Project Manual

August 18, 2025
STANTEC Project No. 21400 1269

Elementary School No. 23

Alvin Independent School District
Manvel, Texas

Final Construction Documents

VOL. 1 of 2

All required permits must be obtained before construction

rear cover

SECTION 00 01 01 - TITLE PAGE:

TITLE AND LOCATION OF THE WORK:

ELEMENTARY SCHOOL #23
2727 White Gold Drive
Rosharon, Texas 77583

NAME AND ADDRESS OF THE OWNER:

ALVIN INDEPENDENT SCHOOL DISTRICT
301 East House Street
Alvin, Texas 77511

NAME AND ADDRESS OF THE ARCHITECT and CONSULTANTS:

STANTEC
ARCHITECT
910 Louisiana Street, Suite 2600
Houston, Texas 77002
Ph (713) 548-5700

S&G Engineers
CIVIL ENGINEER
1796 Avenue D, Suite B
Katy, Texas 77493
Ph (832) 437-7377

CMTA ENGINEERING CONSULTANTS
MEP, TECHNOLOGY & FIRE PROTECTION
2201 Timberloch Place
The Woodlands, Texas 77380
Ph (281) 419-9899

PEA Group
LANDSCAPE ARCHITECT
16060 Dillard Drive, Suite 250.
Houston, Texas 77040
Ph (713) 688-3530

STANTEC
STRUCTURAL ENGINEER
910 Louisiana Street, Suite 2600
Houston, Texas 77002
Ph (713) 548-5700

FOODSERVICE DESIGN PROFESSIONALS
FOOD SERVICE CONSULTANT
594 Sawdust Road, Suite 139
The Woodlands, Texas 77380
Ph (281) 350-2323

INDEX TO SPECIFICATIONS
CONTRACT DOCUMENTS

DOCUMENT 00 01 10 – MASTER TABLE OF CONTENTS

Note: This Master Table of Contents includes **all** specification sections for the Project regardless of origin. Sections marked by asterisk (*****) below are provided by consultants to the Architect or Owner and are not covered by the Architect's seal. Refer to attached supporting Tables of Contents to identify Consultant responsible for a particular section.

VOLUME 1 of 2

Section	Title
00 01 01	Project Title Page
00 01 10	Master Table of Contents
*00 01 11	Sealed Structural Table of Contents
*00 01 12	Sealed MEP Table of Contents
*00 01 13	Sealed Civil Table of Contents
*00 01 14	Sealed Landscape Table of Contents
00 01 15	List of Drawings – Reference Drawing Sheet **G002**

DIVISION 00 - PROCUREMENT AND CONTRACTING REQUIREMENTS - for Competitive Sealed Proposals (CSP)

*00 01 16	Invitation to Proposers
*00 22 13	Supplementary Instructions to Proposers and Attached Forms
*00 23 13	Ranking Criteria for Competitive Sealed Proposals (CSP)
*00 31 32	Geotechnical Data
00 41 00	Proposal Form (Base & Unit Prices)
00 41 10	Proposal Form (Alternates Proposals)
00 43 13	Proposal Security
00 50 00	Construction Contract and Conditions
00 60 00	Bonds and Certificates
*00 73 00	Supplementary Conditions
*00 73 43	Wage Rates

DIVISION 01 - GENERAL REQUIREMENTS

01 10 00	Summary of Work and Scheduling
01 21 00	Cost Allowances
01 22 00	Unit Prices
01 23 00	Alternates
01 25 13	Product Substitutions
01 26 00	Contract Modification Procedures
01 29 00	Applications for Payment
01 30 00	Administrative Requirements
01 30 10	Mechanical and Electrical Coordination
01 31 19	Project Meetings
01 32 00	Notification of Architect Requirements
*01 32 23	Survey and Layout Data
01 33 00	Submittal Procedures
01 40 00	Quality Requirements
01 42 19	Reference Standards and Definitions
01 50 00	Temporary Facilities
*01 55 13.10	Stabilized Construction Access
*01 55 26	Traffic Control
*01 57 10	TPDES Requirements
*01 57 19	Temporary Environmental Controls
*01 57 23	Temporary Storm Water Pollution Control
01 60 00	Product Requirements
01 70 00	Execution and Closeout Procedures

01 73 29 Cutting and Patching
*01 74 16 Site Maintenance
*01 74 19 Construction Waste Management and Disposal
01 78 00 Warranties
*01 80 00 Special Owner Requirements
*01 91 13 General Commissioning Requirements
*01 91 14 Commissioning Authority Responsibilities

DIVISION 02 – EXISTING CONDITIONS
*02 41 13.10 Removing Existing Pavement and Structures

DIVISION 03 - CONCRETE
*03 30 00 Cast-In-Place Concrete
03 35 43 Special Concrete Floor Finishes
03 52 16 Insulating Concrete Roof Fill
*03 62 00 Non-Shrink Grout

DIVISION 04 - MASONRY
04 05 03 Masonry Mortaring and Grouting
04 20 00 Unit Masonry Assemblies
*04 29 00 Engineered Unit Masonry

DIVISION 05 - METALS
*05 12 00 Structural Steel Framing
*05 12 13 Architecturally Exposed Structural Steel
*05 21 00 Steel Joist Framing
*05 31 00 Steel Decking
*05 40 00 Cold-Formed Metal Framing
05 50 00 Metal Fabrications
05 51 00 Metal Stairs
05 52 00 Metal Railings

DIVISION 06 - WOOD, PLASTICS, AND COMPOSITES
06 10 53 Miscellaneous Rough Carpentry
06 20 24 Interior Finish Carpentry and Millwork
06 42 19 Plastic Laminate Wall Panels
06 61 16 Solid Surfacing Fabrications
06 61 19 Quartz Surfacing Fabrications

DIVISION 07 - THERMAL AND MOISTURE PROTECTION
07 13 00 Sheet Waterproofing
07 19 16 Concrete Floor Sealer and Finish
07 21 13 Thermal Wall Insulation
07 27 26 Fluid Applied Membrane Air Barrier
07 42 13 Metal Soffit Panels
07 54 23 Multiply PVC Kee Fleeceback Membrane Roofing
07 62 00 Sheet Metal Flashing and Trim
07 71 00 Roof Specialties
07 72 33 Roof Hatches
07 81 00 Applied Fireproofing
07 84 00 Firestopping
07 90 00 Joint Protection
07 95 00 Premanufactured Expansion Joint Systems

DIVISION 08 - OPENINGS

08 11 13	Standard Steel Doors and Frames
08 14 16	Flush Wood Doors
08 31 13	Access Doors and Frames
08 32 13	Sliding Aluminum-Framed Glass Doors
08 33 13	Overhead Counter Doors
08 33 23	Overhead Coiling Doors
08 34 73	Sound Control Door Assemblies
08 41 13	Aluminum-Framed Entrances and Storefronts
08 44 13	Glazed Aluminum Curtain Walls
08 45 00	Translucent Wall and Roof Assemblies
08 56 54	Ballistic Rated Transaction Windows
*08 71 00	Door Hardware
*08 74 00	Access Control Monitoring System
08 80 00	Interior Glazing
08 88 56	Ballistic and Impact-Resistant Glazing
08 91 00	Louvers

DIVISION 09 - FINISHES

09 21 16	Gypsum Board Assemblies
09 30 00	Tiling
09 51 13	Lay-In Acoustical Panel Ceilings
09 54 23	Linear Metal Ceiling System
09 64 13	Finish Wood Stage Steps
09 65 00	Resilient Flooring and Base
09 65 66	Resilient Athletic Flooring
09 66 23	Resinous Matrix Terrazzo Flooring – Alternate
09 68 16	Carpeting
09 72 00	Wall Coverings
09 72 16.16	Rigid Sheet Vinyl Wall Protection
09 77 00	FRP Wall Panels
09 77 23	Fabric Wrapped Wall Panels
09 90 00	Painting and Coating
09 96 53	Elastomeric Coatings

DIVISION 10 - SPECIALTIES

10 11 00	Visual Display Surfaces
10 14 00	Graphics Panels, Plaques, and Building Letters
10 14 26	Post and Panel Signs
10 21 15	Solid Plastic Toilet Compartments
10 26 41	Ballistic-Resistant Fiberglass Panels
10 28 00	Toilet Accessories
10 28 10	Miscellaneous Specialties
10 44 00	Fire Protection Specialties
10 51 13	Metal Wardrobe Lockers
10 73 26	Aluminum Walkway Covers and Canopies
10 75 00	Flags and Flagpoles

DIVISION 11 - EQUIPMENT

*11 40 00	Food Service Equipment
11 52 13	Projection Screens
11 61 43	Stage Curtains and Tracks
11 66 00	Athletic Equipment
11 66 24	Basketball Backstops
11 68 13	Playground Equipment and Structures

DIVISION 12 - FURNISHINGS
12 21 13 Horizontal Louver Blinds
12 32 16 Manufactured Plastic Laminate-Clad Casework
12 56 51 Manufactured Library Furniture
12 93 00 Site Furnishings

DIVISION 13 – NOT USED

DIVISION 14 – CONVEYING EQUIPMENT
14 24 01 Hydraulic Passenger Elevators

DIVISIONS 15 Through 20: Not Used

End of Master TOC Volume 1

VOLUME 2 of 2

Section	Title
00 01 01	Project Title Page
00 01 10	Master Table of Contents
*00 01 11	Sealed Structural Table of Contents
*00 01 12	Sealed MEP Table of Contents
*00 01 13	Sealed Civil Table of Contents
*00 01 14	Sealed Landscape Table of Contents

DIVISION 21 - FIRE SUPPRESSION

*21 01 00	Fire Protection General Requirements
*21 01 20	Fire Protection Shop Drawings and Submittals
*21 01 50	Fire Protection Materials and Methods
*21 05 53	Identification for Fire Suppression Piping and Equipment
*21 13 00	Fire Suppression Sprinkler Systems

DIVISION 22 - PLUMBING

*22 01 00	Plumbing General Requirements
*22 01 20	Plumbing Shop Drawings and Submittals
*22 01 50	Plumbing and Piping Materials and Methods
*22 05 29	Hangers and Supports for Plumbing Piping and Equipment
*22 05 53	Identification for Plumbing Piping and Equipment
*22 07 19	Plumbing Piping Insulation
*22 08 00	Commissioning of Plumbing
*22 10 05	Plumbing Piping
*22 10 06	Plumbing Piping Specialties
*22 13 23	Sanitary Waste Interceptors
*22 30 00	Plumbing Equipment
*22 40 00	Plumbing Fixtures

DIVISION 23 – HEATING VENTILATING AND AIR CONDITIONING

*23 01 00	Mechanical General Requirements
*23 01 20	Mechanical Shop Drawings and Submittals
*23 01 50	Mechanical Materials and Methods
*23 05 13	Common Motor Requirements for HVAC Equipment
*23 05 19	Meters and Gauges for HVAC Piping
*23 05 23	General Duty Valves for HVAC Piping
*23 05 29	Hangers and Supports for HVAC Piping and Equipment
*23 05 53	Identification for HVAC Piping and Equipment
*23 05 93	Testing, Adjusting, and Balancing for HVAC
*23 07 13	Duct Insulation
*23 07 16	HVAC Equipment Insulation
*23 07 19	HVAC Piping Insulation
*23 08 00	Commissioning of HVAC
*23 09 00	Instrumentation and Control for HVAC
*23 09 30	Kitchen Hood Ventilation Control System
*23 09 34	Variable Frequency Motor Controllers for HVAC
*23 09 93	Sequence of Operations for HVAC Controls
*23 21 13	Hydronic Piping

*23 21 14 Hydronic Specialties
*23 21 23 Hydronic Pumps
*23 23 00 Refrigerant Piping
*23 25 00 HVAC Water Treatment
*23 31 00 HVAC Ducts and Casings
*23 33 00 Air Duct Accessories
*23 34 23 HVAC Power Ventilators
*23 34 39 High Volume Low Speed Propeller Fans
*23 36 00 Air Terminal Units
*23 38 13 Commercial Kitchen Hoods
*23 38 13.01 Residential Kitchen Range Hood for Commercial Buildings
*23 51 00 Breechings, Chimneys, and Stacks
*23 52 16 Condensing Boilers
*23 64 23 Scroll Water Chillers
*23 73 13 Modular Indoor Central Station Air Handling Units

DIVISION 26 - ELECTRICAL
*26 01 00 Electrical General Requirements
*26 01 20 Electrical Shop Drawings and Submittals
*26 05 19 Low Voltage Electrical Power Conductors and CAbles
*26 05 26 Grounding and Bonding for Electrical Systems
*26 05 29 Hangers and Supports for Electrical Systems
*26 05 33.13 Conduit for Electrical Systems
*26 05 33.16 Boxes for Electrical Systems
*26 05 33.23 Surface Raceways for Electrical Systems
*26 05 36 Cable Trays for Electrical Systems
*26 05 53 Identification for Electrical Systems
*26 05 73 Power System Studies
*26 08 00 Commissioning of Electrical
*26 09 23 Lighting Control Devices
*26 21 00 Low Voltage Electrical Service Entrance
*26 22 00 Low Voltage Transformers
*26 24 13 Switchboards
*26 24 16 Panelboards
*26 27 26 Wiring Devices
*26 28 13 Fuses
*26 28 16.13 Enclosed Circuit Breakers
*26 28 16.16 Enclosed Switches
*26 29 13 Enclosed Controllers
*26 32 13 Engine Generators
*26 36 00 Transfer Switches
*26 36 33 Generator Docking Station
*26 43 13 Surge Protective Devices
*26 51 00 Interior Lighting
*26 56 00 Exterior Lighting

DIVISION 27 - COMMUNICATION
*27 00 00 Common Communications Requirements
*27 05 03 Communications Shop Drawings and Submittals
*27 05 10 Scope of the Communications Work
*27 05 29 Hangers and Supports for Communications Systems
*27 10 00 Structured Cabling Common Requirements
*27 11 00 Communications Equipment Room Fittings
*27 11 16 Communications Racks, Frames, and Enclosures

*27 13 23 Communications Optical Fiber Backbone Cabling
*27 15 13 Communications Copper Horizontal Cabling
*27 30 14 Voice Communication System for Elevators
*27 41 16 Integrated Audo Video Systems and Equipment – Common Requirements
*27 41 16.55 Integrated Audo Video Systems - Dining
*27 41 16.56 Integrated Audo Video Systems - Gymnasium
*27 41 23 Integrated Audo Cabling and Accessories
*27 51 23 Intercommunications and Program Systems

DIVISION 28 - ELECTRONIC SAFETY AND SECURITY
*28 00 00 Common Electronic Safety and Security Requirements
*28 05 03 Electronic Safety and Security Shop Drawings and Submittals
*28 05 10 Scope of the Electronic Safety and Security Work
*28 10 00 Access Control
*28 31 11 Intrusion Detection System
*28 46 00 Fire Detection and Alarm

DIVISIONS 29 & 30 – Not Used

DIVISION 31 - EARTHWORK
*31 00 00 Site Earthwork
*31 06 20.15 Cement Stabilized Sand
*31 06 20.17 Utility Backfill Materials
*31 11 00 Clearing and Grubbing
*31 22 00 Site Grading
*31 22 16 Fine Grading
*31 22 17 Topsoil
*31 23 15 Building Earthwork
*31 23 16.14 Trench Safety System
*31 23 33 Excavation and Backfill for Utilities
31 31 16 Termite Control
*31 63 29 Drilled Concrete Piers and Shafts

DIVISION 32 - EXTERIOR IMPROVEMENTS
*32 01 90 Operation and Maintenance of Planting
*32 11 13.13 Lime-Treated Subgrades
*32 11 29.13 Lime-Fly Ash-Treated Base Courses
*32 13 13.00 Concrete Paving
*32 13 13.13 Concrete Pavement Curing
*32 13 13.25 Concrete Sidewalks
32 13 17 Integrally Colored Decorative Concrete Paving
*32 13 73 Concrete Paving Joints and Sealants
*32 16 13 Curbs and Gutters
*32 17 23 Pavement Markings
32 18 16 Playground Protective Surfacing
32 31 13 Chain Link Fences and Gates
32 31 19 Decorative Metal Fences and Gates
32 31 25 Louvered Fencing and Gates
*32 84 00 Planting Irrigation
*32 91 13 Soil Preparation
*32 91 14 Planting Media
*32 92 00 Turf and Grasses
*32 92 13 Hydromulch Seeding
*32 93 00 Plants

DIVISION 33 – UTILITIES

*33 05 13 Manholes and Structures
*33 05 13.13 Manhole Grade Adjustment
*33 05 16.13 Precast Concrete Utility Structures
*33 05 16.16 Concrete for Utility Construction
*33 06 10.14 Polyvinyl Chloride (PVC) Pipe
*33 06 10.15 Ductile Iron Pipe and Fittings
*33 06 40.10 HDPE Solid and Profile Wall Pipe
*33 06 40.11 Reinforced Concrete Pipe
*33 11 00 Water Utility Distribution Piping
*33 12 13.10 Tapping Sleeves and Valves
*33 12 13.12 Wet Connections
*33 12 16 Water Utility Distribution Valves
*33 12 19 Water Utility Distribution Fire Hydrants
*33 12 40 Valve Boxes, Meter Boxes, and Meter Vaults
*33 13 00 Disinfecting of Water Utility Distribution
*33 13 00.10 Hydrostatic Testing of Pipelines
*33 31 00 Sanitary Utility Sewerage Piping
*33 31 00.10 Acceptance Testing for Sanitary Sewers
*33 41 00 Storm Utility Drainage Piping
*33 49 13 Storm Drainage Manholes, Frames, and Covers

End of Master TOC Volume 2

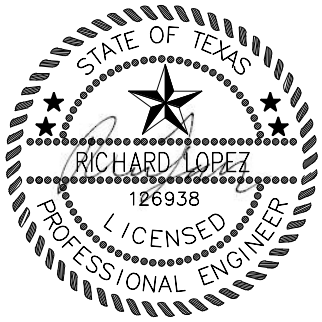
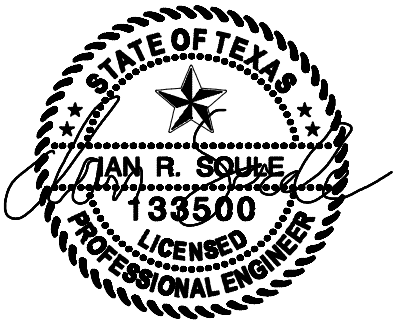
28 46 00 Fire Detection and Alarm





SECTION 00 01 13 – CIVIL TABLE OF CONTENTS

DIVISION 01 – GENERAL REQUIREMENTS

No. of Section	Title
01 32 23	Survey and Layout Data
01 55 13.10	Stabilized Construction Access
01 55 26	Traffic Control
01 57 10	TPDES Requirements
01 57 19	Temporary Environmental Controls
01 57 23	Temporary Storm Water Pollution Control
01 74 16	Site Maintenance
01 74 19	Construction Waste Management and Disposal

DIVISION 02 – EXISTING CONDITIONS

No. of Section	Title
02 41 13.10	Removing Existing Pavement and Structures

DIVISION 31 – EARTHWORK

No. of Section	Title
31 00 00	Site Earthwork
31 06 20.15	Cement Stabilized Sand
31 06 20.17	Utility Backfill Materials
31 11 00	Clearing and Grubbing
31 22 00	Site Grading
31 23 16.14	Trench Safety System
31 23 33	Excavation and Backfill for Utilities

DIVISION 32– EXTERIOR IMPROVEMENTS

No. of Section	Title
32 11 13.13	Lime-Treated Subgrades
32 11 29.13	Lime-Fly Ash-Treated Base Courses
32 13 13.00	Concrete Paving
32 13 13.10	Concrete Pavement Curing
32 13 13.25	Concrete Sidewalks
32 13 73	Concrete Paving Joints and Sealants
32 16 13	Curbs and Gutters
32 17 23	Pavement Markings

DIVISION 33 – UTILITIES

No. of Section	Title
33 05 13.00	Manholes and Structures
33 05 13.13	Manhole Grade Adjustment

SECTION 00 01 16 - INVITATION TO PROPOSERS

PROJECT: **ELEMENTARY SCHOOL #23**
ALVIN INDEPENDENT SCHOOL DISTRICT

ARCHITECT'S PROJECT NUMBER: 214000 933

PROPOSAL DATE AND TIME: **TUESDAY, SEPTEMBER 16, 2025**
2:00 PM for Base Proposals and Unit Prices
3:00 PM for Alternates

ARCHITECT: STANTEC
910 Louisiana Street, Suite 2600
Houston, Texas 77002
(713) 548 5700
ATTN: Mark E. Jackson, AIA, LEED AP

PROPOSALS.

A. Base Proposal
   1. Includes all Work of the Project except for work described as "Alternates".
   2. Refer to 00 14 00 for the Base Proposal Form

B. Alternates and Unit Prices
   1. Alternates and Unit Prices will be separate individual proposed numbers
   2. Refer to 01 23 00 for brief description of Alternates
   3. Refer to 00 41 10 for the Alternates Proposal Form

C. Proposers are required to execute both the Proposal for Base Bid Work and the Proposal for Alternates Work. The Combination of the Base Proposal and any accepted Alternates Proposals be used by the District in making evaluations

1.2 RECEIPT AND OPENING OF PROPOSALS

A. Sealed Proposals for the above referenced project shall be received at the following location:
   Alvin Independent School District Support Services Center
   2200 Stapp Maxwell – Building A
   Alvin, Texas 77511

B. Proposals will NOT be accepted after designated time, according to the Owner's clock at the place of submittal.

C. Proposals shall be on a lump sum basis including General Contract, Electrical and Mechanical work. Proposals received after the date and time specified shall NOT be accepted. All Proposals will be opened and read aloud at **3:01 PM**.

D. The Owner invites Proposals on the form indicated in Section 00 41 00 for the above referenced project.

E. The Owner may consider informal any Proposal not prepared and submitted in accordance with the provisions. Any Proposal may be withdrawn prior to the scheduled time for the opening of Proposals or authorized postponement thereof. Any Proposal received after the time and date specified shall not be considered. No Proposer shall withdraw a Proposal within **thirty (30) calendar days** after the actual date of the opening thereof.

F. By execution and submission of a Proposal, the Proposer attests and affirms that their subcontractors are skilled and experienced in the use and interpretation of plans, specifications, addenda and related documents and, that they have carefully reviewed the plans, specifications, addenda and related documents for this project and has found them to be free of conflicts and/or ambiguities and sufficient for the purpose of submitting a Proposal, and for construction. Further, they have carefully examined the soils reports and the site of the work, and - through their own personal observations - has satisfied themselves as to the nature, location and requirements of the work; the character, quality and quantity of materials required; the difficulties likely to be encountered; the other items and/or conditions which may affect the satisfactory performance of the work. They have based their Proposal solely on these documents - and personal observations - and has not relied in any way on any explanation or interpretation - oral or written - from any source other than those written and issued by the Architect/Engineer.

G. Representations: by execution and submission of a Proposal, the Proposer hereby represents and warrants to the Owner as follows:
1. The Proposer has read and understands the Proposal documents and the Contract Documents and the Proposal is made in accordance with the Proposal Documents.

H. By submitting a Proposal, each Proposer agrees to waive any claim it has or may have against the Owner, the Architect/Engineer, and their respective employees arising out of or in connection with the administration, evaluation, or recommendation of any Proposal; waiver of any requirements under the Proposal Documents, or the Contract Documents; and award of the Contract.

I. The Proposer agrees that the Owner has the right to accept or reject any or all Proposals and to waive all informalities.

1.3 CONTRACT DOCUMENTS

A. Copies of the Contract Documents may be obtained from the following reprographics company:

ARC Houston
4900 Dacoma Street
Houston, Texas 77092
https://www.e-arc.com/location/houston-dacoma-street/

B. Contract Documents may be examined at the following plan rooms:

1. F.W. Dodge, 10606 Hempstead Road, Suite 110, Houston, Texas 77092
281-460-5730 – Toni Lawson
2. Associated General Contractors, 3825 Dacoma, Houston, Texas 77092
800-364-2059 ext 7024 – Jake Valentine
3. Associated Builders and Contractors, 3910 Kirby Drive, Houston, Texas 77098
713-523-6222
4. Construction Market Data-Houston plan room, Houston, Texas
770-209-3814 – Pam Graham
5. Virtual Builders Exchange;
832-613-0201 ext 404 – Breanna Clark

C. Copies of documents or PDF files may also be purchased from the reprographics company

D. Proposal security in the amount of 5% of the largest possible total of Proposals submitted shall accompany each Proposal in accordance with the Instruction to Proposers.

E. Statutory Bonds for performance of the contract and for payments of mechanics and materials shall be required in an amount equal to 100% of the accepted Proposal.

F. The Owner reserves the right to hold all Proposals for **thirty (30)** calendar days from date of receipt without action, to reject any and all Proposals, to waive irregularities, and to require statements or evidence of Offerors qualifications including financial statements.

1.4 COMPLETION OF WORK

A. Completion of this Contract is of importance to the Owner. See Section 01 10 00 - Summary of Work for required completion dates. Note that milestone dates have been provided for major portions of the work, in addition to overall substantial completion date.

1.5 PRE-PROPOSAL CONFERENCE

A. As indicated in Section 00 22 13 - Supplementary Instructions.to Proposers, a Pre-Proposal Conference will be held at:

Alvin Independent School District Support Services Center
2200 Stapp Maxwell – Building A
Alvin, Texas 77511

Day & Time: September 9, 2025 at 10:00 AM

B. Interested parties are advised to monitor any issued addenda that may affect date, time, or location for this pre-proposal conference.

1.6 QUALIFICATIONS PACKAGES

A. All Proposers shall submit Qualifications Packages for the Owner’s evaluation in accordance with Section 00 23 13 – Ranking Criteria.

END OF SECTION

SECTION 00 22 13 - SUPPLEMENTARY INSTRUCTIONS TO PROPOSERS AND ATTACHED FORMS

The following sections modify or supplement the provisions of AIA Document A701, Instructions to Bidders:

3.2 INTERPRETATION OR CORRECTION OF BIDDING DOCUMENTS

3.2.4 PRE-PROPOSAL CONFERENCE: A Pre-Proposal Conference will be held at:

Alvin Independent School District Support Services Center
2200 Stapp Maxwell – Building A
Alvin, Texas 77511

Day & Time: Tuesday, September 9, 2025 at 10:00 AM

Attendance by representatives of the building contractors is highly desirable. Sub-Contractors who expect to be associated with the project are invited. Representatives of the Owner, Architect, Engineer, and Architect's Consultants will generally and briefly review and discuss the plans, specifications, details, materials, demolition, alterations and requirements of the Work with those interested parties present.

A written Addendum with a list of attendees and any changes in the Contract Documents will be issued subsequent to the Pre-Proposal Conference.

4.1.8 TIME OF COMPLETION

4.1.8.1 Time of completion of this Contract is of importance to the Owner and will be considered in the award of this Contract as well as future Contracts. Payments on the Contract shall be made as provided by the Contract. No payment shall be made on the Contract after 30 days prior to the completion date set by the Contractor, until final completion and acceptance by the Architect and Owner.

4.1.8.2 Extensions of time granted for causes described herein will be granted on the basis of one Regular Work Day extension for each Regular Work Day lost (i.e., 7 Calendar Days extension will be granted after 5 Regular Work Days are lost, except as modified by the provisions contained herein related to Anticipated Weather Days).

Each Proposer shall include in his proposed Contract Time an allowance of Anticipated Weather Days in accordance with the following schedule:

Number of Anticipated Weather Days to be included in proposed Contract Time (These are Regular Work Days) only in those months in which critical portions of the Work are being completed which can be impacted by weather:

January = 6	**April = 6**	**July = 4**	**October = 8**
February = 6	**May = 2**	**August = 4**	**November = 6**
March = 6	**June = 6**	**September = 8**	**December = 6**

The Contractor shall include within their contract an appropriate number of lost days due to average inclement or adverse weather conditions. Only weather-related days that exceed the 5 year average for the number of days with ½ inch or greater rainfall as measured by the National Weather Service for the greater Houston area will be granted as extra contract time. Only one mud day will accompany each rain day.

Weather Days shall pertain to such items as rain, flooding, snow, unusually high winds, excessively wet grounds, or the like which prevent progress on major portions of the Work on Regular Work Days only. If such situations occur on more than the number of Anticipated Weather Days included in the proposed Contract Time and if those additional days prevent the Contractor from performing critical portions of the scheduled Work, extensions of time caused by inclement weather may be requested as enumerated hereinafter;

At the beginning of each month, the Contractor shall submit a monthly status report showing (1) the scheduled number of Anticipated Weather Days for the particular month, (2) the actual Weather Days requested, and (3) the Net Weather Days (plus, minus, or no change). At times deemed appropriate by the Architect or when requested in writing by the Contractor, the Contract Time will be adjusted by Change Order if the total of Net Weather Days is substantially greater than 0. If the Contractor fails to submit said monthly status report, it will be assumed that none of the Anticipated Weather Days were used for that month and they shall accumulate for possible future offset against Net Weather Days; however, if at the end of the Project, all Anticipated Weather Days have not been used, the Contract Completion Time will not be reduced.

4.1.8.3 Liquidated damages shall be assessed to the Contractor at $1,000 per day for each day that actual substantial completion exceeds the contract completion date, with consideration given to milestone dates set forth by Owner (in Summary of Work)

4.2 BID SECURITY

4.2.1.1 Each proposal shall be accompanied by Proposal Security in the amount of 5% of the largest possible total of the Proposal submitted. The Proposal Security shall be by cash, certified check or a Bid Bond. The Bid Bond shall be executed by the Proposer as principal. The Bid Bond form and security company are subject to approval by the Owner and the surety shall comply with requirements noted in Article 11 of the Supplementary General Conditions.

The Proposal security shall be returned to all except the three lowest Proposers within three days after opening of the proposals. The remaining Proposal securities shall be returned promptly after the Owner and the accepted Proposer have executed the Contract, or, if no award has been made within thirty days after the date of the opening of Proposals, upon demand of the Proposer any-time thereafter so long as he has not been notified of the acceptance of his Proposal.

The successful Proposer, upon his failure or refusal to execute and deliver the contract, insurance and bonds required within 10 days after he has received notice of the acceptance of his proposal, shall forfeit to the Owner, as liquidated damages for such failure or refusal, the security deposited with his proposal.

4.3 SUBMISSION OF BIDS

4.3.1.1 All Proposers shall submit the following with their Proposal;
"Proposal Evaluation Waiver"
Refer to the checklist and forms below this section

4.3.1.2 The Proposal shall be manually signed by a person with legal authority to bind the firm to the Contract.

4.4 MODIFICATION OR WITHDRAWAL OF BID

4.4.2.1 If written confirmation of the modified or withdrawn bid is not received within two days from the closing time, no consideration shall be given to the modification or withdrawal.

THE FOLLOWING CHECKLIST AND FORMS ARE PROVIDED AND REQUIRED BY THE OWNER

PROPOSAL EVALUATION WAIVER

By submitting a Proposal, the Proposer indicated below agrees to waive any claim it has or may have against the Owner, Architect, Engineers, Consultants and their respective employees, arising out of or in connection with the administration, evaluation, or recommendation of any Proposal. The Proposer further agrees that the Owner reserves the right to waive any requirements under the Proposal Documents or the Contract Documents, with regards to acceptance or rejection of any Proposals, and recommendation or award of the Contract.

NOTE: This Statement of Affirmation Must Be Notarized.

STATEMENT OF AFFIRMATION

"The undersigned affirms that he/she is duly authorized to execute this waiver by the person(s) or business entity making the proposal."

- State of Texas Bid Requirement Page -

(Must sign acknowledgement below and identify exceptions)

Vendors shall not discriminate against any employee or applicant for employment because of race, religion, color, sex or national origin. Bidder certifies that the company complies with Executive order 11246, entitled "Equal Employment Opportunity", as amended by Executive Order 11375 and as supplemented in Department of Labor Regulations.

VENDOR NON-COLLUSIVE BIDDING

By submission of this bid or proposal, the Bidder certifies that:

a) This proposal has been independently arrived at without collusion with any other Bidder or with any Competitor.

b) This bid or proposal has not been knowingly disclosed and will not be knowingly disclosed, prior to the opening of bids, or proposals for this project, to any other Bidder, Competitor or potential Competitor.

c) No attempt has been or will be made to induce my other person, partnership or corporation to submit or not to submit a bid or proposal.

d) The person signing this bid or proposal certifies that he has fully informed himself regarding the accuracy of the Statements contained in this certification, and under the penalties being applicable to the Bidder as well as to the person signing in its behalf.

CONFLICT OF INTEREST QUESTIONNAIRE (FORM CIQ)

Vendors are required to report business relationships at the time they begin contract negotiations or are solicited for bids or proposals. A vendor must disclose any business relationship with a district officer that might cause a conflict of interest. Vendors have 7 business days to file the Ethics commission's ***Conflict of Interest Questionnaire (form CIQ)*** or face the possibility of a Class C Misdemeanor.

- ☐ Vendor has no known Conflict of Interests with the District
- ☐ Vendor has a known Conflict of Interest and will be attaching a copy of the CIQ

FELONY CONVICTION NOTIFICATION

State of Texas Legislative Senate Bill No. 1, Section 44.034, Notification of Criminal History of Contractor states:

a) A person or business entity that enters into a contract with a school district must give advance notice to the district if the person or an owner or operator of the business entity has been convicted of a felony. The notice must include a general description of the conduct resulting in the conviction of a felony.

b) A school district may terminate a contract with a person or business entity if the district determines that the person or business entity failed to give notice as required by Subsection (a) or misrepresented the conduct resulting in the conviction. The district must compensate the person or business entity for services performed before the termination of the contract.

c) This section does not apply to a publicly-held corporation.

Please check off one box and sign the form in the appropriate space(s):

- ☐ My firm is a publicly-held corporation; therefore, this reporting requirement is not applicable.
- ☐ My firm is neither owned nor operated by anyone who has been convicted of a felony.
- ☐ My firm is owned and operated by the following individual(s) who has/have been convicted of a felony: Name of Felon(s):_____

Details of Conviction(s):_____

INSURANCE REQUIREMENTS – REQUIRED FOR WORK PERFORMED ON DISTRICT PROPERTY

The vendor shall carry Statutory Workmen's Compensation Insurance, Comprehensive General Liability Insurance covering premises operation and Contractor's Liability in the amount of $100,000/$300,000 for bodily injury and $100,000 each accident property damage and Automobile Liability covering all owned, non-owned, and hired vehicles in the amount of $100,000/$300,000 bodily injury and $100,000 each accident property damage. Certificates of Insurance shall be delivered to the Purchasing Department before work is commenced.

Upon award of bid, the vendor shall supply purchasing proof of insurance, in the manner prescribed by the Texas Worker's Compensation Commission, informing all persons providing services on the project that they are required to be covered, and station how a person may verify coverage and report lack of coverage.

The undersigned agrees to fully comply in strict accordance with the above requirements, terms and specifications

Acknowledgment by Signature *Printed Name* *Date*

Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions

This certification is required by the regulations implementing Executive Order 12549, Debarment and Suspension, 7 CFR Part 3017, Section 3017.510, Participants' responsibilities. The regulations were published as Part IV of the January 30, 1989, *Federal Register* (pages 4722-4733). Copies of the regulations may be obtained by contacting the Department of Agriculture agency with which this transaction originated.

1.) By signing and submitting this form, the prospective lower tier participant *(vendor submitting proposal)* is providing the certification set out below in accordance with these instructions. 2.) The certification in this clause is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective lower tier participant *(vendor submitting proposal)* knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment. 3.) The prospective lower tier participant *(vendor submitting proposal)* shall provide immediate written notice to the person to which this proposal is submitted if at any time the prospective lower tier participant *(vendor submitting proposal)* learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances. 4.) The terms "covered transaction", "debarred", "suspended", "ineligible"," lower tier covered transaction", "participant", "person", "primary covered transaction", "principal", "proposal", and "voluntarily excluded" as used in this clause, have the meanings set out in the Definitions and Coverage sections of rules implementing Executive Order 12549. You may contact the person to which this proposal is submitted for assistance in obtaining a copy of those regulations. https://www.federalregister.gov/articles/2010/07/19/2010-17429/nonprocurement-debarment-and-suspension
5.)The prospective lower tier participant *(vendor submitting proposal)* agrees by submitting this form that, should the proposed covered transaction *(contract)* be entered into, it shall not knowingly enter into any lower tier covered transaction *(contract)* with a person who is debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction *(contract)*, unless authorized by the department or agency with which this transaction originated. 6.) The prospective lower tier participant *(vendor submitting proposal)* further agrees by submitting this form that it will include this clause titled "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion - Lower Tier Covered Transactions," without modification, in all lower tier covered transactions *(contract)* and in all solicitations for lower tier covered transactions *(contract)*. 7.) A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction *(contract)* that is not debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency by which it determines the eligibility of its principals. Each participant may, but is not required to, check the Non-procurement List. 8.) Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings. 9.) Except for transactions authorized under paragraph 5 of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction *(contract)* with a person who is suspended, debarred, ineligible, or voluntarily excluded from participating in this transaction, in addition to other remedies available to the Federal Government, the department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.

(BEFORE COMPLETING CERTIFICATION, READ INSTRUCTIONS ABOVE)

(1) The prospective lower tier participant (vendor submitting proposal) certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency. (2) Where the prospective lower tier participant (vendor submitting proposal) is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

The undersigned agrees to fully comply in strict accordance with the above requirements, terms and specifications

ALVIN INDEPENDENT SCHOOL DISTRICT

Consultant/Contractors Certification Form

Introduction:

Texas Education Code Chapter 22 and Senate Bill 9 require service contractors to obtain criminal history record information regarding covered employees and to certify to the District that they have done so. Contractors must comply with Texas Education Code, Section 22.0834, regarding the Criminal History Record Information Review of Certain Contract Employees. Before work on this contract begins, Contractors shall have all employees that will be performing services at the district, fingerprinted through the criminal history clearinghouse as provided by Section 411.0845, Government Code relating to an employee or applicant who has or will have duties related to the contracted services; and the employee or applicant has or will have direct contact with students. The DISTRICT WILL obtain criminal history record information before employing or securing the services of the CONTRACTOR or applicant that has or will have direct contact with students. The contractor further agrees that he shall assume all expenses associated with the criminal background check and shall immediately remove any employee or agent who was convicted of a felony, or misdemeanor involving moral turpitude, as defined by the Texas law, from District property or the location where students are present.

Please visit a Guide for School Contractors Section for additional information regarding Senate Bill 9.

Definitions:

Covered employees: All employees of a contractor who have or will have work duties that have been or will be performed on District property DURING THE TIME STUDENTS ARE SCHEDULED TO BE ON THE PROPERTY related to the service to be performed at the District and WILL HAVE ACCESS TO THE FACILITIES IN WHICH STUDENTS ARE IN OCCUPANCY. The District will be the final arbiter of what constitutes direct contact with students.

On behalf of _____ (Individual Consultant or Contractor's Name of Company), **I certify that the [check one]:**

◯ A.) Individual Contractor or Contractor's employees are covered employees and have been processed through the FACT Clearinghouse as **HAVING CONTACT with students.**

AND ***MANDATORY DATA FOR INQUIRY:*** *Date of Birth_____

*Driver's License # _____ or * State ID _____

*TxDPS SID # _____ (FACT Clearinghouse State assigned ID number)

-Or-

◯ B.) Individual Consultant or Contractor's employees are not covered employees as defined above and **DO NOT HAVE CONTACT with students.**

---

(1) By providing a release along with the names, Texas drivers license number and the date of birth of each any every employee, that will perform services on district property, the Contractor will make available for the District's inspection, the criminal history record information of any covered employee. If the District objects to the assignment of a covered employee on the basis of the covered employee's criminal history record information, Contractor agrees to discontinue using that covered employee to provide services at the District.

Noncompliance by Contractor with this certification May be grounds for contract termination, and May be a violation of State Law as described in Senate Bill 9 and/or TEC 22.

***By* submission of this form, I am indicating that I am complying with Senate Bill 9 and Texas Education Code Section 22.0834 Criminal History Record Information Review of Certain Contract Employees.**

Form **W-9**
(Rev. October 2018)
Department of the Treasury
Internal Revenue Service

Request for Taxpayer Identification Number and Certification

▶ **Go to *www.irs.gov/FormW9* for instructions and the latest information.**

Give Form to the requester. Do not send to the IRS.

Print or type. See **Specific Instructions** on page 3.

1 Name (as shown on your income tax return). Name is required on this line; do not leave this line blank.

2 Business name/disregarded entity name, if different from above

3 Check appropriate box for federal tax classification of the person whose name is entered on line 1. Check only **one** of the following seven boxes.

☐ Individual/sole proprietor or single-member LLC ☐ C Corporation ☐ S Corporation ☐ Partnership ☐ Trust/estate

☐ Limited liability company. Enter the tax classification (C=C corporation, S=S corporation, P=Partnership) ▶

Note: Check the appropriate box in the line above for the tax classification of the single-member owner. Do not check LLC if the LLC is classified as a single-member LLC that is disregarded from the owner unless the owner of the LLC is another LLC that is **not** disregarded from the owner for U.S. federal tax purposes. Otherwise, a single-member LLC that is disregarded from the owner should check the appropriate box for the tax classification of its owner.

☐ Other (see instructions) ▶

4 Exemptions (codes apply only to certain entities, not individuals; see instructions on page 3):

Exempt payee code (if any)

Exemption from FATCA reporting code (if any)

(Applies to accounts maintained outside the U.S.)

5 Address (number, street, and apt. or suite no.) See instructions.

Requester's name and address (optional)

6 City, state, and ZIP code

7 List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN*, later.

Note: If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Social security number

___ – ___ – ____

or

Employer identification number

___ – _____

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

Sign Here | **Signature of U.S. person** ▶ | **Date** ▶

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9*.

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

ALVIN ISD

(TO BE COMPLETED AND RETURNED BY VENDOR)

Hold Harmless Agreement

The Proposer shall defend, indemnify, and hold harmless, Alvin ISD and all its trustees, officers, agents, and employees, from and against all suits, actions, or claims of any character brought forth or on account of any injuries or damages (including death) received or sustained by any person or property on account of, arising out of, or in connection with, any negligent act or omission of contractor or any agent, employee, subcontractor or supplier of contractor in the execution or performance under this contract as designated as CONTRACTED SERVICES.

The proposer shall also defend, indemnify and hold harmless, Alvin ISD and all of its trustees, officers, agents and employees, from and against claims by any subcontractor, supplier, laborer, material-man or mechanic for payment for work materials provided on behalf of the Contractor in the performance of the Contract and all such claimants shall look solely to Contractor and not Alvin ISD for satisfaction of such claims.

This Hold Harmless Agreement shall be binding upon the undersigned, and its successors, legal representatives, heirs and assigns.

RELEASE OF INFORMATION

At various times throughout the year, we will receive formal requests to provide your information to third parties. The requested files include records we received from you or from your company which may include, all purchase orders, quotes, check info, vendor info, contact info, line item descriptions quantities and pricing. Generally, the Public Information Act (the "Act") requires the release of requested information, but there are exceptions.

◯ I authorize release of my information to third party requestors.

◯ I do not authorize release of my information to third party requestors.

***Please note – if you marked that you "do not wish" to have information released when an open record request has the information is requested, you will receive a notice from Alvin ISD, so that you may send your rebuttal to the Office of the Attorney General.

This notice will be placed in our record with your proposal and will remain in effect thru the term of your proposal contract.

Texas Government Code **Sec. 552.372 Bids and Contracts states:**

(a) A contract described by Section 552.371 (Certain Entities Required to Provide Contracting Information to Governmental Body in Connection With Request) must require a contracting entity to:

(1) preserve all contracting information related to the contract as provided by the records retention requirements
applicable to the governmental body for the duration of the contract;
(2) promptly provide to the governmental body any contracting information related to the contract that is in the
custody or possession of the entity on request of the governmental body; and
(3) on completion of the contract, either:

(A) provide at no cost to the governmental body all contracting information related to the contract that is in the custody or possession of the entity; or

(B) preserve the contracting information related to the contract as provided by the records retention requirements applicable to the governmental body.

(b)Unless Section 552.374 (Termination of Contract for Noncompliance)(c) applies, a bid for a contract described by Section 552.371 (Certain Entities Required to Provide Contracting Information to Governmental Body in Connection With Request) and the contract must include the following statement: "The requirements of Subchapter J, Chapter 552 (Public Information), Government Code, may apply to this (include "bid" or "contract" as applicable) and the contractor or vendor agrees that the contract can be terminated if the contractor or vendor knowingly or intentionally fails to comply with a requirement of that subchapter."

(c)A governmental body may not accept a bid for a contract described by Section 552.371 (Certain Entities Required to Provide Contracting Information to Governmental Body in Connection With Request) or award the contract to an entity that the governmental body has determined has knowingly or intentionally failed to comply with this subchapter in a previous bid or contract described by that section unless the governmental body determines and documents that the entity has taken adequate steps to ensure future compliance with the requirements of this subchapter.

The requirement of Subchapter J, Chapter 552, Government Code, may apply to this and the contractor or vendor agrees that the contract can be terminated if the contractor or vendor knowingly or intentionally fails to comply with a requirement of that subchapter.

Company Name _____ **Date**

FEDERAL COMPLIANCE
GUIDELINES FOR THE USE OF FEDERAL FUNDS

Alvin ISD has elected to solicit pricing from Qualifying Vendors, Awarded Proposals Vendors and/or Cooperative Vendors as set forth under the requirements of the Code of Federal Regulations (CFR) Title 2 Grants and Agreements, Part 200 Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards. (2 CFR§200).

Following these federal requirements will allow for federal funds, entrusted to Alvin ISD, to be used to make purchases through the anticipated contract(s). The CFR is the codification of the general and permanent rules published in the Federal Register by the departments and agencies of the Federal Government produced by the Office of the Federal Register (OFR) and the Government Publishing Office. The CFR may change during the term of the contract and the supplier may be required to make adjustments as necessary.

It is necessary for the supplier to certify and agree that they, as a company, understand and comply with all applicable areas identified below and included with this attachment. Some of the areas may not be applicable to this solicitation and it is the supplier's sole responsibility to identify which areas are appropriate for the solicitation. Failure to affirm and agree to these requirements may, at Alvin ISD's discretion, disqualify the associated response to this solicitation or limit the use of the awarded contract based on the funding source.

Alvin ISD reserves the right, at any time within the contract term, to require an awarded supplier to reaffirm, sign and resubmit proper documentation stating their company is not debarred, or if any other circumstances change related to the original response.

The following terms are applicable to all solicitations:

1. **General.** Included for all solicitations regardless of type of specialty.

1.1 ***Debarment and Suspension (executive Orders 12549 and 12689).*** A contract award (see 2 CFR 180.220) must not be made to parties listed on the government wide Excluded Parties List System in the System of Award Management (SAM), in accordance with the OBM guidelines at 2 CFR 180 that implement Executive Orders 12549 (3 CFR Part 1986 Comp., p. 189) and 12689 (3 CFR Part 1989 Comp., p. 235), "Debarment and Suspension" The Excluded Parties Listed System in SAM (sam.gov) contains the names of parties debarred, suspended, or otherwise excluded by agencies, as well as parties declared ineligible under statutory or regulatory authority other than Executive Order 12549. Prior to award, Alvin ISD will verify that the supplier is not currently listed as debarred by the Federal government. If the supplier is found to be on the Federal debarment list, Alvin ISD, at its sole option, may elect to not award to the supplier. If awarded, and during the contract term, the supplier becomes debarred, the supplier must notify Alvin ISD within five (5) Alvin ISD business days of the debarment. Alvin ISD, at its sole judgement, may elect to cancel the associated contract or limit the contract to non-federal funds. Such judgement will be done in writing within twenty (20) Alvin ISD business days. During this assessment period, no contract orders can be placed by Alvin ISD using federal funds.

1.2 ***Conflict of Interest. 2 CFR 200.318(c)(1)*** states that Alvin ISD must maintain written standards of conduct covering conflicts of interest and governing the actions of its employees engaged in the selection, award and administration of contract. No employee, officer, or agent may participate in the selection, award, and administration of a contract supported by a Federal award if he or she has a real or apparent conflict of interest. Such a conflict of interest would arise when the employee, officer, or agent, any member of his or her immediate family, his or her partner, or an organization which employs or is about to employ any of the parties indicated herein, has a financial or other interest in or a tangible personal benefit from the contract awarded to a specific supplier. The

FEDERAL COMPLIANCE - REQUIRED FORM OF UNDERSTANDING – RETURN THIS COMPLETE PAGE WITH PROPOSAL - Does vendor certify? Yes _____ Initials of Authorized Representative of Vendor

officers, employees, and agents of Alvin ISD may neither solicit nor accept gratuities, favors, or anything of monetary value from suppliers or parties to subcontracts. However, Alvin ISD may set standards for situations in which the financial interest is not substantial or the gift is an unsolicited item of nominal value. The standards of conduct must provide for disciplinary actions to be applied for violations of such standards by officers, employees, or agents of Alvin ISD. It is the responsibility for the supplier to identify and make Alvin ISD aware of any potential conflicts of interest that exist between their company and Alvin ISD. Failure to do so will cause the associated supplier response to be disqualified from further consideration, or if already awarded, the associated contract will be cancelled based on cause.

1.3 ***HUB Certification.*** Pursuant of 2 CFR 200.321. Bidding companies that have been certified by the State of Texas as Historically Underutilized Business (HUB) entities are encouraged to **attach a copy of the HUB Certification** when responding to this proposal invitation. This information will be included in the vendor profiles and may be used for consideration of purchase(s).

1.4 ***Termination for Cause.*** All federal contracts, in excess of $10,000, must address termination for cause and for convenience by the non-Federal entity including the manner by which it will be affected and the basis for settlement. As per Alvin ISD does not have a threshold, all contracts for any amount may be terminated for cause.

2. ***Small Purchases (2 CFR 200.320).*** Small purchase procedures are those relatively simple and informal procurement methods for securing services, supplies, or other property that do not cost more than the *Simplified Acquisition Threshold (SAT).*

2.1 If small purchase procedures are used, price and rate quotations must be obtained from an adequate number of qualified sources. Specifically for multiple award catalog-based or non-identifiable pricing based on a percentage off catalog, Alvin ISD may be required to submit a request for quotation from the contracted vendors for the purpose of meeting the competitive bidding requirements of this section.

3. ***Large Purchases.*** For individual purchases that exceed the *Simplified Acquisition Threshold.*

3.1 *Simplified Acquisition Threshold Contracts* for more than the Simplified Acquisition Threshold (SA) currently set at $250,000 which is the inflation adjusted amount determined by the Civilian Agency Acquisition Council and the Defense Acquisition Regulation Council (Councils) as authorized by 41 U.S.C. 1980, must address administrative, contractual, or legal remedies in instances where contractors violate or breach contract terms, and provide for such sanctions and penalties as appropriate. In any case, contracts in excess of the state's or state agency threshold must address the foregoing. Any purchase that meets or exceeds the SAT threshold will require additional cost/price analysis by Alvin ISD. The supplier may be required to provide additional documentation to support this requirement based on the federal requirements at the time of the purchase.

3.2 *Cost Analysis/Negotiation of Profit (2 CFR 200.323).* For contracts over the SAT, Alvin ISD must negotiate profit as a separate element of the price for each contract in which there is no price competition, including solicitations that received only one viable response. In all cases, a cost analysis is to be performed by Alvin ISD. To establish a fair and reasonable profit, consideration must be given to the complexity of the work to be performed, the risk borne by the contractor, the contractor's investment, the amount of subcontracting, the quality of its record of past performance, and industry profit rates in the surrounding geographical area for similar work.

3.3 *Supplier Violation or Breach of Contract Terms.* For contract awards valued at or greater than the SAT, Alvin ISD must address administrative, contractual, or legal remedies in instances where contractors violate or breach contract terms, and provide for such sanctions and penalties as appropriate. The remedies under the contract are in addition to any other remedies that may be

4. CERTIFICATIONS REQUIRED UNDER FEDERAL CONTRACT PROVISIONS (2 CFR 200.326)

4.1 The following pages contain the required Contract Provisions that must be certified by the vendor of use with Federal Contracts. By initialing the following statements, you Certify your Company will hold true to these provisions for the duration of the proposal.

4.2 It is the responsibility for the supplier to identify and make Alvin ISD aware of any potential changes that exist between their company and Alvin ISD. Failure to do so will cause the associated supplier response to be disqualified from further consideration, or if already awarded, the associated contract will be cancelled based on the cause.

EDGAR CERTIFICATIONS

Addendum FOR CONTRACT FUNDED BY a U.S. FEDERAL GRANT

The following certifications and provisions are required and apply when Alvin Independent School District ("Alvin ISD") expends federal funds for any contract resulting from this procurement process. **Accordingly, the parties agree that the following terms and conditions apply to the Contract between the District and _____ ("Vendor") in all situations where Vendor has been paid or will be paid with federal funds:**

CERTIFICATION REGARDING EMPLOYMENT ASSISTANCE PROHIBITED

Vendor certifies and agrees that it shall not assist an employee, contractor, or agent of Alvin ISD or any other school district, in obtaining a new job if the Vendor knows, or has probable cause to believe that the individual engaged in sexual misconduct regarding a minor or student in violation of the law. Routine transmission of an administrative or personnel file does not violate this prohibition. See Alvin ISD Policy CJ (Legal) and (Local).

REQUIRED CONTRACT PROVISIONS FOR NON-FEDERAL ENTITY CONTRACTS UNDER FEDERAL AWARDS APPENDIX II TO 2 CFR PART 200

(A) Contracts for more than the simplified acquisition threshold currently set at $250,000, which is the inflation adjusted amount determined by the Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (Councils) as authorized by 41 U.S.C. 1908, must address administrative, contractual, or legal remedies in instances where contractors violate or breach contract terms, and provide for such sanctions and penalties as appropriate.

Pursuant to Federal Rule (A) above, when ALVIN ISD expends federal funds, ALVIN ISD reserves all rights and privileges under the applicable laws and regulations with respect to this procurement in the event of breach of contract by either party.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

(B) Termination for cause and for convenience by the grantee or sub grantee including the manner by which it will be affected and the basis for settlement. (All contracts in excess of $10,000)

Pursuant to Federal Rule (B) above, when ALVIN ISD expends federal funds, ALVIN ISD reserves the right to immediately terminate any agreement in excess of $10,000 resulting from this procurement process in the event of a breach or default of the agreement by Vendor in the event Vendor fails to: (1) meet schedules, deadlines, and/or delivery dates within the time specified in the procurement solicitation, contract, and/or a purchase order; (2) make any payments owed; or (3) otherwise perform in accordance with the contract and/or the procurement solicitation. ALVIN ISD also reserves the right to terminate the contract immediately, with written notice to vendor, for convenience, if ALVIN ISD believes, in its sole discretion that it is in the best interest of ALVIN ISD to do so. Vendor will be compensated for work performed and accepted and goods accepted by ALVIN ISD as of the termination date if the contract is terminated for convenience of ALVIN ISD. Any award under this procurement process is not exclusive and ALVIN ISD reserves the right to purchase goods and services from other vendors when it is in ALVIN ISD's best interest.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

(C) Equal Employment Opportunity. Except as otherwise provided under 41 CFR Part 60, all contracts that meet the definition of "federally assisted construction contract" in 41 CFR Part 60-1.3 must include the equal opportunity clause provided under 41 CFR 60-1.4(b), in accordance with Executive Order 11246, "Equal Employment Opportunity" (30 FR 12319, 12935, 3 CFR Part, 1964-1965 Comp., p. 339), as amended by Executive Order 11375, "Amending Executive Order 11246 Relating to Equal Employment Opportunity," and implementing regulations at 41 CFR part 60, "Office of Federal Contract Compliance Programs, Equal Employment Opportunity, Department of Labor."

Pursuant to Federal Rule (C) above, when ALVIN ISD expends federal funds on any federally assisted construction contract, the equal opportunity clause is incorporated by reference herein.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

(D) Davis-Bacon Act, as amended (40 U.S.C. 3141-3148). When required by Federal program legislation, all prime construction contracts in excess of $2,000 awarded by non-Federal entities must include a provision for compliance with the Davis-Bacon Act (40 U.S.C. 3141-3144, and 3146-3148) as supplemented by Department of Labor regulations (29 CFR Part 5, "Labor Standards Provisions Applicable to Contracts Covering Federally Financed and Assisted Construction"). In accordance with the statute, contractors must be required to pay wages to laborers and mechanics at a rate not less than the prevailing wages specified in a wage determination made by the Secretary of Labor. In addition, contractors must be required to pay wages not less than once a week. The non-Federal entity must place a copy of the current prevailing wage determination issued by the Department of Labor in each solicitation. The decision to award a contract or subcontract must be conditioned upon the acceptance of the wage determination. The non-Federal entity must report all suspected or reported violations to the Federal awarding agency. The contracts must also include a provision for compliance with the Copeland "Anti-Kickback" Act (40 U.S.C. 3145), as supplemented by Department of Labor regulations (29 CFR Part 3, "Contractors and Subcontractors on Public Building or Public Work Financed in Whole or in Part by Loans or Grants from the United States"). The Act provides that each contractor or sub recipient must be prohibited from inducing, by any means, any person employed in the construction, completion, or repair of public work, to give up any part of the compensation to which he or she is otherwise entitled. The non-Federal entity must report all suspected or reported violations to the Federal awarding agency.

Pursuant to Federal Rule (D) above, when ALVIN ISD expends federal funds during the term of an award for all contracts and sub grants for construction or repair, Vendor will be in compliance with all applicable Davis-Bacon Act provisions.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

---

(E) Contract Work Hours and Safety Standards Act (40 U.S.C. 3701-3708). Where applicable, all contracts awarded by the non-Federal entity in excess of $100,000 that involve the employment of mechanics or laborers must include a provision for compliance with 40 U.S.C. 3702 and 3704, as supplemented by Department of Labor regulations (29 CFR Part 5). Under 40 U.S.C. 3702 of the Act, each contractor must be required to compute the wages of every mechanic and laborer on the basis of a standard work week of 40 hours. Work in excess of the standard work week is permissible provided that the worker is compensated at a rate of not less than one and a half times the basic rate of pay for all hours worked in excess of 40 hours in the work week. The requirements of 40 U.S.C. 3704 are applicable to construction work and provide that no laborer or mechanic must be required to work in surroundings or under working conditions which are unsanitary, hazardous or dangerous. These requirements do not apply to the purchases of supplies or materials or articles ordinarily available on the open market, or contracts for transportation or transmission of intelligence.

Pursuant to Federal Rule (E) above, when ALVIN ISD expends federal funds, Vendor certifies that Vendor will be in compliance with all applicable provisions of the Contract Work Hours and Safety Standards Act during the term of an award for all contracts by ALVIN ISD resulting from this procurement process.

(H) Debarment and Suspension (Executive Orders 12549 and 12689)—A contract award (see 2 CFR 180.220) must not be made to parties listed on the government wide exclusions in the System for Award Management (SAM), in accordance with the OMB guidelines at 2 CFR 180 that implement Executive Orders 12549 (3 CFR part 1986 Comp., p. 189) and 12689 (3 CFR part 1989 Comp., p. 235), "Debarment and Suspension." SAM Exclusions contains the names of parties debarred, suspended, or otherwise excluded by agencies, as well as parties declared ineligible under statutory or regulatory authority other than Executive Order 12549.

Pursuant to Federal Rule (H) above, when federal funds are expended by ALVIN ISD, Vendor certifies that during the term of an award for all contracts by ALVIN ISD resulting from this procurement process, Vendor certifies that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation by any federal department or agency.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

---

(I) Byrd Anti-Lobbying Amendment (31 U.S.C. 1352)—Contractors that apply or bid for an award exceeding $100,000 must file the required certification. Each tier certifies to the tier above that it will not and has not used Federal appropriated funds to pay any person or organization for influencing or attempting to influence an officer or employee of any agency, a member of Congress, officer or employee of Congress, or an employee of a member of Congress in connection with obtaining any Federal contract, grant or any other award covered by 31 U.S.C. 1352. Each tier must also disclose any lobbying with non-Federal funds that takes place in connection with obtaining any Federal award. Such disclosures are forwarded from tier to tier up to the non-Federal award.

Pursuant to Federal Rule (I) above, when federal funds are expended by ALVIN ISD, Vendor certifies that during the term and after the awarded term of an award for all contracts by ALVIN ISD resulting from this procurement process, the vendor certifies that it is in compliance with all applicable provisions of the Byrd Anti-Lobbying Amendment (31 U.S.C. 1352). The undersigned further certifies that:

a) No Federal appropriated funds have been paid or will be paid for on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of congress, or an employee of a Member of Congress in connection with the awarding of a Federal contract, the making of a Federal grant, the making of a Federal loan, the entering into a cooperative agreement, and the extension, continuation, renewal, amendment, or modification of a Federal contract, grant, loan, or cooperative agreement.

b) If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of congress, or an employee of a Member of Congress in connection with this Federal grant or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying", in accordance with its instructions.

c) The undersigned shall require that the language of this certification be included in the award documents for all covered sub-awards at all tiers (including subcontracts, sub grants, and contracts under grants, loans and cooperative agreements) and that all sub-recipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certificate is a prerequisite for making or entering into this transaction imposed by Section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for such failure.

---

(J) Procurement of Recovered Materials – When federal funds are expended by Alvin ISD and their contractors, they must comply with section 6002 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act. The requirements of Section 6002 include: (1) procuring only items designated in guidelines of the Environmental Protection Agency (EPA) at 4 CFR part 247 that contains the highest percentage of recovered materials practicable, consistent with maintaining a satisfactory level competition, where the purchase price of the items exceeds $10,000, or the value of the quantity acquired during the preceding fiscal year exceeded $10,000; (2) procuring solid waste management services in a manner that maximizes energy and resource recovery; and (3) establishing an affirmative procurement program for procurement of recovered materials identified in the EPA guidelines.

Pursuant to Federal Rule (J) above, when federal funds are expended by Alvin ISD, as required by the Resource Conservation and Recovery Act of 1975 (42 U.S.C. §6962 (c)(3)(A)(i)), the vendor certifies, by signing this document, that the percentage of recovered materials content for the EPA-designated items to be delivered or used in the performance of the contract will be at least the amount required by the applicable contract specifications or other contractual requirements.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

CERTIFICATION OF EQUAL EMPLOYMENT STATEMENT

It is the policy of ALVIN ISD not to discriminate on the basis of race, color, national origin, gender, limited English proficiency or handicapping conditions in its programs. Vendor agrees not to discriminate against any employee or applicant for employment to be employed in the performance of this Contract, with respect to hire, tenure, terms, conditions and privileges of employment, or a matter directly or indirectly related to employment, because of age (except where based on a bona fide occupational qualification), sex (except where based on a bona fide occupational qualification) or race, color, religion, national origin, or ancestry. Vendor further agrees that every subcontract entered into for the performance of this Contract shall contain a provision requiring non-discrimination in employment herein specified, binding upon each subcontractor. Breach of this covenant may be regarded as a material breach of the Contract.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

CERTIFICATION OF NON-COLLUSION STATEMENT

Vendor certifies under penalty of perjury that its response to this procurement solicitation is in all respects bona fide, fair and made without collusion or fraud with any person, joint venture, partnership, corporation or other business or legal entity.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

CERTIFICATION OF COMPLIANCE WITH TEXAS FAMILY PROVISION

~~As per Section 14.52 of the Texas Family Code, added by S.B. 84, Acts, 73rd Legislature, R.S. (1993), all bidder must~~ complete and submit with the bid the following affidavit:

I, the undersigned vendor do hereby acknowledge that NO sole proprietor, partner, majority shareholder of a corporation, or an owner of 10% or more of another business entity is 30 days or more delinquent in paying child support under a court order or a written repayment agreement. I understand that under this provision, a sole proprietorship, partnership, corporation or other entity is 30 days or more delinquent in paying child support under a court order or a written repayment agreement is NOT eligible to bid or receive a state contract.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

CERTIFICATION OF HEALTH AND SAFETY CERTIFICATIONS LICENSING OR REGULATIONS

Vendor certifies under penalty of perjury that with its response to this procurement, that all required applicable local, state and federal health and safety certifications, licensing or regulations, which include, but are not limited, to facility use, food establishment and authorized providers are in good standing and current.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

CERTIFICATION REGARDING TERRORIST ORGANIZATIONS & BOYCOTTING OF ISRAEL GOVT. CODE 808 (HB 89) & GOVT. CODE 2252 (SB252)

Vendor hereby certifies that it is not a company identified on the Texas Comptroller's list of companies known to have contracts with, or provide services to, a foreign organization designated as a Foreign Terrorist Organization by the U.S. Secretary of State.

If (a) Contractor is not a sole proprietorship; (b) Contractor has ten (10) or more full-time employees; and (c) this Agreement has a value of $100,000 or more, the following certification shall apply; otherwise, this certification is not required. Pursuant to Chapter 2270 of the Texas Government Code, the Contractor hereby certifies and verifies that neither the Contractor, nor any affiliate, subsidiary, or parent company of the Contractor, if any (the "Contractor Companies"), boycotts Israel, and the Contractor agrees that the Contractor and Contractor Companies will not

boycott Israel during the term of this Agreement. For purposes of this Agreement, the term "boycott" shall mean and include refusing to deal with, terminating business activities with, or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations with Israel, or with a person or entity doing business in Israel or in an Israeli-controlled territory, but does not include an action made for ordinary business purposes.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

---

CERTIFICATION OF ACCESS TO RECORDS – 2 C.F.R. § 200.336

Vendor agrees that the District's Inspector General or any of their duly authorized representatives shall have access to any books, documents, papers and records of Vendor that are directly pertinent to Vendor's discharge of its obligations under the Contract for the purpose of making audits, examinations, excerpts, and transcriptions. The right also includes timely and reasonable access to Vendor's personnel for the purpose of interview and discussion relating to such documents.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

---

CERTIFICATION OF APPLICABILITY TO SUBCONTRACTORS

Vendor agrees that all contracts it awards pursuant to the Contract shall be bound by the foregoing terms and conditions.

Does vendor certify? YES _____ Initials of Authorized Representative of Vendor

VENDOR AGREES TO COMPLY WITH ALL APPLICABLE FEDERAL, STATE, AND LOCAL LAWS, RULES, REGULATIONS, AND ORDINANCES. IT IS FURTHER ACKNOWLEDGED THAT VENDOR CERTIFIES COMPLIANCE WITH ALL PROVISIONS, LAWS, ACTS, REGULATIONS, ETC. AS SPECIFICALLY NOTED ABOVE.

FORM REQUIRED

U.S. Department of Agriculture Lobbying
Certification Regarding Lobbying Form

Applicable to Grants, Sub-grants, Cooperative Agreements, and Contracts Exceeding $100,000.00 in Federal Funds Submission of this certification is a prerequisite for making or entering into this transaction and is imposed by section 1352, Title 31, U.S. Code. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000.00 and not more than $100,000.00 for each such failure.

The undersigned certifies, to the best of his or her knowledge and belief, that:

(1) No Federal appropriated funds have been paid or will be paid by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of congress, or an employee of a Member of Congress in connection with the award of a Federal contract, the making of a Federal grant, the making of a Federal loan, the entering into a cooperative agreement, and the extension continuation, renewal, amendment, or modification of a Federal contract, grant, loan or cooperative agreement.

(2) **If any funds other than Federal appropriated funds have been paid or will be paid to any person for influence or attempting to influence an officer or employee of any agency, a Member of Congress, an officer of employee of congress, or an employee of a Member of Congress in connection with this Federal grant or cooperative agreement, the undersigned shall complete and submit Standard Form –LLL, "disclosure Form to Report Lobbying," in accordance with its instructions.**
(Form not included in this packet but can be accessed through Purchasing Federal Compliance Website and must be completed and submitted IF APPLICABLE).

(1) The undersigned shall require that the language of this certification be included in the award documents for all covered sub-awards exceeding $100,000.00 in Federal funds at all appropriate tiers and that all sub-recipients shall certify and disclose accordingly.

Federal Use Only	Authorized for Local Reproduction Standard Form - LLL (Rev. 7-97)

House Bill 1295

As of January 1, 2016, a new state policy was implemented that affects all proposals which are awarded by our Board of Trustees. HB1295 basically states the following…

House Bill 1295 amended the Texas Government Code by adding Section 2252.908, the Disclosure of Interested Parties. Under this Section 2252.908, (Alvin ISD) is prohibited from entering into a contract resulting from an RFP with a business entity unless the business entity submits a Disclosure of Interested Parties (Form 1295) to the District at the time business entity submits the signed contract. The Texas Ethics Commission has adopted rules requiring the business entity to file Form 1295 electronically with the Texas Ethics Commission.

Changes to the law requiring certain businesses to file a Form 1295 are in effect for contracts entered into or amended on or after January 1, 2018. The changes exempt certain businesses from filing a Form 1295 for certain types of contracts and replace the need for a completed Form 1295 to be notarized. Instead, the person filing a 1295 needs to complete an "unsworn declaration."

Detailed Instructions for Compliance with HB1295

VENDOR'S Responsibility for Compliance:

1) Go to the Ethics Commission Website using the following link to register and complete FORM 1295 - Certificate of Interest Parties Electronic Filing Application:
https://www.ethics.state.tx.us/whatsnew/elf_info_form1295.htm
Proposers must complete the filing application Form 1295 ***electronically*** with the Texas Ethics Commission using their online filing application.

As a "business entity," all vendors must electronically complete, print, sign and submit Form 1295 with their proposals or contracts even if there are no conflicting interested parties within the district unless:

Form 1295 is not required for the following contracts if entered into or amended on or after January 1, 2018:

- (1) a sponsored research contract of an institution of higher education;
- (2) an interagency contract of a state agency or an institution of higher education;
- (3) a contract related to health and human services if:

  (a) the value of the contract cannot be determined at the time the contract is executed; and

  (b) any qualified vendor is eligible for the contract;

- (4) a contract with a publicly traded business entity, including a wholly owned subsidiary of the business entity;*
- (5) a contract with an electric utility, as that term is defined by Section 31.002, Utilities Code;* or
- (6) a contract with a gas utility, as that term is defined by Section 121.001, Utilities Code.*

2) Proposers must print a copy of the completed form, which will include a certification of filing containing a unique certification number
3) Fill out the bottom (number 6 on the form) titled "Unsworn Declaration" and sign at the bottom. This Form 1295 must be signed by an authorized agent of the business entity.
4) Send a copy of the form via email to Jennifer Ortiz, jortiz@alvinisd.net or by fax number to our Purchasing Department is 281-585-4567.
   ADDITIONAL NOTATION: The Form 1295 must be completed for every contract entered into with Alvin ISD that will be awarded by the board.

Alvin ISD Responsibility for Compliance:

1) Once received, Alvin ISD must acknowledge the receipt of the filed Form 1295 by notifying the Texas Ethics Commission of the receipt of the filed Form 1295 **no later than the 30th day after the date the contract is approved at our board meeting.**

2) After Alvin ISD acknowledges the Form 1295, the Texas Ethics Commission will post the completed Form 1295 to its website within seven business days.

3) The completed Form 1295 with the certification of filing will be filed with your completed proposal or contract that was provided to the district for board award.

4) Upon award of the proposal, and review of all required signed documents, Purchasing will process vendor numbers to staff for issuance of purchase order.

ADDITIONAL NOTATION: Failure to comply with HB 1295 will result in your vendor packet being suspended from processing and no business can be conducted with your company until compliance has been provided by your company to Alvin ISD.

Additional Information to Help Clarify HB1295:

- Should you have questions, concerns or require additional information, please contact the Texas Ethics Commission at 512-463-5800; their office hours are from 8:00 am to 5:00 pm Monday through Friday.

- For questions submitting Form 1295 to Alvin ISD:
  - Contact Jennifer Ortiz at 281-245-2430, or by email at jortiz@alvinisd.net .
  - You may fax your signed copy to 281-585-4567

** Alvin ISD is not required at this time to keep the original documentation; therefore, it can be scanned electronically and received by email or by fax to the Purchasing Department or submitted with proposal documentation.

** HB1295 affects all Government Entities (including public school districts) entering into contracts whereby their Board of Trustees awards the contracts. Therefore, should you enter into any other contracts with other school districts, universities, colleges, or government municipalities be prepared to complete this form for their contracts as well.

Definitions Utilized for Completing Form 1295 include:

"Interested Party" means a person:
- Who has a **controlling interest** in a business entity with whom AISD contracts; or
- Who actively participates in **facilitating the contract or negotiating the terms of the contract** with Alvin ISD, including a broker, intermediary, adviser, or attorney for the business entity

"Business Entity" means an entity:
- Who is recognized by law through which business is conducted, including a sole proprietorship, partnership or corporation.
  - This includes NonProfit and For-Profit Organizations as a Business Entity

"Intermediary" for purposes of this rule, means a person:
- Who actively participates in the facilitation of the contract or negotiating the contract, including a broker, adviser, attorney, or representative of or agent for the business entity who:
  - Receives compensation from the business entity for the person's participation
  - Communicates directly with Alvin ISD on behalf of the business entity regarding the contract
  - AND is not an employee of the business entity

"Controlling Interest" means a person:
- Whereby has ownership interest or participating interest in the business entity by virtue of units, percentage, shares, stock, or otherwise that exceeds 10 percent
- Is a member on the board of directors or other governing body of a business entity of which the board or other governing body is composed of not more than 10 members
- Who serves as an officer of a business entity that has four or fewer officers or service as one of the four officers most highly compensated by a business entity that has more than four officers

SECTION 00 23 13 - RANKING CRITERIA FOR COMPETITIVE SEALED PROPOSALS

In order for the Owner and Architect to properly evaluate each proposer's qualifications, each proposer shall submit (1) printed/bound hardcopy and (2) electronic copies of the Qualifications Package, with all required attachments and information, with their bid submission.

Qualifications Packages will include AIA A305, "Contractors Qualification Statement," and its required attachments and information, and the following:

1. A copy of each Certificate of Substantial Completion for 5 previous projects similar scope and complexity;
2. A copy of the first page of each final pay application executed by the Architect for each of the five projects, contact names and current phone numbers of the Architect's and Owner's representatives for each of the five projects;
3. The resume of the proposed Project Manager, the proposed Superintendent, and any other relevant project staff.
4. A summary addressing the ranking criteria to assist the Owner in the evaluation.
5. The electronic copies shall be a single bookmarked PDF files organized in the same manner as the printed hard copy.

The Owner may make such investigations as deemed necessary and request additional information from the contractor to determine the ability of the proposer to perform the Work. The Proposer shall furnish all such information and data for the purpose as may be requested. The Owner reserves the right to reject any proposal if the evidence submitted by, or investigation of, such proposer fails to satisfy the Owner that such proposer is properly qualified to carry out the obligations of the Contract and to complete the Work contemplated above.

A committee consisting of Alvin ISD Administrators and the Architect with their consultants will make an initial evaluation of the Proposals to determine the number one ranked firm.

By submitting a proposal, each proposer agrees to waive any claim it has or may have against the Owner, the Architect/Engineer, and their respective employees, arising out of or in connection with the administration, evaluation, or recommendation of any proposal; waiver of any requirements under the Proposal Documents or the Contact Documents; acceptance or rejection of any proposals; and award of the contract.

Ranking Criteria

The Owner will use the following criteria for ranking the proposals and for designating the higher ranked Proposers with which it desires to negotiate. Each total score will be converted to a percentage grade of 0%-100% by dividing the total actual score by the total possible score. Upon ranking of the firms, the Owner shall enter into negotiations with the proposer that has the lowest proposed Base Bid price with all accepted Alternates and an evaluation grade of 80% or better. This proposer will be ranked as the number one firm with each of the higher priced proposers (with a score of 80% or better) given ranking of 2nd, 3rd, 4th, etc... If negotiations are unsuccessful, the Owner may continue negotiating with Proposers in order of rank until a contract at a price acceptable to the Owner is agreed upon. The Owner reserves the right to exclude Proposers failing to achieve a minimum total score of 80% from any further consideration for negotiation. The highest ranking firm with which the Owner negotiates a contract at a price acceptable to the Owner will be deemed the Proposer offering the best value to the Owner.

NOTE: In the event that two or more contractors propose the same total price: the contractor scoring

highest on Question #10 will be ranked higher.

STANDARD - CLOSED SEALED PROPOSAL (CSP) - RANKING CRITERIA

1 – Team Orientation & Firm Philosophy – References are asked to evaluate the Contractor's Teamwork and overall firm philosophy on Competitive Sealed Proposals.
10 Points per Reference 1.0 Factor 10 Total Points Available
Preferred References (minimum 5) shall be provided BY PROPOSER in Qualification Documents. The evaluator may also select additional references as necessary. Responses from multiple references are averaged and compared with references of other Proposers.

2 – Quality of Work – References are asked to evaluate the Contractor's Quality of Work
10 Points per Reference 1.5 Factor 15 Total Points Available
Preferred References (minimum 5) shall be provided BY PROPOSER in Qualification Documents. The evaluator may also select additional references as necessary. Responses from multiple references are averaged and compared with references of other Proposers

3 – Maintaining Schedule – References are asked whether or not schedules and milestones were met
10 Points per Reference 1.5 Factor 15 Total Points Available
Preferred References (minimum 5) shall be listed BY PROPOSER in Qualification Documents. The evaluator may also select additional references as necessary. Responses from multiple references are averaged and compared with references of other Proposers

4 – Change Orders – References are asked to evaluate the Contractor on response time and overall pricing received by Change Orders and other Proposals
10 Points per Reference 1.0 Factor 10 Total Points Available
Preferred References (minimum 5) shall be listed BY PROPOSER in Qualification Documents. The evaluator may also select additional references as necessary. Responses from multiple references are averaged and compared with references of other Proposers

5 – Warranty Work – References are asked whether or not warranty work was responded to and completed in a timely and proficient manner.
10 Points per Reference 1.5 Factor 15 Total Points Available
Preferred References (minimum 5) shall be listed BY PROPOSER in Qualification Documents. The evaluator may also select additional references as necessary. Responses from multiple references are averaged and compared with references of other Proposers

6 – Client Satisfaction – References are asked whether or not they wish to work with the Contractor again.
10 Points per Reference 1.0 Factor 10 Total Points Available
Preferred References (minimum 5) shall be chosen BY PROPOSER in Qualification Documents. The evaluator may also select additional references as necessary. Responses from multiple references are averaged and compared with references of other Proposers

7 – Time in Business & Overall Experience – Evaluation Team will acquire the year of establishment from the AIA305 submitted by Contractor and count the number of CSP projects of comparable size and scope completed within the last 10 years.
10 Points per Reference 1.5 Factor 15 Total Points Available
Contractors with less than 10 years in business under their current name will only receive a score of 1 for each project completed of comparable size and scope. Contractors with more than 10 years in business under their current name will receive a score of 5 plus an additional score of 1 for each project completed of comparable size and scope.

8 – Proposed Project Management – Resumes for proposed Project Manager and any Asst Project Managers will be evaluated and compared with those submitted by other Proposers.
10 Points per Reference 1.0 Factor 10 Total Points Available
Contractor to provide comprehensive resume and contact names and telephone numbers for references on applicable projects completed.

9 – Proposed On-Site Supervision – Resume for proposed Project Superintendent and any

Asst Superintendents will be evaluated and compared with those submitted by other Proposers.

10 Points per Reference 1.0 Factor 10 Total Points Available

Contractor to provide comprehensive resume and contact names and telephone numbers for references on applicable projects completed.

10 – Experience with Alvin ISD within the Past 10 Years – Proposer provides to Owner a list of projects completed with Alvin ISD.

10 Points per Reference 1.5 Factor 15 Total Points Available

Contractor with no experience with District will be given a score of 5. Good experience will be given a score of 6-10, bad experience will be given a score of 0-4

Total Possible Score	125
Percent Score	100%

END OF SECTION

SECTION 00 31 32 - GEOTECHNICAL DATA

PART 1 GENERAL

1.1 SOIL INVESTIGATION DATA

A. Investigation and Report:

After soil and subsurface investigations were conducted at the Project site, the Owner has obtained a geotechnical report, No. AS255004 issued by Terracon Consultants, Inc. , dated April 4, 2025 and supplemental report dated June 13, 2025. Both are available to bidders directly from the Owner if not included within the Project Manual. Soil investigation data is not a part of the Contract Documents.

Proposers are urged to examine soils investigation data and to make their own investigation of the site before submitting proposals.

B. Interpretation of Report:

Neither the Owner nor the Consultants warrant the accuracy or the completeness of the report. In submitting a tender, the Bidder acknowledges and represents that it has reviewed the report and has made its' own independent assessment of the conditions of the site and the requirement of the work, and that it is solely responsible for decisions pertaining to implementation of the geotechnical recommendations.

Re: Geotechnical Engineering Report
New Elementary School #23 Site
Iowa Colony, Texas
Terracon Project No. AS255004

Dear Mr. VanWagner:

We have completed the scope of Geotechnical Engineering services for the above referenced project in general accordance with Terracon Document No. PAS255004 dated February 3, 2025. This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning earthwork and the design and construction of foundations and pavements for the proposed project.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,
Terracon Consultants, Inc.
(Texas Firm Registration No.: F-3272)

Exploration and Testing Procedures
Site Location and Exploration Plans
Exploration and Laboratory Results
Supporting Information

Introduction

This report presents the results of our subsurface exploration and Geotechnical Engineering services performed for the proposed construction of a New Elementary School campus in Iowa Colony, Texas. The purpose of these services was to provide information and geotechnical engineering recommendations relative to:

- Earthwork recommendations including site/subgrade preparation
- Recommended foundation options and engineering design parameters
- Estimated settlement of foundations
- Pavement design guidelines

The geotechnical engineering Scope of Services for this project included the advancement of 14 test borings (BH-01 through BH-14) to depths ranging from approximately 15 to 40 feet below existing grade, laboratory testing, engineering analysis, and preparation of this report.

Terracon previously performed geotechnical engineering services and provided geotechnical engineering report (Project No. 91205027A, dated August 10, 2020) for this site. The field and laboratory data from this project was used to supplement the information for this report.

Maps showing the site and boring locations are shown on the **Site Location** and **Exploration Plan**, respectively. The results of the laboratory testing performed on soil samples obtained from the site during our field exploration are included on the boring logs in the **Exploration Results** section.

Project Description

Our initial understanding of the project was provided in our document and was discussed during project planning. A period of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

Item	Description
Information Provided	A request for quote email and a site location map were received on January 31, 2025.
Project Description	We understand that the proposed development is planned to include a new two-story elementary school building with a footprint area of about 70,300 square feet and associated pavement and driveways.

Item	Description
Proposed Foundations	Drilled-and-underreamed footings Shallow spread footings
Finished Floor Elevation	Within up to 2 feet above the existing grade.
Maximum Loads	▪ Columns: 100 kips ▪ Slabs: 125 pounds per square foot (psf)
Pavements	We assume both rigid (concrete) and flexible (asphalt) pavement sections will be considered. Anticipated traffic is planned to consist primarily of passenger and school vehicles in the parking areas. Passenger and school vehicles combined with garbage trucks and large multi-axle delivery trucks from time-to-time in the driveway areas.

Terracon should be notified if any of the above information is inconsistent with the planned construction, as modifications to our recommendations may be necessary.

Site Conditions

The following description of site conditions is derived from our site visit in association with the field exploration.

Item	Description
Parcel Information	The project site is located approximately 700 feet northwest of the intersection of White Gold Drive and Karsten Road in Iowa Colony, Texas. (See **Exhibit D**)
Existing Improvements	At the time of our field exploration, a detention pond was located on the south side of the site. The rest of the site was vacant.
Current Ground Cover	Grass, weeds, and exposed subgrade
Existing Topography	Relatively level

Geotechnical Characterization

Geology

Based on the geologic maps published by the Bureau of Economic Geology, the site for the proposed construction is located on the Beaumont formation, a deltaic nonmarine Pleistocene deposit. The Beaumont formation is heterogeneous containing thick interbedded layers of clay, fine sand, and silt.

The clay fraction is primarily composed of montmorillonite, illite, kaolinite, and finely ground quartz. The clay present in the formation has been preconsolidated by a process of desiccation. Numerous wetting and drying cycles have produced a network of small randomly oriented, closely-spaced joints within some depth zones. These small joints frequently have a shiny appearance; the clays are called slickensided in these cases. The joint pattern may have an influence on the construction and engineering behavior of the soil.

The coastal plain in this region has a complex tectonic geology, several major features of which are: Gulf Coastal geosyncline, salt domes, and major sea level fluctuations during the glacial stages, subsidence and geologic faulting activities. Most of these geologic faulting activities have ceased for millions of years, but some are still active.

Subsurface Profile

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of the site. Conditions observed at each exploration point are indicated on the individual logs. The individual logs can be found in the **Exploration Results** and the GeoModel can be found in the **Figures** attachment of this report.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at each boring location, refer to the GeoModel.

Model Layer	Layer Name	General Description
1	Fill – Fat Clay and Lean Clay	Reddish brown, tan, gray and dark gray, with calcareous and ferrous nodules, sand pockets and slickensides
2	Fat Clay	Dark gray, gray, tan and reddish brown, medium stiff to very stiff, with calcareous and ferrous nodules, sand pockets, silt seams, and slickensides
3	Sandy Lean Clay and Lean Clay	Reddish brown and tan, soft to stiff with silt and sand seams
4	Clayey Sand, Silty Sand, and Sandy Silt	Tan, loose to dense, with clay pockets

Groundwater Conditions

To evaluate groundwater conditions at the time of our field program, Borings BH-01 through BH-14 were advanced using dry drilling techniques to their termination depths (about 15 to 40 feet) in an effort to evaluate groundwater conditions at the time of our field program. Upon reaching groundwater, drilling was suspended for a period of about 15 minutes to allow the groundwater to rise and the groundwater levels to be recorded.

The water levels observed in the boreholes can be found on the boring logs in **Exploration Results** and are summarized below.

Summary of Groundwater Level Observations					
Boring No.	Approximate Boring Depth (feet)[1]	Approximate Depth of Dry Drilling (feet)[1]	Approximate Depth of Groundwater Below Existing Grade		
			Initial/During Dry Drilling	After 5 Minutes	After 15 Minutes
BH-01	40	40	30	24	23
BH-02	40	40	30	18	16
BH-03	40	40	30	22	21½
BH-04	40	40	35	21½	20
BH-05	40	40	35	24	23½
BH-06	40	40	35	30	28½
BH-07	40	40	30	21	20½
BH-08	40	40	35	23	22

Summary of Groundwater Level Observations					
Boring No.	**Approximate Boring Depth (feet)[1]**	**Approximate Depth of Dry Drilling (feet)[1]**	**Approximate Depth of Groundwater Below Existing Grade**		
			Initial/During Dry Drilling	**After 5 Minutes**	**After 15 Minutes**
BH-09	15	15	Groundwater not observed		
BH-10	15	15			
BH-11	15	15			
BH-12	15	15			
BH-13	15	15			
BH-14	15	15			

1. Below existing grade.
2. Groundwater readings were obtained on March 20, 2025.

Groundwater level fluctuations occur due to seasonal variations in the amount of rainfall, runoff and other factors not evident at the time the borings were performed. Therefore, groundwater levels during construction or at other times in the life of the structure may be higher or lower than the levels indicated on the boring logs. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project and should be evaluated prior to construction.

Geotechnical Overview

Based on the information obtained from our subsurface exploration, the site can be developed for the proposed project. A summary of our findings and recommendations is provided below.

- Fill soils were observed at the ground surface at borings BH-1 through BH-14 and extended approximately 2 to 10 feet below existing grade. Fill soils may be observed at varying depths at other locations within the site not explored during our field program. Support of the floor slabs on or above existing fill materials is discussed in this report. However, even with the recommended construction procedures, there is an inherent risk for the owner that compressible fill or unsuitable material within or buried by the fill will not be discovered. This risk of unforeseen conditions cannot be eliminated without completely removing the existing fill. To take advantage of the cost benefit of not removing the entire amount of undocumented fill, the owner must be willing to accept the risk of increased differential performance which can result in increased cracking and abrupt differential settlement. Should this risk be acceptable, floor slabs and pavements can be supported above the fill.

- We recommend that the fill soils be over-excavated and completely removed within the proposed building area to expose the underlying native subsurface soils.

- Expansive soils were observed at this site. This report provides recommendations to help reduce the effects of soil shrinkage and expansion. However, even if these procedures are followed, some movement and distress in the proposed building should be anticipated. The severity of distress will increase if any modification of the site results in excessive wetting or drying of the expansive soils. Eliminating the risk of movement associated with expansive soils may not be feasible. However, this risk can be significantly reduced if the building is designed as a structural slab over a void space with the structural loads supported by a foundation system terminated below the active zone. Terracon can provide recommendations for this option, if requested.

- A foundation system consisting of drilled-and-underreamed or shallow spread footings should be utilized to support the proposed building planned at this site.

- A minimum 60-inch thick select fill pad should be placed under the proposed building to provide uniform support to the floor slab and to reduce the estimated Potential Vertical Rise (PVR) to approximately one inch or less.

- Flexible pavement sections vary from 2 to 2½ inches of asphaltic concrete over 8 to 10 inches of base material with chemically treated subgrade.

- Rigid pavement sections vary from 5 to 7 inches of reinforced concrete with chemically treated subgrade.

- The top 6 inched of the subgrade just below the proposed pavement should be chemically treated with lime. We recommend that about 8 to 10 percent lime be used for estimation and planning. The percentage are given as application by dry weight and are typically equivalent to about 40 to 50 pounds of lime per square yard per 6-inch depth.

- Pavement areas placed upon the deeper fill soils, such as observed at borings BH-09, BH-11, B-13,and BH-14 will also be subject to future settlement of the fill. Complete excavation, removal, and recompaction of the fill soils in the pavement areas would reduce the potential for future settlement; however, complete excavation and removal of the fill soil within the proposed pavement areas would likely not be feasible. As an alternative, the settlement potential can be reduced by reworking the upper two to three feet of fill below the pavement areas if deep fills soils are observed (or up to the underlying native soils, whichever occurs first) to reduce differential settlements, with the understanding that some settlement (which will likely result in increased maintenance of pavements) may occur.

The recommendations contained in this report are based upon the results of field and laboratory testing (presented in the **Exploration Results**), engineering analyses, and our current understanding of the proposed project. The **General Comments** section provides an understanding of the report limitations.

Earthwork

Earthwork is anticipated to include clearing and grubbing, excavations, and fill placement. The following sections provide recommendations for use in the preparation of specifications for the work. Recommendations include critical quality criteria, as necessary, to render the site in the state considered in our geotechnical engineering evaluation for foundations, floor slabs, and pavements.

Site Preparation

Construction areas should be stripped of vegetation, topsoil, and other debris/unsuitable surface material. Proper site drainage should be maintained during construction so that ponding of surface runoff does not occur and cause construction delays and/or inhibit site access.

Once final subgrade elevations have been achieved, the exposed subgrade should be carefully proofrolled with a 20-ton pneumatic roller or equivalent equipment, such as a fully loaded dump truck, to detect weak zones in the subgrade. Special care should be exercised when proofrolling areas containing fill soils in an attempt to observe soft/weak zones within the fill soils. Weak areas detected during proofrolling, as well as zones of fill containing organic matter and/or debris, should be removed and replaced with soils exhibiting similar classification, moisture content, and density as the adjacent in-situ soils. Proofrolling should be performed under the direct observation of the geotechnical engineer or his/her representative.

Subsequent to proofrolling, and just prior to placement of fill, the exposed subgrade within the construction area should be evaluated for moisture and density. If the moisture and/or density do not meet the criteria described in **Fill Compaction Requirements** for on-site soils, the subgrade should be scarified to a minimum depth of 6 inches, moisture adjusted, and compacted to at least 95 percent of the Standard Effort (ASTM D 698) maximum dry density.

Existing Fill

We recommend that the fill soils be over-excavated and completely removed within the proposed building area to expose the underlying native subsurface soils. Select fill soils should be used to raise grade up in the proposed building area.

Pavement areas placed upon the deeper fill soils, such as observed at borings BH-09, BH-11, B-13,and BH-14 will also be subject to future settlement of the fill. Complete excavation, removal, and recompaction of the fill soils in the pavement areas would reduce the potential for future settlement; however, complete excavation and removal of the fill soil within the proposed pavement areas would likely not be feasible. As an alternative, the settlement potential can be reduced by reworking the upper two to three feet of fill below the pavement areas if deep fills soils are observed (or up to the underlying native soils, whichever occurs first) to reduce differential settlements, with the understanding that some settlement (which will likely result in increased maintenance of pavements) may occur.

Fill Material Types

Select fill and on-site soils to be used at this site for grade adjustments should meet the following criteria:

Fill Type	USCS Classification	Acceptable Location for Placement
Select fill soils	CL and/or SC (10≤PI≤20)	Must be used to construct the select fill building pad under the floor slab and for all grade adjustments within the building areas.
On-site soils	Varies	The on-site soils, including the undocumented fill soils, appear suitable for use as fill within the pavement areas, provided they are free of organics and debris.

If blended or mixed soils are intended for use as select fill, Terracon should be contacted to provide additional recommendations. Blended or mixed soils do not occur naturally. These soils are a blend of sand and clay and will require mechanical mixing at the site with a pulvimixer. If these soils are not mixed thoroughly to break down the clay clods and blend-in the sand to produce a uniform soil matrix, the fill material may be detrimental to the performance of the foundations. If blended soils are used, we recommend that additional samples of the blended soils as well as the clay clods, be obtained prior to and during earthwork operations to evaluate if the blended soils can be used in lieu of select fill. The actual type and amount of mechanical mixing at the site will depend on the amount of clay and sand, and properties of the clay.

Fill Compaction Requirements

Item	Description
Fill lift thickness	The fill soils should be placed on prepared surfaces in lifts not to exceed 8 inches loose measure, with compacted thicknesses not to exceed 6 inches.
Compaction requirements	■ Select fill and on-site placed within 4 feet of final grade should be compacted to 95 percent of the Standard Effort (ASTM D 698) maximum dry density. ■ Select fill and on-site placed below 4 feet below final grade should be compacted to 100 percent of the Standard Effort (ASTM D 698) maximum dry density. ■ The select fill soils should be moisture adjusted to within 2 percent of the optimum moisture content. ■ The on-site clay soils should be moisture conditioned to between optimum and +4 percent of the optimum moisture content.

Prior to any filling operations, samples of the proposed borrow and on-site materials should be obtained for laboratory moisture-density testing. The tests will provide a basis for evaluation of fill compaction by in-place density testing. A qualified soil technician should perform sufficient in-place density tests during the filling operations to evaluate that proper levels of compaction, including dry unit weight and moisture content, are being attained.

Utility Trench Backfill

Utility trenches are a common source of water infiltration and mitigation. All utility trenches that penetrate beneath the structure should effectively sealed to restrict water intrusion and flow through the trenches that could migrate below the building. We recommend constructing and effective clay "trench plug" that extends at least 5 feet out from the face of the building exterior. The plug material should consist of clay compacted at a water content at or above the soils optimum water content. The clay fill should be placed to completely surround the utility line and be compacted in accordance with recommendations in this report.

Grading and Drainage

All grades must provide effective drainage away from the proposed structures during and after construction. Water permitted to pond next to the buildings can result in distress in the buildings. These greater movements can result in unacceptable differential slab movements, cracked slabs and walls, and roof leaks. Slabs and

foundation performances described in this report are based on effective drainage for the life of the buildings and cannot be relied upon if effective drainage is not maintained.

Exposed ground should be sloped away from the buildings for at least 10 feet beyond the perimeter of the buildings. After construction and landscaping, we recommend verifying final grades to document that effective drainage has been achieved. Grades around the buildings should also be periodically inspected and adjusted as necessary, as part of the buildings' maintenance program.

Planters located within 10 feet of the proposed buildings should be self-contained to prevent water accessing the buildings subgrade soils. Locate sprinkler mains and spray heads a minimum of 5 feet away from the building lines. Low-volume, drip-style landscaped irrigation should not be used near the building. Collect roof runoff in drains or gutters. Discharge roof drains and downspouts onto pavements and/or flatworks which slope away from the structures or extend down spouts a minimum of 10 feet away from the buildings.

Flatworks will be subject to post construction movement. Maximum grades practical should be used for flatwork to prevent water from ponding. Allowances in final grades should also consider post-construction movement of flatwork, particularly if such movement would be critical. Where flatwork abuts the buildings, effectively seal and maintain joints to prevent surface water infiltration.

Wet Weather/Soft subgrade Considerations

Construction operations may encounter difficulties due to wet or soft surface soils becoming a general hindrance to equipment, especially following periods of wet weather. If the subgrade cannot be adequately compacted to the minimum densities as described previously, one of the following measures will be required: 1) removal and replacement with select fill, 2) chemical treatment of the soil to dry and improve the condition of the subgrade, or 3) drying by natural means if the schedule allows. Based on our experience with similar soils in this area, chemical treatment is generally an efficient and effective method to improve the condition of wet and weak subgrade. Terracon should be contacted for additional recommendations if chemical treatment is needed due to soft and wet subgrade.

Shallow Foundations

If the site has been prepared in accordance with the requirements noted in **Earthwork**, the following design parameters are applicable for shallow foundations.

Design Recommendations – Shallow Spread-Strip Footings

Item	Description
Minimum embedment depth[1]	3 feet below final grade
Allowable bearing pressures (individual footings)[2]	Net dead plus sustained live load – 2,300 psf Net total load – 3,400 psf
Allowable bearing pressure (strip footing)[3]	Net total load – 2,300 psf
Approximate post-construction settlement[4]	Approximately one inch
Estimated post-construction differential settlement[5]	Approximately ½ of post-construction settlement
Allowable passive pressure[6]	750 psf
Allowable frictional resistance[7]	250 psf
Uplift resistance[8]	Foundation Weight (150 pcf) & Soil Weight (120 pcf)

1. The footings should bear upon the properly placed and compacted select fill soils.
2. Whichever condition yields a larger bearing area.
3. Defined as a footing at least twice as long as it is wide.
4. This estimated post-construction settlement of the shallow footings is based on proper construction practices being followed. A clear distance between footings of one footing size of the larger of the two footings should not produce overlapping stress distributions and would essentially behave as independent foundations. If shallow footing widths are planned to be greater than 10 feet, Terracon should be contacted to perform additional settlement analyses.
5. The post-construction differential settlements may result from variances in subsurface conditions, loading conditions, and construction procedures. The settlement response of the footings will be more dependent upon the quality of construction than upon the response of the subgrade to the foundation loads.
6. The passive pressure along the exterior face of the footings should be neglected within the upper 4 feet due to surface effects and the presence of fill and expansive soils unless pavement is provided up to the edge of the structures. For interior footings, the allowable passive pressure may be used for the entire depth of the footing.
7. To be utilized on the base of the footings.
8. Structural uplift loads on the shallow footings may be resisted by the weight of the foundation plus the weight of any soil directly above the foundation. The ultimate uplift capacity of shallow footings should be reduced by an appropriate factor of safety to compute allowable uplift capacity.

Construction Considerations – Shallow Foundations

Excavations for the shallow foundations should be performed with equipment capable of providing a relatively clean bearing area. The bottom 6 inches of the excavations should be performed using a smooth-mouthed excavation bucket or by hand labor. The excavations should be neatly excavated and properly formed. Disturbance of the bearing area of the foundations should be minimized during the excavation operations. Soft zones observed during construction should be over-excavated to a firm and undisturbed soil layer and all loose materials in the excavation bottom should be removed before placement of concrete. Water should not be allowed to accumulate at the bottom of the foundation excavations. To reduce the potential for groundwater seepage into the excavations and to minimize disturbance to the bearing area, we recommend that steel and concrete be placed as soon as possible after the excavations are completed and properly cleaned. Excavations should not be left open for more than 24 hours. The bearing surface of the foundations should be evaluated immediately prior to placing concrete.

A thin seal slab (approximately 2 to 4 inches thick) should be placed at the bottom of the footing excavation to protect the bearing surface of the footing from disturbance if the footing cannot be poured within 24 hours following excavation.

Design Recommendations – Drilled-and-Underreamed Footings

Item	Description
Minimum embedment depth[1]	10 feet below existing grade (grade at the time of our field program)
Allowable bearing pressures[2]	Net dead plus sustained live load – 2,800 psf Net total load – 4,200 psf
Maximum underream-to-shaft diameter ratio	3:1
Minimum underream-to-shaft diameter ratio[3]	2:1
Estimated uplift pressure due to post-construction heave of the clay soils[4]	1,000 psf
Minimum percentage of steel[5]	0.5 percent
Approximate post-construction settlement[6]	one inch or less
Estimated differential settlement[7]	Approximately ½ of post-construction settlement
Allowable passive pressure[8]	1,000 psf

Item	Description
Uplift resistance[9]	Foundation Weight (150 pcf) & Soil Weight (120 pcf)

1. The footings should bear within the native undisturbed clay soils.
2. Whichever condition yields a larger bearing area.
3. This minimum underream-to-shaft diameter ratio should result in a large enough diameter of the underream to overcome uplift forces on the footing without casing local soil failure to the overlying soils.
4. The magnitude of uplift is difficult to predict and will vary with in-situ moisture contents. This uplift pressure can be approximated over the entire perimeter of the shaft above the top of the underream up to the bottom of the select fill pad.
5. The footings should contain sufficient vertical reinforcing steel throughout the entire shaft length to resist uplift (tensile) forces due to post-construction heave of the clay soils. The amount of reinforcing steel required can be computed by assuming that the dead load of the structure surcharges the footing, that the above estimated tensile force acts vertically on the shaft, and that the underream acts as a rigid anchor.
6. This estimated post-construction settlement of the drilled-and-underreamed footings is without considering the effect of stress distribution from adjacent foundations and assuming proper construction practices are being followed. A clear distance between the footings of one underream diameter of the larger footing should be provided between the underreams to develop the recommended bearing pressures and to control settlements. If a clearance of one diameter cannot be maintained in every case, the above bearing capacities should be reduced by 20 percent for a clearance between one half and one underream diameters. Underreams closer than a clearance of one half of an underream diameter are not recommended.
7. The differential settlement will result from variances in subsurface conditions, loading conditions and construction procedures, such a cleanliness of the bearing area or flowing water in the shaft.
8. For footings placed against an undisturbed vertical face of the in-situ soils. Lateral resistance of the drilled-and-underreamed footings is primarily developed by passive resistance of the soils against the side of the footing. Due to surface effects and the presence of fill and expansive soils, the lateral resistance of the upper 4 feet of the soils at the surface for exterior footings should be neglected unless area paving is provided up to the edge of the building.
9. Structural uplift loads on the drilled-and-underreamed footings will be resisted by the dead weight of the footings and supported structure plus the weight of a soil wedge above the footing. The soil wedge can be assumed to extend upward from the bottom of the underream at a slope of 4 vertical to 1 horizontal.

Construction Considerations – Drilled-and-Underreamed Footings

Drilled excavations to a depth of 10 feet below existing grade will be necessary for installation of drilled-and-underreamed footings for the proposed buildings planned at this site. The excavations should be performed with equipment capable of providing a relatively clean bearing area. The presence of secondary structures such as silt and sand pockets, ferrous and calcareous nodules, etc., can cause sloughing during footing excavation. Thus, the drilling contractor should have casing available in the event that sloughing causes improperly formed shafts.

Based on our groundwater observations, groundwater was not observed at borings BH-01 through BH-08 within the recommended bearing depth and is not expected to be a major concern during construction at the recommended bearing depth. However, depending on climatic conditions, groundwater levels may vary from the levels observed during our field program as shown on boring locations performed for this site in project (Terracon Project No. 91205027A). Water must not be allowed to accumulate in the bottom of the footing excavations. The contractor should be prepared to remove water from the drilled footings, if necessary. To reduce the potential for water seepage into the footing excavation and to minimize disturbance to the bearing area, we recommend that concrete and steel be placed as soon as possible after footing excavations are completed. Preferably, footing excavations should be backfilled with concrete within about 2 to 4 hours of completion of the drilling and in no case should an excavation be left open overnight. The concrete placed in the excavations should have a 6-inch slump with a plus or minus one inch tolerance. The bottom of each footing excavation should be free of all loose materials and/or water, and the bearing surface should be evaluated immediately prior to placing concrete.

Based on the available field and laboratory data, the underreams constructed as described in this report should remain stable for a short period of time. However, if underreams are marginally stable due to water seepage and/or the presence of sloughing soils, successful construction of underreamed footings may be possible by performing the sequence of construction without interruption, that is, each footing drilled, underreamed, and backfilled with concrete in one continuous operation. The contractor must coordinate the operation very closely to have concrete on site at the time each footing is drilled and underreamed so that no shaft or underream is drilled without concrete standing by, ready to be placed. Additional measures to reduce the potential for caving of the underream would be to limit the underream-to-shaft diameter ratio to 2.5:1 or 2:1 or to install straight shaft footings in isolated problem areas. If straight shaft footings are planned at the site, Terracon should be contacted for additional recommendations.

Grade Beams – Drilled-and-Underreamed Footings

Grade beams associated with the drilled-and-underreamed footings should be designed to span between the footings without subgrade support. Often, a vertical void of about 6 to 8 inches is provided beneath the grade beams in clay soils such as those observed at this site. However, recent experience indicates that the voids beneath the grade beams often fill with water, providing moisture to the surrounding subgrade. Therefore, provided that the subgrade is prepared as recommended in this report, grade beams may be constructed without a void at this site. However, due to the underlying clay soils, nominal upward movement of the grade beams may occur during moisture variations of the subgrade.

If construction of voids beneath the grade beams is planned, proper construction of the voids and soil retainers is very important. If a cardboard carton system is used on this project, we recommend that the carton form supplier provide, during the initial concrete operations, a representative to instruct the work force on the proper installation methods for both the forms and the concrete. In addition, measures should be implemented to provide proper surface drainage away from the structures to reduce the potential for water to access the voids.

Backfill against the outside face of the grade beams should consist of select fill used to prepare the building pad. The select fill should be uniformly compacted to at least 95 percent of the Standard Effort (ASTM D 698) maximum dry density at a moisture content within 2 percent of optimum moisture content.

Foundation Construction Monitoring

The performance of the foundation systems will be highly dependent upon the quality of construction. Thus, we recommend that subgrade preparation, fill compaction, and foundation installation be observed full time by an experienced Terracon soil technician under the direction of our geotechnical engineer. During foundation construction, the base of the footing excavations should be observed to evaluate the condition of the subgrade. We would be pleased to develop a plan for compaction and foundation installation observation to be incorporated in the overall quality control program.

Floor Slabs

Planned finished grades for the proposed building were not available at the time of this report. We anticipate that the finished floor elevation of the proposed building is planned to be within about 2 feet of existing grade. If the grading is planned to be altered from what has been previously described, Terracon should be notified to review and/or modify our recommendations given in this subsection.

Due to the amount of fill observed at this site, we recommend that the fill soils be over-excavated and completely removed within the proposed building area. The exposed subgrade after over-excavation should be thoroughly proofrolled and prepared as outlined in the **Earthwork** section of this report (including evaluated for moisture and density). Select fill soils should be used to raise grade up in the proposed building area.

The near-surface soils observed at this site generally exhibit a high expansion potential. These soils can subject the interior floor slab of the building to significant movements (due to shrinking and swelling) with fluctuations in their moisture content. This movement potential is influenced primarily by the properties of the subgrade soils, as well as the moisture content of the subgrade at the time of construction, overburden pressures, and the stability of the moisture contents throughout the life of the building. Based on the information developed from our field and laboratory programs and on method TEX-124-E in the Texas Department of Transportation (TxDOT) Manual of Testing Procedures, we estimate that the subgrade soils at this site exhibit a Potential Vertical Rise (PVR) of up to approximately 4¾ inches. Therefore, we highly recommend that the near-surface soils be prepared as stated below to reduce the potential for slab movement associated with volumetric changes of the near-surface clay soils due to moisture variations to a more acceptable level. The actual movements could be greater if poor drainage, ponded water, and/or other sources of moisture are allowed to infiltrate beneath the structure after construction.

The most common method of subgrade preparation to reduce potential expansion of the subgrade would be to provide a pad of properly placed and compacted select fill beneath the grade-supported floor slabs. The corresponding decrease in the potential soil movements is primarily a function of the fill pad thickness and the moisture levels of the underlying clay subgrade. While the indicated preparations do not eliminate the potential for soil movement, the magnitude of such movements should be reduced to more acceptable levels. To provide uniform support to the floor slab and to reduce the estimated PVR to approximately one inch or less, we recommend that a minimum 60 inches of properly placed and compacted select fill material be constructed immediately beneath the floor slab. The select fill pad should extend a minimum of 5 feet beyond the edge of the building area. The final exterior grade adjacent to the structure should be sloped to promote effective drainage away from the structure.

Select fill should be utilized for all grade adjustments within the proposed building area. The subgrade and select fill soils should be prepared as outlined in the **Earthwork** section of this report, which contains material and placement requirements for select fill, as well as other subgrade preparation recommendations.

The subgrade soils for flatwork outside of the structure which will be sensitive to movement should be prepared as discussed previously. This preparation will be important on surrounding sidewalks and paving immediately adjacent to the structure. If these adjacent flatwork areas are not prepared as stated above for the building area, the

estimated PVR for these areas could approach those indicated previously for in-situ conditions. If the soils swell in these areas, this movement could result in significant distress to the adjacent sidewalks and paving and possibly result in reversed drainage (flow of runoff toward the structure) around the perimeter of the structure.

Pavements

Once the subgrade is properly prepared, both flexible pavement systems (consisting of asphaltic concrete and base material) and rigid pavement systems may be considered for this project. Detailed traffic loads and frequencies were not available at the time of this report. However, we anticipate that the traffic will consist primarily of passenger vehicles in the parking areas and passenger vehicles combined with garbage trucks and large multi-axle delivery trucks from time-to-time in driveway areas.

Tabulated in the following table are the assumed traffic frequencies and loads used to design pavement sections for this project. When actual traffic conditions have been determined, Terracon should be contacted to review the information to consider a need for revision of the pavement designs and related recommendations.

Pavement Area	Traffic Design Index	Description
Automobile Parking Areas	DI-1	Light traffic (Few vehicles heavier than passenger cars, no regular use by heavily loaded two axle trucks.) (EAL[1] < 6)
Driveways (Light Duty)	DI-2	Medium to light traffic (Similar to DI-1 including not over 50 loaded two axle trucks or lightly loaded larger vehicles per day. No regular use by heavily loaded trucks with three or more axles.) (EAL[1] = 6-20)
Driveways and Truck Traffic Areas (Medium Duty)	DI-3	Medium traffic (Including not over 300 heavily loaded two axle trucks plus lightly loaded trucks with three or more axles and no more than 30 heavily loaded trucks with more than three axles per day.) (EAL[1] = 21-75)

1. Equivalent daily 18-kip single-axle load applications.

The top 6 inches of the finished subgrade soils directly beneath the pavement systems should be chemically treated with lime. The decision about the type and proper amount of additive should be made after the subgrade is open for inspection. Chemical treatment will increase the supporting value of the subgrade and decrease the effect of

moisture on subgrade soils. These 6 inches of treatment is a required part of the pavement design and is not a part of site and subgrade preparation for wet/soft subgrade conditions.

Listed in the following tables are flexible and rigid pavement component thicknesses, which may be used as a guide for pavement systems at the site for the traffic classifications stated herein. These systems were derived based on general characterization of the subgrade. Specific testing (such as CBR's, resilient modulus tests, etc.) was not performed for this project to evaluate the support characteristics of the subgrade.

Flexible Pavement System

Layer	Material Thickness (inches)	
	DI-1	DI-2
Asphaltic Concrete	2	2½
Base Material	8	10
Treated Subgrade	6	6

Rigid Pavement System

Layer	Material Thickness (inches)		
	DI-1	DI-2	DI-3
Reinforced Concrete	5	6	7
Treated Subgrade	6	6	6

Waste dumpster areas should be constructed of at least 7 inches of reinforced concrete pavement. The concrete pad areas should be designed so that the vehicle wheels of the collection truck are supported on the concrete while the dumpster is being lifted to support the large wheel loading imposed during waste collection.

Presented in the following sections are our recommended material requirements for the various pavement sections.

Reinforced Concrete Pavement – The materials and properties of reinforced concrete pavement shall meet applicable requirements in the ACI Manual of Concrete Practice. The Portland cement concrete mix should have a minimum 28-day compressive strength of 3,500 psi.

If river gravel is planned to be utilized in the portland cement concrete mix, Terracon should be contacted for additional services. The presence of river gravel in the portland cement concrete mix can result in excessive cracking and distress to the concrete pavement as a result of differing thermal expansion properties between the river gravel and cement paste. Special care should be taken in developing the project's Portland cement concrete mix design, joint layout, and placement to help reduce the potential for excessive cracking and distress if river gravel is planned to be utilized for the project.

Reinforcing Steel – ACI recommendations indicate that distributed steel reinforcement is not necessary when the pavement is properly jointed to form short panel lengths that will help reduce intermediate cracking. Provided the concrete pavement is designed and constructed as stated herein, the installation of reinforcing steel is optional and should be evaluated by the design team. Proper layout and installation of the joints within the pavement is critical to help control intermediate cracking.

If reinforcing steel is planned to be utilized in the concrete pavement by the design team, the following amount of reinforcing steel should be used as a guideline:

- DI-1: #3 bars spaced at 18 inches or #4 bars spaced at 24 inches on centers in both directions.
- DI-2: #3 bars spaced at 12 inches or #4 bars spaced at 18 inches on centers in both directions.
- DI-3: #4 bars spaced at 18 inches on centers in both directions.

Control Joint Spacing – ACI recommendations indicate that control joints should be spaced at a maximum spacing of 30 times the thickness of the pavement for unreinforced parking lot pavements. Furthermore, ACI recommends a maximum control joint spacing of 12.5 feet for 5-inch pavements and a maximum control joint spacing of 15 feet for 6-inch or thicker pavements. Sawcut control joints should be cut within 4 to 12 hours of concrete placement to help control the formation of plastic shrinkage cracks as the concrete cures. The depth of the joint should be at least one-quarter of the slab depth when using a conventional saw or one inch when using early entry saws. The width of the cut should be in accordance with the joint sealant manufacturer recommendations.

Expansion Joint Spacing – ACI recommendations indicate that regularly spaced expansion joints may be deleted from concrete pavements. Therefore, the installation of expansion joints is optional and should be evaluated by the design team.

Construction Joints – When concrete is planned to be placed at different times, we recommend the use of a construction joint between paving areas. The construction joint should consist of a butt joint (not a keyway joint).

Concrete Curing Compound – A concrete curing compound, such as a Type 2 membrane curing compound conforming to TxDOT DMS-4650, "Hydraulic Cement Concrete Curing Materials and Evaporation Retardants" or equivalent, should be applied to the concrete surface immediately after placement of the concrete in accordance with TxDOT 2014 Standard Specifications Item 360.

Dowels at Expansion/Construction Joints – The dowels at expansion/construction joints should be spaced at 12-inch centers and consist of the following:

- DI-1: 5/8-inch diameter, 12-inches long with 5-inch embedment.
- DI-2: 3/4-inch diameter, 14-inches long with 6-inch embedment.
- DI-3: 7/8-inch diameter, 14-inches long with 6-inch embedment.

One end of the dowels should either be greased or sleeved to allow for lateral movement to occur.

Hot Mix Asphaltic Concrete Surface Course – The asphaltic concrete surface course should be plant mixed, hot laid Type D (Fine Graded Surface Course) meeting the specifications requirements in TxDOT 2014 Standard Specifications Item 340. Specific criteria for the job specifications should include compaction to within an air void range of 3.8 to 8.5 percent calculated using the maximum theoretical specific gravity mix measured by TxDOT Tex-227-F. The asphalt cement content by percent of total mixture weight should be within ± 0.5 percent asphalt cement from the job mix design.

Base Material – Base material should be composed of crushed limestone or crushed concrete meeting the requirements of TxDOT 2014 Standard Specifications Item 247, Type A or D, Grade 1-2. The base material should be compacted to at least 95 percent of the Modified Effort (ASTM D 1557) maximum dry density at moisture content within 2 percent of the optimum moisture content.

Lime Treated Subgrade – We anticipate that the pavement subgrade will generally consist of on-site medium to high plasticity clay soils. The pavement subgrade should be treated with lime in accordance with TXDOT 2014 Standard Specifications Item 260. Based on the classification test results, we recommend that approximately 8 to 10 percent lime by dry weight be used for estimating and planning. The percentages are given as application by dry weight and are typically equivalent to about 40 to 50 pounds of lime per square yard per 6-inch depth. The actual quantity of lime should be determined at the time of construction based on lime determination tests conducted using bulk samples of the subgrade soils. The pulverization, mixing, and curing of the lime treated subgrade is of particular importance for the on-site clay soils. The subgrade should be compacted to a minimum of 95 percent of the Standard Effort (ASTM D 698) maximum dry density at a moisture content between optimum and 4 percent wet of the optimum moisture content.

Preferably, traffic should be kept off the treated subgrade for about 7 days to facilitate curing of the soil-lime mixture; in addition, the subgrade is not suitable for heavy construction traffic prior to paving.

The pavement design methods described above are intended to provide structural sections with adequate thickness over a particular subgrade such that wheel loads are reduced to a level the subgrade can support. The support characteristics of the subgrade for pavement design do not account for shrink/swell movements of an expansive clay subgrade such as the soils observed at this site. Thus, the pavement may be adequate from a structural standpoint, yet still experience cracking and deformation due to shrink/swell related movement of the subgrade. Post-construction subgrade movements and some cracking of pavements are not uncommon for clay subgrade conditions such as those observed at this site. Reducing moisture changes in the subgrade is important to reduce shrink/swell movements. Although chemical treatment will help to reduce such movement/cracking, this movement/cracking cannot be feasibly eliminated.

Related civil design factors such as subgrade drainage, shoulder support, cross-sectional configurations, surface elevations and environmental factors which will significantly affect the service life must be included in the preparation of the construction drawings and specifications. Normal periodic maintenance will be required.

Long-term pavement performance will be dependent upon several factors, including maintaining subgrade moisture levels and providing for preventative maintenance. The following recommendations should be implemented to help promote long-term pavement performance:

- The subgrade and the pavement surface should be designed to promote proper surface drainage, preferably at a minimum grade of 2 percent;
- Install joint sealant and seal cracks immediately;
- Extend curbs into the treated subgrade for a depth of at least 4 inches to help reduce moisture migration into the subgrade soils beneath the pavement section; and
- Place compacted, low permeability clayey backfill against the exterior side of the curb and gutter.

Preventative maintenance should be planned and provided for the pavements at this site. Preventative maintenance activities are intended to slow the rate of pavement deterioration, and consist of both localized maintenance (e.g. crack and joint sealing and patching) and global maintenance (e.g. surface sealing). Prior to implementing any maintenance, additional engineering observations are recommended to determine the type and extent of preventative maintenance.

General Comments

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly effect excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety and cost estimating including excavation support and dewatering requirements/design are the responsibility of others. Construction and site development have the potential to affect adjacent properties. Such impacts can include damages due to vibration, modification of groundwater/surface water flow during construction, foundation movement due to undermining or subsidence from excavation, as well as noise or air quality concerns. Evaluation of these items on nearby properties are commonly associated with contractor means and methods and are not addressed in this report. The owner and contractor should consider a preconstruction/precondition survey of surrounding development. If changes in the nature, design, or location of the project are planned, our conclusions and

recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

Exploration and Testing Procedures

Field Exploration

Number of Borings	Approximate Boring Depth (feet)	Location
8 (BH-01 through BH-08)	40	Building area
6 (BH-09 through BH-14)	15	Pavement/driveway area

Boring Layout and Elevations: We used handheld Global Positioning System (GPS) equipment to locate the approximate latitude and longitude of the borings with an accuracy of +/-25 feet. The boring depths were measured from the existing ground surface at the time of our field activities.

Subsurface Exploration Procedures: We advanced the borings with an all-terrain vehicle (ATV) mounted drilling rig using dry auger techniques. Samples were obtained at 2-foot intervals in the upper 12 feet of each boring and at intervals of 5 feet thereafter. Soil sampling was typically performed using open-tube and/or split-barrel sampling procedures.

Cohesive soil samples were generally recovered using open-tube samplers. Hand penetrometer tests were performed on samples of cohesive soils in the field to serve as a general measure of consistency.

Granular soils and soils for which good quality open-tube samples could not be recovered were sampled by means of the Standard Penetration Test (SPT). This test consists of measuring the number of blows (N) required for a 140-pound hammer free falling 30 inches to drive a standard split-spoon sampler 12 inches into the subsurface material after being seated six inches. This blow count or SPT "N" value is used to evaluate the stratum. An automatic SPT hammer was used in advancing the split-spoon sampler at the borings. A greater efficiency is typically achieved with the automatic hammer compared to the conventional safety hammer operated with a cathead and rope. Published correlations between the SPT N-values and soil properties are based on the lower efficiency cathead and rope method. The higher efficiency of an automatic SPT hammer affects the SPT N-value by increasing the penetration per hammer blow over what would be obtained using the cathead and rope method.

The samples were placed in appropriate containers, taken to our soil laboratory for testing, and classified by a geotechnical engineer. In addition, we observed and recorded

groundwater levels during drilling and sampling. We backfilled the borings with auger cuttings after completion.

Our exploration team prepared field boring logs as part of standard drilling operations including sampling depths, penetration distances, and other relevant sampling information. Field logs include visual classifications of materials observed during drilling, and our interpretation of subsurface conditions between samples. Final boring logs, prepared from field logs, represent an interpretation of the field logs by a geotechnical engineer and include modifications based on laboratory observation and tests on select samples.

Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests. The laboratory testing program included the following types of tests:

- Moisture Content
- Dry Unit Weight
- Unconfined Compression
- Atterberg Limits
- Percent Finer than No. 200 Sieve

The laboratory testing program included examination of soil samples by an engineer. Based on the results of our field and laboratory programs, we described and classified the soil samples in accordance with the Unified Soil Classification System.

Samples not tested in the laboratory will be stored for a period of 30 days subsequent to submittal of this report and will be discarded after this period, unless we are notified otherwise.

Angleton, TX

General Notes

Sampling	Water Level	Field Tests
Shelby Tube Standard Penetration Test	Water Initially Encountered Water Level After a Specified Period of Time Water Level After a Specified Period of Time Cave In Encountered Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.	N Standard Penetration Test Resistance (Blows/Ft.) (HP) Hand Penetrometer (T) Torvane (DCP) Dynamic Cone Penetrometer UC Unconfined Compressive Strength (PID) Photo-Ionization Detector (OVA) Organic Vapor Analyzer

Descriptive Soil Classification

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

Location And Elevation Notes

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

Strength Terms

Relative Density of Coarse-Grained Soils
(More than 50% retained on No. 200 sieve.)
Density determined by Standard Penetration Resistance

Relative Density	Standard Penetration or N-Value (Blows/Ft.)
Very Loose	0 - 3
Loose	4 - 9
Medium Dense	10 - 29
Dense	30 - 50
Very Dense	> 50

Consistency of Fine-Grained Soils
(50% or more passing the No. 200 sieve.)
Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

Consistency	Unconfined Compressive Strength Qu (tsf)	Standard Penetration or N-Value (Blows/Ft.)
Very Soft	less than 0.25	0 - 1
Soft	0.25 to 0.50	2 - 4
Medium Stiff	0.50 to 1.00	4 - 8
Stiff	1.00 to 2.00	8 - 15
Very Stiff	2.00 to 4.00	15 - 30
Hard	> 4.00	> 30

Relevance of Exploration and Laboratory Test Results

Exploration/field results and/or laboratory test data contained within this document are intended for application to the project as described in this document. Use of such exploration/field results and/or laboratory test data should not be used independently of this document.

Unified Soil Classification System

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A]				Soil Classification	
				Group Symbol	Group Name [B]
Coarse-Grained Soils: More than 50% retained on No. 4 sieve	**Gravels:** More than 50% of coarse fraction retained on No. 4 sieve	**Clean Gravels:** Less than 5% fines [C]	Cu≥4 and 1≤Cc≤3 [E]	GW	Well-graded gravel [F]
			Cu<4 and/or [Cc<1 or Cc>3.0] [E]	GP	Poorly graded gravel [F]
		Gravels with Fines: More than 12% fines [C]	Fines classify as ML or MH	GM	Silty gravel [F, G, H]
			Fines classify as CL or CH	GC	Clayey gravel [F, G, H]
	Sands: 50% or more of coarse fraction passes No. 4 sieve	**Clean Sands:** Less than 5% fines [D]	Cu≥6 and 1≤Cc≤3 [E]	SW	Well-graded sand [I]
			Cu<6 and/or [Cc<1 or Cc>3.0] [E]	SP	Poorly graded sand [I]
		Sands with Fines: More than 12% fines [D]	Fines classify as ML or MH	SM	Silty sand [G, H, I]
			Fines classify as CL or CH	SC	Clayey sand [G, H, I]
Fine-Grained Soils: 50% or more passes the No. 200 sieve	**Silts and Clays:** Liquid limit less than 50	**Inorganic:**	PI > 7 and plots above "A" line [J]	CL	Lean clay [K, L, M]
			PI < 4 or plots below "A" line [J]	ML	Silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OL	Organic clay [K, L, M, N]
					Organic silt [K, L, M, O]
	Silts and Clays: Liquid limit 50 or more	**Inorganic:**	PI plots on or above "A" line	CH	Fat clay [K, L, M]
			PI plots below "A" line	MH	Elastic silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OH	Organic clay [K, L, M, P]
					Organic silt [K, L, M, Q]
Highly organic soils:	Primarily organic matter, dark in color, and organic odor			PT	Peat

[A] Based on the material passing the 3-inch (75-mm) sieve.
[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.
[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.
[E] $Cu = D_{60}/D_{10}$ $Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$
[F] If soil contains ≥ 15% sand, add "with sand" to group name.
[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.
[H] If fines are organic, add "with organic fines" to group name.
[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.
[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.
[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.
[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.
[N] PI ≥ 4 and plots on or above "A" line.
[O] PI < 4 or plots below "A" line.
[P] PI plots on or above "A" line.
[Q] PI plots below "A" line.

Re: Geotechnical Engineering Letter Report
New Elementary School #23 Site
White Gold Drive and Karsten Road
Iowa Colony, Texas
Terracon Project No. AS255004.Supplement1

Dear Mr. Van Wagner:

Terracon Consultants, Inc. (Terracon) is pleased to submit this Supplemental Letter Report to provide requested recommendations in general accordance with Terracon Cost Estimate No. PAS255004.Supplement1 dated April 22, 2025, for the above-referenced project in Iowa Colony, Texas. On April 11, 2025, Stantec provided an updated site plan for the elementary school. We understand the school building was shifted about 130 feet southwest from the original location.

We understand we have been requested to provide seismic site classification, updated foundation and floor slab recommendations, LPILE parameters, modules of subgrade reaction (k) for grade supported slabs, and surveyed elevations for the soil borings. In addition, we understand we have been requested to provide conventionally-reinforced, monolithically-poured slab-on-grade recommendations for various equipment pads adjacent to the building.

Seven additional borings, designated BH-15 through BH-21, were performed with all-terrain vehicle (ATV) mounted drilling equipment and extended to depths that ranged from about 15 to 40 feet below existing grade in the proposed building and pavement areas. The field and laboratory programs were analogous to our original scope. We also utilized borings BH-01 through BH-14 from our original field program completed in February 2025.

The survey data, including Northings and Eastings and surface elevations, were obtained by Baker & Lawson, Inc. and are presented on the boring logs and are included as an attachment to this letter report.

Geotechnical Characterization

Subsurface Profile

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of the site. Conditions observed at each exploration point are indicated on the individual logs. The individual logs can be found in the **Exploration Results** and the GeoModel can be found in the **Figures** attachment of this letter report.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at each boring location, refer to the GeoModel.

Model Layer	Layer Name	General Description
1	Fill – Fat Clay and Lean Clay	Reddish brown, tan, gray, and dark gray, with sand seams, calcareous and ferrous nodules, scattered roots, and slickensides
2	Fat Clay	dark gray, gray, light gray, tan, and reddish brown, medium stiff to very stiff, with silt and sand seams, calcareous and ferrous nodules, sand pockets, and slickensides
3	Sandy Lean Clay, Sandy Silty Clay and Lean Clay	reddish brown and tan, soft to stiff, with silt and sand seams
4	Clayey Sand, Silty Sand, Silt with Sand and Sandy Silt	tan, loose to very dense, with clay pockets

Groundwater Conditions

To evaluate groundwater conditions at the time of our field program, Borings BH-15 through BH-21 were advanced using dry drilling techniques to their termination depths (about 15 to 40 feet) in an effort to evaluate groundwater conditions at the time of our field program. Upon reaching groundwater, drilling was suspended for a period of about 15 minutes to allow the groundwater to rise and the groundwater levels to be recorded.

The water levels observed in the boreholes can be found on the boring logs in **Exploration Results** and are summarized below.

Summary of Groundwater Level Observations					
Boring No.	Approximate Boring Depth (feet)[1]	Approximate Depth of Dry Drilling (feet)[1]	Approximate Depth of Groundwater Below Existing Grade[2]		
			Initial / During Dry Drilling	After 5 Minutes	After 15 Minutes
BH-15	40	25	25	23	21½
BH-16	40	25	25	22½	21½
BH-17	40	30	30	28½	27
BH-18	40	25	25	23	21½
BH-19	40	30	30	27½	26½
BH-20	15	15	No groundwater observed		
BH-21	15	15			

1. Below existing grade.
2. Groundwater readings were obtained on May 19 and May 20, 2025.

Seismic Site Class

The seismic design requirements for buildings and other structures are based on Seismic Design Category. Site Classification is required to determine the Seismic Design Category for a structure. The Site Classification is based on the upper 100 feet of the site profile defined by a weighted average value of either shear wave velocity, standard penetration resistance, or undrained shear strength in accordance with Section 20.4 of ASCE 7 and the International Building Code (IBC). Based on the soil properties observed at the site and as described on the exploration logs and results, our professional opinion is for that a **Seismic Site Classification of D** be considered for the project. Subsurface explorations at this site were extended to a maximum depth of 40 feet. The site properties below the boring depth to 100 feet were estimated based on our experience and knowledge of geologic conditions of the general area. Additional deeper borings or geophysical testing may be performed to confirm the conditions below the current boring depth.

Earthwork

Please refer to Terracon Report No. AS255004, dated April 4, 2025, for subgrade preparation recommendations, fill material and compaction requirements, grading and drainage recommendations, utility backfill considerations, and wet weather/soft subgrade considerations.

Existing Fill

Fill soils were observed in borings BH-01 through BH-21 to depths that ranged from about 2 to 10 feet below existing grade. We recommend that the fill soils be over-excavated and completely removed within the proposed building area to expose the underlying native subsurface soils. Select fill soils should be used to raise grade up in the proposed building area.

Pavement areas placed upon the deeper fill soils, such as observed in borings BH-03, BH-09, and BH-10 will also be subject to future settlement of the fill. Complete excavation, removal, and recompaction of the fill soils in the pavement areas would reduce the potential for future settlement; however, complete excavation and removal of the fill soil within the proposed pavement areas would likely not be feasible. As an alternative, the settlement potential can be reduced by reworking the upper two to three feet of fill below the pavement areas if deep fill soils are observed (or up to the underlying native soils, whichever occurs first) to reduce differential settlements, with the understanding that some settlement (which will likely result in increased maintenance of pavements) may occur.

Shallow Foundations

Design Recommendations – At Grade Slab Foundation System

We anticipate that final grade will be within about 2 feet of existing grade. If significant cuts and/or fills are planned, Terracon should be notified to review and/or modify our recommendations.

The near-surface soils observed within the area of the proposed grade supported slabs generally exhibit a medium to high expansion potential. These soils can subject the slabs to significant movements (due to shrinking and swelling) with fluctuations in their moisture content. This movement potential is influenced primarily by the properties of the subgrade soils, as well as the moisture content of the subgrade at the time of construction, overburden pressures, and the stability of the moisture contents throughout the life of the structures. Based on the information developed from our field and laboratory programs and on method TEX-124-E in the Texas Department of Transportation (TxDOT) Manual of Testing Procedures, we estimate that the subgrade soils at this site exhibit a Potential Vertical Rise (PVR) of up to 5 inches. Therefore, we highly recommend that the near-surface soils be prepared as stated below to reduce the potential for slab movement associated with volumetric changes of the near-surface clay soils due to moisture variations to a more acceptable level. The actual movements could be greater if poor drainage, ponded water, and/or other sources of moisture are allowed to infiltrate beneath the slabs after construction.

The most common method of subgrade preparation to reduce potential expansion of the subgrade would be to provide a pad of properly placed and compacted select fill beneath the slab area. The corresponding decrease in the potential soil movements is primarily a function of the fill pad thickness and the moisture levels of the underlying clay subgrade. While the indicated preparations do not eliminate the potential for soil movement, the magnitude of such movements should be reduced to more acceptable levels. To provide uniform support to the slab and to reduce the estimated PVR to approximately one inch or less, we recommend that a minimum 60 inches of properly placed and compacted select fill material be constructed immediately beneath the slab. The select fill pad should extend a minimum of 5 feet beyond the edge of the slab area. The final exterior grade adjacent to the structure should be sloped to promote effective drainage away from the structure.

The at-grade slab foundations may be designed using the following parameters provided that the subgrade is prepared as discussed above:

Item	Description
Minimum embedment depth[1]	12 inches below existing grade
Allowable bearing pressure	1,200 psf
Approximate total settlement [2]	One inch or less
Estimated differential settlement[3]	Approximately ½ of post-construction settlement
Estimated long-term modulus of subgrade reaction [4]	10 pounds per cubic inch (psi)
Allowable frictional resistance[5]	250 psf

1. To bear upon properly placed and compacted select fill soils.
2. This total post construction settlement is estimated provided that proper construction practices are implemented. The isolated thickened concrete foundation should produce a major portion of the estimated settlements during and shortly after construction.
3. Differential settlements will result from variances in subsurface conditions, loading conditions, and construction procedures, such as cleanliness of the bearing area or water seepage in the foundation excavation.
4. Based on the allowable bearing pressure provided above, we estimate a maximum square slab size of about 30 feet by 30 feet for the use in estimating the long-term modulus of subgrade reaction. This value may be used for initial design of a rigid concrete slab. Lateral loads transmitted to the isolated at-grade slab will be resisted by soil-concrete friction on the base of the slab.

Construction Considerations – Shallow Foundations

Excavations for the shallow foundations should be performed with equipment capable of providing a relatively clean bearing area. The bottom 6 inches of the excavations should

be performed using a smooth-mouthed excavation bucket or by hand labor. The excavations should be neatly excavated and properly formed. Disturbance of the bearing area of the foundations should be minimized during the excavation operations. Soft zones observed during construction should be over-excavated to a firm and undisturbed soil layer and all loose materials in the excavation bottom should be removed before placement of concrete. Water should not be allowed to accumulate at the bottom of the foundation excavations. To reduce the potential for groundwater seepage into the excavations and to minimize disturbance to the bearing area, we recommend that steel and concrete be placed as soon as possible after the excavations are completed and properly cleaned. Excavations should not be left open for more than 24 hours. The bearing surface of the foundations should be evaluated immediately prior to placing concrete.

A thin seal slab (approximately 2 to 4 inches thick) should be placed at the bottom of the footing excavation to protect the bearing surface of the footing from disturbance if the footing cannot be poured within 24 hours following excavation.

Foundation Construction Monitoring

The performance of the foundation systems will be highly dependent upon the quality of construction. Thus, we recommend that subgrade preparation, fill compaction, and foundation installation be observed full time by an experienced Terracon soil technician under the direction of our Geotechnical Engineer. During foundation construction, the base of the footing excavations should be observed to evaluate the condition of the subgrade. We would be pleased to develop a plan for compaction and foundation installation observation to be incorporated in the overall quality control program.

Deep Foundations

Drilled Straight Shaft Design Parameters

Allowable skin friction and end bearing values for drilled straight shafts are presented in the following table. These design parameters were estimated based on a generalized soil profile and engineering properties of the subsurface soils observed within the depths explored at this site. The end bearing and skin friction values within the upper 6 feet of the on-site soils were neglected to account for surface effects, the presence of expansive soils, and anticipated disturbance during foundation installation. The allowable end bearing and skin friction values include a factor of safety of 2 for skin friction and a factor of safety of 3 for end bearing. The drilled straight shaft foundations should be placed to bear within native soils at a minimum depth of 15 feet below existing grade to help offset the uplift force caused by post-construction heave of expansive soils in the active zone.

Groundwater was assumed to be 20 feet below existing grade for the design parameters provided below.

Drilled Straight Shaft Design Parameters		
Depth Below Existing Grade[1] (ft)	**Allowable Side Friction[2,3] (psf)**	**Net Allowable End Bearing Pressure (psf)[4]**
0 to 6	Disregard	
6 to 13	150	1,600
13 to 20	250	2,400
20 to 25	300	3,600
25 to 33	150	2,100
33 to 40	550	3,600

1. Grade at the time of our field program.
2. The allowable side friction is based on a rectangular pressure distribution.
3. Applicable for compressive loading only. Reduce to 2/3 of values shown for uplift loading. Effective weight of shaft can be added to uplift load capacity.
4. The net allowable end bearing pressure refers to the pressure at the foundation bearing level in excess of the surrounding overburden pressure.

A minimum penetration of 2 feet into the desired bearing strata with a minimum of 2 feet of the selected bearing stratum below the bottom of the shaft is required to achieve the recommended allowable end bearing values provided in the above table. Design of shafts should also include an evaluation of the structural capacity of the foundation element which may limit the allowable capacity.

There are numerous factors which contribute to the behavior of groups subjected to axial load. Several of these factors are foundation type, size and length, spacing, overall group size, loading conditions, installation procedures and soil type and strength. We recommend a minimum spacing of three diameters, center-to-center, for shafts placed in groups beneath square or rectangular caps. However, for shafts placed in a linear pattern beneath load bearing walls, a minimum spacing of two diameters, center-to-center, would generally be acceptable. Closer spacing than three diameters in groups or two diameters in rows could result in increased group settlement and a reduction of load-carrying capacity of individual foundation elements.

Settlement of a single, isolated shaft will depend on the elastic properties of the foundation, the applied load, and the interaction of the soil and foundation. Settlement is anticipated to be primarily elastic and will occur relatively soon as load is applied. Significant consolidation settlement due to applied load is not anticipated for the allowable capacities. Our experience indicates that a single, isolated foundation loaded to about one-half of its ultimate capacity will result in settlements of less than one inch. Groups generally undergo more settlement than single, isolated foundation elements for the same applied load. Based on the above recommended spacing, we anticipate that

settlement of a group will be on the order of one inch under working loads with differential settlement between columns of approximately one-half inch.

The deep foundations will provide resistance to lateral loads through the passive earth pressure acting on the side of the foundation. A detailed lateral load analysis of the proposed straight shaft footings was beyond the scope of this project. If requested, a lateral load analysis of the proposed deep foundations can be performed by Terracon. Lateral loads should not exceed the structural capacity of the individual shaft. Refer to the **Drilled Straight Shaft Lateral Loading** section for LPILE parameters to be used in lateral load analysis of the school building foundations.

Drilled straight shaft foundations will provide resistance to structural uplift loads through the mobilization of the skin friction acting at the interface of the shaft sidewall and the adjacent soils. The allowable skin friction values provided in the previous table may be reduced to 2/3 of values shown to calculate the uplift resistance for the shafts.

Drilled Straight Shaft Lateral Loading

As requested, LPILE design parameters are presented in the following table for the school building. These design parameters were computed based on generalized soil profiles and engineering properties of the subsurface soils observed within the depths explored at this site for the proposed school building.

The following table lists input values for use in LPILE analyses. Modern versions of LPILE provide estimated default values of k_h and E_{50} based on strength and are recommended for the project. Since deflection or a service limit criterion will most likely control lateral capacity design, no safety/resistance factor is included with the parameters. Groundwater was assumed to be at a depth of 20 feet for the design parameters provided below.

Stratigraphy[1] Depth	L-Pile Soil Model	S_u (psf)[2]	ϕ[2]	γ' (pcf)[2]	ε_{50}	K_h (pci)	
						Static	Cyclic
0 to 6	Stiff Clay w/o Free Water	500	---	120	Use Default Value		
6 to 13	Stiff Clay w/o Free Water	700	---	120	Use Default Value		
13 to 20	Stiff Clay w/o Free Water	1,000	---	120	Use Default Value		
20 to 25	Stiff Clay w/o Free Water	1,200	---	58	Use Default Value		

Stratigraphy[1] Depth	L-Pile Soil Model	S_u (psf)[2]	ϕ[2]	γ' (pcf)[2]	ε_{50}	K_h (pci) Static	K_h (pci) Cyclic
25 to 33	Stiff Clay w/o Free Water	700	---	58	Use Default Value		
33 to 40	Sand/Reese	---	29	53	Use Default Value		

1. See Subsurface Profile in **Geotechnical Characterization** for more details on Stratigraphy.
2. Definition of Terms:
   S_u: Undrained shear strength
   ϕ: Internal friction angle
   γ': Effective unit weight

These parameters are based on an evaluation of a single pile. Appropriate reduction factors should be used when performing a lateral load analysis of piles in a group. These reduction factors are based on the direction of the applied lateral load as it relates to the pile group, spacing of the piles, and configuration of the piles within the group. If desired, Terracon can review a proposed foundation layout and assist with providing group reduction factors.

Drilled Straight Shaft Construction Considerations

The drilling contractor should be experienced in the subsurface conditions observed at the site, and the excavations should be performed with equipment capable of providing a relatively clean bearing area. The drilled straight shaft foundations should be installed in general accordance with the procedures presented in " Drilled Shafts: Construction Procedures and LRFD Design Methods," by Brown, D.A., Turner, J.P., and Castelli, R.J., FHA Publication No. FHWA-NHI-10-016, 2010 and "Standard Specification for the Construction of Drilled Piers", ACI Publication No. 336.1-01, 2001.

The successful completion of the drilled shafts will depend to a large extent on the suitability of the equipment and the operator's skills. The operation sequence should be scheduled so that the shaft excavations can be completed, reinforcing steel placed, and the concrete poured in a continuous, rapid, and orderly manner to minimize the time the excavations are open. Concrete should be placed as soon as practical and in all instances should be placed within the same day. Concrete should be poured with a tremie and should exhibit a six-inch slump with a ±one-inch tolerance.

Zones of sloughing soils and/or groundwater inflow will likely occur during construction, particularly in the more silty/sandy zones within the subgrade. Therefore, we recommend that provisions be incorporated into the plans and specifications to utilize slurry or casing to control sloughing and/or groundwater seepage during shaft construction.

The need for casing or slurry will depend on the depth of the drilled shaft and the groundwater conditions at the time of construction. If casing is used and seepage persists, the water accumulating in the foundation excavation should be pumped out. The condition of the bearing surface should be evaluated immediately prior to placing concrete, if casing is used in lieu of slurry. If groundwater inflow is too severe to be controlled by the use of casing and pumping or significant sloughing of the sidewalls occurs, the slurry method of construction should be utilized to complete the foundation installation.

Where casing is used, removal of the casing should be performed with extreme care and under proper supervision to minimize mixing of the surrounding soil and water with the fresh concrete. Rapid withdrawal of the casing may develop a suction that could cause the soil and water to flow into the excavation. An insufficient head of concrete in the casing during withdrawal could also allow the water to intrude into the wet concrete. Under no circumstances should loose soil be placed in the annulus between the casing and the drilled shaft sidewalls. The casing must be removed in order to utilize the skin friction values previously provided.

During slurry displacement, the foundation excavation is filled with a slurry mixture. The level of slurry should be maintained above the groundwater level to maintain a positive head in the foundation excavation. Therefore, the slurry tends to seep out of the excavation, rather than the groundwater seeping into the open excavation. The slurry must be maintained in the foundation excavation until design termination depth is achieved and should be removed only as concreting proceeds. The properties of the slurry including the density, viscosity, and pH must be carefully controlled and should be in accordance with Item 416 of Texas Department of Transportation (TXDOT) Standard Specifications for Construction of Highways, Streets, and Bridges.

Slurry left in place for long periods of time will build up on the sides of the shaft causing a reduction in skin friction.

The following procedures and equipment are recommended for installation of the drilled shafts by the Slurry Displacement Method:

- The bottom of the shaft should be cleaned as well as practical just prior to concreting to remove cuttings.
- The concrete should be placed by means of a tremie with a one-way valve to prevent slurry from entering the pipe. The tremie should extend to the bottom of the shaft to allow displacement of the slurry.
- The end of the tremie should remain several feet within the concrete mass to reduce the entrapment of slurry.
- The concrete should be relatively fluid to reduce the entrapment of slurry. We recommend that concrete with a slump of 6 to 8 inches be used.

- The upper few feet of concrete should be expunged from the shaft excavation if found to be contaminated with slurry or soil.

A surface casing may be required in addition to the slurry for shaft installation at this site if sloughing of the surficial soils occurs. Where casing is used, removal of the casing should be performed with extreme care as previously discussed in this section.

Production shaft installation should be observed by a qualified technician experienced in drilled shaft installation techniques. At a minimum, the technician should observe shaft excavation, note any unusual installation occurrences, observe slurry properties and/or casing installation and removal, observe concrete placement and generally evaluate if shaft installation is being performed in accordance with the project specifications.

Floor Slab

Planned finished grades for the proposed building were not available at the time of this report. We anticipate that the finished floor elevation of the proposed building is planned to be within about 2 feet of existing grade. If the grading is planned to be altered from what has been previously described, Terracon should be notified to review and/or modify our recommendations given in this subsection.

Due to the amount of fill observed at this site, we recommend that the fill soils be over-excavated and completely removed within the proposed building area. The exposed subgrade after over-excavation should be thoroughly proofrolled and prepared as outlined in the **Earthwork** section of the original report (including evaluation for moisture and density). Select fill soils should be used to raise grade up in the proposed building area.

The near-surface soils observed at this site generally exhibit a high expansion potential. These soils can subject the interior floor slab of the building to significant movements (due to shrinking and swelling) with fluctuations in their moisture content. This movement potential is influenced primarily by the properties of the subgrade soils, as well as the moisture content of the subgrade at the time of construction, overburden pressures, and the stability of the moisture contents throughout the life of the building. Based on the information developed from our field and laboratory programs and on method TEX-124-E in the Texas Department of Transportation (TxDOT) Manual of Testing Procedures, we estimate that the subgrade soils at this site exhibit a Potential Vertical Rise (PVR) of up to approximately 5 inches. Therefore, we highly recommend that the near-surface soils be prepared as stated below to reduce the potential for slab movement associated with volumetric changes of the near-surface clay soils due to moisture variations to a more acceptable level. The actual movements could be greater if poor drainage, ponded water, and/or other sources of moisture are allowed to infiltrate beneath the structure after construction.

The most common method of subgrade preparation to reduce potential expansion of the subgrade would be to provide a pad of properly placed and compacted select fill beneath the grade-supported floor slabs. The corresponding decrease in the potential soil movements is primarily a function of the fill pad thickness and the moisture levels of the underlying clay subgrade. While the indicated preparations do not eliminate the potential for soil movement, the magnitude of such movements should be reduced to more acceptable levels. To provide uniform support to the floor slab and to reduce the estimated PVR to approximately one inch or less, we recommend that a minimum 60 inches of properly placed and compacted select fill material be constructed immediately beneath the floor slab. The select fill pad should extend a minimum of 5 feet beyond the edge of the building area. The final exterior grade adjacent to the structure should be sloped to promote effective drainage away from the building.

Select fill should be utilized for all grade adjustments within the proposed building area. The subgrade and select fill soils should be prepared as outlined in the **Earthwork** section of the original report, which contains material and placement requirements for select fill, as well as other subgrade preparation recommendations.

The estimated modulus of subgrade reaction (k) for the grade supported slab is 75 pounds per cubic inch (pci). This value reflects the response of the subgrade under temporary, elastic conditions, and small deflections. This value does not take into account the total settlement anticipated for the foundation.

The subgrade soils for flatwork outside of the building which will be sensitive to movement should be prepared as discussed previously. This preparation will be important on surrounding sidewalks and paving immediately adjacent to the building. If these adjacent flatwork areas are not prepared as stated above for the building area, the estimated PVR for these areas could approach those indicated previously for in-situ conditions. If the soils swell in these areas, this movement could result in significant distress to the adjacent sidewalks and paving and possibly result in reversed drainage (flow of runoff toward the building) around the perimeter of the building.

Pavements

Please refer to the **Pavements** section of Terracon Report No. AS255004, dated April 4, 2025 for pavement design considerations.

We trust this supplemental letter report is responsive to your project needs. Please note that any items not specifically discussed above should be addressed as indicated in our original report. Please contact us if you have any questions or we can be of further assistance.

We appreciate the opportunity to work with you on this project and look forward t providing additional geotechnical engineering and construction materials testing services in the future.

Sincerely,
Terracon
(Texas Firm Registration No. F-3272)

General Notes
Unified Soil Classification System

Note: All attachments are one page unless noted above.

Terracon
22535 N Highway 288B
Angleton, TX

General Notes

Sampling	Water Level	Field Tests
Shelby Tube Standard Penetration Test	Water Initially Encountered Water Level After a Specified Period of Time Water Level After a Specified Period of Time Cave In Encountered Water levels indicated on the soil boring logs are the levels measured in the borehole at the times indicated. Groundwater level variations will occur over time. In low permeability soils, accurate determination of groundwater levels is not possible with short term water level observations.	N Standard Penetration Test Resistance (Blows/Ft.) (HP) Hand Penetrometer (T) Torvane (DCP) Dynamic Cone Penetrometer UC Unconfined Compressive Strength (PID) Photo-Ionization Detector (OVA) Organic Vapor Analyzer

Descriptive Soil Classification

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

Location And Elevation Notes

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

Strength Terms

Relative Density of Coarse-Grained Soils
(More than 50% retained on No. 200 sieve.)
Density determined by Standard Penetration Resistance

Relative Density	Standard Penetration or N-Value (Blows/Ft.)
Very Loose	0 - 3
Loose	4 - 9
Medium Dense	10 - 29
Dense	30 - 50
Very Dense	> 50

Consistency of Fine-Grained Soils
(50% or more passing the No. 200 sieve.)
Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

Consistency	Unconfined Compressive Strength Qu (tsf)	Standard Penetration or N-Value (Blows/Ft.)
Very Soft	less than 0.25	0 - 1
Soft	0.25 to 0.50	2 - 4
Medium Stiff	0.50 to 1.00	5 - 8
Stiff	1.00 to 2.00	9 - 15
Very Stiff	2.00 to 4.00	16 - 30
Hard	> 4.00	> 30

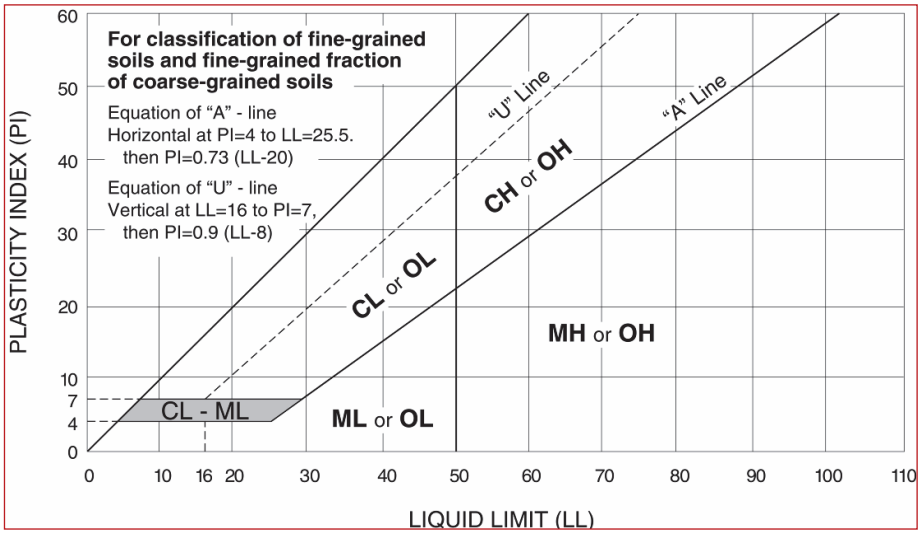
Relevance of Exploration and Laboratory Test Results

Exploration/field results and/or laboratory test data contained within this document are intended for application to the project as described in this document. Use of such exploration/field results and/or laboratory test data should not be used independently of this document.

Unified Soil Classification System

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A]				Soil Classification	
				Group Symbol	Group Name [B]
Coarse-Grained Soils: More than 50% retained on No. 200 sieve	**Gravels:** More than 50% of coarse fraction retained on No. 4 sieve	**Clean Gravels:** Less than 5% fines [C]	Cu≥4 and 1≤Cc≤3 [E]	GW	Well-graded gravel [F]
			Cu<4 and/or [Cc<1 or Cc>3.0] [E]	GP	Poorly graded gravel [F]
		Gravels with Fines: More than 12% fines [C]	Fines classify as ML or MH	GM	Silty gravel [F, G, H]
			Fines classify as CL or CH	GC	Clayey gravel [F, G, H]
	Sands: 50% or more of coarse fraction passes No. 4 sieve	**Clean Sands:** Less than 5% fines [D]	Cu≥6 and 1≤Cc≤3 [E]	SW	Well-graded sand [I]
			Cu<6 and/or [Cc<1 or Cc>3.0] [E]	SP	Poorly graded sand [I]
		Sands with Fines: More than 12% fines [D]	Fines classify as ML or MH	SM	Silty sand [G, H, I]
			Fines classify as CL or CH	SC	Clayey sand [G, H, I]
Fine-Grained Soils: 50% or more passes the No. 200 sieve	**Silts and Clays:** Liquid limit less than 50	**Inorganic:**	PI > 7 and plots above "A" line [J]	CL	Lean clay [K, L, M]
			PI < 4 or plots below "A" line [J]	ML	Silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OL	Organic clay [K, L, M, N]
					Organic silt [K, L, M, O]
	Silts and Clays: Liquid limit 50 or more	**Inorganic:**	PI plots on or above "A" line	CH	Fat clay [K, L, M]
			PI plots below "A" line	MH	Elastic silt [K, L, M]
		Organic:	$\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$	OH	Organic clay [K, L, M, P]
					Organic silt [K, L, M, Q]
Highly organic soils:	Primarily organic matter, dark in color, and organic odor			PT	Peat

[A] Based on the material passing the 3-inch (75-mm) sieve.
[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.
[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.
[E] $Cu = D_{60}/D_{10}$ $Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$
[F] If soil contains ≥ 15% sand, add "with sand" to group name.
[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.
[H] If fines are organic, add "with organic fines" to group name.
[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.
[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.
[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.
[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.
[N] PI ≥ 4 and plots on or above "A" line.
[O] PI < 4 or plots below "A" line.
[P] PI plots on or above "A" line.
[Q] PI plots below "A" line.



SECTION 00 41 00 - PROPOSAL FORM (BASE PROPOSAL & UNIT PRICES)

PROJECT: **ELEMENTARY SCHOOL #23**

PLACE: **ALVIN INDEPENDENT SCHOOL DISTRICT SUPPORT SERVICES CENTER**
2200 STAPP MAXWELL – BUILDING A
ALVIN, TEXAS 77511

DATE: **TUESDAY, SEPTEMBER 16, 2025**

TIME: **2:00 PM**

TO: **THE BOARD OF TRUSTEES, ALVIN INDEPENDENT SCHOOL DISTRICT**

FROM: _____
Company

Pursuant to and in compliance with the Invitation to Proposers and the proposed Contract Documents dated **AUGUST 18, 2025**, prepared by Stantec Architecture Inc., relating to the above referenced Project, the undersigned, hereby proposes and agrees to fully perform the work within the time stated and in strict accordance with the proposed Contract Documents, and addenda thereto, for the following sum of money:

BASE PROPOSAL

All labor, materials, services, and equipment necessary for completion of the Work shown on the drawings and in the specifications except the work indicated by the Alternates.

_____
DOLLARS

($_____)

BASE PROPOSAL UNIT PRICES

Refer to Section 01 22 00

A. Unit Price No. 1 – Additional Structural Steel:

1. Structural Steel $_____ Per TON

B. Unit Price No. 2 – Site Fill Haul Off:

1. Dirt Haul Off: $_____ Per 1,000 cubic yards

C. Unit Price No. 3 – Additional Site Fill:

1. Site Fill imported: $_____ Per 1,000 cubic yards

D. Unit Price No. 4 – Additional Duplex Outlet and Wiring:

1. Metal Stud pre-wall enclosure: $_____ Lump Sum
2. Metal Stud post-wall enclosure: $_____ Lump Sum
3. CMU pre-wall enclosure: $_____ Lump Sum
4. CMU Stud post-wall enclosure: $_____ Lump Sum

E. Unit Price No. 5 – Additional Data (2D) Outlets and Wiring:

1. Metal Stud pre-wall enclosure: $_____ Lump Sum
2. Metal Stud post-wall enclosure: $_____ Lump Sum
3. CMU pre-wall enclosure: $_____ Lump Sum
4. CMU Stud post-wall enclosure: $_____ Lump Sum

F. Unit Price No. 6 – Door Hardware:

1. HW Set (Typical Classroom): $_____ Lump Sum
2. HW Set (Typical Office): $_____ Lump Sum

G. Unit Price No. 7 – Additional Concrete Placement:

1. Grade Beams: $_____ Per Cubic Yard
2. Slab on Grade: $_____ Per Cubic Yard
3. Slab on Metal Deck: $_____ Per Cubic Yard

H. Unit Price No. 8 – Additional Reinforcing Steel:

1. Reinforcing Steel: $_____ Per Pound (lb)

I. Unit Price No. 9 – Additional Metal Deck:

1. Metal Deck for floor slab: $_____ Per Square Foot (sf)
2. Roof Metal Deck (non-acoustical): $_____ Per Square Foot (sf)

BASE PROPOSAL ALTERNATES

Refer to Section 00 41 10

CONTRACT EXECUTION - If awarded this Contract the undersigned shall execute a satisfactory Construction Contract, Performance Bond, Labor and Material Payment Bond and proof of insurance coverage, with the Owner for the entire Work as per the Contract Documents within 10 calendar days after notice of award. It is agreed that this Proposal is subjected to the Owner's acceptance for a period of 30 calendar days from the receipt of Proposals.

Enclosed is a Certified Check or Bid Bond in the amount of

$_____, in compliance with the specification requirements. (5% of highest amount proposed).

The above Check or Bid Bond is to become the property of the Owner in the event the Construction Contract (when offered by the Owner) and the bonds and proof of insurance coverage are not executed within the time set forth above.

EXTRA WORK

The undersigned agrees that should any change in the work or extra work be ordered, the allowance for overhead and profit combined shall be as scheduled below, but in no case shall it exceed 15%. The following applicable percentages shall be added to the extra work cost as defined by Article 7 of the

General Conditions.

Allowance to the Contractor for overhead and profit for extra work provided by his own forces: 10%.

Allowance to Subcontractors and Sub-subcontractors for overhead and profit for extra work: Not to exceed a total of 10% of the amount of the change.
Allowance to the Contractor for overhead and profit for extra work provided by Subcontractors and Sub-subcontractors and supervised by the Contractor 5%.

The General Contractor shall not be allowed to charge the Owner for "extended overhead" charges relating to change orders or weather delays.

The undersigned agrees to the following:

To furnish all labor and materials as shown and specified.

To substantially complete the base proposal (and any Alternates selected) by the date specified in Section 01 10 00 - Summary of Work.

The full amount of all allowances as specified in the General Requirements, Division 1, of the Specifications, is included in the Base Proposal price shown.

Receipt is acknowledged of the following issued Addenda:

No._____ Dated_____

No._____ Dated_____

No._____ Dated_____

No._____ Dated_____

By execution and submission of this Proposal, the Proposer attests and affirms that he and his subcontractors are skilled and experienced in the use of plans, specifications, addenda and related bid documents, and that he has carefully reviewed the plans, specifications, addenda and related proposal documents for this project and has found them to be sufficient for proposal and construction purposes. Further, he has carefully examined the soils reports and the site of the work, and - through his own personal observations - has satisfied himself as to the nature, location and requirements of the work; the character, quality and quantity of materials required; the difficulties likely to be encountered; the other items and/or conditions which may affect the satisfactory performance of the work. He has based his proposal solely on these documents - and personal observations - and has not relied in any way on any explanation or interpretation - oral or written - from any source other than those written and issued by the Architect/Engineer.

Representations: by execution and submission of this Proposal, the Proposer hereby represents and warrants to the Owner as follows:

The Proposer has read and understands the Proposal Documents and the Contract Documents and the Proposal is made in accordance with the Proposal Documents.

By submitting this Proposal, each Proposer agrees to waive any claim it has or may have against the Owner, the Architect/Engineer, and their respective employees arising out of or in connection with the administration, evaluation, or recommendation of any Proposal; waiver of any requirements under the

Proposal Documents, or the Contract Documents; and award of the Contract.

Proposer agrees that the Owner has the right to accept or reject any or all Proposals and to waive all informalities.

Respectfully submitted,

By execution and submission of this Proposal, the Proposer attests and affirms that he and his subcontractors are skilled and experienced in the use of plans, specifications, addenda and related Bid Documents, and that he has carefully reviewed the plans, specifications, addenda and related Proposal Documents for this Project and has found them to be sufficient for Proposal and construction purposes. Further, he has carefully examined the geotechnical report(s) and the site of the Work, and through his own personal observations has satisfied himself as to the nature, location and requirements of the Work; the character, quality and quantity of materials required; the difficulties likely to be encountered; and other items and/or conditions which may affect the satisfactory performance of the Work. He has based his Proposal solely on these documents and personal observations and has not relied in any way on any explanation or interpretation - oral or written - from any source other than those written and issued by the Architect/Engineer.

Representations: by execution and submission of this Proposal, the Proposer hereby represents and warrants to the Owner as follows:

The Proposer has read and understands the Proposal Documents and the Contract Documents, and the Proposal is made in accordance with the Proposal Documents.

By submitting this Proposal each Proposer agrees to waive any claim it has or may have against the Owner, the Architect/Engineer, and their respective employees arising out of or in connection with the administration, evaluation, or recommendation of any Proposal; waiver of any requirements under the Proposal Documents, or the Contract Documents; and award of the Contract.

Proposer agrees that the Owner has the right to accept or reject any or all Proposals and to waive all informalities.

Respectfully submitted,

SECTION 00 43 13 - PROPOSAL SECURITY

1.1 SUPPLEMENTS TO PROPOSAL FORMS

A. Each proposal shall be accompanied by Proposal Security in the amount of 5% of the largest possible total of the Proposal submitted. The Proposal Security shall be by certified check or Bid Bond. The Bid Bond shall be executed by the Proposer as principal. The Bid Bond form and security company are subject to approval by the Owner and the surety shall comply with requirements noted in Article 11 of the Supplementary General Conditions.

B. The Proposal security shall be returned to all except the three lowest Proposers within three days after opening of the proposals. The remaining Proposal securities shall be returned promptly after the Owner and the accepted Proposer have executed the Contract, or, if no award has been made within thirty days after the date of the opening of Proposals, upon demand of the Proposer any-time thereafter so long as he has not been notified of the acceptance of his Proposal.

C. The successful Proposer, upon his failure or refusal to execute and deliver the contract, insurance and bonds required within 10 days after he has received notice of the acceptance of his proposal, shall forfeit to the Owner, as liquidated damages for such failure or refusal, the security deposited with his proposal.

D. All Proposers shall submit the following with their Proposal;

    a. “Proposal Evaluation Waiver,” “Felony Conviction Notification,” “Conflict of Interest Questionnaire,” and “Certification of Criminal History Record Information.” Failure to submit such forms shall subject the proposal to be rejected as non-conforming.

E. The Proposal shall be manually signed by a person with legal authority to bind the firm to the Contract.

F. If written confirmation of a modified or withdrawn bid is not received within two days from the closing time, no consideration shall be given to the modification or withdrawal.

END OF SECTION

SECTION 00 50 00 – CONSTRUCTION CONTRACT AND CONDITIONS

1.0. CONSTRUCTION CONTRACT AGREEMENT

A. The Agreement shall be executed on AIA Document A101 “Standard Form of Agreement between Owner and Contractor”, 2017 edition. A sample of this form is available from the Architect for inspection.

2.0 CONDITIONS OF THE CONTRACT

A. The General Conditions of the Contract for Construction, AIA Document A201, 2017 Edition, is hereby specifically made a part of the Contract Documents - whether attached hereto or not - shall apply to the Contractor and all Subcontractors, except as may be modified by the Project Supplementary Conditions.

B. Supplementary Conditions:
The Supplementary Conditions contain modifications to the General Conditions of the Contract for Construction, AIA Document A201. Where any part of that document is modified by Supplementary Conditions, the unaltered provisions of the General Conditions shall remain in effect. Refer to Section 00 73 00 for the Supplementary Conditions.

3.0 AVAILABILITY

A. The standard General Conditions document may be obtained from:
1. the Houston Chapter of the American Institute of Architects, 315 Capitol, Suite 120, Houston, Texas 77002; (713) 520-0155.
2. Copies are also normally available for purchase from the Project printing company.

B. Failure to obtain and examine these documents in no way relieves the Contractor, Subcontractors, Sub-subcontractors, and material suppliers of responsibilities incorporated in the Agreement.

END OF DOCUMENT

SECTION 00 60 00 - BONDS AND CERTIFICATES

1.1 GENERAL

A. The Contractor shall furnish the following Bonds and Certificates to be delivered simultaneously with the executed contract:
   1. Performance Bond
   2. Payment Bond
   3. Certificates of Insurance - Provide on AIA Document G715 (1991 Edition)

1.2 CONTRACT SECURITY

A. Performance and Payment Bonds shall be required for all work where the Contract exceeds $25,000.00. After award of contracts by Owner, the successful Proposer, at Proposer's expense, must deliver to the Owner an executed Performance and Payment Bond in an amount of 100% of the accepted proposal as security for the faithful performance of the Contract and payment of all persons performing labor and furnishing materials in connection with this Contract.

B. Bonding Company must be licensed, listed, and approved in the State of Texas (State Board of Insurance).

C. Bonding Company shall provide such other information as necessary to document net worth, stability, total bonding capacity, and projects under coverage, etc., with adequate financial capacity for this Project. If the Contract sum exceeds the underwriting limitation of the Surety on the most recent list of acceptable sureties, the Contractor shall provide the Owner with evidence that the excess is protected by re-insurance or co-insurance in a form and amount acceptable to the Owner.

D. Such bonds shall meet the requirements of Chapter 2253 of the Texas Government Code.

E. Costs of the above stated bonds and insurance are to be included in the proposal.

F. Attorneys-in-Fact who sign bonds shall file with each bond a certified and effective dated copy of their Power of Attorney.

G. The Performance Bond shall guarantee the repair and maintenance of all defects due to faulty materials and workmanship that appear within one (1) year from date of substantial completion.

END OF SECTION

ALVIN ISD SUPPLEMENTARY CONDITIONS TO THE AIA DOCUMENT A201-2017 GENERAL CONDITIONS OF THE CONTRACT FOR CONSTRUCTION

The following supplements modify the "General Conditions of the Contract for Construction", AIA Document A201, Sixteenth Edition, 2017. Where a portion of the General Conditions is modified or deleted by these Supplementary Conditions, the unaltered portions of the General Conditions shall remain in effect. As appropriate, for purposes of this Request for Proposal, the term "Bid" shall mean "Proposal" and the term "Bidder" shall mean "Offeror", wherever they appear in the Construction Documents. The term "Contractor" shall include a Construction Manager-at-Risk.

ARTICLE 1 -- GENERAL PROVISIONS

1.1 BASIC DEFINITIONS

1.1.1 THE CONTRACT DOCUMENT

Delete Section 1.1.1 in its entirety and substitute the following:

1.1.1 The Contract Documents are enumerated in the Agreement between the Owner and Contractor (hereinafter the Agreement) and consist of the Agreement, Conditions of the Contract (General, Supplementary and other Conditions), Performance Bond, Labor and Material Payment Bond, Drawings, Specifications, Addenda issued prior to execution of the Contract, other documents listed in the Agreement and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties, (2) a Change Order, (3) a Construction Change Directive or (4) a written order for a minor change in the Work issued by the Architect. Unless specifically enumerated in the Agreement, the Contract Documents do not include the advertisement or invitation to propose, instructions to Proposers, sample forms, other information furnished by the Owner in anticipation of receiving bids or proposals, the Contractor's Proposal or portions of Addenda relating to proposal requirements).

To the extent any provision in the Supplementary Conditions to these AIA Document A201-2017 General Conditions, issued by Owner, conflicts with any provision in the Supplementary Conditions issued by the Architect; the Supplementary Conditions to these AIA Document A201-2017 General Conditions issued by Owner shall control.

1.1.3 THE WORK

Add the following sentence at the end of this section:

It also includes all supplies, skill, supervision, transportation services and other facilities and things necessary, proper or incidental to the carrying out and completion of the terms of the contract and all other items of cost or value needed to produce, construct and fully complete the public work identified by the Contract Documents.

1.2 CORRELATION AND INTENT OF THE CONTRACT DOCUMENTS

Add the following Sections:

1.2.1.2 Precedence of the Contract Documents: The most recently issued Document takes precedence over previous issues of the same Document. The order of precedence is as follows with the highest authority listed as"1".

.1 Contract Modifications (such as Change Orders) signed by the Contractor and Owner.
.2 The Agreement. (AIA Document A101-2017)
.3 The Supplementary Conditions
.4 The General Conditions of the Contract for Construction
.5 Addenda, with those of later date having precedence over those of earlier date
.6 Drawings and Specifications

Should these Documents disagree in themselves, the Architect and Owner will select the appropriate method for performing the Work, to facilitate avoiding increases in the Contract cost.

1.2.1.3 Relation of Specifications and Drawings: To be equivalent in authority and priority. Should they disagree in themselves, or with each other, prices shall be based on the most expensive combination of quality and quantity of Work indicated. In the event of the above mentioned disagreements, the resolution shall be determined by the Architect and Owner.

1.6 NOTICE

Delete the text of Section 1.6.1 in its entirety and substitute the following:

1.6.1 Written notice shall be deemed to have been duly served if delivered in person to the individual or a member of the firm or entity or to an officer at the corporation for which is was intended, or if delivered at or sent by certified mail, or by registered or certified mail, or by courier service providing proof of delivery, to the last business address known to the party giving notice, or if delivered by facsimile or other electronic communications to the offices of the person or corporation for which it was intended. For facsimiles or other electronic communications received after 5:00 p.m. on a business day, or on a weekend or legal holiday on which the recipient's offices are closed, notice shall be deemed to have been duly served on the next business day.

Delete the text of Section 1.6.2 in its entirety.

Add Section 1.9 as follows:

1.9 MISCELLANEOUS OTHER DEFINITIONS

1.9.1 ADDENDA, ADDENDUM

Documents issued by the Architect prior to execution of the Owner Contractor Agreement for this Project that modify or clarify the Proposal Documents. All addenda become a part of the Contract Documents.

1.9.2 ALTERNATE PROPOSAL(S)

A separate amount stated on a separate Proposal Form which, if accepted by the Owner, will be added to or deducted from the Base Proposal. If accepted, the work that corresponds to the alternate proposal will become part of the agreement between Owner and Contractor. Alternate proposals shall remain valid for the same period of time as the Base Proposal after receipt of proposals, regardless if an Owner Contractor Agreement has been executed, unless indicated otherwise herein.

1.9.3 APPROVED, APPROVED EQUIVALENT, APPROVED EQUAL, OR EQUAL

The terms Approved, Approved Equivalent, Approved Equal, and Or Equal, relate to the substitution of products or systems approved in writing by the Architect. Refer to Paragraph 3.4.2, Substitution of Products and Systems, for procedures which must be followed after award of contract. The substitution procedure process to be followed prior to receipt of proposals is described in the Instructions to Bidders.

1.9.4 BASE PROPOSAL

The Contractor's proposal for the Work, not including any Alternates.

1.9.5 CONTRACT TIME

The period of time which is established in the Contract Documents for Substantial Completion of the Work. This period of time is subject to authorized adjustments as enumerated in the Contract Documents.

1.9.6 DATE OF AGREEMENT

The date the Owner formally awards a Contract for Construction of the Work. This date will be inserted in the first page of the Agreement between Owner and Contractor and shall be referenced in Performance Bond and Payment Bond forms. See also Date of Commencement of Work.

1.9.7 DATE OF COMMENCEMENT OF THE WORK

The date of a written Notice to Proceed to the Contractor for a given portion of the Work. This date constitutes day zero (0) of the stated Contract Time. The Notice to Proceed will be issued after the District has received and validated the Contractor's Payment Bond, Performance Bond and Insurance.

1.9.8 DATE OF FINAL COMPLETION

The end of construction. See AIA Document A201, Section 9.10.

1.9.9 DAY

The following days are referenced in the documents:

.1 Calendar Days. Extensions of time granted for Regular Work Days lost, if any, will be converted to Calendar Days.

.2 Holidays: The days officially recognized by the construction industry in this area as a holiday; normally limited to the observance days of New Year's Day, Memorial Day, Fourth of July, Labor Day, Thanksgiving Day and the day after and Christmas Day.

.3 Regular Work Days: All calendar days except holidays, Saturdays, and Sundays. Requests for extensions of time shall be requested on the basis of Regular Work Days, and those days, if approved, will be converted to calendar days by multiplying by a factor of one and four-tenths (1.4).

.4 No extensions of the Contract Time will be granted due to inclement weather, except as provided in Section 8.3.1.

1.9.10 NOTICE TO PROCEED

A notice that may be given by the Owner to the Contractor that directs the Contractor to start the Work. It may also establish the Date of Commencement of the Work.

1.9.11 PROVIDE

Whenever the word "provide" is used in these documents, it shall mean the same as "furnish and install".

1.9.12 PUNCH LIST

A comprehensive list prepared by the Contractor prior to Substantial Completion to establish all items to be completed or corrected; this list may be supplemented by the Architect or Owner. See AIA Document A201, Section 9.8.

1.9.13 UNIT PRICES

A cost for a unit of work as described in the Contract Documents. The Owner may add or deduct Unit Price work at the amounts stated on the Proposal Form and such amounts shall not be subject to additional mark up by the Contractor or his subcontractors."

ARTICLE 2 – OWNER

2.1 GENERAL

Delete the text of Section 2.1.1 in its entirety and substitute the following:

2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. All parties understand that only the Board of Trustees for the Owner acting as a body corporate has the authority to bind the Owner with respect to all matters requiring the Board's approval under current policy of the Board of Trustees for the Owner, including, but not limited to, Change Orders. Except as otherwise provided in Section 4.2.1, the Architect does not have authority to bind the Owner with respect to matters requiring the Owner's approval or authorization. The term "Owner" means the Owner or the Owner's authorized representative.

Delete the text of Section 2.1.2 in its entirely.

2.2 EVIDENCE OF THE OWNER'S FINANCIAL ARRANGEMENTS

After the first sentence of Section 2.2.1, delete the remainder of Section 2.2.1 in its entirety. Delete

Sections 2.2.2 and 2.2.3 in their entirety.

2.3 INFORMATION AND SERVICES REQUIRED OF THE OWNER

Delete Section 2.3.6 in its entirety and replace it with the following:

2.3.6 The Contractor will be furnished free of charge 25 copies of the Drawings and 25 copies of the Project Manual. These copies may have been used during the Bid/Proposal process and it is the Contractor's responsibility to determine their completeness and to request replacement of any missing portions. Additional new copies will be

furnished at the cost of reproduction, postage, and handling.

2.5 OWNER'S RIGHT TO CARRY OUT THE WORK

Delete the text of Section 2.5. in its entirety and substitute the following:

If the Contractor defaults or neglects to carry out the work in accordance with the Contract Documents and fails, after receipt of written notice from the Owner, to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such deficiencies. In such case, an appropriate Change Order shall be issued deducting from payments then or thereafter due the Contractor the actual cost of correcting such deficiencies, including the Owner's expenses and compensation for the Architect's additional services and expenses made necessary by such default, neglect or failure. Such action by the Owner and amounts charged to the Contractor are both subject to the prior approval of the Architect. If payments then or thereafter due the Contractor are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner within thirty (30) days of receipt of written notice from the Owner therefor.

Add Section 2.6 as follows:

2.6 OWNER'S LACK OF LIABILITY TO THIRD PARTY

2.6.1 The Owner is not responsible for the acts and/or omissions of, or contractually involved with, any subcontractors, suppliers of labor or materials, and/or their respective employees or agents or any other third-party claimants. Such claimants shall not constitute third party beneficiaries under this contract. The Contractor and/or his Surety solely shall deal with, take responsibility for, and be liable to such parties under this Contract. Contractor will indemnify and defend the Owner from any legal actions against Owner for unpaid bills of subcontractors.

Add Section 2.7 as follows:

2.7 OWNER'S RIGHT TO OCCUPY THE PROJECT

2.7.1 The Owner shall have the right to occupy or use without prejudice to the right of either party, any completed or largely completed portions of the project, notwithstanding the time for completing the entire work or such portions may not yet have expired. Such occupancy and use shall not constitute acceptance of any work not in accordance with the Contract Documents. If the Contractor determines that said occupancy may cause a delay to the completion of the project, he shall notify the Owner in writing immediately.

2.7.2 Refer to Article 11 Insurance and Bonds regarding property insurance requirements in the event of such occupancy.

2.7.3 If Contractor has not completed the obligations of the Contract Documents by the dates established by subsequent Amendments to the Agreement Between Owner and Construction Manager, the Owner shall have the right to occupy or use the entire project.

ARTICLE 3 -- CONTRACTOR

3.1 GENERAL

Add Section 3.1.4 as follows:

3.1.4 The Contractor must be fully qualified under any state or local licensing laws for Contractors in effect at the time and at the location of the work. The Contractor is responsible for determining that all of his subcontractors and prospective subcontractors are duly licensed in accordance with the law.

3.2 REVIEW OF CONTRACT DOCUMENTS AND FIELD CONDITIONS BY CONTRACTOR

Delete the last sentence of Section 3.2.4 in its entirety and substitute the following:

If the Contractor performs those obligations, the Contractor shall not be liable to the Owner or architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities provided

such errors, inconsistencies, omissions, differences, or nonconformities could not have been ascertained from a careful study of the Contract Documents.

Add Sections 3.2.5, 3.2.6 and 3.2.7 as follows:

3.2.5 The Contractor shall make a reasonable attempt to interpret the Contract Documents before asking the Architect for assistance in interpretation. The Contractor shall not ask the Architect for observation of work prior to the Contractor's field superintendent's personal inspection of the work and his determination that the work of all major subcontractors, to allow the subcontractor to demonstrate his understanding of the documents to the Architect and to allow the subcontractor to ask for any interpretation he may require.

3.2.6 If, in the opinion of the Architect, the Contractor does not make a reasonable effort to comply with the above requirements of the Contract Documents and this causes the Architect or his Consultants to expend an unreasonable amount of time in the discharge of the duties imposed on him by the Contract Documents, then the Contractor shall bear the cost of compensation for the Architect's additional services made necessary by such failure. The Architect will give the Contractor prior notice of intent to bill for additional services related to Sections 3.2.5, 3.2.6 and 3.7 before additional services are performed.

3.2.7 If the Contractor has knowledge that any of the products or systems specified will perform in a manner that will limit the Contractor's ability to satisfactorily perform the work or to honor his Warranty, he shall promptly notify the Architect in writing, providing substantiation for his position. Any necessary changes, including substitutions of materials, shall be accomplished by appropriate Modification.

3.3 SUPERVISION AND CONSTRUCTION PROCEDURES

Delete the last sentence of Section 3.3.1 in its entirety and substitute the following:

If the Contractor is then instructed to proceed with the required means, methods, techniques, sequences or procedures without acceptance of changes proposed by the Contractor, the Owner shall be solely responsible for any resulting loss or damage arising solely from those Owner-required means, methods, techniques, sequences or procedures, but only to the extent the Owner would be responsible for any such losses or damages under state and/or federal law.

Add Sections 3.3.4 and 3.3.5 as follows:

3.3.4 The Contractor is especially cautioned to coordinate the routing of mechanical and electrical items prior to commencing these operations.

3.3.5 Contractor shall bear sole responsibilities for design and execution of acceptable trenching and shoring procedures, in accordance with Texas Government Code, Section 2166.303 and Texas Health and Safety Code, Subchapter C, Sections 756.021, et seq. On trench excavations in excess of 5 feet in depth, Contractor shall pay a qualified engineer, experienced in the engineering design and preparation of drawings and specifications for compliance with state requirements for trenching and shoring, to prepare and professionally seal detailed drawings and specifications directing Contractor in the safe execution of trenching and shoring.

3.3.6 Any time that the Contractors' employees, subcontractors and their agents and employees, and other persons or entities performing portions of the work for or on behalf of the Contractor or any of its subcontractors are on site, the work shall be supervised by a qualified employee of the Contractor.

3.4 LABOR AND MATERIALS

Delete Section 3.4.2 in its entirety and replace it with the following:

3.4.2 The materials, products, and the systems covered by these specifications have been selected as a standard because of quality, particular suitability, or record of satisfactory performance. It is not intended to preclude the use of equivalent or better materials, products, or systems provided that same meets the requirements of the particular project and have been approved in an addendum as a substitution prior to the submission of bids. If prior written approval in an addendum has not been obtained, it will be assumed that the Bid is based upon the materials, products, and systems described in the Bidding Documents and no substitutions will be permitted, except as provided hereinafter.

.1 If, after award of contract, the Contractor of one of his Subcontractors, or Suppliers determines that any of the products or systems specified will perform in a manner that will limit the Contractor's ability to satisfactorily perform the work or to honor the Warranty, the Contractor shall promptly notify the Architect, in writing, providing detailed

substantiation for his position. Any changes deemed necessary by the Owner and Architect, including substitution of materials and change in Contract Sum, either upward or downward, if any, shall be accompanied by appropriate Modification.

.2 After the Contract has been executed, the Owner and Architect will consider a formal request for the substitution of products on the Work in place of those specified only under the conditions set forth in specification referring to Product Options and Substitutions.

.3 Requests for substitution, received by the Architect later than forty five (45) days after “Notice to Proceed” or “Date of Commencement of the Work” (whichever occurs first), may result in additional costs to the Owner. Contractor agrees to reimburse the Owner through deductive Change Order to the Contract, for all costs associated with such requests.

.4 By making request for substitutions based on Subparagraph 3.4.2 above, the Contractor

.1 Represents that the Contractor has personally investigated the proposed substitute product and determined that it is equivalent or superior in all respects to that specified, and is suitable for the intended purpose;

.2 Represents that the Contractor will provide the same warranty for the substitution that the Contractor would for that specified;

.3 Certifies that the cost data presented is complete and includes all related costs under this Contract except the Architect’s redesign costs, and waives all claims for additional costs related to the substitution which subsequently become apparent; and

.4 Will coordinate the installation of the accepted substitute, making such changes as may be required for the Work to be complete in all respects.

.5 Substitution requests shall be submitted on the forms included herein and in accordance with the process established in specification referring to Product Options and Substitutions.

Add the following Sections after Section 3.4.3

3.4.3.1 State law prohibits possession and/or use of alcohol and tobacco products on school property at all times.

.2 State law prohibits weapons or firearms on school property.

.3 There shall be zero tolerance for fraternization with students, teachers and any other school district personnel, Contractor will immediately remove any employee that violates this provision from the project.

.4 No glass bottles shall be brought on the construction site or Owner’s property by any construction personnel.

3.5 WARRANTY

Delete the text of Section 3.5.1 in its entirety and substitute the following:

3.5.1 The Contractor warrants to the Owner and Architect that materials and equipment furnished under the Contract will be of good quality and new, unless the Contract Documents require or permit otherwise. The contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Contractor’s warranty excludes remedy for damage or defect cause by abuse, material alteration to the Work not executed by the Contractor, insufficient maintenance or maintenance not in compliance with written instructions therefor, operation not in compliance with written instructions therefor, or normal wear and tear and normal usage. If required by the Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

Add Sections 3.5.3, 3.5.4 and 3.5.5 as follows:

3.5.3 In the event of failure in the Work, including a specified product, whether during construction, or the correction period (which shall be one (1) year from the Date of Substantial Completion, except where a longer period as specified), the Contractor shall take prompt and appropriate measures to assure correction or replacement of the defective Work or any portion thereof, including manufactured products, whether notified by the Owner or the Architect. Upon correction of warranty items, the Contractor shall provide the Owner and Architect with written notification of said correction. This obligation shall survive acceptance of the Work under the Construction Contract.

3.5.4 The Contractual Correction Period for this Project is one (1) year from the date of Substantial Completion, except for any extended warranties as specified within the Contract Documents. Items of Work not completed until after the deadline for Substantial Completions shall have their warranties (general and any extended warranty periods)

extended by the period of time between the deadline for Substantial Completion and the actual completion of the Work. Such warranties shall be submitted to the Owner in writing, documenting such time extensions. This correction period shall not restrict or modify extended warranties called for or provided on systems, equipment or other specific portions of the Work.

3.5.5 The Contractor shall accompany the Owner and Architect for a complete reinspection of the Project approximately eleven (11) months after the Date of Substantial Completion and shall promptly complete any observed or reported deficiencies in the Work, including any uncompleted Punch List items or outstanding and incomplete warranty items. The contractor shall provide written notification to the Owner and Architect when said Punch List items and/or additional deficiencies observed have been corrected. This obligation shall survive acceptance of the Work under the Construction Contract.

3.6 TAXES

Delete Section 3.6 in its entirety and substitute the following:

The Owner qualifies for exemption from State and Local Sales and Use Taxes pursuant to the provision of Article 20.04(f) of the Texas Limited Sales, Excise and Use Tax Act. Taxes normally levied on the purchase, rental and lease of materials, supplies and equipment used or consumed in performance of the Contract may be exempted by issuing to suppliers an exemption certificate in lieu of tax. Exemption certificates comply with State Comptroller of Public Accounts Ruling No. 95-0.07. Any such exemption certificate

issued in lieu of tax shall be subject to State Comptroller of Public Accounts Ruling No. 95-0.09, as amended. Failure by the Contractor or Subcontractors to take advantage of the Owner's exemption and to obtain such exemption certificate shall make him responsible for paying taxes incurred on materials furnished on the Project without additional cost to or reimbursement by the Owner.

3.7 PERMITS, FEES, NOTICES AND COMPLIANCES WITH LAWS

After Section 3.7.1, add the following Sections:

3.7.1.1 The Owner shall pay directly to the governing authority the cost of all permanent property utility assessments and similar utility connection charges.

.2 The Contractor shall pay directly all temporary utility charges (excluding permanent power), utility district/company inspection fees, temporary tap charges, and temporary water meter charges and any other similar fees assessed by jurisdictional authority having control over this Project. The Contractor shall secure and pay for all governing authorities' permit fees.

.3 Fees payable to the Texas Department of Licensing and Regulation (TDLR) for document review relative to the Elimination of Architectural Barriers Act shall be paid by the Owner and the Architect will submit the documents to the TDLR for review and approval.

.4 The Contractor shall pay for all measures required for the SWPPP.

3.8 ALLOWANCES

Delete Section 3.8 in its entirety and substitute the following:

3.8.1 The Contractor shall include in the Contract Sum all allowances stated in the Contract documents. Items covered by allowances shall be supplied for such amounts and by such persons or entities as the Owner may direct and approve in writing. All unused allowance amounts shall be credited back to Owner, along with any markups included in the Contract Sum on such unused amounts.

3.9 SUPERINTENDENT

Delete Section 3.9.1 in its entirety and substitute the following:

3.9.1 The Contractor shall employ a competent superintendent, project manager and necessary assistants who shall be in attendance at the Project site during performance of the Work, including Punch List work. The superintendent and project manager shall represent the Contractor, and unless provided otherwise in Section 3.1.1, communications

given to the superintendent or project manager shall be binding as if given to the Contractor.

3.10 CONTRACTOR'S CONSTRUCTION AND SUBMITTAL SCHEDULES

Delete Section 3.10.1 and substitute the following:

3.10.1 Within 30 days of being awarded an Amendment, the Contractor shall prepare and submit for the Owner and Architect's review, a construction schedule for the Work, with critical path clearly defined. The schedule shall not exceed time limits current under the Contract Documents. For further schedule requirements refer to specification section regarding project schedules in the Project Manual.

Add the following clause to Section 3.10.2:

3.10.2 Requirements for the submittal schedule are outlined in the specifications. If the Contractor fails to submit a submittal schedule or fails to provide submittals in accordance with the approved submittal schedule, the Contractor shall not be entitled to any increase in the Contract Sum or extension of the Contract Time based on the time required for review of submittals.

Add Section 3.10.4 as follows:

3.10.4 The Contractor shall submit to the Architect, with each monthly Application for Payment; a copy of the progress schedule updated to reflect the current status of the project. The Contractor shall take whatever action necessary to assure that the project completion schedule is met.

3.11 DOCUMENTS AND SAMPLES AT THE SITE

Add Section 3.11.1 as follows:

3.11.1 The Contractor shall post all Addenda on Construction Documents prior to commencing work in the site.

3.12 SHOP DRAWINGS, PRODUCT DATA AND SAMPLES

At Section 3.12.5, add the following Sections:

3.12.5 .1 If, in the opinion of the Architect, the Shop Drawings, Product Data, Samples and similar submittals are incomplete, indicate an inadequate understanding of the work covered by the submittals, or indicate a lack of study and review by the Contractor prior to submittal to the Architect, the submittals will be returned, unchecked, to the Contractor for correction of these three deficiencies and subsequent resubmittal. Additional service charges as outlined in 3.2.6 may be charged by the Architect in this event.

.2 The Architect will take no action on Shop Drawings, Product Data, and Samples that have not first been certified, by stamped, signed notation, as having been checked and approved by the Contractor for use in the Work, or that are not specifically required by the Contract Documents.

At Section 3.12.7, correct the word "approved" in the last line to read "accepted".

At Section 3.12.8, correct "Architect's approval" in the last line to read "Architect's acceptance".

At Section 3.12.9, correct "Architect's approval" in the last line to read "Architect's acceptance" and add the following Section:

3.12.9.1 Deviation from the requirements of the Contract Documents indicated on shop Drawings, Product Data, and Samples, does not constitute the required notification "in writing.

Add Sections 3.12.11 and 3.12.12 as follows:

3.12.11 The Contractor shall submit complete Shop Drawings, Product Data, Samples and similar submittals required by the Contract Documents to the Architect at least thirty (30) days prior to the date the Contractor needs the reviewed submittals returned. Where colors are to be selected by the Architect, submit all Samples in adequate time to allow the Architect to prepare a complete selection schedule. In general, all submittals requiring color selection shall be submitted to the Architect within four weeks of the date of the contact for construction.

3.12.12 The Contractor shall submit digital PDF's of Shop Drawings, Product Data, and similar submittals in the proper format according to the procedures stipulated within the Contract Documents. Digitally submitted Shop Drawings will be reviewed and marked by the Architect and/or his consultants and returned to the Contractor for his use, distribution, correction or resubmittal as required. Contractor corrections or revisions shall be resubmitted to the Architect in accordance with same procedures. The digitally marked up prints will be retained by the Architect and his consultants. Samples shall be submitted directly to the Architect for review.

Add Section 3.12.13 as follows:

3.12.13 The Contractor shall provide MEP coordination drawings within a schedule mutually agreed upon by the Team and prior to installing the Work, showing how all piping, ductwork, lights, conduit, equipment, etc. will fit into the ceiling space allotted, including clearances required by the manufacturer, by code, or in keeping with good construction practice. Space for all trade elements must be considered on the same drawing. Drawings shall be at ¼ inch per foot minimum scale and shall include invert elevations and

sections required to meeting intended purpose. The Contractor may propose an alternate method of accomplishing MEP coordination. If the alternate method is approved by the Team, it may be utilized.

3.14 CUTTING AND PATCHING

Add Section 3.14.3 as follows:

3.14.3 Leave all chases, holes and openings, straight and true, of proper size, and cut them into existing work as may be necessary for the proper installation of the work. Consult with all Subcontractors concerned, regarding proper locations and size. In case of conflict between requirement for cutting and patching and any other requirement of the Work, submit request for direction before proceeding with the Work. In case of failure to leave or cut them in the proper place, openings shall be cut afterward at no expense to the Owner. No excessive cutting will be permitted, nor shall any piers or other structural members be cut without prior approval. After such work has been installed, satisfactorily and carefully fit around, close up, repair, patch, and point up all cuts. Work shall be done with proper tools by workmen of the particular trade to which work belongs and shall be done without extra expense to the Owner. No description of specific cutting, patching, digging, etc., required for the work under a Specification Section that may be required for the proper accommodation of that work to the work of other trades shall relieve the Contractor from responsibility described above.

3.15 CLEANING UP

Add Section 3.15.3 as follows:

3.15.3 Prior to the Architect's inspection for Substantial Completion the Contractor shall clean exterior and interior surfaces exposed to view; remove temporary labels, stains, and foreign substances; polish transparent and glossy surfaces; clean equipment and fixtures to a sanitary condition; replace air filters in mechanical equipment; clean roof, gutters, and downspouts; remove obstructions and flush debris from drainage systems; clean site; sweep paved areas and rake clean other surfaces; remove trash and surplus materials from the site.

3.18 INDEMNIFICATION

Delete Sections 3.18.1 and 3.18.2 in their entirety and replace them with the following:

3.18.1 TO THE FULLEST EXTENT PERMITTED BY LAW, CONTRACTOR SHALL INDEMNIFY DEFEND AND HOLD HARMLESS THE OWNER AND ITS TRUSTEES, OFFICERS, AGENTS, AND EMPLOYEES (COLLECTIVELY, THE "INDEMNIFIED PARTIES") FROM AND AGAINST ALL CLAIMS, LOSSES, EXPENSES, COSTS, DEMANDS, SUITS, CAUSES OF ACTION, AND DAMAGES, INCLUDING WITHOUT LIMITATION, ATTORNEYS' FEES AND EXPENSES, ATTRIBUTABLE TO BODILY INJURY, SICKNESS, DISEASE OR DEATH OF ANY EMPLOYEE OF CONTRACTOR, ITS AGENTS, OR ITS SUBCONTRACTORS OF EVERY TIER, EVEN IF THE BODILY INJURY, SICKNESS, DISEASE OR DEATH IS CAUSED BY OR ALLEGED TO HAVE BEEN CAUSED BY THE NEGLIGENCE, FAULT OR STRICT LIABILITY OF ANY OF THE INDEMNIFIED PARTIES.

FOR ALL CLAIMS NOT ADDRESSED IN THE ABOVE PARAGRAPH, CONTRACTOR SHALL INDEMNIFY, DEFEND AND HOLD HARMLESS THE OWNER AND ITS TRUSTEES, OFFICERS, AGENTS, AND EMPLOYEES AND (COLLECTIVELY, THE "INDEMNIFIED PARTIES"), FROM AND AGAINST ALL CLAIMS, LOSSES, EXPENSES, COSTS, DEMANDS, SUITS, CAUSES OF ACTION, AND DAMAGES, INCLUDING WITHOUT LIMITATION, ATTORNEYS' FEES AND EXPENSES, OF ANY NATURE WHATSOEVER ARISING OUT OF OR RELATED TO THIS

AGREEMENT OR THE WORK TO BE PERFORMED UNDER THIS AGREEMENT, BUT ONLY TO THE EXTENT OF THE NEGLIGENCE OR OTHER FAULT OF THE CONTRACTOR, ITS AGENTS, REPRESENTATIVES, EMPLOYEES OR SUBCONTRACTORS OF ANY TIER.

3.18.2 It is understood and agreed that Subparagraph 3.18 above is subject to, and expressly limited by, the terms and conditions of TEX. CIV. PRACT. & REM. CODE ANN. 130.001-130.005 (Vernon Supp. 1989), as amended or modified, or any successor statute. Contractor shall not be obligated under

Subparagraph 3.18 to indemnify or hold harmless Architect or any agent, servant of employee of Architect from liability or damage that is caused by or results from:

.1 Defects in plans, designs or specifications prepared, approved or used by the Architect; or

.2 Negligence of the Architect in the rendition or conduct of professional duties called for or arising out of the Contract Documents and the plans, designs or specifications that are a part of the Contract Documents; and arises from:

.1 personal injury or death;
.2 property injury; or
.3 any other expense that arises from personal injury, death or property injury.

Add Section 3.18.3 as follows:

3.18.3 It is agreed with respect to any legal limitations, now or hereafter in effect and affecting the validity or enforceability of the indemnification obligation under Paragraph 3.18, such legal limitations are made a part of the indemnification obligation and shall operate to amend the indemnification obligation to the minimum extent necessary to bring the provision into conformity with the requirements of such limitations, and as so modified, the indemnification obligation shall continue in full force and effect.

Add Sections 3.19, 3.20, and 3.21 as follows:

3.19 RECORD DRAWINGS

3.19.1 Refer Owner's Closeout Procedures

3.20 PREVAILING WAGE RATES

3.20.1 As required by Chapter 2258 of the Texas Government Code Title 10 Prevailing Wage Rate, no employee used in this construction may be paid less than the minimum prevailing wage rate in effect for the Owner.

3.20.2 The Contractor and each Subcontractor and Sub-subcontractor shall pay to all laborers, workmen, and mechanics employed in execution of this Contract not less than rates set forth by law for each craft of type of workman or mechanic needed to execute this Contract.

3.20.3 Determination of prevailing wages shall not be construed to prohibit payment of more than the rates identified.

3.21 ANTITRUST VIOLATIONS

3.21.1 Contractor hereby assigns to Owner any and all claims for overcharges associated with this Contract which arise under the antitrust laws of the United States, 15 U.S.C.A. Section 1 et.seq. (1973). The Contractor shall include this provision in his contracts with each Subcontractor and Supplier. Each Subcontractor shall include such provision in contracts with Sub-subcontractors and suppliers.

3.22 THIRD-PARTY BENEFICIARY

3.22.1 No person or entity shall be deemed to be a third-party beneficiary of any provision(s) of this Contract; nor shall any provision(s) hereof be interpreted to create a right of action or otherwise permit anyone not a signatory party to the Contract to maintain an action for personal injury or property damage.

ARTICLE 4 – ARCHITECT

4.2 Administration of the Contract

Delete Section 4.2.2 in its entirety and substitute the following:

4.2.2 The Architect, as a representative of the Owner, will visit the site at intervals appropriate to the stage of the Contractor's operations (1) to become generally familiar with and to keep the Owner informed about the progress and quality of the portion of the Work completed, (2) to endeavor to guard the Owner

against defects and deficiencies in the work, and (3) to determine in general if the work is being performed in a manner indicating that the work, when fully completed, will be in accordance with the Contract documents. The Architect will be required to make on-site inspections as necessary to keep the Owner informed of the progress of the Work and as necessary to guard the Owner against defects and deficiencies in the Work. The Architect will neither have control over or charge of, no be responsible for, the construction means, methods, techniques, sequences or procedures, or for the safety precautions and programs in connection with the Work, since these are solely the Contractor's rights and responsibilities under the Contract Documents, except as provided in Section 3.3.1.

Delete Section 4.2.6 in its entirety and substitute the following:

4.2.6 The Architect shall have authority to reject Work that does not conform to the Contract Documents. The Architect shall be required to promptly notify the Owner of any non-conforming Work and shall reject such non-conforming Work unless the Owner objects to the rejection in writing within twenty-four (24) hours of such notification. Whenever the Architect considers it necessary or advisable for implementation of the intent of the Contract documents, the Architect will have authority to require inspection or testing of the Work in accordance with the provisions of the Contract Documents, whether or not such Work is fabricated, installed or completed. Performance of any additional inspection or testing, which would result in additional cost to the Owner, shall require advance notice to and approval of the Owner. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, material and equipment suppliers, their agents or employees, or other persons or entities performing portions of the Work, except when the Contractor's inability to perform the Work is a result of design flaw, error or omission.

Add the following Section 4.2.8.1:

4.2.8.1 Allowance Expenditure will be authorized using Allowance Expenditure authorizations (AEA) executed by the Owner, the Architect and the Contractor. All Allowance Expenditure Authorizations will be incorporated into the contract by Change Order at the completion of the project. Work authorized by an AEA may be invoiced as it is completed.

Delete Section 4.2.13 in its entirety and substitute the following:

4.2.13 All decisions on matters relating to aesthetic effect shall initially be made by the Architect; however, all such decisions are subject to the Owner's written approval.

ARTICLE 5 – SUBCONTRACTORS

5.1 DEFINITIONS

At the end of Section 5.1.1 add the following sentence:

Wherever relevant, the term "Subcontractor" shall also include a person, or entity who supplies material or equipment for the Project.

5.2

At the end of Section 5.2.4, add the following sentence:

Prior to such change the Contractor shall notify the Architect of his intent and reasons for such proposed changes.

5.4 CONTINGENT ASSIGNMENT OF SUBCONTRACTS

Delete the last sentence of Section 5.4.1 in its entirety and substitute the following:

When the Owner accepts the assignment of a subcontract agreement, the Owner assumes the Contractor's rights and obligations under the subcontract, but only to the extent permitted by law.

Delete the last sentence of Section **5.4.3** in its entirety.

ARTICLE 7 -- CHANGES IN THE WORK

7.1 GENERAL

Delete the text of Section 7.1.2 in its entirety and substitute the following:

7.1.2 A Change Order shall be based on agreement among the Owner, Contractor, and Architect, except when the Contract balance is amended as a result of Owner's Right to Carry out the Work under Section 2.4.1 or the Owner's assessment of liquidated damages as allowed by the Contract Documents. A Construction Change Directive requires agreement by the Owner or the Owner's representative and Architect, and may or may not be agreed to by the Contractor; an order for a minor change may be issued by the Architect alone.

Add Section 7.5 as follows:

7.5 ALLOWABLE MARKUPS FOR CHANGES IN THE WORK

7.5.1 Unless otherwise directed, the procedure and markup of the costs for additional work shall be determined in the following manner:

.1 Upon Change Proposal request, the Contractor shall quote the cost for changes in the work showing separately, credits and additional costs broken down by headings used in the Schedule of Values. Further breakdown into units of labor and materials may be required if agreement on cost cannot be reached using the breakdown by headings. The final cost shall be the amount of the Total Contract Value Change shown on the Change Proposal signed by the Contractor and Owner. For general construction work, not subcontracted, the Contractor shall consider as costs the actual invoice amount for additional materials, the sales tax on additional materials when applicable, the wages paid for additional direct labor, plus the Contractor's usual markup of wages to cover additional labor related costs such as insurance, taxes and fringe benefits.

.2 On changes executed within the Owner's Contingency Allowance, Contractor shall have included costs for combined overhead and profit, to the extent permitted by the Contract Documents, and General Conditions costs, including the cost of superintendents, field office expense, temporary facilities and services, small hand tools, construction equipment not specifically provided for the change in hand, home office expense, bond and building insurance premiums, and managing the Subcontractor's work, in his Base Contract amount. Allowed overhead and profit fee on Owner's Contingency Allowance changes to be included in the total cost to the Owner shall be based as follows:

.1 For each Subcontractor or Sub-subcontractor involved, for Work performed by that Subcontractor's of Sub-subcontractor's own forces, ten percent (10%) of the cost.

.2 For each Subcontractor, for Work performed by the Subcontractor's Sub-subcontractors, five percent (5%) of the amount due the Sub-subcontractors.

7.5.2 If any additional Work is authorized outside of or in excess of the Owner's Contingency Allowance, the combined overhead and profit for this work shall be based as follows:

.1 For the Contractor, for Work performed by the Contractor's own forces, a maximum total markup of ten percent (10%) of the actual cost on a lump sum project, or the Contractor's Construction Phase Fee on a Guaranteed Maximum Price Project.

.2 For Work performed by the Contractor's Subcontractor(s), five percent (5%) of the amount due the Subcontractor(s).

.3 For each Subcontractor or Sub-subcontractor involved, for work performed by that Subcontractor's or Sub-subcontractor's own forces, a maximum markup of ten percent (10%) of the actual cost.

.4 For each Subcontractor, for work performed by the Subcontractor's Sub-subcontractors, five percent (5%) of the amount due the Sub-subcontractor.

.5 Cost to which overhead and profit is to be applied shall be determined in accordance with Section 7.3.7.

7.5.3 In order to facilitate checking of quotations for extras or credits, all proposals, (except those so minor that their propriety can be seen by inspection), shall be accompanied by a complete and detailed itemization of costs including labor, materials, and Subcontracts. Labor and materials shall be itemized in the manner prescribed above. Where major cost items are Subcontracts, they shall be itemized also. In no case will a change be approved without such itemization.

7.5.4 Change orders, as they are accepted by the Owner, shall be entered under heading “Change Orders” in the next current Request for Payment.

7.5.5 All credits to or deductions from the Contract Sum, a Contingency or an Allowance shall be calculated using the same methodology set forth in this Section 7.5. All unused Contingency or Allowance amounts shall be credited back to Owner prior to final payment, along with any markups included in the Contract Sum or GMP on such unused amounts.

ARTICLE 8 -- TIME

8.1 DEFINITIONS

At Section 8.1.4, add the following sentence:

See further definition of “Day” in Section 1.9.10.

8.3 DELAYS AND EXTENSIONS OF TIME

Delete Section 8.3.1 in its entirety and substitute the following:

8.3.1 If the Contractor is delayed at any time in the commencement or progress of the Work by an act or neglect of the Owner or Architect, or of an employee of either, or of a separate contractor employed by the Owner, or by changes ordered in the Work, or by labor disputes, fire, unusual delay in deliveries, unavoidable casualties or other unforeseeable causes beyond the Contractor’s control, or by other causes which the Architect determines may justify delay, then the Contract Time shall be extended by Change Order for such reasonable time as the Architect may determine. No extensions of the Contract Time will be granted for inclement weather, except for Force Majeure weather events consisting of named storms or government declared emergencies resulting from extreme weather.

Add Sections 8.3.4 and 8.3.5 as follows:

8.3.4 The parties hereto agree that time is of the essence of this Contract and that pecuniary damages would be suffered by the Owner if the Contractor does not substantially complete all Work called for in the Contract Document by the specified date, which damages are, by their very nature, difficult of ascertainment. It is therefore expressly agreed, as a part of the consideration inducing the Owner to execute this Contract that the Owner may deduct from the final payment made to the Contractor a sum equal to the amount stated stated in the Contract Documents, per phase for each and every Calendar Day beyond the agreed date which the contractor has agreed to for Substantial Completion of the Work included in the Contract Documents. It is expressly understood that said sum per day is agreed upon as a fair estimate of the pecuniary damages which will be sustained by the Owner in the event that the Work is not substantially completed within the agreed time, or with the legally extended time, if any, otherwise provided for herein. Said sum shall be considered as liquidated damages only, and in no sense shall be considered a penalty or forfeiture; said damage being caused by additional compensation to personnel, and other miscellaneous increased costs, all of which are difficult of exact ascertainment. The liquidated damages assessed herein shall be Owner’s sole remedy for time delays between the deadline for substantial completion and Contractor’s achievement of substantial completion.

8.3.5 Failure to complete and close-out the Project, and complete all Punch List items, within sixty (60) days after the scheduled Substantial completion date will additionally entitle the Owner to deduct from the final payment made to the Contractor a sum equal to the amount stated in the Contract Documents, per phase, for each and every Calendar Day beyond the 60-day close-out period. It is expressly understood that said sum per day is agreed upon as a fair estimate of the pecuniary damages which will be sustained by the Owner in the event that the Project close-out does not occur on a timely basis. Said sum shall be considered as liquidated damages only and in no sense shall be considered a penalty or forfeiture; said damage being caused by additional compensation to personnel, and other miscellaneous increased costs, all of which are difficult of exact ascertainment. If the Contractor is delayed through no fault of the Owner, the Substantial Completion is not achieved by the agreed contract completion date, the Project close-out period of sixty (60) days will not be extended by the number of days of delay past the actual Substantial completion date and will remain based upon the agreed contract completion date.

ARTICLE 9 -- PAYMENTS AND COMPLETION

9.1 CONTRACT SUM

Add Section 9.1.1.1 as follows:

9.1.1.1 The Owner is exempt from payment of Texas State Sales Tax on materials required for the Work. Therefore, to comply with the law, the Contract Sum shall be broken down into the amount of cost for labor and the amount of cost for materials. This breakdown shall be provided by the Contractor within ten (10) days of award of Contract.

9.2 SCHEDULE OF VALUES

Add the following Sections:

9.2.1 General Contractor's cost for Contractor's fee, bonds and insurance, General Conditions, etc., shall be listed as individual line items.

9.2.2 Schedule of Values shall break each line into materials and labor. Once approved by the Owner and Architect, it shall be used as basis for reviewing Application for Payment but not be taken as evidence of market or other value.

9.2.3 Contractor's cost for various construction items shall be detailed. For example, concrete work shall be subdivided into footings, grade beams, floor slabs, paving, etc. These subdivisions shall appear as individual line items.

9.2.4 On major subcontracts, such as mechanical, electrical, and plumbing, the Schedule shall indicate line items and amounts in detail, (for example; underground, major equipment, fixtures, installation of fixtures, start up, etc.)

9.2.5 Costs for subcontract work shall be listed without any addition of General Contractor's costs for overhead, profit or supervision.

9.2.6 The Contractor shall include a value for the coordination documents/drawings on the schedule of values.

9.2.7 The Contractor shall include a value for the correction of deficiencies noted by the Commissioning Agent and the Test, Adjust and Balance consultant on the schedule of values for each sub-contractor subject to commissioning and test, adjust and balance requirements.

9.3 APPLICATIONS FOR PAYMENT

Delete Sections 9.3.1 and 9.3.2 in their entirety and replace them with the following:

9.3.1 Refer to Section 7.1.3 of the A133 Agreement for timelines related to Applications for Payment.

9.3.1.1 As provided in Section 7.3.9, such applications may include requests for payment on account of changes in the Work which have been properly authorized by Construction Change Directives but not yet included in Change Orders.

9.3.2 Payments will be made on account of materials or equipment 1) incorporated in the Work; 2) suitably stored at the site; or 3) suitably stored at some off-site location, provided the following conditions are met for off-site storage:

.1 The location must be agreed to, in writing, by the Owner and Surety.

.2 The location must be a bonded warehouse.

.3 Surety must agree, in writing, to each request for payment.

.4 The Contractor must bear the cost of the Owner's and Architect's expenses related to visiting the offsite storage area for confirmation.

Payments for materials or equipment stored on or off the site shall be conditioned upon submission by the Contractor of bills of sale or such other procedures satisfactory to the Owner to establish the Owner's title to such materials or equipment or otherwise protect the Owner's interest, including applicable insurance (naming the Owner as insured) and transportation to the site for those materials and equipment stored off the site. Under no circumstances will the Owner reimburse the Contractor for down payments, deposits, or other advance payments for materials or equipment, without prior written approval of Owner.

The Contractor acknowledges that the review of materials and/or equipment stored off the side is an additional service of the Architect, and the Contractor shall be charged for that service. The cost for such service will be established by the Architect and is not subject to appeal.

Add Section 9.3.4 as follows:

9.3.4 The Contractor shall submit requests for payment in duplicate, using AIA Document G702, Application and Certificate of Payment, as the cover sheet. Continuation sheets showing in detail the amounts requested, etc., shall be submitted using AIA Document G703, Continuation Sheet, or a computerized version of these documents previously approved for use. The information provided on the continuation sheets in the Description of the Work and Scheduled Values columns shall match the corresponding information shown on the approved Schedule of Values. All blank spaces on AIA Document G702, Application and Certificate of Payment, must be completed and the signatures of the Contractor and Notary Public shall be original on each form. By submitting his application for payment, the Contractor certifies that the individual signing the application is authorized to do so.

9.6 PROGRESS PAYMENTS

Delete Section 9.6.1 in its entirety and substitute the following:

9.6.1 After the Architect has issued a Certificate for Payment, the Owner shall make progress payments in accordance with the following Section and Section 7.1.3 of the A133.

.1 Based upon the applications for payment and supporting documents submitted to the Architect by the Contractor and certification of the amount payable by the Architect, the Owner shall make progress payments on account of the Contract Sum to the Contractor as provided in the Contract Documents for the period covered by the application for payment:

.2 Applications for Payment shall be submitted by the last day of the month. Not later than the last day of the following month, ninety-five percent (95%) of the portion of the Contract Sum properly allocable to labor, materials, and equipment incorporated in the Work and ninety-five percent (95%) of the portion of the Contract Sum properly allocable to materials and equipment suitably stored at the site or at some other location agreed upon in writing (subject to the conditions listed in Article 9.3.2 of the Supplementary Conditions to the Contract for Construction), for the period covered by the Application for Payment, less the aggregate of previous payments made by the Owner.

.3 Upon Substantial Completion of the entire Work, a sum sufficient to increase the total payments to ninety-five percent (95%) of the Contract Sum, less such amounts as the Architect shall determine for all incomplete Work and unsettled claims as provided in the Contract Documents.

At Section 9.6.2, insert the following sentence between the first and second sentence:

More specifically, if only five percent (5%) retainage is withheld by the Owner on payments to the Contractor, then the Contractor shall withhold only five percent (5%) retainage on payments to subcontractors; and subcontractors shall withhold only five percent (5%) retainage on payments to sub- subcontractors.

9.7 FAILURE OF PAYMENT

Delete the phrase “or awarded by binding dispute resolution.” Replace all references to “seven days” to “ten days.”

9.8 SUBSTANTIAL COMPLETION

At Section 9.8.2, add the following sentence at the end:

Should the Architect determine that the Contractor’s List of Items to be Completed or Corrected lacks sufficient detail or requires extensive supplementation, the list will be returned to the Contractor for revision, and inspection for determining the Date of Substantial Completion will be delayed until the List submitted is a reasonable representation of the work to be done.

Add Sections 9.8.6 and 9.8.7 as follows:

9.8.6 In order for the project or a major portion thereof to be considered substantially complete, the following conditions must be met:

.1 All inspections by governmental authorities having jurisdiction over the project must have been finalized, any remedial work required by those authorities must have been completed, and Certificates of Occupancy and similar governmental approval forms must have been issued and copies delivered to the Owner and Architect.

.2 All work, both interior and exterior, shall have been completed and cleaned except minor items which if completed after occupancy, will not, in the Owner’s opinion, cause interference to the Owner’s use of the building or any portion thereof. A significantly large number of items to be completed or corrected will preclude the Architect from issuing a Certificate of Substantial Completion. The Owner and Architect will be the sole judge of what constitutes a significantly large number of items.

The following items are a partial specific list of requirements, as applicable to the Project, that must be completed prior to established Substantial Completion of all portions of the work (Including the Substantial Completion of the commissioning phase).

1. All fire alarm system components must be completed and demonstrated to the Owner.
2. Local fire marshal approval certificate, or similar Certificate of Occupancy from the governing agency, must be delivered to the Owner.
3. All exterior clean-up and landscaping must be complete.
4. All final interior clean-up must be complete.
5. All HVAC air and water balancing must be complete.
6. All required commissioning must be complete.
7. All Energy Management Systems must be complete and fully operational and demonstrated to the Owner.
8. All communications equipment, telephone system, and P.A. systems must be complete and demonstrated to the Owner.
9. All final lockset cores must be installed and all final Owner directed keying completed.
10. All room plaques and exterior signage must be completed.
11. All Owner demonstrations must be completed including kitchen equipment, HVAC equipment, plumbing equipment, and electrical equipment.
12. A final certificate of occupancy must be signed by the Contractor and delivered to the Owner.

9.8.7 After the date of Substantial Completion of the Project is evidenced by the Certificate of Substantial Completion, the Contractor will be allowed a period of time within which to correct all deficiencies attached to the Certificate of Substantial Completion as outlined in Section 8.3.4 of these supplementary conditions. Failure of the Contractor to complete such corrections within the stipulated time will be reported to the contractor's surety. In this report, the Contractor and surety will be informed that, should correction remain incomplete for fifteen (15) days, the Owner may initiate action to complete corrective work out of the remaining Contract funds in accordance with Article 14.2.

1 Should corrective work following Substantial Completion require more than one reinspection after notification by the Contractor that corrections are complete, the cost of subsequent inspections may also be deducted from the Contract funds remaining unpaid to the Contractor.

9.10 FINAL COMPLETION AND FINAL PAYMENT

At Section 9.10.2, add the following sentence at the end:
Prior to final payment, the Contractor shall meet all of the requirements of Owner's Closeout Procedures. Add Section

9.10.6 as follows:

9.10.6 Final Payment, constituting the entire unpaid balance of the Contract Sum, shall be paid by the Owner to the Contractor thirty-one (31) days after Substantial Completion of the Work unless otherwise stipulated in the Certificate of Substantial Completion, provided the Work has then been completed, the Contract fully performed, all Contract Close Out Documents have been submitted, and the Final Certificate for Payment has been issued by the Architect. The final payment will not be made until all of these conditions have been satisfied.

ARTICLE 10 -- PROTECTION OF PERSONS AND PROPERTY

Add Sections 10.2.9 and 10.2.10 as follows:

10.2.9 The performance of the foregoing services by the Contractor shall not relieve the Subcontractors of their responsibilities for the safety of persons and property and for compliance with all applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities applicable to the conduct of the Work.

10.2.10 The Contractor shall be responsible for taking all precautions necessary to protect the Work in place from any foreseeable weather conditions which could cause any potential damage to portions or all Work in place. The Contractor shall be responsible for performing all repairs and/or replacement of any Work that results from foreseeable weather conditions.

10.3 HAZARDOUS MATERIALS

Delete the text of Section 10.3.1 in its entirety and substitute the following:

10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents

regarding hazardous materials. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent foreseeable bodily injury or death to persons resulting from a material or substance encountered on the site by the Contractor, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected area and report the condition to the Owner and Architect in writing. The Owner, Contractor and Architect shall then proceed in the same manner described in Section 10.3.2.

Delete the text of Sections 10.3.3, 10.3.4 and 10.3.5 in their entirety. Delete the text

of Section 10.3.6 in its entirely and substitute the following:

10.3.6 If, without negligence on the part of the Contractor, the Contractor is held liable by a governmental agency for the cost of remediation of a hazardous material or substance solely by reason of performing Work as required by the Contract Documents, the Owner shall indemnify the Contractor for all costs and expenses thereby incurred, but only to the extent provided by law.

Add Section 10.3.7 as follows:

10.3.7 As part of the construction contract close out process, and prior to receiving payment of any of the retainage, the Contractor and his subcontractors shall submit notarized statements pertaining to the above referenced hazardous materials.

ARTICLE 11 -- INSURANCE AND BONDS

Delete the text of Sections 11.1 through 11.5 and substitute the following Sections:

11.1 CONTRACTOR'S LIABILITY INSURANCE

The Owner reserves the right to review the insurance requirements during the effective period of any Contract to make reasonable adjustments to insurance coverages and limits when deemed reasonably prudent by Owner based upon changes in statutory laws, court decisions or potential increase in expense to loss.

11.2 The Owner requires the following minimum insurance coverages:

Types of Coverage	Limits of Liability	
Commercial General Liability	General Aggregate	$2,000,000.00
	Products / Completed Operations / Aggregate	$1,000,000.00
	Bodily Injury and Property Damage	$1,000,000.00
	Contractual	$1,000,000.00
	Personal and Advertising Injury	$1,000,000.00
	Fire Damage	$500,000.00
	Medical Expenses	$5,000.00

11.2.1 The Owner shall be named as an additional insured on a primary and noncontributory basis using form CG 2010 10 01 or similar endorsement providing equal or greater coverage in favor of the Owner.

Coverage shall include the following:

(a) Premises operations;
(b) Blanket Contractual Liability;
(c) Pollution;
(d) Products/Completed Operations;
(e) Broad Form Property Damage;

(f) Independent Contractors;
(g) Per project aggregate limit;
(h) Provide a statement of claims against the aggregate limit with each renewal certificate;
(i) X,C,U exclusions to be removed when underground work is performed; and
(j) Waivers of subrogation in favor of Owner and its officers, directors, representatives, agents and
employees shall be provided.

11.2.2 Automobile Liability Combined Single Limit
$1,000,000.00

(a) Comprehensive Automobile Liability Insurance to cover all vehicles owned by, hired by, or used on behalf of the Contractor.

(b) Owner and its officers, directors, representatives, agents and employees shall be endorsed as Additional Insureds, as their interests may appear.

(c) Waivers of subrogation in favor of Owner and its officers, directors, representatives, agents and employees shall be provided.

11.2.3 Workers' Compensation Statutory Limits

(a) Coverage at Statutory Limits with All States Endorsement

(b) Employer's Liability	Each Accident	$1,000,000.00
	Disease (Policy Limit)	$1,000,000.00
	Disease (Each Employee)	$1,000,000.00

(c) Waivers of subrogation in favor of Owner and its officers, directors, representatives, agents and employees shall be provided.

11.2.4 Excess or Umbrella Insurance (provides coverage in excess of primary Commercial General Liability, Automobile Liability, and Worker's Compensation Coverage B limits)

(a) Minimum coverage for the Contractor shall be one (1) times the Contract amount, subject to a minimum limit of $1,000,000.00 and a maximum limit of $25,000,000.00. Limits for primary policies may differ from those shown above when Excess (Umbrella) Insurance coverage is provided.

(b) Owner and its officers, directors, representatives, agents and employees shall be endorsed as Additional Insureds, as their interests may appear.

(c) Waivers of subrogation in favor of Owner and its officers, directors, representatives, agents and employees shall be provided.

11.3 The Owner requires that the following insurance requirements be satisfied:

.1 No Work shall be commenced until all insurance requirements set forth in this Agreement have
been approved by the Owner in writing.

.2 All insurance policies and certificates required hereunder shall be in form and content
satisfactory to the Owner.

.3 The Owner shall be furnished an ACORD form Certificate of Insurance evidencing all policies and
endorsements required by this Agreement prior to execution of the Contract and thereafter upon
renewal or replacement of each required policy of insurance.

.4 Each Insurance coverage/policy shall contain a provision that at least thirty (30) days prior written

notice shall be given to the Owner in the event of cancellation, material change, or non-renewal.

.5 Insurance shall be underwritten by a company licensed to do business in Texas, satisfactory to

Owner and rated minimum A-VII by A.M. Best.

.6 The insurance coverages specified herein shall be maintained at all times during the term of the

contract and, with the exception of builder's risk coverage, shall be maintained for a minimum of one

(1) year thereafter.

.7 No deletions/exclusions from the standard coverage form are allowed without the prior written consent

of the Owner.

.8 All insurance must be issued on an occurrence basis.

.9 The Contractor shall be responsible for all deductibles; the Owner shall approve the deductibles

selected.

.10 With the exception of Excess Umbrella Coverage, the coverage afforded by each carrier must be a

primary over any other applicable insurance.

.11 In addition to certificates of insurance, copies of policy endorsements must be provided (a) listing the

Owner as Additional Insured, and (b) showing waivers of subrogation in favor of the Owner.

11.4 PERFORMANCE BOND AND PAYMENT BOND

Add the following Sections:

11.4.1 The Contractor shall provide a Performance Bond, in the penal sum equal to one hundred percent (100%) of the Contract Sum, if the formal Contract is in excess of One Hundred Thousand Dollars ($100,000.00) and a Labor and Material Payment bond, in the penal sum equal to one hundred percent (100%) of the Contract sum if the formal contract is in excess of Twenty Five Thousand Dollars ($25,000.00).

11.4.2 The Work will not be started until the bonds and issuing companies have been accepted as satisfactory by the Owner. The original bonds will be delivered to the Owner with an attached authorized power of attorney. Such Bonds shall be issued by a company authorized to do business in the State of Texas with an A.M. Best Company rating of a least A-X and included on the U.S. Department of the Treasury Listing of Approved Sureties (Dept. Circular 570).

11.4.3 The Performance Bond Form and the Payment Bond Form included herein shall be executed and submitted to the Architect in duplicate prior to commencement of the work. The surety companies must be acceptable to the Owner and licensed admitted carriers in the State of Texas; and the companies must appear in a current Federal Treasury list as Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds land as Acceptable Reinsuring companies.

11.4.4 Each bond shall be of penal sum equal to one hundred percent (100%) of the Contract Sum and shall be compatible with the provisions of the governing authority. The Contractor shall file copies of each bond with the county clerk and furnish the Owner with a file receipt. The bonds shall remain in force throughout the warranty period of the contract. The Work will not be started until the bonds and issuing companies have been accepted as satisfactory by the Owner. The original bonds will be delivered to the Owner with an authorized power of attorney attached.

11.4.5 Claims must be sent to the Contractor and his Surety in accordance with Article 5160, Revised Civil Statutes. The Owner will furnish in accordance with such Article, a copy of the Payment Bond as provided therein to claimants upon request. All claimants are cautioned that no lien exists on the funds unpaid to the contractor on such Contract, and that reliance on notices sent to the Owner may result in loss of their rights against the Contractor and/or his Surety. The Owner is not responsible in any manner to a claimant for collection of unpaid bills, and accepts no responsibility because of any representation by any agent or employee.

11.5 WORKER'S COMPENSATION INSURANCE COVERAGE

11.5.1 Comply with the requirements of Rule 28, TAC §110.110, Reporting Requirements for Building or Construction Projects for Governmental Entities

11.5.2 DEFINITIONS:

.1 Certificate of coverage ("certificate"). A copy of a certificate of insurance, a certificate of authority to self-insure issued by the commission, or a coverage agreement (TWCC-81, TWCC-82, TWCC-83, or TWCC-84), showing statutory workers' compensation insurance coverage for the person's or entity's employees providing service as on a project, for the duration of the project.

.2 Duration of the project –includes the time from the beginning of the work on the project until the contractor's/person's work on the project has been completed and accepted by the governmental entity.

.3 Persons providing services on the project ("subcontractor" in §406.096)-includes all persons or entities performing all or part of the services the contractor has undertaken to perform on the project, regardless of whether that person has employees. This includes, without limitation, independent contractors, subcontractors, leasing companies, motor carriers, owner-operators, employees of any such entity which furnishes persons to provide services on the project. "Services" include without limitation, providing hauling, or delivering equipment or materials, or providing labor, transportation, or other service related to a project. "Services" does not include activities unrelated to the project, such as food/beverage vendors, office supply delivery, and delivery of portable toilets.

11.5.3 The Contractor shall provide coverage, based on proper reporting of classification codes and payroll amounts and filing of any coverage agreements, which meets the statutory requirements of Texas Labor Code, Section 401.011(44) for all employees of the Contractor providing services on the project, for the duration of the project.

11.5.4 The Contractor must provide a certificate of coverage to the governmental entity prior to being awarded the contract.

11.5.5 If the coverage period shown on the Contractor's current certificate of coverage ends during the duration of the project, the Contractor must, prior to the end of the coverage period, file a new certificate of coverage with the governmental entity showing that coverage has been extended.

11.5.6 The Contractor shall obtain from each person providing services on a project, and provide to the governmental entity:

.1 A certificate of coverage, prior to that person beginning work on the projects so the governmental entity will have on file certificates of coverage showing coverage for all persons providing services on the project, and

.2 No later than seven days after receipt by the Contractor, a new certificate of coverage showing extension of coverage, if the coverage period shown on the current certificate of coverage ends during the duration of the project.

11.5.7 The Contractor shall retain all required certificates of coverage for the duration of the project and for one year thereafter.

11.5.8 The Contractor shall notify the governmental entity in writing by certified mail or personal

delivery, within 10 days after the Contractor knew or should have known, of any change that materially affects the provision of coverage of any person providing services on the project.

11.5.9 The Contractor shall post on each project site a notice, in the text, form and manner prescribed by the Texas Workers Compensation, informing all persons providing services on the project that they are required to be covered, and stating how a person may verify coverage and report lack coverage.

11.5.10 The Contractor shall contractually require each person with whom it contracts to provide services on a project, to:

.1 Provide coverage, based on proper reporting of classification codes and payroll amounts and filing of any

coverage agreements, which meet the statutory requirements of Texas Labor code, Section 401.011(44) for

all of its employees providing services on the project, for the duration of the project.

.2 Provide the Contractor, prior to that person beginning work on the project, a certificate of coverage showing

that coverage is being provided for all employees of the person providing services on the project, for the

duration of the project.

.3 Provide the Contractor, prior to the end of the coverage period shown on the current certificate ends during

the duration of the project.

.4 Obtain from each other person with whom it contracts, and provides to the Contractor:

.1 A certificate of coverage, prior to the other person beginning work on the project, and

.2 A new certificate of coverage showing extension of coverage, prior to the end of the coverage period, if

the coverage period shown on the current certificate of coverage ends during the duration of the project.

.5 Retain all required certificates of coverage on file for the duration of the project and for one year thereafter.

.6 Notify the governmental entity in writing by certified mail or personal delivery, within 10 days after the

person knew or should have known, of any change that materially affects the provision of coverage of any

person providing services on the project, and

.7 Contractually require each person with whom it contracts, to perform as required by these subsections

(1)-(7), with the certificates of coverage to be provided to the person for whom they are providing services.

11.5.11 By signing this Contract or providing or causing to be provided a certificate of coverage, the Contractor is representing to the governmental entity that all employees of the Contractor who will provide services on the project will be covered by workers compensation coverage for the duration of the project, that the coverage will be based on proper reporting of classification codes and payroll amounts, and that all coverage agreements will be filed with the appropriate insurance carrier or, in the case of a self-insured, with the commission's Division of Self-Insurance Regulation. Providing false or misleading information may subject the Contractor to

administrative penalties, criminal penalties, civil penalties, or other actions.

11.5.12 The Contractor's failure to comply with any of these provisions is a breach of contract by the Contractor which entitles the governmental entity to declare the contract void if the Contractor does not remedy the breach within ten days after receipt of notice of breach from the governmental entity.

ARTICLE 12—UNCOVERING AND CORRECTION OF WORK

12.2.1 BEFORE SUBSTANTIAL COMPLETION

After Section 12.2.1 add the following Sections:

12.2.1.1 In the event of failure of a specified project, either during construction or the correction period, the Contractor shall take appropriate measures with the manufacturer of the product to assure correction or replacement of the defective products.

12.2.1.2 Refer to Owner's Closeout Procedures for further terms regarding warranties which will be required prior to final payment.

12.2.2 AFTER SUBSTANTIAL COMPLETION

After Section 12.2.2 add the following Section:

12.2.2.1 Approximately eleven months after substantial completion, the contractor shall accompany the Owner and Architect on an "end of the one year correction period" reinspection of the Project. Additional deficiencies observed or reported shall be corrected by the Contractor.

12.3 ACCEPTANCE OF NONCONFORMING WORK

Number the existing provision as Section 12.3.1, and add Section 12.3.2 as follows:

12.3.2 The Owner's use and/or occupancy of any or all of the Project site shall never be construed as an acceptance of Work not in conformance with Contract Documents. The Owner reserves the right to enforce provisions of the Contract unless the Owner's acceptance is provided to the Contractor in writing.

ARTICLE 13—MISCELLANEOUS PROVISIONS

Add Sections 13.7, 13.8 and 13.9 as follows:

13.7 EQUAL OPPORTUNITY

13.7.1 The contractor shall maintain policies of employment as follows:

.1 The Contractor and the Contractor's Subcontractors shall not discriminate against any employee or applicant for employment because of race, religion, color, sex or national origin. The Contractor shall take affirmative action to insure that applicants are employed, and that employees are treated during employment without regard to their race, religion, color, sex or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the policies of non-discrimination.

13.8 CRIMINAL BACKGROUND CHECKS

The Contractor/Subcontractor shall certify the Criminal Background Check, as stated in Owner's Board Policy CJA and the form included herein, as required by Texas Education Code Section 22.0834 and Texas Administrative Code Section 153.1101 and 153.1117, and shall comply with all requirements of such laws and policy.

13.9 REQUIRED CERTIFICATIONS

Contractor hereby certifies that it is not a company identified on the Texas Comptroller's list of com
contracts with, or provide supplies or services to, a foreign organization designated as a Foreign T
the U.S. Secretary of State under federal law. Contractor hereby certifies and verifies that neither C
affiliate, subsidiary, or parent company of Contractor, if any (the "Contractor Companies"), boycotts
agrees that Contractor and Contractor Companies will not boycott Israel during the term of this Agr
of this Agreement, the term "boycott" shall mean and include terminating business activities or othe
that is intended to penalize, inflict economic harm on, or limit commercial relations with Israel, or w
doing business in Israel or in an Israeli-controlled territory.

ARTICLE 14—TERMINATION OR SUSPENSION OF THE CONTRACT

Delete the text of Section 14.1.3 in its entirety and substitute the following:

14.1.3 If one of the reasons described in Section 14.4.1 or 14.4.2 exists, the Contractor may, upon seven day's written notice to the Ower and Architect, terminate the Contract and recover from the Owner payment for Work executed as of the date of the notice, plus costs of demobilization.

14.4 TERMINATION BY THE OWNER FOR CONVENIENCE

Delete the text of Section **14.4.3** in its entirety and substitute the following:

14.4.**3** In the case of such termination for the Owner's convenience, the Contractor shall be entitled to receive payment for Work executed up to date of receipt of the notice of termination, plus costs of demobilization.

ARTICLE 15—CLAIMS AND DISPUTES

15.1 CLAIMS

Delete the text of Section **15.1.1** in its entirety and substitute the following:

15.1.1 DEFINITION

A Claim is a demand or assertion by one of the parties seeking, as a matter of right, adjustment or interpretation of contract terms, payment of money, extension of time or other relief with respect to the terms of the Contract. The term "Claim" also includes other disputes and matters in question between the Owner, Architect, and Contractor arising out of or relating to the Contract. The responsibility to substantiate Claims shall rest with the party making the Claim. Nothing herein shall require the Owner to make or file a Claim in order to assess liquidated damages provided for in the Contract Documents.

15.1.2 TIME LIMITS ON CLAIMS

Delete the last sentence of Section 15.1.2 in its entirety.

15.1.3 NOTICE OF CLAIMS

Delete the second sentence of Section 15.1.3 in its entirety and substitute the following:

Claims by either party must be initiated within ninety (90) days after occurrence of the event giving rise to such Claim or within ninety (90) days after the claimant first recognizes the condition giving rise to the Claim, whichever is later.

15.1.6 CLAIMS FOR ADDITIONAL TIME

Delete the text of Section 15.1.6.2 in its entirety and substitute the following:

15.1.6.2 No extenstions of the Contract Time will be granted for inclement weather, except as provided in Section 8.3.1.

15.1.7 CLAIMS FOR CONSEQUENTIAL DAMAGES

Delete the text of Section 15.1.7 in its entirety.

15.2 INITIAL DECISION

Delete the text of Section 15.2.1 in its entirety and substitute the following:

15.2.1 Claims, excluding those alleging an error or omission by the Architect or those arising after expiration of the period for correction of the Work, shall be referred to the Initial Decision Maker for initial decision. The Architect will serve as the Initial Decision Maker, unless otherwise indicated in the Agreement. If the parties are unable to agree, any claim, dispute or matters arising out of the contract between the Architect, Owner and Contractor or any combination of those parties shall be submitted to a court of appropriate jurisdiction.

Delete the text of Section 15.2.5 in its entirety and substitute the following:

15.2.5 The Initial Decision Maker will render an initial decision approving or rejecting the Claim, or indicating that the initial Decision Maker is unable to resolve the Claim. This initial decision shall (1) be in writing; (2) state the reasons therefore; and (3) notify the parties and the Architect, if the Architect is not serving as the Initial Decision Maker, of any change in the Contract Sum or Contract Time or both. The initial decision shall be final and binding on the parties, but subject to mediation, if both parties so agree, and subject to legal or equitable proceedings in a court having jurisdiction thereof. It is understood and agreed that, in the event that any dispute, controversy, or conflict arises during the design and construction of the Project or following its completion, the parties hereto will cooperate in good faith, if possible, to resolve the issues without resorting to litigation.

Delete the text of Sections 15.2.6 and 15.2.6.1 in

their entirety. Add the following Section 15.2.9

15.2.9 The prevailing party in any judicial proceeding arising from the Contract Documents shall recover its reasonable and necessary attorneys' fees.

15.3 MEDIATION

15.3.1 Delete the text of 15.3.1 in its entirety.

Delete Section 15.3.2 in its entirety and replace with the following:

15.3.2 The parties may mutually agree to resolve their claims by mediation which, unless the parties mutually agree otherwise, shall be in accordance with the Construction Industry Mediation Rules of the American Arbitration Association currently in effect. Request for mediation shall be filed in writing with the other party to the Contract. Mediation shall proceed in advance of legal or equitable proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing unless stayed for a longer period of agreement of the parties or court order.

15.4 ARBITRATION

Delete the text of Sections **15.4.1** through **15.4.3** and **15.4.4.1** through **15.4.4.3** in their entirety.

END OF DOCUMENT

SECTION 00 73 43 - WAGE RATES

General

A. Requirements:

1. Pay not less than the minimum wage scale and benefits indicated on the "Prevailing Wage Rates" schedule provided herein.
2. Wages listed are minimum rates only.
3. No claims for additional compensation shall be considered by the Owner be-cause of payments of wage rates in excess of the applicable rate contained in this contract.

B. Penalty for Violations - Texas Government Code section 2258.023(b) (Vernon Pamphlet 1998) states as follows: "A contractor or subcontractor who violates this section shall pay to the Owner, $60 for each worker employed for each worker employed for each calendar day or part of the day that the worker is paid less than the wage rates stipulated in the contract."

C. Payroll Records - Pursuant to Texas Government Code section 2258.024 (Vernon Pamphlet 1998), the Contractor and all subcontractors shall keep records showing: (a) the name and occupation of each worker employed by the contractor or subcontractor in the construction of the public work; and (b) the actual per diem wages paid to each worker. These records shall be open at all reasonable hours to inspection by the officers and agents of the Owner.

PREVAILING WAGE SCALE NOTICE

D. Minimum Wage Rates - Pay prevailing basic wage listed, plus any applicable fringe benefits.

E. This determination of prevailing wages shall not be construed to prohibit the payment of more than the rates named. Under no condition shall any laborer, workman or mechanic employed on this job be paid less than the minimum wage scale.

F. In execution of this contract, the contractor shall comply with all ap-plicable state and federal laws, including but not limited to laws con-cerned with labor, equal employment opportunity, safety, and minimum wage.

G. Apprentice Pay-All Trades and Crafts - The minimum rate for apprentices shall be in accordance with the scale determined by an approved apprenticeship program or $1.00 per hour less than journeymen's rates, whichever is lower. An approved apprenticeship program is one approved by the U.S. Department of Labor, Bureau of Apprenticeship Training, and only apprentices enrolled in an approved program may be paid apprenticeship rates.

H. Base Per Diem Rate - Hours Worked/Day Times Base Hourly Rate

I. Multipliers for Overtime Rates:

1. Over 40 hours per week: Base hourly rate times 1.5

2. Holidays: Base hourly rate times 1.5

June 2022 to June 2025 Prevailing Wages Rates

Bricklayer/Mason	$	18.87

END OF SECTION

SECTION 01 10 00 - SUMMARY OF WORK AND SCHEDULING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Project description.
2. Work sequence.
3. Contractor's use of premises.
4. Owner occupancy.
5. Owner-furnished items.
6. Specification conventions.

1.2 PROJECT DESCRIPTION

A. The Project consists of construction and related sitework of the new **Elementary School #23** located in Rosesharon, Texas on Inspiration Way near Meridiana Parkway, as indicated on the Contract Documents prepared by Stantec Architecture and consultants, dated **AUGUST 18, 2025**.

B. The Work consists of Civil, Landscape, Structural, Architectural, Mechanical, Electrical, Plumbing, and Fire Protection requirements as indicated in the Project drawings and specifications.

1.3 REQUIRED COMPLETION DATES

A. The Work shall be conducted according to the following schedule to ensure that the Owner has sufficient opportunity to ready the facility for occupancy and permit an orderly transfer of personnel, furnishings, and equipment.

1. Start Date for On-Site Construction: Approximately **November 3, 2025**
*Subject to change based on successfully obtaining a Permit for Construction. The contractor shall not incur any cost for staffing, mobilizing, or construction until a notice to proceed is submitted by Alvin ISD.
2. Project Substantial Completion Date: On or before **March 1, 2027**

1.4 CONTRACTOR USE OF PREMISES

A. The Contractor's use of the designated portions of the premises is limited only by the Owner's right to perform construction operations with its own forces or to employ separate contractors on portions of the Project.

B. Limit use of the premises to construction activities in areas indicated; allow for Owner occupancy and use by the public for areas outside the limits of construction.
1. Confine operations to areas within the limits indicated. Portions of the premises beyond areas in which construction operations are indicated are not to be disturbed.
2. Keep driveways and entrances serving other portions of the premises clear and available to the Owner, the Owner's employees, and the public at all times. Do not use these areas for parking or storage of materials. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on site.

1.5 OWNER OCCUPANCY

A. Partial Owner Occupancy of Completed Areas: The Owner reserves the right to occupy and to place and install equipment in completed areas prior to Substantial Completion provided that such occupancy does not interfere with completion of the Work. Such placing of equipment and partial occupancy shall not constitute acceptance of the total Work.
   1. A Certificate of Substantial Completion will be executed for each specific portion of the Work to be occupied prior to Owner occupancy.
   2. Obtain a Certificate of Occupancy from local building officials prior to Owner occupancy.
   3. Prior to partial Owner occupancy, mechanical and electrical systems shall be fully operational. Required inspections and tests shall have been successfully completed. Upon occupancy the Owner will provide operation and maintenance of mechanical and electrical systems in occupied portions of the building.

1.6 OWNER-FURNISHED ITEMS

A. The Owner will furnish certain items, including **paper towel dispensers, paper towel disposals, toilet tissue dispensers, refrigerators, stoves, ice makers, and washer/dryers.** The Work includes providing support systems to receive Owner's equipment, and service and utility connections as required for the intended use of the item(s).
   1. The Owner will arrange and pay for delivery of Owner-furnished items in accordance with the Contractor's Construction Schedule and will inspect deliveries for damage.
   2. If Owner-furnished and delivered items are damaged by Owner, received defective, or are missing, the Owner will arrange for replacement. The Owner will also arrange for manufacturer's field services, and the delivery of manufacturer's warranties and bonds to the Contractor.
   3. The Contractor is responsible for coordinating the delivery dates of Owner-furnished items in the Contractor's Construction Schedule and for receiving, unloading and handling Owner- furnished items at the site. The Contractor is responsible for protecting Owner-furnished items from damage, including damage from exposure to the elements, and to repair or replace items damaged as a result of his operations.

1.7 SPECIFICATION CONVENTIONS

A. These specifications are written in imperative mood and streamlined form. This imperative language is directed to the Contractor, unless specifically noted otherwise. The words “shall be” are included by inference where a colon (:) is used within sentences or phrases.

PART 2 - PRODUCTS (Not applicable).

PART 3 - EXECUTION (Not applicable).

END OF SECTION

SECTION 01 21 00 – COST ALLOWANCES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Administrative and procedural requirements governing handling and processing Allowances.

B. Related Sections:
   1. Section 01 22 00 - Unit Prices: Procedures for submitting and handling Unit Prices.
   2. Section 01 26 00 - Modification Procedures: Procedures for submitting and handling Change Orders.
   3. Section 01 40 00 - Quality Requirements: Use of allowances for inspection and testing agencies.

1.2 SUBMITTALS

A. Submit proposals for purchase of products or systems included in allowances, in the form specified for Change Orders.

B. Submit invoices or delivery slips to indicate actual quantities of materials delivered to the site for use in fulfillment of each allowance.

1.3 CONTINGENCY ALLOWANCES

A. Use the Owner’s contingency allowance only as directed for the Owner's purposes, and only by Contingency Fund Change Orders which designate amounts to be charged to the allowance.
   1. The Contractor's related costs for products or equipment ordered by the Owner under the contingency allowance, including delivery, installation, taxes, insurance, equipment rental, and similar costs are not part of the Contract Sum.
   2. CONTRACTOR shall include mark-up for overhead and profit for all allowances in their Base Proposal. No additional mark up, including labor burden, will be allowed on individual items provided under the allowances. This includes labor and material supplied by the CONTRACTOR and any SUB-CONTRACTORS.
   3. For change orders outside of allowances noted in the document, the CONTRACTOR will be allowed to add mark up for overhead and profit as stipulated in the contract documents.
   4. At Project closeout, credit unused amounts remaining in the contingency allowance to Owner by Change Order or transfer the remaining amounts to other allowances as directed by the Architect.

1.4 UNUSED MATERIALS

A. Return unused materials to the manufacturer or supplier for credit to the Owner, after installation has been completed and accepted.

B. Where it is not economically feasible to return unused material for credit and when requested by the Architect, prepare unused material for the Owner's storage, and deliver to the Owner's storage space as directed. Otherwise, disposal of excess material is the Contractor's responsibility.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 INSPECTION

A. Inspect products covered by an allowance promptly upon delivery for damage or defects.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related construction activities.

3.3 SCHEDULE OF ALLOWANCES

A. **Allowance Number 1 – Owner's Contingency Allowance:**

Include the sum of **$700,000.00** for use upon the Owner's instruction.

B. **Allowance Number 2 – Unforeseen Subsurface Conditions Allowance:**

Include the sum of **$100,000.00** for the approved removal or mitigation of unforeseen subsurface materials or conditions during earthwork operations.

C. **Allowance Number 3 – Authority Review Comments Allowance**:

Include the sum of **$100,000.00** for revisions to proposed design and construction as may be required by the City or County in review of construction documents for permitting.

D. **Allowance Number 4 – BDA Emergency Responder Radio System**:

Include the sum of **$100,000.00** for the contractor to bid and coordinate the installation of the BDA system once the building walls are up and the building is fully dried in. The Owner will coordinate the testing when appropriate and approve the installer.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for unit prices.

1. A unit price is an amount proposed by Bidders and stated on the Bid Form as a price per unit of measurement for materials or services that will be added to or deducted from the Contract Sum by Change Order in the event the estimated quantities of Work required by the Contract Documents are increased or decreased.
2. Unit prices all necessary material, labor, overhead, profit and applicable taxes.
3. Refer to individual Specification Sections for construction activities requiring the establishment of unit prices. Methods of measurement and payment for unit prices are specified in those Sections.

B. Schedule: A "Unit Price Schedule" is included at the end of this Section. Specification Sections referenced in the Schedule contain requirements for materials and methods described under each unit price.

1. The Owner reserves the right to reject the Contractor's measurement of work-in-place that involves use of established unit prices, and to have this Work measured by an independent surveyor acceptable to the Contractor at the Owner's expense.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION

3.1 UNIT PRICE SCHEDULE

A. Unit Price No. 1 – Additional Structural Steel: If additional structural steel is required, bid unit pricing shall be used in adjusting the Contract Price.
1. Structural Steel, price per Ton.

B. Unit Price No. 2 – Site Fill Haul Off: If additional dirt is required to be hauled off the site, bid unit pricing shall be used in adjusting the Contract Price.
1. Dirt haul off, price per 1,000 cubic yards

C. Unit Price No. 3 – Additional Site Fill: If additional dirt is required to be imported and compacted on the site, bid unit pricing shall be used in adjusting the Contract Price.
1. Dirt imported, price per 1,000 cubic yards

D. Unit Prices No. 4 – Additional Duplex Outlet and Associated Wiring: If additional duplex outlets are required, the following unit price shall be used in adjusting the Contract Price.
1. Duplex outlet, price per Box, Device, and Wiring (100’ max distance from panel) – Metal Stud pre-wall enclosure.
2. Duplex outlet, price per Box, Device, and Wiring (100’ max distance from panel) – Metal Stud post-wall enclosure where the box needs to

be cut in (not surface mounted).
3. Duplex outlet, price per Box, Device, and Wiring (100' max distance from panel) – CMU pre-wall installation.
4. Duplex outlet, price per Box, Device, and Wiring (100' max distance from panel) – CMU post-wall installation where the box needs to be cut in (not surface mounted).

E. Unit Price No. 5 – Additional Data (2D) Outlet and Associated Trim Out, Connection and Wiring - If additional data outlets are required, the following unit pricing shall be used in adjusting the Contract Price.
1. Data outlet, price per Box, Device, and Wiring (300' max distance) – Metal Stud pre-wall enclosure.
2. Data outlet, price per Box, Device and Wiring (300' max distance) – Metal Stud post-wall enclosure where the box needs to be cut in (not surface mounted).
3. Data outlet, price per Box, Device and Wiring (300' max distance) – CMU pre-wall installation.
4. Data outlet, price per Box, Device and Wiring (300' max distance) – CMU post-wall installation where the box needs to be cut in (not surface mounted).

F. Unit Price No. 6 – Hardware: If additional hardware sets are required or recovered, the following unit prices shall be used in adjusting the Contract Price.
1. Additional Door Hardware: HW Set (typical classroom).
2. Additional Door Hardware: HW Set (typical office).

G. Unit Price No. 7 – Additional concrete placement: If additional concrete is required and approved by the Project Engineer, the following unit price shall be used in adjusting the Contract Price.
1. Grade Beams, price per cu. yd.
2. Slab on grade, price per cu. yd.
3. Concrete slab on metal deck, price per cu. yd.

H. Unit Price No. 8 – Additional Reinforcing Steel: If additional reinforcing steel is required, the following unit price shall be used in adjusting the Contract Price. Unit price shall include furnishing, fabricating and installing reinforcing.
1. Reinforcing steel, price per lb.

I. Unit Price No. 9 – Additional Metal Deck (non-acoustical deck): If additional metal deck is required, the following unit price shall be used in adjusting the Contract Price. Unit price shall include furnishing, fabricating and installing the metal deck.
1. Metal deck for floor slab, price per sq. ft.
2. Roof deck (non-acoustical), price per sq. ft.

END OF SECTION

SECTION 01 23 00 – ALTERNATES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for Alternates.

1. Definition: An Alternate is an amount proposed by Proposers and stated on the Proposal Form for certain construction activities defined in the Proposal Requirements that may be added to or deducted from Base Proposal amount if the Owner decides to accept a corresponding change in either the amount of construction to be completed, or in the products, materials, equipment, systems or installation methods described in Contract Documents.

2. Coordination: Coordinate related Work and modify or adjust adjacent Work as necessary to ensure that Work affected by each accepted Alternate is complete and fully integrated into the project.

3. Notification: Immediately following the award of the Contract, prepare and distribute to each party involved, notification of the status of each Alternate. Indicate whether Alternates have been accepted, rejected or deferred for consideration at a later date. Include a complete description of negotiated modifications to Alternates.

4. Schedule: A "Schedule of Alternates" is included at the end of this Section. Specification Sections referenced in the Schedule contain requirements for materials and methods necessary to achieve the Work described under each Alternate.

a. Include as part of each Alternate, miscellaneous devices, accessory objects and similar items incidental to or required for a complete installation whether or not mentioned as part of the Alternate.

b. The Owner reserves the right to accept any, none or all of the Alternates for a period of 30 days after receipt of proposals. Should the Owner-Contractor Agreement be executed prior to Owner acceptance of an Alternate, the Alternate will be accepted by Change Order at the original bid amount within 30 days after receipt of proposals.

PART 2 – PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF ALTERNATES

A. **ALTERNATE NO. 1 – FLOORING**

1. Base Bid: Corridor Flooring to be Solid Vinyl Tile as shown on the drawings
2. Alternate: Corridor Flooring to be Epoxy Terrazzo
3. Note: One Alternate price for both floors.

B. **ALTERNATE NO. 2 – Not Used**

C. **ALTERNATE NO. 3 – Lighting Package**

1. Base Bid: No Lighting Package
2. Alternate 3a: Putterman Scharck
3. Alternate 3b: CW Lighting
4. Alternate 3c: Lighting Associates
5. Note: Refer to the electrical lighting schedule

D. **ALTERNATE NO. 4 – Base Bid Adjustment**

1. Base Bid: No change to base bid price
2. Alternate: Any adjustment up or down to the base bid price.
3. Note: The intent is that the other Alternates are true bids up or down for the work detailed within them. This alternate is intended for any adjustments to the base bid up or down.

END OF SECTION

SECTION 01 25 13 - PRODUCT SUBSTITUTIONS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for handling requests for substitutions made both prior to receipt of bids and after as herein specified.

B. The Contractor's Construction Schedule and the Schedule of Submittals are included under Section "Submittal Requirements."

C. Standards: Refer to Section "Reference Standards and Definitions" for applicability of industry standards to products specified.

D. Procedural requirements governing the Contractor's selection of products and product options are included under Section "Product Requirements."

1.3 DEFINITIONS

A. Definitions used in this Article are not intended to change or modify the meaning of other terms used in the Contract Documents.

B. Substitutions: Requests for changes in products, materials, equipment, and methods of construction required by Contract Documents proposed by the Contractor 10 days prior to receipt of bids are considered requests for substitutions. The following are not considered substitutions:
   1. Substitutions requested by Bidders during the bidding period, and accepted prior to award of Contract, are considered as included in the Contract Documents.
   2. Revisions to Contract Documents requested by the Owner or Architect.
   3. Specified options of products and construction methods included in Contract Documents.
   4. The Contractor's determination of and compliance with governing regulations and orders issued by governing authorities.

1.4 SUBSTITUTIONS

A. Substitution Request Submittal: Requests for substitution will be considered if received at least 10 days prior to bid date. Requests received after commencement of the Work may be considered or rejected at the discretion of the Architect.
   1. Submit 3 copies of each request for substitution for consideration. Submit requests in the form attached in this section and in accordance with procedures required for Change Order proposals.
   2. Identify the product, or the fabrication or installation method to be replaced in each request. Include related Specification Section and Drawing numbers. Provide complete documentation showing compliance with the requirements for substitutions, and the following information, as appropriate:
   3. Product Data, including Drawings and descriptions of products, fabrication and installation procedures.
   4. Samples, where applicable or requested.

5. A detailed comparison of significant qualities of the proposed substitution with those of the Work specified. Significant qualities may include elements such as size, weight, durability, performance and visual effect.
6. Coordination information, including a list of changes or modifications required for other parts of the Work (or to related construction performed by the Owner and any separate contractors) that will become necessary to accommodate the proposed substitution.
7. A statement indicating the substitution's effect on the Anticipated Project Schedule and Contract Construction Schedule after award of contract compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall Contract Time.
8. Cost information, including a proposal of the net change, if any, from the specified product or assembly, or the contract sum.
9. **Construction Manager at Risk Projects**: No substitutions will be considered either during or after subcontractor bidding that are not accompanied by this fully executed form including approval signature of the CMAR.
10. **Competive Sealed Proposal Projects**: No substitutions will be considered AFTER selection of the successful General Contractor that are not accompanied by this fully executed form including approval signature of the Contractor.
11. Certification by the Vendor, Subcontractor Bidder, CMAR or General Contractor certifies that the substitution proposed is equal-to or better in every significant respect to that required by the Contract Documents, and that it will perform adequately in the application indicated. Certification includes the waiver of rights by any party to additional payment or time that may subsequently become necessary because of the failure of the substitution to perform adequately, or additional payment for any required modification of related materials or construction.

B. ENVIRONMENTAL AND HEALTH CERTIFICATIONS
1. Reference Section 01 33 00 “Submittals” for additional submittal requirements for certain materials indicated in the Materials and/or Finish Schedules regarding “Environmental and Health Certifications”. Such “E&H” certificates and labels are to be provided by the material manufactures and are to be included with the product submittals.

1.5 Architect's Action: If a decision on use of a proposed substitute cannot be made or obtained within the time allocated, use the specified product only. Acceptance of the proposed substitution will be in the form of an Addendum which lists all prior-approved products prior to award of Contract and a Change Order after the award of Contract.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

A. Conditions: The Bidder's or Contractor's substitution request will be received and considered by the Architect when all of the mandatory conditions are satisfied and one or more of the optional conditions are satisfied, as determined by the Architect; otherwise requests will be returned without action except to record noncompliance with these requirements.
1. Mandatory Conditions:
a. Submitted as required prior to bidding.
b. Extensive revisions to Contract Documents are not required.
c. Proposed changes are in keeping with the general intent of Contract Documents.
d. The request is timely, fully documented and properly submitted.

2. Optional Conditions:
a. The request is directly related to an "or equal" clause or similar language in

the Contract Documents.

b. The specified product or method of construction cannot be provided within the Contract Time. The request will not be considered if the product or method cannot be provided as a result of failure to pursue the Work promptly or coordinate activities properly.

c. The specified product or method of construction cannot receive necessary approval by a governing authority, and the requested substitution can be approved.

d. A substantial advantage is offered the Owner, in terms of cost, time, energy conservation or other considerations of merit, after deducting offsetting responsibilities the Owner may be required to bear. Additional responsibilities for the Owner may include additional compensation to the Architect for redesign and evaluation services, increased cost of other construction by the Owner or separate Contractors, and similar considerations.

e. The specified product or method of construction cannot be provided in a manner that is compatible with other materials, and where the Bidder or Contractor certifies that the substitution will overcome the incompatibility.

f. The specified product or method of construction cannot be coordinated with other materials, and where the Bidder or Contractor certifies that the proposed substitution can be coordinated.

g. The specified product or method of construction cannot provide a warranty required by the Contract Documents and where the Bidder or Contractor certifies that the proposed substitution provide the required warranty.

h. The Contractor's submittal and Architect's acceptance of Shop Drawings, Product Data or Samples that relate to construction activities not complying with the Contract Documents does not constitute an acceptable or valid request for substitution, nor does it constitute approval.

2.2 FAILURE OF TIMELY ORDER

A. The contractor is responsible for assuring the timely order of all materials specified. If a specified material or color of material cannot be delivered by the contract completion date, due to failure to order the material in a timely manner, the contractor shall be responsible for supplying an equal or better material. The Architect shall be the sole determinant of the approved substitute material.

B. The contractor shall also be charged an amount equal to 5% of the value of the specified material. This amount shall be credited to the owner through a change order to the contract.

C. The word "material", as used in this section, includes all items specified in the specifications or shown on the drawings.

PART 3 - EXECUTION (Not Applicable).

PRODUCT AND MATERIAL SUBSTITUTION REQUEST FORM

(This substitution request form must be used for **Pre-Proposal** Substitution Requests or **Post - Proposal** Substitution Requests as specified in Divisions 1 Section -"Product Substitutions".)

Project:_____

From (company): _____ Date:_____

Address:_____Telephone:_____

[ ] Bidding G.C. [ ] CM @ Risk [ ] Bidding subcontractor [ ] Bidding vendor or manufacturer

Substitution approval is an acceptance of only the manufacturer and product for general conformance with the design concept reflected in the Contract Documents. The A/E has made no attempt to verify specific performance data, or to check the details of the proposed substitution as to special features, capacities, physical dimensions or code and/or regulatory compliance, all of which remain the responsibility of the person/entity submitting the proposed substitution.

Specified Product:_____

Specification Title:_____ Section No._____

Page No. _____ Paragraph No._____ or previous Addendum No. _____

Proposed
Substitution:_____

Manufacturer:_____ Phone:_____

Model/Series Number:_____ Trade Name _____

Area Distributor_____Contact _____ Phone_____

History: [ ] New product [ ] 2-5 years old [ ] More than 10 years old

Differences between proposed substitution and specified product: _____

_____

_____

Similar Installations:
(attach any additional related project listings)

Proposed substitution affects other parts of work: [ ] No [ ] Yes

If Yes, explain_____

Estimated Cost Savings to Owner (if substitution is proposed by G.C.) [ ] negligible [ ] $ _____

Time Savings for Project (if substitution is proposed by G.C.) [ ] none [ ] saved days [ ] extra days

Supporting Data Attached: [ ] Drawings [ ] Product Data [ ] Samples [ ] Tests [ ] Reports [ ] Other:
Note: Comparative data sufficient for Owner / Architect / General Contractor evaluation is required.

The Undersigned certifies:

- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- For items where color/pattern is named in the documents, proposed color/pattern of the substituted item will be the equivalent, with the final determination made by the Architect.
- Equal or better warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule except as may be clearly identified above.
- Claims for additional costs for this substitution (other than costs clearly indicated above), are the responsibility of the entity making this request.
- Substitutions affecting minor dimensions and clearances are identified herein, and it is the responsibility of the entity requesting the substitution to coordinate such with the Contractor. Approval of such changes is the sole responsibility of the Architect.

Signature of Person Submitting: _____ Title_____

Printed Name: _____ email _____

A/E's RESPONSE (**Accepted substitutions will be included in written addendum issued prior to bidding):**

[ ] Substitution rejected for non-compliance……Use specified materials.
[ ] Substitution rejected for lack of data……Use specified materials.
[ ] Substitution Request received too late……Use specified materials.

[ ] Substitution conditionally approved – Provide submittals after bidding per Division 1 Section "Submittals".
[ ] Plus noted exceptions: _____

Copied to: [ ] Owner [ ] General Contractor [ ] _____ [ ] _____

For any Product Substitution Request submitted at any time for a Construction Manager at Risk project, or after bidding is complete for a Competitive Sealed Proposal project, this form must be approved for submittal by the CMAR or successful General Contractor as identified herein:

SECTION 01 26 00 – CONTRACT MODIFICATION PROCEDURES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division 1 Specification sections, apply to this section.

1.2 SUMMARY

A. This section specifies administrative and procedural requirements for handling and processing Contract modifications.

B. Related Sections: The following sections contain requirements that relate to this section:
   1. Division 1 Section "Allowances" for procedural requirements governing the handling and processing of allowances.
   2. Division 1 Section "Submittals" for requirements for the Contractor's Construction Schedule.
   3. Division 1 Section "Application for Payment" for administrative procedures governing applications for payment.
   4. Division 1 Section "Product Substitutions" for administrative procedures for handling requests for substitutions made after award of the Contract.

1.3 MINOR CHANGES IN THE WORK

A. Instructions authorizing minor changes in the Work, not involving an adjustment to the Contract Sum or Contract Time, will be issued by the Architect as part of a request for information on a Request for Interpretation Form as included in the Division-1 Section "Submittals".

B. Supplemental instructions authorizing minor changes in the Work, not involving an adjustment to the Contract Sum or Contract Time, will be issued by the Architect on AIA form G710, Architect's Supplemental Instructions.

1.4 CHANGE ORDER PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: Proposed changes in the Work that will require adjustment to the Contract Sum or Contract Time will be issued by the Architect, with a detailed description of the proposed change and supplemental or revised Drawings and Specifications, if necessary.
   1. Proposal requests issued by the Architect are for information only. Do not consider them an instruction either to stop work in progress, or to execute the proposed change.
   2. Unless otherwise indicated in the proposal request, within 20 days of receipt of the proposal request, submit to the Architect for the Owner's review an estimate of cost necessary to execute the proposed change.
   3. Include a list of quantities of products to be purchased and unit costs, along with the total amount of purchases to be made. Furnish survey data to substantiate quantities and costs on Providers' letterheads, including, but not limited to, Subcontractors' letterheads.
   4. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
   5. Include a statement indicating the effect the proposed change in the Work will have on the Contract Time.

B. Contractor-Initiated Change Order Proposal Requests: When latent or other unforeseen conditions require modifications to the Contract, the Contractor may propose changes by submitting a request for a change to the Architect.

1. Include a statement outlining the reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and Contract Time.
2. Include a list of quantities of products to be purchased and unit costs along with the total amount of purchases to be made. Furnish survey data to substantiate quantities and costs on Providers' letterheads, including, but not limited to, Subcontractors' letterheads.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Comply with requirements in Section "Product Substitutions" if the proposed change in the Work requires the substitution of one product or system for a product or system specified.

C. Proposal Request Form: Use AIA Document G 709 for Change Order Proposal Requests.

1.5 ALLOWANCES

A. Allowance Adjustment: Base each Change Order Proposal Request for an allowance cost adjustment solely on the difference between the actual purchase amount and the allowance, multiplied by the final measurement of work-in-place, with reasonable allowances, where applicable, for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.
   1. Include installation costs in the purchase amount only where indicated as part of the allowance.
   2. Prepare explanations and documentation to substantiate the margins claimed.
   3. Submit substantiation of a change in scope of work claimed in the Change Orders related to unit-cost allowances.
   4. The Owner reserves the right to establish the actual quantity of work-in-place by independent quantity survey, measure, or count.

1.6 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive: When the Owner and Contractor are not in total agreement on the terms of a Change Order Proposal Request, the Architect may issue a Construction Change Directive on AIA Form G714, instructing the Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
   1. The Construction Change Directive will contain a complete description of the change in the Work and designate the method to be followed to determine change in the Contract Sum or Contract Time.

B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
   1. After completion of the change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

1.7 CHANGE ORDER PROCEDURES

A. Upon the Owner's approval of a Change Order Proposal Request, the Architect will issue a Change Order for signatures of the Owner and Contractor on AIA Form G701, as provided in the Conditions of the Contract.

PART 2 – PRODUCTS: Not Used
PART 3 – EXECUTION: Not Used

END OF SECTION

SECTION 01 29 00 - APPLICATIONS FOR PAYMENT

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements governing the Contractor's Applications for Payment.

B. The Contractor's Construction Schedule and Submittal Schedule are included in Section "Submittals".

1.3 SCHEDULE OF VALUES

A. Coordinate preparation of the Schedule of Values with preparation of the Contractor's Construction Schedule.

1. Correlate line items in the Schedule of Values with other required administrative schedules and forms, including:
   a. Contractor's construction schedule.
   b. Application for Payment form.
   c. List of subcontractors.
   d. Schedule of allowances.
   e. Schedule of alternates.
   f. List of principal suppliers and fabricators.
   g. Schedule of submittals.
   h. Include separate line items for project closeout and record documents

2. Submit the Schedule of Values to the Architect at the earliest feasible date, but in no case later than 10 days before the date scheduled for submittal of the initial Application for Payment.

3. Sub-Schedules: Where the Work is separated into phases that require separately phased payments provide sub-schedules showing values of each schedule correlated with each phase of payment.

4. Where the Contractor anticipates invoicing for materials prior-to or separately-from installation, such line items shall be separated into labor and material costs.

5. Identification: Include the following Project identification on the Schedule of Values:
   a. Project name and location.
   b. Name of the Architect.
   c. Project number.
   d. Contractor's name and address.
   e. Date of submittal.

6. Provide a breakdown of the Contract Sum in sufficient detail to facilitate continued evaluation of Applications for Payment and progress reports. Break principal subcontract amounts down into several line items and use no less detail than the level of line-item detail in the Project Manual Table of Contents.

7. Round amounts off to the nearest whole dollar; the total shall equal the Contract Sum.

8. For each part of the Work where an Application for Payment may include materials or equipment, purchased or fabricated and stored, but not yet installed, provide separate line items on the Schedule of Values for initial cost of the materials, for each subsequent stage of completion, and for total installed value of that part of the Work.

9. Margins of Cost: Show line items for indirect costs, and margins on actual costs and list individually in Applications for Payment. Each item in the Schedule of Values and Applications for Payment shall be complete including its total cost.

10. Overhead and Profit: Show separate line item value for overhead and profit.
    a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place shall be shown as separate line items in the Schedule of Values.

11. Schedule Updating: List Change Orders as a separate line item when Change Orders or Construction Change Directives result in a change in the Contract Sum.

1.4 APPLICATIONS FOR PAYMENT

A. Each Application for Payment shall be consistent with previous applications and payments as certified by the Architect and paid for by the Owner.

   1. The initial Application for Payment, the Application for Payment at time of Substantial Completion, and the final Application for Payment involve additional requirements.

B. Payment Application Times: Each progress payment date is as indicated in the Agreement. The period of construction Work covered by each Application or Payment is the period indicated in the Agreement. Modification to payment application times shall occur if agreed to by all concerned parties at the pre-construction meeting.

C. Payment Application Forms: Use AIA Document G 702 and Continuation Sheet G 703, or a similar form, as the form for Application for Payment.

D. Application Preparation: Complete every entry on the form, including notarization and execution by person authorized to sign legal documents on behalf of the Contractor. Incomplete applications will be returned without action.
   1. Entries shall match data on the Schedule of Values and Contractor's Construction Schedule. Use updated schedules if revisions have been made.
   2. Include amounts of Change Orders and Construction Change Directives issued prior to the last day of the construction period covered by the application.

E. Transmittal: Submit 3 executed copies of each Application for Payment to the Architect by means ensuring receipt within 24 hours.
   1. Transmit each copy with a transmittal form listing attachments, and recording appropriate information related to the application in a manner acceptable to the Architect.

F. Waivers of Mechanics Lien: Owner reserves the right to require Wavers of Mechanics Lien with each Application for Payment. Submit waivers of liens from subcontractors or sub-subcontractors and suppliers for the period covered by the previous application.
   1. Submit partial waivers on each item for the amount requested, prior to deduction for retainage, on each item.

2. When an application shows completion of an item, submit final or full waivers.
3. The Owner reserves the right to designate which entities involved in the Work must submit waivers.
    a. Waiver Delays: Submit each Application for Payment with the Contractor's waiver of mechanics lien for the period of construction covered by the application.
        1.) Submit final Application for Payment with or preceded by final waivers from every entity involved with performance of Work covered by the application who could lawfully be entitled to a lien.
    b. Waiver Forms: Submit waivers of lien on forms, and executed in a manner, acceptable to Owner.

G. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of the first Application for Payment include the following:
    1. List of subcontractors.
    2. List of principal suppliers and fabricators.
    3. Schedule of Values.
    4. Contractor's Construction Schedule (preliminary if not final).

H. Application for Payment at Substantial Completion: Following issuance of the Certificate of Substantial Completion, submit an Application for Payment; this application shall reflect any Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

I. Final Payment Application: Administrative actions and submittals which must precede or coincide with submittal of the final payment Application for Payment include the following:
    1. Completion of Project closeout requirements.
    2. Completion of items specified for completion after Substantial Completion.
    3. Assurance that unsettled claims will be settled.
    4. Assurance that Work not complete and accepted will be completed without undue delay.
    5. Transmittal of required Project construction records to Owner.
    6. Removal of temporary facilities and services.
    7. Removal of surplus materials, rubbish and similar elements.
    8. Change of door locks to Owner's access.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION (Not Applicable).

END OF SECTION

SECTION 01 30 00 - ADMINISTRATIVE REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and supervisory requirements necessary for Project coordination including, but not necessarily limited to:
   1. Coordination.
   2. Administrative and supervisory personnel.
   3. General installation provisions.
   4. Cleaning and protection.

B. Field engineering is included in Section "Field Engineering".

C. Progress meetings: coordination meetings and pre-installation conferences are included in Section "Project Meetings".

D. Requirements for the Contractor's Construction Schedule are included in Section "Submittal Procedures".

1.3 COORDINATION

A. Coordination: Coordinate construction activities included under various Sections of these Specifications to assure efficient and orderly installation of each part of the Work. Coordinate construction operations included under different Sections of the Specifications that are dependent upon each other for proper installation, connection, and operation.
   1. Where installation of one part of the Work is dependent on installation of other components, either before or after its own installation, schedule construction activities in the sequence required to obtain the best results.
   2. Where availability of space is limited, coordinate installation of different components to assure maximum accessibility for required maintenance, service and repair.
   3. Make adequate provisions to accommodate items scheduled for later installation.
      a. Where necessary, prepare memoranda for distribution to each party involved outlining special procedures required for coordination. Include such items as required notices, reports, and attendance at meetings.
   4. Prepare similar memoranda for the Owner and separate Contractors where coordination of their Work is required.

B. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
   1. Preparation of schedules.
   2. Installation and removal of temporary facilities.
   3. Delivery and processing of submittals.
   4. Progress meetings.
   5. Project Close-out activities.

C. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials.

1. Salvage materials and equipment involved in performance of, but not actually incorporated in, the Work. Refer to other sections for disposition of salvaged materials that are designated as Owner's property.

1.4 SUBMITTALS

A. Coordination Drawings: Prepare and submit coordination Drawings where close and careful coordination is required for installation of products and materials fabricated off-site by separate entities, and where limited space availability necessitates maximum utilization of space for efficient installation of different components.
   1. Show the interrelationship of components shown on separate Shop Drawings.
   2. Indicate required installation sequences.
   3. Comply with requirements contained in Section "Submittals."
   4. Refer to Division-15 Section "Basic Mechanical Requirements," and Division-16 Section "Basic Electrical Requirements" for specific coordination drawing requirements for mechanical and electrical installations.

B. Staff Names: Within 15 days of Notice to Proceed, submit a list of the Contractor's principal staff assignments, including the Superintendent and other personnel in attendance at the site; identify individuals, their duties and responsibilities; list their addresses and telephone numbers.
   1. Post copies of the list in the Project meeting room, the temporary field office, and each temporary telephone.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION PROVISIONS

A. Inspection of Conditions: Require the Installer of each major component to inspect both the substrate and conditions under which Work is to be performed. Do not proceed until unsatisfactory conditions have been corrected in an acceptable manner.

B. Manufacturer's Instructions: Comply with manufacturer's installation instructions and recommendations, to the extent that those instructions and recommendations are more explicit or stringent than requirements contained in Contract Documents.

C. Inspect materials or equipment immediately upon delivery and again prior to installation. Reject damaged and defective items.

D. Provide attachment and connection devices and methods necessary for securing Work. Secure Work true to line and level. Allow for expansion and building movement.

E. Visual Effects: Provide uniform joint widths in exposed Work. Arrange joints in exposed Work to obtain the best visual effect. Refer questionable choices to the Architect for final decision.

F. Recheck measurements and dimensions, before starting each installation.

G. Install each component during weather conditions and Project status that will ensure the best possible results. Isolate each part of the completed construction from incompatible material as necessary to prevent deterioration.

H. Coordinate temporary enclosures with required inspections and tests, to minimize the

necessity of uncovering completed construction for that purpose.

I. Mounting Heights: Where mounting heights are not indicated, install individual components at standard mounting heights recognized within the industry for the particular application indicated. Refer questionable mounting height decisions to the Architect for final decision.

3.2 CLEANING AND PROTECTION

A. During handling and installation, clean and protect construction in progress and adjoining materials in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

B. Clean and maintain completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

C. Limiting Exposures: Supervise construction activities to ensure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period. Where applicable, such exposures include, but are not limited to, the following:
1. Excessive static or dynamic loading.
2. Excessive internal or external pressures.
3. Excessively high or low temperatures.
4. Thermal shock.
5. Excessively high or low humidity.
6. Air contamination or pollution.
7. Water or ice.
8. Solvents.
9. Chemicals.
10. Light.
11. Radiation.
12. Puncture.
13. Abrasion.
14. Heavy traffic.
15. Soiling, staining and corrosion.
16. Bacteria.
17. Rodent and insect infestation.
18. Combustion.
19. Electrical current.
20. High speed operation,
21. Improper lubrication,
22. Unusual wear or other misuse.
23. Contact between incompatible materials.
24. Destructive testing.
25. Misalignment.
26. Excessive weathering.
27. Unprotected storage.
28. Improper shipping or handling.
29. Theft.
30. Vandalism.

END OF SECTION

SECTION 01 30 10 - MECHANICAL AND ELECTRICAL COORDINATION

PART 1 - GENERAL

1.1 REQUIREMENTS

A. Provide necessary work and services required for the complete installation of heating, ventilating, air conditioning, plumbing, and electrical systems in the buildings as shown on the Drawings. For convenience, Drawings showing primarily HVAC have been numbered with an “M”, Drawings showing primarily electrical have been numbered with an “E” and Drawings showing; primarily plumbing have been numbered with a “P”.

B. Make installations in a manner that shall comply with applicable codes and laws. Where the requirements of Contract Documents exceed code requirements, comply with the Contract Documents.

C. Perform electrical Work in accordance with the latest edition of the national Electrical code as minimum standards of quality and safety.

D. Comply with: (ADA) Americans Disability Act and (TAS) Texas Accessibility Standards requirements.

1.2 RELATED REQUIREMENTS

A. Section 01 73 29 – Cutting and Patching.

B. Section 01 31 19 – Project Meetings.

C. Section 01 30 00 – Administrative Requirements.

D. Section 01 33 00 – Submittal Requirements.

E. Section 01 60 00 – Product Requirements: Product options and substitutions.

F. Section 01 70 00 – Execution and Closeout Requirements.

1.3 REQUIREMENTS FOR EQUIPMENT

A. Provide equipment with necessary parts and accessories even though the parts and accessories are not specifically mentioned herein.

B. Provide a factory applied finish on all exterior surfaces. Tough up or refinish items which have the finish marred, before final acceptance.

C. Rotating parts shall be in static and dynamic balance.

D. Electrical materials shall bear the stamp of approval of the Underwriter’s Laboratory.

E. Noise: Eliminate any abnormal noises, which are not an inherent part of the systems as designed. Abnormal buzzing and rattling of equipment, piping, ducts, and air devices and squeaks in rotating equipment components will not be acceptable.

1.4 PROTECTION OF EQUIPMENT

A. Do not deliver equipment to jobsite until progress of construction has reached the stage

where equipment is actually needed, or until equipment can be stored inside building to protect equipment from the weather. Equipment allowed to stand in weather will be rejected, and new equipment of a like kind shall be used.

B. Adequately protect equipment from damage after delivery to job site. Cover with heavy drop cloths as required to protect from plaster, dirt, paint, water, adverse weather conditions, and physical damage.

C. Equipment which has been damaged by construction activities will be rejected, and new equipment of a like kind shall be used.

D. At time of Substantial Completion, equipment shall be clean.

E. Insulation material that becomes wet shall be rejected and replaced at no additional cost to Owner.

1.5 OPERATING MANUALS, SERVICE DATA, AND WARRANTIES

A. Upon completion of the project, provide service manuals for each type unit of equipment provided in the project as described in Section 01 70 00 – Execution and Closeout Requirements.

B. Warranties: In addition to the one year warranty specified in the Conditions of the Contract, assume all responsibility for special guarantees which may be required in this specification concerning installation, operation or performance of equipment, materials, and systems provided by a distributor, manufacturer or subcontractor.

1.6 SUBMITTALS

A. Conform to the requirements of Section 01 33 00 – Submittal Procedures, Supplementary Conditions and individual specification sections.

B. Equipment and material submittals shall show sufficient data to indicate complete compliance with Contract Documents as follows:
1. Proper sizes and capabilities.
2. Ability to fit in the available space in a manner that will allow proper service.
3. Construction methods, materials, and finishes.
4. List of accessories.

C. Product data shall include the contract item designation, building, and proposed model number.

D. If proposed air devices are different than models specified, indicate the specified model and beside it the proposed model for each type of device. Do not list quantities.

E. For any item to be installed in or on a finished surface (such as a tee bar, acoustical ceiling, plaster wall) certify that applicable Contract Documents have been checked and that the item submitted is compatible with the surface finish on which it is to be installed.

F. Show Drawings: Sheet metal, piping, mechanical, and electrical fabrication Shop Drawings shall show equipment, ductwork, and piping, including piping in plumbing chases, sized and drawn in exact location to be installed. Produce Drawings in 1/4 inch scale with all ductwork and piping sized accordingly. Ductwork and piping larger than 3 inches shall be shown with double lines.

G. Coordination Drawings: Coordination Drawings are Drawings which indicate relationships between the various systems and other components of the building such as beams, columns, ceilings, and walls. They shall be drawn to 1/4 inch scale and shall include plans, elevations, sections, and other details as required to clearly define the relationships of the various components. Indicate ducts, conduits, sprinkler systems, light fixtures, piping, and miscellaneous equipment on one drawing for each floor or level. Refer to Mechanical and Electrical Specifications for additional requirements. Submit these within two months of award of contract.

H. Interference Drawings:
1. Interference Drawings are supplementary to Coordination Drawings and indicate conflict between the various systems and other components of the building such as beams, columns, and walls. They shall be drawn to 1/4 inch scale and shall include plans, elevations, sections, and other details as required to clearly define the interference and to indicate the Contractor's proposed solution.

2. Submit Drawings for approval whenever job measurements and an analysis of the Drawings and specifications by the Contractor indicate that the various systems cannot be installed without significant deviation from the intent of the Contract. When such an interference is encountered, Work shall cease in the general areas of the conflict until a solution to the question has been approved by the Architect.

I. All Submittals shall be bound into book form with a table of contents listing all items in that specific submittal. Loose catalog sheets or drawings will not be acceptable. A separate brochure will be required for each type of equipment; e.g., lighting fixtures, switchgear, lighting panels, clock system, mechanical equipment, plumbing items, and ductwork accessories, each in a separate brochure. Miscellaneous apparatuses such as transformers contactors, time switches, and safety switches may be contained in one brochure.

J. Auxiliary system submittals shall contain sufficient information to show conformance with the specifications and shall include a description of the operation of each system to aid the consultant in the evaluation of each submittal.

PART 2 – PRODUCTS: Not Used

PART 3 - EXECUTION

3.1 MANUFACTURER'S DIRECTIONS AND SUPERVISION

A. Follow manufacturer's directions for installation, testing, and operation of all apparatuses and equipment provided.

B. Where supervision by a manufacturer is required in the specification, pay all costs and follow all instructions and recommendations of the manufacturer, who shall supervise the installation, connection, startup adjustment, instruction of the Owner, and final tests of equipment and systems. Where two or more manufacturer's equipment is interrelated, coordinate the Work and supervision.

C. Provide a letter from the manufacturers whose supervision is required stating that they have supervised the installation and their equipment or system is operating satisfactorily in detail and in every respect and that the Owner's representative has been instructed in the operation and maintenance.

3.2 COORDINATION

A. Coordinate the mechanical and electrical Work with that of other trades in order that the various components of the systems shall be installed at the proper time, shall fit the available space, and shall allow proper service access to those requiring maintenance, including equipment specified in other Divisions.

B. Remove and relocate items which are installed without regard to proper access as directed by the Consultant, at no additional cost to the Owner.

C. Provide materials with trim to match and fit properly with the types of adjacent ceiling, wall, and floor finishes actually installed. Model numbers in specifications or scheduled on Drawings are not intended to designate the required trim.

D. Provide mechanical equipment with electrical characteristics compatible with that shown on Electrical Drawings and described in electrical Division of the specifications.

E. Prior to the fabrication of ductwork or the installation of devices in the ceilings, review the Drawings to ascertain that the locations of devices in the ceilings create a pattern which is compatible with the reflected ceiling plan and the spacings of the various ceiling mounted devices.

3.3 DRAWINGS

A. The Contract Drawings are schematic in nature, but indicate how the various components are integrated with other parts of the building. Determine exact locations by job measurement, by checking the requirements of other trades, and by review of Contract Documents.

B. The Drawings indicate general routing of the various parts of the systems, but do not indicate all sizes, fittings, offsets, and runouts which are required. Provide correct sizes, fittings, offsets, and runouts required to fit the system into spaces allocated to them. Locate all light fixtures, vents, and supply grilles to conform to the ceiling grid system. Examine the Drawings to become familiar with this requirement.

C. In certain instances, the Architect may require relocation of outlets and switches. Where relocation is within 3 feet of location shown on Drawings, and when Contractor is informed of necessary relocation before Work is begun on this portion of the job, no extra compensation will be allowed.

END OF SECTION

SECTION 01 31 19 - PROJECT MEETINGS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for project meetings including but not limited to:
   1. Pre-Construction Conference.
   2. Pre-Installation Conferences.
   3. Coordination Meetings.
   4. Progress Meetings.

B. Construction schedules are specified in another Division-1 Section.

1.3 PRE-CONSTRUCTION CONFERENCE

A. Schedule a pre-construction conference and organizational meeting at the Project site or other convenient location no later than 15 days after execution of the Agreement and prior to commencement of construction activities. Conduct the meeting to review responsibilities and personnel assignments.

B. Attendees: The Owner, Architect and their consultants, the Contractor and its superintendent, major subcontractors, manufacturers, suppliers and other concerned parties shall each be represented at the conference by persons familiar with and authorized to conclude matters relating to the Work.

C. Agenda: Discuss items of significance that could affect progress including such topics as:
   1. Tentative construction schedule.
   2. Critical Work sequencing.
   3. Designation of responsible personnel.
   4. Procedures for processing field decisions and Change Orders.
   5. Procedures for processing Applications for Payment.
   6. Distribution of Contract Documents.
   7. Submittal of Shop Drawings, Product Data and Samples.
   8. Preparation of record documents.
   9. Use of the premises.
   10. Office, Work and storage areas.
   11. Equipment deliveries and priorities.
   12. Safety procedures.
   13. First aid.
   14. Security.
   15. Housekeeping.
   16. Working hours.

1.4 PRE-INSTALLATION CONFERENCES

A. Conduct a pre-installation conference at the site before each construction activity that requires coordination with other construction. The Installer and representatives of

manufacturers and fabricators involved in or affected by the installation, and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise the Architect of scheduled meeting dates.

B. Review the progress of other construction activities and preparations for the particular activity under consideration at each pre-installation conference, including requirements for:
   1. Contract Documents.
   2. Options.
   3. Related Change Orders.
   4. Purchases
   5. Deliveries.
   6. Shop Drawings, Product Data and quality control Samples.
   7. Possible conflicts.
   8. Compatibility problems.
   9. Time schedules.
   10. Weather limitations.
   11. Manufacturer's recommendations.
   12. Compatibility of materials.
   13. Acceptability of substrates.
   14. Temporary facilities.
   15. Space and access limitations.
   16. Governing regulations.
   17. Safety.
   18. Inspection and testing requirements.
   19. Required performance results.
   20. Recording requirements.
   21. Protection.

C. Record significant discussions and agreements and disagreements of each conference, along with the approved schedule. Distribute the record of the meeting to everyone concerned, promptly, including the Owner and Architect.

D. Do not proceed if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of Work and reconvene the conference at the earliest feasible date.\

1.5 COORDINATION MEETINGS

A. Conduct Project coordination meetings at regularly scheduled times convenient for all parties involved. Project coordination meetings are in addition to specific meetings held for other purposes, such as regular progress meetings and special pre-installation meetings.

B. Request representation at each meeting by every party currently involved in coordination or planning for the construction activities involved.

C. Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

E. The pre-install conferences may include, but are not limited to:
   1. Site Utilities
      a. Attendees include Architect, Owner, Civil Engineer
   2. Concrete
      a. Attendees include Architect, Owner, Civil Engineer, Material Testing

3. Plumbing & Electrical
   a. Attendees include Architect, Owner, MEP Engineer, AISD MEP
4. Athletic Fields and Field Irrigation
   a. Attendees include Architect, Owner, Athletic Consultant
5. Playground
   a. Attendees include Architect, Owner
6. Fencing
   a. Attendees include Architect, Owner
7. Duct/Mech
   a. Attendees include Architect, Owner, MEP Engineer, AISD MEP
8. Roofing
   a. Attendees include Architect, Owner, Envelope Consultant
9. Wall Systems (Masonry, Waterproofing, Glazing, Insulation)
   a. Attendees include Architect, Owner, Envelope Consultant, Material Testing Lab
10. Drywall
    a. Attendees include Architect, Owner
11. Plaster
    a. Attendees include Architect, Owner
12. Communications –Phone, Security Alarm
    a. Attendees include Architect, Owner, MEP Engineer, AISD Technology
13. Paint
    a. Attendees include Architect, Owner
14. Landscaping and Irrigation
    a. Attendees include Architect, Owner, Landscape Architect, AISD Landscaping
15. HVAC Controls
    a. Attendees include Architect, Owner, MEP Engineer, Testing and Balancing Consultant, AISD Energy Manager
16. Carpet/VCT/Acoustic Ceilings/Terrazo/ All Flooring
    a. Attendees include Architect, Owner
17. MEP Exposed Ceilings
    a. Attendees include Architect, Owner, MEP Engineer
18. Sound System
    a. Attendees include Architect, Owner, MEP Engineer, AISD Technology
19. Wall Coverings
    a. Attendees include Architect, Owner
20. Kitchen Equipment
    a. Attendees include Architect, Owner, MEP Engineer, Food Service Consultant, Manufacturer’s Rep
21. Tiling
    a. Attendees include Architect, Owner
22. Fire Alarm
    a. Attendees include Architect, Owner, MEP Engineer, AISD Compliance Coordinator
23. Access Control
    a. Attendees include Architect, Owner, MEP Engineer, AISD Compliance Coordinator
24. Hardware
    a. Attendees include Architect, Owner, Hardware Consultant

25. Casework
    a. Attendees include Architect, Owner
26. Cabling (All) Low Voltage, Network
    a. Attendees include Architect, Owner, MEP Engineer, AISD Technology

1.6 PROGRESS MEETINGS

A. Conduct progress meetings at the Project sites once a week, or biweekly as the stage of work dictates. Notify the Owner and Architect of scheduled meeting dates. Coordinate dates of meetings with preparation of the payment request.

B. Attendees: In addition to representatives of the Owner and Architect, each subcontractor, supplier or other entity concerned with current progress or involved in planning, coordination or performance of future activities shall be represented at these meetings by persons familiar with the Project and authorized to conclude matters relating to progress.

C. Agenda: Review and correct or approve minutes of the previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to the current status of the Project.

D. Contractor's Construction Schedule: Review progress since the last meeting. Determine where each activity is in relation to the Contractor's Construction Schedule, whether on time or ahead or behind schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.
    1. Review the present and future needs of each entity present, including such items as:
        a. Interface requirements.
        b. Time.
        c. Sequences.
        d. Deliveries.
        e. Off-site fabrication problems.
        f. Access.
        g. Site utilization.
        h. Temporary facilities and services.
        i. Hours of Work.
        j. Hazards and risks.
        k. Housekeeping.
        l. Quality and Work standards.
        m. Change Orders.
        n. Documentation of information for payment requests.

E. Reporting: No later than 3 days after each progress meeting date, the contractor shall distribute copies of minutes of the meeting to each party present and to other parties who should have been present. Include a brief summary, in narrative form, of progress since the previous meeting and report.

    1. Schedule Updating: Revise the construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue the revised schedule concurrently with the report of each meeting.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION

SECTION 01 32 00 - NOTIFICATION OF ARCHITECT REQUIREMENTS

PART 1 – GENERAL

1.1 REQUIREMENTS

A. In general, the Contractor shall notify the Architect whenever there is need of clarification of interpretation of the Contract Documents.

B. The Contractor shall notify the Architect 48 hours in advance of certain stages of construction. The project superintendent shall notify the Owner's Representative on an ongoing basis of ongoing work. These stages shall include, but not necessarily be limited to the following:

1. Division 2 – Demolition of any existing facilities or site features.

2. Division 3.
   a. Excavation of grade beams.
   b. Installation of concrete underlayment, underslab vapor barriers, water proofing.
   c. Installation of reinforcing and formwork
   d. Placing of concrete.

3. Division 4
   a. Placing of masonry, grout, and reinforcement
   b. Block, brick, and stone placement, glass unit masonry, masonry cleaning.

4. Division 5
   a. Erection of structural steel, open web steel joists, and steel deck.
   b. Miscellaneous metals, ladders, brackets, pipe rails, etc.

5. Division 6 - Finish Carpentry and Millwork.

6. Division 7
   a. Installation of waterproofing, vapor barriers, flashing and sheet metal.
   b. Installation of roofing system(s) and associated work.
   c. Concealment of insulation.
   d. Application of fireproofing.
   e. Installation of firestopping and firesafing.
   f. Installation of building and glazing sealants.

7. Division 8
   a. Installation of doors, frames, windows, and storefronts.
   b. Installation of rolling and coiling doors and grilles.
   c. Installation of finish hardware.
   d. Installation of glazing and glazed systems.

8. Division 9
   a. Installation of plaster and gypsum board products.
   b. Installation of tile, flooring, and pavers.
   c. Installation of acoustical ceiling (grid and panels).
   d. Installation of resilient flooring and base.
   e. Painting and staining (each coat).

9. Division 10
    a. Installation of specialty items, markerboards, display cases, projection screens, signage and graphics, canopies.
    b. Installation of operable walls and folding partitions.
    c. Installation of toilet accessories.

10. Division 11
    a. Installation of appliances.
    b. Installation of Stage Equipment.

11. Division 14 – Installation of elevators.

12. Division 21
    a. Installation of sprinkler piping.
    b. Installation of sprinkler heads.

13. Divisions 22, 23 and 26
    a. Completion of roughing-in of plumbing, heating, air conditioning and electrical work (prior to concealment).
    b. Any testing specified for mechanical, electrical and plumbing systems.
    c. Inspection and testing of underground utilities.

14. Division 22 - Installation of plumbing fixtures.

15. Division 23 - Installation of heating, ventilating and air conditioning.

16. Division 26 - Installation of all electrical fixtures.

17. Division 31
    a. Site clearing and stripping of top soil.
    b. Excavation for building foundation.
    c. Placing and compaction of each lift of select fill material.
    d. Drilling of foundation piers.
    e. Covering of underground utilities.
    f. Site grading.

18. Division 32
    a. Stabilization of paving subgrades.
    b. Installation of concrete paving.
    c. Installation of running track subgrade, base, and wearing course.
    d. Installation of athletic turf.
    e. Installation of decorative metal fencing.
    f. Installation of topsoil.
    g. Installation of landscaping.

PARTS 2 and 3 - Not Used

END OF SECTION

SECTION 01 32 23 - SURVEY AND LAYOUT DATA

PART 1 G E N E R A L

1.1 QUALITY CONTROL

A. Conform to State of Texas laws for surveys requiring licensed surveyors. Employ a surveyor acceptable to Owner's Representative if required by the Contract.

1.2 SUBMITTALS

A. Conform to requirements of Division 1.

B. Submit name, address, and telephone number of Surveyor to Owner's Representative before starting survey work.

C. Submit documentation verifying accuracy of survey work on request.

D. Submit certificate signed by Surveyor, that elevations and locations of the Work are in conformance with the Contract.

1.3 PROJECT RECORD DOCUMENTS

A. Maintain a complete and accurate log of control and survey work as it progresses.

B. Prepare a certified survey setting forth dimensions, locations, angles, and elevations of construction and site work upon completion of foundation walls and major site improvements.

C. Submit record documents under provisions of Division 1.

1.4 EXAMINATION

A. Verify locations of survey control points prior to starting the Work.

B. Notify Owner's Representative immediately if any discrepancies are discovered.

1.5 SURVEY REFERENCE POINTS

A. The Owner will establish survey control datum as indicated on Drawings. Inform Owner's Representative in advance of time additional horizontal and vertical control points will be established so verification deemed necessary by Owner's Representative may be done with minimum inconvenience to the Owner or Contractor.

B. Locate and protect survey control points prior to starting site work; preserve permanent reference points during construction.

C. Notify Owner's Representative a minimum of 48 hours before relocation of reference points is needed due to changes in grades or other reasons.

D. Promptly report loss or destruction of reference points to Owner's Representative.

E. Reimburse the Owner for cost of reestablishment of permanent reference points disturbed by construction operations.

1.6 SURVEY REQUIREMENTS

A. Utilize recognized engineering survey practices.

B. Establish a minimum of two permanent benchmarks on site, referenced to established control points. Record horizontal and vertical location data on Project record documents.

C. Establish elevations, lines and levels to provide quantities required for measurement and payment and for appropriate controls for the Work. Locate and lay out the following with appropriate instruments:
   1. Site improvements including grading, fill and topsoil placement, utilities, and footings and slabs.
   2. Grid or axis for structures.
   3. Building foundation, column locations, and ground floor elevations.

D. Periodically verify layouts.

1.7 AS-BUILT SURVEY REQUIREMENTS

A. Detention Ponds:
   1. If a detention pond is included in scope of work, Contractor shall provide Owner and Engineer an As-Built survey of said detention pond for volume verification prior to seeding/sodding or covering pond. Contractor shall provide two hard copies and one AutoCAD file with points.
   2. For open ponds, survey shall include enough information for Engineer to perform volume verification calculations. Items shall include but not be limited to: top of bank delineation and elevations, toe of slope delineation and elevations, pilot channels (or center swale) and elevations, and inflow/outflow structures. Survey grid shall be 50’ maximum. Survey shall extend a minimum of 20’ outside top of bank of pond.
   3. For below grade (underground) ponds, survey shall include but not be limited to: layout of below grade structure including pipe sizes, box culvert sizes, etc. and flowlines of structure.
   4. As-Built survey shall be signed and sealed by a registered Land Surveyor.

B. Outfalls to Harris County Flood Control (HCFC) Channels:
   1. HCFC requires an As-Built Certificate for all newly constructed outfalls to their facilities. The Contractor shall provide Owner and Engineer an As-Built Certificate of any newly constructed outfalls to HCFC facilities. The As-Built survey shall include but is not limited to: detailed sketch of outfall, flowline of outfall, size and pipe type of outfall and flowline of existing channel. Survey shall include area of at least 20’ around outfall.
   2. As-Built survey shall be signed and sealed by a registered Land Surveyor.

C. Sites located in the 100-year Floodplain:
   1. Sites located in the 100-year Floodplain will require an As-Built Certificate. Contractor shall provide Owner and Engineer an As-Built Survey (2 hard copies) of completed site for use in filling out said As-Built Certificate. Survey shall include but is not limited to: finished floor elevation(s) of all slabs (including recessed interior slabs, raised interior slabs and bottom of elevator pits), paving elevations, outside mechanical equipment elevations (A/C units, chillers, compressors, etc.) and all fill placed within 100-year floodplain. Survey shall include entire site.
   2. Contractor shall coordinate with Engineer for exact Governmental requirements prior to survey.
   3. As-Built survey shall be signed and sealed by a registered Land Surveyor.

PART 2 P R O D U C T S – Not Used

PART 3 E X E C U T I O N – Not Used

END OF SECTION

SECTION 01 33 00 - SUBMITTAL PROCEDURES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

B. Other Related Sections:
   1. 01 30 10 – Mechanical and Electrical Coordination.
   2. 01 33 10 – BIM Coordination Process.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for submittals required for performance of the Work, including:
   1. Contractor's construction schedule.
   2. Submittal schedule.
   3. Daily construction reports.
   4. Shop Drawings.
   5. Product Data.
   6. Samples.
   7. Requests for Interpretation or Information.
   8. Environmental and Health Certificates or labels for certain materials as required.

B. Administrative Submittals: Refer to other Division-1 Sections and other Contract Documents for requirements for administrative submittals. Such submittals include, but are not limited to:
   1. Permits.
   2. Applications for payment.
   3. Performance and payment bonds.
   4. Insurance certificates.
   5. List of Subcontractors.

C. The Schedule of Values submittal is included in Section "Applications for Payment."

D. Inspection and test reports are included in Section "Quality Control Services."

1.3 SUBMITTAL PROCEDURES

A. General: Electronic copies of CAD Drawings of the Contract Drawings will be provided by Architect for Contractor's use in preparing submittals only after receipt of acceptable waiver from Contractor.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities. Transmit each submittal sufficiently in advance of performance of related construction activities to avoid delay.
   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals and related activities that require sequential activity.
   2. Coordinate transmittal of different types of submittals for related elements of the Work so processing will not be delayed by the need to review submittals concurrently for coordination.
      a. The Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
   3. Processing: Allow sufficient review time so that installation will not be delayed as a result of the time required to process submittals, including time for re-submittals.
   4. Allow two weeks for initial review. Allow additional time if processing must be delayed to

permit coordination with subsequent submittals. The Architect will promptly advise the Contractor when a submittal being processed must be delayed for coordination.
   a. If an intermediate submittal is necessary, process the same as the initial submittal.

5. Allow two weeks for reprocessing each submittal.
   a. No extension of Contract Time will be authorized because of failure to transmit submittals to the Architect sufficiently in advance of the Work to permit processing.

C. Submittal Preparation: Place a permanent label or title block on each submittal for identification. Indicate the name of the entity that prepared each submittal on the label or title block.
   1. Prior to forwarding to Architect, include Contractor's stamp on transmittal, each shop drawing sheet, and each bound set of data indicating Contractor's review and acceptance of submittal. Contractor's notations regarding exceptions, requirements, or deviations from Project requirements are to be clearly indicated.
   2. Do not provide multiple submittals under one transmittal. Provide separate transmittal for each item.
   3. Include the following information on the transmittal and submittal for processing and recording action taken.
      a. Listing of the product(s) or system(s) b or
      b. Number of the related specification section plus sequential number of the particular submittal (for instance: **05 21 00 -1** for initial submittal of Steel Joists). Verify numbering system with Architect.
      c. Project name.
      d. Date.
      e. Name of Architect.
      f. Name of Contractor.
      g. Name of submitting subcontractor or supplier.
   4. Title block on shop drawings shall include the following:
      a. Project name.
      b. Date.
      c. Name of Contractor.
      d. Name and contact number of subcontractor or supplier as appropriate.
      h. Name or initials of person producing the shop drawings.
   5. Submittals rejected or returned to the sender for additional information are not to be forwarded to the Architect. Forwarding a submittal to the Architect indicates Contractor's acceptance of the submittal as meeting Project requirements.

D. Electronic (PDF) Submittals are to be provided in lieu of hard-copies. Architect will utilize file transfer protocol "Newforma" to receive, transfer, and manage submittals routed from Contractor to Architect and associated Consultants.
   1. No purchase of special software is required by the Contractor to interface with "Newforma".
   2. Brief training regarding the use of this system will be provided upon request at the Architect's office for Contractor's personnel.

E. Submittal Transmittal: Package each submittal appropriately for transmittal and handling. Transmit each submittal from Contractor to Architect using electronic transmittal form. Submittals received from sources other than the Contractor will be returned or discarded without action.
   1. Record on the transmittal Record relevant information and requests for additional information.
   2. Clearly and conspicuously indicate on transmittal and shop drawings any deviations from Contract Document requirements, including a non-specified product or manufacturer, any variations, or limitations. Architect's review and acceptance of submittals is not binding where such deviations are not CLEARLY NOTED.

3. Include Contractor's certification of review that submitted product(s) complies with Contract Document requirements except as CLEARLY NOTED.

F. Owner will have access to viewing and commenting on submittals concurrently with A/E, and the Architect will incorporate any Owner comments prior to return of submittals.

1.4 SHOP DRAWINGS AND COORDINATION DRAWINGS

A. Submit newly prepared information, drawn to accurate scale. Highlight, encircle, or otherwise indicate deviations from the Contract Documents. Do not reproduce Contract Documents or copy standard information as the basis of Shop Drawings. Standard information prepared without specific reference to the Project is not considered Shop Drawings.

B. Shop Drawings include fabrication and installation drawings, setting diagrams, schedules, patterns, templates and similar drawings. Include the following information:
   1. Dimensions.
   2. Identification of products and materials included.
   3. Compliance with specified standards.
   4. Notation of coordination requirements.
   5. Notation of dimensions established by field measurement.

C. Provide digital copies of shop drawings unless A/E specifically requests hard copy drawings for a particular submittal.
   1. Sheet Size: Except for templates, patterns and similar full-size Drawings, submit Shop Drawings on sheets at least 8-1/2" x 11" but no larger than 36" x 48".
   2. Number of Copies: Submit three black-line prints for the Architect's or Architect’s Consultant’s review; one print will be returned with comments, or scanned and returned through Architect’s digital file transfer protocol.
   3. Contractor shall make copies necessary for his own use, for field copies, and copies of reviewed submittals to be included in maintenance manuals

D. Steel Shop Drawings (Division 5): To expedite the Architect’s and Engineer’s review of the structural steel Shop Drawings, submit Shop Drawings for items specified in the following sections separately from those of Section 05 12 00 - Structural Steel Framing, even when furnished by the same fabricator:
   1. Section 05 50 00 - Metal Fabrications.
   2. Section 05 51 00 - Metal Stairs.
   3. Section 05 52 00 - Metal Railings
   4. Section 05 53 00 - Metal Gratings.

E. Coordination drawings are a special type of Shop Drawing that show the relationship and integration of different construction elements that require careful coordination during fabrication or installation to fit in the space provided or function as intended.
   1. Preparation of coordination Drawings is specified in other sections of the Project specifications and may include components previously shown in detail on Shop Drawings or Product Data.
   2. Submit coordination Drawings for integration of different construction elements. Show sequences and relationships of separate components to avoid conflicts in use of space.

1.5 PRODUCT DATA

A. Collect Product Data into a single submittal for each element of construction or system. Product Data includes printed information such as manufacturer's installation instructions, catalog cuts, standard color charts, roughing-in diagrams and templates, standard wiring diagrams and performance curves. Where Product Data must be specially prepared because standard printed data is not suitable for use, submit as "Shop Drawings."

B. Mark each copy to show applicable choices and options. Where printed Product Data includes information on several products, some of which are not required, mark copies to indicate the applicable information. Include the following information:
   1. Manufacturer's printed recommendations.
   2. Compliance with recognized trade association standards.
   3. Compliance with recognized testing agency standards.
   4. Application of testing agency labels and seals.
   5. Notation of dimensions verified or requiring verification by field measurement.
   6. Notation of coordination requirements.

C. Do not submit Product Data until compliance with requirements of the Contract Documents has been confirmed.

D. Preliminary Submittal: Submit a preliminary single copy of Product Data where selection of options is required. Do not submit manufacturer’s pamphlets or catalogs without the particular items for consideration CLEARLY indicated.

E. Number of Copies: Provide digital copies of Product Data unless A/E specifically requests hard copies for a particular submittal:
   1. Submit three copies for the Architect's or Consultant’s review; one copy will be returned with comments, or scanned and returned through Architect’s digital file transfer protocol.
   2. Contractor shall make copies necessary for his own use, for field copies, and copies of reviewed Product Data to be included in maintenance manuals.

F. Field Copies: Following receipt of reviewed and accepted submittal from Architect, print and file copy of reviewed submittal in the Project meeting room and field office. Field copy shall include all review markings.
   1. Do not proceed with installation until a copy of the final Product Data submittal is in the installer's possession.

1.6 SAMPLES

A. Submit full-size, fully fabricated Samples cured and finished as specified and physically identical with the material or product proposed. Samples include partial sections of manufactured or fabricated components, cuts or containers of materials, color range sets, and swatches showing color, texture and pattern.
   1. Include transmittal with information as identified above in Submittal Procedures. Number product on the transmittal per the approved numbering system. In many cases the sample will be retained by the Architect with only the transmittal returned with comments.
   2. Mount, display, or package Samples in the manner specified to facilitate review of qualities indicated. Prepare Samples to match the Architect's Sample. Include the following:
      a. Generic description of the Sample.
      b. Sample source.
      c. Product name or name of manufacturer.
      d. Compliance with recognized standards.
   3. Submit Samples for review of kind, color, pattern, and texture, for a final check of these characteristics with other elements, and for a comparison of these characteristics between the final submittal and the actual component as delivered and installed.
   4. Where variation in color, pattern, texture or other characteristics are inherent in the material or product represented, submit multiple units (not less than 3), that show approximate limits of the variations.
   5. Refer to other Specification Sections for requirements for Samples that illustrate workmanship, fabrication techniques, details of assembly, connections, operation and similar construction characteristics.
   6. Refer to other Sections for Samples to be returned to the Contractor for incorporation in the Work. Such Samples must be undamaged at time of use. On the transmittal,

indicate special requests regarding disposition of Sample submittals.

B. Preliminary samples: Where Samples are for initial selection of color, pattern, texture or similar characteristics from a range of standard choices, submit a full set of choices for the material or product.
   1. Preliminary samples will be reviewed and may be returned with the Architect's mark indicating initial selection.
   2. Maintain approved samples, if returned, at the Project site, for quality comparisons throughout the course of construction.
   3. Unless noncompliance with Contract Document provisions is observed, the initial submittal may also serve as the final sample.

C. Distribution of Samples: Distribute additional sets of approved samples to subcontractors, manufacturers, fabricators, suppliers, installers, and others as required for performance of the Work.
   1. Field Samples or “mockups” specified in individual Sections are special types of Samples. Field Samples are full-size mockups erected, installed, or applied on site to illustrate finishes, coatings, or quality of installation, and to establish the standard by which the Work will be judged.
   2. Comply with submittal requirements to the fullest extent possible. Process transmittal forms to provide a record of activity
   3. As part of Closeout Documents, Contractor shall provide a binder with samples of all materials included in Completed Work. Samples shall be separated by Specification Section.

1.7 SUBMITTAL SCHEDULE

A. After development and acceptance of the Contractor's construction schedule, prepare a complete schedule of submittals. Submit the schedule within 10 days of the date required for establishment of the Contractor's construction schedule.
   1. Coordinate submittal schedule with the list of subcontracts, schedule of values and the list of products as well as the Contractor's construction schedule.
   2. Prepare the schedule in chronological order; include submittals required during the first 90 days of construction. Provide the following information:
      a. Scheduled date for delivery of each submittal to the Architect.
      b. Submittal category.
      c. Name of subcontractor.
      d. Description of the part of the Work covered.
      e. Anticipated date for return of Architect’s reviewed copy.

B. Field Copies: Following receipt of reviewed and accepted submittal from Architect, print and file copy of reviewed submittal in the Project meeting room and field office. Field copy shall include all review markings.

1.8 ARCHITECT'S REVIEW OF SUBMITTALS

A. Except for submittals for record, information or similar purposes, where action and return is required or requested, the Architect will review each architectural submittal, mark to indicate action taken, and return promptly.
   1. Compliance with specified characteristics is the Contractor's responsibility.

B. Action Stamp: The Architect will stamp each submittal with a uniform, self-explanatory action stamp. The stamp will be appropriately marked, as follows, to indicate the action taken:

C. Final Release: Where submittals are marked "No Exceptions," that part of the Work covered by the submittal may proceed provided it complies with requirements of the Contract Documents; final acceptance will depend upon that compliance.

D. Final-But-Restricted Release: When submittals are marked "Exceptions Noted" or "Make Corrections Noted", that part of the Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and requirements of the Contract Documents; final acceptance will depend on that compliance.

E. Returned for Resubmittal: When submittal is marked "Revise and Resubmit", do not proceed with that part of the Work covered by the submittal, including purchasing, fabrication, delivery, or other activity. Revise or prepare a new submittal in accordance with the notations; resubmit without delay. Repeat if necessary to obtain a different action mark.

F. Where subcontractor or supplier elects to make corrections based on notations by the Contractor, Architect, or consultants and the submittal has NOT been marked "Revise and Resubmit", do not copy the Architect with revised drawing unless specifically corrected.

G. Do not permit submittals marked "Revise and Resubmit" to be used at the Project site, or elsewhere where Work is in progress

1.9 CONTRACTOR'S CONSTRUCTION SCHEDULE

B. Bar-Chart Schedule: Prepare a fully developed, horizontal bar-chart type Contractor's construction schedule. Submit within 30 days of the date established for "Commencement of the Work".
   1. Provide a separate time bar for each significant construction activity. Provide a continuous vertical line to identify the first working day of each week. Use the same breakdown of units of the Work as indicated in the "Schedule of Values."
   2. Prepare the schedule on a sheet, or series of sheets, of stable transparency, or other reproducible media, of sufficient width to show data for the entire construction period.
   3. Secure time commitments for performing critical elements of the Work from parties involved. Coordinate each element on the schedule with other construction activities; include minor elements involved in the sequence of the Work. Show each activity in proper sequence. Indicate graphically sequences necessary for completion of related portions of the Work.
   4. Coordinate the Contractor's construction schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests and other schedules.
   5. Indicate completion in advance of the date established for Substantial Completion. Indicate Substantial Completion on the schedule to allow time for the Architect's procedures necessary for certification of Substantial Completion.

C. Work Stages: Indicate important stages of construction for each major portion of the Work, including testing and installation.

D. Distribution: Following response to the initial submittal, print and distribute copies to the Architect, Owner, and other parties required to comply with scheduled dates. Post copies in the Project meeting room and temporary field office.
   1. When revisions are made, distribute to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in construction activities.

E. Schedule Updating: Revise the schedule after each meeting or activity, where revisions have been recognized or made. Issue the updated schedule concurrently with report of each meeting.

1.10 DAILY CONSTRUCTION REPORTS

A. Prepare a daily construction report, recording the following information concerning events at the site; make report available to the Architect and Owner at the Project site:

1. List of subcontractors at the site.
2. Approximate count of personnel at the site.
3. Weather-related conditions at the actual site including temperature, precipitation, muddy or wet site conditions. No claims for additional weather days can be made without daily weather entries in the log.
4. Accidents and unusual events.
5. Meetings and significant decisions.
6. Stoppages, delays, shortages, losses.
7. Orders and requests of governing authorities.
8. Services connected, disconnected.
9. Equipment or system tests and start-ups.
10. Partial Completions, occupancies.
11. Substantial Completions authorized.

1.11 REQUESTS FOR INTERPRETATION - All contractor requests for interpretation pertaining to all aspects of the construction documents and this Project shall be submitted on the form attached, or on the Construction Specification Institute form, CSI Form 13.2A, “Request For Interpretation” or a similar form provided by the Contractor.

1.12 Environmental and Health Certifications or Labels (for example: Cradle to Cradle, EPD, HPD, and other certifications and labels): Furnish copies of documents showing proof of certification or label as indicated on the Project’s Interior and/or Exterior Finish Schedule. Submit the information with the other Submittal Data for Basis-of-Design products, equal products by specified manufacturers, and proposed substitution products.

A. Proposed substitutions shall comply with the following: The Project’s Interior and/or Exterior Finish Schedule, or Color Schedule, may be labelled in the drawings as something other than the “Interior Finish Schedule” or “Exterior Finish Schedule”.

B. For a product to be used in lieu of the Basis-of-Design product listed in the specs or on the Interior Finish Schedule, a proposed as-equal product supplied by manufacturers listed in the specifications that is not the Basis-of-Design product, the proposed comparable product shall have a certification or label which is equal to, or better than the Basis-of-Design product.

C. A proposed as-equal product to be used in lieu of the Basis-of-Design product listed in the Specifications or on the Interior Finish Schedule, a product supplied by manufacturers not listed in the specifications or the Interior Finish Schedule, the proposed comparable product shall have a certification or label which is equal to, or better than the Basis-of-Design product.

D. If a question about which certification or label is better than or exceeds the indicated certification, contact the project’s Architect for direction.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION (Not Applicable).

END OF SECTION

SECTION 01 40 00 - QUALITY REQUIREMENTS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for quality control services.

B. Quality control services include inspections and tests and related actions including reports, performed by independent agencies, governing authorities, and the Contractor. They do not include Contract enforcement activities performed by the Architect.

C. Inspection and testing services are required to verify compliance with requirements specified or indicated. These services do not relieve the Contractor of responsibility for compliance with Contract Document requirements.

D. Requirements of this Section relate to customized fabrication and installation procedures, not production of standard.

1. Specific quality control requirements for individual construction activities are specified in the Sections that specify those activities. Those requirements, including inspections and tests, cover production of standard products as well as customized fabrication and installation procedures.
2. Inspections, test and related actions specified are not intended to limit the Contractor's quality control procedures that facilitate compliance with Contract Document requirements.
3. Requirements for the Contractor to provide quality control services required by the Architect, Owner, or authorities having jurisdiction are not limited by provisions of this Section.

1.3 RESPONSIBILITIES

A. Contractor Responsibilities: The Contractor shall provide inspections, tests and similar quality control services specified in individual Specification Sections and required by governing authorities, except where they are specifically indicated to be the Owner's responsibility, or are provided by another identified entity; these services include those specified to be performed by an independent agency and not by the Contractor. Costs for these services shall be included in the Contract Sum.

1. The Owner will engage the services of an independent agency to perform some of the inspections and tests specified in PART 3 - EXECUTION, QUALITY CONTROL, QUALITY CONTROL TESTING DURING CONSTRUCTION or FIELD QUALITY CONTROL. Payment for these services will be made by the Owner.
   a. Where the Owner has engaged a testing agency or other entity for testing and inspection of a part of the Work, and the Contractor is also required to engage an entity for the same or related element, the Contractor shall not employ the entity engaged by the Owner, unless otherwise agreed in writing with the Owner.

2. Retesting: The Contractor is responsible for retesting where results of required inspections, tests or similar services prove unsatisfactory and do not indicate compliance with Contract Document requirements, regardless of whether the original test was the

Contractor's responsibility.

a. Cost of retesting construction revised or replaced by the Contractor is the Contractor's responsibility, where required tests were performed on original construction.

3. Associated Services: The Contractor shall cooperate with agencies performing required inspections, tests and similar services and provide reasonable auxiliary services as requested. Notify the agency sufficiently in advance of operations to permit assignment of personnel. Auxiliary services required include but are not limited to:
   a. Providing access to the Work and furnishing incidental labor and facilities necessary to facilitate inspections and tests.
   b. Taking adequate quantities of representative samples of materials that require testing or assisting the agency in taking samples.
   c. Providing facilities for storage and curing of test samples, and delivery of samples to testing laboratories.
   d. Providing the agency with a preliminary design mix proposed for use for materials mixes that require control by the testing agency.
   e. Security and protection of samples and test equipment at the Project site.

B. Owner Responsibilities: The Owner will provide inspections, tests and similar quality control services specified to be performed by independent agencies and not by the Contractor, except where they are specifically indicated as the Contractor's responsibility or are provided by another identified entity. Costs for these services are not included in the Contract Sum.

1. The Owner will employ and pay for the services of an independent agency, testing laboratory or other qualified firm to perform services which are the Owner's responsibility.

C. Duties of the Testing Agency: The independent testing agency engaged to perform inspections, sampling and testing of materials and construction specified in individual Specification Sections shall cooperate with the Architect and Contractor in performance of its duties, and shall provide qualified personnel to perform required inspections and tests.

1. The agency shall notify the Architect and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. The agency is not authorized to release, revoke, alter or enlarge requirements of the Contract Documents, or approve or accept any portion of the Work.
3. The agency shall not perform any duties of the Contractor.

D. Coordination: The Contractor and each agency engaged to perform inspections, tests and similar services shall coordinate the sequence of activities to accommodate required services with a minimum of delay. Additionally, Contractor and each agency shall coordinate activities to avoid the necessity of removing and replacing construction to accommodate inspections and tests.

1. The Contractor is responsible for scheduling times for inspections, tests, taking samples and similar activities.

1.4 SUBMITTALS

A. The independent testing agency shall submit a certified written report of each inspection, test or similar service, to the Architect, in duplicate, unless the Contractor is responsible for the service. If the Contractor is responsible for the service, submit a certified written report of each inspection, test or similar service through the Contractor, in duplicate.

B. Submit additional copies of each written report directly to the governing authority, when the authority so directs.

C. Report Data: Written reports of each inspection, test or similar service shall include, but not be limited to:
   1. Date of issue.
   2. Project title and number.
   3. Name, address and telephone number of testing agency.
   4. Dates and locations of samples and tests or inspections.
   5. Names of individuals making the inspection or test.
   6. Designation of the Work and test method.
   7. Identification of product and Specification Section.
   8. Complete inspection or test data.
   9. Test results and an interpretation of test results.
   10. Ambient conditions at the time of sample-taking and testing.
   11. Comments or professional opinion as to whether inspected or tested Work complies with Contract Document requirements.
   12. Name and signature of laboratory inspector.
   13. Recommendations on retesting.

1.5 QUALITY ASSURANCE

A. Qualification for Service Agencies: Engage inspection and testing service agencies, including independent testing laboratories, which are prequalified as complying with "Recommended Requirements for Independent Laboratory Qualification" by the American Council of Independent Laboratories, and which specialize in the types of inspections and tests to be performed.
   1. Each independent inspection and testing agency engaged on the Project shall be authorized by authorities having jurisdiction to operate in the State in which the Project is located.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION

3.1 REPAIR AND PROTECTION

A. General: Upon completion of inspection, testing, sample-taking and similar services, repair damaged construction and restore substrates and finishes to eliminate deficiencies, including deficiencies in visual qualities of exposed finishes. Comply with Contract Document requirements for "Cutting and Patching."

B. Protect construction exposed by or for quality control service activities, and protect repaired construction.

C. Repair and protection is the Contractor's responsibility, regardless of the assignment of responsibility for inspection, testing or similar services.

END OF SECTION

SECTION 01 42 19 - REFERENCE STANDARDS AND DEFINITIONS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.

B. Indicated: The term indicated refers to graphic representations, notes, or schedules on the Drawings, or other Paragraphs or Schedules in the Specifications, and similar requirements in the Contract Documents. Terms such as shown, noted, scheduled, and specified are used to help the reader locate the reference. There is no limitation on location.

C. Directed: Terms such as directed, requested, authorized, selected, approved, required, and permitted mean directed by the Architect, requested by the Architect, and similar phrases.

D. Approved: The term approved, when used in conjunction with the Architect's action on the Contractor's submittals, applications, and requests, is limited to the Architect's duties and responsibilities as stated in the Conditions of the Contract.

E. Regulations: The term regulations includes laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, as well as rules, conventions, and agreements within the construction industry that control performance of the Work.

F. Furnish: The term furnish means supply and deliver to the Project site, ready for unloading, unpacking, assembly, installation, and similar operations.

G. Install: The term install describes operations at the Project site including the actual unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.

H. Provide: The term provide means furnish and install, complete and ready for the intended use.

I. Installer: An Installer is the Contractor or another entity engaged by the Contractor, either as an employee, subcontractor, or contractor of lower tier, to perform a particular construction activity, including installation, erection, application, and similar operations. Installers are required to be experienced in the operations they are engaged to perform.

1. The term experienced, when used with the term Installer, means having a minimum of five previous projects similar in size and scope to this Project, being familiar with the special requirements indicated, and having complied with requirements of the authority having jurisdiction.

J. Trades: Using terms such as carpentry is not intended to imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as carpenter. It also does not imply that requirements specified apply exclusively to tradespersons of the corresponding generic name.

K. Assigning Specialists: Certain Sections of the Specifications require that specific construction activities shall be performed by specialists who are recognized experts in those operations. The specialists must be engaged for those activities, and their assignments are requirements

over which the Contractor has no choice or option. However, the ultimate responsibility for fulfilling Contract requirements remains with the Contractor.

1. This requirement shall not be interpreted to conflict with enforcing building codes and similar regulations governing the Work. It is also not intended to interfere with local trade union jurisdictional settlements and similar conventions.

L. Project site is the space available to the Contractor for performing construction activities either exclusively or in conjunction with others performing other work as part of the Project. The extent of the Project site is shown on the Drawings and may or may not be identical with the description of the land on which the Project is to be built.

M. Testing Agencies: A testing agency is an independent entity engaged to perform specific inspections or tests, either at the Project site or elsewhere and to report and interpret results of those inspections or tests.

1.3 SPECIFICATION FORMAT AND CONTENT EXPLANATION

A. Specification Format: These Specifications are organized into Divisions and Sections based on the Construction Specifications Institute's MASTERFORMAT numbering system.

1. Text Subordination: Portions of the Specification may be subordinated to other portions in the following manner:
   a. Certain Sections may be subordinate to other Sections or parts of other Sections. When that occurs, the degree of subordination is described in those Sections.
   b. Paragraphs and lines of text are subordinate to article titles.
   c. Paragraphs and lines of text that are indented from the left hand margin are subordinate to the preceding text that is either not indented or indented by a lesser amount.

2. Underscoring, Bold Letters and Bold Numbers are used strictly to assist the reader in scanning for key words. No emphasis or relative importance is intended for text where underscoring, bold letters and bold numbers are used.

B. Specification Content: This Specification uses certain conventions regarding the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations or circumstances. These conventions are explained as follows:

C. Abbreviated Language: Language used in Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words that are implied, but not stated, shall be interpolated, as the sense requires. Singular words will be interpreted as plural and plural words interpreted as singular where applicable as the context of the Contract Documents indicates.

D. Imperative and streamlined language is used generally in the Specifications. Requirements expressed in the imperative mood are to be performed by the Contractor. At certain locations in the Text, subjective language is used for clarity to describe responsibilities that must be fulfilled indirectly by the Contractor, or by others when so noted.

1. The words "shall be" are implied wherever a colon (:) is used within a sentence or phrase.

1.4 INDUSTRY STANDARDS

A. Applicability of Standards: Except where the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if

bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.

B. Publication Dates: Comply with the standards in effect as of the date of the Contract Documents.

C. Conflicting Requirements: Where compliance with two or more standards is specified and where the standards may establish different or conflicting requirements for minimum quantities or quality levels, refer requirements that are different but apparently equal and other uncertainties to the Architect for a decision before proceeding.

D. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of the requirements. Refer uncertainties to the Architect for a decision before proceeding.

E. Copies of Standards: Each entity engaged in construction on the Project is required to be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed to perform a required construction activity, the Contractor shall obtain copies directly from the publication source.
2. The Architect reserves the right to require the Contractor to submit copies of standards as necessary for enforcement of requirements.

F. Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. Where such acronyms or abbreviations are used in the Specifications or other Contract Documents, they mean the recognized name of the trade association, standards-generating organization, authority having jurisdiction, or other entity applicable to the context of the Text provision. Refer to the "Encyclopedia of Associations," published by Gale Research Co., available in most libraries.

G. Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. The following acronyms or abbreviations, as referenced in Contract Documents, are defined to mean the associated names. Names and addresses are subject to change and are believed, but not ensured, to be accurate and up to date as of the date of Contract Documents.

I. GOVERNING REGULATIONS/AUTHORITIES

1. The Architect has contacted authorities having jurisdiction where necessary to obtain information necessary for preparation of Contract Documents. Contact authorities having jurisdiction directly for information and decisions having a bearing on the Work.

1.5 SUBMITTALS

A. Permits, Licenses, and Certificates: For the Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, and similar documents, correspondence, and records established in conjunction with compliance with standards and regulations bearing upon performance of the Work.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION

SECTION 01 50 00 - TEMPORARY FACILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies requirements for temporary services and facilities, including utilities, construction and support facilities, security and protection.

B. Temporary utilities which may be required include but are not limited to:

1. Water service and distribution.
2. Temporary electric power and light.
3. Telephone service.
4. Storm and sanitary sewer.

C. Temporary construction and support facilities which may be required include but are not limited to:

1. Temporary heat.
2. Storage sheds.
3. Sanitary facilities, including drinking water.
4. Dewatering facilities and drains.
5. Temporary enclosures.
6. Hoists.
7. Temporary Project identification signs and bulletin boards.
8. Waste disposal services.
9. Rodent and pest control.
10. Construction aids and miscellaneous services and facilities.

D. Security and protection facilities which may be required include but are not limited to:

1. Temporary fire protection.
2. Barricades, warning signs, lights.
3. Sidewalk bridge or enclosure fence for the site.
4. Environmental protection.

1.3 QUALITY ASSURANCE

A. Regulations: Comply with industry standards and applicable laws and regulations if authorities having jurisdiction, including but not limited to:

1. Building Code requirements.
2. Health and safety regulations.
3. Utility company regulations.
4. Police, Fire Department and Rescue Squad rules.
5. Environmental protection regulations.

B. Standards: Comply with NFPA Code 241, "Building Construction and Demolition Operations", ANSI-A10 Series standards for "Safety Requirements for Construction and

Demolition", and NECA Electrical Design Library, "Temporary Electrical Facilities."

1. Refer to "Guidelines for Bid Conditions for Temporary Job Utilities and Services", prepared jointly by AGC and ASC, for industry recommendations.

C. Electrical Service: Comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service in compliance with National Electric Code (NFPA 70).

D. Inspections: For inspections and tests of temporary facilities required by authorities having jurisdiction, arrange for such inspections or tests before use. Obtain required certifications and permits.

1.4 PROJECT CONDITIONS

A. Temporary Utilities: Inform the Owner of scheduled dates for termination of each temporary utility. At the earliest feasible time, when acceptable to the Owner, change over from use of temporary service to use of the permanent service.

B. Conditions of Use: Keep temporary services and facilities clean and neat in appearance. Operate in a safe and efficient manner. Take necessary fire prevention measures. Do not overload facilities, or permit them to interfere with progress. Do not allow hazardous dangerous or unsanitary conditions, or public nuisances to develop or persist on the site.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Provide new materials; if acceptable to the Architect, undamaged previously used materials in serviceable condition may be used. Provide materials suitable for the use intended.

2.2 EQUIPMENT

A. General: Provide new equipment; if acceptable to the Architect, undamaged, previously used equipment in serviceable condition may be used. Provide equipment suitable for use intended.

B. Water Hoses: Provide 3/4" heavy-duty, abrasion-resistant, flexible rubber hoses 100 ft. long, with pressure rating greater than the maximum pressure of the water distribution system; provide adjustable shut-off nozzles at hose discharge.

C. Electrical Outlets: Provide properly configured NEMA polarized outlets to prevent insertion of 110-120 volt plugs into higher voltage outlets. Provide receptacle outlets equipped with ground-fault circuit interrupters, reset button and pilot light, for connection of power tools and equipment.

D. Electrical Power Cords: Provide grounded extension cords; use "hard-service" cords where exposed to abrasion and traffic. Provide waterproof connectors to connect separate lengths of electric cords, if single lengths will not reach areas where construction activities are in progress.

E. Lamps and Light Fixtures: Provide general service incandescent lamps of wattage required for adequate illumination. Provide guard cages or tempered glass enclosures, where exposed to breakage. Provide exterior fixtures where exposed to moisture.

F. Heating Units: Provide temporary heating units that have been tested and labeled by UL, FM or another recognized trade association related to the type of fuel being consumed.

G. Temporary Offices: Provide prefabricated or mobile units with lockable entrances, operable windows and serviceable finishes. Provide heated and air-conditioned units on foundations adequate for normal loading.

H. Temporary Storage Sheds: Provide prefabricated or mobile units with lockable entrances. Provide heated units on foundations adequate for normal loading.

I. Temporary Toilet Units: Provide self-contained single-occupant toilet units of the chemical, aerated recirculation, or combustion type, properly vented and fully enclosed with a glass fiber reinforced polyester shell or similar nonabsorbent material.

J. First Aid Supplies: Comply with governing regulations.

K. Fire Extinguishers: Provide hand-carried, portable UL-rated, class "A" fire extinguishers for temporary offices and similar spaces. In other locations provide hand-carried, portable, UL-rated, class "ABC" dry chemical extinguishers, or a combination of extinguishers of NFPA recommended classes for the exposures.

1. Comply with NFPA 10 and 241 for classification, extinguishing agent and size required by location and class of fire exposure.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Use qualified personnel for installation of temporary facilities. Locate facilities where they will serve the Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required.

B. Provide each facility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed, or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

A. General: Engage the appropriate local utility company to install temporary service or connect to existing service. Where the company provides only part of the service, provide the remainder with matching, compatible materials and equipment; comply with the company's recommendations.

1. Arrange with the company and existing users for a time when service can be interrupted, where necessary, to make connections for temporary services.
2. Provide adequate capacity at each stage of construction. Prior to temporary utility availability, provide trucked-in services.

B. Use Charges: Cost or use charges for temporary facilities are not chargeable to the Owner or Architect, and will not be accepted as a basis of claims for a Change Order.

C. Water Service: Install water service and distribution piping of sizes and pressures adequate for construction until permanent water service is in use.

1. Sterilization: Sterilize temporary water piping prior to use.

D. Temporary Electric Power Service: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period. Include transformers, overload protected disconnects, automatic ground-fault interrupters and main distribution switch gear.
   1. Power Distribution System: Install wiring overhead, and rise vertically where least exposed to damage. Where permitted, wiring circuits not exceeding 125 Volts, AC 20 ampere rating, and lighting circuits may be nonmetallic sheathed cable where overhead and exposed for surveillance.

E. Temporary Lighting: Wherever overhead floor or roof deck has been installed, provide temporary lighting with local switching.

   1. Install and operate temporary lighting that will fulfill security and protection requirements, without operating the entire system, and will provide adequate illumination for construction operations and traffic conditions.

F. Temporary Telephones: Provide temporary telephone service for use by all personnel engaged in construction activities. Where field offices are required, provide temporary telephone service consisting of a minimum of two separate telephone lines (one line dedicated for facsimile machine) in the field office for use by personnel engaged in construction activities throughout the construction period. Provide internet access for email in the field office.

G. Sewers and Drainage: If sewers are available, provide temporary connections to remove effluent that can be discharged lawfully. If sewers are not available or cannot be used, provide drainage ditches, dry wells, stabilization ponds and similar facilities. If neither sewers nor drainage facilities can be lawfully used for discharge of effluent, provide containers to remove and dispose of effluent off the site in a lawful manner.

   1. Filter out excessive amounts of soil, construction debris, chemicals, oils and similar contaminants that might clog sewers or pollute waterways before discharge.
   2. Connect temporary sewers to the municipal system as directed by the sewer department officials.
   3. Maintain temporary sewers and drainage facilities in a clean, sanitary condition. Following heavy use, restore normal conditions promptly.
   4. Provide earthen embankments and similar barriers in and around excavations and subgrade construction, sufficient to prevent flooding by runoff of storm water from heavy rains.

3.3 TEMPORARY CONSTRUCTION AND SUPPORT FACILITIES INSTALLATION

A. If required for completion of the Work, locate field offices, storage sheds, sanitary facilities and other temporary construction and support facilities for easy access.
   1. Maintain temporary construction and support facilities until Final Completion. Remove prior to final application for payment. Where temporary construction or facilities interfere with the Owner’s use or occupation of the Work after Substantial Completion, remove, relocate, or modify temporary construction and facilities as required to permit Owner’s use and occupancy.

B. Provide incombustible construction for offices, shops and sheds located within the construction area, or within 30 feet of building lines. Comply with requirements of NFPA 241.

C. Temporary Heat: Provide temporary heat required by construction activities, for curing or drying of completed installations or protection of installed construction from adverse effects of low temperatures or high humidity. Select safe equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce the ambient condition required and minimize consumption of energy.

D. Heating Facilities: Except where use of the permanent system is authorized, provide vented self-contained LP gas or fuel oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, open flame, or salamander type heating units is prohibited.

E. Field Offices: Provide insulated, weathertight temporary offices of sufficient size to accommodate required office personnel at the Project site. Keep the office clean and orderly for use for small progress meetings. Furnish and equip offices as follows:
1. Furnish with at least two desks and chairs, a 4-drawer file cabinet, plan table and plan rack, a 6-shelf bookcase, conference table and chairs, modem with wireless internet access, and printer.
2. Provide an office for the Owner/Architect’s use while on site including desk and chair. Architect may utilize phone, fax, printer, and internet for work related to this Project.
3. All samples will be stored in the Field Office for easy access.

F. Storage and Fabrication Sheds: Install storage and fabrication sheds, sized, furnished and equipped to accommodate materials and equipment involved, including temporary utility service.

G. Sanitary facilities include temporary toilets, wash facilities and drinking water fixtures. Comply with regulations and health codes for the type, number, location, operation and maintenance of fixtures and facilities. Install where facilities will best service the Project's needs.

1. Provide toilet tissue, paper towels, paper cups and similar disposable materials for each facility. Provide covered waste containers for used material.
2. Toilets: Install self-contained toilet units. Shield toilets to ensure privacy. Use of pit-type privies will not be permitted.
3. Wash Facilities: Install wash facilities supplied with potable water at convenient locations for personnel involved in handling materials that require wash-up for a healthy and sanitary condition. Dispose of drainage properly. Supply cleaning compounds appropriate for each condition.

H. Drinking Water Fixtures: Provide drinking water fountains where required to for compliance with regulations and health codes, including paper supply.

I. Dewatering Facilities and Drains: For temporary drainage and dewatering facilities and operations not directly associated with construction activities included under individual Sections, comply with dewatering requirements of applicable Division-2 Sections. Where feasible, utilize the same facilities. Maintain the site, excavations and construction free of water.

J. Temporary Enclosures: Provide temporary enclosure for protection of construction in progress and completed, from exposure, foul weather, other construction operations and similar activities.
1. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.

2. Install tarpaulins securely, with incombustible wood framing and other materials. Close openings of 25 square feet or less with plywood or similar materials.
3. Close openings through floor or roof decks and horizontal surfaces with load-bearing wood-framed construction.
4. Where temporary wood or plywood enclosure exceeds 100 square feet in area, use UL-labeled fire-retardant treated material for framing and main sheathing.

K. Temporary Lifts and Hoists: Provide facilities for hoisting materials and employees. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

L. Project Identification and Temporary Signs: Display no signs without approval of the Architect. Do not permit installation of unauthorized signs.

1. Project Identification Signs: Engage an experienced sign painter to apply graphics. Comply with the following drawings.
2. Temporary Signs: Prepare signs to provide directional information to construction personnel and visitors.

M. Temporary Exterior Lighting: Install exterior yard and sign lights so that signs are visible when Work is being performed.

N. Collection and Disposal of Waste: Collect waste from construction areas and elsewhere daily. Comply with requirements of NFPA 241 for removal of combustible waste material and debris. Enforce requirements strictly. Do not hold materials more than 7 days during normal weather or 3 days when the temperature is expected to rise above 80 deg F (27 deg C). Handle hazardous, dangerous, or unsanitary waste materials separately from other waste by containerizing properly. Dispose of material in a lawful manner.

O. Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate. Cover finished permanent stairs with a protective covering of plywood or similar material so finishes will be undamaged at the time of acceptance.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Except for use of permanent fire protection as soon as available, do not change over from use of temporary security and protection facilities to permanent facilities until Substantial Completion, or longer as requested by the Architect.

B. Temporary Fire Protection: Until fire protection needs are supplied by permanent facilities, install and maintain temporary fire protection facilities of the types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 10 "Standard for Portable Fire Extinguishers," and NFPA 241 "Standard for Safeguarding Construction, Alterations and Demolition Operations."

1. Locate fire extinguishers where convenient and effective for their intended purpose, but not less than one extinguisher on each floor at or near each usable stairwell.
2. Store combustible materials in containers in fire-safe locations.
3. Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire protection facilities, stairways and other access routes for fighting fires. Prohibit smoking in hazardous fire exposure areas.
4. Provide supervision of welding operations, combustion type temporary heating units, and similar sources of fire ignition.

C. Permanent Fire Protection: At the earliest feasible date in each area of the Project, complete installation of the permanent fire protection facility, including connected services, and place into operation and use. Instruct key personnel on use of facilities.

D. Barricades, Warning Signs and Lights: Comply with standards and code requirements for erection of structurally adequate barricades. Paint with appropriate colors, graphics and warning signs to inform personnel and the public of the hazard being protected against. Where appropriate and needed provide lighting, including flashing red or amber lights.

E. Enclosure Fence: When excavation begins, install an enclosure fence with lockable entrance gates. Locate where indicated, or enclose the entire site or the portion determined sufficient to accommodate construction operations. Install in a manner that will prevent people, dogs and other animals from easily entering the site, except by the entrance gates.

1. Provide open-mesh, chain-link fencing with posts set in compacted earth.

F. Security Enclosure and Lockup: Install substantial temporary enclosure of partially completed areas of construction. Provide locking entrances to prevent unauthorized entrance, vandalism, theft and similar violations of security.

G. Storage: Where materials and equipment must be stored, and are of value or attractive for theft, provide a secure lockup. Enforce discipline in connection with the installation and release of material to minimize the opportunity for theft and vandalism.

H. Environmental Protection: Provide protection, operate temporary facilities and conduct construction in ways and by methods that comply with environmental regulations, and minimize the possibility that air, waterways and subsoil might be contaminated or polluted, or that other undesirable effects might result. Avoid use of tools and equipment which produce harmful noise. Restrict use of noise making tools and equipment to hours that will minimize complaints from persons or firms near the site.

3.5 OPERATION, TERMINATION AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. Limit availability of temporary facilities to essential and intended uses to minimize waste and abuse.

B. Maintenance: Maintain facilities in good operating condition until removal. Protect from damage by freezing temperatures and similar elements.

C. Protection: Prevent water filled piping from freezing. Maintain markers for underground lines. Protect from damage during excavation operations.

D. Termination and Removal: Remove each temporary facility when the need has ended, or when replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with the temporary facility. Repair damaged Work, clean exposed surfaces and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of the Contractor. The Owner reserves the right to take possession of Project identification signs.

2. Remove temporary paving that is not intended for or acceptable for integration into permanent paving. Where the area is intended for landscape development, remove soil and aggregate fill that does not comply with requirements for fill or subsoil in the area. Remove materials contaminated with road oil, asphalt or other petrochemical compounds, and other substances which might impair growth of plant materials or lawns. Repair or replace street paving, curbs and sidewalks at the temporary entrances and elsewhere when used during construction, as required by the governing

authority, Architect and or the Owner.

3. At Substantial Completion, clean and renovate permanent facilities that have been used during the construction period, including but not limited to:
   a. Replace air filters.
   b. Replace significantly worn parts and parts that have been subject to unusual operating conditions.
   c. Replace lamps that are burned out or noticeably dimmed by substantial hours of use.

END OF SECTION

SECTION 01 55 13.10 - STABILIZED CONSTRUCTION ACCESS

PART 1 G E N E R A L

1.1 SECTION INCLUDES

A. Installation of erosion and sediment control for stabilized construction access points used during construction and until final development of the site.

1.2 SUBMITTALS

A. Manufacturer's catalog sheets and other product data on geotextile fabric.

B. Sieve analysis of aggregates conforming to requirements of this Specification.

1.3 REFERENCES

A. ASTM D 4632 - Standard Test Method for Grab Breaking Load and Elongation of Geotextiles.

PART 2 P R O D U C T S

2.1 GEOTEXTILE FABRIC

A. Provide woven or nonwoven geotextile fabric made of either polypropylene, polyethylene, ethylene, or polyamide material.

B. Geotextile fabric shall have a minimum grab strength of 270 psi in any principal direction (ASTM D-4632), and the equivalent opening size between 50 and 140.

C. Both the geotextile and threads shall be resistant to chemical attack, mildew, and rot and shall contain ultraviolet ray inhibitors and stabilizers to provide a minimum of 6 months of expected usable life at a temperature range of 0°F to 120°F.

D. Representative Manufacturers: Mirafi, Inc., or equal.

2.2 COARSE AGGREGATES

A. Coarse aggregate shall consist of crushed stone, gravel, crushed blast furnace slag, or a combination of these materials. Aggregate shall be composed of clean, hard, durable materials free from adherent coatings, salt, alkali, dirt, clay, loam, shale, soft or flaky materials, or organic and injurious matter.

B. Coarse aggregates shall be 2" to 5" in size. No crushed concrete will be allowed.

PART 3 E X E C U T I O N

3.1 PREPARATION AND INSTALLATION

A. If necessary to keep the street clean of mud carried by construction vehicles and equipment, Contractor shall provide stabilized construction roads and exits at the construction, staging, parking, storage, and disposal areas. Such erosion and sediment controls shall be constructed in accordance with the requirements shown on the Drawings and specified in this Section.

B. No clearing and grubbing or rough cutting shall be permitted until erosion and sediment control systems are in place, other than as specifically directed by the Owner's Representative to allow soil testing and surveying.

C. Maintain existing erosion and sediment control systems located within the project site until acceptance of the project or until directed by the Owner's Representative to remove and discard the existing system.

D. Regularly inspect and repair or replace components of stabilized construction access points. Unless otherwise directed, maintain the stabilized construction roads and access points until the project is accepted by the Owner. Remove stabilized construction roads and access points promptly when directed by the Owner's Representative. Discard removed materials off site in accordance with the requirements of Division 1.

E. Remove sediment deposits and dispose of them at the designated spoil site for the project. If a project spoil site is not designated on the Drawings, dispose of sediment off site at location not in or adjacent to a stream or floodplain. Off-site disposal is the responsibility of the Contractor. Sediment to be placed at the project site should be spread evenly throughout the site, compacted and stabilized. Sediment shall not be allowed to flush into a stream or drainage way. If sediment has been contaminated, it shall be disposed of in accordance with existing federal, state, and local rules and regulations.

F. Equipment and vehicles shall be prohibited by the Contractor from maneuvering on areas outside of dedicated rights-of-way and easements for construction. Damage caused by construction traffic to erosion and sediment control systems shall be repaired immediately.

G. Conduct all construction operation under this Contract in conformance with the erosion control practices described in Division 1.

3.2 CONSTRUCTION METHODS

A. Provide stabilized access roads, subdivision roads, parking areas, and other on-site vehicle transportation routes where shown on Drawings.

B. Provide stabilized construction exits, and truck washing areas when approved by Owner's Representative, of the sizes and locations where shown on Drawings or as specified in this Section.

C. Vehicles leaving construction areas shall have their tires cleaned to remove sediment prior to entrance onto public right-of-way. When washing is needed to remove sediment, Contractor shall construct a truck washing area. Truck washing shall be done on stabilized areas which drain into a drainage system protected by erosion and sediment control measures.

D. Details for stabilized construction access points are shown on the Drawings. Construction of all other stabilized areas shall be to the same requirements. Roadway width shall be at least 14 feet for one-way traffic and 20 feet for two-way traffic and shall be sufficient for all ingress and egress. Furnish and place geotextile fabric as a permeable separator to prevent mixing of coarse aggregate with underlaying soil. Exposure of geotextile fabric to the elements between laydown and cover shall be a maximum of 14 days to minimize damage potential.

E. Roads and parking areas shall be graded to provide sufficient drainage away from stabilized areas. Use sandbags, gravel, boards, or similar methods to prevent sediment from entering public right-of-way, receiving stream or storm water conveyance system.

F. The stabilized areas shall be inspected and maintained daily. Provide periodic top dressing with additional coarse aggregates to maintain the required depth. Repair and clean out

damaged control measures used to trap sediment. All sediment spilled, dropped, washed, or tracked onto public right-of-way shall be removed immediately.

G. The length of the stabilized area shall be as shown on the Drawings, but not less than 50 feet. The thickness shall not be less than 8 inches. The width shall not be less than the full width of all points of ingress or regress.

H. Stabilization for other areas shall have the same coarse aggregate, thickness, and width requirements as the stabilized construction access points, except where shown otherwise on the Drawings.

I. Stabilized area may be widened or lengthened to accommodate truck washing area when authorized by Owner's Representative.

J. Alternative methods of construction may be utilized when shown on Drawings, or when approved by the Owner's Representative. These methods include the following:
   1. Cement-Stabilized Soil - Compacted cement-stabilized soil or other fill material in an application thickness of at least 8 inches.
   2. Wood Mats/Mud Mats - Oak or other hardwood timbers placed edge-to-edge and across support wooden beams which are placed on top of existing soil in an application thickness of at least 6 inches.
   3. Steel Mats - Perforated mats placed across perpendicular support members.

END OF SECTION

SECTION 01 55 26 - TRAFFIC CONTROL

PART 1 G E N E R A L

1.1 SECTION INCLUDES

A. Requirements for signs, signals, control devices, traffic barriers, flares, lights and traffic signals; construction parking control, designated haul routes, and bridging of trenches and excavations.

B. Qualifications and requirements for use of flagmen.

1.2 MEASUREMENT AND PAYMENT

A. Stipulated Price Contracts. Include payment for work under this section in the total Stipulated Price.

1.3 REFERENCES

A. Texas Manual on Uniform Traffic Control Devices (TMUTCD).

B. Article 4413 (29bb), commonly referred to as Private Investigators and Private Security Agencies Act, and Article 2.12, Texas Code of Criminal Procedure.

1.4 SUBMITTALS

A. Conform to requirements of Division 1.

B. Traffic control plan:
1. If using traffic control plan contained in the Contract without modification, submit a letter confirming use of the plan.
2. If using a different traffic control plan, submit the plan for approval to the local Governing Jurisdiction, Owner and Engineer. The plan must conform to TMUTCD requirements and be sealed by a Registered Texas Professional Engineer. The Contractor is responsible for obtaining approval from the Governing entity if using an alternate plan.

C. Submit copies of approved lane closure permits issued by all governmental authorities.

D. Submit Schedules of Values for traffic control plan and flagmen within 30 days following Notice to Proceed.

E. Submit records verifying qualifications of Uniformed Peace Officers and Certified Flagmen proposed for use on the Work.

1.5 FLAGMEN

A. Use Uniformed Peace Officers and Certified Flagmen to control movement of vehicular and pedestrian traffic when construction operations encroach on public traffic lanes.

B. Uniformed Peace Officer: Individual employed full-time as a peace officer who receives separate compensation as a privately employed flagman. Private employment may be an employee-employer relationship or on an individual basis. Flagman may not be in the employ of another peace officer nor be a reserve peace officer.
1. Uniformed Peace Officers may be:
a. Sheriffs and their deputies;
b. Constables and deputy constables;
c. Marshals or police officers of an incorporated city, town or village; or
d. As otherwise provided by Article 2.12, Code of Criminal Procedure.

2. The Uniformed Peace Officer must be a full-time peace officer, must work a minimum average of 32 paid hours per week, and must be paid a rate not less than the prevailing minimum hourly wage rate set by the federal Wage and Hour Act. The individual must be entitled to vacation, holidays, and insurance and retirement benefits.

C. Certified Flagman: Individual who receives compensation as a flagman and meets the following qualifications:
1. Formally trained and certified in traffic control procedures by the City's E. B. Cape Center.
2. Speaks English. Ability to speak Spanish is desirable but not required.
3. Paid for flagman duty at an hourly rate not less than the wage rate set for Rough Carpenter under the City of Houston's Wage Scale for Engineering Construction.

D. Certified Flagmen must wear a distinctive uniform, bright-colored vest, and be equipped with appropriate flagging and communication devices while at the Work site. They must also have in their possession while on duty, a proof of training identification card issued by the appropriate training institute.

PART 2 P R O D U C T S

2.1 SIGNS, SIGNALS, AND DEVICES

A. Comply with TMUTCD requirements.

B. Traffic cones and drums, flares and lights: Conform to local jurisdictions' requirements.

2.2 PORTABLE LOW PROFILE CONCRETE BARRIERS

A. The low profile concrete barrier is a patented design. Information concerning this barrier may be obtained from Texas Transportation Institute, Texas A&M University System, College Station, Texas 77843-3135, (409) 845-1712.

PART 3 E X E C U T I O N

3.1 PUBLIC ROADS

A. Submit requests forms for lane closure and sidewalk closure to the appropriate governmental authority at least three working days prior to need for blocking vehicular lanes or sidewalks. Do not block lanes or sidewalks without approved permits.

B. Follow laws and regulations of governing jurisdictions when using public roads. Pay for and obtain permits from jurisdiction before impeding traffic or closing lanes. Coordinate activities with Owner's Representative.

C. Give Owner's Representative one-week notice before implementing approved traffic control phases. Inform local businesses of impending traffic control activities.

D. Notify police department, fire department, METRO, and local schools, churches, and businesses in writing a minimum of five business days prior to beginning work.

E. Maintain 10-foot-wide all-weather lanes adjacent to the Work for emergency vehicle use. Keep all-weather lanes free of construction equipment and debris.

F. Do not to obstruct normal flow of traffic from 7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m. on designated major arterials or as directed by Owner's Representative.

G. Maintain local driveway access to residential and commercial properties adjacent to work areas at all times. Use all-weather materials approved by Owner's Representative to maintain temporary driveway access to commercial and residential driveways.

H. Keep streets entering and leaving job site free of excavated material, debris, and foreign material resulting from construction operations in compliance with applicable ordinances.

I. Remove existing signage and striping that conflict with construction activities or that may cause driver confusion.

J. Provide safe access for pedestrians along major cross streets.

K. Alternate closures of cross streets so that two adjacent cross streets are not closed simultaneously.

L. Do not close more than two consecutive esplanade openings at a time without prior approval from Owner's Representative.

3.2 CONSTRUCTION PARKING CONTROL

A. Control vehicular parking to prevent interference with public traffic and parking, access by emergency vehicles, and the Owner's operations.

B. Monitor parking of construction personnel's vehicles in existing facilities. Maintain vehicular access to and through parking areas.

C. Prevent parking on or adjacent to access roads or in non-designated areas.

3.3 FLARES AND LIGHTS

A. Provide flares and lights during hours of low visibility to delineate traffic lanes and to guide traffic.

3.4 HAUL ROUTES

A. Utilize haul routes designated by authorities or shown on Drawings for construction traffic.

B. Confine construction traffic to designated haul routes.

C. Provide traffic control at critical areas of haul routes to regulate traffic and minimize interference with public traffic.

3.5 TRAFFIC SIGNS AND SIGNALS

A. Construct necessary traffic control devices for temporary signals required to complete the Work including loop detectors, traffic signal conduits, traffic signal wiring and crosswalk signals. Notify the governmental agency having jurisdiction a minimum of 60 days in advance of need for control boxes and switchgear. The Contractor will pay for all necessary service, programming or adjustments, to signal boxes and switchgear if required during construction.

B. Install and operate traffic control signals to direct and maintain orderly traffic flow in areas under Contractor's control affected by Contractor's operations. Post notices, signs and traffic controls before moving into next phase of traffic control.

C. Relocate traffic signs and signals as the Work progresses to maintain effective traffic control.

D. Unless otherwise approved by Owner's Representative, provide driveway signs with name of business that can be accessed from each crossover. Use two signs for each crossover.

E. Replace existing traffic control devices in Project area.

F. Owner's Representative may direct Contractor to make minor adjustments to traffic control signage to eliminate driver confusion and maintain orderly traffic flow during construction at no additional cost to the Owner.

3.6 BRIDGING TRENCHES AND EXCAVATIONS

A. When necessary, construct bridges over trenches and excavation to permit an unobstructed flow of traffic across construction areas and major drives. Use steel plates of sufficient thickness to support H-20 loading and install to operate with minimum noise.

B. Shore trench or excavation to support bridge and traffic.

C. Secure bridging against displacement with adjustable cleats, angles, bolts or other devices when:
1. Bridging is placed over existing bus routes,
2. More than five percent of daily traffic is comprised of commercial or truck traffic,
3. More than two separate plates are used for bridging, and
4. When bridge is to be used for more than five consecutive days.

D. Extend steel plates used for bridging a minimum of 1 foot beyond edges of trench or excavation. Use temporary paving materials such as premix to feather edges of plates to minimize wheel impact on secured bridging.

3.7 REMOVAL

A. Remove equipment and devices when no longer required.

B. Repair damage caused by installation.

C. Remove post settings to a depth of 2 feet.

3.8 TRAFFIC CONTROL, REGULATION AND DIRECTION

A. Use Flagmen to control, regulate and direct an even flow and movement of vehicular and pedestrian traffic, for periods of time as may be required to provide for public safety and convenience, where:
1. Multi-lane vehicular traffic must be diverted into single lane vehicular traffic,
2. Vehicular traffic must change lanes abruptly,
3. Construction equipment must enter or cross vehicular traffic lanes and walks,
4. Construction equipment may intermittently encroach on vehicular traffic lanes and unprotected walks and crosswalks,
5. Traffic regulation is needed due to rerouting of vehicular traffic around the Work site, and
6. Where construction activities might affect public safety and convenience.

B. Use of Flagmen to assist in the regulation of traffic flow and movement does not relieve Contractor of responsibility to take other means necessary to protect the Work and public.

3.9 INSTALLATION STANDARDS

A. Place temporary pavement for single lane closures, in accordance with TMUTCD.

B. Reinstall temporary and permanent pavement markings as approved by Owner's Representative. When weather conditions do not allow application according to manufacturer's requirements, alternate markings may be considered. Submit proposed alternate to Owner's Representative for approval prior to installation. No additional payment will be made for use of alternate markings.

3.10 MAINTENANCE OF EQUIPMENT AND MATERIAL

A. Submit name, address and telephone number of individual designated to be responsible for maintenance of traffic handling at construction site to Owner's Representative. Individual must be accessible at all times to immediately correct deficiencies in equipment and materials used to handle traffic including missing, damaged, or obscured signs, drums, barricades, or pavement markings.

B. Inspect signs, barricades, drums, lamps and temporary pavement markings daily to verify that they are visible, in good working order, and conform with traffic handling plans as approved by Owner's Representative. Immediately repair, clean, relocate, realign, or replace equipment or materials that are not in compliance.

C. Keep equipment and materials, signs and pavement markings, clean and free of dust, dirt, grime, oil, mud, or debris.

D. Obtain approval of Owner's Representative to reuse damaged or vandalized signs, drums, and barricades.

END OF SECTION

SECTION 01 57 10 - TPDES REQUIREMENTS

PART 1 G E N E R A L

1.1 SECTION INCLUDES

A. Documentation to be prepared and signed by Contractor before conducting construction operations, in accordance with the Texas Pollutant Discharge Elimination System (TPDES) Construction General Permit Number TXR 150000 (the Construction General Permit).

B. Implementation, maintenance, inspection, and termination of storm water pollution prevention control measures including, but not limited to, erosion and sediment controls, storm water management plans, waste collection and disposal, off-site vehicle tracking, and other appropriate practices shown on the Drawings or specified elsewhere in the Contract.

C. Review of the Storm Water Pollution Prevention Plan (SWP3) implementation in a meeting with the Owner's Representative prior to start of construction.

1.2 DEFINITIONS

A. Commencement of Construction Activities: The exposure of soil resulting from activities such as clearing, grading, and excavating.

B. Large Construction Activity: Project that:
1. Disturbs five acres or more, or
2. Disturbs less than five acres but is part of a larger common plan of development that will disturb five acres or more of land.

C. Small Construction Activity: Project that:
1. Disturbs one or more acres but less than five acres, or
2. Disturbs less than one acre but is part of a larger common plan of development that will ultimately disturb one or more acres but less than five acres.

D. TPDES Operator:
1. The person or persons who have day-to-day operational control of the construction activities which are necessary to ensure compliance with the SWP3 for the site or other Construction General Permit conditions.

PART 2 P R O D U C T S - Not Used

PART 3 E X E C U T I O N

3.1 SITE SPECIFIC STORM WATER POLLUTION PREVENTION PLAN (SWP3)

A. Prepare a SWP3 following Part III of the Construction General Permit and the applicable local code. If conflicts exist between the Construction General Permit and the local regulations, the more stringent requirements will apply.

B. Update or revise the SWP3 as needed during the construction following Part III, Section E of the Construction General Permit.

C. Submit the SWP3 and any updates or revisions to the Owner's Representative for review and address comments prior to commencing, or continuing, construction activities.

3.2 NOTICE OF INTENT FOR LARGE CONSTRUCTION ACTIVITY

A. Fill out, sign, and date TCEQ Form 20022 Notice of Intent (NOI) for Storm Water Discharges Associated with Construction Activity under the TPDES Construction General Permit (TXR 150000). Contractor shall provide NOI forms for both himself and Owner.

B. Transmit the signed Contractor's copy of TCEQ Form 20022, along with a check for the required fee, made out to Texas Commission on Environmental Quality.

C. Submission of the Notice of Intent form by the Contractor to TCEQ is required a minimum of fourteen days before Commencement of Construction Activities.

3.3 CONSTRUCTION SITE NOTICE FOR SMALL CONSTRUCTION ACTIVITY

A. Fill out, sign, and date the Construction Site Notice, Attachment 2 to TPDES General Permit TXR 150000, "Construction Site Notice."

B. Transmit the signed Construction Site Notice to the Engineer and Owner at least seven days prior to Commencement of Construction Activity.

3.4 CERTIFICATION REQUIREMENTS

A. Conduct inspections in accordance with TCEQ requirements. Ensure persons or firms responsible for maintenance and inspection of erosion and sediment control measures read, fill out, sign, and date the Erosion Control Contractor's Certification for Inspection and Maintenance. Use the EPA NPDES Construction Inspection Form.

3.5 RETENTION OF RECORDS

A. Keep a copy of this document and the SWP3 in a readily accessible location at the construction site from Commencement of Construction Activity until submission of the Notice of Termination (NOT) for Storm Water Discharges Associated with Construction Activity under TPDES Construction General Permit (TXR 150000). Contractors with day-to-day operational control over SWP3 implementation shall have a copy of the SWP3 available at a central location, on-site, for the use of all operators and those identified as having responsibilities under the SWP3. Upon submission of the NOT, submit all required forms and a copy of the SWP3 with all revisions to the Owner's Representative.

3.6 REQUIRED NOTICES

A. Post the following notices from effective date of the SWP3 until date of final site stabilization as defined in the Construction General Permit:
   1. Post the TPDES permit number for Large Construction Activity or a signed TCEQ Construction Site Notice for Small Construction Activity. A signed copy of the Contractor's NOI must also be posted.
   2. Post notices near the main entrance of the construction site in a prominent place for public viewing. Post name and telephone number of Contractor's local contact person, brief project description and location of the SWP3.
      a. If posting near a main entrance is not feasible due to safety concerns, coordinate posting of notice with the Owner's Representative to conform to requirements of the Construction General Permit.
      b. If Project is a linear construction project (e.g.: road, utilities, etc.), post notice in a publicly accessible location near active construction. Move notice as necessary.
   3. Post a notice to equipment and vehicles operators, instructing them to stop, check, and clean tires of debris and mud before driving onto traffic lanes. Post at each stabilized construction exit area.
   4. Post a notice of waste disposal procedures in a readily visible location on site.

3.7 ON-SITE WASTE MATERIAL STORAGE

A. On-site waste material storage shall be self-contained and shall satisfy appropriate local, state, and federal rules and regulations.

B. Prepare list of waste material to be stored on-site. Update list as necessary to include up to-date information. Keep a copy of updated list with the SWP3.

C. Prepare description of controls to reduce pollutants generated from on-site storage. Include storage practices necessary to minimize exposure of materials to storm water, and spill prevention and response measures consistent with best management practices. Keep a copy of the description with the SWP3.

3.8 NOTICE OF TERMINATION

A. Submit a NOT to TCEQ and the Engineer within 30 days after:
   1. Final stabilization has been achieved on all portions of the site that are the responsibility of the Contractor; or
   2. Another operator has assumed control over all areas of the site that have not been stabilized; and
   3. All silt fences and other temporary erosion controls have either been removed, scheduled to be removed as defined in the SWP3, or transferred to a new operator if the new operator has sought permit coverage.

END OF SECTION

SECTION 01 57 19 – TEMPORARY ENVIRONMENTAL CONTROLS

PART 1 G E N E R A L

1.1 SECTION INCLUDES

A. Dewatering, depressurizing, draining, and maintaining trenches, shaft excavations, structural excavations and foundation beds in stable condition, and controlling ground water conditions for tunnel excavations.

B. Protecting work against surface runoff and rising floodwaters.

C. Trapping suspended sediment in the discharge form the surface and ground water control systems.

PART 2 MEASUREMENT AND PAYMENT

2.1 UNIT PRICES

A. Stipulated Price (Lump Sum) Contract. If the Contract is a Stipulated Price Contract, include payment for work under this section in the total Stipulated Price.

2.2 REFERENCES

A. ASTM D 698 - Standard Test Methods for Laboratory Compaction of Soils Using Standard Effort (12,400 ft-lbf/ft3 (600kN-m/m3).

B. Federal Regulations, 29 CFR Part 1926, Standards-Excavation, Occupational Safety and Health Administration (OSHA).

C. Storm Water Management Handbook for Construction Activities prepared by City of Houston, Harris County and Harris County Flood Control District.

2.3 DEFINITIONS

A. Ground water control system: system used to dewater and depressurize water-bearing soil layers.
   1. Dewatering: lowering the water table and intercepting seepage that would otherwise emerge from slopes or bottoms of excavations, or into tunnels and shafts; and disposing of removed water. Intent of dewatering is to increase stability of tunnel excavations and excavated slopes, prevent dislocation of material from slopes or bottoms of excavations, reduce lateral loads on sheeting and bracing, improve excavating and hauling characteristics of excavated material, prevent failure or heaving of bottom of excavations, and to provide suitable conditions for placement of backfill materials and construction of structures and other installations.
   2. Depressurization: includes reduction in piezometric pressure within strata not controlled by dewatering alone, necessary to prevent failure or heaving of excavation bottom or instability of tunnel excavations.

B. Excavation drainage: includes keeping excavations free of surface and seepage water.

C. Surface drainage: includes use of temporary drainage ditches and dikes and installation of temporary culverts and sump pumps with discharge lines necessary to protect Work from any source of surface water.

D. Monitoring facilities for ground water control system: includes piezometers, monitoring wells and flow meters for observing and recording flow rates.

2.4 PERFORMANCE REQUIREMENTS

A. Conduct subsurface investigations to identify groundwater conditions and to provide parameters for design, installation, and operation of groundwater control systems. Submit proposed method and spacing of readings for review prior to obtaining water level readings.

B. Design ground water control system, compatible with requirements of Federal Regulations 29 CFR Part 1926 and Division 2 to produce following results:
   1. Effectively reduce hydrostatic pressure affecting:
      a. Excavations.
      b. Tunnel excavation, face stability or seepage into tunnels.
   2. Develop substantially dry and stable subgrade for subsequent construction operations.
   3. Preclude damage to adjacent properties, buildings, structures, utilities, installed facilities and other work.
   4. Prevent loss of fines, seepage, boils, quick condition, or softening of foundation strata.
   5. Maintain stability of sides and bottom of excavations.

C. Provide ground water control systems that include single-stage or multiple-stage well point systems, eductor and ejector-type systems, deep wells, or combinations of these equipment types.

D. Provide drainage of seepage water and surface water, as well as water from other sources entering excavation. Excavation drainage may include placement of drainage materials, crushed stone and filter fabric, together with sump pumping.

E. Provide ditches, berms, pumps and other methods necessary to divert and drain surface water from excavation and other work areas.

F. Locate ground water control and drainage systems so as not to interfere with utilities, construction operations, adjacent properties, or adjacent water wells.

G. Assume sole responsibility for ground water control systems and for any loss or damage resulting from partial or complete failure of protective measures and settlement or resultant damage caused by ground water control operations. Modify ground water control systems or operations if they cause or threaten to cause damage to new construction, existing site improvements, adjacent property, adjacent water wells, or potentially contaminated areas. Repair damage caused by ground water control systems or resulting from failure of system to protect property as required.

H. Install an adequate number of piezometers installed at proper locations and depths, necessary to provide meaningful observations of conditions affecting excavation, adjacent structures and water wells.

I. Install environmental monitoring wells at proper locations and depths necessary to provide adequate observations of hydrostatic conditions and possible contaminant transport from contamination sources into work area or ground water control system.

2.5 SUBMITTALS

A. Conform to requirements of Division 1.

B. Submit Ground Water and Surface Water Control Plan for review by Owner’s Representative prior to start of excavation work. Include the following:
   1. Results of subsurface investigations and description of extent and characteristics of water bearing layers subject to ground water control.
   2. Names of equipment Suppliers and installation Subcontractors.
   3. Description of proposed ground water control systems indicating arrangement, location, depth and capacities of system components, installation details and criteria and operation and maintenance procedures.

4. Description of proposed monitoring facilities indicating depths and locations of piezometers and monitoring wells, monitoring installation details and criteria, type of equipment and instrumentation with pertinent data and characteristics.
5. Description of proposed filters including types, sizes, capacities and manufacturer's application recommendations.
6. Design calculations demonstrating adequacy of proposed systems for intended applications. Define potential area of influence of ground water control operation near contaminated areas.
7. Operating requirements, including piezometric control elevations for dewatering and depressurization.
8. Excavation drainage methods including typical drainage layers, sump pump application and other means.
9. Surface water control and drainage installations.
10. Proposed methods and locations for disposing of removed water.

C. Submit following records upon completion of initial installation:
1. Installation and development reports for well points, eductors, and deep wells.
2. Installation reports and baseline readings for piezometers and monitoring wells.
3. Baseline analytical test data of water from monitoring wells.
4. Initial flow rates.

D. Submit the following records weekly during control of ground and surface water operations:
1. Records of flow rates and piezometric elevations obtained during monitoring of dewatering and depressurization. Refer to Paragraph 3.02, Requirements for Eductor, Well Points, or Deep Wells.
2. Maintenance records for ground water control installations, piezometers and monitoring wells.

2.6 ENVIRONMENTAL REQUIREMENTS

A. Comply with requirements of agencies having jurisdiction.

B. Comply with Texas Commission on Environmental Quality regulations and Texas Water Well Drillers Association for development, drilling, and abandonment of wells used in dewatering system.

C. Obtain necessary permits from agencies with jurisdiction over use of groundwater and matters affecting well installation, water discharge, and use of existing storm drains and natural water sources. Since review and permitting process may be lengthy, take early action to obtain required approvals.

D. Monitor ground water discharge for contamination while performing pumping in vicinity of potentially contaminated sites.

PART 3 P R O D U C T S

3.1 EQUIPMENT AND MATERIALS

A. Select equipment and materials necessary to achieve desired results for dewatering. Selected equipment and materials are subject to review by Owner’s Representative through submittals required in Paragraph 1.06, Submittals.

B. Use experienced contractors, regularly engaged in ground water control system design, installation, and operation, to furnish and install and operate eductors, well points, or deep wells, when needed.

C. Maintain equipment in good repair and operating condition.

D. Keep sufficient standby equipment and materials available to ensure continuous operation, where required.

E. Portable Sediment Tank System: Standard 55-gallon steel or plastic drums, free of hazardous material contamination.
   1. Shop or field fabricate tanks in series with main inlet pipe, inter-tank pipes and discharge pipes, using quantities sufficient to collect sediments from discharge water.

PART 4 E X E C U T I O N

4.1 GROUND WATER CONTROL

A. Perform necessary subsurface investigation to identify water bearing layers, piezometric pressures and soil parameters for design and installation of ground water control systems. Perform pump tests, if necessary to determine draw down characteristics. Present results in the Ground Water and Surface Water Control Plan submittal.

B. Provide labor, material, equipment, techniques and methods to lower, control and handle ground water in manner compatible with construction methods and site conditions. Monitor effectiveness of installed system and its effect on adjacent property.

C. Install, operate, and maintain ground water control systems in accordance with the Ground Water and Surface Water Control Plan. Notify Owner's Representative in writing of changes made to accommodate field conditions and changes to Work. Provide revised drawings and calculations with notification.

D. Provide continuous system operation, including nights, weekends, and holidays. Arrange appropriate backup if electrical power is primary energy source for dewatering system.

E. Monitor operations to verify systems lower ground water piezometric levels at rate required to maintain dry excavation resulting in stable subgrade for subsequent construction operations.

F. Depressurize zones where hydrostatic pressures in confined water bearing layers exist below excavations to eliminate risk of uplift or other instability of excavation or installed works. Define allowable piezometric elevations in the Ground Water and Surface Water Control Plan.

G. Removal of ground water control installations.
   1. Remove pumping system components and piping when ground water control is no longer required.
   2. Remove piezometers, including piezometers installed during design phase investigations and left for Contractor's use, upon completion of testing, as required in accordance with Part 3 of applicable specification.
   3. Remove monitoring wells when directed by Owner's Representative.
   4. Grout abandoned well and piezometer holes. Fill piping that is not removed with cement-bentonite grout or cement-sand grout.

H. During backfilling, maintain water level a minimum of 5 feet below prevailing level of backfill. Do not allow the water level to cause uplift pressures in excess of 80 percent of downward pressure produced by weight of structure or backfill in place. Do not allow water levels to rise into cement-stabilized sand until at least 48 hour after placement.

I. Provide uniform pipe diameter for each pipe drain run constructed for dewatering. Remove pipe drains when no longer required. If pipe removal is impractical, grout connections at 50-foot intervals and fill pipe with cement-bentonite grout or cement-sand grout after removal from service.

J. The extent of ground water control for structures with permanent perforated underground drainage systems may be reduced, for units designed to withstand hydrostatic uplift pressure. Provide a means to drain affected portions of underground systems, including standby equipment. Maintain drainage systems during construction operations.

K. Remove systems upon completion of construction or when dewatering and control of surface or ground water is no longer required.

L. Compact backfill to not less than 95 percent of maximum dry density in accordance with ASTM D 698.

M. Foundation Slab: Maintain saturation line at least 3 feet below lowest elevations where concrete is to be placed. Drain foundations in areas where concrete is to be placed before placing reinforcing steel. Keep free from water for 3 days after concrete is placed.

4.2 REQUIREMENTS FOR EDUCTOR, WELL POINTS, OR DEEP WELLS

A. For above ground piping in ground water control system, include a 12-inch minimum length of clear, transparent piping between each eductor well or well point and discharge header to allow visual monitoring of discharge from each installation.

B. Install sufficient piezometers or monitoring wells to show that trench or shaft excavations in water bearing materials are pre-drained prior to excavation. Provide separate piezometers for monitoring of dewatering and for monitoring of depressurization. Install piezometers and monitoring wells for tunneling as appropriate for selected method of work.

C. Install piezometers or monitoring wells at least one week in advance of the start of associated excavation.

D. Dewatering may be omitted for portions of under drains or other excavations, where auger borings and piezometers or monitoring wells show that soil is pre-drained by existing systems and that ground water control plan criteria are satisfied.

E. Replace installations that produce noticeable amounts of sediments after development.

F. Provide additional ground water control installations, or change method of control if, ground water control plan does not provide satisfactory results based on performance criteria defined by plan and by specifications. Submit revised plan according to Paragraph 1.6B.

4.3 SEDIMENT TRAPS

A. Install sediment tank as shown on approved plan.

B. Inspect daily and clean out tank when one-third of sediment tank is filled with sediment.

4.4 SEDIMENT SUMP PIT

A. Install sediment sump pits as shown on approved plan.

B. Construct standpipe by perforating 12 inch to 24-inch diameter corrugated metal or PVC pipe.

C. Extend standpipe 12 inches to 18 inches above lip of pit.

D. Convey discharge of water pumped from standpipe to sediment trapping device.

E. Fill sites of sump pits, compact to density of surrounding soil and stabilize surface when construction is complete.

4.5 EXCAVATION DRAINAGE

A. Use excavation drainage methods if well-drained conditions can be achieved. Excavation drainage may consist of layers of crushed stone and filter fabric, and sump pumping, in combination with sufficient ground water control wells to maintain stable excavation and backfill conditions.

4.6 MAINTENANCE AND OBSERVATION

A. Conduct daily maintenance and observation of piezometers or monitoring wells while ground water control installations or excavation drainage is operating at the site, or water is seeping into tunnels, and maintain systems in good operating condition.

B. Replace damaged and destroyed piezometers or monitoring wells with new piezometers or wells as necessary to meet observation schedules.

C. Cut off piezometers or monitoring wells in excavation areas where piping is exposed, only as necessary to perform observation as excavation proceeds. Continue to maintain and make specified observations.

D. Remove and grout piezometers inside or outside of excavation area when ground water control operations are complete. Remove and grout monitoring wells when directed by Owner’s Representative.

4.7 MONITORING AND RECORDING

A. Monitor and record average flow rate of operation for each deep well, or for each wellpoint or eductor header used in dewatering system. Also, monitor and record water level and ground water recovery. Record observations daily until steady conditions are achieved and twice weekly thereafter.

B. Observe and record elevation of water level daily as long as ground water control system is in operation, and weekly thereafter until Work is completed or piezometers or wells are removed, except when Owner’s Representative determines more frequent monitoring and recording are required. Comply with Owner’s Representative's direction for increased monitoring and recording and take measures necessary to ensure effective dewatering for intended purpose.

4.8 SURFACE WATER CONTROL

A. Intercept surface water and divert it away from excavations through use of dikes, ditches, curb walls, pipes, sumps or other approved means. Requirement includes temporary works required to protect adjoining properties from surface drainage caused by construction operations.

B. Divert surface water and seepage water into sumps and pump it into drainage channels or storm drains, when approved by agencies having jurisdiction. Provide settling basins when required by agencies.

END OF SECTION

SECTION 01 57 23 – TEMPORARY STORM WATER POLLUTION CONTROL

PART 1 G E N E R A L

1.1 SECTION INCLUDES

A. Implementation of Storm Water Pollution Prevention Plans (SWP3) described in Division 1.

B. Installation and maintenance of storm-water pollution prevention structures: diversion dikes, interceptor dikes, diversion swales, interceptor swales, down spout extenders, pipe slope drains, paved flumes and level spreaders. Structures are used during construction and prior to final development of the site.

C. Filter Fabric Fences:
1. Type 1: Temporary filter fabric fences for erosion and sediment control in non-channelized flow areas.
2. Type 2: Temporary reinforced filter fabric fences for erosion and sediment control in channelized flow areas.

D. Straw Bale Fence.

1.2 MEASUREMENT AND PAYMENT

A. Stipulated Price (Lump Sum) Contract. If Contract is Stipulated Price Contract, payment for Work in this Section is included in total Stipulated Price.

1.3 REFERENCE STANDARDS

A. ASTM
1. A 36 - Standard Specification for Carbon Structural Steel.
2. D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort [12,400 ft-lbf/ft3 (600 kN-m/m3)].
3. D3786 - Standard Test Method for Hydraulic Bursting Strength for Knitted Goods and Nonwoven Fabrics.
4. D 4355 - Standard Test Method for Deterioration of Geotextiles from Exposure to Ultraviolet Light and Water (Xenon-Arc Type Apparatus).
5. D 4491 - Standard Test Methods for Water Permeability of Geotextiles by Permittivity.
6. D 4632 - Standard Test Method for Grab Breaking Load and Elongation of Geotextiles.
7. D 4833 - Standard Test Method for Index Puncture Resistance of Geotextiles, Geomembranes, and Related Products.
8. D 6382 - Standard Practice for Dynamic Mechanical Analysis and Thermogravimetry of Roofing and Waterproofing Membrane Material.

B. Storm Water Management Handbook for Construction Activities prepared by City of Houston, Harris County and Harris County Flood Control District.

1.4 SYSTEM DESCRIPTIONS

A. Filter Fabric Fence Type 1 and Type 2: Install to allow surface or channel runoff percolation through fabric in sheet-flow manner and to retain and accumulate sediment. Maintain Filter Fabric Fences to remain in proper position and configuration at all times.

B. Interceptor Dikes and Swales: Construct to direct surface or channel runoff around the project area or runoff from project area into sediment traps.

C. Drop Inlet Baskets: Install to allow runoff percolation through the basket and to retain and accumulate sediment. Clean accumulation of sediment to prevent clogging and backups.

D. Sediment traps: Construct to pool surface runoff from construction area to allow sediment to settle onto the bottom of trap.

1.5 SUBMITTALS

A. Conform to requirements of Division 1.

B. Submit manufacturer's literature for product specifications and installation instructions.

C. Submit manufacturer’s catalog sheets and other product data on geotextile or filter fabrics, outlet pipe, perforated riser and connectors.

D. Submit proposed methods, equipment, materials, and sequence of operations for storm-water pollution prevention structures.

E. Submit shop drawings for Drop Inlet Baskets.

PART 2 P R O D U C T S

2.1 CONCRETE

A. Concrete: Class B in accordance with Division 32 or as shown on the Drawings.

2.2 AGREGATE MATERIALS

A. Use poorly graded cobbles with diameter greater than 2 inches and less than 5 inches.

B. Provide gravel lining in accordance with Division 31 or as shown on the drawings.

C. Provide clean cobbles and gravel consisting of crushed concrete or stone. Use clean, hard crushed concrete or stone free from adherent coatings, salt, alkali, dirt, clay, loam, shale, soft or flaky materials, or organic matter.

D. Sediment Pump Pit Aggregate: Use nominal 2-inch diameter river gravel.

2.3 PIPE

A. Polyethylene culvert pipe or PVC sewer pipe in accordance with Division 33 or as shown on the Drawings.

B. Inlet Pipes: Galvanized steel pipe in accordance with Division 33 or as shown on the Drawings.

C. Standpipe for Sediment Pump Pits: Galvanized round culvert pipe or round PVC pipe, minimum of 12-inch and a maximum of 24-inch diameter, perforate at 6 to 12 inch centers around circumference.

2.4 GEOTEXTILE FILTER FABRIC

A. Woven or nonwoven geotextile filter fabric made of either polypropylene, polyethylene, ethylene, or polyamide material, in continuous rolls of longest practical length.

B. Grab Strength: 100 psi in any principal direction (ASTM D-4632), Mullen burst strength >200 psi (ASTM D-3786), and equivalent opening size between 50 and 140.

C. Furnish ultraviolet inhibitors and stabilizers for minimum 6 months of expected usable construction life at temperature range of 0 degrees F to 120 degrees F.

D. Mirafi, Inc., Synthetic Industries, or equivalent.

2.5 FENCING

A. Wire Fencing: Woven galvanized steel wire, 14 gauge by 6-inch square mesh spacing, minimum 24 inch roll or sheet width of longest practical length.

B. Fence Stakes: Nominal 2 x 2 inch moisture-resistant treated wood or steel posts (min. of 1.25 lbs. per linear foot and Brinell Hardness greater than 140) with safety caps on top; length as required for minimum 12 inch bury and full height of filter fabric.

2.6 SANDBAGS

A. Provide woven material made of polypropylene, polyethylene, or polyamide material.
1. Minimum unit weight of four ounces per square yard.
2. Minimum grab strength of 100 psi in any principal direction (ASTM D4632).
3. Mullen burst strength exceeding 300 psi (ASTM D3786).
4. Ultraviolet stability exceeding 70 percent.
5. Size: Length: 18 to 24 inches. Width: 12 to 18 inches. Thickness: 6 to 8 inches. Weight: 50 to 125 pounds.

2.7 DROP INLET BASKET

A. Provide steel frame members in accordance with ASTM A36.

B. Construct top frame of basket with two short sides of 2 inch by 2 inch and single long side of 1 inch by 1 inch, 1/8 inch angle iron. Construct basket hangers of 2 inch by 1/4 inch iron bars. Construct bottom frame of 1 inch by 1/4 inch iron bar or 1/4 inch plate with center 3 inches removed. Use minimum 1/4 inch diameter iron rods or equivalent for sides of inlet basket. Weld minimum of 14 rods in place between top frame/basket hanger and bottom frame. Exact dimensions for top frame and insert basket will be determined based on dimensions of type of inlet being protected.

PART 3 E X E C U T I O N

3.1 PREPARATION, INSTALLATION AND MAINTENANCE

A. Provide erosion and sediment control structures at locations shown on the Drawings.

B. Do not clear, grub or rough cut until erosion and sediment control systems are in place unless approved by Project Manger to allow installation of erosion and sediment control systems, soil testing and surveying.

C. Maintain existing erosion and sediment control systems located within project site until acceptance of Project or until directed by Project Manger to remove and discard existing system.

D. Regularly inspect and repair or replace damaged components of erosion and sediment control structures. Unless otherwise directed, maintain erosion and sediment control structure until project area stabilization is accepted. Re-dress and replace granular fill at outlets as needed to replenish depleted granular fill. Remove erosion and sediment control structures promptly when directed by Project Manger. Dispose of materials in accordance with Division 1.

E. Remove and dispose sediment deposits at the designated spoil site for the Project. If a project spoil site is not designated on Drawings, dispose of sediment off site at approved location in accordance with Division 1.

F. Unless otherwise shown on the Drawings, compact embankments, excavations, and trenches in accordance with Division 31.

G. Prohibit equipment and vehicles from maneuvering on areas outside of dedicated right of way and easements for construction. Immediately repair damage caused by construction traffic to erosion and sediment control structures.

H. Protect existing trees and plants in accordance with Division 1.

3.2 SEDIMENT TRAPS

A. Install sediment traps so that surface runoff shall percolate through system in sheet flow fashion and allow retention and accumulation of sediment.

B. Inspect sediment traps after each rainfall, daily during periods of prolonged rainfall, and at a minimum once each week. Repair or replace damaged sections immediately.

C. Use fill material for embankment in accordance with Division 31.

D. Excavation length and height shall be as specified on Drawings. Use side slopes of 2:1 or flatter.

E. Stone outlet sediment traps:
1. Maintain minimum of 6 inches between top of core material and top of stone outlet, minimum of 4 inches between bottom of core material and existing ground and minimum of 1 foot between top of stone outlet and top of embankment.
2. Embed cobbles minimum of 4 inches into existing ground for stone outlet. Core shall be a minimum of 1 foot in height and in width and wrapped in triple layer of geotextile filter fabric.

F. Sediment Basin with Pipe Outlet Construction Methods: Install outlet pipe and riser as shown on the Drawings.

G. Remove sediment deposits when design basin volume is reduced by one-third or sediment level is one foot below principal spillway crest, whichever is less.

3.3 FILTER FABRIC FENCE CONSTRUCTION METHODS

A. Fence Type 1
1. Install stakes 6 feet on center maximum and firmly embed minimum 12 inches in soil. If filter fabric is factory pre-assembled with support netting, then maximum support spacing is 8 feet. Install wood stakes at a slight angle toward the source of anticipated runoff.
2. Trench in the toe of the fence lines so the downward face of the trenches is flat and perpendicular to direction of flow. V-trench configuration as shown on Drawings may also be used.
3. Lay fabric along edges of trenches in longest practical continuous runs to minimize joints. Make joints only at a support post. Splice with minimum 6-inch overlap and seal securely.
4. Staple filter fabric to stakes at maximum 3 inches on center. Extend fabric minimum 18 inches and maximum 36 inches above natural ground.
5. Backfill and compact trench.

B. Fence Type 2
1. Layout fence same as for Type 1.
2. Install stakes at 6 feet on center maximum and at each joint in wire fence, firmly embedded 1-foot minimum, and inclined it as for Type 1.
3. Tie wire fence to stakes with wire at 6 inches on center maximum. Overlap joints minimum one bay of mesh.
4. Install trench same as for Type 1.
5. Fasten filter fabric wire fence with tie wires at 3 inches on center maximum.

6. Layout fabric same as for Type 1. Fasten to wire fence with wire ties at 3 inches on center maximum and, if applicable, to stakes above top of wire fence it as for Type 1.
7. Backfill and compact trench.

C. Attach filter fabric to wooden fence stakes spaced a maximum of 6 feet apart or steel fence stakes spaced a maximum of 8 feet apart and embedded a minimum of 12 inches. Install stakes at a slight angle toward source of anticipated runoff.

D. Trench in toe of filter fabric fence with spade or mechanical trencher so that downward face of trench is flat and perpendicular to direction of flow. A V-trench configuration may also be used. Lay filter fabric along edges of trench. Backfill and compact trench upon completion of Construction.

E. Filter fabric fence shall have a minimum height of 18 inches and a maximum height of 36 inches above natural ground.

F. Cut length of fence to minimize use of joints. When joints are necessary, splice fabric together only at support post with minimum 6 inch overlap and seal securely.

G. Triangular Filter Fabric Fence Construction Methods:
1. Attach filter fabric to wire fencing, 18 inches on each side. Provide a fabric cover and skirt with continuous wrapping of fabric. Skirt should form continuous extension of fabric on upstream side of fence.
2. Secure triangular fabric filter fence in place using one of the following methods:
   a. Toe-in skirt 6 inches with mechanically compacted material;
   b. Weight down skirt with continuous layer of 3-inch to 5-inch graded rock; or
   c. Trench-in entire structure 4 inches.
3. Anchor triangular fabric filter fence structure and skirt securely in place using 6-inch wire staples on 2-foot centers on both edges and on skirt, or staked using 18-inch by 3/8-inch diameter re-bar with tee ends.
4. Lap fabric filter material by 6 inches to cover segment joints. Fasten joints with galvanized shoat rings.

H. Reinforced Filter Fabric Barrier Construction Methods:
1. Attach woven wire fence to fence stakes.
2. Securely fasten filter fabric material to wire fence with tie wires.
3. When used in swales, ditches or diversions, elevation of barrier at top of filter fabric at flow line location in channel shall be lower than bottom elevation of filter fabric at ends of barrier or top of bank, whichever is less, in order to keep storm water discharge in channel from overtopping bank.
4. Remove sediment deposits when silt reaches depth one-third height of barrier or 6 inches, whichever is less.

3.4 DIKE AND SWALE

A. Unless otherwise indicated, maintain minimum dike height of 18 inches, measured from cleared ground at up slope toe to top of dike. Maintain side slopes of 2:1 or flatter.

B. Dike and Swale Stabilization: When shown on the Drawings, place gravel lining 3 inches thick and compacted into the soil or 6 inches thick if truck crossing is expected. Extend gravel lining across bottom and up both sides of swale minimum height of 8 inches vertically, above bottom. Gravel lining on dike side shall extend up the up slope side of dike a minimum height of 8 inches, measured vertically from interface of existing or graded ground and up slope toe of dike, as shown on Drawings.

C. Divert flow from dikes and swales to sediment basins, stabilized outlets, or sediment trapping devices of types and at locations shown on Drawings. Grade dikes and swales as

shown on Drawings, or, if not specified, provide positive drainage with maximum grade of 1 percent to outlet or basin.

D. Clear in accordance with Division 31.

E. Carry out excavation for swale construction so that erosion and water pollution is minimal. Minimum depth shall be 1 foot and bottom width shall be 4 feet, with level swale bottom. Excavation slopes shall be 2:1 or flatter. Clear, grub and strip excavation area of vegetation and root material.

3.5 DOWN SPOUT EXTENDER

A. Down spout extender shall have slope of approximately 1 percent. Use pipe diameter of 4 inches or as shown on the Drawings. Place pipe in accordance with Division 33.

3.6 PIPE SLOPE DRAIN

A. Compact soil around and under drain entrance section to top of embankment in lifts appropriately sized for method of compaction utilized.

B. Inlet pipe shall have slope of 1 percent or greater. Use pipe diameter as shown on the Drawings.

C. Top of embankment over inlet pipe and embankments directing water to pipe shall be at least 1 foot higher at all points than top of inlet pipe.

D. Pipe shall be secured with hold-down grommets spaced 10 feet on centers.

E. Place riprap apron with a depth equal to pipe diameter with 2:1 side slopes.

3.7 PAVED FLUME

A. Compact soil around and under the entrance section to top of the embankment in lifts appropriately sized for method of compaction utilized.

B. Construct subgrade to required elevations. Remove and replace soft sections and unsuitable material. Compact subgrade thoroughly and shape to a smooth, uniform surface.

C. Construct permanent paved flumes in accordance with Drawings.

D. Remove sediment from riprap apron when sediment has accumulated to depth of one foot.

3.8 LEVEL SPREADER

A. Construct level spreader on undisturbed soil and not on fill. Ensure that spreader lip is level for uniform spreading of storm runoff.

B. Maintain at required depth, grade, and cross section as specified on Drawings. Remove sediment deposits as well as projections or other irregularities which will impede normal flow.

3.9 INLET PROTECTION BARRIER

A. Place sandbags and filter fabric fences at locations shown on the SWP3.

3.10 DROP INLET BASKET CONSTRUCTION METHODS.

A. Fit inlet insert basket into inlet without gaps around insert at locations shown on the SWP3.

B. Support for inlet insert basket shall consist of fabricated metal as shown on Drawings.

C. Push down and form filter fabric to shape of basket. Use sheet of fabric large enough to be supported by basket frame when holding sediment and extend at least 6 inches past frame. Place inlet grates over basket/frame to serve as fabric anchor.

D. Remove sediment deposit after each storm event and whenever accumulation exceeds 1-inch depth during weekly inspections.

3.11 BRUSH BERM CONSTRUCTION METHODS

A. Construct brush berm along contour lines by hand placing method. Do not use machine placement of brush berm.

B. Use woody brush and branches having diameter less than 2-inches with 6-inches overlap. Avoid incorporation of annual weeds and soil into brush berm.

C. Use minimum height of 18-inches measured from top of existing ground at upslope toe to top of berm. Top width shall be 24 inches minimum and side slopes shall be 2:1 or flatter.

D. Embed brush berm into soil a minimum of 4-inches and anchor using wire, nylon or polypropylene rope across berm with a minimum tension of 50 pounds. Tie rope securely to 18-inch x 3/8-inch diameter rebar stakes driven into ground on 4-foot centers on both sides of berm.

3.12 STREET AND SIDEWALK CLEANING

A. Keep areas clean of construction debris and mud carried by construction vehicles and equipment. If necessary, install stabilized construction exits at construction, staging, storage, and disposal areas, following Division 1.

B. In addition to stabilized construction access points, shovel or sweep pavements as required to keep areas clean. Do not water hose or sweep debris and mud off street into adjacent areas, except, hose sidewalks during off-peak hours, after sweeping.

3.13 WASTE COLLECTION AREAS

A. Prevent water runoff from passing through waste collection areas, and prevent water runoff from waste collection areas migrating outside collection areas.

3.14 EQUIPMENT MAINTENANCE AND REPAIR

A. Confine maintenance and repair of construction machinery and equipment to areas specifically designated for that purpose, so fuels, lubricants, solvents, and other potential pollutants are not washed directly into receiving streams or storm water conveyance systems. Provide these areas with adequate waste disposal receptacles for liquid and solid waste. Clean and inspect maintenance areas daily.

B. Where designated equipment maintenance areas are not feasible, take precautions during each individual repair or maintenance operation to prevent potential pollutants from washing into streams or conveyance systems. Provide temporary waste disposal receptacles.

3.15 VEHICLE/ EQUIPMENT WASHING AREAS

A. Install wash area (stabilized with coarse aggregate) adjacent to stabilized construction exit(s), as required to prevent mud and dirt run-off. Release wash water into drainage swales or inlets protected by erosion and sediment controls. Build wash areas following Division 1. Install gravel or rock base beneath wash areas.

B. Wash vehicles only at designated wash areas. Do not wash vehicles such as concrete delivery trucks or dump trucks and other construction equipment at locations where runoff flows directly into watercourses or storm water conveyance systems.

C. Locate wash areas to spread out and evaporate or infiltrate wash water directly into ground, or collect runoff in temporary holding or seepage basins.

3.16 WATER RUNOFF AND EROSION CONTROL

A. Control surface water, runoff, subsurface water, and water from excavations and structures to prevent damage to the Work, the site, or adjoining properties.

B. Control fill, grading and ditching to direct water away from excavations, pits, tunnels, and other construction areas, and to direct drainage to proper runoff courses to prevent erosion, sedimentation or damage.

C. Provide, operate, and maintain equipment and facilities of adequate size to control surface water.

D. Dispose of drainage water to prevent flooding, erosion, or other damage to the site or adjoining areas. Follow environmental requirements.

E. Retain existing drainage patterns external to the site by constructing temporary earth berms, sedimentation basins, retaining areas, and temporary ground cover as required to control conditions.

F. Plan and execute construction and earth work to control surface drainage from cuts and fills, and from borrow and waste disposal areas, to prevent erosion and sedimentation.
   1. Hold area of bare soil exposed at one time to a minimum.
   2. Provide temporary controls such as berms, dikes, and drains.

G. Construct fill and waste areas by selective placement to eliminate surface silts or clays which will erode.

H. Inspect earthwork periodically to detect start of erosion. Immediately apply corrective measures as required to control erosion.

I. Dispose of sediments offsite, not in or adjacent to streams or floodplains, nor allow sediments to flush into streams or drainage ways. Assume responsibility for offsite disposal location.

J. Unless otherwise indicated, compact embankments, excavations, and trenches by mechanically blading, tamping, and rolling soil in maximum of 8-inch layers. Provide compaction density at minimum 90 percent Standard Proctor ASTM D-698-78 density. Make at least one test per 500 cubic yards of embankment.

K. Do not maneuver vehicles on areas outside of dedicated rights-of-way and easements for construction. Immediately repair damage to erosion and sedimentation control systems caused by construction traffic.

L. Do not damage existing trees intended to remain.

3.17 REMOVAL OF CONTROLS

A. Remove erosion and sediment controls when the site is finally stabilized or as directed by Owner’s Representative.

B. Dispose of sediments and waste products following Division 1.

END OF SECTION

SECTION 01 60 00 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements governing the Contractor's selection of products for use in the Project.

B. Standards: Refer to Section "Reference Standards and Definitions" for applicability of industry standards to products specified.

1. Administrative procedures for handling requests for substitutions made after award of the Contract are included under Section "Product Substitutions."
2. Since the Owner is a governmental entity or an organization which may be exempted from the sales and use taxes on certain tangible personal property, the Contractor shall be responsible for:
    a. Determining whether such governmental entity or organization is exempt from such taxes under the Contract Documents.
    b. Determining whether your purchase of any tangible personal property for use in the performance of this contract is exempt.
    c. Obtaining any sales tax exemption certificate from the Owner.
    d. Properly issuing any sales tax exemption certificate to a seller or supplier that the sale of any item of tangible personal property qualifies for an exemption. Maintaining any records required by the laws of the State of Texas or by any valid rules and/or regulations of the Comptroller of Public Accounts of the State of Texas.
    f. Payment of any legally assessed penalties or fines for improper use of any exemption Certificate.

1.3 DEFINITIONS

A. Definitions used in this Article are not intended to change the meaning of other terms used in the Contract Documents, such as "specialties," "systems," "structure," "finishes," "accessories," and similar terms. Such terms are self-explanatory and have well recognized meanings in the construction industry.

1. "Products" are items purchased for incorporation in the Work, whether purchased for the Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

2. "Named Products" are items identified by manufacturer's product name, including make or model designation, indicated in the manufacturer's published product literature, that is current as of the date of the Contract Documents.

3. "Foreign Products", as distinguished from "domestic products," are items substantially manufactured (50 percent or more of value) outside of the United States and its possessions; or produced or supplied by entities substantially owned (more than 50 percent) by persons who are not citizens of nor living within the United States and its possessions.
4. "Materials" are products that are substantially shaped, cut, worked, mixed, finished,

refined or otherwise fabricated, processed, or installed to form a part of the Work.

5. "Equipment" is a product with operational parts, whether motorized or manually operated, that requires service connections such as wiring or piping.

1.4 SUBMITTALS

A. Product List Schedule: Prepare a schedule showing products specified in a tabular form acceptable to the Architect. Include generic names of products required. Include the manufacturer's name and proprietary product names for each item listed.

1. Coordinate the product list schedule with the Contractor's Construction Schedule and the Schedule of Submittals.

B. Form: Prepare the product listing schedule with information on each item tabulated under the following column headings:

1. Related Specification Section number.
2. Generic name used in Contract Documents.
3. Proprietary name, model number and similar designations.
4. Manufacturer's name and address.
5. Supplier's name and address.
6. Installer's name and address.
7. Projected delivery date, or time span of delivery period.

C. Initial Submittal: Within 30 days after date of commencement of the Work, submit 3 copies of an initial product list schedule. Provide a written explanation for omissions of data, and for known variations from Contract requirements.

1. At the Contractor's option, the initial submittal may be limited to product selections and designations that must be established early in the Contract period.

D. Completed Schedule: Within 30 days after date of commencement of the Work, submit 3 copies of the completed product list schedule. Provide a written explanation for omissions of data, and for known variations from Contract requirements.

E. Architect's Action: The Architect will respond in writing to the Contractor within 2 weeks of receipt of the completed product list schedule. No response within this time period constitutes no objection to listed manufacturers or products but does not constitute a waiver of the requirement that products comply with Contract Documents. The Architect's response will include the following:

1. A list of unacceptable product selections, containing a brief explanation of reasons for this action.

1.5 QUALITY ASSURANCE

A. Source Limitations: To the fullest extent possible, provide products of the same kind, from a single source.

1. When specified products are available only from sources that do not or cannot produce a quantity adequate to complete project requirements in a timely manner, consult with the Architect for a determination of the most important product qualities before proceeding. Qualities may include attributes relating to visual appearance, strength, durability, or compatibility. When a determination has been made, select products from sources that produce products that possess these qualities, to the fullest extent

possible.

B. Compatibility of Options: When the Contractor is given the option of selecting between two or more products for use on the Project, the product selected shall be compatible with products previously selected, even if previously selected products were also options.

C. Nameplates: Except for required labels and operating data, do not attach or imprint manufacturer's or producer's nameplates or trademarks on exposed surfaces of products which will be exposed to view in occupied spaces or on the exterior.

D. Labels: Locate required product labels and stamps on a concealed surface or, where required for observation after installation, on an accessible surface that is not conspicuous.

E. Equipment Nameplates: Provide a permanent nameplate on each item of service-connected or power-operated equipment. Locate on an easily accessible surface which is inconspicuous in occupied spaces. The nameplate shall contain the following information and other essential operating data:
   1. Name of product and manufacturer.
   2. Model and serial number.
   3. Capacity.
   4. Speed.
   5. Ratings.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store and handle products in accordance with the manufacturer's recommendations, using means and methods that will prevent damage, deterioration and loss, including theft.

B. Schedule delivery to minimize long-term storage at the site and to prevent overcrowding of construction spaces.

C. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft and other losses.

D. Deliver products to the site in the manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting and installing.

E. Inspect products upon delivery to ensure compliance with the Contract Documents, and to ensure that products are undamaged and properly protected.

F. Store products at the site in a manner that will facilitate inspection and measurement of quantity or counting of units.

G. Store heavy materials away from the Project structure in a manner that will not endanger the supporting construction.

H. Store products subject to damage by the elements above ground, under cover in a weathertight enclosure, with ventilation adequate to prevent condensation. Maintain temperature and humidity within range required by manufacturer's instructions.

PART 2 – PRODUCTS

2.1 PRODUCT SELECTION

A. General Product Requirements: Provide products that comply with the Contract Documents,

that are undamaged and, unless otherwise indicated, unused at the time of installation.

1. Provide products complete with all accessories, trim, finish, safety guards and other devices and details needed for a complete installation and for the intended use and effect.

B. Standard Products: Where available, provide standard products of types that have been produced and used successfully in similar situations on other projects.

C. Product Selection Procedures: Product selection is governed by the Contract Documents and governing regulations, not by previous Project experience. Procedures governing product selection include the following:

D. Proprietary Specification Requirements: Where only a single product or manufacturer is named, provide the product indicated. No substitutions will be permitted.

E. Semi-proprietary Specification Requirements: Where two or more products or manufacturers are named, provide one of the products indicated. No substitutions will be permitted.

1. Where products or manufacturers are specified by name, accompanied by the term "or equal," or "or approved equal" comply with the Contract Document provisions concerning "substitutions" to obtain approval for use of an unnamed product.

F. Non-Proprietary Specifications: When the Specifications list products or manufacturers that are available and may be incorporated in the Work, but do not restrict the Contractor to use of these products only, the Contractor may propose any available product that complies with Contract requirements. Comply with Contract Document provisions concerning substitutions to obtain approval for use of an unnamed product.

G. Descriptive Specification Requirements: Where Specifications describe a product or assembly, listing exact characteristics required, with or without use of a brand or trade name, provide a product or assembly that provides the characteristics and otherwise complies with Contract requirements.

H. Performance Specification Requirements: Where Specifications require compliance with performance requirements, provide products that comply with these requirements, and are recommended by the manufacturer for the application indicated. General overall performance of a product is implied where the product is specified for a specific application.

1. Manufacturer's recommendations may be contained in published product literature, or by the manufacturer's certification of performance.

I. Compliance with Standards, Codes and Regulations: Where the Specifications only require compliance with an imposed code, standard or regulation, select a product that complies with the standards, codes or regulations specified.

J. Visual Matching: Where Specifications require matching an established Sample, the Architect's decision will be final on whether a proposed product matches satisfactorily.

1. Where no product available within the specified category matches satisfactorily and also complies with other specified requirements, comply with provisions of the Contract Documents concerning substitutions for selection of a matching product in another product category, or for noncompliance with specified requirements.

K. Visual Selection: Where specified product requirements include the phrase "...as selected from manufacturer's standard colors, patterns, textures..." or a similar phrase, select a product and

manufacturer that complies with other specified requirements. The Architect will select the color, pattern and texture from the product line selected.

L. Allowances: Refer to individual Specification Sections and "Allowance" provisions in Division-1 for allowances that control product selection, and for procedures required for processing such selections.

PART 3 - EXECUTION

3.1 INSTALLATION OF PRODUCTS

A. Comply with manufacturer's instructions and recommendations for installation of products in the applications indicated. Anchor each product securely in place, accurately located and aligned with other Work.

1. Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

END OF SECTION

SECTION 01 70 00 - EXECUTION AND CLOSEOUT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for project closeout, including but not limited to:

1. Inspection procedures.
2. Project record document submittal and digital archiving.
3. Operating and maintenance manual submittal and digital archiving.
4. Submittal of warranties.
5. Final cleaning.
6. Demonstration and training videotapes.

B. Closeout requirements for specific construction activities are included in the appropriate Sections in Divisions 2 through 26.

1.3 SUBSTANTIAL COMPLETION

A. To obtain Substantial Completion the following MUST be complete.
1. All HVAC Commissioning and Test & Balance issues resolved.
2. HVAC Controls Graphics complete and under the full control of Alvin ISD.
3. Elevator complete and being monitored by Alvin ISD Police.
4. Fire and Burglar Alarm Systems complete and being monitored by Alvin ISD.

B. Preliminary Procedures: Before requesting inspection for certification of Substantial Completion, complete the following. List exceptions in the request.

1. In the Application for Payment that coincides with, or first follows, the date Substantial Completion is claimed, show 100 percent completion for the portion of the Work claimed as substantially complete. Include supporting documents for completion as indicated in these Contract Documents and a statement showing an accounting of changes to the Contract Sum.
2. If 100 percent completion cannot be shown, include a list of incomplete items, the value of incomplete construction, and reasons the Work is not complete.
3. Advise Owner of pending insurance change-over requirements.
4. Submit specific warranties, workmanship bonds, maintenance agreements, final certifications, and similar documents.
5. Obtain and submit releases enabling the Owner unrestricted use of the Work and access to services and utilities; include occupancy permits, operating certificates and similar releases.
6. Submit record drawings, maintenance manuals, final project photographs, damage or settlement survey, property survey, and similar final record information.
7. Deliver tools, spare parts, extra materials, and similar items to location designated by Owner. Label with manufacturer's name and model number where applicable. Extra materials include but are not necessarily limited to those listed in the “Summary of Extra Materials” following this Section.

8. Make final change-over of permanent locks and transmit keys to the Owner. Advise the Owner's personnel of change-over in security provisions.
9. Complete start-up testing of systems, and instruction of the Owner's operating and maintenance personnel. Discontinue or change over and remove temporary facilities from the site, along with construction tools, mock-ups, and similar elements.

C. Inspection Procedures: On receipt of a request for inspection, the Architect will either proceed with inspection or advise the Contractor of unfilled requirements. The Architect will prepare the Certificate(s) of Substantial Completion following inspection(s) or advise the Contractor of construction that must be completed or corrected before the certificate will be issued.

1. The Architect will repeat inspection when requested, and assured by the Contractor in writing, that the Work has been substantially completed.
2. Results of the completed inspection will form the basis of requirements for final acceptance.

1.4 FINAL ACCEPTANCE

A. Preliminary Procedures: Before requesting final inspection for certification of final acceptance and final payment, complete the following. List exceptions in the request.

1. Submit the final payment request with releases and supporting documentation not previously submitted and accepted. Include certificates of insurance for products and completed operations where required.
2. Submit an updated final statement, accounting for final additional changes to the Contract Sum.
3. Submit a certified copy of the Architect's final inspection list of items to be completed or corrected, stating that each item has been completed or otherwise resolved for acceptance, and the list has been endorsed and dated by the Architect.
4. Submit final meter readings for utilities, a measured record of stored fuel, and similar data as of the date of Substantial Completion, or when the Owner took possession of and responsibility for corresponding elements of the Work.
5. Submit consent of surety to final payment.
6. Submit Notice of Termination as required in Division 1 Section “Erosion and Sediment Control”.
7. Submit a final liquidated damages settlement statement.
8. Submit evidence of final, continuing insurance coverage complying with insurance requirements.
9. Complete final clean up requirements, including touch-up painting. Touch-up and otherwise repair and restore marred exposed finishes.

B. Re-inspection Procedure: The Architect will re-inspect the Work upon receipt of notice that the Work, including inspection list items from earlier inspections, has been completed, except items whose completion has been delayed because of circumstances acceptable to the Architect.

1. Upon completion of re-inspection, the Architect will prepare a certificate of final acceptance, or advise the Contractor of Work that is incomplete or of obligations that have not been fulfilled but are required for final acceptance.
2. If necessary, re-inspection will be repeated.
3. Should the Architect perform re-inspections, due to failure of the Work to comply with the claims of status of completion made by the Contractor, the Owner shall compensate the Architect for additional services; and the Owner shall deduct the amount of the compensation from the final payment to the Contractor.

1.5 RECORD DOCUMENT SUBMITTALS

A. General: Do not use record documents for construction purposes; protect from deterioration and loss in a secure, fire-resistive location; provide access to record documents for the Architect's reference during normal working hours.

B. **Record Drawings**: Maintain a clean, undamaged set of prints of Contract Drawings at the Project Site. This set must be updated as revisions or issued or field conditions change.

1. The Design Team will issue full revised sheets when changes are made.

2. The GC and Subcontractor's will note any field modifications on the final sheets in (red) prior to scanning the final drawings.

3. All drawings will include the words "As Built Record Drawings" in red located where the professional seals were removed by the GC.

4. The GC will digitally scan full size documents at 300 dpi, and provide a single bookmarked PDF in an editable file to the Owner and Architect for review within 90 days of Substantial completion. (Insure that pages are fit to screen prior to making bookmarks.)

5. Mark new information that is important to the Owner but was not shown on Contract Drawings or Shop Drawings. Example: field modifications.

6. Note related Proposal Requests (PR), Architect's Supplemental Instructions (ASI), Requests for Information (RFI), and Change Order (CO) numbers where applicable.

7. At completion of project, electronically transfer all Project Record Data to one complete set of PDF drawings.

8. Electronically remove, all professional seals on drawings.

9. Sheets with changes shall include the words 'RECORD DRAWINGS'. Where no changes are necessary on a sheet, add the phrase "NO CHANGES". These words shall be located where the professional seals were.

10. Make full size digital scans in indexed PDF format for all drawings and deliver to the Architect and Owner for review. Scans shall be a minimum 300 dpi and all items readable.

11. Bookmark the PDF file by discipline then by sheet. Ensure pages are "fit to screen" prior to making bookmarks. Example:

12. Submit Record Drawings to the Architect within 90 days of Substantial Completion. The Architect will make a cursory review of the drawings and mark any needed changes or additions and return to the Contractor. Do NOT provide prints for review.

13. Make any corrections and re-scan sheets as necessary. Print final half-size set and deliver the printed set and USB Flash Drive containing a single indexed digital file to the Owner. Deliver duplicate USB Flash Drive to the Architect.

    a. Include separate indexed USB Flash Drive to the Owner indicating locations of plumbing shutoff valves and electrical disconnects.

14. The costs of scanning and printing record drawings for review and final delivery shall be paid by the Contractor.

C. **Record Specifications**: Maintain at the project site one complete copy of the Project Manual, including addenda. Mark these specifications to show variations in actual Work performed in comparison with the text of the Specifications and modifications. Give particular attention to substitutions, selection of options and similar information on elements that are concealed or cannot otherwise be readily discerned later by direct observation.

1. Upon completion of the Work, submit a hard-copy of the record Specifications to the Architect for review. Architect will make a cursory review of the record documents and mark any needed changes or additions to the hard-copy and return to the Contractor.

2. Make any corrections and scan specification pages. Reference “Document Scanning” below for scanning and delivery requirements.

3. The costs of scanning and printing record specifications for review and final delivery shall be paid by the Contractor.

D. **Record Project Data**: Make hard copies for binders including Change Orders, Proposal Requests and responses, Requests for Information and responses, and Architect’s Supplemental Instructions.

1. Submit one complete set of Record Project Data to the Architect for review. Architect will make a cursory review of the documents and mark any needed changes or additions to the hard-copy and return to the Contractor.

2. Make any corrections and digitally scan all Project Data pages. Deliver DVD containing a single indexed digital file to the Owner. Deliver duplicate DVD to the Architect. Reference “Document Scanning” below for scanning and delivery requirements.

3. The costs of scanning and printing record Project Data for review and final delivery shall be paid by the Contractor.

E. **Material Finishes Binder (if Applicable):** Provide Finishes Binder with physical samples of all finish materials included in completed Work. Group all samples according to Specification Section.

1. Samples shall include, but not be limited to Paint, Vinyl Wall Covering, Plastic Laminates, Carpet, Rubber Base, VCT, Wood Stains, and other Finishes and Color Selections, regardless of whether they are same as Color Schedule.
2. Label each sample with name of manufacturer, any product number, style or series, and color.
3. Make needed changes to Color Schedule and include in the Finishes Binder.
4. Where samples are or a size, material, or thickness that do not allow inclusion in the Finishes Binder (such as face brick or tile pavers), include product cut sheets from the manufacturer indicating manufacturer, any product number, style or series, and color.
5. Deliver completed Finishes Binder to Architect for review. Architect will make a cursory review of the Finishes Binder and mark any needed changes or additions and return to the Contractor.
6. Make any corrections and deliver completed binder to the Owner.
7. The costs of scanning, printing, and binding record Finishes pages for review and final delivery shall be paid by the Contractor.

F. **Operation and Maintenance Manuals**: Organize operating and maintenance data into

suitable sets of manageable size.

1. Provide (1) Binder Set and Deliver to Project Site.
2. Provide (1) single indexed digital PDF to owner via USB Flash Drive.
   a. Emergency instructions.
   b. Spare parts list.
   c. Copies of warranties.
   d. Wiring diagrams.
   e. Recommended "turn-around" cycles.
   f. Inspection procedures.
   g. Shop Drawings and Product Data.
   h. Fixture lamping schedule.

3. The GC will digitally scan all O&M documents at 300 dpi, and provide a single bookmarked PDF in an editable file to the Owner and Architect for review within 90 days of Substantial Completion. (Ensure that pages are fit to screen prior to making bookmarks.) (Delete any blank pages)
4. Once approved as complete, the GC will print and bind 1 set of Close Out documents in Heavy duty D Slat binders and deliver to the owner at the project site.
5. The costs of scanning, printing, and binding Maintenance and Operations information for review and final delivery shall be paid by the Contractor.

G. **Demonstration and Training Video:** Submit 1 copy of all demonstrations on (1) USB Flash Drive and deliver to owner within 90 days of substantial completion

1. Identification: label with the following information:
   a. Name of Project.
   b. Name and address of photographer.
   c. Name of Architect (and Construction Manager when applicable).
   d. Name of Contractor.
   e. Date video was recorded.
   f. Description of video content including description of subject building equipment and/ or systems, and general description of training or procedures covered.

2. GC may provide manufacturer’s standard video in lieu of on-site custom recorded video if first approved by the Owner.

H. **Close-Out Document Manuals:** Submit for review to the Architect one PDF file bookmarked and indexed in the proper order that the final Close-out binders will be. Do not print binders for the Architect’s review.

The GC will digitally scan all close out documents at 300 dpi, and provide a single bookmarked PDF in an editable file to the Owner and Architect for review within 90 days of Substantial Completion.(Insure that pages are fit to screen prior to making bookmarks.)

Once approved as complete, the GC will print and bind 1 set of Close Out documents in Heavy duty D Slat binders and deliver to the owner at the project site.

The Close Out PDF will include the following in this order (Omit anything not applicable);

1. Project Directory
2. Final List of Subcontractors / Suppliers with Contact information (AIA G805)
3. Contractor’s Affidavit of Payment & Debts Claim (AIA G706)
4. Contractor’s Affidavit of Release of Liens (AIA G706A)
5. Certificate of Substantial Completion (AIA G704)

6. Consent of Surety of Final Payment (AIA G707)
7. Contractor Conditional Waiver & Release of Final Payment
8. Subcontractor/Supplier Release of Final Payment
9. General Contractor Warranty
10. List of Subcontractors / Suppliers & Warranties by Division as cover page for individual subcontractor warranties
11. General Contractor's Hazardous Material Fee (Asbestos/PCBs/Lead) Certificate
12. Subcontractor Supplier Hazardous Material Fee (Asbestos/PCBs/Lead) Certificates
13. Architect / Engineer Hazardous Material Fee (Asbestos/PCBs/Lead) Certificates
14. Plumbing Subcontractor / Supplier (No Lead) Certificate
15. Mechanical Subcontractor / Supplier Refrigerant Certificate
16. Electrical Subcontractor / Supplier (No PCBs) Certificate
17. Materials Testing Letter of Compliance
18. Certificate of TEA Compliance
19. Building Envelope Letter of Compliance
20. Certificate of Occupancy
21. Structural Letter of Compliance
22. Elevation Certificates
23. Elevator Inspection & Acceptance
24. Windstorm WPI-8 Certificate
25. TCEQ Clearance Letter
26. MEP Letter of Compliance / Com Check
27. Plumber Valve Tag Index
28. Fire Alarm Installation Certificate
29. Stage Curtain Fire Certificate
30. TAS Acceptance Letter and State Certificate of Compliance
31. Well Permit
32. Kitchen Food Service Inspection / Permit
33. Boiler Inspection / Permit
34. Backflow Tests / Inspections
35. Key Sign Off to Owner
36. Key Bitting
37. Extra Stock Signoff to Owner
38. Demonstrations - Sign In.

I. **Document Scanning:** PDF files can be created by scans or source PDF files from drawings or other electronic documents.

1. Final documents shall be one digital file each for the following information indexed according to major and minor criteria as indicated below:
   a. Record Drawings organized and bookmarked by discipline then drawing number with title
   b. Record Specifications organized and bookmarked by Division then Specification number with name
   c. Record Product Data organized and bookmarked by specification section and

name
d. Operation and Maintenance Manuals organized and bookmarked by specification section and name
e. Closeout Manuals organized by contractor and/or subcontractor name and trade.
f. Include extended warranties page at beginning of warranty section.

2. Deliver 1 USB Flash Drive to the Owner and 1 to the Architect.

3. All documents shall be scanned at a minimum resolution of 300 dpi.

4. Submit proposed document table of contents to Architect for review prior to completion of scanning and bookmarking work.

5. OCR (searchable) PDF are NOT REQUIRED.

J. Release of Retainage
1. 3% Retainage will be released by owner when all punch list items have been verified as complete. The final 2% Retainage will be released by the owner when all required Close Out Documents have been verified complete by the Architect and provided to the owner.
a. The ARCHITECT and their consultants shall not approve substitution of products that deviate from those specified in this document without prior written approval from OWNER.
b. The Architect will provide an owner room number G sheet *(clean floor plan with only owner room numbers in text big enough to read when the sheet is reduced to 8-1/2" x11"). A separate floor plan with room square feet shall be included in the as-builts.*

PART 2 - PRODUCTS

2.1 CLEANING AGENTS: Use cleaning materials and agents recommended by the manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property, or that might damage finished surfaces.

2.2 PHOTOGRAPHIC MEDIA

1. Video Format: Provide high-quality digital files that can be played on a PC (.wmv or similar).

PART 3 - EXECUTION

3.1 CLOSEOUT PROCEDURES

A. Operating and Maintenance Instructions: Arrange for each installer of equipment that requires regular maintenance to meet with the Owner's personnel to provide instruction in proper operation and maintenance. If installers are not experienced in procedures, provide instruction by manufacturer's representatives. Include a detailed review of the following items:
1. Maintenance manuals.
2. Record documents.
3. Spare parts and materials.
4. Tools.
5. Lubricants.

6. Fuels.
7. Identification systems.
8. Control sequences.
9. Hazards.
10. Cleaning.
11. Warranties and bonds.
12. Maintenance agreements and similar continuing commitments.

B. As part of instruction for operating equipment, demonstrate the following procedures:

1. Start-up.
2. Shut down.
3. Emergency operations.
4. Noise and vibration adjustments.
5. Safety procedures.
6. Economy and efficiency adjustments.
7. Effective energy utilization.
8. Upon review and approval of Architect and Owner of close-out manuals, Contractor to send documents to reprographics company for scanning. Refer to Section H below for additional information concerning PDF scanning and bookmarking requirements. The cost of scanning and bookmarking close out manuals shall be paid by the Contractor.

C. Demonstration and Training Video: Record instruction of Owner's personnel in the operation and maintenance of equipment and systems. Edit video to remove non-instructional conversation. Photographer shall select vantage points to best show equipment, systems, and procedures demonstrated.

1. Contractor may, with Owner’s written approval and in compliance with other requirements, provide manufacturer’s standard demonstration and training video in lieu of on-site custom recorded video.

D. Attic Stock Materials Schedule: Provide a schedule of all attic stock materials. Include information pertaining to quality, description, manufacturer, model no., color, and finish.

3.2 FINAL CLEANING

A. General: General cleaning during construction is required by the General Conditions and included in Section "Temporary Facilities".

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to the condition expected in a normal, commercial building cleaning and maintenance program. Comply with manufacturer's instructions.

1. Complete the following cleaning operations before requesting inspection for Certification of Substantial Completion.
2. Remove labels that are not permanent labels.
3. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compound and other substances that are noticeable vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials.
4. Clean exposed exterior and interior hard-surfaced finishes to a dust-free condition, free of stains, films and similar foreign substances. Restore reflective surfaces to their original reflective condition. Leave concrete floors broom clean. Vacuum carpeted surfaces.
5. Wipe surfaces of mechanical and electrical equipment. Remove excess lubrication and other substances. Clean plumbing fixtures to a sanitary condition. Clean light fixtures and lamps.
6. Clean the site, including landscape development areas, of rubbish, litter and foreign

substances. Sweep paved areas broom clean; remove stains, spills and other foreign deposits. Rake grounds that are neither paved nor planted, to a smooth even-textured surface.

C. Removal of Protection: Remove temporary protection and facilities installed for protection of the Work during construction.

D. Compliance: Comply with regulations of authorities having jurisdiction and safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on the Owner's property. Do not discharge volatile, harmful or dangerous materials into drainage systems. Remove waste materials from the site and dispose of in a lawful manner.

1. Where extra materials of value remaining after completion of associated Work have become the Owner's property, arrange for disposition of these materials as directed.

END OF SECTION

SECTION 01 73 29 - CUTTING AND PATCHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for cutting and patching.

B. Refer to other Sections for specific requirements and limitations applicable to cutting and patching individual parts of the Work.

1. Requirements of this Section also apply to mechanical and electrical installations, as well as work specified in Divisions 2 through 32. Refer to Division-23 and Division-26 Sections for other requirements and limitations applicable to cutting and patching mechanical and electrical installations.

1.3 SUBMITTALS

A. Cutting and Patching Proposal: Where approval of procedures for cutting and patching is required before proceeding, submit a proposal describing procedures well in advance of the time cutting and patching will be performed and request approval to proceed. Include the following information, as applicable, in the proposal:

1. Describe the extent of cutting and patching required and how it is to be performed; indicate why it cannot be avoided.
2. Describe anticipated results in terms of changes to existing construction; include changes to structural elements and operating components as well as changes in the building's appearance and other significant visual elements.
3. List products to be used and firms or entities that will perform Work.
4. Indicate dates when cutting and patching is to be performed.
5. List utilities that will be disturbed or affected, including those that will be relocated and those that will be temporarily out-of-service. Indicate how long service will be disrupted.
6. Where cutting and patching involves addition of reinforcement to structural elements, submit details and engineering calculations to show how reinforcement is integrated with the original structure.
7. Approval by the Architect to proceed with cutting and patching does not waive the Architect's right to later require complete removal and replacement of a part of the Work found to be unsatisfactory.

1.4 QUALITY ASSURANCE

A. Requirements for Structural Work: Do not cut and patch structural elements in a manner that would reduce their load-carrying capacity or load-deflection ratio.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following structural elements:
    a. Foundation construction.
    b. Bearing and retaining walls.
    c. Structural concrete.
    d. Structural steel.
    e. Lintels.

f. Structural decking.
g. Miscellaneous structural metals.
h. Equipment supports.
i. Piping, ductwork, vessels and equipment.
j. Structural systems of special construction in Division-13.

B. Operational and Safety Limitations: Do not cut and patch operating elements or safety related components in a manner that would result in reducing their capacity to perform as intended, or result in increased maintenance, or decreased operational life or safety.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following operating elements or safety related systems:
   a. Shoring, bracing, and sheeting.
   b. Primary operational systems and equipment.
   c. Air or smoke barriers.
   d. Water, moisture, or vapor barriers.
   e. Membranes and flashings.
   f. Fire protection systems.
   g. Noise and vibration control elements and systems.
   h. Control systems.
   i. Communication systems.
   j. Conveying systems.
   k. Electrical wiring systems.
   l. Special construction specified by Division-13 Sections.

C. Visual Requirements: Do not cut and patch construction exposed on the exterior or in occupied spaces, in a manner that would, in the Architect's opinion, reduce the building's aesthetic qualities, or result in visual evidence of cutting and patching. Remove and replace Work cut and patched in a visually unsatisfactory manner.

1. If possible retain the original installer or fabricator to cut and patch the following categories of exposed Work, or if it is not possible to engage the original installer or fabricator, engage another recognized experienced and specialized firm:
   a. Matched-veneer woodwork.
   b. Preformed metal panels.
   c. Window wall system.
   d. Acoustical ceilings.
   e. Finished wood flooring.
   f. Carpeting.
   g. Aggregate wall coating.
   h. Wall covering.
   i. HVAC enclosures, cabinets or covers.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Use materials that are identical to existing materials. If identical materials are not available or cannot be used where exposed surfaces are involved, use materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials whose installed performance will equal or surpass that of existing materials.

PART 3 - EXECUTION

3.1 INSPECTION

A. Before cutting existing surfaces, examine surfaces to be cut and patched and conditions under which cutting and patching is to be performed. Take corrective action before proceeding, if unsafe or unsatisfactory conditions are encountered.

1. Before proceeding, meet at the site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

3.2 PREPARATION

A. Temporary Support: Provide temporary support of Work to be cut.

B. Protection: Protect existing construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of the Project that might be exposed during cutting and patching operations.

1. Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.
2. Take all precautions necessary to avoid cutting existing pipe, conduit or ductwork serving the building, but scheduled to be removed or relocated until provisions have been made to bypass them.

3.3 PERFORMANCE

A. General: Employ skilled workmen to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time and complete without delay.

1. Cut existing construction to provide for installation of other components or performance of other construction activities and the subsequent fitting and patching required to restore surfaces to their original condition.

B. Cutting: Cut existing construction using methods least likely to damage elements to be retained or adjoining construction. Where possible review proposed procedures with the original installer; comply with the original installer's recommendations.

1. In general, where cutting is required use hand or small power tools designed for sawing or grinding, not hammering and chopping. Cut holes and slots neatly to size required with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. To avoid marring existing finished surfaces, cut or drill from the exposed or finished side into concealed surfaces.
3. Cut through concrete and masonry using a cutting machine such as a carborundum saw or diamond core drill.
4. Comply with requirements of applicable Sections of Division-2 where cutting and patching requires excavating and backfilling.
5. By-pass utility services such as pipe or conduit, before cutting, where services are shown or required to be removed, relocated or abandoned. Cut-off pipe or conduit in walls or partitions to be removed. Cap, valve or plug and seal the remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after by-passing and cutting.

C. Patching: Patch with durable seams that are as invisible as possible. Comply with specified tolerances.

1. Where feasible, inspect and test patched areas to demonstrate integrity of the installation.

2. Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.
3. Where removal of walls or partitions extends one finished area into another, patch and repair floor and wall surfaces in the new space to provide an even surface of uniform color and appearance. Remove existing floor and wall coverings and replace with new materials, if necessary to achieve uniform color and appearance.
4. Where patching occurs in a smooth painted surface, extend final paint coat over entire unbroken containing the patch, after the patched area has received primer and second coat.
5. Patch, repair or rehang existing ceilings as necessary to provide an even plane surface of uniform appearance.

3.4 CLEANING

A. Thoroughly clean areas and spaces where cutting and patching is performed or used as access. Remove completely paint, mortar, oils, putty and items of similar nature. Thoroughly clean piping, conduit and similar features before painting or other finishing is applied. Restore damaged pipe covering to its original condition.

END OF SECTION

SECTION 01 74 16 - SITE MAINTENANCE

PART 1 G E N E R A L

1.1 SECTION INCLUDES

A. Restoration of site affected by the Work in public or private property, including pavement, esplanades, sidewalks, driveways, fences, lawns and landscaping.

1.2 MEASUREMENT AND PAYMENT

A. Stipulated Price (Lump Sum) Contracts. If Contract is Stipulated Price Contract, include payment for work under this section in total Stipulated Price.

1.3 DEFINITIONS

A. Phase: Locations identified on the plans and listed in Division 1.

B. Site Restoration: Replacement or reconstruction of Site Improvements located in rights-of-way, easements, public property, and private property affected or altered by the Work.

C. Site Improvement: Includes pavement, curbs and gutters, esplanades, sidewalks, driveways, fences, lawns, irrigation systems, landscaping, and other improvements in existence at the Project site before commencement of construction operations.

1.4 SCHEDULING

A. Schedule testing, service connections, abandonment, backfill and site restoration immediately following completion of work in an area.

B. Phased Construction:
1. Commencement of subsequent Phase will follow scheduling of site restoration of prior Phase. Limit work to a maximum of two Phases of the project.

PART 2 P R O D U C T S

2.1 MATERIALS

A. Pavement, Sidewalks and Driveways: Materials specified in Division 32.

B. Seeding and Sodding: Sod specified in Division 32.

C. Trees, Shrubs and Plantings: Conform to requirements of Division 1.

PART 3 E X E C U T I O N

3.1 SITE PROJECTS

A. Contractor shall maintain a clean and orderly site throughout construction duration. Work includes but is not limited to: insuring grass is mowed and kept at a manageable height, trash is continuously picked up and construction materials are stored in an orderly fashion.

B. Contractor shall immediately repair and restore any damage done to adjoining properties such that final conditions are as equal to or better than prior to damage occurring.

3.2 WORK IN PUBLIC ROW

A. Contractor shall repair and replace any damaged items in the Public ROW to the satisfaction of the local governing authority.

3.3 CLEANING

A. Remove debris and trash to maintain a clean and orderly site in accordance with requirements of General Conditions and Division 1.

3.4 LANDSCAPING AND FENCES

A. Seeding and Sodding.
   1. Remove construction debris and level area with bank sand so that new grass surface matches level of existing grass and maintains pre-construction drainage patterns. Level and fill minor ruts or depressions caused by construction operations with bank sand, where grass is still viable.
   2. Restore previously existing turfed areas with sod and fertilize in accordance with Division 32. Sod to match existing turf.
   3. Restore unpaved areas not requiring sodding with hydromulch seeding conforming to Division 32.

B. Trees, Shrubbery and Plants.
   1. Remove and replant trees, shrubs, and plants in accordance with requirements of Division 1.

C. Fence Replacement.
   1. Replace removed or damaged fencing to equal or better condition than existed prior to construction, including concrete footings and mow strips. Provide new wood posts, top and bottom railing and panels. Metal fencing material, not damaged by the Work, may be reused.
   2. Remove and dispose of damaged or substandard material.

3.5 MAINTENANCE

A. Maintain shrubs, plantings, sodded areas and seeded areas. Replace shrubs, plantings and seeded or sodded areas that fail to become established.

B. Refer to Division 1 for maintenance requirements.

END OF SECTION

SECTION 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 G E N E R A L

1.1 SECTION INCLUDES

A. Disposal of waste material and salvageable material.

1.2 SUBMITTALS

A. Conform to requirements of Division 1.

B. Contractor shall obtain all required permits prior to disposal of excess material in areas designated as being in "100-year Flood Hazard Area."

C. Obtain and submit disposal permits for proposed disposal sites, if required by local ordinances.

D. Submit copy of written permission from property owner, with description of property, prior to disposal of excess material adjacent to Project. Submit written and signed release from property owner upon completion of disposal work.

E. Describe waste materials expected to be stored on-site and a description of controls to reduce Pollutants from these materials, including storage practices to minimize exposure of materials to storm water; and spill prevention and response measures in the Project's Storm Water Pollution Prevention Plan (SWPPP). Refer to Division 1.

PART 2 P R O D U C T S -Not Used

PART 3 E X E C U T I O N

3.1 SALVAGEABLE MATERIAL

A. Excavated Material: When indicated on Drawings, load, haul, and deposit excavated material at location or locations shown on Drawings outside limits of Project.

B. Base, Surface, and Bedding Material: Load shell, gravel, bituminous, or other base and surfacing material designated for salvage into Owner's designated trucks.

C. Pipe Culvert: Load culverts designated for salvage into Owner's designated trucks.

D. Other Salvageable Materials: Conform to requirements of individual Specification Sections.

E. Coordinate loading of salvageable material on Owner's trucks with Owner's Representative.

F. The Contractor shall dispose of all items the Owner refuses in conformance with the requirements of Division 1 at no additional cost to the Owner.

3.2 EXCESS MATERIAL

A. Remove and legally dispose of vegetation, rubble, broken concrete, debris, asphaltic concrete pavement, excess soil, and other materials not designated for salvage from job site.

B. Excess soil may be deposited on private property adjacent to Project when written permission is obtained from property owner. See Paragraph 1.02 D above.

C. Verify flood plain status of any proposed disposal site. Do not dispose of excavated materials in area designated as within 100-year Flood Hazard Area unless a permit has been obtained. Remove excess material placed in "100-year Flood Hazard Area" without a permit, at no additional cost to the Owner.

D. Remove waste materials from site daily, in order to maintain site in neat and orderly condition.

END OF SECTION

SECTION 01 78 00 - WARRANTIES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies general administrative and procedural requirements for warranties required by the Contract Documents, including manufacturers' standard warranties on products and special warranties.
   1. Refer to the General Conditions for terms of the Contractor's special warranty of workmanship and materials.
   2. Refer to Section 01 80 00 – Special Owner Requirements for procedures to be followed in correcting work under warranty.
   3. Closeout requirements are included in Section "Execution and Closeout Procedures."
   4. Specific requirements for warranties for the Work and products and installations that are specified to be warranted, are included in the individual Sections of Divisions 2 - 16.
   5. Certifications and other commitments and agreements for continuing services to Owner are specified elsewhere in the Contract Documents.

B. Separate Prime Contracts: Each Contractor responsible for warranties related to his Contract.

1.3 DEFINITIONS

A. Standard Product Warranties are preprinted written warranties published by manufacturers for particular products and are specifically endorsed by the manufacturer to the Owner.

B. Special Warranties are written warranties required by or incorporated in the Contract Documents, either to extend time limits provided by standard warranties or to provide greater rights for the Owner.

1.4 WARRANTY REQUIREMENTS

A. The General Contractor will be the first point of contact for warranty work performed by subcontractors and manufacturers. Refer to Section 01 80 00 – Special Owner Requirements for procedures to be followed in reporting and correcting work under warranty.

B. Related Damages and Losses: When correcting warranted Work that has failed, remove and replace other Work that has been damaged as a result of such failure or that must be removed and replaced to provide access for correction of warranted Work.

C. Reinstatement of Warranty: When Work covered by a warranty has failed and been corrected by replacement or rebuilding, reinstate the warranty by written endorsement. The reinstated warranty shall be equal to the original warranty with an equitable adjustment for depreciation. The warranty period shall not be extended.

D. Replacement Cost: Upon determination that Work covered by a warranty has failed, replace or rebuild the Work to an acceptable condition complying with requirements of Contract Documents. The Contractor is responsible for the cost of replacing or rebuilding defective Work, including the cost of equipment needed to perform the Work, regardless of whether the Owner has benefited from use of the Work through a portion of its anticipated useful service

life.

E. Owner's Recourse: Written warranties made to the Owner are in addition to implied warranties, and shall not limit the duties, obligations, rights and remedies otherwise available under the law, nor shall warranty periods be interpreted as limitations on time in which the Owner can enforce such other duties, obligations, rights, or remedies.
   1. Rejection of Warranties: Owner reserves the right to reject warranties and to limit selections to products with warranties not in conflict with requirements of the Contract Documents.
      a. The Owner reserves the right to refuse to accept Work for the Project where a special warranty, certification, or similar commitment is required on such Work or part of the Work, until evidence is presented that entities required to countersign such commitments are willing to do so.

1.5 SUBMITTALS

A. Submit written warranties to the Architect prior to the date of activation. If the Architect's Certificate of Substantial Completion designates a commencement date for warranties other than the date of Substantial Completion for the Work, or a designated portion of the Work, submit written warranties upon request of the Architect.
   1. When a designated portion of the Work is completed and occupied or used by the Owner, by separate agreement with the Contractor during the construction period, submit properly executed warranties to the Architect within fifteen days of completion of that designated portion of the Work.
   2. When a special warranty is required, prepare a written document that contains appropriate terms and identification, ready for execution by the required parties. Submit a draft to the Owner through the Architect for approval prior to final execution.
   3. Forms for special warranties are included at the end of particular Sections. Prepare a written document utilizing the appropriate form, ready for execution by the warrantor. Submit a draft to the Owner through the Architect for approval prior to final execution.
      a. Refer to individual Sections of Divisions-2 through -16 for specific content requirements, and particular requirements for submittal of special warranties.

B. Form of Submittal: At Final Completion compile two copies of each required warranty properly executed. Organize the warranty documents into an orderly sequence based on the table of contents of the Project Manual.
   1. Bind warranties in heavy-duty, commercial quality, durable 3-ring vinyl covered loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2" by 11" paper.
      a. Provide heavy paper dividers with celluloid covered tabs for each separate warranty. Mark the tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product, and the name, address and telephone number of the installer.
      b. Identify each binder on the front and the spine with the typed or printed title "WARRANTIES”, the Project title or name, and the name of the Contractor.
   2. When operating and maintenance manuals are required for warranted construction, provide additional copies of each required warranty, as necessary, for inclusion in each required manual.

PART 2 - PRODUCTS (Not applicable).

PART 3 - EXECUTION (Not applicable).

END OF SECTION

Special Owner Requirements

CONTRACTOR'S INSTRUCTION MANUAL FOR ALVIN ISD Revised: January 7, 2023

This manual is provided to contractors who perform services for Alvin ISD. Responsibility for compliance and education of the contractor's staff, suppliers, and subcontractors is a contractual obligation of the individual or company with whom Alvin ISD has contracted to perform the work and services (hereafter referred to as contractor or prime contractor).

The contractor will be required to acknowledge receipt and understanding of this document prior to moving onto any Alvin ISD site or property and beginning work.

A. Contractor's Safety Program

The prime contractor will have a written safety program that is communicated and enforced with construction personnel during the course of performing the contract or services. An electronic copy of the program will be provided to AISD.

As part of the contractor's safety program education, the contractor will be responsible for and ensure that all construction workers, subcontractors, suppliers, etc are made aware of AISD's safety requirements and instructions as included herein.

B. General Requirements

1. All construction related personnel are to confine their activities to their specific job work areas. There will be no loitering or access to unauthorized areas of the campus or facility. Use of AISD toilet facilities, cafeteria, or vending areas by construction personnel is prohibited.
2. Potentially hazardous work areas and excavations are to be secured and provided with warning signs, fencing, shoring, shields, guard rails or other adequate protection and warning signage consistent with acceptable standards of safety and as dictated by law.
3. All contractor equipment and tools on AISD facilities must have designed safety guards and accessories intact, functional, and in use. Equipment or devices whose safety certification has been damaged or compromised will not be used or brought onto AISD job sites.
4. It is the obligation and responsibility of the Prime Contractor, their subcontractors, and all related construction personnel to practice appropriate safety techniques to protect the health and well being of themselves, their co-workers, AISD staff, and students.
5. It is the obligation and responsibility of the Prime Contractor to insure that all State and Federal laws pertaining to criminal history checks are met in order to insure that any on-site job related employee is cleared to be on an Alvin ISD facility that may be occupied with students.
6. Radios and other devices that broadcast music publicly are not allowed on occupied campuses.

C. Drugs and Alcohol

Illegal drugs and intoxicants are explicitly excluded from access or use on any Alvin ISD owned property. Those in possession or under the influence of illegal drugs or intoxicants are specifically excluded from access to any AISD property or facility. Violation will result in immediate removal from AISD property and prosecution as appropriate

D. Weapons and Firearms

Weapons and firearms, as defined by the Alvin ISD Police Department, are strictly prohibited on AISD owned property or facilities. Violation of this requirement will result in immediate removal from AISD property and prosecution as appropriate.

E. Tobacco and Vaping Products

Use of tobacco and / or Vaping products is not permitted on AISD owned property (including the perimeter of the property to 100'). Failure to comply with this requirement may result in the violator being removed and excluded from future access to AISD owned properties.

F. Dress Code and Conduct

At all times, construction personnel will be held accountable for wearing appropriate attire. More specifically, no clothing will be allowed on AISD properties that in the view point of AISD Administration or Police Department is outside the limits of acceptable standards for this school district. Specifically excluded are items of clothing that contain wording or graphics that may be viewed as offensive.

Shirts, long pants (secured at the waist), and hard soled closed toed shoes will be worn at all times.

Loud, boisterous, and/or profane language will not be allowed.

Unauthorized interaction with AISD staff or students will not be tolerated. Any action by construction personnel that may be interpreted by AISD's Administration or Police Department as harassing, offensive, teasing, annoying, or nuisance toward any student or staff member will result in immediate removal, permanent suspension of the offender from school property, and follow up prosecution if justified.

Courtesy and consideration of AISD staff and students by construction personnel is mandated and expected at all times.

When working on or around areas that are occupied and operational by AISD, care and consideration will be given to minimizing disruptions such as noise, dust, housekeeping, and any disruption of utilities that may impact ongoing school or business operations.

G. Emergency Situations, Accidents, and Injuries

All situations that result in accidents, near accidents, injuries, or loss must be reported to AISD. As soon as emergency circumstances allow, the supervisor for the prime contractor must notify the AISD Construction Project Manager or the Coordinator of Planning & Construction, of the occurrence. A written report must follow within 2 business days of the mishap.

EMERGENCY CONTACTS FOR ALVIN I.S.D.

AISD Police – 281 331-2320

Bill VanWagner – Director of Planning & Construction Services
Office: 281-245-2555 - Mobile: 281 299-6496 - E-mail: bvanwagner@alvinisd.net

Billie Cunningham - Coordinator, Planning & Construction Services
Office: 281-245-2960 - Mobile 713-806-7749 - E-mail bcunningham@alvinisd.net

Rudy Santos – Construction Services - Project Manager
Office: 281-245-2524 - Mobile: 281-824-2778 - E-mail: rsantos@alvinisd.net

Shannon Tobias - Construction Services - Project Manager
Office: 281-245-2469 - Mobile: 281-245-7008 - E-mail: stobias@alvinisd.net

H. Hazardous Communications Program

The contractor must have in place an effective HazCom program that complies with Federal Guidelines and Occupational Safety and Health Administration regulations.

All contractors and subcontractors must provide a Workplace Chemical List (WPCL) and Material Safety Data Sheets (MSDS) on site for each chemical they expect to use during the construction project. Chemicals needing to remain on site must be stored according to MSDS guidelines.

Care should be taken to control use and reduce the quantity of on site hazardous materials.

I. Housekeeping and Debris Removal

The contractor is required to keep the entire project area clean and free from accumulation of excess debris at all times. Trash and debris must be managed to contain it on site and confined to the dedicated construction area. Trash will be controlled to eliminate objectionable and unsightly conditions and disposed of in a proper and timely manner. Public roads, parking, walks, etc. will be kept clear of mud and water.

This section also pertains to the grounds keeping of all areas within the construction site and/or under the control of the contractor. All grass areas shall be routinely maintained to provide a neat appearance. This includes but is not limited to weed and pest control around all fenced areas.

J. Parking, Staging, and Lay Down Areas

During construction, the contractor will be assigned and limit their activity to the use of designated areas only. In no case will contractor personnel be allowed to park vehicles randomly in AISD staff or student parking spaces at occupied campuses.

K. Disruptions to Utilities, Equipment, Roadways, and Building Safety Features

The availability of utilities, equipment, access roadways, and building safety features all work to insure safe and productive operation of Alvin ISD's plant and facilities. Consistent with that is the need to manage and plan any disruption to the use of these items. Therefore, shutdowns must be requested, planned, and approved well in advance to minimize disruption to AISD's operations.

L. Asbestos

Alvin ISD will endeavor to identify and/or remove or encapsulate any known asbestos containing materials within a project area prior to beginning a construction or repair project.

In the event that any construction personnel encounter materials suspected of being asbestos containing, they will immediately stop construction activity that would further disturb the ACM and notify the AISD representative managing their work. No further activity should commence that would disturb the potential ACM or expose any workers or building occupants to risk of exposure until AISD has acted and authorized such work to commence.

At the completion of the project and as part of the contract close out, the prime contractor will provide a "Certificate of Asbestos Free Construction" certifying that they have reviewed all MSDS's for materials used and all products installed in the project are asbestos free.

M. OSHA and EPA Compliance

In all cases, the contractor, his subcontractors, suppliers, and construction personnel will comply with any and all laws and regulations as set forth by the Occupational Safety and Health Act and the Environmental Protection Agency. The prime contractor is responsible for enforcing these regulations and guidelines at all times. Failure to comply may be cause for cessation of work and termination of the contract.

N. Schedule for Completion

The contractor will include within their contract days, an appropriate number of lost days due to average inclement or adverse weather conditions. Only weather-related days that exceed the 5 year average for the number of days with ½ inch or greater rainfall as measured by the National Weather Service for the greater Houston area will be granted as extra contract time.

No more than one mud day will accompany each rain day for the duration of the contract. Months containing less than the average rainfall will be credited back to the job schedule.

Maintaining the site drainage and dewatering are the responsibility of the prime contractor and not a valid reason for construction delay.

O. Warranty Work

At the Owner's discretion, the prime contractor shall be responsible for enforcing and coordinating completion of all subcontractor and/or manufacturers warranty repairs, for the duration of those warranty periods, including extended warranties. Any special equipment or building modifications required by the contractor to complete warranty repairs will be included in the warranty. No additional costs will be incurred by Alvin ISD.

Alvin ISD utilizes Google Docs Spreadsheet to notify the contractor of items needing attention that may be covered under the contractual warranty periods. At the owner's discretion, the first point of contact will always be the General Contractor whose responsibility will be to make any necessary contacts to subcontractors and/or manufacturers to initiate and facilitate the warranty claims process. Coordination of facility availability and access by subcontractors will be handled through the General Contractor.

The google spreadsheet will be set up so that the Contractor's representative is notified by E-mail when a warranty issue is added by the owner. The issue will be marked as to the level of urgency it may warrant depending upon the needs of the campus staff or students. There are three levels of urgency, each corresponding to an expected response time.

Emergency: Immediate Response

Urgent: Next Business Day

Normal: Within 3 to 5 Business Days.

Included for each Warranty Request will be a description of the needed repair along with any special working conditions or remarks that the contractor may need to be made aware of. Once the repairs have been completed, the request will need to be updated by the contractor's representative on the Google Docs spreadsheet. Afterwards, the repair will be reviewed and approval will be noted on the document by the owner once accepted as complete.

Completion of this process in its entirety is what will be considered as acceptable completion of a Warranty Request.

If the contractor fails to respond in a timely manner or if safety, security, or the well being of the building or its occupants is at risk, AISD reserves the right to complete the warranty work order at the expense of the prime contractor.

P. Aerial Photography

The General Contractor or Construction Manager shall provide monthly aerial drone photography. Photography shall start the month they are given a notice to proceed until one month AFTER Substantial Completion. The images shall be sent electronically monthly to the Owner and Architect. The cost shall be included in the contractor's final bid price or GMP:

All photos taken shall be from the same fixed position each month at an altitude to see the entire building from all corners, and the entire site for at least 2 photos. Confirm all angles and altitudes with the Client and Architect prior to starting and adjust as needed.

All required licenses and permissions shall be obtained by the Aerial Photography company in order to provide this service for this project at this location.

END OF SECTION

SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. Commissioning is intended to achieve the following specific objectives; this section specifies the Contractor's responsibilities for commissioning:
   1. Verify that the work is installed in accordance with Contract Documents and the manufacturer’s recommendations and instructions, and that it receives adequate operational checkout prior to startup: Startup reports and Prefunctional Checklists executed by Contractor are utilized to achieve this.
   2. Verify and document that functional performance is in accordance with Contract Documents: Functional Tests executed by Contractor and witnessed by the Commissioning Authority are utilized to achieve this.
   3. Verify that operation and maintenance manuals submitted to Owner are complete: Detailed operation and maintenance (O&M) data submittals by Contractor are utilized to achieve this.
   4. Verify that the Owner’s operating personnel are adequately trained: Formal training conducted by Contractor is utilized to achieve this.

B. The Commissioning Authority directs and coordinates all commissioning activities; this section describes some but not all of the Commissioning Authority's responsibilities.

1.2 RELATED REQUIREMENTS

A. Section 01 78 00 - Closeout Submittals: Scope and procedures for operation and maintenance manuals and project record documents.

PART 2 PRODUCTS

2.1 TEST EQUIPMENT

A. Provide all standard testing equipment required to perform startup and initial checkout and required Functional Testing; unless otherwise noted such testing equipment will NOT become the property of Owner.

B. Calibration Tolerances: Provide testing equipment of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. If not otherwise noted, the following minimum requirements apply:
   1. Temperature Sensors and Digital Thermometers: Certified calibration within past year to accuracy of 0.5 degree F and resolution of plus/minus 0.1 degree F.
   2. Pressure Sensors: Accuracy of plus/minus 2.0 percent of the value range being measured (not full range of meter), calibrated within the last year.
   3. Calibration: According to the manufacturer’s recommended intervals and when dropped or damaged; affix calibration tags or keep certificates readily available for inspection.

C. Equipment-Specific Tools: Where special testing equipment, tools and instruments are specific to a piece of equipment, are only available from the vendor, and are required in order to accomplish startup or Functional Testing, provide such equipment, tools, and instruments as part of the work at no extra cost to Owner; such equipment, tools, and instruments are to become the property of Owner.

D. Dataloggers: Independent equipment and software for monitoring flows, currents, status, pressures, etc. of equipment.
   1. Dataloggers required to for Functional Tests will be provided by the Commissioning Authority and will not become the property of Owner.

PART 3 EXECUTION

3.1 COMMISSIONING PLAN

A. Commissioning Authority has prepared the Commissioning Plan.
   1. Attend meetings called by the Commissioning Authority for purposes of completing the commissioning plan.
   2. Require attendance and participation of relevant subcontractors, installers, suppliers, and manufacturer representatives.

B. Contractor is responsible for compliance with the Commissioning Plan.

C. Commissioning Plan: The commissioning schedule, procedures, and coordination requirements for all parties in the commissioning process.

D. Commissioning Schedule:
   1. Submit anticipated dates of startup of each item of equipment and system to Commissioning Authority within 60 days after award of Contract.
   2. Re-submit anticipated startup dates monthly, but not less than 4 weeks prior to startup.
   3. Prefunctional Checklists and Functional Tests are to be performed in sequence from components, to subsystems, to systems.
   4. Provide sufficient notice to Commissioning Authority for delivery of relevant Checklists and Functional Test procedures, to avoid delay.

3.2 STARTUP PLANS AND REPORTS

A. Startup Plans: For each item of equipment and system for which the manufacturer provides a startup plan, submit the plan not less than 8 weeks prior to startup.

B. Startup Reports: For each item of equipment and system for which the manufacturer provides a startup checklist (or startup plan or field checkout sheet), document compliance by submitting the completed startup checklist prior to startup, signed and dated by responsible entity.

C. Submit directly to the Commissioning Authority.

3.3 PREFUNCTIONAL CHECKLISTS

A. A Prefunctional Checklist is required to be filled out for each item of equipment or other assembly specified to be commissioned.
   1. No sampling of identical or near-identical items is allowed.
   2. These checklists do not replace manufacturers' recommended startup checklists, regardless of apparent redundancy.
   3. Prefunctional Checklist forms will not be complete until after award of the contract; the following types of information will be gathered via the completed Checklist forms:
      a. Certification by installing contractor that the unit is properly installed, started up, and operating and ready for Functional Testing.
      b. Confirmation of receipt of each shop drawing and commissioning submittal specified, itemized by unit.

c. Manufacturer, model number, and relevant capacity information; list information "as specified," "as submitted," and "as installed."
d. Serial number of installed unit.
e. List of inspections to be conducted to document proper installation prior to startup and Functional Testing; these will be primarily static inspections and procedures; for equipment and systems may include normal manufacturer’s start-up checklist items and minor testing.
f. Sensor and actuator calibration information.

B. Contractor is responsible for filling out Prefunctional Checklists, after completion of installation and before startup; witnessing by the Commissioning Authority is not required unless otherwise specified.
1. Each line item without deficiency is to be witnessed, initialed, and dated by the actual witness; checklists are not complete until all line items are initialed and dated complete without deficiencies.
2. Checklists with incomplete items may be submitted for approval provided the Contractor attests that incomplete items do not preclude the performance of safe and reliable Functional Testing; re-submission of the Checklist is required upon completion of remaining items.
3. Individual Checklists may contain line items that are the responsibility of more than one installer; Contractor shall assign responsibility to appropriate installers or subcontractors, with identification recorded on the form.
4. If any Checklist line item is not relevant, record reasons on the form.
5. Contractor may independently perform startup inspections and/or tests, at Contractor's option.
6. Regardless of these reporting requirements, Contractor is responsible for correct startup and operation.
7. Submit completed Checklists to Commissioning Authority within two days of completion.

C. Commissioning Authority is responsible for furnishing the Prefunctional Checklists to Contractor.
1. Initial Drafts: Contractor is responsible for initial draft of Prefunctional Checklist where so indicated in Contract Documents.
2. Provide all additional information requested by Commissioning Authority to aid in preparation of checklists, such as shop drawing submittals, manufacturers' startup checklists, and O&M data.
3. Commissioning Authority may add any relevant items deemed necessary regardless of whether they are explicitly mentioned in Contract Documents or not.
4. When asked to review the proposed Checklists, do so in a timely manner.

D. Commissioning Authority Witnessing: Required for:
1. Each piece of primary equipment, unless sampling of multiple similar units is allowed by the commissioning plan.
2. A sampling of non-primary equipment, as allowed by the commissioning plan.

E. Deficiencies: Correct deficiencies and re-inspect or re-test, as applicable, at no extra cost to Owner.
1. If difficulty in correction would delay progress, report deficiency to the Commissioning Authority immediately.

3.4 FUNCTIONAL TESTS

A. A Functional Test is required for each item of equipment, system, or other assembly specified to be commissioned, unless sampling of multiple identical or near-identical units is allowed by the final test procedures.

B. Contractor is responsible for execution of required Functional Tests, after completion of Prefunctional Checklist and before closeout.

C. Commissioning Authority is responsible for witnessing and reporting results of Functional Tests, including preparation and completion of forms for that purpose.

D. Contractor is responsible for correction of deficiencies and re-testing at no extra cost to Owner; if a deficiency is not corrected and re-tested immediately, the Commissioning Authority will document the deficiency and the Contractor's stated intentions regarding correction.
   1. Deficiencies are any condition in the installation or function of a component, piece of equipment or system that is not in compliance with Contract Documents or does not perform properly.
   2. When the deficiency has been corrected, the Contractor completes the form certifying that the item is ready to be re-tested and returns the form to the Commissioning Authority; the Commissioning Authority will reschedule the test and the Contractor shall re-test.
   3. Identical or Near-Identical Items: If 10 percent, or three, whichever is greater, of identical or near-identical items fail to perform due to material or manufacturing defect, all items will be considered defective; provide a proposal for correction within 2 weeks after notification of defect, including provision for testing sample installations prior to replacement of all items.
   4. Contractor shall bear the cost of Owner and Commissioning Authority personnel time witnessing re-testing.
   5. Contractor shall bear the cost of Owner and Commissioning Authority personnel time witnessing re-testing if the test failed due to failure to execute the relevant Prefunctional Checklist correctly; if the test failed for reasons that would not have been identified in the Prefunctional Checklist process, Contractor shall bear the cost of the second and subsequent re-tests.

E. Functional Test Procedures:
   1. Some test procedures are included in Contract Documents; where Functional Test procedures are not included in Contract Documents, test procedures will be determined by the Commissioning Authority with input by and coordination with Contractor.
   2. Examples of Functional Testing:
      a. Test the dynamic function and operation of equipment and systems (rather than just components) using manual (direct observation) or monitoring methods under full operation (e.g., the chiller pump is tested interactively with the chiller functions to see if the pump ramps up and down to maintain the differential pressure setpoint).
      b. Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc.
      c. Systems are run through all the HVAC control system’s sequences of operation and components are verified to be responding as the sequence's state.
      d. Traditional air or water test and balancing (TAB) is not Functional Testing; spot checking of TAB by demonstration to the Commissioning Authority is Functional Testing.

F. Deferred Functional Tests: Some tests may need to be performed later, after substantial completion, due to partial occupancy, equipment, seasonal requirements, design or other site conditions; performance of these tests remains the Contractor's responsibility regardless of timing.

3.5 SENSOR AND ACTUATOR CALIBRATION

A. Calibrate all field-installed temperature, relative humidity, carbon monoxide, carbon dioxide, and pressure sensors and gauges, and all actuators (dampers and valves) on this piece of equipment shall be calibrated. Sensors installed in the unit at the factory with calibration certification provided need not be field calibrated.

B. Calibrate using the methods described below; alternate methods may be used, if approved by Commissioning Authority and Owner beforehand. See PART 2 for test instrument requirements. Record methods used on the relevant Prefunctional Checklist or other suitable forms, documenting initial, intermediate and final results.

C. All Sensors:
1. Verify that sensor location is appropriate and away from potential causes of erratic operation.
2. Verify that sensors with shielded cable are grounded only at one end.
3. For sensor pairs that are used to determine a temperature or pressure difference, for temperature make sure they are reading within 0.2 degree F of each other, and for pressure, within tolerance equal to 2 percent of the reading, of each other.
4. Tolerances for critical applications may be tighter.

D. Sensors Without Transmitters - Standard Application:
1. Make a reading with a calibrated test instrument within 6 inches of the site sensor.
2. Verify that the sensor reading, via the permanent thermostat, gauge or building automation system, is within the tolerances in the table below of the instrument-measured value.
3. If not, install offset, calibrate or replace sensor.

E. Sensors With Transmitters - Standard Application.
1. Disconnect sensor.
2. Connect a signal generator in place of sensor.
3. Connect ammeter in series between transmitter and building automation system control panel.
4. Using manufacturer’s resistance-temperature data, simulate minimum desired temperature.
5. Adjust transmitter potentiometer zero until 4 mA is read by the ammeter.
6. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the building automation system.
7. Record all values and recalibrate controller as necessary to comply with specified control ramps, reset schedules, proportional relationship, reset relationship and P/I reaction.
8. Reconnect sensor.
9. Make a reading with a calibrated test instrument within 6 inches of the site sensor.
10. Verify that the sensor reading, via the permanent thermostat, gauge or building automation system, is within the tolerances in the table below of the instrument-measured value.
11. If not, replace sensor and repeat.
12. For pressure sensors, perform a similar process with a suitable signal generator.

F. Sensor Tolerances for Standard Applications: Plus/minus the following maximums:
1. Watthour, Voltage, Amperage: 1 percent of design.
2. Pressure, Air, Water, Gas: 3 percent of design.
3. Air Temperatures (Outside Air, Space Air, Duct Air): 0.4 degrees F.
4. Relative Humidity: 4 percent of design.
5. Barometric Pressure: 0.1 inch of Hg.
6. Flow Rate, Air: 10 percent of design.

7. Flow Rate, Water: 4 percent of design.
8. AHU Wet Bulb and Dew Point: 2.0 degrees F.

G. Critical Applications: For some applications more rigorous calibration techniques may be required for selected sensors. Describe any such methods used on an attached sheet.

H. Valve/Damper Stroke Setup and Check:
1. For all valve/damper actuator positions checked, verify the actual position against the control system readout.
2. Set pump/fan to normal operating mode.
3. Command valve/damper closed; visually verify that valve/damper is closed and adjust output zero signal as required.
4. Command valve/damper to open; verify position is full open and adjust output signal as required.
5. Command valve/damper to a few intermediate positions.
6. If actual valve/damper position does not reasonably correspond, replace actuator or add pilot positioner (for pneumatics).

I. Isolation Valve or System Valve Leak Check: For valves not associated with coils.
1. With full pressure in the system, command valve closed.
2. Use an ultra-sonic flow meter to detect flow or leakage.

3.6 TEST PROCEDURES - GENERAL

A. Provide skilled technicians to execute starting of equipment and to execute the Functional Tests. Ensure that they are available and present during the agreed upon schedules and for sufficient duration to complete the necessary tests, adjustments and problem-solving.

B. Provide all necessary materials and system modifications required to produce the flows, pressures, temperatures, and conditions necessary to execute the test according to the specified conditions. At completion of the test, return all affected equipment and systems to their pre-test condition.

C. Sampling: Where Functional Testing of fewer than the total number of multiple identical or near-identical items is explicitly permitted, perform sampling as follows:
1. Identical Units: Defined as units with same application and sequence of operation; only minor size or capacity difference.
2. Sampling is not allowed for:
   a. Major equipment.
   b. Life-safety-critical equipment.
   c. Prefunctional Checklist execution.
3. XX = the percent of the group of identical equipment to be included in each sample; defined for specific type of equipment.
4. YY = the percent of the sample that if failed will require another sample to be tested; defined for specific type of equipment.
5. Randomly test at least XX percent of each group of identical equipment, but not less than three units. This constitutes the "first sample."
6. If YY percent of the units in the first sample fail, test another XX percent of the remaining identical units.
7. If YY percent of the units in the second sample fail, test all remaining identical units.
8. If frequent failures occur, resulting in more troubleshooting than testing, the Commissioning Authority may stop the testing and require Contractor to perform and document a checkout of the remaining units prior to continuing testing.

D. Manual Testing: Use hand-held instruments, immediate control system readouts, or direct observation to verify performance (contrasted to analyzing monitored data taken over time to make the “observation”).

E. Simulating Conditions: Artificially create the necessary condition for the purpose of testing the response of a system; for example apply hot air to a space sensor using a hair dryer to see the response in a VAV box.

F. Simulating Signals: Disconnect the sensor and use a signal generator to send an amperage, resistance or pressure to the transducer and control system to simulate the sensor value.

G. Over-Writing Values: Change the sensor value known to the control system in the control system to see the response of the system; for example, change the outside air temperature value from 50 degrees F to 75 degrees F to verify economizer operation.

H. Indirect Indicators: Remote indicators of a response or condition, such as a reading from a control system screen reporting a damper to be 100 percent closed, are considered indirect indicators.

I. Monitoring: Record parameters (flow, current, status, pressure, etc.) of equipment operation using dataloggers or the trending capabilities of the relevant control systems; where monitoring of specific points is called for in Functional Test Procedures:
   1. All points that are monitored by the relevant control system shall be trended by Contractor; at the Commissioning Authority’s request, Contractor shall trend up to 20 percent more points than specified at no extra charge.
   2. Other points will be monitored by the Commissioning Authority using dataloggers.
   3. At the option of the Commissioning Authority, some control system monitoring may be replaced with datalogger monitoring.
   4. Provide hard copies of monitored data in columnar format with time down left column and at least 5 columns of point values on same page.
   5. Graphical output is desirable and is required for all output if the system can produce it.
   6. Monitoring may be used to augment manual testing.

3.7 OPERATION AND MAINTENANCE MANUALS

A. See Section 01 78 00 - Closeout Submittals for additional requirements.

B. Add design intent documentation furnished by Architect to manuals prior to submission to Owner.

C. Submit manuals related to items that were commissioned to Commissioning Authority for review; make changes recommended by Commissioning Authority.

D. Commissioning Authority will add commissioning records to manuals after submission to Owner.

END OF SECTION

SECTION 01 91 14 - COMMISSIONING AUTHORITY RESPONSIBILITIES

PART 1 GENERAL

1.1 SUMMARY

A. Commissioning is intended to achieve the following specific objectives; this section covers the Commissioning Authority's responsibilities for commissioning:
   1. Verify that the work is installed in accordance with Contract Documents and the manufacturer’s recommendations and instructions, and that it receives adequate operational checkout prior to startup: Startup reports and Prefunctional Checklists are utilized to achieve this.
   2. Verify and document that functional performance is in accordance with Contract Documents: Functional Tests performed by Contractor and witnessed by the Commissioning Authority are utilized to achieve this.
   3. Verify that operation and maintenance manuals submitted to Owner are complete: Detailed O&M data submittals are specified.
   4. Verify that the Owner’s operating personnel are adequately trained: Formal training conducted by Contractor is specified.

B. Commissioning, including Functional Tests, O&M documentation review, and training, is to occur after startup and initial checkout and be completed before Substantial Completion.

C. Coordinate and direct all the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties, frequently updated timelines and schedules and technical expertise.

1.2 SCOPE OF COMMISSIONING

A. The following are to be commissioned:

B. Other equipment and systems explicitly identified elsewhere in Contract Documents as requiring commissioning.

1.3 REFERENCE STANDARDS

A. ASHRAE Guideline 1.1 - HVAC&R Technical Requirements for the Commissioning Process; 2007, with Errata (2012).

1.4 SUBMITTALS

A. Commissioning Plan:
   1. Submit preliminary draft for review by Owner and Architect within 30 days after commencement of Commissioning Authority contract.
   2. Submit revised draft to be included in the construction Contract Documents, not less than 4 weeks prior to bid date.
   3. Submit final plan not more than 90 days after commencement of construction, for issuance to all parties.

B. List of Prefunctional Checklists to be developed:
   1. Submit preliminary list at start of construction documents phase or within 30 days after commencement of contract, whichever is later.

2. Submit revised list not less than 6 weeks prior to bid date, for inclusion in the construction Contract Documents.
3. Submit final list not more than 60 days after start of construction.

C. Prefunctional Checklists:
1. Submit preliminary draft at start of construction documents phase or within 30 days after commencement of contract, whichever is later.
2. Submit revised draft for review by Owner and Architect not less than 6 weeks prior to bid date, for inclusion in the construction Contract Documents.
3. Submit final draft to Contractor not less than 4 weeks prior to startup of particular items to be commissioned.

D. List of Functional Test procedures to be developed:
1. Submit preliminary list at start of construction documents phase or within 30 days after commencement of contract, whichever is later.
2. Submit revised list not less than 6 weeks prior to bid date, for inclusion in Contract Documents; this is intended to be a list of titles, not full description of the tests.
3. Submit final list not more than 60 days after start of construction.

E. Functional Test Procedures:
1. Submit preliminary draft at start of construction documents phase or within 30 days after commencement of contract, whichever is later.
2. Submit revised draft for review by Owner and Architect not less than 6 weeks prior to bid date, for inclusion in the construction Contract Documents.
3. Submit final draft to Contractor not less than 4 weeks prior to startup of particular items to be commissioned.

F. Training Plan.

G. Recommissioning Manual: Submit within 60 days after receipt of Owner's instructions to proceed with preparation.

H. Commissioning Process Record: Submit to Contractor for inclusion with O&M manuals. Include, at a minimum the following:

I. Final Commissioning Report: Submit to Owner. Include the following:

PART 3 EXECUTION

2.1 COMMISSIONING PLAN

A. Prepare and implement the Commissioning Plan, covering commissioning schedule, Prefunctional Checklist and Functional Test procedures, coordination requirements, and forms to be used, for all parties in the commissioning process.
1. Call and chair meetings of the Commissioning team when appropriate.
2. Give Contractor sufficient notice for scheduling commissioning activities.
3. Develop a comprehensive start-up and initial systems checkout plan with cooperation of Contractor and subcontractors.
4. ASHRAE Guideline 1.1 may be used as a guide for the Commissioning Plan.
5. Avoid replication of information included in the construction Contract Documents to the greatest extent possible.

B. Review the construction Contract Documents for Contractor submittals of draft checklists, draft test procedures, manufacturer startup procedures, and other information intended for the use of the Commissioning Authority in preparing the Commissioning Plan.

C. Commissioning Schedule:
1. Coordinate with Contractor anticipated dates of startup of each item of equipment and system.
2. Contractor's scheduling responsibilities are specified in the construction Contract Documents.
3. Revise and re-issue schedule monthly.
4. Prefunctional Checklists and Functional Tests are to be performed in sequence from components, to subsystems, to systems.
5. Deliver relevant Prefunctional Checklists and Functional Test Procedures to Contractor in time to avoid delay.

2.2 CONSTRUCTION CONTRACT DOCUMENTS

A. General Commissioning Specifications: Architect has prepared general commissioning specifications for inclusion in the construction Contract Documents; review and submit comments to Owner.
1. These specifications include:
a. Procedures applicable to all types of items to be commissioned.
2. Prepare specifications for any of the following that would be recommended, for incorporation into the construction Contract Documents by Architect:
a. Additional Contractor submittals needed for purposes of commissioning, such as startup procedures, draft test procedures, draft training plans, etc.
b. Additional Owner personnel training.
c. Additional operation or maintenance data that should be submitted.

B. Prefunctional Checklists: Develop detailed Checklists for each item to be commissioned.
1. List of Checklists to be Developed: Prepare and maintain a detailed list of titles, not full text.
2. The Checklist forms are intended to be part of the Contractor's Contract Documents.

C. Functional Testing: Develop detailed procedures for each item to be commissioned; submit for review by Owner and Architect.
1. List of Test Procedures to be Developed: Prepare and maintain a detailed list of titles, not full text.
2. The forms the Commissioning Authority will use to report Functional Test results are not intended to be part of Contractor's Contract Documents, but the Functional Test Procedures that must be executed by the Contractor must be made part of the Contract Documents, by modification if necessary.

D. Develop any other reporting forms Contractor will be required to use; if they are likely to require a substantially different amount of work than the Contractor can reasonably anticipate, they must be included in the construction Contract Documents.

E. If any part of the documents described above have not been developed by the bid date, coordinate with Architect the issuance of modifications to the construction Contract Documents

2.3 PREFUNCTIONAL CHECKLISTS

A. Prefunctional Checklists - Content: Prepare forms for Contractor's use, in sufficient detail to document that the work has been installed in accordance with Contract Documents and the manufacturer’s recommendations and instructions, and that it receives adequate operational checkout prior to startup.
1. Prepare separate Checklists for each type of equipment, system, or other assembly, customized to the item.

2. Identify each Checklist by using Contract Documents identification number or name, if any; if none, create unique identifiers for each Checklist; do not rely on Contractor to number checklists.
3. Multiple identical or near-identical items may appear on a single Checklist provided there is space to record all required data for each separately; label each set of data uniquely.
4. Include space to record manufacturer name, model number, serial number, capacity and other relevant characteristics, and accessories and other features as applicable; include space to record "as specified", "as submitted", and "as installed" data.
5. Include space to record whether or not the required submittals have been received; list each separate type of submittal.
6. Include line items for each physical inspection to be performed.
7. Include line items for each operational inspection to be performed, such as checking switch operation, fan rotation, valve and damper stroke, and measuring actual electrical loads.
8. Include separate section for sensors and actuators, with space for documenting actual physical location and calibration measurements; provide a separate generic calibration checklist identified wherever referenced.
9. Include spaces to record that related Checklists for related work upon which this work depends have been completed.

B. Prefunctional Checklists - Format:
1. Provide a cover sheet showing name of equipment item or system, documentation identification number (see Documentation Identification Scheme), names of accessory components involved, and identification of related checklists.
2. Include on cover sheet space for Contractor's use in attesting to completeness; provide spaces for the signatures of the general contractor and each subcontractor or other entity responsible, customized to the project and the type of item.
3. Include on the cover sheet, above the signature block, the following statement: "The work referenced in this Checklist and other work integral to or dependent on this work is complete and ready for functional testing. The checklist items are complete and have been checked off only by parties having direct knowledge of the event." Include two checkboxes:
   a. "This Checklist is submitted for approval with no exceptions."
   b. "This Checklist is submitted for approval, subject to the attached list of outstanding items, none of which preclude the performance of safe and reliable functional tests. A statement of completion will be submitted upon completion of the outstanding items."
4. Use a consistent, tabular format for all Checklists, with one line per checklist activity.
5. For each line item, provide space for initials and date, and identification of the subcontractor or other entity responsible.

2.4 FUNCTIONAL TEST PROCEDURES

A. Develop test procedures in sufficient detail to demonstrate that functional performance is in accordance with Contract Documents, including proper operation through specified modes of operation where there is a different system response, including seasonal, unoccupied, warm-up, cool-down, part- and full-load regimes.
1. Obtain assistance and review by installing subcontractors.
2. Itemize each test sequence in step-by-step order, with acceptance criteria for each step and for the test as a whole.
3. Include test setup instructions, description of tools and apparatus, special cautions, and.
4. Avoid procedures that would void or otherwise limit warranties; review with Contractor prior to execution.
5. For HVAC systems, procedures may include energy management control system trending, stand-alone datalogger monitoring, or manual functional testing.

6. Obtain explicit approval of Contractor in regard to feasibility and safety prior to execution.

B. Functional Test Forms: Prepare and distribute forms in advance of testing. Use a consistent format to the greatest degree practicable. For each form, include the following:
1. Signature Block: Signature of the designated commissioning lead and the system and equipment installer attesting that the recorded test results are accurate.

2.5 CONSTRUCTION PHASE

A. Coordinate the commissioning work with Contractor and Construction Manager; ensure that commissioning activities are being incorporated into the master schedule.

B. Perform site visits, as necessary, to observe component and system installations. Attend planning and job-site meetings to obtain information on construction progress. Review Contractor's meeting minutes for issues relating to the commissioning process. Assist in resolving discrepancies.

C. Commissioning Kick-Off Meeting: Plan and conduct a meeting early in the construction phase to review proposed commissioning schedule, activities, and responsibilities with parties involved. Require attendance by every member of the Commissioning Team.

D. Conduct periodic meetings as necessary to coordinate, resolve planning issues, and aid in resolution of deficiencies, minimizing the time spent by Contractor and Owner personnel; hold meetings at least monthly.

E. Submit periodic progress reports to Owner and Contractor.

F. Review Contractor shop drawing submittals applicable to systems being commissioned for compliance with commissioning needs; verify that Owner's responsibilities are clearly defined in warranties.

G. Review and approve submittals directly related to commissioning.

H. Deliver Prefunctional Checklists and Functional Test procedures to Contractor.

I. Verify satisfactory completion of Prefunctional Checklists by Contractor by reviewing checklists and by site observation and spot checking; provide formal approval when satisfactory.

J. Verify startup of all systems by reviewing start-up reports and by site observation; provide formal approval when satisfactory.

K. Coordinate, witness and approve Functional Tests performed by Contractor. Coordinate retesting until satisfactory performance is achieved.

L. HVAC Commissioning:
1. Gather and review the control sequences and interlocks and work with Contractor and design engineers until sufficient clarity has been obtained, in writing, to be able to prepare detailed Functional Test procedures.
2. Witness all or part of HVAC piping test and flushing procedures, sufficient to be confident that proper procedures were followed; document testing and include documentation in O&M manuals.
3. Witness all or part of duct testing and cleaning procedures, sufficient to be confident that proper procedures were followed; document testing and include documentation in O&M manuals.
4. Review TAB Plan prepared by Contractor.

5. Before TAB is executed, witness sufficient Functional Testing of the control system to approve it to be used for TAB.
6. Verify air and water systems balancing by spot testing, by reviewing completed reports, and by site observation; provide formal approval when satisfactory.
7. Analyze trend logs and monitoring data to verify performance.

M. Witness and document testing of systems and components over which the Commissioning Authority does not have direct control, such as smoke control systems, tests contracted directly by Owner, and tests by manufacturer's personnel; include documentation in O&M manuals.

N. When Functional Testing for specific systems or equipment is specified to be performed by the Commissioning Authority rather than the Contractor, perform such testing without assistance of Contractor.

O. Maintain a master deficiency and resolution log and a separate testing record. Provide written progress and test reports with recommended actions.

P. Operation and Maintenance Data: Review submitted operation and maintenance data for completeness; provide formal approval if satisfactory.

Q. Notify Contractor and Owner of deficiencies in procedures or results; suggest solutions.

2.6 TRAINING

A. Training Plan: Prepare a comprehensive Training Plan, incorporating draft training plans submitted by Contractor.
1. Include a ____ hour session by the HVAC design engineer covering the overall HVAC system and equipment design concepts, with one-line schematic drawings.
2. Include a ____ hour session by the Commissioning Authority on the use of the blank Prefunctional Checklists and Functional Test forms for re-commissioning purposes.
3. Establish criteria for determining satisfactory completion of training.

B. Verify that training was satisfactorily completed; provide formal approval if satisfactory.

2.7 CLOSEOUT

A. Commissioning Record: Use the same format and organization as specified for the O&M manuals.
1. Include the Final Commissioning Plan and Final Report.
2. For each product or system and equipment item, include the following organized as indicated, with separator tabs:
   a. Design intent documentation, furnished by Architect or others.
   b. Detailed operational sequences.
   c. Startup plan and approved startup reports.
   d. Filled out Prefunctional Checklists.
   e. Filled out Functional Test reports; trend logs and monitoring reports and analysis; other verification documentation.
   f. Training plan and training records.
   g. Recommissioning recommendations, including time schedule and procedures; include blank copies of all Prefunctional Checklists and Functional Test report forms.

B. Final Commissioning Report: Include:
1. Executive summary.
2. List of participants and roles.
3. Brief facility description.

4. Overview of commissioning scope and general description of testing and verification methods.
5. For each item commissioned, an evaluation of adequacy of:
   a. The product itself; i.e. compliance with Contract Documents.
   b. Installation.
   c. Functional performance; include a brief description of the verification method used and observations and conclusions from the testing.
   d. O&M documentation, including design intent.
   e. Operator training.
6. List of all outstanding non-compliance items, referenced to the specific functional test, inspection, trend log, etc., where the deficiency is documented.
7. List of unresolved issues, seasonal or deferred testing, and other concerns that could affect facility operation.
8. Recommendations for improvement to equipment or operations, future actions, commissioning process changes, etc. (about four to six pages).
9. Attach appendices containing all commissioning documentation, including logs, minutes, reports, deficiency lists, communications, findings, etc., except that specified to be part of the Commissioning Record.

C. Recommissioning Manual: Revise the Commissioning Plan documents, checklists, and Functional Test forms as necessary based on accepted recommendations of the final Commissioning Report. Provide step-by-step instructions for recommissioning, blank forms, and cross-references to O&M data needed during recommissioning.

2.8 POST-OCCUPANCY PHASE

A. Coordinate deferred and seasonal Functional Tests; verify correction of deficiencies.

B. On-Site Review: 10 months after Substantial Completion conduct on-site review with Owner's staff.
   1. Review the current facility operation and condition of outstanding issues related to the original and seasonal commissioning.
   2. Interview staff to identify problems or concerns they have operating the facility as originally intended.
   3. Make suggestions for improvements and for recording these changes in the O&M manuals.
   4. Identify areas of concern that are still under warranty or are the responsibility of the original construction contractor.
   5. Assist facility staff in developing reports, documents and requests for services to remedy outstanding problems.

END OF SECTION

SECTION 02 41 13.10 - REMOVING EXISTING PAVEMENTS, UTILITIES AND STRUCTURES

PART 1 G E N E R A L

1.1 SECTION INCLUDES

A. Removing concrete paving, asphaltic concrete pavement, and base courses.

B. Removing concrete curbs, concrete curbs and gutters, sidewalks, and driveways.

C. Removing pipe culverts, sewers and water lines.

D. Removing existing inlets and manholes.

E. Removing miscellaneous structures of concrete or masonry.

1.2 MEASUREMENT AND PAYMENT

A. Stipulated Price (Lump Sum). If the Contract is a Stipulated Price Contract, payment for work in this Section is included in the total Stipulated Price.

B. Include cost of installing suitable backfill material and proper compaction (95% of the Std. Proctor Density) in cost of each item to be removed. No separate pay for this item.

1.3 REGULATORY REQUIREMENTS

A. Conform to applicable codes for disposal of debris.

B. Coordinate removal work with utility companies.

PART 2 P R O D U C T S – Not Used

PART 3 E X E C U T I O N

3.1 PREPARATION

A. Obtain advance approval from Engineer for dimensions and limits of removal work.

B. Identify known utilities below grade. Stake and flag locations.

3.2 PROTECTION

A. Protect the following from damage or displacement:
   1. Adjacent public and private property.
   2. Trees, plants, and other landscape features designated to remain.
   3. Utilities designated to remain.
   4. Pavement and utility structures designated to remain.
   5. Bench marks, monuments, and existing structures designated to remain.

3.3 REMOVALS

A. Remove pavements and structures by methods that will not damage underground utilities. Do not use a drop hammer near existing underground utilities.

B. Minimize amount of earth loaded during removal operations.

C. Where existing pavement is to remain, make straight saw cuts in existing pavement to provide clean breaks prior to removal. Do not break concrete pavement or base with drop hammer unless concrete or base has been saw cut to a minimum depth of two (2) inches.

D. Where street and driveway saw cut locations coincide or fall within three (3) feet of existing construction or expansion joints, break out to existing joint.

E. Remove sidewalks and curbs to nearest existing dummy, expansion, or construction joint.

F. Where existing end of pipe culvert or end of sewer is to remain, install an 8-inch thick masonry plug in pipe end prior to backfill.

G. When removing existing utilities or structures, all existing backfill material (i.e. cement stabilized sand) shall also be removed. Include in price of utility or structure removed.

3.4 BACKFILL

A. Backfill of removal areas shall be in accordance with requirements of Division 31.

B. Trench and structure excavations shall be backfilled in 8” lifts and compacted to 95% of the Std. Proctor Density. Reference Geotechnical Report and Plans for details on acceptable backfill.

3.5 DISPOSAL

A. Inlet frames, grates, plates, and manhole frames and covers may remain property of the Owner. Disposal shall be in accordance with requirements of Division 1.

B. Remove from the site debris resulting from work under this section in accordance with requirements of Division 1.

END OF SECTION

SECTION 03 30 00 - CAST-IN-PLACE CONCRETE (BUILDING CONCRETE)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes.

B. Cast in place concrete includes the following:
1. Foundations and footings.
    a. Drilled Piers.
    b. Light pole bases.
    c. Flag pole base.
2. Slab on grade.
3. Fill for steel deck.
4. Equipment pads and bases.

C. Related Requirements:

1. Quality Requirements: Materials Section 01 40 00 – testing.
2. Section 03 52 16 – Insulating Concrete Roof Fill
3. Division 09 for requirements relating to specified floor coverings, finishing, and curing of interior concrete floor slabs.
4. Section 31 23 15 - Building Earthwork
5. Section 31 63 29 – Drilled Concrete Piers and Shafts

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference prior to any work beginning by trade. Time, date and location as determined by a construction manager.

1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

    a. Contractor's superintendent.
    b. Independent testing agency responsible for concrete design mixtures.
    c. Ready-mix concrete manufacturer.
    d. Concrete Subcontractor.
    e. Special concrete finish Subcontractor.

2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semirigid joint fillers, forms and form removal limitations, shoring and reshoring procedures, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, methods for achieving specified floor and slab flatness and levelness floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection.

1.5 ACTION SUBMITTALS

A. General: Submit the following according to Conditions of the Contract and Division 1 Specification Sections.

B. Product Data: For each type of product.

C. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments. Designs shall be submitted a minimum of 48 hours prior to the placement of any concrete. Submit properties of mixtures for each class of concrete including:
1. Mixture Identification by class
2. Specified compressive strength, f'_c, that is applicable for the class
3. Specified exposure class in Part 2, “PRODUCTS”, Article “CONCRETE MIXTURES, GENERAL”
4. Documentation of strength test records of similar class of concrete used to establish standard deviation in accordance with ACI 318, when test records exist
5. Required average compressive strength, f'_{cr}, for each class of concrete
6. Documentation of f'_{cr} of proposed mixtures(s)
7. Intended placement method
8. Slump or slump flow
9. Air content
10. Density
11. Water/cement ratio (w/cm), when specified
12. Documentation supporting other specified requirements of concrete mixtures
13. Nominal maximum aggregate size or Size number
14. Type and information about the ingredient materials proposed for use including:
    a. Cementitious Materials
    b. Aggregates
    c. Admixtures
    d. Water
    e. Fibers, color pigments, and other additions
15. Amounts of mixing water to be withheld for later addition at Project site.

D. Steel Reinforcement Shop Drawings: Placing Drawings that detail fabrication, bending, and placement. Comply with CRSI's "Manual of Standard Practice" and ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures." Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement. Original contract drawings shall not be reproduced for use as a portion of the Shop drawing.

E. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
1. Submit original shop drawings indicating the proposed construction joint locations to the Architect/Engineer at least 14 days prior to beginning formwork on the portion of the building in question.

1.6 INFORMATIONAL SUBMITTALS

A. Information submittals are mandatory submittals by the sub-contractor to the General Contractor, Construction Manager and Design Professional which are not returned but kept for the project record.

B. Material certificates in lieu of material laboratory test reports when permitted by Architect/Engineer. For each of the following, material certificates shall be signed by manufacturer and Contractor, certifying that each material item complies with or exceeds specified requirements.

1. Cementitious materials.
2. Admixtures. Provide certification that chloride content complies with specification requirements.
3. Form materials and form-release agents.
4. Steel reinforcement and accessories.
5. Fiber reinforcement.
6. Waterstops.
7. Curing compounds.
8. Floor and slab treatments.
9. Bonding agents.
10. Adhesives.
11. Vapor retarders. Certificate shall include permeance ratings expressed in grains of water vapor per square foot per hour per inch of mercury.
12. Semi-rigid joint filler.
13. Joint-filler strips.
14. Repair materials.

C. Material Test Reports: For the following, from a qualified testing agency:

1. Aggregates**:** Include sieve analysis, dry rodded unit weight of coarse aggregate, and the specific gravities of both fine and coarse aggregates. Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity.

D. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.

E. Field quality control reports: The independent testing laboratory shall submit laboratory test reports for concrete materials directly to the Architect/Engineer with copy to others in accordance with the provisions of section 014000 "Quality Requirements." State in each report whether or not the test specimens comply with the specified requirements and indicate any deviations therefrom.

1.7 QUALITY ASSURANCE

A. Codes and Standards: Comply with provisions of the following codes, specifications, and standards, except where more stringent requirements are shown or specified:

1. American Concrete Institute (ACI) 301, "Specifications for Structural Concrete for Buildings."
2. ACI 304 "Recommended Practice for Measuring, Mixing, Transporting, & Placing Concrete"
3. ACI 305 "Hot Weather Concreting".
4. ACI 306 "Recommended Practice for Cold Weather Concreting"
5. ACI 311 "Recommended Practice for Concrete Inspection"
6. ACI 318 "Building Code Requirements for Reinforced Concrete."
7. ACI 347 "Recommended Practice for Concrete Formwork"
8. Concrete Reinforcing Steel Institute (CRSI), "Manual of Standard Practice."

B. Mix designs: Test in accordance with the requirements of PART 2 - PRODUCTS, article "PROPORTIONING AND MIX DESIGNS".

A. Materials and installed work may require testing and retesting at any time during progress of Work. Tests, including retesting of rejected materials for installed Work, shall be done at Contractor's expense.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: When the manufacturer does not comply with all requirements of Part 1, Quality Assurance, Manufacturer Qualifications, engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures. The manufacturer is permitted to engage a qualified independent testing agency to perform specific tests for project submittals. The contractor is responsible for the cost of the preconstruction testing service.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement.

B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

1.10 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40 deg F for more than one day in a row, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.
4. Removal of formwork shall be delayed during cold weather to assure adequate structural strength, unless approved strength accelerating measures are taken.
5. Contractor shall provide to the Architect/Engineer a written description of procedures to be used for cold weather concreting in accordance with Part 1, “ACTION SUBMITTALS”. The details should include, but not be limited to, the following:
    a. Procedures for protecting the subgrade from frost and the accumulation of ice or snow on reinforcement or forms prior to placement.
    b. Methods for temperature protection during placement.
    c. Types of covering, insulation, housing, or heating to be provided.
    d. Curing methods to be used during and following the protection period.
    e. Use of strength accelerating admixtures.
    f. Methods for verification of in-place strength.
    g. Procedures for measuring and recording concrete temperatures.
    h. Procedures for preventing drying during dry, windy conditions.

B. Hot-Weather Placement: Comply with ACI 301 and 305.1 and as follows:

1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.
3. Provide submittals required by ACI 305.1 in accordance with Part 1, “ACTION SUBMITTALS”.
4. Water Reducing and Retarding Compound: The manufacturer of the mixture shall submit in writing to the Architect/Engineer and the Contractor, special recommendations for quantities to be used under various temperature and job conditions to assure that the concrete can be maintained at a uniform consistency while in the mixer truck and sufficiently workable between lifts to prevent the occurrence of lift lines with the specified placement and consolidation techniques, and as approved by the Architect/Engineer. Assure that the proper admixture and dosage is used during hot weather (mix temperature over 90 deg F.) to prevent slump loss from plant to site.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301.
2. ACI 336.
3. ACI 117.

2.2 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.
2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:

    a. High-density overlay, Class 1 or better.
    b. Medium-density overlay, Class 1 or better; mill-release agent treated and edge sealed.
    c. Structural 1, B-B or better; mill oiled and edge sealed.
    d. B-B (Concrete Form), Class 1 or better; mill oiled and edge sealed.

3. Overlaid Finnish birch plywood.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.

D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.

E. Hole Forms: Plastic, removable, coiling forms for handrail and guardrail post supports.
   1. Basis-of-Design: Econ-O-Post Hole Form, Deslauriers, Inc. 800-743-4106 www.deslinc.com
      a. For post up to 2-3/8 inch outside diameter: EPHF-3.
      b. For post greater than 2-3/8 inch outside diameter to 3-1/2 inch outside diameter: EPHF-4.
   2. Coordinate locations with post indicated on plans, shop drawings, setting drawings and with railing installers. Coordinate form sizes required with post sizes.

F. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum.

G. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

H. Form-Release Agent: Commercially formulated form-release agent with a maximum of 450 g/l volatile organic compounds (VOCs) that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.

   1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

I. Form Ties: Factory-fabricated, removable or snap-off glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

   1. Furnish units that leave no corrodible metal closer than 1 1/2 inch to the plane of exposed concrete surface.
   2. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.
   3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

J. Expanded polystyrene (EPS) and Extruded polystyrene (XPS) Forms: Complies with ASTM D6817 / D6817M, treated to resist insects and suitable for below grade applications; EPA registered treatment, meeting requirements of ICC ES AC239, and recognized in an ISS ES report.

   1. Products: Subject to compliance with requirements, product which may be incorporated in the Work include, but are not limited to, the following:

      a. Foam-Control EPS; 952-892-0809; www.geofoam.com
      b. InsulFoam GF; 403-248-6616; www.insulfoam.com
      c. Atlas EPS; 616-878-1568; www.atlaseps.com
      d. DOW Building Solutions; 800-583-2583; www.building.dow.com
      e. Owens Corning; 800-438-7465; commercial.owenscorning.com/products
      f. Kingspan; 800-241-4402; www.trustgreenguard.com/insulation-board
      g. Substitutions: Section 01 60 00-Product Requirements

   2. Minimum material requirements for EPS and XPS foams:

      a. Size: Largest practicable sizes.
      b. Thickness: As indicated.
      c. Density: As indicated (1.15 lb/cu. ft, min.)
      d. Compressive Strength: As indicated (5.8 psi at 1% deformation, min.)

e. Deformation: 1% maximum.

3. Connector Plates: Manufacturer’s galvanized or stainless steel plates with two-sided multi-barbed design, capable of piercing geofoam and resisting lateral movement between blocks during installation.

4. Lateral Holding Strength: 60 lbs.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.

B. Low-Alloy-Steel Reinforcing Bars, including Deformed Bar Anchors: ASTM A 706/A 706M, deformed.

C. Plain-Steel Wire: ASTM A 1064/A 1064M, as drawn.

D. Deformed-Steel Wire: ASTM A 1064/A 1064M.

E. Plain-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, plain, fabricated from as-drawn steel wire into flat sheets.

F. Deformed-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, flat sheet.

2.4 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.

B. Epoxy-Coated Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, ASTM A 775/A 775M epoxy coated.

C. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/A 775M.

D. Zinc Repair Material: ASTM A 780/A 780M.

E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place. Manufacture bar supports from steel wire or plastic according to CRSI's "Manual of Standard Practice," and as follows:
1. For slabs on grade, use supports with sand plates or horizontal runners where base material will not support chair legs.
2. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2.5 CONCRETE MATERIALS

A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

B. Cementitious Materials:

1. Portland Cement: ASTM C 150/C 150M, Type I. Type III cement may be used in lieu of Type I at contractor's option, when acceptable to the Architect/Engineer.
2. Fly Ash: ASTM C 618, Class F.
3. Slag Cement: ASTM C 989/C 989M, Grade 100 or 120.

C. Normal-Weight Aggregates: ASTM C 33/C 33M, coarse aggregate or better, graded. Provide aggregates from a single source for exposed concrete.

1. Maximum Coarse-Aggregate Size: As indicated in Section 2.13 “CONCRETE MIXTURES FOR BUILDING ELEMENTS”.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
3. For exposed exterior surfaces, do not use fine or coarse aggregates that contain substances that cause spalling. Do not use aggregates containing soluble salts or other substrates such as iron sulfides, pyrite, marcasite or ocher which can cause stains on exposed concrete surfaces.
4. Local aggregates not complying with ASTM C 33 that have been shown to produce concrete of adequate strength and durability by special tests or actual service may be used when acceptable to Architect/Engineer.

D. Lightweight Aggregate: ASTM C 330/C 330M, as indicated in Section 2.13 “CONCRETE MIXTURES FOR BUILDING ELEMENTS”.

E. Air-Entraining Admixture: ASTM C 260/C 260M.
1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
   a. MasterAir VR 10 or MasterAir AE 200; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
   b. Eucon Air Mix or Eucon Air series; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
   c. Darex AEA or Daravair series; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
   d. Sika AEA series of Sika Air series; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com

F. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
   a. Products: Subject to compliance with requirements, product which may be incorporated in the Work include, but are not limited to, the following:

      1) MasterPozzolith or MasterPolyheed; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
      2) Eucon WR or Eucon MR; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      3) WRDA series; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
      4) Plastocrete 161; Sika Corporation, USA; 800-933-7452; www.sikaconstruction

2. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
   a. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

1) MasterSet R 300 ; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
2) Eucon Retarder 75; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
3) Daratard 17; W. R. Grace & Co.-Conn 866-333-3726; www.graceconstruction.com
4) Plastiment; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com
5) Metco WR; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com

3. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F and/or High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
   a. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

      1) Super P; Anti-Hydro International, Inc.; 800-777-1773; www.anti-hydro.com
      2) MasterRheobuild 1000; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
      3) Eucon 37; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      4) Daracem series or ADVA series; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
      5) Superslump ; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
      6) Sikament series; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com

4. Water Reducing, Accelerating Admixture: ASTM C 494, Type E.
   a. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

      1) MasterSet FP 20; BASF Construction Chemicals – Building Systems; 722-8899; www.master-builders-solutions.basf.us
      2) ACCELGUARD 80; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      3) Daraset series; W. R. Grace & Co.-Conn ; 866-333-3726; www.graceconstruction.com
      4) Q-Set; Dayton Superior; 888-977-9600; www.daytonsuperior.com
      5) Accel Set; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
      6) SikaSet NC; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com

5. Waterproofing and Durability Admixture: ASTM C 494, Type S.
   a. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

      1) Penetron Admix SB; Penetron International, LTD; 631-941-9700; penetron.com

G. Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete and complying with ASTM C 494/C 494M, Type C.

1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
   a. MasterLife CI 30; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
   b. Eucon BCN or Eucon CIA; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
   c. DCI or DCI-S; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
   d. Sika CNI; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com

H. Water: ASTM C 94/C 94M and potable. Non-potable water sources, with documented conformance of ASTM C1602, may be submitted for approval by the Architect/Engineer prior to construction.

2.6 WATERSTOPS

A. Flexible Rubber Waterstops: CE CRD-C 513, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.
   1. Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include, but are not limited to, the following:
      a. Williams Products, Inc.; 800-521-9594; www.williamsproducts.net
   2. Profile: Flat dumbbell with center bulb at expansion joints and Flat dumbbell without center bulb at construction joint.
   3. Dimensions: Minimum of 4 inches by 3/16 inch thick at cold joints and 6 inches by 3/8 inch thick at expansion joints; nontapered.

B. Flexible PVC Waterstops: CE CRD-C 572, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.
   1. Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include, but are not limited to, the following:
      a. Greenstreak; 800-325-9504; www.greenstreak.com
      b. Vinylex Corporation;800-325-3602; www.vinylexwaterstop.com
   2. Profile: Flat dumbbell with center bulb at expansion joints and Flat dumbbell without center bulb at construction joint.
   3. Dimensions: Minimum of 4 inches by 3/16 inch thick at cold joints and 6 inches by 3/8 inch thick at expansion joints; nontapered.

C. Preformed Plastic Adhesive Waterstops: Federal Specification SS S 210A. It shall be supplied in extruded form of suitable cross section and of a size to seal the joint areas of concrete sections. The plastic waterstop shall be protected by a suitable removable two piece wrapper. The two piece wrapper shall be so designed that one half may be removed longitudinally without disturbing the other half, to facilitate application of the sealing compound.
   1. Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the work include; but are not limited to, the following:
      a. Waterstop-RX; CETCO; 800-527-9948; www.cetco.com
      b. Synko Flex, Henry Company 800-486-1278 www.henry.com
      c. Ram Nex, K.T. Snyder Company, Inc.

D. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch.

2.7 VAPOR RETARDERS

A. Sheet Vapor Retarder: ASTM E 1745, Class A. Include manufacturer's recommended adhesive or pressure-sensitive tape.
   1. Provide manufacturer's recommended mastics and gusset tape at all joints, to create a continuous membrane.
   2. Products for Slab-on-Grade: Subject to compliance with requirements, products which may be incorporated in the Work include the following:
      a. VB-350; Inteplast Group; 877-535-0555; www.barrierbac.com
      b. VaporBlock Plus; Raven Industries Inc.; 605-335-0174; www.ravenefd.com
      c. 15 mils thick Stego Wrap; Stego Industries, LLC; 877-464-7834; www.stegoindustries.com
      d. 15 mils thick Perminator; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com
      e. Polyethylene sheet not less than 15 mils thick (must provide proof of compliance with ASTM E 1745).

B. Bituminous Vapor Retarder: 110-mil- thick, semiflexible, seven-ply sheet membrane consisting of reinforced core and carrier sheet with fortified asphalt layers, protective weathercoating, and removable plastic release liner. Furnish manufacturer's accessories, including bonding asphalt, pointing mastics, and self-adhering joint tape.
   1. Product: Subject to compliance with requirements, products which may be incorporated in the Work include the following:
      a. Premoulded Membrane Vapor Seal with Plasmatic Core; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com
   2. Water-Vapor Permeance: 0.0011 grains/h x sq. ft. x inches Hg; ASTM E 154.
   3. Tensile Strength: 140 lbf/; ASTM E 154.
   4. Puncture Resistance: 90 lbf; ASTM E 154.

2.8 CHEMICAL HARDENERS

A. Colorless aqueous solution containing a blend of magnesium fluosilicate and zinc fluosilicate combined with a wetting agent, containing not less than 2 lbs. of fluosilicates per gal.
   1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
      a. MasterKure HD 300WB; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
      b. Surfhard; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      c. Liqui-Hard; W.R. Meadows, Inc. 800-342-5976; www.wrmeadows.com

2.9 LIQUID FLOOR TREATMENTS

A. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or siliconate materials and proprietary components complying with ASTM C 309, Type I-D, Class A; odorless; that penetrates, hardens, and densifies concrete surfaces.

   1. Provide material that has a maximum volatile organic compound (VOC) rating of 350 mg per liter.
   2. Do not use curing compound on recessed slab areas which receive paver tile, quarry tile, ceramic tile or terrazzo finish floor material. These areas shall be water cured only.
   3. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
      a. A-H 3 Way Sealer WB Anti-Hydro International, Inc. 800-777-1773; www.anti-hydro.com

b. MasterKure CC series BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
c. Cure and Seal series; Dayton Superior; 888-977-9600; www.daytonsuperior.com
d. Eucocure VOX; Euclid Chemical Company ;800-321-7628; www.euclidchemical.com
e. L&M Cure R; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
f. Seal N Kure; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
g. CS-309-25; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

2.10 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.
1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
a. MasterKure ER 50; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
b. Aquafilm series; Dayton Superior; 888-977-9600; www.daytonsuperior.com
c. Eucobar; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
d. E-Con; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
e. Waterhold; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
f. Evapre; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

D. Water: Potable.

E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.
1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
a. MasterKure CC Series; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
b. Cure and Seal series Dayton Superior 888-977-9600 www.daytonsuperior.com
c. Aqua-Cure VOX; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
d. Dress & Seal WB; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
e. Metcure; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
f. Vocomp-20;W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

2.11 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber.

B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Type A shore durometer hardness of 80 according to ASTM D 2240.

C. Bonding Agent: ASTM C 1059/C 1059M, Type II, nonredispersible, acrylic emulsion or styrene butadiene.
1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

a. Polyvinyl Acetate (Interior Only):
   1) PVA Bonding Agent J41; Dayton Superior; 888-977-9600; www.daytonsuperior.com
   2) Tammsweld; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
   3) Weld-Crete ; Larsen Products Corp.; 800-633-6668; www.larsenproducts.com
   4) Herculox; Metalcrete Industries; 800-526-5602 ; www.metalcreteindustries.com
   5) Intralok ; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com
b. Acrylic or Styrene Butadiene:
   1) MasterEmaco A 660; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
   2) Acrylic Bonding Agent J40; Dayton Superior; 888-977-9600; www.daytonsuperior.com
   3) SBR Latex; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
   4) Daraweld C; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
   5) Everbond; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
   6) Acrylpave; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
   7) Acry-Lok; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

D. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:

1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
   a. MasterInject 1500; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
   b. Sure Bond J58 ; Dayton Superior; 888-977-9600; www.daytonsuperior.com
   c. Euco Epoxy System #452; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
   d. Epobond; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
   e. Metco Hi Mod Epoxy; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
   f. Sikadur 32 Hi-Mod; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com
   g. Stonset Primer; Stonhard; 800-257-7953; www.stonhard.com
   h. Rezi-Weld 1000; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

E. Reglets: Fabricate reglets of not less than 0.022-inch- thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.

F. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034 inch thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

2.12 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.

1. Cement Binder: ASTM C 150/C 150M, Portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.
4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109/C 109M.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.

1. Cement Binder: ASTM C 150/C 150M, Portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109/C 109M.

2.13 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.
1. Use a qualified testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures. Use qualified testing agency to develop supplementary performance test data for additional requirements identified in this specification.

2. Design mixtures shall meet the specified strength and durability requirements listed below or as provided in the Contract Documents, whichever is more stringent. Exposure classes listed below are defined by ACI 318, and the design mixture shall comply with the durability requirements of each exposure class.

B. Cementitious Materials - Unless otherwise indicated in the Contract Documents or as indicated below, concrete mixtures may use any cementitious materials listed in PART 2 section “Concrete Materials”.
1. Cementitious materials other than Portland cement shall not exceed the ACI 318 limits for the designated exposure classifications of each mix class.

C. Limit water-soluble, chloride-ion content in hardened concrete to following limits depending on the exposure category assigned to the structural member identified in this section of the specification or in the contract documents, whichever is more stringent. The limits are stated in terms of chloride ions in percent by weight of cement.
1. Reinforced in Exposure Category C0 – 1.00%
2. Reinforced in Exposure Category C1 – 0.30%
3. Reinforced in Exposure Category C2 – 0.15%

D. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as required, for placement and workability.

2. Use water-reducing and -retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a w/c ratio below 0.50.
4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.

E. Air Content: Provide total air content for each class of concrete based on the nominal maximum size of aggregate and the assigned exposure class for resistance to freezing and thawing indicated in 2.12. Concrete for members categories as Exposure Category F0 should be non-air entrained, unless noted otherwise on the Contract Documents.

Nominal Maximum Aggregate Size, inch	Total Air Content (%)	
	Exposure Class F2 and F3	Exposure Class F1
3/8	6.0 to 9.0%	4.5 to 7.5%
1/2	5.5 to 8.5%	4.0 to 7.0%
3/4	4.5 to 7.5%	3.5 to 6.5%
1	4.5 to 7.5%	3.0 to 6.0%
1-1/2	4.0 to 7.0%	3.0 to 6.0%
2	3.5 to 6.5%	2.5 to 5.5%
3	3.0 to 6.0%	2.0 to 5.0%

F. Slump – Provide documentation in submittal prior to commencement of Work of target slump or slump flow value for each class of concrete. Consistency of concrete shall be established to facilitate placement with minimized potential for segregation.

G. Alkali silica reactivity – For structural concrete members that will be moist in service and when it is determined as per Section 2.2B that the aggregate source used needs to include mitigative measures, submit documentation demonstrating that the proposed cementitious materials used with the aggregates by ASTM C1567 tests with an expansion after 14 days of exposure less than or equal to 0.1%.

H. The installer and manufacturer shall coordinate to establish properties of fresh concrete to facilitate placement and finishing with reduced potential for segregation and bleeding. Factors shall include but are not limited to slump or slump flow, setting time, method of placement, rate of placement, hot and cold weather placement, curing, and concrete temperature. Selection of fresh concrete properties shall be notified to the Engineer of Record in the submittal.

I. Contractor shall indicate reportable changes in sources of materials and quantities when such changes are necessary to ensure constructability, performance of concrete and compliance with the specification requirements. The contractor is permitted to make minor adjustments less than the reportable deviations noted in the original submittal to concrete mixtures to ensure uniformity of concrete without a re-submittal for review or approval.

2.14 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

B. Identification: Deliver all reinforcement to the project site bundled, tagged and marked. Use metal tags indicating bar size, lengths, and other information corresponding to markings shown on placement diagrams.

C. Rejected Materials: Reinforcing with any of the following defects will not be permitted in the work:
   1. Bar lengths, depths, and bends exceeding the specified fabrication tolerances. Bends or kinks not indicated on drawings or final shop drawings.
   2. Bars with reduced cross section due to excessive rusting or other cause.

2.15 CONCRETE MIXING

A. General: Concrete may be mixed at batch plants or it may be transit mixed as specified herein. Batch plants must comply with the requirements of ACI 304, with sufficient capacity to produce concrete of the quality specified, in quantities required to meet the construction schedule. All plant facilities are subject to the acceptance of the Architect/Engineer. Plant facilities shall be calibrated by testing agencies specifically qualified for this as frequently as necessary to insure accuracy to plus or minus 0.4% of the total capacity of the components of the plant, but at a frequency not to exceed 6 months.

B. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, furnish batch ticket information, and as specified, provided the quantity and rate of delivery will permit unrestricted progress of the work in accordance with the placement schedule. Discharge of the concrete shall be completed within l l/2 hours after water is added to the mix or by the time the drum has revolved 300 times, whichever occurs first.

   1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

C. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.

   1. For mixer capacity of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
   2. For mixer capacity larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd.
   3. Do not exceed the catalog rating or nameplate capacity for a total volume of materials used per batch.
   4. Equip the mixer with automatic controls, or semi-automatic controls, if acceptable, for proportioning materials and the proper measured quantities.
   5. Do not exceed 30 minutes total elapsed time between intermingling of damp aggregates and cement to the discharge of the completed mix.
   6. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.\

2.16 FABRICATION OF REINFORCEMENT

A. General: Shop-fabricate reinforcing bars to conform to the required shapes and dimensions, with fabrication tolerances complying with ACI 315. In case of fabricating errors, do not re-bend or straighten reinforcement in a manner that will injure or weaken the material.

B. Identification: Deliver all reinforcement to the project site bundled, tagged and marked. Use metal tags indicating bar size, lengths, and other information corresponding to markings shown on placement diagrams.

C. Rejected Materials: Reinforcing with any of the following defects will not be permitted in the work:

1. Bar lengths, depths, and bends exceeding the specified fabrication tolerances. Bends or kinks not indicated on drawings or final shop drawings.
2. Bars with reduced cross-section due to excessive rusting or other cause.

PART 3 - EXECUTION

3.1 FORMWORK INSTALLATION

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support assumed values of live load, dead load, weight of moving equipment operated on formwork, concrete mix, height of concrete drop, vibrator frequency, ambient temperature, foundation pressures, stresses, lateral stability, and other factors pertinent to safety of the structure during construction.

B. Construction loads, including reshoring loads, on in place construction shall at no time exceed the live load for which the in place construction was designed. If the contractor is uncertain about the design live loads, it shall be his responsibility to obtain these from the Architect/Engineer.

C. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.
   1. Earth forming of grade beams is permitted, with the exception that the top 6-inches of exterior grade beams must be formed. Earth forming must be accompanied by lime-stabilization of the subgrade to prevent sloughing. Trench width shall be 2-inches wider than stated beam width to account for increase cover thickness required by ACI, i.e. 3-inches at sides and bottom for cast-against earth.

D. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

   1. Class A, 1/8 inch for smooth-formed finished surfaces.
   2. Class C, 1/2 inch for rough-formed finished surfaces.

E. Construct forms tight enough to prevent loss of concrete mortar.

F. Construct forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

   1. Install keyways, reglets, recesses, and the like, for easy removal.
   2. Do not use rust-stained steel form-facing material.

G. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

H. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

I. Chamfer exterior corners and edges of permanently exposed concrete.

J. Forms for Exposed Concrete: Drill forms to suit ties used and to prevent leakage of concrete mortar around tie holes. Do not splinter forms by driving ties through improperly prepared holes.

1. Do not use metal cover plates for patching holes or defects in forms.

K. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

L. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

M. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

N. Coat contact surfaces of forms with an approved, non-residual, low-VOC form-release agent, according to manufacturer's written instructions, before placing reinforcement.

1. Do not allow excess form coating material to accumulate in forms or come into contact with in place concrete surfaces against which fresh concrete will be placed. Apply according to manufacturer's instructions.
2. Coat steel forms with a non-staining, rust preventative material. Rust stained steel formwork is not acceptable.

3.2 EMBEDDED ITEM INSTALLATION

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Anchor bolts shall be set with securely fastened templates, and the threaded area shall be protected from concrete laitance. Anchor bolts shall be accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
    a. Where conduit, pipe, or other items are to be embedded in concrete beams, slabs, or columns, they shall be placed not closer than the diameter of the largest of the adjacent items and with a net reduction in the concrete area (of a 12 inch wide strip in slabs) not in excess of 9% without prior approval of the Engineer. The location of such embedded items shall generally be at the middle or centroid of the member.
3. Install dovetail anchor slots in concrete structures as indicated.
4. Hole Forms for Slabs: Install “hole forms” in concrete structures where railing posts are indicated on drawings.
5. Forms for Slabs: Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and contours in finished surfaces. Provide and secure units to support screed strips using strike off templates or compacting type screeds.

3.3 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.
1. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place may not be removed in less than 14 days and until concrete has achieved at least 70 percent of its 28-day design compressive strength. Determine

potential compressive strength of in place concrete by testing field cured specimens representative of concrete location or members.

2. Form facing material may be removed 4 days after placement only if shores and other vertical supports have been arranged to permit removal of form facing material without loosening or disturbing shores and supports.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material are not acceptable for exposed surfaces. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 SHORING AND RESHORING INSTALLATION

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

C. Keep reshores in place a minimum of 15 days after placing upper tier, or longer, if required, until concrete has attained its required 28 day strength and heavy loads due to construction operations have been removed.

3.5 VAPOR-RETARDER INSTALLATION

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 6 inches and seal with manufacturer's recommended tape.

B. Bituminous Vapor Retarders: Place, protect, and repair bituminous vapor retarder according to manufacturer's written instructions.

3.6 STEEL REINFORCEMENT INSTALLATION

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcing by metal chairs, runners, bolsters, spacers, and hangers, as approved by Architect/Engineer to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

1. Provide sufficient numbers of supports and of strength to carry the reinforcement. Do not place reinforcing bars more than 2 inches beyond the last leg of any continuous bar

support. Do not use supports as bases for runways for concrete conveying equipment and similar construction loads.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded-wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.7 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

1. Locate construction joints, if required, but not shown so as to divide the slab into areas not in excess of 6000 sq. ft.(as close to square in configuration as possible), unless otherwise accepted by the Architect/Engineer. Con-form to slab placement, where shown. Before adjacent pour is made, the surface shall be roughened to an amplitude of a minimum of 1/4 inch except at exposed surfaces.

2. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
3. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete. Bulkheads designed and accepted for this purpose may be used for slabs. Keyways are to be horizontal or vertical as directed by the Architect/Engineer. Install preformed plastic adhesive waterstops in the keyway of all construction joints where vinyl, bulb type waterstops are not detailed.
4. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
6. Space vertical joints in walls as indicated in the Construction Documents. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
7. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:
1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface, dislodge aggregates, and before concrete develops random contraction cracks, but not longer than 12 hours after slab finishing.
2. Formed Contraction Joints: Insert premolded plastic, hardboard, or fiberboard strip into fresh concrete until top surface of strip is flush with slab surface. Tool slab edges round on each side of insert. After concrete has cured, at least 7 days remove inserts and clean groove of loose debris.
3. Contraction joints in unexposed floor slabs may be formed by saw cuts as soon as possible after slab finishing as may be safely done without dislodging aggregate.

4. If joint pattern is not shown, provide joints not exceeding 15 feet in either direction and located to conform to bay spacing wherever possible (at column centerlines, half bays, third bays).

D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
1. Joint fillers and sealants are specified in Division 7 Section "Joint Sealants."

E. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.8 WATERSTOP INSTALLATION

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.9 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections are completed. Notify other trades to permit installation of their work. Notify the Architect/Engineer and Testing Laboratory 24 hours before placing concrete.

B. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

C. Do not use concrete which becomes non-plastic and unworkable, or does not meet the requirements quality control limits, or which has been contaminated by foreign materials. Do not use re-tempered concrete. Remove rejected concrete from the project site and dispose of in an acceptable location.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

E. Concrete Conveying: Handle concrete from the point of delivery and transfer to the concrete conveying equipment and to the locations of final deposit as rapidly as practical by methods which will prevent segregation and loss of concrete mix materials.

1. Provide mechanical equipment of such size and design for conveying concrete to insure a continuous flow of concrete at the delivery end. Provide run ways above top of finished slab in all places for wheeled concrete conveying equipment for the concrete delivery point to the locations of final deposit. Do not wheel concrete directly over steel

reinforcement. Keep interior surfaces of conveying equipment, including chutes, free of hardened concrete, debris, water, snow, ice, and other deleterious materials.

F. Pumping Concrete: The Contractor may at his option use pumping machines for placing the concrete subject to the following requirements:
1. If for pumping requirements the mix design is other than specified, the Contractor shall furnish to the Architect/Engineer a mix for approval not less than 15 days prior to the time required for its use. The laboratory will make and test this mix design. After the results of these tests are noted and approval is received, this mix can be used. Cost of this laboratory work shall be paid by the Contractor.
2. Whenever concrete is placed by pumping, it is recommended a second pump complete with sufficient pipes and hose for a complete and independent set up, or other placement equipment, be at the job prior to any placing of concrete. The Contractor shall be responsible for any corrective work which results from equipment breakdown.

G. Placing Concrete in Forms: Deposit concrete in forms in horizontal layers no deeper than 24 inches and in a manner to avoid inclined construction joints. Where placement consists of several layers, place each layer while preceding layer is still plastic to avoid cold joints.

1. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 309.
3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

H. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
2. Maintain reinforcement in position on chairs during concrete placement.
3. Screed slab surfaces with a straightedge and strike off to correct elevations.
4. Slope surfaces uniformly to drains where required.
5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

I. Bonding: Roughen surfaces of set concrete at all joints, except where bonding is obtained by use of a concrete bonding agent. Clean surfaces of laitance, coatings, loose particles, and foreign matter. Roughen surfaces in a manner to expose bonded aggregate uniformly and to not leave laitance, loose particles of aggregate, or damaged concrete at the surface.

3.10 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view, to receive a rubbed finish, or to be covered with a coating or covering material applied directly to concrete, such as waterproofing, dampproofing, veneer plaster, painting, or another similar system.

C. Rubbed Finish: Apply the following to smooth-formed-finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix 1 part Portland cement to 1-1/2 parts fine sand with a 1:1 mixture of bonding admixture and water. Add white Portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.11 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch in one direction.

1. Apply scratch finish to monolithic slab surfaces to receive concrete floor topping or mortar setting beds for tile, Portland cement terrazzo, and other bonded applied cementitious finish flooring material, and where indicated.

2. After placing slabs, finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:

a. Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and of levelness, F(L) 15.

3. Slope surfaces uniformly to drains where required.

C. Float Finish: After screeding, consolidating, and leveling concrete slabs, do not work surface until ready for floating. Begin floating, using float blades or float shoes only, when surface water has disappeared, or when concrete has stiffened sufficiently to permit operation of power-driven floats, or both. Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats. Restraighten, cut down high spots, and fill low spots. Uniformly slope surfaces to drains. Repeat float passes and re-straightening until surface is left with a uniform, smooth, granular texture.

1. Apply float finish to monolithic slab surfaces to receive trowel finish and other finishes as specified; slab surfaces to be covered with membrane or elastic waterproofing, membrane or elastic roofing, or sand bed terrazzo; and where indicated.

2. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:

    a. Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and of levelness, F(L) 15.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to monolithic slab surfaces exposed to view and slab surfaces to be covered with resilient flooring, carpet, ceramic or quarry tile, paint, or another thin film-finish coating system.
2. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:
    a. Specified overall values of flatness, F(F) 35; and of levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 17; for slabs-on-grade.
    b. Specified overall values of flatness, F(F) 30; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 15; for suspended slabs.

E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces where ceramic or quarry tile is to be installed by either thickset or thinset method. While concrete is still plastic, slightly scarify surface with a fine broom.

1. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

G. Chemical Hardener Finish: On concrete floors which remain exposed and as directed apply chemical hardener finish to interior concrete floors. Apply liquid chemical hardener after complete curing and drying of the concrete surface. Dilute liquid hardener with water (parts of hardener/water as follows), and apply in 3 coats; first coat, 1/3 strength; second coat, 1/2 strength; third coat, 2/3 strength. Evenly apply each coat, and allow 24 hours for drying between coats.

1. Apply proprietary chemical hardeners, in accordance with manufacturer's printed instructions.

2. After final coat of chemical hardener solution is applied and dried, remove surplus hardener by scrubbing and mopping with water.

3.12 MISCELLANEOUS CONCRETE ITEM INSTALLATION

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations:

1. Coordinate sizes and locations of concrete bases with actual equipment provided.
2. Construct concrete bases as indicated on the Contract Documents.
3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete substrate.
4. Prior to pouring concrete, place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Cast anchor-bolt insert into bases. Install anchor bolts to elevations required for proper attachment to supported equipment.

D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel finish concrete surfaces.

3.13 CONCRETE PROTECTING AND CURING

A. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

B. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for remainder of curing period.

C. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

D. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than three days with the following materials:

   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 4-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 3 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven

days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.

a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies does not interfere with bonding of floor covering used on Project.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions, followed by shading or moist curing adequate to keep temperature of the concrete at 80 degrees F or below during the curing period. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

5. Temperature of Concrete During Curing: When the atmospheric temperature is 85 degrees F. and above, or during other climatic conditions which will cause too rapid drying of the concrete, make arrangements before the start of concrete placing for the installation of wind breaks or shading, and for fog spraying, wet sprinkling, or moisture retaining covering. Protect the concrete continuously for the concrete curing period. Provide hot weather protection complying with the requirements of Part 1 “GENERAL”, Article “FIELD CONDITIONS”.

6. Protection from Mechanical Injury: During the curing period, protect concrete from damaging mechanical disturbances including load stresses, heavy shock, excessive vibration, and from damage caused by rain or flowing water. Protect all finished concrete surfaces from damage by subsequent construction operations. Concrete trucks, cranes, or excessive concentrations of loads will not be permitted on any slab without prior written approval of the Architect/Engineer during the curing period or subsequent construction.

7. Sealer and Dustproofer: Apply a second coat of specified curing and sealing compound only to surfaces given a first coat.

3.14 LIQUID FLOOR TREATMENT APPLICATION

A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.

1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
2. Do not apply to concrete that is less than seven (7) days' old.

3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.

B. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.

3.15 JOINT FILLING

A. Joint fillers and sealants are specified in Division 7 Section "Joint Sealants."

3.16 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part Portland cement to 2-1/2 parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/4 inch in any dimension to solid concrete. Limit cut depth to 1 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
2. Repair defects on surfaces exposed to view by blending white Portland cement and standard Portland cement so that, when dry, patching mortar matches surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, pop-outs, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
2. After concrete has cured at least 14 days, correct high areas by grinding.
3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
4. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.

5. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Architect's approval. Under no circumstances will "dusting" of wet concrete during finishing operations be allowed.

3.17 SOURCE QUALITY CONTROL

A. Concrete Batch Facility: The testing laboratory shall perform inspections of the concrete batching facility at intervals not to exceed one per 1,000 cubic yards of concrete placed or at least one each six months. The inspection shall include verification of the calibration of scales, aggregate analysis of the current stockpiles, verification of batching procedures, and compliance with the original mix design. First inspection shall take place before any concrete is placed. The cost of each inspection shall be paid by the testing allowance.
   1. Test results will be reported in writing to Architect, Structural Engineer, ready mix producer, and Contractor within 24 hours after tests. Reports of compressive strength tests shall contain the Project identification name and number, date of concrete placement, name of concrete testing service, concrete type and class, location of concrete batch in structure, design compressive strength at 28 days, concrete mix proportions and materials, compressive breaking strength, and type of break for both 7 day tests and 28 day tests. If any breaks are below specified or expected strengths, the Testing Laboratory shall report any visible anomalies.

3.18 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

   1. The testing laboratory shall monitor concrete properties at time of placement and report to the Contractor any deviation from the project specifications. It shall be the responsibility of the Contractor to control the concrete and comply with the project specifications. If the Contractor cannot adequately control the quality of the concrete, then the Architect/Engineer shall direct the testing laboratory to control the concrete. The cost of this service shall be paid for by the Contractor.

B. Perform testing and inspections as indicated on the Contract Documents.

C. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172/C 172M shall be performed according to the following requirements:
   1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd., plus one set for each additional 50 cu. yd. or fraction thereof. One specimen tested at 7 days, two specimens tested at 28 days, and one specimen retained in reserve for later testing if required.

      a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231/C 231M, pressure method, for normal-weight concrete; ASTM C 173/C 173M, volumetric method, for structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below or 80 deg F and above, and one test for each composite sample.
5. Unit Weight: ASTM C 567/C 567M, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
6. Compression Test Specimens: ASTM C 31/C 31M.

    a. Cast and laboratory cure one set of four standard cylinder specimens for each composite sample.
    b. For pumped concrete, one set of compression test cylinders shall be obtained at both the point of discharge and point of placement.
7. Curing of Compression Test Specimens: After preparation of the test cylinders, to prevent evaporation of water from the unhardened concrete, cover the cylinders immediately after finishing with a non-reactive plate or impervious plastic sheeting. Protect the outside surface of cardboard molds from any source of water for the first 24 hours after casting. Field curing procedures for test cylinders for 28 day compressive strengths are not the same as those for determining strength for form removal time.
    a. For test cylinders for 28 days compressive strength determination, during the first 24 hours after molding, store all test cylinders under conditions that maintain the temperature immediately adjacent to the cylinders in the range of 60 to 80 degrees F. and prevent loss of moisture from the specimens. If the Architect/Engineer or testing laboratory have questions concerning the storage temperature, they may require that the contractor provide a temperature record of the cylinders by means of maximum minimum thermometers. At the end of 20 hours plus or minus four hours, cylinders are to be transported to the laboratory, removed from the molds, and placed in a moist condition at 73.4 plus or minus 3 degrees F. until the moment of testing.
    b. Cure test cylinders to be used for determining strength for form removal time as nearly as practical in the same manner as the concrete in the structure. Cylinders shall be stored in or on the structure as near the point of use as possible, and as far as is practical, with the same exposure to the elements. Remove test cylinders from field storage and store in lime water at 73.4 plus or minus 3 degrees F. for 24 hours plus or minus 4 hours immediately before testing.
    c. Cylinders shipped from the field to the laboratory shall be packed in sturdy wood boxes or other suitable containers surrounded by wet sawdust or other suitable packing material and shall be protected from freezing during shipment.

8. Compressive-Strength Tests: ASTM C 39/C 39M; test one laboratory-cured specimens at 7 days, two specimens at 28 days, and retain one specimen in reserve for later testing if required.

    a. Test one set of two field-cured specimens at 7 days and one set of two specimens at 28 days.
    b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.
    c. If the compressive strength tests fail to meet the minimum requirements specified, the concrete represented by such tests will be considered deficient in strength and subject to additional testing as herein specified.

9. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
10. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
11. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
12. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
13. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
14. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
15. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

D. Measure floor and slab flatness and levelness according to ASTM E 1155 within 48 hours of finishing.

E. Formed Concrete Dimensional Tolerances: Formed concrete having any dimension smaller than required, and outside the specified tolerance limits, will be considered deficient in strength and subject to additional testing as herein specified.
1. Formed concrete having any dimension greater than required will be rejected if the appearance or function of the structure is adversely affected, or if the larger dimensions interfere with other construction. Repair, or remove and replace rejected concrete as required to meet the construction conditions. When permitted, accomplish the removal of excessive material in a manner to maintain the strength of the section without affecting function and appearance.

F. Strength of Concrete Structures: The strength of the concrete structure in place will be considered potentially deficient if it fails to comply with any of the requirements which control the strength of structure, including the following conditions:
1. Failure to meet compressive strength test requirements.
2. Concrete which differs from the required dimensions or location in such a manner to reduce strength.
3. Concrete subjected to damaging mechanical disturbances; particularly load stresses, heavy shock, and excessive vibration.
4. Poor workmanship and quality control likely to result in deficient strength.

3.19 PROTECTION OF LIQUID FLOOR TREATMENTS

A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

END OF SECTION 03 30 00

SECTION 03 35 43 - SPECIAL CONCRETE FLOOR FINISHES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: This section specifies polished concrete.

B. Related Sections:

1. Section 07 92 00 "Joint Sealants" for sealants in concrete floor surfaces.
2. Section 03 30 00 “Cast-in-Place Concrete”

1.2 REFERENCES

A. American Concrete Institute (ACI)
1. CI 302.IR – Guide for Concrete Floor and Slab Construction.

B. ASTM International

1. ASTM C309 – Standard Specification for Liquid Membrane Forming Compounds for C Curing Concrete.
2. ASTM C171 - Standard Specification for Sheet Materials for Curing Concrete.
3. ASTM C779 – Standard Test Method for Abrasion Resistance of Horizontal Concrete Surfaces.
4. ASTM C805 - Standard Test Method for Rebound Number of Hardened Concrete.
5. ASTM E 1155 – Standard Test Method for Determining Floor Flatness and Levelness Using the F number system.

C. Reunion Internationale des Laboratories D'Essais et de Recherches sur les Constructions (RILEM)
1. RILEM Test Method 11.4 Standard Measurement of Reduction of Moisture Through Horizontal Concrete Surfaces.

1.3 PERFORMANCE REQUIREMENTS

A. Provide polished flooring that has been selected, manufactured and installed to achieve the following:

1. Abrasion Resistance: ASTM C779, Up to 400% increase in abrasion resistance.
2. Reflectivity: Increase of 35% as determined by gloss meter.
3. Waterproof Properties: RILEM Test Method 11.4, 70% or greater reduction in absorption.
4. Impact Strength: ASTM C805, Up to 21% increased impact strength must meet or exceed ADA/OSHA suggested 0.5 standard value for the Static Co-efficient of Friction.

B. Design Requirements

1. Hardened Concrete Properties
   a. Minimum Concrete Compressive Strength: 3500 psi
   b. Normal Weight Concrete, No light weight aggregates
   c. Non-air entrained concrete
   d. Fly Ash Content not to exceed 10%

2. Placement Properties for New Concrete
   a. Natural concrete slump of 4 1/2 inches - 5 inches, Admixtures may be used
   b. Flatness Requirements
      1) Overall Ff 50
      2) Local Ff 35
3. Hard-Steel Trowelled (3 passes) Concrete
   a. No burn marks. Finish to ACI 302.IR, Class 5 floor.
   b. Contractor shall take special care to avoid over-troweling initial concrete finish which may burn the surface.
4. Curing Options
   a. Membrane forming curing compounds (ASTM C309, Type 1, Class B, all resin, dissipating cure). Acrylic curing and sealing compounds not recommended.
   b. Sheet membrane (ASTM CI71) Polyethylene film not recommended.
   c. Damp curing: Seven-day cure.
   d. Sodium Silicate Curing Compound. Apply per manufacturer's written instructions.

1.4 PRE INSTALLATION MEETINGS

A. Pre-Installation Conference: Conduct conference at project site

1.5 ACTION SUBMITTALS:

A. Product Data: For each type of product indicated

1.6 INFORMATIONAL SUBMITIALS

A. Test Reports: Certified test reports, from an Independent Testing Laboratory, showing compliance with specified performance criteria and physical properties as cited in Performance Requirements above.

B. Certificates:

1. Product and installer certificates signed by the manufacturer certifying materials meet specified performance characteristics and criteria and physical requirements.
2. Current installation contractor's certificate signed by manufacturer declaring contractor as a certified installer of polishing system, prior to bidding of project.

1.7 CLOSEOUT SUBMITIALS:

A. Warranty: Submit warranty documents specified.

B. Maintenance Data: For polished concrete finishing to include in maintenance manuals. Also include the following.

1. Manufacturer's instructions on maintenance renewal of applied treatments.
2. Protocols and product specifications for joint filling, crack repair and/or surface repair.

1.8 QUALITY ASSURANCE

A. Manufacturers Qualifications:

1. Manufacturer has a minimum of 5 years' experience in manufacturing components similar to or exceeding requirements of project.
2. Manufacturer must be able to provide technically trained field representative during

construction and approving application method.

B. Installer Qualifications

1. Installer experienced in performing work of this section who has specialized in installation work similar to that required for this project.
2. Installer trained and having current certification for RetroPlate Concrete Polishing System.

C. Mock-Ups

1. Mock-up size: 10'x10' floor area at job site, at location as directed under conditions.
2. similar to those which will exist during actual placement. Divide mock-up area into 4 equal zones, allowing for sequential attempts to determine amount of aggregate exposure, and color (if required) and shine selection.
3. Mock-up will be used to judge workmanship, concrete substrate preparation, operation of equipment, material application, color selection and shine level.
4. Allow 24 hours for inspection of mock-up before proceeding with work
5. When accepted, mock-up will demonstrate minimum standard of quality required for this project.

D. Basis of Design:

1. Class B, Salt/Pepper Finish.
2. Level 2, Medium Gloss, up to and including an 800-grit polish with a gloss reading of 20-30.
3. Color: As determined by Owner based upon installer's mock-up samples.

E. Sequence with Other Work: Comply with Manufacturer's written recommendations for sequencing construction operations.

1.9 DELIVERY, STORAGE & HANDLING

A. Ordering:

1. Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.

B. Delivery:

1. Deliver materials in manufacturer's original packaging with identification labels and seals intact

C. Storage and Protection:

1. Store materials protected from exposure to harmful weather conditions and at temperature conditions recommended by manufacturer
2. Protect Concrete Slab
   a. Protect from petroleum stains during construction.
   b. Diaper all hydraulic lifts and power equipment.
   c. Restrict vehicular parking, drop cloths will be placed under vehicles parked on slab
   d. No pipe cutting machinery will be used on interior floor slab.
   e. Steel will not be placed on interior floor slab to avoid rust staining.
   f. No acids or acidic detergents will come into contact with slab

1.10 PROJECT CONDITIONS

A. Environmental Limitations: Do not install work until ambient temperature and humidity conditions are maintained at levels indicated in reference standards.

1.11 WARRANTY

A. Project Warranty: Refer to Contract Conditions for project warranty provisions.

B. Manufacturer's Warranty: Submit for owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to and does not limit, other rights Owner may have under Contract Documents.

PART 2 - PRODUCTS

2. 1 PRODUCTS, GENERAL

A. Ensure concrete finishing components and materials are from single source, from single manufacturer.

2.2 POLISHED CONCRETE FINISHING PRODUCTS

A. Basis of Design Product: Advanced Floor Products, RetroPlate Systems
1. Contact: P 0 Box 80533, Provo, UT 84605, Telephone: (800)998-5664; Deke Rife, {402) 598-0801 deke@retroplatesystem.com.

B. Proprietary Products/Systems:
1. Hardener, Sealer, Densifier: RetroPlate 99 - penetrating, water based, odorless liquid, VOC compliant, environmentally safe chemical, will leave no film on surface.
a. Use only silicate type densifiers.
b. Use no siliconates.
2. Joint Filler: Crete Fill, semi-rigid, 2 component, self-leveling, 100% solids, rapid curing, polyuria control joint and crack filler with a choice of 65, 75 or 85 Shore-A hardness.
a. Color to be selected by Architect.
b. Floor mockup shall include a filled joint.
3. Oil Repellent Sealer: RetroPel.
4. Cleaning Solution: CreteClean Plus.
5. Stain Protector: RetroGuard.

C. No Substitutions Allowed.

D. Where color is indicated, color is to be achieved using ChemSystems Chromastain. Solvent or water-based dyes not permitted.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Compliance: Comply with manufacturer's written data, including product technical bulletins, product catalog installation instructions, product carton installations and Advanced Floor products Spec-Data sheets

3.2 EXAMINATION

A. Site Verification of Conditions.

1. Verify that concrete substrate conditions which have been previously installed under other sections or contracts are acceptable for product installation in accordance with

manufacturer's instructions prior to installation of finishing materials.

2. Verify concrete is cured to 28 days or 3500 psi strength.

3.3 PREPARATION

A. Ensure surfaces are clean and free of dirt and other foreign matter harmful to performance of Concrete finishing materials.

B. Examine surface to determine soundness of concrete for polishing.

3.4 INSTALLATION

A. Floor Surface Polishing and Treatment.

1. Provide polished concrete floor treatment in entirety of slab indicated by drawings. Provide Consistent finish in all contiguous areas.

2. Apply floor finish prior to installation of fixtures and accessories.

3. Diamond polish concrete floor surfaces with proper grinding equipment, recommended by Polishing system representative.

a. Comply with manufacturer's recommended polishing grits for each sequence to achieve desired finish level.

b. Sequence with coarse to fine grit (Level 1, 1500 grit) using dry method using incrementally finer grit polishing until achieving level of polish and sheen that matches approved floor mockup.

c. Maintain sharp demarcation line between polished surfaces and other finishes.

d. Expose aggregate in concrete surface only as determined by approved mock-up.

e. All concrete surfaces shall be as uniform in appearance as possible.

4. Apply RetroPlate 99, Hardener-Densifier as follows;

a. Apply RetroPlate 99 at 200 sq. ft. per gallon, according to manufacturer's directions

b. Apply RetroGuard according to manufacturer's directions.

c. Remove defects and re-polish defective areas.

d. Finish edges of floor finish adjoining other materials in a clean and sharp manner.

3.5 FINAL CLEANING

A. Mechanically scrub treated floors for seven days with soft to medium pads using approved Cleaning solution (Crete Clean Plus).

B. Upon completion, general contractor must remove surplus and excess materials, rubbish, tools and equipment.

3.6 PROTECTION

A. Protect installed product (Polished floors) from damage during construction.

1. Do not allow vehicles on the concrete floor. Do not transport materials across floor without protection from scuffing and/or staining.
2. Do not cut or fit pipes, masonry, or drywall over the finished floor.
3. Do not store materials on the floor that may affect curing or sheen.
4. Do not slide equipment, boxes, or furnishings across the floor.

END OF SECTION

SECTION 03 52 16 – INSULATING CONCRETE ROOF FILL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Formed non-structural cementitious lightweight insulating roof fill over metal roof deck.
   2. Openings for roof accessories.
   3. Perimeter joints and control joints at vertical interruptions.

B. Related Sections:
   1. Section 01 40 00 – Quality Requirements: Materials testing.
   2. Section 05 31 23 – Steel Roof Decking.
   3. Section 05 50 00 – Metal Fabrications: Steel framed openings in roof deck.
   4. Section 06 10 53 – Miscellaneous rough Carpentry: Wood nailers, wood curbs, and wood-framed openings in roof deck.
   5. Section 07 54 05 – Thermoplastic Membrane Roofing.
   6. Section 07 71 00 – Roof Specialties: Manufactured roof curbs.
   7. Section 07 72 00 – Roof Hatches: Access and smoke hatches in roof openings.

1.2 SUMMARY

A. This Section includes cast-in-place lightweight concrete roof insulation for roof decks.

1.3 DEFINITIONS

A. Lightweight Concrete Roof Insulation: Low-density concrete, with an oven-dry unit weight not exceeding 50 lb/cu. ft. (800 kg/cu. m), placed with or without embedded rigid insulation, and classified as follows:

   1. Aggregate Lightweight Concrete: Low-density concrete made with Portland cement, water, air-entraining admixture, and either perlite or vermiculite mineral aggregates.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated. Include mixing and application instructions for each type of lightweight concrete roof insulation.

B. Shop Drawings: Include plans, sections, and details showing roof slopes, lightweight concrete roof insulation thicknesses, embedded board insulation, roof penetrations, roof perimeter terminations and curbs, control and expansion joints, and roof drains.

C. Design Mixes: For each lightweight concrete roof insulation mix.

D. Material Test Reports: From a qualified testing agency indicating and interpreting test results of the following for compliance with requirements indicated, based on comprehensive testing of current materials:

   1. Cement.
   2. Aggregates.
   3. Admixtures.
   4. Insulation board.

E. Research/Evaluation Reports: Evidence of lightweight concrete roof insulation's compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed lightweight concrete roof insulation similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

1. Installer shall be approved by lightweight concrete roof insulation manufacturer.

B. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1077 and ASTM E 329 to conduct the testing indicated, as documented according to ASTM E 548.

C. FM Listing: Provide lightweight concrete roof insulation evaluated by FM as part of a roof assembly and listed in FM's "Approval Guide" for Class 1 fire rating and Class 1-90 windstorm ratings.

D. Provide vermiculite aggregates containing no detectable asbestos as determined by the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."

E. Provide copy of Manufacturer’s 20 year, NDL warranty with the same Manufacturer’s roofing warranty.

F. Installer is responsible for insuring positive drainage of the insulation deck . Ponding water shall be cause for rejection of the installation. Prior to installation of the roof system, the installer shall perform a ponding water test on the deck to confirm deck drainage. Test shall be conducted in the presence of the Architect.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original undamaged packages or acceptable bulk containers.

B. Store packaged materials to protect them from elements or physical damage.

C. Do not use cement that shows indications of moisture damage, caking, or other deterioration.

1.7 PROJECT CONDITIONS

A. Do not place lightweight concrete roof insulation unless ambient temperature is 40 deg F (4.4 deg C) and rising.

B. Do not place lightweight concrete roof insulation during rain or snow or on surfaces covered with standing water, snow, or ice.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include the following:

1. Cellular-Type Lightweight Insulating Concrete:
   a. Celcore Incorporated.
   b. Elastizell Corporation of America.
   c. Siplast Inc.

2. Substitutions: Section 01 60 00 - Product Requirements.

2.2 CELLULAR-TYPE INSULATING CONCRETE MATERIALS

A. Portland Cement: ASTM C 150, Type I II or III.

A. Foam Concentrate: Protein-based foam concentrate conforming to ASTM C869 and ASTM C796.

B. Joint Filler: ASTM C 612, Class 2, glass-fiber type; compressing to one-half thickness under a load of 25 psi (172 kPa).

C. Molded-Polystyrene Insulation Board: ASTM C 578, Type I, 0.90-lb/cu. ft. (15-kg/cu. m) minimum density. Provide units with keying slots of approximately 3 percent of board's gross surface area.

D. Curing Compound: Type recommended by manufacturer.

2.3 DESIGN MIXES - GENERAL

A. Prepare design mixes for each type and strength of lightweight concrete roof insulation by either laboratory trial batch or field-test data methods. For trial batch method, use a qualified independent testing agency for preparing and reporting proposed mix designs.

1. Limit use of fly ash to not exceed 25 percent of Portland cement by weight.

B. Limit water-soluble chloride ions to the maximum percentage by weight of cement or cementitious material permitted by ACI 301.

C. Do not use the same testing agency for field quality-control testing.

D. Do not use Calcium dioxide in Lightweight concrete.

2.4 CELLULAR-TYPE LIGHTWEIGHT INSULATING CONCRETE

A. Cellular Mix: As follows:
1. Wet Density: 53 to 63 lb./cu. ft. when tested according to ASTM C138.
2. Oven-Dry Density: 31 to 37 lb/cu.ft., when tested according to ASTM C 495.
3. Compressive Strength: Minimum 200 psi when tested according to ASTM C 495.

PART 3 - EXECUTION

3.1 INSPECTION and PREPARATION

A. Metal Deck: Ensure that metal deck to receive insulating concrete fill is galvanized and ventilated to meet manufacturer's requirements. Neither cellular nor vermiculite type lightweight concrete roof insulation shall be installed over a non-ventilated deck regardless of whether allowed by manufacturer or submittals.

B. Control Joints: Install control joints at perimeter of roof deck and at junctures with vertical surfaces, including curbs, walls, and vents, for full depth of lightweight concrete roof insulation. Fill control joints with joint filler.

1. Provide 1 inch (25 mm) wide control joints for roof dimensions up to 100 feet (30 m) in length; 1-1/2 inch (38 mm) wide control joints for roof dimensions exceeding 100 feet (30 m).

3.2 MIXING AND PLACING

A. Mix and place lightweight concrete roof insulation according to manufacturer's written instructions, using equipment and procedures to avoid segregation of mix and loss of air content.

C. Install insulation board according to lightweight concrete roof insulation manufacturer's written instructions. Place board insulation in wet, lightweight concrete slurry poured a minimum of 1/8 inch (3 mm) over the structural substrate. Ensure full contact of board insulation with slurry, stagger joints, and tightly butt insulation boards.

1. Install insulation board in a stair-step configuration with a maximum step-down of 1 inch (25 mm).
2. Provide total system thickness of minimum 7.5-inches and R-25 or greater.

D. Deposit and screed lightweight concrete roof insulation in a continuous operation until an entire panel or section of roof area is completed. Do not vibrate or work mix except for screeding or floating. Place to depths and slopes indicated.

E. Finish top surface smooth, free of ridges and depressions, and maintain surface in condition to receive subsequent roofing system.

F. Begin curing operations immediately after placement, and air cure for not less than three days according to manufacturer's written instructions.

G. If ambient temperature falls below 32 deg F (0 deg C), protect lightweight concrete roof insulation from freezing and maintain temperature recommended by manufacturer for 72 hours after placement.

3.3 CURING

A. Protect insulating concrete from excess evaporation of surface moisture.

B. During low humidity conditions, sprinkle water over concrete surface to aid hydration and curing.

C. Apply curing compound where recommended by manufacturer.

D. Protect installed lightweight concrete from rain until installation of roof membrane.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to sample materials, perform tests, and submit test reports evaluating lightweight concrete roof insulation. Sampling and testing for quality control may include requirements specified in this Article.

1. Testing agency shall take samples according to ASTM C 172, except as modified by ASTM C 495, and comply with the following:

a. Determine as-cast unit weight during each hour of placement, according to ASTM C 138.
b. Determine compressive strength and oven-dry unit weight according to ASTM C 495. Make a set of at least 6 molds for each day's placement, but not less than 1 set of molds for each 5000 sq. ft. (465 sq. m) of roof area.
c. Report test results to Architect, Contractor, and lightweight concrete roof insulation Installer within 24 hours of completion of each test.
d. Perform additional tests when test results indicate as-cast unit weight, compressive strength, oven-dry unit weight, or other requirements have not been met.
1) Retest cast-in-place lightweight concrete roof insulation according to ASTM C 513 for compressive strength and oven-dry unit weight.

3.4 DEFECTIVE WORK

A. Refinish, or remove and replace, lightweight concrete roof insulation if surfaces are excessively scaled or too rough to receive roofing, according to roofing membrane manufacturer's written requirements.

B. Remove and replace lightweight concrete roof insulation that fails to comply with compressive-strength and oven-dry unit weight requirements.

END OF SECTION

CSECTION 03 62 00 – NON-SHRINK GROUT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.

1.2 SUMMARY

A. This specification describes non-shrink epoxy grout and non-shrink cement-based grout to be used wherever shown or implied on the drawings or called for in the specifications.

1.3 SUBMITTALS

A. Product data: Submit product data for the non-shrink grout verifying the products' compliance with this specification and describing the manufacturer's placement recommendations.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Non-Shrink Epoxy Grout: All epoxy grout shall be a pourable, non-shrink, 100% solids epoxy system. The epoxy grout system shall be supplied in units consisting of three components: resin, hardener, and specially-blended aggregate, all premeasured and prepackaged.

1. Resin component shall not contain any non-reactive diluents. Resins containing butyl glycidyl ether (BGE) or other highly volatile and hazardous reactive diluents are not acceptable.

2. Variation of component ratios is not permitted unless specifically recommended by the manufacturer.

3. The non-shrink epoxy grout shall exhibit the following properties:

    a. Working life: The mixed epoxy grout system shall have a minimum "working life" of 45 minutes at 75 degrees F.
    b. Compressive Strength: The hardened epoxy grout shall attain a minimum compressive strength of 5,500 psi in 24 hours and 10,000 psi in seven days when tested according to ASTM C 579, Method B.
    c. Thermal Coefficient: The epoxy grout shall exhibit a maximum thermal coefficient of .000030 -6 in./in./Fahrenheit when tested according to ASTM C 531 or ASTM D 696.
    d. Effective Bearing Area: The epoxy grout shall exhibit a minimum effective bearing area of 95%.

B. Non-Shrink Cement-Based Grout: Non-Shrink grout shall consist of premeasured, prepackaged materials supplied by the manufacturer requiring only the addition of water. The manufacturer's instructions must be printed on the outside of each bag.

1. The non-shrink cement-based grout shall exhibit the following properties:

    a. Non-Shrink: Grout shall comply with ASTM C1107. No shrinkage (0.0 percent) and a maximum 4.0% expansion when tested in accordance with ASTM C827. No shrinkage (0.0 percent), and a maximum of 0.3 percent expansion in the hardened state when tested in accordance with ASTM C1090.
    b. Compressive Strength: A minimum 28day compressive strength of 5,000 psi when tested in accordance with ASTM C 109.
    c. Setting Time: A minimum initial set time of 60 minutes when tested in accordance with ASTM C 191.

C. Water: Potable water.

D. Coarse Aggregate: Provide a clean, coarse aggregate conforming to ASTM C 404 (maximum size 3/8") for grout thickness greater than three inches.

2.2 MANUFACTURERS

A. Non-Shrink Epoxy Grout:

1. E³-F; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com

2. Five Star HP Epoxy Grout; Five Star Products, Inc.; 800-243-2206; www.firestarproducts.com

3. Rezi-Weld 3/2; W.R. Meadows, Inc.;800-342-5976; www.wrmeadows.com

4. MasterFlow 647; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us

5. Epoxy Grout J55; Dayton Superior; 888-977-9600; www.daytonsuperior.com

6. Polytops GC Grout; ChemMasters; 440-428-2105; www.chemmasters.net

B. Metallic Non-Shrink Cement-Based Grout

1. NS Metallic Grout; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com

2. MasterFlow 885; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us

C. Non-metallic Non-Shrink Cement-Based Grout:

1. MasterFlow 100; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us

2. NS Grout; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com

3. Sure-Grip Grout; Dayton Superior; 888-977-9600; www.daytonsuperior.com

4. Five Star Grout; Five Star Products, Inc.; 800-243-2206; www.firestarproducts.com

5. Crystex;L&M Construction Chemicals, Inc.; 800-362-3331; www.lmcc.com

6. Conset Grout; ChemMasters; 440-428-2105; www.chemmasters.net

7. 588-10K Nonshrink Grout; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

8. CG-86 Nonshrink Grout; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

PART 3 - EXECUTION

3.1 GENERAL

A. Placing: The Contractor shall perform all mixing and placement in accordance with the manufacturer's recommendations.

B. Temperature: The temperature of the grouting surfaces and the grout shall be maintained between 50 degrees F and 90 degrees F during grouting and for a minimum of 24 hours thereafter.

C. Elimination of Voids: Grout placement shall proceed in a manner that will assure the filling of all spaces and intimate contact of the grout with contact surfaces. Grout holes shall be used; location to be approved by Architect/Engineer if not otherwise detailed.

3.2 SURFACE PREPARATION

A. Concrete Surfaces: The concrete on which the grout will bear shall have attained its design strength before grouting.

1. Concrete shall be sound and all surfaces to be in contact with the grout shall be entirely free of oil, grease, laitance, curing compounds, and other deleterious substances.

2. Surfaces shall be roughened by chipping, sandblasting or other mechanical means to assure bond of the grout to the existing concrete.

B. Metal Surfaces: All metal surfaces which are to be in direct contact with the grout shall be thoroughly cleaned to bare metal immediately before grouting. Cool down hot base plates with cold water. Heat cold base plates with hot water.

C. Adjacent Surfaces: Treat adjacent surfaces and formwork with a bond breaking material to prevent bonding of excess grout.

3.3 INSTALLATION

A. Formwork: Forms shall remain in full contact with the grout until it hardens.

1. Forms shall be watertight and capable of supporting the grout until it cures.

2. Wood forms must be sealed.

B. Non-Shrink Epoxy Grout:

1. Surface Dryness: All surfaces shall be kept completely dry before grouting.

2. Grout Removal: Surfaces from which grout is to be removed after placing shall be treated with a paste wax or release agent before placement.

C. Non-Shrink Cement-Based Grout:

1. Composition: For interior column base plates not exposed to weather, grout containing metallic particles such as aluminum powders or iron filings may be used. For any other applications, the grout shall not contain metallic particles such as aluminum powders or iron fillings or expansive cement.

2. Mixing: For grouting depths greater than three (3) inches, add 3/8" coarse aggregate to the mix following manufacturer's recommendations. Use the minimum water necessary for proper installation in accordance with flowability requirements and manufacturers recommendations for specific applications.

D. Grouting Operation: Concrete surfaces shall be washed clean, then saturated with water for 24 hours prior to placement of cement-based grout. Excess water must be removed prior to grouting. The placement of grout should be rapid and continuous so as to avoid cold joints.

1. Protect grout from external vibration caused by operating machinery for at least 24 hours.

2. Curing: Cover all exposed grout with wet burlap immediately after placement. Keep area moist for a minimum of 48 hours.

END OF SECTION 03 62 00

SECTION 04 05 03 - MASONRY MORTARING AND GROUTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes mortar and grout for masonry.

B. Related Sections:
1. Section 04 20 00 - Unit Masonry.
2. Section 08 11 13 - Standard Steel Frames: Grouting steel door frames.

1.2 REFERENCES

A. American Concrete Institute:
1. ACI 530 - Building Code Requirements for Masonry Structures.
2. ACI 530.1 - Specifications for Masonry Structures.

B. ASTM International:
1. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar.
2. ASTM C150 - Standard Specification for Portland Cement.
3. ASTM C206 - Standard Specification for Finishing Hydrated Lime.
4. ASTM C270 - Standard Specification for Mortar for Unit Masonry.
5. ASTM C404 - Standard Specification for Aggregates for Masonry Grout.
6. ASTM C476 - Standard Specification for Grout for Masonry.
7. ASTM C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry.
8. ASTM C1019 - Standard Test Method for Sampling and Testing Grout.
9. ASTM C1314 - Standard Test Method for Constructing and Testing Masonry Prisms Used to Determine Compliance with Specified Compressive Strength of Masonry.
10. ASTM C1357 - Standard Test Method for Evaluating Masonry Bond Strength.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Samples: Submit two samples of each type of colored mortar, illustrating mortar color and range.

C. Design Data: Submit design mix when Property specification of ASTM C270 is to be used, required environmental conditions, and admixture limitations.

D. Test Reports:
1. Submit reports on mortar indicating conformance of mortar to property requirements of ASTM C270.
2. Submit reports on grout indicating conformance of grout to property requirements of ASTM C476.
3. Include descriptions of types and proportions of mortar and grout ingredients.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 530 and ACI 530.1.

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from one manufacturer for each cementitious component and from one source or producer for each aggregate.

C. Preconstruction Testing Services: Provide Material Certificates in lieu of testing, unless otherwise directed by Architect. If Material Certificates are unavailable, notify the Architect

immediately upon discovery. Engage a qualified independent testing agency to perform preconstruction testing indicated below if directed by the Architect. Payment for these services will be made by the Owner except in the case of retesting for substandard materials and in the case of first time testing for substandard materials where Material Certificates were submitted as part of the Quality Control procedures for the job. Where considered appropriate by the Architect/Engineer, Prism Test shall be used where completed masonry assemblies are built with potentially substandard materials. Testing of built assemblies determined to contain substandard materials, shall be at the Contractor's expense.

D. Material Certificates (non-load bearing walls): Material Certificates proving compliance with the test below (except the Prism Test) are usually available from manufacturers. Certificates indicating compliance are acceptable to satisfy Quality Control requirements for the individual materials listed when used in masonry assemblies. Use this method of Quality Control in lieu of Prism Test unless total cost of Certificate acquisition is greater than the Prism Tests.
   1. Mortar Test (Property Specification): For each mix required, per ASTM C780.
   2. Grout Test (Compressive Strength): For each mix required, per ASTM C1019 with minimum compressive strength of 2,500 psi.
   3. Prism Tests (required for load bearing walls, conditionally allowed for non-load bearing walls): At the Contractors option, with agreement of the Architect/Engineer, Prism Tests may be used to confirm non-load bearing masonry assembly compressive strength in lieu of Material Certificates.
      a. Prism Test: For each type of reinforced wall construction indicated, per ASTM C1314.
      b. Prepare one set of prisms for testing at 7 days and one set for testing at 28 days.
      d. Fabricate concrete masonry prisms with height-to-thickness ratio of not less than 1.33 nor more than 3.0.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Cold Weather Requirements: In accordance with ACI 530.1 when ambient temperature or temperature of masonry units is less than 40 degrees F.

C. Hot Weather Requirements: In accordance with ACI 530.1 when ambient temperature is greater than 100 degrees F or ambient temperature is greater than 90 degrees F with wind velocity greater than 8 mph.

PART 2 - PRODUCTS

2.1 COMPONENTS

A. Portland Cement: ASTM C150, Type I, gray or white color as required to produce mortar color indicated.

B. MASONRY CEMENT SHALL NOT BE USED.

C. Mortar Aggregate: ASTM C144, standard masonry type.

D. Hydrated Lime: ASTM C206, Type S.

E. Grout Aggregate: ASTM C404, fine and coarse.

F. Water: Clean and potable.

G. Mortar Color: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes. Use only pigments with a record of satisfactory performance in masonry mortars.

1. Manufacturers:
   a. "SGS Mortar Colors"; Solomon Grind-Chem Service, Inc., www.solomoncolors.com
   b. "True Tone Mortar Colors"; Davis Colors, A Subsidiary of Rockwood Industries, Inc., www.daviscolors.com
2. Color to be selected by Architect from Manufacture's full range of options.

H. Water Repellent Admixture: Liquid water repellent mortar admixture intended for use with exterior decorative concrete masonry units containing integral water repellent.
1. Manufacturers:
   a. Mortar Tite; Addiment Inc., www.addiment.com
   b. Dry-Block Mortar Admixture; W. R. Grace & Co., www.grace.com
   c. Rheopel; Master Builders., www.masterbuilders.com
   d. RainBloc for Mortar; ACM Chemistries, Inc., www.acmchem.com

I. Calcium chloride is not permitted.

J. AIR ENTRAINING ADMIXTURES SHALL NOT BE USED.

K. ANTIFREEZING ADMIXTURES SHALL NOT BE USED.

2.2 MIXES

A. Mortar Mixes:
1. Mortar For Reinforced CMU Walls: ASTM C270, Type S using Proportion specification.
2. Mortar For Face Brick and Unreinforced CMU Walls: ASTM C270, Type N using Proportion specification.

B. Mortar Mixing:
1. Thoroughly mix mortar ingredients in accordance with ASTM C270 in quantities needed for immediate use.
2. Achieve uniformly damp sand immediately before mixing process.
3. Add mortar color to achieve uniformity of mix and coloration. Limit mineral-oxide pigments to no more than 10 percent of cement content by weight.
4. Re-temper only within two hours of mixing.

C. Grout Mixes:
1. Grout for Load Bearing and Non-Load Bearing Masonry: Strength as indicated on Drawings; mixed in accordance with ASTM C476.
2. Application:
   a. Coarse Grout: For grouting spaces with minimum 4 inches dimension in every direction.
   b. Fine Grout: For grouting other spaces.

D. Grout Mixing:
1. Thoroughly mix grout ingredients in quantities needed for immediate use in accordance with ASTM C476.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Request inspection of spaces to be grouted.

3.2 INSTALLATION

A. Install mortar in accordance with Section 04 20 00.

B. Low-Lift Grouting:
   1. Use Low-Lift grouting technique for all walls and bond beams.
   2. Provide minimum clear dimension of 2 inches and clear area of 8 sq. in. in vertical cores to be grouted.
   3. Place vertical reinforcement prior to laying of CMU. Extend above elevation of maximum pour height as required for splicing. Support in position at vertical intervals not exceeding 192 bar diameters nor 10 ft.
   4. Place horizontal beam reinforced as the masonry units are laid.
   5. Lay CMU to maximum pour height. Do not exceed 5 foot height, or if bond beam occurs below 5 foot height stop pour at course below bond beam.
   6. Pour grout using chute or container with spout. Rod or vibrate grout during placing. Place grout continuously; do not interrupt pouring of grout for more than one hour. Terminate grout pours 1-1/2 inches below top course of pour.
   7. Bond Beams: Stop grout in vertical cells 1-1/2 inches below bond beam course. Place horizontal reinforcing in bond beams; lap at corners and intersections as shown. Place grout in bond beam course before filling vertical cores above bond beam.

3.3 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Testing Frequency:
   1. One set of prism tests for every 5,000 S.F. of completed wall area.
   2. One set of mortar tests in accordance with ASTM C780 for aggregate ratio and water content, air content, consistency, and compressive strength, for every 25 C.Y. mortar.
   3. One set of grout tests in accordance with ASTM C780 for compressive strength and slump, for every 25 C.Y. grout.

END OF SECTION

SECTION 04 20 00 - UNIT MASONRY ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Face brick.
2. Standard concrete masonry units.
3. Masonry joint reinforcement.
4. Ties and anchors.
5. Embedded flashing.
6. Miscellaneous masonry accessories.

B. Related Sections:
1. Section 04 05 03 - Masonry Mortaring and Grouting: Mortar and grout.
2. Section 04 73 00 – Manufactured Stone Masonry.
3. Section 05 12 00 - Structural Steel Framing: Product requirements for steel anchors for placement by this section.
4. Section 05 50 00 - Metal Fabrications: Product requirements for loose steel lintels for placement by this section.
5. Section 07 21 13 - Board Insulation: Insulation for cavity spaces.
6. Section 07 62 00 - Sheet Metal Flashing and Trim: Product requirements for reglets for flashings for placement by this section.
7. Section 07 90 00 - Joint Protection: Rod and sealant at control and expansion joints.

1.2 REFERENCES

A. American Concrete Institute:
1. ACI 530 - Building Code Requirements for Masonry Structures.
2. ACI 530.1 - Specifications for Masonry Structures.

B. ASTM International:
1. ASTM A153/A153M - Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
2. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
3. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
4. ASTM C67 - Standard Test Methods for Sampling and Testing Brick and Structural Clay Tile.
5. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units.
6. ASTM C652 - Standard Specification for Hollow Brick (Hollow Masonry Units Made from Clay or Shale).
7. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
8. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

C. National Fire Protection Association:
1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Product Data:
1. Submit data for decorative masonry units, fabricated wire reinforcement, wall ties, anchors, cavity drainage material, and other accessories.

2. Submit data for cleaning solutions, including detailed description of methods, materials, equipment and site cleanup procedures to be used. Provide with letters of approval from brick and cleaning material manufacturers regarding the compatibility of proposed use of products together for cleaning purposes.

C. Samples:
1. Submit four samples of each type of decorative masonry unit and face brick, to illustrate color, texture and extremes of color range. Furnish additional samples when necessary to fully illustrate the complete range of highly variable materials.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 530 Building Code Requirements for Masonry Structures and ACI 530.1 Specification for Masonry Structures.

B. Fire Rated Wall Construction: Rating as indicated on Drawings.
1. Tested Rating: Determined in accordance with ASTM E119.

1.5 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three years documented experience.

1.6 MOCKUP

A. Section 01 40 00 - Quality Requirements: Mockup requirements.

B. Construct cavity masonry wall mockup, 4 feet long by 4 feet high, including masonry, mortar and accessories, structural backup, flashings, wall insulation, and weeps.
1. Structural backup wall to consist of CMU and cold formed metal framing.
2. Include a sealant-filled control joint.
3. Omit masonry above flashing to leave a 12 inch length of the flashing exposed to view.
4. Clean face of mockup with masonry cleaner using methods anticipated for the work.

C. Furnish removable cover to protect completed mock-up from rain or other environmental or site conditions that may alter its appearance.

D. Locate where directed by Architect/Engineer.

E. Remove mockup when directed by Architect/Engineer.

1.7 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept masonry units and accessories on site. Inspect for damage.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Cold Weather Requirements: In accordance with ACI 530.1 when ambient temperature or temperature of masonry units is less than 40 degrees F.

C. Hot Weather Requirements: In accordance with ACI 530.1 when ambient temperature is greater than 100 degrees F or ambient temperature is greater than 90 degrees F with wind velocity greater than 8 mph.

D. Bracing of Work in Progress:
1. Where masonry erection may be exposed to high winds, installation shall be adequately braced until masonry construction has attained sufficient strength to resist wind forces.
2. Shores and forms shall not be removed until masonry construction has attained sufficient strength to support its own weight and all other construction or environmental loads.

1.10 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate work with work of other trades built into or adjoining masonry work.

PART 2 - PRODUCTS

2.1 MASONRY MATERIALS

A. **BK-1** and **BK-2 -** Velour Face Brick: ASTM C652, Grade SW, Type HBS, HBX, or HBA in accordance with the particular units selected for use, as indicated on Drawings.
1. Size: Modular. Velour finish in color(s) as scheduled.
2. Furnish special units and “solids” where indicated on Drawings, and for corners other than 90-degrees, window sills, outside corners of soldier courses, and other locations to ensure against exposed cores or unfinished faces or ends.
3. As distributed locally by Upchurch-Kimbrough, Inc.

B. Hollow Load Bearing Concrete Masonry Units (CMU): ASTM C90, lightweight type only.
1. Size: Nominal modular size of 16 inches long x 8 inches high x thickness indicated.
2. Furnish special units for bond beams and lintels.
3. Furnish bullnose corners at units exposed to interior of building.

C. Solid Load-Bearing Concrete Masonry Units (CMU): ASTM C90; size and weight to match hollow units.

D. Mortar and Grout: As specified in Section 04 05 03.

2.2 ANCHORS, TIES AND REINFORCEMENT

A. Manufacturers:
1. AA Wire Products
2. Heckman Building Products, www.heckmannbuildingprods.com
3. Hohmann & Barnard (Dur-O-Wall), www.h-b.com
4. Masonry Reinforcing Corp. of America (Wire-Bond)
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Single Wythe Joint Reinforcement: ASTM A951; ladder type; steel; 9 gage side rods and cross ties; hot dip galvanized

C. Strap Anchors: Bent steel, 1-1/2 inches wide x 24 inches long x 1/4 inch thick, with ends turned up not less than 2 inches; ASTM A153/A153M hot dip galvanized.

D. Veneer Ties for CFMF Stud Backup Walls: Rib-stiffened sheet metal plate anchors with screw holes top and bottom and projecting tabs with slotted holes for receiving vertical legs of adjustable wire ties; ASTM A153/A153M hot dip galvanized.
1. Anchor Size: 2-3/4 inches wide by 3 inches high.
2. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.

3. Tie Shape: Rectangular
4. Fasteners: Type 304 stainless steel hex-washer head screws with carbon drill point as provided by Hohmann & Barnard.
   a. Size: #12 diameter x length required to penetrate steel stud flange by not less than 3 exposed threads.
   b. Complete with stainless steel backed neoprene sealing washer.
5. Basis of Design:
   a. Running Bond Brick: Hohmann & Barnard HB-200X.
   b. Stacked Bond or Soldier Course Brick: **Hohmann & Barnard HB-213 SH or 300C/HB-213 Seismic.** Provide with hot-dip galvanized 0.1875 inch diameter wire reinforcing continuous within horizontal brick joint.

E. Veneer Ties for CMU Backup Walls: ASTM A82; ladder type joint reinforcement with adjustable eye and pintle type wire ties; ASTM A153/A153M hot dip galvanized.
1. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.
2. Tie Shape: Rectangular
3. Fasteners: #12 stainless steel screws self-tapping screws.
4. Basis of Design:
   a. Modular Brick: Hohmann & Barnard, #270 Ladder Eye-Wire.
   b. King Size Brick: **Hohmann & Barnard, 2-Seal BYNA-LOK** wire tie with hot-dip galvanized 0.1875 inch diameter wire reinforcing continuous within horizontal brick joint**.**

F. Veneer Ties for Grade Beams and Concrete Backup Walls: Zinc-alloy barrel section with flanged head and eye, fastened with corrosion-resistant, self-drilling screw. Eye designed to receive tie and to serve as head for drilling fastener into concrete. Provide barrel length to suit cavity wall insulation thickness, allowing screw to seat directly against the concrete wall with flanged head covering hole in insulation.
1. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.
2. Tie Shape: Triangular
3. Basis of Design: **Hohmann & Barnard, 2-Seal BYNA-LOK** wire tie.

G. Dovetail Anchors (where indicated): Bent steel strap formed from 0.1046 inch thick steel, with 0.1875 inch diameter triangular-shaped wire tie sized to extend within 1 inch of masonry face; ASTM A153/A153M hot dip galvanized.

H. Steel Beam and Column Anchors: Crimped 1/4 inch diameter wire anchor welded to steel member, with 0.1875 inch diameter triangular-shaped wire tie for solid masonry and rectangular-shaped wire tie for hollow masonry, sized to extend within 1 inch of masonry face; ASTM A153/A153M hot dip galvanized.

I. Reinforcing Steel: Type specified in Section 03 20 00.

J. Anchor Bolts: ASTM A307; Grade A; J-shaped or L-shaped; complete with flat washers and heavy hex nuts; hot-dipped galvanized finish, ASTM A153/A153M.

2.3 EMBEDDED FLASHING MATERIALS

A. Stainless Steel: ASTM A240, Type 304, soft temper; 0.016 inch thick; smooth finish.

B. Asphalt-Coated Copper Flashing: 5 oz/sq ft rolled sheet copper coated with flexible asphalt.
1. Manufacturers:
   a. Cop-A-Cote; AFCO Products, Inc., www.afcoproducts.com
   b. Type ACC-Asphalt Bituminous Coated; Phoenix Building Products.
   c. Coated Copper Flashing; Sandell Manufacturing Co., Inc., www.sandellmfg.com
   d. Substitutions: Section 01 60 00 - Product Requirements.

C. Rubberized Asphalt Flashing: Composite flashing sheet consisting of self-adhesive rubberized asphalt compound bonded to a high-density cross-laminated polyethylene film; overall thickness of 0.030 inch.
   1. Do not install rubberized asphalt flashing adjacent to or in contact with flexible vinyl or PVC products.
   2. Manufacturers:
      a. Perm-A-Barrier Wall Flashing; W. R. Grace & Co., www.grace.com
      b. Vycor V-40; W. R. Grace & Co., www.grace.com
      c. Polyguard 400; Polyguard Products, Inc., www.polyguardproducts.com
      d. Cloaked Flashing System, Hyload Inc., www.HyloadFlashing.com
      e. Substitutions: Section 01 60 00 - Product Requirements.

D. Coping Flashing: Stainless steel, soft temper; 0.016 inch thick; smooth finish; formed with dovetail ribs 3 inches on center for integral mortar bond.

E. Lap Sealant: Type specified in Section 07 90 00.

2.4 ACCESSORIES

A. Joint Filler: ASTM D1056, Grade 2A1, closed cell neoprene; oversized 50 percent to joint width; self-expanding.

B. Cavity Wall Insulation: Extruded polystyrene board specified in Section 07 21 13.

C. Cavity Drainage Material: Open polyethylene mesh thickness required to fill cavity space, and shaped to ensure moisture drainage to cavity weeps.
   1. Manufacturers:
      a. Mortar Break; Advanced Building Products Inc., www.advancedflashing.com
      b. Mortar Net; Mortar Net USA, Ltd., www.mortarnet.com
      c. CavClear Masonry Mat, Archovations, Inc., www.cavclear.com
      d. Substitutions: Section 01 60 00 - Product Requirements.

D. Weeps: Open head joints, maximum 3 inches high.

E. Cleaning Solutions:
   1. Job-Mixed Detergent Solution: Solution of 1/2-cup (0.14-L) dry measure tetrasodium polyphosphate and 1/2-cup (0.14-L) dry measure laundry detergent dissolved in 1 gal. (4 L) of water.
   2. Proprietary Acidic Cleaner: Standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry and pigmented mortar surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
      a. Manufacturers:
         1) AHI Supply, www.ahi-supply.com.
         2) Diedrich Technologies, Inc., www.diedrichtechnologies.com.
         3) EaCo Chem, Inc., www.eacochem.com.
         4) ProSoCo, Inc., www.prosoco.com.
         5) Substitutions: Section 01 60 00 - Product Requirements.

F. Steel Lintels: Size as indicated on Drawings, hot-dip galvanized.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive work.

C. Verify items provided by other sections of work are properly sized and located.

D. Verify built-in items are in proper location, and ready for roughing into masonry work.

3.2 PREPARATION

A. Direct and coordinate placement of metal anchors supplied to other sections.

B. Furnish temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent support.

C. Wet clay and shale brick before laying when initial rate of absorption is greater than 30 grams when tested in accordance with ASTM C67.

3.3 INSTALLATION

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form bed and head joints of uniform thickness.

C. Lay exposed masonry in the bond pattern shown or, if not shown, lay as follows:
1. Coursing of Brick Units:
   a. Bond: Running.
   b. Coursing: Three units and three mortar joints to equal **9 inches**.
   c. Mortar Joints: Concave.
2. Coursing of Concrete Masonry Units:
   a. Bond: Running.
   b. Coursing: One unit and one mortar joint to equal 8 inches.
   c. Mortar Joints: Concave.
3. Coursing of Decorative Concrete Masonry Units:
   a. Bond: Running.
   b. Coursing: One unit and one mortar joint to equal 8 inches.
   c. Mortar Joints: Concave.
4. Coursing of Cast Stone Masonry Units: Not applicable.

D. Placing and Bonding:
1. Lay solid masonry units in full bed of mortar, with full head joints.
2. Lay hollow masonry units with face shell bedding on head and bed joints.
   a. Bed webs in mortar in starting course on footings and in all courses of piers, columns, and pilasters, and where adjacent to cells or cavities to be filled with grout.
   b. For starting course on footings where cells are not grouted, spread out full mortar bed, including areas under cells.
3. Buttering corners of joints or excessive furrowing of mortar joints are not permitted.
4. Remove excess mortar as work progresses.
5. Interlock intersections and external corners.
6. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment is required, remove mortar and replace.
7. Perform job site cutting of masonry units with motor-driven saws to assure straight, clean, unchipped edges. Prevent broken masonry unit corners or edges. Where possible, use full-size units without cutting.
8. Install cut units with cut surfaces and edges concealed.
9. Select and arrange exposed units to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.
10. Cut mortar joints flush where wall tile is scheduled or bitumen dampproofing is applied.
11. Cut mortar fins protruding into cavity from back side of face brick as work progresses.
12. Isolate masonry from vertical structural framing members.
13. At full-height walls, leave a 1□ space between top of masonry and floor or roof structure above. Brace masonry from structure with 16- gauge galvanized steel angles having 4□ equal legs and 8□ lengths mechanically anchored to the floor or roof

structure and spaced not more than 4™-0□ on center.

14. Isolate top of masonry from horizontal structural framing members and slabs or decks with compressible joint filler.

E. Weeps and Vents: Furnish weeps and vents in outer wythe at maximum 24 inches oc horizontally above through-wall flashing, above shelf angles and lintels, at bottom of walls, and above other obstructions of wall cavity continuity.

F. Cavity Wall: Do not permit mortar to drop or accumulate into cavity air space or to plug weeps. Build inner wythe ahead of outer wythe to receive cavity insulation and bituminous dampproofing.

1. Install cavity drain material, notched end up, continuously at bottom of each cavity above embedded flashing.

G. Stain Prevention: As work progresses, prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and from mortar splatter by coverings spread on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

H. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24 inches down both sides and hold cover securely in place.
2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.

3.4 JOINT REINFORCEMENT

A. Install horizontal joint reinforcement in cmu walls 16 inches oc.

B. Place joint reinforcement in first and second horizontal joints above and below openings greater than 12 inches wide. Extend minimum 16 inches each side of opening.

C. Place joint reinforcement continuous in first and second joints below tops of walls.

D. Lap joint reinforcement ends minimum 6 inches.

E. Cut or interrupt joint reinforcing at control and expansion joints.

F. At corners, install horizontal joint reinforcement with prefabricated œL□ intersections.

G. At intersecting and abutting walls, unless vertical expansion or control joints are shown at juncture, install horizontal joint reinforcement with prefabricated œT□ intersections.

H. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch of dimensioned position.

3.5 TIES AND ANCHORS

A. Install anchors attached to concrete and steel structural members:

1. Leave an open space not less than 1 inch in width between back of masonry and face of structural member. Keep open space free of mortar or other rigid materials.
2. Install anchors at maximum 16 inches o.c. vertically and horizontally.

B. Install Wall Ties at CMU Backup Walls:

1. Install wall ties at 16 inches oc vertically and maximum 16 inches oc horizontally.
2. Coordinate ties to accommodate installation of 16 inch widths of cavity wall insulation specified in Section 07 21 13.
3. Place additional wall ties within 12 inches of openings at intervals not exceeding 36 inches.

C. Install Wall Ties at CFMF Backup Walls:
1. Install wall tie anchor plates at 16 inches oc vertically and maximum 16 inches oc horizontally.
2. Coordinate anchor plates to accommodate installation of 16 inch widths of cavity wall insulation specified in Section 07 21 13.
3. Place additional wall ties within 12 inches of openings at intervals not exceeding 36 inches.
4. Secure wall tie anchor plates through sheathing to CFMF studs.

3.6 MASONRY FLASHINGS

A. Provide concealed flashing in masonry work at or above shelf angles, lintels, ledges and other obstructions to the downward flow of water in the wall so as to divert such water to the exterior.

B. Form flashings from the following materials:
1. Exposed flashings: Stainless steel.
2. Concealed flashings: Asphalt-coated copper or rubberized asphalt, at contractor™s option.

C. Prepare masonry surfaces smooth and free from projections which could puncture flashing. Place through-wall flashing on sloping bed of mortar and cover with mortar. Seal penetrations in flashing with mastic before covering with mortar.

D. Extend flashings horizontally through exterior face of masonry and turn down 1/4 inch to form drip.

E. Turn flashing up minimum 8 inches and bed into mortar joint of CMU backup wall or seal to sheathing over CFMF stud backup wall.

F. Lap end joints minimum 6 inches and seal watertight.

G. Extend flashing the full length of lintels and shelf angles and minimum of 4" into masonry each end; turn up ends not less than 2" to form end dams as recommended by BIA and illustrated in BIA Technical Note 7, Figure 21, current edition.

H. Turn flashing, fold, and seal at corners, bends, and interruptions.

3.7 LINTELS

A. Install loose steel lintels over openings more than 12 inches wide in brick or decorative cmu walls.

B. Install reinforced unit masonry lintels over openings more than 24 inches wide in CMU walls.
1. Reinforce lintels as indicated on Drawings.
2. Do not splice reinforcing bars.
3. Support and secure reinforcing bars from displacement.
4. Place and consolidate grout fill without displacing reinforcing.
5. Allow masonry lintels to attain specified strength before removing temporary supports.

C. Maintain minimum 8-inch bearing on each side of opening.

3.8 MISCELLANEOUS

A. Grouted Components:
1. Reinforce bond beams and pilasters as indicated on Drawings.
2. Splice reinforcement in accordance with Section 03 20 00.

3. Support and secure reinforcing bars from displacement.
4. Place and consolidate grout fill without displacing reinforcing.
5. At bearing locations, fill masonry cores with grout for minimum 12 inches both sides of opening.
6. Fill cores in hollow concrete masonry units with grout 24 inches under bearing plates, beams, lintels, posts, and similar items, unless otherwise indicated.

B. Reinforced Masonry:
1. Lay masonry units with core cells vertically aligned and cavities between wythes clear of mortar and unobstructed.
2. Place reinforcement bars as indicated on Drawings.
3. Splice reinforcement in accordance with Section 03 20 00.
4. Support and secure reinforcement from displacement.
5. Place and consolidate grout fill without displacing reinforcing.
6. Place grout in accordance with ACI 530.1 Specification for Masonry Structures.

C. Control And Expansion Joints:
1. Install control and expansion joints at the following maximum spacings, unless otherwise indicated on Drawings:
   a. Interior Partitions: 25'-0" o.c. horizontally.
   b. Exterior Cavity Walls: 20'-0" o.c. horizontally.
   c. Steel Lintels: Provide horizontal bond breaks as detailed on Drawings at the end bearing to allow for thermal expansion and contraction.
   d. VERIFY DESIGN OF SHELF ANGLES AND PROPER COURSING WITH PROJECT ARCHITECT AND ENGINEER FOR BELOW, OR DELETE.
   e. Openings in Exterior and Interior Walls: At masonry with steel lintels, provide expansion joints on each side of the opening continuing to the top and bottom of the brick wythe and as specified above. At CMU lintels, provide control joints in alignment with the outside ends of the lintel continuing to the bed joint and then with horizontal bond breaks at the end bearing.
   f. Veneer Construction: Provide horizontal pressure relieving joints beneath shelf angles as recommended by BIA Technical Note 28B current edition.
   g. At changes in wall height.
2. Do not continue horizontal joint reinforcement through control and expansion joints.
3. Form control joint with sheet building paper bond breaker fitted to one side of hollow contour end of block unit. Fill resultant core with grout fill. Rake joint at exposed unit faces for placement of backer rod and sealant.
4. Form expansion joint by omitting mortar and cutting unit to form open joint.

D. Built-In Work:
1. As work progresses, install built-in door and window frames, wood nailing strips, anchor bolts, plates, and other items to be built-in the work and furnished by other sections.
2. Install built-in items plumb and level.
3. Bed anchors of metal door and window frames in adjacent mortar joints. Fill frame voids solid with grout or mortar. Fill adjacent masonry cores with grout minimum 12 inches from framed openings.
4. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath in the joint below and rod mortar or grout into core.
5. Do not build in materials subject to deterioration.

E. Cutting And Fitting:
1. Cut and fit for chases, pipes, conduit, sleeves, grounds, and other items penetrating masonry. Coordinate with other sections of work to provide correct size, shape, and location.
2. Obtain Architect/Engineer’s approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.9 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Alignment of Columns and Pilasters: 1/4 inch.

C. Maximum Variation From Unit to Adjacent Unit: 1/16 inch.

D. Maximum Variation from Plane of Wall: 1/4 inch in 10 ft and 1/2 inch in 20 ft or more.

E. Maximum Variation from Plumb: 1/4 inch per story non-cumulative; 1/2 inch in two stories or more.

F. Maximum Variation from Level Coursing: 1/8 inch in 3 ft; 1/4 inch in 10 ft; 1/2 inch in 30 ft.

G. Maximum Variation of Joint Thickness: 1/8 inch in 3 ft.

H. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch.

I. Maximum Variation for Steel Reinforcement:
   1. Install reinforcement within the tolerances specified in ACI 530.1 for foundation walls.
   2. Plus or minus 1/2 inch when distance from centerline of steel to opposite face of masonry is 8 inches or less.
   3. Plus or minus 1 inch when distance is between 8 and 24 inches.
   4. Plus or minus 1-1/4 inch when distance is greater than 24 inches.
   5. Plus or minus 2 inches from location along face of wall.

3.10 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess mortar and mortar smears as work progresses.

C. Replace defective mortar. Match adjacent work.

D. Clean soiled surfaces with cleaning solution.

E. Use non-metallic tools in cleaning operations.

F. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
   1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
   2. Protect adjacent stone and non-masonry surfaces from contact with cleaner by covering them with liquid strippable masking agent, polyethylene film or waterproof masking tape.
   4. Saturate wall surfaces with water prior to application of cleaners; remove cleaners promptly by rinsing thoroughly with clear water.
   5. Clean brick by the bucket-and-brush hand-cleaning method described in BIA Technical Notes No. 20, using job-mixed detergent solution, or clean masonry with approved cleaner applied according to the brick and the cleaning manufacturer's written instructions and approval.
   6. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2 applicable to type of stain on exposed surfaces.
   7. Do not use high-pressure washing methods (greater than 700psi as described in BIA Technical Notes No. 20) on single wythe construction, on concrete masonry incorporating integral or applied water repellents, or on sand-finished face brick.

3.11 DEFECTIVE CONSTRUCTION

A. Correct defects appearing in the finished work for a period of one year after the date of Substantial Completion.

B. Defects shall include, but not be limited to, cracking, separating or color leaching of mortar, cracking, discoloration, or deterioration of masonry units, efflorescence in masonry units or

joints, and water penetration through face brick or joints under normal exposure.

3.12 PROTECTION OF FINISHED WORK

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for protecting finished Work.

B. Protect exposed external corners subject to damage.

C. Protect base of walls from mud and mortar splatter.

D. Protect masonry and other items built into masonry walls from mortar droppings and staining caused by mortar.

E. Protect tops of masonry work with waterproof coverings secured in place without damaging masonry. Provide coverings where masonry is exposed to weather when work is not in progress.

END OF SECTION

SECTION 04 29 00 - ENGINEERED UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes furnishing all labor, materials, and services incidental to the installation of steel reinforcing for CMU, brick, and stone masonry:

B. Related Sections:
   1. Section 01 40 00 – Quality Requirements: Materials testing.
   2. Section 04 20 00 – Unit Masonry Assemblies.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

B. Requirements of Division 4 Section "Unit Masonry Assemblies" apply to Work of this Section.

1.3 SUMMARY

A. This Section consists of furnishing all the labor, materials, and services incidental to the installation of reinforced unit masonry.

1.4 DESCRIPTION OF WORK

A. Extent of each type of reinforced unit masonry work is indicated on drawings and in schedules.

1.5 SUBMITTALS

A. Shop Drawings: Submit shop drawings for fabrication, bending, and placement of reinforcement bars. Comply with ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures". Show bar schedules, diagrams of bent bars, stirrup spacing, lateral ties and other arrangements and assemblies as required for fabrication and placement of reinforcement for unit masonry work. Submit shop drawings showing wall elevations with all masonry openings, reinforcement, and control joints.

B. Material certificates in lieu of material laboratory test reports when permitted by Architect/Engineer. Material certificates shall be signed by manufacturer and Contractor, certifying that each material item complies with or exceeds specified requirements. Provide certification from admixture manufacturers that chloride content complies with specification requirements.

C. Testing Reports: The independent testing laboratory shall submit laboratory test reports for materials used directly to the Architect/Engineer with copy to others in accordance with the provisions of Division 1 Section "Quality Control Services." State in each report whether or not the test specimens comply to the specified requirements and indicate any deviations therefrom.

PART 2 - PRODUCTS

2.1 UNIT MASONRY

A. General: Refer to Division 4 Section "Unit Masonry Assemblies" for masonry materials and accessories not included in this Section.

B. Masonry Compressive Strengths:

1. Minimum masonry compressive strength (Fm) = 2000 psi.
2. Concrete Masonry Units: ASTM C 90, with a minimum compressive strength of 2500 psi, minimum average of three units on the net area.
3. Mortar : ASTM C 270, Type S.
4. Grout : ASTM C 476, with a minimum compressive strength of 2500 psi.

2.2 REINFORCEMENT BARS

A. General: Provide deformed bars to following grades complying with ASTM A 615, except as otherwise indicated.

1. Provide Grade 40 for bars No. 3, except as otherwise indicated.
2. Provide Grade 60 for bars No. 4 to No. 18, except as otherwise indicated.
3. Shop-fabricate reinforcement bars which are shown to be bent or hooked.

PART 3 - EXECUTION

3.1 PLACING REINFORCEMENT

A. General: Clean reinforcement loose rust, mill scale, earth, ice or other materials which will reduce bond to mortar or grout. Do not use reinforcement bars with kinks or bends not shown on drawings or final shop drawings, or bars with reduced cross-section due to excessive rusting or other causes.

B. Position reinforcing accurately at the spacing indicated. Support secure vertical bars against displacement. Horizontal reinforcing may be placed as the masonry work progresses. Where vertical bars are shown in close proximity, provide a clear distance between bars of not less than the nominal bar diameter or 1" (whichever is greater). Minimum clearance between masonry and reinforcement shall be 1/2".

1. For columns, piers and pilasters, provide a clear distance between vertical bars as indicated, but not less than 1-1/2 times the nominal bar diameter or 1-1/2", whichever is greater. Provide lateral ties as indicated. Refer to the general notes on the drawings for minimum clearance between the main reinforcement and the masonry.

C. Splice reinforcement bars where shown; do not splice at other points unless acceptable to the Architect. Provide lapped splices, unless otherwise indicated. In splicing vertical bars or attaching to dowels, lap ends, place in contact and wire tie.

D. Embed metal ties in mortar joints as work progresses, with a minimum mortar cover of 5/8" on exterior face of walls and 1/2" at other locations.

E. Embed prefabricated horizontal joint reinforcement as the work progresses, with a minimum cover of 5/8" on exterior face of walls and 1/2" at other locations. Lap units not less than 6" at ends. Use prefabricated "L" and "T" units to provide continuity at corners and

intersections. Cut and bend units as recommended by manufacturer for continuity at returns, offsets, column fireproofing, pipe enclosures and other special conditions.

F. Anchoring: Anchor reinforced masonry work to supporting structure as indicated.
   1. Anchor reinforced masonry walls to non-reinforced masonry where they intersect.

G. Foundation dowels: Dowels in the foundation shall be placed to align with cores containing reinforcement.

3.2 INSTALLATION, GENERAL

A. Refer to Division 4 Section "Unit Masonry Assemblies" for general installation requirements to unit masonry.

B. Temporary Formwork: Provide formwork and shores as required for temporary support of reinforced masonry elements.

   1. Construct Formwork to conform to shape, line and dimensions shown. Make sufficiently tight to prevent leakage of mortar grout, or concrete (if any). Brace, tie and support as required to maintain portion and shape during construction and curing of reinforced masonry.

C. Do not remove forms and shores until reinforced masonry member have hardened sufficiently to carry their own weight and all other reasonable temporary loads that may be placed on them during construction.

   1. Allow not less than the following minimum time to elapse after completion of members before removing shores or forms, provided suitable curing conditions have been obtained during the curing period.
      a. 10 days for girders and beams.

3.3 INSTALLATION OF REINFORCED BRICK MASONRY

A. Mortar Jointing and Bedding:
   1. Pattern Bond: Lay exterior wythes in the pattern bond shown, or if not shown, lay in 1/2-running bond with vertical joints in each course centered on units in courses above and below. Lay inner wythes (if any) with all units in a wythe bonded by lapping not less than 2". Bond and interlock each course of each wythe at corners and intersections. Do not use units with less than 4" nominal horizontal face dimension at corners or jambs.
   2. Lay exterior wythes with bed (horizontal) and head (vertical) joints between units completely filled with mortar. Top of bed joint mortar may be sloped toward center of walls. Butter ends of units with sufficient mortar to completely fill head joints and shove into place. Do not furrow bed joints or slush head joints. Remove any mortar fins which protrude into grout space.

      a. Maintain joint widths shown for head and bed joints, but adjust thickness of bed joints, if required, to allow for not less than 1/4" thickness of mortar between reinforcement and masonry units, except 1/4" bars (if any) may be laid in 1/2" thick bed joints and No. 6 gage or smaller wire reinforcing (if any) may be laid in 3/8" thick bed joints.

B. Two-Wythes Wall Construction: Lay both wythes as previously specified for exterior wythes. Maintain grout space (collar or continuous vertical joint between wythes) of width indicated, but adjust, if required, to provide grout space not less than 1/2" wider than the sum of the vertical and horizontal (if any) reinforcement bars shown to be placed in grout space. Do not parge or fill grout space with mortar.

C. Limit extent of masonry construction to sections which do not exceed the maximum pour requirements specified hereafter. Provide temporary dams or barriers to control horizontal flow of grout at ends of wall sections. Build dams full height of grout pour. If masonry units are used, do not bond into permanent masonry wythes. Remove temporary dams after completion of grout pour.

D. Low-Lift Grouting:
   1. Use Low-Lift grouting technique with "Fine Grout" per ASTM C 476 for the following:
      a. Two-wythe walls with grout space of 2" or less in width.

   2. Use Low-Lift grouting technique with "Coarse Grout" per ASTM C 476 for the following:
      a. Columns, piers or pilasters where masonry units are shown in core areas enclosed by exterior masonry units.

   3. Construct low-lift masonry by placing reinforcement, laying masonry units and pouring grout as the work progresses.

   4. Place vertical reinforcement bars and supports prior to laying of masonry units. Extend above elevation of maximum pour height as required to allow for splicing. Horizontal reinforcement bars may be placed progressively with laying of masonry units.

   5. Limit grout pours as required to prevent displacement of masonry by grout pressures (blowout), but do not exceed 12" pour height.

   6. Lay masonry units prior to each grout pour, but do not construct more than 12" above maximum grout pour height in one exterior wythe and 4" above in other exterior wythe. Provide metal wall ties if required to prevent blowouts.

   7. Pour grout using container with spout and consolidate immediately by rodding or puddling; do not use trowels. Place grout continuously; do not interrupt pouring of grout for more than one hour. If poured in lifts, place from center-to-center of masonry courses. Terminate pour 1-1/2" below top of highest course in pour.

3.4 INSTALLATION OF REINFORCED CONCRETE UNIT MASONRY

A. Do not wet concrete masonry units (CMU).

B. Lay CMU units with full-face shell mortar beds. Fill vertical head joints (end joints between units) solidly with mortar from face of unit to a distance behind face equal to not less than the thickness of longitudinal face shells. Solidly bed cross-webs of starting courses in mortar. Maintain head and bed joint widths shown, or if not shown, provide 3/8" joints.

   1. Where solid CMU units are shown, lay with full mortar head and bed joints.

C. Walls:

   1. Pattern Bond: Lay CMU wall units in 1/2 running bond with vertical joints in each course centered on units in courses above and below, unless otherwise indicated. Bond and interlock each course at corners and intersections. Use special-shaped units where shown, and as required for corners, jambs, sash, control joints, lintels, bond beams and other special conditions.

   2. Maintain vertical continuity of core or cell cavities, which are to be reinforced and grouted, to provide minimum clear dimensions indicated and to provide minimum

clearance and grout coverage for vertical reinforcement bars. Keep cavities free of mortar. Solidly bed webs in mortar where adjacent to reinforced cores or cells.

3. Where horizontal reinforced beams (bond beams) are shown, use special units or modify regular units to allow for placement of continuous horizontal reinforcement bars. Place small mesh expanded metal lath or wire screening in mortar joints under bond beam courses over cores or cells of non-reinforced vertical cells, or provide units with solid bottoms.

4. Columns, Piers and Pilasters:
   a. Use CMU units of the size, shape and number of vertical core spaces shown. If not shown, use units which provide minimum clearances and grout coverage for number and size of vertical reinforcement bars shown.
   b. Provide pattern bond shown, or if not shown, alternate head joints in vertical alignment.
   c. Lay wall and pilaster units together to maximum pour height specified.

D. Grouting:
   1. Use “Fine Grout" per ASTM C 476 for filling spaces less than 4" in one or both horizontal directions and bond beams.
   2. Use "Coarse Grout" per ASTM C 476 for filling 4" spaces or larger in both horizontal directions and formed beams.

E. Low-Lift Grouting:
   1. Use Low-Lift grouting technique for all walls and bond beams.

   2. Provide minimum clear dimension of 2" and clear area of 8 sq. in. in vertical cores to be grouted.

   3. Place vertical reinforcement prior to laying of CMU. Extend above elevation of maximum pour height as required for splicing. Support in position at vertical intervals not exceeding 192 bar diameters nor 10 ft.

   4. Place horizontal beam reinforced as the masonry units are laid.

   5. Lay CMU to maximum pour height. Do not exceed 5' height, or if bond beam occurs below 5' height stop pour at course below bond beam.

   6. Pour grout using chute or container with spout. Rod or vibrate grout during placing. Place grout continuously; do not interrupt pouring of grout for more than one hour. Terminate grout pours 1-1/2" below top course of pour.

   7. Bond Beams: Stop grout in vertical cells 1-1/2" below bond beam course. Place horizontal reinforcing in bond beams; lap at corners and intersections as shown. Place grout in bond beam course before filling vertical cores above bond beam.

F. High-Lift Grouting:
   1. High-lift grouting technique may be used for the following masonry construction:
      a. Columns, piers, pilasters, or formed beams.

   2. Provide cleanout holes in first course of each grout pour at all vertical cells which are to be filled with grout.
      a. Use units with one face shell removed and provide temporary supports for units above, or use header units with concrete brick supports, or cut openings in one face shell.

3. Construct masonry to full height of maximum grout specified, prior to placing grout.
   a. Limit grout lifts to a maximum height of 5' and grout pour to a maximum height of 12', unless otherwise indicated.

4. Place vertical reinforcement before grout placement. Place before or after laying masonry units, as required by job conditions. Tie vertical reinforcement to dowels at base of masonry where shown and thread CMU over or around reinforcement. Support vertical reinforcement at intervals not exceeding 192 bar diameters nor 10'.
   a. Where individual bars are placed after laying masonry, place wire loops extending into cells as masonry is laid and loosen before mortar sets. After insertion of reinforcing bar, pull loops and bar to proper position and tie free ends.

5. Where reinforcement is prefabricated into cage units before placing, fabricate units with vertical reinforcement bars and lateral ties of the size and spacing indicated.

6. Embed lateral tie reinforcement in mortar joints where indicated. Place as masonry units are laid, at vertical spacing shown.

   a. Where lateral ties are shown in contact with vertical reinforcement bars, embed additional lateral tie reinforcement in mortar joints. Place as shown, or if not shown, provide as required to prevent grout blowout or rupture of CMU face shells, but provide not less than No. 2 bars or 8 gage wire ties spaced 16" o.c. for members with 20" or less side dimensions, and 8" o.c. for members with side dimensions exceeding 20".

7. Preparation of Grout Spaces: Prior to placement, inspect and clean grout spaces. Remove dust, dirt, mortar droppings, loose pieces of masonry and other foreign materials from grout spaces. Clean reinforcing and adjust to proper position. Clean top surface of structural members supporting masonry to ensure bond. After final cleaning and inspection, close cleanout holes and brace closures to resist grout pressures.

   a. Do not place grout until entire height of masonry to be poured has attained sufficient strength to resist displacement of masonry units and breaking of mortar bond. Install shores and bracing, if required, before starting grouting operations.

   b. Place grout by pumping into grout spaces unless alternate methods are acceptable to the Architect.

   c. Limit grout pours to sections which can be completed in one working day with not more than one hour interruption of pouring operation. Place grout in lifts which do not exceed 5'. Allow not less than 30 minutes, nor more than one hour between lifts of a given pour. Rod or vibrate each grout lift during pouring operation.

   d. When more than one pour is required to complete a given section of masonry, extend reinforcement beyond masonry as required for splicing. Pour grout to within 1-1/2" of top course of first pour. After grouted masonry is cured, lay masonry units and place reinforcement for second pour section. Repeat sequence if more pours are required.

3.5 FIELD QUALITY CONTROL

A. General: An independent testing agency shall perform tests and to submit test reports.

B. Minimum Tests and Submittals:
   1. Certificate for materials used in masonry construction indicating compliance with contract documents.

2. Verification of Minimum masonry compressive strength (f'm) prior to construction and every 5000 sq. ft during construction. Perform compressive strength "Prism Test" per ASTM C1314.

3. Verification of proportions of materials and grout as delivered to the site.

4. Test mortar in accordance with the property specification of ASTM C 270 or evaluate with ASTM C 780.

5. Sample and test grout in accordance with ASTM C 1019 for each 5000 sq. ft.

C. Minimum Inspection:

1. From the masonry construction and continuously during construction of masonry, verify the following are in compliance:
   a. Proportion of site-mixed mortar and grout.
   b. Placing of masonry units and construction of mortar joints.
   c. Placement of reinforcement and connectors.
   d. Grout space prior to grouting.
   e. Placement of grout.

2. Observe preparation of grout specimens, mortar specimens, and/or prisms.

3. Verify compliance with the required inspection provisions of the contract documents and the approved submittals.

D. Test results will be reported in writing to Architect, Structural Engineer, and Contractor within 24 hours after tests. Reports of tests shall contain the Project identification name and number, date of test, name of testing service, mortar or grout type and class, location of mortar or grout batch in structure, design compressive strength at 28 days, mortar or grout mix proportions and materials, compressive breaking strength, and type of break for both 7-day tests and 28-day tests. If any breaks are below specified or expected strengths, the Testing Laboratory shall report any visible anomalies.

E. Additional Tests: The testing agency will make additional tests of in-place masonry when test results indicate specified strengths and other characteristics have not been attained in the structure, as directed by Architect/Engineer. Testing agency may conduct tests to determine adequacy of materials by cored cylinders complying with ASTM C 42, or by other methods as directed.

END OF SECTION 04 29 00

SECTION 04 73 00 – MANUFACTURED STONE MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Manufactured Stone Masonry: Calcium silicate product; may be identified as “Cast Stone” on the drawings.
   2. Miscellaneous masonry ties, anchors, and accessories related to manufactured stone masonry.

B. Related Sections:
   1. Section 04 05 03 - Masonry Mortaring and Grouting: Mortar and grout for Cast Stone.
   2. Section 04 20 00 – Unit Masonry Assemblies.
   3. Section 07 90 00 - Joint Protection: Rod and sealant at control and expansion joints.

1.2 REFERENCES

A. American Society for Testing and Materials
   1. ASTM C73-14 – Standard Specification for Calcium Silicate Brick (Sand-Lime Brick).

B. American Concrete Institute:
   1. ACI 530 - Building Code Requirements for Masonry Structures.
   2. ACI 530.1 - Specifications for Masonry Structures.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Product Data:
   1. Submit data for manufactured stone masonry units, fabricated wire reinforcement, wall ties, anchors, and other accessories.
   2. Submit data for cleaning solutions, including detailed description of methods, materials, equipment and site cleanup procedures to be used. Provide with letters of approval from manufacturer regarding the compatibility of proposed use of products together for cleaning purposes.

C. Samples:
   1. Submit four samples of each type of manufactured stone masonry to illustrate color, texture and extremes of color range. Furnish additional samples when necessary to fully illustrate the complete range of highly variable materials.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 530 Building Code Requirements for Masonry Structures and ACI 530.1 Specification for Masonry Structures.

1.5 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three years’ documented experience.

1.6 MOCKUP

A. Section 01 40 00 - Quality Requirements: Mockup requirements.

B. Construct mockup minimum 4 ft. x 4 ft. unless detailed otherwise in the drawings, including masonry, mortar and accessories, structural backup, flashings, wall insulation, and weeps.
   1. Structural backup wall to consist of CMU and cold formed metal framing.
   2. Include a sealant-filled control joint.

3. Omit masonry above flashing to leave a 12 inch length of the flashing exposed to view.
4. Clean face of mockup with masonry cleaner using methods anticipated for the work.

C. Furnish removable cover to protect completed mock-up from rain or other environmental or site conditions that may alter its appearance.

D. Locate in well-lit area where approved Architect/Engineer.

E. Remove mockup when directed by Architect/Engineer, unless part of permanent construction.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept masonry units and accessories on site. Inspect for damage.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Cold Weather Requirements: In accordance with ACI 530.1 when ambient temperature or temperature of masonry units is less than 40 degrees F.

C. Hot Weather Requirements: In accordance with ACI 530.1 when ambient temperature is greater than 100 degrees F or ambient temperature is greater than 90 degrees F with wind velocity greater than 8 mph.

D. Bracing of Work in Progress:
1. Where masonry erection may be exposed to high winds, installation shall be adequately braced until masonry construction has attained sufficient strength to resist wind forces.
2. Shores and forms shall not be removed until masonry construction has attained sufficient strength to support its own weight and all other construction or environmental loads

1.10 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate work with work of other trades built into or adjoining masonry work.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Manufacturers:
1. Arriscraft International, distributed by Upchurch Kimbrough Company, www.arriscraft.com.
2. U.S. Stone Industries, usstoneindustries.com
3. Substitutions: Section 01 60 00 – Product Requirements.

B. Manufactured Stone Masonry Units: ASTM C1364, architectural manufactured stone masonry units fabricated by dry casting methods, with fine grained texture, simulating natural cut stone.

1. Type: Calcium silicate masonry units meeting requirements of ASTM C73, Grade SW; solid units that have been pressure-formed and autoclaved to standard and special shapes.
2. Size(s): As indicated in the drawings.
3. Reinforce units as indicated and as required by ASTM C1364. Use galvanized or epoxy-coated reinforcement when covered with less than 1-1/2 inches of material.
4. Curing: Cure units to develop concrete quality, and to minimize appearance blemishes including non-uniformity, staining, or surface cracking.
5. Colors and Textures: As scheduled.
6. Mortar Color: As selected by the Architect.

2.2 ANCHORS, TIES AND REINFORCEMENT

A. Manufacturers:
1. AA Wire Products
2. Heckman Building Products (Dur-O-Wall), www.heckmannbuildingprods.com
3. Hohmann & Barnard, www.h-b.com
4. Masonry Reinforcing Corp. of America (Wire-Bond)
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Strap Anchors: Bent steel, 1-1/2 inches wide x 24 inches long x 1/4 inch thick, with ends turned up not less than 2 inches; ASTM A153/A153M hot dip galvanized.

C. Veneer Ties for CFMF Stud Backup Walls: Rib-stiffened sheet metal plate anchors with screw holes top and bottom and projecting tabs with slotted holes for receiving vertical legs of adjustable wire ties; ASTM A153/A153M hot dip galvanized.
1. Anchor Size: 2-3/4 inches wide by 3 inches high.
2. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.
3. Tie Shape: Rectangular
4. Fasteners: Steel drill screws, #10 diameter x length required to penetrate steel stud flange by not less than 3 exposed threads, complying with ASTM C954 except with hex washer head and neoprene washer, cadmium-plated.
5. Basis of Design: Hohmann & Barnard HB-200/DA-213.

D. Veneer Ties for CMU Backup Walls: ASTM A82; ladder type joint reinforcement with adjustable eye and pintle type wire ties; ASTM A153/A153M hot dip galvanized.
1. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.
2. Tie Shape: Rectangular
3. Basis of Design: Hohmann & Barnard, #270 Ladder Eye-Wire.

E. Veneer Ties for Grade Beams and Concrete Backup Walls: Zinc-alloy barrel section with flanged head and eye, fastened with corrosion-resistant, self-drilling screw. Eye designed to receive tie and to serve as head for drilling fastener into concrete. Provide barrel length to suit cavity wall insulation thickness, allowing screw to seat directly against the concrete wall with flanged head covering hole in insulation.
1. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.
2. Tie Shape: Triangular
3. Basis of Design: Heckman Building Products, Pos-i-Tie.

F. Dovetail Anchors: Bent steel strap formed from 0.1046 inch thick steel, with 0.1875 inch diameter triangular-shaped wire tie sized to extend within 1 inch of masonry face; ASTM A153/A153M hot dip galvanized.

G. Steel Beam and Column Anchors: Crimped 1/4 inch diameter wire anchor welded to steel member, with 0.1875 inch diameter triangular-shaped wire tie for solid masonry and rectangular-shaped wire tie for hollow masonry, sized to extend within 1 inch of masonry

face; ASTM A153/A153M hot dip galvanized.

2.3 EMBEDDED FLASHING MATERIALS

A. Stainless Steel: Reference Section 07 62 00 Sheet Metal Flashing and Trim for material requirements.

B. Flexible Flashing: Reference Section 07 11 00 Dampproofing and Flexible Flashing.

C. Pre-Coated Galvanized Steel or Aluminum Sheet: Not allowed for embedment in masonry walls.

D. Galvanized or Precoated Steel Sheet: Not allowed for embedment in masonry walls.

2.4 ACCESSORIES

A. Expansion Joint Filler: ASTM D1056, Grade 2A1, closed cell neoprene; oversized 50 percent to joint width; self-expanding.

B. Weeps: Open head joints, maximum 3 inches high.

C. Cleaning Solutions:
1. Job-Mixed Detergent Solution: Solution of 1/2-cup (0.14-L) dry measure tetrasodium polyphosphate and 1/2-cup (0.14-L) dry measure laundry detergent dissolved in 1 gal. (4 L) of water.
2. Proprietary Acidic Cleaner: Standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry and pigmented mortar surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
3. Manufacturers:
   a. AHI Supply, www.ahi-supply.com.
   b. Diedrich Technologies, Inc., www.diedrichtechnologies.com.
   c. EaCo Chem, Inc., www.eacochem.com.
   d. ProSoCo, Inc., www.prosoco.com.
   e. Substitutions: Section 01 60 00 - Product Requirements.

D. Steel Lintels: Size as indicated on Drawings, hot-dip galvanized.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive manufactured stone masonry work.

C. Verify items provided by other sections of work are properly sized and located.

D. Verify built-in items are in proper location, and ready for roughing into masonry work.

3.2 PREPARATION

A. Direct and coordinate placement of metal anchors supplied to other sections.

B. Furnish temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent support.

3.3 INSTALLATION

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form bed and head joints of uniform

thickness.

C. Placing And Bonding:
1. Lay solid manufactured stone masonry units in full bed of mortar, with full head joints.
2. Buttering corners of joints or excessive furrowing of mortar joints are not permitted.
3. Remove excess mortar as work progresses.
4. Do not shift or tap units after mortar has achieved initial set. Where adjustment is required, remove mortar and replace.
5. Perform job site cutting of units with motor-driven saws to assure straight, clean, unchipped edges. Prevent broken masonry unit corners or edges. Where possible, use full-size units without cutting.
6. Install cut units with cut surfaces and edges concealed.
7. Select and arrange exposed units to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.

D. Weeps and Vents: Furnish weeps and vents in outer wythe at maximum 24 inches oc horizontally above through-wall flashing, above shelf angles and lintels, at bottom of walls, and above other obstructions of wall cavity continuity.

E. Stain Prevention: As work progresses, prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
1. Protect base of walls from rain-splashed mud and from mortar splatter by coverings spread on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

F. Protection of manufactured stone masonry units: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

3.4 TIES AND ANCHORS

A. Install anchors attached to concrete and steel structural members:
1. Leave an open space not less than 1 inch in width between back of masonry and face of structural member. Keep open space free of mortar or other rigid materials.
2. Install anchors at maximum 16 inches o.c. vertically and horizontally.

B. Install Wall Ties at CMU Backup Walls:
1. Install wall ties at 16 inches oc vertically and maximum 16 inches oc horizontally.
2. Coordinate ties to accommodate installation of 16 inch widths of cavity wall insulation specified in Section 07 21 13.
3. Place additional wall ties within 12 inches of openings at intervals not exceeding 36 inches.

C. Install Wall Ties at CFMF Backup Walls:
1. Install wall tie anchor plates at 16 inches oc vertically and maximum 16 inches oc horizontally.
2. Coordinate anchor plates to accommodate installation of 16 inch widths of cavity wall insulation specified in Section 07 21 13.
3. Place additional wall ties within 12 inches of openings at intervals not exceeding 36 inches.
4. Secure wall tie anchor plates through sheathing to CFMF studs.

3.5 EMBEDDED FLASHINGS

A. Flexible Flashings: Ensure flexible flashing is properly installed at or above shelf angles,

lintels, ledges and other obstructions to the downward flow of water in the wall so as to divert such water to the exterior through masonry weep openings.

B. Sheet Metal Flashings: Coordinate with Division 7 section Sheet Metal Flashing and Trim for sheet metal flashings to be built-in to masonry work. Only specified stainless steel is approved to be built-in to masonry work unless otherwise specifically approved in writing by the Architect.

C. Prepare masonry surfaces smooth and free from projections which could puncture flashing. Place through-wall flashing on sloping bed of mortar and cover with mortar. Seal penetrations in flashing with mastic before covering with mortar.

D. Extend flexible flashings horizontally to exterior face of masonry and neatly trim flush below weep holes.

E. Extend stainless steel flashings horizontally through exterior face of masonry and turn down to form counterflashing to roofing flashing or other flashing materials as indicated in the drawings. .

F. Turn flashings up minimum 8 inches and bed into mortar joint of CMU backup wall. Ensure that vertical leg of flexible flashings are properly sealed to sheathing over CFMF stud backup wall.

G. Lap end joints of flashings minimum 6 inches and seal watertight.

H. Ensure flashings are extended the full length of lintels and shelf angles and minimum of 4" into masonry each end; turn up ends not less than 2" to form end dams as recommended by BIA and illustrated in BIA Technical Note 7, Figure 21, current edition.

I. Turn flashings, fold, and seal at corners, bends, and interruptions.

3.6 LOOSE LINTELS

A. Install loose steel lintels for manufactured stone masonry unis for openings more than 12 inches wide.

B. Maintain minimum 8 inch bearing on each side of opening.

3.7 MISCELLANEOUS

A. Control and Expansion Joints: Continue masonry control and expansion joints through manufactured stone masonry units.

B. Built-In Work:
1. As work progresses, install built-in door and window frames, wood nailing strips, anchor bolts, plates, and other items to be built-in the work and furnished by other sections.
2. Install built-in items plumb and level.
3. Bed anchors of metal door and window frames in adjacent mortar joints. Fill frame voids solid with grout or mortar. Fill adjacent masonry cores with grout minimum 12 inches from framed openings.
4. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath in the joint below and rod mortar or grout into core.
5. Do not build in materials subject to deterioration.

C. Cutting And Fitting:
1. Cut and fit for chases, pipes, conduit, sleeves, grounds, and other items penetrating masonry. Coordinate with other sections of work to provide correct size, shape, and location.
2. Obtain Architect/Engineer’s approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.8 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess mortar and mortar smears as work progresses.

C. Replace defective mortar. Match adjacent work.

D. Clean soiled surfaces with cleaning solution.

E. Use non-metallic tools in cleaning operations.

3.9 DEFECTIVE CONSTRUCTION

A. Correct defects appearing in the finished work for a period of one year after the date of Substantial Completion.

B. Defects shall include, but not be limited to, cracking, separating of mortar, cracking, discoloration, or deterioration of masonry units, efflorescence in masonry units or joints, and water penetration through manufactured stone masonry or joints under normal exposure.

3.10 PROTECTION OF FINISHED WORK

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for protecting finished Work.

B. Protect exposed external corners subject to damage.

C. Protect base of walls from mud and mortar splatter.

D. Protect masonry and other items built into masonry walls from mortar droppings and staining caused by mortar.

E. Protect tops of masonry work with waterproof coverings secured in place without damaging masonry. Provide coverings where masonry is exposed to weather when work is not in progress.

END OF SECTION

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Structural steel.
2. Field-installed shear connectors.
3. Shop and Field Welding.
4. Galvanizing.
5. Prime Painting.

B. Related Requirements:
1. Section 03 62 00 “Non-Shrink Grout” for structural steel bearing and base plate connections.
2. Section 05 21 00 “Steel Joist Framing” for field installation of joists on supporting steel.
3. Section 05 31 00 "Steel Decking" for field installation of shear connectors through deck.
4. Section 05 50 00 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other steel items not defined as structural steel.
5. Section 05 12 13 “Architecturally Exposed Structural Steel” for critical exposed steel member requirements (refer to S0002 for additional information).

1.3 DEFINITIONS

A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

B. Heavy Sections: Rolled and built-up sections as follows:

1. Shapes included in ASTM A 6/A 6M with flanges thicker than 1-1/2 inches.
2. Welded built-up members with plates thicker than 2 inches.
3. Column base plates thicker than 2 inches.

C. Protected Zone: Structural members or portions of structural members indicated as "Protected Zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.

D. Demand Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the Seismic-Load-Resisting System and which are indicated as "Demand Critical" or "Seismic Critical" on Drawings.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.5 PREINSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference prior to any work beginning by trade. Time, date and location as determined by a construction manager.

1.6 ACTION SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections. In addition to Division 1 requirements, provide one half-size hard copy (paper) of any drawings submitted in the electronic files.

B. Product Data: For each type of product.

C. Shop drawings prepared under supervision of a Registered Professional Structural Engineer licensed in the state in which the project is constructed, including complete details and schedules for fabrication and assembly of structural steel members, procedures, and diagrams.
1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pre-tensioned and slip-critical, high-strength bolted connections.
5. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed as work of other Sections.
6. Original contract documents shall not be reproduced for use as a portion of the Shop Drawings.
7. Indicate locations and dimensions of protected zones.
8. Identify demand critical welds.

D. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing, including the following:

1. Power source (constant current or constant voltage).
2. Electrode manufacturer and trade name, for demand critical welds.

E. Delegated-Design Submittal: For structural-steel connections indicated to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, fabricator, testing agency.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

D. Mill test reports for structural steel, including chemical and physical properties, and country of origin (must be domestic, including Canada).

E. Product Test Reports: For the following:

1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength, bolt-nut-washer assemblies.
4. Shear stud connectors.
5. Shop primers.
6. Non-shrink grout.

F. Survey of existing conditions.

G. Source quality-control reports.

H. Field quality-control and special inspection reports.

1.8 QUALITY ASSURANCE

A. Source Limitations:
1. Steel shapes shall be domestically milled and manufactured. Foreign milled steel shall not be used.
2. To the greatest extent possible steel shapes shall be manufactured with recycled material and shall be manufactured locally or within the State of Texas.

B. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD, or is accredited by the IAS Fabricator Inspection Program for Structural Steel (AC 172).
1. Fabricators not meeting the requirements noted above may be submitted for consideration in writing as a substitution request DURING BIDDING PHASE ONLY. Refer to Section 4.1 for substitution request requirements. This request will be evaluated on a case-by-case basis and is subject to Owner approval.

C. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Steel Erector, CSE.

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
1. Provide certification that welders to be employed in work have satisfactorily passed AWS qualification tests.
2. If recertification of welders is required, retesting will be Contractor's responsibility.

3. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8/D1.8M. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

E. Comply with applicable provisions of the following specifications and documents:

1. AISC 303.
2. AISC 341 and AISC 341s1.
3. AISC 360.
4. RCSC's "Specification for Structural Joints Using High-Strength Bolts."

F. Correct deficiencies in structural steel work that inspections and laboratory test reports have indicated to be not in compliance with requirements. Perform additional tests, at Contractor's expense, as necessary to reconfirm any non-compliance of original work and to show compliance of corrected work.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site at such intervals to ensure uninterrupted progress of work.

B. Deliver anchor bolts and anchorage devices, which are to be embedded in cast in place concrete or masonry, in ample time to not to delay work.

C. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

D. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
2. Clean and re-lubricate bolts and nuts that become dry or rusty before use.
3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 1852 fasteners and for retesting fasteners after lubrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Connections: Provide details of connections required by the Contract Documents to be selected or completed by structural-steel fabricator, including comprehensive engineering analysis by a qualified professional engineer, to withstand loads indicated and comply with other information and restrictions indicated.
1. Select and complete connections using schematic details indicated and AISC 360. Details shown are typical; similar details apply to similar conditions, unless otherwise indicated. Verify dimensions at site whenever possible without causing delay in the work.

a. Promptly notify Architect/Engineer whenever design of members and connections for any portion of structure are not clearly indicated.

2. Use Allowable Stress Design; data are given at service-load level.

B. Moment Connections: Type FR, fully restrained.

2.2 STRUCTURAL-STEEL MATERIALS

A. W-Shapes: ASTM A 992/A 992M, Grade 50 or ASTM A572 Grade 50.

B. Channels, Angles, M, S-Shapes: ASTM A 36/A 36M.

C. Plate and Bar: ASTM A 36/A 36M

D. Baseplates: ASTM A572 Grade 50

E. Cold-Formed Hollow Structural Sections: ASTM A 500/A 500M, Grade B, structural tubing.

F. Steel Pipe: ASTM A 53/A 53M, Type E or Type S, Grade B.
1. Finish: Black except where indicated to be galvanized.

G. Welding Electrodes: Comply with AWS requirements.

2.3 BOLTS, CONNECTORS, AND ANCHORS

A. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade C, heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers; all with plain finish.
1. Direct-Tension Indicators: ASTM F 959, Type 325, compressible-washer type with plain finish.

B. High-Strength Bolts, Nuts, and Washers: ASTM A 490, Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers with plain finish.
1. Direct-Tension Indicators: ASTM F 959, Type 490, compressible-washer type with plain finish.

C. Zinc-Coated High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade DH heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers.

1. Finish: Hot-dip or mechanically deposited zinc coating.
2. Direct-Tension Indicators: ASTM F 959, Type 325, compressible-washer type with mechanically deposited zinc coating finish.

D. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, heavy-hex head assemblies consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

1. Finish: Mechanically deposited zinc coating.

E. Shear Connectors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.

F. Unheaded Anchor Rods: ASTM F 1554, Grade 36, 55 (S1) & 105

1. Configuration: Straight, unless otherwise indicated.
2. Nuts: ASTM A 563 heavy-hex carbon steel.
3. Plate Washers: ASTM A 36/A 36M carbon steel.
4. Washers: ASTM F 436, Type 1, hardened carbon steel.
5. Finish: Plain, unless otherwise indicated on the Contract Documents.

G. Headed Anchor Rods: ASTM F 1554, Grade 36, straight.

1. Nuts: ASTM A 563 heavy-hex carbon steel.
2. Plate Washers: ASTM A 36/A 36M carbon steel.
3. Washers: ASTM F 436, Type 1, hardened carbon steel.
4. Finish: Plain, unless otherwise indicated on the Contract Documents.

H. Threaded Rods: ASTM A 36/A 36M.

1. Nuts: ASTM A 563 hex carbon steel.
2. Washers: ASTM A 36/A 36M carbon steel.
3. Finish: Plain, unless otherwise indicated on the Contract Documents.

I. Clevises and Turnbuckles: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1035.

J. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1030.

K. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1018.

L. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint, as specified in Division 5 section "Teflon Bearing Pads".

2.4 PRIMER

A. Primer: Exposed structural steel shall comply with Section 099000 "Painting and Coating."

B. Primer: Fabricator's standard lead- and chromate-free, non-asphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

C. Galvanizing Repair Paint: ASTM A 780/A 780M.

2.5 GROUT

A. Grout for use under steel bearing or base plates shall be a high strength, non-bleeding, non-shrink grout of high durability, as specified in Division 3 section "Non-shrink Grout".

2.6 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," and to AISC 360.

1. Camber structural-steel members where indicated.
2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel according to ASTM A 6/A 6M and maintain markings until structural steel has been erected.
4. Mark and match-mark materials for field assembly.
5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

C. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 1, "Solvent Cleaning" and SSPC-SP 2, "Hand Tool Cleaning."

F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.7 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened, unless otherwise indicated on the Contract Documents.
2. All bolts shall have threads excluded from the shear plane.
3. Torque wrenches shall be used to tighten high strength fasteners unless prior written approval has been obtained from the Architect/Engineer.
4. If for any reason a high strength bolt has to be removed after being stressed to "Proof Load", it shall not be reused.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.8 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces of high-strength bolted, slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
5. Galvanized surfaces.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 2, "Hand Tool Cleaning."
2. SSPC-SP 3, "Power Tool Cleaning."
3. SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 2 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

D. Structural steel delivered to the job site showing evidence of rust, mill scale, spatter, slag or flux deposits shall be either returned to the shop for proper cleaning and repriming, or sand blasted clean and reprimed at the job site.

2.9 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.

1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.

B. Minimize distortion and warpage of steel members being galvanized by following recommendations according to ASTM A 384/A 384 M.

1. Do not apply galvanizing using double- dip or progressive processes without Architect’s or Engineer’s written approval.
2. Galvanize lintels and exposed plates, angles, tubes, shelf angles and rolled shapes attached to structural-steel frame and located in exterior walls.

2.10 SOURCE QUALITY CONTROL

A. General: Materials and fabrication procedures are subject to inspection and tests in mill, shop, and field, conducted by a qualified inspection agency. Such inspections and tests will not relieve Contractor of responsibility for providing materials and fabrication procedures in compliance with specified requirements.

1. Promptly remove and replace materials or fabricated components that do not comply.

B. Testing Agency: Owner will engage a qualified testing agency to perform shop tests and inspections.
1. Testing agency shall conduct and interpret tests, state in each report whether test specimens comply with requirements, and specifically state any deviations therefrom.

2. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.

A. Bolted Connections: Inspect and test shop-bolted connections according to RCSC's "Specification for Structural Joints Using High-Strength Bolts."

1. Verify that gaps of installed Direct Tension Indicators are less than gaps specified in ASTM F 959, Table 2.

B. Welded Connections: Visually inspect shop-welded connections according to AWS D1.1/D1.1M. In addition to visual inspection, provide non-destructive testing as indicated by AISC 360 and the contract documents, whichever is more stringent. Test and inspect field welds according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

1. Liquid Penetrant Inspection: ASTM E 165.
2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
3. Ultrasonic Inspection: ASTM E 164.
4. Radiographic Inspection: ASTM E 94.

C. In addition to visual inspection, test and inspect shop-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete and masonry bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Shoring shall have the effect of being continuous down to foundation level unless written approval is obtained from Architect/Engineer to do otherwise. Point loads from shoring shall be distributed to main structural members as necessary to prevent localized overstressing of supporting members. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

B. Temporary Planking: Provide temporary planking and working platforms as necessary to effectively complete work.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

B. Baseplates, Bearing Plates, and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.
2. Weld plate washers to top of baseplate.
3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

C. Maintain erection tolerances of structural steel within AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

D. Cranes or other erection machinery shall not be permitted on the foundation slab. The construction shall be scheduled so the structural steel is not erected from the foundation slab.

E. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.
2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

F. Splice members only where indicated. Splices will be permitted only with prior written approval of the Architect/Engineer.

G. Do not use thermal cutting during erection for correcting fabrication errors in primary structural framing. Cutting will be permitted only on secondary members that are not under stress, as acceptable to Architect/Engineer. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.

H. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

I. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

J. Erection Bolts: On exposed welded construction, remove erection bolts, fill holes with plug welds, and grind smooth at exposed surfaces.

1. Comply with AISC Specifications for bearing, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened, unless otherwise indicated on the Contact Documents.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or runoff tabs where indicated, back gouge, and grind steel smooth.
3. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," for mill material.
4. Where fillet welding of members thicker than one half inch is indicated on the drawings, preheating of members shall be accomplished as directed by the Testing Laboratory prior to welding.
5. Where one of the members is embedded in concrete, extreme care shall be taken not to overheat the concrete so as to cause cracking or spalling. Adequate time shall be allowed between multiple passes to allow cooling of the concrete adjacent to the welded members.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Verify structural-steel materials and inspect steel frame joint details.
2. Verify weld materials and inspect welds.
3. Verify connection materials and inspect high-strength bolted connections.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Testing agency shall conduct and interpret tests, state in each report whether test specimens comply with requirements, and specifically state any deviations therefrom.

D. Bolted Connections: Inspect and test bolted connections according to RCSC's "Specification for Structural Joints Using High-Strength Bolts."

1. Verify that gaps of installed Direct Tension Indicators are less than gaps specified in ASTM F 959, Table 2.

E. Welded Connections: Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, provide non-destructive testing as indicated by AISC 360 and the contract documents, whichever is more stringent. Test and inspect field welds according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

a. Liquid Penetrant Inspection: ASTM E 165.
b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
c. Ultrasonic Inspection: ASTM E 164.
d. Radiographic Inspection: ASTM E 94.

F. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.

3.6 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780/A 780M.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Field Rusting: Special steps shall be taken after erection of steel members to prevent rusting. Any rust appearing on any structural member shall be removed by wire brushing, sand blasting, or other approved techniques. The area shall then be repainted per above. This process shall be continued until the steel member is enclosed in its final waterproof or architectural covering. The Contractor shall notify the Architect/Engineer so that all structural steel may be inspected not more than 36 hours prior to attachment of blocking, sheathing, and/or other covering materials.

PART 4 - SUBSTITUTION REQUESTS

4.1 STRUCTURAL STEEL FABRICATORS

A. The following items are required to be inspected by the Owner's special inspection laboratory (or their subcontractor) at the expense of the Contractor if specification section 051200 – Structural Steel Framing (1.8.B Quality Assurance – Fabricator Qualifications) cannot be met:

1. Direction and Leadership

Management review requirements will be defined by the Fabricator and include a specific method to obtain, appropriately assess and analyze, and then report the following:

- Results of internal and external audits
- Customer feedback (surveys, letters of recognition, personal interviews, etc.)
- The level of qualification training of personnel
- Channels for communication to address and resolve all quality issues
- Product nonconformance of manufactured product (in process or final)

2. Personnel

Name and title of qualified management team assigned to the project including (but not limited to):

- Management representative
- Detailing manager (minimum three years experience)
- Purchasing manager (minimum three years experience)
- Fabrication process manager (minimum three years experience)
- Quality assurance (minimum five years experience)
- Quality control manager (minimum five years experience)
- ASNT-TC-1A certified staff (minimum one of each on staff or available under contract)
  - Certified Level II technician for each NDT method performed in shop

3. Facility

A fabrication facility shall consist of areas and buildings that provide space for the routine functions considered to be part of steel fabrication. The areas and buildings shall be conducive to achieving a consistent high quality of work meeting the requirements of the contract documents.

4. Fabrication Process Equipment

The fabricator shall have under their control the equipment and software necessary to perform the functions common to fabrication consistent with the specifications and standards common to the work being performed and consistent with meeting the requirements of the contract documents.

5. Documentation Requirements

The Quality Management System documentation shall include (but not be limited to) and be signed/dated by the highest ranking organizational individual responsible for the facility:

- A Quality Manual
  - Applicable reference documents
  - Industry and government regulations, codes and contract requirements
  - Organizational chart describing responsibility, authority and interrelationship of functional positions that manage, perform and verify work regarding quality
  - Job descriptions and required qualifications for key personnel and functions
  - Facility plan
  - Equipment list (including maintenance records)
  - Established documented procedures
  - Description of the interaction and communication between the processes of the Quality Management System used by the Fabricator to produce products of the required quality
- A statement of a quality policy and quality objectives
- Procedures and their associated Quality Records

6. Contract and Project Specification Review and Communication

The fabricator shall develop a documented procedure for contract and project specification review. The procedure shall require that a contract and project specification review be completed for each structural steel project performed. The review shall begin no later than the fabricator's acceptance of responsibility for performing the work.

The review shall identify, determine, plan, and record the specific project requirements as well as define distribution of the recorded specific project requirements to the responsible individuals in the fabricator's organization. This review will consider any issue that affects the fabricator's capability to perform the work.

The procedure shall provide for review of the original contract documents, revised contract documents and changes received through clarification (e.g. requests for information or other sources) to assure that the fabricator fully understands the contract requirements. Evidence of contract review can take the form of technical summaries, signoffs, change orders, schedules and allocation of adequate resources.

7. Design and Detailing

The shop and erection drawings produced shall incorporate all customer requirements, specifications, codes, and relevant standards to adequately procure materials, fabricate, and erect the structural steel frame and provide in instructions to the erector for location of shipping pieces in the completed structure.

To ensure and verify this, a documented procedure for preparation of shop and erection drawings shall be developed, which describes:

- How project requirements are reviewed and incorporated.
- How the fabricator coordinates, clarifies, resolves, and tracks information with the Customer (e.g., construction change documents, Requests for Information [RFI]) and how the associated resolutions are tracked and controlled).

For products that are standard components, the manufacturer shall have on file and available to the customer a set of design calculations reviewed and stamped by a professional engineer to signify that the designed product meets the current applicable code requirements for its intended use. Any design tables or design processes published with the product literature shall also be reviewed and stamped by a professional engineer. Shop drawings for these components shall include a statement that the component details are based on designs that have been reviewed and stamped by a professional engineer and are on file with the manufacturer.

For products that are job-specific, the manufacturer shall retain the services of a professional engineer to review and stamp the site-specific design of the component. The engineer shall also review the shop drawings produced for the component and verify their consistency with the design. The results of this review shall be indicated on the component shop drawings.

8. Detailing Standards

The fabricator will prepare and utilize detailing standards describing technical preferences and requirements customarily used in the shop. These standards will show special information required on advance bills such as allowances for cuts, camber, or supplementary requirements. The detailing standards will include how mill order lists are prepared which, at a minimum, include:

- Sizes and quantities
- Appropriate ASTM specification references
- Special ordering information
- Any allowances or tolerances

The detailing standards shall describe the fabricator's preferred methods of drawing layout, including but not limited to:

- Sections and views
- Title block information
- Piece marking system
- Dimensional preferences
- Commonly used shop abbreviations
- Showing bolt placement lists (including bolt type and installation requirements)
- Information required on weld symbols including any special NDT requirements

The detailing standards shall describe the fabricator's preferred method for:

- Selection of connection geometry and material (including sizes and specifications)
- Detailing holes, fasteners, washers, cuts, and copes
- Assignment of appropriate welding symbols (shop and field welds)
- Selecting bolt type and installation method
- Showing surface preparation (including specification of surface finish)
- Designating coating requirements (including coating materials and dry film thickness)
- Showing any necessary special instructions to fabricate and erect the structural steel frame

9. Shop and Erection Drawings

The fabricator shall develop a documented procedure to provide for checking of all shop and erection drawings and to describe the approval method used to release shop drawings for fabrication.

10. Checking of Shop and Erection Drawings

The documented procedure for checking of shop and erection drawings shall describe the method by which the fabricator or its subcontractor performs and records final check of shop and erection drawings to ensure compliance with contract documents before release for fabrication and erection. Such methods may include signatures, stamps, logs, files, or lists. Records shall provide means for identification of the individual checker who performed the final check of each shop or erection drawing. When detailing is performed by a subcontractor, the procedure will define the extent of review by detailing management and checking of received detailing products before release for fabrication.

11. Approval of Shop Drawings

The procedure for checking of shop and erection drawings shall describe the method used to document approval of shop drawings released for fabrication. Such methods may include signatures, stamps, logs, files, or lists. The method shall have provisions for recording Owner's designated representatives for design and construction approval of shop drawings—whether produced in house or by a subcontractor. The procedure shall require that waiver of approval from the Owner's designated representative for design or from the Owner's designated representative for construction be in writing.

12. Detailing Resource Material

The fabricator shall maintain as a minimum, a library of the required references as follows:

- AISC Steel Construction Manual, which includes the following specifications, codes, and standards:
- AISC Specification for Structural Steel Buildings
- RCSC Specification for Structural Joints Using ASTM A325 or A490 Bolts
- AISC Code of Standard Practice for Steel Buildings and Bridges
- ANSI/AWS D1.1 Structural Welding Code–Steel
- AISC Selected ASTM Standards for Structural Steel Fabrication

13. Detailing Management

Responsibilities for personnel performing detailing management shall include:

- Overseeing the production of shop and erection drawings
- Liaising with designers
- Scheduling
- Developing and maintaining company detailing standards and detailing procedures
- Transmittals related to Owner's designated representative for design and construction approvals and connection consultation subcontracting
- Coordinating and incorporating construction requirements
- Training detailers and checkers

Qualification requirements for detailing management personnel shall include one or more of the following:

- Experience in detailing and checking shop and erection drawings that have met the approval of the Owner's representative for design for a variety of structures representative of projects the company provides. The fabricator shall determine and describe a way to demonstrate competence.
- Graduate engineer with experience related to structural steel fabrication.
- Licensed P.E. or S.E., with experience related to structural steel fabrication.

14. Connection Consultation

Qualification requirements for personnel providing connection development guidance to detailers performing connection detailing shall include one or more of the following:

- Experience in connection development and in detailing and checking of shop and erection drawings for steel that have met the approval of the Owner's representative for design for a variety of structures representative of projects the company provides. The fabricator shall determine and describe a way to demonstrate competence.
- Graduate engineer with experience related to structural steel fabrication.
- Licensed P.E. or S.E., with experience related to structural steel fabrication.

In lieu of employed staff personnel, subcontractors may be used for the following functions: detailing, connection consultation, checking of shop and erection drawings, training of detailers and checkers. However, the fabricator retains the responsibility for compliance.

15. Control of Quality Records

The fabricator shall develop a documented procedure for quality records that provides for:

- Identification, collection, storage, maintenance, retention, and disposition

All quality records shall be legible and shall be stored and retained in such a way that they are retrievable from facilities that provide a suitable environment to prevent damage, deterioration or loss. Quality records typically include, but are not limited to:

- Inspection records, NDT reports, drawing logs, MTRs, C of Cs, design changes, RFIs
- Contract review, contract clarifications, design change records, including contract construction changes and addendums
- Mill and consumable purchase orders, records or summaries of nonconformance reports
- Corrective action requests, training records, subcontractor and supplier evaluations
- Internal and external quality management system audits

Retention times shall be established and recorded for records retained for any purpose. The retention periods will be at least long enough to permit evaluation of the records during the course of project construction.

16. Purchasing Data

The fabricator shall clearly describe subcontracted work and the purchased products, materials, and services ordered in written purchasing documents. This shall include but not be limited to:

- The type of service, material, class, grade, and other unique identification.
- The applicable specifications, drawings, process requirements, and inspection instructions and any witness points.
- Delivery instructions and date.
- Required C of Cs, MTRs, and NDT reports.

Purchasing documents for materials furnished to ASTM specifications shall include the information required in the *"Order Information"* section of the ASTM Standard.

17. Verification of Purchased Product, Materials and Services

The fabricator's procedure for purchasing shall define the extent of control necessary to conform to the project requirements. This may be dependent upon the type of product, the impact of subcontracted product on the quality of the final product or the records available for the demonstrated capability and performance of previous projects. Test reports, C of Cs, or other evidence of quality control shall be kept on file as defined in the fabricator's procedure requirements.
The Owner and/or Owner's representative shall be allowed the right to verify the conformance of the final product to the project requirements at the fabricator's premises.

18. Material Identification

The documented procedure shall describe how the fabricator marks or maintains the identification of base materials from the point of receipt to the point of the first fabricating operation (or beyond, if required; see Section 11.2) to assure incorporation of the correct materials into the product.

- Structural steel material shall be identified as stated in contract documents.
- Welding consumables shall be identified in accordance with the appropriate ANSI/AWS specification.
- Coating materials (excluding metallic coating) shall be identified on the container by, at a minimum, color (pigment description and federal standard number, or manufacturer's number), lot/batch number, ID/stock number, quantity of coating in container, date of manufacture, date of expiration, and manufacturer's name and address.
- Metallic coatings shall be identified by, at a minimum, composition and the appropriate ASTM specification, including hot dip or mechanical galvanizing and metallizing.
- Fasteners shall be stored in containers clearly identified by type, grade, size and lot number(s).

Records that provide a basis for material identification (e.g., MTRs and C of Cs for base materials, fasteners, welding consumables, and coatings) shall be filed and retained as defined in the fabricator's documented procedures.

19. Fabrication Process Control

The fabricator shall develop documented procedures for process control necessary to produce a consistent acceptable level of quality of the furnished product in accordance with the applicable codes or specifications. Fabrication processes include (but are not limited to) thermal and mechanical cutting, fitting and assembly, welding, drilling, bolting, milling, and coating. The fabricator will include additional “special procedures” that cover fabrication processes done at the facility (e.g., cambering).

20. Welding

The fabricator’s welding procedure shall include (but not be limited to):

- WPSs (in close proximity to and used by the welders)
- Preheat requirements
- PQRs (when required)
- Welder, welding operator, and tack welder qualifications and qualification test records
- Welder, welding operator, and tack welder performance records - to provide objective evidence that the “period of effectiveness” has not been exceeded for welder, welding operator, and tack welder qualifications
- Traceability of welds to the welders who produce them

21. Bolt Installation

The fabricator’s documented bolting procedure shall include storage, rotational capacity testing, pre installation verification, installation, and inspection of fastener assemblies for snug-tightened, pretensioned and slip-critical joint types. The documented procedure shall meet the requirements of the RCSC *Specification for Structural Joints Using High-Strength Bolts*.

22. Equipment Maintenance

The fabricator shall develop a documented procedure defining an equipment maintenance program to produce the required quality. The procedure shall define preventative maintenance for, at minimum, equipment critical to product quality and delivery requirements.

23. Inspection and Testing

The fabricator shall develop a documented procedure for inspection and testing activities to verify that the product quality meets the project requirements. The inspection and testing procedure shall define receipt, in-process, and final inspection of all product furnished to a project. Product determined during inspection and testing to be nonconforming shall be addressed by the fabricator’s nonconformance procedure.
For each type of inspection less than 100 percent, the procedure shall describe the methods for establishing sampling plans and for adjusting the level and frequency of inspection to assure expected contract quality. The fabricator’s methods will adjust the level and frequency of inspection at any time the required level of quality is not met. The level or frequency of an inspection sampling plan shall not be zero where a nonconformance has been identified and corrective action has not been fully implemented and verified as effective.

24. Assignment of QC Inspections and Monitoring

The inspection procedure shall define inspection and testing and the required records to meet the project requirements and shall assign QC inspection and QC monitoring duties.
Qualification requirements for QC inspectors shall be defined and documented. QC inspectors shall be assigned on the basis of qualification, evidenced by experience, training, and education. Qualification standards and certifications granted by recognized industry organizations related to structural steel fabrication can be used as a basis for qualification. QC inspectors shall be periodically monitored by QA (either by repeating the QC duties or by witnessing their work).
Production personnel shall be assigned to QC inspection duties under the following conditions:

- They shall be trained both in knowledge and practice in proper inspection methods and acceptance criteria specified for the material they are inspecting.
- They are aware of their responsibilities and are given time to perform their inspection responsibilities.
- They do not inspect their own work.
- Their inspections are monitored by qualified QC personnel.

25. Inspection Procedure

The fabricator's procedure shall include (but not be limited to) provisions for the following:

- Material Receipt Inspection:
  Materials received shall be compared to the purchase order requirements. The receiver shall identify the material, grade, and quantity and look for visible shipping damages. The receiver shall inspect shapes and plates for obvious deviations from the requirements of purchase order specifications.

- In-process Inspection:
  The fabricator shall conduct in-process inspection. In-process inspection plans and practices will provide a level of compliance assurance for specified process requirements and inspection acceptance criteria that are not verifiable at final inspection or that can hinder assembly. In-process inspection is appropriate for welds that will be hidden or out of reach during the final inspection, visual examination of fit-up tolerances that will not be visible after welding, areas requiring coatings that will not be accessible during final inspection. Materials shall be inspected for specification and grade, workmanship, and tolerances using appropriate codes, standards, or a documented plan before fabrication begins. Compliance with documented bolting procedures and welding procedures (WPSs, preheat and welding personnel qualifications) shall be monitored. Production personnel should be capable of inspecting the product or subassembly before sending it to the next process.

- Final Inspection:
  The fabricator shall conduct final inspection. QC inspectors qualified and responsible for final inspection shall perform the final inspection of structural steel products after the fitting, welding, and coating operations, but prior to delivery. Qualification requirements for personnel performing final inspection shall be defined and documented. Competency of staff-employed and subcontracted individuals performing final inspection shall be verifiable and evidenced by experience, training, and education.

- Inspection Records:

The inspection procedure shall indicate what records and marks are used to document inspections. In-process inspections shall be verifiable until the final inspection of the piece. Final inspections shall be documented. The quality records produced shall be filed and retained as defined in the fabricator's procedure. Inspection records shall clearly show the products and product aspects that were inspected and who performed the inspection.

26. Calibration of Inspection, Measuring and Test Equipment

The Fabricator shall develop a Documented Procedure to control, calibrate, and maintain inspection, measuring, and test equipment used to demonstrate the compliance of products and processes to the specified requirements. Tools with devices for measuring properties of fabricated pieces or process variables are included in this requirement when they are used to demonstrate the compliance of products and processes to the specified requirements.
The documented procedure shall define equipment calibration frequency. However, the volt/amp meters used to verify compliance with WPS parameters (may be welding machine volt and amp meters or auxiliary volt/amp meters) shall be calibrated whenever the accuracy of the meter is in question and at a minimum every twelve months.
Inspection, measuring and test equipment shall be used in a manner consistent with the required measurement. The precision capability of the equipment used shall support reliable determination of compliance with acceptance criteria. When specifically required, technical data pertaining to the measurement equipment shall be made available for verification that the measuring equipment is performing properly.
For inspection, measuring, and test equipment used to demonstrate the compliance of products and processes to the specified requirements, the documented procedure shall include (but not be limited to):

- An equipment list that provides a means for unique identification of each piece of equipment
- Service use for each piece of equipment including the required precision for the types of inspections, measurements or tests made
- Handling, preservation, and storage of inspection, measuring, and test equipment to maintain accuracy and fitness for use
- Calibration frequency for each piece of equipment based upon service use, requirements of this standard, manufacturer's recommendations, project requirements, specification requirements
- Identification of standards or certified equipment having a known valid relationship to internationally or nationally recognized standards used to calibrate each listed piece of equipment. Where such standards do not exist, the basis used for calibration shall be documented
- The calibration procedure for each piece of equipment calibrated at the fabricator's facility
- The calibration accuracy acceptance criteria for each piece of equipment
- The action to be taken when equipment does not meet the calibration requirements. This action includes disposition of the measuring device and an evaluation of the impact to product that was measured using the device.
- Calibration quality record maintenance as defined in the fabricator's procedure
- Method of preventing inadvertent use of equipment that is not calibrated where calibrated equipment is required

27. Control of Nonconformances

The fabricator shall develop a documented procedure to identify and control nonconformances. These nonconformances may be identified by the fabricator's inspection program, process monitoring, and during internal and external audits, which are then addressed by the corrective action procedure.

28. Nonconforming Product

Nonconforming product shall be documented to ensure that final product not conforming to specified requirements is prevented from reaching the customer. This procedure shall provide for identification, documentation, evaluation, segregation (when practical), treatment of nonconforming product, and for notification of the relevant functions concerned. Nonconforming product shall be clearly marked as soon as practical after it is discovered. Records shall be kept of the pieces affected, the nature of the nonconformance, the treatment selection, authorization, and reinspection results if applicable.
The responsibility for review, authority, and required qualifications for the personnel selecting treatment of nonconforming product shall be defined by the procedure. If the treatment is rework or repair, the result will be inspected per drawing, specification, project requirements, and the fabricator's inspection procedure. The treatment of nonconforming product may be:

- Reworked
- Repaired
- Use as is (after more detailed analysis or acceptance by the fabricator's engineering or management)
- Customer-approved nonconforming product
- Scrapped

Approval from the Owner's designated representatives for design and construction may be required by contract for treatment of nonconformances. These approvals shall be in writing for treatments resulting in "use as is," "repaired," or "reworked."

29. Corrective Action

The fabricator shall develop a documented procedure for corrective action. Any corrective action taken shall be to the degree appropriate to the magnitude of problems and commensurate with the risks to product quality.
The corrective action procedure shall include periodic review of records or summaries of nonconformances and of internal and external quality audit reports for determination and initiation of corrective actions. Corrective action may be applied when:

- There is a nonconformance that is repetitive in nature. This can be identified by periodically reviewing nonconformance reports or summaries for negative trends
- Process nonconformances are found during the internal and external quality audits indicating that the quality management system may not be implemented and functioning as stated in the quality manual
- Nonconformance with the quality management system is found during the day-to-day execution of the system
- Nonconformance is unacceptable due to cost or severity
- A customer complaint has been received
- A complaint has been received from an owner, general contractor or erector

The Corrective Action Procedure shall address these steps:

1. Document a Corrective Action Request (CAR) that includes the nonconformance to be addressed by the corrective action and the requirement that has not been met. The corrective action procedure shall define the functional positions authorized to issue a CAR and initiate the corrective action process.
2. Assign responsibility and establish a timeframe for the response to a CAR.
3. Investigate and document the scope of the nonconformance, root causes, corrective measures taken, and list the actions to be taken to prevent recurrence.
4. Communicate the CAR and resolution to the management team and appropriate members of the organization.
5. Follow up the corrective action taken with periodic monitoring to assure the corrective action is implemented and is effective.

30. Handling, Storage and Delivery of Product and Materials

Material shall be stored, loaded, and shipped to avoid damage and deterioration. Material shall be marked with its identification and shall be listed on a manifest or shipping documents. Delivery instructions and any shipping agreements (e.g., sequencing that complies with erection needs) between the fabricator, the customer, the fabricator's subcontractors, or the fabricator's suppliers shall be included in written purchasing documents. Shipments by subcontractors and suppliers shall be coordinated and monitored for compliance with shipping and delivery instructions.

31. Internal Audit

The fabricator shall perform an internal audit of each element of the quality management system at least once a year to evaluate their compliance and the effectiveness of implementation. The management representative or a qualified individual, independent of the function being audited, shall perform the audit and provide a written record of the audit result from each element.

END OF SECTION 05 12 00

SECTION 05 12 13 - ARCHITECTURALLY EXPOSED STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes architecturally exposed structural steel (AESS).

1. Requirements in Section 051200 "Structural Steel Framing" also apply to AESS.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for additional requirements applicable to AESS.
2. Section 055000 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other metal items not defined as structural steel.
3. Section 099000 “Painting and Coating” for surface preparation and priming requirements.

1.3 DEFINITIONS

A. AESS: Structural steel designated as "architecturally exposed structural steel" or "AESS" in the Contract Documents.

B. Category 1 AESS: AESS that is within 96 inches vertically and 36 inches horizontally of a walking surface and that is visible to a person standing on that walking surface or is designated as "Category 1 architecturally exposed structural steel" or "AESS-1" in the Contract Documents.

C. Category 2 AESS: AESS that is within 20 feet vertically and horizontally of a walking surface and that is visible to a person standing on that walking surface or is designated as "Category 2 architecturally exposed structural steel" or "AESS-2" in the Contract Documents.

D. Category 3 AESS: AESS that is not defined as Category 1 or Category 2 or that is designated as "Category 3 architecturally exposed structural steel" or "AESS-3" in the Contract Documents.

1.4 COORDINATION

A. Coordinate installation of anchors for AESS members that connect to the work of other trades. Furnish setting drawings, templates, and directions for installing anchors, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to the project site in time for installation. Anchorage concepts shall be as indicated on drawings and approved on final shop drawings.

B. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference to comply with requirements of Division 1 Section “Project Meetings.” As a minimum, the meeting shall include the General Contractor, Fabricator, Erector, the finish-painting subcontractor, and the Architect. Coordinate requirements for shipping, special handling, attachment of safety cables and temporary erection bracing, touch up painting and other requirements for AESS.

1.6 ACTION SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections. In addition to Division 1 requirements, provide one half-size hard copy (paper) of any drawings submitted in the electronic files.

B. Shop Drawings: Show fabrication of AESS components. Shop Drawings for structural steel may be used for AESS provided items of AESS are specifically identified and requirements below are met for AESS.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include details that clearly identify all of the requirements listed in the “Fabrication“ Article and the “Erection” Article of this specification. Provide connections for exposed AESS consistent with concepts shown on the architectural or structural drawings.
3. Include embedment Drawings.
4. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain. Indicate grinding, finish, and profile of welds.
5. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.
6. Indicate exposed surfaces and edges and surface preparation being used.
7. Indicate special tolerances and erection requirements.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification data for firms and persons specified in the ‘Quality Assurance” Article to demonstrate their capabilities and experience. Include lists of completed projects names and address, names and addresses of architects and owners, and other information specified.

B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: In addition to those qualifications listed in Division 5 Section ‘Structural Steel,’ engage a firm experienced in fabricating AESS similar to that indicated for this Project

with a record of successful in-service performance, as well as sufficient production capacity to fabricate AESS without delaying the Work.

B. Installer Qualifications: In addition to those qualifications listed in Division 5 Section ‘Structural Steel,’ engage an experienced Erector who has completed AESS work similar in material, design, and extent to that indicted for this Project and with a record of successful in-service performance.

C. Mockups: At least four weeks prior to fabricating AESS, the contractor shall construct mockups to demonstrate aesthetic effects as well as qualities of materials and execution. Mockups shall be built by the Contractor or Subcontractor responsible for the Project Work. Build mockups to comply with the following requirements, using all conditions and materials indicated for completed unit of Work.
   1. Locate mockups on-site or in the fabricator’s shop as directed by Architect. Mockups shall be full-size pieces unless the Architect approves smaller models.
   2. Notify the Architect 7 days in advance of the dates and times when mockups will be available for review.
   3. Demonstrate the proposed range of aesthetic effects regarding each element listed under the fabrication heading below.
   4. Mockup will have finished surface (including surface preparation and paint system).
   5. Obtain Architect’s approval of mockups before start of fabrication of final units.
   6. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed work.
   7. Coordinate painting requirements with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
   8. Coordinate high-performance coatings requirements with Section 099600 "High-Performance Coatings."
   9. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Use special care in handling to prevent twisting, warping, nicking, and other damage. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

   1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.10 FIELD CONDITIONS

A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the work.

PART 2 - PRODUCTS

2.1 BOLTS, CONNECTORS, AND ANCHORS

A. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

1. Finish: Mechanically deposited zinc coating.

B. Corrosion-Resisting (Weathering Steel), Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 3, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

2.2 FILLER

A. Filler: Polyester filler intended for use in repairing dents in automobile bodies.

2.3 PRIMER

A. Primer: Comply with Section 099000 Painting and Coatings.

B. Etching Cleaner for Galvanized Metal: MPI#25.

C. Galvanizing Repair Paint: ASTM A 780/A 780M.

D. Shop Primer for Galvanized Steel: MPI#26, cementitious galvanized metal primer, MPI#80, vinyl wash primer, or MPI#134, water-based galvanized metal primer.

2.4 FABRICATION

A. Shop fabricate and assemble AESS to the maximum extent possible. Locate field joints at concealed locations if possible. Detail assemblies to minimize handling and to expedite erection.

B. In addition to special care used to handle and fabricate AESS, comply with the following:

1. Fabricate with exposed surfaces smooth, square, and free of surface blemishes including pitting, rust, scale, and roughness.
2. Grind sheared, punched, and flame-cut edges of **Category 1** AESS to remove burrs and provide smooth surfaces and edges.
3. Fabricate **Category 1** AESS with exposed surfaces free of mill marks, including rolled trade names and stamped or raised identification. Mill marks shall be omitted by cutting of mill material to appropriate lengths where possible. Where not possible, the fabricator can fill and/or grind to a surface finish consistent with the approved mock up.
4. Fabricate **Category 1 and Category 2** AESS with exposed surfaces free of seams to maximum extent possible.
5. Remove blemishes by filling or grinding or by welding and grinding, before cleaning, treating, and shop priming.

6. Fabricate with piece marks fully hidden in the completed structure or made with media that permits full removal after erection.
7. Fabricate **Category 1** AESS to the tolerances specified in AISC 303 for steel that is designated AESS.
8. Fabricate **Category 2 and Category 3** AESS to the tolerances specified in AISC 303 for steel that is not designated AESS.
9. Seal-weld open ends of hollow structural sections with 3/8-inch closure plates for **Category 1** AESS.

C. Curved Members: Fabricate indicated members to curved shape by rolling to final shape in fabrication shop.

1. Distortion of webs, stems, outstanding flanges, and legs of angles shall not be visible from a distance of 20 feet under any lighting conditions.
2. Tolerances for walls of hollow steel sections after rolling shall be approximately 1/2 inch.

D. Coping, Blocking, and Joint Gaps: Maintain uniform gaps of 1/8 inch with a tolerance of 1/32 inch for **Category 1** AESS.

E. Bolt Holes: Cut, drill, **mechanically thermal cut,** or punch standard bolt holes perpendicular to metal surfaces.

F. Cleaning Corrosion-Resisting Structural Steel: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.5 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
1. Joint Type: Snug tightened, unless otherwise indicated on the Contract Documents.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work, and comply with the following:

1. Appearance and quality of welds shall be consistent with the mock up.
2. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding specified tolerances.
3. Use weld sizes, fabrication sequence, and equipment for AESS that limit distortions to allowable tolerances.
4. Provide continuous, sealed welds at angle to gusset-plate connections and similar locations where **Category 1** AESS is exposed to weather.
5. Provide continuous welds of uniform size and profile where **Category 1** AESS is welded.

6. Make butt and groove welds flush to adjacent surfaces within tolerance of plus 1/16 inch, minus zero inch for C**ategory 1 and Category 2** AESS. Do not grind unless required for clearances or for fitting other components, or unless directed to correct unacceptable work.
7. Remove backing bars or runoff tabs; back-gouge and grind steel smooth for **Category 1 and Category 2** AESS.
8. At locations where welding on the far side of an exposed connection of **Category 1 and Category 2** AESS occurs, grind distortions and marking of the steel to a smooth profile aligned with adjacent material.
9. Make fillet welds for **Category 1 and Category 2** AESS of uniform size and profile with exposed face smooth and slightly concave. Do not grind unless directed to correct unacceptable work.
10. Where fillet welds are indicated to be ground-contoured, or blended, oversize welds as required and grind to provide a smooth transition and to match profile on approved mock-up.

2.6 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to AESS according to ASTM A 123/A 123M.

1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
2. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
3. Fabricate such that all connections of assemblies are made in the field with bolted connections. Provide galvanized finish or members and assemblies within the range of color and surface textures presented in the mock ups.

B. Minimize distortion and warpage of steel members being galvanized by following recommendations according to ASTM A 384/A 384 M.

1. Do not apply galvanizing using double- dip or progressive processes without Architect’s or Engineer’s written approval.

2.7 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces to be high-strength bolted with slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials.
5. Galvanized surfaces.

B. Surface Preparation **for Non-galvanized Steel**: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 2, "Hand Tool Cleaning."
2. SSPC-SP 3, "Power Tool Cleaning."

3. AESS receiving epoxy primers, rust-inhibitive primers, or polyurethane finish coats shall receive surface preparation according to SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
    a. Coordinate the required blast profile with the approved paint submittal prior to beginning surface preparation.

C. Preparing Galvanized Steel for Shop Priming: After galvanizing, thoroughly clean steel of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.

D. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 2 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Examine AESS for twists, kinks, warping, gouges, and other imperfections before erecting.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep AESS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated. Handle, lift and align pieces using padded slings and/or other protection required to maintain the appearance of the AESS through the process of erection.

1. If possible, locate welded tabs for attaching temporary bracing and safety cabling where they will be concealed from view in the completed Work or where approved by the Architect during the pre-installation meeting. Methods of removing temporary erection devices and finishing the AESS members shall be approved by the Architect prior to erection.

3.3 ERECTION

A. Set AESS accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

1. Erect **Category 1** AESS to the tolerances specified in AISC 303 for steel that is designated AESS.
2. Erect **Category 2 and Category 3** AESS to the tolerances specified in AISC 303 for steel that is not designated AESS.

B. Do not use thermal cutting during erection **unless approved by Architect. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M**.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
1. Joint Type: Snug tightened, unless otherwise indicated on the Contract Documents.
2. Orient bolt heads as indicated on the contract documents. Where bolt-head alignment is specified, the orientation shall be noted for each connection on the erection drawings. Where not noted, the bolt heads in a given connection shall be oriented to one side.

B. Weld Connections: Comply with requirements in "Weld Connections" Paragraph in "Shop Connections" Article.

1. Remove backing bars or runoff tabs; back-gouge and grind steel smooth for **Category 1 and Category 2** AESS.
2. Remove erection bolts in **Category 1 and Category 2** AESS, fill holes, and grind smooth.
3. Fill weld access holes in **Category 1 and Category 2** AESS and grind smooth.
4. Obtain Architects approval for appearance of welds in repaired or field modified work.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect AESS as specified in Section 051200 "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.

B. Architect will observe AESS in place and determine acceptability based on the mockup. The Testing Agency shall have no responsibility for enforcing the requirements of this section.

3.6 REPAIRS AND PROTECTION

A. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Grind steel smooth.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

C. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

D. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

E. Touchup Priming: Cleaning and touchup priming are specified in Section 099600 "High-Performance Coatings."

END OF SECTION 05 12 13

SECTION 05 21 00 - STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. K-series steel joists.
2. KCS-type K-series steel joists.
3. K-series steel joist substitutes.
4. LH-series long-span steel joists.
5. Joist accessories.

B. Related Requirements:

1. Section 05 12 00 "Structural Steel Framing" for field-welded shear connectors and galvanizing.
2. Section 05 31 00 "Steel Decking" for roof decking.

1.3 DEFINITIONS

A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."

B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 ACTION SUBMITTALS

A. Product Data: Submit manufacturer's specifications and installation instructions for each type of joist and accessories. Include manufacturer's certification that joists comply with SJI "Specifications".

B. Shop Drawings:
1. In addition to Division 1 requirements, provide one half-size hard copy (paper) of any drawings submitted in the electronic files.
2. Include layout, designation, number, type, location, and spacing of joists.
3. Include joining and anchorage details; bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
4. Indicate locations and details of bearing plates to be embedded in other construction.
5. A highly visible statement shall appear on the joist shop drawings indicating which joists are to receive special inspection by internal quality control personnel and which are to be inspected by the independent testing laboratory.

1.5 INFORMATIONAL SUBMITTALS

A. Testing Agency Qualifications: Prior to approval of the testing agency by the Architect/Engineer, a letter indicating the qualifications of the agency and all personnel to be utilized in the inspection of the joists, a statement about the proposed techniques for inspection, and a statement that they have read and understood these specifications, shall be submitted to the Architect/ Engineer.

B. Test Reports: Submit copies of reports of tests conducted on welded connections directly to the Architect/Engineer with copy to others in accordance with the provisions of Division 1 Section "Quality Control Services." Include data on type(s) of tests conducted and test results.

C. Welding certificates.

D. Manufacturer certificates.

E. Mill Certificates: For each type of bolt.

F. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

G. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Source Limitations:
1. To the greatest extent possible steel shapes shall be manufactured with recycled material and shall be manufactured locally or within the State of Texas.

B. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications**."**

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

C. Distribution of Information: It shall be the responsibility of the general contractor and/or his steel fabrication sub-contractor to ensure that the steel joist fabricator receives a copy of the following prior to the commencement of shop drawings and fabrication.
1. Copies of the contract documents.
2. These specifications.
3. The names and addresses of the general contractor, the Architect's responsible office, and the Structural Engineer for distribution of necessary reports.

D. Acceptable Weld Quality: The quality of welds shall be visually inspected and a weld shall be accepted by visual inspection if the weld shows that:
1. The weld has no cracks.
2. Thorough fusion exists between adjacent layers of weld metal and between weld metal and the base metal at the welded connection.
3. All craters are filled to the full cross section of the weld joint.
4. All weld profiles shall be reasonably uniform. It is recognized that all web joint welds will not have a perfect profile; however, the effective throat and penetration shall be equal to the throat required by the design drawings. Visual inspection of the welds shall be made to confirm that unequal legs, excessive convexity, or overlap conditions do not detract from the effective throat of the weld.

5. Undercutting of welds is undesirable but is acceptable if the depth of undercutting does not exceed 1/32 inch. Welds that have undercutting in excess of 1/32 inch shall be repaired and re inspected.
6. Any cluster of surface porosity in the weld area is to be removed and replaced with sound weld metal.
7. The surface of the shop welds shall be reasonably clean prior to the inspection.

E. All welding procedures shall be covered by a written welding procedure specification, a copy of which shall be made available to the Architect/Engineer upon request.

F. Test Reports: The inspectors, in house or independent, shall issue written reports of the inspection results to the general contractor, structural steel supplier, and the Architect/Engineer. In the case of in house inspection, where multiple production lines and inspectors are involved, the reports may be issued by the quality control supervisor provided it can be proven by the joist manufacturer to the Architect/Engineer that this supervisor is personally involved in observing the work of the line inspectors on a regular and virtually continuous basis and is personally knowledgeable of the contents, intent, and desired results of this specification. These reports shall be issued for each shift for every day the job is in production.

G. The inspector shall observe the technique and performance of each welder and welding operator at such intervals as may be required to assure that the applicable welding requirements are met.

H. The above inspection procedures do not preclude the Architect/Engineer or Owner from employing a separate independent testing agency for the purpose of further inspection at the job site. In the event of conflict or disagreement, the decision of the Architect/Engineer or Owner will be final with regard to acceptance or rejection of the joists.

I. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications**."** Handle and store joists in a manner to avoid deforming members and to avoid excessive stresses.

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Vulcraft Group, Division of Nucor Corporation; 936-687-4665; www.vulcraft.com
2. New Millennium Building Systems, LLC; 870-722-4272; www.newmill.com
3. Canam-buildings, a business unit of Canam Group; 866-466-8769; www.canam-construction.com

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads, including wind uplift loads, as indicated on the Contract Documents.

1. Use ASD; data are given at service-load level.
2. Design special joists to withstand design loads with live-load deflections no greater than the following:

a. Roof Joists: Vertical deflection of 1/360 of the span, or as indicated on the Contract Documents, whichever is more stringent.

2.3 K-SERIES STEEL JOISTS

A. Manufacture steel joists of type indicated according to "Standard Specification for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord.

1. Joist Type: K-series steel joists and KCS-type K-series steel joists.

B. Steel Joist Substitutes: Manufacture according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle or -channel members.

C. Provide holes in chord members for connecting and securing other construction to joists; however, deduct area of holes from the area of chord when calculating strength of member.

D. Top-Chord Extensions: Extend top chords of joists with SJI's Type S top-chord extensions where indicated, complying with SJI's "Specifications."

E. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated, complying with SJI's "Specifications."

F. Camber joists according to SJI's "Specifications," unless otherwise noted in Contract Documents.

G. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

H. Crimped Members: Crimped members shall be carefully inspected to detect any splits caused by the crimping process. Splits exceeding one half inch in length are not acceptable. In joists and joist girders used as part of a moment resistive frame, splits are not acceptable regardless of length. Nicks less than one eight inch in length caused by the shearing process are acceptable.

2.4 LONG-SPAN STEEL JOISTS

A. Manufacture steel joists according to "Standard Specification for Longspan Steel Joists, LH-Series and Deep Longspan Steel Joists, DLH-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements as follows: (unless otherwise indicated on the Contract Documents.)

1. Joist Type: LH-series steel joists.
2. End Arrangement: Underslung.

3. Top-Chord Arrangement: Parallel, unless otherwise indicated on the Contract Documents.

B. Provide holes in chord members for connecting and securing other construction to joists; however, deduct area of holes from the area of chord when calculating strength of member.

C. Camber long-span steel joists according to SJI's "Specifications."

D. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.5 PRIMERS

A. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

2.6 GALVANIZING

A. See Section 05 12 00 "Structural Steel Framing".

2.7 JOIST ACCESSORIES

A. Bridging: Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.

B. Bridging, including X-bridging, indicated on the plans where it would not normally be required, shall be provided to supplement continuity of the lateral bracing system to:
1. Support perimeter conventional framing, beams, posts for roof screens, and as indicated.
2. Offset bridging lines at roof openings, mechanical ductwork, and as indicated.

C. Fabricate steel bearing plates from ASTM A 36/A 36M steel with integral anchorages of sizes and thicknesses indicated. Shop prime paint.

D. Steel bearing plates with integral anchorages are specified in Section 055000 "Metal Fabrications."

E. Header Units: Provide header units to support tail joists at openings in floor or roof system not framed with steel shapes.

F. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within 1/2 inch of finished wall surface unless otherwise indicated.

1. Finish: Plain, uncoated.

G. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts; ASTM A 563 heavy hex carbon-steel nuts; and ASTM F 436 hardened carbon-steel washers.

1. Finish: Plain.

H. Welding Electrodes: Comply with AWS standards.

I. Galvanizing Repair Paint: ASTM A 780/A 780M].

J. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.8 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by hand-tool cleaning, SSPC-SP 2 or power-tool cleaning, SSPC-SP 3.

B. Do not prime paint joists and accessories to receive sprayed fire-resistive materials.

C. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.

B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications**,"** joist manufacturer's written instructions, final shop drawings, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.

C. Field weld joists to supporting steel bearing plates and framework, in accordance with the contract documents, or if not shown, with SJI "Specifications" for type of joists used. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

D. Where joists penetrate fire walls, see Division 7 Section "Insulation" for related work.

E. Bolt joists to supporting steel framework using carbon-steel bolts.

F. Bolt joists to steel columns and at other locations where shown on the Contract Documents using high-strength structural bolts. Comply with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for high-strength structural bolt installation and tightening requirements.

G. Provide temporary bridging, connections, and anchors to ensure lateral stability during construction.
   1. Where "open web" joist lengths are 40 feet and longer, install a center row of bolted bridging to provide lateral stability before slackening of hoisting lines.

H. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

I. At flat roofs (up to 1/4 inch per foot maximum slope), with joists of the same depth, splices shall be a minimum of 4 inches long with at least 1 1/2 inches of fillet weld on each side, and shall develop a minimum capacity of 700 pounds, whichever is greater. Splices may occur between joists unless a depth change occurs, or other conditions occur which would affect the continuity of the bridging. For either of these cases the splice must occur at the joist. If joists are not flat, splicing and weld requirements for bridging shall be designed by the joist manufacturer and noted in the shop drawings.

J. Sweep: Sweep of joists after installation shall not exceed the greater of one half inch or L/300. Bottom and top chords shall be maintained in a vertical plane.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Visually inspect field welds according to AWS D1.1/D1.1M.
   1. In addition to visual inspection, provide non-destructive testing as indicated by AISC 360 and the Contract Documents, whichever is more stringent. Test field welds according to AWS D1.1/D1.1M and the following procedures, at testing agency's option:

      a. Liquid Penetrant Inspection: ASTM E 165/E 165M.
      b. Magnetic Particle Inspection: ASTM E 709.
      c. Ultrasonic Testing: ASTM E 164.
      d. Radiographic Testing: ASTM E 94.

C. Visually inspect bolted connections.

D. Prepare test and inspection reports.

3.4 PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780/A 780M and manufacturer's written instructions.

B. Top Chord Repair: Repair all locations where the steel deck welding procedures have burned holes in the top chord members. Contact the Architect/Engineer for correction procedures.

C. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists, bearing plates, abutting structural steel, and accessories.

1. Clean and prepare surfaces by hand-tool cleaning according to SSPC-SP 2 or power-tool cleaning according to SSPC-SP 3.
2. Apply a compatible primer of same type as primer used on adjacent surfaces.

D. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure joists and accessories are without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 21 00

SECTION 05 31 00 - STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Composite floor deck.
2. Noncomposite vented form deck.

B. Related Requirements:

1. Section 03 30 00 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
2. Section 03 52 16 "Lightweight Insulating Concrete" for lightweight insulating concrete fill over steel deck.
3. Section 05 12 00 "Structural Steel Framing" for shop- and field-welded shear connectors.
4. Section 05 50 00 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.
5. Section 09 90 00 "Painting and Coatings" for repair painting of primed deck and finish painting of deck.

1.3 ACTION SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections. In addition to Division 1 requirements, provide one half-size hard copy (paper) of any drawings submitted in the electronic files.

B. Product Data: For each type of deck, accessory, and product indicated.

C. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product Certificates: For each type of steel deck.

C. Product Test Reports: For tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

1. Power-actuated mechanical fasteners.

D. Evaluation Reports: For steel deck, from ICC-ES.

E. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
1. Welded decking in place is subject to inspection and testing. Expense of removing and replacing portions of decking for testing purposes will be borne by Owner if welds are found to be satisfactory. Remove work found to be defective and replace with new acceptable work.

C. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.1 DECKING MATERIALS

A. Source Limitations:
1. To the greatest extent possible steel shapes shall be manufactured with recycled material and shall be manufactured locally or within the State of Texas.

2.2 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.3 COMPOSITE FLOOR DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Vulcraft Group, Division of Nucor Corporation; 936-687-4665; www.vulcraft.com
2. New Millennium Building Systems, LLC ; 870-722-4272; www.newmill.com
3. Epic Metals Corporation; 877-696-3742; www.epicmetals.com
4. Canam-buildings, a business unit of Canam Group; 866-466-8769; www.canam-construction.com
5. H.H. Robertson Floor Systems, a CENTRIA company; 800-932-0706; www.hhrobertson.com

B. Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:

1. Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), Grade as Indicated on Contract Documents, with top surface phosphatized and unpainted and underside surface shop primed with manufacturers' standard gray baked-on, rust-inhibitive primer.
2. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents, G90 zinc coating.
3. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents, G90 zinc coating; with unpainted top surface and cleaned and pretreated bottom surface primed with manufacturer's standard gray baked-on, rust-inhibitive primer.
4. Profile Depth: As indicated on Contract Documents.
5. Design Uncoated-Steel Thickness: As Indicated.
6. Span Condition: Triple span or more.

2.4 NONCOMPOSITE VENTED FORM DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Vulcraft Group, Division of Nucor Corporation; 936-687-4665; www.vulcraft.com
2. New Millennium Building Systems, LLC ; 870-722-4272; www.newmill.com
3. Epic Metals Corporation; 877-696-3742; www.epicmetals.com
4. Canam-buildings, a business unit of Canam Group; 866-466-8769; www.canam-construction.com

B. Non-composite Vented Form Deck: Fabricate ribbed- and vented-steel sheet noncomposite form-deck panels to comply with "SDI Specifications and Commentary for Noncomposite Steel Form Deck," in SDI Publication No. 31, and with the following:

1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents G90 zinc coating.
2. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents, G60 zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.

a. Color: Manufacturer's standard.

3. Profile Depth: As Indicated.
4. Design Uncoated-Steel Thickness: As Indicated.
5. Span Condition: Triple span or more.
6. Side Laps: Overlapped.
7. Vent Slot Area: Manufacturer's standard vent slots providing 1-1/2 percent open area.

2.5 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 31 for overhang and slab depth.

G. Metal Cover Plates: Fabricate metal cover plates for end abutting floor deck units of not less than same thickness as decking. Form to match contour of deck units and approximately 6" wide.

H. Metal Closure Strips: Fabricate metal closure strips, for openings between decking and other construction, of not less than 0.045 inch min. (18 gage) sheet steel. Form to provide tight fitting closures at open ends of cells or flutes and sides of decking.

I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 16 gage thickness, with factory-punched hole of 3/8-inch minimum diameter.

J. Flat Sump Plates: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck. For drains, cut holes in the field.

K. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck, with 3-inch- wide flanges and level recessed pans of 1-1/2-inch minimum depth. For drains, cut holes in the field. Galvanizing Repair Paint: ASTM A 780/A 780M.

L. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Locate deck bundles to prevent overloading of supporting members.

C. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

1. Maximum vertical dimension between deck units at a support shall be 1/16 inch.

2. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

D. Place deck panels flat and square, secured to adjacent framing with top flange having no warping in excess of 1/16 inch across any three adjacent flanges.

E. Do not place deck units on concrete supporting structure until concrete has cured and is dry.

F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work. Coordinate reinforcing requirements of openings in first paragraph below with applicable Sections. Reinforce openings as indicated on the contract documents, and not less than:
1. Reinforce steel deck openings from 6 to 18 inches in size with 2x2x1/4 inch steel angles. Place angles perpendicular to flutes; extend a minimum of two flutes beyond each side of opening and fusion weld to deck at each flute.

H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

I. Fastening Deck Units: The top flanges of the beams and the steel deck shall be free of paint, water, ice, oil, rust, or any other material which might interfere with the welding process.

J. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.3 ROOF-DECK INSTALLATION

A. Install temporary shoring before placing deck panels if required to meet deflection limitations.

B. Uplift Loading: Install and anchor roof deck units to resist gross uplift loading as indicated on the Contract Documents.

C. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long, and as follows:

1. Weld Diameter: As Indicated on the Contract Documents.
2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds As indicated on Contract Documents.
3. Weld Washers: Install weld washers at each weld location where deck thickness is less than 0.028 inches.

D. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 36 inches, and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, length as required, carbon-steel screws.
2. For decks with positive registering, interlocking male/female type side laps, join by button punching.

E. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:

1. End Joints: Lapped 2 inches minimum.

F. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and weld or mechanically fasten flanges to top of deck. Space welds or mechanical fasteners not more than 12 inches apart with at least one weld or fastener at each corner.

1. Install reinforcing channels or zees in ribs to span between supports and weld or mechanically fasten.

G. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. [Weld] to substrate to provide a complete deck installation.

1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

H. Sound Absorption Batts: Install sound absorbing batts immediately prior to installation of roof insulation. Keep materials dry before, during, and after installation.

I. Provide minimum 1 inch thick soft composition rubber closures above walls and partitions contiguous to acoustical steel roof deck.

3.4 FLOOR-DECK INSTALLATION

A. Floor decking units shall be temporarily shored in accordance with the manufacturer's Allowable Shoring Tables. Shoring requirements shall be determined as follows:

1. Bending stress shall not exceed 0.60 times the yield strength, nor exceed 36,000 psi under the combined weights of wet concrete, deck and the following construction live loads: 20 psf uniform load, or 150 lb. concentrated load on a 1' 0" width section of deck.
2. Slab dead load shall not cause deflection in excess of 1/180 of the span or a maximum of 3/4 inch. Shoring shall be designed in accordance with local building code provisions. Shoring shall be left in place until the concrete attains 75 percent design compressive strength.

B. Do not use floor deck units for storage or working platforms until permanently secured.

C. Fasten composite floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:

1. Weld Diameter: As Indicated on the Contract Documents.
2. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds at not more than 12 inches apart with a minimum of 2 welds per unit at each support.
3. Weld Washers: Install weld washers at each weld location where deck thickness is less than 0.028 inches**.**

D. Fasten non-composite floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
1. Weld Diameter: As Indicated on the Contract Documents.
2. Weld Spacing: As Indicated on the Contract Documents, at a minimum provide welds at the ends and at all end laps, provide welds at the side of each sheet (including sides where sheets lap), and at the midspan of each sheet. Provide welds at each support, and alternate the two following weld patterns: 1) at each side, and/or at each side lap, 2) at the midspan of each sheet, and at each side.
3. Weld Washers: Install weld washers at each weld location where deck thickness is less than 0.028 inches**.**

E. SDI requires side-lap and perimeter edge fastening if deck spans exceed 60 inches (1524 mm).

F. Side-Lap and Perimeter Edge Fastening: As Indicated on the Contract Documents, at a minimum, fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 36 inches, and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
2. Mechanically clinch or button punch.
3. Fasten with a minimum of 1-1/2-inch long welds.

G. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:

1. End Joints: 2” minimum lap for non-composite floor deck or Butted for composite floor decking.

H. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

I. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

J. Deformed bar anchors: Deformed bar anchors shall be automatically end welded on centers as shown on drawings in accordance with manufacturer's recommendations.

K. Shear Connectors: Shear connectors shall be solid fluxed and are to be automatically end welded through the metal deck at spacings shown on the drawings and in accordance with manufacturer's recommendations. Do not weld shear connectors through two layers (lapped ends) of decking units. Weld only on clean, dry deck surfaces.

1. A minimum of 2 shear connector studs shall be welded at the start of each production period in order to determine proper generator, control unit, and stud welder settings. These studs shall be capable of being bent 45 degrees from vertical without weld failure. If, after welding, visual inspection reveals that a sound weld or a full 360 degree fillet weld has not been obtained for a particular stud, such stud shall be struck with a hammer and bent approximately 15 degrees off perpendicular to the nearest end of the beam. Studs meeting this test shall be left in this position. Studs failing under this test shall be replaced. When the temperature is below 32 degrees F., one stud in each 100 shall be tested after cooling.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Prepare test and inspection reports.

3.6 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780/A 780M and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint.

1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.

END OF SECTION 05 31 00

SECTION 05 40 00 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS.

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Exterior non-load-bearing wall framing.
2. Interior non-load-bearing wall framing exceeding height limitations of standard, nonstructural metal framing.
3. Ceiling joist framing.
4. Soffit framing.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for miscellaneous steel shapes, masonry shelf angles, and connections used with cold-formed metal framing.
2. Section 061053 "Miscellaneous Rough Carpentry" for subflooring, wall sheathing, or roof sheathing using wood-based structural-use panels, particleboard, fibrous-felted board, and foam-plastic sheathing.
3. Section 092216 "Gypsum Board Assemblies" for standard, interior non-load-bearing, metal-stud framing, with height limitations and ceiling-suspension assemblies.

1.3 DEFINITIONS

A. Uncoated Steel Design Thickness: Minimum uncoated thickness of cold-formed framing delivered to the Project site shall be not less than 95 percent of the indicated thickness used in the cold-formed framing design. Lesser thicknesses shall be permitted at bends due to cold forming. Where decimal thicknesses of framing are not indicated, the thicknesses in “gages” and “mils” shall be provided in conformance with the thicknesses indicated in the Steel Stud Manufacturers Association.

B. Producer: Entity that produces steel sheet coil fabricated into cold-formed members.

C. Engineer of Record: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing cold formed metal framing engineering services and is specifically hired to do so.

D. Engineering Services: Services performed by the Engineer of record for installations of cold-formed metal framing for this Project.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site prior to commencing the Work.
   1. Require attendance of parties directly affecting the Work of the section. The cold-formed metal framing Engineer of Record shall be an attendee of the Preinstallation Conference. If the Engineer of Record is not able to attend the scheduled Preinstallation Conference, the conference shall be rescheduled as many times as necessary, until the Engineer of Record is able to attend the conference.
   2. Review conditions of installation, installation drawings, procedures and coordination with related work.
   3. Approved Cold-Formed Metal Framing shop drawings shall be reviewed at the Preinstallation Conference with the Engineer of Record present for the review.
   4. Review required inspecting, testing, and certifying procedures.
   5. The Owner's Materials Testing Lab shall attend the Preinstallation Conference if the Owner has engaged the service of an independent lab for site inspections of CFMF.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

   1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

B. Shop Drawings:
   1. Provide shop/installation drawings prepared by cold-formed metal framing engineer.
   2. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
   3. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

C. Delegated-Design Submittal: For cold-formed steel framing. For cold-formed metal framing, connection design including fasteners, clips, anchors and all other related aspects of the framing design: comply with all applicable model code required design loads. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

B. Welding certificates.

C. Product Certificates: For each type of code-compliance certification for studs and tracks.

D. Product Test Reports: For each listed product, for tests performed by a qualified testing agency.

   1. Steel sheet.
   2. Expansion anchors.
   3. Power-actuated anchors.
   4. Mechanical fasteners.
   5. Vertical deflection clips.
   6. Horizontal drift deflection clips
   7. Miscellaneous structural clips and accessories.

E. Evaluation Reports: For nonstandard cold-formed steel framing post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

F. Submittals required as part of component manufacturer's and installer's Quality Control Program(s) that include material control procedures, inspection procedures, and nonconformance procedures.

G. Component manufacturer's and installer's Quality Control Inspector qualifications.

H. Certificates of Compliance: Certificate from Professional Structural Engineer responsible for system design that system was designed in accordance with Contract Documents requirements, applicable Building Code, and generally accepted engineering practices.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Installer Qualifications: An experienced installer who has completed cold-formed metal framing similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
   1. The installer shall establish and maintain quality control procedures and perform inspections to ensure that the work is in accordance with AISI referenced documents and Contract Documents.

C. Engineer of Record:
   1. Engage a qualified professional Engineer to prepare design calculations, Shop Drawings, and other structural data as required.
   2. The Engineer of Record shall perform two (2) site inspections during installation and one (1) site inspection at completion of cold-formed metal framing.
   3. The Engineer of Record shall provide reports, including any nonconformance, issued to the Construction Manager, Owner, and Architect/Engineer within 48 hours of inspection.

D. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

E. Welding Qualifications: Qualify procedures and personnel according to the following:

   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

F. AISI Specifications and Standards:
   1. Comply with AISI documents as referenced standards in the applicable version of the International Building Code for this project.
   2. Comply with AISI S202-15 "Code of Standard Practice for Cold-formed Steel Structural Framing".
   3. Comply with AISI S240-15 "North American Standard for Cold-Formed Steel Structural Framing", including Section D Quality Control and Quality Assurance.

1.8 DELIVERY, STORAGE AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling in accordance with AISI's "Code of Standard Practice".

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation in accordance with AISI's "Code of Standard Practice".

C. The contractor shall verify that the framing materials delivered meet the requirements of the contract, construction documents, and submittals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cold-formed steel framing.

B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated. The size of framing members indicated in the drawings, are minimum sizes – provide the indicated sizes, or larger sizes where structural engineering dictates larger sizes are required. Where larger sizes of studs, tighter spacing of studs or more studs are indicated by the Structural Engineer preparing the buildings framing design, provide these material increases to the job, at no additional cost of the Owner. In some instances, the stud sizes indicated may be larger than engineering analysis dictates are necessary - heavier indicated stud sizes may have been chosen, and subsequently indicated in order to support, or otherwise accommodate other building systems which require heavier stud gages than basic structural engineering (framing design to meet the Building Code) dictates – DO NOT DOWN-SIZE THE STUD SIZES INDICATED.

1. Design Loads: As indicated on Drawings
2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:

    a. Exterior Load-Bearing Wall Framing used behind masonry veneer: Horizontal deflection of 1/600 of the wall height.
    b. Exterior Load-Bearing Wall Framing not used behind masonry veneer: Horizontal deflection of 1/360 of the wall height.
    c. Exterior Non-Load-Bearing Framing used behind masonry veneer: Horizontal deflection of 1/600 of the wall height.
    d. Exterior Non-Load-Bearing Framing not used behind masonry veneer: Horizontal deflection of 1/360 of the wall height.
    e. Interior Non-Load-Bearing Framing: Horizontal deflection of 1/360 of the wall height under a horizontal load of 5 lbf/sq. ft.
    f. Roof Rafter Framing: Vertical deflection of 1/360 of the horizontally projected span for live loads.
    g. Ceiling Joist Framing: Vertical deflection of 1/360 of the span for live loads and 1/240 for total loads of the span.

3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:

    a. Upward and downward movement of 1-1/2 inches.

5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

C. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing shall comply with AISI S100, AISI S200, and the following:

1. Floor and Roof Systems: AISI S210.
2. Wall Studs: AISI S211.
3. Headers: AISI S212.
4. Lateral Design: AISI S213.

D. Design framing installed behind exterior ceramic tile walls to comply with ANSI A108.11-4.0-4.3 requirements for framing.

E. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency acceptable to authorities having jurisdiction.

2.2 COLD-FORMED STEEL FRAMING MATERIALS

A. Steel Sheet: ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:

1. Grade: As required by structural performance.
2. Coating: G60 (Z180) unless otherwise indicated, G90 (Z275) at masonry curtain-wall framing.

B. Steel Sheet for Vertical Deflection Clips: ASTM A 653/A 653M, structural steel, zinc coated, of grade and coating as follows:

1. Grade: As required by structural performance.
2. Coating: G60 (Z180) unless otherwise indicated, G90 (Z275) at masonry curtain-wall framing.

2.3 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-5/8 inches, minimum.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: Matching steel studs.
2. Flange Width: 1-1/4 inches, minimum.

C. Vertical Deflection Clips: Manufacturer's standard bypass clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical

attachment to stud web to permit frictionless vertical movement, 68 mils (1.72 mm) minimum thickness, size as required by structural design calculations.
1. Basis-of-Design: VertiClip, The Steel Network, Inc. 888-474-4876 www.steelnetwork.com
2. Manufacturers: Subject to compliance with requirements, provide the named product, or a comparable product by other manufacturer.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch.
2. Flange Width: As required to accommodate upward or downward deflection of primary structure.

E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.4 INTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-5/8 inches, minimum.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: Matching steel studs.
2. Flange Width: 1-1/4 inches, minimum.

C. Vertical Deflection Clips: Manufacturer's standard head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web to permit frictionless vertical movement, 68 mils (1.72 mm) minimum thickness, size as required by structural design calculations.
1. Basis-of-Design: VertiClip, The Steel Network, Inc. 888-474-4876 www.steelnetwork.com
2. Manufacturers: Subject to compliance with requirements, provide the named product, or a comparable product by other manufacturer.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch.
2. Flange Width: As required to accommodate upward or downward deflection of primary structure .

E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.5 CEILING JOIST FRAMING

A. Steel Ceiling Joists: Manufacturer's standard C-shaped steel sections, of web depths indicated, punched with standard holes, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-5/8 inches, minimum.

B. Connector Devices: For transfer of loads from ceiling joist framing members to supporting structure, hanger type and size as required by structural design calculations. ASTM A 653/A 653M, structural steel, zinc coated.
1. Grade: As required by structural performance.
2. Coating: G90 (Z275).
3. Basis-of-Design: StiffClip, The Steel Network, Inc. 888-474-4876 www.steelnetwork.com
4. Manufacturers: Subject to compliance with requirements, provide the named product, or a comparable product by other manufacturer.]

2.6 SOFFIT FRAMING

A. Exterior Soffit Frame: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-5/8 inches, minimum.

2.7 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated steel sheet, of same grade and coating designation used for framing members, with a minimum yield strength of 33,000 psi. Where any of the framing’s minimum yield strength is greater than 33,000 psi, i.e. 50,000 psi, accessory minimum yield strength shall be match the framings minimum yield strength.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:

1. Supplementary framing.
2. Bracing, bridging, and solid blocking.
3. Web stiffeners.
4. Anchor clips.
5. End clips.
6. Foundation clips.
7. Gusset plates.
8. Stud kickers and knee braces.
9. Joist hangers and end closures.
10. Hole-reinforcing plates.
11. Backer plates.

2.8 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel bolts, carbon-steel nuts, and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C.

C. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC58 at masonry walls or ICC-ES AC308 at concrete walls as appropriate for the substrate.

1. Uses: Securing cold-formed steel framing to structure.
2. Type: Adhesive anchor.
3. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
4. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) stainless-steel bolts, ASTM F 593 (ASTM F 738M), and nuts, ASTM F 594 (ASTM F 836M).

D. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.

1. Head Type: Low-profile head beneath sheathing; manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.9 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: ASTM A 780/A 780M, MIL-P-21035B, or SSPC-Paint 20.

B. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C 1107/C 1107M, and with a fluid consistency and 30-minute working time.

C. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.

D. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members as required.

2.10 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, Engineer’s shop/installation drawings, manufacturer's written instructions, and requirements in this Section.

1. Fabricate framing assemblies using jigs or templates.
2. Cut framing members by sawing or shearing; do not torch cut.
3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.

    a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    b. Locate mechanical fasteners and install according to Shop Drawings, with screws penetrating joined members by no fewer than three exposed screw threads.

4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies by means that prevent damage or permanent distortion.

C. Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable variation of 1/8 inch in 10 feet and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, conditions, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that required to obtain fire-resistance ratings indicated. Protect remaining fire-resistive materials from damage.

C. Grout bearing surfaces uniform and level to ensure full contact of bearing flanges or track webs on supporting concrete or masonry construction.

D. Install load-bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4 inch to ensure a uniform bearing surface on supporting concrete or masonry construction.

E. Install sealer gaskets at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed steel framing according to AISI S200, AISI S202, Engineer's shop/installation drawings, and manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.

1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.

D. Provide supplementary framing, blocking, and bracing where metal framing systems are indicated to support fixtures, equipment, services, casework, heavy trim and furnishings, metal roof, wall, and soffit panels, and similar work requiring attachment. Where type of supplementary support is not otherwise indicated, comply with cold- formed metal framing manufacturer's recommendations and industry standards in each case, considering weight or loading resulting from item supported.

E. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.

1. Cut framing members by sawing or shearing; do not torch cut.
2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
b. Locate mechanical fasteners, install according to Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.

F. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.

G. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

H. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.

I. Install insulation, specified in Section 072100 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

J. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

3.4 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs to bottom track unless otherwise indicated. Space studs as follows:

1. Stud Spacing: As indicated on Shop Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Connect vertical deflection clips to bypassing studs and anchor to building structure.
3. Connect drift clips to cold-formed steel framing and anchor to building structure.

E. At exterior walls where walls are adjacent to the primary building structure, connect vertical deflection clips with slip capability, to the studs and anchor the clips to the primary building structure. The connection at the stud is to allow vertical movement only, not horizontal movement. Tighten connection nuts for vertical movement only. Deflection clips shall have vertical slot connection holes for vertical movement. Locate the slots adjacent to the stud, not at the primary building structure. The slip fasteners at the studs shall allow vertical movement without the fastener being able to disconnect from and fall from the framing studs. Slip connection shall be with bolts, nuts and washers unless the framing manufacturer has other recommendations that are acceptable to the Architect – submit designs in shop drawings. If framing manufacturer does not have other permanent fastening options that are acceptable to the Architect, deform the bolt threads after the nuts are in place to create a permanent fastener installation.

F. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Subject to compliance with authorities having jurisdiction and other requirements, provide either bridging method indicated immediately above.
4. Where Portland Cement Plaster (PCP) is to be installed over walls, and the lath used in the PCP is welded wire lath, the wall bracing shall be provided in accordance with the International Building Code section 2308.9.3 or section 2308.12 regardless of type of studs used in the PCP wall.

G. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
1. Install solid blocking at every other stud and at additional locations as indicated on shop drawings.

H. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 INTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs tobottom track unless otherwise indicated. Space studs as follows:

1. Stud Spacing: As indicated on Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Connect vertical deflection clips to studs and anchor to building structure.
3. Connect drift clips to cold-formed steel metal framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Subject to compliance with authorities having jurisdiction and other requirements, provide either bridging method indicated immediately above.
4. Where Portland Cement Plaster (PCP) is to be installed over walls, and the lath used in the PCP is welded wire lath, the wall bracing shall be provided in accordance with the International Building Code section 2308.9.3 or section 2308.12 regardless of type of studs used in the PCP wall.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
1. Install solid blocking at every other stud and at additional locations as indicated on shop drawings.

G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.6 JOIST INSTALLATION

A. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated on Shop Drawings.

B. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.

1. Install joists over supporting frame with a minimum end bearing of 1-1/2 inches.
2. Reinforce ends and bearing points of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections.

C. Space joists not more than 2 inches from abutting walls, and as follows:

1. Joist Spacing: As indicated on Drawings.

D. Frame openings with built-up joist headers, consisting of joist and joist track or another combination of connected joists if indicated.

E. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement.

1. Install web stiffeners to transfer axial loads of walls above.

F. Install bridging at intervals indicated on Shop Drawings. Fasten bridging at each joist intersection as follows:

1. Bridging: Cold-rolled steel channel, welded or mechanically fastened to bottom flange of joists.

2. Joist-Track Solid Bridging: Joist-track solid blocking of width and thickness indicated, secured to joist webs.
3. Combination Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange of joists and secure solid blocking to joist webs.
4. Subject to compliance with authorities having jurisdiction and other requirements, provide any bridging method indicated above.

G. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.

H. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

3.7 ERECTION TOLERANCES

A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.8 FIELD QUALITY CONTROL

A. Inspection: Component manufacturer and installer shall inspect the work as required by their Quality Control Program(s) per AISI S240-15.

B. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

C. Field and shop welds will be subject to testing and inspecting.

D. Testing agency will report test results promptly and in writing to Contractor and Architect.

E. Cold-formed steel framing will be considered defective if it does not pass tests and inspections.

F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.9 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780/A 780M and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 40 00

SECTION 05 50 00 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes shop fabricated metal items.
   1. Loose lintels.
   2. Bollards.
   3. Steel ladders.
   4. Steel ships ladders.
   5. Structural supports for miscellaneous attachments.
   6. Steel framing and supports for mechanical and electrical equipment.
   7. Other miscellaneous steel items indicated or as required for complete installation of indicated work.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for embedded anchors and attachments for metal fabrications specified by this section in concrete.
   2. Section 05 12 00 - Structural Steel.
   3. Section 05 21 00 - Steel Joists and Joist Girders.
   4. Section 05 31 13 – Steel Floor Decking.
   5. Section 05 31 23 - Steel Roof Decking.
   6. Section 09 90 00 - Painting and Coating: Field applied paint finish.

1.2 REFERENCES

A. ASTM International:
   1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
   2. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
   3. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   4. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
   5. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
   6. ASTM A500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
   7. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts.
   8. ASTM F436 - Standard Specification for Hardened Steel Washers.

B. American Welding Society:
   1. AWS D1.1 - Structural Welding Code - Steel.

C. SSPC: The Society for Protective Coatings:
   1. SSPC Paint 15 - Steel Joist Shop Paint.
   2. SSPC Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable. Indicate welded connections using standard AWS A2.0 welding symbols. Indicate net weld lengths.

C. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification

within previous 12 months.

1.4 QUALIFICATIONS

A. Fabricator Qualifications: A firm experienced in producing metal fabrications similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept metal fabrications on site in labeled shipments. Inspect for damage.

C. Protect metal fabrications from damage by exposure to weather.

1.6 FIELD MEASUREMENTS

A. Where metal fabrications are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication and indicate measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

B. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating metal fabrications without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions. Allow for trimming and fitting.

PART 2 - PRODUCTS

2.1 MATERIALS - STEEL

A. Steel Sections: ASTM A36/A36M.

B. Steel Plate: ASTM A36/A36M.

C. Hollow Structural Sections: ASTM A500, Grade B.

D. Steel Pipe: ASTM A53/A53M, Grade B Schedule 40. .

E. Sheet Steel: ASTM A653/A653M, Grade 33 Structural Quality with galvanized coating.

F. Bolts: ASTM A307; Grade A or B.

G. Nuts: ASTM A563 heavy hex type.

H. Washers: ASTM F436; Type 1.

I. Welding Materials: AWS D1.1; type required for materials being welded.

J. Shop Primer: SSPC Paint 15, or manufacturer’s standard primer complying with performance requirements of SSPC Paint 15.

K. Touch-Up Primer: Match shop primer.

L. Touch-Up Primer for Galvanized Surfaces: SSPC Paint 20.

2.2 LOOSE LINTELS

A. Lintels: Steel sections, size and configuration as indicated on Drawings, length to allow 8 inches minimum bearing on both sides of opening.

B. Galvanize loose lintels installed in exterior walls.

2.3 ANGLE EXTENSIONS FOR WIRE MASONRY ANCHORS

A. Fabricate angle extension for wire masonry anchors from steel angles, 2" x 2" x 1/8". Provide a 1/4" x 1" slot in the vertical leg of the angle, 1" back from the end for receiving the 3/16" wire masonry anchors specified in Division 4 Section "Unit Masonry". Fabricate in lengths such that the overall length of the angle extension is equal to the distance from the web of column or beam to 1" from the back of the masonry wall. Reference detail in drawings for additional clarification.

B. Weld the angle extension, with a continuous fillet weld, at 16" o.c. horizontally at beam webs and vertically at column webs where support of masonry walls is indicated.

2.4 BOLLARDS

A. Fabricate bollards from Schedule 80 steel pipe, size as indicated.

B. Standard Bollards: Fill with 3,000 psi concrete as specified in Section 03 30 00, with crowned cap.

C. Removable Bollards: Fabricate sleeves from Schedule 40 steel pipe or 1/4 inch wall thickness steel tubing with an ID 1/4 inch less than OD of bollards. Match drill sleeve and bollard for 1/2 inch steel machine bolt.
1. Cap removable bollards with 1/4 inch minimum steel plate. Do not fill with concrete.

2.5 STEEL LADDERS

A. General: Fabricate ladders for locations shown, with dimensions, spacings, details, and anchorages as indicated.
1. Comply with ANSI A14.3, unless otherwise indicated.
2. Provide hot-dip galvanizing after fabrication for exterior ladders.
3. For elevator pit ladders, comply with ASME A17.1.

B. Side Rails: Continuous 1/2 x 2-1/2 inch flat bars with eased edges, spaced 18 inches apart.

C. Bar Rungs: 3/4 inch round steel bars, spaced 12 inches o.c.
1. Fit bar rungs in centerline of side rails; plug-weld and grind smooth on outer rail faces.
2. Provide nonslip surfaces on top of each bar rung by coating with abrasive material metallically bonded to rung by a proprietary process.
a. Manufacturers:
1) Mebac; IKG Borden www.ikgindustries.com
2) SLIP-NOT; W. S. Molnar Company www.wsmolnar.com

D. Tread Rungs: Inverted channel shape; 2-1/2” W. x 1-1” D. X 14 ga. steel with serrated and punched top surface.
1. Manufacturers:
a. Grip Strut, McNichols Manufacturing Co. www.mcnichols.com

E. Support each ladder at top and bottom and not more than 60 inches o.c. with welded or bolted steel brackets. Size brackets to support design loads specified in ANSI A14.3.

2.6 STEEL SHIP'S LADDERS

A. Ship’s Ladders: Fabricate with structural steel channel stringers, steel pipe handrails, and minimum 3/16” steel bar grating treads on nominal 3/4” centers with open risers, unless otherwise indicated. Provide brackets and fittings for installation.

B. Dimensions - Unless otherwise indicated:
1. Width: 24 inches.

2. Stringer depth: Minimum 10 inches.
3. Inclination: 60 degrees from horizontal.
4. Tread Depth: Minimum 7 inches.
5. Riser Height: Maximum 12 inches and minimum 9 inches.

C. Railings: As specified in Section 05 52 00 - Metal Railings.

D. Galvanize ship's ladders, including brackets and fasteners, in exterior locations, and elsewhere where indicated.

2.7 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports that are not a part of structural steel framework as necessary to complete the Work.

B. Fabricate units from structural steel shapes, plates, and bars of welded construction, unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction retained by framing and supports. Cut, drill, and tap units to receive hardware, hangers, and similar items.
1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors 1-1/4 inches wide by 1/4 inch thick by 8 inches long at 24 inches o.c., unless otherwise indicated.
2. Furnish inserts if units must be installed after concrete is placed.

C. Operable Partitions: Fabricate supports for operable partitions of continuous steel shapes of sizes indicated, with attached bearing plates, anchors, and braces. Drill bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition shop drawings.

2.8 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Continuously seal joined members by continuous welds.

D. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

E. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

F. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.9 FACTORY APPLIED FINISHES - STEEL

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Galvanizing: Hot-dip galvanize all items exposed to the exterior, ASTM A123/A123M, minimum 2.0 oz/sq ft coating thickness.
1. Galvanize after fabrication.
2. After galvanizing, fill vent holes and grind smooth
3. Do not apply galvanizing using double- dip or progressive processes without Architect’s or Engineer’s written approval.
4. Galvanizing for Fasteners, Connectors, and Anchors:
   a. Hot-Dipped Galvanizing: ASTM A153/A153M.
   b. Mechanical Galvanizing: ASTM B695; Class 50 minimum.

C. Prime paint items with one coat except where galvanizing is specified.

1. Do not prime surfaces in direct contact with concrete or where field welding is required.

2.10 FABRICATION TOLERANCES

A. Squareness: 1/8 inch maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16 inch.

C. Maximum Misalignment of Adjacent Members: 1/16 inch.

D. Maximum Bow: 1/8 inch in 48 inches.

E. Maximum Deviation From Plane: 1/16 inch in 48 inches.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive Work.

3.2 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply steel items required to be cast into concrete or embedded in masonry with setting templates to appropriate sections.

3.3 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Make provisions for erection stresses. Install temporary bracing to maintain alignment, until permanent bracing and attachments are installed.

C. Field weld components indicated on shop drawings.

D. Perform field welding in accordance with AWS D1.1.

E. Obtain approval of Architect/Engineer prior to site cutting or making adjustments not scheduled.

F. After erection, touch up welds, abrasions, and damaged finishes with prime paint or galvanizing repair paint to match shop finishes.

3.4 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Plumb: 1/4 inch per story or for every 12 ft in height whichever is greater, non-cumulative.

C. Maximum Offset From Alignment: 1/4 inch.

D. Maximum Out-of-Position: 1/4 inch.

END OF SECTION

SECTION 05 51 00 - METAL STAIRS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Steel stair frame of structural sections, with closed risers and pan to receive concrete fill.
2. Metal nosings.

B. Related Sections:
1. Section 03 30 00 - Cast-In-Place Concrete: Concrete fill in stair pans and landings.
2. Section 05 50 00 - Metal Fabrications: Steel ship's ladders.
3. Section 05 52 00 - Metal Railings: Railings attached to metal stairs.
4. Section 09 90 00 - Painting and Coating: Paint finish.

1.2 REFERENCES

A. ASTM International:
1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
2. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
3. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
4. ASTM A500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
5. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts.
6. ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
7. ASTM F436 - Standard Specification for Hardened Steel Washers.

B. American Welding Society:
1. AWS D1.1 - Structural Welding Code - Steel.

C. National Association of Architectural Metal Manufacturers:
1. NAAMM AMP 510 - Metal Stairs Manual.

D. SSPC: The Society for Protective Coatings:
1. SSPC Paint 15 - Steel Joist Shop Paint.
2. SSPC Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

1.3 DESIGN REQUIREMENTS

A. Fabricate stair assembly to support uniform live load of 100 lb/sq ft and concentrated load of 300 lb/sq ft with deflection of treads, stringers, or landings not to exceed 1/360 of span or 1/4 inch, whichever is less.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Shop Drawings:
1. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
2. Shop Drawings: Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
3. Indicate exact profile of proposed nosing. Include block-out or shimming requirements for flush installation with any finish tread materials.

C. Design Data: Submit design calculations.

D. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

1.5 QUALIFICATIONS

A. Prepare Shop Drawings under direct supervision of Professional Engineer experienced in design of this Work and in the State of Texas.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

PART 2 - PRODUCTS

2.1 COMPONENTS

A. Steel Sections: ASTM A36/A36M.

B. Steel Plate: ASTM A36/A36M.

C. Hollow Structural Sections: ASTM A500, Grade B.

D. Steel Pipe: ASTM A53/A53M, Grade B Schedule 40. .

E. Sheet Steel: ASTM A1008/A1008M, uncoated cold rolled steel sheet.

F. Welded Wire Fabric: ASTM A185, 6 x 6 W1.4 x W1.4.

G. Bolts: ASTM A307; Grade A or B.

H. Nuts: ASTM A563 heavy hex type.

I. Washers: ASTM F436; Type 1.

J. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; consistent with design of stair structure.

K. Welding Materials: AWS D1.1; type required for materials being welded.

L. Concrete: Type specified in Section 03 30 00.

M. Shop Primer: SSPC Paint 15, Type 1, red oxide.

N. Touch-Up Primer: Match shop primer.

O. Abrasive Nosings: Single-stage surface-mount type meeting requirements of ASTM B221.
1. Black aluminum oxide abrasive strips set in 3” wide x 1/4” x continuous mill finish extruded aluminum plate with integral turn-down nosing. Provide (5) abrasive strips with a total combined width of not less than 1-inch.
2. Basis-of-Design: No. A3D as manufactured by Babcock-Davis or approved equivalent by Balco.
3. Predrill for flat-head flush expansion anchors set no more than 3” from each end and maximum 15” O.C.; designed for post-installation on concrete-filled metal pan stair treads just prior to installation of finish tread materials.
4. Each nosing shall be in one piece section and shall run from stringer to stringer.

2.2 FABRICATION

A. Comply with NAAMM AMP 510, "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" for Commercial Class, unless more stringent requirements are indicated.

B. Preassemble stairs in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. Fabricate components with joints tightly fitted and secured.

D. Continuously seal joined pieces by continuous welds.

E. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

F. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

G. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

H. Accommodate for expansion and contraction of members and building movement without damage to connections or members.

I. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain at slope not to exceed 1/4 inch per foot.

2.3 FABRICATION - PAN STAIRS AND LANDINGS

A. Fabricate stairs and landings with closed risers and treads of metal pan construction, ready to receive concrete.

B. Form treads and risers with minimum 14 gage sheet steel stock.

C. Secure tread pans to stringers with clip angles welded in place.

D. Form stringers with rolled steel channels or rectangular hollow sections, minimum 12 inches deep. Close exposed ends of channels and tubes with minimum 14 gage steel sheet.

E. Form landings with minimum 14 gage sheet stock. Reinforce underside with angles to attain design load requirements.

2.4 SHOP FINISHING

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Shop prime metal stairs. Do not prime surfaces that will be embedded in concrete or masonry.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive work. Verify concealed blocking and reinforcement is installed and correctly located to receive wall mounted handrails.

3.2 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply items required to be cast into concrete and or embedded in masonry with setting templates.

3.3 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Install anchors, plates, angles, hangers, and struts required for connecting stairs to structure.

C. Allow for erection loads. Install sufficient temporary bracing to maintain framing safe, plumb, and in alignment.

D. Field weld components indicated on shop drawings. Perform field welding in accordance with AWS D1.1.

E. Field bolt and weld to match shop bolting and welding. Conceal bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

F. Mechanically fasten joints butted tight, flush, and hairline. Grind welds smooth and flush.

G. Obtain approval of Architect/Engineer prior to site cutting or creating adjustments not scheduled.

H. Metal Nosings:

1. Install specified metal nosing in wet concrete infill. Keep traffic off of stairs until completed installation of nosing and curing of concrete, minimum 48 hours.

2. When treads are scheduled for tile, rubber, or other finish product with thickness, coordinate with finish material installer to ensure flush condition at interface of finish material and nosing plate.

I. After erection, prime welds, and abrasions, except surfaces to be in contact with concrete.

3.4 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

C. Maximum Offset From Alignment: 1/4 inch.

END OF SECTION

SECTION 05 52 00 - METAL RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes
1. Shop-primed steel railings.
2. Stainless steel railings.
3. Aluminum railings.
4. Perforated aluminum infill panels at railings.

B. Related Sections:
1. Section 01 23 00 – Alternates: Reference alternate for brushed stainless steel handrails in lieu of the specified anodized aluminum.
2. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for placement of anchors specified in this section in concrete.
3. Section 04 20 00 - Unit Masonry Assemblies: Execution requirements for placement of anchors specified in this section in masonry.
4. Section 05 51 00 - Metal Stairs.
5. Section 09 21 16- Gypsum Board Assemblies: Execution requirements for placement of anchors specified in this section in stud wall construction.
6. Section 09 90 00 - Painting and Coating: Paint finish.

1.2 REFERENCES

A. ASTM International:
1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
2. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
3. ASTM A500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
4. ASTM A513 - Standard Specification for Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing.

B. SSPC: The Society for Protective Coatings:
1. SSPC Paint 15 - Steel Joist Shop Paint.

1.3 DESIGN REQUIREMENTS

A. Design handrail, guardrail, and attachments to resist forces as required by applicable code. Apply loads non-simultaneously to produce maximum stresses.
1. Guard Top Rail and Handrail Concentrated Load: 200 pounds applied at any point in any direction.
2. Guard Top Rail Uniform Load: 50 plf applied in any direction.
3. Intermediate Rails, Panels, and Baluster Concentrated Load: 50 pounds applied to 1 sf area.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.

C. Samples:

1. Submit one 6” x 6” sample of perforated clear anodized aluminum infill panel.

2. Provide on-site mock-up of decorative steel railing section with finish painted steel and clear anodized perforated infill panel. Mock-up shall be full size and include at least 2

vertical supports and one infill panel. Mock-up may be utilized in the permanent construction if approved.

D. Product Data: Submit manufacturer's data for wall brackets.

1.5 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

PART 2 - PRODUCTS

2.1 STEEL RAILING SYSTEM COMPONENTS

A. Tubing: ASTM A513, Type 5, minimum 50 ksi yield strength.

B. Shapes, Plates, and Bars: ASTM A36/A36M.

C. Hollow Structural Sections: ASTM A500, Grade B.

D. Pipe: ASTM A53/A53M, Grade B, Schedule 40.

E. Fittings: Elbows, T-shapes, wall brackets, escutcheons; cast steel.

F. Splice Connectors: Steel welding collars.

G. Shop Primer: SSPC Paint 15, Type 1, red oxide.

H. Touch-Up Primer: Match shop primer.

2.2 MISCELLANEOUS COMPONENTS

A. Perforated Infill Panels: Perforated aluminum sheet as follows:
1. Hole Pattern: 1/2-inch diameter holes on 5/8 inch staggered centers.
2. Thickness: 1/8-inch.
3. Manufacturer: McNichols Co., www.mcnichols.com or approved equivalent by Accurate Perforating, accurateperforating.com.
4. Finish: Clear anodized.

B. Exposed Fasteners: Flush countersunk screws or bolts; consistent with design of railing.

C. Cast-in-Place and Post-installed Anchors: Anchors of type indicated below, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete.
1. Cast-in-place anchors.
2. Chemical anchors.
3. Expansion anchors.

D. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

E. Brackets, Flanges, and Anchors: Cast or formed metal of same material and finish as supported rails, unless otherwise indicated.
1. Manufacturers:
a. Malleable Iron or Cast Steel: Series 378/ 1378; Julius Blum and Co. www.juliusblum.com

2.3 ALUMINUM RAILING SYSTEM COMPONENTS

A. Pipe: Extruded aluminum, Schedule 40.

B. Fittings: Elbows, T-shapes, wall brackets, escutcheons; cast aluminum.

C. Splice Connectors: Welding collars; cast aluminum.

D. Interior Aluminum Surfaces: AAMA A41 anodized, prepared with mechanical pre-treatment, clear anodized.

E. Removable sections of Aluminum guardrails. Locations as indicated in drawings.

2.4 FABRICATION

A. Preassemble handrails and railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

B. Form changes in direction of railing members as follows:
1. By flush radius bends.
2. By inserting prefabricated flush-elbow fittings.

C. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.

D. Fabricate components with joints tightly fitted and secured. Furnish spigots and sleeves to accommodate site assembly and installation.

E. Fasteners for Interconnecting Handrail and Railing Components: Use fasteners fabricated from same basic metal as fastened metal, unless otherwise indicated. Do not use metals that are corrosive or incompatible with materials joined.
1. Provide concealed fasteners for interconnecting handrail and railing components and for attaching them to other work, unless otherwise indicated.
2. Provide Phillips flat-head machine screws for exposed fasteners, unless otherwise indicated.

F. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect handrail and railing members to other work, unless otherwise indicated.

G. For railing posts set in concrete, provide preset sleeves of steel not less than 6 inches long with inside dimensions not less than 1/2 inch greater than outside dimensions of post, and steel plate forming bottom closure.

H. For removable railing posts, fabricate slip-fit sockets from steel tube whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height. Provide socket covers designed and fabricated to resist being dislodged.

I. Close exposed ends of handrail and railing members with prefabricated end fittings.

J. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated. Close ends of returns, unless clearance between end of railing and wall is 1/4 inch or less.

K. Interior Components: Continuously seal joined pieces by continuous welds.

L. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

M. Accurately form components to fit stairs and landings, each other, and building structure.

N. Accommodate for expansion and contraction of members and building movement without damage to connections or members.

2.5 FINISHES

A. Shop prime steel railings and hardware. Do not prime surfaces that will be embedded in concrete or masonry.

B. Anodize aluminum railings and hardware after fabrication. Provide anodized aluminum fittings, brackets, fasteners, sleeves, and other components.

C. Shop paint perforated steel panels with polyurethane enamel paint, electrostatically-applied, color as selected by Architect from manufacturer's full range of options.

2.6 COMPONENTS FOR STAINLESS STEEL ALTERNATE

A. Tubing: ASTM A 554, Grade MT 304.

B. Pipe: ASTM A 312/A 312M, Grade TP 304, Schedule 40.

C. Castings: ASTM A 743/A 743M, Grade CF 8 or CF 20.

D. Sheet, Strip, Plate, and Flat Bar: ASTM A 666, Type 304.

E. Bars and Shapes: ASTM A 276, Type 304.

F. Fittings: Elbows, T-shapes, wall brackets, escutcheons; stainless steel.

G. Splice Connectors: Stainless steel welding collars.

H. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

I. Finish:
1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Brushed Finish: Grind and polish surfaces to produce uniform finish with slight brush in direction of grain, free of cross scratches. Run grain of directional finishes with long dimension of each piece.
3. Directional Satin Finish: No. 4.
4. When finishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive work.

C. Verify concealed blocking and reinforcement is installed and correctly located to receive wall mounted handrails.

3.2 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply items required to be cast into concrete, embedded in masonry, or placed in partitions with setting templates.

3.3 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Set embedded posts in pipe sleeves and fill space between post and sleeve with nonshrink grout.

C. Fit exposed connections together to form tight, hairline joints.

D. Anchor railings to structure.

E. Field weld anchors as indicated on shop drawings. Touch-up welds with primer. Grind welds smooth.

F. Conceal bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

G. Assemble tube rails with sleeves to accommodate tight joints and secure installation.

H. Attach handrails to wall with wall brackets. Provide bracket with 1-1/2-inch clearance from inside face of handrail and finished wall surface.
   1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
   2. Secure wall brackets to building construction as follows:
      a. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
      b. For hollow masonry anchorage, use toggle bolts.
      c. For steel-framed gypsum board assemblies, use hanger or lag bolts set into wood backing between studs. Coordinate with stud installation to locate backing members.

3.4 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

C. Maximum Offset From Alignment: 1/4 inch.

D. Maximum Out-of-Position: 1/4 inch.

END OF SECTION

SECTION 06 10 53 - MISCELLANEOUS ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Roof curbs, cants, and perimeter nailers.
2. Blocking in wall and roof openings.
3. Plywood sheathing.
4. Wood furring and grounds.
5. Concealed wood blocking for support of toilet accessories, wall cabinets, handrails, and other wall-mounted items.
6. Telephone and electrical panel back boards.
7. Fire retardant and preservative treatment of wood.

1.2 REFERENCES

A. American Forest and Paper Association:
1. AF&PA - National Design Specifications for Wood Construction.

B. American Wood-Preservers' Association:
1. AWPA U1 - User Specification for Treated Wood.

C. ASTM International:
1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. Southern Pine Inspection Bureau:
1. SPIB - Standard Grading Rules for Southern Pine Lumber.

E. U.S. Department of Commerce National Institute of Standards and Technology:
1. DOC PS 1 - Construction and Industrial Plywood.
2. DOC PS 2 - Performance Standard for Wood-Based Structural-Use Panels.
3. DOC PS 20 - American Softwood Lumber Standard.

F. West Coast Lumber Inspection Bureau:
1. WCLIB - Standard Grading Rules for West Coast Lumber.

G. Western Wood Products Association:
1. WWPA G-5 - Western Lumber Grading Rules.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit technical data on wood preservative and fire retardant treatment materials and application instructions.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with the following:
1. Lumber Grading Agency: Certified by DOC PS 20.
2. Plywood Grading Agency: Certified by EWA - The Engineered Wood Association.
3. Lumber: DOC PS 20.
4. Plywood: DOC PS 1 or DOC PS 2.

B. Surface Burning Characteristics:
1. Fire Retardant Treated Materials: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Apply label from agency approved by authority having jurisdiction to identify each preservative treated and fire retardant treated material.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Lumber Grading Rules: AF&PA, SPIB, WCLIB, WWPA G-5.

B. Miscellaneous Framing: Southern pine, mixed southern pine or spruce-pine-fir species; 19 percent maximum moisture content.

C. Plywood: APA/EWA; southern pine or douglas fir species; 1/2 inch thick, minimum.

2.2 ACCESSORIES

A. Fasteners and Anchors:
   1. Fasteners: Hot dipped galvanized steel for high humidity and treated wood locations, unfinished or cadmium plated steel elsewhere.
   2. Nails and Staples: ASTM F1667.
   3. Anchors:
      a. Toggle bolt type for anchorage to hollow masonry.
      b. Expansion shield and lag bolt type for anchorage to solid masonry or concrete.
      c. Bolt or ballistic fastener for anchorages to steel.

2.3 FACTORY WOOD TREATMENT

A. Preservative Treatment: AWPA U1, Use Category UC2; using inorganic boron (SBX) preservative with 0.25 percent retainage.

B. Fire Retardant Treatment: AWPA U1, Use Category UCFA for interior use, and UCFB for exterior use; chemically treated and pressure impregnated.

C. Moisture Content after Treatment:
   1. Lumber: Maximum 19 percent.
   2. Plywood: Maximum 15 percent.

2.4 FIELD WOOD TREATMENT

A. Preservative Treatment: Brush applied inorganic boron solution, with minimum concentration of 1.5 percent.

B. Touch-up cut wood ends.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify substrate conditions are ready to receive blocking, curbing and framing.

3.2 PREPARATION

A. Coordinate placement of blocking, curbing and framing items.

3.3 INSTALLATION

A. Set members level and plumb, in correct position.

B. Place horizontal members, crown side up.

C. Construct curb members of solid wood sections.

D. Curb roof openings except where prefabricated curbs are provided. Form corners by alternating lapping side members.

E. Coordinate curb installation with installation of decking and support of deck openings.

F. Secure sheathing to framing members with ends over firm bearing and staggered.

G. Install plywood parapet sheathing using 1/2 inch thick plywood. Space panels 1/8 inch apart at edges and ends.

H. Install telephone and electrical panel back boards using 3/4 inch thick plywood. Size back boards 12 inches beyond size of electrical and telephone panel, or as indicated on Drawings.

3.4 SCHEDULE OF WOOD TREATMENT

A. Note: The term “Treated” as may be used on the drawings for wood products does not distinguish between Fire-Retardant Treated or Preservative Treated. Conditions as specified below shall take precedence over drawing notations. Where governing code authorities require Fire-Retardant Treatment in addition to conditions stated below or noted in the drawings, those authorities shall govern.

B. Fire-Retardant Treatment: In buildings of Types I-B, II-A, and II-B construction, all rough carpentry items shall be fire retardant treated in the following conditions:
   1. All wood including but not necessarily limited to cants, nailers, shims, curbs, equipment support bases, blocking, and sheathing built into the roof or above the roof line. Use only preservative treatment formulated for exterior use.
   2. Blocking, nailers, supports, shims or other wood construction within the building whether or not concealed within walls or above-celling shall be fire-retardant treated. For wood in contact with concrete slab-on-grade use only preservative treatment formulated for exterior use
   3. Any wood Items indicated on the drawings as “Fire-Retardant Treated”.

C. Preservative Treatment: Install preservative treated wood in the following conditions:
   1. All wood including but not necessarily limited to sills, sleepers, blocking, furring, stripping, and wood flooring nailers that are in contact with concrete slab-on-grade or built into exterior walls.
   2. All wood framing, blocking, and furring members used in exterior construction except for Fire-Retardant Treated wood conditions as specified above.
   3. All wood framing, blocking, furring, and roofing wood including cants, nailers, shims, curbs, equipment support bases, and sheathing used in concession buildings, toilet buildings, press box buildings, and similar free-standing separate ancillary buildings shall be Preservative Treated.

END OF SECTION

SECTION 06 20 24 – INTERIOR FINISH CARPENTRY AND MILLWORK

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Miscellaneous wood or plastic laminate clad millwork items that are not included in Section 12 32 16 Plastic Laminate Clad Casework.
   2. Chair rails at offices where noted, with matching PVC edge banding.
   3. Finished hardwood cap at low walls.
   4. Subflooring construction for Oak treads and risers at stage.

B. Related Sections include the following:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood furring, blocking, shims, and hanging strips required for installing finish carpentry and millwork items.
   2. Section 09 64 13 – Finish Wood Stage Steps: Finish wood flooring at stage treads and risers.
   3. Section 09 90 00 - Painting and Coating: Transparent finish of field-finished millwork items.
   4. Section 12 32 16 Plastic Laminate-Clad Casework.

1.2 REFERENCES

A. American Forest and Paper Association:
   1. AF&PA - National Design Specifications for Wood Construction.

B. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of product indicated.

C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
   1. Show locations and sizes of required furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
   2. Indicate wood type and finish of each piece of construction.

D. Samples:
   1. Submit three representative samples of each finish carpentry and millwork item, illustrating wood grain, edge and corner condition(s), and finish.

1.4 QUALITY ASSURANCE

A. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for interior finish carpentry including wood grades, construction, finishes, and other requirements.

B. Surface Burning Characteristics for Fire Retardant Treated Items: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.
   1. Where required by authority having jurisdiction, apply label from approved agency identifying each item.

1.5 QUALIFICATIONS

A. Installer Qualifications: An experienced installer who has completed finish interior carpentry similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fabricator Qualifications: A firm experienced in producing finish interior carpentry millwork similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect work from moisture damage.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Comply with AWI requirements.

C. Maintain temperature and humidity conditions within ranges recommended by AWI. Do not deliver or install millwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

D. Allow materials to acclimate to temperature and humidity conditions recommended by AWI for minimum of 48 hours prior to installation. Maintain same conditions during and after installation.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate work with electrical rough-in and installation of associated and adjacent finishes.

C. Coordinate locations and requirements for blocking and backing for support and attachment of work of this section.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Plastic Laminate Surfacing: Comply with NEMA Standard GP50 high pressure laminated plastic as provided by Wilsonart, Formica, or Pionite. Provide 0.050 inch thick material at horizontal surfaces, and 0.030 inch thick laminate on exposed vertical surfaces. Provide backing sheet on bottom or concealed surfaces. Color(s) to be selected by the Architect from manufacturer’s full range.

B. Hardwood Lumber for Low Wall Caps: Graded in accordance with AWI QSI Grade II; maximum moisture content of 8 percent, and the following:
1. Species of Wood: Red Oak.
2. Grade: Clear.
3. Cut: Plain sawn.
4. Moisture Content: 12 to 14 percent.
5. Thickness: As indicated.
6. Width: As indicated.

7. Finish: Transparent, clear finish or with stain color indicated.

C. Hardwood Plywood and Face Veneers: HPVA HP-1, Grade A, min 7-ply wood veneer core, face species to match hardwood lumber.
1. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.

D. Concealed Plywood: U.S. Product Standard PSI-66, 7-ply wood veneer core Douglas Fir plywood, grade trademarked DFPA, sanded. A-D grade. Use only in concealed areas or as core for plastic laminate. Use exterior grade at sink cabinets.

2.2 ACCESSORIES

A. Fasteners and Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors in masonry walls.

B. Adhesive for High Pressure Decorative Laminates: FS A-A-1936 contact adhesive.

C. PVC Edge Trim: Extruded rigid PVC; smooth finish, of width to match component thickness; standard or custom color as required to match plastic laminate; 1 mm and 3 mm thickness.

D. Glass: Clear tempered double strength, as specified in Section 08 80 00.

E. Fasteners and Anchors:
1. Fasteners: Hot dipped or Electro galvanized steel for high humidity and treated wood locations, unfinished steel elsewhere.
2. Nails and Staples: ASTM F1667.

F. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application.

G. Concealed Joint Fasteners: Threaded steel.

H. Grommets:

1. Type: Plastic or nylon 2-1/2” diameter with flip-top tab in cap, in color(s) as selected by the Architect.

2. Locations: Where indicated on the drawings and where needed for data wiring to pass through counter tops, whether or not indicated.

3. Basis of Design: Model #EDP3 as manufactured by Doug Mocket & Co., 800-523-1269.

2.3 FABRICATION, GENERAL

A. Provide Custom grade interior millwork complying with the referenced quality standard. All work shall be of the highest quality workmanship thoroughly sanded and cleaned, free from tool marks, with all nails properly set, filled and sanded smooth. Moldings and trim shall be furnished in as long lengths as practicable. All pencil and chalk marks shall be removed.

B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Fabricate millwork to dimensions, profiles, and details indicated.

D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

2.4 INTERIOR STANDING AND RUNNING TRIM

A. Quality Standard: Comply with AWI Section 300.

B. Wood Species: Hardwood lumber as identified on the drawings.

C. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work.

D. Finish: Transparent, with stain color indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. Condition millwork to average prevailing humidity conditions in installation areas before installation.

B. Before installing architectural millwork, examine shop-fabricated work for completion and complete work as required, including removal of packaging and.

3.2 MISCELLANEOUS MILLWORK INSTALLATION

A. Install miscellaneous millwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.

B. Scribe and cut millwork to fit adjoining work and refinish cut surfaces and repair damaged finish at cuts.

C. Anchor millwork to anchors or blocking built in or directly attached to substrates. Secure with concealed fasteners and blind nailing as required for complete installation.

D. Field Finishing:
1. Mask off adjacent surfaces before beginning sanding.
2. Apply filler and sand final construction to smooth even finish with no evidence of sander marks. Take precautions to contain dust. Remove dust by vacuum and tack rag.
3. Apply single coat of sanding sealer to protect construction until final finishing.
4. Apply stain where required to match final color of approved sample Determine from the Architect whether stain and finish or only clear finish is required.
5. Apply 3-coats of specified clear finish over sanding sealer or stain as determined by the Architect. Allow each coat to fully dry and sand lightly between coats. Clean dust with vacuum and tack rag.

3.3 SUBFLOORING FOR WOOD STAGE STEPS

A. Coordinate with wood flooring installer to determine specific project needs for subflooring construction at stage steps.

B. Reference the Drawings and Section 09 64 13 for general requirements for subflooring under finish Oak treads and risers.

3.4 ADJUSTING AND CLEANING

A. Repair damaged and defective millwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace millwork. Adjust joinery for uniform appearance.

B. Clean millwork on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION

SECTION 06 42 19 - PLASTIC LAMINATE WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Plastic laminate-clad individual panels with all edges finished.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Concealed sheet metal mounting bands required for installing paneling. Wood blocking as may be required by the panel manufacturer or installer.
   2. Section 09 21 16 – Gypsum Board Assemblies: Installation and finishing of drywall after installation of sheet metal mounting bands.
   3. Section 09 90 00 – Painting and Coating: Finish painting of drywall prior to installation of panels.

1.2 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each product indicated.
   1. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.

C. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations based on job measurements.
   1. Show typical and all non-typical details full size.
   2. Show locations and sizes of concealed mounting clips.
   3. Show typical location for exposed false mounting bolts and washers.

D. Samples for Verification: For the following:
   1. Plastic laminate chain of samples for initial approval of color/finish selection.
   2. Plastic-laminate-clad panel sections nominal 8 by 10 inches face size, with matching vinyl edges. Provide one sample panel for each selected color/pattern/finish once initial selections are determined.

E. Provide fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or other testing and inspecting agency acceptable to authorities having jurisdiction

F. Product Certificates: Signed by manufacturers of paneling certifying that products furnished comply with requirements.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed paneling similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fabricator Qualifications: A firm experienced in producing paneling similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for grades of paneling, construction, finishes, and other requirements.

1.4 MOCK-UP

A. Section 01-40 00 - Quality Requirements: Mock-up requirements.

B. Before fabricating panels build onsite mockup using a minimum of (3) stacked panels mounted on finished stud wall. Approved mockup will become the standard of fit, finish,

materials and workmanship for the completed Work. Build mockup to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockup in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Notify Architect seven days in advance of dates and times when mockups will be installed.
3. Use only materials that meet the requirements of the specifications, and finish materials in the selected color(s) and finish(es).
4. Obtain Architect's approval of mockup before starting paneling fabrication.
5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
6. Approved mockups may become part of the completed Work.

1.5 PRE-INSTALLATION MEETINGS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Do not deliver paneling until painting and similar operations that could damage paneling have been completed in installation areas. If paneling must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where paneling is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support paneling by field measurements before being enclosed and indicate measurements on Shop Drawings.
2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating paneling without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.8 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that paneling can be installed as indicated.

PART 2 - PRODUCTS

2.1 PANELING FABRICATORS

A. Available Fabricators: Subject to compliance with requirements, fabricators offering paneling that may be incorporated into the Work include, but are not limited to, the following:

1. Panel Specialists, Inc. (PSI), www.panelspec.com.
2. Custom Plastics, www.customplastics.com.
3. Substitutions: Section 01 60 00 - Product Requirements.

2.2 MATERIALS

A. General: Provide materials that comply with requirements of the AWI quality standard for quality grade specified, unless otherwise indicated.

B. Wood Products: Comply with the following:
1. Particle board: 4-pound density particle board core faced with fire-rated vertical surface type (.030") high-pressure laminate and backed with .028" high pressure laminate backer sheet.
2. Manufacturer: Provide "Duraflake FR" by Willamette Industries or equivalent.

C. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated, or if not indicated, as required by woodwork quality standard.
1. Available Manufacturers:
a. Formica Corporation.
b. International Paper; Decorative Products Div, www.internationalpaper.com.
c. Pionite Decorative Surfaces, www.pionite.com.
d. Laminart, www.laminart.com.
e. Wilsonart International, www.wilsonart.com.

D. Panel Fire-Test-Response Characteristics: Fabricated panels rated **Class A** in accordance with ASTM-E-84;
1. Flame spread **25 or less.**
2. Smoke developed **460 or less.**
3. Cataloged by Underwriters Laboratories as UL 723.
4. Provide fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or other testing and inspecting agency acceptable to authorities having jurisdiction.
5. Rated Class “A”.
6. Flame Spread Rating: Less than 25.
7. Smoke Developed Rating: Less than 100.

E. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln-dried to less than 15 percent moisture content.

F. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

2.3 FABRICATION, GENERAL

A. Paneling Grade: Provide Custom grade paneling complying with the referenced quality standard.

B. Wood Moisture Content: Comply with requirements of the referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Complete fabrication to maximum extent feasible, before shipment to Project site. Disassemble components only as necessary for shipment and installation.

D. Neatly cut openings to receive fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs and seal with clear waterproofing agent.

2.4 PLASTIC-LAMINATE-CLAD PANELS

A. Quality Standard: Comply with AWI Section 500.

B. Plastic-Laminate Cladding: High-pressure decorative laminate, color(s) and finish as scheduled:

1. Faces: Type VGF.
2. Backs: Type BKV.
3. Panel Edges: PVC edging in color to match panel face.

C. Panel Core Construction: Fire-retardant high-density particleboard.

D. Fire-Retardant-Treated Paneling: Provide panels consisting of fire-retardant plastic laminate and fire-retardant particleboard or fire-retardant medium-density fiberboard. Panels shall have a flame-spread rating of 75 or less and a smoke-developed rating of 450 or less per ASTM E 84.

E. Finish Sizes:
1. Overall finish panel thickness shall be 7/16 inch minimum.
2. Panel face size(s) shall be as indicated in the drawings.

F. Accessories:
1. Panel anchors: Panel manufacturer's recommended formed steel or extruded aluminum zee clips specially designed for panel mounting. Zee clips shall provide for 1/4-inch gap from face of mounting substrate to back of panel.
2. Divider moulding: No. 302.
3. Outside corner moulding, 90 degrees: No. 103-90, with end caps.
4. Trim moulding: No. 304.

PART 3 - EXECUTION

3.1 PREPARATION

A. Condition paneling to average prevailing humidity conditions in installation areas before installation.

B. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and back-priming.

3.2 INSTALLATION

A. Quality Standard: Install panels to comply with AWI Section 1700 for the appropriate grade of materials.

B. Install continuous horizontal bands of 16-ga. x 4" wide sheet metal to metal wall studs prior to installation of gypsum board.
1. Fasten sheet steel band using minimum of (2) bugle-head drywall screws at each stud. Dimple sheet metal at screw locations for flush heads to avoid interference with gypsum board installation.
2. Provide continuous metal bands horizontally as required for mounting of panel zee-clip receivers using flat-head sheet metal screws or drywall screws.
   a. Fasten corresponding half of each zee clip to back of panel using flat-head wood screws.
   b. Each panel shall have a minimum total of (6) zee clips mounted to the horizontal mounting bands.

C. Install each panel with long length horizontal; level, plumb, true, and straight with no distortions and with all top and bottom edges in alignment.
1. Shim as required with concealed shims to ensure full length of each panel is flush with adjacent panel. Install level and plumb to a tolerance of 1/8 inch in 96 inches.
2. Install each panel flush with adjacent panels.
3. Install self-adhesive foam backer spacers where required to keep panel mounts tight without rattle.

3.3 ADJUSTING AND CLEANING

A. Adjust installed panels where necessary to provide uniform gaps between panels, all top edges level and in alignment, and with all panel edges flush with each adjacent panel edge.

B. Replace any panels that are damaged during installation or prior to Owner acceptance.

C. Clean exposed surfaces of panels and deliver to the Owner recommended cleaner in quantity suitable for a minimum of 50 cleanings.

END OF SECTION

SECTION 06 61 16 - SOLID SURFACING FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes cast plastic fabrications.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry.
   2. Section 06 61 13 – Quartz Surfacing Fabrications

1.2 REFERENCES

A. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

   3. PRODUCT-SPECIFIC SUBMITTALS

B. Section 013300 - Submittal Procedures: Submittal procedures.

C. Shop Drawings: Indicate dimensions, thicknesses, required clearances, tolerances, materials, colors, finishes, fabrication details, field jointing, adjacent construction, methods of support, integration of plumbing and electrical components, and anchorages.

D. Product Data: Submit data on specified component products.

E. Samples: Submit two samples, 6 x 6 inch in size illustrating each color, texture, and finish.

F. Manufacturer's Installation Instructions: Submit preparation of opening required, rough-in sizes, and tolerances for item placement.

1.3 CLOSEOUT SUBMITTALS

A. Section 017000 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit list of approved cleaning materials and procedures required, and list of substances harmful to component materials. Include instructions for stain removal and surface and gloss restoration.

1.4 QUALITY ASSURANCE

A. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ documented experience.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 MAINTENANCE

A. Section 017000 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two containers of 16 oz of polishing cream.

PART 2 - PRODUCTS

2.1 SOLID SURFACING FABRICATIONS

A. Manufacturers
1. Wilsonart; www.wilsonart.com

B. Basis of Design: *Aspen Quartzite 9245SS* as manufactured by Wilsonart, or approved equivalent by specified manufacturer.
1. Substitutions: Section 01 60 00 - Product Requirements.

2.2 COMPONENTS

A. Resin: Acrylic resin-based, non-porous, stain resistant.

B. Adhesive: Clear methacrylate type, cartridge dispensed.

2.3 FABRICATION

A. Polish exposed surfaces to honed finish.

B. Radius corners and edges.

C. Provide uniform ½" thick material unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify joint preparation and affected dimensions are acceptable.

3.2 PREPARATION

A. Provide anchoring devices for installation.

B. Provide templates and rough-in measurements.

3.3 INSTALLATION

A. Align work plumb and level.

B. Rigidly anchor to substrate to prevent misalignment.

C. Seal to adjacent construction in accordance with Section 079000.

3.4 ERECTION TOLERANCES

A. Maximum Variation from Indicated Dimension: 1/8 inch.

B. Maximum Offset from Indicated Position: 1/8 inch.

3.5 CLEANING

A. Section 017000 - Execution and Closeout Requirements: Final cleaning.

B. Clean work under provisions of 017000.

C. Clean and polish surfaces.

END OF SECTION

SECTION 06 61 19 – QUARTZ SURFACING FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes quartz-based fabricated stone countertops for reception desk and other fabrications as may be indicated in the drawings.

B. Related Sections:
   1. Section 06 20 53 – Interior Finish Carpentry and Millwork: Base cabinet countertop support.

1.2 REFERENCES

A. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   2. ASTM C373 – Standard Test Method for Water Absorption, Bulk Density, Apparent Porosity, and Apparent Specific Gravity.
   3. ASTM C170 - Standard Test Method Compressive Strength of Dimension Stone.
   4. ASTM C501 - Standard Test Method for Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abraser.
   5. NEMA LD3-3.6 – Ball Impact Resistance.
   6. NEMA LD3-3.6 – High Temperature Resistance.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate dimensions, thicknesses, required clearances, tolerances, materials, colors, finishes, fabrication details, field jointing, adjacent construction, methods of support, integration of plumbing and electrical components, and anchorages.

C. Product Data: Submit data on specified component products.

D. Samples: Submit two samples, 12 12 inch in size illustrating each color, texture, and finish.

E. Manufacturer's Installation Instructions: Submit preparation of opening required, rough-in sizes, and tolerances for item placement.

1.4 CLOSEOUT SUBMITTALS

A. Section 017000 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit list of approved cleaning materials and procedures required, and list of substances harmful to component materials. Include instructions for stain removal and surface and gloss restoration.

1.5 WARRANTY:

A. Provide manufacturer’s limited commercial 10-year warranty against product defects.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years’ documented experience.

B. Installer: Fabricated and installed by manufacturer’s certified fabricator/installer with a minimum of 5-years’ experience in similar installations. Provide manufacturer’s written certification with assurance of manufacturer’s warranty.

PART 2 - PRODUCTS

2.1 QUARTZ SURFACING FABRICATIONS

A. Manufacturers:
1. Consentino Silestone, www.silestone.com.
2. Corian Quartz, www.corianquartz.com
3. Ice Stone LLC, www.icestoneusa
4. Prestige Stone Quartz Surfacing, Building Plastics, Inc., www.bpiteam.com
5. Zodaq Quartz Surfaces, DuPont, www.dupont.com
6. Substitutions: Section 016000 - Product Requirements.

B. Basis of Design: *Corian Quartz*® (formerly *Zodiaq*®) or approved equivalent by specified manufacturer.

C. Performance Characteristics
1. Fire Resistance per ASTM E84 (UL 723).
a. Surface Burning Characteristics: Class A (Class 1)
b. Flame Spread Resistance: 25 or less.
c. Smoke Developed Index: 450 or less.
2. Water Absorption: Less than 0.04% short term; less than 0.12% long term per ASTM C373.
3. Density: 2.2 - 2.4 g/cm^3 per ASTM D792.
4. Impact Resistance: No failure at 164 inches NEMA LD 3-3.8.
5. Abrasion Resistance: 139 or better per ASTM C501.
6. Stain Resistance: Passes ANSI Z124.
7. High Temperature Resistance: Passes NEMA LD3-3.6
8. Impact Resistance: No failure at 164 inches NEMA LD 3-3.8.

D. Selection(s): Reference the Interior Materials Schedule.

2.2 COMPOSITION

A. 93 percent crushed quartz aggregate combined with resins and pigments fabricated into slabs using a vacuum vibro-compaction process.

B. Color: As selected by the Architect from manufacturer’s full range of standard and custom colors for polished finish.

2.3 SHOP FABRICATION

A. Finished Slab Thickness: 3/4-inch or 1-1/4-inch as indicated in the drawings.

B. Slab Sizes: As indicated.

C. Identification: Each slab shall be labeled with fabricator’s batch number and imprinted with manufacturer’s identifying mark on the back side.

D. Polish exposed surfaces to manufacturer’s “Polished” finish with gloss rating of 35%.

E. Beveled or slightly radiused corners and edges.

F. Provide all necessary cut-outs. Obtain templates from plumbing subcontractor for fittings, sinks, and lavatories. Provide cut-outs with minimum 3/8” inside corner radius. Reinforce any remaining material less than 3-inches wide with concealed strip(s) of quartz panels.

G. Laminate layers of quartz surfacing as required to create built-up edges or other areas requiring additional thickness as indicated in the drawings.

2.4 ACCESSORIES

A. Mounting Adhesive: Silicone or 2-component epoxy as determined by the installer for the particular installation.
   1. Color: Adhesive that will be visible in finished work shall be tinted to match quartz surfacing.
   2. Provide spacers where required by the adhesive manufacturer for the particular installation.

B. Joint Sealants: Clear silicone sealant by Dow Corning or General Electric as recommended by the manufacturer for the specific application and conditions of use. Provide anti-bacterial type at restrooms and food preparation areas.

PART 3 - EXECUTION

3.1 STORAGE AND HANDLING

A. Store in racks in near-vertical position, indoors and away from direct exposure to sun or other heat source.

B. Protect against warpage and breakage.

C. Store with finished face turned toward finished face and separated by heavy paper or cardboard.

3.2 EXAMINATION

A. Reference Section 013000 - Administrative Requirements: Coordination and project conditions

B. Field-verify all relevant dimensions prior to beginning fabrication.

C. Verify that substrates supporting quartz surfacing are plumb, level, and within plane to within 1/16-inch per ten-ft., and that necessary supports and blocking are in place.

D. Ensure that base cabinets are securely fixed to adjoining units and back wall.

E. Verify joint preparation and affected dimensions are acceptable.

3.3 INSTALLATION

A. Align work plumb and level.

B. Rigidly adhere or physically anchor finished panels in concealed manner to prevent movement or misalignment.

3.4 ERECTION TOLERANCES

A. Maximum Variation from Indicated Dimension: 1/8 inch.

B. Maximum Offset from Indicated Position: 1/8 inch.

3.5 FINAL CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean and polish all exposed surfaces of quartz surfacing.

C. Furnish to the Owner (2) 16 oz. or larger containers of manufacturer’s recommended non-abrasive, low pH cleaning and polishing agent.

END OF SECTION

SECTION 07 13 00 - SHEET WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes self-adhering rubberized asphalt sheet waterproofing and protective cover.
   1. For installation at below-grade walls such as elevator pits.

B. Related Sections:
   1. Section 07 90 00 - Joint Protection.
   2. Section 14 24 23 – Hydraulic Passenger Elevators: Waterproofing of elevator pits

1.2 REFERENCES

A. ASTM International:
   1. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers -Tension.
   2. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.

B. National Roofing Contractors Association:
   1. NRCA - The NRCA Waterproofing and Dampproofing Manual.

1.3 SYSTEM DESCRIPTION

A. Waterproofing System: Capable of resisting water under positive pressure and preventing moisture migration to interior.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate special joint or termination conditions and conditions of interface with other materials.

C. Product Data: Submit data for surface conditioner, flexible flashings, joint cover sheet, and joint and crack sealants, with temperature range for application of waterproofing membrane.

D. Samples: Submit 12 x 12 inch samples of waterproofing sheet and protection board.

E. Manufacturer's Installation Instructions: Submit special procedures and perimeter conditions requiring special attention.

F. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with NRCA Waterproofing Manual and manufacturer’s instructions.

1.6 QUALIFICATIONS

A. Applicator: Company specializing in performing work of this section and who is authorized by the manufacturer to install manufacturer’s products.

1.7 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application and until liquid or mastic accessories have cured.

1.9 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for waterproofing failing to resist penetration of water.

C. For warranty repair work, remove and replace materials concealing waterproofing.

PART 2 - PRODUCTS

2.1 SHEET MEMBRANE WATERPROOFING

A. Manufacturers:
1. Bituthene System 4000, W. R. Grace & Co., www.grace.com
2. Mel-Rol, W. R. Meadows, Inc., www.wrmeadows.com
3. Miradri, T. C. Miradri, www.miradi.com
4. Duramem 700-SM, Pecora Corporation, www.pecora.com
5. Polyguard 650, Polyguard Products, Inc., www.polyguardproducts.com
6. TW-60, Tamko Roofing Products, Inc., www.tamco.com
7. Substitutions: Section 01 60 00 - Product Requirements.

2.2 COMPONENTS

A. Rubberized Asphalt Membrane: Self-adhering sheet consisting of 56 mils rubberized asphalt laminated to a 4 mil thick polyethylene film with release liner on adhesive side, conforming to following criteria:

Properties	Test	Results
Tensile Strength	ASTM D412	250 psi
Elongation	ASTM D412	300 percent
Low-Temperature Flexibility	ASTM D1970	Pass at minus 20 deg F
Puncture Resistance	ASTM E154	40 lbf
Water Absorption	ASTM D570	0.15 percent weight gain
Moisture Vapor(perms)	ASTM E96	0.05 perms
Hydrostatic-Head Resistance	ASTM D5385	150 feet

2.3 ACCESSORIES

A. Surface Conditioner: Waterborne latex type, compatible with membrane.

B. Primer: Liquid, rubber-based primer recommended by manufacturer.

C. Liquid Membrane: Elastomeric, cold-applied, trowel grade, designed for use with sheet waterproofing.

D. Sealant: As specified in Section 07 90 00.

E. Protection Board: Rigid asphaltic-composition board, nominal 1/4-inch thick, or structural insulating board conforming to ASTM C208.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of waterproofing system.

C. Verify items penetrating surfaces to receive waterproofing are securely installed.

D. Verify substrate surface slopes to drain for horizontal waterproofing applications.

3.2 PREPARATION

A. Protect adjacent surfaces not designated to receive waterproofing.

B. Clean and prepare surfaces to receive waterproofing.

C. Do not apply waterproofing to surfaces unacceptable to manufacturer or applicator.

D. Seal cracks and joints with sealant materials using depth to width ratio as recommended by sealant manufacturer.

E. Apply surface conditioner at rate recommended by manufacturer. Protect conditioner from rain or frost until dry.

3.3 INSTALLATION - SELF ADHERED MEMBRANE WATERPROOFING

A. Roll out membrane. Minimize wrinkles and bubbles.

B. Remove release paper layer. Roll out on substrate with mechanical roller to encourage full contact bond.

C. Lap sides and ends.

D. Overlap edges and ends minimum 3 inches and seal with contact adhesive. Seal permanently waterproof.

E. Reinforce membrane with multiple thickness of membrane material over joints, whether joints are static or dynamic.

F. Weather lap joints on sloped substrate in direction of drainage. Seal joints and seams. Coordinate with drain installation.

G. Seal membrane to adjoining surfaces.

H. Extend membrane over cants and up intersecting surfaces at membrane perimeter minimum 6 inches above horizontal surface laid in shingle fashion.

I. Seal items protruding to or penetrating through membrane.

3.4 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Do not permit traffic over unprotected or uncovered membrane.

C. Protect membrane from damage by adhering protection board immediately after membrane placement.

D. Carefully backfill and compact so as not to damage or dislodge protection board.

END OF SECTION

SECTION 07 19 16 – CONCRETE FLOOR CLEAR FINISH

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Water-based clear finish for interior concrete floors to remain exposed.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Concrete slab-on-grade surfaces, curing agents, and floor hardeners.
   2. Section 07 90 00 - Joint Protection: Sealants

1.2 SYSTEM DESCRIPTION

A. Applied Finish: Material to restrict moisture absorption and provide slip-resistant and abrasion-resistant finished appearance for interior concrete flooring indicated to remain exposed.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit details of product description, tests performed, limitations to coating, and chemical properties including percentage of solids.

C. Samples: Of each substrate indicated to receive water repellent, 12 inches square, with specified repellent treatment applied to half of each sample.

D. Manufacturer's Installation Instructions: Submit special procedures and conditions requiring special attention, and cautionary procedures required during application.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements, including local requirements controlling the emission of VOCs.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section for a minimum of three years.

B. Applicator: Company specializing in performing Work of this section with minimum three years’ experience and approved by manufacturer for this application.

1.5 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect product from freezing.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not apply coating when ambient or surface temperature is lower than 40 degrees F or higher than 100 degrees F.

1.8 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish manufacturer's written warranty for sealer/finish for a minimum of two-years after Substantial Completion of Project.

PART 2 - PRODUCTS

2.1 Manufacturers:

A. Euclid Chemical Company, www.euclidchemical.com.
B. L.M. Scofield Company, www.scofield.com
C. W.R. Meadows, www.wrmeadows.com
D. Substitutions: Section 01 60 00 - Product Requirements.

2.2 MATERIALS

A. Concrete Sealer: Water-based clear and colorless high solids type sealer and finish that is VOC-compliant.
   1. Basis-of-Design: *Selectseal Plus* as manufactured by Scofield.
   2. VOC Content: less than 100 g/L.
   3. Semi-Gloss or Gloss finish.
   4. High solids content; low odor.
   5. Certified wet-slip resistant per UL 410.
   6. Abrasion-resistant.
   7. Apply at interior concrete floors scheduled to remain exposed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify joint sealants are installed and cured.

C. Verify surfaces to be coated are dry, clean, and free of efflorescence, oil, or other matter detrimental to application of coating.

D. Obtain product information from Contractor for curing agent that was used on floors scheduled to receive a clear finish coat to ensure that the proposed finish coat is compatible.

E. Test the surface of concrete before applying sealer/finish ensure it absorbs drops of water within 20-30 seconds. Verify with the sealer/finish manufacturer whether a non-absorbing surface will require mild acid-etching prior to sealer/finish application.

3.2 PREPARATION

A. Delay Work until concrete substrate is cured minimum of 60 days, and all other trades have completed work in the affected areas.

B. Remove loose particles and foreign matter. Remove oil or foreign substances that may interfere with appearance or performance of sealer/finish. Remove drywall compound and paint drips by scraping.

C. Remove curing agents remaining on surface of affected slabs. Ensure compatibility of curing agent and any installed joint sealants with proposed sealer/finish product.

D. Scrub and rinse surfaces with water and let dry while restricting foot traffic. Vacuum dry surface just prior to application of sealer/finish.

E. Test for pH level of substrate before applying. Do not apply to substrates with pH level outside of manufacturer's recommended limits.

F. Protect adjoining work, including sealant bond surfaces at joints. Mask-off wall bases and adjoining surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces.

G. Coordination with Sealants and Hardeners:

1. Coordinate with concrete hardener applied under the Cast-In-Place Concrete section to ensure compatibility.
2. Coordinate with sealant manufacturer to determine whether sealer/finish should be applied prior to or after installation of any joint sealants in concrete slab. Sealant joints installed prior to application of sealer/finish shall be fully cured.
3. Sealer/finish application may precede joint sealant installation only if sealant adhesion and compatibility have been tested and verified.

3.3 APPLICATION

A. Apply in accordance with manufacturer's instructions.

B. Apply a saturation coating of clear sealer/finish on indicated surfaces using foam, microfiber, or lamb's wood applicators. Cover all surfaces to remain exposed.

C. Apply second coat in accordance with manufacturer's directions for drying and scuffing of first coat. Final coat shall be free of lap or brush marks.

3.4 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Immediately remove sealer/finish from adjacent surfaces by methods as instructed by coating manufacturer. Repair damage to surfaces not indicated to receive sealer/finish.

END OF SECTION

SECTION 07 21 13 – THERMAL WALL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes
   1. Rigid board insulation at exterior masonry or steel stud cavity wall construction.
   2. Blanket insulation in parapet construction, above exterior soffits, behind metal panels, and other specific areas as specifically indicated.
   3. Loose fill insulation within single-wythe exterior walls where other forms of insulation are not practical.

B. Related Sections:
   1. Section 04 20 00 - Unit Masonry Assemblies: Cavity wall construction.
   2. Section 07 27 13 – Fluid Applied Membrane Air Barrier.
   3. Section 09 21 16 – Gypsum Board Assemblies.

1.2 REFERENCES

A. ASTM International:
   1. ASTM C549 – Standard Specification for Perlite Loose Fill.
   2. ASTM D2842 - Standard Test Method for Water Absorption of Rigid Cellular Plastics.
   3. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit for product characteristics, performance criteria, and limitations.
   1. Provide product data indicating fire-test-response characteristics in accordance with the following, or similar testing and inspecting agency acceptable to authorities having jurisdiction:
      a. Identify materials with appropriate markings of applicable testing and inspecting agency.
      b. Surface-Burning Characteristics tested per ASTM E84.
      c. Fire-Resistance Ratings tested per ASTM E119.
      d. Combustion Characteristics tested per ASTM E136.
   2. Provide product data indicating thermal characteristics.

C. Manufacturer's Installation Instructions: Submit special environmental conditions required for installation and installation techniques.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

A. Insulation Installed in Concealed Locations Surface Burning Characteristics:
   1. Foam Plastic Insulation: Maximum 75/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

B. Apply label from agency approved by authority having jurisdiction to identify each foam plastic insulation board.

1.5 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install adhesives when temperature or weather conditions are detrimental to successful installation.

1.6 SEQUENCING

A. Section 01 10 00 - Summary: Work sequence.

B. Sequence Work to ensure dampproofing or air barrier materials are in place before beginning Work of this section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration by moisture, soiling, and other sources.
   1. Store inside and in a dry location.
   2. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
   3. Protect plastic insulation as follows:
      a. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
      b. Protect against ignition at all times.
      c. Do not deliver plastic insulating materials to Project site before installation time.
      d. Once started, complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 CAVITY WALL BOARD INSULATION

A. Polyisocyanurate
   1. Manufacturers
      a. *EnergyShield PRO2:* Atlas Wall Board, www.atlaswall.com
      b. *Ecomax ci:* Rmax, www.rmax.com
      c. *EnergyGuard*: GAF Corp., www.gaf.com
      d. Thermax: Dow Chemical USA, www.dow.com
      e. XCI Class A: Hunter Panels www.hunterxci.com

   2. Components: Rigid Polyisocyanurate Insulation Board with glass fiber reinforced aluminum facers on both sides:
      a. Board size: 16 x 96 inches.
      b. Board Thickness: 2- inches or as indicated in the drawings.
      c. Thermal Resistance: - year aged R-value of 5.0 or better per inch thickness.
      d. Tested and meeting requirements of NFPA 285-(06) in commercial assemblies.

B. Applications:
   1. Polyisocyanurate Board:
      a. Use at metal panel surfaced walls as required to meet NFPA285-(06).

   2. Protection: All plastic insulation boards must be utilized, detailed, and protected in accordance with requirements of NFPA285-(06) and applicable governing authorities.

C. Accessories
1. Adhesive: Type recommended by insulation manufacturer for application. Ensure compatibility with applied air barrier material.

2.2 SINGLE WYTHE LOOSE FILL INSULATION

A. Thermal Insulation Within Masonry Cells: Loose granular perlite, ASTM C549 Type II.
1. Inert volcanic white granular glass material expanded by heat process and treated to improve water repellency.
2. Dry loose weight density of 2.0 - 11.0 lbs./cu.ft.
3. Basis of Design: *Loose-Fill Masonry Insulation* as manufactured by Ryolex® or approved equivalent.

B. Applications:
1. For special applications only where specifically indicated in the drawings.

2.3 BLANKET INSULATION

A. Manufacturers:
1. CertainTeed Corporation www.certainteed.com
2. Johns Manville Corporation. www.jm.com
3. Owens Corning. www.owens-corning.com
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Type: ASTM C665; preformed glass fiber blankets; friction fit, conforming to the following:
1. Thermal Resistance: Minimum R-value of 19.
2. Thickness: 6 inches.
3. Width: 12 and 16 inches wide, as needed for the particular stud spacing.
4. Facing: Unfaced.

C. Applications:
1. For special applications where specifically indicated in the drawings.
2. Typically behind metal panels or stucco/plaster, or within exterior soffit areas.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate, adjacent materials, and insulation boards are dry and ready to receive insulation.

C. Verify wall ties are properly spaced and ready to receive insulation.

3.2 INSTALLATION – BOARD INSUALTION at CAVITY WALLS

A. Apply adhesive to substrate.

B. Install boards horizontally between wall ties.

C. Stagger end joints. Butt edges and ends tight to adjacent boards.

D. Cut and fit insulation tight to protrusions or interruptions to insulation plane.

3.3 LOOSE FILL INSULATION

A. Install only at single-wythe masonry walls where board insulation or blanket insulation is not practical.

B. Pour insulation directly from the bag or hopper directly into the open cells of the masonry units as wall construction progresses. Do not exceed four installed courses per each installation of loose-fill to ensure filling of all open masonry cells.

C. Ensure that all wall openings are sealed prior to installing loose fill to ensure against leakage of installed fill.

D. Provide copper screen mesh bridging within walls as required to prevent any self-supporting pour from exceeding 20 feet in height.

E. Fill all walls completely and to full height

3.4 BLANKET INSULATION

A. Install only at areas where board insulation or loose fill insulation is not indicated.
   1. Use blanket widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill cavity, provide lengths that will produce a snug fit between ends.
   2. Place blankets in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
   3. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically.
   4. Do not compress insulation.

B. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.

C. Fit insulation tight in spaces and tight to exterior side of mechanical and electrical services within plane of insulation.

3.5 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

SECTION 07 27 26 – FLUID-APPLIED MEMBRANE AIR BARRIER

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes cold applied water-resistant vapor permeable air barrier at exterior wall assemblies.

B. Related Sections include the following:
1. Section 04 20 00 - Unit Masonry Assemblies: Concrete masonry unit backup.
2. Section 07 21 13 - Thermal Wall Insulation: Board insulation and compatibility.
3. Section 09 21 16 “Gypsum Board Assemblies” for exterior sheathing board.

1.2 REFERENCES

A. ASTM International:
1. ASTM E 2178 - Standard Test Method for Air Permeance.
2. ASTM E 96 – Standard Test Methods for Water Vapor Transmission of Materials.
3. ASTM D 4541 – Standard Test Method for Pull-Off Strength of Coatings.
4. ASTM D 412 – Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers – Tension.

14 ASTM D 1004 Test Method for Initial Tear Resistance of Plastic Film and Sheeting.
15 ASTM D 1876 Test Method for Peel Resistance of Adhesives.
16 ASTM D 1938 Test Method for Tear Propagation Resistance of Plastic Film and Sheeting.
17 ASTM D 1970 Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.
18 ASTM D 4258 Practice for Surface Cleaning Concrete for Coating.

B. National Fire Protection Association (NFPA)
1. NFPA 285 – Fire propagation test that evaluates the fire performance of exterior wall assemblies contining combustible components.

1.3 SUBMITTALS

A. General Submittal Requirements: Reference Section 01 33 00 - Submittal Procedures.

B. Product Data: For each type of product specified, submit manufacturer’s product data, installation instructions, and manufacturer’s printed instructions for evaluating, preparing, and treating substrate, temperature, and other limitations of installation conditions, technical data, and tested physical and performance properties.
1. Obtain primary materials from a single manufacturer regularly engaged in manufacturing vapor permeable air barrier materials. Submit letter from primary materials manufacturer indicating approval of products not manufactured by primary manufacturer.

2. Include statement that all proposed air barrier materials are permanently chemically compatible with all proposed adjacent materials.
3. Include statement that successful field peel-adhesion tests on all materials to which sealants are proposed to be adhered have been performed.
4. Include statement that products comply with applicable regulations controlling the use of volatile organic compounds for the specific authority having jurisdiction.
5. Submit manufacturer's printed documents verifying product has met testing requirements of NFPA 285 in wall assemblies pertaining to this Project.

C. Quality Assurance:
1. Submit evidence of current accreditation and certification under the Air Barrier Association of America's (ABAA) Quality Assurance Program. Submit accreditation number of manufacturer and certification numbers of proposed installers.

D. Manufacturer's Installation Instructions:
1. Submit special procedures and perimeter conditions requiring special attention.
2. Submit requirements for conditions, preparation, and any details of construction required for substrates installed by other trades in order to provide substrate installations suitable for the work under this section.
3. Submit manufacturer's recommended dry film thickness installation of fluid-applied membrane for this specific Project.

1.4 MOCKUP

A. Section 01 40 00 - Quality Requirements: Requirements for mockup.

B. Install membrane air barrier as part of the unit masonry mock-up specified in Section 04 20 00. Mock-up shall be nominal minimum 8 ft. long by 8 ft. high unless indicated larger in the drawings.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Ensure that ambient temperatures are above 40 degrees F and below 100 degrees F for 24 hours before and during application and until membrane has cured.

C. Do not install liquid-applied membrane in snow, rain, fog, or mist or when such conditions are expected within 24 hours of completed application. Do not install liquid-applied membrane when the temperature of substrate surfaces and surrounding air temperatures are below those recommended by the vapor permeable air barrier manufacturer.

1.6 PERFORMANCE REQUIREMENTS

A. Material performance: Provide materials that have an air permeance not to exceed 0.004 cu. ft. per minute per sq. ft. under a pressure differential of 0.3 in. water (1.57 psf) (0.02 L/m^2@75 Pa.) when tested in in accordance with ASTM E-2178.

B. Assembly Performance: Provide a continuous vapor permeable air barrier assembly that has an air leakage not to exceed 0.040 cu. ft. per minute per sq. ft. under a pressure differential of 0.3 in. water (1.57 psf) (0.20 L/m^2@75 Pa.) when tested in in accordance with ASTM E-2357.
1. Assembly shall be capable of withstanding combined positive and negative design wind, fan, and stack pressures on the envelope without damage or displacement and shall transfer the load to the structure.
2. Assembly shall perform as a liquid drainage plane flashed to discharge condensation or water penetration to the exterior. Assembly shall accommodate movements of building materials by providing expansion and control joints as required, with accessory vapor permeable air barrier materials at such locations, changes in substrate, and perimeter conditions.
3. Assembly shall not displace adjacent materials under full load.

4. Assembly shall be joined in an airtight and flexible manner to the air barrier material of adjacent assemblies, allowing for the relative movement of assemblies due to thermal and moisture variations, and any anticipated seismic movement. Connection shall be made between:
   a. Foundation and walls.
   b. Walls and windows or doors.
   c. Different wall systems.
   d. Wall and roof.
   e. Wall and roof over unconditioned space.
   f. Walls, floor and roof across construction, control and expansion joints.
   g. Walls, floors and roof to utility, pipe and duct penetrations.

5. All penetrations of the air barrier and paths of air infiltration/exfiltration shall be made airtight.

C. System is not suitable for waterproofing applications in hydrostatic condition.

D. System is not compatible with petroleum solvents, fuels and oils, materials containing creosote, pentachlorophenol, or linseed oil.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in original packages with seals unbroken, labeled with manufacturer's name, product, date of manufacturer, and any special directions for storage.

B. Store materials in their original undamaged packages in a clean, dry, protected location within temperature range recommended by the manufacturer. Protect stored materials from direct sunlight.

C. Handle materials in accordance with manufacturer's recommendations.

1.8 WARRANTY

A. Material Warranty: Provide Manufacturer's standard form in which manufacturer agrees to replace fluid-applied air barrier membrane materials that fail within specified warranty period when installed and used in accordance with manufacturer's written instructions.
   1. Failures include, but are not necessarily limited to the following:
      a. Failure to maintain air permeance rating not to exceed .004 cfm/sq. ft (0.02 L/s/sq. m.) when tested per ASTM E2178, within specified warranty period.
      b. Failure to maintain a vapor permeance rating greater than 10 perms when tested in accordance with ATM E96, Method B.
   2. Warranty Period: Minimum of 5-years from date of Substantial Completion of the Project

B. Installer's Warranty: Provide air barrier subcontractor's material and installation warranty for a minimum of 2-years from date of Substantial Completion of the Project. Warranty shall cover all components of the air barrier assembly against failure including loss of airtight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.

1.9 PRE-INSTALLATION CONFERENCE

A. A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Pre-installation conference shall include the Contractor, installer, Architect, system manufacturer's field representative, and Owner's building envelope consultant. Agenda for meeting shall include but not be limited to the following:
   1. Review of Submittals.
   2. Review of surface preparation, minimum curing period and installation procedures.
   3. Review of special details and flashings.
   4. Sequence of construction, responsibilities and schedule for subsequent operations.
   5. Review of mock-up requirements.

6. Review of inspection, testing, protection and repair procedures.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. General: Manufacturer shall be a firm with a minimum of 10-years' experience in the production and sales of waterproofing and air barriers. Manufacturers proposed for use, but not named in these specifications shall submit evidence of ability to meet all requirements specified and include a list of projects of similar design and complexity completed within the past five years.
   1. Grace Construction Products: *Perm-A Barrier VPL.*
   2. Henry Company, Inc.: *Air Bloc 31MR.*
   3. Polyguard Products, Inc.: *Airlok Flex VP.*
   4. Prosoco *R-Guard MVP*.
   5. STO: *EmeraldCoat*.
   6. Tremco, Inc.: *ExoAir 230.*
   7. W.R. Meadows, Inc: *Air-Shield LMP*
   8. Substitutions: Section 01 25 00 – Substitution Procedures – products must meet NFPA 285 requirements for the wall assembly.

2.2 SYSTEM COMPONENTS: Basis of Design: *Perm-A-Barrier* as manufactured by Grace Construction Products or approved equivalent by specified manufacturer.

A. Fluid-Applied Membrane: Single component acrylic vapor-permeable air barrier membrane, resulting in minimum 30-mil dry thickness.
   1. Basis of Design: *Perm-A Barrier VPL* Class ll vapor retarder as manufactured by GCP Applied Technologies (Formerly Grace Construction Products), or approved equivalent by specified manufacturer.
   2. Air permeance: Less than 0.004 cfm/ft^2 per ASTM E2178.
   3. Water vapor transmission: Not less than 11.2 perms (649.6 ng/Pa x s x sq. m); when tested in accordance with ASTM E96.
   4. Pull adhesion to glass faced wall board: 25 psi or greater per ASTM D4541.
   5. Tensile strength: 15 psi or greater per ASTM D412.
   6. Solids content: Minimum 50% by volume or weight per ASTM D2369.
   7. UV exposure limit: Not more than 180 calendar days; per ASTM D412 and ASTM E96-Method B.

B. Transition Membrane: *Perm-A-Barrier Detail Membrane*, fully adhered; must be provided by membrane system manufacturer.

C. Through-Wall Flashing: *Perm-A-Barrier Wall Flashing*: 0.8 mm (32 mils) of rubberized asphalt integrally bonded to 0.2 mm (8 mil) of cross-laminated, high-density polyethylene film to provide a min. 1.0 mm (40 mil) thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed, conforming with the following:
   1. Water Vapor Transmission: ASTM E96, Method B: 2.9 ng/m2sPa (0.05 perms) max.
   2. Water Absorption: ASTM D570: max. 0.1% by weight
   3. Puncture Resistance: ASTM E154: 356 N (80 lbs.) min.
   4. Tear Resistance:
      a. Initiation ASTM D1004: min. 58 N (13.0 lbs.) M.D.
      b. Propagation ASTM D1938: min. 40 N (9.0 lbs.) M.D.
   5. Lap Adhesion at -4ºC (25ºF): ASTM D1876: 880 N/m (5.0 lbs./in.) of width
   6. Low Temperature Flexibility ASTM D1970: Unaffected to -43ºC (-45ºF)
   7. Tensile Strength: ASTM D412, Die C Modified: min. 5.5 MPa (800 psi)
   8. Elongation, Ultimate Failure of Rubberized Asphalt: ASTM D412, Die C: min. 200%.

D. Primer: Water based *Perm-A-Barrier Primer Plus* or *WB Primer*.

E. Penetrations, terminations, and detailing sealant: *Bituthene Liquid Membrane*.

F. Joint Sealant: As recommended by the primary system manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces are durable, free of matter detrimental to adhesion or application of air barrier system. Verify items penetrating substrate are securely anchored and prepared to receive air barrier system.

C. Ensure the following conditions:
1. Surfaces are sound, dry, even, and free of oil, grease, dirt, excess mortar or other contaminants.
2. Concrete surfaces are cured and dry, smooth without large voids, loose aggregate, spalled areas, or sharp protrusions.
3. Masonry joints are full, flush, and completely filled with mortar, and all excess mortar on masonry ties has been removed.
4. Confirm mortar is tooled full and flush at pintel ties embedded in CMU joints.
5. Corners and edges of drywall sheathing panels are properly screw-fastened to avoid any deflection in the final membrane, and all fastener heads are driven flush with the panel surface.
6. Substrate dryness meets air barrier system manufacturer’s requirements. Test for capillary moisture in substrate by plastic sheet method according to ASTM D 4263.

D. Verify sealants used in sheathing installation are compatible with proposed air barrier membrane. Perform field peel-adhesion test on materials to which sealants are adhered.

E. Beginning air barrier system installation indicates acceptance of substrate conditions.

3.2 PREPARATION

A. During wall construction install embedded flashings including all membrane through-wall flashings where indicated and as necessary for successful air barrier installation. Install membrane flashing over vertical and horizontal legs of steel shelf angles and over transition between vertical leg and sheathing or CMU substrate.

B. Protect adjacent construction and surfaces not designated to receive air barrier system.

C. Clean loose dust and dirt from surfaces to receive air barrier system by brushing or use of a clean dry cloth.

D. Do not apply membrane or sealants to surfaces unacceptable to air barrier system manufacturer without corrective action.

E. Fill surface irregularities, voids, and joints in substrate as recommended by system manufacturer, with particular attention to expansion and construction joints. Remove any high spots to ensure uniform surface.

F. On highly dusty or porous substrates apply a scratch coat of liquid membrane prior to spraying to full thickness.

G. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through air barrier and protrusions.

H. Protection of Other Work: Do not allow liquid and mastic compounds to enter and clog drains and conductors. Prevent spillage and migration onto other surfaces of work by masking or otherwise protecting adjoining work.

3.3 INSTALLATION

A. General: Install transition strip materials and fluid-applied vapor-permeable air and liquid water barrier to prevent air infiltration and exfiltration through the exterior wall construction without prohibiting the movement of water vapor through the wall.
1. Install materials in accordance with manufacturer’s printed instructions, the approved

submittals, and as specified herein.

2. Do not allow materials to come in contact with other chemically incompatible materials.
3. Prime substrates prior to application of self-adhering air barrier transition membrane/flashing.
4. Roll entire surface of self-adhering air barrier transition membrane/flashing with hand-held roller.
5. To ensure proper adhesion to polyethylene surfacing, apply primer on areas of self-adhering membrane at locations where fluid-applied air barrier will be applied to top surface of membrane.
6. Apply self-adhering membrane finger flashing around wall penetrations extending minimum 2-inches onto penetration and onto fluid-applied air barrier.
7. Apply sealant or liquid membrane along edges and seams of self-adhering membrane.
8. Applicator shall perform and record wet-mil thickness measurements during application per every 200 sq. ft. of application and submit record of findings to the Owner, Architect, and General Contractor.

B. Reinforcement and Joint Treatments
1. Reinforce joints, corners, and changes in plane of substrate using air barrier system manufacturer's approved transition membrane and sealant.
2. Tape all vertical and horizontal joints in gypsum sheathing using 2-inch wide x continuous mesh wallboard tape or approved transition membrane as recommended by the system manufacturer. Joint gaps greater than 1/4" wide shall be filled with approved mastic or caulk and allowed to fully cure before application of tape. Ensure that open-mesh tape and any remaining joint gap is fully filled with specified-applied membrane material.

C. Priming:
1. Apply primer for transition strips at rate recommended by manufacturer. Allow primer to dry completely before transition strip application. Prime all wood, metal, painted and shop coated substrates.
2. Apply as many coats as necessary for proper adhesion.
3. Prime masonry or concrete substrates with conditioning primer for fluid-applied vapor permeable air barrier as recommended by system manufacturer. Apply as many coats as necessary for proper adhesion. Provide adequate drying time between coats.
4. Prime glass-fiber faced gypsum sheathing with number of coats as required to achieve proper bonding. Provide adequate drying time between coats.

D. Detailing:
1. Connect vapor permeable air barrier in exterior wall assembly continuously to the air barrier of the roof, to concrete below-grade structures, to windows, curtain wall, storefront, louvers, exterior doors, and other intersection conditions, and perform sealing of penetrations using accessory materials in accordance with system manufacturer's recommendations and approved submittals.
2. Transitions to beams, columns, and similar appurtenances shall be made with system manufacturer's transition membrane.
3. Apply transition strips and flashing to shed water naturally. Seal all sheet edges with permanently flexible termination mastic.
4. Install transition strips in shingle fashion so that any subsequent sheet overlaps sheet below by a minimum of 2-inches. Overlap horizontally adjacent transition strips a minimum of 2-inches. Roll overlaps into place using hand roller.
5. Seal all penetrations with termination mastic, extruded silicone sealant, membrane counter flashing or other material approved by the system manufacturer and the approved submittals.
6. At changes in substrate plane install approved transition material of sealant, mastic, membrane counter flashing or other material approved by the system manufacturer and the approved submittals. Eliminate all sharp 90-degree inside corners and provide a smooth transition from one plane to another.

7. At through-wall flashings provide an additional 6-inch wide strip of manufacturer's recommended membrane counter flashing to seal top of through-wall flashing to fluid-applied membrane. Seal top edge of strip with bead of approved sealant or mastic.
8. At expansion and control joints provide backup for the membrane to accommodate anticipated movement. Provide transition at all joint assemblies.
9. Apply a continuous bead or trowel coat of mastic along membrane seams at reverse-lapped seams, rough cuts, and as recommended by the manufacturer and the approved submittals.
10. Membrane shall be continuously supported by substrate. Provide mechanically fastened non-corrosive sheet metal to span gaps in substrate plane and to make smooth transition from one plane to another.
11. At the end of each working day, seal top edge of self-adhered membrane to substrate with termination mastic.

E. Fluid-Applied Membrane:
1. Ensure that all detailing of wall and sheathing is completed prior to applying the full coverage of fluid-applied membrane.
2. Apply fluid-applied vapor permeable air barrier using spray equipment and methods as required to achieve at a minimum the specified dry film thickness. Dry mil thicknesses thinner than specified shall not be acceptable even if tested and allowed by the system manufacturer.
3. Spray number of coats as required to achieve the specified dry film thickness. Allow for required drying time between each coat.
4. Make frequent wet mil thickness measurements as required during application to ensure application thickness will yield specified dry mil thickness requirements.

F. Inspection
1. Installer shall arrange for system manufacturer's field representative shall make a minimum of three inspection trips to the jobsite to review processes and work completed. Owner's building envelope consultant shall be advised a minimum of 5-days in advance of manufacturer's inspection trips. Manufacturer's representative shall provide written report of relevant observations to the Contractor:
   a. At work commencement.
   b. At nominal 50% completion.
   c. Just prior to system cover-up.
2. All penetrations of the air barrier and paths of air infiltration/exfiltration shall be made airtight. Installer shall inspect completed system with manufacturer's field representative and Owner's building envelope consultant just prior to cover-up and make corrections to any tears, scuffs, cracks, penetrations, or other damage as directed by the manufacturer.

3.4 CLEANING AND PROTECTING

A. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction and materials.

B. Inspect installation just prior to final covering of system, and repair punctures, tears, damaged areas, and inadequately lapped seams with patches of membrane lapped and sealed per manufacturer's recommendations.

C. Coordinate scheduling with installation of cover materials to ensure that membrane is not exposed to sunlight longer than recommended by the system manufacturer. Board insulation shall not be installed until fluid-applied membrane is fully cured.

END OF SECTION

SECTION 07 42 13 - METAL SOFFIT PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Prefinished steel soffit panel system with concealed fasteners.
   2. Related flashings and accessory components.

B. Related Sections:
   1. Section 07 62 00 - Sheet Metal Flashing and Trim.

1.2 REFERENCES

A. ASTM International:
   1. ASTM A755/A755M - Standard Specification for Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products.
   2. ASTM A924/A924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.

1.3 PERFORMANCE REQUIREMENTS

A. Components: Design and size components to withstand dead and live loads caused by positive and negative wind pressure as calculated in accordance with applicable code.

B. Maximum Allowable Deflection of Panel: 1/180 of span.

C. Movement: Accommodate movement within system without damage to components or deterioration of seals, movement within system; movement between system and perimeter components when subject to seasonal temperature cycling; dynamic loading and release of loads; deflection of structural support framing.

D. Drainage: Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate dimensions, layout, joints, expansion joints, construction details, methods of anchorage, and interface with adjacent materials.

C. Product Data: Submit data on panels.

D. Samples:
   1. Submit two samples of each type panel and panel finish, 12 x 12 inch in size, illustrating panel profile and finish color, sheen, and texture.
   2. Submit two samples of fasteners, closures, and other accessories.

E. Manufacturer’s Installation Instructions: Submit special procedures.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Installer: Company specializing in performing Work of this section with minimum three years’ experience and approved by manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.

C. Store prefinished material off ground protected from weather, to prevent twisting, bending, or abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

D. Prevent contact with materials capable of causing discoloration or staining.

1.7 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with installation of secondary cold form metal support framing.

1.8 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Fluoropolymer Finish Warranty: Submit a written warranty, signed by manufacturer, covering failure of the factory-applied exterior finish on metal soffit panels within the specified warranty period and agreeing to repair finish or replace soffit panels that show evidence of finish deterioration. Deterioration of finish includes, but is not limited to, color fade, chalking, cracking, peeling, and loss of film integrity.
   1. Fluoropolymer Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 METAL SOFFIT PANELS

A. Manufacturers - Prefinished Galvanized Steel Panels:
   1. AEP-Span www.aep-span.com
   2. Berridge Manufacturing Co. www.berridge.com
   3. Centria www.centria.com
   4. Metal Building Components, Inc. www.mbci.com
   5. Petersen Aluminum Corp. www.pac-clad.com
   6. Substitutions: Section 01 60 00 - Product Requirements.

2.2 STEEL PANELS

A. Base Material: Prefinished galvanized steel sheet. ASTM A755/A755M coil coated
   1. Base Metal: ASTM A653/A653M; Structural Quality; G90 zinc coating.
   2. Exposed Finish: Premium three-coat fluoropolymer coating with minimum 70 percent polyvinylidene fluoride resin. Color(s) to be selected by the Architect.
   3. Unexposed Finish: Manufacturer's standard coating.
   4. Trim, Closure Pieces, and Flashings: Same material, thickness and finish as panel sheets; brake formed to required profiles
   5. 20-year finish warranty.

B. Overhead Steel Soffit Panels:
   1. Minimum 22-gage prefinished steel stock.
   2. Interlocking flat profile without grooves to match Berridge “FW-12” Panel
   3. 11-5/8-inch face width with Vee grooves at 3-7/8 centers. Certain soffit panels to be vented as indicated in the drawings.
   4. Interlocking edges and ends butted tight. Provide with matching corner trim and

fascia.

5. Install with concealed fasteners.
6. Color to be selected by Architect from Manufacture’s full range of options.

2.3 ACCESSORIES

A. Sealants: Specified in Section 07 90 00; color to match siding.

B. Fasteners: Manufacturer's standard type to suit application; with soft neoprene washers, stainless steel; fastener cap same color as exterior panel.

C. Field Touch-up Paint: As recommended by panel manufacturer.

2.4 FABRICATION

A. Form sections to shape indicated on Drawings, accurate in size, square, and free from distortion or defects.

B. Form pieces in longest practicable lengths.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install panels in accordance with manufacturer’s instructions using manufacturer’s standard flashing and trim details unless modified by Drawings.

B. Protect surfaces in contact with cementitious materials and dissimilar metals with bituminous paint. Allow to dry prior to installation.

C. Use proper tools to obtain controlled, uniform compression for positive seal without rupture of neoprene washer.

D. Field cutting panels by torch is not permitted.

E. Install soffit panels full width of soffit over open framing and fasten at maximum 16 inches on center. End joints in soffit panels are not allowed. Install panels with concealed fasteners.

F. Accessories: Install components necessary for complete soffit panel assembly, including trim, flashings, sealants, gaskets, and similar items.

G. Seal and place gaskets to prevent weather penetration. Maintain neat appearance.

H. Installation Tolerances: Shim and align panel units within installed tolerance of 1/4 inch in 20 feet on level, plumb, and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.2 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove site cuttings from finish surfaces.

C. Remove protective films from panel surfaces within 60 days of installation.

D. Clean and wash prefinished surfaces with mild soap and water; rinse with clean water.

END OF SECTION

SECTION 07 54 23 – MULTIPLY PVC KEE FLEECEBACK MEMBRANE ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Work includes all labor, materials, equipment, and services necessary for installation of torch-applied SBS modified bituminous membrane and fleece-backed PVC KEE thermoplastic hybrid roofing system.

B. Related Sections:
1. Section 03 52 16 - Insulating Concrete Roof Fill: Requirements for insulating concrete as roofing deck.
2. Section 05 31 00 – Steel Decking: Acoustical metal deck at high gym,
3. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood nailers.
4. Section 07 62 00 - Sheet Metal Flashing and Trim: Sheet metal flashing and counterflashing.
5. Section 07 71 00 - Roof Specialties.
6. Section 07 72 33 - Roof Hatches.

1.3 SYSTEM DESCRIPTION

A. Multiply Roofing System: Roof assembly consisting of a smooth-surfaced torch SBS modified bituminous base-ply sheet and highly reflective PVC KEE fleeceback cap sheet ply.

B. Roof Deck: Insulating concrete roof fill and steel acoustic deck as indicated.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Pre-installation Meeting: Conduct at Project Site.
1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including set up and mobilization areas for stored material and work area.
3. Review safety procedures and site-specific requirements relating to the work and areas to be accessed.
4. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
5. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
6. Review structural loading limitations of roof deck during and after roofing.
7. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
8. Review governing regulations and requirements for insurance and certificates if applicable.
9. Review temporary protection requirements for roofing system during and after installation.
10. Review roof observation and repair procedures after roofing installation.
11. Review notification procedures for weather or non-working days.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with not less than 5 years documented experience and have ISO 9001 certification.

B. Installer Qualifications: Company specializing in similar roofing system installation with not less than 5 years' experience and authorized by roofing system manufacturer as qualified to install manufacturer's roofing materials.

C. Installer's Field Supervision: Maintain a full-time Supervisor/Foreman on job site during all phases of roofing work while roofing work is in progress. Supervisor/Foremen must be fluent in the English language and maintain proper supervision of workmen.

D. Maintain a copy of the Contract Documents in the possession of the Supervisor/Foreman and on the roof at all times.

E. Source Limitations: Obtain all components of roof system from a single manufacturer. Secondary products that are required shall be recommended and approved in writing by the roofing system Manufacturer.
1. Upon request of the Architect or Owner, submit Manufacturer's written approval of secondary components in list form, signed by an authorized agent of the Manufacturer.
2. Manufacturer shall have direct authority and control over all fabrication of steel components as well as the raw materials used in their fabrication.

F. Source Quality Control: Manufacturer shall have in place a documented, standardized quality control program such as ISO-9001 approval.

G. Engage the Manufacturer's Field Representative to conduct required periodic inspections of work in progress as described herein and shall furnish written documentation of all such inspections.

1.6 SUBMITTALS

A. Comply with pertinent provisions of Division 01 Section “Submittal Procedures, unless otherwise indicated.”

B. Manufacturer's Installation Instructions: Submit installation instructions and recommendations indicating special precautions required for installing the membrane.

C. Manufacturer's Certificate: Certify that roof system furnished is approved by Factory Mutual, Underwriters Laboratories, Warnock Hersey or approved third party testing facility in accordance with ASTM E108, Class [A] for external fire and meets local or nationally recognized building codes.

D. Manufacturer's Certificate: Certify that materials are manufactured in the United States and conform to requirements specified herein, are chemically and physically compatible with each other, and are suitable for inclusion within the total roof system specified herein.

E. Manufacturer's Certificate: Submit a certified copy of the roofing manufacturer's ISO 9001 compliance certificate.

F. Test Reports: Submit test reports, prepared by an independent testing agency, for all modified bituminous sheet roofing, indicating compliance with ASTM D5147.

G. Written certification from the roofing system manufacturer certifying the applicator is currently authorized for the installation of the specified roof system.

H. Design Loads: Submit copy of manufacturer's minimum design load calculations according to ASCE 7-16, Method 2 for Components and Cladding, In no case shall the design loads be taken to be less than those detailed in Design and Performance Criteria article of this specification.

I. Specimen Warranty: Provide an unexecuted copy of the warranty specified for this Project, identifying the terms and conditions required of the Manufacturer and the Owner

1.7 CLOSEOUT SUBMITTALS

A. General: Comply with Requirements of Division 01 Section Closeout Submittals.

B. Special Project Warranty: Provide specified warranty for the Project, executed by the authorized agent of the Manufacturer.

C. Roofing Maintenance Instructions: Provide a manual of manufacturer's recommendations for maintenance of installed roofing systems.

1.8 DELIVERY, STORAGE AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

C. Discard and legally dispose of materials that cannot be applied within its stated shelf life.

D. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

E. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

1.9 WARRANTY

A. Upon completion of installation, and acceptance by the Owner and Architect, the Manufacturer will supply to the Owner an “NDL” warranty, without monetary limitations in which manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Twenty (20) years from date of Substantial Completion.

B. Installer’s Warranty: Provide roofing installers warranty, to the membrane manufacturer, in which the roofing installer will, at his own expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.
   1. Warranty Period: Five (5) years from date of Substantial Completion.

1.10 MANUFACTURERS FIELD REPRESENTATION

A. Regularly scheduled site observations shall be required by the manufacturer’s field representative at an appropriate intervals during the roofing installation period; exceptions being made for inclement weather, holidays, etc.

B. All observation reports shall be kept current and shall be delivered electronically to the architect and contractor within five (5) calendar days after the observation. Progress payments for roofing work may be withheld if observation report submissions are not current.

C. Any failure by the Architect, the Owner’s Representative, the Project Manager, or the roofing manufacturer’s Technical Field Representative to observe, detect, pinpoint, or object to any defect or noncompliance with the requirements of the Roofing Manufacturer’s requirements, the Contract Documents, the Project Specifications, the approved Shop Drawings and Engineering Data, and/or the Roofing Manufacturer’s standard details – of work in progress or completed work – shall not relieve the Contractor of, or reduce, or in any way limit, his responsibility of full performance of the work required of him under the requirements of the Roofing Manufacturer, the Contract Documents, the Project Specifications, the approved Shop Drawings and Engineering Data, and/or the Roofing Manufacturer’s standard details

1.11 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

B. Do not apply roofing insulation or membrane to damp deck surface.

C. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.

D. Do not expose materials subject to water or solar damage in quantities greater than can be weatherproofed during same day.

E. Phased Construction will not be accepted.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis of Design Manufacturer: **Elevate.**

B. Additional Approved Manufacturers: For systems approved as equivalent to the Basis of Design system.
   1. GAF
   2. Soprema
   3. The Garland Company
   4. Johns Manville

C. Substitutions: Per Division 1 by roofing contractor. Manufacturer or distributor to not provide substitution request.

D. Thermoplastic Hybrid roofing shall include but not be limited to:
1. Mechanically Attached Anchor Sheet at insulating concrete deck only: membrane complying with ASTM D 4601, Type II.
2. Base Ply Sheet Modified Membrane: Type I membrane complying with ASTM 6163, Grade S.
3. Cap Sheet Membrane: PVC KEE Fleeceback; Type III membrane complying with ASTM D4434.
4. Stripping Ply Sheet Modified Membrane: Type I membrane complying with ASTM 6163, Grade S.
5. Base Flashing Assembly: PVC KEE Bareback; Type III membrane complying with ASTM D4434.

E. Materials, manufacturer's product designations, and/or manufacturer's names specified herein shall be regarded as the minimum standard of quality required for work of this Section. Comply with all manufacturer and contractor/fabricator quality and performance criteria specified in Part 1.

2.2 ROOFING SHEET MATERIALS

A. Mechanically Attached Anchor Sheet for use over Lightweight Insulating Concrete Deck: ASTM D 4601, Type II, 70 mil, heavy duty asphalt coated fiberglass base sheet; suitable for application method specified, and as follows: MB Base

B. Base Ply Sheet Modified Membrane: ASTM D 6163, Grade S, Type I, 120 mil SBS-modified asphalt sheet; suitable for application method specified, and as follows: SBS Glass Torch Base

C. Fleeceback Roofing Cap Sheet: ASTM D 4434, Type III, 115 mil - flexible thermoplastic roofing membrane produced with DuPont™ Elvaloy® KEE, polyester weft-inserted reinforcement and a 5.5 ounce non-woven spunbonded polyester fleece backing suitable for application method specified, and as follows: Elevate 60 mil MIN PVC KEE XR

2.3 BASE FLASHING SHEET MATERIALS

A. Bareback Roofing Sheet: ASTM D 4434, Type III, 115 mil - flexible thermoplastic roofing membrane produced with DuPont™ Elvaloy® KEE, polyester weft-inserted reinforcement suitable for application method specified, and as follows: Elevate 60 mil MIN PVC KEE

2.4 BITUMINOUS ROOFING MATERIALS

A. General: Auxiliary materials provided or recommended by roofing system manufacturer for intended use and compatible with roofing.

B. Asphalt Primer: ASTM D 41/D 41M.

C. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required by roofing system manufacturer for application.

D. Miscellaneous Materials: Provide those recommended by roofing system manufacturer.

2.5 RELATED MATERIALS

A. Low VOC Bonding Adhesive: As recommended by Thermoplastic Sheet Manufacturer’s printed instructions to develop a bond between the flashing membrane and the substrate to which the membrane is to be attached. Adhesive for bareback membrane is to be LVOC Bonding Adhesive.

B. Fasteners: FM Approved corrosion resistant steel screws of the appropriate size for fasteners for roof membrane and insulation attachment and for sheet metal flashing.

Fasteners for the membrane shall be supplied by the thermoplastic manufacturer and are to be installed as recommended by Thermoplastic sheet manufacturer's printed instructions.

1. Shall be Factory Mutual approved and supplied by the manufacturer for the specific application.
2. Fastener for Brick: Zamac Nailin. Shall be 1/4-inch x 2 inches, stainless steel nail, one piece unit, flat head, as manufactured by Power Fasteners, or approved equal.
3. Fastener for Metal Deck: Shall be a minimum #14 Factory Mutual approved fastener, fluorocarbon coated, with CR-10 coating. A minimum 0.200-inch diameter shank and 0.250-inch diameter thread. To be used with Factory Mutual approved, round pressure plates or bar, and having a fluorocarbon CR-10 coating, when subjected to 30 Kesternich cycles (DIN 50018) shows less than ten percent (15%) red rust which surpasses Factory Mutual Approval Standard 4470 as manufactured by roofing manufacturer.
4. Nails: G-90 galvanized or non-ferrous type, size as required to suite application, minimum 11 gauge with 3/8-inch diameter head.

C. Insulating Concrete Base Sheet Fasteners: Shall be approved by the fastener manufacturer, membrane manufacturer and FM for use with insulating concrete deck as follows:

1. Fastener shall be a single unit, precision formed, of electro zinc coated steel having a 2.7-inch diameter rib reinforced cap and 1.7-inch-long rectangular legs, designed to expand when fully driven into the lightweight insulating concrete. Fasteners for insulating concrete deck shall meet FM Standard 4470 requirements for corrosion resistance. As manufactured by roofing manufacturer.

2.6 ROOF INSULATION OVER STEEL DECKS

A. Polyisocyanurate Roof Insulation: Shall comply with ASTM C1289 Type II Class 2 coated polymer bonded glass fiber mat facer on both sides, with a 20-psi minimum compressive strength. Total thickness shall be as indicated on the drawings and divided in two staggered layers. Size to be 48” x 96” for mechanically attached and 48” x 48” for adhered. Approved product shall be RESISTA as manufactured by Elevate or pre-approved substitute.

B. Cover Board: Moisture resistant, 1/2-inch-thick gypsum roof board, ASTM C 1278; provide 48” by 48” nominal size: “DensDeck Prime” by Georgia Pacific or pre-approved equal.

C. Tapered Insulation: Factory cut 48 inches x 48 inches polyisocyanurate board; slope and thickness to vary as required to achieve a minimum ¼” per foot finished slope unless noted otherwise on the Drawings (cricketed areas between roof drains / scuppers are to achieve a minimum ½” per foot slope); ASTM C1289 Type II Class 2 coated polymer bonded glass fiber mat facer on both sides, with a 20-psi minimum compressive strength. Approved product shall be tapered RESISTA as manufactured by Elevate or pre-approved substitute. Provide 1/2-inch recovery board similar to that specified above over tapered polyisocyanurate board insulation.

D. Tapered Edge Strip: Tapered perlite complying with ASTM C208, Type II manufactured by Blue Ridge.

E. Insulation Adhesive: Bead-Applied Insulation Adhesive: Insulation manufacturers recommended bead-applied, low-rise, one-component, or multicomponent urethane adhesive formulated to attach coverboard and tapered insulation (if required) and second layer of insulation.

2.7 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to

defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.

C. Solar Reflectance Index: Not less than 64 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

D. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated. Identify products with appropriate markings from an applicable testing agency.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify surfaces and site conditions are ready to receive work.

C. Verify deck is supported and secure.

D. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains or eaves, and suitable for installation of roof system.

E. Verify deck surfaces are dry and free of snow or ice.

F. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, and wood cants and nailers are in place.
1. Verify that wood nailers have been anchored in accordance with SPRI ES-1 requirements.

G. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
1. Take moisture readings for the insulating concrete deck using moisture meter approved by the roofing manufacturer. Do not install roofing system over deck not meeting dryness requirements as determined by the roofing manufacturer.

H. Verify that insulating concrete provides positive drainage meeting requirements of membrane manufacturer prior to beginning roofing operations.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Cooperate with manufacturer, inspection and test agencies engaged or required to perform services in connection with installing the roof system.

B. Insurance/Code Compliance: Where required by code, install and test the roofing system to comply with governing regulation and specified insurance requirements.

C. Protect other work from spillage of roofing materials and prevent materials from entering or clogging drains and conductors. Replace or restore other work damaged by installation of the modified bituminous roofing system.

D. Coordinate installation of roofing system so insulation and other components of the roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of workday or when rain is forecast.
1. Provide tie-ins at end of each day's work to cover exposed roofing sheets and insulation with a course of roofing cement, with joints and edges sealed. On Thermoplastic cap sheet provide sealant, with joints and edges sealed.
2. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system.
3. Remove and discard temporary seals before beginning work on adjoining roofing.

E. Apply roofing materials as specified by manufacturer's instructions:
1. Keep roofing materials dry before and during application.
2. Do not permit phased construction.
3. Complete application of roofing plies, modified sheet and flashing in a continuous operation.
4. Begin and apply only as much roofing in one day as can be completed that same day.

3.3 RIGID BOARD INSULATION AND COVER BOARD OVER ACOUSTICAL STEEL DECK

A. Fasteners exposed through bottom flutes of acoustical steel deck shall not be allowed.

B. Install insulation and cover board per current ASCE 7 guidelines and as specified herein.

C. Install rigid board insulation over acoustical steel deck with long dimension of initial layer of insulation boards perpendicular to flutes of metal roof deck.

D. Install required thickness in 2 or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6-inches in each direction.

E. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.

F. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water. Stagger all joints and butt tight. Cut neatly around all roofing penetrations and interruptions.

G. Install tapered insulation to conform to slopes indicated in the drawings and the reviewed Shop Drawings.

H. Install cover board over rigid insulation in accordance with manufacturer’s recommendations. Stagger all joints and butt tight. Cut neatly around all roofing penetrations and interruptions.

I. Mechanically fasten first layer of insulation board using membrane manufacturer’s recommended steel screw fasteners and metal plates. Screw fasteners shall extend through top flutes of metal decking **ONLY**, and by a minimum of 1”. Use approved fastening pattern as specifically recommended by the roofing system manufacturer to meet or exceed current ASCE 7 wind uplift guidelines.
1. Spacing of fasteners for insulation board shall meet requirements by roofing manufacturer to support the specified warranty and as required to meet all code and ASCE-7 requirements for the design wind loading.
2. Where allowed by membrane manufacturer, code authorities. and ASCE-7 requirements for spacings, insulation board, cover board, and membrane may be fastened concurrently.

J. Specified second layer of insulation, tapered insulation (if required) and cover board, the top surface of the underlying layer of insulation shall have bead applied low rise foam adhesive applied to it. Do now allow adhesive to skim over prior to setting subsequent board, and subsequent layers of insulation shall be applied using offset joints, so that all individual insulation layers joints are offset a minimum of twelve inches (12") both ways with the preceding layer and immediately walked in place and weighed down per manufacturers requirements. Contractor to utilize water rollers to walk in and even distribute insulation adhesive below prior to being weighed down.

3.4 SBS MODIFIED BITUMINOUS BASE PLY INSTALLATION

A. Install base plies according to roofing manufacturer's written instructions, starting at low point of roofing system. Extend roofing membrane sheets over and terminate beyond cants, installing as follows:
1. Lay out the roll in the course to be followed and unroll 6 feet.
2. Using a roofing torch, heat the surface of the coiled portion until the burn-off backer melts away. At this point, the material is hot enough to lay into the substrate.

Progressively unroll the sheet while heating and insure a proper bond.

3. After the major portion of the roll is bonded, re-roll the first 6 feet and bond it in a similar fashion.
4. Repeat this operation with subsequent rolls with side laps of 4 inches and end laps per manufacturers requirements.
5. Give each lap a finishing touch by passing the torch along the joint and spreading the melted bitumen evenly with a rounded trowel to ensure a smooth, tight seal.

B. Laps: Accurately align roofing sheets, without stretching, and maintain uniform side and end laps. Stagger end laps. Completely bond and seal laps, leaving no voids.
1. Repair voids in laps and lapped seams not completely sealed.

C. Install roofing sheets so side and end laps shed water.

3.5 THERMOPLASTIC MEMBRANE INSTALLATION

A. General: Install in strict accordance with manufacturer's latest published requirements, instructions, specifications, and details and approved shop drawings.

B. Over the properly installed and prepared substrate, apply manufacturers low-rise foam to clean dry surface. The foam shall be applied at a rate according to manufacturer requirements. Allow to rise per manufacturers application guide. No foam is applied to the back of the fleeceback membrane. Do not allow foam to skin over or surface-dry prior to installation of fleece-back membrane.

C. The Fleeceback roof membrane is unrolled immediately into the foam. Adjacent rolls overlap previous rolls by 3 inches. This process is repeated throughout the roof area. Immediately after application into the foam, each roll shall be firmly pressed into place with a broom or water filled, foam covered lawn roller by frequent rolling in two directions.

D. Contractor to utilize water rollers to walk in and even distribute insulation adhesive.

E. Weld cover strips at all seams that do not have a factory selvage edge.

3.6 BASE FLASHING INSTALLATION

A. Apply bonding adhesive to substrate and underside of flashing sheet at required rate and allow to partially dry. Do not apply LVOC bonding adhesive to seam area of flashing.

B. Flash penetrations and field-formed inside and outside corners with sheet flashing as recommended by manufacturer.

C. Clean seam areas, overlap seams, and firmly roll flashings into the adhesive. Weld side and end laps to ensure a watertight seam installation.

D. Test lap edges with probe to verify seam weld continuity. Apply lap sealant, if required by roofing manufacturer, and seal exposed edges of sheet flashing terminations per manufacturer’s requirements.

E. Terminate and seal top sheet flashings and mechanically anchor to substrate through termination bars.

3.7 ROOF DETAILING INSTALLATION

A. Coordinate counter flashing, cap flashings, expansion joints, and similar work with roofing membrane work (as specified in other Sections).

B. Coordinate roof accessories, miscellaneous sheet metal accessory items, including piping vents and other devices with the roofing system work (as specified in other Sections).

3.8 FIELD QUALITY CONTROL

A. Perform manufacturer’s field inspection and as required at appropriate intervals.

B. Correct defects or irregularities discovered during field inspection.

C. Require attendance of roofing materials manufacturers' representatives at site during installation of the roofing system. A copy of the specification should also be on site at all times.

3.9 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Remove bitumen adhesive drippings from all walls, windows, floors, ladders and finished surfaces.

D. In areas where finished surfaces are soiled by asphalt or any other sources of soiling caused by work of this Section, consult manufacturer of surfaces for cleaning instructions and conform to their instructions.

E. Repair or replace defaced or disfigured finishes caused by work of this Section.

3.10 CONSTRUCTION WASTE MANAGEMENT

A. Remove and properly dispose of waste products generated during roofing procedures. Comply with requirements of authorities having jurisdiction.

3.11 FINAL INSPECTION

A. At completion of roofing installation and associated work, meet with Contractor, Architect, installer, installer of associated work, Owner, roofing system manufacturer's representative, and other representatives directly concerned with performance of roofing system.

B. Walk roof surface areas of the building, inspect perimeter building edges as well as flashing of roof penetrations, walls, curbs, and other equipment. List all items requiring correction or completion and furnish copy of list to each party in attendance.

C. The roofing system manufacturer reserves the right to request a thermographic scan of the roof during final inspection to determine if any damp or wet materials have been installed. The thermographic scan shall be provided by the Roofing Contractor.

D. If core cuts verify the presence of damp or wet materials, the Roofing Contractor shall be required to replace the damaged areas at his own expense.

E. Repair or replace deteriorated or defective work found at time above inspection as required to a produce an installation which is free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

F. Notify the Owner and Architect upon completion of corrections.

G. Following the final inspection, provide written notice of acceptance of the installation from the roofing system manufacturer.

H. Immediately correct roof leakage during construction. If the Contractor does not respond within twenty-four (24) hours, the Owner will exercise rights to correct the Work under the terms of the Conditions of the Contract.

3.12 ROOFING INSTALLER'S SEPARATE WARRANTY: Reprint and fully execute the following installer's warranty on installation company's letterhead:

ROOFING INSTALLER'S 5-YEAR NO EXCLUSION WARRANTY

WHEREAS <NAME> of <ADDRESS>, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

Owner:
Address:
Building Name/Type:
Address:
Area of Work:
Acceptance Date:
Warranty Period:
Expiration Date:

AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period of 5-years after the Date of Substantial Completion of the Project.

NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

This Warranty is made subject to the following terms and conditions:

Coverage specifically included under this Warranty are damages to work and other parts of the building, and to building contents, caused by

Sustaned winds up to 75 MPH and gusts to 115 MPH

Coverag specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

Lightning;
Acts of vandalism;
Fire;
Failure of roofing system structural substrate, including cracking, excessive deflection, deterioration, and decomposition;
Activity on roofing other than normal foot traffic, and maintenance activities.

When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof has been paid by Owner or by another responsible party so designated.

During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.

The Owner shall notify Roofing Installer on becoming aware, of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration. Nothing in this

warranty shall prevent the Owner from making emergency repairs to faulty or damaged roofing areas to prevent further damage to roof, building or contents, and warranty coverage shall not be affected by the performance of such emergency repairs.

This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

IN WITNESS THEREOF, this instrument has been duly executed this <DAY> day of <MONTH>, 20<YEAR>.

END OF SECTION

SECTION 07 62 00 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes fabricated sheet metal items, including:
   1. Flashings and counter flashings not a part of Unit Masonry systems.
   2. Roof fascias and gravel stops.
   3. Gutters and downspouts.
   4. Scuppers.
   5. Metal trim not part of manufactured roof or wall systems.

B. Related Sections:
   1. Section 04 20 00 - Unit Masonry Assemblies: Flashings embedded in masonry.
   2. Section 07 54 05 - Thermoplastic Membrane Roofing - Mechanically Attached: Roof fascias and gravel stops.
   3. Section 07 90 00 - Joint Protection.

1.2 REFERENCES

A. American Society of Civil Engineers:

   2. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   3. ASTM A755/A755M - Standard Specification for Steel Sheet, Metallic Coated by the Hot-Dip Process and Pre-painted by the Coil-Coating Process for Exterior Exposed Building Products.
   4. ASTM B32 - Standard Specification for Solder Metal.
   5. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
   6. ASTM D4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free.

C. Federal Specification Unit:
   1. FS TT-C-494 - Coating Compound, Bituminous, Solvent Type, Acid Resistant.

D. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - Architectural Sheet Metal Manual.

E. Single Ply Roofing Institute:
   1. SPRI ES-1 - Wind Design Guide for Edge Systems Used with Low-Slope Roofing Systems.

1.3 PERFORMANCE REQUIREMENTS

A. General: Manufacture and install items of this Section to resist thermally induced movement and exposure to weather without failing, rattling, leaking, and fastener disengagement.

B. Manufacture and install copings and roof edge flashings tested according to SPRI ES-1 and capable of resisting the area wind zone pressures in accordance with ASCE-7 requirements.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods,

flashings, terminations, and installation details.

C. Product Data: Submit data on manufactured components metal types, finishes, and characteristics.

D. Samples: Submit two samples of each exposed metal finish.

E. Product Test Reports: Submit report based on evaluation of comprehensive tests performed by a qualified testing agency, verifying compliance of copings and roof edge flashings with performance requirements.

1.5 QUALIFICATIONS

A. Installer: Engage an experience Installer who has completed sheet metal flashing and trim work similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

C. Prevent contact with materials causing discoloration or staining.

1.8 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Finish Warranty for Prefinished Steel Sheet: Submit a written warranty, signed by manufacturer, covering failure of the factory-applied exterior finish on metal wall panels within the specified warranty period and agreeing to repair finish or replace wall panels that show evidence of finish deterioration. Deterioration of finish includes, but is not limited to, color fade, chalking, cracking, peeling, and loss of film integrity.
   1. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SHEET METAL FLASHING AND TRIM

A. Pre-Finished Galvanized Steel Sheet: ASTM A755/A755M coil coated.
   1. Base Metal: ASTM A653/A653M; Structural Quality; G90 zinc coating, minimum 24 gage thick.
   2. Exposed Finish: Minimum two coat fluoropolymer coating with minimum 70 percent polyvinylidene fluoride resin.
   3. Unexposed Finish: Manufacturer’s standard coating.
   4. Color to be selected by Architect.

B. Stainless Steel: ASTM A240/240M; Type 304, dead soft fully annealed; smooth surface, Number 2D finish; minimum 26 gage thick.

2.2 ACCESSORIES

A. Fasteners: Stainless steel, with soft neoprene washers. Match finish of exposed heads with material being fastened.

B. Underlayment: ASTM D226; Type II, No. 30 un-perforated asphalt felt.

C. Protective Backing Paint: FS TT-C-494, Bituminous.

D. Sealant: As specified in Section 07 90 00.

E. Plastic Cement: ASTM D4586, Type I.

F. Solder: ASTM B32; type suitable for application and material being soldered.

2.3 FABRICATION

A. Form sections shape indicated on Drawings, accurate in size, square, and free from distortion or defects.

B. Fabricate cleats of same material as sheet metal, interlocking with sheet.

C. Form pieces in longest possible lengths.

D. Hem exposed edges on underside 1/2 inch; miter and seam corners.

E. Form nonmoving seams with flat lock seams, except where otherwise indicated. At moving joints, use sealed lapped, bayonet-type or interlocking hooked seams. Form seams and joints in accordance with SMACNA standards.

F. Fabricate corners from one piece with minimum 18 inch long legs; seam and seal prefinished steel, solder stainless steel.

G. Fabricate vertical faces with bottom edge formed outward 1/4 inch and hemmed to form drip.

H. Separate metal from non-compatible metal or corrosive substrates by coating concealed surfaces at locations of contact with asphalt mastic or other permanent separation as recommended by manufacturer.

I. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of sheet metal exposed to public view.

J. Fabricate gutters to rectangular profile as indicated on Drawings.

K. Fabricate downspouts to square profile, 4-1/2 x 4-1/2 inch size unless indicated otherwise.

L. Fabricate accessories in profile and size to suit gutters and downspouts:
   1. Anchorage Devices: In accordance with SMACNA requirements.
   2. Gutter Supports: Brackets and straps.
   3. Downspout Supports: Straps.

M. Seal metal joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, and nailing strips located.
   1. Verify that wood nailers have been anchored in accordance with SPRI ES-1 requirements.

C. Verify roofing termination and base flashings are in place, sealed, and secure.

3.2 PREPARATION

A. Install starter and edge strips, and cleats before starting installation.

B. Paint concealed metal surfaces with protective paint to minimum dry film thickness of 15-mil.

3.3 INSTALLATION

A. Install sheet metal flashing and trim in accordance with SMACNA requirements.

B. Secure flashings in place using concealed fasteners wherever possible. Use exposed fasteners only where not exposed to public view.

C. Install flashings embedded in roofing system in accordance with roofing manufacturer's details and instructions to meet SPRI ES-1 requirements.

D. Install edge flashings in accordance with Section 07 54 05 to meet SPRI ES-1 requirements.

E. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.

F. Expansion Provisions: Provide for thermal expansion of exposed sheet metal Work. Space movement joints at maximum of 10 feet with no joints allowed within 18 inches of corner or intersection. Where lapped or bayonet-type expansion provisions in Work cannot be used or would not be sufficiently weatherproof and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

G. Secure gutters and downspouts in place.

H. Slope gutters minimum 1/4 inch per foot.

I. Seal metal joints watertight.

3.4 SCHEDULE

A. Gutters with Girth up to 20-Inches: Prefinished steel, 24 gage.

B. Gutters with Girth 20 to 25-inches: Prefinished steel, 22 gage.

C. Downspouts: Prefinished steel, 24-gage.

D. Scuppers: Stainless steel, 24-gage.

E. Gravel Stops and Fasciae: Two-piece snap-on edge flashings by roof membrane manufacturer.

F. Exposed Trim: Prefinished steel, 24-gage.

G. Counterflashings and Receivers: Stainless steel, 24-gage.

H. Roof Expansion Joints: Stainless steel, 24-gage.

I. Equipment Support and Roof Penetration Flashing: Stainless steel, 24-gage.

END OF SECTION

SECTION 07 71 00 - ROOF SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Roof curbs and equipment supports.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood curbs.
   2. Section 07 54 05 - Thermoplastic Membrane Roofing - Mechanically Attached.
   3. Section 07 62 00 - Sheet Metal Flashing and Trim: Metal flashings.
   4. Section 07 72 33 - Roof Hatches.

1.2 REFERENCES

A. ASTM International:
   1. ASTM D4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free.

B. National Roofing Contractors Association:
   1. NRCA - The NRCA Roofing and Waterproofing Manual.

C. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - Architectural Sheet Metal Manual.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Manufacturer's Installation Instructions: Submit instructions for special procedures and perimeter conditions requiring special attention.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with SMACNA and NRCA details.

1.5 COORDINATION

A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
   1. With Architect's approval, adjust location of roof accessories that would interrupt roof drainage routes or roof expansion joints.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Pre-Finished Galvanized Steel Sheet: ASTM A755/A755M coil coated.
   1. Base Metal: ASTM A653/A653M; Structural Quality; G90 zinc coating, minimum 24-gage thick.
   2. Exposed Finish: Minimum two coat fluoropolymer coating with minimum 70 percent polyvinylidene fluoride resin.
   3. Unexposed Finish: Manufacturer’s standard coating.

B. Sealant: As specified in Section 07 90 00.

C. Roofing Cement: As recommended by roofing membrane manufacturer.

2.2 ROOF CURBS AND EQUIPMENT SUPPORTS

A. Roof Curbs: Provide metal roof curbs and equipment supports, internally reinforced and capable of supporting superimposed live and dead loads, including equipment loads and other construction to be supported. Fabricate with welded or sealed mechanical corner joints, with integral formed mounting flange at perimeter bottom. Coordinate dimensions with rough-in information or shop drawings of equipment to be supported.

B. Manufacturers:
1. Custom Curb, Inc. www.customcurbinc.com
2. Roof Products, Inc. www.rpicurbs.com
3. ThyCurb www.thybar.com
4. Uni-Curb, Inc.
5. Vent Products Company, Inc. www.ventprod.com

C. Load Requirements: As indicated.

D. Material: Prefinished steel sheet, 24-gage thick, minimum.

E. Factory install wood nailers at tops of curbs and supports.

F. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.

G. Factory insulate curbs with 1-1/2 inch thick glass fiber board insulation.

H. Fabricate units to minimum height of 12 inches above adjacent roof surface, unless otherwise indicated.

I. Sloping Roofs: Fabricate curbs and equipment supports with height tapered to match slope to level tops of units.
1. Where slope of roof exceeds 1:48, fabricate units with water diverter or cricket.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify deck, curbs, roof membrane, base flashing, and other items affecting Work of this section are in place and positioned correctly.

3.2 INSTALLATION

A. Conform to SMACNA - Architectural Sheet Metal Manual and NRCA - Waterproofing Manual.

B. Coordinate installation of components of this section with installation of roofing membrane and base flashings.

C. Install roof curbs and equipment supports so that top surface of unit is level.

D. Coordinate installation of sealants and roofing cement with Work of this section to ensure water tightness.

END OF SECTION

SECTION 07 72 33 - ROOF HATCHES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Roof hatches.
   2. Roof hatch safety railing.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood curbs.
   2. Section 07 54 05 – Thermoplastic Membrane Roofing.
   3. Section 07 62 00 - Sheet Metal Flashing and Trim: Metal flashings.
   4. Section 07 71 00 - Roof Specialties.

1.2 REFERENCES

A. Underwriters Laboratories Inc.:
   1. UL - Building Materials Directory.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data on unit construction, sizes, configuration, jointing methods and locations when applicable, and attachment method.

C. Manufacturer's Installation Instructions: Indicate special installation criteria and interface with adjacent components.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with SMACNA and NRCA details.

PART 2 - PRODUCTS

2.1 ROOF HATCHES

A. Manufacturers:
   1. Babcock-Davis www.babcockdavis.com
   2. Bilco Company www.bilco.com
   3. Custom Curb, Inc. www.customcurb.com
   4. Milcor Inc. www.milcorinc.com
   5. Nystrom, Inc. www.nystrom.com
   6. O'Keeffe's Inc. www.okeeffes.com
   7. Roof Products, Inc. www.rpicurbs.com
   8. ThyCurb www.thybar.com
   9. Uni-Curb, Inc.
   10. Vent Products Company, Inc. www.ventprod.com
   11. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Manufacturer’s standard aluminum, with nominal 12-inch high integral curb, double-wall insulated type.

C. Size: 2’-6” x 3’-0” single-leaf, for ladder access.

D. Loads: Minimum 40-lbf/sq.ft. external live load and 30-lbf/sq.ft. uplift.

E. Integral Aluminum Curb: Minimum 11 gage mill finished aluminum; nominal 1-inch rigid glass fiber insulation; integral cap flashing to receive roof flashings; extended flange for mounting.

F. Flush Aluminum Cover: Minimum 11-gage mill finish aluminum; nominal 1-inch glass fiber or insulation; minimum 18 gage aluminum interior liner; continuous neoprene or vinyl gasket to provide weatherproof seal.

G. Hardware: Manufacturer's standard Cadmium plated finish:
1. Compression spring operator;
2. Steel manual pull handle for interior and exterior operation;
3. Steel hold open arm with vinyl covered grip handle for easy release,
4. Padlock hasp.
5. Hinges: Manufacturer's recommended type for specific type of roof hatch.

H. Safety Railings: Manufacturer's integral hatch railing and gate system curb-mounted on 3 sides of the hatch.
1. Swinging gate automatically latches in the closed position. Non-roof-penetrating attachment.
2. Fabricated from fiberglass-reinforced polymer pipe and finished in safety yellow factory-applied paint. Mounting brackets Hot dip galvanized steel.
3. 25-year manufacturer's warranty.
4. Basis of Design: *Bil-Guard* as manufactured by Bilco.

2.2 ACCESSORIES

A. Anchorage Devices: Type recommended by manufacturer.

B. Counterflashings: Same metal type and finish as roof hatch frame.

C. Protective Coating: Bituminous, FS TT-C-494.

D. Sealant: As specified in Section 07 90 00.

2.3 FABRICATION

A. Fabricate components free of visual distortion and free of defects. Weld corners and joints.

B. Provide for condensation occurring within components and within assembly to drain to exterior above roofing.

C. Fit components for weather tight assembly.

D. Sloped Roofs: Fabricate roof hatch curbs tapered to maintain hatch top level.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify openings and substrate conditions are ready to receive Work of this section.

3.2 PREPARATION

A. Apply protective coating on aluminum surfaces of roof hatches to be in contact with cementitious materials or dissimilar metals.

3.3 INSTALLATION

A. Install curb assembly, fastening securely to roof decking. Flash curb assembly into roof system.

B. Place roof hatch and secure to curb assembly. Install integral setting sealant and counterflashing as required.

C. Final installation to be watertight assembly.

D. Coordinate with installation of roofing system and related flashings for weather tight installation.

E. Apply bituminous paint on surfaces of units in contact with cementitious materials or dissimilar metals.

F. Adjust hinges for smooth operation.

G. Install safety railing in accordance with manufacturer’s printed instructions.

3.4 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Wash down exposed surfaces; wipe surfaces clean.

C. Remove excess sealant.

END OF SECTION

SECTION 07 81 00 - APPLIED FIREPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Spray-on cementitious fireproofing for interior exposed and concealed structural steel where indicated.
2. Intumescent coating fireproofing for exposed interior and exterior structural steel where indicated.

B. Related Sections:
1. Section 05 12 00 - Structural Steel.
2. Section 05 21 00 - Steel Joist and Girders.
3. Section 07 84 00 - Firestopping.

1.2 REFERENCES

A. ASTM International:
1. ASTM C847 - Standard Specification for Metal Lath.
2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
3. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
4. ASTM E605 - Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.
5. ASTM E736 - Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members.
6. ASTM E760 - Standard Test Method for Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members.
7. ASTM E761 - Standard Test Method for Compressive Strength of Sprayed Fire-Resistive Material Applied to Structural Members.
8. ASTM E859 - Standard Test Method for Air Erosion of Sprayed Fire-Resistive Materials (SFRMs) Applied to Structural Members.
9. ASTM E937 - Standard Test Method for Corrosion of Steel by Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.
10. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. National Fire Protection Association:
1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

C. Underwriters Laboratories Inc.:
1. UL - Fire Resistance Directory.
2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.

1.3 PERFORMANCE REQUIREMENTS

A. Applied (Sprayed-On) Fireproofing Systems: Provide fire rated assembly ratings as indicated on Drawings.

B. Air Erosion: Maximum 0.025 gram/sq. ft allowable weight loss of fireproofing when tested in accordance with ASTM E859.

C. Corrosion: No contribution to corrosion of steel test panels when tested in accordance with ASTM E937.

D. Mold Resistance: Material to show resistance to fungi growth when tested in accordance with ASTM C665 requirements for fungi resistance of insulation or ASTM G21.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data:
1. Submit data for each type of fireproofing specified, indicating product characteristics, performance criteria, and limitations of use.
2. Submit data for each type of finish paint to be used over intumescent coating. Provide documentation of intumescent coating manufacturer's approval of proposed paint type.

C. Samples:
1. Provide 12" x 12" finish samples of each type and selected color of finish paint for steel to be coated with intumescent fireproofing.
2. Reference mock-up requirements under Part 3 Installation below.

D. Product Data: Submit data for each type of fireproofing specified, indicating product characteristics, performance criteria, and limitations of use.

E. Test Reports: Indicate the following:
1. Compressive Strength: ASTM E761.
2. Dry Density: ASTM E605.
3. Bond Strength of Fireproofing: ASTM E736.
4. Bond Impact: ASTM E760.
5. Fire test reports of fireproofing application to substrate materials, including primers, similar to Project conditions, conducted in conformance to ASTM E84 and ASTM E119.
6. Air Erosion: ASTM E859.
7. Corrosion: ASTM E937.
8. Mold Resistance: ASTM C665 or ASTM G21.

F. Intumescent Paint Fireproofing Systems Test Reports: Indicate the following:
1. Fire test reports of fireproofing application to substrate materials, including primers, similar to Project conditions, conducted in conformance to ASTM E84 and ASTM E119.

G. Manufacturer's Installation Instructions: Submit information including special procedures, and conditions requiring special attention.

H. Manufacturer's Certificate: Certify applied fireproofing products meet or exceed specified requirements.
1. Certify applied fireproofing products contain no asbestos or other finely-divided particulate matter that can be released as airborne health hazard during or after application.

I. Manufacturer's Field Reports: Indicate compliance with manufacturer's installation instructions and Contract Documents.

1.5 QUALITY ASSURANCE

A. Fireproofing Assembly: Rating as indicated on Drawings.
1. Tested Rating: Determined in accordance with ASTM E119.

B. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section, with minimum three years' experience.

B. Applicator: Company specializing in performing Work of this section, with minimum three years' experience and approved by manufacturer.

1.7 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Maintain minimum ambient and substrate temperature of 40 degrees F during and for minimum 24 hours after application of fireproofing, unless otherwise recommended by manufacturer.

C. Provide ventilation in areas to receive fireproofing during application and 24 hours afterward, to dry applied material.

1.9 SEQUENCING

A. Section 01 10 00 - Summary: Work sequence.

B. Sequence Work in conjunction with placement of masonry anchors and ties, partition track, and mechanical component hangers.

C. Provide temporary enclosure as required to confine spraying operations and protect the environment.

D. Provide temporary enclosures for applications to prevent deterioration of fire-resistive material due to exposure to weather and to unfavorable ambient conditions for humidity, temperature, and ventilation.

E. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.

F. Do not apply fire-resistive material to metal roof deck substrates until concrete topping, if any, has been completed. For metal roof decks without concrete topping, do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material.

G. Do not apply fire-resistive material to metal floor deck substrates until concrete topping has been completed.

H. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.

I. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.

J. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, and tested and corrections have been made to defective applications.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Warranty: Manufacturer's standard form, signed by Contractor and by Installer, in which manufacturer agrees to repair or replace sprayed fire-resistive materials that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
   1. Cracking, flaking, spalling, or eroding in excess of specified requirements; peeling; or delaminating of sprayed fire-resistive materials from substrates.
   2. Not covered under the warranty are failures due to damage by occupants and

Owner's maintenance personnel, exposure to environmental conditions other than those investigated and approved during fire-response testing, and other causes not reasonably foreseeable under conditions of normal use.

C. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CONCEALED SPRAY-ON CEMENTITIOUS FIREPROOFING

A. Manufacturers:
1. Carboline Co., Pyrocrete www.carboline.com
2. W. R. Grace & Co., Monokote Type MK-6/HY www.grace.com
3. Isolatek International Corp., Cafco 300 www.cafco.com
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description:
1. Low Density Cementitious Type: Factory mixed, cementitious material blended for uniform texture with vermiculite or lightweight synthetic aggregate, and conforming to the following requirements:
a. Type: As recommended by manufacturer for concealed interior applications.
b. Compressive Strength: ASTM E761, minimum 5.21 psi.
c. Dry Density: ASTM E605, minimum average density of 15 lb/cu ft.
d. Bond Strength: ASTM E736, 150 psf when set and dry.
e. Bond Impact: ASTM E760, no cracking, flaking or delamination.

2.2 EXPOSED SPRAY-ON CEMENTITIOUS FIREPROOFING

A. Manufacturers:
1. Carboline Co., Pyrocrete 241 www.carboline.com
2. W. R. Grace & Co., Monokote Type Z106 www.grace.com
3. Isolatek International Corp., Cafco 400 www.cafco.com
4. Pyrok, Inc., Pyrok-MD www.pyrokinc.com
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description:
1. Medium Density Cementitious Type: Factory mixed, portland cement blended for uniform texture with mineral aggregates or mineral fibers and additives, without chlorides, approved for exterior use and conforming to the following requirements:
a. Type: As recommended by manufacturer for exposed interior applications, and for concealed exterior use.
b. Compressive Strength: ASTM E761, minimum 51 psi.
c. Dry Density: ASTM E605, minimum density of 22 lb/cu ft.
d. Bond Strength: ASTM E736, 434 psf when set and dry.
e. Bond Impact: ASTM E760, no cracking, flaking or delamination.

2.3 INTUMESCENT PAINT FIREPROOFING

A. Manufacturers:
1. AD Fire Protection Systems, www.adfire.com.
2. Albi Manufacturing, www.albi.com
3. Isolatek International Corp., www.cafco.com
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis-of-Design:
1. Interior: Isolatek International Corp., Cafco SprayFilm-WB 3 Basecoat.
2. Exterior: Isolatek International Corp., Cafco SprayFilm-WB 4 Basecoat and Topseal.

C. Thin-Film Fire-Resistive Intumescent Mastic Coating: Factory-mixed formulation.
1. Water-Based Formulation: Approved by manufacturer and authorities having jurisdiction for interior or exterior use as indicated.Retain first option below for colored appearance or

protective topcoat.
2. Color and Gloss: Color and Gloss: As selected by Architect in coordination with manufacturer.
3. Provide manufacturer's topcoat where required by manufacturer.

2.4 ACCESSORIES

A. Primer, Adhesive, Bonding Agent, and Topseal as recommended by fireproofing manufacturer.

B. Metal Lath: Expanded metal lath where required for cementitious fireproofing; 3.4 lb/sq ft, galvanized finish; conform to ASTM C847.

C. Water: Clean, potable.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify surfaces are ready to receive fireproofing.

C. Verify clips, hangers, supports, sleeves, and other items required to penetrate fireproofing are in place.

D. Verify ducts, piping, equipment, or other items interfering with application of fireproofing have not been installed.

E. Verify voids and cracks in substrate have been filled. Verify projections have been removed where fireproofing will be exposed to view as finish material.

F. Verify roof traffic has ceased and roof mounted equipment is in place.

G. Ensure that all steel members and sections scheduled to receive fireproofing have been properly prepared by the fabricator to receive the specified fireproofing application.

3.2 PREPARATION

A. Perform tests as recommended by fireproofing manufacturer in situations where adhesion of fireproofing to substrate is in question.

B. Remove incompatible materials affecting bond by scraping, brushing, scrubbing, or sandblasting.

C. Prepare substrates to receive fireproofing.

D. Apply fireproofing manufacturer's recommended bonding agent on primed steel.

E. Protect surfaces not scheduled for fireproofing and equipment from damage by overspray, fall-out, and dusting.

F. Close off and seal duct work in areas where fireproofing is being applied.

3.3 APPLICATION - SPRAY-ON CEMENTITIOUS FIREPROOFING

A. Install metal lath over steel members as required by fire rated assembly Design Numbers.

B. Apply primer or adhesive as required by fireproofing manufacturer for conditions encountered.

C. Apply fireproofing in sufficient thickness to achieve required fire ratings, with as many passes as necessary to cover with monolithic blanket of uniform density and texture.

D. In exposed locations, trowel surface smooth and form square edges, using tools and procedures recommended by fireproofing manufacturer.

E. Patch damaged work.

3.4 APPLICATION - INTUMESCENT PAINT FIREPROOFING

A. Apply primer and fireproofing in accordance with manufacturer's instruction.

B. Cut back primer 3 inches for bolted connections and 12 inches for welded connections.

C. Apply fireproofing in sufficient thickness to achieve indicated fire rating with as many passes as necessary. Provide multiple thinner coats of intumescent coating in order to build up required thicknesses in lieu of heavier coats that encourage surface deformations.

D. Interior and exterior intumescent paint fireproofing shall be finish painted with decorative topcoat. Utilize fireproofing manufacturer’s recommended paint type for the particular installation, in color(s) selected.

1. Provide manufacturer’s approved acrylic paint for interior applications, and manufacturer’s approved aliphatic urethane paint for exterior applications.

2. Acceptable final finish is slight “orange peel” without runs, drips, sags, or other surface deformations whether in the finish paint or the underlying intumescent coating.

E. Mock-ups

1. Provide on-site mock-ups of both interior and exterior finished steel for Architect’s approval. Approved mock-ups will be used as the minimum acceptable standard of finish.

2. Mock-ups will have full required thickness of intumescent paint prior to application of finish paint.

3. As determined by the Architect, steel finishes not meeting the minimum acceptable standard of finish shall be removed and recoated and finished.

3.5 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.

C. Independent Testing Agency To:
1. Inspect fireproofing substrates prior to application of fireproofing for surface temperature and surface preparation in accordance with manufacturer's instructions.
2. Inspect installed fireproofing after application and curing for integrity, prior to its concealment.
3. Test frequency and type in accordance with applicable code and authorities having jurisdiction.
4. Inspect for the following:
   a. Installed Thicknesses and Density: ASTM E605.
   b. Bond Strengths: ASTM E736.
5. Re-inspect installed fireproofing for integrity of fire protection, after installation of subsequent Work.

3.6 MANUFACTURER'S FIELD SERVICES

A. Section 01 40 00 - Quality Requirements: Manufacturers’ field services.

B. Observe site conditions, conditions of surfaces and installation, quality of workmanship, and initiate instructions when necessary.

C. Manufacturer's Field Reports: Document above observations; include environmental conditions under which fireproofing materials were installed.

3.7 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess material, overspray, droppings, and debris.

C. Remove fireproofing from materials and surfaces not required to be fireproofed.

D. At exposed fireproofing, clean surfaces that have become soiled or stained, using manufacturer's recommended procedures.

END OF SECTION

SECTION 07 84 00 - FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Penetrations through fire-resistance rated wall, floor, and roof construction including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.
2. Penetrations through smoke barriers and construction enclosing compartmentalized areas involving both empty openings and openings containing penetrating items.
3. Sealant joints in fire-resistance rated construction.

B. Related Sections:
1. Section 04 20 00 – Unit Masonry Assemblies: Mortar used for firestopping.
2. Section 09 21 16 - Gypsum Board Assemblies: Gypsum board for fireproofing.

1.2 REFERENCES

A. ASTM International:
1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
2. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
3. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops.
4. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems.

B. National Fire Protection Association:
1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

C. Underwriters Laboratories Inc.:
1. UL 263 - Fire Tests of Building Construction and Materials.
2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
3. UL 1479 - Fire Tests of Through-Penetration Firestops.
4. UL 2079 - Tests for Fire Resistance of Building Joint Systems.
5. UL - Fire Resistance Directory.

1.3 DEFINITIONS

A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.4 PERFORMANCE REQUIREMENTS

A. Conform to applicable code for fire resistance ratings and surface burning characteristics.

1.5 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data on product characteristics, performance and limitation criteria.

C. Schedule: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.

D. Manufacturer's Installation Instructions: Submit preparation and installation instructions.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.6 QUALITY ASSURANCE

A. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.10 inch water gage minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated, but not less than 1-hour.
   1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.
   2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.
      a. Floor Penetrations Within Wall Cavities: T-Rating is not required.

B. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.
   1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
   2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.

C. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.

D. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10 inch water gage minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.

E. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

F. A qualified inspection agency shall check installed firestopping systems for compliance with requirements.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not apply materials when temperature of substrate material and ambient air is below 60 degrees F.

C. Maintain this minimum temperature before, during, and for minimum 3 days after installation of materials.

D. Provide ventilation in areas to receive solvent cured materials.

PART 2 - PRODUCTS

2.1 FIRESTOPPING

A. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.

B. Ceramic-Fiber and Mastic Coating: Ceramic fibers in bulk form formulated for use with mastic coating, and ceramic fiber manufacturer's mastic coating.
   1. Manufacturers:

a. FireMaster Bulk and FireMaster Mastic, Thermal Ceramics www.thermalceramics.com

C. Endothermic, Latex Compound Sealant: Single-component, endothermic, latex formulation.
1. Manufacturers:
a. Fyre-Shield, Tremco, Inc. www.tremcosealants.com
b. Flame-Safe FS900/FST900 Series, International Protective Coatings Corp. www.flamesafe.com

D. Intumescent, Latex Sealant: Single-component, intumescent, latex formulation.
1. Manufacturers:
a. SpecSeal Triple S Intumescent Sealant, Specified Technologies Inc. www.stifirestop.com
b. SpecSeal LCI Intumescent Sealant, Specified Technologies Inc.
c. Metacaulk 950, The RectorSeal Corporation. www.rectorseal.com/firestopping/fp2.htm
d. Fire Barrier CP 25WB + Caulk, 3M Fire Protection Products. www.3m.com/firestop
e. Tremstop IA, Tremco, Inc.

E. Intumescent Putty: Nonhardening, dielectric, water-resistant putty containing no solvents, inorganic fibers, or silicone compounds.
1. Manufacturers:
a. SpecSeal Series SSP Firestop Putty and Putty Pads, Specified Technologies Inc. Flame-Safe FSP1000 Putty, International Protective Coatings Corp.
b. Fire Barrier Moldable Putty +, 3M Fire Protection Products.

F. Intumescent Wrap Strips: Single-component, elastomeric sheet with aluminum foil on one side.
1. Manufacturers:
a. SpecSeal Series SSW Wrap Strips, Specified Technologies Inc. FS 601 Intumescent Wrap, Hilti Construction Chemicals, Inc. www.us.hilti.com
b. Fire Barrier FS-195 + Wrap/Strip, 3M Fire Protection Products.
c. Tremstop WS, Tremco, Inc.

G. Job-Mixed Vinyl Compound: Prepackaged vinyl-based powder product for mixing with water at Project site to produce a paintable compound, passing ASTM E 136, with flame-spread and smoke-developed ratings of zero per ASTM E 84.
1. Manufacturers:
a. USG Firecode Compound, United States Gypsum Co. www.usg.com

H. Mortar: Prepackaged dry mix composed of a blend of inorganic binders, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogenous mortar.
1. Manufacturers:
a. SpecSeal Series SSM Mortar, Specified Technologies Inc.
b. KBS-Mortar Seal, International Protective Coatings Corp.
c. Tremstop M, Tremco, Inc.

I. Pillows/Bags: Re-usable, heat-expanding pillows/bags composed of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents and fire-retardant additives.
1. Manufacturers:
a. KBS Sealbags, International Protective Coatings Corp.
b. Tremstop PS, Tremco, Inc.

J. Silicone Foam: Two-component, silicone-based liquid elastomer that, when mixed, expands and cures in place to produce a flexible, nonshrinking foam.
1. Manufacturers:

a. Fire Barrier 2001 Silicone ATV Foam, 3M Fire Protection Products.
b. Pensil 200 Foam, General Electric Co. www.ge.com/silicones

K. Silicone Sealant: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealant of grade indicated below:
1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping/ gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.
2. Manufacturers:
a. PENSIL Series PEN300 Silicone Sealant, Specified Technologies Inc.
b. 2000 Silicone Sealant, 3M Fire Protection Products.
c. FS 601 Firestop Sealant, Hilti Construction Chemicals, Inc.
d. Metacaulk 835 +, The RectorSeal Corporation. www.rectorseal.com
e. Metacaulk Pipe Collars, The RectorSeal Corporation.
f. Fyre-Sil, Tremco Inc.
g. Fyre-Sil S/L, Tremco Inc.

L. Solvent-Release-Curing Intumescent Sealant: Solvent-release-curing, single-component, synthetic-polymer-based sealant of grade indicated below:
1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping/ gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.

2.2 FIRE-RESISTIVE ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing, elastomeric sealants of base polymer indicated that complies with ASTM C 920 requirements, including those referenced for Type, Grade, Class, and Uses, and requirements specified in this Section applicable to fire-resistive joint sealants.
1. Sealant Colors: As selected.

B. Single-Component, Neutral-Curing Silicone Sealant: Type S; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, G, A, and (as applicable to joint substrates indicated) O.
1. Additional Movement Capability: Provide sealant with the capability to withstand the following percentage changes in joint width existing at time of installation, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, and remain in compliance with other requirements of ASTM C 920 for uses indicated:
a. 100 percent movement in extension and 50 percent movement in compression for a total of 150 percent movement.
2. Manufacturers:
a. Dow Corning 790, Dow Corning Corp. www.dowcorning.com
b. Dow Corning 795, Dow Corning Corp.
c. Silpruf SCS 2000, General Electric Co.
d. Ultraglaze SSG 4000, General Electric Co.
e. 864, Pecora Corp. www.pecora.com
f. Fyre-Sil, Tremco, Inc.)

C. Multicomponent, Nonsag, Urethane Sealant: Type M; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, A, and (as applicable to joint substrates indicated) O.
1. Additional Movement Capability: Provide sealant with the capability to withstand the following percentage change in joint width existing at time of installation, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, and remain in compliance with other requirements of ASTM C 920 for uses indicated:
a. 40 percent movement in extension and 25 percent in compression for a total of

65 percent movement.
b. 50 percent movement in both extension and compression for a total of 100 percent movement.

2. Manufacturers:
a. Vulkem 922, Mameco International Inc.
b. Dynflex, Pecora Corp.
c. Dynatred, Pecora Corp.
d. Dynatrol II, Pecora Corp.
e. Sikaflex 2cn NS, Sika Corp. www.sikausa.com
f. Sonolastic NP 2, Sonneborn Building Products www.chemrex.com
g. Dymeric, Tremco Inc.

D. Single-Component, Nonsag, Urethane Sealant: Type S; Grade NS; Class 25; and Uses NT, M, A, and (as applicable to joint substrates indicated) O.
1. Manufacturers:
a. Isoflex 880 GB, Harry S. Peterson Co., Inc.
b. Isoflex 881, Harry S. Peterson Co., Inc.
c. Vulkem 921, Mameco International Inc.
d. Sikaflex 15LM, Sika Corp.

2.3 ACCESSORIES

A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.

B. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify openings are ready to receive firestopping.

3.2 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.

B. Remove incompatible materials affecting bond.

C. Install backing materials to arrest liquid material leakage.

3.3 APPLICATION

A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.

B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.

C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating.

D. Compress fibered material to maximum 40 percent of its uncompressed size.

E. Place foamed material in layers to ensure homogenous density, filling cavities and spaces. Place sealant to completely seal junctions with adjacent dissimilar materials.

F. Place intumescent coating in sufficient coats to achieve rating required.

G. Remove dam material after firestopping material has cured.

3.4 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Inspecting agency shall examine completed firestopping to determine, in general, if it is being installed in compliance with requirements.

C. Inspecting agency will report observations promptly and in writing to Contractor and Architect.

D. Do not proceed to enclose firestopping with other construction until reports of examinations are issued.

E. Where deficiencies are found, repair or replace firestopping so that it complies with requirements.

3.5 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean adjacent surfaces of firestopping materials.

3.6 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect adjacent surfaces from damage by material installation.

END OF SECTION

SECTION 07 90 00 - JOINT PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes sealants and joint backing, pre-compressed foam sealers, and accessories for building expansion joints, control joints, and joints between dissimilar materials where not a part of work specified under other sections.

B. Sections Related to Work Under This Section:
1. Section 03 30 00 – Cast-In-Place Concrete: Sealant at expansion and control joints in interior and exterior walls, and in exposed interior concrete floors.
2. Section 04 20 00 – Unit Masonry Assemblies: Sealant at expansion and control joints.
3. Section 08 11 13 – Standard steel Doors and Frames: Perimeter sealant at interior and exterior door frames.
4. Section 08 41 13 – Aluminum Framed Entrances and Storefronts: Perimeter joints between storefront assemblies and adjacent materials.
5. Section 08 44 13 – Glazed Aluminum Curtain Walls: Perimeter joints between curtain wall assemblies and adjacent materials.
6. Section 08 91 00 - Louvers: Perimeter joints between louvers and adjacent materials.
7. Section 09 21 16 - Gypsum Board Assemblies: Joints between drywall assemblies and adjacent materials.
8. Section 09 24 00 – Portland Cement Plastering: Control and perimeter joint sealing.

C. Sealant Work Specified in Other Sections:
1. Section 06 20 23 – Finish Carpentry and Millwork: Sealant between millwork assemblies and adjacent materials.
2. Section 07 13 00 – Sheet Waterproofing: Sealant at shower pan membrane and below-grade waterproofing systems.
3. Section 07 54 05 – Thermoplastic Membrane Roofing System: Sealant as part of membrane roofing system.
4. Section 07 61 03 – Manufactured Sheet Metal Roofin: Sealant as part of metal roofing system.
5. Section 07 62 00 – Sheet Metal Flashing and Trim: Sealant as part of metal flashing systems.
6. Section 07 84 00 - Firestopping: Sealant as part of firestopping assemblies.
7. Section 08 80 00 - Glazing: Glazing sealants.
8. Section 09 21 16 - Gypsum Board Assemblies: Acoustic sealant at drywall partitions.
9. Section 09 30 00 – Tiling: Sealant as part of tiling systems, including expansion and control joints.
10. Section 12 32 16 – Plastic Laminate-Clad Casework: Sealant between casework assemblies and adjacent materials.
11. Division 22 Sections: Sealants as part of plumbing systems and fixture installations.
12. Division 32 Sections: Sealants at paving and sidewalk joints.

1.2 REFERENCES

A. ASTM International:
1. ASTM C834 - Standard Specification for Latex Sealants.
2. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.
3. ASTM C1193 - Standard Guide for Use of Joint Sealants.
4. ASTM D1056 - Standard Specification for Flexible Cellular Materials-Sponge or Expanded Rubber.
5. ASTM D1667 - Standard Specification for Flexible Cellular Materials-Vinyl Chloride Polymers and Copolymers (Closed-Cell Foam).
6. ASTM D2628 - Standard Specification for Preformed Polychloroprene Elastomeric Joint Seals for Concrete Pavements.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Products Data: Submit data indicating sealant chemical characteristics, performance criteria, substrate preparation, limitations, and color availability.

C. Samples: Submit two samples illustrating sealant colors for selection.

D. Manufacturer's Installation Instructions: Submit special procedures, surface preparation, and perimeter conditions requiring special attention.

E. Warranty: Include coverage for installed sealants and accessories failing to achieve watertight seal, exhibit loss of adhesion or cohesion, and sealants which do not cure.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Applicator: Company specializing in performing Work of this section with minimum three years' experience.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Maintain temperature and humidity recommended by sealant manufacturer during and after installation.

1.6 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with sections referencing this section.

PART 2 - PRODUCTS

2.1 JOINT SEALERS

A. Manufacturers:
1. Dow Corning Corp. www.dowcorning.com.
2. GE Silicones www.gesilicones.com.
3. Pecora Corp. www.pecora.com.
4. Sika Corp. www.sikaconstruction.com.
5. Tremco Sealants & Waterproofing www.tremco.com.
6. Substitutions: Section 01 60 00 - Product Requirements.

2.2 EXTERIOR SEALANTS:

A. General Purpose Exterior (Nontraffic) Sealant: Polyurethane; ASTM C920, Grade NS, Class 50, Uses M, G, A, and O; multi- component. Reference Division 32 sections for sealants related to paving and sidewalks.
1. Type: Dymeric 240FC manufactured by Tremco.
2. Color: Standard colors matching finished surfaces.
3. Applications: Use for:
   a. Control, expansion, and soft joints in masonry.
   b. Joints between concrete and other materials.
   c. Joints between metal frames and other materials.
   d. Exposed joints in metal copings, trim, and flashings.
   e. Other exterior nontraffic joints for which no other sealant is indicated.

B. Exterior Foam Expansion Joint Sealer: Precompressed foam sealer; Polyurethane with water-repellent, +/- 25 percent movement capability.
   1. Color: Face color as selected.
   2. Size: As required to provide watertight and airtight seal when installed.
   3. Applications: Use for exterior wall expansion joints.
   4. Manufacturers:
      a. Colorseal; Emseal Corp. www.emseal.com.
      b. Polytite R or Polytite Standard; Dayton Superior www.daytonsuperior.com.
      c. Illmod 600; Tremco www.tremco.com.
      d. Willseal 600; Willseal USA LLP www.willsealusa.com.
      e. Substitutions: Section 01 60 00 - Product Requirements.

C. Exterior Metal Lap Joint Sealant: Butyl or polyisobutylene, non-drying, non-skinning, non-curing.
   1. Type: Butyl Sealant manufactured by Tremco.
   2. Applications: Use for concealed sealant bead in sheet metal work and concealed sealant bead in siding overlaps.

2.3 INTERIOR SEALANTS:

A. General Purpose Interior Sealant: Acrylic emulsion latex; ASTM C834, single component, paintable.
   1. Type: Tremflex 834 manufactured by Tremco.
   2. Color: Standard colors matching finished surfaces.
   3. Applications: Use for interior wall and ceiling control joints, joints between door and window frames and wall surfaces, and other interior joints for which no other type of sealant is indicated.
   4. For interior control joints in brick, unpainted concrete masonry, cast stone, or stone, use General Purpose Exterior Sealant.

B. General Purpose Interior Traffic Bearing Sealant: Polyurethane; ASTM C920, Type S, Grade P, Class 50, Use T; single- component, semi self-leveling.
   1. Type: Vulkem 45 SSL manufactured by Tremco.
   2. Color: Standard colors matching finished surfaces.
   3. Applications: Use for interior pedestrian traffic bearing joints

C. Interior Foam Acoustic Gap Filler: Precompressed mass-loaded pre-formed polyurethane foam sealer with minimum 25 percent movement capability.
   1. Basis of Design: *Quiet Joint* as manufactured by Emseal or approved equivalent by specified manufacturer.
   2. Color: Color of both finished faces to match anodized glazing mullion.
   3. Size: As indicated.
   4. Applications: Provide visual and acoustic protection in open gap between glazing mullion and adjacent interior construction.
   5. Manufacturers:
      a. Colorseal; Emseal Corp. www.emseal.com.
      b. Polytite R or Polytite Standard; Dayton Superior www.daytonsuperior.com.
      c. Illmod 600; Tremco www.tremco.com.
      d. Willseal 600; Willseal USA LLP www.willsealusa.com.
      e. Substitutions: Section 01 60 00 - Product Requirements.
   6. After installation use putty knife to smooth any wrinkling at faces and edges.

2.4 ACCESSORIES

A. Primer: Non-staining type, recommended by sealant manufacturer to suit application.
   1. Interior Sealants and Sealant Primers: Maximum volatile organic compound content in accordance with SCAQMD Rule 1168.

B. Joint Cleaner: Non-corrosive and non-staining type, recommended by sealant manufacturer; compatible with joint forming materials.

C. Joint Backing: Round foam rod compatible with sealant; ASTM D1056, sponge or expanded rubber; oversized 30 to 50 percent larger than joint width.

D. Bond Breaker: Pressure sensitive tape recommended by sealant manufacturer to suit application.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces and joint openings are ready to receive work.

C. Verify joint backing and release tapes are compatible with sealant.

3.2 PREPARATION

A. Remove loose materials and foreign matter impairing adhesion of sealant.

B. Clean and prime joints.

C. Perform preparation in accordance with ASTM C1193.

D. Protect elements surrounding Work of this section from damage or disfiguration.

3.3 INSTALLATION

A. Perform installation in accordance with ASTM C1193.

B. Measure joint dimensions and size joint backers to achieve the following:
   1. Width/depth ratio of 2: 1.
   2. Neck dimension no greater than 1/3 of joint width.
   3. Surface bond area on each side not less than 75 percent of joint width.

C. Install bond breaker where joint backing is not used.

D. Install sealant free of air pockets, foreign embedded matter, ridges, and sags.

E. Apply sealant within recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

F. Tool joints concave.

G. Pre-compressed Foam Sealant: Do not stretch; avoid joints except at corners, ends, and intersections; install with face 1/8 to 1/4 inch below adjoining surface.

3.4 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean adjacent soiled surfaces.

3.5 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect sealants until cured.

END OF SECTION

SECTION 07 95 00 - PREMANUFACTURED EXPANSION JOINT SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: The following types of metal expansion joint covers:
   1. Interior pedestrian traffic joints.
   2. Interior wall and ceiling joints.
   3. Interior soffit joints.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Block-outs and cast-in anchorage and frames for expansion joint systems in concrete floors, parking decks, and walls.
   2. Section 07 62 00 - Sheet Metal Flashing and Trim: Sheet metal roof and wall joint systems.
   3. Section 07 90 00 - Joint Protection; Elastomeric sealants and preformed compressed-foam sealants without metal frames.

1.2 DEFINITIONS

A. Expansion Joint System: Any filler or cover used to span, fill, cover, or seal a joint, except expanding foam seals and applied sealants.

B. Cyclic Movement: Periodic change between widest and narrowest joint widths in an automatically mechanically controlled system.

C. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist passage of flame and hot gases through a movement joint.

D. Movement Capability: Value obtained from the difference between widest and narrowest widths of a joint opening typically expressed in numerical values (mm or inches) or a percentage of nominal value of joint width.

E. Revise below if it is impossible either to indicate nominal joint widths based on a prediction when the joint system will be installed or, if none is indicated, to establish them based on maximum and minimum joint widths.

F. Nominal Joint Width: Width of linear gap indicated as representing the conditions existing when expansion joint systems will be installed or, if no nominal joint width is indicated, a width equal to the sum of maximum and minimum joint widths divided by two.

1.3 PERFORMANCE REQUIREMENTS

A. General: Provide factory-fabricated expansion joint systems capable of withstanding the types of loads and of accommodating the kinds of movement, and the other functions for which they are designed including those specified below, without failure. Types of failure include those listed in Appendix X3 of ASTM E 1399.
   1. Pedestrian Traffic Joints: Support pedestrian traffic across joint.
   2. Joints in Fire-Resistance-Rated Assemblies: Maintain fire-resistance ratings of assemblies.
   3. Joints in Smoke Barriers: Maintain integrity of smoke barrier.
   4. Joints in Acoustically Rated Assemblies: Inhibit passage of airborne noise.
   5. Other Joints: Where indicated, provide joint systems that prevent penetration of water, moisture, and other substances deleterious to building components or content.
   6. Seismic Joints: Remain in place on exposure to seismic activity (movement).
   7. Joints in Surfaces with Architectural Finishes: Serve as finished expansion joint closures.

1.4 SUBMITTALS

A. Product Data: Include manufacturer's product specifications, construction details, material and finish descriptions, and dimensions of individual components and seals.

B. Shop Drawings: For each joint system specified, provide the following:
   1. Placement Drawings: Include line diagrams showing entire route of each joint system, plans, elevations, sections, details, joints, splices, locations of joints and splices, and attachments to other Work. Where joint systems change planes, provide Isometric Drawings depicting how components interconnect to achieve continuity of joint covers and fillers.

C. Samples for Verification: Full-size units 6 inches (150 mm) long of each type of joint system indicated; in sets for each finish, color, texture, and pattern specified, showing the full range of variations expected in these characteristics.

D. Product Test Reports: From a qualified testing agency indicating expansion joint systems comply with requirements, based on comprehensive testing of current products.

E. Research/Evaluation Reports: Evidence of expansion joint system's compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain expansion joint systems through one source from a single manufacturer. Coordinate compatibility with adjoining joint systems specified in other Sections.

B. Fire-Test-Response Characteristics: Where indicated, provide joint systems incorporating fire barriers that are identical to those of assemblies tested for fire resistance per ASTM E 119 and UL 2079, including hose-stream test of vertical wall assemblies, by a testing and inspecting agency acceptable to authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Products: The design for each expansion joint system specified in Part 2 "Expansion Joint Systems" Article below is based on the products named. Subject to compliance with requirements, provide either the named products or comparable products by one of the other manufacturers listed.

2.2 MATERIALS

A. Aluminum: ASTM B 221 (ASTM B 221M), alloy 6063-T5 for extrusions; ASTM B 209 (ASTM B 209M), alloy 6061-T6 for sheet and plate.
   1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.

B. Preformed Seals: Single or multicellular extruded elastomeric seals designed with or without continuous, longitudinal, internal baffles. Formed to be installed in frames or with anchored flanges, in color indicated or, if not indicated, as selected by Architect from manufacturer's standard colors.

C. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint.

D. Accessories: Manufacturer's standard anchors, clips, fasteners, set screws, spacers, flexible moisture barrier and filler materials, drain tubes, lubricants, adhesives, and other accessories compatible with material in contact, as indicated or required for complete installations.

2.3 EXPANSION JOINT SYSTEMS

A. General: Provide joint systems of design, basic profile, materials, and operation indicated. Provide units with the capability to accommodate joint widths indicated and variations in adjacent surfaces.
1. Furnish units in longest practicable lengths to minimize number of end joints. Provide hairline mitered corners where joint changes directions or abuts other materials.
2. Include closure materials and transition pieces, tee-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous joint systems.
3. Public Arena Seals: Non-slip seals designed for installation on treads and risers and to lie flat with adjacent surfaces and complying with ADA guidelines for public areas.
4. Nominal Joint Widths: As indicated.
5. Type of Movement Capability: Expansion and contraction.
6. Preformed Seal Material: Manufacturer's standard.
a. Seal Color: Selected by Architect.
7. Exposed Frame Material: Aluminum.
8. Fire-Resistance Ratings: For joint systems at rated conditions, provide manufacturer's standard fire barrier with a rating not less than that of adjacent construction.

B. Basis-of-Design Products: The design for each expansion joint system specified below is based on the products named. Subject to compliance with requirements, provide either the named products or comparable products by one of the following manufacturers:
1. Architectural Art Manufacturing, Inc. www.archart.com
2. Balco Metalines, www.balcousa.com
3. Construction Specialties, Inc. www.c-sgroup.com
4. InPro Corp. www.inprocorp.com.
5. MM Systems, Inc. www.mmsystemscorp.com

C. Expansion Joint System: Metal frames and preformed seals for the following interior conditions:
1. Floor-to-Floor Joints, Basis-of-Design Product: Construction Specialties, Inc.; “ALS” Series.
2. Floor-to-Wall Joints, Basis-of-Design Product: Construction Specialties, Inc.; “ALSW” Series.
3. Wall-to-Wall Joints, Basis-of-Design Product: Construction Specialties, Inc.; “AFW” Series.
4. Wall-to-Ceiling Joints, Basis-of-Design Product: Construction Specialties, Inc.; “FCSC” Series
5. Ceiling-to-Ceiling Joints, Basis-of-Design Product: Construction Specialties, Inc.; “FCS” Series.
6. Wall-to-Soffit Joints, Basis-of-Design Product: Construction Specialties, Inc.; “FCSC” Series.
7. Soffit-to-Soffit Joints, Basis-of-Design Product: Construction Specialties, Inc.; “FCS” Series.

2.4 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.5 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Mill Finish: AA-M10 (Mechanical Finish: as fabricated; no other applied finish unless buffing

is required to remove scratches, welding, or grinding produced in fabrication process.
1. Provide at floor conditions unless otherwise indicated.

C. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: Non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 607.1.
1. Provide at wall, ceiling, and soffit conditions unless otherwise indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare substrates according to expansion joint system manufacturer's written instructions.

B. Coordinate and furnish anchorages, Placement Drawings, and instructions for installing joint systems to be embedded in or anchored to concrete or to have recesses formed into edges of concrete slab for later placement and grouting-in of frames.

C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure joint systems to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of joint systems.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for handling and installing expansion joint assemblies and materials, unless more stringent requirements are indicated.

B. Coordinate installation of expansion joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.

C. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required to install joint systems.
1. Install joint cover assemblies in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
2. Allow adequate free movement for thermal expansion and contraction of metal to avoid buckling.
3. Set covers in horizontal surfaces at elevations that place exposed surfaces flush with adjoining finishes.
4. Locate wall, ceiling, and soffit covers in continuous contact with adjacent surfaces.
5. Securely attach in place with required accessories.
6. Locate anchors at interval recommended by manufacturer, but not less than 3 inches from each end and not more than 24 inches o.c.

D. Continuity: Maintain continuity of joint systems with a minimum number of end joints and align metal members. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal to avoid buckling of frames. Adhere flexible filler materials, if any, to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.

E. Extruded Preformed Seals: Install seals to comply with manufacturer's written instructions and with minimum number of end joints.
1. For straight sections, provide preformed seals in continuous lengths.
2. Vulcanize or heat-weld field splice joints in preformed seal material to provide watertight joints using procedures recommended by manufacturer.
3. Apply adhesive, epoxy, or lubricant adhesive approved by manufacturer to both frame interfaces before installing preformed seals.
4. Seal transitions according to manufacturer's written instructions.

F. Seismic Seals: Install interior seals in continuous lengths. Install exterior seal in standard

lengths and vulcanize or heat-weld field splice joints to provide watertight joints using manufacturer's recommended procedures. Seal transitions and end joints according to manufacturer's written instructions.

G. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and end joints.

3.3 CLEANING AND PROTECTION

A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.

END OF SECTION

SECTION 08 11 13 - STANDARD STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Steel frames for doors and windows.
   2. Steel doors.

B. Related Sections:
   1. Section 08 14 16 - Flush Wood Doors: For wood veneer or plastic laminate clad doors set in steel frames.
   2. Section 08 71 00 - Door Hardware: For finish hardware requirements of steel doors and frames.
   3. Section 08 80 00 – Glazing: For glazing panels set in steel frames and glass lights set in steel door faces.
   4. Section 09 90 00 - Painting and Coating: Field painting of shop-primed steel doors and frames.

1.2 REFERENCES

A. American National Standards Institute:
   1. ANSI A250.8 - Recommended Specifications for Standard Steel Doors and Frames.

B. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   2. ASTM E413 - Standard Classification for Rating Sound Insulation.

C. National Fire Protection Association:
   1. NFPA 80 - Standard for Fire Doors, Fire Windows.
   2. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies.

D. Steel Door Institute:
   1. SDI 108 - Recommended Selection and Usage Guide for Standard Steel Doors.

E. Underwriters Laboratories Inc.:
   1. UL 10B - Fire Tests of Door Assemblies.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Requirements for submittals.

B. Shop Drawings: Indicate door elevations, frame elevations, internal reinforcement, anchor types and spacing, door closure method, and cut-outs for hardware, glazing, and louvers.

C. Product Data: Submit door configurations, frame configurations, location of cut-outs for hardware reinforcement.

D. Manufacturer's Installation Instructions: Submit special installation instructions.

E. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

F. Oversize Construction Certificates: For door assemblies required to be fire rated and exceeding size limitations of labeled assemblies.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ANSI A250.8.

B. Fire Rated Door and Frame Construction: Conform to NFPA 252.

C. Installed Fire Rated Door Assembly: Conform to NFPA 80 for fire rated class as indicated on Drawings.

D. Attach label from agency approved by authority having jurisdiction to identify each fire rated door and frame.

E. Surface Burning Characteristics:
   1. Foam Insulation in Fire Rated Doors: Maximum 75/450 flame spread/smoke developed index when tested in accordance with ASTM E84.
   2. Apply label from agency approved by authority having jurisdiction to identify each foam plastic insulation board.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section with minimum years' experience and approved by manufacturer.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept doors and frames on site in manufacturer's packaging. Inspect for damage.

C. Break seal on site to permit ventilation.

1.8 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Requirements for coordination.

B. Coordinate Work with door opening construction, door frame, and door hardware installation.

C. Coordinate installation to accommodate door hardware electric wire connections.

PART 2 - PRODUCTS

2.1 STANDARD STEEL DOORS AND FRAMES

A. Manufacturers:
   1. Amweld Building Products www.amweld.com
   2. Ceco Door www.cecodoor.com
   3. Curries www.curries.com
   4. Deansteel Manufacturing, Inc. www.deansteel.com
   5. Kewanee Corporation www.kewaneecorp.com
   6. Mesker Door, Inc. www.meskerdoor.com
   7. Pearland Industries
   8. Pioneer Industries Inc. www.pioneerindustries.com
   9. Republic Doors and Frames. www.republicdoor.com
   10. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description - Doors: To suit ANSI A250.8 and the following:

1. Exterior Doors (Insulated): Level 3 - Extra heavy Duty, Model 2, seamless design, 16 gage face sheets, 1-3/4 inches thick, galvanized A60.
2. Interior Doors (Non-Rated): Level 3 - Extra heavy Duty, Model 2, seamless design, 16 gage face sheets, 1-3/4 inches thick, ungalvanized.
3. Interior Doors (Fire Rated): Level 3 - Extra heavy Duty, Model 2, seamless design, 16 gage face sheets, 1-3/4 inches thick, unglvanized.

C. Product Description - Frames: Fully welded steel frames, to suit ANSI A250.8 and the following:
1. Exterior: Level 3 - Extra heavy Duty, 16-gage thick material, galvanized A60.
a. Furnish 14 gage thick material for frames over 48 inches wide.
2. Interior: Level 3 - Extra heavy Duty, 16-gage material, ungalvanized.
a. Furnish 14-gage material for frames over 48 inches wide.

2.2 DOOR COMPONENTS

A. Face: Steel sheet in accordance with ANSI A250.

B. End Closure: Channel, 0.04 inches thick, flush.

C. Core: Manufacturer’s standard core consisting of one of the following:
1. Resin-impregnated cardboard honeycomb.
2. Polyurethane.
3. Polystyrene foam.
4. Mineral fiberboard.

D. Thermal-Rated (Insulating) Assemblies: At exterior locations and elsewhere as shown or scheduled, provide doors and frames fabricated as thermal-insulating assemblies and tested according to ASTM C236 or ASTM C976 on fully operable door assemblies.
1. Unless otherwise indicated, provide thermal-rated assemblies with U-value of 0.41 Btu/sq. ft. x h x deg F or better.

E. Sound-Rated (Acoustical) Assemblies: Where shown or scheduled, provide doors and frames fabricated as sound-reducing assemblies, tested according to ASTM E1408, and classified according to ASTM E 413.
1. Unless otherwise indicated, provide acoustical assemblies with STC sound ratings of 33 or better.

2.3 FRAME COMPONENTS: Frames: Steel sheet in accordance with ANSI A250.

2.4 ACCESSORIES

A. Removable Stops: Rolled steel, channel shape, butted corners; prepared for countersink style screws.

B. Vision Lite Systems: Manufacturer's standard kits consisting of glass lite moldings to accommodate glass thickness and size of vision lite indicated.

C. Primer: ANSI A250.10, manufacturer’s standard rust inhibitive type.

D. Silencers: Specified in Section 08 71 00; resilient rubber fitted into drilled hole.

2.5 FABRICATION

A. Doors:
1. Fabricate doors with hardware reinforcement welded in place.
2. Glazing Stops: Provide non-removable stops on outside of exterior doors and on secure side of interior doors for glass.
3. Attach fire rated label to each fire rated door.

B. Frames:
1. Fabricate frames as welded unit.

2. Mullions for Double Doors: Removable, specified in Hardware Section.
3. Transom Bars for Glazed Lights: Fixed type, of same profiles as jamb and head.
4. Fabricate frames with hardware reinforcement plates welded in place. Provide mortar guard boxes.
5. For frames installed in masonry walls, and which will receive stop-applied seals or weatherstripping, fill the stops with strips of rigid insulation to keep the grout out of the stops and to facilitate installation of the seals and weatherproofing.
6. Prepare frames for silencers. Provide three single silencers for single doors on strike side. Provide two single silencers on frame head at double doors.
7. Attach fire rated label to each fire rated frame.
8. Glazing Stops: Provide non-removable stops on the outside and removable, screw-applied stops on the room side of doors and frames for glass.

2.6 SHOP FINISHING: Baked-on primer, ready for finish field painting.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify opening sizes and tolerances are acceptable.

3.2 FRAME INSTALLATION

A. Install frames in accordance with ANSI A250.8.

B. Coordinate with masonry and gypsum board wall construction for anchor placement.

C. Provide at least three wall anchors per jamb. For openings 90 inches or more in height, install four wall anchors per jamb.

D. Coordinate installation of glass and glazing specified in Section 08 80 00.

E. Coordinate installation of frames with doors and with hardware specified in Section 08 71 00.

F. Coordinate installation of frames with installation of doors specified in Section 08 14 16.

3.3 DOOR INSTALLATION

A. Install doors in accordance with ANSI A250.8.

B. Install door louvers and glazing frames plumb and level.

C. Coordinate installation of glass and glazing specified in Section 08 80 00.

D. Coordinate installation of doors with frames and with hardware specified in Section 08 71 00.

E. Touch-up damaged shop finishes.

3.4 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Diagonal Distortion: 1/16 inch measured with straight edge, corner to corner.

C. Clearances for Non-Fire-Rated Doors: Not more than 1/8 inch at jambs and heads, except not more than 1/4 inch between pairs of doors. Not more than 3/4 inch at bottom.

D. Clearances for Fire-Rated Doors: In accordance with NFPA 80.

3.5 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for adjusting.

B. Adjust door for smooth and balanced door movement.

END OF SECTION

SECTION 08 14 16 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Flush wood doors with plastic laminate faces.

B. Related Sections:
   1. Section 08 11 13 - Standard Steel Doors and Frames: Steel frames.
   2. Section 08 71 00 - Door Hardware.
   3. Section 08 80 00 - Glazing.

1.2 REFERENCES

A. ASTM International:
   1. ASTM E413 - Standard Classification for Rating Sound Insulation.

B. Architectural Woodwork Institute:
   1. AWI - Quality Standards Illustrated.

C. Intertek Testing Services (Warnock Hersey Listed):
   1. WH - Certification Listings.

D. National Electrical Manufacturers Association:
   1. NEMA LD 3 - High Pressure Decorative Laminates.

E. National Fire Protection Association:
   1. NFPA 80 - Standard for Fire Doors, Fire Windows.
   2. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies.

F. Underwriters Laboratories Inc.:
   1. UL - Building Materials Directory.
   2. UL 10B - Fire Tests of Door Assemblies.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Illustrate door opening criteria, elevations, sizes, types, swings, undercuts required, special beveling, special blocking for hardware, factory machining criteria, identify cutouts for glazing and louvers.

C. Product Data: Submit information on door core materials and construction.

D. Samples:
   1. Submit two samples of door construction, 12 x 12 inch in size, cut from top corner of door.
   2. Submit two samples of plastic laminate illustrating laminate pattern and color.
   3. Submit two samples of lite opening frames, 6 inches long, for each material, type, and finish required.

E. Manufacturer's Installation Instructions: Submit special installation instructions.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with AWI Quality Standard Section 1300, Custom Grade.

B. Finish doors in accordance with AWI Quality Standard Section 1500.

C. Fire Rated Door Construction: Conform to NFPA 252.

D. Attach label from agency approved by authority having jurisdiction to identify each fire rated

door.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Package deliver and store doors in accordance with AWI Section 1300.

C. Accept doors on site in manufacturer's packaging. Inspect for damage.
1. Break seal on site to permit ventilation.

1.7 PROJECT CONDITIONS

A. Do not deliver or install doors until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.8 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.9 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with door opening construction, door frame and door hardware installation.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Include coverage for delamination, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.

C. Furnish manufacturer's "Life of Installation" warranty for interior doors.

PART 2 - PRODUCTS

2.1 FLUSH WOOD DOORS

A. Manufacturers:
1. Algoma Hardwoods Inc. www.algomahardwoods.com
2. Eggers Industries www.eggersind.com
3. GRAHAM Manufacturing Corp. www.grahamdoors.com
4. IPIK Door Company www.ipikdoor.com
5. Marshfield Door Systems Inc. www.marshfielddoors.com
6. VT Industries www.vtindustries.com
7. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Solid core flush wood doors; 1-3/4 inches thick, five-ply construction, plastic laminate facing material; fire and acoustic rated as indicated on Drawings.

2.2 COMPONENTS

A. Plastic Laminate Doors: Solid core, 5-ply construction, AWI Section 1300, core as follows:

1. Non-Rated: Structural composite lumber core.
2. 20- and 45-Minute Rating: Structural composite lumber core.
3. 60-Minute Rating: Agri-fiber core.
4. 90-Minute Rating: Mineral core.

B. Special Construction for Mineral Core Fire Doors:
1. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire ratings indicated as follows:
   a. 5-inch top-rail blocking.
   b. 5-inch bottom-rail blocking, in doors indicated to have protection plates.
   c. 5-inch midrail blocking, in doors indicated to have armor plates.
   d. 5-inch midrail blocking, in doors indicated to have exit devices.
2. Edge Construction: At hinge stiles, provide manufacturer's standard laminated-edge construction with improved screw-holding capability and split resistance, painted to match plastic laminate facing at plastic laminate doors.
3. Pairs: Provide fire-rated pairs with fire-retardant stiles that are labeled and listed for applications indicated without formed-steel edges and astragals.

C. Acoustical Doors: AWI Section 1300, Type SR- Sound Retardant (Acoustical).

D. Plastic Laminate Facing (Interior): NEMA LD-3, General Purpose Type, 0.050 inch thick, type as indicated on Drawings.

E. Cross Banding Behind Laminate Finish: 1 ply; manufacturer’s standard construction.

F. Facing Adhesive: Type II - water resistant.

2.3 ACCESSORIES

A. Glazing Stops - Wood Veneer Doors:
1. Rolled steel, factory primed frames for fire rated doors.

B. Glazing Stops - Plastic Laminate-Clad Doors:
1. Rolled steel, factory primed frames.

2.4 FABRICATION

A. Fabricate doors in accordance with AWI Quality Standards requirements.

B. Sound Rating for Acoustical Door: ASTM E413, minimum STC-45.

C. Furnish lock blocks at lock edge and top of door for hardware reinforcement.

D. Vertical Exposed Edge of Stiles: Hardwood painted to match laminate for plastic laminate doors.

E. Factory machine doors for finish hardware in accordance with hardware requirements and dimensions. Do not machine for surface hardware. Furnish solid blocking for through bolted hardware.

F. Factory fit doors for frame opening dimensions identified on shop drawings.

G. Provide edge clearances in accordance with AWI 1300.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes and tolerances are acceptable.

C. Do not install doors in frame openings that are not plumb or are out-of-tolerance for size or alignment.

3.2 INSTALLATION

A. Install doors in accordance with AWI Quality Standards requirements.

B. Trim non-rated door width by cutting equally on both jamb edges.

C. Trim door height by cutting bottom edges to maximum of 3/4 inch.
   1. Trim fire door height at bottom edge only, in accordance with fire rating requirements.

D. Machine cut doors for hardware installation.

E. Coordinate installation of doors with installation of frames specified in Section 08 11 13 and hardware specified in Section 08 71 00.

F. Coordinate installation of glass and glazing specified in Section 08 80 00.

3.3 INSTALLATION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Conform to AWI requirements for fit and clearance tolerances.

C. Conform to AWI Section 1300 requirements for maximum diagonal distortion.

3.4 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust door for smooth and balanced door movement.

C. Adjust closer for full closure.

END OF SECTION

SECTION 08 31 13 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes fire resistive rated and non-rated access doors and panels with frames.
   1. Provide for access to controls, valves, traps, dampers, cleanouts, and similar items requiring operation behind inaccessible finished surfaces.
   2. Coordinate exact locations with various trades to assure proper placement of access doors and panels.

1.2 REFERENCES

A. ASTM International: ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

B. Intertek Testing Services (Warnock Hersey Listed): WH - Certification Listings.

C. National Fire Protection Association: NFPA 80 - Standard for Fire Doors, Fire Windows.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate exact position of access door units.

C. Product Data: Submit literature indicating sizes, types, finishes, hardware, scheduled locations, fire resistance listings, and details of adjoining Work.

D. Manufacturer's Installation Instructions: Submit installation requirements and rough-in dimensions.

1.4 QUALITY ASSURANCE

A. Fire Resistance Ratings: Where indicated as fire rated provide assemblies from manufacturers listed in UL Directory or Intertek Testing Services (Warnock Hersey Listed) Directory.

B. Fire Rated Access Doors: Rating as indicated on Drawings.
   1. Tested Rating: Determined in accordance with ASTM E119.

C. Attach label from agency approved by authority having jurisdiction to identify each fire rated access door.

1.5 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Requirements for coordination.

B. Coordinate Work with work requiring controls, valves, traps, dampers, cleanouts, and similar items requiring operation being located behind finished surfaces.

PART 2 - PRODUCTS

2.1 ACCESS DOORS AND PANELS

A. Manufacturers:
   1. J. L. Industries.
   2. Karp Associates, Inc.
   3. Milcor LTD, Partnership.
   4. Nystrom Products Co.
   5. Substitutions: Section 01 60 00 - Product Requirements.

B. Flush Framed Access Doors: Frames and nominal 1 inch wide exposed flanges of 16 gage steel and door panels of 14 gage steel.

C. Gypsum Board Access Doors: Frames and nominal 1 inch wide flanges of 16 gage steel and door panels of 14 gage steel. Design flanges to be concealed by gypsum board joint finishing compound specified in Section 09 21 16.

D. Plaster Access Doors: Frames and nominal 1 inch wide flanges of 16 gage steel and door panels of 14 gage steel. Design flanges to be concealed by plaster specified in Section 09 24 00.

E. Fire Rated Access Doors: Frames and nominal 1 inch wide exposed flanges of minimum 16 gage steel and door panels of 20 gage steel. Provide self-closing and latching doors with keyed lock to match cylinders specified in Section 08 71 00.

F. Gypsum Board Fire Rated Access Doors: 16 gage steel frames with minimum 22 gage galvanized steel drywall bead flanges and door panels of 20 gage steel. Design flanges to be concealed by gypsum board joint finishing compound specified in Section 09 21 16. Provide self- closing and latching doors with keyed lock to match cylinders specified in Section 08 71 00.

2.2 FABRICATION

A. Fabricate units of continuous welded construction; weld, fill, and grind joints to assure flush and square unit.

B. Wall and Ceiling Access Door and Panel Hardware:
1. Hinge: Standard continuous or concealed spring pin type, 175 degree steel hinges.
2. Lock: Self-latching lock. Screw driver slot for quarter turn cam lock.

C. Size Variations: Obtain acceptance of manufacturer’s standard size units which vary slightly from sizes shown or scheduled.

2.3 SHOP FINISHING

A. Base Metal Protection: Galvanized, hot dipped wiped coat finish.

B. Finish: One coat baked enamel, color as selected.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify rough openings for access doors and panels are correctly sized and located.

3.2 INSTALLATION

A. Secure frames rigidly in place, plumb and level in opening, with plane of door and panel face aligned with adjacent finished surfaces.
1. Set concealed frame type units flush with adjacent finished surfaces.

B. Position unit to provide convenient access to concealed work requiring access.

C. Install fire rated units in accordance with NFPA 80 and requirements for fire listing.

END OF SECTION

SECTION 08 32 13 - SLIDING ALUMINUM-FRAMED GLASS DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Sliding glass doors at interior display cases.
2. Provide 2-panel and/or 3-panel configurations as indicated.

B. Related Sections:

1. Section 07 90 00 - Joint Protection: Perimeter sealant.
2. Section 08 71 00 - Door Hardware: Removable cylinder keyed to Owner’s building system for lockset on sliding doors.
3. Section 08 80 00 - Glazing.

1.2 DEFINITIONS

A. Grade “C”: Commercial grade.

B. Performance grade number, included as part of the AAMA code designating sliding aluminum-framed glass door products, is the actual design pressure in pounds force per square foot (pascals) used to determine the structural test pressure and water test pressure.

1.3 PERFORMANCE REQUIREMENTS

A. General: Provide sliding aluminum-framed glass doors capable of complying with performance requirements indicated based on testing manufacturer's doors representative of those specified and of the test size indicated below:

1. Minimum size required by AAMA/NWWDA 101/I.S.2.

B. AAMA Performance Requirements: Provide sliding aluminum-framed glass doors of the performance class and grade indicated that comply with AAMA/NWWDA 101/I.S.2.

1. Performance Class: C.
2. Performance Grade: Minimum 20.

C. Deglazing: No disengagement of glazing surround members of operable panels when tested according to ASTM E 987 at 70 lbf (312 N) on vertical rails and 50 lbf (223 N) on other rails.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of sliding aluminum-framed glass door indicated, including the following:

1. Construction details and fabrication methods.
2. Profiles and dimensions of individual components.
3. Data on hardware, accessories, and finishes.
4. Recommendations for maintaining and cleaning exposed surfaces.

C. Shop Drawings: For each type of sliding aluminum-framed glass door indicated. Include information not fully detailed in manufacturer's standard Product Data and the following:

1. Fabrication, layout, and installation details, including anchors.
2. Typical door elevations.
3. Hardware.
4. Accessories.

D. Samples for Verification: Architect reserves the right to require additional Samples that show fabrication techniques, workmanship, and design of sliding glass door, hardware, and accessories.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed sliding aluminum-framed glass door installations similar in material, design, and extent to those indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Source Limitations: Obtain sliding aluminum-framed glass doors and aluminum-framed entrances and storefronts through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, dimensional requirements, and aesthetic effects of sliding aluminum-framed glass doors and are based on the specific doors indicated. Other manufacturers' products with equal performance characteristics may be considered provided deviations in size, profile, and dimensions are minor and do not alter the aesthetic effect. Refer to Division 1 Section "Substitutions."

D. Sliding Aluminum-Framed Glass Door Standard: Comply with provisions of AAMA/NWWDA 101/I.S.2 for standards of performance, materials, components, and fabrication, unless more stringent requirements are indicated.

E. Safety Glass: Category II materials complying with testing requirements in 16 CFR 1201 and ANSI Z97.1.

F. Glazing Publications: Comply with written recommendations of glass manufacturers and GANA's "Glazing Manual," unless more stringent requirements are indicated.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify sliding aluminum-framed glass door openings by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
   1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish opening dimensions and proceed with fabricating sliding aluminum-framed glass doors without field measurements.
   2. Coordination: Coordinate wall construction to ensure that actual opening dimensions correspond to established dimensions.

1.7 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

C. Special Warranty: Written warranty, executed by manufacturer agreeing to repair or replace components of sliding aluminum-framed glass doors that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
   1. Structural failures, including excessive deflection.
   2. Faulty operation of movable panels and hardware.
   3. Deterioration of metals, metal finishes, and other materials beyond normal exposure.
   4. Warranty Period: Three years from date of Substantial Completion.
   5. Warranty Period for Glass: Five years from date of Substantial Completion.
   6. Warranty Period for Metal Finishes: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers:
1. Arch Aluminum & Glass Co., Inc., www.arch.amarlite.com
2. EFCO Corporation, www.efcocorp.com
3. Kawneer, www.kawneer.com
4. United States Aluminum, www.usalum.com
5. Vistawall Architectural Products, www.vistawall.com
6. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis-of-Design: Kawneer, 1010 Sliding Mall Front.

2.2 GLAZING

A. Glazing System: 1/4 inch thick clear tempered glass in manufacturer's standard glazing system.

2.3 HARDWARE

A. General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, or other corrosion-resistant material compatible with aluminum; designed to smoothly operate, tightly close, and securely lock sliding aluminum-framed glass doors. Do not use aluminum in frictional contact with other metals. Where exposed, provide solid bronze; extruded, cast, or wrought aluminum; solid white metal with special coating finish; or nonmagnetic stainless steel.

B. Roller Assemblies: Provide movable panels with rollers and roller assemblies that comply with AAMA 906.3.

C. Threshold and Sill Cap/Track: Provide extruded-aluminum threshold and track of thickness, dimensions, and profile indicated; designed to comply with performance requirements indicated; with manufacturer's standard finish.
1. Multi-Track for 2-panel or 3-panel doors with opening configuration as indicated in the drawings.
a. Interior Floor Track: Recessed type.
b. Interior Floor Track: Low profile, with stainless steel cap.

D. Door Pulls: Provide manufacturer's standard flush face pull on each movable panel.

E. Locks: Provide hook bolt lock accepting removable cylinder keyed to Owner’s master keying requirements (*Sargent Large Format*):
1. Removable cylinder provided under the Hardware Section.
2. Adjust locking device to allow unobstructed movement of the panel across adjacent panel in the direction indicated.

2.4 FABRICATION

A. General: Fabricate sliding aluminum-framed glass doors in sizes indicated that comply with AAMA/NWWDA 101/I.S.2 for performance class and performance grade indicated. Include a complete system for assembling components and anchoring doors.

B. Fabricate sliding aluminum-framed glass doors that are reglazable without dismantling panel framing.

C. Factory-Glazed Fabrication: Glaze sliding aluminum-framed glass doors in the factory where practical and possible for applications indicated. Comply with requirements in Division 8 Section "Glazing" and with AAMA/NWWDA 101/I.S.2.

2.5 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: Non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Examine openings before installation. Verify that opening is correct and sill plate is level. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Masonry Surfaces: Visibly dry and free of excess mortar, sand, and other construction debris.
   2. Metal Surfaces: Dry; clean; free of grease, oil, dirt, rust, corrosion, and welding slag; without sharp edges or offsets at joints.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for installing doors, hardware, accessories, and other components.

B. Set doors level, plumb, and true to line, without warp or rack of frames and panels. Provide proper support and anchor securely in place.
   1. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials by complying with requirements specified in "Dissimilar Materials" Paragraph in Appendix B to AAMA/NWWDA 101/I.S.2.

3.3 ADJUSTING

A. Adjust operating panels, screens, and hardware to provide a tight fit at contact points and weather stripping for smooth operation and weathertight closure. Lubricate hardware and moving parts.

3.4 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean aluminum surfaces immediately after installing sliding aluminum-framed glass doors. Avoid damaging protective coatings and finishes. Remove excess glazing and sealants, dirt, and other substances.

C. Clean glass of factory-glazed doors immediately after installing sliding aluminum-framed glass doors. Comply with manufacturer's written recommendations for final cleaning and maintenance. Remove nonpermanent labels from glass surfaces.

D. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during the construction period.

3.5 PROTECTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect sliding aluminum-framed glass doors from damage or deterioration until time of Substantial Completion.

END OF SECTION

SECTION 08 33 13 - OVERHEAD COUNTER DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Stainless steel overhead coiling counter doors.
   2. Manual operation.

B. Related Sections:
   1. Section 08 33 23 - Overhead Coiling Doors.
   2. Section 08 71 00 - Door Hardware.

1.2 REFERENCES

A. ASTM International:
   1. ASTM A666 - Standard Specification for Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

1.3 SYSTEM DESCRIPTION

A. Manual Operation: Manual push up unit with overhead counter balance device, requiring 25 lb nominal force to operate.

1.4 DESIGN REQUIREMENTS

A. Operation: Design door assembly to operate for not less than 10,000 cycles.

1.5 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details.

C. Product Data: Submit general construction, component connections and details.

D. Samples: Submit two door slats of each material, 12 inch long, illustrating shape, color and finish texture.

E. Manufacturer's Installation Instructions: Indicate installation sequence and procedures, and adjustment and alignment procedures.

1.6 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit lubrication requirements and frequency, and periodic adjustments required.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Installer: Company specializing in performing work of this section with minimum three years’ experience and approved by manufacturer.

PART 2 - PRODUCTS

2.1 OVERHEAD COUNTER DOORS

A. Manufacturers:
1. The Cookson Company www.cooksondoor.com/index
2. Cornell Iron Works Inc. www.cornelliron.com
3. McKeon Rolling Steel Door Company, Inc. www.mckeondoor.com
4. Overhead Door Corporation. www.overheaddoor.com
5. Raynor Garage Doors. www.raynor.com/index.cfm
6. Substitutions: Section 01 60 00 - Product Requirements.

2.2 COMPONENTS

A. Curtain: Conform to following:
1. Stainless Steel Slats: Interlocking, minimum 24 gage of stainless steel conforming to ASTM A666 Type 304 rollable temper.
a. Type: Single thickness flat slat.
2. Nominal Slat Size: 2 inches wide by required length.
3. Slat Ends: Alternate slats fitted with end locks to act as wearing surface in guides and to prevent lateral movement.
4. Curtain Bottom: Tube-shape, providing reinforcement and positive contact with counter in closed position; of material to match curtain.

B. Guides: Material to match curtain. Provide continuous integral wear strips to prevent metal-to-metal contact and minimize noise of travel. Provide removable stops on guides to prevent overtravel of curtain.

C. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension.

D. Hood Enclosure: Square shape, minimum 24 gage stainless steel; internally reinforced to maintain rigidity and shape.

E. Hardware: Specified in Section 08 71 00 and as follows:
1. Handle: Inside center mounted, adjustable keeper, spring activated latch bar with feature to keep in locked or retracted position; interior handle.

2.3 SHOP FINISHING

A. Stainless Steel: NAAMM No. 4 satin directional polished finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes, tolerances and conditions are acceptable.

3.2 INSTALLATION

A. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

B. Securely and rigidly brace components suspended from structure.

C. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

D. Coordinate installation of sealants and backing materials at frame perimeter as specified in

Section 07 90 00.

E. Install perimeter trim and closures.

3.3 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maintain dimensional tolerances and alignment with adjacent Work.

C. Maximum Variation from Plumb: 1/16 inch.

D. Maximum Variation from Level: 1/16 inch.

E. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 ft straight edge.

3.4 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust door, hardware and operating assemblies for smooth and noiseless operation.

3.5 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean door and components.

C. Remove labels and visible markings.

END OF SECTION

SECTION 08 33 23 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Insulated exterior overhead coiling doors.
   2. Non-insulated interior overhead coiling doors.
   3. Electric operation with manual override.

B. Related Sections:
   1. Section 05 50 00 - Metal Fabrications: Support framing.
   2. Section 08 71 00 - Hardware: Removable cylinder keyed to Owner’s building system for coiling door control stations.
   3. Section 09 90 00 - Painting and Coating: Field painted finish of factory-primed guides and hood enclosure.
   4. Division 26 and 28 Sections:
      a. Power and final connections.
      b. Coordination with emergency generator circuit and fire/smoke alarm activation.

1.2 REFERENCES

A. ASTM International:
   1. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   2. ASTM A924/A924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.

B. National Electrical Manufacturers Association:
   1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
   2. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC.
   3. NEMA MG 1 - Motors and Generators.

1.3 SYSTEM DESCRIPTION

A. Electric Operation: Electric motor operated unit with manual override in case of power failure.

1.4 DESIGN REQUIREMENTS

A. Wind Loads: Design exterior door assembly to withstand wind/suction loads indicated on Drawings, with maximum deflection of 1/120, and without damage to door shutter or assembly components.

B. Operation: Design door assembly, including operator, to operate for not less than 10,000 cycles.

1.5 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details, including wiring diagrams for electric operators.

C. Product Data: Submit general construction, component connections and details, wiring diagram and electrical equipment.

D. Samples: Submit two door slats, 12 inches long, illustrating shape, color and finish texture.

E. Manufacturer's Installation Instructions: Indicate installation sequence and procedures, and

adjustment and alignment procedures.

1.6 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit lubrication requirements and frequency, and periodic adjustments required.

1.7 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by UL or another testing firm acceptable to authority having jurisdiction.

B. Surface Burning Characteristics:
1. Foam Insulation: Maximum 75/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Apply label from agency approved by authority having jurisdiction to identify each foam plastic insulation board.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section with minimum years' experience and approved by manufacturer.

PART 2 - PRODUCTS

2.1 OVERHEAD COILING DOORS

A. Manufacturers:
1. The Cookson Company www.cooksondoor.com/index
2. Cornell Iron Works Inc. www.cornelliron.com
3. McKeon Rolling Steel Door Company, Inc. www.mckeondoor.com
4. Overhead Door Corporation. www.overheaddoor.com
5. Raynor Garage Doors. www.raynor.com/index.cfm
6. Substitutions: Section 01 60 00 - Product Requirements.

2.2 COMPONENTS

A. Curtain for Exterior Doors: Conforming to the following:
1. Steel Slats: Interlocking, minimum 24 gage of ASTM A653/A653M steel, with galvanized coating designation G90 in accordance with ASTM A924/A924M.
a. Type: Sandwich slat construction with insulated core.
2. Nominal Slat Size: 2 inches wide x required length.
3. Slat Ends: Alternate slats fitted with end locks to act as wearing surface in guides and to prevent lateral movement.
4. Windlocks: Malleable-iron castings secured to curtain slats with galvanized rivets or high-strength nylon, as required to comply with wind load.
5. Curtain Bottom: Fitted with minimum 1-1/2 x 1-1/2 x 1/8 inch angles to provide reinforcement and positive contact with floor in closed position; galvanized.
a. Provide motor-operated doors with combination bottom astragal and sensor edge.
6. Insulation: Manufacturer's standard rigid cellular polystyrene or polyurethane foam-type thermal insulation complying with maximum flame spread and smoke developed indices of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely within metal slat faces.

B. Curtain for Interior Doors: Fire rated in accordance with requirements indicated on Drawings:
   1. Steel Slats: Interlocking, minimum 24 gage of ASTM A653/A653M steel.
      a. Type: Single thickness S-configuration slat.
      b. Rated opening as scheduled.
   2. Nominal Slat Size: 2 inches wide by required length.
   3. Slat Ends: Alternate slats fitted with end locks to act as wearing surface in guides and to prevent lateral movement.
   4. Curtain Bottom: Fitted with minimum 1-1/2 x 1-1/2 x 1/8 inch angles to provide reinforcement and positive contact with floor in closed position.
   5. Astragal: Provide a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene, between angles or fitted to shape, as a cushion bumper for interior door. Bumper color to be black.
   6. Provide motor-operated doors with combination bottom astragal and sensor edge.

C. Guides: Minimum 3/16 inch thick; galvanized steel conforming to ASTM A653/A653M, minimum galvanized coating designation G90 in accordance with ASTM A924/A924M.
   1. Furnish continuous angles of profile to retain door in place; mounting brackets of same metal. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension.

D. Hood Enclosure: Round shape, minimum 24 gage galvanized steel; internally reinforced to maintain rigidity and shape.

E. Mounting Tube Frame: Provide manufacturer's standard mounting tube frame designed to support grille; factory fabricated from structural-steel tubes; fastened to floor and structure above grille; to be built into wall construction; and complete with anchors, connections, and fasteners.

F. Electric Operator:
   1. General: Provide electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operational life specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
   2. Comply with NFPA 70.
   3. Disconnect Device for Manual Operation: Provide hand-operated disconnect or mechanism for automatically engaging sprocket-chain operator and releasing brake while disconnecting motor, without affecting timing of limit switch. Mount disconnect and operator so they are accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
   4. Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency auxiliary operator.
   5. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V, ac or dc.
   6. Door-Operator Type: Provide wall-, hood-, or bracket-mounted, jackshaft, gear-head hoist-type door operator unit consisting of electric motor, enclosed worm-gear running-in-oil primary drive, chain and sprocket secondary drive, and auxiliary chain-hoist and floor level disconnect.
   7. Electric Motors: Provide high-starting torque, reversible, continuous-duty, Class A insulated, electric motors, complying with NEMA MG 1, with overload protection, sized to start, accelerate, and operate door in either direction, from any position, at not less than 2/3 fps or more than 1 fps, without exceeding nameplate ratings or considering service factor.
      a. Type: Polyphase, medium-induction type.
      b. Service Factor: According to NEMA MG 1, unless otherwise indicated.
      c. Coordinate wiring requirements and electric characteristics of motors with building electrical system.

d. Provide open dripproof-type motor, and controller with NEMA ICS 6, Type 1 enclosure.

8. Remote-Control Station: Provide keyed control station with 3-position controls labeled "Open," "Close," and "Stop."
   a. Provide one control station on each side of door where doors are installed across corridors or other traffic areas.
   b. Provide switch body accepting removable cylinder keyed to Owner's master keying requirements (*Sargent Large Format*). Removable cylinder provided under the Hardware Section.
9. Provide interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
10. Obstruction Detection Device: Provide each motorized door with indicated external automatic safety sensor able to protect full width of door opening. Activation of sensor immediately stops and reverses downward door travel.
    a. Sensor Edge: Provide each motorized door with an automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor immediately stops and reverses downward door travel. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
    b. Provide electrically actuated automatic bottom bar.
    c. Self-Monitoring Type: Provide self-monitoring, 4-wire configured device.
11. Limit Switches: Provide adjustable switches, interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
12. Emergency Operation: Where scheduled, doors shall self-open (powered by emergency generator) when activated by the fire/smoke alarm system or loss of primary power. When the alarm is cleared and power is restored, Doors shall automatically reset for normal operation. Provide adjustable time delay of up to 10 seconds from signal or power failure until start of door opening.

2.3 SHOP FINISHING

A. Curtain Slats: Steel, with factory powder coat finish, color as selected by Architect from manufacturer's full range.

B. Steel Guides and Hood Enclosure: Prime for field painting.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes, tolerances and conditions are acceptable.

3.2 INSTALLATION

A. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

B. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.

C. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

D. Coordinate installation of electrical service. Complete wiring from disconnect to unit components and from fire alarm system to door operator.

E. Coordinate installation of sealants and backing materials at frame perimeter as specified in Section 07 90 00.

F. Install perimeter trim and closures.

3.3 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maintain dimensional tolerances and alignment with adjacent Work.

C. Maximum Variation from Plumb: 1/16 inch.

D. Maximum Variation from Level: 1/16 inch.

E. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 ft straight edge.

3.4 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust door, hardware and operating assemblies for smooth and noiseless operation.

3.5 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean door and components.

C. Remove labels and visible markings.

END OF SECTION

SECTION 08 34 73 - SOUND CONTROL DOOR ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Steel sound-control doors, frames, seals, and certain hardware for music area doors as scheduled.

B. Related Sections:
   1. Section 08 71 00 – Door Hardware: For required hardware not provided under this section.
   2. Section 09 90 00 – Painting and Staining: For field-applied paint finishes for steel doors and frames.

1.2 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of product indicated. Include sound ratings, construction details, material descriptions, core descriptions, and finishes.

C. Shop Drawings: Include the following:
   1. Elevations of each door design.
   2. Details of sound-control seals, door bottoms, and thresholds.
   3. Details of doors, including vertical and horizontal edge details and metal thicknesses.
   4. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   5. Locations of reinforcement and preparations for hardware.
   6. Details of each different wall opening condition.
   7. Details of anchorages, joints, field splices, and connections.
   8. Details of accessories.
   9. Details of moldings, removable stops, and glazing.
   10. Details of conduit and preparations for power, signal, and control systems.

D. Samples:
   1. Finishes: For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches.
   2. Retain both subparagraphs below if fabrication Samples are required.
   3. Doors: Include section of vertical-edge, top, and bottom construction; automatic door bottom or gasket; core construction; glazing; and hinge and other applied hardware reinforcement.
   4. Frames: Include profile, corner joint, floor and wall anchors, and seals. Include separate section showing fixed sound panels if applicable.

E. Schedule: Provide a schedule of sound-control door assemblies prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with the Door Hardware Schedule.

F. Product Certificates: For each type of sound-control door assembly, from manufacturer.

G. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of sound-control door assembly.

H. Warranty: Samples of special warranty.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sound-control door assemblies to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain sound-control door assemblies, including doors, frames, sound-control seals, hinges (when integral for sound control), thresholds, and other items essential for sound control, from single source from single manufacturer.

B. Sound Rating: Provide sound-control door assemblies identical to those of assemblies tested as sound-retardant units by an acoustical testing agency, and have the following minimum rating:
   1. STC Rating: **Minimum STC-50** as determined by ASTM E 413 when tested in an operable condition according to ASTM E 90 and ASTM E 1408.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in the section with minimum three years' experience.

B. Installer: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

C. Acoustical Testing Agency: An independent agency accredited as an acoustical laboratory according to the National Voluntary Laboratory Accreditation Program of NIST.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use non-vented plastic.
   1. Provide additional protection to prevent damage to finish of factory-finished wood doors.

C. Shipping Spreaders: Deliver welded frames with two removable spreader bars across bottom of frames, tack welded or mechanically attached to jambs and mullions.

D. Store doors and frames under cover at Project site. Place units in a vertical position with heads up, spaced by blocking, on minimum 4-inch high, wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber.
   1. If wrappers on doors become wet, remove cartons immediately. Provide a minimum of 1/4 inch space between each stacked door to permit air circulation.

1.8 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.9 COORDINATION

A. Coordinate installation of anchorages for sound-control door assemblies. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for warranties.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sound-control door assemblies that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Failure to meet sound rating requirements.
      b. Faulty operation of sound seals.
      c. Deterioration of metals, metal finishes, and other materials beyond normal use or weathering.
   2. Warranty Period for Steel Doors: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 STEEL SOUND-CONTROL DOOR ASSEMBLIES

A. Manufacturers:
   1. Krieger Specialty Products Company, www.kriegerproducts.com
   2. Overly Door Company, www.overly.com
   3. Substitutions: Section 01 60 00 - Product Requirements.

B. Description: Provide flush-design sound-control doors, 1-3/4 inches thick, of seamless construction; with manufacturer's standard sound-retardant core as required to provide STC ratings indicated. Construct doors with smooth, flush surfaces without visible joints or seams on exposed faces or stile edges. Fabricate according to ANSI/NAAMM-HMMA 865.
   1. Interior Doors: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.048 inch nominal thickness, or thicker as required to achieve STC rating indicated.
   2. Loose Stops for Glazed Lites in Doors: Same material as face sheets.
   3. Top and Bottom Channels: Closed with continuous channels of same material as face sheets, spot welded to face sheets not more than 6 inches o.c.
   4. Hardware Reinforcement: Same material as face sheets.

C. Materials:
   1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
   2. Glazing: As required by sound-control door assembly manufacturer to comply with sound-control requirements.

D. Finishes:
   1. Prime Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating.
      a. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
   2. Factory-Applied Paint Finish: Manufacturer's standard primer and finish coats, complying with ANSI/SDI A250.3 for performance and acceptance criteria.
      a. Color and Gloss: As indicated.

2.2 SOUND-CONTROL FRAMES

A. Description: Fabricate sound-control door frames with corners mitered, reinforced, and continuously welded full depth and width of frame. Fabricate according to ANSI/NAAMM-HMMA 865.
   1. Weld frames according to NAAMM-HMMA 820.
   2. Interior Frames: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.075 inch nominal thickness, or thicker as required to provide STC rating indicated.
   3. Sound-Control Panel Stops: Formed integral with frames, a minimum of 5/8 inch high, unless otherwise indicated.
   4. Hardware Reinforcement: Fabricate according to ANSI/NAAMM-HMMA 865 of same material as face sheets.

5. Head Reinforcement: Reinforce frames with metallic-coated steel channel or angle stiffener, 0.108 inch nominal thickness, welded to head.
6. Jamb Anchors:
    a. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.064 inch nominal thickness metallic-coated steel with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.156 inch thick.
    b. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.048 inch nominal thickness uncoated steel unless otherwise indicated.
    c. Pos-tinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8 inch diameter, metallic-coated steel bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
7. Floor Anchors: Not less than 0.079-inch nominal thickness metallic-coated steel, and as follows:
    a. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.

B. Materials:
1. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
2. Supports and Anchors: After fabricating, galvanize units to be built into exterior walls according to ASTM A 153/A 153M, Class B.
3. Inserts, Bolts, and Fasteners: Provide items to be built into exterior walls, hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329.
4. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching sound-control door frames of type indicated.
5. Mineral-Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers.

C. Finishes:
1. Prime Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating.
    a. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.
2. Factory-Applied Paint Finish: Manufacturer's standard primer and finish coats, complying with ANSI/SDI A250.3 for performance and acceptance criteria.
    a. Color and Gloss: As indicated.

2.3 SOUND-CONTROL HARDWARE

A. Description: Provide manufacturer's standard sound-control system, including head and jamb seals, door bottoms, cam-lift hinges, and thresholds, as required by testing to achieve STC rating indicated.
1. Compression Seals: One-piece units; consisting of closed-cell sponge neoprene seal held in place by metal retainer; with retainer cover of same material as door frame; attached to door frame with concealed screws.
2. Magnetic Seals: One-piece units; consisting of closed-cell sponge neoprene seal and resiliently mounted magnet held in place by metal retainer; with retainer cover of same material as door frame; attached to door frame with concealed screws.
3. Automatic Door Bottoms: Neoprene or silicone gasket, held in place by metal housing, that automatically drops to form seal when door is closed; mounted to bottom edge of door with screws.
    a. Mounting: Mortised or semi-mortised into bottom of door as required by testing to achieve STC rating indicated.

b. Cam-Lift Hinges: Full-mortise template type that raises door 1/2 inch when door is fully open; with hardened pin; fabricated from stainless steel.

B. Other Hardware: Comply with requirements in Division 08 Section "Door Hardware".

2.4 SOUND-CONTROL ACCESSORIES

A. Glazing: Comply with requirements in Division 08 Section "Glazing."

B. Grout: Comply with ASTM C 476, with a slump of not more than 4 inches as measured according to ASTM C 143/C 143M.

C. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15 mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.5 FABRICATION

A. Sound-Control Steel Door Fabrication: Sound-control doors to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
1. Seamless Edge Construction: Fabricate doors with faces joined at vertical edges by welding; welds shall be ground, filled, and dressed to make them invisible and to provide a smooth, flush surface.
2. Glazed Lites: Factory install glazed lites according to requirements of tested assembly to achieve STC rating indicated. Provide fixed stops and moldings welded on secure side of door.
3. Hardware Preparation: Factory prepare sound-control doors to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in "Door Hardware".
a. Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.
b. Locate door hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
4. Tolerances: Fabricate doors to tolerances indicated in ANSI/NAAMM-HMMA 865.

B. Sound-Control Frame Fabrication: Fabricate sound-control frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
1. Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.
2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
3. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
4. Jamb Anchors: Provide number and spacing of anchors as follows:
a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
1) Two anchors per jamb up to 60 inches in height.
2) Three anchors per jamb from 60 to 90 inches in height.
3) Four anchors per jamb from 90 to 96 inches in height.
b. Stud Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
1) Three anchors per jamb up to 60 inches in height.

2) Four anchors per jamb from 60 to 90 inches in height.
3) Five anchors per jamb from 90 to 96 inches in height.
4) Two anchors per head for frames more than 42 inches wide and mounted in metal stud partitions.

c. Post-installed Expansion Type: Locate anchors not more than 6 inches from top and bottom of frame. Space anchors not more than 26 inches o.c.

5. Head Reinforcement: For frames more than 48 inches wide, provide continuous head reinforcement for full width of opening, welded to back of frame at head.
6. Hardware Preparation: Factory prepare sound-control frames to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in "Door Hardware."
   a. Reinforce frames to receive nontemplated mortised and surface-mounted door hardware.
   b. Locate hardware as indicated, or if not indicated, according to NAAMM-HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
7. Plaster Guards: Weld guards to frame at back of hardware cutouts and glazing-stop screw and sound-control seal preparations to close off interior of openings in frames to be grouted.
8. Tolerances: Fabricate frames to tolerances indicated in ANSI/NAAMM-HMMA 865.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of sound-control door assemblies.

B. Examine roughing-in for embedded and built-in anchors to verify actual locations of sound-control door frame connections before frame installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation and with installation spreaders in place, adjust and securely brace sound-control door frames to the following tolerances:
   1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
   3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.

C. Drill and tap doors and frames to receive non-templated mortised and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install sound-control door assemblies plumb, rigid, properly aligned, and securely fastened in place; comply with manufacturer's written instructions.

B. Frames: Install sound-control door frames in sizes and profiles indicated.

1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
    a. Install sound-control frames with removable glazing stops located on secure side of opening.
    b. Remove temporary braces only after frames or bucks have been properly set and secured.
    c. Check squareness, twist, and plumbness of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
    d. Apply corrosion-resistant coatings coating to backs of frames to be filled with mortar or grout.
2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with postinstalled expansion anchors.
    a. Floor anchors may be set with powder-actuated fasteners instead of postinstalled expansion anchors, if so indicated and approved on Shop Drawings.
3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation behind frames.
4. In-Place Concrete or Masonry Construction: Secure frames in place with post-installed expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
5. Grouted Frames: Solidly fill space between frames and substrate with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
6. Installation Tolerances: Adjust sound-control door frames for squareness, alignment, twist, and plumbness to the following tolerances:
    a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
    b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
    c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
    d. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.

C. Doors: Fit sound-control doors accurately in frames, within clearances indicated below. Shim as necessary.
1. Non-Fire-Rated Doors: Fit non-fire-rated doors accurately in frames with the following clearances:
    a. Jambs: 1/8 inch.
    b. Head with Butt Hinges: 1/8 inch.
    c. Head with Cam-Lift Hinges: As required by manufacturer, but not more than 3/8 inch.
    d. Sill: Manufacturer's standard.
    e. Between Edges of Pairs of Doors: 1/8 inch.

D. Sound-Control Seals: Where seals have been prefit and preinstalled in the factory and subsequently removed for shipping, reinstall seals and adjust according to manufacturer's written instructions.

E. Cam-Lift Hinges: Install hinges according to manufacturer's written instructions.

F. Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with sound-control door assembly manufacturer's written instructions.
1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c., and not more than 2 inches o.c. from each corner.

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and adjust seals, door bottoms, and other sound-control hardware items right before final inspection. Leave work in complete and proper operating condition.

B. Remove and replace defective work, including defective or damaged sound seals and doors and frames that are warped, bowed, or otherwise unacceptable.
   1. Adjust gaskets, gasket retainers, and retainer covers to provide contact required to achieve STC rating.

C. Clean grout off sound-control door frames immediately after installation.

D. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying primer.

E. Metallic-Coated Surfaces: Clean abraded areas of doors and repair with galvanizing repair paint according to manufacturer's written instructions.

END OF SECTION

SECTION 08 41 13 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Standard and impact-resistant aluminum-framed storefronts, exterior and interior.
2. Aluminum entrance doors, exterior and interior.
3. Bullet resistant storefront frames.
4. Horizontal sun control devices.

B. Related Sections:
1. Section 07 90 00 - Joint Protection.
2. Section 08 71 00 - Door Hardware.
3. Section 08 44 13 - Glazed Aluminum Curtain Walls.
4. Section 08 80 00 – Typical Interior Glazing.

1.2 REFERENCES

A. American Architectural Manufacturers Association:
1. AAMA 501 - Methods of Test for Exterior Walls.
2. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.
3. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.
4. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site.
5. AAMA MCWM-1 - Metal Curtain Wall Manual.
6. AAMA SFM-1 - Aluminum Store Front and Entrance Manual.

B. ASTM International:
1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
2. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
4. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
5. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
6. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference.

C. SSPC: The Society for Protective Coatings:
1. SSPC Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

D. TDI: Texas Department of Insurance.
1. TDI Engineering Services Program for evaluation of impact-resistant glazing assemblies.

1.3 SYSTEM DESCRIPTION

A. Aluminum-framed storefront system includes: tubular aluminum sections; aluminum and glass entrances; shop fabricated, factory finished, with glass and glazing specified in Section 08 80 00 and installed by this Section; related flashings, anchorage and attachment devices.
1. System to be re-glazable from interior.

B. System Assembly: Site assembled.

1.4 PERFORMANCE REQUIREMENTS

A. System Design: Design and size components to withstand dead and live loads caused by positive and negative wind pressure acting normal to plane of wall, including building

corners.

1. To design pressure indicated on Drawings, as tested in accordance with ASTM E330.

B. Deflection: Limit mullion deflection to 1/175 for spans under 13’-6” and 1/240 plus 1/4 inch for spans over 13’-6”, with full recovery of glazing materials.

C. Internally reinforce aluminum storefront framing to properly support specified sun control devices.

D. System Assembly: Accommodate without damage to components or deterioration of seals, movement within system, movement between system and peripheral construction, dynamic loading and release of loads, deflection of structural support framing.

E. Air Infiltration: Limit air leakage through assembly to 0.06 cfm/min/sq ft of wall area, measured at reference differential pressure across assembly of 1.57 psf as measured in accordance with AAMA 501.

F. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with glass.

G. Water Leakage: None, when measured in accordance with AAMA 501 with test pressure difference of 20 percent of design pressure, with minimum differential of 2.86 lbf/sq ft and maximum of 12.00 lbf/sq ft.

H. Thermal Transmittance of Assembly (Excluding Entrances): Maximum U Value of 0.69 Btu/sq ft per hour per deg F when measured in accordance with AAMA 1503.

I. Expansion / Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over 12 hour period without causing detrimental effect to system components and anchorage.

J. System Internal Drainage: Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior by weep drainage network.

1.5 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work and expansion and contraction joint location and details.

C. Product Data: Submit component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

D. Samples: Submit two samples 12 x 12 inches in size illustrating finished aluminum surface.

E. Design Data: Indicate framing member structural and physical characteristics and dimensional limitations.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with AAMA SFM-1 and AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

B. Systems specified under this section and Section 08 44 13 Glazed Aluminum Curtain Walls shall be provided by the same manufacturer.

C. Sun control devices mounted to aluminum storefront framing shall be manufactured by framing manufacturer or specifically approved in writing by framing manufacturer for use with the storefront system and shall not limit the storefront system warranty.

1.7 QUALIFICATIONS

A. Manufacturer and Installer: Company specializing in manufacturing aluminum glazing systems with minimum three years' experience.

1.8 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.9 DELIVERY, STORAGE, AND PROTECTION

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Handle Products of this section in accordance with AAMA MCWM-1 - Curtain Wall Manual #10.

C. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install sealants or glazing materials when ambient temperature is less than 40 degrees F during and 48 hours after installation.

1.11 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including, but not limited to, excessive deflection.
      b. Noise or vibration caused by thermal movements.
      c. Deterioration of metals and other materials beyond normal weathering.
      d. Adhesive or cohesive sealant failures.
      e. Water leakage through fixed glazing and framing areas.
      f. Failure of operating components to function properly.
   2. Warranty Period: Two years from date of Substantial Completion.

C. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
   1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 ALUMINUM-FRAMED STOREFRONTS

A. Manufacturers:
   1. Arcadia Texas, www.arcadianc.com
   2. Arch Aluminum & Glass Co., Inc. www.arch.amarlite.com
   3. Columbia Commercial Building Products, www.ccbpwin.com
   4. EFCO Corporation www.efcocorp.com
   5. Kawneer www.kawneer.com
   6. Tubelite Inc., www.tubeliteinc.com

7. United States Aluminum. www.usalum.com
8. Vistawall Architectural Products. www.vistawall.com/
9. YKK AP America Inc., www.ykkap.com.
10. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis-of Design:
1. Exterior Systems: Provide installed system with label meeting requirements of TDI Evaluation ID CWSF-32.
   a. IR 501 T/IR SINGLE Isolock™ Thermal Break center-glazed impact-resistant exterior storefront framing as manufactured by Kawneer or approved equivalent by specified manufacturer.
   b. Outside glazed with an internal silicone seal.
   c. Thermally broken with 1/4" of high density polyurethane; center glazed to accommodate 1-5/16” thick insulated glazing units.
   d. Furnish closed backs at heads and jambs of exterior frames.
   e. Mullions: Profile of extruded aluminum, 5-inches deep x 2-1/2 to 2-3/4” sightline.
   f. Entrance Doors: Series *350 Medium Sile* as manufactured by Kawneer or approved equivalent by specified manufacturer. Nominal 12-inch wide bottom rail to meet ADA requirements.

2. Typical Interior Systems:
   a. *Trifab VG 450 Framing* as manufactured by Kawneer or approved equivalent by specified manufacturer.
   b. Use for standard interior glazing not scheduled for curtain wall framing.
   c. Flush glazing stops; center glazed to accommodate 1/4 inch thick standard glazing.
   d. Interior Storefront Doors: 1-3/4” thick, nominal 5-inch wide top rail and vertical stiles, nominal 12-inch wide bottom rai to meet ADA requirements; beveled glazing stops.

2.2 INTERIOR BALLISTIC-RESISTANT SYSTEMS:

A. Ballistic Level: Pass **UL 752 Level 3**.

B. Obtain Ballistic-Resistant storefront and storefront doors from a single source.

C. Manufacturers (subject to meeting requirements of drawings):
1. United States Bullet Proofing, Inc.; www.USBP.com
2. Total Security Solutions; www.tssbulletproof.com
3. Armortex; www.armortex.com
4. Ambico; www.ambico.com
5. Substitutions: Section 01 60 00 – Product Requirements

D. Interior Ballistic Rated Storefront: *USAW 400* as manufactured by U.S. Bullet Proofing or approved equivalent by specified manufacturer.

E. Flush glazing stops; center glazed to accommodate Ballistic Resistant glazing.

F. Interior Ballistic Resistant Storefront Doors: *USAD 1000* manufactured by U.S. Bullet Proofing or approved equivalent by specified manufacturer. 2-3/4” thick, nominal 5-5/16”-inch wide top rail and vertical stiles, nominal 12-inch wide bottom rai to meet ADA requirements; beveled glazing stops.
1. Finish: Standard clear anodized finish.

2.3 COMPONENTS

A. Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical, 6061 alloy, T6 temper for extruded structural members.

B. Sheet Aluminum: ASTM B209, 5005 alloy, H15 or H34 temper.

C. Sheet Steel: ASTM A653/A653M; galvanized to minimum G90.

D. Steel Sections: ASTM A36/A36M; shaped to suit mullion sections, galvanized.

E. Glass: Specified in Section 08 80 00 and 08 88 56.

F. Glazing Materials: Storefront manufacturer's standard types to suit application and to achieve weather, moisture, and air infiltration requirements.

G. Flashings: Minimum 0.032 inch thick aluminum to match mullion sections where exposed.

H. Hardware: In accordance with Section 08 71 00 and as follows:
1. Weather Stripping: Manufacturer's standard replaceable components.
a. AAMA 701, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

I. Sealant and Backing Materials:
1. Sealant Used Within System (Not Used for Glazing): Manufacturer's standard materials to achieve weather, moisture, and air infiltration requirements.
2. Perimeter Sealant: Specified in Section 07 90 00.

J. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum brackets and reinforcements. Provide non-staining, nonferrous shims for aligning system components.

K. Fasteners: Manufacturer's standard stainless steel, compatible with adjacent materials.

L. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

M. Horizontal Sun Control Devices:

1. System: Curtain wall manufacturer's single blade aluminum sun control devices mounted on curtain wall framing.

2. Design Requirements: Design and size components to withstand design loads indicated on Drawings without damage or permanent set.

a. Blade deflection shall not exceed L/120 of span length.

b. Test horizontal sunshade configurations to meet a minimum load of 65 psf with a factor of safety of 1.5 times the design load.

c. Stresses resulting from thermal expansion/contraction and designed wind loading shall not cause permanent deformation of or disengagement from the glazed system.

d. Provide internal mullion reinforcing as required for mounting of sun control blades to mullions.

3. Basis of Design: *Versoleil*™ *SunShade – Single Blade System for Curtain Wall* as manufactured by Kawneer or approved equivalent by specified curtain wall manufacturer:
a. Blade Size: 14-inches deep x width(s) indicated.
b. Orientation: Horizontal.
c. Finish: Clear anodized to match curtain wall framing.

2.4 FABRICATION

A. Fabricate components with minimum clearances and shim spacing around perimeter of assembly yet enabling installation and dynamic movement of perimeter seal.

B. Fabricate sill pans with sealed end dams at jambs and changes in sill height.

C. Fabricate frames for glazing from inside.

D. Accurately fit and secure joints and corners. Make joints flush, hairline, and weatherproof.

E. Prepare components to receive anchor devices. Fabricate anchors.

F. Arrange fasteners and attachments to conceal from view.

G. Prepare components with internal reinforcement for door hardware.
   1. At exterior door frames, provide weatherstripping at fixed stops.
   2. At interior door frames, provide weatherstripping or silencers at stops to prevent door-to-frame contact.

H. Reinforce framing members for imposed loads.

2.5 SHOP FINISHING

A. Clear Anodized Aluminum Surfaces: AAMA 611, AA-M12C22A41 non-specular as fabricated mechanical finish, medium matte chemical finish, and Architectural Class I 0.7 mils clear anodized coating.

B. Concealed Steel Items: Galvanized to ASTM A123/A123M; minimum 1.2 oz/sq ft coating thickness; galvanize after fabrication.

C. Apply bituminous paint to concealed aluminum surfaces in contact with cementitious materials or dissimilar metals.

D. Touch-Up Primer for Galvanized Steel Surfaces: SSPC Paint 20 zinc rich.

E. Sun Control Devices:
   1. Louvers and Fascias: Clear anodized to match storefront framing.
   2. Outriggers: Factory-painted fluoropolymer or powder coat to match louvers and fascias.

F. Extent of Finish:
   1. Apply factory coating to surfaces exposed at completed assemblies.
   2. Apply touch-up materials recommended by coating manufacturer for field application to cut ends and minor damage to factory applied finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify dimensions, tolerances, and method of attachment with other Work.

C. Verify wall openings and adjoining air and vapor seal materials are ready to receive Work of this Section.

3.2 INSTALLATION

A. Install wall system and sun control devices in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent Work.

E. Install sill pans. Turn up ends and edges; seal to adjacent Work to form water tight dam.

F. Coordinate attachment and seal of perimeter air and vapor retarder materials.

G. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

H. Install integral flashings and integral joint sealers.

I. Set thresholds in sealant and secure.

J. Install hardware using templates provided. Refer to Section 08 71 00 for installation requirements.

K. Coordinate installation of glass with Section 08 80 00; separate glass from metal surfaces.

L. Coordinate installation of perimeter sealants with Section 07 90 00.

3.3 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation from Plumb: 0.06 inches every 3 ft non-cumulative or 1/16 inches per 10 ft, whichever is less.

C. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

3.4 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting and balancing.

B. Adjust operating hardware and sash for smooth operation.

3.5 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove protective material from pre-finished aluminum surfaces.

C. Wash down surfaces with solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

D. Remove excess sealant by method acceptable to sealant manufacturer.

3.6 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect finished Work from damage.

END OF SECTION

SECTION 08 44 13 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Aluminum-framed curtain wall system for both exterior and interior glazing.
   2. Horizontal sun control devices.

B. Related Sections:
   1. Section 07 90 00 - Joint Protection.
   2. Section 08 41 13 - Aluminum-Framed Entrances and Storefronts.
   3. Section 08 80 00 – Typical Interior Glazing.
   4. Section 08 88 56 – Ballistic and Impact-Resistant Glazing.

1.2 REFERENCES

A. American Architectural Manufacturers Association:
   1. AAMA 501 - Methods of Test for Exterior Walls.
   2. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.
   3. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.
   4. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site.
   5. AAMA MCWM-1 - Metal Curtain Wall Manual.
   6. AAMA SFM-1 - Aluminum Store Front and Entrance Manual.

B. ASTM International:
   1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
   2. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   3. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   4. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
   5. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
   6. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference.

C. SSPC: The Society for Protective Coatings:
   1. SSPC Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

D. TDI: Texas Department of Insurance.
   1. TDI Engineering Services Program for evaluation of impact-resistant glazing assemblies.

1.3 SYSTEM DESCRIPTION

A. Glazed aluminum curtain wall system includes: tubular aluminum sections; shop fabricated, factory finished, with glass and glazing specified in Section 08 80 00 and installed by this Section; related flashings, anchorage and attachment devices.
   1. System to be reglazable from interior.

B. System Assembly: Site assembled.

1.4 PERFORMANCE REQUIREMENTS

A. System Design: Design and size components to withstand dead and live loads caused by positive and negative wind pressure acting normal to plane of wall, including building corners.

1. To design pressure indicated on Drawings, as tested in accordance with ASTM E330.

B. Deflection: Limit mullion deflection to 1/175 for spans under 13'-6" and 1/240 plus 1/4 inch for spans over 13'-6", with full recovery of glazing materials.

C. System Assembly: Accommodate without damage to components or deterioration of seals, movement within system, movement between system and peripheral construction, dynamic loading and release of loads, deflection of structural support framing.

D. Air Infiltration: Limit air leakage through assembly to 0.06 cfm/min/sq ft of wall area, measured at reference differential pressure across assembly of 1.57 psf as measured in accordance with AAMA 501.

E. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with glass.

F. Water Leakage: None, when measured in accordance with AAMA 501 with test pressure difference of 20 percent of design pressure, with minimum differential of 2.86 lbf/sq ft and maximum of 12.00 lbf/sq ft.

G. Thermal Transmittance of Assembly (Excluding Entrances): Maximum U Value of 0.69 Btu/sq ft per hour per deg F when measured in accordance with AAMA 1503.

H. Expansion / Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over 12 hour period without causing detrimental effect to system components and anchorage.

I. System Internal Drainage: Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior by weep drainage network.

1.5 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work and expansion and contraction joint location and details.

C. Product Data: Submit component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

D. Samples: Submit two samples 12 x 12 inches in size illustrating finished aluminum surface.

E. Design Data: Indicate framing member structural and physical characteristics and dimensional limitations.

F. Shading Performance: Manufacturer shall analyze system and provide written performance report for the Project glazing fitted with horizontal sun control devices using *Solector® Sun Shading Estimator Tool*.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

B. Systems specified under this section and Section 08 41 13 Aluminum-Framed Entrances and Storefronts shall be provided by the same manufacturer.

C. Sun control devices mounted to aluminum curtainwall framing shall be manufactured by framing manufacturer or specifically approved in writing by framing manufacturer for use with the curtain wall system and shall not limit the curtainwall system warranty.

1.7 QUALIFICATIONS

A. Manufacturer and Installer: Company specializing in manufacturing aluminum glazing systems with minimum three years' experience.

1.8 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.9 DELIVERY, STORAGE, AND PROTECTION

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Handle Products of this section in accordance with AAMA MCWM-1 - Curtain Wall Manual.

C. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install sealants nor glazing materials when ambient temperature is less than 40 degrees F during and 48 hours after installation.

1.11 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including, but not limited to, excessive deflection.
      b. Noise or vibration caused by thermal movements.
      c. Deterioration of metals and other materials beyond normal weathering.
      d. Adhesive or cohesive sealant failures.
      e. Water leakage through fixed glazing and framing areas.
      f. Failure of operating components to function properly.
   2. Warranty Period: Two years from date of Substantial Completion.

C. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
   1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Arcadia Texas, www.arcadianc.com
B. Arch Aluminum & Glass Co., Inc. www.arch.amarlite.com
C. Columbia Commercial Building Products, www.ccbpwin.com
D. EFCO Corporation www.efcocorp.com
E. Kawneer www.kawneer.com
F. Tubelite Inc., www.tubeliteinc.com
G. United States Aluminum. www.usalum.com
H. Vistawall Architectural Products. www.vistawall.com

I. YKK AP America Inc., www.ykkap.com
J. Substitutions: Section 01 60 00 - Product Requirements

2.2 BASIS-OF DESIGN:

A. Exterior System: Kawneer 1600 Wall System™ 1-IR Curtain Wall: 2-1/2" face X 7-13/16" depth for 1-5/16-inch thick impact-resistant glazing system. Structural silicone glazed.

B. Interior System for Ballistic-Rated Glazing: Kawneer 1600 Wall System™ 1 Curtain Wall: 2-1/2" face X 7-11/16" depth for 1-3/16 inch thick glazing. Structural silicone glazed.

C. Interior System for Typical Interior Glazing: Kawneer 1600 Wall System™ 1 Curtain Wall or approved equivalent by a specified manufacturer: 2-1/2" face X 6-3/4" depth and 2-1/2" face X 7-11/16" depth as indicated; both depths for 1/4- inch thick glazing. Typical gasketed glazing.

2.3 COMPONENTS

A. Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical, 6061 alloy, T6 temper for extruded structural members.

B. Sheet Aluminum: ASTM B209, 5005 alloy, H15 or H34 temper.

C. Sheet Steel: ASTM A653/A653M; galvanized to minimum G90.

D. Steel Sections: ASTM A36/A36M; shaped to suit mullion sections where needed for reinforcing; galvanized

E. Glass: Specified in Section 08 80 00.

F. Glazing Materials: Curtain wall manufacturer's standard types to suit application and to achieve weather, moisture, and air infiltration requirements.

G. Flashings: Minimum 0.032-inch thick aluminum to match mullion sections where exposed.

H. Sealant and Backing Materials:
1. Sealant Used Within System (Not Used for Glazing): Manufacturer's standard materials to achieve weather, moisture, and air infiltration requirements.
2. Perimeter Sealant: Specified in Section 07 90 00.

I. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum brackets and reinforcements. Provide nonstaining, nonferrous shims for aligning system components.

J. Fasteners: Manufacturer's standard stainless steel, compatible with adjacent materials.

K. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

L. Horizontal Sun Control Devices:

1. System: Curtain wall manufacturer's single blade aluminum sun control devices mounted on curtain wall framing.

2. Design Requirements: Design and size components to withstand design loads indicated on Drawings without damage or permanent set.

a. Blade deflection shall not exceed L/120 of span length.

b. Test horizontal sunshade configurations to meet a minimum load of 65 psf with a factor of safety of 1.5 times the design load.

c. Stresses resulting from thermal expansion/contraction and designed wind loading shall not cause permanent deformation of or disengagement from the glazed system.

d. Provide internal mullion reinforcing as required for mounting of sun control blades to mullions.

3. Basis of Design: *Versoleil*™ *SunShade – Single Blade System for Curtain Wall* as manufactured by Kawneer or approved equivalent by specified curtain wall manufacturer:
   a. Blade Size: 14-inches deep x width(s) indicated.
   b. Orientation: Horizontal.
   c. Attachment: Manufacturer's thermally broken attachment brackets allowing for thermal expansion and contraction.
   d. Finish: Clear anodized to match curtain wall framing.

2.4 FABRICATION

A. Fabricate components with minimum clearances and shim spacing around perimeter of assembly yet enabling installation and dynamic movement of perimeter seal.

B. Fabricate sill pans with welded end dams at jambs and changes in sill height.

C. Fabricate frames for glazing from exterior.

D. Accurately fit and secure joints and corners. Make joints flush, hairline, and weatherproof.

E. Prepare components to receive anchor devices. Fabricate anchors.

F. Arrange fasteners and attachments to conceal from view.

G. Reinforce framing members for imposed loads.

2.5 SHOP FINISHING

A. Clear Anodized Aluminum Surfaces (Typical): AAMA 611, AA-M12C22A41 non-specular as fabricated mechanical finish, medium matte chemical finish, and Architectural Class I 0.7 mils clear anodized coating.

B. Concealed Steel Items: Galvanized to ASTM A123/A123M; minimum 1.2 oz/sq ft coating thickness; galvanize after fabrication.

C. Apply bituminous paint to concealed aluminum surfaces in contact with cementitious materials or dissimilar metals.

D. Touch-Up Primer for Galvanized Steel Surfaces: SSPC Paint 20 zinc rich.

E. Extent of Finish:
   1. Apply factory coating to surfaces exposed at completed assemblies.
   2. Apply touch-up materials recommended by coating manufacturer for field application to cut ends and minor damage to factory applied finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify dimensions, tolerances, and method of attachment with other Work.

C. Verify wall openings and adjoining air and vapor seal materials are ready to receive Work of this Section.

3.2 INSTALLATION

A. Install wall system and sun control devices in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent Work.

E. Install sill pans. Turn up ends and edges; seal to adjacent Work to form water tight dam.

F. Coordinate attachment and seal of perimeter air and vapor retarder materials.

G. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

H. Install integral flashings and integral joint sealers.

I. Coordinate installation of glass with Section 08 80 00; separate glass from metal surfaces.

J. Coordinate installation of perimeter sealants with Section 07 90 00.

3.3 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation from Plumb: 0.06 inches every 3 ft non-cumulative or 1/16 inches per 10 ft, whichever is less.

C. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

3.4 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting and balancing.

B. Adjust operating hardware and sash for smooth operation.

3.5 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove protective material from pre-finished aluminum surfaces.

C. Wash down surfaces with solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

D. Remove excess sealant by method acceptable to sealant manufacturer.

3.6 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect finished Work from damage.

END OF SECTION

SECTION 08 45 00 - TRANSLUCENT WALL AND ROOF ASSEMBLIES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes aluminum framed vertical system with sandwich panels of translucent skins separated with continuous vertical supports.

B. Related Sections:
   1. Section 079000 - Joint Protection: System perimeter sealant and back-up materials.

1.2 REFERENCES

A. American Architectural Manufacturers Association:

   7. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   8. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
   9. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference.
   10. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference.
   11. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Curtain Walls, and Doors by Uniform or Cyclic Static Air Pressure Difference.

D. Underwriters Laboratories Inc.:
   1. UL 723 - Tests for Surface Burning Characteristics of Building Materials.

1.3 SYSTEM DESCRIPTION

A. Panel System: Structurally reinforced translucent panel system, shop fabricated, factory prefinished, with related flashings, anchorage and attachment devices.

1.4 PERFORMANCE REQUIREMENTS

A. System Design: Design and size components to withstand dead loads and live loads caused by positive and negative wind loads acting normal to plane of wall, including building corners.
   1. As calculated in accordance with ASCE 7, as tested in accordance with ASTM E330.

B. Wind-Borne Debris Loads: Design and size assemblies located less than 60 feet above grade to withstand the following loads:
   1. Within 30 feet of Grade: ASTM E1886 and ASTM E1996; large missile impact test.
   2. Within 60 feet of Grade: ASTM E1886 and ASTM E1996; small missile impact test.

C. Deflection: Limit mullion deflection to 3/4 inch, with full recovery of glazing materials.

D. System Assembly: Accommodate following without damage to system, components or deterioration of seals.
   1. Movement within system.
   2. Movement between system and perimeter framing components.
   3. Dynamic loading and release of loads.
   4. Deflection of structural support framing.
   5. Tolerance of supporting components.

E. Light Transmission: 24 percent.

F. Solar Heat Gain Coefficient: 0.24.

G. Thermal Resistance of Assembly: Maximum U-Value of 0.24 Btu/sq ft per hour per deg. F when measured in accordance with AAMA 1503.

H. Air Infiltration: Limit air infiltration through assembly to 0.06 cfm/sq ft. of wall area, measured at reference differential pressure across assembly of 1.57 psf as measured in accordance with AAMA 501.

I. Water Leakage: None, when measured in accordance with AAMA 501 with test pressure difference of 20 percent of design pressure, with minimum differential of 2.86 lbs/sq ft and maximum of 12.00 lbf/sq ft.

J. Expansion / Contraction: System to provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over 12 hour period without causing detrimental effect to system components.

K. System Internal Drainage: Drain water entering joints, condensation occurring in framing system, or migrating moisture occurring within system, to exterior by weep drainage network.

L. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with inside face of glazing panel and heel bead of glazing compound.

M. Not Permitted: Vibration harmonics, wind whistles, noises caused by thermal movement, thermal movement transmitted to other building elements, loosening, weakening, or fracturing of attachments or components of system.

1.5 SUBMITTALS

A. Section 013300 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, anticipated deflection under load, affected related Work, weep drainage network, expansion and contraction joint location and details, and field welding required.

C. Product Data: Submit component dimensions, describe components within assembly, anchorage and fasteners, panel configuration, and internal drainage details.

D. Design Data: Provide framing member structural and physical characteristics, calculations, dimensional limitations.

E. Submit two samples 12 x 12 inches in size illustrating prefinished aluminum surface, specified panel with skins, infill panels glazing materials illustrating edge and corner.

F. Test Reports: Submit substantiating engineering data, test results of previous tests by independent laboratory which purport to meet performance criteria, and other supportive data.

G. Manufacturer's Installation Instructions: Submit special installation requirements.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual. Light Transmitting Plastics: Class CC1 defined by applicable code when tested in accordance with ASTM D635 in thickness for intended use.
   1. Self Ignition Temperature: Minimum 650 degrees F when tested in accordance with ASTM D1929.
   2. Smoke Developed Index: Maximum 450 when tested in accordance with ASTM E84 or maximum 75 when tested in accordance with ASTM D2843 in thickness for intended use.

B. Surface Burning Characteristics:
   1. Foam Insulation: Maximum 75/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Apply label from agency approved by authority having jurisdiction to identify each foam plastic insulation board.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience and approved by manufacturer.

1.8 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.
   1. Convene minimum one week prior to commencing work of this Section.

B. PRE-INSTALLATION MEETING
   1. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.
   2. Convene minimum one week prior to commencing work of this Section.

1.9 PRE-INSTALLATION MEETINGS

A. Section 013000 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Section 016000 - Product Requirements: Product storage and handling requirements.

B. Handle Products in accordance with AAMA MCWM-1 - Curtain Wall Manual.

C. Protect prefinished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather. Puncture wrappings at ends for ventilation.

1.11 ENVIRONMENTAL REQUIREMENTS

A. Section 016000 - Product Requirements.

B. Do not install sealants when ambient temperature is less than 40 degrees F during and 48 hours after installation.

C. Maintain this minimum temperature during and after installation of sealants.

1.12 WARRANTY

A. Section 017000 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish 10 year warranty to include coverage for panel color change and fiberbloom.

PART 2 PRODUCTS

2.1 TRANSLUCENT WALL AND ROOF ASSEMBLIES

A. Manufacturers:
1. Kalwall Corp., www.kalwall.com.
2. Major Industries, Inc., www.majorskylights.com.
3. Substitutions: Section 016000 - Product Requirements.

B. Product Description: Factory assembled panels of translucent skins bonded to continuous aluminum ribs for vertical applications, factory prefinished, including perimeter flashings. Panels are self-supporting.

C. Basis-of-Design: Kalwall *Verti-Kal.*

2.2 COMPONENTS

A. Translucent Sandwich Panels: Bonded to both sides of structural extruded aluminum vertical ribs.
1. Exposed surfaces of exterior sheet chemically and permanently treated to protect against surface erosion and extreme weather conditions.
2. Exposed surface of interior sheets fire retardant to a flame/smoke rating of 25/450.
3. Panel Thickness: 4 inches.
4. Exterior Facing Sheets: Translucent White.
   a. Furnish high-impact face sheet if required to meet specified impact-resistance requirements.
5. Interior Facing Sheets: Translucent White.

B. Glazing Accessories: Manufacturer recommended type to suit application to achieve weather, moisture, and air infiltration requirements.

C. Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical, 6061 alloy, T6 temper for extruded structural members.

D. Sheet Aluminum: ASTM B209, 3003 or 5005 alloy, H15, H16, or H34 temper.

E. Mullions: Aluminum; glazing stops of sufficient size and strength to provide bite on panels prior to and during glazing; drainage holes, deflector plates and internal flashings to accommodate internal weep drainage system; internal mullion baffles to eliminate "stack effect" air movement within internal spaces.

F. Battens, Cover Strips, Cover Plates, and Integral Flashings: Extruded aluminum, to suit location and application; sized to rigidly retain panels in place.

G. Sealant and Backing Materials: As specified in Section 079000 of Types described below.
   1. Perimeter Sealant: High performance general purpose exterior nontraffic polyurethane.
   2. Sealant Used Within System (Not Used for Glazing): Exterior metal lap joint sealant at metal to metal joints, manufacturer recommended sealants at other locations.

H. Flashings: Secure with concealed fastening method.
   1. Aluminum: Minimum 0.032-inch thick, finish to match adjacent aluminum.
   2. Stainless Steel: Minimum-0.025 inch thick stainless steel, No. 4 satin directional polish.

I. Weather Seals: To suit application; non-bleeding; non-staining.

J. Fasteners: Stainless steel.

2.3 FABRICATION

A. Fabricate system components with minimum clearances and shim spacing around perimeter of assembly yet enabling installation and dynamic movement of perimeter seal.

B. Accurately fit and secure joints and corners. Make joints flush, hairline, and weatherproof.

C. Prepare components to receive anchor devices. Fabricate anchors.

D. Arrange fasteners and attachments concealed from view.

E. Reinforce framing members for external imposed loads.

2.4 FACTORY FINISHING

A. Clear Anodized Aluminum Surfaces: AA-M12C22A41 non-specular as fabricated mechanical finish, medium matte chemical finish, and Architectural Class I 0.7 mils clear anodized coating.
   1. Conform to AAMA 611.

B. Apply one coat of bituminous paint to concealed aluminum surfaces in contact with cementitious or dissimilar materials.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 013000 - Administrative Requirements: Coordination and project conditions.

B. Verify dimensions, tolerances, and method of attachment with other work.

C. Verify wall openings and adjoining air barrier and vapor retarder materials are ready to receive work of this section.

3.2 INSTALLATION

A. Install wall system in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

B. Install cellular panels with cells horizontal.

C. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

D. Install alignment attachments and shims to permanently fasten system to building structure.

E. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances and align with adjacent work.

F. Install sill and integral flashings.

G. Coordinate attachment and seal of perimeter air and vapor retarder materials.

H. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

I. Install perimeter sealant to method required to achieve performance criteria, with backing materials, and installation criteria in accordance with Section 079000.

3.3 ERECTION TOLERANCES

A. Section 014000 - Quality Requirements: Tolerances.

B. Maximum Variation from Plumb: 0.06 inches every 3 ft non-cumulative or 0.5 inches per 100 ft, whichever is less.

C. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

D. Sealant Space Between Panel System Members and Adjacent Construction: Maximum of 3/4 inch and minimum of 1/4 inch.

3.4 MANUFACTURER'S FIELD SERVICES

A. Section 014000 - Quality Requirements: Manufacturers’ field services.

B. Translucent panel product manufacturers to provide field surveillance of installation of their products.

C. Monitor and report installation procedures, and unacceptable conditions.

3.5 CLEANING

A. Section 017000 - Execution and Closeout Requirements: Final cleaning.

B. Remove protective material from prefinished aluminum surfaces.

C. Wash down surfaces with solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

D. Remove excess sealant by moderate use of mineral spirits or other solvent acceptable to sealant manufacturer.

3.6 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 017000 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect finished Work from damage.

END OF SECTION

SECTION 08 56 55 – BALLISTIC-RATED TRANSACTION WINDOWS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Ballistic-rated fixed window.
   2. Ballistic-rated transaction tray.
   3. Speak-through capability.

B. Related Sections:
   1. Section 08 80 00 - Glazing: General glass requirements for factory-installed glazing provided under this section.

1.2 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product Data for each type of window required, including the following:
   1. Construction details and fabrication methods.
   2. Profiles and dimensions of individual components.
   3. Data on hardware, accessories, and finishes.
   4. Recommendations for maintaining and cleaning exterior surfaces.

C. Ballistics Certification: Manufacturer’s certification construction is identical to the Bullet Resistant assembly tested at an independent testing laboratory in accordance with UL752 and approved for Level 3 bullet resistance.

D. Shop Drawings showing fabrication and installation of each type of window required including information not fully detailed in manufacturer's standard Product Data and the following:
   1. Layout and installation details, including anchors.
   2. Window unit elevations at 3/4 inch = 1 foot scale.
   3. Full-size section details of typical composite members, including reinforcement and stiffeners.
   4. Hardware.
   5. Glazing details.
   6. Accessories.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed installation of transaction windows similar in material, design, and extent to those required for this Project and with a re

B. Record of successful in-service performance.

C. Single-Source Responsibility: Obtain transaction windows from one source and by a single manufacturer.

D. Product Options: The Drawings indicate sizes, profiles, dimensional requirements, and aesthetic effects of transaction windows and are based on the specific window types and models indicated. Other transaction window manufacturers whose products have equal performance characteristics may be considered provided deviations in size, profile, and dimensions are minor and do not alter the aesthetic effect. Refer to Division 1 Section "Substitutions."

E. Manufacture Product Certificates:
1. For each type of security window: Certify Products meet or exceed specified requirements
a. Provide test reports from nationally accredited testing laboratory indicating and interpreting test results relative to compliance with performance requirements of installed assemblies.
b. Bullet Resistant Rating: Certify that the construction is identical to the Bullet Resistant assembly tested at an independent testing laboratory in accordance with UL752.

1.4 PROJECT CONDITIONS

A. Field Measurements: Check window openings by field measurements before fabrication and show recorded measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
1. Where field measurements cannot be made without delaying the Work, guarantee opening dimensions and proceed with fabricating transaction windows without field measurements. Coordinate wall construction to ensure that actual opening dimensions correspond to guaranteed dimensions.

1.5 WARRANTY

A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.

B. Warranty Period: Minimum 1-year after date of Substantial Completion. Warranted failures include but are not limited to:
1. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
2. Structural failures including deflections exceeding 1/4 inch.
3. Failure of welds.

PART 2 - PRODUCTS

2.1 SYSTEM

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Quickserv Corporation, www.quikserv.com.
2. Ready Access, www.ready-access.com. Must meet all specification requirements.
3. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis-of-Design: UL-rated *Level 3 Acrylic Baffle Window* with clear anodized aluminum frame, and 11”x10”x2” Deal Tray as manufactured by Quckserv or approved equivalent by specified manufacturer.
1. Factory-glazed in fixed stainless steel bullet-resistant frame.
2. Glazing – Clear acrylic in 1-1/4” thickness or greater as required to provide the required UL 752 Level 3 rating. Provide center glazing panel with ½” standoff for speak-through capability.
3. Protective Baffles: Twin vertical acrylic baffles (*Bandit Barrier*) for additional protection. All edges square, eased, and highly polished.
4. Size: 36” x 36” or as indicated in the drawings.

2.2 FABRICATION

A. General: Fabricate fixed window units to comply with indicated standards. Include a complete system for assembly of components and anchorage of window units.

PART 3 - EXECUTION

3.1 INSPECTION

A. Inspect openings before installation. Verify that rough opening is sized correctly with level sill.
   1. Drywall surfaces shall be taped and floated and ready for painting.
   2. Masonry surfaces shall be visibly dry and free of excess mortar, sand, and other construction debris.
   3. Metal surfaces shall be dry; clean; free of grease, oil, dirt, rust and corrosion, and welding slag; without sharp edges or offsets at joints.

3.2 INSTALLATION

A. Comply with manufacturer's specifications and recommendations for installing window units, hardware, operators, and other components of the Work.

B. Set window units plumb, level, and true to line, without warp or rack of frames or sash. Provide proper support and anchor securely in place.

C. Separate dissimilar metals and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials by complying with requirements specified under "Dissimilar Materials" Paragraph in appendix to AAMA 101.

D. Refer to Division 7 Section "Joint Sealants" for compounds, fillers, and gaskets to be installed concurrently with window units. Coordinate installation with wall flashings and other components of the Work.

3.3 CLEANING

A. Clean all exposed surfaces promptly after installing windows. Exercise care to avoid damage to protective coatings and finishes. Remove excess glazing and sealant compounds, dirt, and other substances.

B. Clean glass of pre-glazed units promptly after installing windows. Comply with requirements of Division 8 Section "Glazing" for cleaning and maintenance.

3.4 PROTECTION

A. Provide final protection and maintain conditions in a manner acceptable to transaction window manufacturer to ensure that window units are without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 08 71 00 – DOOR HARDWARE

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:

1. Mechanical and electrified door hardware
2. Electronic access control system components
3. Field verification, preparation and modification of existing doors and frames to receive new door hardware.

B. Section excludes:
1. Windows
2. Cabinets (casework), including locks in cabinets.
3. Signage
4. Toilet accessories
5. Overhead doors

C. Related Sections:
1. Division 01 Section “Alternates” for alternates affecting this section.
2. Division 06 Section “Rough Carpentry”
3. Division 06 Section "Finish Carpentry”
4. Division 07 Section “Joint Sealants” for sealant requirements applicable to threshold installation specified in this section.
5. Division 08 Sections:

    a. “Metal Doors and Frames”
    b. “Flush Wood Doors”
    c. “Stile and Rail Wood Doors”
    d. “Interior Aluminum Doors and Frames”
    e. "Aluminum-Framed Entrances and Storefronts"
    f. “Stainless Steel Doors and Frames”
    g. “Special Function Doors”
    h. "Entrances”
6. Division 09 sections for touchup, finishing or refinishing of existing openings modified by this section.
7. Division 26 "Electrical" sections for connections to electrical power system and for low-voltage wiring.
8. Division 28 “Electronic Safety and Security” sections for coordination with other components of electronic access control system and fire alarm system.

1.03 SUBMITTALS

A. General:
   1. Submit in accordance with Conditions of Contract and Division 01 Submittal Procedures.
   2. Prior to forwarding submittal:

      a. Comply with procedures for verifying existing door and frame compatibility for new hardware, as specified in PART 3, “EXAMINATION” article, herein.
      b. Review drawings and Sections from related trades to verify compatibility with specified hardware.
      c. Highlight, encircle, or otherwise specifically identify on submittals: deviations from Contract Documents, issues of incompatibility or other issues which may detrimentally affect the Work.

B. Action Submittals:

   1. Product Data: Submit technical product data for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.

   2. Samples for Verification: If requested by Architect, submit production sample of requested door hardware unit in finish indicated and tagged with full description for coordination with schedule.

      a. Samples will be returned to supplier. Units that are acceptable to Architect may, after final check of operations, be incorporated into Work, within limitations of key coordination requirements.

3. Riser and Wiring Diagrams: After final approval of hardware schedule, submit details of electrified door hardware, indicating:

    a. Wiring Diagrams: For power, signal, and control wiring and including:
        1) Details of interface of electrified door hardware and building safety and security systems.
        2) Schematic diagram of systems that interface with electrified door hardware.
        3) Point-to-point wiring.
        4) Risers.

4. Door Hardware Schedule:

    a. Submit concurrent with submissions of Product Data, Samples, and Shop Drawings. Coordinate submission of door hardware schedule with scheduling requirements of other work to facilitate fabrication of other work critical in Project construction schedule.
    b. Submit under direct supervision of a Door Hardware Institute (DHI) certified Architectural Hardware Consultant (AHC) or Door Hardware Consultant (DHC) with hardware sets in vertical format (only) as illustrated by Sequence of Format for the Hardware Schedule published by DHI.
    c. Indicate complete designations of each item required for each opening, include:
        1) Door Index: door number, heading number, and Architect's hardware set number.
        2) Quantity, type, style, function, size, and finish of each hardware item.
        3) Name and manufacturer of each item.
        4) Fastenings and other pertinent information.
        5) Location of each hardware set cross-referenced to indications on Drawings.
        6) Explanation of all abbreviations, symbols, and codes contained in schedule.
        7) Mounting locations for hardware.
        8) Door and frame sizes and materials.
        9) Degree of door swing and handing.
        10) Operational Description of openings with electrified hardware covering egress, ingress (access), and fire/smoke alarm connections.

5. Key Schedule:

    a. After Keying Conference, provide keying schedule that includes levels of keying, explanations of key system's function, key symbols used, and door numbers controlled.
    b. Use ANSI/BHMA A156.28 "Recommended Practices for Keying Systems" as guideline for nomenclature, definitions, and approach for selecting optimal keying system.
    c. Provide 3 copies of keying schedule for review prepared and detailed in accordance with referenced DHI publication. Include schematic keying diagram and index each key to unique door designations.
    d. Index keying schedule by door number, keyset, hardware heading number, cross keying instructions, and special key stamping instructions.
    e. Provide one complete bitting list of key cuts and one key system schematic illustrating system usage and expansion. Forward bitting list, key cuts and key system schematic directly to Owner, by means as directed by Owner.
    f. Prepare key schedule by or under supervision of supplier, detailing Owner's final keying instructions for locks.

6. Templates: After final approval of hardware schedule, provide templates for doors, frames and other work specified to be factory or shop prepared for door hardware installation.

C. Informational Submittals:

1. Provide Qualification Data for Supplier, Installer and Architectural Hardware Consultant.
2. Provide Product Data:
    a. Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.
    b. Include warranties for specified door hardware.
3. Buy American Certification: Manufacturer is accredited under an accredited third-party Quality Control Program, including IAS AC472 and based upon chapter 17 of the International Building Code (IBC).

D. Closeout Submittals:

1. Operations and Maintenance Data: Provide in accordance with Division 01 and include:
    a. Complete information on care, maintenance, and adjustment; data on repair and replacement parts, and information on preservation of finishes.
    b. Catalog pages for each product.
    c. Factory order acknowledgement numbers (for warranty and service)
    d. Name, address, and phone number of local representative for each manufacturer.
    e. Parts list for each product.
    f. Final approved hardware schedule edited to reflect conditions as installed.
    g. Final keying schedule
    h. Copies of floor plans with keying nomenclature
    i. Copy of warranties including appropriate reference numbers for manufacturers to identify project.
    j. As-installed wiring diagrams for each opening connected to power, both low voltage and 110 volts.

E. Inspection and Testing:

1. Submit written reports to the Owner and Authority Having Jurisdiction (AHJ) of the results of functional testing and inspection for:
    a. Fire door assemblies, in compliance with NFPA 80.
    b. Required egress door assemblies, in compliance with NFPA 101.

1.04 QUALITY ASSURANCE

A. Qualifications and Responsibilities:
1. Supplier: Recognized architectural hardware supplier with record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this Project and that provides certified Architectural Hardware Consultant (AHC) or Door Hardware Consultant (DHC) available to Owner, Architect, and Contractor, at reasonable times during the Work for consultation.

2. Installer: Qualified tradesperson skilled in the application of commercial grade hardware with experience installing door hardware similar in quantity, type, and quality as indicated for this Project.
3. Architectural Hardware Consultant: Person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and meets these requirements:
   a. For door hardware: DHI certified AHC or DHC.
   b. Can provide installation and technical data to Architect and other related subcontractors.
   c. Can inspect and verify components are in working order upon completion of installation.
   d. Capable of producing wiring diagram and coordinating installation of electrified hardware with Architect and electrical engineers.

4. Single Source Responsibility: Obtain each type of door hardware from single manufacturer.

B. Certifications:

1. Fire-Rated Door Openings:

   a. Provide door hardware for fire-rated openings that complies with NFPA 80 and requirements of authorities having jurisdiction.
   b. Provide only items of door hardware that are listed products tested by Underwriters Laboratories, Intertek Testing Services, or other testing and inspecting organizations acceptable to authorities having jurisdiction for use on types and sizes of doors indicated, based on testing at positive pressure and according to NFPA 252 or UL 10C and in compliance with requirements of fire-rated door and door frame labels.

2. Smoke and Draft Control Door Assemblies:

   a. Provide door hardware that meets requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105
   b. Comply with the maximum air leakage of 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) at tested pressure differential of 0.3-inch wg (75 Pa) of water.

3. Electrified Door Hardware

   a. Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction.

4. Accessibility Requirements:

   a. Comply with governing accessibility regulations cited in "REFERENCES" article 087100, 1.02.D3 herein for door hardware on doors in an accessible route. This project must comply with all Federal Americans with Disability Act regulations and all Local Accessibility Regulations.

C. Pre-Installation Meetings

1. Keying Conference

a. Incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including:
   1) Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
   2) Preliminary key system schematic diagram.
   3) Requirements for key control system.
   4) Requirements for access control.
   5) Address for delivery of keys.

2. Pre-installation Conference

   a. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   b. Inspect and discuss preparatory work performed by other trades.
   c. Inspect and discuss electrical roughing-in for electrified door hardware.
   d. Review sequence of operation for each type of electrified door hardware.
   e. Review required testing, inspecting, and certifying procedures.
   f. Review questions or concerns related to proper installation and adjustment of door hardware.

3. Electrified Hardware Coordination Conference:

   a. Prior to ordering electrified hardware, schedule and hold meeting to coordinate door hardware with security, electrical, doors and frames, and other related suppliers.

D. Regulatory Requirements:

1. Floor stops: Do not locate in path of travel. Locate no more than 4 inches from walls, per DSA Policy #99-08 (Access).
2. Handles, pull, latches, locks, other operable parts:
   a. Panic hardware: locate between 36 inches to 44 inches above the finished floor.
   b. Tempered glass doors without stiles: bottom rail may be less than 10 inches if top leading edge is tapered 60 degrees minimum.
   c. Applied kickplates and armor plates: bevel the left and right edges; free of sharp or abrasive edges.
   d. Actuator location: conspicuously located, clear and level floor/ground space for forward or parallel approach.
   e. Where powered door serves an occupancy of 100 or more, provide back-up battery power or stand-by generator power, capable of supporting a minimum of 100 cycles.

E. Buy American Compliance: Materials provided under work of this section shall comply with the following requirements:

1. Buy American Act of 1933 BAA-41 U.S.C., 10a - 10d
2. Buy American Act provision of section 1605 of the American Recovery and Reinvestment Act of 2009 (ARRA)

F. Texas Department of Insurance Windstorm Requirements: When project falls under the Texas Department of Insurance Windstorm Inspection Program for Inland II. All products, materials and installation systems shall be evaluated and approved by the Texas Department of Insurance, Windstorm Inspection Program, and listed in the TDI Product Evaluation Index or approved by the Windstorm Engineer as outlined below. Products, materials and installation systems not presently approved by the Texas Department of Insurance, Windstorm Inspection Program, may be considered for this project however, they must be properly submitted through the Architect for review. This submittal shall be a part of the initial

submittal process outlines in Section 013400 and requirements for this portion are detailed within the Texas Department of Insurance Windstorm Inspection website at the following location: www.tdi.state.tx.us/wind/submittal_requi.html.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up for hardware delivered to Project site. Promptly replace products damaged during shipping.

B. Tag each item or package separately with identification coordinated with final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package. Deliver each article of hardware in manufacturer's original packaging.

C. Maintain manufacturer-recommended environmental conditions throughout storage and installation periods.

D. Provide secure lock-up for door hardware delivered to Project. Control handling and installation of hardware items so that completion of Work will not be delayed by hardware losses both before and after installation.

E. Handle hardware in manner to avoid damage, marring, or scratching. Correct, replace or repair products damaged during Work. Protect products against malfunction due to paint, solvent, cleanser, or any chemical agent.

F. Deliver keys to manufacturer of key control system for subsequent delivery to Owner.

1.06 COORDINATION

A. Coordinate layout and installation of floor-recessed door hardware with floor construction. Cast anchoring inserts into concrete.

B. Installation Templates: Distribute for doors, frames, and other work specified to be factory or shop prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.

C. Security: Coordinate installation of door hardware, keying, and access control with Owner's security consultant.

D. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.

E. Existing Openings: Where existing doors, frames and/or hardware are to remain, field verify existing functions, conditions and preparations and coordinate to suit opening conditions and to provide proper door operation.

1.07 WARRANTY

A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.

1. Warranty does not cover damage or faulty operation due to improper installation, improper use or abuse.
2. Warranty Period: Beginning from date of Substantial Completion, for durations indicated in manufacturer's published listings.
    a. Mechanical Warranty
        1) Locks
            a) Schlage: 10 years
        2) Exit Devices
            a) Von Duprin: 10 years
        3) Closers
            a) LCN 4000 Series: 30 years
    b. Electrical Warranty
        1) Locks
            a) Schlage: 3 years
        2) Exit Devices
            a) Von Duprin: 3 years
        3) Closers
            a) LCN: 2 years

1.08 MAINTENANCE

A. Furnish complete set of special tools required for maintenance and adjustment of hardware, including changing of cylinders.

B. Turn over unused materials to Owner for maintenance purposes.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Approval of manufacturers and/or products other than those listed as “Scheduled Manufacturer” or “Acceptable Manufacturers” in the individual article for the product category shall be in accordance with QUALITY ASSURANCE article, herein. Where “No Substitute” is noted, submittals and substitution requests for other products will not be considered.

B. Approval of products from manufacturers indicated in “Acceptable Manufacturers” is contingent upon those products providing all functions and features and meeting all requirements of scheduled manufacturer’s product.

C. Where specified hardware is not adaptable to finished shape or size of members requiring hardware, furnish suitable types having same operation and quality as type specified, subject to Architect's approval.

2.02 MATERIALS

A. Fasteners
    1. Provide hardware manufactured to conform to published templates, generally prepared for machine screw installation.
    2. Furnish screws for installation with each hardware item. Finish exposed (exposed under any condition) screws to match hardware finish, or, if exposed in surfaces of other work,

to match finish of this other work including prepared for paint surfaces to receive painted finish.

3. Provide concealed fasteners for hardware units exposed when door is closed except when no standard units of type specified are available with concealed fasteners. Do not use thru-bolts for installation where bolt head or nut on opposite face is exposed in other work unless thru-bolts are required to fasten hardware securely. Review door specification and advise Architect if thru bolts are required.
4. Install hardware with fasteners provided by hardware manufacturer.

B. Modification and Preparation of Existing Doors: Where existing door hardware is indicated to be removed and reinstalled.
   1. Provide necessary fillers, Dutchmen, reinforcements, and fasteners, compatible with existing materials, as required for mounting new opening hardware and to cover existing door and frame preparations.
   2. Use materials which match materials of adjacent modified areas.
   3. When modifying existing fire-rated openings, provide materials permitted by NFPA 80 as required to maintain fire-rating.

C. Provide screws, bolts, expansion shields, drop plates and other devices necessary for hardware installation. All closers and exit devices on labeled wood doors shall be through bolted if required by the door manufacturer.
   1. Where fasteners are exposed to view: Finish to match adjacent door hardware material.

D. All hardware shall be installed with the Manufacturers standard screws as provided. The use of any other type of fasteners shall not be permitted. The general contractor shall provide wood blocking in all stud walls specified and/or scheduled to receive wall stops, No Exception.

2.03 HINGES

A. Manufacturers and Products:
   1. Scheduled Manufacturer and Product: Ives 5BB series.

B. Requirements:
   1. Provide hinges conforming to ANSI/BHMA A156.1.
   2. 1-3/4 inch (44 mm) thick doors, up to and including 36 inches (914 mm) wide:
      a. Exterior: Standard weight, bronze or stainless steel, 4-1/2 inches (114 mm) high
      b. Interior: Standard weight, steel, 4-1/2 inches (114 mm) high
   3. 1-3/4 inch (44 mm) thick doors over 36 inches (914 mm) wide:
      a. Exterior: Heavy weight, bronze/stainless steel, 5 inches (127 mm) high
      b. Interior: Heavy weight, steel, 5 inches (127 mm) high
   4. 2 inches or thicker doors:
      a. Exterior: Heavy weight, bronze or stainless steel, 5 inches (127 mm) high
      b. Interior: Heavy weight, steel, 5 inches (127 mm) high
   5. Provide three hinges per door leaf for doors 90 inches (2286 mm) or less in height, and one additional hinge for each 30 inches (762 mm) of additional door height.
   6. Where new hinges are specified for existing doors or existing frames, provide new hinges of identical size to hinge preparation present in existing door or existing frame.
   7. Hinge Pins: Except as otherwise indicated, provide hinge pins as follows:
      a. Steel Hinges: Steel pins

b. Non-Ferrous Hinges: Stainless steel pins
c. Out-Swinging Exterior Doors: Non-removable pins
d. Out-Swinging Interior Lockable Doors: Non-removable pins, as specified
e. Interior Non-lockable Doors: Non-rising pins

8. Width of hinges: 4-1/2 inches (114 mm) at 1-3/4 inch (44 mm) thick doors, and 5 inches (127 mm) at 2 inches (51 mm) or thicker doors. Adjust hinge width as required for door, frame, and wall conditions to allow proper degree of opening.
9. Provide hinges with electrified options as scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware. Locate electric hinge at second hinge from bottom or nearest to electrified locking component.
10. At labeled door's steel or stainless steel, bearing-type hinges shall be provided. For all doors equipped with closers provide bearing-type hinges.

2.04 CONTINUOUS HINGES

A. Stainless Steel
1. Manufacturers:

a. Scheduled Manufacturer: Ives.

2. Requirements:

a. Provide pin and barrel continuous hinges conforming to ANSI/BHMA A156.26., Grade 1.
b. Provide pin and barrel continuous hinges fabricated from 14-gauge, type 304 stainless steel.
c. Provide twin self-lubricated nylon bearings at each hinge knuckle, with 0.25-inch (6 mm) diameter stainless steel pin.
d. Provide hinges capable of supporting door weights up to 600 pounds, and successfully tested for 1,500,000 cycles.
e. On fire-rated doors, provide pin and barrel continuous hinges that are classified for use on rated doors by testing agency acceptable to authority having jurisdiction.
f. Provide pin and barrel continuous hinges with electrified options as scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware.
g. Install hinges with fasteners supplied by manufacturer.
h. Provide hinges 1 inch (25 mm) shorter in length than nominal height of door, unless otherwise noted or door details require shorter length and with symmetrical hole pattern.

B. Aluminum Geared
1. Manufacturers:

a. Scheduled Manufacturer: Ives.

2. Requirements:

a. Provide aluminum geared continuous hinges conforming to ANSI/BHMA A156.26, Grade 1.
b. Provide aluminum geared continuous hinges, where specified in the hardware sets, fabricated from 6063-T6 aluminum.
c. Provide split nylon bearings at each hinge knuckle for quiet, smooth, self-lubricating operation.
d. Provide hinges capable of supporting door weights up to 450 pounds, and successfully tested for 1,500,000 cycles.

e. On fire-rated doors, provide aluminum geared continuous hinges that are classified for use on rated doors by testing agency acceptable to authority having jurisdiction.
f. Provide aluminum geared continuous hinges with electrified option scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware.
g. Install hinges with fasteners supplied by manufacturer.
h. Provide hinges 1 inch (25 mm) shorter in length than nominal height of door, unless otherwise noted or door details require shorter length and with symmetrical hole pattern.

2.05 ELECTRIC POWER TRANSFER

A. Manufacturers:

a. Scheduled Manufacturer: Von Duprin EPT-10.

B. Requirements:
1. Provide power transfer with electrified options as scheduled in the hardware sets. Provide with number and gage of wires sufficient to accommodate electric function of specified hardware.
2. Locate electric power transfer per manufacturer’s template and UL requirements, unless interference with operation of door or other hardware items.

2.06 FLUSH BOLTS

A. Manufacturers:
1. Scheduled Manufacturer: Ives.
2. Acceptable Manufacturers: Burns, Rockwood.

B. Requirements:
1. Provide automatic, constant latching, and manual flush bolts with forged bronze or stainless-steel face plates, extruded brass levers, and with wrought brass guides and strikes. Provide 12 inch (305 mm) steel or brass rods at doors up to 90 inches (2286 mm) in height. For doors over 90 inches (2286 mm) in height increase top rods by 6 inches (152 mm) for each additional 6 inches (152 mm) of door height. Provide dust-proof strikes at each bottom flush bolt.

2.07 SURFACE BOLTS

A. Manufacturers:
1. Scheduled Manufacturer: Ives.
2. Acceptable Manufacturers: Burns, Rockwood.

B. Requirements:
1. Surface bolt s to have 1″ throw for maximum security with concealed mounting that prevents vandalism. Units to be constructed of heavy-duty steel and UL listed up to three (3) hours when used on the inactive door of a pair up to 8′ in height.

2.08 COORDINATORS

A. Manufacturers:
   1. Scheduled Manufacturer: Ives.
   2. Acceptable Manufacturers: Burns, Rockwood.

B. Requirements:
   1. Where pairs of doors are equipped with automatic flush bolts, an astragal, or other hardware that requires synchronized closing of the doors, provide bar-type coordinating device, surface applied to underside of stop at frame head.
   2. Provide filler bar of correct length for unit to span entire width of opening, and appropriate brackets for parallel arm door closers, surface vertical rod exit device strikes or other stop mounted hardware. Factory-prepared coordinators for vertical rod devices as specified.

2.09 CYLINDRICAL LOCKS

A. Manufacturers and Products:
   1. Scheduled Manufacturer and Product: Schlage ND series.
   2. Acceptable Manufacturers and Products: Sargent 10-Line, Falcon T.

B. Requirements:
   1. Provide cylindrical locks conforming to ANSI/BHMA A156.2 Series 4000, Grade 1, and UL Listed for 3-hour fire doors.
   2. Cylinders: Refer to “KEYING” article, herein.
   3. Provide locks with standard 2-3/4 inches (70 mm) backset, unless noted otherwise, with 1/2-inch latch throw. Provide proper latch throw for UL listing at pairs.
   4. Provide locksets with separate anti-rotation thru-bolts, and no exposed screws.
   5. Provide independently operating levers with two external return spring cassettes mounted under roses to prevent lever sag.
   6. Provide standard ASA strikes unless extended lip strikes are necessary to protect trim.
   7. Provide electrified options as scheduled in the hardware sets.
   8. Lever Trim: Solid cast levers without plastic inserts and wrought roses on both sides.

      a. Lever Design: Schlage RHODES.

2.10 PADLOCKS:

A. Manufacturers and Products:
   1. Scheduled Manufacturer and Product: Schlage KS Series.

B. Requirements:
   1. Provide padlocks with 1-inch (25 mm) shackle height, unless noted otherwise, as specified.
   2. Cylinders: Refer to “KEYING” article, herein.

2.11 EXIT DEVICES

A. Manufacturers and Products:
   1. Scheduled Manufacturer and Product: Von Duprin 99/33A series.
   2. Acceptable Manufacturers and Products: Sargent 80 series.
   3. Scheduled Manufacturer and Product: Von Duprin QEL (no substitutions)

B. Requirements:
   1. Provide exit devices tested to ANSI/BHMA A156.3 Grade 1 and UL listed for Panic Exit or Fire Exit Hardware.
   2. Cylinders: Refer to "KEYING" article, herein.
   3. Provide touchpad type exit devices, fabricated of brass, bronze, stainless steel, or aluminum, plated to standard architectural finishes to match balance of door hardware.
   4. Touchpad must extend a minimum of one half of door width. No plastic inserts are allowed in touchpads.
   5. Provide exit devices with dead latching feature for security and for future addition of alarm kits and/or other electrified requirements.
   6. Provide exit devices with weather resistant components that can withstand harsh conditions of various climates and corrosive cleaners used in outdoor pool environments.
   7. Provide flush end caps for exit devices.
   8. Provide exit devices with manufacturer's approved strikes.
   9. Provide exit devices cut to door width and height. Install exit devices at height recommended by exit device manufacturer, allowable by governing building codes, and approved by Architect.
   10. Mount mechanism case flush on face of doors or provide spacers to fill gaps behind devices. Where glass trim or molding projects off face of door, provide glass bead kits.
   11. Provide cylinder or hex-key dogging as specified at non-fire-rated openings.
   12. Provide dogging indicators (CDSI) for visible indication of dogging status where scheduled.
   13. Removable Mullions: 2 inches (51 mm) x 3 inches (76 mm) steel tube. Where scheduled as keyed removable mullion, provide type that can be removed by use of a keyed cylinder, which is self-locking when re-installed. Provide MT54 Wall Kits (unless noted otherwise in hardware set).
   14. Provide factory drilled weep holes for exit devices used in full exterior application, highly corrosive areas, and were noted in hardware sets.
   15. Provide electrified options as scheduled.
   16. Provide exit devices with optional trim designs to match other lever and pull designs used on the project.

2.12 CYLINDERS/KEYING/KEYS

A. Provide all exterior and interior locks or Exit Devices requiring cylinders keyed to the existing Large Format Interchangeable Core Master Key System as instructed by the Owners Representative. Cylinders shall comply with performance requirements of ANSI A156.5. All keys shall be of nickel silver material only. The hardware supplier shall meet with the General Contractor, Architect and the Owners Representative at the project jobsite to determine all permanent keying requirements.

B. Cylinders shall be factory keyed, and factory maintained as directed by the owners Representative and the Architect. Provide (3) keys per cylinder.

C. Factory stamp all keys "Do not duplicate" and with key symbol as directed by the Owners Representative. Visual key control shall be provided on all permanent keys and cylinders.

D. Provide temporary keyed construction cores for the duration of the construction phase. Provide ten (10) construction day keys and three (3) construction control keys. All construction cores shall be returned to the hardware supplier upon installation of permanent cores.

E. Manufacturers and Products:

1. Scheduled Manufacturer and Product: Sargent Signature R-series keyway.
2. Alvin ISD uses a Sargent Signature Key System with a Sargent "R" Series Keyway.
3. Visual Key Control to be used. Key Set/Number (Example A1, A2 etc.) to be stamped on key and on the face of cylinders.
4. The GGGM is to be cut on an "RN" Signature key blank.
5. Control Key to be built into the system and cut on an "RN" Signature key blank.
6. All Master keys are to be cut on a Signature Key blank.
7. All Exterior door cylinders are to be Signature Cylinders except for any GGGM1-5 exterior doors
8. All interior openings, keyed dog downs, and mullions are to be standard cylinders, non-signature unless noted otherwise. All GGGM1-5 openings are to be standard cylinders. Non-Signature; GGGM1: Maintenance - GGGM2 : Custodial - GGGM3 : Technology - GGGM4: Future use - GGGM5 : Food Service.
9. Contractor will install final cores in all door hardware.
10. Contractor to provide.
    1 lockable surface mounted key cabinet with capacity of 3 times the number of key changes, including all number tags and record keeping accessories.
    (Commonly referred to as a "Deluxe 2 Tag System").
11. After verifying key functions on installed hardware, the contractor will hang key cabinet and place all keys on tags and hooks in cabinet as directed by the owner.
12. Key Quantity: Furnish in the following quantities.
    Contractor to provide:

- 5 each of the following keys: GGMK - GMK - MK - SMK
- 6 Master Keys (per Master Key Level/Group)
- 6 keys per change key number for all cores except the common key.
- 12 Athletics Cross Keys for Male Coaches and 12 for Female Coaches.
- 100 Common keys (Interior hallway doors, break rooms, lounge, etc.)
- 4 Interchangeable Core Padlocks and cores.
- 10 Uncombinated Cores
- 100 key blanks

13. The factory shall package cut keys and cores separately in key set sequence and ship all keys, cores, and padlocks to the contractor or Alvin ISD Project Manager.
14. Bittings are to be supplied electronically to be uploaded in Keywizard Software.

2.13 KEY CONTROL SYSTEM

A. Manufacturers:
   1. Scheduled Manufacturer: Telkee.
   2. Acceptable Manufacturers: HPC, Lund.

B. Requirements:
   1. Provide key control system, including envelopes, labels, tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet, all as recommended by system manufacturer, with capacity for 150% of number of locks required for Project.

      a. Provide complete cross index system set up by hardware supplier, and place keys on markers and hooks in cabinet as determined by final key schedule.
      b. Provide hinged-panel type cabinet for wall mounting.

2.14 DOOR CLOSERS

A. Manufacturers and Products:
   1. Scheduled Manufacturer and Product: LCN 4040XP series.
   2. Acceptable Manufacturers and Products: Sargent 351 series.

B. Requirements:
   1. Provide door closers conforming to ANSI/BHMA A156.4 Grade 1 requirements by BHMA certified independent testing laboratory. ISO 9000 certified closers. Stamp units with date of manufacture code.
   2. Provide door closers with fully hydraulic, full rack and pinion action with high strength cast iron cylinder, and full complement bearings at shaft.
   3. Cylinder Body: 1-1/2-inch (38 mm) diameter with 5/8-inch (16 mm) diameter double heat-treated pinion journal.
   4. Hydraulic Fluid: Fireproof, passing requirements of UL10C, and requiring no seasonal closer adjustment for temperatures ranging from 120 degrees F to -30 degrees F.
   5. Spring Power: Continuously adjustable over full range of closer sizes, and providing reduced opening force as required by accessibility codes and standards.
   6. Hydraulic Regulation: By tamper-proof, non-critical valves, with separate adjustment for latch speed, general speed, and backcheck.
   7. Provide closers with solid forged steel main arms and factory assembled heavy-duty forged forearms for parallel arm closers.
   8. Pressure Relief Valve (PRV) Technology: Not permitted.
   9. Finish for Closer Cylinders, Arms, Adapter Plates, and Metal Covers: Powder coating finish which has been certified to exceed 100 hours salt spray testing as described in ANSI Standard A156.4 and ASTM B117 or has special rust inhibitor (SRI).
   10. Provide special templates, drop plates, mounting brackets, or adapters for arms as required for details, overhead stops, and other door hardware items interfering with closer mounting.

2.15 DOOR TRIM

A. Manufacturers:
   1. Scheduled Manufacturer: Ives.
   2. Acceptable Manufacturers: Burns, Rockwood.

B. Requirements:
   1. Provide push plates, push bars, pull plates, and pulls with diameter and length as scheduled.

2.16 PROTECTION PLATES

A. Manufacturers:
   1. Scheduled Manufacturer: Ives.
   2. Acceptable Manufacturers: Burns, Rockwood.

B. Requirements:
   1. Provide protection plates with a minimum of 0.050 inch (1 mm) thick, beveled four edges as scheduled. Furnish with sheet metal or wood screws, finished to match plates.
   2. Sizes plates 2 inches (51 mm) less width of door on single doors, pairs of doors with a mullion, and doors with edge guards. Size plates 1 inch (25 mm) less width of door on pairs without a mullion or edge guards.

3. At fire rated doors, provide protection plates over 16 inches high with UL label.

2.17 OVERHEAD STOPS AND OVERHEAD STOP/HOLDERS

A. Manufacturers:
   1. Scheduled Manufacturers: Glynn-Johnson.
   2. Acceptable Manufacturers: Rixson, Sargent.

B. Requirements:
   1. Provide overhead stop at any door where conditions do not allow for a wall stop or floor stop presents tripping hazard.
   2. Provide friction type at doors without closer and positive type at doors with closer.

2.18 DOOR STOPS AND HOLDERS

A. Manufacturers:
   1. Scheduled Manufacturer: Ives.
   2. Acceptable Manufacturers: Burns, Rockwood.

B. Provide door stops at each door leaf:
   1. Provide wall stops wherever possible. Provide concave type where lockset has a push button of thumbturn.
   2. Where a wall stop cannot be used, provide universal floor stops.
   3. Where wall or floor stop cannot be used, provide overhead stop.
   4. Provide roller bumper where doors open into each other and overhead stop cannot be used.

2.19 THRESHOLDS, SEALS, DOOR SWEEPS, AUTOMATIC DOOR BOTTOMS, AND GASKETING

A. Manufacturers:
   1. Scheduled Manufacturer: Zero International.
   2. Acceptable Manufacturers: National Guard, Reese.

B. Requirements:
   1. Provide thresholds, weather-stripping, and gasketing systems as specified and per architectural details. Match finish of other items.
   2. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that meets requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.
   3. Provide door sweeps, seals, astragals, and auto door bottoms only of type where resilient or flexible seal strip is easily replaceable and readily available.
   4. Size thresholds 1/2 inch (13 mm) high by 5 inches (127 mm) wide by door width unless otherwise specified in the hardware sets or detailed in the drawings.

2.20 SILENCERS

A. Manufacturers:
   1. Scheduled Manufacturer: Ives.
   2. Acceptable Manufacturers: Burns, Rockwood.

B. Requirements:
   1. Provide "push-in" type silencers for hollow metal or wood frames.
   2. Provide one silencer per 30 inches (762 mm) of height on each single frame, and two for each pair frame.
   3. Omit where gasketing is specified.

2.21 FINISHES

A. Finishes for all hardware are as required in this specification and the hardware sets.

B. Special care is to be taken to make uniform the finish of all various manufactured items.

2.24 PROPRIETARY PRODUCTS

A References to specific products are used to establish quality standards of utility and performance. Unless otherwise approved provide only the specified product.

All other materials, not specifically described, but required for a complete and proper finish hardware installation, are to be selected by the Contractor, subject to the approval of the Architect and the Owners Representative.

Architect and the Owners Representative reserve the right to approve all the substitutions proposed for this specification. All requests for substitution to be made prior to bid in accordance with Division 1, General Requirements, and are to be in writing, hand delivered to the Architect. Two (2) copies of the manufacturer’s brochures and a physical sample of each item in the appropriate design and finish shall accompany requests for substitution.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Prior to installation of hardware, examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance. Verify doors, frames, and walls have been properly reinforced for hardware installation.

B. GC and Hardware Supplier to field-verify existing doors and frames receiving new hardware and existing conditions receiving new openings – prior to submittal/ordering. Verify that new hardware is compatible with existing door and frame preparation and existing conditions. Provide/replace all products/components necessary for complete, compliant, functioning opening.

C. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

D. Submit a list of deficiencies in writing and proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Where on-site modification of doors and frames is required:
   1. Carefully remove existing door hardware and components being reused. Clean, protect, tag, and store in accordance with storage and handling requirements specified herein.
   2. Field modify and prepare existing doors and frames for new hardware being installed.
   3. When modifications are exposed to view, use concealed fasteners, when possible.
   4. Prepare hardware locations and reinstall in accordance with installation requirements for new door hardware and with:

      a. Steel Doors and Frames: For surface applied door hardware, drill and tap doors and frames according to ANSI/SDI A250.6.
      b. Wood Doors: DHI WDHS.5 "Recommended Hardware Reinforcement Locations for Mineral Core Wood Flush Doors."
      c. Doors in rated assemblies: NFPA 80 for restrictions on on-site door hardware preparation.

3.03 INSTALLATION

A. Mount door hardware units at heights to comply with the following, unless otherwise indicated or required to comply with governing regulations.
   1. Standard Steel Doors and Frames: ANSI/SDI A250.8.
   2. Custom Steel Doors and Frames: HMMA 831.
   3. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."

B. Install each hardware item in compliance with manufacturer’s instructions and recommendations, using only fasteners provided by manufacturer.

C. Do not install surface mounted items until finishes have been completed on substrate. Protect all installed hardware during painting.

D. Set units level, plumb and true to line and location. Adjust and reinforce attachment substrate as necessary for proper installation and operation.

E. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

F. Install operating parts so they move freely and smoothly without binding, sticking, or excessive clearance.

G. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than quantity recommended by manufacturer for application indicated.

H. Key Control System: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.

I. Door Closers: Mount closers on room side of corridor doors, inside of exterior doors, and stair side of stairway doors from corridors. Mount closers so they are not visible in corridors, lobbies and other public spaces unless approved by Architect.

J. Closer/Holders: Mount closer/holders on room side of corridor doors, inside of exterior doors, and stair side of stairway doors.

K. Thresholds: Set thresholds in full bed of sealant complying with requirements specified in Division 07 Section "Joint Sealants."

L. Stops: Provide floor stops for doors unless wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they may impede traffic or present tripping hazard.

M. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.

N. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.

O. Door Bottoms and Sweeps: Apply to bottom of door, forming seal with threshold when door is closed.

3.04 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
   1. Door Closers: Adjust sweep period to comply with accessibility requirements and requirements of authorities having jurisdiction.

B. Occupancy Adjustment: Approximately three to six months after date of Substantial Completion, examine and readjust each item of door hardware, including adjusting operating forces, as necessary to ensure function of doors and door hardware.

3.05 CLEANING AND PROTECTION

A. Clean adjacent surfaces soiled by door hardware installation.

B. Clean operating items per manufacturer’s instructions to restore proper function and finish.

C. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of Substantial Completion.

3.06 DOOR HARDWARE SETS

132563 OPT0391681 Version 1

Hardware Group No. 001 - OH DOOR

For use on Door #(s):

Provide each RU door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	FINISH	MFR
1	EA	CYLINDER/CORE WITH CONSTR KEYING	63-TYP/QTY REQUIRED CKC (MATCH EXIST SYSTEM)	626	SAR
	EA	NOTE	REMAINDER OF HARDWARE BY DOOR MFR.		

-COORDINATE HARDWARE WITH DOOR MFR.

Hardware Group No. 001SL - SLIDING

For use on Door #(s):

Provide each SL door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	FINISH	MFR
2	EA	CYLINDER/CORE WITH CONSTR KEYING	63-TYP/QTY REQUIRED CKC (MATCH EXIST SYSTEM) QTY/TYPE REQD	626	SAR
	EA	NOTE	REMAINDER OF HARDWARE BY DOOR MFR.		

-COORDINATE HARDWARE WITH DOOR MFR.

Hardware Group No. 103 - SGL OFFICE LOCK

For use on Door #(s):

Provide each SGL door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	FINISH	MFR
3	EA	HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	ENTRANCE LOCK	ND53JSARD RHO	626	SCH
1	EA	CYLINDER/CORE WITH CONSTR KEYING	63-TYP/QTY REQUIRED CKC (MATCH EXIST SYSTEM)	626	SAR
1	EA	STOP AS REQD	WS406/407CCV/FS436-OH STOP AS REQD	630	IVE
1	EA	GASKETING	488S PSA H & J (USE SILENCERS @ NON-RATED DOORS)	BK	ZER

Hardware Group No. 103A - SGL OFFICE LOCK

For use on Door #(s):

Provide each SGL door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	FINISH	MFR
3	EA	HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	ENTRANCE LOCK	ND53JSARD RHO	626	SCH
1	EA	CYLINDER/CORE WITH CONSTR KEYING	63-TYP/QTY REQUIRED CKC (MATCH EXIST SYSTEM)	626	SAR
1	EA	STOP AS REQD	WS406/407CCV/FS436-OH STOP AS REQD	630	IVE
1	SET	SEAL	PERIMETER SEAL BY FRAME MFR.		

Hardware Group No. 201 - SGL STORAGE LOCK CLOSER

For use on Door #(s):

Provide each SGL door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	FINISH	MFR
3	EA	HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	STOREROOM LOCK	ND80JSARD RHO	626	SCH
1	EA	CYLINDER/CORE WITH CONSTR KEYING	63-TYP/QTY REQUIRED CKC (MATCH EXIST SYSTEM)	626	SAR
1	EA	SURFACE CLOSER	4040XP-RW/EDA-TBSRT X MTG BRKT, SPCR/SUPPORT & PLATE AS REQ	689	LCN
1	EA	STOP AS REQD	WS406/407CCV/FS436-OH STOP AS REQD	630	IVE
1	EA	GASKETING	488S PSA H & J (USE SILENCERS @ NON-RATED DOORS)	BK	ZER

Hardware Group No. 201W - SGL STORAGE LOCK CLOSER WIDE

For use on Door #(s):

Provide each SGL door(s) with the following:

QTY		DESCRIPTION	CATALOG NUMBER	FINISH	MFR
3	EA	HINGE	5BB1HW 5 X 4.5 NRP	652	IVE
1	EA	STOREROOM LOCK	ND80JSARD RHO	626	SCH

SECTION 08 74 00 – ACCESS CONTROL MONITORING SYSTEM

PART 1 – GENERAL

1.1 ACCESS CONTROL MONITORING SYSTEM (ACMS)

A. Related Documents
   1. Section 08.71.00 Door Hardware
   2. Building Security Systems Drawings

1.2 DESCRIPTION OF WORK:

A. Provide a complete Access Control Monitoring System (ACMS) turnkey installation as detailed in this and other sections of these specifications. The ACMS shall comprise the following:
   1. A computer-based ACMS having monitoring and control functionality, operator workstations, intelligent edge devices. The ACMS shall consist of Schlage Electronic Trims, Locks and other components located as described in this section for a complete turnkey electronic access control solution.
   2. The extent of the access system work is indicated herein, and by the contract drawings and schedules.
   3. The type of access control in this Section shall be hard-wired technology fully integrated with the door hardware described in section 08 71 00.
   4. The Owner shall provide the following Network Security Server, Operator Workstations and Local Area Network. All equipment must meet or exceed the minimum manufacturer's specifications for the Access Control Monitoring System.
   5. The access control software shall have the ability to assign ADA access to a specific credential.

B. Provide the following support for the ACMS facilities:
   1. Hardware Supplier and Installer shall provide a 1 year warranty on all components furnished.
   2. Submittals, samples and record documentation.
   3. Comprehensive commissioning and testing.
   4. Training services for the Owner and Operators.
   5. Coordination with other site contractors.
   6. Reporting to the owner and Architect for the coordinated and timely execution of the work.
   7. Maintenance services during the warranty period.
   8. All security equipment, cabling, and other components, materials and services required for a completed and fully operational turnkey ACMS installation meeting these specifications.

1.3 QUALITY ASSURANCE:

A. Manufacturer: Firms regularly engaged in manufacture of intrusion and access systems, of types, sizes, and electrical characteristics required, whose products have been satisfactorily used in similar service for not less than 5-years.

B. Installer: Shall be qualified with at least 5-years of successful installation experience on projects with intrusion detection and access control systems installations having work similar to that required for this Project. The subcontractor security contractor, installer, integrator) shall be Factory Certified on the supplied equipment and employ full time factory certified technicians.

1.4 ACMS TOPOLOGY

A. The ACMS shall have the following characteristics:
   1. The ACMS shall be configured to ensure reliability of systems operation and control of critical functions/systems. The following describes in very general terms the relationship between the various components of the ACMS that would be acceptable.
   2. The subcontractor shall coordinate the material needs with the Hardware Supplier and program the Open Options DNA Fusion Client Workstation that resides on the District's existing DNA Fusion Server. The DNA Fusion Client Workstations and ACPS (Access Control Panels) shall reside on the Security Local Area Network (LAN). The DNA Fusion Client Workstations shall provide the operators with a "window" into the ACMS for monitoring and control of the System. The Security LAN shall be a high speed Ethernet TCP/IP based network.
   3. The system shall have the capability for "Real Time" centralized lockdown in less than ten (10) seconds.
   4. Electronic locks shall be programmed to fail secure.

1.5 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

   1. Convene minimum one week prior to commencing work of this Section.

PART 2 – PRODUCTS

2.1 LOCAL CONTROL PANEL COMPONETS:

A. Local control panel shall be Open Options SSP-EP (No Substitutions). Security Contractor shall provide quantities of material and licenses necessary to handle all devices, power supplies, function, and I/O zones as specified and/or required.

B. Control panel interface module shall be Open Options RSC-1 or RSC-2. Module shall interface with door hardware described in Section 08 71 00 and shall communicate with the SSP-EP utilizing the RS485 protocol.

2.2 EDGE DEVICES AND COMPONENTS:

A. Access control hardware shall be Schlage AD-300 (No Substitutions) Hard-wired equipment. The electronic locking hardware shall interface with the door hardware described in Section 08 71 00 and within this Section. Use Von Duprin Exit Device LD-RX-00EO-US26D for all doors receiving an AD-300 lock.

B. The AD-300 hard-wire locks shall communicate with the Open Options Control Panel utilizing the RS485 Protocol.

C. Local lockdown control hardware shall be STI Stopper Station with Bopper Stopper Cover **SS-2411 & CP-LBL** Emergency Push Button, color Blue, displaying factory custom phrase "LOCKDOWN DOORS" (No Substitutions) hardwired to Open Options Panel. The lockdown push button shall communicate with the DNA Fusion Software via the Open Options Control Panel to change all AD-300 locks to "Locked" mode upon activation, and automatically return to previous mode by resetting the push button.

2.3 CREDENTIALS:

A. Card credentials shall be XceedID Smart ISO Model # 9500 (No Substitutions). Card format and numbering shall be coordinated with AISD Access Control Systems Administrator prior to ordering. 100 cards shall be provided to the ACMS Administrator.

PART 3 – EXECUTION

3.1 INSTALLATION:

A. Install all components in strict accordance with manufacturer's printed instructions.

B. Test and adjust system to ensure system is fully and reliably operational.

C. Instruct Owner's representatives in settings, use, maintenance, and troubleshooting of ACMS system.

D. All hardware related and connected to access Control equipment shall be provided, installed and programmed by Open Options Certified Integrator.

E. Door Position Switch shall be installed in top edge of access-controlled door only.

F. Install 299 Strike (provided with Von Duprin Exit Device) on mullion for exit device installed on access-controlled door.

G. Request to Exit and Door Position switches shall be properly installed to display proper door status in DNA Fusion Workstation, without false reporting.

PART 4 – SCHEDULE (Actual hardware sets and quantities used will be referenced in the Hardware Section 08 71 00)

END OF SECTION

SECTION 08 80 00 – INTERIOR GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes glass and glazing for the following:
   1. Interior windows.
   2. Door lights at interior doors.
   3. Standard glazing for interior storefront systems.
   4. Laminated glazing for glass railing systems.
   5. Laminated glazing to meet Forced Entry requirements.
   6. Glass and glazing accessories and installation requirements are included in this section for other sections referencing this section.

B. Related Sections:
   1. Section 07 90 00 - Joint Protection: Sealant and back-up material other than glazing sealants.
   2. Section 08 11 13 - Standard Steel Doors and Frames: Glazing in interior steel doors and windows.
   3. Section 08 14 16 - Flush Wood Doors: Interior door lights.
   4. Section 08 41 13 - Aluminum-Framed Entrances and Storefronts.
   5. Section 08 56 54 – Ballistic Rated Transaction Windows: Polycarbonate panel system.
   6. Section 08 88 56 – Security Glazing: Ballistic and impact-resistant glazing.

E. Glass Association of North America:
   1. GANA - Sealant Manual.
   2. GANA - Glazing Manual.
   3. GANA - Laminated Glass Design Guide.

1.3 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.
   1. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.

2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glazing, tape sealants, gaskets, and glazing channel substrates.
3. Test no fewer than eight samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.4 PERFORMANCE REQUIREMENTS

A. Glass Thickness: Glass thickness designations indicated are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites in the thickness designations indicated for various size openings, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:
   1. Wind Loads: As indicated, but not less than wind loads required by ASCE 7 "Minimum Design Loads for Buildings and Other Structures": Section 6.0 "Wind Loads."
   2. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
      a. Load Duration: 3 seconds.
   3. Maximum Lateral Deflection: For exterior glass supported on all 4 edges, provide thickness required that limits center deflection at design wind pressure to 1/50 times the short side length or 1 inch, whichever is less.
   4. Minimum Glass Thickness for Exterior Lites: Not less than 1/4 inch.

B. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components.
   1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

C. Thermal and Solar Optical Performance: Measured or calculated in accordance with the following:
   1. U-Values: NFRC 100.
   2. Solar Heat Gain Coefficients: NFRC 200.
   3. Solar Optical Properties: NFRC 300.

1.5 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data:
   1. Glass and Plastic: Provide structural, physical, and thermal and solar optical performance characteristics, size limitations, special handling or installation requirements.
   2. Glazing Sealants, Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements. Identify available colors where exposed.

C. Samples:
   1. Glass: Submit two samples 12x12 inch in size, of each type and color of glass specified, including spandrel, wire glass, insulated metal panels, and other glazing types as may be indicated.
   2. Glazing Materials: Submit 12-inch-long bead of glazing sealant for each color other than black.

D. Manufacturer's Certificate: Certify sealed insulating glass and low-E coated glass meet or exceed specified requirements.

E. Installer's Certificate: Certify glass furnished without identification label is installed in accordance with Construction Documents and applicable code.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with GANA Glazing Manual for glazing installation methods.

B. Safety Glazing Products: Comply with testing requirements in 16 CFR 1201 and, for wired-glass, ANSI Z97.1.
   1. Obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council or another certification agency or manufacturer acceptable to authorities having jurisdiction.
   2. Where glazing units are specified for lites more than 9 sq. ft. in exposed surface area, and lites of any size in certain hazardous locations such as sliding glass doors, doors and enclosures for bathtubs, showers, hot tubs, whirlpools, saunas, and steam rooms, provide glazing products that comply with Category II materials; for lites 9 sq. ft. or less in exposed surface area, provide glazing products that comply with Category I or II materials.

1.7 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.8 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install liquid glazing sealants when ambient and substrate temperature conditions are outside limits permitted by glazing sealant manufacturer or below 40 deg F.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish ten-year warranty to include coverage for coated glass units from coating deterioration or failure, and replacement of same.

C. Furnish ten-year warranty to include coverage for sealed glass units from seal failure, interpane dusting or misting, and replacement of same.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Typical Glazing:
   1. Guardian Glass, www.guardianglass.com
   2. Oldcastle Building Envelope www.oldcastlebe.com
   3. Pilkington North America, Inc. www.pilkington.com
   4. Viracon www.viracon.com
   5. Vitro Architectural Glass (PPG) www.ppg.com
   6. Substitutions: Section 01 60 00 - Product Requirements

B. Fire Rated Glazing:
   1. SaftiFirst™ Fire Rated Glazing Solutions, www.safti.com.
   2. Substitutions: Section 01 60 00 – Product Requirements.

2.2 MATERIALS

A. **TYPE GL-4**: Tempered glass; ASTM C1048, Type 1 transparent flat, Quality Q3, Kind FT fully tempered, Condition A uncoated, float glass with horizontal tempering; furnish tempered glass conforming to CPSC 16 CFR 1201 Category II.
   1. Clear Tempered Glass: Class 1 clear; minimum 1/4-inch thick.
   2. Locations: Use for all interior glazing except Security Glazing and polycarbonate systems.

B. **Type GL-5**: Single-pane laminated glass at interior railing systems.
   1. Fabrication: Two fully tempered 3/8” glass plies bonded with an interlayer complying with ASTM C1172.
   2. Total Thickness: Nominal ¾-inch.
   3. Plastic Interlayer: Clear polyvinyl butyral.
   4. Installed system shall comply with safety glazing requirements of the International Building Code (IBC) Section 2407 for guards, including ANSI Z97.1 Class A rating.
   5. Glass panels shall meet performance tests including impact resistance and load requirements per ASTM E2358, Standard Specification for the Performance of Glass in Permanent Glass Railing Systems, Guards, and Balustrades.
   6. Finish and protect edges to prevent delamination.
   7. Sizes and mounting method per manufacturer’s recommendations, fully supported at minimum edges or fixed with approved hardware.

C. **Type GL-7**: Single-pane laminated glass at interior storefront systems, fixed windows, and door lights at security vestibules.
   1. Fabrication: 1/4” clear annealed glass + 0.09” PVB interlayer + 1/4” clear annealed glass.
   2. Total Thickness: Nominal 9/16 inch.
   3. Plastic Interlayer: Clear polyvinyl butyral.
   4. Installed system shall meet TEA requirements and UL 972 for Delayed Forced Entry.

2.3 GLAZING ACCESSORIES

A. Dense Gaskets: Resilient extruded shape to suit glazing channel retaining slot; black color.
   1. Neoprene: ASTM C864.
   2. EPDM: ASTM C864.
   3. Silicone: ASTM C1115.

B. Soft Gaskets: ASTM C509 Type II; resilient extruded shape to suit glazing channel retaining slot; black color.
   1. Neoprene.
   2. EPDM.
   3. Silicone.

C. Pre-Formed Glazing Tape: Size to suit application.
   1. Preformed butyl compound with or without integral resilient tube spacing device; 10 to 15 Shore A durometer hardness; coiled on release paper; black color.
      a. Butyl Corner Sealant: ASTM C920 single component non-skinning butyl compatible with glazing tape; color to match tape.
      b. Interior Sealants and Sealant Primers: Maximum volatile organic compound content in accordance with SCAQMD Rule 1168.

D. Setting Blocks: Elastomeric material recommended by glass manufacturer, 80 to 90 Shore A durometer hardness, length of 0.1 inch for each square foot of glazing or minimum 4 inch x width of glazing rabbet space minus 1/16 inch x height to suit glazing method and pane weight and area.

E. Spacer Shims: Elastomeric material recommended by glass manufacturer, 50 to 60 Shore A durometer hardness, minimum 3-inch long x one half the height of glazing stop x thickness to suit application, self-adhesive on one face.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify openings for glazing are correctly sized and within acceptable tolerance.

C. Verify surfaces of glazing channels or recesses are clean, free of obstructions impeding moisture movement, weeps are clear, and ready to receive glazing.

3.2 PREPARATION

A. Clean contact surfaces with solvent and wipe dry.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant.

3.3 INSTALLATION

A. Perform installation in accordance with GANA Glazing Manual.
1. Glazing Sealants: Comply with ASTM C1193.
2. Do not allow metal-to-glass contact.

B. Interior Dry Method (Tape and Tape) Installation:
1. Cut glazing tape to length and set against permanent stops, projecting 1/16 inch above sight line.
2. Place setting blocks at 1/4 points with edge block no more than 6 inches from corners.
3. Rest glazing on setting blocks and push against tape for full contact at perimeter of pane or unit.
4. Place glazing tape on free perimeter of glazing in same manner described above.
5. Install removable stop without displacement of tape. Exert pressure on tape for full continuous contact.
6. Knife trim protruding tape.

3.4 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove glazing materials from finish surfaces.

C. Remove labels after Work is complete.

D. Clean glass and adjacent surfaces.

3.5 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. After installation, mark pane with an 'X' by using removable plastic tape or paste. Do not mark heat absorbing or reflective glass units.

END OF SECTION

SECTION 08 88 56 – BALLISTIC AND IMPACT-RESISTANT GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes glazed systems for the following products and applications of the following types:
   1. Glazing Types:
      a. Interior Ballistics-Rated Glass: Laminated all-glass sheets.
      b. Exterior Impact-Resistant Glass: Insulated dual-pane all-glass sheets.

   2. Framing Types
      a. For Interior Ballistics-Rated Glass: Ballistic Resistant aluminum storefront framing provided under Section 08 41 13.
      b. For Exterior Impact-Resistant Glass: Impact-resistant aluminum storefront framing provided under Section 08 41 13 and Impact-Resistant aluminum curtain wall framing provided under Section 08 44 13.

B. Related Sections:
   1. Section 08 41 13 - Aluminum Framed Entrances and Storefronts: Both standard and impact-resistant aluminum framing for interior and exterior glazing, including ballistics-resistant interior glazing.
   2. Section 08 44 13 - Glazed Aluminum Curtain Walls: Impact-resistant aluminum curtainwall system for exterior security glazing.
   3. Section 08 80 00 – Typical Interior Glazing.
   4. Section 08 88 56 – Ballistic Rated Transaction Windows: Bullet-resistant polycarbonate protective vision panel system.

1.2 PRECONSTRUCTION TESTING

A. Preconstruction Adhesion and Compatibility Testing: Test each glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.
   1. Testing will not be required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
   2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glazing, tape sealants, gaskets, and glazing channel substrates.
   3. Test no fewer than eight samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
   4. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
   5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

2. GANA - Glazing Manual.
3. GANA - Laminated Glass Design Guide.

E. Underwriters Laboratories:
1. UL 752 Testing for Ballistic Resistance at the ballistic levels.

1.4 SUBMITTALS

A. Product Data: Manufacturer's literature and testing data for each type of product indicated.

B. Ballistic-Resistant Glazing Samples: For each type of glazing unit; (2) nominal 6-inch square panels.

C. Glazed System Schedule and Shop Drawings:
1. Indicate glazing and framing types and sizes in overall plan drawing for each size opening and location. Use same designations indicated on Drawings.
2. Indicate all frame sections, glazing panel thickness, and all head, jamb, sill and intermediate details.

D. Product Certificates: For each type of product indicated, from manufacturer.

E. Preconstruction adhesion and compatibility test reports.

F. Warranties: Sample of manufacturer's warranties.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:
1. Approved in writing by the security glazing manufacturer for the specific Project.
2. A qualified installer who employs glazing installers for this Project who are certified under the National Glass Association Glazier Certification Program.
3. Installation company can provide information completion of at least ten projects of similar size and scope within the past three-years.

B. System Qualifications:
1. Ballistic-rated glazing installed in this Project shall meet all testing requirements of Underwriters Laboratories UL 752 Testing for Ballistic Resistance at the ballistic level(s) specified.
2. Impact-resistant glazing installed in this Project shall meet testing requirements of ASTM F1233 at the impact-resistant level(s) specified.

C. Source Limitations for Security Glazing:
1. Obtain ballistics-rated glazing from single source manufacturer using the same type of lites, plies, interlayers, and spacers for each glazing type indicated.
2. Obtain impact-resistant glazing from single source manufacturer using the same type of lites, plies, interlayers, and spacers for each glazing type indicated.

D. Glazing Publications: Comply with published recommendations of security glazing and glazing material manufacturers and organizations below, unless more stringent requirements are

indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: GANA's "Laminated Glazing Reference Manual" and GANA's "Glazing Manual."

E. Glass Labeling: Permanently mark glazing with certification label of the manufacturer. Label shall indicate manufacturer's name and ballistic-resistant rating.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect security glazing and glazing materials according to manufacturer's written instructions. Prevent damage from condensation, temperature changes, direct exposure to sun, or other causes.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient or substrate temperature conditions are outside limits permitted by glazing material manufacturer and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40-deg. F.

1.9 COORDINATION

A. Coordinate dimensions, including thickness, of security glazing and framing with dimensions of construction that receives security glazing.

1.10 WARRANTY

A. Manufacturer's standard warranty for ballistics-resistant glazing: System manufacturer agrees to replace materials that deteriorate or show defects within specified warranty period. Defects include delamination, interlayer yellowing, or observable loss of light transmission, failure of ballistics-resistance or impact-resistance at specified level(s).

1. Glazing Warranty Period: 5-years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SECURITY GLAZING

A. Manufacturers
1. Ballistic Glass & Armor Solutions, LLC; www.ballisticglassandarmor.com
2. Armortex, Inc., www.armortex.com
3. Insulgard Security Products, www.insulgard.com
4. Oldcastle Building Envelope, www.obe.com
5. Pacific Bulletproof, www.pacificbulletproof.com

6. Substitutions: Section 01 60 00 - Product Requirements.

2.2 DESIGN OF SYSTEMS, GENERAL

A. Glazing Thickness and Layers: Where thickness is indicated, it is a minimum required thickness. Provide glazing in increased thicknesses as needed to comply with requirements indicated.

B. Framing Dimensions: Coordinate with framing contractor to ensure that frames provided have glazing gaps compatible with the proposed glazing thicknesses.
   1. Rabbet depth: 1-1/4”

C. Tempered Glass:
   1. ASTM C1048, Type 1 transparent flat, Quality Q3, Kind FT fully tempered, Condition A uncoated, float glass with horizontal tempering; furnish tempered glass conforming to CPSC 16 CFR 1201 Category II.
   2. Clear Tempered Glass: Class 1 clear.

D. Polycarbonate Sheet: Not applicable.

E. Low-E Coating: ASTM C1376, vacuum deposited, low-E coating applied to No. 2 face of clear glass in insulated panels for exterior glazing.
   1. Basis-of-Design: Guardian SNE50 or approved equivalent as required to meet Energy Code requirements for both clear and colored glass panels.

F. Laminated Units: All-glass laminated with clear polyvinyl butyral interlayer that complies with ASTM C 1349, Appendix X2, and has a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation. Provide laminated units that comply with requirements of ASTM C 1349 for maximum allowable laminating process blemishes and haze.

G. Glazing Sealants
   1. Compatibility: Provide glazing sealants that are compatible with materials they will contact, including glazing channel substrates
   2. VOC Content: For sealants used inside, not more than 250 g/L when calculated according to 40 CFR 59, Subpart D.
   3. Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.

H. Glazing Tapes
   1. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; non-staining and non-migrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and security glazing manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
      a. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
      b. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure

   2. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
      a. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
      b. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

I. Glazing Gaskets: Provided as integral part of aluminum framing system.

J. Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of ballistics-resistant glazing and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

2.3 SYSTEM TYPES

A. Exterior Insulated Impact-Resistant Glass:
1. **TYPE GL-1**: Dual-pane system ASTM E2190 certified by Insulating Glass Certification Council; with aluminum and silicone edge seal; black edge seal color; purge interpane core space with dry hermetic air.
2. Basis of Design: Hurricane-Rated system manufactured by Guardian or approved equivalent by a specified manufacturer.
3. Total Unit Thickness: 1-5/16” minimum, including nominal 1/2" dry air core.
4. Outer Pane: Clear tempered glass 1/4" thickness with specified low-E coating applied to number 2 surface.
5. Inner Pane: Clear laminated glass consisting of 2-plies of 1/4” heat-strengthened glass bonded together with 0.090 SGP clear interlayer. Pane thickness nominal 9/16".

a. Thermal Performance - Nominal Values:
1) U-Value Winter: 0.29.
2) U-Value Summer: 0.27.
3) Solar Heat Gain Coefficient: 0.23.
4) Light to Solar Gain: 2.22.

b. Optical Performance - Nominal Values:
1) Visible Light Transmittance: 51%.
2) Visible Light Reflectance Outside: 12%.

B. Exterior Insulated Impact-Resistant Colored Glass:
1. **TYPE GL-2** : Same construction and hurricane rating as Type **GL-1**, except interlayer of inner pane is 0.090 SGP color as manufactured by *Vanceva*. Colors to be selected by Architect.

C. Exterior Insulated Impact-Resistant Spandrel Glass:
1. **TYPE GL-3**: Same construction and hurricane rating as Type **GL-1**, except Outer Pane is 1/4" spandrel glass; Type 1, Quality Q3 flat fully tempered clear glass with opaque ceramic coating on number 2 surface. Color to be selected by Architect.

D. Interior Bullet-Resistant Glass:
1. **TYPE GL-6**: Non-insulated, clear, all-glass laminate with 0.090 SGP interlayer. Unit is designed to flex and absorb the energy of a bullet.
2. Basis of Design: *BGAS 3-2001-LS* as manufactured by Ballistic Glass & Armor Solutions or approved equivalent all-glass laminated unit by a specified manufacturer.
3. Total Thickness: as required to meet Ballistic Resistance performance requirement.
4. Total Weight: 12.5 - 14.7 lbs. /ft^2.
5. System Performance
a. Ballistic Resistance: **Level 3** per UL 752 for any trajectory or angle to threat side.
b. Designed for conventional installation and glazing methods.

2.4 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of security glazing and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Interior glazing gaskets: preset sponge gasket, closed cell, non-staining EPDM with trim lip and factory molded corners meeting ASTM C509-06 EPDM specifications, Type ll Option 1 and C-864-06. Use no PVC material.

C. Setting Blocks: Thermoplastic polyolefin rubber; “Santoprene” as manufactured by Exxon Mobile Corp. Type A, durometer hardness of 85, plus or minus 5.

D. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

E. Spacers: Elastomeric blocks or continuous extrusions of hardness required by security glazing manufacturer to maintain glazing units in place for installation indicated.

F. Edge Blocks: Elastomeric material of hardness needed to limit security glazing lateral movement (side walking).

2.5 FABRICATION OF SYSTEMS

A. Fabricate security glazing in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing for security glazing, with Installer present, for compliance with the following:
1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Minimum required face and edge clearances.
3. Effective sealing within framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving security glazing immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of security glazing, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Protect edges of security glazing from damage during handling and installation. Remove damaged security glazing from Project site and legally dispose of off Project site. Damaged security glazing includes units with edge or face damage or other imperfections that, when installed, could weaken security glazing, impair performance, or impair appearance.

C. Apply primers to surfaces where required for adhesion of sealants, as determined by preconstruction testing.

D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glazing unit manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

E. Do not exceed edge pressures stipulated by security glazing manufacturers for installing lites.

F. Provide spacers for security glazing lites where the length plus width is larger than 50 inches.
   1. Locate spacers directly opposite each other on both inside and outside faces of security glazing. Install correct size and spacing to preserve required face clearances unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with performance requirements.
   2. Provide 1/8-inch minimum bite of spacers on glazing lites and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

G. Provide edge blocking where indicated or needed to prevent security glazing from moving sideways in glazing channel, as recommended in writing by security glazing manufacturer and according to requirements in referenced glazing publications.

H. Set security glazing in each series with uniform pattern, draw, bow, and similar characteristics.

I. Set coated security glazing with proper orientation so that coatings face exterior or interior as specified.

J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 GASKET GLAZING (DRY):

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket securely in place between glazing unit and frame or fixed stop, with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center security glazing in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center security glazing in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.5 TAPE GLAZING: Not applicable for gasketed frames

3.6 SEALANT GLAZING (WET): Not applicable for gasketed frames.

3.7 PROTECTION AND CLEANING

A. Protect exterior security glazing from damage immediately after installation by attaching crossed streamers to framing held away from glazing unit. Do not apply markers to security glazing surfaces. Remove nonpermanent labels, and clean surfaces.

B. Protect security glazing from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with security glazing, remove substances immediately as recommended in writing by security glazing manufacturer.

C. Examine security glazing surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by security glazing manufacturer.

D. Remove and replace security glazing that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, or vandalism during construction period.

E. Wash security glazing on exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash security glazing as recommended in writing by security glazing manufacturer.

END OF SECTION

SECTION 08 91 00 - LOUVERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Fixed louvers, frames and accessories.

B. Related Sections:
   1. Section 07 90 00 - Joint Protection: Sealant at louver perimeter.
   2. Division 23 Sections – HVAC ducting with direct connections to louvers.

1.2 REFERENCES

A. ASTM International:
   1. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
   2. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

1.3 PERFORMANCE REQUIREMENTS

A. As follows, determined by testing units 48 inches wide by 48 inches high per AMCA Standard 500:
   1. Louver Free Area: Nominal 50% or not less than 7.81 sq. ft.
   2. Static Pressure Loss: Not more than 0.14 inch water gage at an airflow of 810 fpm free area intake velocity.
   3. Water Penetration: Not more than 0.02 oz. per sq. ft. of free area at an airflow of 855 fpm free area velocity when tested for 15 minutes.

B. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, tolerances; head, jamb and sill details; blade configuration, screens, blank-out areas required, and frames.

C. Product Data: Submit data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.

D. Samples: Submit two samples illustrating finish and color of exterior surfaces.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with AMCA Certification for Water Penetration, Air Performance, and Wind Driven Rain, in compliance with AMCA 500-L. Attach AMCA seal to louvers.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with installation of metal siding and masonry flashings.

C. Coordinate Work with installation of mechanical ductwork.

1.8 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish twenty-year manufacturer warranty for louvers.

C. Warranty: Include coverage for degradation of fluoropolymer finish.

PART 2 - PRODUCTS

2.1 LOUVERS

A. Manufacturers:
1. Airline Products Co.
2. Airolite Co. www.airolite.com
3. Airstream Products www.pennvent.com
4. Construction Specialties, Inc. www.c-sgroup.com
5. Reliable Metal Products. www.reliablelouvers.com
6. Ruskin Mfg. www.ruskin.com
7. Substitutions: Section 01 60 00 - Product Requirements.

2.2 MATERIALS

A. Aluminum Sheet: ASTM B209, alloy 3003 or 5005, temper as required to produce required finish.

B. Aluminum Extrusions: ASTM B 221, alloy 6063-T5 or T-52.

C. Flashings: Of same material and finish as louver frame.

D. Sealants: As specified in Section 07 90 00.

2.3 COMPONENTS

A. Wall Louvers - Non-Drainable Style
1. Louver Construction: Aluminum.
2. Louver Depth: 6-inches, unless otherwise indicated.
3. Frame Type: Channel flange.
4. Frame Thickness: 0.081 inch.
5. Louver Blade Thickness: 0.081 inch.
6. Louver Blade Profile: Plain blade with no center baffle.
7. Louver Blade Angle: 37 1/2 degrees.
8. Louver Blade Spacing: 3".

2.4 ACCESSORIES

A. Bird Screen: Interwoven 1/4-inch mesh of 0.063 inch diameter aluminum wire.

B. Fasteners and Anchors: Stainless steel type.

C. Blank-Out Sheeting on Interior of Louver: Same material and finish as louver and frame:
1. Configuration: Single sheet.

2.5 FABRICATION

A. Louver Frame: Mechanically fastened corner joints. Form perimeter of frames with recessed channel to retain backer rod for sealant application.

B. Intermediate Mullions: Concealed, of extruded aluminum, profiled to suit louver frame.
1. Space at 7- inches o.c. or as recommended by manufacturer.

C. Sill Extensions: Provide sill extensions and loose sills made of same material as louvers where required for drainage to exterior.

D. Screens: Install screen mesh in channel-shaped frame; reinforce corner construction.

2.6 FACTORY FINISHING

A. Aluminum - Painted Finish: Manufacturer's 2 coat fluoropolymer finish with minimum 50 percent polyvinylidene fluoride resin.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify prepared openings and flashings are ready to receive Work and opening dimensions are as indicated on shop drawings.

3.2 INSTALLATION

A. Install louvers level and plumb.

B. Align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

C. Secure louvers in opening framing with concealed fasteners.

D. Install bird screen and frame to interior of louver. Attach to frame with stainless steel machine screws.

E. Attach blank-off sheet to back of frame with stainless steel sheet metal screws.

F. Install perimeter sealant and backing rod in accordance with Section 07 90 00.

3.3 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements - Final cleaning.

B. Strip protective finish coverings.

C. Clean surfaces and components.

END OF SECTION

SECTION 09 21 16 - GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Metal stud wall framing.
2. Metal channel ceiling framing.
3. Gypsum board and joint treatment.
4. Rated shaft wall assemblies.
5. Impact-Resistant gypsum board.
6. Glass mat gypsum sheathing board.
7. Acoustic insulation and sealant.

B. Related Sections:
1. Section 05 40 00 - Cold-Formed Metal Framing.
2. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood blocking attached to metal stud framing.
3. Section 08 31 13 - Access Doors and Frames: Metal access panels.

1.2 REFERENCES

A. ASTM International:
1. ASTM C475 - Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board.
2. ASTM C645 - Standard Specification for Nonstructural Steel Framing Members.
3. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.
4. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
5. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board.
6. ASTM C954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness.
7. ASTM C1002 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases.
8. ASTM C1178 - Standard Specification for Glass Mat Water-Resistant Gypsum Backing Panel.
9. ASTM C1280 - Standard Specification for Application of Gypsum Sheathing.
10. ASTM C1396/C1396M - Standard Specification for Gypsum Board.
11. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
12. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
13. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

B. Gypsum Association:
1. GA 214 - Recommended Levels of Gypsum Board Finish.
2. GA 216 - Application and Finishing of Gypsum Board.
3. GA 600 - Fire Resistance Design Manual Sound Control.

C. Intertek Testing Services (Warnock Hersey Listed):
1. WH - Certification Listings.

D. Underwriters Laboratories Inc.:
1. UL - Fire Resistance Directory.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data on metal framing, gypsum board, cementitious backer board, glass mat sheathing, joint materials, acoustic insulation and sealant, and fasteners.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ASTM C840.

B. Fire Rated Wall and Ceiling Construction: Rating as indicated on Drawings, tested in accordance with ASTM E119.
   1. Fire Rated Ceilings and Partitions: Listed assembly by UL, WH, or GA.
   2. Fire Rated Shaft Wall Requirements: Listed assembly by UL, WH, or GA.

C. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

PART 2 - PRODUCTS

2.1 FRAMING MATERIALS

A. Manufacturers:
   1. ClarkDietrich Building Systems, www.clarkdietrich.com.
   2. General Rolling Mills., www.generalrollingmills.com.
   3. Marino\Ware, www.marinoware.com.
   4. Phillips Manufacturing, www.phillipsmfg.com.
   5. Substitutions: Section 01 60 00 - Product Requirements.

B. Studs: ASTM C645, galvanized sheet steel, C shape, 25 gage thick, depth as indicated.
   1. Furnish 20 gage studs at the following locations:
      a. Studs framing doors.
      b. Walls finished with tile.
      c. Walls finished with abuse resistant gypsum board.
      d. Studs supporting wall-mounted accessories and TV brackets.

C. Tracks: ASTM C645, galvanized sheet steel, depth and thickness to match studs.

D. Deep-Leg Deflection Track: ASTM C645, with 2-inch deep flanges, thickness to match studs.

E. Grid Suspension System for Interior Ceilings: ASTM C645, direct-hung system composed of main beams and interlocking cross-furring members.
   1. Manufacturers:
      a. Armstrong World Industries, Inc.; Furring Systems/Drywall.
      b. USG Interiors, Inc.; Drywall Suspension System.

F. Furring, Framing, and Accessories: ASTM C645.

G. Fasteners: ASTM C1002; Type S; length to suit application.

H. Anchorage to Substrate: Tie wire, nails, screws, and other metal supports, of type and size to suit application; to rigidly secure materials in place.

I. Suspension Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.0625 inch diameter wire, or double strand of 0.0475 inch diameter wire.

2.2 GYPSUM BOARD MATERIALS

A. Manufacturers:
1. American Gypsum Co., www.americangypsum.com.
2. Georgia-Pacific Gypsum, www.gp.com
3. National Gypsum Company, www.nationalgypsum.com
4. Temple-Inland Inc., www.templeinland.com
5. USG Corporation www.usg.com

B. General: All specified types shall meet the following requirements unless otherwise noted:
1. Conform to ASTM C1396 section 5 (C 36), Grade X fire- resistant.
2. Ends square cut, tapered long edges wrapped.
3. 5/8” gypsum core faced and edge-wrapped with mold and moisture resistant 100% recycled paper.
4. Surface Burning Characteristics per ASTM E 84:
   a. Flame Spread = 0
   b. Smoke Developed = 0.
5. Intended for interior applications only.

C. Typical Gypsum Board Panels:
1. Basis of Design: FireBloc® Type X as manufactured by American Gypsum or approved equivalent by specified manufacturer.
2. Use throughout the interior of the Project except for specialized uses and locations requiring other panel types as indicated below.

D. Moisture-Resistant Gypsum Board:
1. Basis of Design: AquaBloc® Type X as manufactured by American Gypsum or approved equivalent by specified manufacturer.
2. 5/8” water-resistant gypsum core faced with mold and moisture resistant 100% recycled green-color paper
3. Water Absorption: Less than 5% per ASTM 1396.
4. Use at restrooms, shower rooms, custodial rooms and other areas subject to high moisture. Where board is not surfaced with tile, prepare for finish painting.
   a. Behind wall tile.
   b. Toilet room walls not receiving cementitious backer board.

E. Impact-Resistant Gypsum Board:
1. Basis of Design: M-Bloc® IR Type X Impact-Resistant board as manufactured by American Gypsum or approved equivalent by specified manufacturer.
2. 5/8” abuse, fire, mold and moisture-resistant fiberglass mesh reinforced gypsum core faced with mold and moisture resistant 100% recycled blue-color paper, and brown paper backing. fiberglass mesh fabric embedded into the core adjacent to the back of the panel to provide additional impact and penetration resistance
3. Abrasion-Resistance: Level 3 per ASTM C1629.
4. Indentation-Resistance: Level 1 per ASTM C1629.
5. Water Absorption: Less than 5% per ASTM 1396.
6. Use at locations as indicated in the drawings.

F. Fire Rated Assemblies:

1. Furnish one of the Type X panels specified above that meet the requirements for the specified fire rated assembly as well as the respective use and location requirements for Typical or Moisture-Resistant panels.

2. Furnish Type C gypsum board panels only where specifically indicated or where otherwise required for the indicated fire rated assembly.
   a. Basis of Design: FireBloc® Type C as manufactured by American Gypsum or approved equivalent by specified manufacturer.
   b. 5/8” Type X gypsum core with enhanced fire-resistant properties.

2.3 CEMENTITIOUS BACKER BOARD

A. Manufacturers:
   1. Custom Building Products; Wonderboard Cement Backerboard.
   2. FinPan, Inc.; Util-A-Crete Concrete Backer Board.
   3. National Gypsum Company; PermaBase Cement Board.
   4. USG Company; DUROCK Cement Board.

B. Cementitious Backer Board: ASTM C1325; High density, glass fiber reinforced, 1/2 inch thick; 24 inch wide, coated glass fiber tape for joints and corners.
   1. All shower walls.
   2. Wet walls behind lavatories, toilets, and urinals, and side walls adjacent to these fixtures.

2.4 GLASS MAT GYPSUM SHEATHING BOARD

A. Manufacturers:
   1. GlasRoc; BPB America Inc., www.glasroc.com.
   2. Dens-Glass Gold, Georgia-Pacific Gypsum, www.gp.com.
   3. GreenGlass, Temple-Inland, Inc., www.templeinland.com.
   4. Securock, USG Corporation, www.usg.com.

B. Glass-Mat Gypsum Sheathing Board: ASTM C1177/C1177M, paperless, with glass mat facing on, or embedded into, each side of a water-resistant gypsum core; 48 x 96 inch size, 1/2 inch thick.

C. Fasteners: ASTM C954; steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing board to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B117.

2.5 ACCESSORIES

A. Acoustic Insulation: ASTM C665; preformed glass fiber, friction fit type, unfaced, thickness to match studs.
   1. If required by fire-resistance requirements for fire rated walls, furnish mineral fiber insulation complying with ASTM C665, Type I.

B. Acoustic Sealant: Non-hardening, non-skinning, for use in conjunction with gypsum board.

C. Gypsum Board Accessories: ASTM C1047; galvanized steel, aluminum coated steel, or rolled zinc; corner beads, edge trim, and expansion joints.
   1. Furnish Type LC bead at exposed panel edges.
   2. Furnish rolled zinc material at exterior locations.

D. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.

E. Joint Materials: ASTM C475; reinforcing tape, joint compound, and water.

F. Gypsum Board Screws: ASTM C1002, Type S; length to suit application.
   1. Use screws complying with ASTM C954 for fastening panels to cold formed metal framing specified in Section 05 40 00.
   2. Use screws recommended by manufacturer for fastening cementitious backer board to metal framing.

G. Knee-Wall Bracing

1. 2” x 2” x 1/8” wall steel tube fully-welded to 3-1/2” x 5” deep x 1/4” thick steel base plate with (4) pre-punched mounting holes.
2. Product: *SKB Knee Brace Kit* as manufactured by Softforms, www.kneewall.com, or approved equivalent.
3. Fasteners: 3/8” x 3-1/2” long expansion bolts as recommended by the manufacturer. Use (4) bolts per mounting plate.
4. Height: Fabricate or job-cut height of brace tube to be no lower than 2” below knee-wall height.
5. Spacing: Install braces at 48” maximum within low stud walls and fasten one metal stud on each side of brace using self-tapping screws at nominal 6” centers vertically.

H. End-Wall Trim
1. Where indicated provide prefinished aluminum end-wall trim at walls terminating on window mullions.
2. Type: *Cased Jamb* RN303 with RN425 caps as manufactured by Raco Interior or approved equivalent. Sized for scheduled wall finish thickness.
3. Finish: Anodized to match window system mullions.

I. Preformed Aluminum Reveals – Provide at transition of VWC and painted drywall:
1. Type: 6063 T5 alloy extruded aluminum open reveal *Deco SG* as manufactured by Schluter or approved equivalent by Fry.
2. Size(s): Reveal size 5/8” deep x 1/2” high or as indicated in the drawings.
3. Finish: Clear anodized aluminum.

2.6 GYPSUM BOARD SHAFT WALLS

A. General:
1. Provide gypsum board shaft-wall assemblies capable of withstanding the full air-pressure loads indicated for maximum heights of partitions without failing and while maintaining an airtight and smoke-tight seal. Evidence of failure includes deflections exceeding limits indicated, bending stresses causing studs to break or to distort, and end-reaction shear causing track (runners) to bend or to shear and studs to become crippled.
2. Fire-Resistance-Rated Assemblies: Provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction

B. Intermittent Air-Pressure Loads: 5 lbf/sq. ft. (0.24 kPa).

C. Deflection Limit: L/240.

D. Studs: Manufacturer's standard profile for repetitive members and corner and end members and for fire-resistance-rated assembly indicated.
1. Depth: As indicated.
2. Minimum Base Metal Thickness: Manufacturer's standard thicknesses that comply with structural performance requirements for stud depth indicated.

E. Track (Runner): Manufacturer's standard J-profile track with long-leg length as standard with manufacturer, but at least 2 inches (51 mm), in depth matching studs.
1. Minimum Base Metal Thickness: Manufacturer's standard thicknesses that comply with structural performance requirements for stud depth indicated.

F. Jamb Struts: Manufacturer's standard J-profile strut with long-leg length of 3 inches (76.2 mm), in depth matching studs, and not less than 0.0329 (0.84 mm) thick.

G. STC Rating: As indicated.

H. Cavity Insulation: Sound attenuation blankets.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify site conditions are ready to receive work and opening dimensions are as indicated on drawings.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
   1. Suspend overhead framing from structural members or floor slabs only; do not suspend members from steel roof decks.

B. Coordination with Sprayed Fire-Resistive Materials:
   1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling tracks to surfaces indicated to receive sprayed-on fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
   2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of gypsum board assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.3 INSTALLATION

A. Metal Stud Installation:
   1. Install studs in accordance with ASTM C754.
   2. Metal Stud Spacing: 16 inches on center.
      a. Install studs 12 inches on center behind wall tile and elsewhere where indicated.
   3. Refer to Drawings for indication of partitions extending stud framing through ceiling to structure above. Maintain clearance under structural building members to avoid deflection transfer to studs. Install deflection track at tops of walls to avoid axial loading.
   4. For fire-resistance-rated and STC-rated partitions that extend to the underside of floor/roof slabs and decks or other continuous solid-structure surfaces to obtain ratings, install framing around structural and other members extending below floor/roof slabs and decks as needed to support gypsum board closures and to make partitions continuous from floor to underside of solid structure.
   5. Do not bridge building expansion joints with framing or furring members. Frame both sides of joints independently.
   6. Door Opening Framing: Install double studs at door frame jambs.
   7. Blocking: Install blocking for support of plumbing fixtures, toilet partitions, wall cabinets, toilet accessories, and other wall-mounted items.
   8. Where studs are installed directly against exterior walls, install asphalt-saturated felt isolation strip between studs and wall.

B. Curved Partitions:
   1. Frame curved partitions to comply with GA-226 and with gypsum board manufacturer's applicable written recommendations, unless otherwise indicated.
   2. Cut top and bottom tracks through leg and web at 2 inch intervals for arc length. In cutting lengths of track, allow for uncut straight lengths of not less than 12 inches at ends of arcs.
   3. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
   4. Support outside (cut) leg of track by clinching steel sheet strip, 1-inch high-by-thickness of track metal, to inside of cut legs using metal lock fasteners.

5. Begin and end each arc with a stud, and space intermediate studs equally along arcs at stud spacing recommended in writing by gypsum board manufacturer for radii indicated. On straight lengths of not less than 2 studs at ends of arcs, place studs 6 inches o.c.

C. Suspended Framing Installation:
1. Install suspension system components in sizes and spacings indicated on Drawings, but not less than those required by referenced installation standards for assembly types and other assembly components indicated.
2. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
3. Suspend hangers from building structure as follows:
   a. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
   b. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   c. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
4. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
5. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
6. Do not attach hangers or suspend members from steel roof deck.
7. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
8. Do not connect or suspend steel framing from ducts, pipes, or conduit.
9. Laterally brace entire suspension system.
10. Grid Suspension Systems:
    a. Install grid suspension system in accordance with manufacturer’s instructions
    b. Attach perimeter edge angle where ceiling system meets vertical surfaces
    c. Mechanically join main beam and cross furring members to each other and butt-cut to fit into wall track.

D. Exterior Soffit Framing Installation:
1. Install in accordance with ASTM C754.
2. Coordinate location of hangers with other work.
3. Install soffit framing independent of walls, columns, and above soffit work.
4. Reinforce openings in suspension system which interrupt main carrying channels or furring channels, with lateral channel bracing. Extend bracing minimum 24 inches past each end of openings.
5. Do not attach hangers to steel deck tabs.
6. Do not attach hangers to steel roof deck. Attach hangers to structural members.
7. Do not connect or suspend steel framing from ducts, pipes, or conduit.
8. Brace system to resist lateral loads and wind uplift. Provide cross-bracing and additional framing required to resist wind uplift for design loads of 20 psf inward and outward.

E. Interior Ceiling Framing Installation:
1. Install grid suspension system in accordance with manufacturer’s instructions.
2. Laterally brace entire suspension system to building structure.
3. Install acoustic sealant between tops of partitions and bottom of ceiling board.

F. Gypsum Board Installation:

1. Install gypsum board in accordance with ASTM C840.
2. Erect single layer gypsum board in most economical direction, with ends and edges occurring over firm bearing.
   a. At fire-rated partitions, erect single layer gypsum board vertically, with edges and ends occurring over firm bearing.
3. Double Layer Applications: Place second layer parallel with first layer. Offset joints of second layer from joints of first layer. Stagger joints on opposite sides of partition.
4. Cover both faces of stud framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
5. Erect ceiling board panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in the central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
6. STC-Rated Assemblies: Seal construction at perimeters, behind control and expansion joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and manufacturer's instructions for locating edge trim and closing off sound-flanking paths around or through gypsum board assemblies, including sealing partitions above acoustical ceilings.
7. Place acoustic insulation in partitions tight within spaces, around cut openings, behind and around electrical and mechanical items within or behind partitions, and tight to items passing through partitions.
8. Install acoustic sealant where indicated.
9. Seal penetrations of partitions by conduit, pipe, duct work, rough-in boxes, and.
10. Erect glass mat gypsum sheathing in accordance with ASTM C1280, horizontally, with edges butted and ends occurring over firm bearing.
11. Use screws when fastening gypsum board to metal furring or framing.
12. Place control joints consistent with lines of building spaces as indicated on Drawings. as directed.
13. Place corner beads at external corners as indicated on Drawings. Use longest practical length. Place edge trim where gypsum board abuts dissimilar materials.
14. Install cementitious backer board in the following locations:
    a. Shower walls.
    b. Rear and side walls (wet walls) adjacent to lavatories, toilets, and urinals.
15. Install moisture resistant gypsum board in the following locations:
    a. Behind wall tile.
    b. Toilet room walls not receiving cementitious backer board.
16. Install abuse resistant gypsum board in corridors within 4 feet of floor.
17. Apply gypsum board to curved walls in accordance with GA-216.

G. Joint Treatment:
1. Tape, fill, and sand exposed joints, edges, and corners to produce smooth surface ready to receive finishes.
2. Feather coats on to adjoining surfaces so that camber is maximum 1/32 inch.
3. Finish cementitious backer board in accordance with manufacturer’s instructions.

H. Shaft Wall Assemblies
1. Install gypsum board shaft-wall assemblies to comply with requirements of fire-resistance rated assemblies indicated, manufacturer's written installation instructions, and ASTM C 754 for installing steel framing.
2. Install supplementary framing in gypsum board shaft-wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, and similar items that cannot be supported directly by shaft-wall assembly framing.
3. Where handrails directly attach to gypsum board shaft-wall assemblies, provide galvanized steel reinforcing strip with 0.0312 inch (0.79 mm) minimum thickness of base (uncoated) metal, accurately positioned and secured behind at least 1 face-layer panel.
4. At penetrations in shaft wall, maintain fire-resistance rating of shaft-wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection

behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.

5. Isolate gypsum finish panels from building structure to prevent cracking of finish panels while maintaining continuity of fire-rated construction.
6. Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly. Install acoustical sealant to withstand dislocation by air-pressure differential between shaft and external spaces; maintain an airtight and smoke-tight seal; and comply with manufacturer's written instructions or ASTM C 919, whichever is more stringent.
7. In elevator shafts where gypsum board shaft-wall assemblies cannot be positioned within 2 inches (51 mm) of the shaft face of structural beams, floor edges, and similar projections into shaft, install 1/2 or 5/8 inch (12.7 or 15.9 mm) thick, gypsum board cants covering tops of projections.
    a. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches (610 mm) o.c. with screws fastened to shaft-wall framing.
    b. Where steel framing is required to support gypsum board cants, install framing at 24 inches (610 mm) o.c. and extend studs from the projection to the shaft-wall framing.

I. Marking of Fire Rated and Smoke Stop Partitions: All fire-rated partitions, smoke stop partitions, horizontal exit enclosures, and fire walls must be permanently marked above ceilings as follows: "FIRE AND SMOKE BARRIER - PROTECT ALL OPENINGS". Letters shall be minimum 2 1/2" in height and painted red. Provide one time per structural bay.

3.4 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation of Finished Gypsum Board Surface from Flat Surface: 1/8 inch in 10 feet.

3.5 FIELD QUALITY CONTROL

A. Above-Ceiling Observation: Before Contractor installs gypsum board ceilings, Architect shall conduct an above-ceiling observation and report deficiencies in the Work observed. Do not proceed with installation of gypsum board to ceiling support framing until deficiencies have been corrected.

B. Notify Architect seven days in advance of date and time when Project, or part of Project, is to be ready for above-ceiling observation.

C. Before notifying Architect, complete the following in areas to receive gypsum board ceilings:
1. Installation of 80 percent of lighting fixtures, powered for operation.
2. Installation, insulation, and leak and pressure testing of water piping systems.
3. Installation of air-duct systems.
4. Installation of air devices.
5. Installation of mechanical system control-air tubing.
6. Installation of ceiling support framing.

3.6 SCHEDULES

A. Finishes in accordance with GA-214 Level:

1. **Level 1:** Embed tape at joints in ceiling plenum areas, concealed areas, on portions of walls above ceilings between the ceilings and the tops of walls and where indicated, unless a higher level of finish is required for fire-resistance-rated assemblies and sound-rated assemblies.

2. **Level 2:** Embed tape and apply first coat of joint compound to tape, fasteners, and trim flanges where panels are substrate for tile.

3. **Level 3:** Embed tape and apply separate first and fill coats of joint compound to tape, fasteners, and trim flanges where panels are substrate for medium or heavy textures or heavy-grade wallcoverings. Verify with wallcovering installer that gypsum board finish is acceptable for wallcovering application.

4. **Level 4** (Standard Finish): Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges where panels are substrate for light textures, flat paints, or standard vinyl wallcoverings.

5. **Level 5:** Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges, and apply skim coat of joint compound over entire surface where panels are substrate for gloss or semi-gloss paints.
   a. Provide at drywall panels in high-level natural or artificial lighting areas such as near glazed entries, clerestory windows, or down-lighting mounted on or near walls.
   b. Provide at drywall panels scheduled to receive dry-erase coatings or wall coverings to be used as dry-erase marker surfaces.

END OF SECTION

SECTION 09 30 00 - TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Ceramic wall tile and floor tile.
2. Quarry tile floor and base.
3. Marble thresholds at restroom entries.
4. Control joints in accordance with TCNA standards and recommendations.

B. Related Sections:
1. Section 01 23 00 – Alternates: Terrazzo as alternative floor finish at corridors as indicated.
2. Section 03 30 00 - Cast-In-Place Concrete: Troweling of floor slab for tile application.
3. Section 07 13 00 – Sheet Waterproofing.
4. Section 07 90 00 - Joint Protection.
5. Section 09 21 16 - Gypsum Board Assemblies: Moisture resistant gypsum board and cementitious backer board for wall tile application.

C. International Standard Organization:
1. ISO 13007 – Standards for Ceramic Tiles, Grouts, and Adhesives.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate tile layout, patterns, color arrangement, perimeter conditions, junctions with dissimilar materials, control and expansion joints, and setting details.

C. Product Data: Submit instructions for using grouts and adhesives.

D. Samples:

1. For each type and color of tile specified, submit mounted tile and grout on two plywood panels, at least 12 x 12 inch in size, illustrating pattern, color variations, and grout joint size variations.
2. Submit 2 full-size units of each trim and accessory.
3. Submit stone thresholds in 6 inch lengths.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit recommended cleaning methods, cleaning materials, stain removal methods, and polishes and waxes.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with TCNA Handbook and ANSI A108 Series/A118 Series.

B. Install glass tile in accordance with tile manufacturer's instructions.

C. To ensure warranty requirements and compatibility of products provide all tile grout, setting materials, additives, accessories, and factory-prepared dry-set mortars from the same manufacturer.

D. Manufacturer: Company specializing in manufacturing products specified in this section with minimum ten years' experience.

E. Installer: Company specializing in performing Work of this section with minimum three years' experience, approved by tile manufacturer, and a member of the National Tile Contractors Association of America.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect adhesives and grouts from freezing or overheating.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install adhesives and grouts in unventilated environment.

C. Maintain ambient and substrate temperature of 50 degrees F during installation of mortar materials.

1.9 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish quantity of full-size units equal to 3 percent of amount installed, for each type, composition, color, pattern, and size indicated.

PART 2 - PRODUCTS

2.1 TILE

A. Tile Manufacturers: Refer to specific manufacturers and products indicated in the Drawings

to determine the Project requirements. Subject to compliance with requirements, provide products indicated or equal product by one of the following manufacturers.

1. Acceptance of products other than those indicated is contingent upon submittal of proposed alternate products to the Architect. Submittal of proposed alternate products must occur prior to bidding as described in Division One specification section “Product Substitutions”.

2. Submittals must demonstrate to the Architect that the proposed alternate product line has colors that match the basis-of-design indicated. The Architect may reject the proposed product for technical non-compliance or, at his discretion, on the basis of the color match alone.

B. Manufacturers:
   1. American Marazzi Tile, Inc.
   2. American Olean; Div. of Dal-Tile International Corp.
   3. American Tile Supply.
   4. Concept Surfaces, LLC
   5. Crossville Ceramics Company, L.P.
   6. Daltile; Div. of Dal-Tile International Inc.
   7. Emser Tile, LLC
   8. Monarch Tile, Inc.
   9. Summitville Tiles, Inc.
   10. United States Ceramic Tile Company.
   11. Additional manufacturers as may be listed in the Finish/Color Schedule
   12. Substitutions: Section 01 60 00 - Product Requirements.

2.2 COMPONENTS

A. Ceramic Mosaic Floor Tile: ANSI A137.1, conforming to the following:
   1. Basis of Design: As scheduled.
   2. Moisture Absorption: 0 to 0.5 percent.
   3. Base: 5” high (2-1/2 tiles) matching base, coved and flush with both floor and wall tile.
   4. Surface Finish: Unglazed.
   5. Joint Width: As scheduled.
   6. Use latex-Portland cement grout, sanded or unsanded depending on joint size below.

B. Porcelain Floor Tile: ANSI A137.1, conforming to the following:
   1. Basis of Design: As scheduled, both standard and large format.
   2. Moisture Absorption: 0 to 0.5 percent.
   3. Base: Matching base, coved when available from the manufacturer. Flush with floor and wall tile.
   4. Surface Finish: Unglazed.
   5. Joint Width: As scheduled.
   6. Use latex-Portland cement grout, sanded or unsanded depending on joint size below.

C. Ceramic Wall Tile: ANSI A137.1, conforming to the following:
   1. Basis of Design: As scheduled.
   2. Moisture Absorption: 0 to 0.5 percent.
   3. Surface Finish: Glazed as scheduled.
   4. Joint Width: As scheduled.
   5. Use latex-Portland cement grout, sanded or unsanded depending on joint size below.
   6. Base: As scheduled.

D. Quarry Tile: ANSI A137.1, conforming to the following:
   1. Basis of Design: As scheduled.
   2. Moisture Absorption: 0.5 to 3.0 percent.
   3. Size: Nominal 6” x 6” x 1/2”.
   4. Shape: Square.
   5. Edge: Square.

6. Surface Finish: Unglazed, smooth
7. Joint Width: Uniform, 1/4” maximum.
8. Base:
   a. Size: 6” high x 6” long.
   b. Top Edge: Bullnose.
   c. Toe: Cove flush with floor tile.
9. Use epoxy emulsion grout.

2.3 ACCESSORIES

A. Mortar Materials:
   1. Manufacturers:
      a. Ardex Americas, www.ardexamericas.com
      b. Bonsal, W. R., Company
      c. Bostik www.bostik.com/bostikusa.html
      d. C-Cure Corporation www.c-cure.com
      e. Laticrete International, Inc. www.laticrete.com
      f. Mapei Corporation www.mapei.com
      g. TEC Specialty Products Inc.
      h. Substitutions: Section 01 60 00 - Product Requirements.

   2. Mortar Bed Materials at Recessed Slabs: ANSI A108.1A; Portland cement, sand, latex additive, and water; proportioned in accordance with TCNA specifications.

   3. Mortar Bond Coat Materials:
      a. General: Latex-Portland Cement single-component type polymer-modified thin-set or medium bed mortar.
      b. Basis of Design:

         1) For Small Format Floor or Wall Tile (all dimensions less than 15”): *Ultraflex-2* thin-set as manufactured by Mapei or approved equivalent by specified manufacturer; meets or exceeds requirements of ANSI A118.4E, ANSI A118.11, and ISO C2TE.

         2) For Large Format Floor Tile (any dimension 15” or greater): *Ultraflex-LFT* medium bed as manufactured by Mapei or approved equivalent by specified manufacturer; meets or exceeds requirements of ANSI A118.4, ISO 13007 C2TES1P1, and TE and ANSI A118.11.

         3) For Large Format Wall Tile (any dimension 12” or greater): *Ultralite Pro* non-sag type as manufactured by Mapei or approved equivalent by specified manufacturer; meets or exceeds requirements of ANSI A118.4TE, ANSI A118.4TE, and ISO 13007 C2TE.

B. Grout Materials:
   1. Manufacturers:
      a. Ardex Americas, www.ardexamericas.com
      b. Bonsal, W. R., Company
      c. Bostik www.bostik.com/bostikusa.html
      d. C-Cure Corporation www.c-cure.com
      e. Laticrete International, Inc. www.laticrete.com
      f. Mapei Corporation www.mapei.com
      g. TEC Specialty Products Inc.
      h. Texrite www.texrite.com
      i. Substitutions: Section 01 60 00 - Product Requirements.

   2. Sanded Grout: Calcium Aluminate Cement type that meets or exceeds requirements of ANSI A118.6.
      a. Color: As selected.

b. Basis of Design: *Ultracolor Plus FA* as manufactured by Mapei or approved equivalent by specified manufacturer.
c. Application: For non-epoxy joints 1/16” or greater.
d. Use acid-resistant grout at restrooms, unless indicated as epoxy.

3. Non-Sanded Grout: Latex-Portland cement polymer-modified type that meets or exceeds requirements of ANSI A118.6.
   a. Color: As selected.
   b. Basis of Design: *Keracolor-U* as manufactured by Mapei or approved equivalent by specified manufacturer.
   c. Application: For non-epoxy joints less than 1/16”.
   d. Use acid-resistant grout at restrooms, unless indicated as epoxy.

4. Epoxy Grout: 100% solids, chemical-resistant, industrial-grade modified epoxy grout suitable for use in commercial kitchens; Meets or exceeds requirements of ANSI A118.3.
   a. Color(s) as selected.
   b. Basis of Design: *Kerapoxy-IEG CQ* as manufactured by Mapei or approved equivalent by specified manufacturer.
   c. Application: Use for quarry tile applications and where specifically indicated.

C. Waterproofing Membrane at showers: Not applicable.

D. Reinforcing Mesh: 2 x 2 inch size weave of 16/16 wire size; welded fabric, galvanized.

E. Crack Control Membrane: At substrate cracking and construction/expansion joints in dry areas, provide liquid-applied or sheet membrane meeting or exceeding requirements of ASTM C627. Use with reinforcing fabric:

1. For Covering Shrinkage Cracking and Non-Structural Cracks to less than 1/8” - Use one of the following:
   a. *Mapelastic C1* as manufactured by MAPEI: Liquid-applied.
   b. *Blue 92* as manufactured by Laticrete: Liquid-applied.
   c. *Mapeguard 2 with SM Primer* as manufactured by MAPEI: Sheet
   d. *NobleSeal CIS* as manufactured by Noble Corp: Sheet.
2. For Bridging Construction Joints and Any Cracks 1/8” or greater– Use one of the following membrane sheets meeting or exceeding requirements of ASTM C627-*Extra Heavy*:
   a. *Mapeguard 2 with SM Primer* as manufactured by MAPEI.
   b. *Crack Isolation Mat* as manufactured by Laticrete.
   c. *NobleSeal CIS* as manufactured by Noble Corp.
   d. In addition install sealant-filled control joint at or within 12” of construction joints or any joints exceeding 1/4” in width.

F. Cementitious Backer Board: As specified in Section 09 21 16 for use at shower walls.

G. Marble Thresholds: Provide at each entry door or framed opening to restrooms or restroom vestibules.

1. Material: Carrara white marble, Grade A.
2. Configuration: One-piece material, 2-in. wide x full width of door. ADA compliant with long edges beveled and top surface of threshold 3/8” – 1/2” higher than finish flooring on either side.

3. Finish: Sealed with clear non-yellowing penetrating sealer.

4. Location:
    a. Door: Center threshold on door.
    b. Opening without door: Center on wall opening or frame.

H. Trowelable Underlayments and Patching Compounds: Latex-modified cementitious type, Planiprep SC as manufactured by MAPEI Corporation or approved equivalent by ARDEX Engineered Cements.

I. Finished Metal Accessories: Unless scheduled otherwise, furnish decorative metal edge strips, transition strips, and corners and trim with integral provision for anchorage to mortar bed or substrate at all exposed tile edges.
1. Manufacturers:
    a. Schluter-Rondec, www.schluter.com.
    b. Substitutions: Section 01 60 00 - Product Requirements.

2. Transition Strips – Typical:
    a. Tile to Concrete, VCT, Rubber, or Linoleum: Schluter-RENO-U, aluminum.
    b. Tile to Carpet: Schluter-RENO-TK, aluminum
    c. Top of Wainscot Edge Strip: Schluter-Rondec, extruded clear satin anodized aluminum. Provide manufacturer's factory-formed matching fittings at tee-intersections.

3. Coved Tile-to-Tile Transition Strips – Where Scheduled:
    a. Tile Floor to Tile Wall: Schluter-DILEX-HKS stainless steel cove with flanges. Typically for no-base situations. Reference the Finish Schedule.
    b. Vertical Inside Corner - Tile Wall to Tile Wall: Schluter-DILEX-EHK stainless steel cove with flanges. Reference the Finish Schedule.

4. Vertical Outside Corners
    a. Tile to Tile: Schluter-Rondec or as indicated, extruded clear satin anodized aluminum.
    b. Bullnose Tile: Where specifically indicated provide matching tiles with bullnose edge for corners in lieu of metal edge strips.

J. Steel Reinforcing Mesh: 2 x 2 inch size weave of 16/16 wire size, galvanized welded fabric for mortar beds.

K. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

1. MAPEI *Ultracare Stone, Tile & Grout Care* Solutions or approved equivalent.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify surfaces are ready to receive work.

3.2 PREPARATION

A. Protect surrounding work from damage.

B. Vacuum clean surfaces and damp clean.

C. Mix and install leveling and patching compound in accordance with underlayment manufacturer's printed instructions. Fill low spots and grind high spots to bring floor to level.

D. Install crack control membrane at substrate cracking and construction/expansion joints in accordance with membrane manufacturer's printed recommendations.

E. Prepare surfaces and install in strict accordance with waterproofing membrane manufacturer's printed recommendations

F. Seal substrate surface cracks with filler.

G. Prepare substrate surfaces for adhesive installation.

3.3 INSTALLATION

A. Install tile and grout in accordance with applicable requirements of ANSI A108.1 through A108.10, and TCNA Handbook recommendations.

B. Lay tile to patterns indicated. Do not interrupt tile pattern through openings.

C. Place metal edge strips at exposed tile edges.

D. Cut and fit tile to penetrations through tile, leaving sealant joint space. Form corners and bases neatly.

E. Joints: Place tile with joints uniform in width, subject to variance in tolerance allowed in tile size. Make joints watertight, without voids, cracks, excess mortar, or excess grout. Notify Architect in advance of setting tile whether conditions of tile or substrate will negatively affect appearance or performance of the following specified joint widths:
   1. Ceramic or Porcelain Floor or Wall Tile:
      a. 1" x 1" to 4" x 4" Tile: 1/16-inch.
      b. 6" x 6" to 12" x 12" Tile: 1/8-inch.
      c. Large Format Tile, Rectified: 3/16-inch.
      d. Large Format Tile, Non-Rectified: 1/4 inch – 3/8 inch.
   2. Glass Wall Tile: 1/16 inch.
   3. Quarry Tile: 1/4 inch - 3/8 inch.

F. Control Joints: Locate sealant-filled control joints in accordance with TCNA standards and recommendations and the approved shop drawings. Pay special attention to areas where large temperature variations may occur on the flooring, such as at glazed entry or windowed areas.

G. Form internal angles square and external angles bullnosed.

H. Sound tile after setting. Replace hollow sounding units.

I. Keep control joints free of adhesive or grout. Apply sealant to joints.

J. Allow tile to set for a minimum of 48 hours prior to grouting.

K. Grout tile joints.

L. Apply sealant to junction of tile and dissimilar materials and junction of dissimilar planes.

M. Installation - Floors - Thin-Set or Medium Bed Methods:
   1. Over interior concrete slabs, install with latex-Portland cement grout in accordance with TCNA Handbook Method F113-14 for slabs-on-grade and A113A-14 for slabs-above-ground:
      a. Where waterproofing membrane is indicated, install in accordance with TCNA Handbook Method F122, with latex-Portland cement grout.

N. Installation - Floors - Mortar Bed Methods at Recessed Slabs:
   1. Over interior concrete slabs, install in accordance with TCNA Handbook Method F112, bonded, with latex-Portland cement grout.
      a. Where waterproofing membrane is indicated, install in accordance with TCNA Handbook Method F121, with latex-Portland cement grout.

b. Where quarry tile is indicated, install in accordance with TCNA Handbook Method F112, with epoxy grout.

O. Installation - Wall Tile:
1. Over cementitious backer units install in accordance with TCNA Handbook Method W244, with Portland-cement grout.
2. Over moisture-resistant gypsum wallboard, install in accordance with TCNA Handbook Method W243, with latex-Portland cement grout.
3. Over concrete masonry, install in accordance with TCNA Handbook Method W202, with Portland cement grout.

P. Stone Thresholds: Install where edge of tile flooring is exposed in wet area such as showers.

Q. Metal Edge Strips:
1. Install floor transition strips at all floor tile terminations where stone thresholds are not installed.
2. Install wall edge strips at exposed edges of tile where wall tile terminates away from inside corners.

R. Install waterproofing membranes as specified in Section 07 13 00.

S. When bonding large-format tiles, install in accordance with TCNA and tile manufacturer's recommendations to achieve full coverage of mortar bed under tile surface. Back-butter tiles as necessary to ensure full coverage.

3.4 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean tile and grout surfaces.

3.5 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Do not permit traffic over finished floor surface for 4 days after installation.

C. Keep epoxy grout free of construction drywall dust until fully cured, as determined by the epoxy grout manufacturer.

END OF SECTION

SECTION 09 51 13 – LAY-IN ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Section includes acoustical ceiling panels in suspended grid.
   2. Section includes special perimeter trim at ceiling panel clouds.

B. Related Work:
   1. Section 09 54 23 – Linear Metal Ceilings.

1.2 REFERENCES

A. ASTM International:
   1. ASTM C635 - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.
   2. ASTM C636 - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
   3. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   4. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
   5. ASTM E580 - Standard Practice for Application of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Requiring Seismic Restraint.
   6. ASTM E1264 - Standard Classification for Acoustical Ceiling Products.

B. Ceilings and Interior Systems Construction Association:
   1. CISCA - Acoustical Ceilings: Use and Practice.

C. Underwriters Laboratories Inc.:
   1. UL - Fire Resistance Directory.
   2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
   1. Ceiling suspension system members.
   2. Method of attaching suspension system hangers to building structure.
   3. Ceiling-mounted items including light fixtures; air outlets and inlets; speakers; sprinklers; and special moldings at walls, column penetrations, and other junctures of acoustical ceilings with adjoining construction.
   4. Minimum Drawing Scale: 1/8 inch = 1 foot (1:96).

C. Product Data: Submit data on acoustic units, metal grid system components, and edge trim.

D. Samples:
   1. Submit two samples, 6 x 6 inch in size, of each type of acoustic panel specified.
   2. Submit two samples, 12 inches long, of each type of exposed suspension system specified.

E. Manufacturer's Installation Instructions: Submit special procedures, perimeter conditions requiring special attention.

F. Certification: Provide certification from manufacturer of products that all materials used in food preparation and food serving areas have USDA approval for use in food preparation and food serving areas.

1.4 QUALITY ASSURANCE

A. Conform to CISCA requirements.

B. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Certify all materials used in food preparation and food serving areas have USDA approval for use in food serving and food preparation areas.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section with minimum three years' experience and approved by manufacturer.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Maintain uniform temperature of minimum 60 degrees F, and maximum humidity of 40 percent prior to, during, and after acoustic unit installation.

1.8 SEQUENCING

A. Section 01 10 00 - Summary: Requirements for sequencing.

B. Sequence Work to ensure acoustic ceilings are not installed until building is enclosed, sufficient heat or air conditioning is provided, dust generating activities have terminated, and overhead work is completed, tested, and approved.

C. Install acoustic units after interior wet work is dry.

1.9 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish 2 percent of total acoustic unit area of extra panels to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Ceiling Panels
1. Armstrong World Industries, Inc., www.armstrong.com
2. CertainTeed/Saint Gobain, www.certainteed.com
3. USG Interiors, Inc., www.usg.com
4. Substitutions: Section 01 25 00 – Substitution Procedures.

B. Suspension Grid
1. Armstrong World Industries, Inc., www.armstrong.com
2. BPB America.
3. CertainTeed/Saint Gobain, www.certainteed.com
4. Chicago Metallic Corporation, www.chicagometallic.net

5. USG Interiors, Inc., www.usg.com
6. Substitutions: Section 01 25 00 – Substitution Procedures.

2.2 COMPONENTS

A. **APC-1**: ASTM E1264, Type IV conforming to the following:
1. Basis of Design: *Fine Fissured* as manufactured by Armstrong or approved equivalent by specified manufacturer.
2. Size: 24 x 24 inches.
3. Thickness: 5/8 inches.
4. Composition: Mineral fiber, wet-formed.
5. Light Reflectance Coefficient: 0.85.
6. NRC: 0.55.
7. CAC: 35.
8. Edge: Square.
9. Surface Color: White, typical.
10. Surface Finish: Fine texture, no pattern.
11. Special Treatment: *HumiGuard Plus* and *BioBlock+.*
12. Grid: Factory 15/16” wide white.

B. **APC-2**: ASTM E1264, Type IV, conforming to the following:
1. Basis of Design: *Ultima Health Zone* as manufactured by Armstrong or approved equivalent by specified manufacturer.
2. Size: 24 x 24 inches.
3. Thickness: 3/4 inches.
4. Composition: Mineral fiber, wet-formed.
5. Light Reflectance Coefficient: 0.86.
6. NRC: 0.70
7. CAC: 38.
8. Edge: Square.
9. Surface Color: White.
10. Surface Finish: Smooth-textured, unperforated, washable vinyl-face.
11. Special Treatment: *HumiGuard Plus* and *BioBlock+.*
12. Grid: Factory 15/16” wide factory white aluminum cap on steel.

C. **APC-3**: Acoustic Panels conforming to ASTM E1264, conforming to the following:
1. Basis of Design: *Fine Fissured* as manufactured by Armstrong or approved equivalent by specified manufacturer.
2. Size: 24 x 24 inches.
3. Thickness: 5/8 inches.
4. Composition: Mineral.
5. NRC: 0.55.
6. CAC: 33.
7. Edge: Square.
8. Surface Color: Tech Black.
9. Special Treatment: *HumiGuard Plus* and *BioBlock+.*
10. Grid: Factory 15/16” wide black.

D. **APC-4**: Acoustic Panels conforming to ASTM E1264, conforming to the following:
1. Basis of Design: *Fine Fissured High NRC* as manufactured by Armstrong or approved equivalent by specified manufacturer.
2. Size: 24 x 24 inches.
3. Thickness: 7/8 inches.
4. Composition: Mineral fiber, wet formed.
5. Light Reflectiance Coefficient: 0.85
6. NRC: 0.75.
7. CAC: 35.
8. Edge: Square.
9. Surface Color: White, typical.

10. Surface Finish: Fine texture, no pattern.
11. Special Treatment: *HumiGuard Plus* and *BioBlock+.*
12. Grid: Factory 15/16” wide factory white aluminum cap on steel.

E. Grid:
1. Non-fire Rated Grid: ASTM C635, intermediate duty; exposed T; components die cut and interlocking.
2. Grid Materials: Commercial quality cold rolled steel with galvanized coating.
   a. Basis of design, *Prelude XL* as manufactured by Armstrong or approved equivalent by specified manufacturer.
   b. Grid Finish:
      1) Ceiling Panels **APC-1, APC-4**: Factory painted white.
      2) Ceiling Panels **APC-2**: Factory white painted aluminum cap over galvanized steel grid. Provide at all wet areas such as restrooms, custodial, or foodservice in all buildings.
      3) Ceiling Panels **APC-3**: Factory painted black.
3. Accessories: Stabilizer bars, clips, splices, perimeter moldings, hold down clips, and other items required for suspended grid system.
   a. For circular penetrations of ceiling, provide perimeter moldings fabricated to diameter required to fit penetration exactly.
4. Support Channels and Hangers: Galvanized steel; size and type to suit application and ceiling system flatness requirement specified.
   a. Post-installed Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.
   b. Zinc-Coated Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper. Select wire diameter so its stress at three times hanger design load will be less than yield stress of wire but provide not less than 0.106 inch diameter wire.

F. Special Perimeter Trim:
1. Extruded aluminum perimeter trim for framing ceiling clouds; square profile, white painted finish to match grid. Sizes as indicated in the drawings.
2. Basis of Design*: Axiom Classic Trim* as manufactured by Armstrong or approved equivalent by specified grid manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify layout of hangers will not interfere with other work.

3.2 EXISTING WORK

A. Extend existing acoustical ceiling installations using materials and methods as specified.

B. Clean and repair existing acoustical ceilings which remain or are to be reinstalled.

3.3 INSTALLATION

A. Lay-In Grid Suspension System:
1. Install suspension system in accordance with ASTM C635, ASTM C636 and as supplemented in this section.
2. Install system capable of supporting imposed loads to deflection of 1/360 maximum.

3. Lay out system to balanced grid design with edge units no less than 50 percent of acoustic unit size.
4. Install after major above ceiling work is complete. Coordinate location of hangers with other work.
5. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.
6. Do not attach hangers to steel roof deck. Attach hangers to structural members.
7. Space hangers not more than 48 inches o.c. along each member supported directly from hangers, and provide hangers not more than 8 inches from ends of each member.
8. Where ducts or other equipment prevent regular spacing of hangers, reinforce nearest affected hangers and related carrying channels to span extra distance.
9. Do not support components on main runners or cross runners when weight causes total dead load to exceed deflection capability. Support fixture loads by supplementary hangers located within 6 inches of each corner; or support components independently.
10. Do not eccentrically load system, or produce rotation of runners.
11. Perimeter Molding:
    a. Install edge molding at intersection of ceiling and vertical surfaces.
    b. Use longest practical lengths.
    c. Overlap corners.
    d. Do not use exposed fasteners, including pop rivets, on moldings and trim.
    e. Install at junctions with other interruptions.

B. Acoustic Units:
1. Fit acoustic units in place, free from damaged edges or other defects detrimental to appearance and function.
2. Fit border trim neatly against abutting surfaces.
3. Install units after above-ceiling work is complete.
4. Install acoustic units level, in uniform plane, and free from twist, warp, and dents.
5. Cut to fit irregular grid and perimeter edge trim.
6. Where round obstructions occur, install preformed closures to match perimeter molding.
7. Install hold-down clips to retain panels tight to grid system within 20 ft of exterior door.

3.4 ERECTION TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet.

B. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

END OF SECTION

SECTION 09 54 23 – LINEAR METAL CEILING SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes:
   1. Suspended decorative interior linear metal ceilings with factory perforations.

B. Related Sections include the following:
   1. Section 09 51 13 – Lay-In Acoustical Panel Ceilings: For interior ceilings consisting of mineral-base and glass-fiber-base acoustical panels and exposed suspension grid systems.
   2. Division 21 Sections for fire protection systems.
   3. Division 23 Sections for grilles, registers, and diffusers.
   4. Division 26 Sections for light fixtures.

1.2 REFERENCES

A. ASTM International:
   1. ASTM C635 - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.
   2. ASTM C636 - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
   3. ASTM E580 - Standard Practice for Application of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Requiring Seismic Restraint.

B. Ceilings and Interior Systems Construction Association:
   1. CISCA - Acoustical Ceilings: Use and Practice.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
   1. Ceiling pattern.
   2. Ceiling suspension members.
   3. Indicate all required end joints in panel lengths.
   4. Ceiling-mounted or above-ceiling items including lighting fixtures, air outlets and inlets; speakers; sprinklers; access panels, column penetrations, and any other junctures, penetrations, or interfaces with specialty metal ceilings.
   5. Submit details indicating special conditions.

C. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

D. Physical Samples: Submit (2) 12” lengths of factory-finished sections, (2) 12” lengths of factory-finished support grid, and (2) 12” lengths of matching ceiling-penetration trim.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed specialty metal ceilings similar in material, design, and extent to those indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Source Limitations for Specialty Metal Ceilings: Obtain specialty metal ceilings from one source with resources to provide products of consistent quality in appearance and physical properties.

C. Fire-Test-Response Characteristics: Provide specialty metal ceiling components with the following surface-burning characteristics as determined by testing identical assemblies per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify ceiling units with appropriate markings of applicable testing and inspecting agency.
   1. Flame Spread: 25 or less.
   2. Smoke Developed: 50 or less.

D. Mockups: Prior to installing specialty metal ceilings, construct mockups for each form of construction and finish required to verify selections made under Sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Mockups shall be built by the Subcontractor responsible for the Project Work. Build mockups to comply with the following requirements, using all conditions and materials indicated for the completed Work:
   1. Build mockups on-site in the location and of the size indicated or, if not indicated, as directed by Architect.
   2. Erect mockups 10’ by 10’ (3 m by 3 m) using materials indicated for final Work.
   3. Notify Architect 7 days in advance of dates and times when mockups will be constructed.
   4. Demonstrate the proposed range of aesthetic effects and workmanship.
   5. Obtain Architect's approval of mockups before beginning final installation of specialty metal ceilings.
   6. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work. Approved mockups may be incorporated into the final installation.

E. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Division 1 Section "Project Meetings."

1.5 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. All materials shall be delivered to the Project site in the original, labeled, unopened packages.

B. Materials shall be stored off of the floor level, flat and level, in a fully enclosed space.

C. Exercise care in handling to avoid damage.

1.7 PROJECT CONDITIONS

A. Do not install specialty metal ceilings until spaces are enclosed and weatherproof, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.8 COORDINATION

A. Coordinate layout and installation of specialty metal panels and suspension system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

1.9 WARRANTY

A. Installed suspension system and ceiling panels shall be warranted by Contractor to be free from rusting, sagging, warping, shrinking, buckling, or delaminating for a minimum of one year from date of Substantial Completion of the Project.

B. For sag-resistant panels, provide ceiling panel manufacturer's written warranty against sagging, warping, shrinking, buckling or delaminating as a result of manufacturing defects for a period of ten years from date of Substantial Completion of the Project.

C. Provide suspension manufacturer's written warranty against material defects for a period of fifteen years from date of Substantial Completion.

1. Where suspension manufacturer and non-sag ceiling panel manufacturer are the same, provide combination warranty including protection from sagging, warping, shrinking, buckling or delaminating of ceiling panels as a result of manufacturing defects.

D. Provide suspension manufacturer's written warranty against the occurrence of 50% red rust on grid face for a period of thirty years from date of Substantial Completion.

1.10 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents.

1. Specialty Metal Ceiling Units: Full-length units equal to 2.0 percent of quantity installed.
2. Suspension System Components: Quantity of each exposed component equal to 2.0 percent of quantity installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Armstrong World Industries, Inc, www.armstrongceilings.com
B. Hunter-Douglass Architectural Products, Inc., www.hunterdouglas.com
C. Reference Section 01 25 13-Product Substitutions.

2.2 SYSTEM AND COMPONENTS:

A. Type **APC-5** as indicated on the drawings**:** Interior Perforated Metal Panels: ASTM E 84, with flame spread less than 25 and smokedeveloped 50 or less. Class A per ASTM E1264. For all interior locations.

B. Basis of Design: *MetalWorks Linear Ceiling System* as manufactured by Armstrong, or approved equivalent by specified manufacturer.
1. Panel Width: Nominal 6" including 1" reveal.
2. Material: Factory-finished electro-galvanized formed steel sheet.
3. Finish: Factory powder coat finish. Color/pattern selected from manufacturer's standard line of faux wood finishes as indicated in Finish Schedule.
   a. Edges: *Tegular Vector Linear* long edges: Square with extended flange covered with manufacturer's black color filler strip, item #5494 creating auniform nominal 1-inch reveal.
4. Splicing System: Manufacturer's 6" long back-mounted panel splice provding hairline joint between panel ends.
   a. Provide cross joints only where length of installed panels exceeds manufacturer's available panel lengths.
   b. Stagger cross joints uniformly a minimum of 12" between adjacent panels.
5. Options Provided:

a. Perforations: Manufacturer's *M1Microperforated* face.
b. Acoustical: Manufacturer's black poly-encapsulated fiberglass infill to provide an NRC of nominal 0.70.

C. Suspension System:
1. Non-fire Rated Grid: ASTM C635, 15/16" face, galvanized, intermediate duty; modified as indicated below; components die cut and interlocking.
a. Commercial quality cold rolled steel with galvanized coating.
b. Wire-suspended main beam carriers with 4 ft. drywall grid cross tee stabilizers.
c. Manufacturer's linear "J" clip system attached to face of main beam carriers for suspending turned long edges of panels: *Metalworks Linear Carrier*.
2. Screw-fastener or powder-actuated fastening system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for system with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.
3. Zinc-Coated Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper. Select wire diameter so its stress at three times hanger design load will be less than yield stress of wire but provide not less than 0.106 inch diameter wire.

2.5 FINISHES, GENERAL

A. Protect the specified finish on exposed surfaces by applying strippable temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine overhead construction prior to beginning installation of specialty metal ceilings to ensure that all overhead work including finish painting of deck, structure, ducting, conduits, piping, etc. is completed.

B. Proceed with installation only after unsatisfactory conditions have been corrected. Beginning of specialty ceiling installation indicates acceptance of overhead work.

C. Verify layout of hangers will not interfere with other work.

3.3 INSTALLATION

A. General: Install specialty metal ceilings in accordance with manufacturer's recommendations and requirements and to comply with the following:
1. Standard for Ceiling Suspension System Installations: Comply with ASTM C 636.
2. CISCA Recommendations for Acoustical Ceilings: Comply with CISCA's "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings--Seismic Zones 0-2."
3. Space main tees and cross tees no more than 48" o.c.

B. Install system capable of supporting imposed loads to deflection of 1/360 maximum.

C. Suspend ceiling hangers from building's structural members and as follows:
   1. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.
   2. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or ceiling suspension system.
   3. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   4. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with the location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
   5. Secure hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for structure to which hangers are attached and for type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
   6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, powder-actuated fasteners, or drilled-in anchors that extend through forms into concrete.
   7. Do not attach hangers to steel deck tabs.
   8. Do not attach hangers to steel roof deck. Attach hangers to structural members.
   9. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers, unless otherwise indicated.

D. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs.
   1. Fasten bracing wires into concrete with cast-in-place or post-installed anchors.
   2. Bracing wires shall be located as to not be visible from below ceiling.

E. Install suspension system carriers so they are aligned and securely interlocked with one another. Remove and replace dented, deformed, or kinked members

F. Neatly cut finished units for accurate fit at interruptions and penetrations through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.

G. Install finished units in coordination with suspension system and exposed moldings and trim.
   1. Where finished length exceeds manufacturer’s standard lengths, fit adjoining units to form flush, tight joints.
   2. Install panels with butt joints using internal panel splices and in aligned configuration.
   3. Install directionally textured panels in directions indicated.
   4. Install matching end caps at open ends of finished units.
   5. Do not use exposed fasteners, including pop rivets, on moldings and trim.

3.4 CLEANING

A. Clean exposed surfaces of specialty metal ceilings, including visible support framing. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and deformed units.

END OF SECTION

SECTION 09 64 13 – FINSH WOOD STAGE STEPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes site finished wood stage steps, including treads and risers:
   1. Installation of vapor retarder, sleepers and subflooring for Red Oak flooring at stage/platform.
   2. Sanding and finishing of Red Oak stage trim, base, treads, and risers to match stage/platform flooring.

B. Related Sections:
   1. Section 06 20 24 - Interior Finish Carpentry and Millwork: Subflooring construction for finish treads and risers..
   2. Division 09 65 00 – Resilient Flooring: Vinyl tile and rubber base at stage behind curtain line.

1.2 REFERENCES

A. APA-The Engineered Wood Association:
   1. APA/EWA PS 1 - Voluntary Product Standard for Construction and Industrial Plywood.

B. ASTM International:
   1. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.
   2. ASTM F2170 testing. Standard Test Methods for Determining Relative Humidity in Concrete Floor Slabs Using In-Situ Probes.

C. National Oak Flooring Manufacturers Association:
   1. NOFMA 24 - Installing Hardwood Flooring - Strip, Plank & Parquet.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate installation details, including location and layout of each accessory.

C. Product Data: Submit data for each flooring and floor finish material.

D. Samples: Submit 24” x 24” samples panel of wood flooring, illustrating full range of color and texture variations.

E. Manufacturer's Installation Instructions: Submit standard and special installation procedures, and perimeter conditions requiring special attention. Include manufacturer's recommendations for accessory products.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, suggested schedule for cleaning, stripping, and re-finishing, stain removal methods, and polishes and waxes.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with NOFMA 24 - National Oak Flooring Manufacturers Association.

B. Products: Stamp MFMA mill number and grade on underside of each piece of wood flooring at factory.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section with minimum three years' experience and approved by manufacturer.

1.7 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install wood flooring materials until wet construction work is complete and ambient air at installation space has moisture content stabilized between 35 and 50 percent and temperature is stabilized between 65 and 80 degrees F.

C. Do not install wood flooring materials until wood materials have been acclimated to ambient temperature and humidity conditions for minimum of 72 hours. Stack wood for acclimation procedures to facilitate cross-ventilation of wood materials.

D. Provide heat, light, and ventilation prior to installation.

E. Maintain room temperature and humidity for period of two days prior to delivery of materials to installation space, during installation, and continuously after installation.

PART 2 - PRODUCTS

2.1 COMPONENTS

A. Wood Trim: Red Oak.
1. Grade: No. 1 Common.
2. Cut: Plain sawn.
3. Moisture Content: 12 to 14 percent.
4. Size: 25/32" x 2-1/4".
5. Profile: Tongue and groove edges, end-matched.
6. Lengths: Provide standard random-length strips complying with applicable grading rules, minimum 24".

B. Flooring Nails or Machine Staples: Type as recommended by the manufacturer and NOFMA; cement coated.

C. Sleepers and Shims: Softwood lumber, pressure treated for moisture protection, 2 x 4 inch size. Provide only Kiln Dried After Treatment (KDAT) material.
1. Provided under Finish Carpentry Section.

D. Subflooring: APA plywood, 3/4-inch thicknesses, with tongue and groove long edges.
1. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.
2. Provided under Finish Carpentry Section.

E. Vapor Retarder: ASTM D 4397, clear polyethylene sheet not less than 6.0 mils thick. Provide where recommended by Oak flooring manufacturer.

2.2 ACCESSORIES

A. Wood Filler: Formulated to fill and repair seams, defects, and open-grain hardwood floors;

compatible with finish system components and recommended by filler and finish manufacturers for use indicated. If required to match approved samples, provide pigmented filler.

B. Floor Finish: Oil modified polyurethane, to achieve semi-gloss finish; type recommended by finish manufacturer for the specific application. Minimum 3-coats.

C. Floor Stain: Penetrating type recommended by flooring manufacturer.

D. Sealer: Pliable, penetrating type.

E. Wood Trim: In same species and grade as wood flooring, unless otherwise indicated.
   1. Oak Shoe Molding: 1/2 by 3/4 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify concrete subfloor surface is smooth and flat to plus or minus 1/4 inch in 10 feet.

C. Verify that moisture content of the concrete slab does not exceed 85% RH per ASTM F 2170 testing.
   1. Perform deep-probe moisture meter testing per ASTM-F2170 for each area receiving the specified floor finish.
   2. Perform number of tests recommended by the flooring system manufacturer per each floor area, but no less than one test per each 1000 sq. ft.
   3. Provide written test results to the Architect, along with flooring manufacturer’s recommended maximum moisture values.

D. Verify required floor mounted utilities are in proper location.

E. Verify wood flooring has been acclimated to ambient temperatures, and acclimation and ambient temperatures are in accordance with flooring manufacturer’s instructions.

3.2 PREPARATION

A. Sleepers and Shims (provided under Finish Carpentry):
   1. Place vapor retarder over concrete subfloor, lapping edges and ends minimum 6 inches and tape seal.
   2. Place sleepers over vapor retarder; space sleepers at 12 inches oc.
   3. Shim underside of sleepers with layers of heavy sound deadening felt to achieve level line of plus or minus 1/4 inch in 10 feet.
   4. Anchor sleepers to concrete slab with powder actuated fasteners at 16-inch centers or closer.

B. Subflooring (provided under Finish Carpentry):
   1. Place plywood subflooring over sleepers.
   2. Install acoustic insulation blankets snug between wood sleepers.
   3. Lay one layer 3/4-inch thick plywood with long edge perpendicular to sleepers and end joints nominally centered on sleepers. Stagger end joints of adjacent panels minimum 24”.
   4. Screw-fasten with 2” flat head wood screws at 12-inch centers or closer along each sleeper.

C. Broom clean substrate.

3.3 INSTALLATION

A. Strip Flooring:
   1. Install in accordance with flooring manufacturer's instructions, and in accordance with NOFMA's "Installing Hardwood Flooring," as applicable to flooring type and location.

2. Blind-fasten to wood sub-floor.
3. Lay flooring parallel to width of stage. Verify alignment as work progresses.
4. Arrange flooring with end matched grain set flush and tight.
5. Install continuous matching bullnose Oak trim at tread nosings as indicated in the drawings.
6. Install matching Oak shoe molding at unprotected or exposed edges, and where treads and risers terminate at walls. Provide 3/4-inch expansion space at fixed walls and other interruptions and cover with Oak shoe molding.

B. Finishing Wood Treads and Risers:
1. Provide final finishing of all wood flooring and related items including base, shoe mold, treads and risers.
2. Fill open-grained hardwood. Fill and repair any open joints or other defects to Architect's satisfaction or remove and replace wood flooring in the affected area.
3. Mask off adjacent surfaces before beginning sanding.
4. Sand flooring, treads and risers to smooth even finish with no evidence of sander marks. Take precautions to contain dust. Remove dust by vacuum.
5. Apply filler and stain and three finish coats.
6. Apply first coat, allow to dry, then buff lightly with steel wool to remove irregularities. Vacuum clean and wipe with tack cloth before applying succeeding coat.
7. Each successive coat: Lightly buff between fully cured coats with steel wool, vacuum clean and wipe with tack cloth before applying succeeding coat.

3.4 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Prohibit traffic on floor finish for minimum 48 hours after installation.

C. Maintain finish manufacturer's recommended temperature and humidity levels until finish is fully cured.

D. After drying of final finish, protect installed flooring with sheets of hardboard on kraft paper or double layer of sound-deadening felt with edges lapped and taped.

3.5 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean finished strip floor surfaces in accordance with manufacturer's instructions.

END OF SECTION

SECTION 09 65 00 - RESILIENT FLOORING AND BASE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
1. Solid Vinyl Tile flooring.
2. Final cleaning of all installed SVT.
3. Rubber base: Provide and install standard coved rubber base where scheduled throughout the project, regardless of floor finish.
4. Rubber stairs accessories

B. Related Sections
1. Section 03 30 00 – Cast-In-Place Concrete: Subfloor conditions.
2. Section 04 20 00 – Unit Masonry Assemblies: Wall conditions.
3. Section 09 21 16 – Gypsum Board Assemblies: Wall conditions.

1.2 REFERENCES

A. ASTM International:
1. ASTM F1066 - Standard Specification for Vinyl Composition Floor Tile.
2. ASTM F1861 - Standard Specification for Resilient Wall Base.
3. ASTM F2169 - Standard Specification for Resilient Stair Treads.
4. ASTM F2170-11 – Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

B. International Organization for Standardization
1. ISO 10581 – International Standard for Resilient floor coverings, 2019

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

C. Samples:
1. Submit manufacturer's complete set of color samples for initial selection.
2. Submit two full size samples of each tile and base item specified.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning, stripping, and re-waxing.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.6 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Store tiles on flat surfaces.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Maintain temperature in storage area between 55 degrees F and 90 degrees F.

C. Store materials for not less than 48 hours prior to installation in area of installation at temperature of 70 degrees F to achieve temperature stability. Thereafter, maintain conditions above 55 degrees F.

1.9 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish 1 box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

C. Furnish 10 linear feet for each 500 linear feet or fraction thereof, of each type and color of base installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Armstrong Commercial Flooring www.armstrong.com

B. Azrock www.azrock.com

C. Mannington Commercial www.mannington.com

D. Tarkett, www.tarkett.com

E. Substitutions: Section 01 60 00 - Product Requirements.

2.2 PRODUCTS

A. **SVT-1,2,7** : Solid Vinyl Tile – ISO 10581.
   1. Basis of Design: *iQ Eminent* as manufactured by Tarkett or approved equivalent by specified manufacturer.
   2. Size: As scheduled.
   3. Thickness: 0.078 inch.
   4. Pattern/color: As scheduled.
   5. Bio-Based Tile Composition: Homogeneous vinyl. Color/pattern through the entire thickness.
      a. No surface wear layer.
   6. Low VOC emissions.
   7. Slip-Resistance: ADA compliant.
   8. Manufacturer’s Warranty: 15-years.

B. **SVT-3,4,5,6** : Solid Vinyl Tile - ISO 10581.
   1. Basis of Design: *iQ Optima* as manufactured by Tarkett or approved equivalent by specified manufacturer.
   2. Size: As scheduled.
   3. Thickness: 0.078 inch.
   4. Pattern/color: As scheduled.

5. Bio-Based Tile Composition: Homogeneous vinyl. Color/pattern through the entire thickness.
   a. No surface wear layer.
6. Low VOC emissions.
7. Slip-Resistance: ADA compliant.
8. Manufacturer's Warranty: 15-years.

2.3 RESILIENT BASE

A. Manufacturers:
1. Rubber Cove Base, Armstrong www.armstrong.com
2. Rubbermyte, Burke Flooring www.burkeflooring.com
3. Base 2000 Wall Base, Flexco www.flexcofloors.com
4. Rubber Cove Base, Johnsonite www.johnsonite.com
5. 700 Series Base, Roppe Corporation www.roppe.com
6. Series 700 Cove Base, VPI www.vpicorp.com
7. Substitutions: Section 01 60 00 - Product Requirements.

B. Rubber Base: ASTM F1861, rubber, Type TP:
1. Height: 4 inch.
2. Thickness: 1/8 inch.
3. Finish: Smooth.
4. Length: Continuous rolls.
5. Style: Coved with top-set toe.

2.4 RESILIENT STAIR ACCESSORIES

A. Manufacturers:
1. Armstrong, www.armstrong.com
2. Burke Flooring, www.burkeflooring.com
3. Flexco, www.flexcofloors.com
4. Johnsonite, www.johnsonite.com
5. Roppe Corporation, www.roppe.com
6. VPI Flooring, www.vpicorp.com
7. Substitutions: Section 01 60 00 - Product Requirements.

2.5 ACCESSORIES

A. Subfloor Filler: Self-leveling or trowel-applied latex-modified cementitious type, ARDEX **SD-F** "**Feather Finish"** as manufactured by Ardex Engineered Cements.

B. Primers: Waterproof; types recommended by flooring manufacturer.

C. Adhesives:

1. Rubber Base: Latex type as recommended by base manufacturer for the particular substrate.

2. Flooring: Selected flooring manufacturer's premium adhesive with enhanced grip and slip resistance, capable of accepting full traffic load within 48 hours of installation.

   a. Basis of Design: Armstrong S-750 Premium Floor Tile Adhesive or approved equivalent by specified manufacturer.

D. Moldings and Edge Strips: Extruded aluminum, of height necessary to protect edges of tiles.
1. VCT, LVT, or VET to Carpet: Schluter-RENO-U, aluminum.

E. Sealer and Wax:
1. National Chemical Laboratories "24-7".
2. Apply minimum 3-coats of wax and buff to high sheen between coats and after final.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify that moisture content of the concrete slab does not exceed maximum moisture content as recommended by manufacturer, and exhibit negative alkalinity, carbonization, and dusting. In no case shall moisture content exceed 85% RH per ASTM F 2170 testing.
   1. Perform deep-probe moisture meter testing per ASTM-F2170 for each area receiving the specified floor finish.
   2. Perform number of tests recommended by the flooring system manufacturer per each floor area, but no less than one test per each 1000 sq. ft.
   3. Provide written test results to the Architect, along with flooring manufacturer's recommended maximum moisture values.

C. Verify floor and lower wall surfaces are free of substances capable of impairing adhesion of new adhesive and finish materials.

D. Starting installation of flooring indicates installer's acceptance of flooring substrate conditions.

3.2 PREPARATION

A. Remove sub-floor ridges and bumps. Fill minor low spots, cracks, joints, holes, and other defects with sub-floor filler to achieve smooth, flat, hard surface.

B. Prohibit traffic until filler is cured.

C. Clean substrate.

D. Apply primer as required to prevent "bleed-thru" or interference with adhesion by substances that cannot be removed.

3.3 INSTALLATION - TILE FLOORING

A. Mix tile from container to ensure shade variations are consistent when tile is placed.

B. Lay flooring with joints and seams butted tight and parallel to building lines to produce symmetrical tile pattern.

C. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints.

D. Where floor finishes are different on opposite sides of door, terminate flooring under centerline of door.

E. Install edge strips at unprotected or exposed edges, where flooring terminates, and where flooring materials change.

F. Install flooring in recessed floor access covers. Maintain floor pattern.

G. At movable partitions, install flooring under partitions without interrupting floor pattern.

3.4 INSTALLATION - BASE

A. Fit joints tightly and make vertical. Maintain minimum dimension of 18 inches between joints.

B. Miter internal corners. At external corners, use premolded units or 'V' cut back of base strip to 2/3 of its thickness and fold. At exposed ends, use premolded units.

C. Install base on solid backing. Bond tightly to wall and floor surfaces.

D. Scribe and fit to door frames and other interruptions.

3.5 CLEANING AND WAXING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess adhesive from floor, base, and wall surfaces without damage.

C. Clean and maintain all resilient flooring products.

3.6 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Prohibit traffic on resilient flooring for 48 hours after installation.

C. Do not slide furnishings, equipment, or other objects directly over floor surfaces. Place plywood or hardboard panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels. Remove and replace damaged tiles.

END OF SECTION

SECTION 09 65 66 - RESILIENT ATHLETIC FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: Resilient exercise sheet flooring, adhesively applied with heat-welded seams. Installed over existing slab with new concrete infill.

B. Related Sections:
1. Section 09 65 00 – Resilient Flooring and Base: 4” rubber coved base.

1.2 REFERENCES

A. ASTM International:
1. ASTM-F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

C. Samples:
1. Submit manufacturer's complete set of color samples for initial selection.
2. Submit two 12’ x 12” samples of each color/pattern specified.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Installer: Company specializing in performing Work of this section with minimum three years’ experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Unroll sheet material and allow to relax in environmentally controlled room for 24 hours prior to installation.

C. Section 01 60 00 - Product Requirements.

D. Maintain temperature in storage area between 55 degrees F and 90 degrees F.

E. Store materials for not less than 48 hours prior to installation in area of installation at temperature of 70 degrees F to achieve temperature stability. Thereafter, maintain conditions above 55 degrees F.

1.7 WARRANTY

A. Provide manufacturer’s written material warranty against material defects and failures due to surface wear-through and moisture vapor intolerance.
1. Warranty Period: Minimum 15-years after Project Substantial Completion.

B. Provide installer's written warranty against defects in installation and workmanship.
   1. Warranty Period: Minimum 2-years after Project Substantial Completion.

1.8 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish additional 5% of packaged material for Owner's future use for each type, color, and pattern of flooring installed.

PART 2 - PRODUCTS

2.1 RUBBER FLOORING

A. Manufacturers:
   1. Tarkett Sports, www.tarkettsportsindoor.com
   2. Substitutions: Section 01 60 00 - Product Requirements.

B. Rubber Athletic Sheet Flooring: 100-percent recycled high-density rubber flooring.
   1. Basis of Design*: Tarkett Ominisports*.
   2. Color/texture as scheduled
   3. Construction: Embossed, homogeneous product of vulcanized natural and synthetic rubbers with mineral aggregates, stabilizing agents, and pigmentation.
      a. Surface: Printed faux wood design coated with clear PVC and UV cured urethane treatment.
      b. Foam force reduction layer: High density closed cell PVC foam with honeycomb embossing.
      c. Intermediate Layers: Reinforced with a non-woven fiberglass grid for dimensional stability.
      d. Total Thickness: Layers vulcanized to form 0.27" (7.1 mm) overall thick sheet.
      e. Antimicrobial treatment.
   4. Recyclability:
      a. Made from 30% recycled content and 100% manufacturing waste recycled.
      b. FloorScore certified.
   5. Wear Layer: Type 1 – Grade 1 per ASTM F1303/F410.
   6. Impact Resistance: Passes EN 1717.
   7. Ball Rebound: >90% per ASTM F2772.
   8. Fire Rating: Class I per ASTM E648.
   9. Roll Width: 6'-6".

2.2 ACCESSORIES

A. Primers and Adhesives: Waterproof; types approved by flooring manufacturer.

B. Seam Welding Rods: Matching color and compatible material provided by flooring manufacturer.

C. Game-Line and Marker Paint: Enamel or other approved product, compatible with flooring and recommended by flooring and paint manufacturers for use indicated.

   1. Colors: As indicated, or if not indicated, as selected by Architect from manufacturer's full range of line colors

D. Transition Strips: Beveled strips that transition smoothly from the surface of rubber athletic flooring to the adjacent flooring.

E. Rubber Base: Coved, 4-inch high as specified in Section 09 65 00.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Perform in-situ relative humidity testing (ASTM F2170) to determine moisture condition of concrete subfloor.

C. Verify concrete subfloors are dry to maximum moisture content as recommended by manufacturer, and exhibit negative alkalinity, carbonization, and dusting. Maximum allowable amount of moisture emission from substrate is 3.0 pounds per 1,000 square feet in 24-hour period and shall not exceed 85% or the maximum allowable moisture content as recommended or allowed by flooring manufacturer.

1. Perform deep-probe moisture meter testing per ASTM-F2170 for each area receiving the specified floor finish.
2. Perform number of tests recommended by the flooring system manufacturer per each floor area, but no less than one test per each 1,000 sq. ft.
3. Provide written test results to the Architect, along with flooring manufacturer's recommended maximum moisture values.

D. Verify substrate surfaces are free of substances capable of impairing adhesion of new adhesive and finish materials.

E. Ambient temperature of installation area shall be maintained at 65-degrees F or greater.

F. Starting installation of flooring indicates installer's acceptance of flooring substrate conditions.

3.2 PREPARATION

A. Remove coatings, including curing compounds and other substances that are incompatible with flooring adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.

B. Remove sub-floor ridges and bumps. Fill minor low spots, cracks, joints, holes, and other defects with sub-floor filler to achieve smooth, flat, hard surface.

C. Prohibit traffic until filler is cured.

D. Clean and vacuum substrate thoroughly.

E. Apply primer as required to prevent "bleed-thru" or interference with adhesion by substances that cannot be removed.

3.3 INSTALLATION

A. Lay flooring with joints and seams parallel to building lines. Provide wall-to-wall lengths where possible to avoid end seams. Gap seams uniformly for flush application of matching filler using heat-welded rods. Stagger end seams nominal 24".

B. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints

C. Where floor finishes are different on opposite sides of door, terminate flooring under centerline of door.

D. Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.

1. Roll flooring for maximum adhesion and flatness using minimum 50 lb. roller.

2. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

E. Install manufacturer's pre-formed transition strips at exposed edges where flooring does not abut vertical surfaces.

F. Mask flooring at game lines and markers and apply paint to produce sharp edges and opaque coverage.

G. At movable partitions, install flooring under partitions without interrupting floor pattern.

H. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

I. Reference Section 09 65 00 for installation requirements of rubber base.

J. Remove excess adhesive from floor, base, and wall surfaces without damage.

K. Clean and maintain resilient flooring products.

3.4 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect flooring against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods indicated or recommended in writing by flooring manufacturer.

C. Do not move heavy or sharp objects directly over floor surfaces. Place plywood or hardboard panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels.

D. Prohibit traffic on resilient flooring for 48 hours after installation.

END OF SECTION

SECTION 09 66 23 - RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Thin-set epoxy-resin terrazzo system.

B. Related Sections include the following:
   1. Section 01 23 00 – Alternates: Thin-set terrazzo as alternative floor finish at corridors as indicated.
   2. Division 3 Section - Cast-In-Place Concrete: For concrete substrate requirements.
   3. Section 07 90 00 – Joint Protection: For sealants installed in movement joints.
   4. Section 09 30 00 – Tile base.

1.2 REFERENCE STANDARDS

A. ASTM International:
   1. ASTM D-2240 – Standard Test Method for Rubber Property.
   2. ASTM D-638 – Standard Test Method for Tensile Properties of Plastics.
   3. ASTM D-695 – Standard Test Method for Compressive Properties of Rigid Plastics.
   4. ASTM D-709 – Standard Specification for Laminated Thermosetting Materials.
   5. ASTM D-1308 – Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes.

1.3 SUBMITTALS

A. Product Data: For each type of terrazzo, component material, and accessory specified.

B. Shop Drawings:Show terrazzo fabrication and installation requirements including plans, elevations, sections, component details, and attachments to other work.
   1. Show layout plan drawings of divider, control, and expansion joint strips. Include joint details with plans.
   2. Show layout of base and border strips.

C. Samples for Initial Selection: National Terrazzo and Mosaic Association (NTMA) color plates showing the full range of colors available for each terrazzo type indicated.

D. Samples for Verification: Minimum of three 6-inch square samples of each terrazzo color and type required, showing the full range of color, texture, and pattern variations expected.
   1. Terrazzo: 6-inch square samples.
   2. Accessories and Metal Strips: 6-inch long samples of each item required.

E. Qualification Data: For firms and persons specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

F. Material Certificates: Certificates signed by suppliers or manufacturers certifying that each material complies with requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit procedures for stain removal, stripping, and sealing.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who has completed terrazzo installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

B. Source Limitations for Marble: Obtain each color, grade, type, and variety of marble from one source with resources to provide materials of consistent quality in appearance and physical properties without delaying the Work.

C. NTMA Standards: Comply with the National Terrazzo and Mosaic Association's (NTMA) Guide Specification and written recommendations for terrazzo type indicated, unless more stringent requirements are specified.

D. Mockups: Prior to installing terrazzo, construct mockups for each type and color required to verify selections made under Sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Mockups shall be built by the Subcontractor responsible for the Project Work. Build mockups to comply with the following requirements, using all conditions and materials indicated for the completed Work.
   1. Locate mockups on-site in the location and of the size indicated or, if not indicated, as directed by Architect.
   2. Notify Architect 7-days in advance of dates and times when mockups will be constructed.
   3. Demonstrate the proposed range of aesthetic effects and workmanship.
   4. Obtain Architect's approval of mockups before start of terrazzo work.
   5. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
   6. When directed, demolish and remove mockups from Project site.
   7. Approved mockups in an undisturbed condition at the time of Substantial Completion may become part of the completed Work where there is no visible difference in color or finish from the final product.

1.5 PRE-INSTALLATION MEETINGS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Review methods and procedures related to installation including, but not limited to, the following
   1. Inspect and discuss required condition of substrate and other preparatory work performed by other trades.
   2. Review structural loading limitations.
   3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   4. Review dust-control procedures.
   5. Convene prior to affected concrete floor slabs being poured, and again minimum one week prior to commencing work of this Section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in suppliers' original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number, if any.

B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Maintain temperature above 50 deg F (10 deg C) for 48 hours before and during terrazzo installation.

B. Control and collect dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Basis of Design: *EZPour Epoxy 158* by Terrazzco; terrazzco.com
   1. Hardness: ASTM D-2240, 83.5.
   2. Tensile Strength: ASTM D-638: 9,500 psi
   3. Compressive Strength: ASTM D-695: 13,000 psi
   4. Flexural Strength: ASTM D-790: 4,100 psi
   5. Chemical Resistance: ASTM D-1308

B. Marble Chips: Sizes conforming to NTMA gradation standards for approved mix, with Ha 10 minimum abrasive-hardness value when tested according to ASTM C 241, 0.75 percent maximum 24-hour absorption rate, dust content of less than 1-percent by weight, and containing no deleterious or foreign matter.

C. Epoxy-Resin Matrix: Manufacturer's standard recommended for use indicated and in color required for mix indicated.

D. Metal Strips
   1. Divider Strips: 1/8-inch thick white alloy of zinc top strip, galvanized steel bottom strip, with anchoring features.
   2. Control Joint Strips: Separate, double-L type angle or straight strips positioned back-to-back, matching material, thickness, and color of divider strips.
   3. Strip Height: To suit thickness of terrazzo topping, with allowance for grinding.
   4. Adhesive: Epoxy-resin adhesive recommended by manufacturer for this use and acceptable to thin-set terrazzo resin manufacturer.

E. Flexible Reinforcing Membrane: Manufacturer's resinous membrane for substrate crack preparation and reflective crack reduction.
   1. Reinforcement: Fiberglass scrim.
   2. Location: Over all Cracks and Joints in substrate.

F. Primer: Two-component resin or other compound recommended by thin-set terrazzo resin manufacturer for priming substrate.

G. Finishing Grout: Thin-set terrazzo resin manufacturer's resin-based finishing grout for filling voids.

H. Sealer: Slip-resistant and stain-resistant penetrating-type sealer that is chemically neutral with pH factor between 7 and 12, does not affect color or physical properties of the installed terrazzo, is recommended by sealer manufacturer for this use, and complies with NTMA Guide Specification for the installed system.

2.2 MIXES

A. Thin-Set Epoxy-Resin Terrazzo: Comply with NTMA's "Terrazzo Specifications and Design Guide" and manufacturer's written instructions for matrix and decorative chip proportions and mixing.
   1. Formulated Mix Color and Pattern: Match approved sample.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of terrazzo. Do not proceed with installation until unsatisfactory conditions, including levelness tolerances, have been achieved.

3.2 PREPARATION

A. Clean substrates of substances that impair terrazzo's bond, including oil, grease, and curing compounds.
   1. Roughen concrete substrates by use of powered shot-blasting equipment before installing terrazzo or underbed. Substrate finish shall be in accordance with NTMA's written recommendations.
   2. Prepare thin-set-terrazzo substrates according to resin manufacturer's written instructions.

B. Protect other work from dust generated by grinding operations. Control dust to prevent air pollution and comply with governing environmental protection regulations.
   1. Erect and maintain temporary enclosures and other suitable methods to limit dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

C. Verify that concrete substrates are visibly dry and free of moisture.

D. Moisture Testing:
   1. Test substrate for moisture content by method recommended in writing by terrazzo manufacturer. Proceed with installation only after substrates pass testing.

3.3 INSTALLATION

A. General: Comply with NTMA Guide Specification for terrazzo type indicated and NTMA's written recommendations for substrate preparation and terrazzo installation.

B. Prime thin-set-terrazzo substrates according to resin manufacturer's written instructions.

C. Install divider and accessory strips according to NTMA's written recommendations.

D. Install control-joint strips back-to-back directly above substrate control joints and according to NTMA's written recommendations. Provide gap between strips for sealant installation.

E. Install angle or T-strips and similar accessories in adhesive setting bed without voids below strips. Provide mechanical anchorage of strips as required for adequate attachment of strips to substrate.

F. Thin-Set Terrazzo: Place, cure, grind, grout, and finish thin-set terrazzo according to resin manufacturer's written instructions and NTMA Guide Specification for terrazzo type indicated. Ensure fluids from grinding operations do not react with divider and control-joint strips, or stain decorative chips. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.

G. Cut out and replace terrazzo areas that evidence lack of bond with substrate, including areas that emit a "hollow" sound when tapped. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

H. Construction Tolerances: Limit terrazzo surfaces' variation from level to 1/4 inch in 10 feet.

3.4 CLEANING AND PROTECTING

A. Remove grinding dust from installation and adjacent areas.

B. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's

written instructions.

C. Rinse surfaces with water and allow to dry thoroughly.

D. Seal surfaces according to NTMA's written recommendations. Apply sealer according to sealer manufacturer's written instructions.

E. Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure terrazzo is without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 09 68 16 - CARPETING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes sheet carpet, fully adhered.

B. Section includes modular walk-off carpet, fully adhered.

C. Related Sections:
1. Section 03 30 00 – Cast-In-Place Concrete: Subfloor.
2. Section 09 65 00 - Resilient Base: Rubber base for areas receiving carpeting.

1.2 REFERENCES

A. Carpet and Rug Institute: CRI 104 - Standard for Installation of Commercial Carpet.

B. Consumer Products Safety Commission: CPSC 16 CFR 1630 - Standard for the Surface Flammability of Carpets and Rugs.

C. National Fire Protection Association: NFPA 253 - Standard Method of Test for Critical Radiant Flux for Floor Covering Systems Using a Radiant Heat Energy Source.

D. ASTM F2170-11 – Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate layout of joints, direction of carpet pile, patterns and colors, and location of edge moldings.

C. Product Data: Submit data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

D. Samples:
1. Submit two samples of carpet, 12 x 12 inches in size, illustrating color and pattern design for each type and color of carpet selected.
2. Submit two 12-inch long samples of edge strip and accessories.

E. Manufacturer's Installation Instructions: Submit special procedures and perimeter conditions requiring special attention.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, including:

1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.

2. Precautions for cleaning materials and methods that could be detrimental to carpet.

1.5 QUALITY ASSURANCE

A. Surface Burning Characteristics.
1. Class I, minimum 0.45 watts/sq cm when tested in accordance with NFPA 253.
2. CPSC 16 CFR 1630.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section and is approved by manufacturer.
   1. FCIB or IFCI certified carpet installers or demonstrate compliance with certification program requirements.

1.7 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.8 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Store materials in area of installation for 48 hours prior to installation.

C. Do not install carpet until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

D. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet manufacturer.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish 20 year warranty for materials and labor.

1.11 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Supply extra carpet minimum 5% of the amount installed for each type and color.

PART 2 - PRODUCTS

2.1 MANUFACTURERS
A. Tarkett; commercial.tarkett.com
B. Substitutions: None.

2.2 SELECTIONS

A. **Sheet Carpet**: Basis of Design; *Angulate*, product of Tarkett, color and pattern as indicated in the Finish Schedule.
   1. Roll Width: 6 feet.

2. Primary Backing: Powerbond with Tandus Seam Weld #54.
3. Construction: Stratatec® Patterned Loop in Dynex SD® Nylon.
4. Recycled Content: 56%.
5. Face Weight: 21 oz./sq. yd.
6. Gauge: 5/64.
7. Stiches per Inch: 10.7.
8. Pile Height Average: 0.187 inch.
9. Dye Method: 75% Solution Dyed.
10. Soil/Stain Protection: Eco Ensure.

B. **Walk-Off Carpet:** Basis of Design: *Assertive Action* as manufactured by Tarkett.
1. Roll Width: 6 feet.
2. Primary Backing: Non-woven synthetic fiber.
3. Construction Type: Patterned Loop in Dynex SD® Nylon.
4. Face Weight: 17 oz./sq. yd.
5. Gauge: 5/64.
6. Stiches per Inch: 8.5.
7. Pile Height Average: 0.187 inch.
8. Dye Method: 90% Solution Dyed.
9. Soil/Stain Protection: Eco Ensure.
10. Color: As scheduled.

2.3 ACCESSORIES

A. Sub-Floor Filler: Self-leveling latex-modified cementitious type, ARDEX SD-F “Feather Finish” as manufactured by Ardex Engineered Cements.

B. Moldings and Edge Strips: Approved metal edge strips mechanically-fastened at exposed edges abutting resilient tile surfaces; height as required to protect carpet edge.

C. Seam Adhesive: Type recommended by manufacturer.

D. Adhesive: Manufacturer’s peel-and-stick self-adhesive system.

2.4 EXTRA MATERIAL

A. After completion of installation, carpet subcontractor shall provide an additional three (3) percent of total yards installed of each carpet specified to the Owner for future use.

B. Required extra material stock shall be packaged in unused rolls. Any large remnants provided to Owner shall be in addition to required material.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify floor surfaces are smooth and flat within tolerances specified in Section 03 30 00 and are ready to receive work.

C. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and:
1. Revise subparagraph below to suit Project.
2. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by the carpet manufacturer.
3. Subfloor finishes comply with requirements specified in Section 03 30 00 for slabs receiving carpet.
4. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

D. Verify concrete floors are dry to maximum moisture content as recommended by manufacturer, and exhibit negative alkalinity, carbonization, and dusting.

1. Maximum allowable amount of moisture emission from substrate is 3.0 pounds per 1,000 square feet in 24-hour period, and also shall not exceed maximum allowable moisture content as recommended or allowed by flooring manufacturer.

2. Perform deep-probe moisture meter testing per ASTM-F2170 for each area receiving the specified floor finish. Provide written test results to the Architect, along with flooring manufacturer's recommended maximum moisture values.

E. Starting installation of flooring indicates installer's acceptance of flooring substrate conditions.

3.2 PREPARATION

A. Remove sub-floor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with sub-floor filler.

B. Remove coatings, including curing compounds and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by the carpet manufacturer.

C. Broom and vacuum clean substrates to be covered immediately before installing carpet. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Apply, trowel, and float filler to achieve smooth, flat, hard surface. Prohibit traffic until filler is cured.

E. Clean substrate.

3.3 INSTALLATION

A. Sheet Carpet
1. Install carpet in accordance with CRI 104, Pre-Applied Adhesive Systems (Peel and Stick).
2. Verify carpet match before cutting to ensure minimal variation between dye lots.
3. Lay out carpet and locate seams in accordance with CRI 104 section 7.2:
   a. Locate seams in area of least traffic, out of areas of pivoting traffic, and parallel to main traffic.
   b. Do not locate seams perpendicular through door openings.
   c. Align run of pile in same direction as anticipated traffic and in same direction on adjacent pieces.
   d. Locate change of color or pattern between rooms under door centerline.
   e. Provide monolithic color, pattern, and texture match within each contiguous area.
4. Install carpet tight and flat on subfloor, well fastened at edges, with uniform appearance.
5. Double cut carpet seams.
   a. Make cuts straight, true, and unfrayed.
   b. Apply a bead of carpet manufacturer's seam sealer to the cut edge at proper height to seal all edges. Thoroughly clean all seams
6. Self-Adhesive Installation:
   a. Apply primer to floor uniformly at rate recommended by manufacturer.
   b. Apply seam sealer. Lay adjoining piece with seam straight, not overlapped or peaked, and free of gaps.
   c. Roll with 100 lb. roller for complete contact of carpet backing to floor.
7. Trim carpet neatly at walls and around interruptions.
8. Complete installation of edge strips, concealing exposed edges.

B. Carpet Tile
1. Install carpet tile in accordance with CRI 104, Section 10.4, Pre-Applied Adhesive Systems (Peel and Stick).
2. Do not mix carpet from different cartons unless from same dye lot.
3. Cut carpet tile clean. Fit carpet tight to intersection with vertical surfaces without gaps.
4. Install carpet tile in square pattern, with pile direction alternating to next unit, set parallel to building lines.
5. Install carpet tight and flat on subfloor, well fastened at edges, with uniform appearance.
6. Double cut carpet seams.
   a. Make cuts straight, true, and unfrayed.
7. Self-Adhesive Installation:
   a. Apply primer to floor uniformly at rate recommended by manufacturer.
   b. Apply seam sealer. Lay adjoining piece with seam straight, not overlapped or peaked, and free of gaps.
   c. Roll with 100 lb. roller for complete contact of carpet backing to floor.
8. Trim carpet neatly at walls and around interruptions.
9. Complete installation of edge strips, concealing exposed edges.

3.4 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess adhesive from floor, base, and wall surfaces without damage.

C. Clean and vacuum carpet surfaces.

END OF SECTION

SECTION 09 72 00 - WALL COVERINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Vinyl wall covering.

B. Related Sections:
   1. Section 09 21 16 - Gypsum Board Assemblies: Wall substrate.

1.2 REFERENCES

A. ASTM International:
   1. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Base Materials.
   2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. National Fire Protection Association:
   1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.
   2. NFPA 265 - Standard Methods of Fire Tests for Evaluating Room Fire Growth Contribution of Textile Coverings on Full Height Panels and Walls.

C. Underwriters Laboratories Inc.:
   1. UL 723 - Tests for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data on covering and adhesive.

A. Shop Drawings: Indicate wall elevations with seaming layout.

C. Samples: Submit two samples of each covering, 12x12 inch in size illustrating color, finish, and texture.

D. Manufacturer's Installation Instructions: Submit special installation procedures and perimeter conditions requiring special attention.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit data on cleaning, touch-up, and repair of covered surfaces.

1.5 QUALITY ASSURANCE

A. Surface Burning Characteristics:
   1. Textile Wall Coverings: Comply with one of the following:
      a. Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.
      b. Comply with requirements of applicable code when tested in accordance with NFPA 265 Method A or Method B test protocols.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with

minimum three years' experience.

B. Installer: Company specializing in performing work of this section and approved by manufacturer.

1.7 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Inspect roll materials on site to verify acceptance.

C. Protect packaged adhesive from temperature cycling and cold temperatures.

D. Do not store roll goods on end.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not apply materials when surface and ambient temperatures are outside temperature ranges required by adhesive or vinyl covering product manufacturer.

C. Maintain these conditions 24 hours before, during, and after installation of adhesive and covering.

D. Provide lighting level of 80 ft candles measured mid-height at substrate surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. BoltaWall
B. Essex
C. GenCorp Polymer
D. Genon.
E. Koroseal
F. MDC Wallcoverings
G. Carnegie Fabrics
H. Maharam

2.2 WALL COVERING

B. Wall Covering: FS CCC-W-408A and CFFA-W-101-A, Type II, Medium Duty; vinyl coated fabric roll stock, conforming to the following:
1. Total Weight: 20 – 21 oz/sq yd.
2. Roll Width: 54 inches.
3. Backing:
4. Basis of Design: As scheduled, or approved equivalent in color and pattern by specified manufacturer.

A. Adhesive: Use only mildew-resistant type as recommended by wall covering manufacturer.

C. Release Coat: Provide sealer or undercoat for new gypsum wallboard substrates as recommended by wallcovering manufacturer.

D. Substrate Filler: As recommended by adhesive and covering manufacturers; compatible with substrate.

B. Substrate Primer and Sealer: Type recommended by covering manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces are ready to receive work, and conform to requirements of covering manufacturer.

C. Measure moisture content of surfaces using electronic moisture meter. Do not apply coverings unless moisture content of surfaces are below the following maximums:
1. Plaster and Gypsum Wallboard: 12 percent.
2. Masonry, Concrete, and Concrete Unit Masonry: 12 percent.
3. Wood Surfaces: 15 percent, measured in accordance with ASTM D4442.

D. Verify flatness tolerance of surfaces does not vary more than 1/8 1/4 inch in 10 feet nor vary at rate greater than 1/16 inch/ft.

3.2 PREPARATION

A. Fill cracks in substrate and smooth irregularities with filler; sand smooth.

B. Wash impervious surfaces with tetra-sodium phosphate, rinse and neutralize; wipe dry.

C. Surface Appurtenances: Remove electrical plates, hardware, light fixture trim, escutcheons, and fittings prior to preparing surfaces or finishing.

D. Surfaces: Correct defects and clean surfaces which affect work of this section. Remove existing coatings that exhibit loose surface defects.

E. Marks: Seal with shellac those which may bleed through surface finishes.

F. Apply primer sealer to substrate surfaces as required, in accordance with manufacturer’s instructions. Allow to dry. Lightly sand smooth.

G. Vacuum clean surfaces free of loose particles.

3.3 INSTALLATION

A. Use covering in roll number sequence. Change run numbers at partition breaks and corners only.

B. Razor trim edges on flat work table, changing blade often to prevent rough cut edges. Do not razor cut on gypsum board surfaces.

C. Apply covering smooth, without wrinkles, gaps or overlaps. Eliminate air pockets and ensure full bond to substrate surface. Butt edges tight.

D. Horizontal seams are not acceptable.

E. Adhesive shall be mildew resistant.

F. Do not seam within 2-inches of internal corners or within 6-inches of external corners.

G. Remove excess adhesive while wet from seam before proceeding to next covering sheet. Wipe clean with dry cloth.

H. Trim within ¾” of top of resilient base.

3.4 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean coverings of excess adhesive, dust, dirt, and other contaminants.

C. Reinstall wall plates and accessories removed prior to work of this section.

END OF SECTION

SECTION 09 72 16.16 – RIGID SHEET VINYL WALL PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Adhesive-applied rigid plastic wall covering.

B. Related Sections:
   1. Section 09 21 16 – Gypsum Board Assemblies: Substrate finish.
   2. Section 09 90 00 – Painting and Coating.

1.2 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Drawings: Provide scaled drawings of wall elevations indicating proposed joint and trim locations.

C. Product Data: For each product indicated.
   1. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.
   2. Manufacturer’s product data sheet(s) for plastic sheets, adhesive, and any related accessories.
   3. Manufacturer’s installation procedures.

D. Samples for Verification:
   1. Plastic sheet physical samples: Nominal 6 by 6 inches each, for each selected type, color, pattern, and surface finish.

E. Qualification Data: For installation firm to demonstrate capabilities and experience. Include lists of completed projects with project names, locations, and dates, names and contact information of the projects’ architects and owners.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed wall protection installation similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fabricator Qualifications: A firm experienced in producing paneling similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Fire-Test-Response Characteristics: Provide materials and products with specified fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction.

1.4 WARRANTY

A. Manufacturer’s warranty: Minimum two-year warranty against defects in materials.

B. Installer’s warranty: Minimum two-year warranty against defects in installation and workmanship.

1.5 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Preinstallation Meetings.

B. Conduct conference at Project site to comply with requirements in Section 01 31 19 - Project Meetings.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Do not deliver wall protection sheets until painting and similar operations that could damage materials have been completed in installation areas. If materials must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install materials until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering rigid sheet plastic wall protection that may be incorporated into the Work include, but are not limited to, the following:
   1. Construction Specialties, Inc., www.c-sgroup.com.
   2. Koroseal Wall Protection Systems, www.koroseal.com
   3. Substitutions: Section 01 60 00 - Product Requirements**.**

2.2 SYSTEM

A. Basis of Design: *Acrovyn High-Impact Wall Covering* as manufactured by Construction Specialties, or approved equivalent by specified manufacturer.
   1. Sheet Material:
      a. Type: Rigid high-impact rigid non-PVC plastic sheet with Thickness: Nominal 0.040” unless noted otherwise in the drawings.
      b. Fire Performance Characteristics: Provide engineered PETG wall protection system components with UL label indicating that they are identical to those tested in accordance with ASTM E84 for Class A/1 characteristics listed below:
         1) Flame Spread: 25 or less.
         2) Smoke Developed: 450 or less.
      c. Impact Strength: Provide wall protection components that have been tested in accordance with the applicable provisions ASTM F476.
      d. Finish: Suede.
      e. Color(s): As indicated.
   2. Trimless: Use no trim at vertical joints and inside corners. Leave 1/8” gap for manufacturer’s “Color Match” sealant.

B. Mounting Adhesive:
   1. System manufacturer’s water-based or contact adhesive.

C. Wall Primer:

1. System manufacturer’s recommended water-based wall primer for unpainted walls.

PART 3 - EXECUTION

3.1 EXAMINATION AND COORDINATION

A. Examine substrates scheduled to receive wall protection sheets for compliance with system manufacturer's requirements and conditions affecting performance.
   1. Wall surfaces to receive materials shall be dry and free from dirt, grease, loose paint, and scale.
   2. Wall surfaces shall be flat.
   3. Do not proceed with installation until unsatisfactory conditions have been corrected.

B. Coordinate with Project painting contractor to determine preferred painting condition of wall prior to beginning installation of wall protection sheets. Where installation is to begin prior to painting, determine whether priming is recommended by wall protection manufacturer.

3.2 ENVIRONMENTAL CONDITIONS

A. Do not install wall protection sheets until wet construction work is complete and ambient air at installation space has stable relative humidity of less than 80%, and room temperature is stabilized between 65 and 75 degrees F.

B. Do not install wall protection sheets until materials have been acclimated to ambient temperature and humidity conditions for minimum of 48 hours. Stack and space sheets out of direct sunlight for acclimation procedures to facilitate adequate ventilation.

C. Provide heat, light, and ventilation prior to installation.

D. Maintain room temperature and humidity for period of three days prior to delivery of materials to installation space, during installation, and continuously after installation.

3.3 INSTALLATION

A. General: Install system in strict accordance with manufacturer’s printed requirements and recommendations using manufacturer’s standard primers, adhesives, and trims.

B. Primer: Where recommended by system manufacturer, prime portion of walls to receive wall protection sheets using system manufacturer’s recommended primer.
   1. Where walls are painted prior to installation, determine compatibility of mounting adhesive with painted wall.
   2. Protect wall adjacent surfaces during wall protection sheet installation.

C. Install wall protecton sheets level, plumb, true, and straight with full adhesion to substrate and without distortions.

D. Install wall protection sheets using specified trim at top and bottom of any horizontal color-change bands, and at inside and outside corners.

E. Install manufacturer’s color-matching sealant neat and flush with vinyl face at all vertical joint gaps.

3.4 ADJUSTING AND CLEANING

A. Clean installed wall protection sheets. Replace any damaged sheets or trim and adjust for uniform appearance.

B. Remove any wall paint from trim or wall protection sheets.

END OF SECTION

SECTION 09 77 00 - FRP WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: FRP pre-laminated wall panels.

1.2 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Include physical characteristics, installation methods for each different type of substrate, and maximum permissible moisture content of substrates.

C. Shop Drawings: Show location and extent of wall panels, panel terminations, installation details, and elevations showing nonstandard conditions.

D. Samples for Initial Selection: For initial selection of color, pattern and surface texture, provide the manufacturer's standard color chips consisting of actual sections of each FRP wall panel and vinyl plastic material required showing the full range of materials, colors, and textures available.

E. Samples for Verification: Provide the following samples for verification of compliance with requirements indicated. Prepare samples from the same material to be used in the Work.
1. 6-inch by 6 inch square samples of each wall panel material required for verification of color, pattern, and texture selected.
2. 1- inch long sample of each molding accessory.

F. Product Test Reports: From a qualified independent testing laboratory showing compliance of FRP wall panel materials with requirements indicated based on tests performed by the laboratory within the past five years.

G. Maintenance data for FRP wall panel material components for inclusion in the operating and maintenance manuals specified in Division 1.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has previously installed FRP wall panel materials similar in design and extent to the materials required on this Project.

B. Fire Performance Characteristics: Provide FRP wall panels that are identical to those tested in accordance with ASTM E 84 for the fire performance characteristics indicated below. Identify wall panel materials with appropriate markings from the testing and inspection organization.
1. Flame Spread: 25 or less.
2. Smoke Developed: 450 or less.

C. Single Source Responsibility: Obtain each color, texture, grade, finish, and type of FRP wall panel material from a single source with resources to provided products of consistent quality in appearance and physical properties without delaying progress of the Work.

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to Project site in original factory wrappings, clearly labeled with identification of manufacturer, brand name, lot number, quality or grade, and fire hazard classification.

B. Store materials inside in original undamaged packages in a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity. Do not store rolled goods upright; lay flat, blocked off the ground to prevent sagging and warping.

1. Maintain room temperature within the storage area at not less than 70 deg F during the period FRP wall panel and accessory materials are stored. Keep material out of direct sunlight to avoid surface distortion.

1.5 PROJECT CONDITIONS

A. Environmental Conditions: Do not install FRP wall panel material until the space to receive the wall panel material is enclosed and weatherproof. Do not install materials until the ambient temperature within the building is maintained and stabilized at not less than 70 deg F for not less than 72 hours prior to beginning of the installation.

1.6 SEQUENCING AND SCHEDULING

A. Schedule installation with other construction activities to minimize the possibility of damage and soiling during the remainder of the construction period.

1.7 MAINTENANCE

A. Maintenance Instructions: Provide the manufacturer's instructions for maintenance of installed work. Include recommended methods and frequency for maintaining materials in optimum condition under anticipated traffic and use conditions. Include precautions against cleaning materials and methods that may be detrimental to finishes and performance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products:
1. Fire-X Glasbord, Kemlite Company, www.kemlite.com.
2. Substitutions: 01 16 00 - Product Requirements.

2.2 FRP WALL PANELS

A. Wall Panels: Provide manufacturer's standard FRP wall panels. Panels shall consist of 0.09-inch thick, textured, USDA approved panel.

B. Sheet Size: 4 by 10 feet, cut for 5 ft. high wainscot.

C. Colors and Textures of Plastic Material: Provide plastic material that matches color and texture indicated by reference to the manufacturer's standard color and texture designation.

D. Adhesive: Provide the type of adhesive recommended by the manufacturer for use with the wall panel material on the substrate indicated.

E. Trim: Provide extruded, impact-resistant, vinyl plastic trim members matching color of wall panel materials.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates scheduled to receive FRP wall panel materials for compliance with manufacturer's requirements and conditions affecting performance.
1. Wall surfaces to receive FRP wall panel materials shall be dry and free from dirt, grease, loose paint, and scale.
2. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Prior to installation, clean substrate to remove dust, debris, and loose particles. Provide skim coat over rough walls to smooth surface.
   1. Complete all finishing operations, including painting, before beginning installation of FRP wall panel materials.
   2. Test masonry and plaster substrates to receive FRP wall panel with an electronic moisture meter. Moisture content shall be within manufacturer's recommended limits.
   3. Prime and seal substrates, if required, in accordance with the FRP wall panel material manufacturer's recommendations for the type of substrate.

3.3 INSTALLATION

A. General: Install FRP wall panel materials in accordance with manufacturer's recommendations using adhesive recommended for use over the substrate.
   1. Moldings: Furnish moldings for perimeter edging where indicated. Install moldings in the longest practical lengths. Tightly butt end joints and miter corners.
   2. Installation Type: full wall height, from top of wall base to 8 inches above ceiling.

3.4 CLEANING

A. General: Immediately upon completion of installation, clean FRP wall panels and accessories using a manufacturer's recommended cleaning agent. Clean moldings in accordance with the manufacturer's recommendations.

B. Remove excess adhesive, using methods and materials recommended by manufacturer.

C. Remove surplus materials, rubbish, and debris resulting from installation upon completion of work, and leave areas of installation in neat, clean condition.

END OF SECTION

SECTION 09 77 23 – FABRIC WRAPPED WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Fabric-wrapped acoustical wall panels, absorptive type for acoustical panels mounted above 9 ft. from finish floor level.
2. Fabric-wrapped impact resistant wall panels for acoustical panels mounted below 9 ft. from finish floor level.
3. Fabric-wrapped tackable wall panels for corridors, classrooms, job-built display cases, and other locations as may be indicated.

1.2 SUBMITTALS

A. Shop Drawings: Submit shop drawings showing layout and components, including details of hanging method for wall panels and suspension method for baffles, accessories. Identify each panel and baffle as to size, type, and fabric.

B. Product Data: Submit manufacturer's technical data for each type of acoustical panel and baffle required.

C. Submit manufacturer's standard size swatches of scheduled fabric for each type of panel and facing material required.

D. Certified Test Reports: Submit test data from an independent testing agency, acceptable to authorities having jurisdiction, evidencing that panel assemblies comply with requirements indicated for fire performance characteristics.

E. Certificates: Submit certificates from manufacturers of acoustical panels attesting that their products comply with specified requirements including those for fire performance characteristics.

1.3 QUALITY ASSURANCE:

A. Fire Performance Characteristics: Provide acoustical panels, with surface-burning characteristics as indicated below, which have been determined by testing assemblies of identical materials and construction according to ASTM E 84 by a testing organization acceptable to authorities having jurisdiction.
1. Flame Spread: 25 or less.
2. Smoke Developed: 450 or less.

1.4 PRODUCT HANDLING:

A. Protect acoustical wall panels from excessive moisture in shipment, storage, and handling. Deliver in unopened bundles and store in a dry place with adequate air circulation. Do not deliver material to building until "wet work" such as concrete and plaster have been completed and cured to a condition of equilibrium.

1.5 PROJECT CONDITIONS:

A. Do not begin installation until spaces to receive acoustical panels have been enclosed and maintained at approximately the same humidity and temperature conditions as planned for occupancy. Maintain temperature and humidity as recommended by panel manufacturer.

1.6 EXTRA MATERIALS:

A. Deliver extra materials to Owner. Furnish extra materials described below matching products installed, packaged with protective covering for storage and identified with appropriate labels:
   1. Fabrics: Furnish quantity of each fabric equal to 5.0 percent of each type of fabric installed.
   2. Fabric shall be provided in continuous rolls, packaged for storage.

PART 2 - PRODUCTS

2.1 GENERAL

A. MANUFACTURERS: Subject to compliance with requirements, approved manufacturers include the following:
   1. Acoustical Surfaces, Inc. www.soundsilencer.com
   2. Conwed, Inc.
   3. Decoustics. www.decoustics.com
   4. Golterman & Sabo, www.golterman.com
   5. Lamvin http://www.lamvin.com
   6. MBI Products Company, www.mbiproducts.com
   7. Wall Technology. www.walltechnology.com

2.2 FABRICATION - GENERAL:

A. Fabricate panels to sizes and configurations indicated; attach facing materials to cores to produce installed panels with visible surfaces fully covered and free from wrinkles, sags, blisters, seams, adhesive or other foreign matter.
   1. Fabricate back-mounted panels in factory to sizes required to fit wall surfaces based on field measurements of completed substrates indicated to receive wall panels.
   2. Fabricate suspended baffles in factory to indicated sizes, complete with hanging system.
   3. Each panel shall be faced with approved fabric bonded directly to the panel face and edges. Provide panels with flat, wrinkle-free surface, and tailored corners.

B. Provide panel manufacturer's accessories for securely mounting panels of type and size indicated to substrates provided and complying with the following requirements:
   1. Provide manufacturer’s 2-part zee-clips with one-part screw-fastened to back of panel and receiving part fastened to wall using appropriate anchoring. In addition, provide heavy-duty Velcro anchoring to stabilize panel and provide resistance to removal.
   2. Unless indicated otherwise, anchoring system shall be designed to hold back of panel within 1/4” of wall surface.

2.3 ACOUSTICAL WALL PANELS:

A. Sound Absorption Performance: Provide acoustical panels with noise reduction coefficients (NRC) indicated as determined by testing per ASTM C 423 for mounting type specified under individual product requirements.

B. Octave Band Center Frequencies (Hz)/Nominal Absorption Coefficient: Panels tested at 2” thick shall have the following nominal octave band absorption coefficients within a tolerance of plus or minus 5% when mounted directly on a hard surface:
   125/0.40
   250/0.98
   500/1.00
   1000/1.00
   2000/1.00

4000/1.00

C. Back-Mounted Edge-Reinforced Acoustical Wall Panels: Manufacturers standard panel construction consisting of scheduled fabric laminated to front, edges and back border of molded glass fiber board core, with edges chemically hardened to a minimum depth of 1/8" to reinforce panel perimeter against warping and edge damage. structural framing using wood, plastic, or metal will not be accepted:

D. Basis of Design:
1. Typical Panels: Decoustics *Type AP2* for panels located above 9’-0” or approved equivalent by specified manufacturer or approved equivalent by specified manufacturer.
   a. Core Density: 7 lbs. per cu. ft.
   b. Panel Face Size: As indicated.
   c. Panel Thickness: 2” or as indicated in the drawings.
   d. Edge Detail: Square, fabric wrapped.
   e. Fabric: Carnegie wall coverings www.carnegiefabrics.com;
      1) *Xorel #6427 Meteor* Acoustical Panel Textile with manufacturer’s *X Protect* wall backing.
      2) Width: 56”.
      3) Weight: varies from 12 oz per linear yd.
      4) Flame Retardancy: ASTM E84 Class A / Class 1.
      5) Cleanability: Water, solvent and bleach cleanable.
      6) Fabric Manufacturer’s Warranty: 10-years.
      7) Color(s) and pattern(s) as scheduled.
2. Impact-Resistant Wall Panels: Decoustics *Type HIR* for wall panels located at any height in a gymnasium, below 9’-0” in other parts of the building or identified on the drawings as “Impact-Resistant”.

   a. Use for panels mounted with any portion of panel installed at a height of less than 9'-0" above finish floor.

   b. Provide construction as specified above plus impact-resistant rigid fiberglass sheet laminated to front, edges, and back border of glass fiber board core.

2.4 TACKABLE WALL PANELS

A. Back-Mounted Edge-Reinforced Tack Panels: Manufacturers standard panel construction consisting of scheduled fabric laminated to front, edges and back border of molded glass fiber board core, with tackable facer, and chemically hardened edges to provide panel perimeter reinforced against warping and edge damage. Structural framing using wood, plastic, or metal will not be accepted.
1. Basis of Design: *Type H.I.R. #1, Tackable* panels as manufactured by Decoustics or approved equivalent by specified manufacturer.
2. Core Density: Minimum 7 lbs. per cu. ft.
3. Panel Face: Smooth high-density fiberglass facer for tackability.
4. Edges: Resin hardened.
5. Panel Thickness: 1” or as indicated in the drawings.
6. Edge Detail: Square unless otherwise indicated.
7. Fabric: Specified Carnegie *Xorel #6427 Meteor in scheduled color/pattern.*

PART 3 - EXECUTION

3.1 INSTALLATION:

A. Install acoustical wall panels in locations indicated with vertical surfaces and edges plumb, top edges level, and in alignment with other panels,

1. Scribe to fit adjoining work accurately at borders and at penetrations.

2. Comply with panel manufacturer's printed instructions for installation of panels using type of mounting accessories as specified above.

3. Remove and replace panels which are damaged and are unacceptable to Architect.

END OF SECTION

SECTION 09 90 00 - PAINTING AND COATING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and field application of paints, stains, varnishes, and other coatings.
   1. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.
   2. It is the intent of this Section that all exterior and interior materials normally requiring finish paint, coating, or stain/finishing as determined by the Architect, will be painted, coated, or stain/finished under this Section except for specialty coatings and finishes specifically covered under other Sections.
   3. Where the Bidder is uncertain of whether a specific item is intended to be painted, coated, or stain/finished, contact the Architect during the Bidding period for clarification.

B. Related Sections:
   1. Section 05 50 00 - Metal Fabrications: Shop primed items.
   2. Section 05 12 00 – Structural Steel: Shop primed items of structural steel to remain exposed.
   3. Section 05 21 00 – Steel Joists and Joist Girders: Shop primed items of steel joists and joist girders to remain exposed.
   4. Section 09 21 16 - Gypsum Board Assemblies: Surface preparation of gypsum board.
   5. Section 09 96 53 – Elastomeric Coatings: Coating at exposed inside face of CMU at mechanical courtyard walls, and where specifically indicated.

C. Paint exposed surfaces, except where these Specifications indicate that the surface or material is not to be painted or is to remain natural. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.
   1. Painting includes field painting of exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.
   2. Exposed High Roof Decks:
      a. Library and Corridor: Protect prefinished metal roof deck. Painting required only at exposed steel structure or gypsum board covered structure
      b. Gymnasium: Clean and paint galvanized roof deck and exposed structure.

D. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.
   1. Prefinished items include the following factory-finished components:
      a. Plastic laminate faced casework and millwork.
      b. Acoustical wall panels.
      c. Toilet compartment doors and partitions.
      d. Metal lockers.
      e. Finished mechanical and electrical equipment, unless roof-top equipment visible from ground level.
      f. Light fixtures.
      g. Hardware.

   2. Concealed surfaces include walls or ceilings in the following generally inaccessible spaces:
      a. Foundation spaces.
      b. Furred areas.
      c. Ceiling plenums.
      d. Utility tunnels.

e. Pipe spaces.
f. Duct shafts.
g. Elevator shafts.

3. Finished metal surfaces include the following:
   a. Anodized aluminum.
   b. Stainless steel.
   c. Chromium plate.
   d. Copper and copper alloys.
   e. Bronze and brass.

4. Operating parts include moving parts of operating equipment and the following:
   a. Valve and damper operators.
   b. Linkages.
   c. Sensing devices.
   d. Motor and fan shafts.
   e. Electrical or control panels

5. Labels: Do not paint over UL, FMG, or other code-required labels or equipment name, identification, performance rating, or nomenclature plates.

1.2 REFERENCES

A. ASTM International:
   1. ASTM D16 - Standard Terminology Relating to Paint, Varnish, Lacquer, and Related Products.
   2. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Base Materials.
   3. ASTM D3359 – Standard Test Method for Measuring Adhesion by Tape Test.

B. Painting and Decorating Contractors of America:
   1. PDCA - Architectural Painting Specification Manual.

1.3 DEFINITIONS

A. Conform to ASTM D16 for interpretation of terms used in this section.
   1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85-degree meter.
   2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60-degree meter.
   3. Semigloss and satin refer to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60-degree meter.
   4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60-degree meter.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit the following for each product specified; include primers and block fillers.
   1. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
   2. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.

C. Samples: For each color and material to be applied, with texture to simulate actual conditions, on representative Samples of the actual substrate.
   1. Provide stepped Samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing Samples for review. Resubmit until

required sheen, color, and texture are achieved.

2. Provide a list of materials and applications for each coat of each Sample. Label each Sample for location and application.
3. Submit two Samples on the following substrates for Architect's review of color and texture only:
   a. Concrete: 4 inch square Samples for each color and finish.
   b. Concrete Unit Masonry: 4 x 8 inch Samples of masonry, with mortar joint in the center, for each finish and color.
   c. Painted Wood: 12 inch square Samples for each color and material on hardboard.
   d. Stained or Natural Wood: 4 x 8 inch Samples of natural or stained wood finish on representative surfaces.

D. Paint Schedule: Submit schedule of proposed paint type and sheen for each room. Use room names and numbers as appearing in the Architect’s drawings.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit data on cleaning, touch-up, and repair of painted and coated surfaces.

1.6 QUALITY ASSURANCE

A. Obtain primers and block fillers from the same manufacturer as the finish coats.

1.7 QUALIFICATIONS

A. Applicator: Company specializing in performing work of this section on projects similar in materials, design, and extent to those of this project, and whose work has resulted in applications with successful in-service performance.

1.8 MOCKUP

A. Section 01 40 00 - Quality Requirements: Mock-up requirements.

B. Provide a full-coat mock-up for each type of coating and substrate required. Comply with procedures specified in PDCA P5. Duplicate finish of approved sample Submittals.
   1. Architect will select one room or surface to represent surfaces and conditions for application of each type of coating and substrate.
      a. Wall Surfaces: Provide mock-up on at least 100 sq. ft.
      b. Small Areas and Items: Architect will designate items or areas required.
   2. Apply mock-up samples according to requirements for the completed Work, after permanent lighting and other environmental services have been activated. Provide required sheen, color, and texture on each surface.
      a. After finishes are accepted, Architect will use the room or surface to evaluate coating systems of a similar nature.
   3. Final approval of colors will be from mock-ups.

1.9 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

C. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

D. Paint Materials: Store at minimum ambient temperature of 45 degrees F and maximum of 90 degrees F, in ventilated area, and as required by manufacturer's instructions.

1.11 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not apply materials when surface and ambient temperatures are outside temperature ranges required by paint product manufacturer.

C. Do not apply exterior coatings during rain or snow when relative humidity is outside humidity ranges, or moisture content of surfaces exceed those required by paint product manufacturer.
1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

D. Minimum Application Temperatures for Latex Paints: 45 degrees F for interiors; 50 degrees F for exterior; unless required otherwise by manufacturer's instructions.

E. Minimum Application Temperature for Varnish Finishes: 65 degrees F for interior or exterior, unless required otherwise by manufacturer's instructions.

F. Provide lighting level of 80 ft candle measured mid-height at substrate surface.

1.12 SEQUENCING

A. Section 01 10 00 - Summary: Work sequence.

B. Sequence application to the following:
1. Do not apply finish coats until paintable sealant is applied at all joints and transitions of differing material.
2. Back prime wood trim before installation of trim.

1.13 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for paints and coatings.

1.14 EXTRA MATERIALS (attic stock)

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Supply additional unopened cans of each color, type, and sheen of paint to the Owner for future use as follows:
1. 10-gallons of each type and color used for walls, ceilings, steel doors, and exposed structure.
2. 3-gallons of each type and color used for door frames, trim, and accents.

C. Label each container with color, type, texture, and locations used in addition to manufacturer's label.

PART 2 - PRODUCTS

2.1 PAINTS AND COATINGS

A. Manufacturers:

1. Benjamin Moore & Co. www.benjaminmoore.com
2. Kelly-Moore Paint Co. www.kellymoore.com
3. Pittsburgh Paints www.pittsburghpaints.com
4. Sherwin-Williams Co. (Sherwin-Williams). www.sherwin-williams.com
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Applications Schedules:
1. Reference Schedules under Part 3 below for locations and applications of specific paint systems, coatings, stains, finishes, and sealers for this Project.
2. Certain of the paint and coating systems specified in Part 2 may not be required or scheduled for this particular Project.

2.2 MATERIALS

A. Coatings: Ready mixed, except field catalyzed coatings. Prepare coatings:
1. To soft paste consistency, capable of being readily and uniformly dispersed to homogeneous coating.
2. For good flow and brushing properties.
3. Capable of drying or curing free of streaks or sags.

B. Accessory Materials: Linseed oil, shellac, turpentine, paint thinners and other materials not specifically indicated but required to achieve finishes specified; commercial quality.

C. Patching Materials: Latex filler.

D. Fastener Head Cover Materials: Latex filler.

E. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

F. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified that are factory formulated and recommended by manufacturer for application indicated. Paint-material containers not displaying manufacturer's product identification will not be acceptable.

G. Alternate Manufacturers: Sherwin-Williams products are specified. Equivalent products by listed manufacturers are acceptable upon approval by Architect.
1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

H. Colors: As indicated in the Color Schedule in the Drawings.

I. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction and, for interior paints and coatings applied at Project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24).\
1. Flat Paints and Coatings: 50 g/L.
2. Nonflat Paints and Coatings: 150 g/L.
3. Dry-Fog Coatings: 400 g/L.
4. Primers, Sealers, and Undercoaters: 200 g/L.
5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
6. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
7. Pretreatment Wash Primers: 420 g/L.
8. Floor Coatings: 100 g/L.
9. Shellacs, Clear: 730 g/L.
10. Shellacs, Pigmented: 550/L.

2.3 CONCRETE UNIT MASONRY BLOCK FILLERS

A. Concrete Unit Masonry Block Filler: Factory-formulated latex block fillers.
1. Sherwin-Williams; PrepRite Interior/Exterior Block Filler B25W25: Applied at a dry film thickness of not less than 8.0 mils per coat.

2.4 EXTERIOR PRIMERS

A. Exterior Metal Field Primers:
1. Factory-formulated metal primer for galvanized or bare metal without shop primer.
a. Sherwin-Williams; Pro-Cryl Universal Water Based Primer, B66 Series: Applied at a dry film thickness of 2.0 – 4.0 mils per coat.
2. Field Welds in Galvanized Metal:
a. ZRC Worldwide “Galvilite” zinc-rich coating.

B. Shop Primers: Typically applied by steel or miscellaneous metals fabricator.
a. Verify compatibility of finish paint with shop-applied primers.
b. Reference Division 5 metals sections for special epoxy shop primers required at items specified or indicated to be shop primed and field painted with urethane alkyd enamel.

C. Exterior Concrete and Masonry Primer: Factory-formulated masonry primer for exterior application:
1. Sherwin-Williams; Loxon Masonry Primer A24W300: Applied at a dry film thickness of not less than 3.0 mils.

2.5 EXTERIOR FINISH COATS.

A. Urethane Alkyd Enamel: Factory-formulated full-gloss urethane alkyd enamel for exterior application.
1. Sherwin-Williams; Industrial Urethane Alkyd Enamel, B54E51: Applied at a dry film thickness of 2.0 – 4.0 mils per coat.

B. Exterior Alkyd Enamel: Factory-formulated formulated full-gloss alkyd enamel for exterior application.
1. Sherwin-Williams; Industrial Enamel B-54WZ101: Applied at a dry film thickness of not less than 2.0 mils per coat.
2. Apply two (2) coats over specified primer.

C. Exterior Low-Luster Acrylic Paint: Factory-formulated low-sheen (eggshell) acrylic-latex paint for exterior application.
1. Sherwin-Williams; A-100 Exterior Latex Satin House & Trim Paint A82 Series: Applied at a dry film thickness of not less than 1.5 mils.
2. Apply two (2) coats over specified primer.

D. Concrete Curb Enamel:
1. Sherwin-Williams; H&C Concrete Sealer Solid Color solvent-based flat enamel (fire lane curbs).
2. Finish Coats: Two coats specified exterior full-gloss alkyd enamel.

2.6 INTERIOR PRIMERS

A. Interior Concrete and Concrete Masonry (CMU) Primer: Factory-formulated alkali-resistant acrylic-latex interior primer for interior application.
1. Sherwin-Williams; Loxon Concrete & Masonry Primer, A24W8300: Applied at a dry film thickness of not less than 3.0 mils per coat.
2. Use equivalent zero VOC primer when building will be occupied by students or staff within 5 days after application

B. Interior Gypsum Board Primer: Factory-formulated latex-based primer for interior application.

1. Sherwin-Williams; Pro Mar 200 Zero VOC Latex Primer B28W2600 Series: Applied at a dry film thickness of not less than 1.5 mils per coat.

C. High Performance Gypsum Board Primer: Factory-formulated acrylic primer for application under epoxy finish coats.
   1. Sherwin-Williams; PrepRite 200 Latex Wall Primer B28W200 Series: Applied at a dry film thickness of not less than 1.0 mils per coat.

D. Interior Ferrous Metal Primer: Factory-formulated for galvanized or bare metal not shop primed.
   1. Sherwin-Williams; Pro Cryl Universal Water Based Primer B66 series: Applied at a dry film thickness of 2.0 – 4.0 mils per coat.
   2. Reference Division 5 metals sections for special epoxy shop primers required at items specified or indicated to be shop primed and field painted with urethane alkyd enamel

E. Interior Dryfall Undercoat: Factory-formulated acrylic undercoat for exposed roof structure, roof deck, piping and ducting that has not been shop primed.
   1. Sherwin-Williams: Waterborne Acrylic Dry Fall, B42 Series.

2.7 INTERIOR FINISH COATS

A. Reference Schedule Information in Part 3 for specific usage of each paint system.

B. Interior Low-VOC Latex Enamel: Factory-formulated acrylic-latex interior enamel.
   1. Sherwin-Williams; Pro Mar 200 Zero VOC Latex Enamel: Applied at a dry film thickness of not less than 1.7 mils per coat. Gloss, semigloss, and eggshell/satin as scheduled.

   2. Sherwin-Williams; Pro Industrial Zero-VOC Acrylic Semigloss, B66W651 over shop primer: Applied at a dry film thickness of 2.5 – 4.0 mils per coat. Where specifically indicated for industrial finish.

C. Interior Dryfall Finish Coat: Factory-formulated acrylic finish coat for exposed roof structure, roof deck, piping, ducting, and cementitious wood fiber planks, both unprimed and primed.
   1. Sherwin-Williams: Waterborne Acrylic Dryfall, B42 Series.

D. Urethane Alkyd Enamel: Factory-formulated full-gloss urethane alkyd enamel for interior application.
   1. Sherwin-Williams; Industrial Urethane Alkyd Enamel, B54E51: Applied at a dry film thickness of 2.0 – 4.0 mils per coat.

E. Interior Semigloss Epoxy: Factory-formulated, two-component, waterbased, catalyzed epoxy resin for high performance applications.
   1. Sherwin-Williams: Waterbased Catalyzed Epoxy B70-200 Series: Applied at a dry film thickness of not less than 2.5 mils per coat.

2.8 INTERIOR WOOD STAINS AND LACQUERS

A. 250 VOC Interior Wood Stain: Factory-formulated penetrating wood stain for interior application, 250 g/L VOC. Use where stain or color is specifically indicated, and verify with Architect:
   1. Sherwin-Williams; Wood Classics Interior Oil Stain-250.

B. Interior Waterborne Polyurethane Varnish: Factory-formulated clear varnish, Gloss or Satin.
   1. Sherwin-Williams; Wood Classics Waterborne Polyurethane Varnish, A68 Series: Applied at a dry film thickness of 0.8 - 1.0 mils per coat. Satin finish unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify surfaces are ready to receive Work as instructed by product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report conditions capable of affecting proper application.

D. Test shop applied primer for compatibility with subsequent cover materials.

E. Measure moisture content of surfaces using electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:
   1. Plaster and Gypsum Wallboard: 12 percent.
   2. Masonry, Concrete, and Concrete Unit Masonry: 12 percent.
   3. Interior Wood: 15 percent, measured in accordance with ASTM D4442.
   4. Exterior Wood: 15 percent, measured in accordance with ASTM D4442.
   5. Concrete Floors: 8 percent.

3.2 PREPARATION

A. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.
   1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

B. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.
   1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

C. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified.
   1. Provide barrier coats over incompatible primers or remove and re-prime.
   2. Cementitious Materials: Prepare concrete, concrete unit masonry, cement plaster, and mineral-fiber-reinforced cement panel surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
      a. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
      b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
      c. Clean concrete floors to be painted with a 5 percent solution of muriatic acid or other etching cleaner. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.

   3. Wood: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand surfaces exposed to view smooth and dust off.
      a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before applying primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.
      b. Back-prime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on back side.

   4. Ferrous Metals: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC's recommendations.
      a. Blast steel surfaces clean as recommended by paint system manufacturer and

according to SSPC-SP 10/NACE No. 2.

b. Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with same primer as the shop coat.

5. Galvanized Surfaces: Clean galvanized surfaces with nonpetroleum-based solvents so surface is free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

6. Painted Surfaces: When painting over surfaces that have been previously painted, prepare surfaces in accordance with paint manufacturer's instructions, and verify with manufacturer that new coatings are compatible with the existing coatings.
   a. Provide adhesion testing of existing paint. Remove completely any loose, flaking, or non-adhering paint.
   b. Clean existing finishes of grease, oil, dust or other materials that may tend to adversely affect adhesion of new paint. Do not use cleaners that will leave a residue.
   c. Remove by sanding any gloss or sheen on existing painted surfaces before application of paint. Remove all sanding dust.
   d. Apply an alkyd bonding primer to all prepared existing painted surfaces prior to application of new paint. Use manufacturer's recommended epoxy primer for new epoxy painting. Verify proper primer for the specific application with the finish paint manufacturer and submit to the Architect.
   e. Where encountering existing no-sheen finishes, primer may not be required if preparation of existing surfaces will produce sufficient bonding of new paint, as demonstrated to the Architect through industry standard pull testing.

7. If specified new coating is determined to be incompatible with exiting coatings, do not proceed, and notify Architect for direction.

D. Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
   1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
   2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
   3. Use only thinners approved by paint manufacturer and only within recommended limits.

E. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

3.3 APPLICATION

A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.
   1. Paint colors, surface treatments, and finishes are indicated in the paint schedules.
   2. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
   3. Provide finish coats that are compatible with primers used.
   4. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, grilles, convector covers, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.

5. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
6. Paint interior surfaces of ducts with a flat, non-specular black paint where visible through registers or grilles.
7. Paint back sides of access panels and removable or hinged covers to match exposed surfaces.
8. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.
9. Finish interior of wall and base cabinets and similar field-finished casework to match exterior.
10. Sand lightly between each succeeding coat and clean with tack-cloth.

B. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.
2. Omit primer over metal surfaces that have been shop primed and touchup painted.
3. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure that edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
4. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, and does not deform or feel sticky under moderate thumb pressure, and until application of another coat of paint does not cause undercoat to lift or lose adhesion.

C. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.
1. Brushes: Use brushes best suited for type of material applied. Use brush of appropriate size for surface or item being painted.
2. Rollers: Use rollers of carpet, velvet-back, or high-pile sheep's wool as recommended by manufacturer for material and texture required.
3. Spray Equipment: Use airless spray equipment with orifice size as recommended by manufacturer for material and texture required.

D. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate to achieve dry film thickness indicated. Provide total dry film thickness of the entire system as recommended by manufacturer.

E. Mechanical and Electrical Work: Painting of mechanical and electrical work is limited to items exposed in occupied spaces.

F. Mechanical items to be painted include, but are not limited to, the following:
1. Uninsulated metal piping.
2. Uninsulated plastic piping.
3. Pipe hangers and supports.
4. Tanks that do not have factory-applied final finishes.
5. Visible portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets.
6. Duct, equipment, and pipe insulation having "all-service jacket" or other paintable jacket material.
7. Mechanical equipment that is indicated to have a factory-primed finish for field painting.

G. Electrical items to be painted include, but are not limited to, the following:
1. Switchgear.

2. Panelboards.
3. Electrical equipment that is indicated to have a factory-primed finish for field painting.

H. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.

I. Prime Coats: Before applying finish coats, apply a prime coat, as recommended by manufacturer, to material that is required to be painted or finished and that has not been prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.

J. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.

K. Stipple Enamel Finish: Roll and redistribute paint to an even and fine texture. Leave no evidence of rolling, such as laps, irregularity in texture, skid marks, or other surface imperfections.

L. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

3.4 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements 01 70 00 - Execution and Closeout Requirements: Field inspecting, testing, adjusting, and balancing.

B. Owner reserves the right to test installed work at any time and as often as Owner deems necessary during the period when paint is being applied:
1. Owner will engage a qualified independent testing agency to sample paint material being used. Samples of material delivered to Project will be taken, identified, sealed, and certified in the presence of Contractor.
2. Owner may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from Project site, pay for testing, and repaint surfaces previously coated with the noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

3.5 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Collect waste material which may constitute fire hazard, place in closed metal containers, and remove daily from site.

C. After completing painting, clean glass and paint-spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

3.6 PROTECTION

A. Protect work of other trades, whether being painted or not, against damage from painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.

B. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.
1. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

3.7 SCHEDULE - EXTERIOR SURFACES

A. Scheduling of paint types below is a general reference for the Project. Where specific paint types on the Color/Finish Schedule in the drawings vary from below, the Color/Finish Schedule shall govern

B. Concrete and Plaster (other than acrylic-finished plaster to remain unpainted):
   1. Low-Luster Acrylic Finish: Two finish coats over specified primer.
      a. Primer: Specified exterior concrete and masonry primer.
      b. Finish Coats: Specified exterior low-luster acrylic paint.
   2. Fire Lane Curbs and other Curb Painting:
      a. Primer: Not required.
      b. Finish Coats: 2-coats specified fire lane curb paint.

C. Concrete Unit Masonry (standard CMU as used for backs of masonry site walls): Provide the following finish system over exterior concrete masonry:
   1. Elastomeric Paint: Reference separate section number09 96 53
   2. Two finish coats over specified block filler.
      a. Block Filler: Concrete unit masonry block filler.
      b. Finish Coats: Elastomeric paint.

D. Metals: Provide the following finish systems over exterior galvanized or non-galvanized metal surfaces indicated to be painted:
   1. Steel doors and frames, railings, steel masonry lintels, steel stairs:
      a. Two coats specified urethane alkyd enamel over specified primer or shop primer.
   2. Miscellaneous piping, bollards, equipment supports indicated to be painted and not scheduled as urethane alkyd:
      a. Primer: Specified exterior metal primer.
      b. Finish Coats: Two coats specified exterior full-gloss alkyd enamel.
   3. Field Welds and Cuts on Galvanized Metal: Apply 2-coats of specified zinc-rich coating over wire-brushed and cleaned galvanized metal.

3.8 SCHEDULE - INTERIOR SURFACES (EXCEPT EPOXY)

A. Scheduling of paint types below is a general reference for the Project. Where specific paint types on the Color/Finish Schedule in the drawings vary from below, the Color/Finish Schedule shall govern.

B. Concrete (other than concrete masonry units): Provide the following paint systems over interior concrete:
   1. Primer: Specified interior concrete and masonry primer.
   2. Finish Coats: Interior low-VOC acrylic enamel.
      a. Semigloss finish in Classrooms and Laboratories.
      b. Eggshell/satin finish elsewhere unless otherwise scheduled.

C. Concrete Unit Masonry: Provide the following finish systems over interior concrete masonry units, except where scheduled for epoxy:
   1. Block Filler: Specified concrete unit masonry block filler.
   2. Finish Coats: 2-coats specified interior low-VOC latex enamel.
      a. Semigloss finish in Classrooms and Laboratories.
      b. Eggshell/satin finish elsewhere unless otherwise scheduled.

D. Gypsum Board Partitions: Provide the following finish systems over interior gypsum board partitions (unless otherwise scheduled):
   1. Primer: Specified interior gypsum board primer.
   2. Finish Coats: 2-coats specified interior low-VOC latex enamel.
      a. Semigloss finish in laboratory and prep.rooms, restrooms, custodial closets, wet areas.
      b. Satin finish in classrooms and corridors.
      c. Flat finish (lback) at “Black Box” theater room.

E. Gypsum Board Ceilings and Furrings: Provide the following finish systems over interior gypsum board ceilings and furrings in dry or normal humidity areas:
1. Eggshell/Satin: Zero-VOC Latex Enamel Finish: Two finish coats over specified primer.
2. Primer: Interior gypsum board primer.
3. Finish Coats at typical dry or low humidity areas: 2-coats specified interior Eggshell/Satin low-VOC latex enamel.
4. Finish Coats in wet or high humidity areas: 2-coats specified interior Semigloss low-VOC latex enamel.

F. Metals: Provide the following finish systems over exterior galvanized or non-galvanized metal surfaces indicated to be painted:
1. Stair treads, risers, and stringers; railings; other items specifically indicated for urethane alkyd enamel.
a. Two coats specified urethane alkyd enamel over specified primer or shop primer.
2. Miscellaneous piping, bollards, equipment supports; loose lintels.
a. Primer: Specified metal primer or shop primer.
b. Finish Coats: Two coats specified exterior full-gloss alkyd enamel.
3. Field Welds and Cuts in Galvanized Metals: Apply 2-coats of specified zinc-rich coating over wire-brushed and cleaned galvanized metal.
4. Removable door mullions and wall hanger brackets: Spray apply satin black enamel to all surfaces of removable mullions (steel or aluminum), as well as their respective wall hanging brackets.
5. Metals with intumescent paint: Coordinate with intumescent paint manufacture.

G. Exposed roof structure and roof deck (including piping, conduit, etc.): provide the following finish systems:
1. Undercoat: Specified interior dryfall paint.
2. Finish coat: Specified interior dryfall paint.

3.9 SCHEDULE - INTERIOR EPOXY COATINGS

A. Scheduling of paint type below is a general reference for the Project. Where specific paint types on the Color/Finish Schedule in the drawings vary from below, the Color/Finish Schedule shall govern

B. Concrete Unit Masonry or Concrete: Provide the following epoxy system over interior concrete masonry or rubbed concrete:

1. Semigloss Epoxy Finish: Two finish coats over specified primer.

a. Block Filler: Concrete unit masonry block filler.

b. Finish Coats: 2-coats specified interior water based semigloss epoxy finish.

C. Gypsum Board: Provide the following epoxy systems over interior gypsum board surfaces:
1. Semigloss Epoxy Finish: Two finish coats over specified primer.
a. Primer: Specified high performance gypsum board primer.
b. Finish Coats: 2-coats specified interior water based semigloss epoxy finish.

3.10 SCHEDULE - INTERIOR TRANSPARENT COATINGS

A. Transparent Finished Woodwork: Provide the following catalyzed lacquer system over wood surfaces:
1. Stain Coat: Specified interior oil wood stain where specifically indicated. Provide 1 or 2 coats as required to achieve selected uniform color.
2. Finish Coats: 2-coats specified interior polyurethane satin finish.
3. Lightly sand between all coats for best adhesion. Wipe with tack-cloth.

END OF SECTION

SECTION 09 96 53 - ELASTOMERIC COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. This Section includes surface preparation and application of elastomeric coatings to exterior surfaces as indicated.
2. Included is inside CMU face of freestanding courtyard walls, exterior face of single-wythe walls, and other areas as may be indicated.

B. Related Sections:
1. Section 09 96 53 – Elastomeric Coatings.

1.2 PERFORMANCE REQUIREMENT

A. Provide elastomeric coating systems with the following properties as determined by the test methods indicated:

B. Elongation at Break: Not less than 280 percent at 77 deg F and not less than 50 percent at 0 deg F according to ASTM D 412.

C. Low-Temperature Flexibility: Passes a 1/8 inch, 180 degree mandrel bend at minus 15 deg F at 20 mil dry film thickness according to ASTM C 711.

D. Water-Vapor Transmission: Not less than 2.0 perms according to ASTM E 96.

E. Wind-Driven Rain Resistance: No water penetration according to procedures in FS TT-C-555.

F. Minimum Solids Content by Volume: Not less than 45 percent.

1.3 SUBMITTALS

A. Product Data: For each elastomeric coating system specified. Include block fillers and primers.
1. Material List: An inclusive list of each required coating material. Indicate each material and cross-reference the specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
2. Manufacturer's Information: Manufacturer's technical information and instructions for handling, storing, and applying each coating material proposed for use.
3. Certification by elastomeric coating manufacturer that products supplied comply with local regulations controlling use of VOCs.

B. Samples for Verification: Of each color and material to be applied, with texture to simulate actual conditions, on representative samples of actual substrate.
1. Provide stepped samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing samples for review. Resubmit until required sheen, color, and texture are achieved.
2. Provide a list of materials and applications for each coat of each sample. Label each sample for location and application.
3. Submit samples on the following substrates for the Architect's review of color and texture only:
a. Concrete, Masonry, and Stucco: Provide two 4 inch (100 mm) square samples of actual substrate material for each color and texture.
b. Concrete Masonry: Two 8 inch (200 mm) square samples of concrete masonry, with mortar joint in the center, for each color and texture.

C. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

D. Product Test Reports: From a qualified independent testing and inspecting agency indicating compliance of elastomeric coatings with requirements based on comprehensive testing within the last 2 years of current product formulations.

E. Material Certificates: In lieu of agency test reports, when permitted by the Architect, certificates signed by manufacturers certifying that each material complies with requirements specified.

1.4 QUALITY ASSURANCE

A. Applicator Qualifications: Engage an experienced applicator who has completed coating system applications similar in material and extent to those indicated for this Project with a record of successful in-service performance.

B. Source Limitations: Obtain block fillers, primers, and other undercoat materials from the same manufacturer as the finish coats.

C. Benchmark Samples (Mockups): Provide full-coat benchmark finish samples of each type of coating and substrate required on the Project. Comply with procedures specified in PDCA P5. Duplicate finish of approved prepared Samples. Benchmark finish shall be applied by the Subcontractor responsible for the Project Work.
   1. The Architect will select one exterior wall surface to represent surfaces and conditions for each substrate.
      a. Wall Surfaces: Prepare benchmark samples on at least 100 sq. ft. of wall surface.
   2. After benchmark samples are approved, these surfaces will be used to evaluate coating systems.
   3. Obtain the Architect's approval of benchmark samples before starting application of coatings.
   4. Final approval of colors will be from benchmark samples, not samples submitted for verification.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the Project site in manufacturer's original, unopened packages and containers bearing the manufacturer's name and label, and the following information:
   1. Product name or title of material.
   2. Manufacturer's stock number and date of manufacture.
   3. Contents by volume, for pigment and vehicle constituents.
   4. Thinning instructions (if permitted).
   5. Application instructions.
   6. Color name and number.
   7. Handling instructions and precautions.
   8. VOC content.

B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 deg F. Maintain containers used in storage of coatings in a clean condition, free of foreign materials and residue.
   1. Protect elastomeric coating materials from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily. Take necessary measures to ensure workers and work areas are protected from fire and health hazards resulting from handling, mixing, and applying coatings.

1.6 PROJECT CONDITIONS

A. Temperature Conditions: Apply coatings only when temperature of surfaces to be coated and surrounding air temperatures are between 50 and 90 deg F, unless otherwise permitted by manufacturer's written instructions.

B. Weather Conditions: Do not apply coatings in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; or at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.
   1. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before starting or continuing coating operation.

1.7 WARRANTY

A. Elastomeric Coating Warranty: Submit a written warranty, executed by the manufacturer, agreeing to repair or replace elastomeric coatings that fail within the specified warranty period. Failures include, but are not limited to, water penetration through the coating.

B. Warranty Period for Elastomeric Coatings: 5 years from the date of Substantial Completion.

1.8 EXTRA MATERIALS

A. Furnish extra elastomeric coating materials from the same production run as the materials applied in quantities described below. Package materials in unopened, factory-sealed containers for storage and identify with labels describing contents. Deliver extra materials to the Owner.
   1. Quantity: Furnish the Owner with an additional 5 percent, but not less than 1 gal. or 1 case, as appropriate, of each color applied.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with requirements, provide one of the products for each condition indicated in the Coating Schedule, or a comparable product by other manufacturer.

B. Manufacturers Names: The following manufacturers are referred to in the Coating Schedule by use of shortened versions of their names, which are shown in parentheses:
   1. BASF Construction Chemicals (Sonneborn), www.buildingsystems.basf.com
   2. BASF Construction Chemicals (Thoro), www.buildingsystems.basf.com
   3. Kelly-Moore Paints (Kelly-Moore), www.kellymoore.com
   4. PPG Industries, Inc. (PPG Pittsburgh Paints), www.pittsburghpaints.com
   5. Tamms Industries Company (Tamms), www.tamms.com

2.2 CRACK FILLERS

A. Crack Fillers: Provide the manufacturer's standard factory-formulated acrylic emulsion crack fillers that are compatible with substrate and finish coat materials indicated.

B. Products: Subject to compliance with requirements, crack fillers that may be incorporated in the Work include, but are not limited to, the following:
   1. For cracks up to 1/16 inch, provide the following:
      a. Kelly-Moore: 1116 Kel-Seal Brush Grade.
      b. PPG Pittsburgh Paints: Perma-Crete 4-1002/4-1003 Brush Grade.
      c. Sonneborn: Hydrocide 750 Brush Grade or Knife Grade Patching Compound.
      d. Thoro: Thorolastic Knife Grade.
   2. For cracks more than 1/16 inch, provide the following:
      a. Kelly-Moore: 1108 Kel-Seal Knife Grade.
      b. PPG Pittsburgh Paints: Perma-Crete 4-1002/4-1001 Knife Grade.

c. Sonneborn: Hydrocide 750 Knife Grade Patching Compound.
d. Tamms: Tamms Thin Patch.
e. Thoro: Thorolastic Knife Grade.

2.3 ELASTOMERIC COATING MATERIALS

A. Material Compatibility: Provide crack fillers, block fillers, primers, elastomeric finish coat materials, and related materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. Material Quality: Provide the manufacturer's best-quality elastomeric coating material complying with requirements of FS TT-C-555. Material containers not displaying manufacturer's product identification are not acceptable.
1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers.
2. Furnish manufacturer's material data and certificates of performance of proposed substitutions.

C. Colors and Textures: Provide custom colors and textures of the finished elastomeric coating system to match the Architect's samples.

D. Products: Smooth, factory-formulated, 100 percent acrylic elastomeric coatings:
1. Kelly-Moore: 1128 Kel-Seal Smooth Elastomeric Coating.
2. PPG Pittsburgh Paints: 4-110 Perma-Crete Pitt-Flex Elastomeric Coating Smooth.
3. Sonneborn: Hydrocide colorflex Waterproof Elastomeric Coating.
4. Tamms: Tammolastic Smooth Elastomeric Decorative and Protective Coating.
5. Thoro: Thorolastic Smooth Elastomeric Coating.
6. Primer: As recommended by the coating manufactuer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with the Applicator present, under which elastomeric coating systems will be applied for compliance with application requirements. Surfaces to receive elastomeric coatings must be thoroughly dry before coatings are applied.
1. Notify the Architect in writing of anticipated problems using coatings specified with substrates primed by others.
2. Begin application only after unsatisfactory conditions have been corrected and surfaces to receive coating are thoroughly dry.
3. Start of coating within a particular area will be construed as the Applicator's acceptance of surface conditions.

3.2 PREPARATION

A. General: Remove hardware and hardware accessories, plates, machined surfaces, light fixtures, and similar items already installed that are not to be coated. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.
1. After completing coating operations in each area, reinstall items removed, using workers skilled in trades involved.

B. Cleaning: Before applying coatings or other surface treatments, clean substrates of substances that could impair bond of coating systems. Remove oil and grease before cleaning.
1. Schedule cleaning and coating application so dust and other contaminates will not fall

on wet, newly coated surfaces.

C. Surface Preparation: Clean and prepare surfaces to be coated according to manufacturer's written instructions for the particular substrate conditions and as specified.
   1. Cementitious Surfaces: Prepare concrete, concrete masonry, stucco, and similar surfaces to receive elastomeric coatings. Remove efflorescence, chalk, dust, dirt, release agents, grease, oils, and similar conditions by water blasting followed by a clear water rinse.
      a. Remove mildew and neutralize surfaces according to manufacturer's written recommendations before patching materials are applied.
      b. Roughen as required to remove glaze. Use abrasive blast-cleaning methods if recommended by coating manufacturer.
      c. If hardeners or sealers have been used to improve concrete curing, use mechanical methods for surface preparation.
      d. Determine alkalinity and moisture content of surfaces to be coated by performing appropriate tests. Do not apply coatings over surfaces where moisture content exceeds that permitted in manufacturer's written instructions.
   2. Crack Repair: Fill cracks according to manufacturer's written recommendations before coating surfaces.
   3. Deep Hairline Cracks: Remove dust and dirt from around cracks. Remove mildew by sterilizing before filling. Apply manufacturer's recommended primer to cracks before patching. If shrinkage occurs after applying crack filler, apply additional filler material to cracks before initially applying elastomeric coatings.
      a. Cracks up to 1/16 Inch: Clean surface around cracks. Apply primer penetrating cracks as deeply as possible, overflowing crack 2 inches on each side. When primer is dry, apply manufacturer's recommended sealant, forced well into cracks using a brush, putty knife, or trowel. Smooth edges around cracks over primed area. Allow for sealant shrinkage when applying.
      b. Cracks up to 3/8 Inch: Open cracks to 1/4 to 3/8 inch wide and 1/8 inch deep. Clean cracks and surrounding area removing dust, dirt, and other impurities. Apply primer recommended by manufacturer with a brush to obtain uniform coverage and spread approximately 2 inches on each side of cracks. Fill cracks with manufacturer's recommended crack filler applied with a putty knife or trowel, and allow for shrinkage. If excessive shrinkage occurs, reapply crack filler.
   4. Material Preparation: Mix and prepare materials according to coating manufacturer's written instructions.
      a. Stir materials before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film that may form into material. Remove film and, if necessary, strain coating material before using.
      b. If manufacturer permits thinning, use only thinners recommended by manufacturer, and only within limits recommended by manufacturer.

3.3 APPLICATION

A. General: Apply elastomeric coatings to exposed surfaces indicated, according to manufacturer's written instructions.

B. Labels: Do not paint over UL, FM, or other code-required labels or equipment name, identification, performance rating, or nomenclature plates.

C. Scheduling Coating: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
   1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer.

2. If undercoats or other conditions show through final coat, apply additional coats until coating film is of uniform finish, color, and appearance. Ensure that surfaces, including edges, corners, crevices, welds, and exposed fasteners, receive a dry film thickness equivalent to that of flat surfaces.
3. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until coating has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and where application of another coat does not cause undercoat to lift or lose adhesion.

D. Application Procedures: Apply elastomeric coatings by brush, roller, or spray according to manufacturer's written instructions.
1. Brushes: Use brushes best suited for material being applied.
2. Rollers: Use professional-quality quick-release rollers of carpet, velvet back, or high-pile sheep's wool covers with a 1 to 1-1/4 inch nap as recommended by the manufacturer for material and texture required.
3. Spray Equipment: Use airless spray equipment with orifice size as recommended by the manufacturer for material and texture required.
4. Minimum Coating Thickness: Apply each material no thinner than manufacturer's recommended spreading rate. Provide total dry film thickness as recommended by the manufacturer.
5. Wherever spray application is used, apply each coat to provide equivalent hiding of brush-applied coats. Do not double back with spray equipment, building up film thickness of 2 coats in 1 pass.

E. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.

F. Prime Coats: If recommended by the manufacturer, apply a primer to material being coated before applying finish coats.

G. Brush Application: Brush out and work brush coats into surfaces in an even film. Eliminate cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Neatly draw glass lines and color breaks.

H. Roller Application: Keep the cover wet at all times; do not dry roll. Work in sections. Lay on required amount of material, working material into grooves and rough areas; then level material, working it into surface.

I. Spray Application: Use spray equipment for application only when permitted by manufacturer's written recommendations and authorities having jurisdiction.

J. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or recoat work not complying with specified requirements.

3.4 CLEANING

A. Cleanup: At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from the Project site.
1. After completing coating work, clean glass and spattered surfaces. Remove spattered coatings by washing, scraping, or other methods, being careful not to scratch or damage adjacent finished surfaces.

3.5 PROTECTION

A. Protect work of other trades from damage whether being coated or not. Correct damage by cleaning, repairing, replacing, and recoating as approved by the Architect. Leave in an undamaged condition.

B. Provide "Wet Paint" signs to protect newly coated finishes. Remove temporary protective wrappings provided by others to protect their work after completing coating operations.
   1. After construction activities of other trades are complete, touch up and restore damaged or defaced coated surfaces.

3.6 COATING SCHEDULE

A. Concrete Masonry: Provide the following elastomeric coating systems over exterior concrete masonry surfaces indicated to receive elastomeric coating:
   1. Block Filler: Manufacturer's recommended, factory-formulated, masonry block filler applied at spreading rate recommended by manufacturer to achieve a total dry film thickness of not less than 4 mils.
      a. Kelly-Moore: 521 Prime-N-Fill Heavy Duty Block Filler.
      b. PPG Pittsburgh Paints: 16-90 Pitt-Glaze Int/Ext Block Filler Acrylic Latex.
      c. Sonneborn: Colorflex Block Filler #749.
      d. Tamms: H/P Primer.
      e. Thoro: Super Quickseal Intermix with Thorosheen Tint Base.
   2. Primer: Factory-formulated primer, if recommended by manufacturer, applied at spreading rate recommended by manufacturer to achieve a total dry film thickness of not less than 4 mils.
   3. First and Second Finish Coats: Each coat applied at spreading rate recommended by manufacturer to achieve a total dry film thickness of not less than 7 mils per each coat.
      a. Kelly-Moore: 1128 Kel-Seal Smooth Elastomeric Coating.
      b. PPG Pittsburgh Paints: 4-110 Perma-Crete Pitt-Flex Elastomeric Coating Smooth.
      c. Sonneborn: Hydrocide colorflex Waterproof Elastomeric Coating.
      d. Tamms: Tammolastic Smooth Elastomeric Decorative and Protective Coating.
      e. Thoro: Thorolastic Smooth Elastomeric Coating.

END OF SECTION

SECTION 10 11 00 - VISUAL DISPLAY SURFACES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Fixed markerboards.
   2. Vinyl-faced tackboards. both fixed and sliding.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood grounds.

1.2 REFERENCES

A. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate wall elevations, dimensions, joint locations, and special anchor details and accessories.

C. Product Data: Submit data on each type of visual display surface specified.

D. Samples:
   1. Submit two panels, 8-1/2 x 11 inches in size, illustrating materials, colors, and textures of each visual display system specified.
   2. Submit two 6-inch long sections of each piece of aluminum trim specified, illustrating profile, color, and texture.

E. Manufacturer’s Certificates: Certify that vinyl tackboard coverings comply with surface burning characteristics specifies.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit Operation and Maintenance Data.

1.5 QUALITY ASSURANCE

A. Surface Burning Characteristics: Maximum 200/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

B. Flame Resistant Fabric: Passes when tested in accordance with NFPA 701, Test 1 or Test 2.

C. Source Limitations: Obtain all visual display surfaces from a single manufacturer.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.8 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish 50-year manufacturer warranty for magnetic markerboards.

C. Warranty: Include coverage of markerboard surface from discoloration due to cleaning, crazing or cracking, staining, and failing to retain original writing and erasing qualities.

PART 2 - PRODUCTS

2.1 VISUAL DISPLAY BOARDS

A. Manufacturers:
1. American Visual Display Products, LLC. www.americanvisualdisplay.com
2. Best-Rite Chalkboard Co. www.bestrite.com
3. Claridge Products and Equipment, Inc. www.claridgeproducts.com
4. General Binding Corporation, www.GBC.com
5. Lemco, Inc. www.adplemco.com
6. New Line Products www.newlineproduct.com.
7. Platinum Visual Solutions www.pvsusa.com.
8. Substitutions: Section 01 60 00 - Product Requirements.

2.2 COMPONENTS

A. Markerboards: Balanced, high-pressure-laminated, magnetic markerboards of 3-ply construction consisting of porcelain enamel face sheet, core material, and backing.
1. Face Sheet: 0.024-inch enameling grade steel especially processed for temperatures used in coating porcelain on steel. Coat exposed face and edges with a 3-coat process consisting of primer, ground coat, and color cover coat. Coat concealed face with a 2-coat process consisting of primer and ground coat. Fuse cover and ground coats to steel at manufacturer's standard firing temperatures, but not less than 1200 deg F.
a. Cover Coat: For magnetic markerboards, provide manufacturer's standard, light-colored, special writing surface with gloss finish intended for use with erasable dry markers.
2. Panel Construction:
a. Particleboard core specified below is usually retained because it is the most dimensionally stable core material offered. It is also available in 7/16- and 3/4-inch (11- and 19-mm) thicknesses, depending on manufacturer.
b. Core: 3/8 inch thick, particleboard core material complying with requirements of ANSI A208.1, Grade 1-M-1.
c. Backing Sheet: 0.015-inch thick, aluminum-sheet backing.
d. Laminating Adhesive: Manufacturer's standard, moisture-resistant, thermoplastic-type adhesive.
e. Panel Thickness: Nominal 1/2".

B. Vinyl-Fabric-Faced Tackboards: Mildew-resistant, washable vinyl fabric complying with FS CCC-W-408, Type II, weighing not less than 13 oz./sq. yd., laminated to 1/4 inch thick cork sheet. Provide fabric with a flame-spread rating of 25 or less when tested according to ASTM E 84. Provide color and texture as scheduled or as selected from manufacturer's standards.
1. Backing for Fixed Boards: Factory laminate cork face sheet under pressure to 3/8-inch thick fiberboard backing.
2. Reinforced Backing for Sliding Boards: 3/8” Honeycomb core.

C. Sliding Systems: Sliding tackboard panel in normal position is adjacent to framed interior window. Tackboard will be used infrequently to slide over window, providing full window

coverage, and exposed slider track on adjacent wall..

1. Sliding Panel: Specified vinyl-faced tackboard panel laminated to 3/8” honeycomb core. overall thickness nominal 1/2”.
2. Frames: Provide custom 1-1/2 inch wide clear anodized box frames to match corridor window frames.
3. Panel Sizes: As indicated in the drawings.
4. Configuration(s) as indicated in the drawings

2.3 ACCESSORIES

A. Metal Trim and Accessories: Fabricate frames and trim of not less than 0.062 inch thick extruded aluminum alloy, size and shape as indicated, to suit type of installation. Provide straight, single-length units. Keep joints to a minimum. Miter corners to a neat, hairline closure. Where tackboards are combined with magnetic markerboards, chalk trays and map rails shall be continuous across width of combination unit.
   1. Where size of visual display boards or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer's standard structural support accessories to suit conditions indicated.
   2. Marker Tray: Manufacturer's standard, continuous, box-type, aluminum tray with slanted front and cast-aluminum end closures for each markerboard.
   3. Map Rail: Furnish map rail at top of each unit, complete with the following accessories:
      a. Display Rail: Provide continuous cork display rail, 2 inches wide, integral with map rail.
      b. End Stops: Provide one end stop at each end of map rail.
      c. Map Hooks: Provide 2 map hooks with flexible metal clips for every 48 inches of map rail or fraction thereof. Provide a minimum of 6 map hooks per classroom.
      d. Flag Holder: Provide two flag holders for each room.
      e. Spring Clips: Provide 4 spring clips per each room.
      f. Roller Brackets: Provide 2 roller brackets per each room.

B. Adhesives: Type used by manufacturer, waterproof.

C. Music Staff Lines: If indicated provide manufacturer’s permanently fused music staff lines where indicated or directed; 5 lines each staff with 1" between each line; 5" between each staff and 3" boarder at top and bottom; Line thickness 1/16".

2.4 FABRICATION

A. Magnetic Markerboards: Laminate facing sheet and backing sheet to core material under pressure with manufacturer's recommended flexible, waterproof adhesive.
   1. Cut joints straight and true. Space joints symmetrically. Fit and match panels before shipment to provide a continuous, uniform writing surface.
   2. Length: Furnish panels approximately equal in length with permissible variation not more than 3 inches in either direction of equal spacing. Allow 1/4 inch clearance at trim in length and width for fitting. Provide lengths of panels in each space as follows:
      a. Up to 16 feet, 1 panel.
      b. More than 16 feet but less than 32 feet, 2 panels.

B. Assembly: Provide factory-assembled chalkboard and tackboard units, unless field-assembled units are required.
   1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, balanced around center of board, as acceptable to Architect.
   2. Provide manufacturer's standard vertical joint system between abutting sections of chalkboards.

3. Provide manufacturer's standard mullion trim at joints between chalkboards and tackboards.

2.5 FACTORY FINISHING

A. Porcelain Enamel: Glass fibered enamel, baked to vitreous surfaces; Porcelain Enamel Institute Type A; white color.

B. Aluminum Frame, Chalk Rail, and Accessories: Class II clear anodized finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify internal wall blocking is ready to receive Work and positioning dimensions are as indicated on shop drawings.

3.2 INSTALLATION

A. Deliver and install visual display boards completely assembled in one piece without joints, where possible. If dimensions exceed panel size, install in 2 or more pieces of equal length as acceptable to Architect. When installation requires delivery in separate units, pre-fit components at the factory, disassemble for delivery, and make final joints at the site. Use splines at joints to maintain surface alignment.

B. Establish top of chalk rail and bottom of perimeter frame at height indicated on Drawings.

C. Secure units level and plumb.

D. Coordinate units with grounds, trim, and accessories. Join parts with a neat, precision fit.

3.3 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean units in accordance with manufacturer’s instructions.

END OF SECTION

SECTION 10 14 00 – GRAPHICS PANELS, PLAQUES, AND BUILDING LETTERS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following types of signs:
   1. Room Identification plaques.
   2. Dimensional letters and numbers.
   3. Cast metal plaques.

B. Related Sections: The following Sections contain requirements that relate to this Section:
   1. Section 01 50 00 - Temporary Facilities: Temporary project identification signs.
   2. Section 10 14 26 - Post and Panel Signs: Freestanding exterior signs.
   3. Section 14 24 00 - Hydraulic Elevators: Elevator door jamb markings.
   4. Division 23 for labels, tags, and nameplates for mechanical equipment.
   5. Division 26 for labels, tags, and nameplates for electrical equipment.
   6. Division 26 for illuminated exit signs.

1.2 SUBMITTALS

A. General: Submit the following according to the Conditions of the Contract and Division 1 Specification Sections.
   1. Product data for each type of graphics panel and plaque specified, including details of construction relative to materials, dimensions of individual components, profiles, and finishes.
   2. Shop drawings:
      a. Drawings showing fabrication and erection of graphics panels. Include plans, elevations, and large-scale sections of typical members and other components. Show anchors, grounds, layout, reinforcement, accessories, and installation details.
      b. Schedule of room identification plaques with information about each individual sign furnished, including, but not limited to: door number, room name and number, sign type, sign text, and sign illustration graphics.
         1) Schedule shall be prepared by contractor or supplier; schedule will not be furnished by Architect.
         2) Provide message list for each plaque required, including large-scale details of wording and lettering layout.
   3. For custom graphics panels anchored to permanent construction, provide installation drawings indicating size and type of stand-offs and anchors.

B. Templates:
   1. Furnish full-size spacing templates for individually mounted dimensional letters and numbers.
   2. Furnish full-size rubbings for metal plaques.

C. Samples for initial selection of color, pattern, and texture:
   1. Plastic Sheets and Plastic Laminates: Manufacturer's color charts consisting of actual sections of material including the full range of colors available for each material required.

D. Samples for verification of color, pattern, and texture selected and compliance with requirements indicated:
   1. Plastic Sheets: Provide a sample panel not less than 8-1/2 inches by 11 inches for each panel color selected. Include a representative sample of the graphics film applied to the sample(s).
   2. Room Identification Panels: Provide full-size representative panel in the selected

color, finish, and graphics required. Sample panel may be used in project installation after approval.

3. Dimensional Letters: Provide full-size representative samples of each dimensional letter type required, showing letter style, color, and material finish and method of attachment. Sample letters may be used in project installation after approval.
4. Stand-Off Anchors: Submit one complete unit in selected size, configuration, and finish.

1.3 QUALITY ASSURANCE

A. Sign Fabricator Qualifications: Firm experienced in producing signs similar to those indicated for this Project, with a record of successful in-service performance, and sufficient production capacity to produce sign units required without causing delay in the Work.

B. Single-Source Responsibility: For each separate sign type required, obtain signs from one source of a single manufacturer.

C. Design Concept: The Drawings indicate sizes, profiles, and dimensional requirements of signs and are based on the specific types and models indicated. Sign units by other manufacturers may be considered provided deviations in dimensions and profiles do not change the design concept as judged by the Architect. The burden of proof of equality is on the proposer.

D. Regulatory Requirements: Comply with the Americans with Disabilities Act (ADA) and with code provisions as adopted by authorities having jurisdiction.

1.4 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.5 PROJECT CONDITIONS

A. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication to ensure proper fitting. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:

1. Manufacturers of Panel Signs:
   a. ABC Architectural Signing System.
   b. Allenite www.allenitesigns.com
   c. Andco Industries Corp. www.andco.com
   d. APCO Graphics, Inc. www.apcoline.com
   e. Architectural Graphic Products
   f. ASI Sign Systems, Inc. www.asisign.com
   g. Bayuk Graphic Systems, Inc.
   h. Best Manufacturing Company www.bestsigns.com
   i. Charleston Industries, Inc. www.cisigns.com
   j. DGS Corp.

k. Diskey Sign Corp. www.diskeysign.com
l. Environmental Graphic Systems, Inc. www.egs-signs.com
m. Modulex. www.modulex.com
n. Mohawk Sign Systems www.mohawksign.com
o. Poblocki & Sons, Inc. www.poblocki.com/home.html
p. South Texas Graphic Specialties, Inc.
q. Spanjer Brothers, Inc.
r. The Supersine Company
s. Vomar Products, Inc. www.vomarproducts.com

2. Manufacturers of Dimensional Letters:
a. Andco Industries Corp. www.andco.com
b. A.R.K. Ramos Manufacturing Company, Inc. www.arkramos.com
c. ASI Sign Systems, Inc. www.asisign.com
d. Gemini, Inc. www.signletters.com
e. Matthews International Corp. www.matthewsisd.com
f. Metal Arts. www.metalartslettersandplaques.com
g. Metallic Arts, Inc. www.metallicarts.com
h. The Southwell Company. www.southwellco.com
i. Spanjer Brothers, Inc.
j. Vomar Products, Inc. www.vomarproducts.com

3. Manufacturers of Cast Plaques:
a. Andco Industries Corp. www.andco.com
b. A.R.K. Ramos Manufacturing Company, Inc. www.arkramos.com
c. Gemini, Inc. www.signletters.com
d. Metal Arts. www.metalartslettersandplaques.com
e. OMC Industries, Inc. www.omc-bronze.com
f. The Southwell Company www.southwellco.com
g. Vomar Products, Inc. www.vomarproducts.com

2.2 MATERIALS

A. Room Identification Plaques - Provide custom laminated panels constructed of matte-finished clear acrylic with opaque color coating subsurface applied, or plastic laminate in selected color and finish:

1. Cast Acrylic Sheet: Provide cast (not extruded or continuous cast) methyl methacrylate monomer plastic sheet, in sizes and thicknesses indicated, with a minimum flexural strength of 16,000 psi when tested according to ASTM D 790, with a minimum allowable continuous service temperature of 176 deg F (80 deg C), and of the following general types:
a. Transparent Sheet: Where sheet material is indicated as "clear," provide colorless sheet in matte finish, with light transmittance of 92 percent, when tested according to the requirements of ASTM D 1003.
b. Opaque Sheet: Where sheet material is indicated as "opaque," provide colored opaque acrylic sheet in colors and finishes as selected from the manufacturer's standards.

2. Plastic Laminate Sheet: High Pressure Decorative Laminate: NEMA LD 3, GP50 or GP28 Color, pattern, and surface texture as selected by the Architect from laminate manufacturer’s full range of colors and finishes.

a. Manufacturers: Wilson Art, Formica, Nevamar, or Pionite.

3. Permanently laminate face panels to backing sheets of material and thickness indicated using the manufacturer's standard process.

4. Fabricate signs with edges mechanically and smoothly finished to conform with the following requirements:
    a. Edge Condition: Square, unless otherwise indicated.
    b. Corner Condition: Round corners, unless otherwise indicated.
5. Colored Coatings for Acrylic Plastic Sheet: Use colored coatings, including inks and paints for copy and background colors that are recommended by acrylic sheet or plastic laminate manufacturers for optimum adherence and color fastness.
6. Graphic Content and Style: Provide sign copy that complies with the requirements indicated for size, style, spacing, content, position, material, finishes, and colors of letters, numbers, and other graphic devices.
7. Subsurface Copy: Apply copy to the back face of clear acrylic sheet forming the panel face by process indicated to produce precisely formed opaque images free from rough edges.
    a. Use reverse silk-screen process to print copy; overspray the copy with an opaque background color coating.
    b. Use Dupont Chromalin heat- and pressure-laminated photopolymer film system to form copy and background color.
    c. Manufacturer has the option of selecting either process indicated above, or using subsurface engraving process, as appropriate to the copy form and the economics of production.
8. Raised Copy: Machine-cut copy characters from matte-finished opaque acrylic sheet and chemically weld onto the acrylic sheet forming sign panel face. Produce precisely formed characters with square cut edges free from burrs and cut marks.
    a. Raised Copy Thickness: Not less than 1/32 inch.

B. Dimensional Letters and Numbers:

1. Cast Letters and Numbers: Form individual letters and numbers by casting. Produce characters with smooth, flat faces, sharp corners, and precisely formed lines and profiles, free from pits, scale, sand holes, or other defects.
    a. Cast aluminum with clear anodized finish, in styles and heights as indicated.
    b. Depending on installation type cast lugs into the back or bottom of characters and tap to receive threaded mounting studs.
    c. Comply with requirements indicated for color, finish, style, and size.
2. Mounts
    a. Back-Mounted: Cast lugs into the back of characters and tap to receive threaded brass or stainless steel mounting studs for mounting to building walls.
    b. Free-Standing Mounted: Cast lugs into the bottom of characters and tap to receive threaded stainless steel mounting studs for bolting to continuous aluminum angle.
3. Letter Heights and Styles: As indicated.
4. Miscellaneous:
    a. Aluminum Castings: Provide aluminum castings of alloy and temper recommended by the sign manufacturer for the casting process used and for

the color and finish indicated.

b. Fasteners: Use concealed fasteners fabricated from metals that are not corrosive to the sign material and mounting surface.

c. Anchors and Inserts: Use stainless steel anchors and inserts for exterior installations and where exposed to view. Use aluminum or brass studs let into back of letters for anchoring letters to masonry or concrete walls.

C. Cast Metal Plaques

1. Castings shall be free from pits, scale, sand holes, or other defects. Comply with requirements specified for metal, border style, background texture, and finish and with requirements shown for thickness, size, shape, and copy. Hand-tool and buff borders and raised copy to produce the manufacturer's standard satin polished finish.

2. Basis of Design: Style AL-300 as manufactured by A.R.K. Ramos and distributed locally by South Texas Graphics, Inc.
   a. Base Plaque: Cast aluminum, 24”W x 18”H x ¾”D.
   b. Border: None.
   c. Edge: Square.
   d. Background Texture: Manufacturer's standard leatherette finish.
   e. Background and Edge Finish: Baked-enamel black color.
   f. Raised Letters and Characters: Satin aluminum natural color.

2.3 FINISHES

A. Colors and Surface Textures: For exposed sign material that requires selection of materials with integral or applied colors, surface textures or other characteristics related to appearance, provide color matches indicated, or if not indicated, as selected by the Architect from the manufacturer's standards.

B. Metal Finishes: Comply with NAAMM "Metal Finishes Manual" for finish designations and applications recommendations.

C. Aluminum Finishes: Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.
1. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 607.1.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Locate sign units and accessories where indicated, using mounting methods of the type described and in compliance with the manufacturer's instructions.
1. Install signs level, plumb, and at the height indicated, with sign surfaces free from distortion or other defects in appearance.

B. Wall-Mounted Panel Signs: Attach panel signs to wall surfaces using the methods indicated below:
1. Vinyl-Tape Mounting: Use double-sided foam tape to mount signs to smooth, nonporous surfaces. Do not use this method for vinyl-covered or rough surfaces.

2. Silicone-Adhesive Mounting: Use liquid silicone adhesive recommended by the sign manufacturer to attach sign units to irregular, porous, or vinyl-covered

surfaces. Use double-sided vinyl tape where recommended by the sign manufacturer to hold the sign in place until the adhesive has fully cured.

3. Shim Plate Mounting: Provide 1/8-inch-thick concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other mounting methods are not practicable. Attach the plate with fasteners and anchors suitable for secure attachment to the substrate. Attach panel sign units to the plate using the method specified above.

4. Where plaques are mounted on glass and are visible from back side, provide same-size, same-color blank plate on opposite side of glass.

C. Individual Dimensional Letters and Numbers:

1. Freestanding Characters: Mount using threaded stainless steel studs set in tapped lugs at bottom of letters and shop-bolted to continuous anodized aluminum support plate. Alternate mounting using heli-arc welding prior to anodizing.

   a. Continuous Support: Bolt continuous aluminum angle supports to top of masonry walls using stainless steel expansion anchors.

   b. For security spot weld bolt heads to mounting angle.

2. Back-Mounted Characters: Mount using threaded stainless steel or brass studs set in tapped lugs at backs of letters. Drill holes in finished masonry slightly larger than threaded studs and set in two-component clear epoxy adhesive. Use sufficient epoxy such that small amount of material pushes out of the mounting holes and seals to back of letters or spacers.

D. Custom Graphics Panels:

1. Mount manufacturer’s brass mounting stud to steel frame structure using 1/4” bolt with machine threads or self-cutting threads for steel. Pre-drill hole in steel structure sized for self-cutting threads or drilled and tapped for machine threads.

2. Mount threaded stand-off barrel onto fixed threaded brass stud.

3. Locate stand-offs as indicated in the drawings, nominal 24” o.c. each way.

4. Secure graphics panels to stand-off barrels by installing threaded cap into barrel. If barrel has no set screw, provide epoxy coating of nominal 1/2” of threads prior to installing cap.

E. Cast Metal Plaques: Mount plaques using one of the following methods dependent on substrate.

1. Concealed Mounting in Masonry: Mount the plaques by inserting threaded studs into tapped lugs on the back of the plaque. Set in predrilled holes filled with quick-setting cement.

2. Mounting in Drywall: Coordinate with Contractor for installation of solid wood blocking between studs for mounting of plaque. Use countersunk, flat-head, square-drive stainless steel mounting screw in each corner.

3.2 CLEANING AND PROTECTION

A. After installation, clean soiled sign surfaces according to the manufacturer's instructions. Protect units from damage until acceptance by the Owner.

END OF SECTION

SECTION 10 14 26 - POST AND PANEL SIGNS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Non-illuminated single-panel-type post and panel signs.

B. Related Sections:
   1. Section 01 50 00 - Temporary Facilities: Temporary project identification, information, and directional signs.
   2. Section 03 30 00 - Cast-In-Place Concrete: Concrete fill for post holes.
   3. Section 10 14 00 - Signs: Wall-mounted interior signs.

1.2 SUBMITTALS

A. Product Data: For each type of post and panel sign specified. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes. Provide manufacturer's written instructions for maintaining and cleaning sign surfaces.

B. Shop Drawings: For each type of post and panel sign indicated.
   1. Provide plans, elevations, and at least 3/4-inch (1:20) scale sections of typical members and other components. Show anchors, reinforcement, accessories, layout, and installation details.
   2. Provide message list, including details of wording and lettering layout, at least half size. Include full-size details of special graphics.
   3. Provide detail of break-away bolted base.

C. Samples for Verification: Of the following products, showing color, texture, or finish selected. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected. Prepare Samples from the same material to be used for the Work.
   1. Aluminum: Samples of each finish type and color, on 6-inch long sections of extrusions and squares of sheet or plate at least 4 inches.
   2. Include a representative sample of the graphic-image process required in each panel. Show graphic style and colors and finishes of letters, numbers, and other graphic devices.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the sign manufacturer and who has completed installation of post and panel signs similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

B. Source Limitations: Obtain post and panel signs through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of post and panel signs and are based on the specific type and model indicated. Other manufacturers' signs may be considered provided deviations are minor and do not change the design concept and are approved by the Architect.

D. Do not modify intended aesthetic effects, as judged solely by the Architect, except with Architect's approval and only to the extent needed to comply with performance requirements. Where modifications are proposed, submit comprehensive explanatory data to Architect for review.

1.4 DELIVERY AND HANDLING

A. Delivery: Provide protective covering or crating as recommended by the manufacturer to protect sign components and surfaces against damage during transportation and delivery.
   1. Coordinate delivery time so signs can be installed within 24 hours of receipt at Project site.

B. Handle signs carefully to prevent breakage, surface abrasion, denting, soiling, and other defects. Comply with the manufacturer's written handling instructions for unloading components subject to damage.
   1. Inspect sign components for damage on delivery.
   2. Do not install damaged sign components.
   3. Repair minor damage to signs, provided the finished repair is equal in all respects to the original work and is approved by Architect; otherwise, remove and replace damaged sign components.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Apco Graphics Inc., www.apcosigns.com.
   2. ASI Sign System, Inc., www.asisign.com
   3. Charleston Industries, Inc., www.cisigns.com.
   4. Vomar Products, Inc., www.vomarproducts.com.

2.2 MATERIALS

A. Aluminum Sheet or Plate: Alloy and temper recommended by the aluminum producer and finisher for the type of use and finish indicated, and with at least the strength and durability properties specified in ASTM B 209 (ASTM B 209M) for 5005-H15 alloy.

B. Aluminum Extrusions: Alloy and temper recommended by the aluminum producer and finisher for the type of use and finish indicated, and with at least the strength and durability properties specified in ASTM B 221 (ASTM B 221M) for 6063-T5 alloy.

C. Vinyl Film: Opaque, non-reflective vinyl film, 0.0035-inch minimum thickness, with pressure-sensitive adhesive backing, suitable for exterior applications.

D. Colored Coatings for Plastic Sheet: Use nonfading colored coatings, including inks and paints for copy and background colors that are recommended by the manufacturers for optimum adherence to the type of surface used.

2.3 COMPONENTS

A. Aluminum Posts: Manufacturer's standard 0.125-inch thick, structural aluminum tubing extruded from 6063-T5 alloy, with vertical slots to engage sign panels. Provide stop blocks in slots to hold panels in position. Include post caps, fillers, spacers, junction boxes, access panels, and related accessories required for a complete installation. Comply with the following requirements for post shape, finish, and mounting method:
   1. Post Shape: 2 by 2 inches square.
   2. Post/Frame Finish: Clear anodized aluminum.
   3. Post Mounting Method:
      a. Unpaved areas: Provide sign posts of length required for permanent installation by direct-burial mounting method.
      b. Paved areas: Provide break-away mounting detail as indicated in the drawings.

B. Sign Panels: Provide smooth, even, level sign panel surfaces constructed to remain flat under installed conditions within a tolerance of plus or minus 1/16 inch measured diagonally

from corner to corner.

1. Framed Single-Sheet Panels: Provide framed single-sheet sign panels with edges mechanically and smoothly finished to conform to the following:
   a. Panel Material: 0.125-inch thick aluminum plate.
   b. Panel Finish: Baked enamel.
2. Frame Material: Extruded aluminum, fabricated to profile indicated with integral slots to receive sign message panel; comply with the following:
   a. Frame Finish: Clear anodized aluminum.
   b. Corner Condition: Square corners.

C. Graphic Content and Style: Provide sign copy to comply with requirements indicated for sizes, styles, spacing, content, positions, materials, finishes, and colors of letters, numbers, symbols, and other graphic devices.

1. Surface-Applied, Die-Cut Vinyl Copy: Provide die-cut characters from nonreflective vinyl film with pressure-sensitive adhesive backing. Apply copy to exposed face of sign panel.

2.4 ACCESSORIES

A. Fasteners: Use concealed fasteners fabricated from metals that are noncorrosive to sign material and mounting surface.

B. Anchors and Inserts: Use nonferrous metal or hot-dip galvanized anchors and inserts. Use toothed steel or lead expansion-bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete.

2.5 FABRICATION

A. General: Provide manufacturer's standard double-post, single-panel-type post and panel signs. The completed sign assembly shall consist of a message panel supported between 2 posts. Comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction.

1. Allow for thermal movement resulting from a maximum ambient temperature change (range) of 100 deg F. Design, fabricate, and install post and panel sign assemblies to prevent buckling, opening up of joints, and overstressing of welds and fasteners.
   a. Base design on actual surface temperatures of metals due to both solar heat gain and nighttime-sky heat loss.
2. Welded Connections: Comply with AWS standards for recommended practices in shop welding. Provide welds behind finished surfaces without distortion or discoloration of exposed side. Clean exposed welded surfaces of welding flux and dress on exposed and contact surfaces.
3. Mill joints to a tight, hairline fit. Form joints exposed to the weather to exclude water penetration.
4. Preassemble signs in the shop to the greatest extent possible to minimize field assembly. Disassemble signs only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation, in a location not exposed to view after final assembly.
5. Conceal fasteners if possible; otherwise, locate fasteners where they will be inconspicuous.

B. Posts: Fabricate posts to lengths required for mounting method indicated.

1. Direct Burial Type: For permanent sign installation in non-paved area, provide posts 36 inches longer than height of sign to permit direct embedment in concrete foundations.
2. Break-Away Type: For sign installations within paved areas, provide break-away type base for posts that will protect paved areas in the event of impact.

C. Panels: Form panels to required size and shape. Comply with requirements indicated for design, dimensions, finish, color, and details of construction.

1. Increase metal thickness or reinforce with concealed stiffeners or backing materials as required to produce surfaces without distortion, buckles, warp, or other surface deformations.
2. Continuously weld joints and seams, unless other methods are indicated; grind, fill, and dress welds to produce smooth, flush, exposed surfaces with welds invisible after final finishing.

2.6 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.

B. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.

C. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Apply baked enamel complying with paint manufacturer's specifications for cleaning, conversion coating, and painting.

D. Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 603.8, except with a minimum dry film thickness of 1.5 mils, medium gloss.

E. Color: As indicated by manufacturer's color designations.

F. Colors and Textures: For exposed sign material that requires selection of materials with integral or applied colors, textures, or other characteristics related to appearance, provide color matches as selected by Architect from manufacturer's standards.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Locate sign units and accessories where indicated, using mounting methods of type described and complying with manufacturer's written instructions.

B. Excavation: In firm, undisturbed or compacted soil, drill or (using a post-hole digger) hand-excavate holes for each post to the minimum diameter recommended by sign manufacturer, but at least 4 times the largest post cross-section.

C. At unpaved areas excavate hole depths approximately 3 inches (75 mm) lower than required post bottom, with bottom of posts set at least 36 inches (900 mm) below finished grade.

D. At paved areas provide concrete footing with break-away mounting as indicated in the drawings.

E. Install signs level, plumb, and at height indicated, with surfaces free from distortion or other defects in appearance.

3.2 CLEANING AND PROTECTING

A. At completion of installation, clean soiled surfaces of sign units according to manufacturer's written instructions.

B. Protect installed sign units from damage until acceptance by Owner.

END OF SECTION

SECTION 10 21 15 – SOLID PLASTIC TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: Solid plastic toilet compartments and urinal screens, overhead braced.

1.2 REFERENCES

A. ASTM International:
1. ASTM A666 - Standard Specification for Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate partition plan, elevation views, dimensions, details of wall and floor supports, and door swings.

C. Product Data: Submit data on panel construction and each type of hardware and accessory.

D. Samples: Submit two samples, 12 x 12 inch in size, illustrating panel finish, color, and sheen.

E. Manufacturer's Installation Instructions: Submit special procedures and perimeter conditions requiring special attention.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with Texas Accessibility Standards (TAS).

PART 2 - PRODUCTS

2.1 SOLID PLASTIC TOILET COMPARTMENTS

A. Manufacturers:
1. Accurate Partitions Corporation www.accuratepartitions.com
2. Ampco www.ampco.com
3. General Partitions Mfg. Corp. www.genpartitions.com
4. Metpar Corp., www.metpar.com.
5. Nevco www.nevco.com
6. PSISC (Columbia Partitions), www.psisc.com.
7. Scranton Products (Santana/Comtec/Capitol) www.scrantonproducts.com
8. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Floor mounted and overhead braced.

2.2 COMPONENTS

A. Door, Panel and Pilaster Construction: Solid, high-density polyethylene (HDPE) or polypropylene (PP) panel material, not less than 1 inch thick, seamless, with eased edges and with homogenous color and pattern throughout thickness of material.
1. Color and Pattern: One color and pattern in each room as selected from manufacturer’s full range of colors and patterns.

B. Urinal Screens: Floor-mounted and wall-braced, of same material as toilet compartments. Brace with 2” x 2” x 1/8” thickness clear anodized extruded aluminum tube with concealed stainless steel or aluminum floor mounting plate and bolted and braced to

building structure above ceiling.

2.3 ACCESSORIES

A. Pilaster Shoe: Formed stainless steel sheet, ASTM A666 Type 304, with No. 4 finish; 3-inch high; concealed floor fastenings.

B. Head Rails: Hollow extruded aluminum tube with anti-grip profile and cast socket wall brackets; clear anodized finish.

C. Brackets: Polished stainless steel or solid plastic, full-height (continuous) type.

D. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum strip fastened to exposed bottom edges of solid-polymer components to prevent burning.

E. Attachments, Screws, and Bolts: Stainless steel or chrome plated steel or brass, tamper proof type.
1. For attaching panels and pilasters to brackets: Through-bolts and nuts; tamper proof.

F. Hardware: Stainless steel:
1. Full-length piano hinge, self-closing, adjustable to hold door open at any angle up to 90-degrees.
2. Thumb turn door latch with exterior emergency access feature; at compartments indicated to be handicapped accessible, provide latches that comply with accessibility requirements of authorities having jurisdiction.
3. Door strike and keeper with rubber bumper; mounted on pilaster in alignment with door latch.
4. Coat hook with rubber bumper; one for each compartment, mounted on door.
5. Furnish door pull and rubber-tipped bumper for out-swinging doors. Provide pulls on both sides of doors at compartments indicated to be handicapped accessible.
6. Furnish continuous channel brackets at walls.

2.4 FABRICATION

A. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, fasteners, and anchors at pilasters to suit floor conditions. Make provisions for setting and securing continuous head rail at top of each pilaster. Provide shoes at pilasters to conceal supports and leveling mechanism.

B. Doors:
1. Standard Compartments: Provide 24-inch wide in-swinging doors unless indicated otherwise.
2. Handicapped Accessible Compartments: Provide 34-inch wide out-swinging doors with a minimum 32 inch wide clear opening.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Maintain the following maximum clearances:
1. Walls and panels: 1 inch.
2. Walls and pilasters: 1 inch.
3. Panels and pilasters: 1/2 inch.

B. Attach continuous panel brackets securely to walls using anchor devices.

C. Secure pilasters to floor; level, plumb, and tighten.

D. Secure continuous head rail to each pilaster with not less than two fasteners.

E. Hang doors to align tops of doors with tops of panels and adjust so tops of doors are parallel with overhead brace when doors are in closed position.

F. Urinal Screens: Attach to floors and walls with anchoring devices to suit supporting structure. Set units level and plumb and to resist lateral impact.

3.2 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Indicated Position: 1/4 inch.

C. Maximum Variation From Plumb: 1/8 inch.

END OF SECTION

SECTION 10 26 41 – BALLISTIC-RESISTANT FIBERGLASS PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Specialized fiberglass panels concealed within other construction to provide bullet-resistance equal or better than the specified testing standard.

B. Related Sections:
   1. Section 06 20 23 – Interior Finish Carpentry and Millwork: Wood or plastic laminate surfaced millwork indicated to receive bullet-resistant protection.
   2. Section 09 21 16 – Gypsum Board Assemblies: Drywall assemblies indicated to receive bullet-resistant protection.

1.2 REFERENCES

A. Underwriters Laboratories
   1. UL 752 Specifications and Ammunition, 11th Edition, Standard for Bullet Resisting Equipment published September 9, 2005, revised December 21, 2006.

B. American Society for Testing and Materials (ASTM International)
   1. ASTM E119: Standard Test Methods for Fire Tests of Building Construction and Materials.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product and testing data in sufficient detail to indicate compliance with these specifications and the referenced testing standard.

C. Installation Instructions: Submit manufacturer’s recommended installation instructions showing all requirements for blocking, bracing, and joint protection as required to maintain specified bullet-resistance Level per the testing standard.

D. Samples: Submit samples, nominal 6 x 6 inches in size, of proposed material in thickness as required to meet specified bullet-resistance Level per the testing standard.

E. Shop drawings:

   1. Show location and extent of bullet-resistant fiberglass panels. Include plans, elevations, large-scale details of fastenings and any required accessory items. Indicate typical and special details.
   2. Indicated requirements for treatment of panel joints to maintain specified bullet-resistance Level per the testing standard.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver the materials to the project with the manufacturer’s UL LISTED Labels intact and legible.

C. Handle the material with care to prevent damage. Store the materials inside under cover, stack flat with full support and off the floor.

D. Protect panels specialties before, during and after installation. Protect installed work of other trades.

1.5 WARRANTY

A. Contractor's Warranty: Materials and workmanship shall be warranted against defects for a minimum period of one-year after Substantial Completion of the Project. Defects shall include failure to achieve or maintain specified protection level.

B. Manufacturer's Warranty: Provide manufacturer's written warranty against defects in materials for a minimum period of two-years after Substantial Completion of the Project. Defects shall include failure to achieve or maintain specified protection level.

1.6 PERFORMACE CRITERIA

A. Bullet-resistant fiberglass panels shall be "non ricochet type" to permit the capture and retention of an attacking projectile lessening the potential of a random injury or lateral penetration.

B. Panel Bullet-Resistance Rating: **Level 3** per UL 752.
1. Panel Fire-Resistance Rating: As required by drawings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Armorcore (Waco Composites, Ltd.) , www.armorcore.com

B. Gaffco Ballistics, www.gaffco.com

C. Insulgard Security Products, www.insulgard.com

D. Substitutions: Section 01 60 00 - Product Requirements

2.2 BASIS OF DESIGN

A. Insulgard *FG Series Fiberglass-Reinforced Structural Polyester Laminate* or approved equivalent by specified manufacturer.

B. Material

1. Panels fabricated of multiple layers of woven roving ballistic grade fiberglass cloth impregnated with a thermoset polyester resin and compressed into flat rigid sheets.

2. Panel Sizes:
   a. Face Size(s): Manufacturer's standard panel size(s) as required by installer for most efficient use of material and least number of panel joints for the particular installation.
   b. Thickness: As required to meet specified ballistics-resistant rating

PART 3 - EXECUTION

3.1 EXAMINATION

A. Prior to starting installation verify that the related work of other trades is satisfactory for the proper installation of bullet-resistant fiberglass panels.

B. Notify the Architect and General Contractor in writing of any apparent conditions detrimental to the proper installation of bullet-resistant fiberglass panels. Do not proceed with installation until all such discrepancies have been resolved. Beginning installation of panels indicates acceptance of substrate and construction by other trades.

3.2 INSTALLATION

A. For installation use only personnel who are skilled in the work required and approved by the

panel manufacturer for the particular Project.

B. Mechanically fasten panels in a concealed behind finish materials in accordance with manufacturer's printed instructions, as indicated in the drawings, the approved shop drawings, and as required to maintain the specified bullet-resistant level.

1. Where indicated standard fastening methods of finish materials over bullet-resistant panels will be sufficient to hold panels permanently in place, adhesive approved by the panel manufacturer may be used in lieu of mechanical fastening of panels.

C. Reinforce panel joints with a back-up layer of bullet-resistive panel material in same thickness. Minimum width of reinforcing strip behind each joint shall be 4-inches, centered on panel joint, butted tight.

D. Install panels as necessary to reduce risk by fitting tightly to adjacent surfaces including floor slab, door and window frames, wall perimeters, and other adjacent construction.

END OF SECTION

SECTION 10 28 00 - TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. The following items are Contractor furnished and Contractor installed:
   1. Sanitary napkin disposal units.
   2. Grab bars.
   3. Stainless steel framed mirrors.
   4. Mop and broom holders with integral shelf.

B. The following items are Owner-Furnished and Contractor Installed (OFCI):
   1. Surface-mounted paper towel dispensers.
   2. Surface-mounted toilet tissue dispensers.

C. The following items are Owner-Furnished and Owner Installed (OFOI):
   1. Surface-mounted soap dispensers.

1.2 SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specifications Sections.

B. Product Data for each toilet accessory item specified, including details of construction relative to materials, dimensions, gages, profiles, method of mounting, specified options, and finishes.

C. Schedule: Indicating types, quantities, sizes, and installation locations (by room) for each toilet accessory item to be provided for project.

D. Setting Drawings: Where cutouts are required in other work, provide templates, substrate preparation instructions, and directions for preparing cutouts and for installation of anchorage devices.

1.3 QUALITY ASSURANCE

A. Inserts and Anchorages: Furnish inserts and anchoring devices that must be set in concrete or built into masonry; coordinate delivery with other work to avoid delay.

B. Single-Source Responsibility: Provide products of same manufacturer for each type of accessory unit and for units exposed to view in same areas, unless otherwise acceptable to Architect.

1.4 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.5 PROJECT CONDITIONS

A. Coordination: Coordinate accessory locations, installation, and sequencing with other work to avoid interference and to assure proper installation, operation, adjustment, cleaning, and servicing of toilet accessory items.

1.6 WARRANTY

A. Special Project Warranty: Provide manufacturer’s written 5-year warranty against silver spoilage of mirrors, agreeing to replace any mirrors that develop visible defects within warranty period.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide toilet accessories by one of the following:
   1. Toilet and Bath Accessories
      a. A & J Washroom Accessories www.ajwashroom.com
      b. American Specialties, Inc. www.americanspecialties.com
      c. Bobrick Washroom Equipment, Inc. www.bobrick.com
      d. Bradley Corporation www.bradleycorp.com
      e. Georgia-Pacific www.gp.com
      f. General Accessory Manufacturing Co. www.gamcousa.com
      g. Kimberly-Clark Professional www.kcprofessional.com
      h. McKinney/Parker

2.2 MATERIALS, GENERAL

A. Reference Toilet Accessory Schedule in drawings for specific model numbers.

B. Stainless Steel: AISI Type 302/304, with polished No. 4 finish, 22-gage minimum thickness, unless otherwise indicated.

C. Brass: Leaded and unleaded, flat products, ASTM B 19; rods, shapes, forgings, and flat products with finished edges, ASTM B 16, Castings, ASTM B-30.

D. Sheet Steel: Cold-rolled, commercial quality ASTM A 366, 20-gage minimum, unless otherwise indicated. Surface preparation and metal pretreatment as required for applied finish.

E. Galvanized Steel Sheet: ASTM A 527, G60.

F. Chromium Plating: Nickel and chromium electro-deposited on base metal, ASTM B 456, Type SC 2.

G. Baked Enamel Finish: Factory-applied, gloss white, baked acrylic enamel coating.

H. Vinyl-Backed Safety Mirror Glass: Nominal ¼ inch thick, conforming to ASTM C 1036, Type I, Class 1, Quality q2, and with silvering, electro- plated copper coating, and protective organic coating. Apply vinyl backing with pressure-sensitive adhesive coating over glass coating by method recommended by vinyl-backing manufacturer to produce a surface free of bubbles, blisters, or other imperfections. Use adhesives and vinyl backing compatible with glass coating as certified by organic coating manufacturer.

I. Galvanized Steel Mounting Devices: ASTM A 153, hot-dip galvanized after fabrication.

J. Fasteners: Screws, bolts, and other devices of same material as accessory unit or of galvanized steel where concealed.

K. Keys: Unless otherwise indicated, provide universal keys for access to toilet accessory units requiring internal access for servicing, resupply, etc. Provide minimum of six (6) keys to Owner’s representative and obtain receipt.

2.3 SANITARY NAPKIN DISPOSAL UNITS

A. Surface-mounted stainless steel disposal unit with seamless exposed walls, tightly self-closing top cover and locking bottom panel with continuous stainless steel piano hinge.
   1. Basis-of-Design: Bobrick B270.

2.4 GRAB BARS

A. Stainless Steel Type: Provide grab bars with wall thickness not less than 18 gage and as follows:
   1. Mounting: Concealed, manufacturer's standard flanges and anchorages.

2. Clearance: 1-1/2 inches clearance between wall surface and inside face of bar.
3. Gripping Surfaces: Smooth, satin finish.
4. Heavy-Duty Size: Outside diameter of 1-1/2 inches.
5. Length: 42", at sides of water closet; 36", behind water closet.

2.5 FRAMED MIRRORS

A. Stainless Steel Framed Mirror Units: Fabricate frame with angle shapes of not less than 18 gage, with square corners mitered, welded, and ground smooth. Provide in No. 4 satin polished finish.

2.6 MISCELLANEOUS ACCESSORIES

A. Mop and Broom Holder: 18 gage Type 304 stainless steel unit with (4)spring-loaded rubber cam-type mop/broom holders and (4) rag hooks. Provide with integral stainless steel shelf full-length x minimum 8” deep with 3/4” return edges, all hemmed.
1. Basis-of-Design: Bobrick B-239 x 34.

2.7 FABRICATION

A. General: Only a maximum 1-1/2-inch diameter, unobtrusive stamped logo of manufacturer, as approved by Architect, is permitted on exposed face of toilet or bath accessory units. On either interior surface not exposed to view or back surface, provide additional identification by means of either a printed, waterproof label or a stamped nameplate, indicating manufacturer's name and product model number.

B. Surface-Mounted Toilet Accessories, General: Except where otherwise indicated, fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous stainless steel piano hinge. Provide concealed anchorage wherever possible.

C. Recessed Toilet Accessories, General: Except where otherwise indicated, fabricate units of all welded construction, without mitered corners. Hang doors or access panels with full-length stainless steel piano hinge. Provide anchorage that is fully concealed when unit is closed.

D. Framed Mirror Units, General: Fabricate frames for glass mirror units to accommodate wood, felt, plastic, or other glass edge protection material. Provide mirror backing and support system that will permit rigid, tamperproof glass installation and prevent accumulation of moisture. Provide galvanized steel backing sheet, not less than 22 gage and full mirror size, with non-absorptive filler material. Corrugated cardboard is not an acceptable filler material.

E. Mirror Unit Hangers: Provide system of mounting mirror units that will permit rigid, tamperproof, and theft-proof installation including heavy-duty wall brackets of galvanized steel, equipped with concealed locking devices requiring special tool to remove.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install toilet accessory units in accordance with manufacturers' instructions, using fasteners appropriate to substrate and recommended by manufacturer of unit. Install units plumb and level, firmly anchored in locations and at heights indicated.

B. Secure mirrors to walls in concealed, tamperproof manner with special hangers, toggle bolts, or screws. Set units plumb, level, and square at locations indicated, in accordance with manufacturer's instructions for type of substrate involved.

C. Install grab bars to resist tensile and moment forces generated by a load of 250 lb. applied in any direction, or as otherwise required by authorities having jurisdiction, whichever is more stringent.

3.2 ADJUSTING AND CLEANING

A. Adjust toilet accessories for proper operation and verify that mechanisms function smoothly. Replace damaged or defective items.

B. Clean and polish all exposed surfaces in strict accordance with manufacturer's recommendations after removing temporary labels and protective coatings.

END OF SECTION

SECTION 10 28 10 - MISCELLANEOUS SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Miscellaneous specialties, including:
   1. Clinic curtain and track.
   2. Wall corner guards.
   3. Exterior and Interior aluminum column covers.

1.2 QUALITY ASSURANCE

A. For installation use only personnel who are skilled in the work required.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each miscellaneous specialty and accessory specified.

C. Installation Instructions: Submit manufacturer's recommended installation instructions showing all requirements for blocking and bracing.

D. Samples: Submit samples of each finish material exposed to view, 6 x 6 inches in size, showing full range of colors and patterns.

E. Shop drawings: Show location and extent of miscellaneous specialty items. Include plans, elevations, large-scale details of anchorages, and accessory items. Indicate typical and special details.
   1. Changing Station: Provide drawings prepared by manufacturer showing location of steel support members within wall cavity for full support of changing station.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protection: Protect specialties before, during and after installation. Protect installed work of other trades.

C. Replacements: In event of damage, make necessary replacements.

PART 2 - PRODUCTS

2.1 CLINIC CURTAIN AND TRACK

A. Manufacturers
   1. ADC Hospital Equipment, www.automaticdevices.com
   2. Clickeze Cubicle Tracking System, InPro Corp., Muskego, WI 800-222-5556
   3. General Cubicle Company Inc., www.generalcubicle.com
   4. Graber Industries, Middleton, WI 800-356-9102
   5. Imperial Fastener Company, www.imperialfastener.com
   6. A. R. Nelson Co.
   7. Pryor Products, www.pryorproducts.com
   8. Salsbury Industries, www.mailboxes.com
   9. Substitutions: Section 01 60 00 - Product Requirements

B. Components

   1. Track: Extruded aluminum sections, not less than 1-1/4 inches wide by 3/4-inch high, with minimum wall thickness of 0.062 inch; one piece for each cubicle track run.

   2. Track Accessories: Fabricate splices, end caps, connectors, end stops, coupling and

joining sleeves, wall flanges, brackets, ceiling clips, and other accessories from same material and finish as track.
   a. End Stop: Non-removable.

3. Curtain Carriers: Nylon roller to accurately fit track; designed to eliminate bind when curtain is pulled; fitted to curtain to prevent accidental curtain removal; one carrier for each 6 inches of fabric width.

4. Wand: Aluminum or plastic hollow section, attached to lead carrier, for pull-to-close action.

5. Curtain:
   a. Fabric: Close weave 100 percent polyester; anti-bacterial, self-deodorizing, sanitized, preshrunk; inherently and permanently flame resistant; color as selected from manufacturer's standard range.
   b. Open Mesh Cloth: No. 50 nylon mesh to permit air circulation; flameproof.
   c. Curtain Grommets: Two-piece, rolled edge, rustproof, nickel-plated brass, machined into top hem.

6. Curtain Tieback: Nickel-plated brass chain; one at each curtain termination.

7. Curtain Track: Hand-drawn ceiling mounted extruded aluminum curtain track in clear anodized finish. Provide 48" baton for hand operation and all slides and hardware required for a complete installation.

8. Curtain: Provide standard weight Class "A: polyester fabric curtain on each curtain track. Curtain shall be 10% wider than opening with flat panel, grommets at 6-inch centers, and 20-inches of open mesh along top. Bottom of curtain shall hang uniformly 6-inches above the floor.

9. Provide one curtain track and curtain at each cot location.

10. Basis of design: Model #9-994 as manufactured by Graber.

2.2 WALL CORNER GUARDS

A. Type: 16-ga. brushed finish Type 304 stainless steel, surface-mount type. Type AG-16-2 as manufactured by Metalines or approved equivalent by Boss.

B. Provide at outside corners of walls.

C. Size:
   1. Corridors: 2" x 2" x 4 ft. long from top of floor base.
   2. Food Service area: 2" x 2" x one-piece length from top of floor base to ceiling.

D. Fastening: Flat head stainless steel screws.

2.3 ALUMINUM COLUMN COVERS

A. Manufacturers:
   1. Centria, www.centriaperformance.com
   2. Fry Reglet Corporation, www.fryreglet.com.
   3. Gordon, www.gordon-inc.com.
   4. MM Systems Corporation, www.mmsystemscorp.com.
   5. Nelson Industrial Inc., www.nelsonindust.com.
   6. Pittcon Industries, www.pittconindustries.com.

B. Interior Floatable Type: Form column covers to shapes indicated from metal of type and minimum thickness indicated below:
   1. Basis-of-Design: Fry Reglet, Series FF or approved equivalent by specified manufacturer.

2. Material: Minimum 0.125 aluminum.
3. Configuration: Round; diameter(s) as indicated in the drawings. Provide white-finished ceiling trim ring at ceiling penetrations.
4. Vertical Joint Type: Flush monolithic designed for field applied tape and float finish provided under Section 09 21 16.
5. Horizontal Joints: Flush, with factory furnished alignment plates.
6. Internal Supports: Steel stud framing provided under Section 09 21 16.
7. Connectors: Provide concealed connectors for anchoring to structure above ceiling.
8. Final Finish: 2-coats semi-gloss enamel finish over specified primer provided under Section 09 90 00.

C. Exterior Factory-Finished Type: Form column covers to shapes indicated from metal of type and minimum thickness indicated below:
1. Basis-of-Design: Fry Reglet, Series E or KS, or approved equivalent by specified manufacturer.
2. Material: Minimum 0.125” thick formed aluminum sheet.
3. Configuration: Round; diameter(s) as indicated in the drawings. Provide matching top and bottom trim ring as required.
4. Vertical Joints: Tight hairline joint unless otherwise indicated.
5. Connectors: Provide manufacturer’s concealed 1/8” thick steel connector clips for anchoring to building column. Provide stainless steel or corrosion protection.
6. Factory Finish: Class I, clear anodic brushed #4 finish per AA-M12C22A41. Match approved sample.

PART 3 - EXECUTION

3.1 PREPARATION

A. Review manufacturer’s installation instructions and notify Architect in the event of discrepancies or incompatibility with existing conditions; do not proceed with installation until all such discrepancies have been resolved.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions and with requirements of authorities having jurisdiction.

B. Anchor specialties securely in place in accordance with manufacturer’s instructions.

C. Sequence installation to accommodate required utility connections.

D. Touch-up surfaces damaged during installation. Replace damaged components that cannot be satisfactorily repaired.

3.3 CLEANING

A. Section 01 71 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove packing material from miscellaneous specialties and leave in clean condition, ready for operation.

END OF SECTION

SECTION 10 44 00 - FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Portable fire extinguishers and extinguisher cabinets.
   2. Brackets for wall mounting fire extinguishers.
   3. Defibrillator Cabinets.
   4. Fire Department lock boxes.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood blocking and shims.

1.2 REFERENCES

A. National Fire Protection Association:
   1. NFPA 10 - Standard for Portable Fire Extinguishers.

B. Underwriters Laboratories Inc.:
   1. UL - Fire Protection Equipment Directory.

1.3 PERFORMANCE REQUIREMENTS

A. Conform to NFPA 10.

B. Provide extinguishers classified and labeled by Underwriters Laboratories Inc. for purpose specified and indicated.

C. Provide fire rated cabinets classified and labeled by Underwriters Laboratories Inc. for purpose specified and indicated.

1.4 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each product specified, submit operational features, color and finish, and anchorage details.
   1. Fire extinguishers: Include rating and classification.
   2. Cabinets: Include rough-in dimensions, mounting details, door hardware, cabinet type, and trim style.

C. Manufacturer's Installation Instructions: Submit special criteria and wall opening coordination requirements.

D. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit test, refill or recharge schedules and re-certification requirements.

1.6 QUALITY ASSURANCE

A. Source Limitations: Obtain fire extinguishers and cabinets through one source from a single manufacturer.

PART 2 - PRODUCTS

2.1 FIRE EXTINGUISHERS

A. Manufacturers:
1. JL Industries, www.jlindustries.com.
2. Larsen's Manufacturing Co., www.larsensmfg.com.
3. Nystrom Products Co., www.nystrom.com.
4. Potter Roemer, www.potterroemer.com.
5. Substitutions: Section 01 60 00 - Product Requirements.

2.2 FIRE EXTINGUISHERS

A. Multipurpose Dry Chemical Type: Cast steel tank with pressure gage; 4-A:60-B:C, 10 lb capacity.

2.3 FIRE EXTINGUISHER CABINETS

A. Tub: Formed sheet steel, 0.036 inch thick base metal.

B. Doors and Trim: Formed stainless steel sheet.

C. Configuration: Semi-recessed type, sized to accommodate extinguisher.

D. Trim Type: Rolled-edge trim, returned to wall surface, with 4 inch projection.

E. Door: 0.016 inch thick, partially-glazed panel, reinforced for flatness and rigidity; with minimum 1/2 inch thick frame.

F. Door Glazing: Clear acrylic, 1/8 inch thick. Vertical clear acrylic window with white "FIRE EXTINGUISHER" decal.

G. Door Hardware: Manufacturer's standard door-operating hardware cam-action latch or door pull and friction latch. Provide concealed or continuous-type hinge permitting door to open 180 degrees.

H. Cabinet Mounting Hardware: Appropriate to cabinet.

I. Form cabinet enclosure with right angle inside corners and seams. Form perimeter trim in one piece with corners mitered, welded, and ground smooth.

J. Pre-drill for anchors.

K. Weld, fill, and grind components smooth.

L. Glaze doors with resilient channel gasket glazing.

M. Finishing Tub and Interior: Baked enamel, color as selected.

N. Finishing Doors and Trim: No. 4 polished stainless steel.

2.4 FIRE-RATED FIRE EXTINGUISHER CABINETS

A. Where cabinets are indicated to be installed in fire-rated CMU walls, provided cabinets listed and labeled to meet requirements of ASTM E 814 for fire-resistance rating of wall.

B. Match construction of non-rated cabinets except as follows:
1. Construct fire-rated cabinets with double walls fabricated from 0.0478 inch thick, cold-rolled steel sheet lined with minimum 5/8 inch thick fire-barrier material.
2. Provide factory-drilled mounting holes.

2.5 AUTOMATED EXTERNAL DEFIBRILLATORS (AED) CABINETS

A. Basis of Design Product: Subject to compliance with requirements, furnish and install Model

AED Plus Combo Pack – Fully Automatic Unit by Zoll. No substitutions.

B. Type: Semi-Recessed with factory powder-coated cold rolled steel tub; white color.

C. Door: Anodized aluminum frame with vertical clear acrylic vision panel, continuous hinge, zinc plated handle, roller latch, and standard Automated External Defibrillator (“AED”) graphics in red color.

D. Alarm: Battery operated siren strobe and audible (85-db) alarm. Provide keyed on/off switch on cabinet exterior.

2.5 FIRE DEPARTMENT LOCK BOXES

A. Provide locking security box for fire department and other authority access to building, as required by local authorities. Coordinate specific requirements, including location requirements, with local authorities. Unless otherwise indicated or directed, provide security boxes or other devices as manufactured by Knox Company, Irvine, CA., www.knoxbox.com.

2.6 ACCESSORIES

A. Extinguisher Brackets: Formed steel, plated or baked enamel finish.
1. Furnish brackets for extinguishers mounted inside cabinets.
2. Furnish brackets for extinguishers not mounted inside cabinets.

B. Cabinet Signage: Provide lettering to comply with authorities having jurisdiction for letter style, color, size, spacing, and location.
1. Identify bracket-mounted extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to wall surface.
2. Identify fire extinguisher in cabinet with the words "FIRE EXTINGUISHER" applied to door.
a. Application Process: Vinyl letters.
b. Lettering Color: White.
c. Orientation: Vertical.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify rough openings for cabinet are correctly sized and located.

3.2 INSTALLATION

A. Install cabinets plumb and level in wall openings.

B. Install wall brackets to walls and cabinets at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

C. Secure rigidly in place.

D. Place extinguishers on wall brackets.

E. Position cabinet signage as required by authorities having jurisdiction.

END OF SECTION

SECTION 10 51 13 - METAL WARDROBE LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Fully-welded metal wardrobe lockers in Kitchen area.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood grounds and attachment strips.
   2. Section 10 51 26 – Plastic Wardrobe Lockers

1.2 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate locker plan layout, and numbering plan.
   1. Show sloping tops, filler panels, trim, and other accessories.

C. Product Data: Submit data on locker types, sizes, and accessories.

D. Samples: Submit two samples, 3 x 6 inches in size, of each color selected, applied to specified base metal.

E. Manufacturer's Installation Instructions: Submit installation template and attachment devices.

F. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals specified in Division 1.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain all metal lockers and accessories from a single manufacturer.

1.4 DELIVERY, STORAGE, AND PROTECTION

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect locker finish and adjacent surfaces from damage.

1.5 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.6 COORDINATION

A. Coordinate size and location of concrete and concrete masonry bases for metal lockers.

B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

1.7 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Breakage.
      b. Structural failures.
      c. Corrosion.
      d. Faulty operation of latches and other door hardware.
   2. Damage from deliberate destruction and vandalism is excluded.
   3. Warranty Period: 10-years from date of Substantial Completion.

1.8 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish the following extra materials packaged with protective covering for storage and identified with labels describing contents:
   1. Identification plates.
   2. Hooks.

C. Furnish extra materials as listed above for 5 units.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Wardrobe Lockers – Kitchen Staff:
   1. DeBourgh Manufacturing Co. www.all-american-lockers.com
   2. ASI Storage Solutions www.asilockers.com
   3. General Storage Systems, www.generalstoragesystems.com
   4. List Industries, Inc. www.listindustries.com
   5. Lyon Metal Products, Inc. www.lyonmetal.com
   6. Penco Products, Inc. www.pencoproducts.com
   7. Republic Storage Systems Co. www.republicstorage.com
   8. WEC Manufacturing, www.itswec.com
   9. Substitutions: Section 01 60 00 - Product Requirements.

2.2 MATERIALS:

A. Sheet Steel: Mild, cold rolled and leveled unfinished steel; to the following minimum thicknesses:

B. Anchors: Select material, type, size, and finish required for secure anchorage to each substrate.
   1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance.
   2. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

C. Fasteners: Zinc- or nickel-plated steel, slot-less type exposed bolt heads, and self-locking nuts or lock washers for nuts on moving parts.

2.3 WARDROBE LOCKERS

A. Construction: Fully welded.

B. Components: Fabricated from steel sheet, of the following thicknesses:
   1. Frame: 16-gage.
   2. Top, bottom, and sides: 16-gage.
   3. Back: 18-gage.

4. Door: 14-gage.
5. Shelves: 16-gage.
6. Hinges: 16-gage.
7. Sloping Top: 18-gage.
8. Fillers: 20-gage.

C. Configuration:
1. Locker Units: Sizes and configurations as indicated on Drawings.
2. Base: On concrete or masonry base as indicated.
3. Locker Body: Formed and flanged; with channel-shaped intermediate horizontal frames separating two- and three-tier lockers.
4. Doors: One-piece construction with channel-shape vertical edges and angle-shape horizontal edges; 20 gage reinforcing pan welded to inside for doors over 15 inches wide and 30 inches high.
5. Hinges: Continuous type, riveted to door and frame.
6. Ventilation: Louvered vents at top and bottom of each door; provide 6 openings at top and bottom for single-tier lockers, 3 openings for two-tier lockers, and 2 openings for multi-tier lockers.
7. Door Latching: Finger-lift control in recessed stainless steel pocket; single-point latching for doors up to 20-inches high, two-point latching for doors over 20 inches high.
   a. Latching Mechanism: Manufacturer's standard rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact and incorporating a pre-locking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock of latching mechanism.
   b. Locking: Padlock hasps for Owner-provided padlocks.

D. Accessories:
1. Furnish the following equipment inside each locker:
   a. Single-Tier Units: Fixed shelf, one double-prong ceiling hook, and two single-prong wall hooks.
   b. Double-Tier Units: Fixed shelf, one double-prong ceiling hook and two single-prong wall hooks.
2. Sloped Top: Continuous sloping top with approximately 20-degree pitch and vertical end closures.
3. ADA-compliant conversion kits for lockers identified or otherwise required by state and federal regulations. Provide with ADA plaques, adjustable shelves and clips. Conversion kit(s) installed by locker subcontractor.

2.4 FABRICATION

A. Number Plates: Furnish polished aluminum number plates on each locker door; number sequentially.

B. Form recess for operating handle and locking device.

C. Finish edges smooth without burrs.

D. Fabricate sloped metal tops, ends, and closure pieces.

E. Install interior equipment.

F. Fabricate handicap accessible units with bottom shelves nine inches above floor to meet Texas Accessibility Standards.

2.5 FACTORY FINISHING

A. Clean, degrease, and neutralize metal; finish with manufacturer's standard baked enamel finish, electrostatically-applied.

B. Color: As indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify prepared bases are in correct position and configuration.

C. Verify bases are properly sized.

3.2 INSTALLATION

A. Install lockers plumb and square.

B. Install lockers on concrete or masonry bases as indicated on Drawings.

C. Secure lockers with concealed anchor devices to suit substrate materials. Minimum Pullout Force: 100 lb.

D. Bolt adjoining locker units together to provide rigid installation. Do not install fasteners exposed on face frames.

E. Install filler panels, end panels, and sloped tops with closures at exposed ends. Use concealed fasteners and splice plates; fit accurately together with tight, hairline joints.

F. Install recess trim with concealed fasteners and splice plates; fit accurately together with tight, hairline joints.

G. Replace components not operating smoothly.

3.3 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean locker interiors and exterior surfaces.

C. Touch up marred finishes or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal locker manufacturer.

END OF SECTION

SECTION 10 73 26 - ALUMINUM WALKWAY COVERS AND CANOPIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Aluminum walkway covers.
2. Flashing where connections to buildings are made.
3. Factory-finished metal decorative soffit systems.

B. Related Work:
1. Section 04 20 00 - Unit Masonry: Items built into masonry walls.
2. Section 07 90 00 - Joint Protection: Joint sealants.
3. Section 07 62 00 - Sheet Metal Flashing and Trim.
4. Section 09 54 23 – Linear Metal Ceiling System: Walkway faux woodgrain soffit panels to match color/finish matching of interior ceiling panels provided under 09 54 23.

1.2 QUALITY ASSURANCE

A. Installer Qualifications: Use for installation, only personnel who are skilled in the work required, familiar with the manufacturer's recommended methods of installation and the requirements of the work.

1.3 SUBMITTALS:

A. Shop Drawings: Submit Shop Drawings in accordance with Division 1 Section "Submittals".

B. Contractor shall submit shop drawings for approval by the Architect prior to fabrication of any materials. Shop Drawings shall clearly illustrate all details including but not limited to: Plan views, column layout and measurements, footing sizing and details, drainage locations and details, building wall condition details, flashing details, Canopy component sizing and thickness, Fastener sizing, large scale assembly details, and finishes by component.

1. Contractor shall verify all dimensions and elevations prior to submittal to Architect and are to be checked by Manufacturer prior to fabrication.

2. The site-specific shop drawings and calculations shall bear the seal of a Civil or Structural engineer authorized to practice in the jurisdiction where the project is located.

C. Samples for Initial Selection:

1. Manufacturer's color charts showing the full range of colors available for system members with factory-applied color finishes.

2. Physical samples of proposed exterior faux wood finish applied to aluminum panels for color match of interior ceiling slats provided under another Section. Minimum (2) 12” x 6” panels.

D. Delete above if colors are preselected and specified or scheduled. Retain below with or without above.

E. Samples for Verification: Of each type of exposed finish required in manufacturer's standard sizes. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.

F. Installation Methods: Submit two copies of manufacturer's recommended installation methods.

1.4 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that

includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.5 PRODUCT HANDLING

A. Protection: Protect walkway covers before, during and after installation. Protect installed work of other trades.

B. Replacements: In the event of damage, make repairs or replacements as necessary:

1.6 EXTENDED WARRANTIES - Provide the following in addition to Contractor's 1-year warranty:

A. Provide manufacturer's written warranty against defects in materials and workmanship for a period of 5-years after date of Substantial Completion. Warranted defects shall include but not necessarily limited to:
1. Excessive deflection of support members or decking.
2. Failure of structural system including collapse or blow-off of any portion of system except where wind loads are in excess of those specified for design loading.
3. Corrosion of components or fastenings.
4. Water leaks at decking, components designed to carry water, or at flashings.

B. Provide manufacturer's written 2-year warranty against failure of materials receiving clear or color anodized finish. Failure of finish includes cracking, peeling, delaminating, crazing, fogging or excessive color change.

C. Provide manufacturer's written 10-year warranty against failure of materials receiving factory applied powder coat, fluoropolymer coil coating, or faux woodgrain finish. Failure of finish includes cracking, peeling, delaminating, crazing, fogging, or excessive color change.

PART 2 - PRODUCTS

2.1 GENERAL

A. Design, materials, and fabrication are based on the product of *AVAdek Walkway Cover Systems & Canopies*.

B. Manufacturers: Manufacturer shall have been in the business of fabricating custom aluminum walkway covers for a minimum of 10-years under the same company name and shall be able to provide evidence of successful completion of a substantial number of projects of similar or more complex scope than this Project. Subject to Project requirements for product substitutions, systems shall be provided by one of the following manufacturers:
1. ASA Builders, Inc., www.asabuildersinc.com.
2. AVAdek Walkway Cover Systems & Canopies www.avadek.com
3. Dittmer Architectural Aluminum; Ditt-Deck Extruded Aluminum Walkway Covers www.ditt-deck.com
4. Peachtree Protective Covers www.peachtreecovers.com

C. Design Requirements:

1. Systems shall be designed for a minimum 20 psf Live load and 25 psf Wind Uplift Load, or additional should state or local building codes require.

2. At Locations Beyond 50-Miles of the Coastline: Systems shall be designed for a minimum 20-psf Live load and 25-psf Wind Uplift Load, or additional should state or local building codes require.

3. At Locations Within 50-Miles of the Coastline: In addition to above, systems shall be designed to withstand 150-mph wind gusts.

4. It is the responsibility of the canopy manufacturer to verify and confirm the design

meets the structural load requirements as specified herein and required by applicable code authorities.

2.2 MATERIALS AND COMPONENTS

A. Beams: “U” Beams sized by manufacturer to meet all required design loads, including wind loads. Aluminum alloy shall be 6063-T61 temper. Minimum

1. Provide sizes as required by Engineer of Record, but minimum of 6” x 4” x .125” thickness.

B. Columns: Shall be extruded aluminum Alloy 6005A-T61 temper, sized by the manufacturer to meet all code-required design loading, including wind loads. Minimum section shall be 4” X 4” screw boss design. Fabricate tube columns for below-grade or surface drainage as indicated

C. Deck: Sized by manufacturer to meet all required design loads, including wind loads, (minimum 2-3/4” ht. x 6” x .078” thickness); extruded aluminum, Alloy 6063-T6 temper; roll-formed not acceptable.

1. Provide sizes as required by Engineer of Record, but minimum of 2-3/4” ht. x 6” x .078” thickness.

D. Fascia / Trim: “G” Alloy 6063-T6 temper aluminum in face height as indicated.

1. Fascia members in 12” or less face height shall be extruded material.
2. Fascia heights up to 18” shall be 0.080” minimum thickness.
3. Fascia heights greater than 18” and up to 24” shall be 0.125” minimum thickness.
4. Fascia heights greater than 24” shall be aluminum-composite material (ACM). Roll-form sheet metal is not acceptable,

E. The component sizes noted above are minimums and shall be precluded by component sizes called out on the drawings, or larger/heavier components as required to achieve the required structural performance.

F. Fasteners: Stainless Steel

G. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements, except containing no asbestos, formulated for 30-mil (0.762-mm) thickness per coat.

H. Miscellaneous:
1. Provide fasteners, sealant, flashing, additional components, etc., to match bents, deck, and trim as required to provide for a complete and finished system.
2. Provide mill-finish secondary aluminum framing/furring members where required for attachment of aluminum soffit panels.

I. Aluminum Soffit Panels – Provide and install both soffit panel systems at walkway cover soffits as indicated:

1. **Type MPC-2:** Linear panels with factory-applied faux wood finish and non-perforated face.
   a. 1” deep x 6” wide x minimum 0.080” x nominal 10 ft. long extruded aluminum alloy 6063-T6 panels with faux wood powder coat finish. Roll-form not acceptable.
   b. Interlocking joints for butt joint appearance.
   c. Stagger end joints of adjacent panels minimum 12”.
   d. Provide with matching perimeter trim, and secondary aluminum or galvanized framing as required for support and wind uplift.
   e. Base color to match interior linear ceiling panels (MPC-1) provided under another Section.

2. **Type MPC-3:** Flat=faced aluminum composite panels with factory-applied anodized finish

and non-perforated face.

a. Nominal 3-ft. wide x 10-ft. long x 0.157” thick sandwich panel 8000 System as manufactured by NOW Specialties or approved equivalent by Alcan Composites, or Arconic Architectural Products.
   1) Aluminum Facers: ASTM B209, 0.0197 inches thick pre-coated aluminum sheet with strippable protective film.
   2) Core: Manufacturer’s standard thermoplastic material.
   3) Fasteners: Concealed stainless steel screws.
   4) Joint Splines: 4-mm thick x 3 1/4-inch width, matching material, finish and color of panels.

2.3 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.

1. Decking, Perimeter Fascia, and Exposed Framing: AA-M12C22A41 Anodic coating, Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 607.1. Satin finish.

2. Concealed Secondary Framing/Furring: Any concealed framing above decorative soffit panels (not including anodized decking); Contractor’s option for mill finish or specified clear anodized.

3. Decorative Soffit Panels:

   a. **Type MPC-2:** Factory polyester powder coat finish meeting AAMA 2604 in faux wood-grain design. Base color as approved by the Architect. Product as manufactured by Quality Powder Coating, www.qualitypowdercoating.com.
      1) Finish electrostatically applied to 2-4 mil thickness and polymerized along with ink printing film for faux wood grain by baking at 400-degrees F for 20-minutes.
      2) Color and “wood grain” pattern approved by the Architect for coordination with interior linear metal ceiling panels provided under another section.

   b. **Type MPC-3:** AA-M12C22A41 Anodic coating, Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 607.1. Satin finish.

PART 3 - EXECUTION

2.1 INSTALLATION AND ERECTION

A. Coordinate installation with scheduled concrete, masonry and roofing work.

B. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Erection shall be by manufacturer in accordance with approved Shop Drawings.

END OF SECTION

SECTION 10 75 00 – FLAGS AND FLAGPOLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Ground-set aluminum flagpoles.
   2. Flags.

B. Related Sections include the following:
   1. Section 03 30 00 - Cast-In-Place Concrete: Concrete footings for flagpoles.
   2. Section 07 90 00 - Joint Protection: Elastomeric sealant filling the top of the foundation tube.

1.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide flagpole assemblies, including anchorages and supports, capable of withstanding the effects of wind loads, determined according to NAAMM FP 1001, "Guide Specifications for Design of Metal Flagpoles."
   1. Base flagpole design on polyester flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.
   2. Basic Wind Speed: As indicated on Drawings; 3-second gust speed at 33 feet above ground.

1.3 SUBMITTALS

A. Product Data: For each type of flagpole required.

B. Structural Calculations: For flagpoles indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Include below-grade foundation requirements.
   2. Include all specified and required accessories, including halyard lockbox.

C. Qualification Data: For professional engineer.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each flagpole as a complete unit, including fittings, accessories, bases, and anchorage devices, from a single manufacturer.
   1. Obtain flagpoles through one source from a single manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

A. General: Spiral wrap flagpoles with heavy paper and enclose in a hard fiber tube or other protective container.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. American Flagpole www.hapcopoles.com
   2. The Baartol Company Inc. www.baartol.com
   3. Concord Industries, Inc. www.flagpoles.com
   4. Lingo Inc.; Acme Flagpole Division www.lingoinc.com
   5. Pole-Tech Company Inc. www.poletech.com

2.2 FLAGPOLES

A. Flagpole Construction, General: Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:

B. Fabricate shop and field joints without using fasteners, screw collars, or lead calking.

C. For tapered flagpoles, provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.

D. Exposed Height: 35-feet.

E. Aluminum Flagpoles: Provide entasis-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B 241/ (B 241M), Alloy 6063, with a minimum wall thickness of 3/16 inch. Heat treat after fabrication to comply with ASTM B 597, Temper T6.

F. Foundation Tube: Galvanized corrugated-steel foundation tube, 0.064-inch minimum nominal wall thickness. Provide with 3/16 inch steel bottom plate and support plate; 3/4 inch diameter, steel ground spike; and steel centering wedges all welded together. Galvanize steel parts, including foundation tube, after assembly. Provide loose hardwood wedges at top of foundation tube for plumbing pole.
1. Provide flashing collar of same material and finish as flagpole.

2.3 FITTINGS

A. Finial Ball: Manufacturer's standard flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.
1. 0.063-inch spun aluminum, finished to match flagpole.

B. External Halyard: Ball-bearing, non-fouling, revolving truck assembly of cast metal with continuous 5/16-inch diameter, braided steel halyard and 9-inch cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.
1. Provide one halyard and one cleat at each flagpole.
2. Provide cast-metal cleat covers, finished to match flagpole, secured with cylinder locks.
3. Provide halyard covers consisting of a 2-inch channel, 60 inches long, finished to match flagpole.

C. Halyard Flag Snaps: Provide two stainless-steel swivel snap hooks per halyard.
1. Provide with neoprene or vinyl covers.

D. Lockbox: Provide welded lockbox to protect movement of halyard. Provide miniumum 3 keys to Owner.

2.4 MISCELLANEOUS MATERIALS

A. Concrete: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3000 psi unless otherwise indicated.

B. Sand: ASTM C 33, fine aggregate.

C. Elastomeric Joint Sealant: Single-component neutral-curing silicone joint sealant complying with requirements in Division 7 Section "Joint Sealants" for Use NT (non-traffic) and for Use M, G, A, and, as applicable to joint substrates indicated, O joint substrates.

2.5 FLAGS

A. Flags: Commercial-quality nylon, 4 x 6 foot size; furnish one flag of each of the following types:
1. United States.
2. State of Texas.

2.6 FINISHES

A. Metal Finishes, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Aluminum: Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
   1. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

PART 3 - EXECUTION

3.1 PREPARATION

A. Prepare uncoated metal flagpoles that are set in foundation tubes by painting below-grade portions with a heavy coat of bituminous paint.

B. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete.

C. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms and foundation tube, sleeve, or anchor bolts in position, to prevent displacement during concreting.

D. Place concrete immediately after mixing. Compact concrete in place by using vibrators. Moist-cure exposed concrete for not less than seven days or use non-staining curing compound.

E. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.2 FLAGPOLE INSTALLATION

A. General: Install flagpoles where shown and according to manufacturer’s written instructions.

B. Foundation-Tube Installation: Install flagpole in foundation tube, seated on bottom plate between steel centering wedges. Plumb flagpole and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2 inch layer of elastomeric joint sealant and cover with flashing collar.

END OF SECTION

SECTION 11 40 00 - FOOD SERVICE EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Documents, apply to the Work specified in this Section.

1.2 SUMMARY OF THE WORK

A. Project Name and Location: Elementary School No. 23
Alvin ISD

B. Approval of Working Surface: Any contractor performing work over the work of other contractors shall notify the Architect of any unsatisfactory conditions. The beginning of work by any contractor shall constitute acceptance of the previous work.

C. Field Verification of All Dimensions: Before ordering any materials or doing any work, field verify all measurements of the building and be responsible for their accuracy. No extras will be allowed for variations from drawings in existing conditions or work performed under this contract. Any discrepancies found shall be submitted to the Architect or Foodservice Design Professionals (FDP) for instructions before proceeding.

D. Cutting and Patching: No excessive cutting will be permitted, nor shall any structural members be cut without the written approval of the Architect. Each Contractor shall leave all chases and openings straight, true, and of the proper size in their work, as may be necessary for the proper installation of their and other contractors' work. After such work has been installed, the contractor shall carefully fit around, close, repair, patch, and point up the same as directed to the satisfaction of the Architect.

E. Cooperation: The General Contractor, all other contractors, and all subcontractors shall coordinate their work with all adjacent work and shall cooperate with all other trades to facilitate the general progress of the work. Each trade shall afford all the other trades every reasonable opportunity to install their work and store their material.

F. Inspection and Tests: The architect, Owner, Foodservice Design Professionals (FDP), and their representative shall always have access to the work, whether in preparation or progress. Provide proper and safe facilities for such access and inspection.

G. Fees, Permits, and Inspections: Secure and pay fees for all permits, licenses, and inspections as required by all authorities having jurisdiction. Give all notices and comply with all laws, ordinances, codes, rules, regulations, and contract requirements bearing on the work.

1.3 SCOPE OF WORK

A. Include the Work specified, shown, or inferable as part of Food Service Equipment. Portions of this Work may be subcontracted to those qualified to do such work as necessary because of jurisdictional trade agreements and restrictions.

B. The General Contractor is responsible for Related Work specified in other Sections: i.e., final plumbing, electrical and mechanical connections. The Kitchen Equipment Contractor (KEC) is responsible for all internal connections.

C. Specifications and drawings have been prepared to form the basis for procurement, erection, start-up, and equipment adjustment in this contract. Plans and specifications shall be considered mutually explanatory. Work required by one, but not by the other, shall be performed as though required by both. Items required by one but not by the other shall be provided as though required by both. Work shall be accomplished as called for in specifications and shown on drawings so that all equipment items shall be entirely functional for the purpose for which they were designed and intended. Provide all necessary material, tools, equipment, and labor required for the complete delivery, un-crating, erection, and installation as designated on the food service equipment plan and, in the specifications, to be made ready for final connection by the appropriate Division contractors. When there is any discrepancy between drawings and specifications, bidders should seek clarification of any discrepancies from the Architect and or Foodservice Design Professionals (FDP) before bidding.

D. Should the drawings disagree in themselves or the specifications with the drawings *(and clarification was not sought before bidding)*, the higher cost, better quality, more stringent, and greater quantity of the work or materials shall be completed without additional costs to the Owner.

1.4 OTHER DIVISIONS/CONTRACTORS RELATED WORK

A. Division 03 (Concrete) is responsible for but not limited to:

1. Slab depressions reinforced concrete wearing bed at prefabricated walk-in assemblies.

2. Concrete or masonry platforms (with a finished top and coved base at the perimeter) for the raised setting of food service equipment.

3. Slab depressions to receive stainless steel drain trench liner/grate assemblies (provided under this Section).

B. Division 09 (Finishes) responsible for but not limited to:

1. Interior finished floor with a coved base at prefabricated walk-in assemblies.

C. Division 10 (Specialties) responsible for but not limited to:

1. S/S Corner Guards throughout the kitchen (unless specified otherwise).

2. Lockers.

D. Division 22 (Plumbing) is responsible for but not limited to:

1. All connections shall be made in accordance with local codes and national standards, except where plans and specifications exceed those codes and standards.

2. Empty PVC and wide-sweep bends for refrigerant piping to beverage lines, Co2 lines, and remote food service equipment refrigeration systems.

3. Rough-in and final connection of plumbing systems to food service equipment and between components (including materials and labor). Accessories provided loose with food service equipment by Section 11 40 00 to be field installed by Division 22. This includes but is not limited to the installation of all faucets (water fill faucets, pre-rinse faucets, etc.), hoses, gas disconnects and drains from the equipment point of connection to building plumbing systems. All drain lines are provided and installed by Div. 22.

a. Kitchen Equipment Contractor is responsible for providing all faucets (water fill faucets, pre-rinse faucets, etc.), drain fittings, mixing valves, control valves, water pressure regulators, vacuum breakers, and all accessories for equipment specified under 11 40 00. Division 22 is responsible for installation.

4. Indirect drain line runs from the equipment to the nearest drain or floor sink—lines to be type 'K' Copper.

5. If any plumbing accessories or fittings are provided loose with equipment by 11 40 00, Div. 22 is to attach to equipment and provide final connection.

6. Gas Supply Systems with all components and fittings required for a complete system.

7. Water Supply Systems with all components and fittings required for a complete system.

8. Compressed Air Systems with all components and fittings required for a complete system (if required for this project).

9. Piping and Drainage Systems (Sanitary and Grease-laden). ***Systems must be cleaned and flushed before the final connection with food service equipment - Critical.***

10. Floor Sinks (Provide and Install). Flange and grates to be flush with the finished floor.

11. Floor Drains (Provide and Install). Flange and grates to be flush with the finished floor.

12. Trench Drains (Provide and Install). Trench Liners provided by 11 40 00. Flange and liners to be flush with the finished floor.

13. Grease Traps as required (Size, Provide, Locate, and Install). Verify with local codes to bypass or pipe through Grease Trap and/or Interceptor.

14. P-Traps as required (including all disposers).

15. Interconnect water through Water Filter (Filter provided by 11 40 00 unless otherwise specified) to equipment.

16. Gas Quick Disconnect Installation (Quick Disconnect provided by 11 40 00).

17. Safety Restraint Cable Installation (Safety Restraint Cable Provided by 11 40 00).

18. Specified couplings and piping to all equipment furnished by 11 40 00.

19. Air Compressors (if required for this project) (Size, Provide, and Install unless otherwise specified).

20. Water Softeners (if required for this project) (Size, Provide, and Install unless otherwise specified).

21. Pressure Boilers (if required for this project) (Size, Provide, and Install unless otherwise specified).

22. Hand Sinks (Provide (unless otherwise specified) and Install). Provide a hot water tempering valve if required. Water temperature to be at least 100 degrees and flow for at least 20 seconds.

23. Ice Bin Drain Insulation (if Ice Machine is provided in this project) (Provide and Install).

24. Unions at disposer solenoid valves (if Disposer is provided in this project) (Provide and Install).

25. Back Flow Prevention as required (Provide and Install - including all disposers). Back-Siphonage shall be installed at all fixtures and equipment where backflow and/or back-siphonage may occur and where a minimum air gap cannot be provided between the water to the fixture or equipment at its flood/level rim. When furnished with equipment, vacuum breakers shall override the above if acceptable with applicable codes. Division 22 is responsible for verifying requirements with local codes.

26. Janitor Sink with Faucet (Provide and Install).

27. Freeze Proof Hydrant at the exterior of the building by receiving door (Provide and Install - unless otherwise specified).

28. Reverse Osmosis Systems (Size, Provide (unless otherwise specified), Locate, and Install).

29. All piping within the counter body or under fabricated counters must be run to a connection point below the counter body by Section 11 40 00—final connection by Division 22.

30. Exhaust Hood condensate drain connections (if Exhaust Hood is provided in this project) (Provide and Install).

31. Interconnection of ½" CW to Pre-Rinse and Disposers cone/body inlets piped through the solenoid and vacuum breaker (if Disposer is provided in this project).

32. Fire System Piping. The exposed piping is to be chrome plated.

33. Pipe ½" cold water to swirl inlets at disposers (if Disposer is provided in this project).

34. Water Treatment for Ice Builders (Non-Chlorinated water with a PH Level of 10 or Higher) and any drains and overflows. Piping from Ice Builders to Tumble Chillers by Div. 23 (if Ice Builders and Tumble Chillers are provided in this project).

35. Refer to Section 2.2 PLUMBING / MECHANICAL REQUIREMENTS for additional information.

E. Division 23 (Mechanical) responsible for but not limited to:

1. All connections shall be made following local codes and national standards, except where plans and specifications exceed those codes and standards.

2. Empty EMT Conduit with pull-wire and wide-sweep bends for refrigerant piping to remote food service equipment refrigeration systems.

3. Rough-in and final connection of mechanical systems to food service equipment, walk-in assemblies, and between components (including materials and labor).

4. A mechanical contractor will test and balance rooms and exhaust hoods.

   Balance report for food service Exhaust Hoods to be provided to Foodservice Design Professionals (FDP) immediately upon completion

   (send to Houston.Submittal@fdp.org) and must be submitted with O&M manuals.

5. Exhaust Hoods, Condensate Hoods, Fire Suppression Systems, connections, and controls (Provide and Install – unless otherwise specified). Provide tempered air at all supply ducts.

    a. If Exhaust/Condensate Hoods and Fire Suppression Systems are specified under Section 11 40 00, Division 23 is responsible for all Exhaust and Condensate Hood connections (Provide and Install).

6. VFD System and controllers when required by code (Provide and Install).

7. Provide and install all ventilation (direct or indirect), air conditioning, and heating systems (unless otherwise specified).

8. Coordinate Supply and Return ducts above Serving Counters. No cold air is to blow directly on hot food counters or open-air refrigerated merchandisers.

9. Coordinate Supply and Return ducts away from equipment with top-mounted refrigeration. No cold air is to blow directly on compressors.

10. Mechanical Contractor to locate temperature monitors within return ducts.

11. Circulating air above walk-in assemblies (Provide and Install).

12. Circulating air above and in air gaps at warehouse cold storage assemblies (Provide and Install).

13. Water Chillers as required (if equipment is provided in this project) (Provide, Size, and Locate).

14. Piping from Ice Builders to Tumble Chillers (if equipment is provided in this project) (Size, Provide and Install).

15. Refer to Section 2.2 PLUMBING / MECHANICAL REQUIREMENTS for additional information.

F. Division 26 (Electrical) responsible for but not limited to:

1. Rough-in and final connection of electrical systems to food service equipment, walk-in assemblies, and between components (including materials and labor). Accessories provided loose with food service equipment by Section 11 40 00 to be field installed by Division 26.

2. Empty EMT Conduit with pull-wire and wide-sweep bends for refrigerant piping to remote food service equipment refrigeration systems.

3. Empty EMT Conduit with pull-wire and wide-sweep bends for interconnect cables between LAN and POS terminals, change-makers, pre-check units, printers, CPUs, etc. Division 26 to verify where the conduit will run for POS System (i.e., Manager’s Office or IDF Room).

4. Empty EMT Conduit with pull-wire and wide-sweep bends for fire suppression systems. Interconnect the Fire Protection System to panel box shunt trips and building alarm.

5. Walk-in Assembly Light Fixture Installation (Provided loose by Section 11 40 00) (if Walk-in is provided in this project).

6. Table Limit Switch (Provided loose by Section 11 40 00) (if Dishmachine is provided in this project) – Install and interconnect to Dishmachine.

7. Electrical Materials and Devices (Shunt-trip breakers, surge protectors, lighting control devices, conduit, wire, etc.).

8. Switches and Stainless Steel Disconnects as required (Provide, Locate, and Install – to be in an accessible location).

9. Charging Stations for Forklifts, Pallet Stackers, and Pallet Jacks (Size, Provide, Locate, and Install) (if equipment is provided in this project).

10. Interconnection between Condensate Fan and Dishmachine control panel (if equipment is provided in this project).

11. Interconnection between Exhaust Hood fans and switch (if equipment is provided in this project).

12. Interconnection between Exhaust Hood lights and switch (if equipment is provided in this project).

13. Door Heaters, Lights, Coils, and Heated Pressure Relief Ports pre-wired to the junction box at the top of walk-in assemblies (if equipment is provided in this project) provided by Section 11 40 00—final connection by Div. 26.

14. If any electrical accessories, fittings, and cord/plugs are provided loose with equipment by 11 40 00, Div. 26 is to attach to equipment and provide final connection.

15. Provide waterproof receptacles in wet areas.

16. All electrical connections beneath Exhaust Hoods (if equipment is provided in this project) to extend to shunt trip breakers with electrical panel box for shutdown during fire mode.

17. Receptacles will be pre-wired to Junction Box or Load Center for final connection by Division 26.

18. All electrical lighting, power, and distribution systems.

19. Do not interconnect more than three (3) convenience outlets on one (1) breaker.

20. Other than convenience outlets, all electrical connections on food service plans are dedicated breakers.

21. Doorbell at receiving door (Provide and Install –audible throughout Kitchen, Office, and Dry Storage room).

22. Adequate lighting at receiving door.

23. (if Walk-in is provided in this project) Walk-in Manufacturer is to provide Two (2) Edwards 860 Series (or equal) red lens, surface-mounted Xenon Emergency Strobe Beacons. Walk-in manufacturer will install One (1) located in the Kitchen above Walk-In Freezer door (or Cooler door when Freezer is within Cooler in an ‘inline’ assembly), and provide the second unit loose for installation by Division 26 located in the Cafetorium (Division 26 to coordinate location with Owners and Architect). Division 26 is to provide all conduit and wiring required and interconnect the illuminated Push Button

Panic Alarm in the Walk-In Freezer to both Strobe Beacons (***Critical***). Coordinate with Division 27.

24. Dedicated circuit for heated drain line connection in Walk-In Freezer (120/1/16.0 Amp) at each coil (if Walk-In is provided in this project).

25. GFCI Breaker for all receptacles under Exhaust Hoods (if Hoods are provided in this project) and Holding Cabinets (if Holding Cabinets are provided in this project), to be located within Kitchen's electrical Breaker Panel and not at the receptacles.

26. Remote GFCI reset switches to be accessible to end user.

27. All electrical below Exhaust Hoods (if Hoods are provided in the project) are to have Shunt Trip Breakers.

28. Interconnect Temp Sensor to Exhaust / Supply fans (if Hoods are provided in this project).

29. Electrical contractor to provide conduit with pulled wires prior to installation of equipment.

30. Refer to Section 2.5, ELECTRICAL REQUIREMENTS, for additional information.

G. Division 27 (Communication) responsible for but not limited to:

1. Data line coordination for food service equipment.

2. Time clocks as required.

3. Video cameras for learning assistance in food service areas as required (Provide, Locate, and Install).

4. (if Walk-in is provided in this project) (Provide conduit, data line, and interconnect the illuminated Push Button Panic Alarm inside the Walk-In Freezer to the Building Automation System (BAS). When activated, facility personnel are to be notified - coordinate notification requirements with the Owner (***Critical***). Coordinate with Division 26.

H. Division 28 (Electronic Safety and Security) is responsible for but not limited to:

1. Security Cameras as required (Provide, Locate, and Install).

I. General Contractor responsible for but not limited to:

1. Any wall penetration required for food service equipment utilities. Escutcheon plates or S/S sleeves are to be provided and installed as needed.

2. Bulk Freezer Ventilation Pipe (if Bulk Freezer is provided in this project) (Provide and Install unless otherwise specified).

3. Core drilling for Guide Rails (if Guide Rails are provided in this project).

4. Refrigeration Roof Curbs / Roof Jack (if Refrigeration System is provided in this project and located on the roof).

5. Interior Bollards (if required for this project) – to be epoxy painted per local codes (Provide and Install).

6. Furnish and Install ¾" Plywood blocking in the wall for mounting equipment furnished by Section 11 40 00 as required.

7. Walk-in Depressions (to be dead level) and sand leveling bed (if Walk-in is provided in this project and recess is shown).

8. Structural bracing for Bulk Walk-in Assembly ceiling panels if required.

9. Menu System Video Monitors in Servery (unless otherwise specified).

10. Structural bracing for Menu System Video Monitors if required.

11. Interior/Exterior refrigeration penetrations and sleeves at building penetrations.

12. DoorScope viewer (peephole) with wide viewing angle at receiving door.

13. Canopy at receiving door. Coordinate height with the height of Receiving Door (8') and the mounting height of Air Screen above the door.

14. Soap and towel dispenser provided by Owner. G.C. is responsible for installation.

15. Washer and Dryer (Provide and Install, unless otherwise specified).

16. Dwarf wall at exposed front/ends of cafeteria serving counters with the finish as selected by the Architect (if required in this project).

17. Substrate (Provide and Install) at SS Wall Caps for pony walls.

18. Final cleaning of all equipment before demonstrations.

1.5 QUALITY ASSURANCE

A. In addition to complying with all applicable laws, statutes, building codes, and regulations of public authorities, comply with the following:

1. National Sanitation Foundation (all equipment to bear label)

2. National Electric Code

3. Underwriters' Laboratories, Inc. (all applicable equipment to bear label)

4. American Gas Association Laboratories

5. National Fire Protection Association

6. Americans with Disabilities Act

7. Food and Drug Administration HAACP Guidelines

8. International Energy Conservation Code (IECC)

9. Department of Energy

10. Environmental Protection Agency

11. CSA Group

B. Furnish certification of regularly manufactured equipment listing or classification by Underwriters Laboratories, Inc., with the initial submittal.

C. Furnish a list of equipment and components (internal and external) that are not of domestic origin. All equipment and components (internal and external) should be of domestic origin when possible. This information should be provided with the initial submittal.

D. Projects outside the continental United States shall adhere to all local authorities having jurisdiction over that project.

1.6 SUBSTITUTIONS

A. **The specified equipment items or components are intended to be the basis of the bid. All other brands, including any additional names, which may be listed as "Alternates" or "Approved Equal," must conform with the general and item specifications, warranties, size/dimensions, quality, accessories, function, voltage, horsepower, etc. of the first-named brand and be subject to Paragraph C-03 of this Article.**

B. Proposed Substitutions:

1. Submitted at least 14 calendar days before Bid Date.

2. Submit proposed substitutions with catalog data and manufacturer's shop details indicating all modifications required to conform with the specified brand.

3. List of deviations must include equipment name, model number, accessories, and features with deviation(s) noted for specified and proposed alternate equipment. Equipment without listed deviation(s) will be considered furnished as specified.

C. Substitutions with prior approval:

1. Submitted on Bidder's letterhead attached to Proposal Form with individual additive/deductive amounts stipulated and the documentation required in Paragraph B-02.

2. Owner reserves the right to accept or reject any or all substitution proposals before execution of the Contract.

3. Provide all design/engineering services required to adjust in space, systems, utilities, etc., and pay all additional costs of utilities, construction, or professional services that may be incurred due to the acceptance of any substitution.

D. All appliances or other equipment within a common group or category (e.g., refrigerators, kettles, ovens, shelving, etc.) must be from the same manufacturer.

1.7 INTERPRETATION OF DOCUMENTS

A. During Bidding: Bidder's, supplier's, or vendor's questions and comments about Construction Document's clarity or intent will be addressed by addendum.

B. After Award:

1. Clarification Bulletin will confirm Construction Document requirements.

2. Request for Information submitted by Contractor shall contain Contractor's proposed resolution.

1.8 WARRANTY

A. Provide a written warranty for parts and labor for one year ***from the date of Substantial Completion***, including an extended four-year replacement warranty on compressor bodies.

B. Components of equipment subject to replacement before one year's use (such as refrigerator door gaskets) and those items which may fail due to improper or inadequate periodic maintenance by the Owner/Operator (such as an uncleaned refrigeration system condenser) are not intended to be included within the scope of the Warranty.

C. Refrigeration Systems/Equipment: One-year free service available within twenty-four hours of notification.

D. Furnish three copies of a list of all equipment and their respective local service agencies, indicating the address, telephone number, and name of the person to contact. The service agencies selected shall be factory-authorized for the equipment assigned whenever possible.

E. Provide the following for refrigeration systems/equipment unless specified otherwise:

1. One (1) year of free refrigeration system service is available within twenty-four hours of notification.

2. Provide five (5) year manufacturer's registered written replacement warranty certificate covering compressor bodies. Warranty to cover labor costs for the first year.

3. Provide ten (10) years of the manufacturer's registered written replacement/repair warranty certificate covering walk-in assembly panels. Warranty to cover defects in material and workmanship. Warranty to cover labor costs for the first year.

4. Provide two (2) year parts and labor warranty for ***all parts/components (including third-party components that may be utilized)*** of the refrigeration system(s) ***(including freon)***, walk-in cooler(s), and freezer(s) not otherwise covered herein.

F. ***All above-stated warranty periods are from the date of Substantial Completion***. All replacement parts due to a warranty call should be the same quality as the original, or better if the original were defective. Replacement parts should be of domestic origin where possible.

1.9 SUBMITTAL DATA

A. **All submittals must be received, reviewed, and approved as noted prior to equipment procurement. If any equipment is procured prior to this process, it is on the KEC to replace any equipment, accessories, or other components that may not meet the specifications or design intent for the facility, including all costs associated with rectifying the errors made in procuring the equipment before this critical process.**

B. Special Requirements: The following are in addition to any general requirements given elsewhere in the Documents.

C. Submittal Requirements:

1. Kitchen Equipment Contractor to furnish all submittals via PDF, drawings to be scaled per General Specifications and provided in Three (3) submittal packages.

2. Foodservice Design Professionals requires the below-listed business days for each package submitted. Packages are to be submitted within 14 days between each issued package. Each package should contain individual submittal sets.

    a. Package One to include (2) Individual sets: 10 Business Days for Review

        i. Equipment rough-in

        ii. Equipment Brochure

    b. Package Two to include (3) Individual sets: 10 Business Days for Review

        i. Exhaust Hoods

        ii. Walk-in Cold Storage Assemblies

        iii. Refrigeration

    c. Package Three to include (4) Individual sets: 15 Business Days for Review

        i. Custom Fabrication

        ii. Serving Counters

        iii. Merchandising Equipment

        iv. Miscellaneous Submittals

D. Submittals to be identified with the below-listed file name structure:

1. 11 40 00-1 EQUIPMENT BROCHURE

2. 11 40 00-2 EQUIPMENT ROUGH-IN PLANS

3. 11 40 00-3 CUSTOM FABRICATION

4. 11 40 00-4 SERVING COUNTER

5. 11 40 00-5 EXHAUST HOODS

6. 11 40 00-6 WALK-IN COLD STORAGE ASSEMBLY

7. 11 40 00-7 REFRIGERATION

8. 11 40 00-8 BEVERAGE MERCHANDISER

E. Package One (1) requires both submittals: Brochure and Rough-in plans. **If not sent together, the submittal will be rejected.**

F. Foodservice Design Professionals (FDP) will notate all submittals in RED. Architects and General contractors will be notated in color per their direction.

G. If hard copy submittals are required, Kitchen Equipment Contractor will furnish all copies to the specified trades as required.

H. If discrepancies, missing information, or incorrect information occur within the documents, Kitchen Equipment Contractor is to seek clarification or note the need for further direction on

submittals. The Kitchen Equipment Contractor is to bid the higher of the discrepancies. *Refer to Section 1.3 SCOPE OF WORK: Subsection D.*

I. Brochure Format (for regularly manufactured equipment and components):

1. Front and rear protective cover with labeled project name.

2. Brochure index: Indicate Functional Area/Room number, item number, quantity, description, and manufacturer.

3. A separate flysheet for each component or item of equipment, indicating item number, name, quantity, manufacturer, optional equipment, modifications, special instructions, and utility requirements. Any equipment or assembly containing more than one buyout sub-assembly or component shall have the second item listed in parenthesis beside the primary item name—for example, Serving Counter (hot food well).

4. Catalog specification sheet with all options notated on the specification sheet and manufacturer's drawing.

J. Shop Drawings (Rough-In Drawings):

1. Separate drawing sheets: same size as Contract Drawings (Contract Drawings are not to be traced or reproduced). Submittal drawings are to be provided by Kitchen Equipment Contractor and not copied or reproduced from Contract Documents. Any reproduced submittal drawings will be rejected.

2. ¼" scale drawing of fixed/movable food service equipment and prefabricated Walk-in assemblies with itemized schedules.

3. Special Conditions Drawings, sizing, and locating the following conditions:

a. Slab depressions, cores, sleeves, or block-outs (walk-in assemblies, drain trenches, piping, etc.).

b. Concrete or masonry platforms.

c. Pipe sleeves or roof jacks.

d. Wall openings or block-outs for pass-through equipment, recessed control panels, in-wall fire-protection system components, etc.

e. Blocking grounds or anchor plates required in walls for equipment support/attachment.

f. Above-ceiling hanger assemblies for support of exhaust hoods, ceiling-mounted pot racks, etc.

g. Access panels in walls or ceiling for service of equipment.

h. Ceiling pockets or recesses for unusually high equipment.

i. In-wall carriers for wall-hung or cantilevered equipment.

4. Electrical Rough-In Drawing

5. Plumbing and Mechanical Rough-In Drawing

6. Required information:

   a. All fixed and portable food service equipment shown on Contract Drawings.

   b. All prefabricated Walk-In Assemblies and Conveyor/Dishtable Assemblies shown on Contract Drawings.

   c. All general-use and convenience utilities or services indicated on Contract Drawings, including those required by or connected to equipment or devices, not in this Section.

   d. All Rough-In Drawings: Fully dimensioned from engineering benchmark (column lines, when provided) and finished-room surface to the point of stub-up through floor and stub-out through wall or ceiling for all mechanical, electrical, and plumbing services.

   e. Connection number/tag system and symbols: Identical to Contract Drawings.

K. Shop Drawings (Manufacturer's and Fabricator's):

1. Sheet Size: Identical to Contract Drawings, drawn or plotted at a ¼" scale for plan view, ½" for elevations, and 1½" for sections and construction details.

2. Included information: The item number, name, and quantity.

3. Construction details, sections, and elevations to reflect the requirements of the Specifications and Drawings.

4. Indicate adjacent walls, columns, and equipment.

5. Indicate plumbing and electrical schematic drawings for equipment such as conveyors, waste systems, self-cleaning exhaust hoods, exhaust hood fire protection systems, and fabricated fixtures with a single electrical or plumbing connection.

6. Mechanical or electrical operating components or products integrated into a fabricated fixture: ventilation and service access required or recommended by the manufacturer, including panel size and location to permit easy lubrication, adjustment, or replacement of all moving parts.

L. All equipment and engineering rough-in plans sheet numbers are to match the contract documents. All equipment item numbers and engineer item numbers located on the schedules are to match the contract documents. All engineering requirements must be updated to accommodate the provided equipment and match the contract documents. The Kitchen Contractor coordinates any MEP revisions to accommodate the supplied and proposed equipment. The Kitchen Equipment Contractor is responsible for any costs associated with equipment substitution.

M. Foodservice Design Professionals (FDP) drawings and schedules are not to be copied in any way. Any replicated drawings of Foodservice Design Professionals (FDP) will be rejected.

1.10 SERVICE MANUAL

A. Three copies bound in 1½" hardback, three-ring binders (as many volumes as required by the scope of the project) with the same data as the brochure after installation (Refer to "Submittal Data"). Provide separate service manuals for each independent area within the project scope (Main Kitchen, Culinary, Concession, etc.).

B. Each Volume: Section for maintenance of finish materials (e.g., stainless steel, plastic laminates, FRP, Plexiglas, etc.).

C. Catalog specification sheet and/or manufacturer's shop drawings, including wiring diagrams when applicable.

D. Each Volume: Index of items, manufacturer's operating/maintenance information, replacement parts data, list of all product warranties, and price lists. Provide the name, title, and address of personnel at each respective manufacturer and service personnel to be contacted for spare/replacement parts and service after the warranty period.

E. To the greatest extent possible, provide two copies of the manufacturer's instructional video cassettes for operating, maintenance, and equipment service.

F. Internally subdivide binder contents with permanent page dividers, logically organized by equipment item number or manufacturer name, with tab titling printed under reinforced, laminated plastic tabs.

G. Electronically submitted manuals must follow the formatting requirements listed above.

H. **Service Manual to be provided to the owner before kitchen equipment demonstration.**

1.11 VERIFICATION AND COORDINATION OF PROJECT / DATA

A. Utilities Rough-in Drawings and field verifications are to be completed within four weeks after receipt of notice-to-proceed. Review Contract Drawings and Submittal Data for accuracy and completeness and notify Architect of conflicts and proposed adjustments. Coordinate work with other sub-contractors.

1. KEC to provide on-site field verification of all underground utilities before pouring concrete for capacity and location and coordinate with General Contractor. Submit a review to Architect and General Contractor. If rough-ins need to be relocated, KEC will compensate other trades for the required relocation.

2. KEC to provide on-site field verification of all other utility connections and locations and coordinate with General Contractor. Submit a review to Architect and General Contractor.

B. On-Site Inspection Reports

1. Before concrete pour: The Kitchen Equipment Contractor is to submit a copy of the report below to the Architect, General Contractor, and Foodservice Design Professionals (FDP) within 24 hours of the inspection. The form to be submitted is contained within these General Specifications.

2. Before delivery of equipment: The Kitchen Equipment Contractor is to submit a copy of the report below to the Architect, General Contractor, and Foodservice Design Professionals (FDP) within 24 hours of the inspection. The form to be submitted is contained within these General Specifications.

Report Date_____ **Project Name** _____

KEC Firm_____ **Phone Number**_____

Contact Name_____ **Email** _____

- ☐ **Walk-In panels are installed square, plumb, and level. Inspected prior to interior concrete pour.**
- ☐ **Ceiling panels are installed flush and tight to wall panels with undamaged gasket material. Any signs of condensation at joints or walls should be reported to FDP and addressed immediately. Caulk at panel seams will not be an acceptable solution.**
- ☐ **All cam-locks are engaged, and buttonholes are in place.**
- ☐ **Gaps under the screed or floor angle (due to shimming) are entirely sealed to the slab.**
- ☐ **Penetrations in the ceiling or wall panels are insulated and sealed.**
- ☐ **Weatherproofing / thermal barrier material is installed.**
- ☐ **All sharp edges of metal doors and diamond treadplate are clean of sharp edges and deburred.**
- ☐ **Door bumper or wall protection is installed and located as to prevent damage of door to adjacent walls.**
- ☐ **Cove base installed at all wall bases internal and external of walk-in.**
- ☐ **Door systems are correctly installed, and the door is self-closing and seals around the opening perimeter and at the floor threshold. Threshold has a smooth and level transition.**
- ☐ **Upon completion of the electrical connections, confirm the final operation of the IC/IC+ control, door heaters and light switches.**
- ☐ **Entrapment hardware and alarm systems are installed and functioning.**

An on-site Inspection to verify the location of INSTALLED utilities was conducted on this date. The following conditions were observed and brought to the attention of the General Contractor. (KEC is to provide a written description and copy of the Utility Plan indicating the corrective action required).

1. What difficulties were encountered?

Inspector's Initials _____

This Inspection Report is the responsibility of the Kitchen Equipment Supplier and the General Contractor. Coordination between the two parties is mandatory.
Neither the Architect nor FDP need to be present at these inspections.

EMAIL A COPY OF THIS REPORT AND ANY ADDITIONAL INFORMATION TO THE ARCHITECT, GENERAL CONTRACTOR AND FOODSERVICE DESIGN PROFESSIONALS, LLC.

C. Review critical systems/components for application, performance, and capacity and submit calculation worksheets with the initial submission of brochure/rough-in drawings, with all proposed adjustments noted, including:

1. Exhaust hood removal/supply air volume, velocity, static pressure, duct collar sizes, and locations.

2. Refrigeration Systems (compressor, condenser, and evaporator) capacities/sizes, quantities, and refrigerant piping distances/sizes.

3. Exhaust Hood Fire Suppression Systems (nozzle locations, air handler, fuel interlocks, piping/distance limitations).

4. Locations of Vacuum Breakers.

5. Conformance of Refrigerated Components/Equipment with HACCP Guidelines (e.g., salad/sandwich pans, upright/open refrigerator cabinets, salad bars) with HACCP Guidelines.

6. Gas and water line sizes and manifold configurations.

7. Diameter and length of flexible connector lines for fixed/movable gas appliances.

8. Fabricated Equipment load center panels (individual and total amperage calculations and circuit balance).

9. ADA compliance of workstations, service positions, passageways, etc.

D. Ceiling mounted appliances/fixtures: Verify and coordinate dimensions/location of support framing/hangers with the General Contractor—all material and installation below 12’-0” AFF: Section 11 40 00.

E. Dimension Responsibility: Obtain actual or guaranteed measurements for the proper equipment fit. All dimensions indicated in Contract Documents are approximate and are as accurate as can be determined at the time. Field-check all horizontal/vertical measurements and conditions at the building before fabrication or delivery of equipment and notify the Architect of all conflicts or deviations from the dimensions shown.

F. Checking Dimensions at Site: Before ordering any materials or doing any work, verify all measurements of the building and be responsible for their correctness. No extras will be allowed for variations from drawings in existing conditions or work performed under this contract. Any discrepancies found shall be submitted to the Architect for instructions before proceeding.

G. Scheduling to Fit Openings: Should it become necessary to schedule the construction of walls or partitions before delivery of fixed equipment, the equipment must be fabricated for passage through finished openings. Maintain close contact with the project and be cognizant of all conditions, including vertical handling limitations within the building (elevator cabs or openings, stairs, etc.) and possible hoisting requirements. Coordinate all procedures with General Contractor and Project Team.

H. Refrigerated and Dry Storage Areas: Verify and coordinate dimensions to accommodate scheduled modular shelf sections. Notify Architect of the variance between the Contract Documents and actual conditions.

I. Color/Pattern Selections: Submit selection samples of solid polymer products, plastic laminate, paint or stain finishes, and vinyl-coated surface material of equipment as selected by the Owner.

J. Movable Equipment Interface: Rolling stock (pan racks, carts, dollies, dish/tray/rack dispensers) required to fit through or into fixed equipment (roll-in refrigerators, counter bodies, etc.) is to be reviewed and coordinated for compatibility at the time initial of shop drawing submittal. Indicate conflicts and proposed adjustments.

K. Relocation of Work: Relocate or re-route work as required to coordinate related items free of charge if no extra work is involved.

L. **Kitchen Equipment Contractor must provide FDP with the food service equipment lump sum pricing (including material and labor) after the contract has been executed and *before submittals* are provided to FDP. *This information is critical to FDP for accounting/billing purposes.***

1.12 EQUIPMENT FURNISHED / INSTALLED BY OTHERS

A. Obtain and coordinate utility requirements of Owner-Furnished/Owner-Installed (OF/OI) equipment with the building utilities and rough-in drawings/provisions.

B. Coordinate physical data of OF/OI appliances or equipment and incorporate information into Submittal Drawings. Vendor- or Purveyor-Furnished equipment (e.g., coffee/tea equipment): same as OF/OI.

1.13 WORK INSTALLED BUT FURNISHED BY OTHERS

A. Coordinate delivery/installation schedule of Owner-Furnished/Contractor-Installed (OF/CI) equipment with the Owner at least ninety (90) days before equipment requirement.

B. Obtain and coordinate utility requirements of OF/CI equipment with the building utilities and rough-in drawings/provisions.

C. Receive at the job site and fully incorporate into installation procedures as if furnished under this Section.

PART 2 - PRODUCTS

2.1 FABRICATED FIXTURES MATERIAL / COMPONENTS

A. Stainless steel sheets or shapes: 18-8, Type 302, polished to 180 grit No. 4 finish.

1. Stainless steel joints and seams: Heli-arc welded, free of pits and flaws, ground smooth, and polished to a No. 4 finish.

2. The “grain” direction of horizontal stainless-steel surfaces: Longitudinal, including the backsplash. The polishing procedure at right-angle corners of fixtures shall provide a mitered appearance.

B. Galvanized Iron Sheets: Armco copper bearing Zinc Grip or Zinc Grip/Paint Grip.

1. Galvanized iron joints and seams: Arc-welded, free of pits, flaws, and ground smooth.

2. Galvanized sheets or shapes: Washed with mineral spirits and painted with Rust-Oleum gray semi-gloss enamel.

C. Sound Deadening: Schnee Butyl Sealant ½" wide rope positioned continuously between all frame members or contact material and underside of stainless-steel surface (sinks, tabletops, food wells, over shelves, and undershelves). Tighten stud bolts for maximum compression of sealant and trim excess.

D. Plastic Laminates: Color/pattern selected by Architect, in 1/16" thickness for flat surfaces: 1/32" thickness for radiused surfaces. Plastic laminates and adhesives must be NSF-approved (Standard No. 35).

E. Solid Polymer products: Color/pattern/material selected by Architect in thickness as specified. Solid Polymers and adhesives must be N.S.F. approved (Standard No. 51).

F. Casters:

1. Fabricated fixtures with "Open Base" construction: Jarvis and Jarvis Model No. 5-405-113P-NSF swivel casters with grease seals on forks and wheels; Zerk fitting in swivel; two casters: Model No. E-75 Verti-Lock brakes. All casters: B-7" rolling bumpers with stainless steel top discs.

G. Cutting Boards: 1/2" thick Read Products, Inc. "Richlite" cutting board, size as indicated.

H. Identification Plates, Labels, Tags:

1. Prohibited Information: Names of suppliers, fabricators, and contractors.

2. NSF Labels: Required on all pieces of equipment.

3. Required Information: Function or purpose of controls such as display light switches, food warmer controls, etc.

4. Plate Construction: Engraved phenolic plastic, secured to equipment with epoxy cement or stainless-steel screws. Furnish samples.

2.2 PLUMBING / MECHANICAL REQUIREMENTS

A. Plumbing Fittings and Components: Furnished under this Section as follows:

Note: Fitting and components described in Items 1, 2, 3, 4, and 5 are furnished loose by 11 40 00 for final installation and connection by Division 22.

1. Control valves and appliance pressure regulators for water, gas, steam, and vacuum breakers: wherever required on food service equipment (chrome-plated where exposed).

2. Faucets and drains with and without connected overflows (unless otherwise indicated) for all sinks.

3. Specialty food service water-fill faucets, hose bibbs, or hose assemblies indicated in drawings/specifications.

4. Wade Model No. W-10 Shock-Stop shock absorbers for all food service equipment with quick-opening or solenoid-operated water valves.

5. Dormont Series Water Quick Disconnect hose, diameter per water connection size requirements, with safety fitting, w/coiled restraining device, full port ball valve, antimicrobial coating, lifetime warranty.

6. Extensions of indirect waste fittings to open-sight floor sink or floor drains from sinks, under bar equipment, and food-holding components of serving counters (e.g., cold pans, hot food wells, refrigerator/freezer coils not equipped with condensate evaporators) furnished and installed by Division 22. Drains: All drains to be type 'K' Copper – Paint with aluminum paint where exposed**. Div. 22 to ensure a minimum air gap of 1" and not less than twice the effective opening of the indirect waste pipe, per code. Div. 22 to ensure all drain lines are centered over floor sink grate openings and no water splashes on the floor.**

7. Piping brackets and supports beneath fabricated equipment.

8. Closed Base Bodies: Removable 18-gauge stainless steel closure panel at plumbing penetrations under the top.

9. Control valves on Open Base fixtures: Mounted on a 14-gauge stainless steel gusset-shaped panel with h 3½" setback from the countertop edge/rim to the face of the control handle.

10. Fill hose/faucet at support pedestals or Closed Base Body: Installed in a 15" x 18" x 5" deep recessed mounting panel. Panel bottom: sloped on a 60° angle, with 3/8" stainless steel rod hanger-bracket for the hose.

11. Provide filtration option as shown on contract documents (a, b, c, or combination thereof):

    a. In-line Water Filter System:

        i. Everpure System filters for coffee/tea brewers, icemakers, water chillers, convection steamers, and beverage systems. They should be sized per the manufacturer's recommendation.

    b. Remote Central Water Filter System.

    c. Remote and/or In-line Reverse Osmosis system.

B. Gas-Heated Equipment Fittings and Components: Furnished under this Section as follows:

1. Fixed Equipment: Dormont 1675KIT2S48 gas appliance connector: Diameter per fuel volume/connection size requirements. Gas valve diameter size per fuel volume/connection size requirements.

    a. Restraining device: Heavy duty steel cable, fastened to equipment and walls, 3" to 6" shorter than equipment connector length.

C. Final Plumbing Connections Provisions:

1. Fabricated equipment containing components, fittings, and devices indicated on food service connection drawings to be connected to the building systems: each component, fitting, or group thereof pre-piped to a utility compartment for final connection by Division 22. Refer to drawings for capacities.

2. Field-assembled equipment (e.g., prefabricated walk-in assemblies, exhaust hoods, ware wash machines, convection ovens, etc.): plumbing components completely

interconnected under this Section for final connection arrangements indicated on Utility Connection Drawings.

3. All plumbing final connection points of equipment shall be tagged, indicating the following:

   a. Item number

   b. Name of devices or components

   c. Type of utility (water, gas, steam, drain, chilled water)

D. Ducts and Vents:

1. Exhaust hoods furred-in to ceiling: 2" high duct collar for final connection to the duct system.

2. Warewash machines equipped with integral vent cowls or extended hoods: furnished with 18-gauge stainless steel seamless duct risers to 6" above the finished ceiling for final connection. The duct: trimmed at the ceiling with a 16-gauge stainless steel angle flange with all corners welded.

E. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Sub Sections E. Plumbing and F. Mechanical for additional information.

2.3 FOOD SERVICE EQUIPMENT REFRIGERATION SYSTEMS

A. Install complete with all refrigerants, oil, dials, dehydrators, gauges, and controls required for the system's proper operation.

B. Self-contained or factory-installed compressors: Check and adjust to the proper operating temperature prescribed by FDA/HACCP.

2.4 PLUMBING TRIM

A. Faucets: Furnished for all sinks or equipment requiring open water supply.

B. Fill Faucets: Furnished for appliances requiring open water supply.

C. Drain Fittings: Furnished for all sinks or equipment requiring removal of liquids. Install specified chrome-plated or stainless-steel fittings in die-stamped openings with washers and locknuts. The solder may be used as a sealer but shall not be applied to the top surface of the drain fittings.

2.5 ELECTRICAL REQUIREMENTS

A. All electrical systems, components, and accessories within the work of this Section: Certified to be in accordance with NEC 70.

B. Electrical Fittings and Components: Furnished under this Section as follows. Coordinate food service equipment loads, voltage, and phase with the building system and confirm any existing or OF/OI equipment requirements.

C. Cord and Caps:

1. Coordinate all food service equipment cord/caps with related receptacles.

2. All 120, 120/208, and 208 volts “plug-in” equipment shall have Type SO or SJO cord and plug with ground wire fastened to the frame/body of the item.

3. Cord lengths for fixed equipment: Adjusted to eliminate loose-hanging excess.

4. All non-fixed plug-in “buy-out” equipment: Hubbell configuration and ratings as required.

5. All mobile electrical support equipment (heated cabinets, dish carts, etc.) and counter appliances mounted on mobile stands (mixers, food cutters, toasters, coffee makers, microwave ovens, etc.): 8’-0” cord length with cord-hanger strap secured to the rear of equipment or mobile stand.

D. Switches and Controls:

1. Each motor-driven appliance or electrically heated unit: Equipped with a control switch or starter per Underwriters’ Laboratories, Inc., with low-voltage and overload protection.

2. Disposer controls recess-mounted in the wall: External fittings and accessories removed from the enclosure and furnished with 12-gauge stainless steel perimeter angle flange with welded corners. Install control at 4’-0” AFF to the bottom of the enclosure.

3. Disposer controls recess-mounted in counter-splash risers: External fittings and accessories removed from NEMA 4 enclosure and furnished with 12-gauge stainless steel perimeter angle flange with welded corners. Install control at 3’-0” AFF to the bottom of the enclosure. Provide the panel with a 60” long Seal-Tite electrical conduit from the bottom of the control panel for final field connections under Division 26.

4. Equipment that is not provided with built-in circuit breakers or fused terminal block and is indicated on Utility Connections Drawings to be directly connected to the building electrical system: a NEMA 4 stainless steel disconnect switch furnished and installed by Division 26.

5. All remote manual starters, disconnect switches, magnetic contactors or starters, and push-button stations: NEMA Type 4 enclosure; NEMA Type 1 enclosure only when installed in a Closed Base Body.

E. Heating Elements:

1. Electrically heated equipment: Thermostatic controls.

2. Water heating equipment: Equipped with positive low water shut-off.

F. Receptacles and Switches:

1. Receptacles installed in vertical panels of support pedestals or Closed Base Bodies: installed in 12” x 8½” x 3” deep recessed mounting panel sloped at a 60° angle and turned up to the top of the opening.

2. Pre-wire receptacles in closed base fixtures to a junction box installed within 6” from the bottom of utility or compressor compartments.

3. Receptacles mounted on Open Base fixtures: Installed on a 12” x 10½” x 4½” deep 14-gauge stainless steel panel with returned ends and sloping recess—secure panel to the underframe of fixture top.

4. Pre-wire receptacles on open base fixtures to a junction box secured to a leg or mounted on the underside of the lower shelf. Vertical runs of wiring: Made in rigid conduit or within the tubular leg.

5. Receptacles installed in/on-fabricated equipment: Hubbell, Inc. assemblies horizontally mounted in a metal box with stainless steel cover plate.

6. Switches installed in/on-fabricated equipment: Hubbell, Inc. with metal box and stainless-steel cover plate. Switches: pre-wired to the controlled device and a junction box installed within 6” from the bottom of the utility or compressor compartment. All refrigeration system switches: Installed within the compressor compartment near the door opening.

7. Load centers installed in/on fabricated equipment to have all fixture components pre-wired to the load center with balanced phase loading. Load center: Ready for final connection by Division 26 and flush-mounted within the utility compartment rear panel, set back 8” from the access door. All breaker/device information will be typewritten on the circuit schedule in the load center door (number corresponding breaker/device) with an enclosed schematic wiring diagram of fixture components.

8. All receptacles are to be pre-wired to the cord and plug assembly and routed through the over-shelf post at all island equipment locations unless specified otherwise.

G. Light Fixtures:

1. Light fixtures with lamps installed in/on fabricated or field-assembled equipment: pre-wired to a junction box for final connection (continuous-run fixtures when indicated).

2. LED Display Light: Install light fixtures full-length of Display Stand and Serving Shelf with stud bolts and pre-wire through support posts to an apron-mounted switch.

3. Heat Lamps: Installed to the underside of serving shelf assemblies. When multiple 24” heat lamps are specified, provide maximum length heat lamp chassis. Install all switches remotely from lamps.

4. **Walk-in assembly LED Light Fixtures: Furnished by Section 11 40 00, final installation by Div. 26. All electrical wiring and conduit, provided by Div. 26, electrically connected through the Vapor Proof light fixture base connection, located on the interior door header—all Conduit to be Seal-tight conduit. Door frame wiring stubs out the top of panels 8” in flexible conduit for final connection by the electrical contractor. All horizontal conduits: below ceiling panels. All lighting fixtures will be wired from inside the assembly—no penetrations through the ceiling panels. Seal-sleeved penetrations are airtight at both sides of the panel. KEC is responsible for verifying that trade contractors seal all penetrations.**

H. Final Electrical Connection Provisions:

1. Fabricated equipment containing electrically operated components or fittings indicated on Utility Connections Drawings: Direct connected, with each component, fitting, or group pre-wired to a junction box for final connection by Division 26. Refer to drawings for circuit loading.

2. Fabricated equipment containing electrically operated components and devices indicated: Circuit-breaker load center with each component or device pre-wired to a

separate circuit breaker for balanced phase loading and single final connection by Division 26.

3. Field-assembled equipment (e.g., prefabricated walk-in assemblies, exhaust hoods, ware wash machines, etc.) shall have electrical components completely interconnected in this Section for final connection arrangements as indicated on Utility Connection Drawings by Division 26.

4. Pre-wire the following groups of walk-in assembly electrical devices to a top-mounted junction box for final connection by Division 26 per compartment grouping (unless otherwise indicated).

   a. Light fixtures and switches; heated pressure-relief ports.

   b. Door/jamb heaters.

   c. Evaporator fans, defrost elements and drain line heaters.

5. All electrical final connection points of equipment shall be tagged, indicating the following:

   a. Item number.

   b. Name of devices on the circuit.

   c. Total electrical load.

   d. Voltage and phase.

I. Lamps: in all food service equipment containing light fixtures. Refrigerator or heated cabinets: All exposed LED lamps above or within a food zone: Shat-R-Shield lamps or standard lamps, sleeved with end caps.

J. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsection F. Division 26 (Electrical) for additional information.

2.6 CUSTOM – FABRICATED / ASSEMBLED UNITS

A. Mechanical or electrical operating components or products integrated into a fabricated fixture: Ventilation and service access required or recommended by the manufacturer. The size and placement of the service access panel(s) permit easy lubrication, adjustment, or replacement of all moving parts and are to be indicated on fabrication shop drawings.

2.7 BAKER TABLETOPS (Unless specified otherwise)

A. 14-gauge 304 S/S top with 2” square turn down at the front, 6” high enclosed splash at two (2) sides and rear. Brace same as “Counter/Tabletops.”

B. 1¼” x 6” high integral coved riser at rear and ends unless indicated otherwise on drawings.

C. 16-gauge stainless steel flour-trough at free long sides, secured to the underside of the top. Trough: 3” diameter with eased edges/corners.

2.8 COUNTER / TABLETOPS

A. 14-gauge stainless steel; all free edges turned down 2” with ¾” tight hem at the bottom—free corners: rounded on ¾” radius.

B. Marine edges: Turned up ½” on 45º angle and turned down 2” with ¾” tight hem at the bottom.

C. Cafeteria serving countertops at hot food stations: Full-length x 3½” x ½” high raised rail at (customer’s) front side with 45º integral turndown to counter surface.

D. Tops abutting high fixtures or walls: Cove up specified height and slope back 1½” at the top on 45º angle; 2½” slope where piping occurs. Turn down 1” at the rear of the splash and tight ends to the bottom of the top turndown. Secure splash turndown to the wall with a 4” long 14-gauge stainless steel “Z” clip anchored to the wall, 36” OC.

E. Freestanding tables and all serving counter splash-risers: Turned back at a 90º angle with 1” turndown at the rear.

F. Brace tops with rigid-welded 1½” x 1½” x 1/8” galvanized steel angle frame at the perimeter with cross bracing 2’-0” OC maximum. Provide 4” x 4” x 12-gauge stainless steel triangular pads where leg gusset welds to frame. Paint the entire frame with Rust-Oleum gray semi-gloss enamel. Angle frames: Secured to the underside of top surfaces with ¼” studs welded 9” OC maximum with chrome-plated washer, lock washer, and cap nut. Studs: Such length that cap nuts can be made up tight, bringing the top down snugly on the angle frame, eliminating all vibrations or “oil-canning.”

G. Tops: 1½” overhang at free sides of underframe or Closed Base Body.

H. Mockett Model No. SG5-26 chrome-plated/plastic grommet assembly or integrally welded stainless-steel flange or inverted gusset where service utilities or support posts penetrate or abut tops, ground, and polished to match the top. When conditions permit, provide a 1” x 1½” rectangular backsplash opening for service utilities instead of piercing the horizontal surface. Install stainless steel split tubing at the raw edge of the opening.

I. Extend underbracing members to the wall, turn down 6”, and anchor to the wall when specified to be mounted on leg/bracket assembly.

J. All openings in tops: 3/16” high raised die-formed edges.

K. All top openings for pans or inserts: 20-gauge stainless steel, watertight liners, 8½” deep, secured to the underside of the countertop.

L. All “built-in” and “drop-in” counter equipment/appliances to have framing members at the perimeter of the opening.

M. Scrap Basket: 18-gauge stainless steel construction 6½” x 6½” x 21¾” long. Top of container: 5/8” wide x ¼” high full perimeter flange with ¼” diameter stainless steel rod bail handle. Interior vertical corners coved on ½” radius. Countertop: Fitted with 6¾” square die-stamped opening.

2.9 COLD PANS

A. 14-gauge stainless steel with ¾” coved interior welded integrally to the countertop with a 3/16” raised edge at the perimeter of the opening – depth of cold pan to follow NSF 7 compliance.

B. Slope bottom to required quantity of Component Hardware Model No. E16-4021 drain fittings at 48” OC maximum. Sleeve through insulation at drain fittings and extend common drain line into utility compartment for indirect waste connection.

C. ½” OD copper refrigerant lines in a serpentine pattern, 1½” OC flattened for maximum contact. Secure tubing to the underside of ¼” thick aluminum “distribution plate” installed tight to the underside of the frost plate area and apply cold-conductive mastic to all surfaces.

D. Component Hardware Model No. E16-4021 drain fittings at 48” OC maximum, sleeved through the insulation with common drain line extended into utility compartment.

E. Heat Cable: Low-wattage, full-perimeter, below countertop at the edge of depression. Secure with “Z” clips, 9” OC, and interwire with compressor switch for simultaneous operation.

F. Enclose the sides and bottom of pans with an airtight 18-gauge galvanized jacket and pack with 2” fiberglass insulation set in mastic.

G. Compressor: Size as indicated or required to accommodate the size of the cold pan. Locate the compressor in the compartment below the unit or as shown on the drawings.

H. Sectional 16-gauge stainless steel perforated false bottom (¼” holes, @ ¾” OC). Turn down 1½” on all sides, weld corners, and provide finger rings. False bottom sections: 24” long maximum.

2.10 DRAWERS

A. Stainless Steel Liners: Component Hardware Model No. S81-2020C (20” x 20”), easily removable with drawer in the fully extended position.

B. Drawer Frame: 16-gauge stainless steel flanged out at the top. Weld the frame to a double-panel 16-gauge stainless steel drawer front with full-length recessed pull at the top (similar profile as Garcy Model No. R-1060) with closed ends.

C. Channel-formed horizontal pull: ¾” turndown at the front and ends with ½” tight hem. The front edge of the pull: flush with the face of the drawer. Recess behind pull: sloped up on a 60° angle, terminating 1” below the bottom edge of pull.

D. Mount drawer frame on Component Hardware Model No. S52-2020 self-closing slides, with Delrin bearings, full-depth of the fixture. Secure slides to the body or brackets to eliminate lateral movement in the extended position. Refrigerator drawers: Component Hardware Model No. S52-2024 stainless steel slides with Delrin bearings.

E. Drawer enclosure in an Open Base Fixture: 18-gauge stainless steel flanged out at the top for attachment to the underside of the tabletop. The lower edge of the enclosure is flanged in toward the open bottom. Mount drawer slides to enclosure and brace as required. The face of the enclosure is to be the same length and height of the drawer face. Provide ¾” deep offset in front of the enclosure and 2½” from the underside of the tabletop for a flush-fitting appearance.

F. Drawer enclosure on freestanding fixture: Full depth of table framing.

G. Drawer enclosure in a Closed Base Fixture: Completely partitioned from the adjoining area. Drawer front: Flush fitting with the face of the body.

H. Drawer Liners other than tool/utility: **Bread Drawer:** S/S liner sized to fit drawer; **Refrigerated Drawer:** S/S liner sized to fit drawer.

I. Cash Drawer: Integral stainless-steel body, 3” deep.

2.11 FOOD WELLS (UNLESS SPECIFIED OTHERWISE)

A. Food Warmer Controls: Remote-mounted in sloping recessed apron panel. The control panel is recessed 2½” from the bodyline at the top of the 60° slope and 1” at the lower edge. Terminate slope angle 2½” below the countertop. Mount panel on concealed piano hinge at bottom edge; secure with screws at upper corners.

B. Manifold all warmer drains and extend to within the utility compartment for indirect waste connection. Install valve in the drain line and extend handle through compartment door.

C. Removable 18-gauge stainless steel closure panel at the underside of warmers.

D. 14-gauge stainless steel plate/utensil shelf full-length of hot food station unless noted otherwise: 10” below countertop x 9” deep, with rear panel coved up to the underside of the countertop; end panels turned up square. Front of shelf: Turned down 1½” and returned under for closure panel attachment.

E. Food wells: Hatco Model No. HWBIBRT-FULD insulated food warmer (1200 watts, 208 volts, single phase) secured to the underside of 12” x 20” die-stamped countertop openings with thermal breaker mastic rope applied at the perimeter of food well flange.

F. Soup Warmers: Hatco Model No. HWB-11QTD soup warmer secured to the underside of 11” diameter die stamped countertop opening with thermal breaker mastic rope applied at the perimeter of soup well flange. The maximum allowable temperature of the countertop at the contact surface is: 120°F. Each warmer: Equipped with one 11-quart stainless steel round insert and slotted cover.

2.12 SINKS

A. 14-gauge stainless steel; all interior corners (horizontal/vertical) coved on ¾” radius. 1½” wide double-walled partitions with flat tops between compartments.

B. Continuous exterior panels of multiple-compartment sinks: 14-gauge stainless steel filler panel welded ground and polished between compartments.

C. Sinks (with overflow): Score and slope sink bottom ½” to die-stamped opening fitted with Fisher 22306 twist waste valve 3 1/2” x 2” with overflow and tailpiece. 18-gauge stainless steel bracket: Welded to sink bottom for drain stem with 1½” handle clearance.

D. Where sinks are installed in fixtures with Closed Base Body, provide a Fisher 22306 twist waste valve 3 1/2” x 2” with overflow and tailpiece. (Sinks with dimensions larger than 20” x 20” in Closed Base Body will not have overflow fitting.) 18-gauge stainless steel bracket: welded to sink bottom with T & S Model No. BL-4740-1 guide bushing. Install on shortened drain stem, one T & S Model No. BL-4710-1 remote control stem assembly only (length as required) with Model No. 113-L universal joint and white blank button. Set drain control handle in Cambro Model PSB-6 bowl with bottom omitted (dress raw edge) to permit passage of drain handle—secure bowl in utility compartment door or body panel with clear silicone.

E. When single-hole deck-mounted faucets are specified, install overflow fitting in the sidewall of the sink compartment and provide ell-fitting in connecting tubing.

F. Flush Covers when specified: 1/2” thick Read Products, Inc. “Richlite” cutting board with two (2) finger holes, size as indicated. Support clips: ¼” stainless steel rod 2” long, formed at 45º

with two ¾" leg ends (¼" long threaded ends). Insert rod clips through tight-clearance holes in the sink, seal watertight, and secure with stainless steel acorn nuts or tack-weld at the exterior of the sink wall. Set support clips ½" below the top. Provide a 14-gauge stainless steel channel or angle support frame to store covers when not in use. Cover holder: Adjacent to sink compartment, below countertop, or under drawer assembly.

2.13 TRAY SLIDES (UNLESS OTHERWISE SPECIFIED)

A. Tray slides: 12" wide, solid 14-gauge stainless steel turned up 2" at the rear behind countertop turndown; turned down 4" at the front and free ends unless otherwise indicated.

B. Three ¼" high die-formed inverted "V" ridges at 4" OC, 2" from the leading edge, terminating 2" from ends of tray slide with tapered ridge ends.

C. Ridges formed on radius: Equal-length segments with 2" separation between chords.

D. Secure tray slides to countertop/body frame, same as "Countertops." Enclose the exposed underside of the tray slide with 18-gauge stainless steel.

E. When indicated, project tray slides 2" beyond the serving countertop and return the entire width of the serving counter at free ends.

F. All tray slides are to be provided and mounted per ADA requirements.

2.14 DISHTABLES

A. Soiled/clean dishtable: 14-gauge stainless steel; free edges coved up 3" with 1½" diameter rolled rim and bullnose corners.

B. Edge of dishtables next to high fixtures or walls: Coved up 10" and sloped back 1½" on 45º angle; 2½" slope where piping occurs. Turn down 1" at the rear of splash and secure to wall with 4" long 14-gauge stainless steel "Z" clips anchored to the wall, @ 36" OC.

C. Exposed rear splash: 16-gauge stainless steel finish panel from the top of the splash to the bottom edge of the rolled rim with a welded vertical joint at the end. Secure the panel with concealed attachment and install bracing 24" OC.

D. Cove all interior corners (horizontal/vertical) on ¾" radius and slope tables 1/8" per foot to sinks, scuppers, or ware wash machines, maintaining level crown/splash.

E. Brace dishtables with 1" x 4" 12-gauge stainless steel channels down the top centerline and between each pair of legs, with closed ends. Bracing: secured to the underside of the dishtable with ¼" studs welded 6" OC maximum, with chrome-plated washer, lock washer, and cap nut. Studs: such length that the cap nuts can be made up tight, bringing the dishtable down on the channel members, eliminating all vibration and "oil-canning."

F. Integrally welded stainless steel flange or inverted gusset where service utilities or support posts penetrate or abut tops; ground and polished to match the top.

G. Hose Bibb: Chicago Model No. 305VBRCF; mounted on 12-gauge stainless steel flange or inverted gusset bracket with 3/8" stainless steel rod hose hanger.

H. Extend underbracing members to the wall, turn down 6", and anchor to the wall when specified to be mounted on leg/bracket assembly.

I. Paper-Drop Opening: 9” square with 4” integral chute having hemmed bottom edge. Slope dishtable top 1” toward the opening, forming a 16” square tapered deposit point.

J. Accessible Tray-Drop Opening: 10” x 18” with integral 16-gauge stainless steel seamless chute sloped at 45º angle toward the center of mobile soak sink position.

K. All dishtables with a Conveyor Type Dishmachine must have a table limit switch provided by Manufacturer and installed by Division 26. Prepare clean dishtable with holes for table limit switch and provide s/s back cover. Wiring must be concealed within dishtable fabrication.

2.15 DISH / TRAY DEPOSIT ASSEMBLY

A. 14-gauge stainless steel deposit shelf, size as indicated. Extend the frame through the opening, flush with the public side of the partition, height as local code authorities require. Turn the shelf down 1” at the front with ¾” return at the bottom (either scribed into a partition or forming reveal). Shelf: 1” square turndown at the long rear side, integral with conveyor slider pan, tray-accumulator, or dishtable. Extend the rear/end splash to align with the head of the deposit station opening. Modify rolled rim at the operator’s side of the tray drop window to have a 3” rolled rim.

B. 18-gauge stainless steel window frame with perimeter flange channel-formed 1” x ¾” at both wall sides. Weld all corners of the frame and install with concealed attachment. Align/abut one jamb of the frame with end splash of conveyor slider pan or dishtable whenever adjacent.

2.16 UTENSIL – WASH COUNTERS

A. 14-gauge stainless steel; all free edges coved up 3” with 1½” diameter rolled rim and bullnose corners.

B. Edges of utensil-wash counters next to high fixtures or walls: Coved up 10” and sloped back 1½” on 45º angle; 2½” slope where piping occurs. Turn down 1” at the rear of splash and secure backsplash to the wall with 4” long 14-gauge stainless steel “Z” clip anchored to wall @ 36” OC. Vacuum breaker pockets: 4” long square turnback sections aligned with the slope break line.

C. Exposed Rear Splash: 16-gauge stainless steel finished panel from the top of the splash to the bottom edge of the rolled rim with a welded vertical joint at the end of the splash and ½” turnback at the bottom of the panel. Secure the panel with concealed attachment and install bracing 24” OC.

D. Cove all interior corners (horizontal/vertical) on ¾” radius and slope tables 1/8” per foot, maintaining level crown.

E. Brace utensil-wash counters with 1” x 4” 12-gauge stainless steel channels down the centerline of the top and between each pair of legs, with closed ends. Bracing: Secured to underside of dishtable with ¼” studs welded 6” OC. maximum, with a chrome-plated washer, lock washer, and cap nut. Studs: Such length that the cap nuts can be made up tight, bringing the dishtable down on the channel members, eliminating all vibration and “oil-canning.”

F. Integrally welded stainless steel flange or inverted gusset where service utilities or support posts penetrate or abut tops: ground and polished to match the top.

G. Extend underbracing members to the wall, turn down 6”, and anchor to the wall when specified to be mounted on a leg/bracket assembly.

H. Hose Bibb: Chicago Model No. 305VBRCF; mounted on 12-gauge stainless steel flange or inverted gusset bracket with 3/8" stainless steel rod hose hanger.

2.17 DOORS

A. 18-gauge x 1" stainless steel double pan-formed welded construction, insulated with 1" thick polyurethane boards. Seal the perimeter joint of the pans. Offset the lower horizontal framing member of the Closed Base Body to align the flush access door with the bottom of the Body.

B. Channel-formed full-length horizontal recessed pull: ¾" turndown at the front and ends with ½" tight hem. The front edge of the pull: Flush with the face of the door. Recess behind pull: Sloped up on a 60° angle and terminated 1" below the bottom edge of pull.

C. Door Hardware

1. Two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge location).

2. Component Hardware Model No. 35-2000 Concealed Magnetic Catch.

3. Component Hardware Model No. D30-4780 lock in the upper free corner of the door.

D. Louvered opening: Cut out opening size as indicated, turn in 1", and weld. All corners: Ground and polished.

1. Full-height 18-gauge stainless steel louver with 1" vanes at 45º, ½" spacing. Perimeter channel-formed frame: 1½" x 1".

2. 45º x 1" x ½" x opening width plus ½" 18-gauge stainless steel louver.

3. Tack the louver flange's weld tab to the door's back panel.

E. Drain handles opening: 6" diameter hole through the double pan to accommodate Cambro Model No. PSB-6 Bowl:

1. Secure the bowl to the door panel with clear silicone.

2. Omit the bottom of the bowl. Dress raw edges of opening for passage of drain handle.

3. Exposed insulation at the penetration of the door pan: Painted black.

F. Sliding Doors: fabricate same as Paragraph "A."

1. Aluminum Sliding Door Track: Component Hardware Model No. B57-0000 Series, length as required. Secure to angle frame at the top of the underside.

2. Front/rear door sheaves: Stainless steel ¾" side-mounted door hangers; two (2) required per door.

3. Recessed Vertical Pull at Upper Corner of Door: Component Hardware Model No. P63-1012.

4. By-Passing Door Guides secured to bottom shelf: Component Hardware Model No. B62-1093.

5. Door Stop at the bottom edge of door: Component Hardware Model No. B60-1086.

G. Offset the lower horizontal framing member of the Closed Base Body/utility compressor compartment to align the door flush with the bottom of the Body.

2.18 CLOSED BASE BODIES

A. Frame: Rigid-welded 1½" x 1½" x 1/8" galvanized steel angle forming a continuous structure around the top and bottom perimeters of the fixture, a post at each corner, studs spaced 48" OC maximum. The top of the frame is cross-braced with 1½" angles, 2'-0" OC maximum.

B. 18-gauge stainless steel panels and trim with concealed attachment. All seams: Welded, ground, and polished.

C. Exposed Vertical Corners: Rounded on ¾" radius. Closed Base Bodies adjacent to walls or fixtures: square corners.

D. Vertical and horizontal channel members at shelf interior or drawer enclosures, such as corners and center mullions: Closed and sealed.

E. Closed Base Bodies set on finished masonry platforms: closed and caulked at the underside of equipment overhang and bolted to the platform. Body overhang of the platform: 1" at free ends and 2" at the front and exposed rear sides.

F. Closed Base Bodies not set on the platform: Component Hardware Model No. A54-2-6, 6" legs spaced 4'-0" OC maximum.

2.19 COMPRESSOR COMPARTMENTS

A. Same material as Closed Base Bodies with back and end partitions; omit bottoms only.

B. 10-gauge steel slide-out support: Channel frame on full extension slides with 125 lb. minimum capacity secured to fixture frame with anti-vibration mountings for maximum sound deadening. Closed Base Body on the solid platform: front-to-back slide-out support channels set 4" above the bottom for air circulation.

C. Access Door: 18-gauge stainless steel double-pan type with a channel formed horizontal recessed pull full length of the top (similar profile as Garcy Model No. R-1060) with closed ends. Channel-formed horizontal pull: ¾" turndown at front and face of the door. Recess behind pull slopes up on a 60° angle, terminating 1" below the bottom edge of pull. Offset the lower horizontal framing member of the Closed Base Body to align the flush access door with the bottom of the body. Door hardware: two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge locations) and Component Hardware Model No. 35-2000 concealed magnetic catch.

D. Access Doors Louver: Full-height, with 1½" x 1" x 18-gauge stainless steel channel-formed frame with welded corners. 18-gauge stainless steel louver. Submit a sample of the design for approval.

2.20 UTILITY COMPARTMENTS

A. Closed Base Bodies or Pedestal Supports: Fitted with utility compartments wherever piping or wiring is required in/on the fixture.

B. Same material as Closed Base Bodies with full-height back and end partitions. Omit bottoms except at hose-reel locations.

C. Access Doors: 18-gauge stainless steel double-pan type with a channel formed horizontal recessed pull full-length of the top (similar profile to Garcy Model No. R-1060) with closed ends. Channel-formed horizontal pull: ¾" turn down at the front of the door, a recess behind the pull slopes up on a 60° angle, terminating 1" below the bottom edge of the pull. Offset the lower horizontal framing member of the Closed Base Fixture to permit flush alignment of the door with the face and bottom edge of the body. Door hardware: two (2) Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge locations) and one Component Hardware Model No. 35-2000 concealed magnetic catch.

D. No shelves of Closed Base Fixtures are to be penetrated.

2.21 UTENSIL RACKS

A. Rack: ¼" x 2" 300 series stainless steel flat bar with No. 4 finish, fully welded and formed to match the shape shown on drawings. Lowest band - 7'-6" AFF unless otherwise indicated.

B. Ceiling Mount Supports 1-5/8" diameter 16-gauge stainless steel tubing from band to 18" above the ceiling. Anti-sway bracing above the ceiling - 1½" Unistrut members. Tubing penetrations at the ceiling - Component Hardware Model No. A16-0206 stainless steel gussets.

C. Table Mount Supports 1-5/8" diameter 16-gauge stainless steel tubing extended through countertop. Secure to closed base framing or cross rail/undershelf on the open base fixture. Tubing penetrations of countertops - integrally welded stainless steel inverted gusset.

D. Utensil Rack Hooks - Component Hardware Model No. J77-4401 stainless steel hooks spaced 8" OC maximum.

E. Electrical Receptacle: NEMA No. 5-20-R or as noted. Mount in fully welded 3½" x 5½" x 3" 14-gauge stainless steel enclosure with ½" radius corners. Stainless steel cover plate to fit specified receptacle. Pre-wire through tubular support for final connection above the ceiling by Division 26.

2.22 CASHIER / SERVING COUNTERS

A. Exterior Body Panels, when specified: ¾" thick marine grade hardwood plywood with plastic laminate or solid polymer in Architect's selection of color/pattern at all exposed surfaces; backing sheet where concealed.

B. Position, size, and finish horizontal or vertical reveal as Architect directs.

C. Secure panels to counter body framing in a concealed manner. Install removable panels with "Z" clips overlapping body framing members.

D. Hinged doors in exterior body panel(s) - Grass Model No. 1200VZ or 1200VZ8 self-closing hinges. Three (3) required per door; Grass Model No. G/HRZ base plate at each hinge; Ives Model No. TM820 concealed push latch at each door. Confirm Model No. and provide samples with the submittal.

E. Cashier counter to have 16-gauge s/s intermediate shelf, turned down 1 1/2" with tight hem at front. Cove up 2" at rear and sides. Brace undershelf with 1" x 4" 14-gauge stainless steel channel at the longitudinal centerline. Provide an outlet for power/data within the body above the intermediate shelf. Provide cash drawer inserts per district standards.

F. Sneeze Guards to be adjustable and meet NSF standards.

2.23 OPEN BASE STRUCTURES

A. 1-5/8" OD x 16-gauge seamless stainless-steel tubing legs bevelled at the bottom. 1¼" OD cross rails fully welded (360° smooth and polished) to legs at 10" AFF, OC.

B. Top of Leg: Inserted in Component Hardware Model No. A20-0206 gusset fully welded to table frame or sink bottom.

C. Bullet Foot: Component Hardware Model No. A10-0851.

D. Freestanding fixtures requiring utility connections: Component Hardware Model No. A10-0854 flanged feet at the fixture corners, anchored to the floor with non-corrosive bolts.

E. Table Bases: Maximum leg spacing of 6'-0" OC; dishtable and utensil wash counter bases at 5'-0" OC.

F. Open Base equipment specified to be supported by brackets at the rear side only (not completely cantilevered): Tubular legs at the front side only with Component Hardware Model No. A10-0854 flanged feet anchored to the floor with non-corrosive bolts. Front-to-back cross rail: fitted into Component Hardware Model No. A20-0406 circular gusset secured to the wall with non-corrosive bolts.

2.24 UNDER SHELVES

A. Open Base Structures: 16-gauge stainless steel turned down 1½" with tight hem at the bottom. Notch all corners to fit tubular legs and weld from the underside to fill the gap, grind, and polish. Cove up 2" at the rear or ends adjacent to wall, columns, refrigerators, etc. The turn-up at freestanding fixtures is to be hemmed tight to the bottom of the turndown. Brace undershelf with 1" x 4" 14-gauge stainless steel channel at the longitudinal centerline and each intermediate pair of legs.

B. Open Base Structure specified to be supported by brackets at the rear side only (not completely cantilevered): 16-gauge stainless steel turned down 1 ½" at free sides with tight hem at the bottom edge. Notch all corners to fit tubular legs as required and weld from the underside to fill the gap, grind, and polish. Cove up 2" at rear ends, as indicated. Fill the gap at the front-to-back rail, grind, and polish. Brace undershelf with 1" x 4" x 1" 14-gauge stainless steel channel at longitudinal centerline between front to back rails.

C. Closed Base Fixtures: 16-gauge stainless steel turned down 1½" at front. Front edge of bottom shelf: Turned back and sealed to finished masonry platform or boxed for leg application. Center shelf has ¾" tight hem.

1. Shelves: Turn up square at ends (coved up at rear only) to the shelf above or countertop flanged out for attachment with no open spaces at interior.

2. All shelf partitions at exposed ends of cabinet bodies or interiors: Free of exposed framing members.

3. Reinforce shelves with full-length 1" x 4" x 14-gauge stainless steel closed hat channel.

4. Unless otherwise noted, all closed base undershelves must be 22" deep and clear.

5. Fully weld smooth and polish the vertical seam of the shelf turndown/turn up with the face of the body partition.

6. Seal the vertical seam of the square turn-in at the exposed interior of open shelf sections.

2.25 ANCHOR PLATES / WOOD GROUNDS

A. Behind the finished surface, wherever building walls, partitions, or ceiling construction will not accommodate direct attachment of equipment such as over shelves, wall cabinets, hose reels, utensil racks, exhaust hoods, display cases, etc. Material and installation by General Contractor. Location and coordination with trades by Section 11 40 00.

B. Anchor Plates: Not less than 12” x 12” x ¼” thick steel, secured to the structure above or behind the finished surface, positioned at attachment points.

C. Wood Grounds: Length required by fixture, component, or device, 24” wide x ¾” thick plywood secured to partition system before gypsum board installation.

D. Above ceiling supports: Structural shapes (4” x 8.0 lb. channel) suspended from the structure. Maximum height 15’-0” AFF. Size: width of equipment x length of equipment plus 6’-0”. Cross bracing at 6’-0” OC maximum.

2.26 OVER SHELVES

A. 16-gauge stainless steel with free edges turned down 1” with ½” tight hem at the bottom—¾” radius at free corners.

B. Turn up 2” raw at walls and sides with a horizontal coved corner at the rear. Round front corners of turn up on ¾” radius.

C. Where shelf width exceeds 12” width, reinforce with ½” x 4” x 14-gauge stainless steel closed hat channel full-length of the shelf.

D. Wall-Mounted Shelves: 16-gauge stainless steel brackets 48” OC maximum, set in 6” from ends.

E. Freestanding Shelves: Where splash is required at free over shelves, turn up square 2” at ends, cove up at the rear, and hem tight to lower edge of front turndown. Weld exposed corners.

1. Freestanding over shelves: 16-gauge stainless steel cantilevered brackets at the rear of the table; double-cantilevered brackets at the center of the table. Posts for cantilevered over shelves are 1-5/8” OD x 16-gauge stainless steel secured to the underframe, 4’-0” OC. Ends of shelves: Secured to adjacent wall/fixture or mounted on 1¼” diameter stainless steel posts.

2. Freestanding over shelves not on cantilevered brackets: 1¼” OD x 16-gauge stainless steel posts, each pair at 4’-0” OC maximum.

F. Baker Table Over shelves: Supported 18” above the top with 1¼” OD stainless steel tubular supports with channel shoe secured to risers.

G. Glass/Cup Rack Over shelf at Dishtables: 14-gauge stainless steel with 1½” deep “vee” trough at free long sides with 1” tight hem inside the trough. Provide a ½” marine edge at free ends and; a 4” splash at the wall. Suspend shelf at 18” above dishtable surface on

posts/brackets anchored to dishtable frame/wall at rear; 1” OD stainless steel tubing supports from the structure above the ceiling at front edge, 60” OC at each end.

1. Install at both ends a ½” stainless steel drain tube (connecting both vee-troughs) extended to the dishtable surface through splash turnback.

2. Rack-rest: horizontal full-length 1-5/8” OD stainless steel tubing supported at 10” OC above shelf (8” OC for double service shelf) by 1¼” OD stainless steel tubing with closed ends. Support tubing: welded, ground, and polished, spaced 60” OC.

3. Rack-rest supports to wall: 4” x 4” x 10-gauge stainless steel flange plates welded to support tubing. Anchor flanged plates to blocking ground with non-corrosive bolts.

2.27 DRAIN TRENCH LINER / GRATING

A. Liners: 14-gauge stainless steel in sizes as indicated.

B. Interior of liners: 6” deep with all interior corners (horizontal/vertical) coved on ¾” radius; sloped and scored 1” to integrally welded Component Hardware Model No. D34-Y011 basket drain assemblies @ 48” OC, fitted with 6” long welded tailpiece. Stainless steel safety chain: connected to basket strainer assembly and top of liner wall.

C. Liners: 1” wide perimeter shoulder at the top, turned up flush with finished floor, tight hemmed back down to the shoulder level, and flanged out 2” for attachment to the slab.

D. Underside of sloping liner portion: 2” long “Z” clips.

E. Grating: IMC-TEDDY PFD-ADA removable fiberglass grating:

1. 1” deep “I” bearing bars with 0.6” wide top flange.

2. Full perimeter frame, section quantities, and sizes indicated.

3. Maximum of 2’-0” sections.

4. Grating bars should be spaced 0.4” apart per ADA requirements.

5. Grating to be two (2) equal sizes.

2.28 WALL PANELS

A. Wall Panels: 18-gauge stainless steel, double pan-formed ½” thick with internal stiffener members. Fill with USDA-approved thermal insulation, full height, and width of panels, and attach to the interior with mastic. The maximum allowable temperature at the rear side of the panel: is 120°F.

1. Height of panels as required: Top of tile base to the underside of the hood, top of tile base to the top cap of stub wall, or top of splash to the underside of the hood.

2. Level and square lower edge and sides.

3. Butt joints on all panels.

2.29 EXHAUST HOODS (SURFACE-MOUNTED CONDENSATE)

A. Hoods: Size/shape as indicated: 18” high on the interior.

B. Body: 16-gauge stainless steel, with all seams welded, ground, and polished.

C. Continuous condensate trough at perimeter: 3” x 1”.

D. Frame the top of the hood with 1½” angle iron assembly and suspend from the structure above the ceiling by ½” diameter steel rods, drawn tight against the finished ceiling surface.

E. Duct opening/collar as specified with stainless steel louvered grille over the opening.

F. Div. 22 to extend drain line to floor sink when shown. The drain line is to be silver painted. Div. 22 to ensure all drain lines are centered over floor sink grate openings and no water splashes on the floor.

G. ½” diameter steel hanger rods at 4’-0” OC maximum to be by Kitchen Equipment Contractor, but they are to be anchored to the supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.

H. Hoods and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements.

2.30 EXHAUST HOODS (UNLESS SPECIFIED OTHERWISE)

A. Exhaust to be provided to meet all current local jurisdiction mechanical and energy code requirements. Kitchen Equipment Contractor to verify code requirements and coordinate with Divisions 23 and 26. Hoods over production equipment to be Type 1 with continuous capture. All Type 1 hoods should be 6’ deep to ensure smoke/steam capture unless otherwise noted.

B. Install fire suppression system(s) in all ventilators specified in this section. Install per the manufacturer’s recommendations and applicable codes or standards. Submit installation certification form to Architect.

C. Locate chemical cylinders as indicated on drawings and install piping to exhaust hood(s) in a concealed manner. Set cylinders and cabinets at 7’-0” clear AFF unless noted otherwise. Provide polished chrome plated tubing piping/fittings, where exposed at cylinder location and at the interior of exhaust ventilator—exposed pipe threads in/above the food zone are not allowed. Submit a schematic installation diagram and confirm critical distances from cylinders to nozzles.

D. Remote manual release located in the path of egress from the protected exhaust hood area. Kitchen Equipment Contractor to coordinate location with local Fire Marshal requirements before submittal review. All conduits will be recessed within the wall; SURFACE MOUNTING WILL NOT BE ACCEPTED.

E. Provide one (1) handheld Type ‘K’ and ABC 6-liter fire extinguisher per Ansul system, surface wall mounted.

F. Required quantity and sizes of mechanically operated gas valves.

G. Confirm interconnection of all equipment as required to ensure exhaust hood and fire suppression systems are entirely operational and meet local jurisdiction code requirements.

H. ½” diameter steel hanger rods at 4’-0” OC maximum to be by Kitchen Equipment Contractor, but they are to be anchored to the supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.

I. Provide an appropriate quantity of fire suppression systems as required by local jurisdiction code requirements.

J. Double wall insulated construction at ends. S/S where exposed.

K. Hoods and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements.

L. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsection E. Division 23 (Mechanical) for additional information.

2.31 HIGHLIGHTING

A. Polish the following vertical surfaces to a No. 8 finish:

1. Serving and display shelf turndowns.

2. Conveyor and dish/tray deposit station turndowns/frame.

3. Tray slide turndowns.

2.32 SHOP / FIELD JOINTS

A. Field joints: The least number is used only when equipment size must be limited for building or interior space access.

B. Stainless steel tops (including edges and splashes): Fully welded, ground, and polished to match adjacent surfaces.

C. Vertical field joints of fixture backsplashes that are inaccessible from the back: terminate 1” above the horizontal coved corner. The remaining height of the field joint: hairline butt joint with offset draw-angle behind. All horizontal/vertical draw joints: located and noted on shop drawings.

D. Hairline butt joint: 1½” x 1½” x 1/8” steel angles welded to the back/underside of countertop/shelf. Offset angle beyond joining metal edge ½” (min.) to provide a flat backing surface for a joint with the angle of other joining metal edge, set for ½” space between vertical legs of angles. Bolt sections together with 5/16” machine bolts, lock washers, acorn head cap nuts, set 3” OC.

E. Closed Base Bodies: Draw-type with hairline seam fully field-welded.

F. Millwork: Plastic laminated joints shall be dowelled, glued, and draw-bolted with fasteners.

G. Solid Polymer: Surfaces drawn tight, filled, sanded, and finished to match adjacent surfaces.

2.33 PREFABRICATED WALK-IN COLD STORAGE ASSEMBLIES

A. Assembly to be installed by Factory Authorized Installers only.

B. KEC to provide a 1-year walk-in assembly panel installation warranty. Panel installation warranty to cover labor and part replacement issues resulting from a failure to complete the following during installation:

1. Walk-in assembly panels to be installed square, plumb, and level.

2. To create a proper seal, ceiling panels must be installed flush and tight to wall panels with undamaged gasket material. Any signs of condensation at joints or assembly wall panels should be reported to FDP and addressed immediately. Caulk at panel seams will not be an acceptable solution.

3. All cam-locks should be engaged and cam-lock covers in place.

4. Any gaps under the floor angle (due to shimming) must be entirely sealed to the slab.

5. All penetrations in the ceiling or wall panels should be insulated and sealed by appropriate trade contractors and verified by KEC, including but not limited to Light Fixtures, Refrigeration Lines, Sprinklers, Temperature Sensors, etc.

6. Proper installation of the door systems should allow the door to self-close and seal around the perimeter of the door opening and at the floor threshold.

7. Final operation of the IC/IC+ control, door heaters, and light switches should be confirmed upon completion of the electrical connections.

8. The walk-in assembly panel installation warranty will cover service issues resulting from faulty installation.

C. **KEC is responsible for overall install accuracy/quality and quality control of work performed, regardless of the installer or any field modifications due to building/construction conditions. KEC is to provide the CSA Installation Approval Report (provided in this document) to Foodservice Design Professionals (FDP) upon completed installation, verifying that all items above have been inspected by the KEC for completeness and installed per manufacturer requirements. This report will be required as part of the completion of the contract.**

D. Sectional Assemblies: Size/shape indicated on drawings; 9'-6" interior clearance unless otherwise specified. Door locations/size: exactly as shown.

E. Sandwich Panel Insulation: Class 1 Urethane with a vapor barrier, 4" thickness (unless specified otherwise) with mature "U" factor of .030 or lower. Finished panels shall be UL-listed and demonstrate a flame spread rating of 20 or less. Panels must meet performance standards as outlined in U.S. Government legislation.

F. Wherever compartment dimension exceeds the clear-span ability of ceiling panels, provide I-beam support on the exterior of the ceiling or spline-hangers. Install ½" diameter steel rods through beams/hangers and secure them to the structure above. Beams or posts within compartments are not acceptable.

G. Reinforce prefabricated wall panels to rigidly support the door assemblies. The perimeter of the door and frame shall be built of a fiberglass reinforced polymer (FRP) pultrusion. All pultrusion's shall be non-conductive, non-corrosive, rust proof and NSF listed. All doors shall be furnished with a replaceable aluminum braided heater wire, electronically monitored, and controlled as to initiation temperature, termination temperature and percentage of operation time as required. Install 2" x 4" 16-gauge stainless steel hat-channel full-width of the jamb with 1/8" stainless steel removable flush sill, secured with stainless steel screws and sealed watertight to channel.

H. Reinforcement as required to be provided above Freezer door (exterior) and panel next to door (handle side – interior) for mounting of Emergency Strobe Beacon, Push Button Panic Alarm and Release Knob. Emergency Strobe Beacons are by Division 26.

I. Provide an aluminum cove base at the interior and exterior of exposed panels for all floor assemblies.

J. Floor Installations:

1. **4" Recessed Exposed Factory Floor Installation (if required):**

   a. 6 mil polyethylene sheets in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

   b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

   c. 4" commercial grade manufacturer's dura floor with diamond treadplate surface and marine grade plywood subfloor.

   d. 15# felt slip sheet over insulation with 6" lapped joints flashed up the height of the finished floor base.

   e. 1/2" sand leveling bed by G.C.

2. **8-1/2" Recessed Floor Installation (if required):**

   a. Factory floor in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

   b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

   c. 4" manufacturer's floor.

   d. 15# felt slip sheet over insulation with 6" lapped joints flashed up the height of the finished floor base.

   e. 1/2" sand leveling bed by G.C.

   f. Concrete flooring and tile over insulation by Divisions 03/09.

3. **12" Recessed Floor Installation (if required):**

   a. 6 mil polyethylene sheets in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

   b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

   c. 4" manufacturer's floor.

   d. 15# felt slip sheet over insulation with 6" lapped joints flashed up the height of the finished floor base.

   e. 1/2" sand leveling bed by G.C.

   f. Concrete flooring over insulation by Division 03:

      i. Concrete mix: 5000 psi @ Freezers and 3000 psi @ Coolers.

      ii. No limestone or fly ash; fiberglass reinforced.

iii. #3 rebar, set on 12” centers in both directions.

iv. Center rebar vertically in wearing bed.

v. 10” high concrete 45° angled wall curb at interior perimeter per food service details.

g. Diamond treadplate wall panels on the interior and exposed exterior by 11 40 00. Refer to drawings for height. Coordinate diamond treadplate wall covering at the interior with angled wall curb.

h. Ventilation Pipe Requirements by G.C.:

i. Bottom perforated vent pipes to be #40 PVC on six ft. max centers open on both ends with the thermostatically controlled fan on (1) end and perforated mesh on the opposite end of the fan at the exterior of the building.

ii. Vent pipes are to be turned parallel with the exterior wall - 180°turn down.

iii. Vent pipe openings to be held at 24” above grade or roof per design.

iv. Fans to be Grainger Manufacturer and sized per airflow needs. Airflow is to be sized based on the length and number of bends.

v. If no exterior wall is adjacent, vent pipes will route up and extend past the roof. Roof penetrations by Division 07.

4. **Surface Mounted Factory Floor Installation (if required):**

a. 4” commercial grade manufacturer’s dura floor with diamond treadplate surface and marine grade plywood subfloor.

b. 36” reinforced diamond treadplate internal ramp.

c. 10-gauge stainless steel threshold to provide a smooth transition to the interior walk-in assembly floor.

K. Modularm Model No. 75LC (Unless otherwise specified). Integrated, flush-mounted temperature monitor/alarm with sensor and probe-cord length required to extend from the exterior front of the assembly to a mounting position of the sensor within the evaporator return airstream. System to have an easy-to-read LCD with high and low alarm set points with audible and visual alerts for alarm conditions. System to include Adaptive Programming for automatic set point control. Wi-Fi connectivity is included for remote notifications of alarms such as power failure, high and low temperatures, entrapment, and door open. System to include a built-in panic alarm. The system is to be interconnected to the Building Automation System (BAS) or the Owner’s Network (by Division 27) and to notify facility personnel of the district/owner choosing when activated.

L. Modularm Model No. IP-1 (unless otherwise specified). Heated Illuminated Push Button Panic Alarm with protective cover and Phenolic Label “PANIC ALARM” for entrapment **within Freezer** (ADA mounting height). Panic Alarm Encasing is to be stainless steel (not plastic). Manufacturer to pre-run conduit within panel from Panic Alarm to panel above Freezer door (or Cooler door if ‘inline’ assembly) for installation of Emergency Strobe/Horn. Division 26 will provide (2) external Emergency Strobe/Horn Beacons and interconnect the Push Button Panic Alarm to external Beacons (One above the Freezer door and One in the Cafetorium in location as directed by Architect). Division 27 will interconnect the Push Button Panic Alarm to the

Building Automation System for Owner notification. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsections F. Division 26 (**Electrical**) and G. Division 27 (**Communication**) for additional information.

M. KE2 Smart Access (unless otherwise specified). Confirm all component model numbers for complete installation and operation.

N. LED surface-mounted light fixture, in quantity/arrangement shown on drawings. Light fixtures to be perpendicular to coils. Light fixtures wired to interior and exterior temperature control panel. Light fixtures are to be provided by Section 11 40 00 and installed by Division 26. Division 26 is to seal all conduit penetrations at light fixtures. KEC to verify that penetrations are sealed.

O. Penetrations of Panels: To be sealed by factory installer and appropriate trade contractors, with Dow Corning 3-6548 silicone RTV foam, total depth of the panel. Trim excess flush. KEC to verify that all penetrations are sealed.

P. Install closure panels and trim strips to building walls and ceiling with concealed attachment. Closure material: same as wall panels unless noted otherwise.

Q. Compartment Entrance Doors: 36” x 78” nominal clearance unless otherwise noted.

1. Mount hinged doors on two Kason Model No. 1346; polished chrome-plated nylon cam-lift hinges. All doors to be equipped with polished chrome Kason 1094 or equivalent door closer assembly. Doors to be adjusted so all doors fully self-close.

2. Hinge doors as indicated on drawings.

3. Defrost heater: Thermostatically controlled and replaceable at the entire perimeter of all doors. Defrost heaters to be wired for continuous service.

4. 36” high x full-length diamond aluminum treadplate at front and rear of all hinged doors.

5. 12” x 2” engraved phenolic plastic compartment identification sign in Architect’s color selection with 1” letters, mounted above door window.

6. 14” x 24” four-panel glass view window with heater and molded non-metallic inner and outer frame. The heater is to be wired and controlled via the door monitor for continuous service.

7. Padlock/key provisions in the door latch with safety release mechanisms.

8. Kason 1826 Intelli-Vent LED Heated Pressure Relief Ports with Dual Port Vent and Security Light. Locate Two (2) 12” below ceiling on Cooler/Freezer common wall panel and Two (2) 12” below ceiling on Cooler wall panel. If Cooler and Freezer are separate units, locate one on the Freezer wall panel as well, 12” below ceiling and mounted in the door frame assembly. All ports to have separate dedicated electrical connections and be wired for continuous service. Located and installed by Manufacturer.

9. Kason Model No. 1238CQ (unless specified otherwise) Pacesetter Locking Handle QTLC polished chrome with Kason 0485 glow-in-the-dark backplate and turn knob safety release.

10. Manual backup vacuum release mechanism to punch 6” diameter hole in ceiling panel to release vacuum within freezer assembly. Mechanism to include a pull-down handle with freeze-proof hand grip. Handle to have the ability to penetrate and/or punch hole in wall accordingly to assist with opening of door

assembly in the event of entrapment (and failure of inside release knob). Release mechanism assembly to be built-in/mounted to panel structural frame to minimize mechanism tear-out and/or failure. Handle to be glow-in-dark yellow with phenolic label “Vacuum Pressure Release.” Punch out portion to be replaceable in opening without the use of tools or sealants. Punch out is not to be located directly over interior ramp.

11. Provide Two (2) Edwards 860 Series (or equal) red lens, surface-mounted Xenon Emergency Strobe Beacons. Walk-in manufacturer will install One (1) located in the Kitchen above Walk-In Freezer door (or Cooler door when Freezer is within Cooler in an ‘inline’ assembly) and provide the second unit loose for installation by Division 26 located in the Cafetorium (Division 26 to coordinate location with Owners and Architect). Division 26 is to provide all conduit and wiring required and interconnect the illuminated Push Button Panic Alarm in the Walk-In Freezer to both Strobe Beacons (***Critical***).

R. Provide refrigeration calculations and refrigeration alarm to meet local jurisdiction code requirements.

S. If air screens or air shields are specified above doors or on the interior of the assembly, the manufacturer must provide adequate blocking in panels to support these components and pre-wired electrical connections. Installer to coordinate location of door closure to not interfere with air screens or air shields. Clear-VU, swinging door assemblies, are not required if air shields are specified.

T. S/S trim above walk-in assembly to conceal manufacturer ceiling grid.

U. Field-check all horizontal/vertical measurements and conditions at the building before fabrication or delivery of equipment.

V. Walk-in Assemblies to be installed by the PRE-APPROVED INSTALLERS listed below:

1. QBR Refrigeration, 30083 Hwy 90 Blvd., Katy, TX 77493, Mr. Andy Spellins, 713-973-2875, andy.spellins@qbrsales.com

2. Machine Ice, 8915 Sweetwater Ln., Houston, TX 77037, Mr. Will Weaver, 281-448-7823

3. Coolers Inc., 6922 Alder Dr., Houston, TX 77081, Mr. Lee Mamone, 713-665-8886

2.34 WALK-IN COLD STORAGE ASSEMBLY REFRIGERATION SYSTEMS

A. Unit Coolers: specified quantity and model, ceiling-hung by ½” OD nylon bolts with stainless steel washers and nuts. Insert hanger bolts through the plastic sleeve and seal penetration airtight.

1. Unit cooler drain fittings: positioned as indicated on drawings. Installation of cast tee-fittings on drain pan outlet with union and cleanout plug and extension of 1” Type K copper drain line through wall panel to airgap fitting or floor drain under this Section.

2. Slope drain line ½” per foot, trap at the exterior of assembly and turn down into the drain. Manifold drain lines of adjacent compartments wherever possible.

3. Install drain line plastic sleeve through compartment wall, seal around drain line, and install stainless steel escutcheon with setscrews.

4. Electric drain line heater cable (self-regulating 7 watts): on all unit coolers operating below 36°F., installed from coil drain line fitting to wall penetration under this Section.

Heater cables: the minimum rating of 15 watts/lineal foot, 208 volts, single phase. Wrap drain line with maximum 2” loop spacing and interwire to unit cooler for continuous operation.

5. Mounted, pre-piped, and pre-wired evaporator components:

   a. Sporlan thermostatic expansion valve with external equalizer.

   b. Shut-off valve at evaporator suction and liquid lines.

   c. Sporlan “Catch-All” refrigerant filter/dehydrator on liquid line.

   d. White Rogers 1609-101 adjustable thermostat with remote bulb positioned in return airstream of the evaporator.

   e. Electrical disconnect switch in NEMA 4 enclosure.

   f. **For any facility within 20 miles of a salt air environment:** Condenser and Evaporators to be built with Electrofin coating to retard salt air deterioration. Coils are to be coated with Technicoat 10-2 coating for protection against a salt air environment.

   g. 110° Ambient Temperature Operation.

B. Refrigerant System Installation:

1. Refrigerant Lines; Type “L” rigid copper tubing. Fittings: Wrought copper or brass designed for use with high-temperature solder. Piping joints: Made with silver solder (Sil-Fos). Piping: Properly suspended from and anchored to the structure with adjustable hangers 6’ OC maximum. Suction lines: Sized to have a maximum pressure drop of two pounds in medium-temperature systems; one pound in low-temperature systems. Liquid lines: Sized to give maximum pressure to prevent trapping of oil. Insulation on all suction lines: Armaflex insulation by Armstrong. ¾” thick at medium-temp 1” thick at low temp. Refrigerant lines in PVC conduit: Sealed at both ends with Dow Corning 3-6548 silicone RTV foam. The refrigeration system installer will wrap Exterior Refrigerant Lines in the self-fastening jacket of Type 3003-H14 aluminum alloy 0.016-inch thick. Provide aluminum strapping and seals for applying aluminum jackets and covers according to the manufacturer’s recommendations for a completely weather-tight covering.

C. Evacuation and Charging:

1. After completion of the pressure test, the system shall be evacuated using an approved auxiliary vacuum pump. Connections for evacuation: Following the manufacturer’s recommendations.

2. Charging after the initial charge, which is contained in the condensing unit (R448A Non-CFC Ozone Depletion Refrigerant for medium and high temp units, R513A - Non- CFC Ozone Depletion Refrigerant on low temp units) – (Refrigerant must meet District Standards, Industry Standards, and local Codes): given through the charging valve in the high side passing all of the liquid refrigerants through a charging dehydrator. All charging lines and gauges must be purged of air before connection with the system. Refrigerant: unused and shall be delivered in clean containers. After the system is fully charged: start and place it in full operation.

D. Refrigeration system to be installed by the **PRE-APPROVED INSTALLERS** listed below:

1. QBR Refrigeration, Mr. Andy Spellins 30083 Hwy 90 Blvd., Katy, TX 77493, 713.973.2875, andy.spellins@qbrsales.com

2. Machine Ice, Mr. Will Weaver, 8915 Sweetwater Ln., Houston, TX 77037, 281.448.7823

3. Coolers Inc., 6922 Alder Dr, Houston, TX 77081, Mr. Lee Mamone, (713) 665-8886

2.35 PRE-APPROVED KITCHEN EQUIPMENT CONTRACTORS

A. Only the following named Subcontractors and those approved later, if any, are approved for inclusion in the Contractor's Bid.

B. **Any contractor requesting inclusion within this bid must submit AIA form 305 a minimum of 14 days before the bid date for review or as required by Architect.**

1. Stafford Smith, Mr. JP Garcia, 7129 North Loop East, Houston, TX 77028, Phone: 713.892.5001, Email: jpgarcia@staffordsmith.com

2. Texas Metal Equipment Company, Mr. Travis Andrews, 23518 Coons Road, Tomball, Texas 77375, Phone: 713.466.8722, Email: tandrews@tmeco.com

3. Kirby Restaurant Supply, Mr. Brian Kernan, 809 S. Eastman Road, Longview, Texas 75602, Phone: 903.757.2723, Email: briank@kirbysupply.com

4. Mission Restaurant Supply, Mr. Robert Snoddy, 1126 S. St. Mary's Street, San Antonio, Texas 78210, Phone: 832.970.4020, Email: roberts@missionrs.com

5. Kommercial Kitchens, Mr. Terry Woodard, 13544 East Fwy., Houston, TX 77015, Phone: 409.769.1199, Email: terry@kommercialkitchens.com

6. Supreme Fixtures Co., Inc., Mr. Tim Hampel, 11900 Vinny Ridge Road, P.O. Box 193655, Little Rock, AR 72219, Phone: 501.455.2552, Email: tim@supremefixture.com

7. Amundsen Commercial Kitchens, Mr. Lewis Beville, 105 Montie, Longview, TX 75604, Phone: 903.576.6354, E-mail: lewis@afeok.com

2.36 PRE-APPROVED STAINLESS-STEEL FABRICATION SUPPLIERS

A. Only the following named Subcontractors and those approved later, if any, are approved for inclusion in the Contractor's Bid. Pre-approved fabricators shown below shall not sub-out fabrication.

B. **Any supplier requesting inclusion within this bid must submit AIA form 305 at least 14 days before the bid date for review or as required by Architect.**

1. Texas Metal Equipment Company, Mr. Travis Andrews, 23518 Coons Road, Tomball, Texas 77375, Phone: 713.466.8722, Email: tandrews@tmeco.com

2. Kommercial Kitchens, Mr. Terry Woodard, 13544 East Fwy., Houston, TX 77015, Phone: 832.767.5287, Email: terry@kommercialkitchens.com

3. Mission Restaurant Supply, Mr. Robert Snoddy, 1126 S. St. Mary's Street, San Antonio, Texas 78210, Phone: 832.970.4020, Email: roberts@missionrs.com

4. CSS Manufacturing, Mr. Jared Woodard, 7430 Fairbanks North Houston Rd., Houston, Texas 77040, Phone: 832.444.6311, Email: jared.woodard@css-mfg.com

PART 3 - EXECUTION

3.1 DELIVERY AND INSTALLATION

A. Supervision: Provide a skilled and proficient foreman or supervisor who shall remain on the job during the entire installation.

B. Delivery: Coordinate with the progress of construction and Owner's operation schedules. Unless otherwise instructed and documented by Owner or General Contractor, the following procedures apply:

1. Field-assembled fixed equipment integrated into the structure (e.g., walk-in assemblies, exhaust hoods, drain trench/grate assemblies, conveyor systems, ceiling-mounted utensil racks) are to be sent to the job site when directed by the General Contractor and installed or protected accordingly.

2. All other Fixed Equipment: delivered after completion of work on adjacent finished ceilings, lighting, finished floor, wall systems (including painting), and painted gas lines.

3. Major Movable Equipment: delivered, when possible, to inventory in a secured area for interim job-site storage or, if the secured area is unavailable when fixed equipment installation/clean-up has been completed.

4. Minor appliances and loose items (e.g., pans, covers, flatware containers, etc.) should be delivered only when the Owner is prepared to receive and inventory such items.

C. Installation: performed by the manufacturer of custom fabricated fixtures.

1. Assemble, square, level, and ready all items for the final utility connections.

2. Cut neatly around obstructions to provide sanitary conditions.

3. Where gaps of ¼" or less occur adjacent to or between equipment, insert rope backing and smoothly apply General Electric construction sealant Series SE-1200 silicone mastic (clear color). Mask both sides of the gap for neat sealant application and remove excess. If space exceeds ¼," neatly install 18-gauge stainless steel trim molding of proper shape with concealed attachment. Use epoxy cement or "Z" clips wherever possible to secure stainless steel trim. Exposed edges or corners of trim: eased and smooth.

4. Refrigeration coil drain line runs to an indirect drain connection greater than 2" from the face of the wall or panel: Either of the following field procedures:

a. Trench the floor and provide a 6" wide x 2" deep 16-gauge stainless steel sloping (-1" to -2") trough from the face of the cooler/freezer wall to the body of the floor sink/floor drain. Trough: turned up 4" at the wall; ¾" flange with ½" turndown at both long sides. Set trough in waterproof mastic and seal 1" OD drain tube penetration into floor sink/floor drain at -2½" BFF. Patch the floor to match adjacent material/surface.

b. Provide 12" x 6" x 2" deep 16-gauge stainless steel condensate pan mounted to cooler/freezer wall at 6" AFF clear. Trench the floor and install a 1" OD drain line from the bottom of the pan to the body of the floor sink/drain. Slope drain line ¼"

per foot and seal all connections watertight. Patch the floor to match adjacent material/surface.

D. Protection of Work:

1. Fabricated fixtures: Fiberboard or plywood taped to tops and exposed body panels/components.

2. Manufactured Equipment: Fiberboard or plywood taped as required by equipment shape and installation-access requirements.

3. Prohibited use of equipment: Tool and materials storage, workbench, scaffold, stacking area, etc.

4. Damaged Equipment: Immediately documented and submitted to the Owner with the Contractor's recommendation of action for repair or replacement and its impact on the Project Schedule and Contract Amount, if any.

3.2 CLEAN AND ADJUST

A. Clean up and remove all debris from this Work from the job site as the installation progresses.

B. Lubricate and adjust drawer slides, hinges, and casters.

C. Adjust pressure regulating valves, timed-delay relays, thermostatic controls, temperature sensors, exhaust hood grilles, etc.

D. Clean or replace faucet aerators and line strainers.

E. Touch-up damage to painted finishes.

F. Start up and check the operation of all refrigeration systems for at least 72 hours before acceptance.

3.3 EQUIPMENT START-UP/DEMONSTRATION

A. Carefully test, adjust, and regulate all equipment following the manufacturer's instructions and certify in writing to the Owner that the installation, adjustments, and performance are in full compliance.

B. Provide the Owner or food service Operators with a thorough operational demonstration of all equipment and furnish instructions for general and specific care and maintenance. Coordinate and schedule selected equipment items and attendees with the Owner at least two weeks before the demonstration starts.

3.4 FINAL OBSERVATION

A. Final observation will be made when the Contractor certifies that they have completed their work, thoroughly reviewed the installation/operation of each item in the contract and found it to comply with the Construction Documents.

B. Repetitive final observations (more than two) and all costs associated with it which may be incurred due to the Contractor's failure to comply with the requirements of this Article will be invoiced to this Contractor on a $70.00/hr and expense basis.

PART 4 - EQUIPMENT SCHEDULE

4.1 REGULARLY MANUFACTURED EQUIPMENT/COMPONENTS: Standard finishes and accessories unless specifically deleted or superseded by the Contract Documents.

4.2 FABRICATED AND FIELD-ASSEMBLED EQUIPMENT: Arrangement and configuration as shown on Plans, Elevations, Detail Drawings, and outlined in Specifications.

4.3 REFER TO DRAWINGS: For unit quantities and plumbing, electrical or mechanical provisions are required, including the manufacturer's optional voltages, wattages, burner capacities, etc.

4.4 REFER TO PART 2 – PRODUCTS: For accessories, fittings, requirements, and procedures related to the listed buy-out and fabricated equipment.

4.5 ALTERNATE MANUFACTURER REQUIREMENTS: A specific product manufactured by the listed pre-approved equals shown under Section 4.7 Food Service Equipment are acceptable only if the specific product can evidence compliance with the specified line items and the contract documents (Refer to Section 1.6; Sub-Section A.).

4.6 RE-USED EXISTING EQUIPMENT IF PROVIDED IN THIS PROJECT

A. Existing equipment scheduled for re-use is to be inventoried and documented that equipment is in operating condition once Kitchen Contractor has taken ownership.

B. Provide pictures of all equipment once inventoried and issue them to the architect to ensure that equipment has not been damaged.

C. Verify the locations of all equipment with the owner.

D. Existing equipment that is to be reused may need parts or accessories for proper and complete operation. Submit a report listing all items with pricing for approval to allow complete installation.

E. Utility disconnection and re-connection: Under Divisions 22 and 26. Kitchen Contractor to verify utility requirements of existing equipment and coordinate with Foodservice Design Professionals (FDP) as required. If utilities shown on FDP drawings do not match the requirements of existing equipment – KEC is to relay that to FDP immediately. All utilities not scheduled for re-use must be capped and covered by required disciplines.

F. Disassembly, removal, transportation, and relocation: under this Section and scheduled with General Contractor. The owner's representative must be present and coordinate the date/time with the owner.

G. Thoroughly clean inside and out before relocation.

H. Review functional parts (e.g., doors, controls, heating elements, compressors, etc.) and submit a report of required repairs and cost estimates. Any finishes or equipment damaged due to construction will be repaired as required.

I. Existing equipment not scheduled for reuse is to be carefully removed/relocated by the Kitchen Contractor per the Owner's direction. Kitchen Contractor to coordinate the date/time with General Contractor and Owner.

J. Removal or replacement of existing equipment is to be scheduled for times of least interruption and inconvenience to the food service operation. Submit the proposed time frame schedule, task sequence, and process for approval before starting work.

K. Kitchen Contractor to verify size and shape for all existing re-used equipment and coordinate with Foodservice Design Professionals (FDP) as required.

L. Any modification(s) required/desired for re-used existing equipment to be verified by the Kitchen Contractor. Before the changes are made, all modifications must be approved by the Owner and Foodservice Design Professionals (FDP).

M. The KEC is to verify and coordinate all the utility requirements with the construction documents as required. Refer to the general specifications regarding conflicts.

4.7 FOOD SERVICE EQUIPMENT

A. All equipment is to have a performance check from factory-authorized personnel. Warranties will begin on the day of the performance check.

B. All equipment and internal components should be of domestic origin where possible.

C. Architect to verify/coordinate the aesthetic options below (Food Service color, material, or signage selections) if these items are provided in this project:

1. Countertops: Stone (stainless steel is provided unless otherwise specified)

2. Tray slides: Corian or Stone (stainless steel is provided unless otherwise specified)

3. Counter fronts: Ceramic tile, 3 Form, or Plastic Laminate

4. Sneeze Guards: Stone insets

5. General color, material and graphic selections:

    a. Display Air Screen Merchandisers – Color selection: Powder Coat or Plastic Laminate (stainless steel is provided unless otherwise specified)

    b. Bakery Display Cases – Color selection: Powder Coat or Plastic Laminate (stainless steel is provided unless otherwise specified)

    c. Pass Thru or Reach-In Holding Cabinets - Color selection: Powder Coat (Mfg.: True) or Plastic Laminate (Mfg.: Traulsen) (Stainless steel is provided unless otherwise specified)

    d. Hanging Heat Lamps – Track and Fixture color selection

    e. Heated Merchandisers

    f. Portable Guide Rails – Stanchion and Belt color selection

    g. Popcorn machine – Signage selection

    h. Bottle Cooler – Signage selection

    i. Graphics Package information

    j. Hot Food Well covers

D. Architect to verify/coordinate the finishes below:

1. Walls: Ceramic Tile, Flat FRP, or Molded FRP (Smooth, Impervious, and easily cleanable as approved by local jurisdiction)

2. Ceilings: Removable Vinyl Face Tile (Smooth, impervious, and easily cleanable as approved by local jurisdiction)

3. Floors: Tile, Epoxy, or Rubberized flooring system (Smooth, impervious, easily cleanable and slip resistant as approved by local jurisdiction) (Coordinate floor tile transition at serving lines)

4. Floors: Walk-in Assembly – Extend kitchen floor flush into Walk-in assembly with coved base

5. Furr Downs above Serving Counters

ITEM NO. 101 AIR SCREEN

QUANTITY 1

Manufacturer:	Mars
Model:	STD-2 Series
Size and Shape:	Refer to drawings
Alternate:	Berner

1. Air curtain, STD2 series model, unheated, obsidian black exterior. Size unit to fit door.
2. Air screen to be mounted at the exterior of the building at Receiving door.
3. Model 99-018 Reed Switch Kit. Commercial surface mounted magnetic door limit switch and the magnetic to be mounted on the surface of the door jamb and the door.
4. Confirm clearance above door prior to installation. Air Curtain to accommodate door width.
5. **Special Instruction:** 11 40 00 to provide magnetic reed switch kit loose to General Contractor for installation by Division 26. Division 26 to route flexible conduit to j-box on cabinet. Routing to be clean and secured to building.

ITEM NO. 102 COLD STORAGE ASSEMBLY

QUANTITY 1

Manufacturer:	Thermo Kool
Model:	---
Size and Shape:	Refer to drawings
Alternate:	RMI

1. Manufacturer to review final installation and provide a letter confirming installation meets manufacturer requirements.
2. KEC to provide written confirmation that all wall panels are properly anchored and no leaks are present at panels
3. Assembly to have 9'-6” interior clearance.
4. 304 #3 finish 20 gauge stainless steel finish where exposed, 26 gauge acrylume where concealed.
5. Factory floor with smooth aluminum finish, recessed in slab 8 1/2". Secure floor to wall assembly with cam-lock assembly. KEC to ensure the floor assembly is level prior to the wearing

bed installation. Kitchens finished floor to extend to walk-in. Critical: Floor to be smooth and level prior to concrete pour and at each stage of installation.

6. Threshold to be smooth and level with finished floor. Critical: Floor threshold to be surfaced with Graphine Oxide Anti-Slip or similar surface to reduce freezing and prevent slip hazards.
7. Interior walls to be baked white enamel embossed texture .040” aluminum.
8. Ceiling to be baked white enamel smooth textured .040” aluminum.
9. Two (2) 36" doors. Doors to be 20 gauge stainless steel, type 304 (18-8), #3 finish, with heated perimeter / door jambs / windows and threshold heaters. Each door to be equipped with 3'-0" high diamond tread kick plate on both sides of doors. Mount hinged doors on two (2) Kason model no. 1346 (or equal); polished chrome plated nylon cam-lift hinges. All doors to be equipped with polished chrome Kason 1094 or equivalent door closer assembly.
10. Each door to be equipped with 3'-0" high diamond tread kick plate on both sides of doors. Mount hinged doors on two (2) Kason model no. 1346 (or equal); polished chrome plated nylon cam-lift hinges. All doors to be equipped with polished chrome Kason 1094 or equivalent door closer assembly.
11. Provide foot treadles at each door.
12. Doors to be provided with CCI Industries, Inc., Clear-VU swinging door assemblies, Alternate: Kason.
13. Provide Kason model No. 1238CQ door handles with Kason 0485 Quarter Turn Frost Free inside release, glow in dark surface, tether to external strike mechanism, ADA compliant.
14. **Assembly to contain simple light switches only. Do not provide Manufacturers standard control panel.**
15. Provide solar powered digital thermometers at doors only.
16. Provide heated illuminated Push Button Panic Alarm with protective cover and Phenolic Label “PANIC ALARM” for entrapment within Freezer (ADA mounting height). Panic Alarm Encasing is to be stainless steel (not plastic). Manufacturer to pre-run conduit within panel from Panic Alarm to panel above Freezer door (or Cooler door if ‘inline’ assembly) for installation of Emergency Strobe/Horn. Division 11 40 00 to provide (2) external Emergency Strobe/Horn Beacons and interconnect the Push Button Panic Alarm to external Beacons (One above the Freezer door and One in the Cafetorium in location as directed by Architect) furnished loose for install by Division 26. Division 27 will interconnect the Push Button Panic Alarm to the Building Automation System for Owner notification.
17. Reinforcement as required to be provided above Freezer door (exterior) and panel next to door (handle side - interior) for mounting of Emergency Strobe Beacon, Push Button Panic Alarm and Release Knob.
18. Manual backup vacuum release mechanism to punch 6” diameter hole in ceiling panel to release vacuum within freezer assembly. Mechanism to include a pull-down handle with freeze-proof hand grip. Handle to have the ability to penetrate and/or punch hole in wall accordingly to assist with opening of door assembly in the event of entrapment (and failure of inside release knob). Release mechanism assembly to be built-in/mounted to panel structural frame to minimize mechanism tear-out and/or failure. Handle to be glow-in-dark yellow with phenolic label

"Vacuum Pressure Release." Punch out portion to be replaceable in opening without the use of tools or sealants. Punch out is not to be located directly over interior ramp.

19. 18-gauge stainless steel, type 304 (18-8), #3 finish trim where adjacent to walls and enclosure panels that extend to 2" above finished ceiling.
20. Freezer: One (1) lot LED light fixtures to operate in temperatures to -20 F. Lights to be installed perpendicular to coils.
21. Cooler: One (1) lot LED light fixtures. Lights to be installed perpendicular to coils.
22. Provide door bumper at doors.
23. Interior and exterior to be sealed with clear silicone. Stainless steel surfaces can be sealed factory approved waterproof and mildew resistant aluminum based metallic sealant.
24. 3'-0" high diamond tread plate at exposed exterior surfaces. Fasten to wall with stainless steel fasteners.
25. All penetrations in assembly to be sealed by appropriate trades. Ensure all penetrations for temperature probe, fire suppression, lights, refrigeration conduit, etc. are sealed. KEC to confirm all penetrations are sealed.
26. K.E.C. to provide aluminum cove base to interior of assembly. Provide sealant between floor and wall panels.
27. Provide Manufacturers alarm/control system that includes hi/low limits. Route temperature sensor to be located to the side of evaporator coil.
28. If RDT provides the KE2 Eco-Smart controller, CSA manufacturer to provide foamed in place j-box for Refrigeration System's K-2 Controller. Locate above Cooler and Freezer doors at exterior of assembly, to be flush with face of assembly wall.
29. KEC to coordinate location of network switch with cold storage assembly as required.
30. Kason 1832 Large Spring Valve Heated Pressure Relief Port. Locate at 12" below ceiling on cooler/freezer common wall panel and at 12" below ceiling on exterior cooler wall. All ports are to have separate dedicated electrical circuits. Pressure relief ports to be wired for continuous service. Relief port to be located, sized, and installed by Walk-in Manufacturer.
31. KEC to field verify all horizontal/vertical measurements and conditions at the building prior to fabrication or delivery of equipment.
32. KEC to provide 1-year walk-in panel installation warranty. KEC is responsible for overall install accuracy/quality and quality control of work performed regardless of installer or any field modifications due to building/construction conditions. KEC to provide Letter of Install Approval to FDP upon completed install.
33. Manufacturer to provide One Year Parts and Labor Warranty upon receipt of warranty letter.
34. Interwiring of temperature monitor panel to master building alarm system or to the Owner's network. Technology department to provide all interfacing of alarm system and with the building alarm system. Conduit from refrigeration system to monitor by Division 26. Temperature Monitor installation at 4'-0" above finished floor. All conduit to be located above walk-in cooler/freezer ceiling. Exposed electrical conduit is not acceptable.
35. Installer to route temperature sensor to be located to the side of evaporator coil.
36. Interconnect with Owner installed Cooper Atkins Temp Trak monitors. Refer to Item 102.2A.

37. Manufacturer Representative to provide training on controls and inside emergency release mechanisms.
38. Note to 11 40 00: Evaporator and Condenser Coils to be coated with Technicoat 10-2 coating for protection against salt air environment. Refer to Item 103 Cold Storage Refrigeration system.
39. Electrical conduit for lights to be exposed, ran from fixture to fixture with no penetration in ceiling panel. Tap off existing light fixture circuit at door. Div. 26 to provide watertight conduit for lights.
40. **Special Instruction:** Conduit from refrigeration system to monitor by Division 26. Temperature Monitor installation at 4'-0" above finished floor. All conduit penetrations to be through the walls, no ceiling penetrations for lighting (exception for evaporators, sprinklers, Temp alarm probes). 8" - 10" air gap around unit. Engineers to provide air flow/ventilation in gap to reduce potential of condensation/mold.

ITEM NO. 102.2 COLD STORAGE MONITORING SYSTEM

QUANTITY 1

Manufacturer:	Cooper Atkins
Model:	Temp Trak
Size and Shape:	Refer to drawings
Alternate:	---

1. Temp Trak system to be provided by 11 4000, installed by Alvin ISD.
2. 1 each 10000 PDT 900 mHz Intelli-Base Buffer.
3. 1 each 100000 US 900 mHz Base Station Receiver.
4. Provide components for all required refrigerated equipment. Refer to Item 102.2A
5. 11 40 00 to turn over system at time of facility punch for all components to be accounted for.

ITEM NO. 102.2A COLD STORAGE MONITORING SYSTEM -PROBES

QUANTITY 4

Manufacturer:	Cooper Atkins
Model:	Temp Trak
Size and Shape:	Refer to drawings
Alternate:	---

1. Temp Trak system to be provided by 11 40 00, installed by Alvin ISD.
2. Provide the following components to accompany Item 102.2
3. 1 each for Walk-In Freezer, Walk-In Cooler and ALL Refrigerated Holding Cabinets, Refrigerated Merchandisers:
    a. 10080 DT 900 mHz Dual internal-external Temperature Transmitter.
    b. 2033 standard air temperature probe.
    c. 10110 900 mHz Transmitter enclosure.
    d. Provide (1) transmitter for each walk-in compartment, refrigerated holding cabinets and Refrigerated Merchandisers. Refer to drawings for quantity and locations of equipment to be monitored.
4. 11 40 00 to turn over system at time of facility punch for all components to be accounted for.

ITEM NO. 103 COLD STORAGE REFRIGERATION SYSTEM

QUANTITY 1

Manufacturer:	RDT
Model:	ZS1-2 EcoSmart
Size and Shape:	Refer to drawings
Alternate:	Cold Zone

1. Outdoor Air cooled system.
2. Scroll Compressors.
3. Cooler temperature to be +35 degrees.
4. Freezer temperature to be -10 degrees.
5. Separate fans on either shared or independent condensers.
6. EcoSmart system on demand defrost.
7. *KE2 Evap Controllers located per Owner requirements. .If providing KE2 Eco Smart, controller to be mounted at exterior of assembly, above the door, and LAN connection is to be provided. If providing EcoNet defrost controller, the remote monitoring control to be located in Managers office above light switch.*
8. Condenser and Evaporators to be built with Electrofin coating to retard salt air deterioration. Coils to be coated with Technicoat 10-2 coating for protection against salt air environment.
9. Refrigeration system to accommodate 110F ambient exterior temperature. Coils to be oversized by 20%.
10. S/S covered housing.
11. A dedicated electrical connection to be provided for heated condensate drain line. Refer to electrical plan for location.
12. All exterior piping to be aluminum wrapped.
13. System to accommodate Item No. 102 Cold Storage Assembly.
14. S/S covered housing mounted to a 24" tall 1/8 galvanized angle iron frame anchored to concrete pad. Base to be open with no skirting.
15. Mount condensing unit on common exterior rack. Refer to Architectural and Engineering drawings for exact location of remote unit. Coordinate routing of refrigeration lines and conduit with appropriate trades. Heat tape and insulate all drain lines. General Contractor to seal all building penetrations at refrigeration lines.
16. All field installed exterior piping to be aluminum wrapped by installing contractor. **All interior refrigeration lines to be insulated, Condensate drain lines at Cooler to be insulated and drain lines in Freezer to be heated and insulated. Refer to section 2.34 B for insulation requirements.**
17. Provide two (2) year parts and labor warranty for all parts and components (including third-party components that may be utilized).

ITEM NO. 104 COLD STORAGE SHELVING

QUANTITY 16

Manufacturer:	Metro
Model:	Metro Max Q
Size and Shape:	Refer to drawings
Alternate:	Cambro Camshelving

1. Each unit to be four (4) tiers high with open grid mats.
2. Four (4) 74" post per unit. Provide foot plates at all posts when assembly is supplied with walk-in floor.
3. Refer to drawings for size, width and lengths. Maximize shelving to allow not more than 6" tolerance.
4. **Special Instruction:** Verify shelving requirements with approved submittal prior to ordering.
   11 40 00 to list dimensions on shelving units for rough in submittal.

ITEM NO. 105 DUNNAGE RACK

QUANTITY 7

Manufacturer:	Metro
Model:	Bow Tie Series
Size and Shape:	Refer to drawings
Alternate:	Cambro Camshelving Slotted

1. Size as shown.
2. **Special Instruction:** Verify shelving requirements with approved submittal prior to ordering.
   11 40 00 to list dimensions on shelving units for rough in submittal.

ITEM NO. 107 DRY STORAGE SHELVING

QUANTITY 11

Manufacturer:	Metro
Model:	MetroMax Q
Size and Shape:	Refer to drawings
Alternate:	Cambro Camshelving

1. Each unit to be five (5) tiers high with open grid shelving.
2. Four (4) 86" posts per unit.
3. All shelving shown within the dry storage room.
4. Refer to drawings for size, width and lengths. Maximize shelving to allow not more than 6" tolerance.
5. **Special Instruction:** Verify shelving requirements with approved submittal prior to ordering.
   11 40 00 to list dimensions on shelving units for rough in submittal.

ITEM NO. 108 CAN RACK

QUANTITY 2

Manufacturer:	New Age
Model:	1250CK

Size and Shape: Refer to drawings
Alternate: ---

1. Three (3) sets 1255, of shelf inserts to accommodate # 5 and # 10 cans.
2. Four (4) casters with brakes.

ITEM NO. 109 ICE MAKER W/ BIN

QUANTITY 1

Manufacturer: Hoshizaki
Model: F-1002MAJ-C / B-500
Size and Shape: Refer to drawings
Alternate: ---

1. One (1) Hoshizaki F-1002MAJ-C ice maker (sonic style ice).
2. One (1) B-500 stainless steel bin with 6” stainless steel legs. Coordinate ice drop zone. Coordinate bin top kits as required.
3. Air cooled.
4. One (1) probe and rake tool set.
5. Interconnect through Item 813 Remote Water Filter**.** Provide stainless steel flex connection to ice machine.
6. Provide One (1) Vollrath model no. 46893 40 oz. Capacity Ice Scoop.
7. Provide One (1) Vollrath model no. ISH-567 64 oz. Capacity Ice Scoop holder. Holder to be mounted to wall next to ice machine in an easily accessible location. Location to be coordinated with Owners prior to being mounted to wall.
8. **Special Instruction:** Coordinate cord and cap with receptacle. 60" long flex hose from filtered water connection to ice maker with 48" wall restraint cable. Interconnection thru water filter to ice machine and final connection by Division 22. Provide one (1) floor sink only, half underneath eqmt. footprint to be accessible for clean-out.

ITEM NO. 110 CLOTHES WASHER

QUANTITY 1

Manufacturer: Owner Furnished
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. 11 40 00 to provide washer installation kit.
2. Final connections by Div. 22 & Div. 26. Coordinate with G.C.
3. Unit to be located on 4" tall housekeeping pad per drawings. Coordinate size of pad with size of equipment.
4. **Special Instruction:** Verify utility requirements with owner/operator.

ITEM NO. 110A CLOTHES DRYER

QUANTITY 1

Manufacturer:	Owner Furnished
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. 11 40 00 to provide dryer installation kit.
2. Final connections by Div. 26. Coordinate with G.C.
3. Unit to be located on 4" tall housekeeping pad per drawings. Coordinate size of pad with size of equipment.
4. **Special Instruction:** Verify utility requirements with owner/operator.

ITEM NO. 111 CHEMICAL SHELF

QUANTITY 2

Manufacturer:	Metro
Model:	MetroMax Q
Size and Shape:	Refer to drawings
Alternate:	Cambro Camshelving

1. Each unit to be four (4) tiers high with open grid mats.
2. Four (4) 72" posts per unit.
3. 11 40 00 to coordinate size and location of shelving.

ITEM NO. 121 TWO COMPARTMENT SINK W/DISPOSER

QUANTITY 1

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. Top: 14 gauge type 304 S/S marine edge with 2" turndown at free sides.
2. Open base construction.
3. 10" high splash where adjacent to walls/fixtures.
4. Two (2) 24" x 26" x 15" deep sink compartments.
5. One (1) T&S model no. B-0291, splash mount faucet, 18" swing nozzle,LL inlets, for ¾" hot and cold water connections.
