial product added during manufacturing to resist mold and mildew growth.
 - b. Intended for sealing interior ceramic tile joints and other nonporous substrates.
 - c. Resistant to in-service exposures of high humidity and temperature extremes.
- 2. Description: One-part mildew-resistant silicone sealant.
- 3. Manufacturers and Products:
 - a. ARDEX Engineered Cements; SX.
 - b. Custom Building Products; Commercial 100% Silicone Caulk.
 - c. Dow Corning Corp.; 786.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- d. Laticrete International, Inc.; Latasil.
- e. Pecora Corp.; 898.
- f. Tremco Inc.; Tremsil 200.

C. Backer Rods:

- 1. Material Quality Standard: ASTM C 1330, Type B.
- 2. Description: Non-gassing (when punctured), bi-cellular polyethylene or polyolefin foam rod with a surface skin, of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
- 3. Manufacturers and Products:
 - a. BASF Construction Chemicals; MasterSeal 921 (Formerly Sonneborn Soft Backer Rod).
 - b. Nomaco Inc.; Sof Rod.

D. Backer Tape: Bond-breaking polyethylene or other plastic tape, self-adhesive where applicable, recommended by sealant manufacturer for preventing sealant from adhering to back of joint where such adhesion would result in sealant failure.

2.9 RELATED MATERIALS

- A. Cementitious Underlayments: Trowelable or self-leveling as required by conditions; pre-mixed, latex-modified, Portland cement based formulation provided by or specifically approved by setting material manufacturer; include primers if required for concrete substrate condition.
- B. Patching Compounds: Trowelable pre-mixed, latex-modified, Portland cement based formulation provided by or specifically approved by setting material manufacturer; include primers if required for concrete substrate condition.
- C. Metal Transition Strips (Tile to Adjacent Flooring Material):
 - 1. Schluter Systems LP; Schiene, stainless steel.
- D. Stone Threshold:
 - 1. Material Quality Standard: MIA Group A.
 - 2. Description: White marble with honed finish.
 - 3. Fabrication: Of shape and width to allow top at no more than 1/2 in (12 mm) above adjoining finished floor surface and both edges beveled on a slope no greater than 1:2 and as indicated in the Drawings.
- E. Glass-Fiber Tape: Self-adhering, alkali-resistant, glass-fiber tape, 10 by 10 or 10 by 20 threads per 1 in (25 mm).; minimum 2 in (50 mm) wide.
- F. Tile Cleaner: Neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, provided by or specifically approved by tile and grout manufacturers.
- G. Grout Sealer: Manufacturer's standard silicone product for sealing grout joints and that does not change color or appearance of grout.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.10 MIXING MORTARS AND GROUT

A. General Procedures:

1. Mix to comply with referenced quality standards and manufacturers' written instructions.
2. Add materials, water, and additives in accurate proportions.
3. Use type of mixing equipment, speeds, containers, time, and other procedures to produce uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Acceptance of Surfaces and Conditions: Examine substrate surfaces to which tile will be installed for compliance with requirements, installation tolerances, and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with the Contract Documents. Starting work within a particular area will be construed as acceptance.

1. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
2. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.

3.2 INSTALLATION, GENERAL

A. Installation Quality Standard: In addition to standards listed elsewhere, perform tile work according to following, unless otherwise specified:

1. Respective manufacturer's written installation instructions.
2. Accepted submittals.
3. Contract Documents.
4. ANSI A108 installation method indicated.
5. TCNA installation method indicated.

B. General Requirements:

1. Extend tile into recesses and under or behind equipment and fixtures to form a complete covering without interruptions unless otherwise indicated.
2. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
3. Accurately form intersections and returns.
4. Perform cutting and drilling of tile without marring visible surfaces.
5. Grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints, to form smooth edges.
6. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so that plates, collars, or covers overlap tile by not less than **1/8 in (3 mm)**.

C. Jointing Pattern:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Unless otherwise indicated, lay tile in grid pattern.
2. Align joints when adjoining tiles on floor, base, walls, and trim are same size.
3. Lay out tile work and center tile fields in both directions in each space or on each wall area. Adjust to minimize tile cutting.
4. Provide uniform joint widths of size recommended by tile and grout manufacturer unless otherwise indicated.
5. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so that extent of each sheet is not apparent in finished work.

- D. Wainscots: Lay out tile to next full tile beyond dimensions indicated, and finish with bullnose shape.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Substrate Cleaning: Remove curing compounds, coatings, laitance, efflorescence, concrete dust, dirt, oil, gypsum board dust, paint, and other residue that would adversely affect or reduce bonding.
- C. Concrete Floor Preparation:
1. Prepare concrete floor substrates to comply with flatness tolerance of **1/4 in in 10 ft (6 mm in 3 m)** as follows:
 - a. Fill cracks, holes and depressions with trowelable cementitious underlayments and patching compounds.
 - b. Remove concrete protrusions, bumps, and ridges by sanding or grinding.
 2. If substrate does not have fine broom finish, mechanically scarify concrete substrates to not less than ICRI CSP 4 finish.
 3. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped **1/4 in per foot (1:50)** toward drains.
- D. Substrate Joints, Gaps, Penetrations, and Different Substrates within Shower and Tub Enclosures: Prior to installing tile, seal the following joints, gaps, and spaces between differing materials as follows:
1. Base of Wall Joints within Shower and Tub Enclosures: Apply wall joint sealant at joint between Coated Glass-Mat Water Resistant Board (specified in Division 09 Section "Gypsum Board Assemblies") and Tub Enclosure or Prefabricated Shower Receptor, Thick-set Mortar Bed, or floor slab to create water resistant barrier in accordance with TCNA Installation B420.
 2. Penetrations: Apply wall joint sealant at penetrations through wall substrates to create water resistant barrier; especially at piping and valve penetrations.
 3. Toilet Accessories: Apply wall joint sealant at fastener penetrations and around perimeter of backing plates to create water resistant barrier.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Joints and Corners: Apply glass-fiber tape to joints and corners of substrates within Showers and Tub Enclosures with thin-set mortar.
 - E. Blending: Verify tile has been factory blended and packaged as specified; if not, either return to manufacturer or blend tiles at site before installing.
 - F. Field-Applied Temporary Protective Coating: Where needed to prevent grout from staining or adhering to exposed tile surfaces, pre-coat with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.
- 3.4 WATERPROOF MEMBRANE UNDERLAYMENT INSTALLATION
- A. Installation Quality Standard: ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.
 - B. General Requirements:
 1. If required by manufacturer, prime concrete substrate.
 2. Install to produce a continuous waterproof membrane of uniform thickness bonded securely to substrate, without wrinkles, bubbles, buckles or kinks.
 3. For sheets, overlap and seal seams.
 4. Turn membrane up wall at locations where tile is scheduled for wall or base.
 5. Roll installed sheet if required by manufacturer.
 6. Install tile after waterproofing has cured and been tested determined it is watertight.
- 3.5 CRACK ISOLATION MEMBRANE UNDERLAYMENT INSTALLATION
- A. General Requirements:
 1. If required by manufacturer, prime concrete substrate.
 2. Install to produce a continuous crack isolation membrane of uniform thickness bonded securely to substrate, without wrinkles, bubbles, buckles, or kinks.
 3. For sheets, overlap and seal seams.
 4. For liquid applied products, brush or roll liquid uniformly over area in number of coats required and install reinforcing fabric.
 5. Roll installed sheet if required by manufacturer.
 6. After installation of tile, install floor joint sealant in tile joints recommended by manufacturer to coordinate with membrane strips.
- 3.6 TILE INSTALLATION
- A. Comply with TCNA's "Handbook for Ceramic Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.
 - B. Installation Quality Standard: Install tile according to following standards:
 1. LHT Mortar: ANSI A108.5; for floor tiles larger than 8 in by 8 in (200 mm by 200 mm) or with at least one side greater than 15 in (375 mm) and where subfloor is not recessed.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Thin-set Latex-Portland Cement Mortar: ANSI A108.5; for floor tiles **8 in by 8 in (200 mm by 200 mm)** and smaller where subfloor is not recessed; and for interior wall tiles.
 3. Latex-Portland Grout: ANSI A108.10, typical unless indicated otherwise.
- C. Back Buttering: For following installations, obtain minimum 95 percent mortar coverage as in referenced ANSI A108 series of installation standards:
1. Tile floors and ceilings in wet and limited water exposures.
 2. Tile floors composed of tiles **12 in by 12 in (300 mm by 300 mm)** or larger.
 3. Tile floors composed of rib-backed tiles.
- D. Grout Joint Widths: Install the respective types of tile with the following grout joint widths, unless otherwise recommended by tiling and grout manufacturers.
1. Ceramic Mosaic Tile - Less than **6 sq in (3900 mm²): 1/16 in (1.5 mm)**.
 2. Paver Tile - **6 sq in (3900 mm²) or More: 1/4 in (6 mm)**.
- E. Stone Thresholds: Install at locations indicated; set in same type of setting bed as abutting field tile, unless otherwise indicated. Where edge of mortar bed would be exposed, set in thin-set mortar.
- F. Metal Trim: Install at locations indicated and where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile.
- G. Grout Sealer: Apply grout sealer to cementitious grout joints in tile floors according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.
- 3.7 MOVEMENT JOINTS
- A. Movement Joints, General: Installation Quality Standard: In accordance with TCNA Movement Joint Design Essentials EJ171 and as specified below.
- B. Wall Joints: The following conditions shall not be grouted; install wall joint sealant and backer rod or backer tape:
1. Gypsum board assembly control joints.
 2. Building expansion joints, unless scheduled for expansion joint cover.
 3. Interior corners of tiled walls, including shower and bathtub walls.
 4. Around substrates and tile at penetrations through tiled substrates.
 5. At one side of changes in direction or plane of wall.
 6. At joint closest and parallel to changes in substrates supporting tile between wall and floor.
- C. Floor Joints:
1. General Requirements:
 - a. Continue construction, contraction (control), and expansion joints in building structure through tile work.
 - b. Isolate tile work that abuts a restraining structure or assembly.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. When metal trim or sealant/backer is used for joint, width shall not be less than width of joint in building structure.
 - d. Tile shall not be placed over building expansion joints.
- 2. Schedule of Sealant Products and Locations:
 - a. Latex-Portland Cement Grouted Floors: Install floor joint sealant with backer rod at horizontal joints in mortar and grout setting conditions.
- 3. Interior Movement Joint Spacing: As indicated on Drawings and as specified below:
 - a. Tile Exposed to Direct Sunlight or Moisture: 8 ft to 12 ft (2.4 m to 3.6 m) on center each way.
 - b. Tile Not Exposed to Sunlight: 20 ft to 25 ft (6 m to 7.5 m) on center each way.
- D. Interior Floor Joint Installation Schedule: Seal interior floor movement joints, as defined by TCNA, according to following schedule:
 - 1. Construction Joints: Floor joint sealant and backer rod.
 - 2. Contraction (Control) Joints: Floor joint sealant and backer rod.
 - 3. Isolation Joints: Floor joint sealant and backer rod.
 - 4. Tile Expansion Joints: Floor joint sealant and backer rod.
 - 5. Perimeter Joints between Wall and Floors: Floor joint sealant with backer tape.

3.8 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Manufacturer's qualified technical representative shall periodically inspect Work to ensure installation is proceeding in accordance with manufacturer's designs, recommendations, instructions, and warranty requirements. Representative shall submit written reports of each visit indicating observations, findings, and conclusions of inspection.
 - 1. Manufacturer's Technical Representative Qualifications: Direct employee of technical services department of manufacturer with experience in providing recommendations, observations, evaluations, and problem diagnostics.

3.9 TESTING

- A. Shower Receptor Test: Where shower floors and receptors are made water-tight by the application of the waterproof membrane, the completed membrane installation shall be tested at each installation.
 - 1. The pipe from the shower drain shall be plugged and the receptor area shall be filled with water to a depth of not less than 2 in (50 mm) measured at the threshold.
 - 2. Where a threshold of adequate height does not exist a temporary threshold shall be constructed to retain the test water to the stated depth.
 - 3. The water shall be retained for a test period of not less than 24 hours, and there shall not be evidence of leakage.
 - 4. Report results of tests, both successful and unsuccessful. In addition to results, report shall include date of test, project name, list of products being applied and tested, name of applicator, name of Contractor, and conditions causing failure of waterproofing membrane in event of an unsuccessful test.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

5. Materials and installations failing to meet specified requirements shall be replaced at Contractor's expense. Retesting of materials and installations failing to meet specified requirements shall be done at Contractor's expense.

3.10 CLEANING

A. Cleaning:

1. Acids are not permitted, nor will they be allowed.
2. Clean tile surfaces so they are free of foreign matter.
3. Remove grout residue from tile as soon as possible.
4. No sooner than 10 days after installation, clean grout smears and haze from tile according to tile and grout manufacturer's written instructions. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned.
5. Protect metal surfaces and plumbing fixtures from effects of cleaning.
6. Flush surfaces with clean water before and after cleaning.
7. Remove temporary protective coating by method recommended by coating manufacturer that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent it from clogging drains.

3.11 DEMONSTRATION

- A. Cleaning and Maintenance Training: Provide instruction to Owner's personnel for cleaning and maintenance of installed work, including methods and frequency for maintaining optimum condition under anticipated use; include precautions against cleaning materials and methods which may be detrimental to finishes and performance.

3.12 PROTECTION

- A. Coverings: When recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.
- B. Traffic Restrictions: Prohibit foot and wheel traffic from tiled floors for at least 7 days after grouting is completed.

3.13 INTERIOR TILE INSTALLATION SCHEDULE

A. Floors, Concrete Substrate:

1. TCNA Installation Method F125A (Crack Isolation Membrane; full coverage): Thin-set Latex-Portland cement mortar over crack isolation membrane over concrete subfloor; Latex-Portland Cement Grout.
 - a. Location: Where scheduled in the Room Finish Schedule located on the drawings and in all thin-set tile locations which have neither waterproofing nor sound isolation scheduled.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. TCNA Installation Method F122 (Waterproof Membrane): Thin-set Latex-Portland cement mortar over waterproof membrane over concrete subfloor; Latex-Portland Cement Grout.
 - a. Location: As scheduled in the Room Finish Schedule located on the drawings.
- B. Walls, Gypsum Board Substrate:
 1. TCNA Installation Method W243: Thin-set Latex-Portland cement mortar over coated-glass-mat gypsum board; Latex-Portland Cement Grout.
- C. Walls, Gypsum Board Substrate, Bathtub / Shower Surfaces:
 1. Walls, Including Tub Unit or Pre-Fabricated Shower Receptors: TCNA Installation Method B419 (Waterproof Membrane): Thin-set Latex-Portland cement mortar over waterproof membrane over coated-glass-mat gypsum board; Latex-Portland Cement Grout.
 2. Shower Receptors: TCNA Installation Method B420 (Waterproof Membrane): Thin-set Latex-Portland cement mortar over waterproof membrane over coated-glass-mat gypsum board walls and concrete subfloors; Latex-Portland Cement Grout.

SECTION 09 5113

ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Acoustical lay-in ceiling panels, exposed metal suspension systems, and supplementary items necessary for installation.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Product Schedule: Use same designations indicated on the Finish Schedule and Drawings.
- C. Samples for Verification Purposes: Full-size units of each type of ceiling assembly indicated; in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics.
 - 1. Acoustical Panels: Set of 6 in (150 mm) square samples of each type, color, pattern, and texture.
 - 2. Exposed Suspension-System Members, Moldings, and Trim: Set of 12 in (300 mm) long samples of each type, finish, and color.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Written reports based on evaluation of comprehensive tests performed by qualified testing agency indicating that each product complies with requirements.
- B. Qualification Data:
 - 1. For firms and persons specified in "Quality Assurance" to demonstrate their capabilities and experience. Include list of completed projects.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: To include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Extra Materials: Furnish the following extra materials that match and are from same production runs as products installed, packaged with protective covering for storage and identified with labels describing contents:
 - 1. Acoustical Ceiling Panels: Full-size units equal to 2 percent of amount installed.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Suspension System Components: Quantity of each exposed component equal to 2 percent of amount installed.

1.6 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and stabilized moisture content.
- C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.9 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
 1. Armstrong World Industries, Inc.
 2. CertainTeed Corporation.
 3. Chicago Metallic / Rockfon.
 4. Lindner Ceiling Systems.
 5. OWA USA.
 6. USG Interiors, Inc.; Subsidiary of USG Corporation.
- B. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.
 - 1. Obtain both acoustical ceiling panels and suspension system from the same manufacturer if both are offered by the manufacturer.

2.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Products and systems shall be engineered to withstand loads within limits of allowable working stresses of the materials involved under conditions indicated and without permanent deformation or failure of materials.
- B. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials.
 - 2. Smoke-Developed Index: 450 or less.
- C. [Seismic Standards](#): Provide acoustical panel ceilings designed and installed to withstand the effects of earthquake motions according to the following:
 - 1. Standard for Ceiling Suspension Systems Requiring Seismic Restraint: Comply with ASTM E 580.

2.4 ACOUSTICAL PANELS, GENERAL

- A. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectance's, unless otherwise indicated.
 - 1. Selections: As scheduled or as indicated in Design Selections.

2.5 METAL SUSPENSION SYSTEMS, GENERAL

- A. Metal Suspension System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635/C 635M.
- B. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.
 - 1. High-Humidity Finish: Comply with ASTM C 635/C 635M requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.
- C. Attachment Devices: Size for five times design load indicated in ASTM C 635/C 635, Table 1, "Direct Hung", unless otherwise indicated.
 - 1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

for attaching hangers and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing per ASTM E 488/E 488M or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.

- a. Cast-in-place anchors, designed for attachment to concrete.
 - b. Post-installed expansion anchors.
 - c. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 for Class SC1 service condition.
2. Powder-Actuated Anchors: Suitable for application indicated, ANSI A10.3; low velocity, powder-actuated fasteners; drive pins and clip angles fabricated from corrosion-resistant materials, with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, an ultimate load capacity not less than 10 times that imposed by construction as determined by testing according to ASTM E 1190 by a qualified independent testing agency.
- a. Manufacturers:
 - 1) Construction Materials, Inc.
 - 2) Heckman Building Products, Inc.
 - 3) Hilti Corp.
 - 4) ITW Ramset/Red Head.
 - 5) Powers Fasteners.
 - 6) Simpson Strong Tie Anchor Systems.
3. For post-tensioned concrete, anchors shall not exceed **1 in (25 mm)** embedment. Obtain Structural Engineer's written approval for all proposed anchors in post-tensioned concrete prior to installation.

D. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:

1. Wire:
 - a. Zinc-Coated Carbon-Steel Wire: ASTM A 641 / A 641M, Class 1 zinc coating, soft temper.
2. Size: Select wire diameter so its stress at 3 times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than **0.106 in (2.69 mm)** diameter wire.

E. Edge Moldings and Trim: Manufacturer's standard moldings for edges and penetrations that fit acoustical panel edge details and suspension systems indicated; formed from sheet metal of same material and finish as that used for exposed flanges of suspension system runners.

1. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.
2. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
3. For narrow-face suspension systems, provide suspension system and manufacturer's standard edge moldings that match width and configuration of exposed runners.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

4. Where required by Code or authorities having jurisdiction, provide **2 in (50 mm)** wide wall angle around the ceiling perimeter in Seismic Design Categories D, E, and F.

F. Specialty Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements.

1. Baked-Enamel or Powder-Coat Finish: Minimum dry film thickness of **1.5 mils (0.04 mm)**. Comply with ASTM C 635/C 635M and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
2. Basis of Design (Product Standard) Manufacturer and Product: Armstrong World Industries, Inc.; Axiom series, with manufacturer's 30 year warranty.

2.6 METAL SUSPENSION SYSTEM FOR ACOUSTICAL PANEL CEILINGS

A. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653 / A 653M, not less than G30 (Z90) coating designation, with prefinished **15/16 in (24 mm)** wide metal caps on flanges.

1. Structural Classification: Heavy-duty system.
2. End Condition of Cross Runners: Override (stepped) type.
3. Face Design: Flush face.
4. Cap Material: Steel sheet.
5. Cap Finish: Painted white, unless indicated otherwise.
6. Manufacturers and Products:
 - a. Armstrong World Industries, Inc.; Prelude XL.
 - b. CertainTeed Corporation; Classic Stab.
 - c. Chicago Metallic Corporation; 1200 System.
 - d. USG Interiors, Inc.; Donn DX.

B. Wide-Face, Capped, Double-Web, Hot-Dip Galvanized, G60 (Z180), Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, hot-dip galvanized according to ASTM A 653 / A 653M, G60 (Z180) coating designation, with prefinished, cold-rolled, 15/16 in (24 mm) wide, aluminum caps on flanges.

1. Structural Classification: Heavy-duty system, standard of manufacturer.
2. End Condition of Cross Runners: Override (stepped) type.
3. Face Design: Flush face.
4. Cap Material: Aluminum sheet.
5. Cap Finish: Painted white, unless indicated otherwise.
6. Cap Finish: Clear anodized.
7. Manufacturers and Products:
 - a. Armstrong World Industries Inc.; Prelude Plus XL Fire Guard.
 - b. CertainTeed Corporation; FireSecure 15/16" Classic Environmental Stab System.
 - c. Chicago Metallic Corporation; 1830 HDG-60 Steel with Aluminum Cap.
 - d. USG Interiors Inc.; ZXLA.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. ASTM C 636 / C 636M.
 - 2. Respective manufacturer's written installation instructions.
 - 3. Accepted submittals.
 - 4. Contract Documents.
- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Coordination: Furnish layouts for cast-in-place anchors, clips, and other ceiling anchors. Furnish cast-in-place anchors and similar devices to other trades for installation well in advance of time needed for coordinating other work.
- C. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.4 INSTALLATION OF ACOUSTICAL PANEL CEILINGS

- A. Suspend ceiling hangers from building's structural members and as follows:
 - 1. Install hangers plumb and free from contact with mechanical and electrical equipment, insulation, or other objects within ceiling plenum that are not part of supporting structural frame or ceiling suspension system. Within limitations allowed by installation quality standards, splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - 2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by installation

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- quality standards.
3. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
 4. Do not support ceilings directly from permanent metal forms. Fasten hangers to cast-in-place hanger inserts, power-actuated fasteners, or drilled-in anchors that extend through forms into concrete.
 5. Do not attach hangers to steel deck tabs.
 6. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 7. Space hangers not more than 48 in (1200 mm) on center along each member supported directly from hangers, unless otherwise indicated; and provide hangers not more than 8 in (200 mm) from ends of each member.
 8. Do not connect or suspend any ceiling components from ducts, pipes or conduit.
 9. Do not make local kinks or bends in hanger wires as a means of leveling.
- B. Install edge moldings and trim at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Screw attach moldings to substrate at intervals not more than 16 in (400 mm) on center and not more than 3 in (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 in per 12 ft (3 mm per 3.6 m). Miter corners accurately and connect securely.
 2. Do not use exposed fasteners, including pop rivets, on moldings and trim.
 3. Provide control joints where joints occur in abutting surfaces.
 4. Hold tees in place with concealed clips.
- C. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
1. Space steel main runners at 48 in (1200 mm) on center.
- D. Install acoustical panels with undamaged edges and fitted accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
1. Arrange directionally patterned acoustical panels with pattern running in one direction parallel to long axis of space.
 2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.
 3. For reveal-edged panels on suspension system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
 4. For reveal-edged panels on suspension system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension system surfaces and panel faces flush with bottom face of runners.
 5. Paint cut panel edges remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.

3.5 PROTECTION

- A. Protect products and systems from damage during installation and remainder of construction

HKS 26399.005
2026-01-16

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

period according to manufacturer's instructions.

3.6 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 096500
RESILIENT FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Resilient flooring products and systems and supplementary items necessary for installation.
 - 1. Resilient tile flooring.
 - 2. Resilient sheet flooring.
 - 3. Luxury vinyl tile flooring.
- B. Related Section:
 - 1. Resilient wall base, reducer strips, and other accessories installed with resilient flooring are specified in Division 09 Section "Resilient Base and Accessories".

1.2 ALLOWANCES

- A. Concrete Moisture Barrier Allowance: Include allowance to provide Concrete Moisture Barrier Floor Treatment to concrete floor decks.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, recommended adhesives, construction details, installation instructions, and recommendations for maintenance.
- B. Shop Drawings for Special Patterns: Show layout and details of special patterns for resilient flooring.
- C. Product Schedule: Use same designations indicated on the Finish Schedule and Drawings.
- D. Samples for Verification Purposes: In manufacturer's standard size, but not less than 6 in by 9 in (150 mm by 230 mm) sample of each different color and pattern of resilient flooring product specified, showing the full range of variations expected in these characteristics. Label each sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in Schedules.
 - 1. Heat-Welded Sheet Flooring: For heat-welding bead, manufacturer's standard-size samples, but not less than 9 in (225 mm) long, of each color specified.
 - 2. Seam Samples for Sheet Flooring: For each color and pattern of resilient sheet flooring product required; with seam running lengthwise and in center of 6 in by 9 in (150 mm by 230 mm) sample applied to a rigid backing and prepared by installer for this Project.

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturer's Project Acceptance Document: Certification by the manufacturer that its product(s) are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required.
 - 1. Product Compatibility: On installations incorporating products provided by more than one manufacturer, each manufacturer's certificate shall include specific reference to and approval of the other manufacturer's products.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.5 CLOSEOUT SUBMITTALS

- A. Maintenance Instructions: Include in operation and maintenance manual as required by Division 01 Section "Closeout Procedures". Submit manufacturer's instructions for maintenance of installed work, including methods and frequency for maintaining optimum condition under anticipated use. Include precautions against cleaning materials and methods which may be detrimental to finishes and performance.

1.6 QUALITY ASSURANCE

- A. Slip Resistance: Provide products identical to those tested for slip resistance per ASTM D 2047 with a static coefficient of friction not less than 0.6 for level surfaces and 0.8 for ramped surfaces.
- B. Fire-Test-Response Characteristics: Provide products with the following fire-test-response characteristics as determined by testing identical products per test method indicated below by a testing and inspecting agency acceptable to authorities having jurisdiction.
 - 1. Critical Radiant Flux: Class I, 0.45 W/sq. cm or greater when tested per ASTM E 648.
 - 2. Smoke Density: Maximum specific optical density of 450 or less when tested per ASTM E 662.

1.7 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.
 - 1. Participants:
 - a. Architect.
 - b. Contractor, including superintendent.
 - c. Installer, including project manager and supervisor.
 - d. LVT manufacturer's qualified technical representative for each product specified
 - e. Installers of other construction interfaced with Work.
 - 2. Minimum Agenda: Installer shall demonstrate understanding of the Work required by describing detailed procedures for preparing, installing, and cleaning the Work. Demonstration shall include, but not be limited to, following topics:
 - a. Tour representative areas of Work, inspect and discuss condition of substrate, and other preparatory work performed by other trades.
 - b. Review Contract Document requirements.
 - c. Review approved submittals.
 - d. Review inspection and testing requirements.
 - e. Review environmental conditions and procedures for coping with unfavorable conditions.
 - f. Resolve deviations or differences between Contract Documents and the manufacturer's specifications.
 - 3. Record discussions, including decisions and agreements, and prepare report.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Store flooring products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 85 deg F (29 deg C).
 - 1. Resilient Tile Flooring: Store floor tiles on flat surfaces.
 - 2. Resilient Sheet Flooring: Store sheet flooring rolls upright.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.9 PROJECT CONDITIONS

- A. Unless otherwise approved in writing by the manufacturer, do not begin flooring installation unless permanent building HVAC system is operational and capable of maintaining relative humidity and temperature of not less than 70 deg F (21 deg C) or more than 85 deg F (29 deg C) for at least 48 hours before installation, during installation, and after installation.
 - 1. Maintain relative humidity of not more than the designed relative humidity for spaces to receive flooring.
- B. Maintain flooring products prior to installation at the same temperature as the space where they are to be installed.
- C. Close spaces to traffic during flooring installation and for time period after installation recommended by manufacturer.
- D. Install flooring products after other finishing operations, including painting, have been completed.
- E. Do not install flooring over concrete substrates until slabs have cured and are sufficiently dry to bond with adhesive, as determined by flooring manufacturer's recommended tests. Refer to "Preparation" Article for requirements.

1.10 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

1.11 WARRANTY FOR LUXURY VINYL TILE

- A. Manufacturer's Warranty: Furnish manufacturer's written material and labor warranty signed by an authorized representative using manufacturer's standard form agreeing to furnish materials and labor required to repair or replace work which exhibits material defects caused by manufacture or design and installation of product. "Defects" are defined to include but not limited to deterioration or failure to perform as required.
 - 1. Guestrooms Warranty Period: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 20 years from date of Substantial Completion.
 - 2. Public Areas Warranty Period: Manufacturer shall warrant the products to be free from material and labor Defects for a period of 10 years from date of Substantial Completion.
- B. Installers Warranty: Furnish installer's written workmanship warranty signed by an authorized representative using installers standard form agreeing to provide labor required to repair or replace work which exhibits workmanship defects. "Defects" is defined to include but not limited to deterioration or failure to perform as required.
 - 1. Warranty Period: Installer shall warrant the installation to be free from workmanship Defects for a period of 2 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Manufacturers:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Vinyl Flooring:
 - a. Altro Group.
 - b. Armstrong World Industries, Inc.
 - c. Congoleum Corporation.
 - d. Forbo Flooring, Inc.
 - e. Gerflor, Architectural Floor Systems, Inc.
 - f. Lonseal, Inc.
 - g. Mannington Mills, Inc.
 - h. Tarkett, Inc.
 2. Rubber Flooring
 - a. AB; American Biltrite.
 - b. Flexco.
 - c. Nora Systems, inc.
 - d. PRF USA, Inc.
 - e. R.C.A. Rubber Company (The).
 - f. VPI, LLC, Floor Products Division.
 3. Linoleum Flooring:
 - a. Armstrong World Industries, Inc.
 - b. Forbo Industries, Inc.
 - c. Johnsonite; A Tarkett Company.
- C. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.
1. Selections: As scheduled or as indicated in Design Selections.
- 2.2 MATERIALS, GENERAL
- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.
- 2.3 RESILIENT TILE FLOORING MATERIALS
- A. Vinyl Composition Floor Tile Standard: ASTM F 1066, Class 2, through-pattern tile, unless otherwise indicated.
1. Size: 12 in by 12 in by 0.125 in (300 mm by 300 mm by 3 mm).
- B. Solid Vinyl Floor Tile Standard: ASTM F 1700, Class 1, monolithic vinyl tile, unless otherwise indicated.
1. Size: 12 in by 12 in by 0.125 in (300 mm by 300 mm by 3 mm).
- C. Linoleum Floor Tile Standard: ASTM F 2195, Type I, linoleum floor tile with fibrous backing, unless otherwise indicated.
1. Size: 12 in by 12 in by 0.125 in (300 mm by 300 mm by 3 mm).
- D. Rubber Floor Tile: ASTM F 1344, Class I, unless otherwise indicated.
1. Size: 12 in by 12 in by 0.125 in (300 mm by 300 mm by 3 mm).

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2.4 RESILIENT SHEET FLOORING MATERIALS

- A. Vinyl Sheet Floor Coverings: ASTM F 1303, Type I or II, Grade 1, Class A (fibrous) or B (nonfoamed plastic) backing or ASTM F 1913 unbacked as required by product selection.
- B. Rubber Sheet Floor Coverings: ASTM F 1859, Type I (homogeneous rubber sheet).
- C. Sheet Linoleum Floor Coverings: Consisting of oxidized linseed or other vegetable drying oil and rosin, mixed with ground cork or wood flour, mineral filler, and pigments. Mixture is bonded and keyed to burlap (jute) or other suitable fibrous backing to that backing is partially embedded in mixture. Patterns and colors extend through entire floor covering thickness.
- D. Sheet Flooring Thickness: 0.125 in (3 mm).
- E. Heat-Welding Seam Bead: Solid-strand product of floor covering manufacturer for heat welding seams.
 - 1. Selections: As scheduled or as indicated in Design Selections.
- F. Integral Cove Base Accessories: Resilient accessories recommended by flooring manufacturer with selections as follows:
 - 1. Basis of Design: Burke Mercer Flooring Products; Division of Burke Industries, Inc.
 - a. Cap Strip: No. 040 round vinyl cap.
 - b. Cove Strip: No. 070 flexible vinyl cove stick with nominal 1 in (25 mm) radius.
 - c. Reducer: No. 633 vinyl reducer, 1 in (25 mm) wide by 1/8 in (3 mm) high.

2.5 LUXURY VINYL TILE FLOORING MATERIALS

- A. LVT Class: ASTM F1700 Composition of Material: Class III Printed Film Vinyl Plank or Tile, Type B (Embossed).
 - 1. Size and Squareness: ASTM F 2055, plus or minus 0.016-inch per linear foot in size and less than 0.010-inch for squareness.
 - 2. Overall Thickness: 0.1875-inch (4 mm and thicker).
 - a. Wear Layer Thickness: ASTM F386, plus or minus 0.020-inch (0.5 mm).
 - 3. Backing Class: Commercial Grade.
 - 4. Dimensional Stability: ASTM F2199, less than 0.020-inch per linear foot.
 - 5. Residual Indentation: ASTM 1914, less than 8 percent total thickness.
 - 6. Flexibility: ASTM F137, less than 1.0-inch diameter, no cracks or breaks.
 - 7. Chemical Resistance: ASTM F 925, no more than slight change in surface dulling, attack or color change.
 - 8. Heat resistance: ASTM F1514, less than 8 color change.
 - 9. Light Resistance: ASTM F1515, less than 8 color change.
 - 10. Static Load Limit: ASTM F 970, 750 psi minimum.
- B. Floor Assembly Sound Reduction Requirements: Sound reduction membrane underlayments shall contribute to achieving following ratings in floor assemblies when tested by qualified independent testing agency acceptable to authorities having jurisdiction.
 - 1. In addition to laboratory test, the installation shall be field tested to determine the acoustic performance:
 - a. Sound Transmission Class (STC): Not less than 60 according to ASTM E 90.
 - b. Laboratory Impact Insulation or Isolation Class (IIC): Not less than 57 according to ASTM E 492.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- c. Field Impact Insulation or Isolation Class (AIIC): Not less than 53 according to ASTM E 1007, Standard Test Method for Field Measurement of Tapping Machine Impact Sound Transmission Through Floor-Ceiling Assemblies and Associated Support Structures.
- d. Sound reduction underlayment may be a separate component as recommended by the LVT flooring manufacturer and compatible with the LVT flooring material or the underlayment may be a composite component integral to the LVT flooring material

2.6 ACCESSORY MATERIALS

- A. Concrete Slab Primer: Non-staining type as recommended by flooring manufacturer.
- B. Trowelable Leveling and Patching Compounds: Latex-modified, Portland-cement-based formulation provided or approved by flooring manufacturer for products and applications indicated.
- C. Adhesives: Water-resistant type recommended by flooring manufacturer suitable for products, applications, and substrate conditions indicated.
 - 1. Product Compatibility: Provide Manufacturer's written recommendation for each product within an assembly. On installations incorporating products provided by more than one manufacturer, each manufacturer shall approve in writing all adhesives that are in contact with their products.
- D. Concrete Moisture Barrier Floor Treatment:
 - 1. Epoxy-Based Moisture Barrier Floor Treatment: Two-component, high-performance, non-flammable, rapid drying, water based, low odor, low VOC, two-component, penetrating epoxy; formulated to reduce moisture vapor transmission and surface alkalinity from concrete substrates, including aged or freshly placed ("green") concrete, prior to installation of impervious glued-down finish flooring specified in other Division 09 sections.
 - a. Basis of Design (Product Standard): Bostik, Inc.; D-250.
 - 2. Cementitious Overcoat: Fast-setting latex-fortified Portland cement skim coating intended for interior uses.
 - a. Basis of Design (Product Standard): Bostik, Inc.; Webcrete 95.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 - 1. Respective manufacturer's written installation instructions.
 - 2. Accepted submittals.
 - 3. Contract Documents.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Concrete Substrates: Prepare according to ASTM F 710.
 - 1. Verify that concrete substrate finishes comply with requirements specified in Division 03 Section "Concrete Finishing" for concrete substrates receiving resilient flooring.
 - 2. Verify that concrete substrates are free of cracks, ridges, depressions, scale, and foreign deposits.
 - 3. Verify that concrete substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Unless concrete has been water-cured, then proceed with the following:
 - a. Bead-blast concrete substrate with an apparatus that abrades the surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - b. Repair damaged and deteriorated concrete according to flooring manufacturer's written recommendations.
 - 4. Determine adhesion and dryness characteristics by performing the following tests as recommended by flooring manufacturer.
 - 5. Alkalinity and Adhesion Testing: Perform tests recommended by flooring manufacturer. A pH range of 5 to 9 is required when substrate is wetted with distilled water and pHHydron paper is applied. Proceed with installation only after concrete substrates pass testing.
 - 6. Moisture Testing: Perform one or both of the following tests as recommended by flooring manufacturer. Perform 3 moisture tests for first 1000 sf (92.9 sm) of concrete substrate scheduled to receive flooring and 1 test for each additional 1000 sf (92.9 sm) or fraction thereof. Proceed with installation only after concrete substrates pass testing.
 - a. Perform anhydrous calcium chloride test in accordance with ASTM F 1869. Proceed with installation only after concrete substrates have maximum moisture-vapor-emission rate of 3 lbs of water/1000 sf (1.36 kg of water/92.9 sm) in 24 hours.
 - b. Perform relative humidity test using in situ probes in accordance with ASTM F 2170. Proceed with installation only after concrete substrates have a maximum 75 percent relative humidity level measurement.
 - 7. Moisture Barrier Floor Treatment: For concrete substrates not meeting moisture test standards specified above, apply epoxy-based moisture floor treatment and cementitious overcoat to concrete substrate in accordance with manufacturer's written instructions.
- C. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.
- D. Broom and vacuum clean substrates to be covered immediately before flooring product installation. After cleaning, reexamine substrates for moisture, alkaline salts, carbonation, or dust. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.4 INSTALLATION OF RESILIENT FLOORING, GENERAL

- A. Apply concrete slab primer, if recommended by flooring manufacturer, prior to applying adhesive. Apply according to manufacturer's directions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- B. Scribe, cut, and fit flooring to butt neatly and tightly to vertical surfaces and permanent fixtures, including built-in furniture, cabinets, pipes, outlets, edgings, door frames, thresholds, and nosings.
- C. Extend flooring into toe spaces, door reveals, closets, and similar openings. Extend flooring to center of door openings.
- D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on substrate. Use chalk or other nonpermanent, non-staining marking device.
- E. Adhere flooring to substrates using a full spread of adhesive applied to substrate to comply with flooring manufacturer's written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.
 - 1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- F. Hand-roll flooring in both directions from center out to embed flooring in adhesive and eliminate trapped air according to manufacturer's written instructions. At walls, door casings, and other locations where access by roller is impractical, press flooring firmly in place with flat-bladed instrument.

3.5 INSTALLATION OF RESILIENT TILE FLOORING

- A. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half of a tile at perimeter.
- B. Match tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Cut tiles neatly around all fixtures. Discard broken, cracked, chipped, or deformed tiles.
 - 1. Lay tiles square with room axis, unless otherwise indicated.
 - 2. Lay tiles with grain running in one direction, unless otherwise indicated.
- C. Access Flooring Panel Substrate: Do not install tile over panel substrate seams.

3.6 INSTALLATION OF RESILIENT SHEET FLOORING

- A. Unroll sheet flooring and allow it to stabilize before cutting and fitting, if recommended in writing by manufacturer.
- B. Lay out sheet flooring to comply with the following requirements:
 - 1. Maintain uniformity of sheet flooring direction.
 - 2. Arrange for a minimum number of seams and place them in inconspicuous and low-traffic areas, and not less than 6 in (150 mm) away from parallel joints in flooring substrates.
 - 3. Match edges of sheet flooring for color shading and pattern at seams according to manufacturer's written recommendations.
 - 4. Avoid cross seams.
- C. Integral Cove Base: Form integral cove base by flashing sheet flooring up vertical surfaces. Support flooring at horizontal and vertical junction with cove strip. Butt flooring at top of base against cap strip.
- D. Heat-Welded Seams: Rout joints and heat weld with welding bead, permanently fusing sections into seamless flooring. Prepare, weld, and finish seams according to manufacturer's written instructions and ASTM F 1516 to produce surfaces flush with adjoining flooring surfaces.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- E. Access Flooring Panel Substrate: Install cement board substrate over access flooring panel substrate before installation of resilient flooring.

3.7 INSTALLATION OF LUXURY VINYL FLOORING, GENERAL

- A. Apply concrete slab primer, if recommended by LVT flooring manufacturer, prior to applying adhesive. Apply according to manufacturer's directions.
- B. Scribe, cut, and fit flooring and underlayment to allow for thermal movement to gap to vertical surfaces and permanent fixtures, including built-in furniture, cabinets, pipes, outlets, edgings, door frames, thresholds, and nosings.
- C. Extend flooring into toe spaces, door reveals, closets, and similar openings. Extend flooring to center of door openings.
- D. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on substrate. Use chalk or other nonpermanent, non-staining marking device.
- E. Where floating installation is indicated or required, maintain a minimum 5/16 inch expansion around perimeter of the room.
- F. Where adhered installation is indicated or required, adhere flooring components to substrates using a full spread of adhesive applied to substrate to comply with flooring manufacturer's written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.
 - 1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.
- G. Hand-roll flooring in both directions from center out to embed flooring in adhesive and eliminate trapped air according to manufacturer's written instructions. At walls, door casings, and other locations where access by roller is impractical, press flooring firmly in place with flat-bladed instruments.

3.8 CLEANING AND PROTECTING

- A. Perform the following operations immediately after installing flooring products:
 - 1. Remove adhesive and other surface blemishes from exposed surfaces using cleaner recommended by flooring manufacturer.
 - 2. Sweep or vacuum floor thoroughly.
 - 3. Do not wash floor until after time period recommended by flooring manufacturer.
 - 4. Damp-mop floor to remove marks and soil.
- B. Protect flooring against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods recommended in writing by flooring manufacturer.
 - 1. Cover products installed on floor surfaces with undyed, untreated building paper until just prior to Substantial Completion.
 - 2. Do not move heavy and sharp objects directly over floor surfaces. Place plywood or hardboard panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels.
 - 3. Apply two coats.

3.9 RESILIENT FLOORING SCHEDULE

- A. Vinyl Composition Tile:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 096513
RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Resilient wall base, resilient flooring accessories, and supplementary items necessary for installation.

1.2 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
 - 1. Include manufacturer's specifications for materials, finishes, construction details, installation instructions, and recommendations for maintenance.
- B. Product Schedule: Use same designations indicated on the Finish Schedule and Drawings.
- C. Samples for Verification Purposes: In manufacturer's standard size, but not less than 12 in (300 mm) sample of each different color and pattern of resilient product specified, showing the full range of variations expected in these characteristics.

1.3 CLOSEOUT SUBMITTALS

- A. Maintenance Data: To include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Fire-Test-Response Characteristics: Provide products with the following fire-test-response characteristics as determined by testing identical products per test method indicated below by a testing and inspecting agency acceptable to authorities having jurisdiction.
 - 1. Critical Radiant Flux: Class I, 0.45 W/sq. cm or greater when tested per ASTM E 648.
 - 2. Smoke Density: Maximum specific optical density of 450 or less when tested per ASTM E 662.

1.5 PRE-INSTALLATION CONFERENCE

- A. Pre-Installation Conference: Before Work begins, conduct conference at Project site.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by product manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C).

1.7 PROJECT CONDITIONS

- A. Maintain a temperature of not less than 70 deg F (21 deg C) or more than 85 deg F (29 deg C) in spaces to receive resilient products for at least 48 hours before installation, during installation, and for at least 48 hours after installation, unless otherwise recommended by product manufacturer.
- B. Maintain resilient products prior to installation at the same temperature as the space where they are to be installed.
- C. Close spaces to traffic during installation and for time period after installation recommended by manufacturer.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- D. Install resilient products after other finishing operations, including painting, have been completed.
- E. Resilient Stair Accessories: Do not install resilient stair accessories over concrete substrates until slabs have cured and are sufficiently dry to bond with adhesive, as determined by resilient accessory manufacturer's recommended tests. Refer to "Examination" Article for requirements.

1.8 COORDINATION

- A. Coordinate installation of products and systems with interfacing and adjoining construction to provide a successful installation without failure.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements of Contract Documents as judged by the Architect, provide product by one of manufacturers listed. If not listed, submit as substitution according to the Conditions of the Contract and Division 01 Section "Substitution Procedures".
- B. Manufacturer:
 - 1. Armstrong World Industries, Inc.
 - 2. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
 - 3. Endura Rubber Flooring; Division of Burke Industries, Inc.
 - 4. Flexco, Inc.
 - 5. Johnsonite.
 - 6. Mondo Rubber International, Inc.
 - 7. Musson, R. C. Rubber Co.
 - 8. Nora Rubber Flooring; Freudenberg Building Systems, Inc.
 - 9. Roppe Corporation, USA.
- C. Basis of Design (Product Standard): Contract Documents are based on products and systems specified to establish a standard of quality. Other manufacturers offering products having equivalent characteristics may be considered, provided deviations are minor and comply with requirements of Contract Documents as judged by the Architect.
 - 1. Selections: As scheduled or as indicated in Design Selections.

2.2 MATERIALS, GENERAL

- A. Single Source Responsibility: Furnish each type of product from single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

2.3 RESILIENT MATERIALS

- A. Rubber Wall Base:
 - 1. Standard: ASTM F 1861, Type TS (rubber, vulcanized thermoset) or TP (rubber, thermoplastic), Group 1 and 2.
 - 2. Thickness: Nominal 1/8 in (3 mm).
 - 3. Lengths: Provide longest length(s) available per manufacturer. Provide coils if available in profile(s) indicated.
 - 4. Outside and Inside Corners:
 - a. Job-formed.
 - b. Pre-formed.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

B. Resilient Molding Accessories:

1. Carpeting Accessories: Carpet cove cap, carpet step-off, carpet reducer, carpet edge bar.
2. Resilient Flooring Accessories: Reducer strip and others as required.
3. Material: Rubber.
4. Lengths: Provide longest length(s) available per manufacturer. Provide coils if available in profile(s) indicated.
5. Color and finish as selected by Architect from manufacturer's standard colors.

C. Resilient Stair Accessories:

1. Standard: ASTM F 2169, Type TS (rubber, vulcanized thermoset) or TP (rubber, thermoplastic), Class 1 and 2.
2. Rubber Stair Treads:
 - a. Nosing Style: Square, adjustable to cover angles between 60 and 90 degrees.
 - b. Nosing Height: 1-1/2 in (38 mm) to 2 in (50 mm).
 - c. Thickness: 1/4 in (6 mm) at nosing, tapered to 1/8 in (3 mm).
 - d. Size: Lengths and depths to fit each stair tread in one piece or, for treads exceeding maximum lengths manufactured, in equal-length units.
 - e. Manufacturing Method: Group 1, tread with embedded abrasive strips; and Group 2, tread with contrasting color for the visually impaired; as selected by Architect.
3. Risers: Smooth, flat, coved-toe, 1/4 in (6 mm) thick by 7 in (175 mm) high by length matching treads produced by same manufacturer as treads and recommended by manufacturer for installation with treads.
4. Stringers: Of same thickness as risers, height and length after cutting to fit risers and treads and to cover stair stringers; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.

2.4 ACCESSORY MATERIALS

A. Adhesives: Water-resistant type recommended by product manufacturer suitable for products, applications, and substrate conditions indicated.

B. Resilient Stair Accessory Materials:

1. Concrete Slab Primer: Non-staining type as recommended by product manufacturer.
2. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based formulation provided or approved by product manufacturer for products and applications indicated.
3. Stair Tread-Nose Filler: Two-part epoxy compound recommended by rubber stair tread manufacturer to fill nosing substrates that do not conform to tread contours.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Acceptance of Surfaces and Conditions: Examine substrates to receive products and systems and associated work for compliance with requirements and other conditions affecting performance. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents. Starting work within a particular area will be construed as acceptance of surface conditions.
- B. Concrete Substrates for Resilient Stair Accessories: Prepare according to ASTM F 710.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Verify that concrete substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing the following tests as recommended by resilient accessory manufacturer.
2. Verify that concrete substrate finishes comply with requirements specified in Division 03 Section "Concrete Finishing" for concrete substrates receiving resilient flooring.
3. Verify that concrete substrates are free of cracks, ridges, depressions, scale, and foreign deposits.
4. Alkalinity and Adhesion Testing: Perform tests recommended by resilient accessory manufacturer. A pH range of 5 to 9 is required when substrate is wetted with distilled water and pHDrion paper is applied. Proceed with installation only after concrete substrates pass testing.
5. Moisture Testing: Perform one or both of the following tests as recommended by resilient accessory manufacturer. Perform 3 moisture tests for first 1000 sf (92.9 sm) of concrete substrate scheduled to receive resilient stair accessories. Proceed with installation only after concrete substrates pass testing.
 - a. Perform anhydrous calcium chloride test in accordance with ASTM F 1869. Proceed with installation only after concrete substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sf (1.36 kg of water/92.9 sm) in 24 hours.
 - b. Perform relative humidity test using in situ probes in accordance with ASTM F 2170. Proceed with installation only after concrete substrates have a maximum 75 percent relative humidity level measurement.

3.2 INSTALLATION, GENERAL

- A. Installation Quality Standards: In addition to standards listed elsewhere, perform Work according to following, unless otherwise specified:
 1. Respective manufacturer's written installation instructions.
 2. Accepted submittals.
 3. Contract Documents.

3.3 PREPARATION

- A. General: Comply with manufacturer's instructions, recommendations, and specifications for cleaning and surface preparation. Surfaces shall have no defects, contaminants, or errors which would result in poor or potentially defective installation or would cause latent defects in Work.
- B. Resilient Stair Accessories:
 1. Remove substrate coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 2. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.
 3. Broom and vacuum clean substrates to be covered by resilient stair accessories immediately before installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, and dust. Proceed with installation only after unsatisfactory conditions have been corrected.
 4. Apply concrete slab primer, if recommended by product manufacturer, prior to applying adhesive. Apply according to manufacturer's directions.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.4 INSTALLATION OF RESILIENT WALL BASE

- A. Apply wall base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
- B. Install wall base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.
- C. Tightly adhere wall base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- D. Do not stretch wall base during installation.
- E. Masonry Wall Surfaces: On masonry surfaces or other similar irregular substrates, fill voids along top edge of wall base with manufacturer's recommended adhesive filler material.
- F. Job-Formed Corners: Use straight pieces of maximum lengths possible.
 - 1. Outside Corners: Form without producing discoloration (whitening) at bends. Shave back of base at points where bends occur and remove strips perpendicular to length of base that are only deep enough to produce a snug fit without removing more than half the wall base thickness.
 - 2. Inside Corners: Form by cutting an inverted V-shaped notch in toe of wall base at the point where corner is formed. Shave back of base where necessary to produce a snug fit to substrate.
- G. Pre-formed Corners: Install pre-formed corners before installing straight pieces.

3.5 INSTALLATION OF RESILIENT FLOORING ACCESSORIES

- A. Resilient Stair Accessories:
 - 1. Use stair tread-nose filler to fill nosing substrates that do not conform to tread contours.
 - 2. Tightly adhere to substrates throughout length of each piece.
 - 3. For treads installed as separate, equal-length units, install to produce a flush joint between units.
- B. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor coverings that would otherwise be exposed.

3.6 CLEANING AND PROTECTING

- A. Perform the following operations immediately after installing resilient products:
 - 1. Remove adhesive and other surface blemishes from exposed surfaces using cleaner recommended by manufacturer.
 - 2. Sweep or vacuum horizontal surfaces thoroughly.
 - 3. Do not wash resilient products until after time period recommended by manufacturer.
 - 4. Damp-mop surfaces to remove marks and soil.
- B. Protect resilient products against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by resilient product manufacturer.

3.7 RESILIENT PRODUCT SCHEDULE

- A. Resilient Wall Base:
 - 1. RB01:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Manufacturer:
 - b. Height: 2-1/2 in (62 mm)
 - c. Height: 4 in (100 mm)
 - d. Height: 6 in (150 mm)
 - e. Type: Straight at carpet; coved elsewhere.
 - f. Type: Coved.
 - g. Color Selection: As selected by Architect from full range of industry colors.
 - h. Color Selection:
- B. Resilient Stair Accessories:
- 1. Manufacturer:
 - 2. Style:
 - 3. Color Selection:

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 098433
ACOUSTICAL WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

- A. Work required for this section includes acoustical wall panels and supplementary items necessary to complete their installation.
- B. Refer to Division 9 "Fabric-Wrapped Panels" for custom-fabricated wall panels.
- C. Refer to Division 9 Section "Stretched-Fabric Wall Systems" for site-upholstered wall systems.
- D. Refer to Division 9 Section "Wall Coverings" for direct glued fabric wall covering.

1.2 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show fabrication and installation details for acoustical wall panels, including plans, elevations, sections, details, and attachments to other Work. Show orientation of fabric application, pattern matching, and seams.
- C. Samples for Verification: 8 in (200 mm) by 11 in (275 mm) units of each type of acoustical wall panel indicated; in sets for each color, texture, and pattern specified for facing materials, showing the full range of variations expected in these characteristics. Include samples of installation devices and accessories.

1.3 INFORMATIONAL SUBMITTALS

- A. Product Certificates: Signed by manufacturers of acoustical wall panels certifying that products furnished comply with requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For acoustical wall panels and facings to include in maintenance manuals specified in Division 1.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A firm experienced in manufacturing acoustical wall panels similar to those indicated for this Project and with a record of successful in-service performance.
- B. Fire-Test-Response Characteristics: Provide acoustical wall panels with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify acoustical wall panels with appropriate markings of applicable testing and inspecting agency.
 - 1. Flame Spread: 25 or less.
 - 2. Smoke Developed: 450 or less.
- C. Mockup: Before installing acoustical wall panels, build mockup for each form of construction and finish required to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for the completed Work:
 - 1. Build mockup in the location and of the size indicated or, if not indicated, a minimum of three panels.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

2. Notify Architect seven days in advance of the dates and times when mock-up will be installed.
3. Obtain Architect's acceptance of mock-ups before starting fabrication or installation.
4. Acceptance of mock-ups does not constitute acceptance of deviations from the Contract Documents contained in mock-ups unless such deviations are specifically noted by Contractor and accepted by Architect in writing.
5. Demolish and remove mock-ups when directed by Architect unless accepted to become part of the completed Work.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect acoustical wall panels from excessive moisture when shipping, storing, and handling. Deliver in unopened bundles and store in a dry place with adequate air circulation. Do not deliver material to building until wet-work, such as concrete and plaster, has been completed and cured to a condition of equilibrium. Protect panel edges from crushing and impact.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Do not install acoustical wall panels until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Air-Quality Limitations: Protect acoustical wall panels from exposure to airborne odors, such as tobacco smoke, and install panels under conditions free from odor contamination of ambient air.
- C. Field Measurements: Where products and systems are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication.

1.8 WARRANTY

- A. Special Warranty: Written warranty, signed by manufacturer agreeing to repair or replace components of acoustical wall panel system that fail in performance, materials, or workmanship within specified warranty period. Failure in performance includes, but is not limited to, acoustical performance. Failure in materials includes, but is not limited to, sagging or distortion of facing or warping of core.
- B. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

- A. Source Limitations for Acoustical Wall Panels: Obtain acoustical wall panels from one source with resources to provide products of consistent quality in appearance and physical properties.

2.2 ACOUSTICAL WALL PANELS

- A. Provide manufacturer's standard panel construction consisting of facing material laminated to front face, edges, and back border of dimensionally stable, rigid glass fiber board core; with edges chemically hardened to reinforce panel perimeter against warpage and damage.
 1. Panel Selection: Refer to Schedule at end of this Section.
 2. Panel Selection: Refer to Division 1 Section "Design Selections"
- B. Fabricate panels to sizes and configurations indicated; attach facing materials to cores to produce installed panels with visible surfaces fully covered and free from waves in fabric weave, wrinkles, sags, blisters, seams, adhesive, or other foreign matter.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1. Fabricate back-mounted panels in factory to exact sizes required to fit wall surfaces, based on field measurements of completed substrates indicated to receive acoustical wall panels.
 2. Tailor corners and attach facing material so there are no seams or gathering of material.
 3. Where fabrics with directional or repeating patterns, or directional weave, are indicated, mark fabric top and attach fabric in same direction.
 4. Where fabric facings with seams are indicated, fabricate invisible seams and comply with Shop Drawings for location.
- C. Dimensional Tolerances of Finished Units: Plus or minus **1/16 in (1.5 mm)** for width length, straightness, squareness, and thickness.
- D. Sound-Absorption Performance: Provide acoustical wall panels with minimum noise reduction coefficients indicated, as determined by testing per ASTM C 423 for mounting type specified under individual product requirements in the Acoustical Wall Panel Schedule.
- E. Panel Characteristics: Comply with requirements indicated in the Acoustical Wall Panel Schedule.
- F. Spline-Mounting Accessories: Manufacturer's standard concealed, extruded-aluminum or plastic connecting splines designed and fabricated for screw attachment to walls, with other moldings and trim for interior and exterior corners, leveling and base support, and as required. Provide panel manufacturer's standard factory-applied finish on exposed items in color as selected.
- G. Back-Mounting Accessories: Manufacturer's standard or recommended accessories for securely mounting panels, of type and size indicated, to substrates provided; and complying with the following requirements:
1. Mechanically Mounted Edge-Reinforced Panels: Metal panel-clip and base-support bracket system consisting of two-part panel clips, with one part of each clip mechanically attached to back of panel and the other part to wall substrate, designed to support panels laterally; and base-support brackets designed to support full weight of panels; with both designed to allow for panel removal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates surfaces to receive acoustical wall panels and associated work and conditions under which work will be installed. Do not proceed with installation until unsatisfactory conditions have been corrected in a manner acceptable to installer. Starting work within a particular area will be construed as installer's acceptance of surface conditions.

3.2 INSTALLATION

- A. Install acoustical wall panels in locations indicated with vertical surfaces and edges plumb, top edges level and in alignment with other panels, and scribed to fit adjoining work accurately at borders and at penetrations. Comply with panel manufacturer's written instructions for installation of panels using type of mounting accessories indicated or, if not indicated, as recommended by manufacturer.
- B. Construction Tolerances: As follows:
1. Variation from Plumb and Level: Plus or minus **1/16 in (1.5 mm)**.
 2. Variation of Joints from Hairline: Not more than **1/16 in (1.5 mm)**.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

3.3 CLEANING

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels with fabric facing, on completion of installation, to remove dust and other foreign materials according to manufacturer's written instructions.
- C. Remove surplus materials, rubbish, and debris resulting from acoustical wall panel installation, on completion of the Work, and leave areas of installation in a neat and clean condition.

3.4 PROTECTION

- A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure acoustical wall panels are without damage or deterioration at time of Substantial Completion.
- B. Replace panels that cannot be cleaned and repaired, before time of Substantial Completion.

3.5 ACOUSTICAL WALL PANEL SCHEDULE

A. AP01:

- 1. Manufacturer:
- 2. Panel designation:
- 3. Facing Material: Manufacturer's standard fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range.
- 4. Nominal Core Density: Not less than 13 lb/cu. ft.
- 5. Panel Thickness: 3/4 inch unless otherwise indicated.
- 6. Noise Reduction Coefficient: For Type A mounting per ASTM E 795 NRC 0.50 to 0.90.
- 7. Panel Width: Manufacturer's standard.
- 8. Panel Height: As indicated

B. AP02:

- 1. Manufacturer:
- 2. Panel designation:
- 3. Facing Material: Manufacturer's standard fabric from same dye lot; color and pattern as selected by Architect from manufacturer's full range.
- 4. Nominal Core Density: Not less than 13 lb/cu. ft.
- 5. Panel Thickness: 3/4 inch unless otherwise indicated.
- 6. Noise Reduction Coefficient: For Type A mounting per ASTM E 795 NRC 0.50 to 0.90.
- 7. Panel Width: Manufacturer's standard.
- 8. Panel Height: As indicated

END OF SECTION

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

SECTION 099100
PAINTING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes: Surface preparation and field painting of exposed interior items, exterior items and surfaces.
 - 1. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.
- B. Paint exposed surfaces, except where indicated that the surface or material is not to be painted or is to remain natural. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.
 - 1. Painting includes field painting of exposed bare and covered pipes and ducts, hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.
- C. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels, unless indicated otherwise.
 - 1. Prefinished items include the following factory-finished components:
 - a. Prefinished wood doors.
 - b. Acoustical materials.
 - c. Prefinished Architectural woodwork and cabinets.
 - d. Elevator equipment.
 - e. Finished mechanical and electrical equipment.
 - f. Light fixtures.
 - g. Distribution cabinets.
 - h. Baked enamel coated items.
 - i. Fluoropolymer coated items.
 - j. Integral colored plaster.
 - k. Integral colored PVC.
 - 2. Concealed surfaces include walls or ceilings in the following generally inaccessible spaces:
 - a. Foundation spaces.
 - b. Furred areas.
 - c. Ceiling plenums.
 - d. Utility tunnels.
 - e. Pipe spaces.
 - f. Duct shafts.
 - g. Elevator shafts.
 - 3. Finished metal surfaces include the following:
 - a. Anodized aluminum.
 - b. Stainless steel.
 - c. Chromium plate.
 - d. Copper and copper alloys.
 - e. Bronze and brass.
 - 4. Operating parts include moving parts of operating equipment and the following:

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

- a. Valve and damper operators.
 - b. Linkages.
 - c. Sensing devices.
 - d. Motor and fan shafts.
5. Labels: Do not paint over UL, FMG, or other code-required labels or equipment name, identification, performance rating, or nomenclature plates.
- a. Embossed UL labels may be used and painted where acceptable to authority having jurisdiction

D. Related Sections:

- 1. Division 09 Section "Gypsum Board Assemblies" for surface preparation of gypsum board assemblies.
- 2. Division 09 Section "High-Performance Coatings" for coatings applied over such substrates as concrete and GFRP, steel, galvanized metal, and aluminum (not anodized or otherwise coated) that are not specified in this Section.

1.2 DEFINITIONS

- A. MPI Gloss Levels: MPI Gloss and Sheen Standard values are measured per ASTM D523, Method D and are as follows:
- 1. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees.
 - 2. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees.
 - 3. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees.
 - 4. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees.
 - 5. Gloss Level 5: 35 to 70 units at 60 degrees.
 - 6. Gloss Level 6: 70 to 85 units at 60 degrees.
 - 7. Gloss Level 7: More than 85 units at 60 degrees.
- B. Exterior Painting: Generally includes surfaces located in unconditioned spaces.
- C. Interior Painting: Generally includes surfaces located in conditioned spaces.

1.3 ACTION SUBMITTALS

- A. Product Data: Manufacturer's technical literature for each product and system indicated.
- 1. Include manufacturer's specifications for materials, finishes, installation instructions, and recommendations for maintenance.
- B. Product List: For each product indicated, include the following:
- 1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
 - 2. Printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
- C. Samples for Verification: For each type of paint system and each color and gloss of topcoat indicated.
- 1. Submit Samples on rigid backing, 8 in (200 mm) square.
 - 2. Step coats on Samples to show each coat required for system.
 - 3. Label each coat of each Sample.
 - 4. Label each Sample for location and application area.

ARLINGTON ISD WIMBISH ELEMENTARY SCHOOL
ARLINGTON, TX

1.4 INFORMATIONAL SUBMITTALS

- A. Manufacturers Project Acceptance Document: Certification that products are approved, acceptable, suitable for use in specific locations, for specific details, and for applications indicated, specified, or required, and that warranty will be issued.
1. Certifications by manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs).

1.5 QUALITY ASSURANCE

- A. MPI Standards:
1. Products: Complying with MPI standards indicated and listed in "MPI Approved Products List."
 2. Preparation and Workmanship: Comply with requirements in "MPI Architectural Painting Specification Manual" and "MPI Maintenance Repainting Manual" for products and paint systems indicated.
- B. Mockups: Apply benchmark samples of each paint system indicated and each color and finish selected to verify preliminary selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Install mockup in the location and of the size indicated or, if not indicated, as directed by Architect.
 - a. Architect will select one surface to represent surfaces and conditions for application of each paint system.
 - 1) Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
 - 2) Other Items: Architect will designate items or areas required.
 - 3) Demonstrate repair procedures for damaged surfaces.
