Project Manual

January 26, 2026

STANTEC Project No. 21400 1329

Crosby Sixth Grade Center

Crosby Independent School District

Crosby, Texas

01.26.2026

Issue for Permit and Proposal

Volume 1 of 2

MasterSpec Copyright © 2026 by the American Institute of Architects, portions Copyright © 2026 by Stantec for **Crosby Sixth Grade Campus**. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

SECTION 00 01 01 – PROJECT TITLE PAGE

TITLE AND LOCATION OF THE WORK:

CROSBY SIXTH GRADE CAMPUS
Red Summit Dr.
Crosby, TX 77532

01.26.2026

NAME AND ADDRESS OF THE OWNER:

CROSBY INDEPENDENT SCHOOL DISTRICT
14670 FM 2100
Crosby, Texas 77532

PROGRAM MANAGER

LAN
3700 West Sam Houston Parkway South
Suite 400
Houston, Texas 77042
713-266-6900

ARCHITECT AND CONSULTANTS:

STANTEC
ARCHITECT
910 Louisiana Street, Suite #2600
Houston, Texas 77002
713-548-5700

STANTEC
STRUCTURAL ENGINEER
910 Louisiana Street, Suite #2600
Houston, Texas 77002
713-548-5700

FOOD SERVICE DESIGN PROFESSIONALS
FOOD SERVICE CONSULTANT
584 Sawdust Rd. Suite 139
The Woodlands, Texas 77380
281-350-2323

AURIC ENGINEERS, LLC
CIVIL ENGINEER
520 Post Oak Blvd, Suite #895
Houston, Texas 77027
713-405-1901

SALAS O'BRIEN
MEP/TECHNOLOGY ENGINEER
10930 W. Sam Houston Pkwy N, Suite 900
Houston, TX 77064
281-664-1900

MASTER TABLE OF CONTENTS

Note: Sections marked by asterisk (*) below are provided by the Owner, Construction Manager (where applies), or consultants to the Architect or Owner, and are not covered by the Architect's seal. Refer to attached supporting Tables of Contents to identify Consultant responsible for a particular section.

VOLUME 1 of 2

Section Title

DIVISION 00 - PROCUREMENT AND CONTRACTING REQUIREMENTS - for Competitive Sealed Proposals (CSP)

00 01 01 Project Title Page
00 01 10 Master Table of Contents
*00 01 11 Sealed Structural Table of Contents
*00 01 12 Sealed MEPT Table of Contents
*00 01 13 Sealed Civil Table of Contents
00 01 20 List of Drawings
*00 11 19 Request for Competitive Sealed Proposals Owner Document
Probable Schedule
Submission Format
Definitions
Term of Contract
Submission Requirements
Amendments to the RFP
Restrictions on Communication
Evaluation
Award of Contract and Reservation of Rights
Proposal Modifications
Submission Checklist
Exhibit A - Proposal Form
Exhibit B - Bid Bond
Exhibit C - Felony Conviction Notification
Exhibit D - Non-Collusion Statement
Exhibit E - Proof of Insurability
Exhibit F - Proof of Bonding Capacity
Exhibit G - Signature Page and Declaration of Compliance
Exhibit H - Deviation and Exceptions Form
Exhibit I - Certificate of Residency
Exhibit J - Vendor Statement of Debarment/Suspension
Exhibit K - Request for Taxpayer Identification Number
Exhibit L - Form 1295 – Certificate of Interested Parties
Exhibit M - Certification Regarding Terrorist Organizations and Boycott of Israel
Exhibit N - Certification Regarding Boycotting certain Energy Companies
Exhibit O - Certification Prohibiting Discrimination Against Firearm and Ammunition Industries
Exhibit P - Certification Regarding Certain Foreign-Owned Companies
Exhibit Q - Antitrust Certifications Statement

Exhibit R - Conflict of Interest Disclosure Statement
Exhibit S - Vendor Packet
Exhibit T - Bid Alternates and Unit Price Form
Exhibit U - Key Subcontractors
Exhibit V - Prevailing Wage Rates
Exhibit W - AIA Document A101-2017
Exhibit X - AIA Document A201-2017

*00 31 32 Geotechnical Data Owner document

DIVISION 01 - GENERAL REQUIREMENTS
01 10 00 Summary of Work
01 21 00 Cost Allowances
01 22 00 Unit Prices
01 23 00 Alternates
01 25 13 Product Substitutions
01 26 00 Contract Modification Procedures
01 29 00 Applications for Payment
01 30 00 Administrative Requirements
01 30 10 Mechanical and Electrical Coordination
01 31 19 Project Meetings
01 32 00 Notification of Architect Requirements
01 33 00 Submittal Procedures
01 33 10 BIM Coordination Process
01 40 00 Quality Requirements
01 42 19 Reference Standards and Definitions
01 50 00 Temporary Facilities
01 56 39 Temporary Tree and Plant Protection
*01 57 13 Erosion and Sedimentation Control Requirements
01 60 00 Product Requirements
01 70 00 Execution and Closeout Procedures
01 73 29 Cutting and Patching
01 78 00 Warranties
01 78 10 Certification of Project Compliance
01 80 10 Project Photographic Documentation
*01 91 00 General Commissioning Requirements

DIVISION 02 – NOT USED

DIVISION 03 – CONCRETE
*03 30 00 Cast-In-Place Concrete
03 52 16 Lightweight Insulating Concrete Roof Fill
*03 62 00 Non-Shrink Grout

DIVISION 04 – MASONRY
04 05 03 Masonry Mortaring and Grouting
04 20 00 Unit Masonry Assemblies
*04 29 00 Engineered Unit Masonry
04 73 00 Manufactured Stone Masonry

DIVISION 05 – METALS

*05 12 00	Structural Steel Framing
*05 12 13	Architecturally Exposed Structural Steel
*05 21 00	Steel Joist Framing
*05 31 00	Steel Decking
*05 40 00	Cold-Formed Metal Framing
05 50 00	Metal Fabrications
05 51 00	Metal Stairs
05 52 00	Metal Railings
05 73 00	Glazed Decorative Metal Railings

DIVISION 06 – WOOD, PLASTICS, AND COMPOSITES

06 10 53	Miscellaneous Rough Carpentry
06 20 24	Interior Finish Carpentry and Millwork
06 42 17	Manufactured Decorative Wood Wall Panel System
06 42 19	Plastic Laminate Wall Panels
06 61 19	Quartz Surface Fabrications

DIVISION 07 – THERMAL AND MOISTURE PROTECTION

07 13 00	Sheet Waterproofing
07 21 13	Thermal Wall Insulation
07 27 26	Fluid-Applied Membrane Air Barrier
07 42 13	Metal Wall Panels
07 54 23	Thermoplastic Membrane Roofing
07 61 00	Manufactured Sheet Metal Roofing
07 62 00	Sheet Metal Flashing and Trim
07 71 00	Roof Specialties
07 72 33	Roof Hatches
07 81 00	Applied Fireproofing
07 84 00	Firestopping
07 90 00	Joint Protection
07 95 00	Premanufactured Expansion Joint Systems

DIVISION 08 – OPENINGS

08 11 13	Standard Steel Door and Frames
08 14 16	Flush Wood Doors
08 31 00	Access Doors and Panels
08 33 13	Overhead Coiling Counter Shutters
08 33 23	Overhead Coiling Doors
08 33 26	Overhead Coiling Grilles
08 34 73	Sound Control Door Assemblies
08 41 13	Aluminum-Framed Entrances and Storefronts
08 44 13	Glazed Aluminum Curtain Walls
08 56 53	Operable Transaction Windows
*08 71 00	Door Hardware
08 80 00	Glazing
08 83 00	Unframed Mirrors
08 87 23	Impact-Resistant Glazing Film
08 91 00	Louvers

MasterSpec Copyright © 2026 by the American Institute of Architects, portions Copyright © 2026 by Stantec for **Crosby Sixth Grade Campus**. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

DIVISION 09 – FINISHES

09 21 16	Gypsum Board Assemblies
09 30 00	Tiling
09 51 10	Acoustical Panel Ceilings
09 54 23	Linear Metal Ceiling System
09 61 50	Concrete Floor Clear Finish
09 65 00	Resilient Flooring and Base
09 65 56	Resilient Athletic Flooring
09 68 13	Tile Carpeting
09 68 16	Sheet Carpeting
09 72 00	Wall Coverings
09 77 00	FRP Wall Panels
09 77 23	Fabric-Wrapped Acoustical Wall Panels
09 77 33	Cementitious Wood Fiber Acoustic Panels
09 84 00	Suspended Acoustical Baffles and Clouds
09 84 16	Reflective Lay-in Ceiling Diffusers
09 90 00	Painting and Coating
09 96 53	Elastomeric Coatings

DIVISION 10 – SPECIALTIES

10 11 00	Visual Display Surfaces
10 12 00	Display Case
10 14 00	Graphics Panels, Plaques, and Building Letters
10 14 26	Post and Panel Signs
10 14 63	Monument Message Signs
10 21 13	Phenolic-Core Toilet Compartments
10 22 13	Wire Mesh Partitions
10 28 00	Toilet and Custodial Accessories
10 28 10	Miscellaneous Specialties
10 44 00	Emergency Aid and Fire Protection Specialties
10 56 13	Metal Storage Shelving
10 56 26	High Density Mobile Storage Shelving
10 73 26	Aluminum Walkway Covers and Entry Canopies
10 75 00	Flags and Flagpoles

DIVISION 11 – EQUIPMENT

11 31 00	Residential-Grade Appliances
*11 40 00	Food Service Equipment
11 43 55	Ice Machines
11 52 13	Manual Projection Screens
11 52 15	Electric Projection Screens
11 61 43	Stage Curtains and Tracks
11 66 00	Athletic Equipment
11 66 24	Basketball Backstops

MasterSpec Copyright © 2026 by the American Institute of Architects, portions Copyright © 2026 by Stantec for **Crosby Sixth Grade Campus**. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

DIVISION 12 – FURNISHINGS
12 24 13 Roller Shades
12 32 16 Manufactured Plastic Laminate-Clad Casework
12 35 00 Manufactured Musical Instrument Storage Cabinets
12 56 51 Manufactured Library Furniture
12 66 00 Telescoping Stands
12 93 00 Site Furnishings

DIVISION 13 – NOT USED

DIVISIONS 14 – CONVEYING EQUIPMENT
14 24 00 MRL Hydraulic Passenger Elevators

DIVISIONS 15 THROUGH 20 - NOT USED

END OF MASTER TOC - VOLUME 1

Note: Sections marked by asterisk (*****) below are provided by the Owner, Construction Manager (where applies), or consultants to the Architect or Owner, and are not covered by the Architect's seal. Refer to attached supporting Tables of Contents to identify Consultant responsible for a particular section.

VOLUME 2 of 2

Section	Title
00 01 01	Project Title Page
00 01 10	Master Table of Contents
*00 01 11	Sealed Structural Table of Contents
*00 01 12	Sealed MEP Table of Contents
*00 01 13	Sealed Civil Table of Contents

DIVISION 21 – FIRE SUPPRESSION

*21 01 00	Fire Protection Operation and Maintenance Manuals
*21 05 00	Fire Protection General Provisions
*21 05 10	Fire Protection Contract Quality Control
*21 05 12	Fire Protection Shop Dwgs, Coord Dwgs & Product Data
*21 05 13	Electrical Provisions of Fire Protection Work
*21 10 00	Fire Sprinkler System

DIVISION 22 – PLUMBING

*22 01 00	Plumbing Operating & Maintenance Manuals
*22 05 00	Plumbing General Provisions
*22 05 10	Plumbing Contract Quality Control
*22 05 12	Shop Drawings, Coordination Drawings and Product Data
*22 05 13	Electrical Provisions of Plumbing Work
*22 05 15	Plumbing Earthwork
*22 05 16	Excavating, Backfilling an Compacting for Utilities Outside Building Slab
*22 05 17	Plumbing Access Doors
*22 05 19	Pressure and Temperature Instrument for Plumbing Piping
*22 05 23	Valves, Strainers and Vents
*22 05 24	Utility Controller
*22 07 19	Plumbing Piping Insulation
*22 11 16	Domestic Water Piping and Appurtenances
*22 11 19	Piping and Piping Appurtenances for Cold Water Makeup
*22 11 23	Domestic Water Pumps (Includes HW Circ. Pumps & Sump Pumps)
*22 11 25	Domestic Water Booster Pump
*22 13 16	Soil, Waste and Sanitary Drain Piping, Vent Piping and Appurtenances
*22 14 13	Roof Drainage Piping and Appurtenances
*22 20 00	Plumbing Pipe and Pipe Fittings- General
*22 33 33	Electric Water Heater (Commercial ASME)
*22 34 32	Gas Domestic Water Heater (Cyclone
*22 40 00	Plumbing Fixtures and Fixture Carriers
*22 60 01	Acid Waste Piping and Appurtenances
*22 63 11	Gas Piping and Appurtenances

DIVISION 23 – MECHANICAL

*23 01 00	HVAC Operating and Maintenance Manuals
*23 05 00	Mechanical General Provisions
*23 05 10	HVAC Contract Quality Control
*23 05 12	HVAC Shop Drawings, Coordination Drawings and Product Data
*23 05 13	Electrical Provisions of HVAC Work

01.26.2026

*23 05 14 HVAC Condensate Drain Piping System
*23 05 17 Mechanical Access Doors
*23 05 18 Variable Frequency Inverter
*23 05 19 Pressure and Temperature Instruments for HVAC
*23 05 23 HVAC Valves, Strainers and Vents
*23 05 33 HVAC Pipe Heat Tracing
*23 05 48 Vibration Isolation
*23 05 93 Testing, Adjusting, And Balancing of Environmental Systems
*23 05 94 Coordination of Testing and Balancing
*23 07 13 External Duct Insulation
*23 07 16 Vessel Insulation
*23 07 19 HVAC Piping Insulation
*23 08 00 Mechanical Commissioning Coordination
*23 09 33 Building Management and Control System
*23 20 00 Mechanical Pipe and Fittings – General
*23 21 13 Hot Water and Chilled Water Piping, Valves and Appurtenances
*23 21 23 HVAC Pumps
*23 23 00 Refrigerant Piping and Appurtenances
*23 25 13 Circulating Water System Chemical Treatment
*23 31 13 Ductwork
*23 31 14 Fabric Air Dispersion System
*23 33 19 Duct Silencers
*23 34 16 Fans
*23 36 16 Variable Volume Terminal Units
*23 37 13 Air Devices
*23 41 00 Air Filtration
*23 52 35 Gas Modulating Hot Water Boiler Condensing
*23 65 28 Air-Cooled Variable Speed Rotary Screw Chiller
*23 73 13 Air Handling Units
*23 82 16 Heating and Cooling Coils
*23 82 18 Ductless Mini Splits
*23 82 19 Fan Coil Units
*23 82 39 Electric Unit Heaters

DIVISION 26 – ELECTRICAL
*26 01 00 Commissioning of Electrical Systems
*26 01 05 Electrical Operation and Maintenance Manuals
*26 05 00 Electrical General Provisions
*26 05 08 Telecommunications, CATV, Voice, Data, Video Utility Coord. and Service Entrance
*26 05 09 Electric Utility Coordination and Service Entrance
*26 05 10 Contract Quality Control
*26 05 12 Shop Drawings, Coordination Drawings and Product Data
*26 05 16 Excavating, Backfilling and Compacting for Electrical
*26 05 19 Conductors and Connectors
*26 05 26 Electrical Grounding
*26 05 33 Conduit Systems
*26 05 35 Electrical Connections for Equipment
*26 05 37 Electrical Boxes and Fittings
*26 05 38 Electrical Floor Boxes and Fittings
*26 05 40 Electrical Gutters and Wireways
*26 05 50 Firestops
*26 08 00 Electrical Commissioning
*26 09 25 Electrical Contactors

MasterSpec Copyright © 2026 by the American Institute of Architects, portions Copyright © 2026 by Stantec for **Crosby Sixth Grade Campus**. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

*26 09 43 Lighting Controls
*26 12 17 Ultra High Efficiency K-Rated Transformers
*26 19 13 Combination Motor Controllers
*26 24 13 Switchboards
*26 24 16 Panelboards and Enclosures
*26 24 25 Enclosed Switches
*26 24 30 Fuses
*26 26 00 Elevator Power Module Panel
*26 27 73 Line Voltage Wiring Devices
*26 32 02 Dual Purpose Manual Transfer Switches
*26 32 13 Natural Gas Standby Generator Sets and Transfer Switch
*26 43 00 Surge Protective Devices
*26 51 13 Lighting Fixtures
*26 56 00 Site Lighting

DIVISION 27 – COMMUNICATIONS
*27 05 00 Communications Basic Materials, Methods and Gen. Provisions
*27 05 07 Communications Shop Drawings
*27 05 09 Contract Quality Control
*27 05 10 Firestops
*27 05 50 Telecommunications Grounding and Bonding
*27 10 00 Structured Cabling System (SCS)
*27 41 16.10 AV Distribution System for Instructional and Office Spaces
*27 41 16.20 Audio and Video Distribution Systems for Special Venues
*27 50 00 School Communications System

DIVISION 28 – SAFETY & SECURITY
*28 01 00 O&M Manuals of Electronic Safety and Security Systems
*28 05 00 Safety and Security Basic Materials, Methods and Gen. Provisions
*28 05 05 Safety & Security Alterations Project Procedures
*28 05 07 Safety & Security Shop Drawings
*28 05 10 Contract Quality Control
*28 05 50 Firestops
*28 10 02 Access Control System (ACS)
*28 20 00 Video Surveillance System (VSS)
*28 31 02 Intrusion Detection System (IDS)
*28 46 00 Fire Detection and Alarm System
*28 48 00 Emergency Radio Communication Enhancement System
*28 55 00 RF Survey

DIVISIONS 29 and 30 – NOT USED

DIVISION 31 – EARTHWORK
*31 11 00 Clearing and Grubbing
*31 22 13 Site Grading
*31 23 15 Building Earthwork
*31 23 33 Trenching, Backfilling and Compaction
31 31 16 Termite Control
*31 32 13.19 Lime Stabilization
*31 32 13.26 Lime Fly Ash or Fly Ash Stabilization
*31 41 33 Trench Safety
*31 63 29 Drilled Concrete Piers and Shafts

MasterSpec Copyright © 2026 by the American Institute of Architects, portions Copyright © 2026 by Stantec for **Crosby Sixth Grade Campus**. Warning: This AIA MasterSpec based document is protected by U.S. Copyright Law and International Treaties.

DIVISION 32 – EXTERIOR IMPROVEMENTS

*32 13 13	Concrete Site Paving
*32 17 23.13	Painted Pavement Markings
32 31 13	Chain Link Fences and Gates
32 31 19	Decorative Metal Fences and Gates
*32 92 00	Turf and Grasses

DIVISION 33 – UTILITIES

*33 10 00	Water Distribution
*33 30 00	Sanitary Sewer
*33 40 00	Storm Drainage

END OF MASTER TOC - VOLUME 2

DOCUMENT 00 01 11 – STRUCTURAL TABLE OF CONTENTS

DIVISION 03 – CONCRETE
03 30 00 Cast-In-Place Concrete
03 62 00 Non-Shrink Grout

DIVISION 04 - MASONRY
04 29 00 Engineered Unit Masonry

DIVISION 05 - METALS
05 12 00 Structural Steel Framing
05 12 13 Architecturally Exposed Structural Steel Framing
05 21 00 Steel Joist Framing
05 31 00 Steel Decking
05 40 00 Cold-Formed Metal Framing

DIVISION 31 – EARTHWORK
31 23 15 Building Earthwork
31 63 29 Drilled Concrete Piers and Shafts

DIVISION 01 – GENERAL REQUIREMENTS

01 91 00 General Commissioning Requirements

01/26/2026

DIVISION 21 – FIRE PROTECTION

21 01 00 Fire Protection Operation and Maintenance Manuals
21 05 00 Fire Protection General Provisions
21 05 10 Fire Protection Contract Quality Control
21 05 12 Fire Protection Shop Dwgs, Coord Dwgs & Product Data
21 05 13 Electrical Provisions of Fire Protection Work
21 10 00 Fire Pump System

DIVISION 22 – PLUMBING

22 01 00 Plumbing Operating & Maintenance Manuals
22 05 00 Plumbing General Provisions
22 05 10 Plumbing Contract Quality Control
22 05 12 Shop Drawings, Coordination Drawings and Product Data
22 05 13 Electrical Provisions of Plumbing Work
22 05 15 Plumbing Earthwork
22 05 16 Excavating, Backfilling an Compacting for Utilities Outside Building Slab
22 05 17 Plumbing Access Doors
22 05 19 Pressure and Temperature Instrument for Plumbing Piping
22 05 23 Valves, Strainers and Vents
22 05 24 Utility Controller
22 07 19 Plumbing Piping Insulation
22 11 16 Domestic Water Piping and Appurtenances
22 11 19 Piping and Piping Appurtenances for Cold Water Makeup
22 11 23 Domestic Water Pumps (Includes HW Circ. Pumps & Sump Pumps)
22 11 25 Domestic Water Booster Pump
22 13 16 Soil, Waster and Sanitary Drain Piping, Vent Piping and Appurtenances
22 14 13 Roof Drainage Piping and Appurtenances
22 20 00 Plumbing Pipe and Pipe Fittings- General
22 33 33 Electric Water Heater (Commercial ASME)
22 34 32 Gas Domestic Water Heater (Cyclone
22 40 00 Plumbing Fixtures and Fixture Carriers
22 60 01 Acid Waste Piping and Appurtenances
22 63 11 Gas Piping and Appurtenances

DIVISION 23 – MECHANICAL

23 01 00 HVAC Operating and Maintenance Manuals
23 05 00 Mechanical General Provisions
23 05 10 HVAC Contract Quality Control
23 05 12 Shop Drawings, Coordination Drawings and Product Data
23 05 13 Electrical Provisions of HVAC Work
23 05 14 HVAC Condensate Drain Piping System
23 05 17 Mechanical Access Doors
23 05 18 Variable Frequency Inverter
23 05 19 Pressure and Temperature Instruments for HVAC
23 05 23 HVAC Valves, Strainers and Vents
23 05 33 HVAC Pipe Heat Tracing
23 05 48 Vibration Isolation
23 05 93 Testing, Adjusting, And Balancing of Environmental Systems
23 05 94 Coordination of Testing and Balancing

23 07 13 External Duct Insulation
23 07 16 Vessel Insulation
23 07 19 HVAC Piping Insulation
23 08 00 Mechanical Commissioning Coordination
23 09 33 Building Management and Control System
23 20 00 HVAC Pipe and Fittings – General
23 21 13 Hot Water and Chilled Water Piping, Valves and Appurtenances
23 21 23 HVAC Pumps
23 23 00 Refrigerant Piping and Appurtenances
23 25 13 Circulating Water System Chemical Treatment
23 31 13 Ductwork
23 31 14 Fabric Air Dispersion System
23 33 19 Duct Silencers
23 34 16 Fans
23 36 16 Variable Volume Units
23 37 13 Air Devices
23 41 00 Air Filtration
23 52 35 Gas Modulating Hot Water Boiler Condensing
23 65 28 Air-Cooled Variable Speed Rotary Screw Chiller
23 73 13 Air Handling Units
23 82 16 Heating and Cooling Coils
23 82 18 Ductless Mini Splits
23 82 19 Fan Coil Units
23 82 39 Electric Unit Heaters

DIVISION 26 – ELECTRICAL

26 01 00 Commissioning of Electrical Systems
26 01 05 Electrical Operation and Maintenance Manuals
26 05 00 Electrical General Provisions
26 05 08 Telecommunications, CATV, Voice, Data, Video Utility Coordination and Service Entrance
26 05 09 Electric Utility Coordination and Service Entrance
26 05 10 Contract Quality Control
26 05 12 Shop Drawings, Coordination Drawings and Product Data
26 05 16 Excavating, Backfilling and Compacting for Electrical
26 05 19 Conductors and Connectors
26 05 26 Electrical Grounding
26 05 33 Conduit Systems
26 05 35 Electrical Connections for Equipment
26 05 37 Electrical Boxes and Fittings
26 05 38 Electrical Floor Boxes and Fittings
26 05 40 Electrical Gutters and Wireways
26 05 50 Firestops
26 08 00 Electrical Commissioning
26 09 25 Electrical Contactors
26 09 43 Lighting Controls
26 12 17 Ultra High Efficiency K-Rated Transformers
26 19 13 Combination Motor Controllers
26 24 13 Switchboards
26 24 16 Panelboards and Enclosures
26 24 25 Enclosed Switches
26 24 30 Fuses

26 26 00 Elevator Power Module Panel
26 27 73 Line Voltage Wiring Devices
26 32 02 Dual Purpose Manual Transfer Switches with Integrated Load Bank and Generator Quick Connects

SECTION 00 31 32 - GEOTECHNICAL DATA

PART 1 - GENERAL

1.1 SOIL INVESTIGATION DATA

A. The Owner has retained Alpha Testing to perform a geotechnical investigation at the project site. This section contains a complete copy of the Geotechnical Report for the Construction Manager's and Subcontractor bidders' information.

B. Investigation and Report:

Report # H254405
December 5. 2025

Geotechnical Engineering Report
Crosby Sixth Grade Campus, Crosby ISD - Final Study
Site Location: 560 ft. west of intersection of Red Summit Drive and FM 2100
Crosby, Texas

Prepared for LAN – West Houston Parkway
Houston, Texas 77042
Prepared by UES Professional Solutions

A copy of the original report is included herein as attachments for the convenience of the Proposers.

Proposers are urged to examine soils investigation data and to make their own investigation of the site before submitting proposals.

C. Interpretation:

Soil investigation data is provided only for information and the convenience of the Proposers. The Owner and Architect/Engineer disclaim any responsibility for the accuracy, true location and extent of the Soils Investigation that has been prepared by others. They further disclaim responsibility for interpretation of that data by Proposers, as in projecting soil-bearing values, rock profiles, soil stability and the presence, level and extent of underground water.

Soil investigation data is not a part of the Contract Documents.

(SOIL INVESTIGATION REPORT ATTACHED)

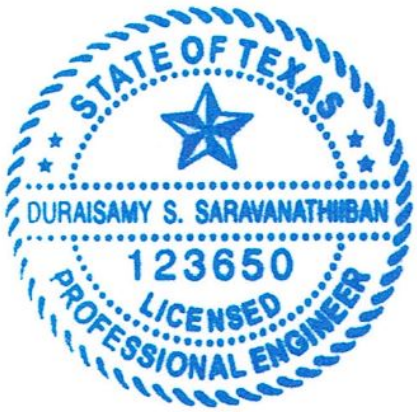
Re: GEOTECHNICAL ENGINEERING REPORT
Crosby Sixth Grade Campus
Crosby, Texas
UES Project No.H254405

Dear Mr. Arcement:



UES Professional Solutions 44, LLC (hereinafter "UES"), is pleased to submit this Preliminary Geotechnical Engineering Report for the referenced project. The results of this exploration, together with our recommendations, are presented in the accompanying report, an electronic copy of which is being transmitted herewith. This geotechnical study was authorized by Paula Patterson with Crosby ISD on November 11, 2025, and performed in accordance with UES Proposal No. 116733 dated October 22, 2025.

UES appreciates the opportunity to be of service on this project. If we can be of further assistance, such as providing materials testing services during construction, please contact our office.

Respectfully submitted,

UES Professional Solutions 44, LLC

Victor Guevara Jr., E.I.T.
Staff Geotechnical Engineer

12/05/2025

Duraisamy S. (Roy) Saravanathiiban, Ph.D., P.E.

Appendix D - Site Grading Plan

1.0 INTRODUCTION

Purpose and Scope. The purpose of this preliminary geotechnical study was to evaluate some of the physical and engineering properties of subsurface materials at selected locations on the subject site to develop preliminary geotechnical engineering design parameters and recommendations for the proposed project. To accomplish this, the scope of this preliminary study included field exploration consisting of drilling test borings and collecting samples of the subsurface materials, performing laboratory testing on selected samples obtained during the field exploration, performing preliminary engineering analysis and evaluation of the subsurface conditions with respect to the project characteristics, and development of preliminary foundation and pavement recommendations suitable for the proposed project. The scope of services did not include an environmental assessment of the site.

Project Location. The project is located off Red Summit Drive, approximately 560 feet west of its intersection with FM 2100 in Crosby, Texas. The general location and orientation of the site are provided in Appendix A - Project Location Diagram.

Project Description. The project consists of a proposed two-story, structural steel, sixth grade school building (approximately 93,000 SF) with associated parking and drive areas.

UES previously performed the preliminary geotechnical study for this project site as UES Report No. H243343, dated September 15, 2025. Information from this preliminary study was used for this Final Report.

Loading Information. Based on information provided by the client, the maximum foundation load for the structure will be up to 200 kips. *Any change in the structural loads should be brought to our attention to review the design and assess the suitability of the recommendations provided.*

Site Grading Plan. Based on the most recent grading plan provided by the client ("Crosby Sixth Grade Campus", Site Grading Plan, Sheet C-3.02) dated November 07, 2025, the approximate existing grade range across the proposed building footprint areas, the proposed Finished Floor Elevations (FFE), and the resulting required cut depths and fill material thicknesses are summarized in the table below. The site grading plan is provided in Appendix D. The cut and fill thicknesses presented are approximate and do not consider over-excavation or fill thicknesses resulting from any necessary site remediation as discussed in forthcoming sections of this report.

Building	Estimated Existing Elevation (feet)	Finished Floor Elevation, FFE (feet)	Approximate Range to Achieve Final Grade	
			Required Cut (feet)	Required Fill (feet)
School Building	44 to 45	48.5	0	3 to 4

Any changes to the site grading plan should be brought to the attention of UES for review and revision of recommendations, as appropriate.

Cautionary Statement Regarding Use of this Report. As with any geotechnical engineering report, this report presents technical information and provides detailed technical recommendations for civil and structural engineering design and construction purposes. UES, by necessity, has assumed the user of this document possesses the technical acumen to understand and properly utilize the information and recommendations provided herein. UES strives to be clear in its presentation and, like the user, does not want potentially detrimental misinterpretation or misunderstanding of this report. Therefore, we encourage any user of this report with questions regarding its content to contact UES for clarification. Clarification will be provided verbally and/or issued by UES in the form of a report addendum, as appropriate.

Report Specificity. This report was prepared to meet the specific needs of the client for the specific project identified. Recommendations contained herein should not be applied to any other project at this site by the client or anyone else without the explicit approval of UES.

This Report is NOT a Specification. Recommendations in this report are not specifications. Geotechnical engineering requires significant experience and professional judgment. Conditions vary in the field which require and/or allow modification to recommendations provided herein at the discretion of the Geotechnical Engineer of Record.

2.0 FIELD EXPLORATION

Subsurface study. The subsurface study for this project is summarized in the following table. Boring locations are provided in Appendix B - Boring Location Diagram.

Boring Nos.	Depth, feet bgs[1]	Date Drilled	Location[2]
B-01 to B-15 and PB-01	25 and 30	8/6/2025, 10/27-28/2025 and 11/03/2025	Proposed School Building
B-16 to B-27	5	10/28/2025 and 11/03/2025	Proposed Paving Area
PB-02 and PB-03	30	8/6/2025	Spaced Across the Site

Notes:
1. bgs = below ground surface.
2. Boring locations provided in Appendix B - Boring Location Diagram were not surveyed and should be considered approximate. Borings were located by recreational hand-held GPS unit. Horizontal accuracy of such units is typically on the order of 20-feet.

Boring Logs. Subsurface conditions were defined using the sample borings. Boring logs generated during this study are included in Appendix C – Boring Logs, Laboratory Results and

Unified Soil Classification System. Borings were advanced between sample intervals using continuous flight auger drilling procedures.

Cohesive Soil Sampling. Cohesive soil samples were generally obtained using Shelby tube samplers in general accordance with American Society for Testing and Materials (ASTM) D1587. The Shelby tube sampler consists of a thin-walled steel tube with a sharp cutting edge connected to a head equipped with a ball valve threaded for rod connection. The tube is pushed into the undisturbed soil by the hydraulic pulldown of the drilling rig. The soil specimens were extruded from the tube in the field, logged, tested for consistency using a hand penetrometer, sealed, and packaged to maintain "in situ" moisture content.

Consistency of Cohesive Soils. The consistency of cohesive soil samples was evaluated in the field using a calibrated hand penetrometer. In this test a 0.25-inch diameter piston is pushed into the undisturbed sample at a constant rate to a depth of 0.25-inch. The results of these tests are tabulated at the respective sample depths on the boring logs. When the capacity of the penetrometer is exceeded, the value is tabulated as 4.5+.

Groundwater Observations. Groundwater observations are shown on the boring logs.

Borehole Plugging. Upon completion of the borings, the boreholes were backfilled with onsite soil cuttings from the top and plugged at the surface.

3.0 LABORATORY TESTING

UES performs visual classification and any of several laboratory tests, as appropriate, to define pertinent engineering characteristics of the soils encountered. Tests are performed in general accordance with ASTM or other standards and the results included at the respective sample depths on the boring logs or separately tabulated, as appropriate, and included in Appendix C – Boring Logs, Laboratory Results and Unified Soil Classification System. Laboratory tests and procedures routinely utilized, as appropriate, for geotechnical studies are tabulated in the following table.

Test Procedure	Description
ASTM D1140	Standard Test Methods for Amount of Material in Soils Finer than the No. 200 (75-µm) Sieve
ASTM D2166	Standard Test Method for Unconfined Compressive Strength of Cohesive Soil
ASTM D2216	Standard Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass
ASTM D2487	Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System)
ASTM D2488	Standard Practice for Description and Identification of Soils (Visual-Manual Procedure)
ASTM D4220	Standard Practices for Preserving and Transporting Soil Samples

Test Procedure	Description
ASTM D4318	Standard Test Methods for Liquid Limit, Plastic Limit and Plasticity Index of Soils
ASTM D4546	Standard Test Methods for One-Dimensional Swell or Settlement Potential of Cohesive Soils

4.0 SITE CONDITIONS

4.1 General

Review of Aerial Photographs. Review of aerial images available from Google Earth™ indicate the site was previously developed with multiple buildings and a baseball field and the buildings were demolished and removed in the past. It is not known whether the foundations supporting the former structures at the site were removed and backfilled or abandoned in-place. In addition, a low-lying area was noted in the project site. Our review revealed obvious areas of fill on-site. **Demolition considerations, existing fill recommendations and existing low-lying area backfill recommendations are provided in Sections 5.6, 5.7 and 5.8, respectively.**

Due to the intermittent nature and relatively low resolution of aerial photographs, as well as lack of provided information regarding the past land use of the site, our review should not be interpreted as eliminating the possibility of past activities on site which could detrimentally affect future construction. No additional information was provided for this study regarding previous site activities or development.

Topography. Based on the review of a United States Geological Survey (USGS) topographic map of the site, the site is relatively flat.

4.2 Geology

Geologic Formation. Based on available surface geology maps and our experience, it appears this site is located in the Beaumont Formation, predominantly clay. Soil within the Beaumont Formation can generally be characterized as clay, silt, and sand.

4.3 Soil Conditions

Stratigraphy. Descriptions of the various strata and their approximate depths and thickness per the Unified Soil Classification System (USCS) and terms and symbols used in the USCS are provided in Appendix C – Boring Logs, Laboratory Results and Unified Soil Classification

System. A summary of the stratigraphy indicated by the borings is provided in the following table.

Generalized Subsurface Conditions at Proposed Building Location (Borings B-01 to B-15 and PB-01)[1]			
Nominal Depth, feet bgs (Except as Noted)		General Description	Detailed Description of Soils/Materials Encountered
Top of Layer	Bottom of Layer		
0	25 and 30	FAT CLAY	FAT CLAY (CH) Note: Fill soils consisting of Clayey Sand (SC) and Lean Clay With Sand (CL) were encountered in borings B-09 and PB-01 from the existing ground surface extending to a depth of about 2 feet.
Note: 1. Boring Termination Depths = 25 and 30 feet bgs.			

Generalized Subsurface Conditions at Proposed Paving Location (Borings B-16 to B-27)[1]			
Nominal Depth, feet bgs (Except as Noted)		General Description	Detailed Description of Soils/Materials Encountered
Top of Layer	Bottom of Layer		
0	5	FAT CLAY	FAT CLAY (CH). Note: Fill soils consisting of Clayey Sand (SC) and Fat Clay (CH) were encountered in borings B-19 and B-20 from the existing ground surface extending to a depth of about 2 feet.
Note: 1. Boring Termination Depth = 5 feet bgs.			

Generalized Subsurface Conditions Spaced Across the Site (Borings PB-02 and PB-03)[1]			
Nominal Depth, feet bgs (Except as Noted)		General Description	Detailed Description of Soils/Materials Encountered
Top of Layer	Bottom of Layer		
0	30	FAT CLAY	FAT CLAY (CH).
Note: 1. Boring Termination Depth = 30 feet bgs.			

4.4 Groundwater

Groundwater Levels. The test borings were advanced using continuous flight augers and air-rotary drilling methods, with intermittent sampling methods. These dry drilling techniques enable observation of potential groundwater seepage levels. Groundwater levels

encountered in the borings during this study are identified in the table below. Depths referenced in this report and in the table below are measured from the existing ground surface at the respective boring location at time of the field exploration.

Boring No.	Depth Groundwater Initially Encountered (feet, bgs)	Groundwater Depth after 15 Minutes (feet, bgs)
All borings, B-01 to B-27 and PB-01 to PB-03	Not Encountered	Not Measured

Long-term Groundwater Monitoring. These groundwater observations are indicative of the groundwater conditions present at the time the borings were drilled. The amount of water in an open borehole largely depends on the permeability of the soil encountered at the boring location. In relatively impervious soils, such as clayey soils, a suitable estimate of the groundwater depth may not be possible, even after several days of observation. Long-term monitoring of groundwater conditions via piezometers or groundwater monitoring wells was not performed during this study and was beyond the scope of this study. Long-term monitoring can reveal groundwater levels materially different than those encountered during measurements taken while drilling the borings.

Groundwater Fluctuations. It is difficult to accurately predict the magnitude of subsurface water fluctuations that might occur based upon short-term observations. Future construction activities may alter the surface and subsurface drainage characteristics of this site. Seasonal variations, temperature, land-use, proximity to water bodies, and recent rainfall conditions may influence the depth to the groundwater. With these considerations UES recommends that the contractor verifies the groundwater elevation before construction starts.

5.0 ANALYSIS AND RECOMMENDATIONS

5.1 Seismic Site Classification

The Site Class assigned for seismic design considers various factors, such as the soil profile (whether it's soil or rock), shear wave velocity, and strength, averaged over a depth of 100 feet. As our borings didn't reach depths of 100 feet, we made determinations under the assumption that the subsurface materials beneath the borehole bottoms resembled those encountered at the termination depth. Following the guidelines outlined in Section 1613.2.2 of the 2024 International Building Code and Table 20.2-1 in the 2022 ASCE-7, UES recommends using Site Class D (stiff soil) for seismic design purposes at this location.

5.2 Potential Vertical Rise (PVR)

Estimated Potential Movement. Our findings indicate grade supported structures at grades referred in Section 1.0 could experience post construction movements of about **4½ inches** due to shrinking and swelling of expansive soils (active clays). For the purpose of this report, movement due to shrinking and swelling of active clays will be referred to as potential vertical movement/rise (PVR).

Method of Estimation. PVR is estimated in general accordance with methods outlined by Texas Department of Transportation (TxDOT) Test Method Tex-124-E, from results of absorption swell tests, and engineering judgment and experience. Estimated PVR calculated assuming the moisture content of the in-situ soil within the normal zone of seasonal moisture content change varies between dry condition to wet condition as defined by Tex-124-E. Also, it was assumed that a 1 psi surcharge load from the floor slab acts on the subgrade soils. Movements exceeding our estimates could occur if positive drainage of surface water is not maintained or if soils are subject to an outside water source, such as leakage from a utility line or subsurface moisture migration from off-site locations.

Assumptions. PVR was estimated based on the assumption that any fill used to raise the grade consists of onsite or similar soil with a plasticity index (PI) of 20 or less. The use of fill material with a PI greater than 20 could result in potential movements exceeding our estimates.

5.3 Construction Excavations

The contractor is responsible for designing any excavation slopes, temporary sheeting or shoring. Design of these structures should include any imposed surface surcharges. Construction site safety is the sole responsibility of the contractor, who shall also be solely responsible for the means, methods and sequencing of construction operations. The contractor should also be aware that slope height, slope inclination or excavation depths (including utility trench excavations) should in no case exceed those specified in local, state and/or federal safety regulations, such as OSHA Health and Safety Standard for Excavations, 29 CFR Part 1926, or successor regulations.

Stockpiles should be placed well away from the edge of the excavation and their heights should be controlled so they do not surcharge the sides of the excavation. Surface drainage should be carefully controlled to prevent flow of water over the slopes and/or into the excavations. Construction slopes should be closely observed for signs of mass movement, including tension cracks near the crest or bulging at the toe. If potential stability problems are observed, a geotechnical engineer should be contacted immediately. Shoring, bracing or underpinning required for the project (if any) should be designed by a professional engineer registered in the State of Texas.

5.4 Groundwater Control

Groundwater was not encountered at the borings during the subsurface study. If groundwater is encountered during excavation, dewatering to bring the groundwater below the bottom of excavations may be required. Dewatering could consist of standard sump pits and pumping procedures, which may be adequate to control seepage on a local basis during excavation. Supplemental dewatering will be required in areas where standard sump pits and pumping is not effective. Supplemental dewatering could include submersible pumps in slotted casings, well points, or eductors. If groundwater is encountered during construction, then the contractor should submit a groundwater control plan, prepared by a licensed engineer experienced in that type of work.

5.5 Earthwork

5.5.1 Site Preparation

In the area of improvements, all concrete, trees, stumps, brush, debris, septic tanks, abandoned structures, roots, vegetation, rubbish, and any other undesirable matter should be removed and properly disposed. All vegetation should be removed, and the exposed surface should be scarified to an additional depth of at least 6 inches. It is the intent of these recommendations to provide a loose surface with no features that would tend to prevent uniform compaction by the equipment to be used.

5.5.2 Proofroll

Building pad and paving subgrades should be proofrolled with a fully loaded tandem axle dump truck or similar pneumatic-tire equipment to locate areas of loose subgrade. In areas to be cut, the proofroll should be performed after the final grade is established. In areas to be filled, the proofroll should be performed prior to fill placement. Areas of loose or soft subgrade encountered in the proofroll should be removed and replaced with engineered fill, moisture conditioned (dried or wetted, as needed) and compacted in place.

5.5.3 Construction Considerations

<u>Surface Sandier/Siltier Soils</u>. The sandier/siltier soils encountered at and near the ground surface at this site are very susceptible to changes in moisture. The presence of surface water due to precipitation or groundwater may result in a decrease in the ability to compact and work with the soil. It is common for these soils to pump when subjected to high levels of moisture. In addition, these soils located at and near the ground surface will allow surface water to infiltrate until the water becomes perched on a less permeable layer at depth. As

such, construction difficulties should be anticipated, especially during the wet season or immediately after rain events. Although having a thin layer of non-plastic or low plasticity soils overlying cohesive soils is typical of this geologic region, our experience suggests that the local contractors find these materials troublesome and can often be the source of change orders, construction delays, and budget over runs. Soils of this type are especially prone to requiring the implementation of wet weather/soft subgrade recommendations provided in this report.

Maintenance of Subgrade during Construction. While the exposed subgrade is expected to remain relatively stable initially, unstable conditions may arise during general construction activities, particularly if the soil is exposed to wet weather conditions and repetitive construction traffic. The use of lighter construction equipment can help minimize disturbance to the subgrade. In the event of unstable conditions, stabilization measures will be necessary. After grading is completed, it's crucial to maintain the moisture content of the subgrade before proceeding with pavement/building slab construction. Minimizing construction traffic over the finished subgrade is advisable. If the subgrade becomes frozen, desiccated, saturated, or disturbed, the affected material should either be removed or treated by scarification, moisture conditioning, and recompaction before pavement/building slab construction begins. UES should be retained to observe earthwork and to perform necessary tests and observations during subgrade preparation.

5.5.4 Grading and Drainage

Every attempt should be made to limit the extreme wetting or drying of the subsurface soils because swelling and shrinkage of these soils will result. Standard construction practices of providing good surface water drainage should be used. A positive slope of the ground away from any foundation should be provided. Ditches or swales should be provided to carry the run-off water both during and after construction. Stormwater runoff should be collected by gutters and downspouts and should discharge away from the buildings.

Root systems from trees and shrubs can draw a substantial amount of water from the clay soil at this site, causing the clays to dry and shrink. This could cause settlement beneath grade-supported slabs such as floors, walks and paving. Trees and large bushes should be located a distance equal to at least one-half their anticipated mature height away from grade slabs.

Lawn areas should be watered moderately, without allowing the clay soil to become too dry or too wet.

5.5.5 Wet Weather/Soft Subgrade

Soft and/or wet surface soils may be encountered during construction, especially following periods of wet weather. Wet or soft surface soil can present difficulties for compaction and

other construction equipment. If specified compaction cannot be achieved due to soft or wet surface soils, one of the following corrective measures will be required:

1. Removal of the wet and/or soft soil and replacement with select fill,
2. Chemical treatment of the wet and/or soft soil to improve the subgrade stability, or
3. If allowed by the schedule, drying by natural means.

Chemical treatment is usually the most effective way to improve soft and/or wet surface soils. UES should be contacted for additional recommendations if chemical treatment is planned due to wet and/or soft soils during construction. The treatment depth and chemical reagent type and application rate depend on the site condition during construction.

5.5.6 Fill

Select Fill. **Any fill placed in building pad areas should consist of select fill.** Select fill should consist of soil with a liquid limit of less than 40 and a Plasticity Index between 8 and 20. The select fill should be placed in loose lifts not exceeding 8-inches and should be compacted to at least 95 percent maximum dry density (per ASTM D-698) and at a moisture content between optimum and 4 percent above optimum moisture content. The subgrade to receive select fill should be scarified to a depth of 6 inches and compacted to 93 to 96 percent of the material's maximum standard Proctor dry density (ASTM D-698) at a workable moisture level at least 3 percentage points above optimum.

Lime-treated Native Clay Soil. Based on the laboratory testing conducted for this study, the native clay on-site soils will not meet requirements for select fill outlined in the section titled "Fill". As an alternative to importing select fill, the native clay soil may be blended with lime to reduce the plasticity index to meet select fill requirements. Based on our experience, we expect that it will require between 6- and 8-percent lime (by dry unit weight) to reduce the plasticity index of the native clay soils to select fill requirements. Prior to selecting this alternative, lime series tests should be performed to assess the amount of lime required.

General Fill. General fill may be placed in improved areas outside of building pad areas. General fill should consist of material similar to onsite soils. General fill should be placed in loose lifts not exceeding 8-inches and should be uniformly compacted to a minimum of 95 percent maximum dry density (per ASTM D-698) and within ±2 percent of the optimum moisture content.

Fill Restrictions. Select fill and general fill should consist of those materials meeting the requirements stated. Select fill and general fill should not contain material greater than 4-inches in any direction, debris, vegetation, waste material, environmentally contaminated material, or any other unsuitable material.

Unsuitable Materials. Materials considered unsuitable for use as select fill or general fill include low and high plasticity silt (ML and MH), silty clay (CL-ML), organic clay and silt (OH and OL) and highly organic soils such as peat (Pt). These soils may be used for site grading and restoration in unimproved areas as approved by the Geotechnical Engineer. Soil placed in unimproved areas should be placed in loose lifts not exceeding 10-inches and should be compacted to at least 92 percent maximum dry density (per ASTM D-698) and at a moisture content within ±4 percentage points of optimum.

Utilities and Deep Fills. In cases where utility lines and/or mass fills are more than 10 ft deep, the fill/backfill below 10 ft should be compacted to at least 100 percent of standard Proctor maximum dry density (ASTM D 698) and within –2 to +2 percentage points of the material's optimum moisture content. The portion of the fill/backfill shallower than 10 ft should be compacted as previously outlined. Density tests should be performed on each lift (maximum 12-inch thick) and should be performed as the trench is being backfilled.

Even if fill is properly compacted, fills in excess of about 10 ft are still subject to settlements over time of up to about 1 to 2 percent of the total fill thickness. This should be considered when designing pavements and other structures over utility lines or adjacent to retaining walls with deep fill, or any other structure in deep fill areas. To reduce the risk of fill settlement, the portion of the fill below a depth of 10 ft below final grade should be compacted to a minimum of 100 percent of the material's maximum standard Proctor dry density (ASTM D-698). This procedure will reduce (but not eliminate) the risk of fill settlement. If this risk of subgrade settlement is not acceptable, consideration could be given to backfilling portions or all of the excavation with flexible base material, cement-stabilized sand, or flowable fill.

If utility trenches or other excavations extend to or beyond a depth of 5 ft below construction grade, the contractor or others shall be required to develop an excavation safety plan to protect personnel entering the excavation or excavation vicinity. The collection of specific geotechnical data and the development of such a plan, which could include designs for sloping and benching or various types of temporary shoring, is beyond the scope of this study. Any such designs and safety plans shall be developed in accordance with current OSHA guidelines and other applicable industry standards.

Cautionary Note. It is extremely important that select fill placed within building pads be properly characterized using one or more representative proctor samples. The use of a proctor sample which does not adequately represent the select fill being placed can lead to erroneous compaction (moisture and density) results which can significantly increase the potential for swelling of the select fill. The plasticity index of select fill soils placed during construction should be checked every day to confirm conformance to the project requirements and consistency with the proctor being utilized.

5.5.7 Testing

Required Testing and Inspections. Field compaction and classification tests should be performed by UES. Compaction tests should be performed in each lift of the compacted material. We recommend the following minimum soil compaction testing be performed: one test per lift per 2,500 square feet (SF) in the area of the building pad, one test per lift per 5,000 SF outside the building pad, and one test per lift per 100 linear feet of utility backfill. If the materials fail to meet the density or moisture content specified, the course should be reworked as necessary to obtain the specified compaction. Classification confirmation inspection/testing should be performed daily on select fill materials (whether on-site or imported) to confirm consistency with the project requirements. The testing frequency recommended herein can be altered (increased or decreased) at the discretion of the geotechnical engineer of record.

Liability Limitations. Since proper field inspection and testing are critical to the design recommendations provided herein, UES cannot assume responsibility or liability for recommendations provided in this report if construction inspection and/or testing is performed by another party.

5.6 Demolition Considerations

Applicability. Recommendations in this section apply to the removal of any existing foundations, utilities or pavement which may be present on this site.

General. Special care should be taken in the demolition and removal of existing floor slabs, foundations, utilities and pavements to minimize disturbance of the subgrade. Excessive disturbance of the subgrade resulting from demolition activities can have serious detrimental effects on planned foundation and paving elements.

Existing Foundations. Existing foundations are typically slabs, shallow footings, or drilled piers. If slab or shallow footings are encountered, they should be completely removed. If drilled piers are encountered, they should be cut off at an elevation at least 24-inches below proposed grade beams or the final subgrade elevation, whichever is deeper. The remainder of the drilled pier should remain in place. Foundation elements to remain in place should be surveyed and superimposed on the proposed development plans to determine the potential for obstructions to the planned construction. UES should be contacted if drilled piers are to be excavated and removed completely. Additional earthwork activities will be required to make the site suitable for new construction if the piers are to be removed completely.

Existing Utilities. Existing utilities and bedding to be abandoned should be completely removed. Existing utilities and bedding may be abandoned in place if they do not interfere

with planned development. Utilities which are abandoned in place should be properly pressure-grouted to completely fill the utility.

Backfill. Excavations resulting from the excavation of existing foundations and utilities should be backfilled in accordance with Section 5.5.6.

Other Buried Structures. Other types of buried structures (wells, cisterns, etc.) could be located on the site. If encountered, UES should be contacted to address these types of structures on a case-by-case basis.

5.7 Existing Fill

Our subsurface study indicates existing fill on site. Existing fill was encountered in borings PB-01, B-09, B-19, and B-20. Existing fill extended to a depth of up to about 2-feet bgs. It is worth noting that existing fill may also be present, potentially at greater depths, in other parts of the site. Accurately delineating fill soils, especially those resembling native soils, based on discrete test boreholes is challenging. As such, the recorded fill depths should be considered as estimates and may slightly deviate from the actual fill depths. Although not encountered in the borings for this project, uncontrolled fills may contain trash, debris, concrete rubble, construction debris, boulders, and other unsuitable materials.

If there is no record indicating that the fill was placed and compacted in a controlled manner (engineered fill), it will be necessary to excavate and recompact it in accordance with section 5.5.6 prior to construction of the building pad and foundations. Considering the depth of excavation required for subgrade improvement to reduce movements due to shrinking and swelling of active clays (see Section 5.8), we anticipate most or all of the existing fill will be removed from the building/foundation area. Any remaining uncontrolled fill after excavation for subgrade improvement should be removed (below the 5.5 ft of select fill pad) to expose firm native soils. The resulting excavation subgrade should be observed, proof-rolled as recommended in Section 5.5.2, and tested by UES prior to backfilling to verify conditions are as anticipated and that all existing fill is removed from the building pad/foundation area. Also, any loose or soft soil should be removed.

After the proofroll, the resulting excavation should be properly backfilled to the bottom of the subgrade improvement depth (5.5 ft) with controlled fill as described in Section 5.5.6. Any excavated materials proposed for re-use as controlled fill in the building pad below the subgrade improvement depth should be free of organics, debris, or other unsuitable materials.

In pavement areas, the existing fill at the pavement subgrade level should be proof-rolled with a heavy roller to detect possible weak areas. Any weak soils identified as part of the

proof-rolling process should be removed and replaced with well-compacted soil as outlined in Section 5.5.6 of this report.

5.8 Existing Low-Lying/Pond Backfill

Based on the aerial photographs and our subsurface investigation, we understand that the west side of the project site will be located within the existing low-lying area/pond. Before placing backfill in the low-lying area/pond, it's imperative to completely remove sediments and soft soil from the sides and bottom of the existing low-lying area/pond until reaching the surface of undisturbed competent native soil. As a minimum, the excavation should extend at least one foot below the bottom of the loose soils or sediments and at least 2 ft beyond the perimeter of the low-lying area/pond. Furthermore, the exposed undisturbed competent native soil after excavating the low-lying area/pond should undergo proof rolling using a fully loaded tandem axle truck to ensure a suitable working surface, as per Section 5.6.2. Following successful proof-rolling, the low-lying area/pond can be backfilled according to our recommendations outlined in Section 5.6.6- Fill. A UES representative must be present to oversee the preparation of the low-lying area/pond bottom, including excavation, proof rolling, and backfilling.

5.9 Slab-on-Grade and Subgrade Improvement

Potential Vertical Slab Movements. Based on the information gathered during this study, a slab constructed on-grade will be subject to potential vertical slab movements of about 4½-inches.

Subgrade Treatment Using Select Fill. The depth of subgrade treatment is dependent on desired post-construction PVR. The following table presents recommended depth of subgrade treatment to reduce the post-construction PVR to 1-inch.

Subgrade Treatment - Select Fill Option		
Required PVR (inches)	Minimum Thickness of Select Fill Soil (feet, bgs) [1]	Thickness of Compacted Subgrade below Select Fill (inches) [2]
1	5½	6

Notes:
1. Depth measured below bottom of the slab-on-grade.
2. The subgrade to receive select fill soil should be scarified to a depth indicated above. The scarified subgrade should be compacted to 93 to 96 percent of the material's maximum standard Proctor dry density (ASTM D-698) at a workable moisture level at least 4 percentage points above optimum.

Subgrade treatment should extend at least 5-feet horizontally beyond the perimeter of the building.

Subgrade Treatment at Exterior Doorways. Subgrade treatment should extend beneath sidewalk areas that abut exterior doorways to the building. Failure to perform subgrade treatment in these areas can increase the probability of differential heaving between exterior sidewalks and doorways, resulting in exterior doors that will not or have difficulty opening outward due to "sticking" caused by heaving sidewalk slabs. Sidewalks tied to pavements and other flatworks that extend beyond the subgrades treated for PVR reduction may be subjected to movements similar to those experienced for untreated subgrades.

Subgrade Moisture. The slab subgrade is prone to drying after being exposed and should be kept moist prior to slab placement.

Moisture Barrier. A moisture barrier should be used beneath the slab foundation in areas where floor coverings will be utilized (such as, but not limited to, wood flooring, tile, linoleum, and carpeting).

Fill Related Slab Settlement. Fill will settle under its own weight. A properly constructed fill will generally settle up to 2% of the fill thickness due to its own weight and independent of external loads. That settlement begins as soon as lift placement begins. The time required for settlement to occur is a function of soil type, pore water, and drainage path conditions and therefore can vary widely. As a result, fill-related settlement should be expected before AND after construction of the slab. Slab movement related to settling fill can be reduced by allowing as much time as possible between the time the fill is placed and construction of the slab. Furthermore, we recommend survey monitoring of constructed fills be performed to verify the rate and magnitude of settlement has been reduced to an acceptable level prior to construction of slabs on the fill.

Load Related Slab Settlement. Slabs on grade will settle when subjected to load. Slab settlement is a function of soil type, load intensity, load geometry, and other factors. Upon request by the Structural Engineer for this project, settlement estimates will be provided for the specific loading application in question.

Movement Risk. Recommendations have been provided to mitigate the effects of soil movement. Some soil movement and related structural cracking and floor unevenness should be expected even after following recommendations in this report. The elimination of risk related to soil movement is typically not feasible. If this risk is intolerable, the user of this report should be prepared to utilize a structural slab suspended adequately above the subgrade surface and supported on deep foundations.

5.10 Foundation System

Appropriate Foundation Types. The following foundation types are appropriate to the site based on the geotechnical conditions encountered:

- Shallow footings, or
- Underreamed drilled piers.

Foundation Determination. We have assumed that structural loads will be typical for the type and size of building proposed. Recommendations for the foundation types are presented below. Final determination of the foundation type to be utilized for this project should be made by the Structural Engineer based on loading, economic factors and risk tolerance.

Avoidance of Mixing Foundation Types. Mixing of foundation types for a given building should be avoided. Where mixing of shallow footings and underreamed drilled piers is required for a given building, we should be contacted to review the foundation plans prepared by the Structural Engineer prior to construction. Shallow footing foundations and underreamed drilled pier foundations can have incompatible movement characteristics.

Foundations Adjacent to Slopes. Foundations placed too close to adjacent slopes steeper than 5H:1V may experience reduced bearing capacities and/or excessive settlement. Recommendations provided herein assume foundations are not close enough to adjacent slopes in excess of 5H:1V to be detrimentally affected. Therefore, foundations closer than 5 times the depth of adjacent slopes, pits, or excavations in excess of 5H:1V should be brought to our attention in order that we may review the appropriateness of our recommendations.

Foundation Plans Review. We recommend contacting our office to review the foundation plans, details and related structural loads, prior to finalizing the design to check conformance with our geotechnical recommendations.

5.10.1 Shallow Footings

General Requirement. Shallow strip and spread footing foundations may be used for support of the proposed structure if recommendations in the sections 5.6 “Demolition Considerations”, 5.7 “Existing Fill”, 5.8 “Existing Low-Lying/Pond Area Backfill” and 5.9 “Slab-on-Grade and Subgrade Improvement” are followed.

Foundation Depth. Shallow strip and spread footing foundations should bear on select fill or competent native soil at a minimum depth of 3-feet below the surrounding grade.

Bearing Capacity. Continuous strip footings can be proportioned using a net dead load plus sustained live load bearing pressure of 2,000 psf or a net total load bearing pressure of 3,000 psf, whichever condition results in a larger bearing surface. Individual spread footings can be

proportioned using a net dead load plus sustained live load bearing pressure of 2,600 psf or a net total load bearing pressure of 3,900 psf, whichever condition results in a larger bearing surface. These bearing pressures are based on a safety factor of 3 and 2, respectively.

Geometry. Individual spread footings should be at least 30 inches wide and continuous strip footing foundations should be at least 16 inches wide.

Settlement. Settlement of footing foundations is influenced by several factors, including load (pressure), soil consolidation properties, depth to groundwater, geometry (width and length), depth, spacing, and quality of construction. Although a detailed settlement analysis is beyond the scope of this study, settlement for foundations, with a maximum horizontal dimension of 10-feet, constructed as described above should be about 1 inch. We should be allowed to review foundations larger than 10 feet to assess their settlement. Our settlement estimate assumes that proper construction practices are followed and there are no overlapping stresses due to adjacent footings. To mitigate any overlapping stresses due to adjacent footings, we recommend a minimum clear spacing of one footing width (width of larger footing) between adjacent footings.

Lateral Resistance. Resistance to lateral loads may be provided by the soil adjacent to the footings. We recommend using an equivalent fluid weight of 180 pcf for lateral resistance. A coefficient of sliding friction of 0.25 between the concrete footings and underlying soil may be combined with the passive resistance. Appropriate safety factors should be utilized by the structural engineer for lateral stability of the shallow footings.

Construction and Observation. The geotechnical engineer should monitor foundation construction to verify conditions are as anticipated and that the materials encountered are suitable for support of foundations. Soft or unsuitable soils encountered at the foundation bearing level should be removed to expose suitable, firm soil. Foundation excavations should be dry and free of loose material. Excavations for foundations should be filled with concrete before the end of the workday or sooner if necessary to prevent deterioration of the bearing surface. Prolonged exposure or inundation of the bearing surface with water will result in changes in strength and compressibility characteristics. If delays occur, the excavation should be deepened as necessary and cleaned, in order to provide a fresh bearing surface. If more than 24 hours of exposure of the bearing surface is anticipated in the excavation, a “mud slab” should be used to protect the bearing surfaces. If a mud slab is used, the foundation excavations should initially be over-excavated by approximately 4 inches and a lean concrete mud slab of approximately 4 inches in thickness should be placed in the bottom of the excavation immediately following exposure of the bearing surface by excavation. The mud slab will protect the bearing surface, maintain more uniform moisture in the subgrade, facilitate dewatering of excavations if required and provide a working surface for the placement of formwork and reinforcing steel.

5.10.2 Underreamed Drilled Piers

General. Underreamed drilled pier foundations bearing in native soil may be utilized at this site for the proposed structure provided that recommendations in the sections 5.6 "Demolition Considerations", 5.7 "Existing Fill", 5.8 "Existing Low-Lying/Pond Area Backfill" and 5.9 "Slab-on-Grade and Subgrade Improvement" are followed.

Foundation Depth. We recommend that underreamed piers should bear in native soil at a depth of 10-feet below the existing grade.

Bearing Capacity. The piers may be proportioned using a net dead load plus sustained live load bearing pressure of 2,600 psf or a net total load pressure of 3,900 psf, whichever condition results in a larger bearing surface. These bearing pressures are based on a safety factor of 3 and 2, respectively, against shear failure of the foundation bearing soils.

Settlement. Settlement of underreamed drilled pier foundations is influenced by several factors, including load (pressure), soil consolidation properties, depth to groundwater, geometry (width and length), depth, spacing, and quality of construction. Although a detailed settlement analysis is beyond the scope of this study, soil related settlement for foundations, 8-feet in diameter or less, constructed as described above should be about 1 inch. We should be allowed to review piers greater than 8-feet in diameter to assess their settlement. However, pier foundation settlement is heavily affected by construction quality and, as a result, oftentimes exceeds 1 inch. Our settlement estimate assumes that proper construction practices are followed and there are no overlapping stresses due to adjacent piers. To mitigate any overlapping stresses due to adjacent piers, we recommend a minimum clear spacing of one bell diameter (larger bell diameter) between adjacent piers.

Lateral Capacity. Because of the potential for the upper two feet of the soil to shrink and pull away from drilled piers during dry periods, we recommend soil resistance to lateral loads on drilled piers be ignored in the upper 2-feet of the soil profile. For resistance of lateral loads on drilled piers, we recommend the following LPILE design parameters.

Depth (feet) [1]	Soil Type	Effective Soil Unit Weight (pcf) [2]	Allowable Cohesion, c (psf) [3]	Angle of Internal Friction, ϕ (degrees)	Strain at ½ Peak Strength, ε_{50}	Soil Modulus Parameter, k (for lateral loads) (pci)
0 - 2	Clay	120	0	0	NA	NA
2 - 10	Clay	120	700	0	0.007	300

Notes:
1. Depth below existing grade.
2. Effective soil unit weight based on assumed groundwater depth greater than 10-feet.
3. Factor of safety 3 is included in the recommended cohesion parameter.

Uplift. Each pier should contain full length reinforcing steel and should be designed to resist the uplift pressure (soil-to-pier adhesion) due to potential soil swell along the shaft from post-construction heave and other uplift forces applied by structural loadings. The magnitude of uplift adhesion due to soil swell along the pier shaft cannot be defined accurately and can vary according to the actual in-place moisture content of the soils during construction. It is estimated this uplift adhesion will not exceed about 1,000 psf. This soil adhesion is approximated to act uniformly over the upper 8 ft of the pier shaft in contact with clayey soils.

Uplift Resistance. The uplift force due to swelling of active clays should be resisted by the underreamed portion of the pier. The underreamed portion should be at least two (2) and not exceeding 3 times the diameter of the shaft. The minimum clear spacing between edges of adjacent piers should be at least one (1) underream diameter, based on the larger underream.

Shaft/Diameter Ratio. The piers should be provided with an underream diameter to shaft diameter ratio of not less than 2 to 1 and not greater than 3 to 1. **There is an inherent risk of bell collapse during construction. Unforeseen sand seams and silt pockets/seams and/or laminated/slickensided structures in clays or variable groundwater conditions can cause significant loss of tensile strength resulting in bell collapse. Therefore, UES recommends test piers with underreams be constructed prior to finalizing the foundation design to assess the risk of bell collapse**.

If underream collapse occurs during test pier drilling, we should be contacted for further recommendations. Some field adjustments in the depth of the underreamed piers may still be required in some areas to maintain the bottom of the piers above any possible groundwater seepage and caving soils encountered near the bearing depth. Adjustments in the depths of the piers should be approved and observed in the field by UES personnel.

Grade Beams. Grade beams may be used to support loads by spanning the drilled-and-underreamed piers. Grade beams should be designed to transfer loads to the piers as a simply supported beam, ignoring any support from the soil between the piers. The depth of exterior and interior grade beams can be varied according to the structural requirements of the floor slab. However, we recommend that exterior grade beams extend at least 12 inches below the lowest adjacent grade. Additionally, backfill soils placed adjacent to grade beams must be compacted as outlined in Section 5.5.6 of this report.

Construction Observation. The construction of all piers should be observed as a means to verify compliance with design assumptions and to verify:

1. the bearing stratum;
2. underream size;
3. the removal of all smear zones and cuttings;

4. that groundwater seepage, when encountered, is correctly handled; and
5. that the shafts are vertical (within acceptable tolerance).

We should be contacted for further evaluation and recommendations if soils other than those anticipated to be encountered at the design foundation bearing level, or if groundwater seepage and/or underream collapse occurs.

Groundwater. Groundwater was not encountered in the borings during drilling. However, groundwater may be encountered during pier excavation and the risk of groundwater seepage is increased during or after periods of precipitation. Submersible pumps may be capable of controlling seepage in the pier excavation to allow for concrete placement.

Applicable TxDOT Standards. Drilled pier foundations should be constructed in accordance with the requirements of TxDOT Item 416 (standard specification for construction of drilled pier foundations).

Concrete Placement. Concrete should be placed in the shafts immediately after excavation to reduce the risk of significant groundwater seepage, deterioration of the foundation-bearing surface and underream collapse. Concrete should have a slump of 5 to 7 inches and should not be allowed to strike the shaft sidewall or steel reinforcement during placement.

5.11 Pavement

General. Recommendations for rigid pavement and preparation of the pavement subgrade are provided in the following sections. A traffic study indicating the number and type of vehicles on which to base the pavement design was not provided. Therefore, our recommendations are based upon our experience with similar projects assuming normal vehicular loading. **Any unusual loading conditions should be brought to our attention prior to finalizing the pavement design so that we may assess and modify our recommendations as necessary.**

Civil and Drainage Consideration. Pavement design is the responsibility of the project Civil Engineer. We have recommended preliminary pavement sections based on geotechnical information and assumed traffic information in accordance with the American Association of State Highway and Transportation Officials (AASHTO) Guidelines for Design of Pavement Structures dated 1993. According to AASHTO design methodology, the pavement design thickness considers pavement performance, traffic, subgrade soils, pavement materials, environment, drainage and reliability. The applicability of our assumptions should be reviewed and approved by the project Civil Engineer before the pavement section is finalized. The recommended pavement sections assume good drainage quality prevails over the life of the pavement and that the pavement subgrade is exposed to moisture levels approaching saturation less than 25 percent of the time. Good drainage is defined by AASHTO as "the

ability to remove water from the pavement within one (1) day". Therefore, it is critical that the project Civil Engineer provide appropriate pavement drainage design to assure validity of the assumed drainage conditions.

5.11.1 Rigid Pavement

Portland cement concrete (PCC) with a minimum 28-day compressive strength of 3,500 pounds per square inch (psi) should be utilized for rigid pavement. Grade 60 reinforcing steel should be utilized in the transverse and longitudinal directions. The following pavement thicknesses and reinforcing are recommended:

Paving Use	Thickness (inches)	Reinforcing
Parking Areas for Automobiles and Light Trucks	5	No. 3 bars spaced on 22-inch intervals
Fire Lane, Bus Lane and Drive Lanes and Areas Subjected to Light to Medium Trucks	6	No. 3 bars spaced on 18-inch intervals
Areas Receiving Heavy Trucks and Dumpsters	7	No. 3 bars spaced on 16-inch intervals
Notes: 1. Recommended pavement reinforcement is in accordance with ACI guidelines. 2. Pavement subgrade should be chemically stabilized per Section 5.11.2.		

Pavement Joints. Contraction joints should be spaced at about 25 times the pavement thickness up to a maximum of 15 feet in any direction. Saw cut control joints should be cut within 6 to 12 hours of concrete placement. ACI recommendations indicate that regularly spaced expansion joints may be deleted from concrete pavements. Therefore, the installation of expansion joints is optional and should be evaluated by the Civil Engineer. Dowels should have a diameter equal to $^1/_8$ the slab thickness, be spaced on 12-inch intervals, and be embedded at least 9 inches. Appropriate joint sealant is recommended to keep water from saturating the pavement subgrade and to prevent the introduction of incompressible material into the joints. Routine monitoring and maintenance of joint sealants are recommended. Where not specified herein, concrete pavement should comply with Texas Department of Transportation (TxDOT) Standard Specifications, Item 360, "Concrete Pavement", or local equivalent.

5.11.2 Pavement Subgrade

Preliminary Potential Vertical Soil Movements. We have assumed that site treatment as recommended in Section 5.9 - Slab-on-Grade and Subgrade Improvement will not be performed within the pavement areas for this project. As a result, pavements will be subjected to the calculated PVR for this site. Based on the information gathered during this study, a pavement constructed on-grade will be subject to potential vertical movements of about 4½-inches. Because heave is generally associated with a source of water, it can occur

differentially. Edge lift, excessive cracking, corner breaks, and poor ride quality are just a few of the many examples of pavement issues that can occur when in-situ PVR values are high. We should be contacted to provide PVR mitigation strategies to help reduce potential movements if desired. Strategies available for reducing potential soil movements include soil stabilization with lime or cement, removal of the on-site expansive soils and replacement with select fill.

Subgrade Preparation for Clayey Soils (PI>15). High plasticity clay is expected to be encountered or exposed at pavement subgrade. The pavement subgrade should be placed in loose lifts not exceeding 8-inches and should be uniformly compacted to a minimum of 95 percent maximum dry density (per ASTM D-698) and within ±2 percent of the optimum moisture content. We recommend the subgrade be stabilized using the following:

Reagent	Application Rate (pounds per square yard)	Application Depth (inches)
Lime	36	6

Lime stabilization should be performed in accordance with TxDOT Standard Specifications, Item 260, “Lime Stabilized Subgrade”, or local equivalent.

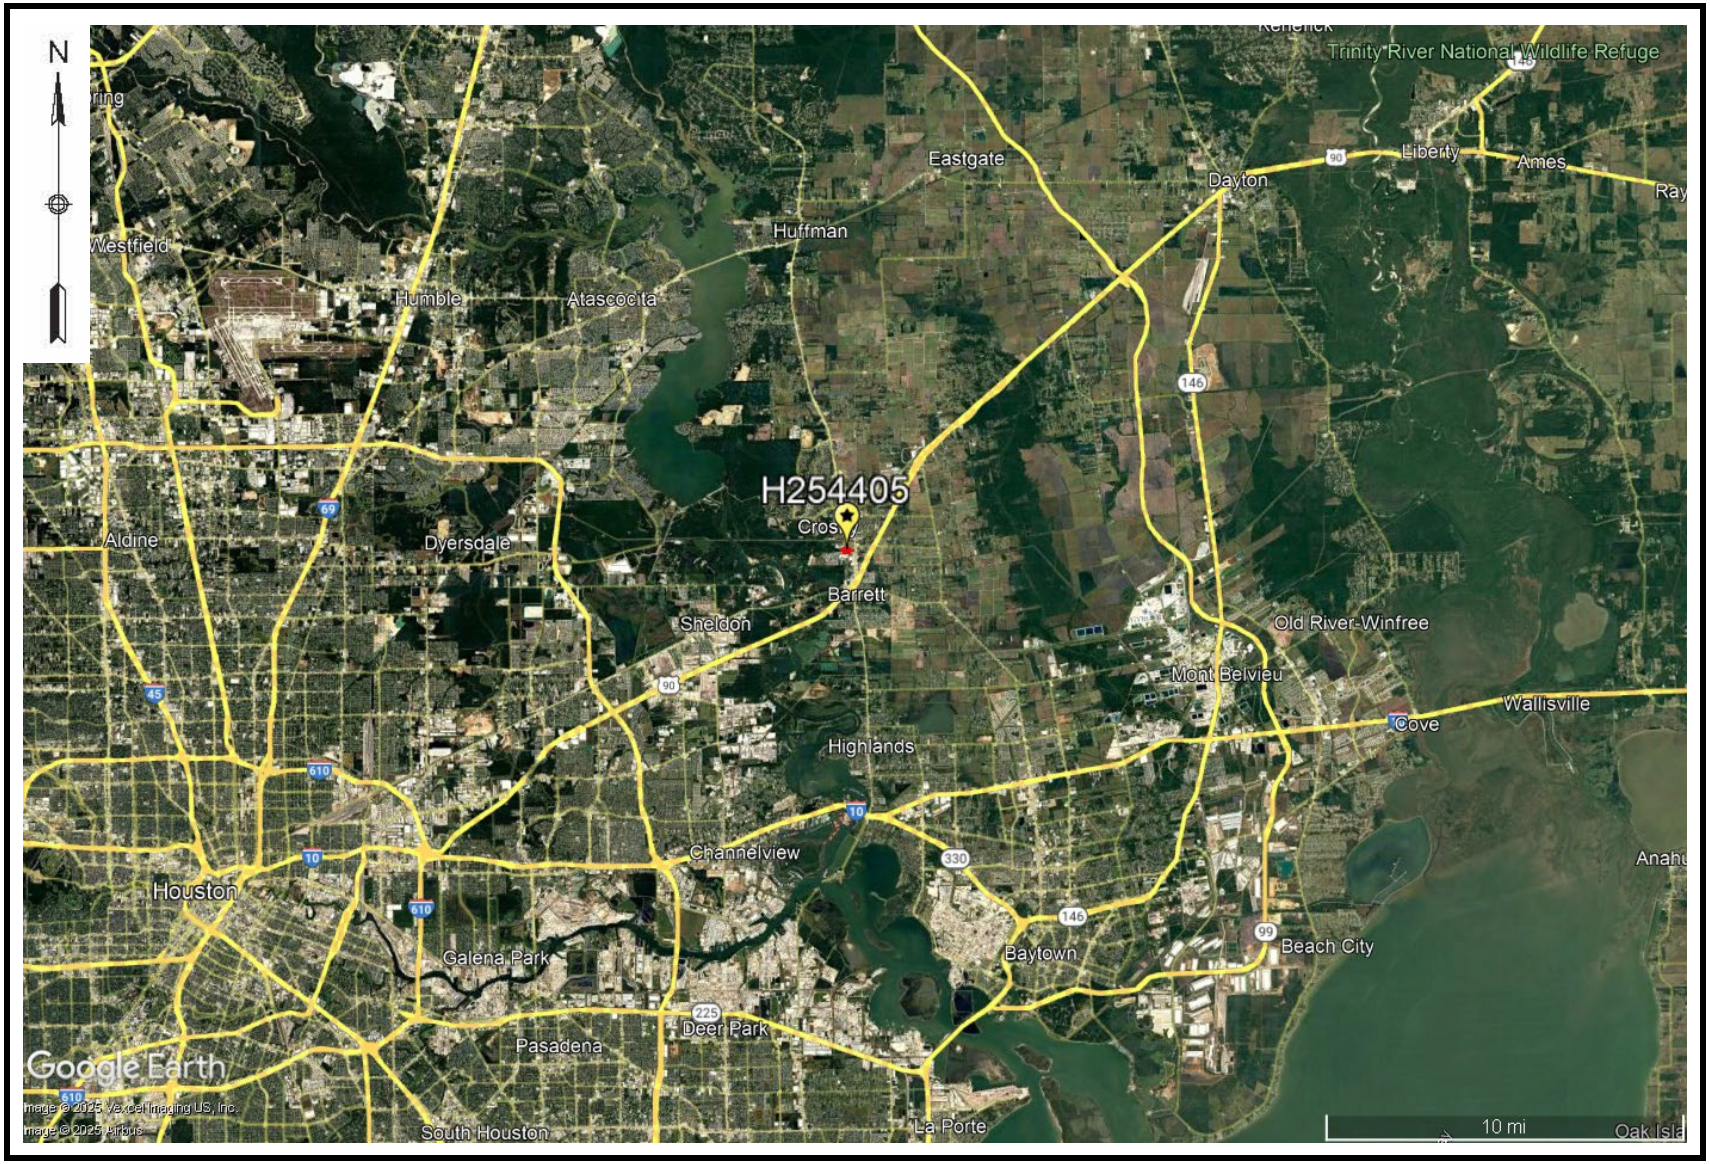
Subgrade Preparation for Sandy Soils (PI≤15). Clayey sand is expected to be encountered or exposed at pavement subgrade. The pavement subgrade should be placed in loose lifts not exceeding 8-inches and should be uniformly compacted to a minimum of 95 percent maximum dry density (per ASTM D-698) and within ±2 percent of the optimum moisture content. We recommend the subgrade be stabilized using either of the following:

Reagent	Application Rate (pounds per square yard)	Application Depth (inches)
Portland Cement	23	6
70% Flyash/30% Lime Blend	50	6

Cement stabilization should be performed in accordance with TxDOT Standard Specifications, Item 275, “Portland Cement Treated Materials” or local equivalent, and lime-fly ash stabilization should be performed in accordance with TxDOT Standard Specifications, Item 265, “Lime-Fly Ash Treatment of Materials Used as Subgrade” or local equivalent.

Cautionary Note Regarding Stabilized Subgrades. Stabilized subgrades are not suitable for supporting heavy construction traffic. Stabilized subgrades that have been subjected to heavy construction traffic should be re-inspected and re-stabilized as necessary prior to the construction of overlying pavement.

6.0 LIMITATIONS



Professional services provided in this geotechnical exploration were performed, findings obtained, and recommendations prepared in accordance with generally accepted geotechnical engineering principles and practices. The scope of services provided herein does not include an environmental assessment of the site or investigation for the presence or absence of hazardous materials in the soil, surface water or groundwater. UES, upon written request, can be retained to provide these services.

UES is not responsible for conclusions, opinions or recommendations made by others based on this data. Information contained in this report is intended for the exclusive use of the Client (and their designated design representatives) and is related solely to design of the specific structures outlined in Section 1.0. No party other than the Client (and their designated design representatives) shall use or rely upon this report in any manner whatsoever unless such party shall have obtained UES's written acceptance of such intended use. Any such third party using this report after obtaining UES's written acceptance shall be bound by the limitations and limitations of liability contained herein, including UES's liability being limited to the fee paid to it for this report. Recommendations presented in this report should not be used for design of any other structures except those specifically described in this report. In all areas of this report in which UES may provide additional services if requested to do so in writing, it is presumed that such requests have not been made if not evidenced by a written document accepted by UES. Further, subsurface conditions can change with passage of time. Recommendations contained herein are not considered applicable for an extended period of time after the completion date of this report. It is recommended our office be contacted for a review of the contents of this report for construction commencing more than one (1) year after completion of this report. Non-compliance with any of these requirements by the Client or anyone else shall release UES from any liability resulting from the use of, or reliance upon, this report.

Recommendations provided in this report are based on our understanding of information provided by the Client about characteristics of the project. If the Client notes any deviation from the facts about project characteristics, our office should be contacted immediately since this may materially alter the recommendations. Further, UES is not responsible for damages resulting from the workmanship of designers or contractors. It is recommended the Owner retain qualified personnel, such as a Geotechnical Engineering firm, to verify construction is performed in accordance with plans and specifications.

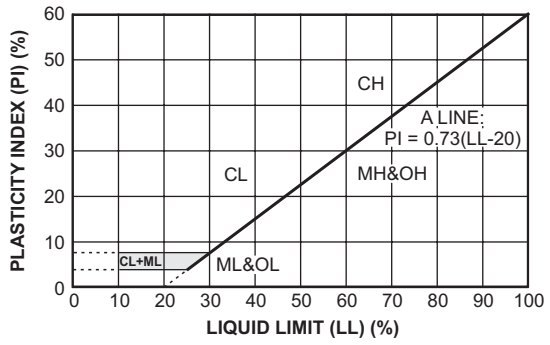
UNIFIED SOIL CLASSIFICATION SYSTEM

UNIFIED SOIL CLASSIFICATION AND SYMBOL CHART

COARSE-GRAINED SOILS (more than 50% of material is larger than No. 200 sieve size.)			
GRAVELS More than 50% of coarse fraction larger than No. 4 sieve size	Clean Gravels (Less than 5% fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
	Gravels with fines (More than 12% fines)	GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
SANDS 50% or more of coarse fraction smaller than No. 4 sieve size	Clean Sands (Less than 5% fines)	SW	Well-graded sands, gravelly sands, little or no fines
		SP	Poorly graded sands, gravelly sands, little or no fines
	Sands with fines (More than 12% fines)	SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (50% or more of material is smaller than No. 200 sieve size.)			
SILTS AND CLAYS Liquid limit less than 50%		ML	Inorganic silts and very fine sands, rock flour, silty of clayey fine sands or clayey silts with slight plasticity
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
		OL	Organic silts and organic silty clays of low plasticity
SILTS AND CLAYS Liquid limit 50% or greater		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic clays of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS		PT	Peat and other highly organic soils

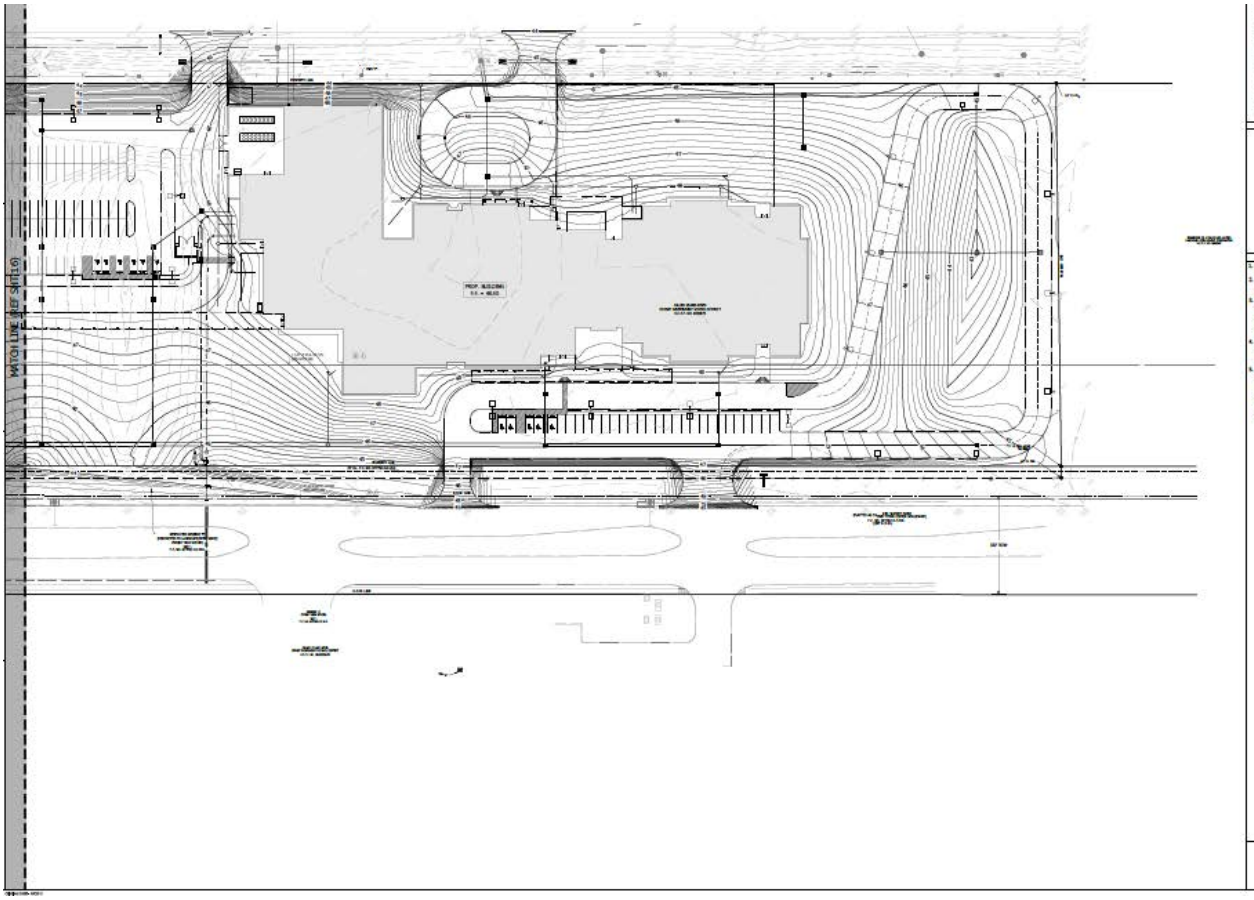


LABORATORY CLASSIFICATION CRITERIA

GW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
GP	Not meeting all gradation requirements for GW	
GM	Atterberg limits below "A" line or P.I. less than 4	Above "A" line with P.I. between 4 and 7 are borderline cases requiring use of dual symbols
GC	Atterberg limits above "A" line with P.I. greater than 7	
SW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
SP	Not meeting all gradation requirements for GW	
SM	Atterberg limits below "A" line or P.I. less than 4	Limits plotting in shaded zone with P.I. between 4 and 7 are borderline cases requiring use of dual symbols.
SC	Atterberg limits above "A" line with P.I. greater than 7	

Determine percentages of sand and gravel from grain-size curve. Depending on percentage of fines (fraction smaller than No. 200 sieve size), coarse-grained soils are classified as follows:

Less than 5 percent ..... GW, GP, SW, SP
More than 12 percent ..... GM, GC, SM, SC
5 to 12 percent ..... Borderline cases requiring dual symbols



PLASTICITY CHART

TERMS DESCRIBING SOIL CONSISTENCY

Fine Grained Soils		Coarse Grained Soils		
Description	Penetrometer Reading (tsf)	Penetration Resistance (blows/ft)	Description	Relative Density
Soft	0.0 to 1.0	0 to 4	Very Loose	0 to 20%
Firm	1.0 to 1.5	4 to 10	Loose	20 to 40%
Stiff	1.5 to 3.0	10 to 30	Medium Dense	40 to 70%
Very Stiff	3.0 to 4.5	30 to 50	Dense	70 to 90%
Hard	4.5+	Over 50	Very Dense	90 to 100%

SECTION 01 10 00 - SUMMARY OF WORK AND SCHEDULING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Project description.
2. Work by others.
3. Required completion dates.
4. Contractor's use of premises.
5. Owner occupancy.
6. Owner-furnished items.
7. Specification conventions.

1.2 PROJECT DESCRIPTION

A. The Project consists of construction and related sitework for the ground-up construction of the new two story 6th grade campus, located at 202 Red Summit Dr., Crosby, TX 77532, in addition to detention requirements off-site as shown on the Contract Documents prepared by Stantec and consultants.

B. The Work consists of Civil, Structural, Architectural, Mechanical, Electrical, Plumbing, AV/IT/Security, Fire Protection, and Food Service requirements as indicated in the drawings and specifications.

1.3 REQUIRED COMPLETION DATES

A. The Work shall be conducted according to the following schedule to ensure that the Owner has sufficient opportunity to ready the facility for occupancy and permit an orderly transfer of personnel, furnishings, and equipment.

1. Start Date for On-Site Construction: Approximately **May 1, 2026**
2. Substantial Completion): On or before **June 18, 2027**

1.4 CONTRACTOR USE OF PREMISES

A. The Contractor's use of the premises is limited only by the Owner's right to perform construction operations.

1.5 OWNER-FURNISHED ITEMS

A. The Owner will furnish certain items to be installed by the Contractor, including paper towel dispensers and toilet tissue dispensers. The Work includes providing support systems to receive Owner's equipment, and service and utility connections as required for the intended use of the item(s).
1. The Owner will arrange and pay for delivery of Owner-furnished items in accordance with the Contractor's Construction Schedule, and will inspect deliveries for damage.
2. If Owner-furnished and delivered items are damaged by Owner, defective, or missing, the Owner will arrange for replacement. The Owner will also arrange for manufacturer's field services, and the delivery of manufacturer's warranties and bonds to the Contractor.

3. The Contractor is responsible for designating the delivery dates of Owner-furnished items in the Contractor's Construction Schedule and for receiving, unloading and handling Owner- furnished items at the site. The Contractor is responsible for protecting Owner-furnished items from damage, including damage from exposure to the elements, and to repair or replace items damaged as a result of his operations.

1.6 SPECIFICATION CONVENTIONS

A. These specifications are written in imperative mood and streamlined form. This imperative language is directed to the Contractor, unless specifically noted otherwise.

PART 2 - PRODUCTS (Not applicable).

PART 3 - EXECUTION (Not applicable).

END OF SECTION

SECTION 01 21 00 – COST ALLOWANCES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Administrative and procedural requirements governing handling and processing allowances.

B. Related Sections:
1. Section 01 22 00 - Unit Prices: Procedures for submitting and handling Unit Prices.
2. Section 01 26 00 - Modification Procedures: Procedures for submitting and handling Change Orders.
3. Section 01 40 00 - Quality Requirements: Use of allowances for inspection and testing agencies.

1.2 SUBMITTALS

A. Submit proposals for purchase of products or systems included in allowances, in the form specified for Change Orders.

B. Submit invoices or delivery slips to indicate actual quantities of materials delivered to the site for use in fulfillment of each allowance.

1.3 CONTINGENCY ALLOWANCES

A. Use the Owner’s contingency allowance only as directed for the Owner's purposes, and only by Contingency Fund Change Orders which designate amounts to be charged to the allowance.
1. The Contractor's related costs for products or equipment ordered by the Owner under the contingency allowance, including delivery, installation, taxes, insurance, equipment rental, and similar costs are not part of the Contract Sum.
2. Allowance Expenditure Authorizations authorizing use of funds from the Owner’s contingency allowance will not include the Contractor's related costs and reasonable overhead and profit margins. Contractor shall include in base bid, Contractor's overhead, profit, insurance, bond and other direct cost.
3. At Project closeout, credit unused amounts remaining in the contingency allowance to Owner by Change Order or transfer the remaining amounts to other allowances as directed by the Architect.

1.4 UNUSED MATERIALS

A. Return unused materials to the manufacturer or supplier for credit to the Owner, after installation has been completed and accepted.

B. Where it is not economically feasible to return unused material for credit and when requested by the Architect, prepare unused material for the Owner's storage, and deliver to the Owner's storage space as directed. Otherwise, disposal of excess material is the Contractor's responsibility.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 INSPECTION

A. Inspect products covered by an allowance promptly upon delivery for damage or defects.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related construction activities.

3.3 SCHEDULE OF ALLOWANCES

A. **Allowance Number 1 – Owner's Contingency Allowance:** Include the sum of **$500,000.00** for use upon the Owner's instruction.

B. **Allowance Number 2 – Graphics Allowance:** All graphics work identified in Section 10 14 00 Signs and Building Letters, custom perforated signage panels identified in Section 05 50 00 Metal Fabrications, and exterior Post and Panel Signs identified in Section10 14 26 is included in the Base Proposal work and is not part of this Allowance. Include the sum of **$60,000.00** for other graphics items to be provided and installed whether indicated in the drawings or not. Typical tagging and signage for elevators, mechanical equipment, electrical equipment, piping, and exit signs is also included in the Base Proposal work and is not part of this Allowance

END OF SECTION

SECTION 01 22 00 - UNIT PRICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for unit prices.

1. A unit price is an amount proposed by Bidders and stated on the Bid Form as a price per unit of measurement for materials or services that will be added to or deducted from the Contract Sum by Change Order in the event the estimated quantities of Work required by the Contract Documents are increased or decreased.
2. Unit prices all necessary material, overhead, profit and applicable taxes.
3. Refer to individual Specification Sections for construction activities requiring the establishment of unit prices. Methods of measurement and payment for unit prices are specified in those Sections.

B. Schedule: A "Unit Price Schedule" is included at the end of this Section. Specification Sections referenced in the Schedule contain requirements for materials and methods described under each unit price.

1. The Owner reserves the right to reject the Contractor's measurement of work-in-place that involves use of established unit prices, and to have this Work measured by an independent surveyor acceptable to the Contractor at the Owner's expense.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION

3.1 UNIT PRICE SCHEDULE –

A. Unit Price No. A1 – Each 1,000 square yards of bermudagrass sod on prepared soil, with maintenance, including watering, for three months past substantial completion.

B. Unit Price No. A2 – Each 1,000 square yards of bermudagrass hydromulch on prepared soil, with maintenance, including watering, for three months past substantial completion.

C. Unit Price No. A3 – Each 1,000 square yards of prepared topsoil, 2” uniform depth.

D. Unit Price No. A4 – Each cubic yard of excavation of rock, excluding trucking off site.

E. Unit Price No. A5 – Each cubic yard of excavation of dirt or caliche, excluding trucking off site.

F. Unit Price No. A6 – Each cubic yard of excavation of dirt or caliche, including trucking off site.

G. Unit Price No. A7 – Each square yard of 5 inch reinforced concrete paving with 6 inch stabilized subgrade.

H. Unit Price No. A8 – Each square yard of 6 inch reinforced concrete paving with 6 inch stabilized subgrade.

I. Unit Price No. A9 – Each square yard of 7 inch reinforced concrete paving with 8 inch stabilized subgrade.

J. Unit Price No. A10 – Each square yard of 4.5 inch reinforced concrete sidewalk paving.

K. Unit Price No. B1 – Each cubic yard of backfilling, meeting fill requirements of construction documents, from off-site sources, compacted in lifts as required by construction documents.

L. Unit Price No. B2.1 – Each 18” diameter pier casing, complete.

M. Unit Price No. B2.2 – Each 24” diameter pier casing, complete.

N. Unit Price No. B3.1 – Each 18” diameter drilled pier, 40’ depth, complete including reinforcing, concrete, and accessories.

O. Unit Price No. B3.2 – Each 24” diameter drilled pier, 40’ depth, complete including reinforcing, concrete, and accessories.

P. Unit Price No. B4 – Each 1,000 pounds reinforcing steel, straight or bent, placed, and tied, including accessories.

Q. Unit Price No. B5 – Each cubic yard structural concrete, off the truck, no pumping, placement, or finishing.

R. Unit Price No. B6 – Each 1 Ton miscellaneous metals, delivered, excluding fabrication and erection.

S. Unit Price No. C1 – Each 120V duplex receptacle on nearest capable circuit.

T. Unit Price No. C2 – Each 120 V duplex receptacle on dedicated circuit, including 20-amp circuit breaker and pathway to panelboard.

U. Unit Price No. D1 – Each double data port wired to nearest IDF/MDF room.

V. Unit Price No. D2 – Each single data drop, flush mounted in wall j-box with 1-1/4” conduit, terminated at wall and patch panel, labeled, tested, conduit stubbed up wall to above ceiling, placed in cable pathway as required by Contract Documents, and cabling of length to maximum allowable distance under Contract Documents.

W. Unit Price No. E1 – Each exterior fire horn device, including J-box, conduit, cabling, weatherproofing, as required by the Contract Documents.

X. Unit Price No. E2 – Each interior fire horn/strobe device, including J-box, conduit, and cabling, as required by the Contract Documents.

Y. Unit Price No. E3 – Each interior fire voice/strobe device, including J-box, conduit, and cabling, as required by the Contract Documents.

Z. Unit Price No. E4 – Each interior smoke detector device, including J-box, conduit, and cabling, as required by the Contract Documents.

AA. Unit Price No. E5 – Each interior pull station device, including J-box, conduit, and cabling, as required by the Contract Documents.

END OF SECTION

SECTION 01 23 00 - ALTERNATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for Alternates.

1. Definition: An Alternate is an amount proposed by Proposers and stated on the Proposal Form for certain construction activities defined in the Proposal Requirements that may be added to or deducted from Base Proposal amount if the Owner decides to accept a corresponding change in either the amount of construction to be completed, or in the products, materials, equipment, systems or installation methods described in Contract Documents.

2. Coordination: Coordinate related Work and modify or adjust adjacent Work as necessary to ensure that Work affected by each accepted Alternate is complete and fully integrated into the project.

3. Notification: Immediately following the award of the Contract, prepare and distribute to each party involved, notification of the status of each Alternate. Indicate whether Alternates have been accepted, rejected or deferred for consideration at a later date. Include a complete description of negotiated modifications to Alternates.

4. Schedule of Alternates: Specification Sections as may be referenced in the Schedule below more completely indicate requirements for the Work described under each Alternate.
   a. Include as part of each Alternate, miscellaneous devices, accessory objects and similar items incidental to or required for a complete installation whether or not mentioned as part of the Alternate.
   b. The Owner reserves the right to accept any, none, or all of the Alternates for a period of 30 days after receipt of proposals. Should the Owner-Contractor Agreement be executed prior to Owner acceptance of an Alternate, the Alternate will be accepted by Change Order at the original bid amount within 30 days after receipt of proposals.

1.3 SCHEDULE OF ALTERNATES

3.1 ALTERNATES

A. **Alternate No. 1: Moisture resistant gypsum board for all interior gypsum board scope**
See drawings for alternate design.

B. **Alternate No. 2A: Air Handling Units by Carrier**
This alternate shall establish the amount to be added to the base proposal for the Contractor to provide Air Handling Units furnished and installed as manufactured

by Carrier as shown on the drawings and listed in the specifications. There are no Air Handling Units included in the base bid.

C. **Alternate No. 2B: Air Handling Units by Trane**

This alternate shall establish the amount to be added to the base proposal for the Contractor to provide Air Handling Units furnished and installed as manufactured by Trane as shown on the drawings and listed in the specifications. There are no Air Handling Units included in the base bid.

D. **Alternate No. 3A: Chillers by Carrier (23 64 16)**

This alternate shall establish the amount to be added to the base proposal for the Contractor to furnish and install chillers as manufactured by Carrier as shown on the drawings and listed in Specification 23 64 16. There are no chillers included in the base proposal.

E. **Alternate No. 3B: Chillers by Trane (23 64 16)**

This alternate shall establish the amount to be added to the base proposal for the Contractor to furnish and install chillers as manufactured by Trane as shown on the drawings and listed in Specification 23 64 16. There are no chillers included in the base proposal.

F. **Alternate No. 4A: Building Management and Control System by Automated Logic Corp. – Automated Logic**

This alternate shall establish the amount to be added to the base proposal for the Contractor to provide building management and control system furnished and installed as manufactured by Automated Logic Corp as shown on the drawings and listed in the specifications. There are no building and control systems included in the base bid.

G. **Alternate No. 4B: Building Management and Control System by Unified Energy Solutions – Reliable Controls**

This alternate shall establish the amount to be added to the base proposal for the Contractor to provide building management and control system furnished and installed as manufactured by Unified Energy Solutions – Reliable Controls as shown on the drawings and listed in the specifications. There are no building and control systems included in the base bid.

H. **Alternate No. 5A: Emergency Natural Gas Generator by Caterpillar**

This alternate shall establish the amount to be added to the base proposal for the Contractor to provide an emergency natural gas generator furnished and installed as manufactured by Caterpillar as shown on the drawings and listed in the specifications. There are no emergency natural gas generators included in the base bid.

I. **Alternate No. 5B: Emergency Natural Gas Generator by Cummins**

This alternate shall establish the amount to be added to the base proposal for the Contractor to provide an emergency natural gas generator furnished and installed as manufactured by Cummins as shown on the drawings and listed in the specifications. There are no emergency natural gas generators included in the base bid.

J. **Alternate No. 5C: Emergency Natural Gas Generator by Generac Industrial**

This alternate shall establish the amount to be added to the base proposal for the Contractor to provide an emergency natural gas generator furnished and installed as manufactured by Generac Industrial as shown on the drawings and listed in the specifications. There are no emergency natural gas generators included in the base bid.

K. **Alternate No. 6A: Automatic Transfer Switch by Caterpillar**
This alternate shall establish the amount to be added to the base proposal for the Contractor to provide an automatic transfer switch furnished and installed as manufactured by Caterpillar as shown on the drawings and listed in the specifications. There are no emergency natural gas generators included in the base bid.

L. **Alternate No. 6B: Automatic Transfer Switch by Cummins**
This alternate shall establish the amount to be added to the base proposal for the Contractor to provide an automatic transfer switch furnished and installed as manufactured by Cummins as shown on the drawings and listed in the specifications. There are no emergency natural gas generators included in the base bid.

M. **Alternate No. 6C: Automatic Transfer Switch by ASCO**
This alternate shall establish the amount to be added to the base proposal for the Contractor to provide an automatic transfer switch furnished and installed as manufactured by ASCO as shown on the drawings and listed in the specifications. There are no emergency natural gas generators included in the base bid.

N. **Alternate No. 7: Parent drop-off drive paving reduction per sheet G511**
See drawings for alternate design.

O. **Alternate No. 8: Stage Proscenium Finish WP-1 option per sheet A601**
See drawings for alternate design.

P. **Alternate No. 9: Aluminum Walkway Canopy Extended – Bus Drop per sheet G511**
See drawings for alternate design.

Q. **Alternate No. 10A: Provide 2x4 Troffer light fixtures per the specifications. There are no 2x4 light fixtures in the base bid**

R. **Alternate No. 10B: Provide 2x4 Flat Panel light fixtures per the specifications. There are no 2x4 light fixtures in the base bid**

S. **Alternate No. 11: Provide optional adjustment to Base Proposal**

END OF SECTION

SECTION 01 25 13 - PRODUCT SUBSTITUTIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for handling requests for substitutions made both prior to receipt of bids and after as herein specified.

B. The Contractor's Construction Schedule and the Schedule of Submittals are included under Section "Submittal Requirements."

C. Standards: Refer to Section "Reference Standards and Definitions" for applicability of industry standards to products specified.

D. Procedural requirements governing the Contractor's selection of products and product options are included under Section "Product Requirements."

1.3 DEFINITIONS

A. Definitions used in this Article are not intended to change or modify the meaning of other terms used in the Contract Documents.

B. Substitutions: Requests for changes in products, materials, equipment, and methods of construction required by Contract Documents proposed by the Contractor 10 days prior to receipt of bids are considered requests for substitutions. The following are not considered substitutions:
   1. Substitutions requested by Bidders during the bidding period, and accepted prior to award of Contract, are considered as included in the Contract Documents.
   2. Revisions to Contract Documents requested by the Owner or Architect.
   3. Specified options of products and construction methods included in Contract Documents.
   4. The Contractor's determination of and compliance with governing regulations and orders issued by governing authorities.

1.4 SUBMITTALS

A. Substitution Request Submittal: Requests for substitution will be considered if received at least 15 days from date of executed contract. Requests received after commencement of the Work may be considered or rejected at the discretion of the Architect.
   1. Submit 3 copies of each request for substitution for consideration. Submit requests in the form attached in this section and in accordance with procedures required for Change Order proposals.
   2. Identify the product, or the fabrication or installation method to be replaced in each request. Include related Specification Section and Drawing numbers. Provide complete documentation showing compliance with the requirements for substitutions, and the following information, as appropriate:
   3. Product Data, including Drawings and descriptions of products, fabrication and installation procedures.

4. Samples, where applicable or requested.
5. A detailed comparison of significant qualities of the proposed substitution with those of the Work specified. Significant qualities may include elements such as size, weight, durability, performance and visual effect.
6. Coordination information, including a list of changes or modifications required for other parts of the Work (or to related construction performed by the Owner and any separate contractors) that will become necessary to accommodate the proposed substitution.
7. A statement indicating the substitution's effect on the Anticipated Project Schedule and Contract Construction Schedule after award of contract compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall Contract Time.
8. Cost information, including a proposal of the net change, if any, from the specified product or assembly, or the contract sum.
9. Certification by the Bidder or Contractor that the substitution proposed is equal-to or better in every significant respect to that required by the Contract Documents, and that it will perform adequately in the application indicated. Include the Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of the failure of the substitution to perform adequately.

B. ENVIRONMENTAL AND HEALTH CERTIFICATIONS

1. Reference Section 01 33 00 “Submittals” for additional submittal requirements for certain materials indicated in the Materials and/or Finish Schedules regarding “Environmental and Health Certifications”. Such “E&H” certificates and labels are to be provided by the material manufactures and are to be included with the product submittals.

1.5 ARCHITECT'S ACTION:

A. If a decision on use of a proposed substitute cannot be made or obtained within the time allocated, use the specified product only. Acceptance of the proposed substitution will be in the form of an Addendum which lists all prior-approved products prior to award of Contract and a Change Order after the award of Contract.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

A. Conditions: The Bidder's or Contractor's substitution request will be received and considered by the Architect when all of the mandatory conditions are satisfied and one or more of the optional conditions are satisfied, as determined by the Architect; otherwise requests will be returned without action except to record noncompliance with these requirements.
1. Mandatory Conditions:
   a. Submitted as required prior to bidding.
   b. Extensive revisions to Contract Documents are not required.
   c. Proposed changes are in keeping with the general intent of Contract Documents.
   d. The request is timely, fully documented and properly submitted.

2. Optional Conditions:
   a. The request is directly related to an "or equal" clause or similar language in the Contract Documents.
   b. The specified product or method of construction cannot be provided within

the Contract Time. The request will not be considered if the product or method cannot be provided as a result of failure to pursue the Work promptly or coordinate activities properly.

c. The specified product or method of construction cannot receive necessary approval by a governing authority, and the requested substitution can be approved.

d. A substantial advantage is offered the Owner, in terms of cost, time, energy conservation or other considerations of merit, after deducting offsetting responsibilities the Owner may be required to bear. Additional responsibilities for the Owner may include additional compensation to the Architect for redesign and evaluation services, increased cost of other construction by the Owner or separate Contractors, and similar considerations.

e. The specified product or method of construction cannot be provided in a manner that is compatible with other materials, and where the Bidder or Contractor certifies that the substitution will overcome the incompatibility.

f. The specified product or method of construction cannot be coordinated with other materials, and where the Bidder or Contractor certifies that the proposed substitution can be coordinated.

g. The specified product or method of construction cannot provide a warranty required by the Contract Documents and where the Bidder or Contractor certifies that the proposed substitution provide the required warranty.

h. The Contractor's submittal and Architect's acceptance of Shop Drawings, Product Data or Samples that relate to construction activities not complying with the Contract Documents does not constitute an acceptable or valid request for substitution, nor does it constitute approval.

2.2 FAILURE OF TIMELY ORDER

A. The contractor is responsible for assuring the timely order of all materials specified. If a specified material or color of material cannot be delivered by the contract completion date, due to failure to order the material in a timely manner, the contractor shall be responsible for supplying an equal or better material. The Architect shall be the sole determinant of the approved substitute material.

B. The contractor shall also be charged an amount equal to 5% of the value of the specified material. This amount shall be credited to the owner through a change order to the contract.

C. The word "material", as used in this section, includes all items specified in the specifications or shown on the drawings.

PART 3 - EXECUTION (Not Applicable).

The Undersigned certifies:

- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- For items where color/pattern is named in the documents, proposed color/pattern of the substituted item will be the equivalent, with the final determination made by the Architect.
- Equal or better warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule except as may be clearly identified above.
- Claims for additional costs for this substitution (other than costs clearly indicated above), are the responsibility of the entity making this request.
- Substitutions affecting minor dimensions and clearances are identified herein, and it is the responsibility of the entity requesting the substitution to coordinate such with the Contractor. Approval of such changes is the sole responsibility of the Architect.

Signature of Person Submitting: _____ Title_____

Printed Name: _____ email _____

A/E's RESPONSE **(Accepted substitutions will be included in written addendum issued prior to bidding):**

[ ] Substitution rejected for non-compliance……Use specified materials.
[ ] Substitution rejected for lack of data……Use specified materials.
[ ] Substitution Request received too late……Use specified materials.

[ ] Substitution conditionally approved – Provide submittals after bidding per Division 1 Section "Submittals".
[ ] Plus noted exceptions: _____

SECTION 01 26 00 - MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division 1 Specification sections, apply to this section.

1.2 SUMMARY

A. This section specifies administrative and procedural requirements for handling and processing Contract modifications.

B. Related Sections: The following sections contain requirements that relate to this section:
   1. Division 1 Section "Allowances" for procedural requirements governing the handling and processing of allowances.
   2. Division 1 Section "Submittals" for requirements for the Contractor's Construction Schedule.
   3. Division 1 Section "Application for Payment" for administrative procedures governing applications for payment.
   4. Division 1 Section "Product Substitutions" for administrative procedures for handling requests for substitutions made after award of the Contract.

1.3 MINOR CHANGES IN THE WORK

A. Instructions authorizing minor changes in the Work, not involving an adjustment to the Contract Sum or Contract Time, will be issued by the Architect as part of a request for information on a Request for Interpretation Form as included in the Division-1 Section "Submittals".

B. Supplemental instructions authorizing minor changes in the Work, not involving an adjustment to the Contract Sum or Contract Time, will be issued by the Architect on AIA form G710, Architect's Supplemental Instructions.

1.4 CHANGE ORDER PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: Proposed changes in the Work that will require adjustment to the Contract Sum or Contract Time will be issued by the Architect, with a detailed description of the proposed change and supplemental or revised Drawings and Specifications, if necessary.
   1. Proposal requests issued by the Architect are for information only. Do not consider them an instruction either to stop work in progress, or to execute the proposed change.
   2. Unless otherwise indicated in the proposal request, within 20 days of receipt of the proposal request, submit to the Architect for the Owner's review an estimate of cost necessary to execute the proposed change.
   3. Include a list of quantities of products to be purchased and unit costs, along with the total amount of purchases to be made. Furnish survey data to substantiate quantities and costs on Providers' letterheads, including, but not limited to, Subcontractors' letterheads.
   4. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
   5. Include a statement indicating the effect the proposed change in the Work will have on the Contract Time.

B. Contractor-Initiated Change Order Proposal Requests: When latent or other unforeseen conditions require modifications to the Contract, the Contractor may propose changes by submitting a request for a change to the Architect.
   1. Include a statement outlining the reasons for the change and the effect of the change on

the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and Contract Time.

2. Include a list of quantities of products to be purchased and unit costs along with the total amount of purchases to be made. Furnish survey data to substantiate quantities and costs on Providers' letterheads, including, but not limited to, Subcontractors' letterheads.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Comply with requirements in Section "Product Substitutions" if the proposed change in the Work requires the substitution of one product or system for a product or system specified.

C. Proposal Request Form: Use AIA Document G 709 for Change Order Proposal Requests.

1.5 ALLOWANCES

A. Allowance Adjustment: Base each Change Order Proposal Request for an allowance cost adjustment solely on the difference between the actual purchase amount and the allowance, multiplied by the final measurement of work-in-place, with reasonable allowances, where applicable, for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.
   1. Include installation costs in the purchase amount only where indicated as part of the allowance.
   2. Prepare explanations and documentation to substantiate the margins claimed.
   3. Submit substantiation of a change in scope of work claimed in the Change Orders related to unit-cost allowances.
   4. The Owner reserves the right to establish the actual quantity of work-in-place by independent quantity survey, measure, or count.

1.6 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive: When the Owner and Contractor are not in total agreement on the terms of a Change Order Proposal Request, the Architect may issue a Construction Change Directive on AIA Form G714, instructing the Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
   1. The Construction Change Directive will contain a complete description of the change in the Work and designate the method to be followed to determine change in the Contract Sum or Contract Time.

B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.
   1. After completion of the change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

1.7 CHANGE ORDER PROCEDURES

A. Upon the Owner's approval of a Change Order Proposal Request, the Architect will issue a Change Order for signatures of the Owner and Contractor on AIA Form G701, as provided in the Conditions of the Contract.

PARTS 2 and 3 - Not Applicable

END OF SECTION

SECTION 01 29 00 - APPLICATIONS FOR PAYMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements governing the Contractor's Applications for Payment.

B. The Contractor's Construction Schedule and Submittal Schedule are included in Section "Submittals".

1.3 SCHEDULE OF VALUES

A. Coordinate preparation of the Schedule of Values with preparation of the Contractor's Construction Schedule.

1. Correlate line items in the Schedule of Values with other required administrative schedules and forms, including:
   a. Contractor's construction schedule.
   b. Application for Payment form.
   c. List of subcontractors.
   d. Schedule of allowances.
   e. Schedule of alternates.
   f. List of principal suppliers and fabricators.
   g. Schedule of submittals.
   h. Include separate line items for project closeout and record documents

2. Submit the Schedule of Values to the Architect at the earliest feasible date, but in no case later than 10 days before the date scheduled for submittal of the initial Application for Payment.

3. Sub-Schedules: Where the Work is separated into phases that require separately phased payments provide sub-schedules showing values of each schedule correlated with each phase of payment.

4. Where the Contractor anticipates invoicing for materials prior-to or separately-from installation, such line items shall be separated into labor and material costs.

5. Identification: Include the following Project identification on the Schedule of Values:
   a. Project name and location.
   b. Name of the Architect.
   c. Project number.
   d. Contractor's name and address.
   e. Date of submittal.

6. Provide a breakdown of the Contract Sum in sufficient detail to facilitate continued evaluation of Applications for Payment and progress reports. Break principal subcontract amounts down into several line items and use no less detail than the level of line-item detail in the Project Manual Table of Contents.

7. Round amounts off to the nearest whole dollar; the total shall equal the Contract Sum.

8. For each part of the Work where an Application for Payment may include materials or equipment, purchased or fabricated and stored, but not yet installed, provide separate line items on the Schedule of Values for initial cost of the materials, for each subsequent stage of completion, and for total installed value of that part of the Work.

9. Margins of Cost: Show line items for indirect costs, and margins on actual costs and list individually in Applications for Payment. Each item in the Schedule of Values and Applications for Payment shall be complete including its total cost.

10. Overhead and Profit: Show separate line item value for overhead and profit.
    a. Temporary facilities and other major cost items that are not direct cost of actual work-in-place shall be shown as separate line items in the Schedule of Values.

11. Schedule Updating: List Change Orders as a separate line item when Change Orders or Construction Change Directives result in a change in the Contract Sum.

1.4 APPLICATIONS FOR PAYMENT

A. Each Application for Payment shall be consistent with previous applications and payments as certified by the Architect and paid for by the Owner.

   1. The initial Application for Payment, the Application for Payment at time of Substantial Completion, and the final Application for Payment involve additional requirements.

B. Payment Application Times: Each progress payment date is as indicated in the Agreement. The period of construction Work covered by each Application or Payment is the period indicated in the Agreement. Modification to payment application times shall occur if agreed to by all concerned parties at the pre-construction meeting.

C. Payment Application Forms: Use AIA Document G 702 and Continuation Sheet G 703, or a similar form, as the form for Application for Payment.

D. Application Preparation: Complete every entry on the form, including notarization and execution by person authorized to sign legal documents on behalf of the Contractor. Incomplete applications will be returned without action.

   1. Entries shall match data on the Schedule of Values and Contractor's Construction Schedule. Use updated schedules if revisions have been made.
   2. Include amounts of Change Orders and Construction Change Directives issued prior to the last day of the construction period covered by the application.

E. Transmittal: Submit 3 executed copies of each Application for Payment to the Architect by means ensuring receipt within 24 hours.

   1. Transmit each copy with a transmittal form listing attachments, and recording appropriate information related to the application in a manner acceptable to the Architect.

F. Waivers of Mechanics Lien: Owner reserves the right to require Wavers of Mechanics Lien with each Application for Payment. Submit waivers of liens from subcontractors or

sub-subcontractors and suppliers for the period covered by the previous application.

1. Submit partial waivers on each item for the amount requested, prior to deduction for retainage, on each item.
2. When an application shows completion of an item, submit final or full waivers.
3. The Owner reserves the right to designate which entities involved in the Work must submit waivers.

    a. Waiver Delays: Submit each Application for Payment with the Contractor's waiver of mechanics lien for the period of construction covered by the application.
        1.) Submit final Application for Payment with or preceded by final waivers from every entity involved with performance of Work covered by the application who could lawfully be entitled to a lien.

    b. Waiver Forms: Submit waivers of lien on forms, and executed in a manner, acceptable to Owner.

G. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of the first Application for Payment include the following:

1. List of subcontractors.
2. List of principal suppliers and fabricators.
3. Schedule of Values.
4. Contractor's Construction Schedule (preliminary if not final).

H. Application for Payment at Substantial Completion: Following issuance of the Certificate of Substantial Completion, submit an Application for Payment; this application shall reflect any Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

I. Final Payment Application: Administrative actions and submittals which must precede or coincide with submittal of the final payment Application for Payment include the following:

1. Completion of Project closeout requirements.
2. Completion of items specified for completion after Substantial Completion.
3. Assurance that unsettled claims will be settled.
4. Assurance that Work not complete and accepted will be completed without undue delay.
5. Transmittal of required Project construction records to Owner.
6. Removal of temporary facilities and services.
7. Removal of surplus materials, rubbish and similar elements.
8. Change of door locks to Owner's access.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION (Not Applicable).

END OF SECTION

SECTION 01 30 00 - ADMINISTRATIVE REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and supervisory requirements necessary for Project coordination including, but not necessarily limited to:
   1. Coordination.
   2. Administrative and supervisory personnel.
   3. General installation provisions.
   4. Cleaning and protection.

B. Field engineering is included in Section "Field Engineering".

C. Progress meetings: coordination meetings and pre-installation conferences are included in Section "Project Meetings".

D. Requirements for the Contractor's Construction Schedule are included in Section "Submittal Procedures".

1.3 COORDINATION

A. Coordination: Coordinate construction activities included under various Sections of these Specifications to assure efficient and orderly installation of each part of the Work. Coordinate construction operations included under different Sections of the Specifications that are dependent upon each other for proper installation, connection, and operation.
   1. Where installation of one part of the Work is dependent on installation of other components, either before or after its own installation, schedule construction activities in the sequence required to obtain the best results.
   2. Where availability of space is limited, coordinate installation of different components to assure maximum accessibility for required maintenance, service and repair.
   3. Make adequate provisions to accommodate items scheduled for later installation.
      a. Where necessary, prepare memoranda for distribution to each party involved outlining special procedures required for coordination. Include such items as required notices, reports, and attendance at meetings.
   4. Prepare similar memoranda for the Owner and separate Contractors where coordination of their Work is required.

B. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:
   1. Preparation of schedules.
   2. Installation and removal of temporary facilities.
   3. Delivery and processing of submittals.
   4. Progress meetings.
   5. Project Close-out activities.

C. Conservation: Coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials.

1. Salvage materials and equipment involved in performance of, but not actually incorporated in, the Work. Refer to other sections for disposition of salvaged materials that are designated as Owner's property.

1.4 SUBMITTALS

A. Coordination Drawings: Prepare and submit coordination Drawings where close and careful coordination is required for installation of products and materials fabricated off-site by separate entities, and where limited space availability necessitates maximum utilization of space for efficient installation of different components.
   1. Show the interrelationship of components shown on separate Shop Drawings.
   2. Indicate required installation sequences.
   3. Comply with requirements contained in Section "Submittals."
   4. Refer to Division-23 Section "Basic Mechanical Requirements," and Division-26 Section "Basic Electrical Requirements" for specific coordination drawing requirements for mechanical and electrical installations.

B. Staff Names: Within 15 days of Notice to Proceed, submit a list of the Contractor's principal staff assignments, including the Superintendent and other personnel in attendance at the site; identify individuals, their duties and responsibilities; list their addresses and telephone numbers.
   1. Post copies of the list in the Project meeting room, the temporary field office, and each temporary telephone.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION PROVISIONS

A. Inspection of Conditions: Require the Installer of each major component to inspect both the substrate and conditions under which Work is to be performed. Do not proceed until unsatisfactory conditions have been corrected in an acceptable manner.

B. Manufacturer's Instructions: Comply with manufacturer's installation instructions and recommendations, to the extent that those instructions and recommendations are more explicit or stringent than requirements contained in Contract Documents.

C. Inspect materials or equipment immediately upon delivery and again prior to installation. Reject damaged and defective items.

D. Provide attachment and connection devices and methods necessary for securing Work. Secure Work true to line and level. Allow for expansion and building movement.

E. Visual Effects: Provide uniform joint widths in exposed Work. Arrange joints in exposed Work to obtain the best visual effect. Refer questionable choices to the Architect for final decision.

F. Recheck measurements and dimensions, before starting each installation.

G. Install each component during weather conditions and Project status that will ensure the best possible results. Isolate each part of the completed construction from incompatible material as necessary to prevent deterioration.

H. Coordinate temporary enclosures with required inspections and tests, to minimize the

necessity of uncovering completed construction for that purpose.

I. Mounting Heights: Where mounting heights are not indicated, install individual components at standard mounting heights recognized within the industry for the particular application indicated. Refer questionable mounting height decisions to the Architect for final decision.

3.2 CLEANING AND PROTECTION

A. During handling and installation, clean and protect construction in progress and adjoining materials in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

B. Clean and maintain completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

C. Limiting Exposures: Supervise construction activities to ensure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period. Where applicable, such exposures include, but are not limited to, the following:
1. Excessive static or dynamic loading.
2. Excessive internal or external pressures.
3. Excessively high or low temperatures.
4. Thermal shock.
5. Excessively high or low humidity.
6. Air contamination or pollution.
7. Water or ice.
8. Solvents.
9. Chemicals.
10. Light.
11. Radiation.
12. Puncture.
13. Abrasion.
14. Heavy traffic.
15. Soiling, staining and corrosion.
16. Bacteria.
17. Rodent and insect infestation.
18. Combustion.
19. Electrical current.
20. High speed operation,
21. Improper lubrication,
22. Unusual wear or other misuse.
23. Contact between incompatible materials.
24. Destructive testing.
25. Misalignment.
26. Excessive weathering.
27. Unprotected storage.
28. Improper shipping or handling.
29. Theft.
30. Vandalism.

END OF SECTION

SECTION 01 30 10 - MECHANICAL AND ELECTRICAL COORDINATION

PART 1 - GENERAL

1.1 REQUIREMENTS

A. Provide necessary work and services required for the complete installation of heating, ventilating, air conditioning, plumbing, and electrical systems in the buildings as shown on the Drawings. For convenience, Drawings showing primarily HVAC have been numbered with an “M”, Drawings showing primarily electrical have been numbered with an “E” and Drawings showing; primarily plumbing have been numbered with a “P”.

B. Make installations in a manner that shall comply with applicable codes and laws. Where the requirements of Contract Documents exceed code requirements, comply with the Contract Documents.

C. Perform electrical Work in accordance with the latest edition of the national Electrical code as minimum standards of quality and safety.

D. Comply with: (ADA) Americans Disability Act and (TAS) Texas Accessibility Standards requirements.

1.2 RELATED REQUIREMENTS

A. Section 01 73 29 – Cutting and Patching.

B. Section 01 31 19 – Project Meetings.

C. Section 01 30 00 – Administrative Requirements.

D. Section 01 33 00 – Submittal Requirements.

E. Section 01 60 00 – Product Requirements: Product options and substitutions.

F. Section 01 70 00 – Execution and Closeout Requirements.

1.3 REQUIREMENTS FOR EQUIPMENT

A. Provide equipment with necessary parts and accessories even though the parts and accessories are not specifically mentioned herein.

B. Provide a factory applied finish on all exterior surfaces. Tough up or refinish items which have the finish marred, before final acceptance.

C. Rotating parts shall be in static and dynamic balance.

D. Electrical materials shall bear the stamp of approval of the Underwriter’s Laboratory.

E. Noise: Eliminate any abnormal noises, which are not an inherent part of the systems as designed. Abnormal buzzing and rattling of equipment, piping, ducts, and air devices and squeaks in rotating equipment components will not be acceptable.

1.4 PROTECTION OF EQUIPMENT

A. Do not deliver equipment to jobsite until progress of construction has reached the stage where equipment is actually needed, or until equipment can be stored inside building to protect equipment from the weather. Equipment allowed to stand in weather will be rejected, and new equipment of a like kind shall be used.

B. Adequately protect equipment from damage after delivery to job site. Cover with heavy drop cloths as required to protect from plaster, dirt, paint, water, adverse weather conditions, and physical damage.

C. Equipment which has been damaged by construction activities will be rejected, and new equipment of a like kind shall be used.

D. At time of Substantial Completion, equipment shall be clean.

E. Insulation material that becomes wet shall be rejected and replaced at no additional cost to Owner.

1.5 OPERATING MANUALS, SERVICE DATA, AND WARRANTIES

A. Upon completion of the project, provide service manuals for each type unit of equipment provided in the project as described in Section 01 70 00 – Execution and Closeout Requirements.

B. Warranties: In addition to the one year warranty specified in the Conditions of the Contract, assume all responsibility for special guarantees which may be required in this specification concerning installation, operation or performance of equipment, materials, and systems provided by a distributor, manufacturer or subcontractor.

1.6 SUBMITTALS

A. Conform to the requirements of Section 01 33 00 – Submittal Procedures, Supplementary Conditions and individual specification sections.

B. Equipment and material submittals shall show sufficient data to indicate complete compliance with Contract Documents as follows:
1. Proper sizes and capabilities.
2. Ability to fit in the available space in a manner that will allow proper service.
3. Construction methods, materials, and finishes.
4. List of accessories.

C. Product data shall include the contract item designation, building, and proposed model number.

D. If proposed air devices are different than models specified, indicate the specified model and beside it the proposed model for each type of device. Do not list quantities.

E. For any item to be installed in or on a finished surface (such as a tee bar, acoustical ceiling, plaster wall) certify that applicable Contract Documents have been checked and that the item submitted is compatible with the surface finish on which it is to be installed.

F. Show Drawings: Sheet metal, piping, mechanical, and electrical fabrication Shop Drawings shall show equipment, ductwork, and piping, including piping in plumbing

chases, sized and drawn in exact location to be installed. Produce Drawings in 1/4 inch scale with all ductwork and piping sized accordingly. Ductwork and piping larger than 3 inches shall be shown with double lines.

G. Coordination Drawings: Coordination Drawings are Drawings which indicate relationships between the various systems and other components of the building such as beams, columns, ceilings, and walls. They shall be drawn to 1/4 inch scale and shall include plans, elevations, sections, and other details as required to clearly define the relationships of the various components. Indicate ducts, conduits, sprinkler systems, light fixtures, piping, and miscellaneous equipment on one drawing for each floor or level. Refer to Mechanical and Electrical Specifications for additional requirements. Submit these within two months of award of contract.

H. Interference Drawings:
1. Interference Drawings are supplementary to Coordination Drawings and indicate conflict between the various systems and other components of the building such as beams, columns, and walls. They shall be drawn to 1/4 inch scale and shall include plans, elevations, sections, and other details as required to clearly define the interference and to indicate the Contractor's proposed solution.

2. Submit Drawings for approval whenever job measurements and an analysis of the Drawings and specifications by the Contractor indicate that the various systems cannot be installed without significant deviation from the intent of the Contract. When such an interference is encountered, Work shall cease in the general areas of the conflict until a solution to the question has been approved by the Architect.

I. All Submittals shall be bound into book form with a table of contents listing all items in that specific submittal. Loose catalog sheets or drawings will not be acceptable. A separate brochure will be required for each type of equipment; e.g., lighting fixtures, switchgear, lighting panels, clock system, mechanical equipment, plumbing items, and ductwork accessories, each in a separate brochure. Miscellaneous apparatuses such as transformers contactors, time switches, and safety switches may be contained in one brochure.

J. Auxiliary system submittals shall contain sufficient information to show conformance with the specifications and shall include a description of the operation of each system to aid the consultant in the evaluation of each submittal.

PART 2 – PRODUCTS: Not Used

PART 3 - EXECUTION

3.1 MANUFACTURER'S DIRECTIONS AND SUPERVISION

A. Follow manufacturer's directions for installation, testing, and operation of all apparatuses and equipment provided.

B. Where supervision by a manufacturer is required in the specification, pay all costs and follow all instructions and recommendations of the manufacturer, who shall supervise the installation, connection, startup adjustment, instruction of the Owner, and final tests of equipment and systems. Where two or more manufacturer's equipment is interrelated, coordinate the Work and supervision.

C. Provide a letter from the manufacturers whose supervision is required stating that they

have supervised the installation and their equipment or system is operating satisfactorily in detail and in every respect and that the Owner's representative has been instructed in the operation and maintenance.

3.2 COORDINATION

A. Coordinate the mechanical and electrical Work with that of other trades in order that the various components of the systems shall be installed at the proper time, shall fit the available space, and shall allow proper service access to those requiring maintenance, including equipment specified in other Divisions.

B. Remove and relocate items which are installed without regard to proper access as directed by the Consultant, at no additional cost to the Owner.

C. Provide materials with trim to match and fit properly with the types of adjacent ceiling, wall, and floor finishes actually installed. Model numbers in specifications or scheduled on Drawings are not intended to designate the required trim.

D. Provide mechanical equipment with electrical characteristics compatible with that shown on Electrical Drawings and described in electrical Division of the specifications.

E. Prior to the fabrication of ductwork or the installation of devices in the ceilings, review the Drawings to ascertain that the locations of devices in the ceilings create a pattern which is compatible with the reflected ceiling plan and the spacings of the various ceiling mounted devices.

3.3 DRAWINGS

A. The Contract Drawings are schematic in nature, but indicate how the various components are integrated with other parts of the building. Determine exact locations by job measurement, by checking the requirements of other trades, and by review of Contract Documents.

B. The Drawings indicate general routing of the various parts of the systems, but do not indicate all sizes, fittings, offsets, and runouts which are required. Provide correct sizes, fittings, offsets, and runouts required to fit the system into spaces allocated to them. Locate all light fixtures, vents, and supply grilles to conform to the ceiling grid system. Examine the Drawings to become familiar with this requirement.

C. In certain instances, the Architect may require relocation of outlets and switches. Where relocation is within 3 feet of location shown on Drawings, and when Contractor is informed of necessary relocation before Work is begun on this portion of the job, no extra compensation will be allowed.

END OF SECTION

SECTION 01 31 19 - PROJECT MEETINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for project meetings including but not limited to:
   1. Pre-Construction Conference.
   2. Pre-Installation Conferences.
   3. Coordination Meetings.
   4. Progress Meetings.

B. Construction schedules are specified in another Division-1 Section.

1.3 PRE-CONSTRUCTION CONFERENCE

A. Schedule a pre-construction conference and organizational meeting at the Project site or other convenient location no later than 15 days after execution of the Agreement and prior to commencement of construction activities. Conduct the meeting to review responsibilities and personnel assignments.

B. Attendees: The Owner, Architect and their consultants, the Contractor and its superintendent, major subcontractors, manufacturers, suppliers and other concerned parties shall each be represented at the conference by persons familiar with and authorized to conclude matters relating to the Work.

C. Agenda: Discuss items of significance that could affect progress including such topics as:
   1. Tentative construction schedule.
   2. Critical Work sequencing.
   3. Designation of responsible personnel.
   4. Procedures for processing field decisions and Change Orders.
   5. Procedures for processing Applications for Payment.
   6. Distribution of Contract Documents.
   7. Submittal of Shop Drawings, Product Data and Samples.
   8. Preparation of record documents.
   9. Use of the premises.
   10. Office, Work and storage areas.
   11. Equipment deliveries and priorities.
   12. Safety procedures.
   13. First aid.
   14. Security.
   15. Housekeeping.
   16. Working hours.

1.4 PRE-INSTALLATION CONFERENCES

A. Conduct a pre-installation conference at the site before each construction activity that requires coordination with other construction. The Installer and representatives of manufacturers and

fabricators involved in or affected by the installation, and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise the Architect of scheduled meeting dates.

B. Review the progress of other construction activities and preparations for the particular activity under consideration at each pre-installation conference, including requirements for:
   1. Contract Documents.
   2. Options.
   3. Related Change Orders.
   4. Purchases
   5. Deliveries.
   6. Shop Drawings, Product Data and quality control Samples.
   7. Possible conflicts.
   8. Compatibility problems.
   9. Time schedules.
   10. Weather limitations.
   11. Manufacturer's recommendations.
   12. Compatibility of materials.
   13. Acceptability of substrates.
   14. Temporary facilities.
   15. Space and access limitations.
   16. Governing regulations.
   17. Safety.
   18. Inspection and testing requirements.
   19. Required performance results.
   20. Recording requirements.
   21. Protection.

C. Record significant discussions and agreements and disagreements of each conference, along with the approved schedule. Distribute the record of the meeting to everyone concerned, promptly, including the Owner and Architect.

D. Do not proceed if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of Work and reconvene the conference at the earliest feasible date.

1.5 COORDINATION MEETINGS

A. Conduct Project coordination meetings at regularly scheduled times convenient for all parties involved. Project coordination meetings are in addition to specific meetings held for other purposes, such as regular progress meetings and special pre-installation meetings.

B. Request representation at each meeting by every party currently involved in coordination or planning for the construction activities involved.

C. Record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

1.6 PROGRESS MEETINGS

A. Architect will conduct progress meetings at the Project sites once a week, or biweekly as the stage of work dictates. Notify the Owner and Architect of appropriate meeting dates. Coordinate dates of meetings with preparation of the payment request.
B. Attendees: In addition to representatives of the Owner and Architect, each subcontractor, supplier or other entity concerned with current progress or involved in planning, coordination or performance

of future activities shall be represented at these meetings by persons familiar with the Project and authorized to conclude matters relating to progress.

C. Agenda: Review and correct or approve minutes of the previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to the current status of the Project.

D. Contractor's Construction Schedule: Review progress since the last meeting. Determine where each activity is in relation to the Contractor's Construction Schedule, whether on time or ahead or behind schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

1. Review the present and future needs of each entity present, including such items as:
    a. Interface requirements.
    b. Time.
    c. Sequences.
    d. Deliveries.
    e. Off-site fabrication problems.
    f. Access.
    g. Site utilization.
    h. Temporary facilities and services.
    i. Hours of Work.
    j. Hazards and risks.
    k. Housekeeping.
    l. Quality and Work standards.
    m. Change Orders.
    n. Documentation of information for payment requests.

E. Reporting: No later than 3 days after each progress meeting date, the contractor shall distribute copies of minutes of the meeting to each party present and to other parties who should have been present. Include a brief summary, in narrative form, of progress since the previous meeting and report.

1. Schedule Updating: Revise the construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue the revised schedule concurrently with the report of each meeting.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION

SECTION 01 32 00 - NOTIFICATION OF ARCHITECT REQUIREMENTS

PART 1 - GENERAL

1.1 REQUIREMENTS

A. In general, the Contractor shall notify the Architect whenever there is need of clarification of interpretation of the Contract Documents.

B. The Contractor shall notify the Architect 48 hours in advance of certain stages of construction. The project superintendent shall notify the Owner's Representative on an ongoing basis of ongoing work. These stages shall include, but not necessarily be limited to the following:

1. Division 2 – Demolition of any existing facilities or site features.

2. Division 3.
   a. Excavation of grade beams.
   b. Installation of concrete underlayment, underslab vapor barriers, water proofing.
   c. Installation of void boxes under concrete slab.
   d. Installation of reinforcing and formwork
   e. Placing of concrete.

3. Division 4
   a. Placing of masonry, grout, and reinforcement
   b. Block, brick, and stone placement, glass unit masonry, masonry cleaning.

4. Division 5
   a. Erection of structural steel, open web steel joists, and steel deck.
   b. Miscellaneous metals, ladders, brackets, pipe rails, etc.

5. Division 6 - Finish Carpentry and Millwork.
   a. Installation of Learning Stair.
   b. Installation of sliding wood panels

6. Division 7
   a. Installation of waterproofing, vapor barriers, flashing and sheet metal.
   b. Installation of roofing system(s) and associated work.
   c. Concealment of insulation.
   d. Application of fireproofing.
   e. Installation of firestopping and firesafing.
   f. Installation of building and glazing sealants.

7. Division 8
   a. Installation of doors, frames, windows, and storefronts.
   b. Installation of rolling and coiling doors and grilles.
   c. Installation of finish hardware.
   d. Installation of glazing and glazed systems.

8. Division 9
   a. Installation of plaster and gypsum board products.
   b. Installation of tile, flooring, and pavers.

c. Installation of acoustical ceiling (grid and panels).
d. Installation of resilient flooring and base.
e. Painting and staining (each coat).

9. Division 10
   a. Installation of specialty items, markerboards, display cases, projection screens, signage and graphics, canopies.
   b. Installation of operable walls and folding partitions.
   c. Installation of toilet accessories.

10. Division 11
   a. Installation of appliances.
   b. Installation of Stage Equipment.

11. Division 14 – Installation of elevators.

12. Division 21
   a. Installation of sprinkler piping.
   b. Installation of sprinkler heads.

13. Divisions 22, 23 and 26
   a. Completion of roughing-in of plumbing, heating, air conditioning and electrical work (prior to concealment).
   b. Any testing specified for mechanical, electrical and plumbing systems.
   c. Inspection and testing of underground utilities.

14. Division 22 - Installation of plumbing fixtures.

15. Division 23 - Installation of heating, ventilating and air conditioning.

16. Division 26 - Installation of all electrical fixtures.

17. Division 31
   a. Site clearing and stripping of top soil.
   b. Excavation for building foundation.
   c. Placing and compaction of each lift of select fill material.
   d. Drilling of foundation piers.
   e. Covering of underground utilities.
   f. Site grading.

18. Division 32
   a. Stabilization of paving subgrades.
   b. Installation of concrete paving.
   c. Installation of decorative metal fencing.
   d. Installation of topsoil.
   e. Installation of landscaping.

PARTS 2 and 3 - Not Used

END OF SECTION

SECTION 01 33 00 - SUBMITTALS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

B. Other Related Sections:
   1. 01 30 10 – Mechanical and Electrical Coordination.
   2. 01 33 10 – BIM Coordination Process.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for submittals required for performance of the Work, including:
   1. Contractor's construction schedule.
   2. Submittal schedule.
   3. Daily construction reports.
   4. Shop Drawings.
   5. Product Data.
   6. Samples.
   7. Requests for Interpretation.
   8. Environmental and Health Certificates or labels for certain materials as required.

B. Administrative Submittals: Refer to other Division-1 Sections and other Contract Documents for requirements for administrative submittals. Such submittals include, but are not limited to:
   1. Permits.
   2. Applications for payment.
   3. Performance and payment bonds.
   4. Insurance certificates.
   5. List of Subcontractors.

C. The Schedule of Values submittal is included in Section "Applications for Payment."

D. Inspection and test reports are included in Section "Quality Control Services."

1.3 SUBMITTAL PROCEDURES

A. General: Electronic copies of CAD Drawings of the Contract Drawings will be provided by Architect for Contractor's use in preparing submittals only after receipt of acceptable waiver from Contractor.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities. Transmit each submittal sufficiently in advance of performance of related construction activities to avoid delay.

   1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals and related activities that require sequential activity.

   2. Coordinate transmittal of different types of submittals for related elements of the Work so processing will not be delayed by the need to review submittals concurrently for coordination.
      a. The Architect reserves the right to withhold action on a submittal requiring

coordination with other submittals until related submittals are received.

3. Processing: Allow sufficient review time so that installation will not be delayed as a result of the time required to process submittals, including time for re-submittals.

4. Allow two weeks for initial review. Allow additional time if processing must be delayed to permit coordination with subsequent submittals. The Architect will promptly advise the Contractor when a submittal being processed must be delayed for coordination.
   a. If an intermediate submittal is necessary, process the same as the initial submittal.

5. Allow two weeks for reprocessing each submittal.
   a. No extension of Contract Time will be authorized because of failure to transmit submittals to the Architect sufficiently in advance of the Work to permit processing.

C. Submittal Preparation: Place a permanent label or title block on each submittal for identification. Indicate the name of the entity that prepared each submittal on the label or title block.

1. Prior to forwarding to Architect, include Contractor's stamp on transmittal, each shop drawing sheet, and each bound set of data indicating Contractor's review and acceptance of submittal. Contractor's notations regarding exceptions, requirements, or deviations from Project requirements are to be clearly indicated.

2. Do not provide multiple submittals under one transmittal. Provide separate transmittal for each item.

3. Include the following information on the transmittal and submittal for processing and recording action taken.
   a. Listing of the product(s) or system(s) b or
   b. Number of the related specification section plus sequential number of the particular submittal (for instance: **05 21 00 -1** for initial submittal of Steel Joists). Verify numbering system with Architect.
   c. Project name.
   d. Date.
   e. Name of Architect.
   f. Name of Contractor.
   g. Name of submitting subcontractor or supplier.

4. Title block on shop drawings shall include the following:
   a. Project name.
   b. Date.
   c. Name of Contractor.
   d. Name and contact number of subcontractor or supplier as appropriate.
   h. Name or initials of person producing the shop drawings.

5. Submittals rejected or returned to the sender for additional information are not to be forwarded to the Architect. Forwarding a submittal to the Architect indicates Contractor's acceptance of the submittal as meeting Project requirements.

D. Electronic (PDF) Submittals are to be provided in lieu of hard-copies. Architect will utilize file transfer protocol "Project mates" to receive, transfer, and manage submittals routed from Contractor to Architect and associated Consultants.
   1. Contractor will require purchase of special software to interface with "Projectmates".

E. Submittal Transmittal: Package each submittal appropriately for transmittal and handling. Transmit each submittal from Contractor to Architect using electronic transmittal form.

Submittals received from sources other than the Contractor will be returned or discarded without action.

1. Record on the transmittal Record relevant information and requests for additional information.
2. Clearly and conspicuously indicate on transmittal and shop drawings any deviations from Contract Document requirements, including a non-specified product or manufacturer, any variations, or limitations. Architect's review and acceptance of submittals is not binding where such deviations are not CLEARLY NOTED.
3. Include Contractor's certification of review that submitted product(s) complies with Contract Document requirements except as CLEARLY NOTED.

F. Owner will have access to viewing and commenting on submittals concurrently with A/E, and the Architect will incorporate any Owner comments prior to return of submittals.

1.4 SHOP DRAWINGS AND COORDINATION DRAWINGS

A. Submit newly prepared information, drawn to accurate scale. Highlight, encircle, or otherwise indicate deviations from the Contract Documents. Do not reproduce Contract Documents or copy standard information as the basis of Shop Drawings. Standard information prepared without specific reference to the Project is not considered Shop Drawings.

B. Shop Drawings include fabrication and installation drawings, setting diagrams, schedules, patterns, templates and similar drawings. Include the following information:

1. Dimensions.
2. Identification of products and materials included.
3. Compliance with specified standards.
4. Notation of coordination requirements.
5. Notation of dimensions established by field measurement.

C. Provide digital copies of shop drawings unless A/E specifically requests hard copy drawings for a particular submittal.

1. Sheet Size: Except for templates, patterns and similar full-size Drawings, submit Shop Drawings on sheets at least 8-1/2" x 11" but no larger than 36" x 48".
2. Number of Copies: Submit three black-line prints for the Architect's or Architect's Consultant's review; one print will be returned with comments, or scanned and returned through Architect's digital file transfer protocol.
3. Contractor shall make copies necessary for his own use, for field copies, and copies of reviewed submittals to be included in maintenance manuals

D. Steel Shop Drawings (Division 5): To expedite the Architect's and Engineer's review of the structural steel Shop Drawings, submit Shop Drawings for items specified in the following sections separately from those of Section 05 12 00 - Structural Steel Framing, even when furnished by the same fabricator:

1. Section 05 50 00 - Metal Fabrications.
2. Section 05 51 00 - Metal Stairs.
3. Section 05 52 00 - Metal Railings
4. Section 05 53 00 - Metal Gratings.

E. Coordination drawings are a special type of Shop Drawing that show the relationship and integration of different construction elements that require careful coordination during fabrication or installation to fit in the space provided or function as intended.

1. Preparation of coordination Drawings is specified in other sections of the Project specifications and may include components previously shown in detail on Shop Drawings or Product Data.
2. Submit coordination Drawings for integration of different construction elements. Show sequences and relationships of separate components to avoid conflicts in use of space.

1.5 PRODUCT DATA

A. Collect Product Data into a single submittal for each element of construction or system. Product Data includes printed information such as manufacturer's installation instructions, catalog cuts, standard color charts, roughing-in diagrams and templates, standard wiring diagrams and performance curves. Where Product Data must be specially prepared because standard printed data is not suitable for use, submit as "Shop Drawings."

B. Mark each copy to show applicable choices and options. Where printed Product Data includes information on several products, some of which are not required, mark copies to indicate the applicable information. Include the following information:

1. Manufacturer's printed recommendations.
2. Compliance with recognized trade association standards.
3. Compliance with recognized testing agency standards.
4. Application of testing agency labels and seals.
5. Notation of dimensions verified or requiring verification by field measurement.
6. Notation of coordination requirements.

C. Do not submit Product Data until compliance with requirements of the Contract Documents has been confirmed.

D. Preliminary Submittal: Submit a preliminary single copy of Product Data where selection of options is required. Do not submit manufacturer’s pamphlets or catalogs without the particular items for consideration CLEARLY indicated.

E. Number of Copies: Provide digital copies of Product Data unless A/E specifically requests hard copies for a particular submittal:

1. Submit three copies for the Architect's or Consultant’s review; one copy will be returned with comments, or scanned and returned through Architect’s digital file transfer protocol.
2. Contractor shall make copies necessary for his own use, for field copies, and copies of reviewed Product Data to be included in maintenance manuals.

F. Field Copies: Following receipt of reviewed and accepted submittal from Architect, print and file copy of reviewed submittal in the Project meeting room and field office. Field copy shall include all review markings.
1. Do not proceed with installation until a copy of the final Product Data submittal is in the installer's possession.

1.6 SAMPLES

A. Submit full-size, fully fabricated Samples cured and finished as specified and physically identical with the material or product proposed. Samples include partial sections of manufactured or fabricated components, cuts or containers of materials, color range sets, and swatches showing color, texture and pattern.

1. Include transmittal with information as identified above in Submittal Procedures. Number product on the transmittal per the approved numbering system. In many cases the

sample will be retained by the Architect with only the transmittal returned with comments.

2. Mount, display, or package Samples in the manner specified to facilitate review of qualities indicated. Prepare Samples to match the Architect's Sample. Include the following:
   a. Generic description of the Sample.
   b. Sample source.
   c. Product name or name of manufacturer.
   d. Compliance with recognized standards.
3. Submit Samples for review of kind, color, pattern, and texture, for a final check of these characteristics with other elements, and for a comparison of these characteristics between the final submittal and the actual component as delivered and installed.
4. Where variation in color, pattern, texture or other characteristics are inherent in the material or product represented, submit multiple units (not less than 3), that show approximate limits of the variations.
5. Refer to other Specification Sections for requirements for Samples that illustrate workmanship, fabrication techniques, details of assembly, connections, operation and similar construction characteristics.
6. Refer to other Sections for Samples to be returned to the Contractor for incorporation in the Work. Such Samples must be undamaged at time of use. On the transmittal, indicate special requests regarding disposition of Sample submittals.

B. Preliminary samples: Where Samples are for initial selection of color, pattern, texture or similar characteristics from a range of standard choices, submit a full set of choices for the material or product.

1. Preliminary samples will be reviewed and may be returned with the Architect's mark indicating initial selection.

2. Maintain approved samples, if returned, at the Project site, for quality comparisons throughout the course of construction.

3. Unless noncompliance with Contract Document provisions is observed, the initial submittal may also serve as the final sample.

C. Distribution of Samples: Distribute additional sets of approved samples to subcontractors, manufacturers, fabricators, suppliers, installers, and others as required for performance of the Work.

1. Field Samples or “mockups” specified in individual Sections are special types of Samples. Field Samples are full-size mockups erected, installed, or applied on site to illustrate finishes, coatings, or quality of installation, and to establish the standard by which the Work will be judged.

2. Comply with submittal requirements to the fullest extent possible. Process transmittal forms to provide a record of activity
   .
3. As part of Closeout Documents, Contractor shall provide a binder with samples of all materials included in Completed Work. Samples shall be separated by Specification Section.

1.7 SUBMITTAL SCHEDULE

A. After development and acceptance of the Contractor's construction schedule. Architect and Contractor will work in tandem to prepare a complete schedule of submittals. Submit the

schedule within 10 days of the date required for establishment of the Contractor's construction schedule.

1. Coordinate submittal schedule with the list of subcontracts, schedule of values and the list of products as well as the Contractor's construction schedule.
2. Prepare the schedule in chronological order; include submittals required during the first 90 days of construction. Provide the following information:
   a. Scheduled date for delivery of each submittal to the Architect.
   b. Submittal category.
   c. Name of subcontractor.
   d. Description of the part of the Work covered.
   e. Anticipated date for return of Architect’s reviewed copy.

B. Field Copies: Following receipt of reviewed and accepted submittal from Architect, print and file copy of reviewed submittal in the Project meeting room and field office. Field copy shall include all review markings.

1.8 ARCHITECT'S REVIEW OF SUBMITTALS

A. Except for submittals for record, information or similar purposes, where action and return is required or requested, the Architect will review each architectural submittal, mark to indicate action taken, and return promptly.
   1. Compliance with specified characteristics is the Contractor's responsibility.

B. Action Stamp: The Architect will stamp each submittal with a uniform, self-explanatory action stamp. The stamp will be appropriately marked, as follows, to indicate the action taken:

C. Final Release: Where submittals are marked "No Exceptions," that part of the Work covered by the submittal may proceed provided it complies with requirements of the Contract Documents; final acceptance will depend upon that compliance.

D. Final-But-Restricted Release: When submittals are marked "Exceptions Noted" or "Make Corrections Noted", that part of the Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and requirements of the Contract Documents; final acceptance will depend on that compliance.

E. Returned for Resubmittal: When submittal is marked "Revise and Resubmit", do not proceed with that part of the Work covered by the submittal, including purchasing, fabrication, delivery, or other activity. Revise or prepare a new submittal in accordance with the notations; resubmit without delay. Repeat if necessary to obtain a different action mark.

F. Where subcontractor or supplier elects to make corrections based on notations by the Contractor, Architect, or consultants and the submittal has NOT been marked "Revise and Resubmit”, do not copy the Architect with revised drawing unless specifically corrected.

G. Do not permit submittals marked "Revise and Resubmit" to be used at the Project site, or elsewhere where Work is in progress

1.9 CONTRACTOR'S CONSTRUCTION SCHEDULE

B. Bar-Chart Schedule: Prepare a fully developed, horizontal bar-chart type Contractor's construction schedule. Submit within 30 days of the date established for "Commencement of the Work" or before initial application of payment.
   1. Provide a separate time bar for each significant construction activity. Provide a continuous vertical line to identify the first working day of each week. Use the same

breakdown of units of the Work as indicated in the "Schedule of Values."
2. Prepare the schedule on a sheet, or series of sheets, of stable transparency, or other reproducible media, of sufficient width to show data for the entire construction period.
3. Secure time commitments for performing critical elements of the Work from parties involved. Coordinate each element on the schedule with other construction activities; include minor elements involved in the sequence of the Work. Show each activity in proper sequence. Indicate graphically sequences necessary for completion of related portions of the Work.
4. Coordinate the Contractor's construction schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests and other schedules.
5. Indicate completion in advance of the date established for Substantial Completion. Indicate Substantial Completion on the schedule to allow time for the Architect's procedures necessary for certification of Substantial Completion.

C. Work Stages: Indicate important stages of construction for each major portion of the Work, including testing and installation.

D. Distribution: Following response to the initial submittal, print and distribute copies to the Architect, Owner, and other parties required to comply with scheduled dates. Post copies in the Project meeting room and temporary field office.
1. When revisions are made, distribute to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in construction activities.

E. Schedule Updating: Revise the schedule after each meeting or activity, where revisions have been recognized or made. Issue the updated schedule concurrently with report of each meeting.

1.10 DAILY CONSTRUCTION REPORTS

A. Prepare a daily construction report, recording the following information concerning events at the site; make report available to the Architect and Owner via “Projectmates”
1. List of subcontractors at the site.
2. Approximate count of personnel at the site.
3. Weather-related conditions at the actual site including temperature, precipitation, muddy or wet site conditions. No claims for additional weather days can be made without daily weather entries in the log.
4. Accidents and unusual events.
5. Meetings and significant decisions.
6. Stoppages, delays, shortages, losses.
7. Orders and requests of governing authorities.
8. Services connected, disconnected.
9. Equipment or system tests and start-ups.
10. Partial Completions, occupancies.
11. Substantial Completions authorized.

1.11 REQUESTS FOR INTERPRETATION - All contractor requests for interpretation pertaining to all aspects of the construction documents and this Project shall be submitted on “Projectmates”

1.12 Environmental and Health Certifications or Labels (for example: Cradle to Cradle, EPD, HPD, and other certifications and labels): Furnish copies of documents showing proof of certification or label as indicated on the Project’s Interior and/or Exterior Finish Schedule. Submit the information with the other Submittal Data for Basis-of-Design products, equal products by specified manufacturers, and proposed substitution products.

A. Proposed substitutions shall comply with the following: The Project's Interior and/or Exterior Finish Schedule, or Color Schedule, may be labelled in the drawings as something other than the "Interior Finish Schedule" or "Exterior Finish Schedule".

B. For a product to be used in lieu of the Basis-of-Design product listed in the specs or on the Interior Finish Schedule, a proposed as-equal product supplied by manufacturers listed in the specifications that is not the Basis-of-Design product, the proposed comparable product shall have a certification or label which is equal to, or better than the Basis-of-Design product.

C. A proposed as-equal product to be used in lieu of the Basis-of-Design product listed in the Specifications or on the Interior Finish Schedule, a product supplied by manufacturers not listed in the specifications or the Interior Finish Schedule, the proposed comparable product shall have a certification or label which is equal to, or better than the Basis-of-Design product.

D. If a question about which certification or label is better than or exceeds the indicated certification, contact the project's Architect for direction.

SECTION 01 33 10 BIM COORDINATION PROCESS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to the Section.

B. Other Related Sections:
   1. 01 30 10 – Mechanical and Electrical Coordination.
   2. 01 33 00 – Submittal Procedures.

C. The requirements of the General Conditions and Supplementary Conditions apply to the work of this Section.

1.2 MODEL REQUIREMENTS

B. BIM Execution/ Implementation Plan shall identify how the data is to be managed and interoperated (data storage, sharing, viewing, quality control parameters, and updating, as necessary) among all Contractor team members.

C. Mechanical: The mechanical systems Model may vary in level of detail for individual elements, but at a minimum must include all features that would be included on a quarter-inch (1/4”=1’0”) scaled drawing.

   1. HVAC- All necessary heating, ventilating, air-conditioning, and specialty equipment, including air distribution ducts for supply, return, and ventilation and exhaust ducts, including control system, registers, diffusers, grills, and hydronic baseboards with necessary intelligence to produce accurate drawings and schedules.

   2. Mechanical Piping: All necessary piping and fixture layouts, and related equipment, including necessary intelligence to produce accurate drawings and schedules. All piping larger than 1.5” diameter shall be modeled.

D. Plumbing: All necessary plumbing piping and fixture layouts, floor and area drains, and related equipment, including necessary intelligence to produce accurate drawings and schedules. All piping larger than 1.5” diameter shall be modeled.

E. Electrical/Telecommunications: The electrical systems Model may vary in level of detail for individual elements, but at a minimum must include all features that would be included on a quarter-inch (1/4”=1’0”) scaled drawing.

   1. All necessary interior electrical components (i.e., receptacles, special and general purpose power receptacles, lighting fixtures, panel boards and control systems), including necessary intelligence to produce accurate drawings and schedules.

   2. Cable tray routing shall be modeled without detail of cable contents. Electrical conduit larger than 1.5” diameter shall be modeled.

F. Fire Protection: The fire protection system Model may vary in level of detail for individual elements, but at a minimum must include all features that would be included on a quarter-inch (1/4”=1’0”) scaled drawing.

1. Fire Protection System- All relevant fire protection components (i.e., branch piping, sprinkler heads, fittings, drains, pumps, tanks, sensors, control panels) with necessary intelligence to produce accurate drawings and schedules. All fire protection piping, regardless of size, shall be modeled.

2. Fire Alarms- Fire alarm/mass notification devices and detection system shall be indicated with necessary intelligence to produce accurate plans depicting the system.

G. Equipment Clearances: All Mechanical, Electrical, and Plumbing equipment clearances shall be modeled for use in spatial coordination and maintenance access requirements.

H. As-Builts BIM Model: The final Model shall include Architectural, Structural, Mechanical, Electrical, Plumbing and Fire protection systems.

1. The model shall include detailed and accurate representations of all equipment as installed.

2. Provide the Model files in interoperable file formats (AutoCAD or Navisworks) per Implementation Plan requirements.

I. Quality Control: Visual review to ensure the design intent has been followed and that the As-Built Model set has no unintended, undefined, incorrectly defined or duplicated elements.

1.3 COORDINATION PROCESS

A. Construction Manager shall take the lead in coordinating the Mechanical, Electrical, Plumbing, and Fire Protection systems within the Project.

B. The Construction Manager shall coordinate a three-dimensional (3D) model of the building which includes the Mechanical, Electrical, Plumbing, and Fire Protection systems.

1. The Electrical, Plumbing, and Fire Protection Sub-Contractors shall prepare their work and generate 3D models that will be given to the Construction manager for spatial coordination.

2. The Sub-Contractors will be provided with the Architecture and Structure models that were used to generate the Contract Documents, and these files may be used for backgrounds.

3. The Sub-Contractors shall replace the MEP systems originally drawn in the Contract Documents with the actual shop drawing models. Submitting the contract drawings as coordination drawings will not be acceptable.

C. The model shall include properly sized, detailed, and accurate representations of all equipment to be installed based upon the reviewed equipment submittals.

D. The Construction Manager shall organize a 3D coordination meeting with all appropriate Sub-Contractors present to review the model and discuss coordination of the installation of the building systems in iterations.

E. The Sub-Contractors shall coordinate to resolve identified spatial conflicts. In accordance with the coordinated and agreed actions, each project team member shall make the appropriate adjustment to their respective model.

F. Sequence of Coordination: Below is hierarchy of model elements and the sequencing by which the models shall be coordinated:
   1. Structure model with Architecture model.
   2. Mechanical model with coordinated Structure and Architecture model.
   3. Electrical, Plumbing and Fire Sprinkler models with coordinated Mechanical, structure and Architecture Models.

G. The Sub-Contractors shall not install any item until the coordination has been completed and reviewed by the Construction Manager, Owner, and A/E Team.

I. By submitting shop drawings for the project, the submitting Sub-Contractor indicates that all necessary coordination with other trades has been completed and that the systems, products and equipment submitted can be installed in the building without conflict and will operate as specified and intended.

END OF SECTION

SECTION 01 40 00 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for quality control services.

B. Quality control services include inspections and tests and related actions including reports, performed by independent agencies, governing authorities, and the Contractor. They do not include Contract enforcement activities performed by the Architect.

C. Inspection and testing services are required to verify compliance with requirements specified or indicated. These services do not relieve the Contractor of responsibility for compliance with Contract Document requirements.

D. Requirements of this Section relate to customized fabrication and installation procedures, not production of standard.

1. Specific quality control requirements for individual construction activities are specified in the Sections that specify those activities. Those requirements, including inspections and tests, cover production of standard products as well as customized fabrication and installation procedures.
2. Inspections, test and related actions specified are not intended to limit the Contractor's quality control procedures that facilitate compliance with Contract Document requirements.
3. Requirements for the Contractor to provide quality control services required by the Architect, Owner, or authorities having jurisdiction are not limited by provisions of this Section.

1.3 RESPONSIBILITIES

A. Contractor Responsibilities: The Contractor shall provide inspections, tests and similar quality control services specified in individual Specification Sections and required by governing authorities, except where they are specifically indicated to be the Owner's responsibility, or are provided by another identified entity; these services include those specified to be performed by an independent agency and not by the Contractor. Costs for these services shall be included in the Contract Sum.

1. The Owner will engage and pay for the services of an independent agency to perform certain inspections and tests as specified in PART 3 - EXECUTION, QUALITY CONTROL, QUALITY CONTROL TESTING DURING CONSTRUCTION or FIELD QUALITY CONTROL.
    a. Where the Owner has engaged a testing agency or other entity for testing and inspection of a part of the Work, and the Contractor is also required to engage an entity for the same or related element, the Contractor shall not employ the entity engaged by the Owner, unless otherwise agreed in writing with the Owner.

2. Retesting: The Contractor is responsible for retesting where results of required inspections, tests or similar services prove unsatisfactory and do not indicate compliance

with Contract Document requirements, regardless of whether the original test was the Contractor's responsibility.

a. Cost of retesting construction revised or replaced by the Contractor is the Contractor's responsibility, where required tests were performed on original construction.

3. Associated Services: The Contractor shall cooperate with agencies performing required inspections, tests and similar services and provide reasonable auxiliary services as requested. Notify the agency sufficiently in advance of operations to permit assignment of personnel. Auxiliary services required include but are not limited to:
   a. Providing access to the Work and furnishing incidental labor and facilities necessary to facilitate inspections and tests.
   b. Taking adequate quantities of representative samples of materials that require testing or assisting the agency in taking samples.
   c. Providing facilities for storage and curing of test samples, and delivery of samples to testing laboratories.
   d. Providing the agency with a preliminary design mix proposed for use for materials mixes that require control by the testing agency.
   e. Security and protection of samples and test equipment at the Project site.

B. Owner Responsibilities: The Owner will provide inspections, tests and similar quality control services specified to be performed by independent agencies and not by the Contractor, except where they are specifically indicated as the Contractor's responsibility or are provided by another identified entity. Costs paid by the Owner for these services are not included in the Contract Sum unless an Allowance sum is established specifically for this purpose.

1. The Owner will employ and pay for the services of an independent agency, testing laboratory or other qualified firm to perform services which are the Owner's responsibility.

C. Duties of the Testing Agency: The independent testing agency engaged to perform inspections, sampling and testing of materials and construction specified in individual Specification Sections shall cooperate with the Architect and Contractor in performance of its duties, and shall provide qualified personnel to perform required inspections and tests.

1. The agency shall notify the Architect and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. The agency is not authorized to release, revoke, alter or enlarge requirements of the Contract Documents, or approve or accept any portion of the Work.
3. The agency shall not perform any duties of the Contractor.

D. Coordination: The Contractor and each agency engaged to perform inspections, tests and similar services shall coordinate the sequence of activities to accommodate required services with a minimum of delay. Additionally, Contractor and each agency shall coordinate activities to avoid the necessity of removing and replacing construction to accommodate inspections and tests.

1. The Contractor is responsible for scheduling times for inspections, tests, taking samples and similar activities.

1.4 SUBMITTALS

A. The independent testing agency shall submit a certified written report of each inspection, test or similar service, to the Architect, in duplicate, unless the Contractor is responsible for the service. If the Contractor is responsible for the service, submit a certified written report of each inspection, test or similar service through the Contractor, in duplicate.

B. Submit additional copies of each written report directly to the governing authority, when the authority so directs.

C. Report Data: Written reports of each inspection, test or similar service shall include, but not be limited to:
   1. Date of issue.
   2. Project title and number.
   3. Name, address and telephone number of testing agency.
   4. Dates and locations of samples and tests or inspections.
   5. Names of individuals making the inspection or test.
   6. Designation of the Work and test method.
   7. Identification of product and Specification Section.
   8. Complete inspection or test data.
   9. Test results and an interpretation of test results.
   10. Ambient conditions at the time of sample-taking and testing.
   11. Comments or professional opinion as to whether inspected or tested Work complies with Contract Document requirements.
   12. Name and signature of laboratory inspector.
   13. Recommendations on retesting.

1.5 QUALITY ASSURANCE

A. Qualification for Service Agencies: Engage inspection and testing service agencies, including independent testing laboratories, which are prequalified as complying with "Recommended Requirements for Independent Laboratory Qualification" by the American Council of Independent Laboratories, and which specialize in the types of inspections and tests to be performed.
   1. Each independent inspection and testing agency engaged on the Project shall be authorized by authorities having jurisdiction to operate in the State in which the Project is located.

PART 2 - PRODUCTS (Not Applicable).

PART 3 - EXECUTION

3.1 REPAIR AND PROTECTION

A. General: Upon completion of inspection, testing, sample-taking and similar services, repair damaged construction and restore substrates and finishes to eliminate deficiencies, including deficiencies in visual qualities of exposed finishes. Comply with Contract Document requirements for "Cutting and Patching."

B. Protect construction exposed by or for quality control service activities, and protect repaired construction.

C. Repair and protection is the Contractor's responsibility, regardless of the assignment of responsibility for inspection, testing or similar services.

END OF SECTION

SECTION 01 42 19 - REFERENCE STANDARDS AND DEFINITIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.

B. Indicated: The term indicated refers to graphic representations, notes, or schedules on the Drawings, or other Paragraphs or Schedules in the Specifications, and similar requirements in the Contract Documents. Terms such as shown, noted, scheduled, and specified are used to help the reader locate the reference. There is no limitation on location.

C. Directed: Terms such as directed, requested, authorized, selected, approved, required, and permitted mean directed by the Architect, requested by the Architect, and similar phrases.

D. Approved: The term approved, when used in conjunction with the Architect's action on the Contractor's submittals, applications, and requests, is limited to the Architect's duties and responsibilities as stated in the Conditions of the Contract.

E. Regulations: The term regulations includes laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, as well as rules, conventions, and agreements within the construction industry that control performance of the Work.

F. Furnish: The term furnish means supply and deliver to the Project site, ready for unloading, unpacking, assembly, installation, and similar operations.

G. Install: The term install describes operations at the Project site including the actual unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.

H. Provide: The term provide means furnish and install, complete and ready for the intended use.

I. Installer: An Installer is the Contractor or another entity engaged by the Contractor, either as an employee, subcontractor, or contractor of lower tier, to perform a particular construction activity, including installation, erection, application, and similar operations. Installers are required to be experienced in the operations they are engaged to perform.

   1. The term experienced, when used with the term Installer, means having a minimum of five previous projects similar in size and scope to this Project, being familiar with the special requirements indicated, and having complied with requirements of the authority having jurisdiction.

J. Trades: Using terms such as carpentry is not intended to imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as carpenter. It also does not imply that requirements specified apply exclusively to tradespersons of the corresponding generic name.

K. Assigning Specialists: Certain Sections of the Specifications require that specific construction activities shall be performed by specialists who are recognized experts in those operations.

The specialists must be engaged for those activities, and their assignments are requirements over which the Contractor has no choice or option. However, the ultimate responsibility for fulfilling Contract requirements remains with the Contractor.

1. This requirement shall not be interpreted to conflict with enforcing building codes and similar regulations governing the Work. It is also not intended to interfere with local trade union jurisdictional settlements and similar conventions.

L. Project site is the space available to the Contractor for performing construction activities either exclusively or in conjunction with others performing other work as part of the Project. The extent of the Project site is shown on the Drawings and may or may not be identical with the description of the land on which the Project is to be built.

M. Testing Agencies: A testing agency is an independent entity engaged to perform specific inspections or tests, either at the Project site or elsewhere and to report and interpret results of those inspections or tests.

1.3 SPECIFICATION FORMAT AND CONTENT EXPLANATION

A. Specification Format: These Specifications are organized into Divisions and Sections based on the Construction Specifications Institute's MASTERFORMAT numbering system.

1. Text Subordination: Portions of the Specification may be subordinated to other portions in the following manner:
   a. Certain Sections may be subordinate to other Sections or parts of other Sections. When that occurs, the degree of subordination is described in those Sections.
   b. Paragraphs and lines of text are subordinate to article titles.
   c. Paragraphs and lines of text that are indented from the left hand margin are subordinate to the preceding text that is either not indented or indented by a lesser amount.

2. Underscoring, Bold Letters and Bold Numbers are used strictly to assist the reader in scanning for key words. No emphasis or relative importance is intended for text where underscoring, bold letters and bold numbers are used.

B. Specification Content: This Specification uses certain conventions regarding the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations or circumstances. These conventions are explained as follows:

C. Abbreviated Language: Language used in Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words that are implied, but not stated, shall be interpolated, as the sense requires. Singular words will be interpreted as plural and plural words interpreted as singular where applicable as the context of the Contract Documents indicates.

D. Imperative and streamlined language is used generally in the Specifications. Requirements expressed in the imperative mood are to be performed by the Contractor. At certain locations in the Text, subjective language is used for clarity to describe responsibilities that must be fulfilled indirectly by the Contractor, or by others when so noted.

1. The words "shall be" are implied wherever a colon (:) is used within a sentence or phrase.

1.4 INDUSTRY STANDARDS

A. Applicability of Standards: Except where the Contract Documents include more stringent

requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.

B. Publication Dates: Comply with the standards in effect as of the date of the Contract Documents.

C. Conflicting Requirements: Where compliance with two or more standards is specified and where the standards may establish different or conflicting requirements for minimum quantities or quality levels, refer requirements that are different but apparently equal and other uncertainties to the Architect for a decision before proceeding.

D. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of the requirements. Refer uncertainties to the Architect for a decision before proceeding.

E. Copies of Standards: Each entity engaged in construction on the Project is required to be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed to perform a required construction activity, the Contractor shall obtain copies directly from the publication source.
2. The Architect reserves the right to require the Contractor to submit copies of standards as necessary for enforcement of requirements.

F. Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. Where such acronyms or abbreviations are used in the Specifications or other Contract Documents, they mean the recognized name of the trade association, standards-generating organization, authority having jurisdiction, or other entity applicable to the context of the Text provision. Refer to the "Encyclopedia of Associations," published by Gale Research Co., available in most libraries.

G. Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. The following acronyms or abbreviations, as referenced in Contract Documents, are defined to mean the associated names. Names and addresses are subject to change and are believed, but not ensured, to be accurate and up to date as of the date of Contract Documents.

I. GOVERNING REGULATIONS/AUTHORITIES

1. The Architect has contacted authorities having jurisdiction where necessary to obtain information necessary for preparation of Contract Documents. Contact authorities having jurisdiction directly for information and decisions having a bearing on the Work.

1.5 SUBMITTALS

A. Permits, Licenses, and Certificates: For the Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, and similar documents, correspondence, and records established in conjunction with compliance with standards and regulations bearing upon performance of the Work.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION

SECTION 01 50 00 - TEMPORARY FACILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies requirements for temporary services and facilities, including utilities, construction and support facilities, security and protection.

B. Temporary utilities which may be required include but are not limited to:

1. Water service and distribution.
2. Temporary electric power and light.
3. Telephone service.
4. Storm and sanitary sewer.

C. Temporary construction and support facilities which may be required include but are not limited to:

1. Temporary heat.
2. Storage sheds.
3. Sanitary facilities, including drinking water.
4. Dewatering facilities and drains.
5. Temporary enclosures.
6. Hoists.
7. Temporary Project identification signs and bulletin boards.
8. Waste disposal services.
9. Rodent and pest control.
10. Construction aids and miscellaneous services and facilities.

D. Security and protection facilities which may be required include but are not limited to:

1. Temporary fire protection.
2. Barricades, warning signs, lights.
3. Sidewalk bridge or enclosure fence for the site.
4. Environmental protection.

1.3 QUALITY ASSURANCE

A. Regulations: Comply with industry standards and applicable laws and regulations if authorities having jurisdiction, including but not limited to:

1. Building Code requirements.
2. Health and safety regulations.
3. Utility company regulations.
4. Police, Fire Department and Rescue Squad rules.
5. Environmental protection regulations.

B. Standards: Comply with NFPA Code 241, "Building Construction and Demolition Operations", ANSI-A10 Series standards for "Safety Requirements for Construction and

Demolition", and NECA Electrical Design Library, "Temporary Electrical Facilities."

1. Refer to "Guidelines for Bid Conditions for Temporary Job Utilities and Services", prepared jointly by AGC and ASC, for industry recommendations.

C. Electrical Service: Comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service in compliance with National Electric Code (NFPA 70).

D. Inspections: For inspections and tests of temporary facilities required by authorities having jurisdiction, arrange for such inspections or tests before use. Obtain required certifications and permits.

1.4 PROJECT CONDITIONS

A. Temporary Utilities: Inform the Owner of scheduled dates for termination of each temporary utility. At the earliest feasible time, when acceptable to the Owner, change over from use of temporary service to use of the permanent service.

B. Conditions of Use: Keep temporary services and facilities clean and neat in appearance. Operate in a safe and efficient manner. Take necessary fire prevention measures. Do not overload facilities, or permit them to interfere with progress. Do not allow hazardous dangerous or unsanitary conditions, or public nuisances to develop or persist on the site.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Provide new materials; if acceptable to the Architect, undamaged previously used materials in serviceable condition may be used. Provide materials suitable for the use intended.

2.2 EQUIPMENT

A. General: Provide new equipment; if acceptable to the Architect, undamaged, previously used equipment in serviceable condition may be used. Provide equipment suitable for use intended.

B. Water Hoses: Provide 3/4" heavy-duty, abrasion-resistant, flexible rubber hoses 100 ft. long, with pressure rating greater than the maximum pressure of the water distribution system; provide adjustable shut-off nozzles at hose discharge.

C. Electrical Outlets: Provide properly configured NEMA polarized outlets to prevent insertion of 110-120 volt plugs into higher voltage outlets. Provide receptacle outlets equipped with ground-fault circuit interrupters, reset button and pilot light, for connection of power tools and equipment.

D. Electrical Power Cords: Provide grounded extension cords; use "hard-service" cords where exposed to abrasion and traffic. Provide waterproof connectors to connect separate lengths of electric cords, if single lengths will not reach areas where construction activities are in progress.

E. Lamps and Light Fixtures: Provide general service incandescent lamps of wattage required for adequate illumination. Provide guard cages or tempered glass enclosures, where exposed to breakage. Provide exterior fixtures where exposed to moisture.

F. Heating Units: Provide temporary heating units that have been tested and labeled by UL, FM or another recognized trade association related to the type of fuel being consumed.

G. Temporary Offices: Provide prefabricated or mobile units with lockable entrances, operable windows and serviceable finishes. Provide heated and air-conditioned units on foundations adequate for normal loading.

H. Temporary Storage Sheds: Provide prefabricated or mobile units with lockable entrances. Provide heated units on foundations adequate for normal loading.

I. Temporary Toilet Units: Provide self-contained single-occupant toilet units of the chemical, aerated recirculation, or combustion type, properly vented and fully enclosed with a glass fiber reinforced polyester shell or similar nonabsorbent material.

J. First Aid Supplies: Comply with governing regulations.

K. Fire Extinguishers: Provide hand-carried, portable UL-rated, class "A" fire extinguishers for temporary offices and similar spaces. In other locations provide hand-carried, portable, UL-rated, class "ABC" dry chemical extinguishers, or a combination of extinguishers of NFPA recommended classes for the exposures.

1. Comply with NFPA 10 and 241 for classification, extinguishing agent and size required by location and class of fire exposure.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Use qualified personnel for installation of temporary facilities. Locate facilities where they will serve the Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required.

B. Provide each facility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed, or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

A. General: Engage the appropriate local utility company to install temporary service or connect to existing service. Where the company provides only part of the service, provide the remainder with matching, compatible materials and equipment; comply with the company's recommendations.

1. Arrange with the company and existing users for a time when service can be interrupted, where necessary, to make connections for temporary services.
2. Provide adequate capacity at each stage of construction. Prior to temporary utility availability, provide trucked-in services.

B. Use Charges: Cost or use charges for temporary facilities are not chargeable to the Owner or Architect, and will not be accepted as a basis of claims for a Change Order.

C. Water Service: Install water service and distribution piping of sizes and pressures adequate for construction until permanent water service is in use.

1. Sterilization: Sterilize temporary water piping prior to use.

D. Temporary Electric Power Service: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period. Include transformers, overload protected disconnects, automatic ground-fault interrupters and main distribution switch gear.

1. Power Distribution System: Install wiring overhead, and rise vertically where least exposed to damage. Where permitted, wiring circuits not exceeding 125 Volts, AC 20 ampere rating, and lighting circuits may be nonmetallic sheathed cable where overhead and exposed for surveillance.

E. Temporary Lighting: Wherever overhead floor or roof deck has been installed, provide temporary lighting with local switching.

1. Install and operate temporary lighting that will fulfill security and protection requirements, without operating the entire system, and will provide adequate illumination for construction operations and traffic conditions.

F. Temporary Telephones: Provide temporary telephone service for use by all personnel engaged in construction activities. Where field offices are required, provide temporary telephone service consisting of a minimum of two separate telephone lines (one line dedicated for facsimile machine) in the field office for use by personnel engaged in construction activities throughout the construction period. Provide internet access for email in the field office.

G. Sewers and Drainage: If sewers are available, provide temporary connections to remove effluent that can be discharged lawfully. If sewers are not available or cannot be used, provide drainage ditches, dry wells, stabilization ponds and similar facilities. If neither sewers nor drainage facilities can be lawfully used for discharge of effluent, provide containers to remove and dispose of effluent off the site in a lawful manner.

1. Filter out excessive amounts of soil, construction debris, chemicals, oils and similar contaminants that might clog sewers or pollute waterways before discharge.
2. Connect temporary sewers to the municipal system as directed by the sewer department officials.
3. Maintain temporary sewers and drainage facilities in a clean, sanitary condition. Following heavy use, restore normal conditions promptly.
4. Provide earthen embankments and similar barriers in and around excavations and subgrade construction, sufficient to prevent flooding by runoff of storm water from heavy rains.

3.3 TEMPORARY CONSTRUCTION AND SUPPORT FACILITIES INSTALLATION

A. If required for completion of the Work, locate field offices, storage sheds, sanitary facilities and other temporary construction and support facilities for easy access.

1. Maintain temporary construction and support facilities until Final Completion. Remove prior to final application for payment. Where temporary construction or facilities interfere with the Owner’s use or occupation of the Work after Substantial Completion, remove, relocate, or modify temporary construction and facilities as required to permit Owner’s use and occupancy.

B. Provide incombustible construction for offices, shops and sheds located within the construction area, or within 30 feet of building lines. Comply with requirements of NFPA

241.

C. Temporary Heat: Provide temporary heat required by construction activities, for curing or drying of completed installations or protection of installed construction from adverse effects of low temperatures or high humidity. Select safe equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce the ambient condition required and minimize consumption of energy.

D. Heating Facilities: Except where use of the permanent system is authorized, provide vented self-contained LP gas or fuel oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, open flame, or salamander type heating units is prohibited.

E. Field Offices: Provide insulated, weathertight temporary offices of sufficient size to accommodate required office personnel at the Project site. Keep the office clean and orderly for use for small progress meetings. Furnish and equip offices as follows:
1. Furnish with at least two desks and chairs, a 4-drawer file cabinet, plan table and plan rack, a 6-shelf bookcase, conference table and chairs, fax machine, modem with wireless internet access, and printer.
2. Provide work station for Architect’s use while on site including desk and chair. Architect may utilize phone, fax, printer, and internet for work related to this Project.

F. Storage and Fabrication Sheds: Install storage and fabrication sheds, sized, furnished and equipped to accommodate materials and equipment involved, including temporary utility service.

G. Sanitary facilities include temporary toilets, wash facilities and drinking water fixtures. Comply with regulations and health codes for the type, number, location, operation and maintenance of fixtures and facilities. Install where facilities will best service the Project's needs.

1. Provide toilet tissue, paper towels, paper cups and similar disposable materials for each facility. Provide covered waste containers for used material.
2. Toilets: Install self-contained toilet units. Shield toilets to ensure privacy. Use of pit-type privies will not be permitted.
3. Wash Facilities: Install wash facilities supplied with potable water at convenient locations for personnel involved in handling materials that require wash-up for a healthy and sanitary condition. Dispose of drainage properly. Supply cleaning compounds appropriate for each condition.

H. Drinking Water Fixtures: Provide drinking water fountains where required to for compliance with regulations and health codes, including paper supply.

I. Dewatering Facilities and Drains: For temporary drainage and dewatering facilities and operations not directly associated with construction activities included under individual Sections, comply with dewatering requirements of applicable Division-2 Sections. Where feasible, utilize the same facilities. Maintain the site, excavations and construction free of water.

J. Temporary Enclosures: Provide temporary enclosure for protection of construction in progress and completed, from exposure, foul weather, other construction operations and similar activities.

1. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.
2. Install tarpaulins securely, with incombustible wood framing and other materials. Close openings of 25 square feet or less with plywood or similar materials.
3. Close openings through floor or roof decks and horizontal surfaces with load-bearing wood-framed construction.
4. Where temporary wood or plywood enclosure exceeds 100 square feet in area, use UL-labeled fire-retardant treated material for framing and main sheathing.

K. Temporary Lifts and Hoists: Provide facilities for hoisting materials and employees. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

L. Project Identification and Temporary Signs: Display no signs without approval of the Architect. Do not permit installation of unauthorized signs.

1. Project Identification Signs: Engage an experienced sign painter to apply graphics. Comply with the following drawings.
2. Temporary Signs: Prepare signs to provide directional information to construction personnel and visitors.

M. Temporary Exterior Lighting: Install exterior yard and sign lights so that signs are visible when Work is being performed.

N. Collection and Disposal of Waste: Collect waste from construction areas and elsewhere daily. Comply with requirements of NFPA 241 for removal of combustible waste material and debris. Enforce requirements strictly. Do not hold materials more than 7 days during normal weather or 3 days when the temperature is expected to rise above 80 deg F (27 deg C). Handle hazardous, dangerous, or unsanitary waste materials separately from other waste by containerizing properly. Dispose of material in a lawful manner.

O. Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate. Cover finished permanent stairs with a protective covering of plywood or similar material so finishes will be undamaged at the time of acceptance.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Except for use of permanent fire protection as soon as available, do not change over from use of temporary security and protection facilities to permanent facilities until Substantial Completion, or longer as requested by the Architect.

B. Temporary Fire Protection: Until fire protection needs are supplied by permanent facilities, install and maintain temporary fire protection facilities of the types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 10 "Standard for Portable Fire Extinguishers," and NFPA 241 "Standard for Safeguarding Construction, Alterations and Demolition Operations."

1. Locate fire extinguishers where convenient and effective for their intended purpose, but not less than one extinguisher on each floor at or near each usable stairwell.
2. Store combustible materials in containers in fire-safe locations.
3. Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire protection facilities, stairways and other access routes for fighting fires. Prohibit smoking in hazardous fire exposure areas.
4. Provide supervision of welding operations, combustion type temporary heating units, and similar sources of fire ignition.

C. Permanent Fire Protection: At the earliest feasible date in each area of the Project, complete installation of the permanent fire protection facility, including connected services, and place into operation and use. Instruct key personnel on use of facilities.

D. Barricades, Warning Signs and Lights: Comply with standards and code requirements for erection of structurally adequate barricades. Paint with appropriate colors, graphics and warning signs to inform personnel and the public of the hazard being protected against. Where appropriate and needed provide lighting, including flashing red or amber lights.

E. Enclosure Fence: When excavation begins, install an enclosure fence with lockable entrance gates. Locate where indicated, or enclose the entire site or the portion determined sufficient to accommodate construction operations. Install in a manner that will prevent people, dogs and other animals from easily entering the site, except by the entrance gates.

1. Provide open-mesh, chain-link fencing with posts set in compacted earth.

F. Security Enclosure and Lockup: Install substantial temporary enclosure of partially completed areas of construction. Provide locking entrances to prevent unauthorized entrance, vandalism, theft and similar violations of security.

G. Storage: Where materials and equipment must be stored, and are of value or attractive for theft, provide a secure lockup. Enforce discipline in connection with the installation and release of material to minimize the opportunity for theft and vandalism.

H. Environmental Protection: Provide protection, operate temporary facilities and conduct construction in ways and by methods that comply with environmental regulations, and minimize the possibility that air, waterways and subsoil might be contaminated or polluted, or that other undesirable effects might result. Avoid use of tools and equipment which produce harmful noise. Restrict use of noise making tools and equipment to hours that will minimize complaints from persons or firms near the site.

3.5 OPERATION, TERMINATION AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. Limit availability of temporary facilities to essential and intended uses to minimize waste and abuse.

B. Maintenance: Maintain facilities in good operating condition until removal. Protect from damage by freezing temperatures and similar elements.

C. Protection: Prevent water filled piping from freezing. Maintain markers for underground lines. Protect from damage during excavation operations.

D. Termination and Removal: Remove each temporary facility when the need has ended, or when replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with the temporary facility. Repair damaged Work, clean exposed surfaces and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of the Contractor. The Owner reserves the right to take possession of Project identification signs.

2. Remove temporary paving that is not intended for or acceptable for integration into permanent paving. Where the area is intended for landscape development, remove soil and aggregate fill that does not comply with requirements for fill or subsoil in the

area. Remove materials contaminated with road oil, asphalt or other petrochemical compounds, and other substances which might impair growth of plant materials or lawns. Repair or replace street paving, curbs and sidewalks at the temporary entrances and elsewhere when used during construction, as required by the governing authority, Architect and or the Owner.

3. At Substantial Completion, clean and renovate permanent facilities that have been used during the construction period, including but not limited to:
   a. Replace air filters.
   b. Replace significantly worn parts and parts that have been subject to unusual operating conditions.
   c. Replace lamps that are burned out or noticeably dimmed by substantial hours of use.

END OF SECTION

SECTION 01 56 39

TEMPORARY TREE AND PLANT PROTECTION

PART 1 – GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Work Included:
   1. Protecting of existing trees (Refer also to the drawings).
   2. Protecting of existing utilities.
   3. Protection fencing and planking
   4. Barricading existing trees

1.03 GENERAL PROVISIONS:

A. Trees and areas scheduled for work under this contract shall be identified in the field and indicated on plans and specifications where practical. Where this is not practical, work shall be directed in field by Owner's Representative.

B. Provision for access to the site for heavy equipment will be as directed by Owner's Representative. Equipment shall use prescribed temporary roadways and shall not be allowed in areas other than designated construction areas and designated roadways. Open areas which are altered or disturbed by equipment during the work shall be returned to pre-existing conditions at no additional cost to Owner.

C. Contractor shall protect root areas and crowns of trees from damage from construction operations and construction equipment. The Contractor shall repair such damage at no costs to Owner. Provide fences or other barricade where necessary for such protection.

D. Contractor shall modify exhaust pipes on construction equipment as needed to ensure that tree crowns are not damaged from exhaust heat from vertical exhaust pipes on top of construction crowns are not damaged from exhaust heat from vertical exhaust pipes on top of construction equipment.
   1. Equipment shall not contact tree trunks, limbs or foliage.
   2. Contractor shall be responsible for providing all tree work/repair to any damage to existing trees
   3. during the contract period. Damage to any existing trees shall be reported immediately to the
   4. Owner's Representative. Contractor shall submit to Owner's Representative a written program of
   5. corrective pruning and tree care to repair damage with name of qualified forester or arboriculturist
   6. for Owner's approval.

1.04 REFERENCE STANDARDS:

A. American National Standard for Tree Care Operations Arisi-A-300 Tree shrub and other woody plant maintenance-standard practices, 1995.

1.05 SUBMITTALS:

A. Furnish required copies of manufacturers literature, samples, certifications, or laboratory analytical data for the following items:
   1. Tree paint (manufacturer's literature)
   2. Urban forester or Arborist. (Resume with education, experience and credentials)

PART 2 - PRODUCTS

2.01 TRENCHING MACHINE

A. Shall be small non-riding track type trencher equal to Case 300.

2.02 SHARP SAND

A. ASTM C-33 for fine aggregate.

2.03 TREE PROTECTION FENCE POSTS

A. 7' long metal t-posts.

2.04 TREE PAINT

A. Thompson Tree Seal, Cabot Tree Paint or approved equal.

2.05 PRUNING TOOLS

A. Shall be of good quality and working condition, sharp, and of the approved type for arboricultural work.

2.06 WOOD FOR TREE PROTECTION PLANKING

A. Shall be construction grade Southern Yellow Pine.

B. Wood for planking: two (2") x four (4")

2.07 FENCING

A. Shall be orange plastic fencing 4' tall.

2.08 INSECTICIDE

A. Shall be "Astro Insecticide" as manufactured by FMC Corporation, Agricultural Products Group, 1735 Market Street, Philadelphia, PA 19103 (800.321.1362) or approved equal.

2.09 WATER

A. Suitable for irrigation.

PART 3 - EXECUTION

3.01 WORKMANSHIP

A. Work shall be performed by personnel trained and experienced in this work and shall be done under the direction of a qualified forester or arborist on Contractor's staff. Owner shall review and approve Contractor’s program for repair to damaged trees prior to the work being done.

B. Work shall be performed in conformance with recognized horticultural and arboricultural practices. Where job requirements require deviation from normal practice, obtain approval.

3.02 FENCES AND BARRICADES:

A. Fences and/or barricades shall be installed prior to the commencement of any site preparation work (cleaning, grubbing or grading) placed where shown on the drawings or as herein described. Tree fencing shall be maintained throughout the construction project in order to prevent the following:
   1. Soil compaction in the root zone area resulting from vehicular traffic or storage of
   2. Root zone disturbances due to grade changes (greater than 3” inches cut or fill), and /or trenching not reviewed or authorized by the Owner’s representative.
   3. Wounds to exposed roots, trunks, or limbs by mechanical equipment.
   4. Other activities detrimental to tress such as: chemical storage, cement truck wash-out and

B. In general, fences and barricades are intended to alert those working on the project that equipment and machinery are not to be stored or operated in the root zone. Where not shown, the fences shall be placed at the drip line. The exact location of fences shall be marked on site by Contractor and approved by Owner’s Representative prior to construction of barricades.

C. Posts shall be installed eight (8”) feet O.C. maximum, one and one half (1 1/2’) feet deep. Fence material pulled taut and secured with galvanized wire.

3.03 TREE PLANKING:

A. A. Where exceptions result in temporary fence being closer than four feet to a tree trunk, protect trunk with strapped-on wood planking to a vertical height of 8 feet (or to the limits of the lower branches).

B. B. Place two x fours with sides touching completely around the circumference of the tree. Secure at three points; top, middle and bottom with galvanized wire; twisted taut and stapled to wood planking.

3.04 TREE PROTECTION:

A. A. All trees to be preserved on the property shall be protected against damage during construction operations by fencing as shown; subject to the approval of the Owner’s Representative. The tree protection shall be installed prior to commencement of any site preparation work (clearing, grubbing or grading) and maintained in repair for the duration of the

construction work unless otherwise directed. No material shall be stored or construction operation shall be carried on within a distance as shown of any tree to be saved or within the tree protection fencing. Tree protection shall remain until all work is completed.

1. Place 6” of mulch to completely cover the area underneath the drip line of the trees in areas where foot traffic cannot be avoided.
2. Trees shall be watered once a week during periods of hot dry weather as directed by Owner’s representative to thoroughly saturate soil.
3. All grading within protected root zone areas shall be by hand or small equipment to prevent root damage resulting from soil compaction and rutting. Prior to grading relocate protective fencing to two feet behind grade change area.

B. Any damage done to existing tree crowns or root systems shall be repaired immediately by an approved tree surgeon at the Owner's direction. Roots exposed and/or damaged during demolition and/or grading operations shall be cut off cleanly inside the exposed or damaged area, the cut surfaces painted with an approved tree paint, and the topsoil and mulch placed over the exposed root area immediately. The Owner shall have his representative present on the site to observe these operations.

3.05 3.5 CONSTRUCTION EQUIPMENT:

A. Contractor shall modify construction equipment as necessary to ensure that exhaust systems Do not burn or scorch tree crowns or branches. Vertical exhaust pipes shall be turned 90 degrees.

B. Height of equipment and equipment operation heights shall be carefully monitored to ensure no damage to tree crowns or branching.

3.06 ADDITIONAL PROVISIONS:

A. No trash or warming fires shall be placed within twenty five (25') feet of the tree canopy.

B. No pedestrian traffic shall occur within the drip line of any tree without proper protection measures in place.

C. No soil shall be spread, under any tree within the drip line, unless otherwise designated or approved by owner’s representative.

D. Hand dig to preserve roots measuring one inch (1”) in diameter and larger, roots shall not be scuffed or damaged otherwise.

END OF SECTION

SECTION 01 57 13 – EROSION AND SEDIMENTATION CONTROL

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. THIS SECTION PERTAINS TO THE IMPLEMENTATION, MAINTENANCE INSPECTION, AND TERMINATION OF STORM WATER POLLUTION PREVENTION CONTROL MEASURES INCLUDING, BUT NOT LIMITED TO, EROSION AND SEDIMENT CONTROLS, STORM WATER MANAGEMENT PLANS, WASTE COLLECTION AND DISPOSAL, OFF-SITE VEHICLE TRACKING, AND OTHER APPROPRIATE PRACTICES SHOWN ON THE STORM WATER POLLUTION PREVENTION PLAN (SWPP PLAN), ON THE PLANS OR REQUIRED BY THE TEXAS POLLUTANT DISCHARGE ELIMINATION SYSTEM (TPDES) GENERAL PERMIT TXR150000.

B. THE CONTRACTOR IS RESPONSIBLE FOR MEETING ALL LOCAL, STATE AND FEDERAL REGULATIONS REGARDING EROSION CONTROL INCLUDING THE APPLICABLE PROVISIONS OF THE NATIONAL POLLUTION DISCHARGE ELIMINATION SYSTEM, PHASE II, REGULATIONS FROM THE CLEAN WATER ACT.

1.01 DEFINITIONS

A. COMMENCEMENT OF CONSTRUCTION ACTIVITIES: THE EXPOSURE OF SOIL RESULTING FROM ACTIVITIES SUCH AS CLEARING, GRADING, AND EXCAVATION ACTIVITIES, AS WELL AS OTHER CONSTRUCTION RELATED ACTIVITIES (E.G., STOCK PILING OF FILL MATERIAL, DEMOLITION).

B. LARGE CONSTRUCTION ACTIVITY: PROJECT THAT:
   1. DISTURBS FIVE ACRES OR MORE, OR
   2. DISTURBS LESS THAN FIVE ACRES BUT IS PART OF A LARGER COMMON PLAN OF DEVELOPMENT THAT WILL DISTURB FIVE ACRES OR MORE OF LAND.

C. SMALL CONSTRUCTION ACTIVITY: PROJECT THAT:
   1. DISTURBS ONE OR MORE ACRES BUT LESS THAN FIVE ACRES, OR
   2. DISTURBS LESS THAN ONE ACRE BUT IS PART OF A LARGER COMMON PLAN OF DEVELOPMENT THAT WILL ULTIMATELY DISTURB ONE OR MORE ACRES BUT LESS THAN FIVE ACRES.

D. TPDES OPERATOR:
   1. OPERATOR - THE PERSON OR PERSONS ASSOCIATED WITH A LARGE OR SMALL CONSTRUCTION ACTIVITY THAT IS EITHER A PRIMARY OR SECONDARY AS DEFINED BELOW:
      a. PRIMARY OPERATOR – THE PERSON OR PERSONS ASSOCIATED WITH A LARGE OR SMALL CONSTRUCTION ACTIVITY THAT MEETS EITHER OF THE FOLLOWING TWO CRITERIA:
         i. THE PERSONS HAVE OPERATIONAL CONTROL OVER CONSTRUCTION PLANS AND SPECIFICATIONS, INCLUDING THE ABILITY TO MAKE MODIFICATIONS TO THOSE PLANS AND SPECIFICATIONS; OR
         ii. THE PERSON OR PERSONS HAVE DAY-TO-DAY OPERATIONAL CONTROL OF THOSE ACTIVITIES AT A CONSTRUCTION SITE THAT ARE NECESSARY TO ENSURE COMPLIANCE WITH A STORM WATER

POLLUTION PREVENTION PLAN (SWPP PLAN) FOR THE SITE OR OTHER PERMIT CONDITIONS (E.G., THEY ARE AUTHORIZED TO DIRECT WORKERS AT A SITE TO CARRY OUT ACTIVITIES REQUIRED BY THE SWPP PLAN OR COMPLY WITH OTHER PERMIT CONDITIONS).

b. SECONDARY OPERATOR – THE PERSON WHOSE OPERATIONAL CONTROL IS LIMITED TO THE EMPLOYMENT OF OTHER OPERATORS OR TO THE ABILITY TO APPROVE OR DISAPPROVE CHANGES TO PLANS AND SPECIFICATIONS. A SECONDARY OPERATOR IS ALSO DEFINED AS A PRIMARY OPERATOR IF THERE ARE NO OTHER OPERATORS AT THE CONSTRUCTION SITE.

E. BEST MANAGEMENT PRACTICES (BMP'S): PHYSICAL FACILITIES SCHEDULES OF ACTIVITIES, PROHIBITION OF PRACTICES, MAINTENANCE PROCEDURES, AND OTHER MANAGEMENT PRACTICES, WHEN PROPERLY DESIGNED, INSTALLED, AND MAINTAINED, WILL BE EFFECTIVE TO PREVENT OR REDUCE THE DISCHARGE OF POLLUTION ASSOCIATED WITH CONSTRUCTION ACTIVITIES. BMP'S ALSO INCLUDE TREATMENT REQUIREMENTS, OPERATING PROCEDURES, AND PRACTICES TO CONTROL SITE RUNOFF, SPILLAGE OR LEAKS, SLUDGE OR WASTE DISPOSAL, OR DRAINAGE FROM RAW MATERIAL STORAGE.

F. BLOCK SODDING: SODDING FOR EROSION CONTROL AND FOR FINAL STABILIZATION SHALL CONSIST OF PROVIDING AND PLANTING BERMUDA GRASS, SAN AUGUSTINE GRASS, OR OTHER ACCEPTABLE SOD ALONG OR ACROSS SUCH AREAS AS ARE DESIGNATED ON THE DRAWINGS AND IN ACCORDANCE WITH THE SPECIFICATION REQUIREMENTS HEREIN OUTLINED.

G. HYDROMULCH SEEDING: SEEDING, FOLLOWED BY THE APPLICATION OF A MULCH EROSION CONTROL BLANKET SHALL CONSIST OF PREPARING THE GROUND, SOWING OF SEEDS, APPLICATION OF A FERTILIZER, AND STABILIZATION WITH MULCH CONSISTING OF A BIODEGRADABLE FIBER ALONG AND ACROSS SUCH AREAS AS ARE DESIGNATED ON THE PLANS AND IN ACCORDANCE WITH THESE SPECIFICATIONS

H. SILT FENCE: THE REINFORCED FILTER FABRIC BARRIER CONSISTS OF GEOTEXTILE FABRIC SUPPORTED BY A NET REINFORCED FENCE STRETCHED ACROSS AND ATTACHED TO SUPPORTING POSTS OR FRAME AND ENTRENCHED. WORK SHALL BE PERFORMED DURING CONSTRUCTION OPERATIONS AND PRIOR TO FINAL STABILIZATION TO CONTROL EROSION AND SEDIMENTATION AS DESIGNATED ON THE PLANS AND IN ACCORDANCE WITH THESE SPECIFICATIONS.

I. INLET PROTECTION BARRIERS: THE INLET PROTECTION BARRIER CONSISTS OF A GEOTEXTILE FABRIC (FILTER FABRIC) SUPPORTED BY A NET REINFORCED FENCE STRUCTURE AND CONSTRUCTED AROUND A STORM DRAIN INLET, CATCH BASIN, OR CULVERT. AN ALTERNATIVE DESIGN OF THE INLET PROTECTION BARRIER, AS APPROVED BY THE ENGINEER, CONSISTS OF FIBER ROLLS PLACED AROUND A FRAME, STAKED IN PLACE (OR WEIGHTED DOWN WITH CLEAN GRAVEL BAGS), AND CONSTRUCTED AROUND A STORM DRAIN INLET, CATCH BASIN OR CULVERT. THIS WORK SHALL BE PERFORMED DURING CONSTRUCTION OPERATIONS AND PRIOR TO FINAL STABILIZATION TO CONTROL EROSION AND SEDIMENTATION. AS DESIGNATED ON THE PLANS AND IN ACCORDANCE WITH THESE SPECIFICATIONS.

J. SEDIMENT BASINS: A SEDIMENT BASIN IS A TEMPORARY BASIN OR DAM CONSTRUCTED ACROSS A WATERWAY OR EXCAVATED LOCATION TO INTERCEPT SEDIMENT-LADEN RUNOFF AND TO TRAP AND RETAIN THE SEDIMENT. A SEDIMENT BASIN IS USUALLY INSTALLED AT POINTS OF DISCHARGE FROM DRAINAGE AREAS GREATER THAN 5 ACRES. WORK SHALL BE PERFORMED DURING CONSTRUCTION OPERATIONS AND PRIOR TO FINAL STABILIZATION TO CONTROL EROSION AND

SEDIMENTATION AS DESIGNATED ON THE PLANS AND IN ACCORDANCE WITH THESE SPECIFICATIONS.

K. STABILIZED CONSTRUCTION ACCESS: THIS WORK SHALL CONSIST OF THE INSTALLATION OF TEMPORARY EROSION PROTECTION AND SEDIMENT CONTROL STABILIZED CONSTRUCTION ACCESS - TYPE I, ROCK, UTILIZED DURING CONSTRUCTION OPERATIONS AND PRIOR TO FINAL STABILIZATION, IN ACCORDANCE WITH THESE SPECIFICATIONS AND CONSTRUCTION DRAWINGS.

L. ROCK FILTER DAMS: ROCK FILTER DAMS ARE TEMPORARY BERMS CONSTRUCTED OF STONE TO INTERCEPT AND SLOW STORM WATER RUNOFF TO RETAIN SEDIMENT ON THE CONSTRUCTION SITE.

1. DEPENDING UPON THE TYPE OF ROCK FILTER DAM SPECIFIED IN THE CONSTRUCTION PLANS AS TYPE 1, 2, 3, OR 4, THE AGGREGATE FILL MAY BE UNWRAPPED, WRAPPED IN TWISTED HEXAGONAL WIRE MESH, OR CONFINED IN A GABION WIRE BASKET. APPLICATIONS OF ROCK FILTER DAMS ARE AS FOLLOWS:
   a. TYPE 1 DAMS MAY BE USED AT TOE OF SLOPES, AROUND INLETS, IN SMALL DITCHES, AND AT DIKE OR SWALE OUTLETS. TYPE 1 DAMS ARE RECOMMENDED FOR EROSION AND SEDIMENT CONTROL FROM A DRAINAGE AREA OF 5 ACRES OR LESS.
   b. TYPE 2 DAMS MAY BE USED IN DITCHES AND AT DIKE OR SWALE OUTLETS.
   c. TYPE 3 DAMS MAY BE USED IN STREAM FLOW.
   d. TYPE 4 SACK GABIONS MAY BE USED IN DITCHES AND SMALLER CHANNELS TO FORM AN EROSION AND SEDIMENT CONTROL DAM

1.02 REGULATORY REQUIREMENTS

A. CONTRACTOR SHALL COMPLY WITH ALL CURRENT, APPLICABLE CODES AND REGULATIONS.

B. CONTRACTOR SHALL COMPLY WITH ALL STANDARD SPECIFICATIONS AND DETAILS OF AUTHORITIES HAVING JURISDICTION FOR WORK IN THE RIGHT-OF-WAY OR EASEMENTS.

C. PRIOR TO COMMENCEMENT OF WORK, THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING, AT THE CONTRACTORS OWN EXPENSE, ALL CONSTRUCTION PERMITS NECESSARY TO COMPLETE THE PROJECT ACCORDING TO THE PLANS AND SPECIFICATIONS.

1.03 SUBMITTALS

A. SUBMIT A COPY OF THE STORM WATER POLLUTION PREVENTION PLAN (SWPP PLAN).

B. SUBMIT A COPY OF THE NOTICE OF INTENT (NOI).

C. SUBMIT A COPY OF THE NOTICE OF TERMINATION (NOT).

D. SUBMIT MANUFACTURER'S LITERATURE FOR PRODUCT SPECIFICATIONS AND INSTALLATION INSTRUCTIONS.

E. SUBMIT MANUFACTURER’S CATALOG SHEETS AND OTHER PRODUCT DATA ON GEOTEXTILE OR FILTER FABRICS, OUTLET PIPE, PERFORATED RISER AND CONNECTORS.

F. SUBMIT PROPOSED METHODS, EQUIPMENT, MATERIALS, AND SEQUENCE OF OPERATIONS FOR STORM-WATER POLLUTION PREVENTION STRUCTURES.

G. SUBMIT SHOP DRAWINGS FOR INLET BASKETS.

1.04 QUALITY ASSURANCE

A. CODES AND STANDARDS: PERFORM EARTHWORK COMPLYING WITH REQUIREMENTS OF AUTHORITIES HAVING JURISDICTION.

PART 2 – PRODUCTS

2.01 SUSTAINABLE MATERIALS

A. CONTRACTOR SHALL STRIVE TO UTILIZE SUSTAINABLE MATERIALS, WHICH INCLUDE RAPIDLY RENEWABLE MATERIALS, REGIONAL MATERIALS, REGIONALLY MANUFACTURED MATERIALS, REGIONALLY EXTRACTED MATERIALS, RECYCLED CONTENTS.

2.02 GRASS

A. MATERIALS FOR EROSION CONTROL SEEDING SHALL CONFORM TO THE REQUIREMENTS OF 32 92 13 – HYDROMULCH SEEDING.

B. MATERIALS FOR EROSION CONTROL SEEDING SHALL CONFORM TO THE REQUIREMENTS OF 32 92 00 – TURF AND GRASSES.

2.03 BANK SAND BACKFILL

A. DURABLE BANK RUN SAND CLASSIFIED AS SP, SW, OR SM BY UNIFIED SOIL CLASSIFICATION SYSTEM (ASTM D 2487) MEETING FOLLOWING REQUIREMENTS:

1. LESS THAN 15 PERCENT PASSING NUMBER 200 SIEVE WHEN TESTED IN ACCORDANCE WITH ASTM D 1140. AMOUNT OF CLAY LUMPS OR BALLS MAY NOT EXCEED 2 PERCENT.
2. MATERIAL PASSING NUMBER 40 SIEVE SHALL MEET THE FOLLOWING REQUIREMENTS WHEN TESTED IN ACCORDANCE WITH ASTM D 4318: PI NOT EXCEEDING 7.

2.04 WATER

A. WATER USED FOR MIXING OR CURING SHALL BE REASONABLY CLEAN AND FREE OF OIL, SALT, ACID, ALKALI, SUGAR, VEGETABLE MATTER OR OTHER SUBSTANCES INJURIOUS TO THE FINISHED PRODUCT.

B. WATER SOURCES OTHER THAN THE LOCAL MUNICIPAL DOMESTIC WATER SUPPLY MUST BE APPROVED BY THE OWNER'S REPRESENTATIVE.

C. IF ONSITE RECLAIMED WATER SOURCES ARE USED, TANKS AND APPURTENANCES MUST BE CLEARLY MARKED WITH THE WORDS "NON-POTABLE" WATER.

2.05 STABILIZED CONSTRUCTION ACCESS

A. PROVIDE CRUSHED AGGREGATE FOR LONG- AND SHORT-TERM CONSTRUCTION EXITS. FURNISH AGGREGATES THAT ARE CLEAN, HARD, DURABLE, AND FREE FROM ADHERENT COATINGS SUCH AS SALT, ALKALI, DIRT, CLAY, LOAM, SHALE, SOFT OR FLAKY MATERIALS, AND ORGANIC AND INJURIOUS MATTER. USE 4 TO 8-INCHES AGGREGATE FOR TYPE 1. USE 2 TO 4-INCHES AGGREGATE FOR TYPE 3.

2.06 SILT FENCE

A. WOVEN OR NONWOVEN GEOTEXTILE FILTER FABRIC MADE OF POLYPROPYLENE, POLYETHYLENE, ETHYLENE, OR POLYAMIDE MATERIAL, IN CONTINUOUS ROLLS OF LONGEST PRACTICAL LENGTH.

B. GRAB STRENGTH: 100 PSI IN ANY PRINCIPAL DIRECTION (ASTM D-4632), CBR PUNCTURE STRENGTH >200 PSI (ASTM D-3786), AND EQUIVALENT OPENING SIZE BETWEEN 50 AND 140.

C. FURNISH ULTRAVIOLET INHIBITORS AND STABILIZERS FOR MINIMUM 6 MONTHS OF EXPECTED USABLE CONSTRUCTION LIFE AT TEMPERATURE RANGE OF 0 DEGREES F TO 120 DEGREES F.

D. PROVIDE NET REINFORCEMENT OF AT LEAST 12.5 GAUGE (SWG) GALVANIZED WELDED WIRE MESH, WITH A MAXIMUM OPENING SIZE OF 2 × 4 IN., AT LEAST 24 IN. WIDE, UNLESS OTHERWISE SHOWN ON THE PLANS.

E. TENCATE GEOSYNTHETICS, CONTECH ENGINEERED SOLUTIONS, OR EQUIVALENT.

2.07 INLET PROTECTION BARRIERS

A. GEOTEXTILE SHALL BE PER THE REQUIREMENTS OF PARAGRAPH 2.6 OF THIS SECTION.

B. PROVIDE NET REINFORCEMENT OF AT LEAST 12.5 GAUGE (SWG) GALVANIZED WELDED WIRE MESH, WITH A MAXIMUM OPENING SIZE OF 2 × 4 IN., AT LEAST 24 IN. WIDE, UNLESS OTHERWISE SHOWN ON THE PLANS.

C. BARRIER STAKES: NOMINAL 2 BY 2 INCH MOISTURE-RESISTANT TREATED WOOD OR STEEL POSTS (MIN. OF 1.25 LBS. PER LINEAR FOOT AND BRINELL HARDNESS GREATER THAN 140) WITH SAFETY CAPS ON TOP; LENGTH AS REQUIRED FOR MINIMUM 12 INCH BURY AND FULL HEIGHT OF FILTER FABRIC.

2.08 DROP INLET BASKET

A. PROVIDE STEEL FRAME MEMBERS IN ACCORDANCE WITH ASTM A36.

B. CONSTRUCT TOP FRAME OF BASKET WITH TWO SHORT SIDES OF 2 INCH BY 2 INCH AND SINGLE LONG SIDE OF 1 INCH BY 1 INCH, 1/8 INCH ANGLE IRON. CONSTRUCT BASKET HANGERS OF 2 INCH BY 1/4 INCH IRON BARS. CONSTRUCT BOTTOM FRAME OF 1 INCH BY 1/4 INCH IRON BAR OR 1/4 INCH PLATE WITH CENTER 3 INCHES REMOVED. USE MINIMUM 1/4 INCH DIAMETER IRON RODS OR EQUIVALENT FOR SIDES OF INLET BASKET.

C. WELD AMINIMUM OF 14 RODS IN PLACE BETWEEN TOP FRAME/BASKET HANGER AND BOTTOM FRAME. EXACT DIMENSIONS FOR TOP FRAME AND INSERT BASKET WILL BE DETERMINED BASED ON DIMENSIONS OF TYPE OF INLET BEING PROTECTED.

2.09 SANDBAGS

A. PROVIDE WOVEN MATERIAL MADE OF POLYPROPYLENE, POLYETHYLENE, OR POLYAMIDE MATERIAL.

1. MINIMUM UNIT WEIGHT OF FOUR OUNCES PER SQUARE YARD.
2. MINIMUM GRAB STRENGTH OF 100 LBS IN ANY PRINCIPAL DIRECTION (ASTM D4632).
3. MULLEN BURST STRENGTH EXCEEDING 300 LBS (ASTM D4833).
4. ULTRAVIOLET STABILITY EXCEEDING 70 PERCENT. AFTER 500 HOURS OF EXPOSURE (ASTM 4355).
5. SIZE: LENGTH: 18 TO 24 INCHES. WIDTH: 12 TO 18 INCHES. THICKNESS: 6 TO 8 INCHES. WEIGHT: APPROXIMATELY 40 TO 50 POUNDS NOT TO EXCEED 75 POUNDS.

2.10 BAGGED GRAVEL BARRIER

A. PROVIDE A BAGGED GRAVEL BARRIER.

1. MINIMUM UNIT WEIGHT OF FOUR OUNCES PER SQUARE YARD.
2. MINIMUM GRAB STRENGTH OF 100 LBS IN ANY PRINCIPAL DIRECTION (ASTM D4632).
3. MULLEN BURST STRENGTH EXCEEDING 300 LBS (ASTM D4833).
4. ULTRAVIOLET STABILITY EXCEEDING 70 PERCENT. AFTER 500 HOURS OF EXPOSURE (ASTM 4355).
5. SIZE: LENGTH:18 TO 24 INCHES. WIDTH: 12 TO 18 INCHES. THICKNESS: 6 TO 8 INCHES. WEIGHT: APPROXIMATELY 40 TO 50 POUNDS NOT TO EXCEED 75 POUNDS.

2.11 ROCK FILTER DAM

A. MATERIALS. GEOTEXTILE FABRIC SHALL CONSIST OF A WOVEN MONOFILAMENT OR SPUNBOND NONWOVEN FIBERS CONSISTING OF LONG-CHAIN SYNTHETIC POLYMERS COMPOSED OF AT LEAST 95 PERCENT BY WEIGHT OF POLYOLEFINS. GEOTEXTILE FABRIC SHALL EQUAL OR EXCEED THE FOLLOWING AVERAGE ROLL VALUES OR AS DIRECTED BY THE ENGINEER:

1. MINIMUM AVERAGE ROLL VALUE.
   a. ELONGATION ³ 50 PERCENT.
   b. GRAB STRENGTH – 200 POUNDS.
   c. PUNCTURE STRENGTH – 75 POUNDS.
   d. UV STABILITY (RETAINED STRENGTH) – 50 PERCENT AFTER 500 HOURS OF EXPOSURE.
2. MAXIMUM AVERAGE ROLL VALUE.
   a. APPARENT OPENING SIZE (AOS) – 0.6 MM/#30 US SIEVE.

B. GEOTEXTILE FABRIC SHALL BE RESISTANT TO COMMONLY ENCOUNTERED SOIL CHEMICALS, MILDEW, ROT, INSECTS, AND DETERIORATION RESULTING FROM EXPOSURE TO SUNLIGHT OR HEAT. GEOTEXTILE FABRIC SHALL PROVIDE AN EXPECTED USEABLE LIFE COMPARABLE TO THE ANTICIPATED CONSTRUCTION PERIOD.

C. AGGREGATE FOR THE ROCK FILTER DAMS SHALL CONSIST OF CRUSHED STONE. AGGREGATE PARTICLES SHALL BE COMPOSED OF CLEAN, HARD, DURABLE MATERIALS FREE FROM ADHERENT COATINGS, SALT, ALKALI, DIRT, CLAY, LOAM,

SHALE, SOFT OR FLAKY MATERIALS OR ORGANIC AND INJURIOUS MATTER. AGGREGATE SHALL BE CUBIC OR ROUNDED FORM, NOT ELONGATED, FLAT, SHAPES. SPALLS, FRAGMENTS, AND CHIPS SHALL NOT EXCEED 5 PERCENT BY WEIGHT. CRUSHED CONCRETE MAY BE SUBSTITUTED FOR THE CRUSHED STONE. AGGREGATE SIZE SHALL DEPEND UPON THE TYPE OF ROCK FILTER DAM SPECIFIED IN THE CONSTRUCTION PLANS. AGGREGATE SIZE BASED ON TYPE OF ROCK FILTER DAM IS AS FOLLOWS:

1. TYPE 1:
   a. USED AT THE TOE OF SLOPES, AROUND INLETS, IN SMALL DITCHES, AND AT DIKE OR SWALE OUTLETS FOR A DRAINAGE AREA OF 5 ACRES OR LESS.
   b. 3 INCHES TO 5 INCHES, OPEN-GRADED.
2. TYPE 2:
   a. USED IN DITCHES AND AT DIKE OR SWALE OUTLETS.
   b. 3 INCHES TO 5 INCHES, OPEN-GRADED.
3. TYPE 3:
   a. USED IN STREAM FLOW.
   b. 4 INCHES TO 8 INCHES, OPEN-GRADED.
4. TYPE 4:
   a. SACK GABIONS MAY BE USED IN DITCHES AND SMALLER CHANNELS TO FORM AN EROSION AND SEDIMENT CONTROL DAM.
   b. 3 INCHES TO 5 INCHES, OPEN-GRADED.

D. MESH IS REQUIRED FOR REINFORCED TYPE ROCK FILTER DAMS. MESH SHALL BE 20 GAUGE GALVANIZED DOUBLE TWISTED HEXAGONAL WIRE MESH WITH 1-INCH DIAMETER HEXAGONAL OPENINGS. MESH WIRE SHALL BE ZINC COATED PRIOR TO BEING DOUBLE TWISTED. REINFORCING SPIRAL BINDERS, LACING WIRE, AND STIFFENERS SHALL BE MADE OF WIRE HAVING THE SAME COATING MATERIAL AND SAME WIRE SIZE AS THE WIRE MESH. GABION WIRE BASKETS SHALL EQUAL OR EXCEED THE REQUIREMENTS OF THE WIRE MESH.

PART 3 – EXECUTION

3.01 PREPERATION

A. PROTECT AND MAINTAIN BENCHMARKS AND SURVEY CONTROL POINTS FROM DISTURBANCE DURING CONSTRUCTION.

B. PROTECT EXISTING SITE IMPROVEMENTS TO REMAIN FROM DAMAGE DURING CONSTRUCTION. RESTORE DAMAGED IMPROVEMENTS TO THEIR ORIGINAL CONDITION, AS ACCEPTABLE TO OWNER.

C. PLAN WORK TO MINIMIZE THE TIME AREAS ARE TO BE EXPOSED WITHOUT VEGETATIVE COVER.

D. PREPARE A SWPP PLAN FOLLOWING THE REQUIREMENTS OF THE CONSTRUCTION GENERAL PERMIT AND THE REQUIREMENTS OF THE LOCAL MS4. IF CONFLICTS EXIST BETWEEN THE CONSTRUCTION GENERAL PERMIT AND THE REQUIREMENTS OF THE MS4, THE MORE STRINGENT REQUIREMENTS WILL APPLY.

   1. UPDATE OR REVISE THE SWPPP AS NEEDED DURING THE CONSTRUCTION FOLLOWING THE REQUIREMENTS OF THE CONSTRUCTION GENERAL PERMIT.

2. SUBMIT THE SWPPP AND ANY UPDATES OR REVISIONS TO THE OWNER'S REPRESENTATIVE FOR REVIEW AND ADDRESS COMMENTS PRIOR TO COMMENCING, OR CONTINUING, CONSTRUCTION ACTIVITIES.

E. NOTICE OF INTENT FOR LARGE CONSTRUCTION ACTIVITY
1. FILL OUT, SIGN, AND DATE TCEQ NOTICE OF INTENT (NOI) FORM FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY UNDER THE TPDES CONSTRUCTION GENERAL PERMIT (TXR 150000) FOR THE CONTRACTOR AND OWNER.
2. TRANSMIT THE SIGNED CONTRACTOR'S AND OWNER'S COPY OF THE NOI, ALONG THE REQUIRED FEES TO THE TCEQ. PROVIDE A COPY OF THE DOCUMENTS TO THE OWNER'S REPRESENTATIVE.
3. SUBMISSION OF THE NOTICE OF INTENT FORM BY THE CONTRACTOR AND OWNER IS REQUIRED A MINIMUM OF SEVEN DAYS BEFORE COMMENCEMENT OF CONSTRUCTION ACTIVITIES.

F. CONSTRUCTION SITE NOTICE FOR SMALL CONSTRUCTION ACTIVITY
1. FILL OUT, SIGN, AND DATE THE CONSTRUCTION SITE NOTICE, CONTAINED IN THE TPDES GENERAL PERMIT TXR 150000.
2. TRANSMIT THE SIGNED CONSTRUCTION SITE NOTICE TO OWNER'S REPRESENTATIVE AT LEAST SEVEN DAYS PRIOR TO COMMENCEMENT OF CONSTRUCTION ACTIVITY.

G. CERTIFICATION REQUIREMENTS
1. COMPLETE THE LARGE CONSTRUCTION SITE "PRIMARY OPERATOR" NOTICE.
2. CONTRACTOR SHALL COMPLETE THE LARGE CONSTRUCTION SITE "SECONDARY OPERATOR" NOTICE AND PROVIDE IT TO THE OWNER AND SUBCONTRACTOR'S FOR SIGNATURE.
3. SUBMIT PROPERLY COMPLETED CERTIFICATION FORMS TO THE OWNER'S REPRESENTATIVE FOR REVIEW BEFORE BEGINNING CONSTRUCTION OPERATIONS.
4. CONDUCT INSPECTIONS IN ACCORDANCE WITH TCEQ REQUIREMENTS. USE THE EPA NPDES CONSTRUCTION INSPECTION FORM TO RECORD MAINTENANCE INSPECTIONS AND REPAIRS.

H. POST THE FOLLOWING NOTICES FROM EFFECTIVE DATE OF THE SWPP PLAN UNTIL DATE OF FINAL SITE STABILIZATION AS DEFINED IN THE CONSTRUCTION GENERAL PERMIT:
1. POST THE TPDES PERMIT NUMBER FOR LARGE CONSTRUCTION ACTIVITY, WITH A SIGNED TCEQ CONSTRUCTION SITE NOTICE FOR LARGE OR SMALL CONSTRUCTION ACTIVITY. SIGNED COPIES OF THE CONTRACTOR'S AND OWNER'S NOI, AS APPLICABLE, MUST ALSO BE POSTED.
2. POST NOTICES NEAR THE MAIN ENTRANCE OF THE CONSTRUCTION SITE IN A PROMINENT PLACE WHERE IT IS SAFELY AND READILY AVAILABLE FOR VIEWING BY GENERAL PUBLIC, LOCAL, STATE, AND FEDERAL AUTHORITIES. POST NAME AND TELEPHONE NUMBER OF CONTRACTOR'S LOCAL CONTACT PERSON, BRIEF PROJECT DESCRIPTION AND LOCATION OF THE SWPP PLAN.
    a. IF POSTING NEAR A MAIN ENTRANCE IS NOT FEASIBLE DUE TO SAFETY CONCERNS, COORDINATE POSTING OF NOTICE WITH THE OWNER'S REPRESENTATIVE TO CONFORM TO REQUIREMENTS OF THE CONSTRUCTION GENERAL PERMIT.
    b. IF PROJECT IS A LINEAR CONSTRUCTION PROJECT (E.G.: ROAD, UTILITIES, ETC.), POST NOTICE IN A PUBLICLY ACCESSIBLE LOCATION NEAR ACTIVE CONSTRUCTION. MOVE NOTICE AS NECESSARY.

3. POST A NOTICE TO EQUIPMENT AND VEHICLES OPERATORS, INSTRUCTING THEM TO STOP, CHECK, AND CLEAN TIRES OF DEBRIS AND MUD BEFORE DRIVING ONTO TRAFFIC LANES. POST AT EACH STABILIZED CONSTRUCTION ACCESS AREA.
4. POST A NOTICE OF WASTE DISPOSAL PROCEDURES IN A READILY VISIBLE LOCATION ON SITE.

I. KEEP A COPY OF THIS DOCUMENT AND THE SWPP PLAN IN A READILY ACCESSIBLE LOCATION AT THE CONSTRUCTION SITE FROM COMMENCEMENT OF CONSTRUCTION ACTIVITY UNTIL SUBMISSION OF THE NOTICE OF TERMINATION (NOT) FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY UNDER TPDES CONSTRUCTION GENERAL PERMIT (TXR 150000). CONTRACTORS WITH DAY-TO-DAY OPERATIONAL CONTROL OVER SWPP PLAN IMPLEMENTATION SHALL HAVE A COPY OF THE SWPP PLAN AVAILABLE AT A CENTRAL LOCATION, ON-SITE, FOR THE USE OF ALL OPERATORS AND THOSE IDENTIFIED AS HAVING RESPONSIBILITIES UNDER THE SWPP PLAN. UPON SUBMISSION OF THE NOT, SUBMIT ALL REQUIRED FORMS AND A COPY OF THE SWPP PLAN WITH ALL REVISIONS TO THE OWNER'S REPRESENTATIVE.

3.02 GENERAL

A. USE ALL MEANS NECESSARY TO CONTROL DUST ON OR NEAR THE SITE RESULTING FROM THE PERFORMANCE OF THE WORK. THOROUGHLY MOISTEN ALL SURFACES TO PREVENT DUST BEING A NUISANCE TO THE PUBLIC, ADJACENT USES, AND CONCURRENT WORK ON SITE. MOISTURE LEVEL DURING COMPACTION OPERATIONS SHALL NOT EXCEED THAT AMOUNT AS SPECIFIED BY GEOTECHNICAL ENGINEER.

B. INSTALL EROSION CONTROL SYSTEMS AT THE SITE'S BOUNDARY AT LOCATIONS WHERE STORMWATER RUNOFF WILL LEAVE THE SITE PRIOR TO STARTING ANY CLEARING, STRIPPING, OR EARTHWORK OPERATIONS.

C. PROPERLY DISPOSE OF SOLID WASTE, PAINTS, SOLVENTS, CLEANING COMPOUNDS, ETC.

D. STORE CONSTRUCTION MATERIALS IN DESIGNATED AREAS AWAY FROM DRAINAGEWAYS AND LOW AREAS.

E. CONSTRUCT CONTAINMENT BERMS AND UTILIZE DRIP PANS AT FUEL AND LIQUID STORAGE TANKS AND CONTAINERS.

3.03 INSTALLATION OF EROSION CONTROL DEVICES

A. INSTALL EROSION CONTROL DEVICES TO PROTECT ADJACENT AND DOWNSTREAM PROPERTIES FROM DAMAGE AND POLLUTION RESULTING FROM EROSION CAUSED BY THE WORK OF THIS CONTRACT. IMPLEMENT EROSION CONTROL MEASURES INDICATED ON DRAWINGS AND ADDITIONAL EROSION CONTROL MEASURES NECESSARY TO PREVENT DAMAGE TO ADJACENT AND DOWNSTREAM PROPERTIES.

B. INSTALL SILT FENCE LOCATED ALONG PERIMETER OF SITE OR GRADING LIMITS IMMEDIATELY FOLLOWING SITE CLEARING OPERATIONS SPECIFIED UNDER DIVISION 31 SECTION 31 11 00 – CLEARING AND GRUBBING.

1. INSTALL SILT FENCE FABRIC FROM A CONTINUOUS ROLL FOR THE LENGTH OF THE SILT FENCE WHENEVER POSSIBLE TO MINIMIZE THE NUMBER OF JOINTS. CREATE JOINTS IN FABRIC BY SECURELY FASTENING FABRIC AT THE SUPPORT POST WITH OVERLAP EXTENDING TO THE NEXT POST.
2. DRIVE SUPPORT POST INTO GROUND NOT LESS THAN 18 INCHES.

3. EXCAVATE A 4-INCH WIDE BY 4-INCH DEEP TRENCH ON UP-SLOPE SIDE OF SILT FENCE.
   a. LINE TRENCH WITH SILT FENCE FABRIC MATERIAL.
   b. BACKFILL TRENCH WITH SOIL OR GRAVEL.

C. INSTALL INLET PROTECTION BARRIERS AT ALL INLETS.

D. STABILIZED CONSTRUCTION ACCESS

1. PROVIDE STABILIZED CONSTRUCTION ROADS AND ACCESS AT CONSTRUCTION, STAGING, PARKING, STORAGE, AND DISPOSAL AREAS TO KEEP STREET CLEAN OF MUD CARRIED BY CONSTRUCTION VEHICLES AND EQUIPMENT. CONSTRUCT EROSION AND SEDIMENT CONTROLS IN ACCORDANCE WITH DRAWINGS, SPECIFICATION AND ANY REQUIREMENTS OF THE AUTHORITY HAVING JURISDICTION.
2. PLACE THE EXIT OVER A FOUNDATION COURSE, IF NECESSARY. GRADE THE FOUNDATION COURSE OR COMPACTED SUBGRADE TO DIRECT RUNOFF FROM THE CONSTRUCTION EXITS TO A SEDIMENT TRAP.
3. CONSTRUCT EXITS WITH A WIDTH OF AT LEAST 14 FT. FOR ONE-WAY AND 20 FT. FOR TWO-WAY TRAFFIC FOR THE FULL WIDTH OF THE EXIT, OR AS REQUIRED.
4. CONSTRUCT TO A DEPTH OF AT LEAST 8 IN. USING CRUSHED AGGREGATE AS SHOWN ON THE PLANS OR AS DIRECTED.

3.04 STORAGE OF SOIL MATERIALS

A. STOCKPILE BORROW MATERIALS AND SATISFACTORY EXCAVATED SOIL MATERIALS. STOCKPILE SOIL MATERIALS WITHOUT INTERMIXING. PLACE, GRADE, AND SHAPE STOCKPILES TO DRAIN SURFACE WATER. COVER TO PREVENT WINDBLOWN DUST.

B. STOCKPILE SOIL MATERIALS AWAY FROM EDGE OF EXCAVATIONS. DO NOT STORE WITHIN DRIP LINE OF REMAINING TREES.

C. STOCKPILE TOPSOIL MAY NOT EXCEED 6 FEET IN HEIGHT.

3.05 FIELD QUALITY CONTROL

A. TESTING SHALL BE THE RESPONSIBILITY OF THE OWNER AND COSTS OF INITIAL TESTING SHALL BE PAID BY OWNER. COST OF ALL SUBSEQUENT TESTING NECESSARY DUE TO NON-COMPLIANCE WITH SPECIFICATIONS SHALL BE PAID BY CONTRACTOR.

B. DENSITY TEST:

1. FREQUENCY AND SCOPE OF TESTING SHALL BE ESTABLISHED BY GEOTECHNICAL ENGINEER, AND AS REQUIRED BY LOCAL JURISDICTIONAL AUTHORITY. IF GEOTECHNICAL ENGINEER HAS NOT ESTABLISHED A FREQUENCY OF TESTING IN THE GEOTECHNICAL REPORT, TESTING SHALL BE AT EVERY 100 LINEAR FOOT OF TRENCH AT A MINIMUM OF ONE PER LIFT AND A MINIMUM OF ONE PER DAY.
2. TESTS SHALL BE PERFORMED IN ACCORDANCE WITH THE REFERENCED STANDARDS.
3. LABORATORY TESTS FOR MOISTURE DENSITY RELATIONS SHALL BE DETERMINED IN ACCORDANCE WITH ASTM D 1557. A MINIMUM OF ONE TEST SHALL BE PERFORMED FOR EACH MAJOR SOILS TYPE. IN ADDITION, SUFFICIENT NUMBER OF RETESTS OR CHECK POINTS SHALL BE PERFORMED TO EVALUATE ACCURACY OF MAXIMUM DENSITY VALUES BEING USED.

4. FIELD IN-PLACE DENSITY SHALL BE DETERMINED IN ACCORDANCE WITH ASTM TEST METHODS D 1556 OR D 2922, AND THE MOISTURE-DENSITY RELATIONS SHALL BE DETERMINED IN ACCORDANCE WITH ASTM TEST METHOD D 1557.
5. REOPEN IMPROPERLY COMPACTED TRENCHES TO DEPTH DIRECTED, THEN REFILL AND COMPACT TO THE SPECIFIED DENSITY AT NO ADDITIONAL COST TO OWNER

3.06 DRAINAGE CONTROLS

A. PROVIDE ALL NECESSARY TEMPORARY APPARATUS, PUMPS, CURBS OR DITCHES AS REQUIRED TO DIVERT OR CONVEY WATER FROM ANY SOURCE AWAY FROM THE WORK. DO NOT ALLOW WATER FROM ANY SOURCE TO ACCUMULATE WITHIN OR DAMAGE TRENCHES.

END OF SECTION 31 22 13

SECTION 01 60 00 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements governing the Contractor's selection of products for use in the Project.

B. Standards: Refer to Section "Reference Standards and Definitions" for applicability of industry standards to products specified.

1. Administrative procedures for handling requests for substitutions made after award of the Contract are included under Section "Product Substitutions."
2. Since the Owner is a governmental entity or an organization which may be exempted from the sales and use taxes on certain tangible personal property, the Contractor shall be responsible for:
    a. Determining whether such governmental entity or organization is exempt from such taxes under the Contract Documents.
    b. Determining whether your purchase of any tangible personal property for use in the performance of this contract is exempt.
    c. Obtaining any sales tax exemption certificate from the Owner.
    d. Properly issuing any sales tax exemption certificate to a seller or supplier that the sale of any item of tangible personal property qualifies for an exemption.
    e. Maintaining any records required by the laws of the State of Texas or by any valid rules and/or regulations of the Comptroller of Public Accounts of the State of Texas.
    f. Payment of any legally assessed penalties or fines for improper use of any exemption Certificate.

1.3 DEFINITIONS

A. Definitions used in this Article are not intended to change the meaning of other terms used in the Contract Documents, such as "specialties," "systems," "structure," "finishes," "accessories," and similar terms. Such terms are self-explanatory and have well recognized meanings in the construction industry.

1. "Products" are items purchased for incorporation in the Work, whether purchased for the Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

2. "Named Products" are items identified by manufacturer's product name, including make or model designation, indicated in the manufacturer's published product literature, that is current as of the date of the Contract Documents.

3. "Foreign Products", as distinguished from "domestic products," are items substantially manufactured (50 percent or more of value) outside of the United States and its possessions; or produced or supplied by entities substantially owned (more than 50 percent) by persons who are not citizens of nor living within the United States and its possessions.

4. "Materials" are products that are substantially shaped, cut, worked, mixed, finished, refined or otherwise fabricated, processed, or installed to form a part of the Work.

5. "Equipment" is a product with operational parts, whether motorized or manually operated, that requires service connections such as wiring or piping.

1.4 SUBMITTALS

A. Product List Schedule: Prepare a schedule showing products specified in a tabular form acceptable to the Architect. Include generic names of products required. Include the manufacturer's name and proprietary product names for each item listed.

1. Coordinate the product list schedule with the Contractor's Construction Schedule and the Schedule of Submittals.

B. Form: Prepare the product listing schedule with information on each item tabulated under the following column headings:

1. Related Specification Section number.
2. Generic name used in Contract Documents.
3. Proprietary name, model number and similar designations.
4. Manufacturer's name and address.
5. Supplier's name and address.
6. Installer's name and address.
7. Projected delivery date, or time span of delivery period.

C. Initial Submittal: Within 30 days after date of commencement of the Work, submit 3 copies of an initial product list schedule. Provide a written explanation for omissions of data, and for known variations from Contract requirements.

1. At the Contractor's option, the initial submittal may be limited to product selections and designations that must be established early in the Contract period.

D. Completed Schedule: Within 30 days after date of commencement of the Work, submit 3 copies of the completed product list schedule. Provide a written explanation for omissions of data, and for known variations from Contract requirements.

E. Architect's Action: The Architect will respond in writing to the Contractor within 2 weeks of receipt of the completed product list schedule. No response within this time period constitutes no objection to listed manufacturers or products, but does not constitute a waiver of the requirement that products comply with Contract Documents. The Architect's response will include the following:

1. A list of unacceptable product selections, containing a brief explanation of reasons for this action.

1.5 QUALITY ASSURANCE

A. Source Limitations: To the fullest extent possible, provide products of the same kind, from a single source.

1. When specified products are available only from sources that do not or cannot produce a quantity adequate to complete project requirements in a timely manner, consult with the Architect for a determination of the most important product qualities before proceeding. Qualities may include attributes relating to visual appearance, strength,

durability, or compatibility. When a determination has been made, select products from sources that produce products that possess these qualities, to the fullest extent possible.

B. Compatibility of Options: When the Contractor is given the option of selecting between two or more products for use on the Project, the product selected shall be compatible with products previously selected, even if previously selected products were also options.

C. Nameplates: Except for required labels and operating data, do not attach or imprint manufacturer's or producer's nameplates or trademarks on exposed surfaces of products which will be exposed to view in occupied spaces or on the exterior.

D. Labels: Locate required product labels and stamps on a concealed surface or, where required for observation after installation, on an accessible surface that is not conspicuous.

E. Equipment Nameplates: Provide a permanent nameplate on each item of service-connected or power-operated equipment. Locate on an easily accessible surface which is inconspicuous in occupied spaces. The nameplate shall contain the following information and other essential operating data:
   1. Name of product and manufacturer.
   2. Model and serial number.
   3. Capacity.
   4. Speed.
   5. Ratings.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store and handle products in accordance with the manufacturer's recommendations, using means and methods that will prevent damage, deterioration and loss, including theft.

B. Schedule delivery to minimize long-term storage at the site and to prevent overcrowding of construction spaces.

C. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft and other losses.

D. Deliver products to the site in the manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting and installing.

E. Inspect products upon delivery to ensure compliance with the Contract Documents, and to ensure that products are undamaged and properly protected.

F. Store products at the site in a manner that will facilitate inspection and measurement of quantity or counting of units.

G. Store heavy materials away from the Project structure in a manner that will not endanger the supporting construction.

H. Store products subject to damage by the elements above ground, under cover in a weathertight enclosure, with ventilation adequate to prevent condensation. Maintain temperature and humidity within range required by manufacturer's instructions.

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION

A. General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged and, unless otherwise indicated, unused at the time of installation.

1. Provide products complete with all accessories, trim, finish, safety guards and other devices and details needed for a complete installation and for the intended use and effect.

B. Standard Products: Where available, provide standard products of types that have been produced and used successfully in similar situations on other projects.

C. Product Selection Procedures: Product selection is governed by the Contract Documents and governing regulations, not by previous Project experience. Procedures governing product selection include the following:

D. Proprietary Specification Requirements: Where only a single product or manufacturer is named, provide the product indicated. No substitutions will be permitted.

E. Semi-proprietary Specification Requirements: Where two or more products or manufacturers are named, provide one of the products indicated. No substitutions will be permitted.

1. Where products or manufacturers are specified by name, accompanied by the term "or equal," or "or approved equal" comply with the Contract Document provisions concerning "substitutions" to obtain approval for use of an unnamed product.

F. Non-Proprietary Specifications: When the Specifications list products or manufacturers that are available and may be incorporated in the Work, but do not restrict the Contractor to use of these products only, the Contractor may propose any available product that complies with Contract requirements. Comply with Contract Document provisions concerning substitutions to obtain approval for use of an unnamed product.

G. Descriptive Specification Requirements: Where Specifications describe a product or assembly, listing exact characteristics required, with or without use of a brand or trade name, provide a product or assembly that provides the characteristics and otherwise complies with Contract requirements.

H. Performance Specification Requirements: Where Specifications require compliance with performance requirements, provide products that comply with these requirements, and are recommended by the manufacturer for the application indicated. General overall performance of a product is implied where the product is specified for a specific application.

1. Manufacturer's recommendations may be contained in published product literature, or by the manufacturer's certification of performance.

I. Compliance with Standards, Codes and Regulations: Where the Specifications only require compliance with an imposed code, standard or regulation, select a product that complies with the standards, codes or regulations specified.

J. Visual Matching: Where Specifications require matching an established Sample, the Architect's decision will be final on whether a proposed product matches satisfactorily.

1. Where no product available within the specified category matches satisfactorily and

also complies with other specified requirements, comply with provisions of the Contract Documents concerning substitutions for selection of a matching product in another product category, or for noncompliance with specified requirements.

K. Visual Selection: Where specified product requirements include the phrase "...as selected from manufacturer's standard colors, patterns, textures..." or a similar phrase, select a product and manufacturer that complies with other specified requirements. The Architect will select the color, pattern and texture from the product line selected.

L. Allowances: Refer to individual Specification Sections and "Allowance" provisions in Division-1 for allowances that control product selection, and for procedures required for processing such selections.

PART 3 - EXECUTION

3.1 INSTALLATION OF PRODUCTS

A. Comply with manufacturer's instructions and recommendations for installation of products in the applications indicated. Anchor each product securely in place, accurately located and aligned with other Work.

1. Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

END OF SECTION

SECTION 01 70 00 - EXECUTION AND CLOSEOUT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for project closeout, including but not limited to:
   1. Inspection procedures.
   2. Project record document submittal and digital archiving.
   3. Operating and maintenance manual submittal and digital archiving.
   4. Submittal of warranties.
   5. Final cleaning.
   6. Demonstration and training videotapes.

B. Closeout requirements for specific construction activities are included in the appropriate Sections in Divisions 2 through 26.

1.3 SUBSTANTIAL COMPLETION

A. Preliminary Procedures: Before requesting inspection for certification of Substantial Completion, complete the following. List exceptions in the request.
   1. In the Application for Payment that coincides with, or first follows, the date Substantial Completion is claimed, show 100 percent completion for the portion of the Work claimed as substantially complete. Include supporting documents for completion as indicated in these Contract Documents and a statement showing an accounting of changes to the Contract Sum.
   2. If 100 percent completion cannot be shown, include a list of incomplete items, the value of incomplete construction, and reasons the Work is not complete.
   3. Advise Owner of pending insurance change-over requirements.
   4. Submit specific warranties, workmanship bonds, maintenance agreements, final certifications, and similar documents.
   5. Obtain and submit releases enabling the Owner unrestricted use of the Work and access to services and utilities; include occupancy permits, operating certificates and similar releases.
   6. Submit record drawings, maintenance manuals, final project photographs, damage or settlement survey, property survey, and similar final record information.
   7. Deliver tools, spare parts, extra materials, and similar items to location designated by Owner. Label with manufacturer's name and model number where applicable. Extra materials include but are not necessarily limited to those listed in the “Summary of Extra Materials” following this Section.
   8. Make final change-over of permanent locks and transmit keys to the Owner. Advise the Owner's personnel of change-over in security provisions.
   9. Complete start-up testing of systems, and instruction of the Owner's operating and maintenance personnel. Discontinue or change over and remove temporary facilities from the site, along with construction tools, mock-ups, and similar elements.

B. Inspection Procedures: On receipt of a request for inspection, the Architect will either proceed with inspection or advise the Contractor of unfilled requirements. The Architect will prepare the Certificate(s) of Substantial Completion following inspection(s), or advise the Contractor of

construction that must be completed or corrected before the certificate will be issued.

1. The Architect will repeat inspection when requested, and assured by the Contractor in writing, that the Work has been substantially completed.
2. Results of the completed inspection will form the basis of requirements for final acceptance.

1.4 FINAL ACCEPTANCE

A. Preliminary Procedures: Before requesting final inspection for certification of final acceptance and final payment, complete the following. List exceptions in the request.

1. Submit the final payment request with releases and supporting documentation not previously submitted and accepted. Include certificates of insurance for products and completed operations where required.
2. Submit an updated final statement, accounting for final additional changes to the Contract Sum.
3. Submit a certified copy of the Architect's final inspection list of items to be completed or corrected, stating that each item has been completed or otherwise resolved for acceptance, and the list has been endorsed and dated by the Architect.
4. Submit final meter readings for utilities, a measured record of stored fuel, and similar data as of the date of Substantial Completion, or when the Owner took possession of and responsibility for corresponding elements of the Work.
5. Submit consent of surety to final payment.
6. Submit Notice of Termination as required in Division 1 Section “Erosion and Sediment Control”.
7. Submit a final liquidated damages settlement statement.
8. Submit evidence of final, continuing insurance coverage complying with insurance requirements.
9. Complete final clean up requirements, including touch-up painting. Touch-up and otherwise repair and restore marred exposed finishes.

B. Re-inspection Procedure: The Architect will re-inspect the Work upon receipt of notice that the Work, including inspection list items from earlier inspections, has been completed, except items whose completion has been delayed because of circumstances acceptable to the Architect.

1. Upon completion of re-inspection, the Architect will prepare a certificate of final acceptance, or advise the Contractor of Work that is incomplete or of obligations that have not been fulfilled but are required for final acceptance.
2. If necessary, re-inspection will be repeated.
3. Should the Architect perform reinspections, due to failure of the Work to comply with the claims of status of completion made by the Contractor, the Owner shall compensate the Architect for additional services; and the Owner shall deduct the amount of the compensation from the final payment to the Contractor.

1.5 RECORD DOCUMENT SUBMITTALS

A. General: Do not use record documents for construction purposes; protect from deterioration and loss in a secure, fire-resistive location; provide access to record documents for the Architect's reference during normal working hours.

B. **Record Drawings**: Maintain a clean, undamaged set of black-line-on-white-prints of Contract Drawings at the Project Site. Mark the set in colors to show the actual installation where the installation varies from the Work as originally shown. Mark whichever drawing is most capable of showing conditions fully and accurately. Give particular attention to concealed

elements that would be difficult to measure and record at a later date.

1. Mark new information that is important to the Owner but was not shown on Contract Drawings or Shop Drawings.

2. Note related Proposal Requests (PR), Architect's Supplemental Instructions (ASI), Requests for Information (RFI), and Change Order (CO) numbers where applicable.

3. At completion of project, transfer all Project Record Data to one complete set of black line drawings. Utilize the following color code, make all changes neatly and legibly:
   a. Red for Architectural Work
   b. Blue for Structural Work
   c. Green for Plumbing Work
   d. Orange for HVAC Work
   e. Brown for Electrical Work
   f. Black for other written notations

4. Organize record drawing sheets into manageable set, bind with durable paper cover sheets, and print suitable titles, dates and other identification on each sheet, including 'RECORD DRAWINGS'. Where no changes are necessary on a sheet, add the phrase "NO CHANGES".

5. Contractor to provide CAD/BIM for all drawings and deliver to the Architect and Owner for review. Architect will make a cursory review of the drawings and mark any needed changes or additions and return to the Contractor.

6. Make any corrections and re-scan sheets as necessary. Print final half-size set and deliver the printed set and DVD containing a single indexed digital file to the Owner. Deliver duplicate DVD to the Architect. Reference "Document Scanning" below for scanning and delivery requirements.
   a. Include separate indexed DVD to the Owner indicating locations of plumbing shutoff valves and electrical disconnects.

7. The costs of scanning and printing record drawings for review and final delivery shall be paid by the Contractor.`

C. **Record Specifications**: Maintain at the project site one complete copy of the Project Manual, including addenda. Mark these specifications to show variations in actual Work performed in comparison with the text of the Specifications and modifications. Give particular attention to substitutions, selection of options and similar information on elements that are concealed or cannot otherwise be readily discerned later by direct observation.
   1. Upon completion of the Work, submit a hard-copy of the record Specifications to the Architect for review. Architect will make a cursory review of the record documents and mark any needed changes or additions to the hard-copy and return to the Contractor.

   2. Make any corrections and scan specification pages. Reference "Document Scanning" below for scanning and delivery requirements.

   3. The costs of scanning and printing record specifications for review and final delivery shall be paid by the Contractor.

D. **Record Project Data**: Make hard copies for binders including Change Orders, Proposal Requests and responses, Requests for Information and responses, and Architect's Supplemental Instructions.

   1. Submit one complete set of Record Project Data to the Architect for review. Architect will

make a cursory review of the documents and mark any needed changes or additions to the hard-copy and return to the Contractor.

2. Make any corrections and digitally scan all Project Data pages. Deliver DVD containing a single indexed digital file to the Owner. Deliver duplicate DVD to the Architect. Reference “Document Scanning” below for scanning and delivery requirements.

3. The costs of scanning and printing record Project Data for review and final delivery shall be paid by the Contractor.

E. **Material Finishes Binder:** Provide Finishes Binder with physical samples of all finish materials included in completed Work. Group all samples according to Specification Section.
   1. Samples shall include, but not be limited to Paint, Vinyl Wall Covering, Plastic Laminates, Carpet, Rubber Base, VCT, Wood Stains, and other Finishes and Color Selections, regardless of whether they are same as Color Schedule.
   2. Label each sample with name of manufacturer, any product number, style or series, and color.
   3. Make needed changes to Color Schedule and include in the Finishes Binder.
   4. Where samples are or a size, material, or thickness that do not allow inclusion in the Finishes Binder (such as face brick or tile pavers), include product cut sheets from the manufacturer indicating manufacturer, any product number, style or series, and color.
   5. Deliver completed Finishes Binder to Architect for review. Architect will make a cursory review of the Finishes Binder and mark any needed changes or additions and return to the Contractor.
   6. Make any corrections and deliver completed binder to the Owner.
   7. The costs of scanning, printing, and binding record Finishes pages for review and final delivery shall be paid by the Contractor.

F. **Maintenance and Operations Manuals**: Organize operating and maintenance data into suitable sets of manageable size.
   1. Provide (1) Binder Set and Deliver to Project Site.
   2. Provide (1) single indexed digital PDF to owner via flash drive or CD.
      a. Emergency instructions.
      b. Spare parts list.
      c. Copies of warranties.
      d. Wiring diagrams.
      e. Recommended "turn-around" cycles.
      f. Inspection procedures.
      g. Shop Drawings and Product Data.
      h. Fixture lamping schedule.

   3. Deliver to Architect for review. Architect will make a cursory review of the Maintenance and Operations Binders and mark any needed changes or additions and return to the Contractor.
   4. Make any corrections and print final sets. Digitally scan all Binder pages and deliver the printed Binder sets on one DVD containing digital files to the Owner within 90-days of Substantial Completion. Deliver duplicate DVD to the Architect.
   5. The costs of scanning, printing, and binding Maintenance and Operations information for review and final delivery shall be paid by the Contractor.

G. **Demonstration and Training Video:** Submit two copies of all demonstrations on (1) DVD and deliver to owner within 90 days of substantial completion
   1. Identification: On each copy provide an applied label with the following information:

      a. Name of Project.
      b. Name and address of photographer.

c. Name of Architect (and Construction Manager when applicable).
d. Name of Contractor.
e. Date video was recorded.
f. Description of video content including description of subject building equipment and/ or systems, and general description of training or procedures covered.

H. **Close-Out Document Manuals** (submit 2 copies): Organize close-out materials into heavy-duty 2-inch D-Slant binders, with pocket folders and deliver to Architect for review. Spine and covers should be labeled. Include and organize the material as follows:
1. Index
2. Consent of Surety to Final Payment AIA G707
3. Contractor's Affidavit of Release of Liens AIA G706A
4. Contractor's Affidavit of Payment of Debts and Claims AIA G706
5. Certificate of Substantial Completion AIA G704
6. General Contractor's Written Guarantee
7. Final list of Subcontractor/Suppliers/Local Representatives
8. Subcontractor's Written Guarantee
9. Sub Contractor's Waiver of Lien (subcontractors/major suppliers)
10. Contractor's Haz-Mat Certificates
11. Subcontractor's Haz-Mat Certificates
12. Project Compliance Certificate
13. Extra Stock Verifications
14. Roofing Warranty & Documentation
15. Warranties
16. Include extended warranties page at beginning of warranty section.
17. Upon review and approval of Architect and Owner of closeout manuals, Contractor shall deliver (1) binder copy of the above material and (1) copy of the digitized & indexed (PDF) files to the Owner(@ the project site). Also Provide one duplicate DVD to the Architect. Refer to “Document Scanning” below for additional information concerning PDF scanning and bookmarking requirements. The cost of printing, scanning, and binding of Closeout Documents shall be paid by the Contractor.

I. **Document Scanning:** Upon review and approval of all closeout documents, including all information listed above, Contractor to contact reprographics or digital archiving company for PDF scanning and bookmarking of all information into one file for delivery to Owner on DVD readable by computer with Windows operating system. Note the following concerning PDF scanning and bookmarking:
1. Final documents shall be one digital file each for the following information indexed according to major and minor criteria as indicated below:
a. Record Drawings organized and bookmarked by drawing number and title
b. Record Specifications organized and bookmarked by specification number and name
c. Record Product Data organized and bookmarked by specification section and name
d. Operation and Maintenance Manuals organized and bookmarked by specification section and name
e. Closeout Manuals organized by contractor and/or subcontractor name and trade.
f. Include extended warranties page at beginning of warranty section.

2. Deliver 1 copy of DVD to the Owner and 1 copy to the Architect.

3. All documents shall be scanned at a minimum resolution of 300 dpi.

4. Submit proposed document table of contents to Architect for review prior to completion of scanning and bookmarking work.

5. OCR (searchable) PDF are NOT REQUIRED.

6. Approved Vendors for Reprographics, Digital Archiving, and Scanning:
   a. Thomas Printworks, 713-621-0022, www.thomasprintworks.com
   b. DataBank Houston, 713-645-0308, www.databankimx.com
   c. Delta T Digital Archiving, 972-494-2300, www.deltatltd.com

PART 2 - PRODUCTS

2.1 CLEANING AGENTS: Use cleaning materials and agents recommended by the manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property, or that might damage finished surfaces.

PART 3 - EXECUTION

3.1 CLOSEOUT PROCEDURES

A. Operating and Maintenance Instructions: Arrange for each installer of equipment that requires regular maintenance to meet with the Owner's personnel to provide instruction in proper operation and maintenance. If installers are not experienced in procedures, provide instruction by manufacturer's representatives. Include a detailed review of the following items:
   1. Maintenance manuals.
   2. Record documents.
   3. Spare parts and materials.
   4. Tools.
   5. Lubricants.
   6. Fuels.
   7. Identification systems.
   8. Control sequences.
   9. Hazards.
   10. Cleaning.
   11. Warranties and bonds.
   12. Maintenance agreements and similar continuing commitments.

B. As part of instruction for operating equipment, demonstrate the following procedures:
   1. Start-up.
   2. Shut down.
   3. Emergency operations.
   4. Noise and vibration adjustments.
   5. Safety procedures.
   6. Economy and efficiency adjustments.
   7. Effective energy utilization.
   8. Upon review and approval of Architect and Owner of close-out manuals, Contractor to send documents to reprographics company for scanning. Refer to Section H below for additional information concerning PDF scanning and bookmarking requirements. The cost of scanning and bookmarking close out manuals shall be paid by the Contractor.

C. Demonstration and Training Video: Record instruction of Owner's personnel in the operation and maintenance of equipment and systems. Edit video to remove non-instructional conversation. Photographer shall select vantage points to best show equipment, systems, and procedures demonstrated.
   1. Contractor may, with Owner’s written approval and in compliance with other requirements, provide manufacturer’s standard demonstration and training video in lieu of on-site custom recorded video.

D. Attic Stock Materials Schedule: Provide a schedule of all attic stock materials. Include

information pertaining to quality, description, manufacturer, model no., color, and finish.

3.2 FINAL CLEANING

A. General: General cleaning during construction is required by the General Conditions and included in Section "Temporary Facilities".

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to the condition expected in a normal, commercial building cleaning and maintenance program. Comply with manufacturer's instructions.
   1. Complete the following cleaning operations before requesting inspection for Certification of Substantial Completion.
   2. Remove labels that are not permanent labels.
   3. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compound and other substances that are noticeable vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials.
   4. Clean exposed exterior and interior hard-surfaced finishes to a dust-free condition, free of stains, films and similar foreign substances. Restore reflective surfaces to their original reflective condition. Leave concrete floors broom clean. Vacuum carpeted surfaces.
   5. Wipe surfaces of mechanical and electrical equipment. Remove excess lubrication and other substances. Clean plumbing fixtures to a sanitary condition. Clean light fixtures and lamps.
   6. Clean the site, including landscape development areas, of rubbish, litter and foreign substances. Sweep paved areas broom clean; remove stains, spills and other foreign deposits. Rake grounds that are neither paved nor planted, to a smooth even-textured surface.

C. Removal of Protection: Remove temporary protection and facilities installed for protection of the Work during construction.

D. Compliance: Comply with regulations of authorities having jurisdiction and safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on the Owner's property. Do not discharge volatile, harmful or dangerous materials into drainage systems. Remove waste materials from the site and dispose of in a lawful manner.

   1. Where extra materials of value remaining after completion of associated Work have become the Owner's property, arrange for disposition of these materials as directed.

END OF SECTION

SECTION 01 73 29 - CUTTING AND PATCHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for cutting and patching.

B. Refer to other Sections for specific requirements and limitations applicable to cutting and patching individual parts of the Work.

1. Requirements of this Section also apply to mechanical and electrical installations, as well as work specified in Divisions 2 through 32. Refer to Division-23 and Division-26 Sections for other requirements and limitations applicable to cutting and patching mechanical and electrical installations.

1.3 SUBMITTALS

A. Cutting and Patching Proposal: Where approval of procedures for cutting and patching is required before proceeding, submit a proposal describing procedures well in advance of the time cutting and patching will be performed and request approval to proceed. Include the following information, as applicable, in the proposal:

1. Describe the extent of cutting and patching required and how it is to be performed; indicate why it cannot be avoided.
2. Describe anticipated results in terms of changes to existing construction; include changes to structural elements and operating components as well as changes in the building's appearance and other significant visual elements.
3. List products to be used and firms or entities that will perform Work.
4. Indicate dates when cutting and patching is to be performed.
5. List utilities that will be disturbed or affected, including those that will be relocated and those that will be temporarily out-of-service. Indicate how long service will be disrupted.
6. Where cutting and patching involves addition of reinforcement to structural elements, submit details and engineering calculations to show how reinforcement is integrated with the original structure.
7. Approval by the Architect to proceed with cutting and patching does not waive the Architect's right to later require complete removal and replacement of a part of the Work found to be unsatisfactory.

1.4 QUALITY ASSURANCE

A. Requirements for Structural Work: Do not cut and patch structural elements in a manner that would reduce their load-carrying capacity or load-deflection ratio.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following structural elements:
    a. Foundation construction.
    b. Bearing and retaining walls.
    c. Structural concrete.
    d. Structural steel.

e. Lintels.
f. Structural decking.
g. Miscellaneous structural metals.
h. Equipment supports.
i. Piping, ductwork, vessels and equipment.
j. Structural systems of special construction in Division-13.

B. Operational and Safety Limitations: Do not cut and patch operating elements or safety related components in a manner that would result in reducing their capacity to perform as intended, or result in increased maintenance, or decreased operational life or safety.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following operating elements or safety related systems:
   a. Shoring, bracing, and sheeting.
   b. Primary operational systems and equipment.
   c. Air or smoke barriers.
   d. Water, moisture, or vapor barriers.
   e. Membranes and flashings.
   f. Fire protection systems.
   g. Noise and vibration control elements and systems.
   h. Control systems.
   i. Communication systems.
   j. Conveying systems.
   k. Electrical wiring systems.
   l. Special construction specified by Division-13 Sections.

C. Visual Requirements: Do not cut and patch construction exposed on the exterior or in occupied spaces, in a manner that would, in the Architect's opinion, reduce the building's aesthetic qualities, or result in visual evidence of cutting and patching. Remove and replace Work cut and patched in a visually unsatisfactory manner.

1. If possible retain the original installer or fabricator to cut and patch the following categories of exposed Work, or if it is not possible to engage the original installer or fabricator, engage another recognized experienced and specialized firm:
   a. Matched-veneer woodwork.
   b. Preformed metal panels.
   c. Window wall system.
   d. Acoustical ceilings.
   e. Finished wood flooring.
   f. Carpeting.
   g. Aggregate wall coating.
   h. Wall covering.
   i. HVAC enclosures, cabinets or covers.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Use materials that are identical to existing materials. If identical materials are not available or cannot be used where exposed surfaces are involved, use materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials whose installed performance will equal or surpass that of existing materials.

PART 3 - EXECUTION

3.1 INSPECTION

A. Before cutting existing surfaces, examine surfaces to be cut and patched and conditions under which cutting and patching is to be performed. Take corrective action before proceeding, if unsafe or unsatisfactory conditions are encountered.

1. Before proceeding, meet at the site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

3.2 PREPARATION

A. Temporary Support: Provide temporary support of Work to be cut.

B. Protection: Protect existing construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of the Project that might be exposed during cutting and patching operations.

1. Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.
2. Take all precautions necessary to avoid cutting existing pipe, conduit or ductwork serving the building, but scheduled to be removed or relocated until provisions have been made to bypass them.

3.3 PERFORMANCE

A. General: Employ skilled workmen to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time and complete without delay.

1. Cut existing construction to provide for installation of other components or performance of other construction activities and the subsequent fitting and patching required to restore surfaces to their original condition.

B. Cutting: Cut existing construction using methods least likely to damage elements to be retained or adjoining construction. Where possible review proposed procedures with the original installer; comply with the original installer's recommendations.

1. In general, where cutting is required use hand or small power tools designed for sawing or grinding, not hammering and chopping. Cut holes and slots neatly to size required with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. To avoid marring existing finished surfaces, cut or drill from the exposed or finished side into concealed surfaces.
3. Cut through concrete and masonry using a cutting machine such as a carborundum saw or diamond core drill.
4. Comply with requirements of applicable Sections of Division-2 where cutting and patching requires excavating and backfilling.
5. By-pass utility services such as pipe or conduit, before cutting, where services are shown or required to be removed, relocated or abandoned. Cut-off pipe or conduit in walls or partitions to be removed. Cap, valve or plug and seal the remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after by-passing and cutting.

C. Patching: Patch with durable seams that are as invisible as possible. Comply with specified tolerances.

1. Where feasible, inspect and test patched areas to demonstrate integrity of the installation.
2. Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.
3. Where removal of walls or partitions extends one finished area into another, patch and repair floor and wall surfaces in the new space to provide an even surface of uniform color and appearance. Remove existing floor and wall coverings and replace with new materials, if necessary to achieve uniform color and appearance.
4. Where patching occurs in a smooth painted surface, extend final paint coat over entire unbroken containing the patch, after the patched area has received primer and second coat.
5. Patch, repair or rehang existing ceilings as necessary to provide an even plane surface of uniform appearance.

3.4 CLEANING

A. Thoroughly clean areas and spaces where cutting and patching is performed or used as access. Remove completely paint, mortar, oils, putty and items of similar nature. Thoroughly clean piping, conduit and similar features before painting or other finishing is applied. Restore damaged pipe covering to its original condition.

END OF SECTION

SECTION 01 78 00 - WARRANTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division-1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section specifies general administrative and procedural requirements for warranties and bonds required by the Contract Documents, including manufacturers' standard warranties on products and special warranties.
   1. Refer to the General Conditions for terms of the Contractor's special warranty of workmanship and materials.
   2. Refer to Section 01 80 00 – Special Owner Requirements for procedures to be followed in correcting work under warranty.
   3. Closeout requirements are included in Section "Execution and Closeout Procedures."
   4. Specific requirements for warranties for the Work and products and installations that are specified to be warranted, are included in the individual Sections of Divisions 2 - 33.
   5. Certifications and other commitments and agreements for continuing services to Owner are specified elsewhere in the Contract Documents.

B. Separate Prime Contracts: Each Contractor responsible for warranties related to his Contract.

1.3 DEFINITIONS

A. Standard Product Warranties are preprinted written warranties published by manufacturers for particular products and are specifically endorsed by the manufacturer to the Owner.

B. Special Warranties are written warranties required by or incorporated in the Contract Documents, either to extend time limits provided by standard warranties or to provide greater rights for the Owner.

1.4 WARRANTY REQUIREMENTS

A. The General Contractor will be the first point of contact for warranty work performed by subcontractors and manufacturers. Refer to Section 01 80 00 – Special Owner Requirements for procedures to be followed in reporting and correcting work under warranty.

B. Related Damages and Losses: When correcting warranted Work that has failed, remove and replace other Work that has been damaged as a result of such failure or that must be removed and replaced to provide access for correction of warranted Work.

C. Reinstatement of Warranty: When Work covered by a warranty has failed and been corrected by replacement or rebuilding, reinstate the warranty by written endorsement. The reinstated warranty shall be equal to the original warranty with an equitable adjustment for depreciation. The warranty period shall not be extended.

D. Replacement Cost: Upon determination that Work covered by a warranty has failed, replace or rebuild the Work to an acceptable condition complying with requirements of Contract Documents. The Contractor is responsible for the cost of replacing or rebuilding defective Work, including the cost of equipment needed to perform the Work, regardless of whether the Owner has benefited from use of the Work through a portion of its anticipated useful service life.

E. Owner's Recourse: Written warranties made to the Owner are in addition to implied warranties, and shall not limit the duties, obligations, rights and remedies otherwise available under the law, nor shall warranty periods be interpreted as limitations on time in which the Owner can enforce such other duties, obligations, rights, or remedies.
   1. Rejection of Warranties: Owner reserves the right to reject warranties and to limit selections to products with warranties not in conflict with requirements of the Contract Documents.
      a. The Owner reserves the right to refuse to accept Work for the Project where a special warranty, certification, or similar commitment is required on such Work or part of the Work, until evidence is presented that entities required to countersign such commitments are willing to do so.

1.5 SUBMITTALS

A. Submit written warranties to the Architect prior to the date of activation. If the Architect's Certificate of Substantial Completion designates a commencement date for warranties other than the date of Substantial Completion for the Work, or a designated portion of the Work, submit written warranties upon request of the Architect.
   1. When a designated portion of the Work is completed and occupied or used by the Owner, by separate agreement with the Contractor during the construction period, submit properly executed warranties to the Architect within fifteen days of completion of that designated portion of the Work.
   2. When a special warranty is required, prepare a written document that contains appropriate terms and identification, ready for execution by the required parties. Submit a draft to the Owner through the Architect for approval prior to final execution.
   3. Forms for special warranties are included at the end of particular Sections. Prepare a written document utilizing the appropriate form, ready for execution by the warrantor. Submit a draft to the Owner through the Architect for approval prior to final execution.
      a. Refer to individual Sections of Divisions-2 through -16 for specific content requirements, and particular requirements for submittal of special warranties.

B. Form of Submittal: At Final Completion compile two copies of each required warranty and bond, properly executed. Organize the warranty documents into an orderly sequence based on the table of contents of the Project Manual.
   1. Bind warranties and bonds in heavy-duty, commercial quality, durable 3-ring vinyl covered loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2" by 11" paper.
      a. Provide heavy paper dividers with celluloid covered tabs for each separate warranty. Mark the tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product, and the name, address and telephone number of the installer.
      b. Identify each binder on the front and the spine with the typed or printed title "WARRANTIES AND BONDS, the Project title or name, and the name of the Contractor.
   2. When operating and maintenance manuals are required for warranted construction, provide additional copies of each required warranty, as necessary, for inclusion in each required manual.

PART 2 - PRODUCTS (Not applicable).

PART 3 - EXECUTION (Not applicable).

END OF SECTION

SECTION 01 78 10 – CERTIFICATION OF PROJECT COMPLIANCE

CERTIFICATION OF PROJECT COMPLIANCE

Completion of this form is required under the provisions of §61.1036(c)(3)(F) TAC for all public school district construction projects. Instructions for completion of this form can be found on page 2.

1. PROJECT INFORMATION

Facility:

Address:

City:

DISTRICT:

ARCHITECT/ENGINEER: Stantec

CONTRACTOR/CM:

CONTRACT DATE:

DATE DISTRICT AUTHORIZED PROJECT:

BRIEF DESCRIPTION OF PROJECT: A new sixth grade school facility comprising of classrooms, labs, administrative offices, and dining area with full kitchen.

2. CERTIFICATION OF DESIGN AND CONSTRUCTION

The intent of this document is to assure that the school district has provided to the architect/engineer the required information and the architect/engineer has reviewed the School Facilities Standards as required by the State of Texas, and used his/her reasonable professional judgment and care in the architectural/engineering design and that the contractor has constructed the project in a quality manner in general conformance with the design requirements and that the school district certifies to project completion.

3. The District certifies that the educational program and the educational specifications of this facility along with the identified building code to be used have been provided to the Architect/Engineer.

DISTRICT: **BY:** **DATE:**

4. The Architect/Engineer certifies the above information was received from the school district, and that the building(s) were designed in accordance with the applicable building codes. Further, the facility has been designed to meet or exceed the design criteria relating to space (minimum square footage), educational adequacy, and construction quality as contained in the School Facilities Standards as adopted by the Commissioner of Education, June 9, 2003, and as provided by the district.

ARCHITECT/ENGINEER **BY:** **DATE:**

5. The Contractor/CM certifies that this project has been constructed in general conformance with the construction documents as prepared by the Architect/Engineer listed above.

CONTRACTOR/CM: **BY:** **DATE:**

DISTRICT: **BY:** **DATE:**

6. The District certifies completion of the project (as defined by the Architect/Engineer and Contractor).

INSTRUCTIONS FOR COMPLETION OF "CERTIFICATION OF PROJECT COMPLIANCE" FORM

Section 1. Identify the following:
- name and address of the school facility
- name of the school district
- the Architect/Engineer and Contractor
- the date of execution of the construction contract
- the date that the school district authorized the superintendent to hire an architect/engineer
- scope of the project.

Section 2. This section outlines the intent of the document. No action required.

Section 3. This section is to be executed by the school district upon transmittal of the information (as listed) to the architect/engineer and is to remain in the custody of the school district throughout the entire project.

Section 4. This section is to be executed by the architect/engineer upon completion of the plans and specifications and in conjunction with the completion of the plan review for code compliance (ref. 19 TAC §61.1033 or §61.1036, School Facilities Standards) and returned to the school district's files.

Section 5. This section is to be executed by the contractor upon substantial completion of the project and retained in the school district's files.

Section 6. This section is to be executed by the school district upon acceptance and occupancy of the project.

NOTE: DO NOT SUBMIT THIS DOCUMENT TO THE TEXAS EDUCATION AGENCY. The school district will retain this document in their files indefinitely until review and/or submittal is required by representatives of the Texas Education Agency.

END OF DOCUMENT

SECTION 01 80 10

PROJECT PHOTOGRAPHIC DOCUMENTATION

PART 1 – SUMMARY

1.1 SECTION INCLUDES:

A. Comprehensive digital photographic documentation of the construction process progressively and at selected milestones.

B. Documentation inclusive of electronic indexing, navigation, storage and remote access throughout construction.

C. Support, security of information and technological requirements related to the documentation.

D. Delivery of completed photographic documentation shall be provided in digital PDF format on a portable drive system (“thumb drive”). Files shall be placed in separate directories on the drive, with name of each directory being the date of the photographic record. Obtain receipt from Owner.

PART 2 –REQUIREMENTS

2.1 GENERAL DOCUMENTATION

A. Indexing and navigation system shall utilize actual construction drawings or equivalent as the basis for an interactive on-line interface. For all documentation referenced herein, indexing and navigation must be organized by both time (date-stamped) and location throughout the Project.

B. Documentation shall combine indexing and navigation system with inspection-grade high-resolution digital photography designed to capture actual conditions throughout construction and at critical milestones. Documentation shall be accessible to the Owner, Architect, Consultants, and Contractor without copyright on-line through use of an Internet connection arranged by this Contractor during construction. Documentation shall allow for multiple-user access, simultaneously, on-line. Access shall adhere to industry standards for information security and protection of data. Multi-tiered access levels shall be achievable through use of individual passwords, if required by the Owner.

C. Before construction, the building pad, adjacent streets, roadways, parkways, driveways, curbs, sidewalks, landscaping, adjacent utilities and adjacent structures surrounding the building pad and site shall be photographed. Overlapping photographic techniques shall be used to insure maximum coverage. Indexing and navigation accomplished through interactive architectural drawings. If site work or pad preparation extensive, this documentation shall be provided immediately before construction and at several pre-determined intervals before first work commences.

D. Construction progress for all trades shall be tracked at pre-determined intervals, but not less than once every thirty (30) calendar days (“Progressions”). Progression documentation shall comprehensively track both the exterior and interior construction or renovation of the building(s). Exterior Progressions shall track 360 degrees around the site and each building. Interior Progressions shall track interior improvements beginning when stud work commences and continuing until Project completion.

E. As-built condition of pre-slab utilities and site utilities shall be documented prior to pouring slabs, placing concrete and/or backfilling. This process shall include all underground and in-slab utilities within the building(s) envelope(s) and utility runs in the immediate vicinity of the building(s) envelope(s). This shall also include utilities enclosed in slab-on-deck in multi-story buildings. Overlapping photographic techniques shall be used to insure maximum coverage. Indexing and navigation shall be accomplished through interactive site utility plans.

F. As-built conditions of mechanical, electrical, plumbing and all other systems shall be documented post-inspection and pre-insulation, wall finish installation or as near to this milestone as is reasonably possible. This process shall include all finished systems located in the walls and ceilings of all buildings at the Project. Overlapping photographic techniques shall be used to insure maximum coverage. Indexing and navigation shall be accomplished through interactive architectural drawings.

G. As-built conditions of exterior skin and elevations shall be documented with an increased concentration of digital photographs as directed by Owner in order to capture pre-determined focal points, such as waterproofing, window flashing, steel work, architectural or plaster detailing. Overlapping photographic techniques shall be used to insure maximum coverage. Indexing and navigation shall be accomplished through interactive elevations or elevation details.

H. As-built finished conditions of the interior of each building including floors, ceilings and walls shall be documented at certificate of occupancy or equivalent, or just prior to tenant/owner occupancy, or both, as directed by Owner. Overlapping photographic techniques shall be used to insure maximum coverage. Indexing and navigation shall be accomplished through interactive architectural drawings.

I. Miscellaneous events that occur during any Contractor site visit, or events captured by the Client independently, shall be dated, labeled and inserted into a Section in the navigation structure entitled “Slideshows,” allowing this information to be stored in the same “place” as the formal scope.

J. Customizable project-specific digital photographic documentation shall take place of other details or milestones. Indexing and navigation shall be accomplished through interactive architectural plans.

PART 3 – SPECIFIC PROJECT DOCUMENTATION

A. Slideshows – Shows overall stages of construction for the project in a slideshow format. The slideshow section also shall allow for the inclusion of client pictures, aerial photographs, and other timely images which do not fit into any regular photo path.

B. Existing Conditions Site Survey of the existing building pad as well as all streets, curbs, parking, landscaping and structures immediately adjacent to the proposed project area. The existing conditions survey shall occur just prior to the start of construction, to be scheduled by client.

C. Monthly UAV Drone Progressions to include both panoramic photos and aerial video of the entire project site captured monthly, or as directed by client.

D. Monthly Exterior Progressions 360 degrees around the structure to include all elevations and building envelope on monthly intervals, or as directed by client.

E. 5 Sets of Interior Wall Progressions that captures each major wall at framing, substantial MEP, drywall, paint/trim, punch list, or as directed by client.

F. 5 Sets of Interior Ceiling Progressions that captures overhead system placement, typically at fireproof, plumbing, data cable, mechanical HVAC, or as directed by client.

G. MEP As-Built of the entire building to include documentation of all mechanical, electrical and plumbing systems, to be conducted after rough-ins are complete, just prior to insulation and or drywall, or as directed by client.

END OF SECTION

SECTION 01 91 00 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 – GENERAL

1.1. RELATED DOCUMENTS

1.1.1. Specifications throughout all Divisions of the Project Manual, which pertain to operable and non-operable equipment and/or building systems, are directly applicable to this Section, and this Section is directly applicable to them.

1.2. SUMMARY

1.2.1. This Section establishes general and administrative requirements pertaining to commissioning of equipment, devices, and building systems on the project. Technical requirements for commissioning of particular systems and components are established in the respective technical sections of this Project Manual.

1.2.2. It is of primary concern that all operable systems installed in the Project perform in accordance with the Contract Documents, the Owner's Project Requirements (OPR) and the Basis of Design (BOD). During Commissioning, the Contractor systematically demonstrates to the Owner or Owner's representative that the operable systems have been installed and performing in strict accordance with the Contract Documents.

1.2.3. Commissioning requires cooperation and involvement of all parties throughout the construction process. The Contractor shall deliver a successful Commissioning process. Successful Commissioning requires that installation of all building systems complies with Contract Document requirements and that full operational check-out and necessary adjustments are performed prior to Substantial Completion with the exception of Deferred tests approved in advance by the Owner.

1.2.4. Commissioning will encompass and coordinate traditionally separate functions of system documentation, installation checkout, System Verification Checklists and start-up, control system calibration and point-to-point checkout, testing, adjusting, and balancing, Functional Performance Tests, Integrated System Tests, Contractor demonstration to the Owner, and training of Owner's personnel. This requires assembling all related documentation into one cohesive collection. Commissioning is intended to achieve the following specific objectives of the Contract Documents:

1.2.4.1. Verify and document proper installation and intended performance of equipment, systems, and integrated systems.

1.2.4.2. Ensure that operating and maintenance and Commissioning documentation requirements are complete.

1.2.4.3. Provide the Owner with functional buildings and systems that meet the Contract Document requirements and the Owner's Project Requirements (OPR) at Substantial Completion.

1.3. DEFINITIONS

1.3.1. Basis of Design (BOD): A document that records the concepts, calculations, decisions, and product selections used to meet the Owner's Project Requirements and to satisfy applicable regulatory requirements, standards and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.

1.3.2. Commissioning (Cx): A systematic process confirming that building systems have been installed, properly started, and consistently operated in strict accordance with the Project

Documents, that all systems are complete and functioning in accordance with the Contract Documents at Substantial Completion, and the Contractor has provided the Owner adequate system documentation and training.

1.3.3. Commissioning Authority (CxA): Party having a contractual agreement with the Owner to provide third party commissioning services as defined herein under Commissioning Authority's Role and Responsibilities. Commissioning Authority may represent the Owner and is authorized to act on behalf of the Owner. The Commissioning Authority does not have authority to alter design or installation procedures without the written approval of the Owner or the design team.

1.3.4. Contract Documents: The General Conditions, Drawings, Specifications, Addenda, and other documents developed by the A/E Team and approved by the Owner that constitute the contractual obligations of the project scope.

1.3.5. Control Point and Sensor Calibration Verification: Process of verifying the point integrity and/or sensor calibration from the physical point of monitoring (sensor, contact, actuator, etc.) to the digital point location at the Operator's interface within the respective control system (Building Automation, Lighting Controls, Power Status and Monitoring, etc.).

1.3.6. Deferred Testing: Functional Performance or Integrated System Tests performed after Substantial Completion due to partial occupancy, partial equipment acceptance, seasonal requirements, design, or other site conditions that prohibit the test from being performed prior to Substantial Completion.

1.3.7. Deficiency: Condition of a component, piece of equipment, or system that is not in compliance with the Project Documents.

1.3.8. Functional Performance Test (FPT): Test of dynamic function and operation of equipment and systems executed by the Contractor and witnessed by the CxA. Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, life safety conditions, power failure, etc. Systems are operated through all specified sequences of operation. Components are verified to be responding in accordance with requirements in the Project Documents.

1.3.9. Functional Performance Testing Procedures: Commissioning protocols, detailed test procedures and instructions in tabular and script-type format that fully describe system configuration and steps required to determine if the system is performing and functioning properly.

1.3.10. Integrated Systems Test (IST): Test of dynamic function and operation of multiple systems. Integrated Systems Tests are tested under various modes, such as fire alarm and emergency situations, life safety conditions, power failure, etc. Systems are integrally operated through all specified sequences of operation. Systems and interconnections are verified to be responding in accordance with the requirements in the Project Documents.

1.3.11. Integrated Systems Testing Procedures: Commissioning protocols and detailed test procedures and instructions in tabular and script-type format that fully describe system configurations and steps required to determine if the interacting systems are performing and functioning properly.

1.3.12. Operational Testing: Activities and testing occurring after initial energizing and/or start-up of equipment that determine whether equipment is operating within the manufacturer's recommendations and the design requirements. These activities are intended to ensure that equipment and systems meet all warranty requirements and are ready for Functional Performance Testing. Common examples are Testing, Adjusting and Balancing of HVAC systems and initial load testing of electrical equipment.

1.3.13. Owner's Project Requirements (OPR): A written document that details the functional requirements of a project and the expectations of how the facility will be used and operated. These include project goals, measurable performance criteria, cost considerations, benchmarks, success criteria and supporting information.

1.3.14. Project Documents: Consists of the Contract Documents, Approved Submittals, Requests for Information (RFI), Vendor documentation, Operations and Maintenance (O&M) information and other documentation that determines the requirements for acceptable installation and operation of the specific equipment and systems on the project.

1.3.15. System Verification Checklist (SVC): A list of static inspections and material or component tests that verify proper installation of equipment (e.g., belt tension, oil levels, labels affixed, gages in place, sensors calibrated, etc.), start-up activities and documentation, as well as operational testing results. The checklists are meant to document all activities for an individual piece of equipment from procurement on the project through operational testing are performed in accordance with the requirements in the project documents.

1.3.16. Start-up: The activities where equipment is initially energized, tested and operated. Start-up is completed prior to Operational Testing and Functional Performance Testing and is an integral item documented in the System Verification Checklist (SVC).

1.3.17. Training Plan: A detailed plan prepared by the Contractor and reviewed by the Owner and Commissioning Authority that outlines the training activities, instructors, time durations, and system requirements in accordance with the Contract Documents and Commissioning Plan.

1.3.18. Trending: Data collection of monitored points using the Building Automation System, Lighting Controls System, Power Status and Monitoring System or independent data acquisition instrumentation.

1.4. COMMISSIONING TEAM

1.4.1. Owner shall appoint the following Members:
- 1.4.1.1. Owner's Project Manager and any other designated representatives of the Owner's staff.
- 1.4.1.2. Commissioning Authority (CxA)
- 1.4.1.3. Architect/Engineer (A/E)
- 1.4.1.4. Test, Adjust and Balance Firm (TAB) – may be sub-contracted to the CxA

1.4.2. Contractor shall appoint the following Members:
- 1.4.2.1. Individuals, each having authority to act on behalf of the entity they represent, explicitly organized to implement the Commissioning process through coordinated actions. At a minimum, the Contractor shall designate a Commissioning Coordinator and each major sub-contractor (Mechanical,

Electrical, Plumbing, Building Automation) shall have a dedicated representative.

1.4.2.2. Vendor representatives (as needed) required for start-up, operational testing, Functional Performance Testing, Integrated Systems Testing, and Owner Training activities.

1.4.2.3. Representatives of independent testing agencies (Test, Adjust and Balance, Electrical Testing Agency, etc.)

1.5. ROLES AND RESPONSIBILITIES

1.5.1. Roles and responsibilities of Commissioning Team members related to the Commissioning Process are provided in this Section. The respective entities defined below shall fulfill the listed roles and responsibilities as contained herein. Specific technical roles and responsibilities are defined in other sections of the Project Specifications.

1.5.2. Owner's Roles and Responsibilities:

1.5.2.1. Provide guidance in development of the Owner's Project Requirements (OPR).

1.5.2.2. Review Technical Specifications containing Commissioning requirements.

1.5.2.3. Approve the Commissioning Scope of Work and schedule of Commissioning activities.

1.5.2.4. Assign Owner's representatives and schedule them to participate in Commissioning activities, including the following:

1.5.2.4.1. Commissioning Team meetings.

1.5.2.4.2. Review and approval of the Commissioning Plan, Training Plan, System Verification Checklist templates, Functional Performance Test Procedures, Integrated Systems Test Procedures, Deferred Testing Plans, Final Commissioning Process Report, Systems Manual, Measurement and Verification Plan and other Commissioning documents.

1.5.2.4.3. Attend Owner Training sessions in operation and maintenance of systems and equipment.

1.5.2.4.4. Observation of Contractor's demonstration of systems and equipment operation.

1.5.3. Commissioning Authority's (CxA) Roles and Responsibilities:

1.5.3.1. Prepare the Commissioning Plan with the Owner's and Contractor's review and input.

1.5.3.2. Periodically attend and/or review the proceedings of the regular Construction Meetings hosted by the Contractor to understand the progress of construction activities on the project.

1.5.3.3. Conduct and document Commissioning Team meetings including the Commissioning Kickoff Meeting.

1.5.3.4. Perform site visits as necessary to observe component and system installations prior to energizing or start-up of equipment and systems.

1.5.3.5. Review and comment on product data and shop drawing submittals and coordination drawings applicable to systems being commissioned.

1.5.3.6. Following submittal review and approvals by the A/E team, review the sequences of operation and coordinate with the Contractor and A/E Team in order to prepare the Functional Performance Test Procedures and Integrated Systems Test procedures. Submit to the Owner and Contractor for review and comment prior to facilitating FPTs and ISTs on the project.

1.5.3.7. Upon written notice that equipment or systems are ready for initial energizing or start-up, review the progress of the System Verification Checklist(s) for the respective systems and components and ensure that all requirements have been completed by the Contractor to permit energizing or start-up in accordance with the project documents; CxA shall issue written notice to the Owner and Contractor that equipment is ready to energize or start-up. CxA will witness and ensure proper documentation is provided by the Contractor for major equipment energizing and start-ups as executed by the Contractor with appropriate notice as indicated herein.

1.5.3.8. Witness, verify, and document results of Functional Performance Tests and Integrated Systems Tests.

1.5.3.9. Coordinate resolution of deficiencies identified during site observations, equipment energizing or start-up, Functional Performance Testing, Integrated Systems Testing, Deferred Testing, and during the warranty period.

1.5.3.10. Review the Operating and Maintenance (O&M) documents to ensure that as-built information and correct data is included prior to the Owner Training sessions; review final O&M submittal to ensure compliance with the requirements in the project documents and provide written comments to the Owner.

1.5.3.11. Review the Contractor's Training Plan and individual training agendas for compliance with the requirements in the project documents. Recommend acceptance to the Owner prior to the Contractor scheduling training sessions with the Owner. Review the attendance and content of the training sessions to ensure the requirements of the project documents are completed. Conduct a survey of the Owner's personnel to evaluate the effectiveness of the Owner Training.

1.5.3.12. Compile the Final Commissioning Process Report and submit to the Owner for review and approval.

1.5.4. Architect/Engineer's (A/E) Roles and Responsibilities:

1.5.4.1. Specify control sequences of operation within the Contract Documents that comply with the OPR and BOD.

1.5.4.2. Incorporate Commissioning requirements into the Contract Documents if requested by the Owner.

1.5.4.3. Attend Commissioning Team meetings.

1.5.4.4. Review the Commissioning Plan, System Verification Checklist templates, Functional Performance Test Procedures, Integrated Systems Test Procedures, Deferred Testing Plans, and other Commissioning documents as required by the Owner or the Contract Documents.

1.5.4.5. Review Contractor's Training Plan and provide comments to the Owner.

1.5.4.6. Approve technical requirements for correction of Deficiencies identified during Commissioning, Deferred Tests, and during the warranty period.

1.5.4.7. Review Operating and Maintenance Manuals and provide comments to the Owner.

1.5.5. Contractor's Roles and Responsibilities:

1.5.5.1. Contractor shall review and provide comments on documents produced by the Commissioning Authority, and shall accept the Commissioning Plan, System Verification Checklists, Functional Performance Test Procedures, and Integrated System Test Procedures as approved by the Owner.

1.5.5.2. Provide an individual, subject to the Owner's approval, experienced in construction and Commissioning of building systems to organize, schedule, conduct, and document the Contractor's responsibilities in the Commissioning process. The Contractor shall assign this individual to act as the Contractor's Commissioning Coordinator. The Contractor's Commissioning Coordinator may have additional duties such as MEP Coordinator, but not as Project Manager or Superintendent. Submit qualifications demonstrating the Commissioning Coordinator's technical expertise and experience to the Owner for approval. In the event that Contractor chooses to subcontract its Commissioning obligations, then Contractor must submit the subcontractor's qualifications and personnel to Owner for Owner's approval.

1.5.5.3. Furnish and install systems that meet all requirements of the Contract Documents.

1.5.5.4. Ensure that Commissioning Process activities are incorporated into the Master Project Schedule. The Contractor shall coordinate with the CxA and the Owner to determine the required activities, durations and predecessors.

1.5.5.5. Submit inspection requests, start-up requests and all supporting documentation in accordance with the Contract Documents, General Conditions, and Commissioning Plan.

1.5.5.6. Cooperate with Owner's representative(s), provide access to work and provide adequate labor, resources, and time for Commissioning.

1.5.5.7. Furnish copies of all shop drawings and submittals, manufacturers' literature, maintenance information, and any other information required for the Commissioning process. Contractor must submit to the Owner installation and checkout materials actually shipped inside equipment and actual field checkout sheet forms used by the factory or field technicians. This requirement does not supersede any additional requirements contained in the Contract Documents.

1.5.5.8. Schedule and conduct pre-installation meetings and pre-commissioning meetings with subcontractors and equipment suppliers related to Commissioning. Contractor must invite Architect/Engineer, Owner and CxA to attend the pre-installation meetings and pre-commissioning meetings.

1.5.5.9. Provide qualified personnel, including subcontractors as required, to fully perform the testing and operational demonstrations required by the Contract Documents and the Commissioning Plan, including any Deferred Testing or re-testing related to warranty work.

1.5.5.10. Correct deficiencies identified during any stage of the Commissioning process.

1.5.5.11. Coordinate with the CxA to develop the Training Plan and submit to the Owner for approval. Provide training to the Owner's personnel in accordance with the Contract Documents and the approved Training Plan. Coordinate with the Owner to schedule training sessions and coordinate subcontractor/vendor participation in all training sessions.

1.5.5.12. Perform Deferred Testing and make necessary amendments to Operating and Maintenance Manuals and as-built drawings for applicable issues identified during the Deferred Testing.

1.5.5.13. Perform system maintenance during construction as specified and recommended by the Owner and send the maintenance records to the Owner for Record.

1.5.5.14. Document the equipment as it arrives onsite to ensure that the submitted and received equipment is correct as it arrives onsite, including the completion of the system verification sections pertaining to the procurement process.

1.6. SYSTEMS TO BE COMMISSIONED

1.6.1. The following systems shall be commissioned according to the process defined in this Section:

1.6.1.1.1 Major HVAC Systems (100% including but not limited to the list below)
1.6.1.1.2 Air Handling Units
1.6.1.1.3 Fan Coil Units
1.6.1.1.4 Exhaust Fans
1.6.1.1.5 Supply Fans
1.6.1.1.6 Pumps
1.6.1.1.7 Chillers
1.6.1.1.8 Boilers

1.6.1.2. Terminal Units (10% Sampling)

1.6.1.3. Building Automation System

1.6.1.4. Lighting Controls - Occupancy Sensors (25% greater than 25 sensors installed, 100% less than 25 sensors installed)

1.6.1.5. Lighting - Daylight Controls (100%)

1.6.1.6. Lighting - Time Switch Controls (100%)

1.6.1.7. Normal and Emergency Power Systems

PART 2 - PRODUCTS

2.1. COMMISSIONING PLAN

2.1.1. Document developed by the CxA that provides the structure, schedule, and coordination plan for the Commissioning Process from the Pre-construction phase through the Occupancy Phase. The Commissioning Plan shall describe the project and systems to be commissioned, Commissioning Process activities and deliverables, procedures to follow throughout the process, specific roles and responsibilities for each participant, and general description of testing and verification methods.

2.1.2. The Commissioning Plan shall comply with the Owner's Project Requirements (OPR).

2.1.3. The Commissioning Team shall review the Commissioning Plan prior to the Pre-Commissioning Meeting and submit written comments or questions to the CxA to be addressed in the meeting.

2.1.4. Following the Pre-Commissioning meeting, the CxA shall incorporate all changes discussed and agreed upon in the Pre-Commissioning meeting and submit the Final Commissioning Plan to the Commissioning Team for approval and acceptance.

2.1.5. If changes to the Commissioning Plan are needed during the Commissioning Process, the CxA shall edit the plan and distribute to the Commissioning Team for approval and acceptance.

2.1.6. The Contractor's acceptance shall constitute acceptance of all parties sub-contracted to the Contractor. The Contractor shall ensure that all sub-contractors and vendors agree and accept the Commissioning Plan.

2.2. SYSTEM VERIFICATION CHECKLISTS

2.2.1. System Verification Checklists (SVCs) are important to ensure that the equipment and systems are connected and operational and that Functional Performance Testing proceeds without unnecessary delays. These checklists document the inspections and procedures necessary to take a piece of equipment from a static state into an operating state. These checklists augment the manufacturer's start-up checklists to provide a complete document from procurement to the start of Functional Performance Testing when combined.

2.2.2. The CxA shall develop the System Verification Checklist templates for review by the Cx Team. The Contractor, appropriate Subcontractors and Vendors shall support the CxA in development of SVCs for each system and components by providing any necessary supporting documentation as requested by the CxA and reviewing and commenting on the checklist templates in accordance with the Project Specifications and the Commissioning Plan.

2.2.3. Once the checklist templates are reviewed and accepted, the CxA will produce checklists for all equipment and components to be commissioned on the project utilizing an

electronic commissioning database that is accessible via web portal or local field tool (i.e., iPad, tablet, laptop, etc.).

2.2.4. The CxA shall provide login access and training to the Contractor and other members of the Cx Team in the use of the electronic commissioning database.

2.2.5. The Contractor shall be responsible for completing the required sections of the System Verification Checklists utilizing the electronic commissioning database and providing all supporting documentation via electronic transmittal to the CxA. Additional requirements for completion of the SVCs are included in this section and other technical sections of the Specifications.

2.2.6. Once equipment arrives on the project site, the Contractor or sub-contractors shall begin completing the individual checklists and continue throughout the installation process. The checklists are meant to be progressive and a tool for tracking progress.

2.2.7. Once the SVCs are electronically completed, the CxA will review and approve the checklists and supporting documentation and compile the information to include in the Final Commissioning Process Report.

2.3. FUNCTIONAL PERFORMANCE TESTING PROCEDURES:

2.3.1. The purpose of the Functional Performance Testing Procedures is to verify and document that the equipment and systems on the project individually perform in accordance with the requirements in the Contract Documents and meet the Owner's Project Requirements.

2.3.2. The CxA shall develop specific script-type test procedures to verify and document proper operation of each piece of equipment and system. The Contractor shall provide any supporting information to the CxA that may be needed including but not limited to product submittals, O&M information, and sequences of operation. Once developed, the CxA will issue to the Cx Team for review and comment.

2.3.3. The Commissioning Team shall review the Functional Performance Test procedures and submit written comments or questions to the CxA. The Contractor shall ensure that the sub-contractors and any vendors that would be involved with Functional Performance Testing review the procedures and provide comments.

2.3.4. The CxA will coordinate with the Cx Team to address any comments and produce the final FPT procedures for acceptance by the Cx Team. The Contractor's acceptance shall constitute acceptance of all parties sub-contracted to the Contractor.

2.3.5. The Contractor shall utilize the FPT procedures for any pre-testing activities prior to Functional Performance Testing.

2.4. INTEGRATED SYSTEMS TESTING PROCEDURES:

2.4.1. The purpose of the Integrated Systems Testing Procedures is to verify and document that all the integrated equipment and systems on the project perform together in accordance with the requirements in the Contract Documents and meet the Owner's Project Requirements.

2.4.2. The CxA shall develop specific script-type test procedures to verify and document proper operation of the integrated systems throughout the facility. The Contractor shall provide

any supporting information to the CxA that may be needed including but not limited to product submittals, O&M information, and sequences of operation. Once developed, the CxA will issue to the Cx Team for review and comment.

2.4.3. The Commissioning Team shall review the Integrated Systems Testing procedures and submit written comments or questions to the CxA. The Contractor shall ensure that the sub-contractors and any vendors that would be involved with Integrated Systems Testing review the procedures and provide comments.

2.4.4. The CxA shall coordinate with the Cx Team to address any comments and produce the final IST procedures for acceptance by the Cx Team. The Contractor's acceptance shall constitute acceptance of all parties sub-contracted to the Contractor.

2.4.5. The CxA shall also develop the IST personnel matrix that will be utilized to track the individual testing teams involved with the IST. The CxA will distribute the matrix to the Cx Team so that the Contractor and Owner can assign the appropriate personnel to the appropriate teams.

2.4.6. The CxA shall also host a coordination meeting prior to the IST to review the IST procedures, complete any final coordination, review safety procedures, and answer any questions.

2.4.7. The CxA estimates there will be two Integrated Systems Tests on the project. The first will test the Data Center systems separately and the second will test the entire facility. Requirements of the testing are included in the respective technical sections of the Project Specifications.

2.4.8. The IST procedures shall be utilized by the Contractor for any pre-testing activities prior to official Integrated Systems Testing.

2.5. TRAINING PLAN

2.5.1. Contractor, in coordination with Owner and CxA, shall develop the Training Plan with project specific requirements for Owner Training, after reviewing the different systems to be installed and commissioned. The purpose of the Training Plan is to specifically communicate the required content and training durations required by the Owner based upon the type of equipment and the Owner's past experience.

2.5.2. The Contractor shall review all of the individual technical sections of this specification for specific training requirements.

2.5.3. The Contractor shall coordinate with the Owner to ensure that the proposed training requirements meet the Owner's needs and expectations.

2.5.4. The Contractor shall coordinate with the sub-contractors and vendors to ensure the Owner Training requirements can be achieved and gather any additional information or recommendations.

2.5.5. Any changes to the training requirements in this specification must follow contractual protocols.

2.5.6. The Training Plan shall include a list of systems and equipment for which training will be provided according to the three-tiered training approach outlined in the project specifications.

2.5.7. All training sessions shall have a syllabus indicating the following as a minimum in addition to any other specification requirements:

2.5.7.1. Session Objectives

2.5.7.2. Proposed Instructor(s)

2.5.7.3. Instructor Qualifications

2.5.7.4. Training Materials that will be provided

2.5.7.5. Location and durations of the various parts of the training session (i.e., Classroom, On-site, etc.)

2.5.7.6. Applicable specification sections and O&M Manual sections

2.5.7.7. Detailed outline of training session content

2.5.8. The Contractor shall coordinate with the CxA to organize the systemic training sessions comparable to the organization of the Systems Manual.

2.5.9. Owner training must be completed prior to the contractor obtaining substantial completion by the Owner.

2.6. FINAL COMMISSIONING PROCESS REPORT

2.6.1. The CxA shall prepare the Final Commissioning Process Report that will include the following:

2.6.1.1. Executive Summary

2.6.1.2. Participants and Roles

2.6.1.3. Brief building description

2.6.1.4. Overview of commissioning and testing scope

2.6.1.5. General description of testing and verification methods

2.6.1.6. Appendices with supporting information, issues log, and communications

2.6.2. The Contractor shall coordinate with the CxA to provide any additional information that may be needed to complete the Final Commissioning Process Report.

2.6.3. The Contractor shall resolve any outstanding commissioning items prior to the CxA preparing the final commissioning report.

2.6.4. The CxA shall issue the Final Commissioning Process Report to the Cx Team for review. The Owner shall approve the Final Commissioning Process report after any comments or discrepancies are resolved by the CxA.

PART 3- EXECUTION

3.1. PROJECT SCHEDULE

3.1.1. The Contractor shall integrate all Commissioning activities into the detailed Project Schedule. All parties will address scheduling problems and make necessary notifications in a timely manner to expedite the Commissioning Process.

3.2. COMMISSIONING TEAM MEETINGS

3.2.1. Upon obtaining Owner's approval of the Commissioning Plan, the CxA shall coordinate with the Cx Team to schedule, plan, and conduct a Pre-Commissioning Meeting with all parties involved in the Commissioning process. This meeting should include the major subcontractors, specialty manufacturers/suppliers, Architect/Engineer, Test, Adjust, and Balance (TAB) Firm, Electrical Testing Agency, and Owner's representatives as participants.

3.2.2. Contractor shall prepare for the Pre-Commissioning Meeting by supplying the following documents created by the CxA to all applicable sub-contractors and vendors: Commissioning Plan, Example System Verification Checklists, Example Functional Performance Test Procedures and Example Integrated Systems Test Procedures.

3.2.3. The CxA shall conduct the Pre-Commissioning Meeting and review all aspects of the Commissioning Plan and applicable specifications.

3.2.4. The Commissioning Plan shall be reviewed with all attendees and the scope of work discussed. Contractor should be prepared to distribute copies of the pertinent sections to the various subcontractors involved in the Commissioning process.

3.2.5. The final outcome of the meeting shall be an understanding of the commissioning process, roles and responsibilities, and consensus acceptance of the Commissioning Plan by the Cx Team.

3.2.6. The Contractor may request additional meetings with the CxA and individual sub-contractors to clarify roles, responsibilities and procedures as needed.

3.3. TEST EQUIPMENT

3.3.1. Contractor shall provide all specialized tools, test equipment and instruments required to execute start-up, checkout, and testing of equipment.

3.3.2. All specialized tools, test equipment and instruments required to execute start-up, checkout, and testing of equipment shall be of sufficient quality and accuracy to test and/or measure system performance within specified tolerances. A testing laboratory must have calibrated test equipment within the previous twelve (12) months. Calibration shall be NIST traceable. Contractor must calibrate test equipment and instruments according to manufacturer's recommended intervals and whenever the test equipment is dropped or damaged. Calibration tags must be affixed to the test equipment or certificates readily available.

3.4. REPORTING

3.4.1. Beginning at the procurement stage for the equipment included in the Cx scope, the Contractor shall communicate at least monthly with all members of the Commissioning Team, keeping them apprised of construction progress and scheduling changes.

3.4.2. Contractor shall submit Deficiency reports to the Owner within five (5) days of the deficiency occurrence. This includes responses to items noted by the Commissioning Authority.

3.5. DEFICIENCY RESOLUTION

3.5.1. The CxA shall document any issues noted during observation or testing activities in the Commissioning Issues Log (CxIL). The CxIL shall be distributed electronically to the Cx Team at regular intervals.

3.5.2. The Contractor shall respond in writing to the CxA within 10 days to all new CxIL items regardless of the disposition. This response does not constitute a request for re-verification, only an acknowledgement of the outstanding item. The Contractor should utilize CxIL responses to update the Cx Team on the progress of deficiency resolution.

3.5.3. The Contractor shall respond to the CxA and the Owner indicating CxIL items that are completed and ready for the CxA to verify completion.

3.5.4. If any item indicated complete by the Contractor is found to be incomplete by the CxA upon re-verification the Contractor is responsible for all costs and additional compensation resulting from incomplete Cx Issues Log items.

3.6. REQUEST FOR ENERGIZING / START-UP OF EQUIPMENT

3.6.1. The Owner and/or Owner’s representative may install lockout devices on equipment in addition to the Contractor’s lockout / tagout devices once permanent power is connected to the facility. This lock would be removed once the proper start-up notification is received by the Owner and/or CxA, and the CxA has reviewed the appropriate SVCs and supporting documentation to verify the equipment is ready for energizing and/or start-up.

3.6.2. These requirements do not supersede any additional requirements noted elsewhere in the Contract Documents or as required by applicable code authorities.

3.6.3. Contractor shall notify Owner and CxA in writing to request initial energizing and/or start-up of equipment and systems at least 72 hours (not including weekends or holidays) prior to the scheduled start-up.

3.6.4. Contractor shall complete the applicable sections of the System Verification Checklist(s) evidencing the Contractor’s thorough inspection of the system and readiness for start-up activities as required by the Project Documents and the Commissioning Plan. Contractor shall submit required supporting documentation to the Owner and/or CxA, including but not limited to, factory testing reports, alignment reports, electrical testing reports and any other documentation required by the Project Documents prior to energizing and/or start-up.

3.6.5. The CxA shall review the SVCs and supporting documentation within the 72 hour notice period and confirm in writing that the systems and equipment are approved to proceed with energizing and start-up.

3.6.6. The CxA and/or owner may witness equipment energizing and/or start-up at the scheduled time, but witness is not required, unless noted elsewhere in the Specifications, as long as written approval is received as noted herein.

3.6.7. Contractor shall perform Start-up under supervision of the responsible manufacturer's representative in accordance with manufacturer's instructions and Project Document requirements.

3.6.8. Contractor shall complete all required factory start-up documentation and applicable items in the System Verification Checklists, prior to startup, to ensure compliance with the requirements in the Project Documents.

3.7. OPERATIONAL TESTING

3.7.1. Once the appropriate start-up activities are completed, the Contractor shall complete all necessary operational testing requirements included in the Project Documents prior to Functional Performance Testing. Specific requirements for systems and equipment are included in other technical sections of the Specifications.

3.7.2. Contractor shall complete all operational testing items in the System Verification Checklist and submit all supporting documentation to the Owner and/or CxA for review.

3.7.3. Contractor and manufacturer's representatives shall supervise and coordinate adjustments and balancing of all devices and systems for proper operation prior to requesting a Functional Performance Test(s).

3.7.4. Contractor shall clearly list outstanding items or System Verification Checklist items not completed successfully. Contractor shall obtain from Subcontractor or vendor completed forms documenting any outstanding deficiencies within five (5) days of completion of energizing and/or start-up activities.

3.7.5. Contractor shall review completed deficiencies to determine if outstanding items prevent execution of the Functional Performance Tests and shall issue any necessary responses to the Owner and/or Commissioning Authority.

3.7.6. Contractor shall notify Owner and CxA in writing to request Functional Performance Testing of equipment and systems at least 72 hours (not including weekends or holidays) prior to the scheduled activities. Owner may require Contractor to reschedule Functional Performance Testing to ensure availability of Owner’s representative(s) as needed.

3.7.7. The CxA shall review the SVCs and supporting documentation within the 72 hour notice period and confirm in writing that the systems and equipment are approved to proceed with Functional Performance Testing.

3.7.8. If any item indicated complete by the Contractor is found to be incomplete by the CxA upon re-verification the Contractor is responsible for all costs and additional compensation resulting from incomplete System Verification Checklist items.

3.8. CONTROL POINT AND SENSOR CALIBRATION VERIFICATION

3.8.1. Automation systems installed on the project must be fully verified for point integrity and sensor calibration prior to Functional Performance Testing. Additional requirements for this verification are listed in other technical sections of the Specifications.

3.8.2. The Contractor shall verify these points according to the requirements in the project documents as part of start-up and operational testing of systems.

3.8.3. The TAB contractor shall independently verify each sensor and point and document the results to be included in the Final TAB Report.

3.8.4. The CxA will witness, at their discretion, this verification and/or independently verify and document the results to be included in the Final Commissioning Process Report.

3.8.5. These activities must be completed prior to the Contractor requesting Functional Performance Testing as indicated herein.

3.9. FUNCTIONAL PERFORMANCE TESTING

3.9.1. The objective of Functional Performance Testing is to demonstrate that each system operates according to the requirements in the Project Documents and meets the OPR and BOD.

3.9.2. Contractor shall operate, or cause to be operated, each system, device, or equipment item, both intermittently and continuously, for a duration period as indicated in the Specification Section(s) for each item and/or in accordance with the Project Documents, the Commissioning Plan and applicable Functional Performance Testing procedures.

3.9.3. Contractor shall operate each component device and each building system to the full extent of its capability, from minimum to maximum, and under automatic control and manual control.

3.9.4. The CxA and members of the Cx Team, including the Owner's personnel, may observe Functional Performance Testing of equipment components and systems. The CxA shall facilitate the Functional Performance Testing activities according to the accepted FPT procedures and record the results of all testing activities.

3.9.5. The CxA shall record any deficiencies noted during the testing in the CxIL. If significant deficiencies exist, the owner and/or CxA may request that the testing activities be terminated and re-scheduled after proper verification by the Contractor. The Contractor is responsible for all costs and additional compensation resulting from deficiencies and incomplete systems noted during scheduled Functional Performance Testing.

3.9.6. All Functional Performance Testing of Integrated Systems must be completed in accordance with the Project Documents and the Commissioning Plan prior to the Contractor scheduling the Integrated Systems Testing activities.

3.10. INTEGRATED SYSTEMS TESTING

3.10.1. The objective of Integrated Systems Testing is to demonstrate that each integrated system operates jointly and/or independently of other systems according to the requirements in the Contract Documents.

3.10.2. Contractor shall operate each system, jointly and independently of other systems, through selected modes of operation (fire alarm integration with HVAC, emergency power modes, equipment failures among related systems, etc.) according to the accepted Integrated Systems Testing procedures developed by the CxA. The CxA shall facilitate and document the testing, organizing the appropriate testing teams and providing sufficient instruction to all participants to conduct efficient and effective testing activities.

3.10.3. Integrated Systems Testing typically involves multiple teams with representation from the CxA, Owner, and Contractor. The Contractor shall provide any needed communication

equipment (i.e., radios) or make available any centralized intercom or paging system for communication with all testing groups.

3.10.4. The Contractor shall provide no less than 7 days (not including weekends or holidays) notice when requesting to conduct the Integrated Systems Testing. All personnel must be assigned to the Personnel Matrix by the CxA and a coordination meeting held within the 7 day period as prescribed elsewhere in this section.

3.10.5. Contractor conducts Integrated Systems Testing after all applicable Functional Performance Testing is satisfactorily completed and approved by the Owner and/or CxA.

3.10.6. The CxA shall record any deficiencies noted during the testing in the CxIL. If significant deficiencies exist, the owner and/or CxA may request that the testing activities be terminated and re-scheduled after proper verification by the Contractor. The Contractor is responsible for all costs and additional compensation resulting from deficiencies and incomplete systems noted during scheduled Integrated Systems Testing.

3.11. DEMONSTRATION AND OWNER TRAINING

3.11.1. The Contractor, in coordination with Owner and CxA, shall develop the Training Plan with project specific requirements for Owner Training as required throughout various sections of the Project Specifications.

3.11.2. The specific requirements for scheduling and conducting the Owner Training are included in other sections of this Specification.

3.11.3. Owner Training activities shall not occur until the Training Plan is approved by the Owner and the Contractor has submitted all O&M information for review and use during the training sessions.

3.11.4. The Contractor shall notify the CxA of all training sessions. The Contractor shall record attendance of the training sessions and the Owner shall ensure the appropriate personnel are in attendance.

3.11.5. The CxA shall ensure the content of the Owner Training sessions meets the requirements in the Project Documents.

3.11.6. The CxA may conduct surveys of the Owner’s personnel to gauge the effectiveness of the Owner training sessions. If unfavorable surveys are received by the Owner’s personnel indicating unsatisfactory training, the Owner reserves the right to require the Contractor to re-train in those specific areas of non-conformance until the requirements in the Project Documents are satisfactorily completed.

3.11.7. Owner training must be completed prior to the contractor obtaining substantial completion by the Owner.

3.12. DEFERRED / SEASONAL TESTING

3.12.1. All Construction phase requirements of the Commissioning Process must be completed prior to Substantial Completion or as indicated elsewhere in this Specification.

3.12.2. If any testing or other requirements cannot be completed prior to Substantial Completion due to the building structure, required occupancy condition, or other condition, performance of such test may be delayed to later in the warranty period, upon approval of

the Owner. Contractor shall reschedule testing according to the protocols described in this section and any other operational protocols prescribed by the Owner.

3.12.3. Contractor shall complete all outstanding commissioning requirements as part of this Contract during the warranty period. Contractor shall schedule all activities with Owner and/or CxA.

3.12.4. The CxA shall document any deferred testing activities and ensure the appropriate commissioning documents are updated. The Contractor shall provide any additional documentation needed by the CxA to complete these requirements.

END OF SECTION

SECTION 03 30 00 - CAST-IN-PLACE CONCRETE (BUILDING CONCRETE)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes.

B. Cast in place concrete includes the following:
1. Foundations and footings.
    a. Drilled Piers.
    b. Light pole bases.
    c. Flag pole base.
2. Slab on grade.
3. Fill for steel deck.
4. Equipment pads and bases.

C. Related Requirements:

1. Quality Requirements: Materials Section 01 40 00 – testing.
2. Section 03 52 16 – Insulating Concrete Roof Fill
3. Division 09 for requirements relating to specified floor coverings, finishing, and curing of interior concrete floor slabs.
4. Section 31 23 15 - Building Earthwork
5. Section 31 63 29 – Drilled Concrete Piers and Shafts

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference prior to any work beginning by trade. Time, date and location as determined by a construction manager.

1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

    a. Contractor's superintendent.
    b. Independent testing agency responsible for concrete design mixtures.
    c. Ready-mix concrete manufacturer.
    d. Concrete Subcontractor.
    e. Special concrete finish Subcontractor.

2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semirigid joint fillers, forms and form removal limitations, shoring and reshoring procedures, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, methods for achieving specified floor and slab flatness and levelness floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection.

1.5 ACTION SUBMITTALS

A. General: Submit the following according to Conditions of the Contract and Division 1 Specification Sections.

B. Product Data: For each type of product.

C. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments. Designs shall be submitted a minimum of 48 hours prior to the placement of any concrete. Submit properties of mixtures for each class of concrete including:
1. Mixture Identification by class
2. Specified compressive strength, f'_c, that is applicable for the class
3. Specified exposure class in Part 2, “PRODUCTS”, Article “CONCRETE MIXTURES, GENERAL”
4. Documentation of strength test records of similar class of concrete used to establish standard deviation in accordance with ACI 318, when test records exist
5. Required average compressive strength, f'_{cr}, for each class of concrete
6. Documentation of f'_{cr} of proposed mixtures(s)
7. Intended placement method
8. Slump or slump flow
9. Air content
10. Density
11. Water/cement ratio (w/cm), when specified
12. Documentation supporting other specified requirements of concrete mixtures
13. Nominal maximum aggregate size or Size number
14. Type and information about the ingredient materials proposed for use including:
    a. Cementitious Materials
    b. Aggregates
    c. Admixtures
    d. Water
    e. Fibers, color pigments, and other additions
15. Amounts of mixing water to be withheld for later addition at Project site.

D. Steel Reinforcement Shop Drawings: Placing Drawings that detail fabrication, bending, and placement. Comply with CRSI's "Manual of Standard Practice" and ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures." Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement. Original contract drawings shall not be reproduced for use as a portion of the Shop drawing.

E. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
1. Submit original shop drawings indicating the proposed construction joint locations to the Architect/Engineer at least 14 days prior to beginning formwork on the portion of the building in question.

1.6 INFORMATIONAL SUBMITTALS

A. Information submittals are mandatory submittals by the sub-contractor to the General Contractor, Construction Manager and Design Professional which are not returned but kept for the project record.

B. Material certificates in lieu of material laboratory test reports when permitted by Architect/Engineer. For each of the following, material certificates shall be signed by manufacturer and Contractor, certifying that each material item complies with or exceeds specified requirements.

1. Cementitious materials.
2. Admixtures. Provide certification that chloride content complies with specification requirements.
3. Form materials and form-release agents.
4. Steel reinforcement and accessories.
5. Fiber reinforcement.
6. Waterstops.
7. Curing compounds.
8. Floor and slab treatments.
9. Bonding agents.
10. Adhesives.
11. Vapor retarders. Certificate shall include permeance ratings expressed in grains of water vapor per square foot per hour per inch of mercury.
12. Semi-rigid joint filler.
13. Joint-filler strips.
14. Repair materials.

C. Material Test Reports: For the following, from a qualified testing agency:

1. Aggregates**:** Include sieve analysis, dry rodded unit weight of coarse aggregate, and the specific gravities of both fine and coarse aggregates. Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity.

D. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.

E. Field quality control reports: The independent testing laboratory shall submit laboratory test reports for concrete materials directly to the Architect/Engineer with copy to others in accordance with the provisions of section 014000 "Quality Requirements." State in each report whether or not the test specimens comply with the specified requirements and indicate any deviations therefrom.

1.7 QUALITY ASSURANCE

A. Codes and Standards: Comply with provisions of the following codes, specifications, and standards, except where more stringent requirements are shown or specified:

1. American Concrete Institute (ACI) 301, "Specifications for Structural Concrete for Buildings."
2. ACI 304 "Recommended Practice for Measuring, Mixing, Transporting, & Placing Concrete"
3. ACI 305 "Hot Weather Concreting".
4. ACI 306 "Recommended Practice for Cold Weather Concreting"
5. ACI 311 "Recommended Practice for Concrete Inspection"
6. ACI 318 "Building Code Requirements for Reinforced Concrete."
7. ACI 347 "Recommended Practice for Concrete Formwork"
8. Concrete Reinforcing Steel Institute (CRSI), "Manual of Standard Practice."

B. Mix designs: Test in accordance with the requirements of PART 2 - PRODUCTS, article "PROPORTIONING AND MIX DESIGNS".

A. Materials and installed work may require testing and retesting at any time during progress of Work. Tests, including retesting of rejected materials for installed Work, shall be done at Contractor's expense.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: When the manufacturer does not comply with all requirements of Part 1, Quality Assurance, Manufacturer Qualifications, engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures. The manufacturer is permitted to engage a qualified independent testing agency to perform specific tests for project submittals. The contractor is responsible for the cost of the preconstruction testing service.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement.

B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

1.10 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40 deg F for more than one day in a row, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.
4. Removal of formwork shall be delayed during cold weather to assure adequate structural strength, unless approved strength accelerating measures are taken.
5. Contractor shall provide to the Architect/Engineer a written description of procedures to be used for cold weather concreting in accordance with Part 1, “ACTION SUBMITTALS”. The details should include, but not be limited to, the following:
    a. Procedures for protecting the subgrade from frost and the accumulation of ice or snow on reinforcement or forms prior to placement.
    b. Methods for temperature protection during placement.
    c. Types of covering, insulation, housing, or heating to be provided.
    d. Curing methods to be used during and following the protection period.
    e. Use of strength accelerating admixtures.
    f. Methods for verification of in-place strength.
    g. Procedures for measuring and recording concrete temperatures.
    h. Procedures for preventing drying during dry, windy conditions.

B. Hot-Weather Placement: Comply with ACI 301 and 305.1 and as follows:

1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.
3. Provide submittals required by ACI 305.1 in accordance with Part 1, “ACTION SUBMITTALS”.
4. Water Reducing and Retarding Compound: The manufacturer of the mixture shall submit in writing to the Architect/Engineer and the Contractor, special recommendations for quantities to be used under various temperature and job conditions to assure that the concrete can be maintained at a uniform consistency while in the mixer truck and sufficiently workable between lifts to prevent the occurrence of lift lines with the specified placement and consolidation techniques, and as approved by the Architect/Engineer. Assure that the proper admixture and dosage is used during hot weather (mix temperature over 90 deg F.) to prevent slump loss from plant to site.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301.
2. ACI 336.
3. ACI 117.

2.2 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.
2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:

    a. High-density overlay, Class 1 or better.
    b. Medium-density overlay, Class 1 or better; mill-release agent treated and edge sealed.
    c. Structural 1, B-B or better; mill oiled and edge sealed.
    d. B-B (Concrete Form), Class 1 or better; mill oiled and edge sealed.

3. Overlaid Finnish birch plywood.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.

D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.

E. Hole Forms: Plastic, removable, coiling forms for handrail and guardrail post supports.
   1. Basis-of-Design: Econ-O-Post Hole Form, Deslauriers, Inc. 800-743-4106 www.deslinc.com
      a. For post up to 2-3/8 inch outside diameter: EPHF-3.
      b. For post greater than 2-3/8 inch outside diameter to 3-1/2 inch outside diameter: EPHF-4.
   2. Coordinate locations with post indicated on plans, shop drawings, setting drawings and with railing installers. Coordinate form sizes required with post sizes.

F. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum.

G. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

H. Form-Release Agent: Commercially formulated form-release agent with a maximum of 450 g/l volatile organic compounds (VOCs) that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.

   1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

I. Form Ties: Factory-fabricated, removable or snap-off glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

   1. Furnish units that leave no corrodible metal closer than 1 1/2 inch to the plane of exposed concrete surface.
   2. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.
   3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

J. Expanded polystyrene (EPS) and Extruded polystyrene (XPS) Forms: Complies with ASTM D6817 / D6817M, treated to resist insects and suitable for below grade applications; EPA registered treatment, meeting requirements of ICC ES AC239, and recognized in an ISS ES report.

   1. Products: Subject to compliance with requirements, product which may be incorporated in the Work include, but are not limited to, the following:

      a. Foam-Control EPS; 952-892-0809; www.geofoam.com
      b. InsulFoam GF; 403-248-6616; www.insulfoam.com
      c. Atlas EPS; 616-878-1568; www.atlaseps.com
      d. DOW Building Solutions; 800-583-2583; www.building.dow.com
      e. Owens Corning; 800-438-7465; commercial.owenscorning.com/products
      f. Kingspan; 800-241-4402; www.trustgreenguard.com/insulation-board
      g. Substitutions: Section 01 60 00-Product Requirements

   2. Minimum material requirements for EPS and XPS foams:

      a. Size: Largest practicable sizes.
      b. Thickness: As indicated.
      c. Density: As indicated (1.15 lb/cu. ft, min.)
      d. Compressive Strength: As indicated (5.8 psi at 1% deformation, min.)

e. Deformation: 1% maximum.

3. Connector Plates: Manufacturer’s galvanized or stainless steel plates with two-sided multi-barbed design, capable of piercing geofoam and resisting lateral movement between blocks during installation.

4. Lateral Holding Strength: 60 lbs.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.

B. Low-Alloy-Steel Reinforcing Bars, including Deformed Bar Anchors: ASTM A 706/A 706M, deformed.

C. Plain-Steel Wire: ASTM A 1064/A 1064M, as drawn.

D. Deformed-Steel Wire: ASTM A 1064/A 1064M.

E. Plain-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, plain, fabricated from as-drawn steel wire into flat sheets.

F. Deformed-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, flat sheet.

2.4 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.

B. Epoxy-Coated Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, ASTM A 775/A 775M epoxy coated.

C. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/A 775M.

D. Zinc Repair Material: ASTM A 780/A 780M.

E. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place. Manufacture bar supports from steel wire or plastic according to CRSI's "Manual of Standard Practice," and as follows:
1. For slabs on grade, use supports with sand plates or horizontal runners where base material will not support chair legs.
2. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2.5 CONCRETE MATERIALS

A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

B. Cementitious Materials:

1. Portland Cement: ASTM C 150/C 150M, Type I. Type III cement may be used in lieu of Type I at contractor's option, when acceptable to the Architect/Engineer.
2. Fly Ash: ASTM C 618, Class F.
3. Slag Cement: ASTM C 989/C 989M, Grade 100 or 120.

C. Normal-Weight Aggregates: ASTM C 33/C 33M, coarse aggregate or better, graded. Provide aggregates from a single source for exposed concrete.

1. Maximum Coarse-Aggregate Size: As indicated in Section 2.13 “CONCRETE MIXTURES FOR BUILDING ELEMENTS”.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
3. For exposed exterior surfaces, do not use fine or coarse aggregates that contain substances that cause spalling. Do not use aggregates containing soluble salts or other substrates such as iron sulfides, pyrite, marcasite or ocher which can cause stains on exposed concrete surfaces.
4. Local aggregates not complying with ASTM C 33 that have been shown to produce concrete of adequate strength and durability by special tests or actual service may be used when acceptable to Architect/Engineer.

D. Lightweight Aggregate: ASTM C 330/C 330M, as indicated in Section 2.13 “CONCRETE MIXTURES FOR BUILDING ELEMENTS”.

E. Air-Entraining Admixture: ASTM C 260/C 260M.
1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
   a. MasterAir VR 10 or MasterAir AE 200; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
   b. Eucon Air Mix or Eucon Air series; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
   c. Darex AEA or Daravair series; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
   d. Sika AEA series of Sika Air series; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com

F. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
   a. Products: Subject to compliance with requirements, product which may be incorporated in the Work include, but are not limited to, the following:

      1) MasterPozzolith or MasterPolyheed; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
      2) Eucon WR or Eucon MR; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      3) WRDA series; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
      4) Plastocrete 161; Sika Corporation, USA; 800-933-7452; www.sikaconstruction

2. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
   a. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

1) MasterSet R 300 ; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
2) Eucon Retarder 75; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
3) Daratard 17; W. R. Grace & Co.-Conn 866-333-3726; www.graceconstruction.com
4) Plastiment; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com
5) Metco WR; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com

3. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F and/or High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
   a. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

      1) Super P; Anti-Hydro International, Inc.; 800-777-1773; www.anti-hydro.com
      2) MasterRheobuild 1000; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
      3) Eucon 37; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      4) Daracem series or ADVA series; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
      5) Superslump ; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
      6) Sikament series; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com

4. Water Reducing, Accelerating Admixture: ASTM C 494, Type E.
   a. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:

      1) MasterSet FP 20; BASF Construction Chemicals – Building Systems; 722-8899; www.master-builders-solutions.basf.us
      2) ACCELGUARD 80; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      3) Daraset series; W. R. Grace & Co.-Conn ; 866-333-3726; www.graceconstruction.com
      4) Q-Set; Dayton Superior; 888-977-9600; www.daytonsuperior.com
      5) Accel Set; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
      6) SikaSet NC; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com

G. Set-Accelerating Corrosion-Inhibiting Admixture: Commercially formulated, anodic inhibitor or mixed cathodic and anodic inhibitor; capable of forming a protective barrier and minimizing chloride reactions with steel reinforcement in concrete and complying with ASTM C 494/C 494M, Type C.
   1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
      a. MasterLife CI 30; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
      b. Eucon BCN or Eucon CIA; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      c. DCI or DCI-S; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com

d. Sika CNI; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com

H. Water: ASTM C 94/C 94M and potable. Non-potable water sources, with documented conformance of ASTM C1602, may be submitted for approval by the Architect/Engineer prior to construction.

2.6 WATERSTOPS

A. Flexible Rubber Waterstops: CE CRD-C 513, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.
1. Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include, but are not limited to, the following:
a. Williams Products, Inc.; 800-521-9594; www.williamsproducts.net
2. Profile: Flat dumbbell with center bulb at expansion joints and Flat dumbbell without center bulb at construction joint.
3. Dimensions: Minimum of 4 inches by 3/16 inch thick at cold joints and 6 inches by 3/8 inch thick at expansion joints; nontapered.

B. Flexible PVC Waterstops: CE CRD-C 572, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.
1. Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include, but are not limited to, the following:
a. Greenstreak; 800-325-9504; www.greenstreak.com
b. Vinylex Corporation;800-325-3602; www.vinylexwaterstop.com
2. Profile: Flat dumbbell with center bulb at expansion joints and Flat dumbbell without center bulb at construction joint.
3. Dimensions: Minimum of 4 inches by 3/16 inch thick at cold joints and 6 inches by 3/8 inch thick at expansion joints; nontapered.

C. Preformed Plastic Adhesive Waterstops: Federal Specification SS S 210A. It shall be supplied in extruded form of suitable cross section and of a size to seal the joint areas of concrete sections. The plastic waterstop shall be protected by a suitable removable two piece wrapper. The two piece wrapper shall be so designed that one half may be removed longitudinally without disturbing the other half, to facilitate application of the sealing compound.
1. Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the work include; but are not limited to, the following:
a. Waterstop-RX; CETCO; 800-527-9948; www.cetco.com
b. Synko Flex, Henry Company 800-486-1278 www.henry.com
c. Ram Nex, K.T. Snyder Company, Inc.

D. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch.

2.7 VAPOR RETARDERS

A. Sheet Vapor Retarder: ASTM E 1745, Class A. Include manufacturer's recommended adhesive or pressure-sensitive tape.
1. Provide manufacturer's recommended mastics and gusset tape at all joints, to create a continuous membrane.
2. Products for Slab-on-Grade: Subject to compliance with requirements, products which may be incorporated in the Work include the following:
a. VB-350; Inteplast Group; 877-535-0555; www.barrierbac.com

b. VaporBlock Plus; Raven Industries Inc.; 605-335-0174; www.ravenefd.com
c. 15 mils thick Stego Wrap; Stego Industries, LLC; 877-464-7834; www.stegoindustries.com
d. 15 mils thick Perminator; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com
e. Polyethylene sheet not less than 15 mils thick (must provide proof of compliance with ASTM E 1745).

B. Bituminous Vapor Retarder: 110-mil- thick, semiflexible, seven-ply sheet membrane consisting of reinforced core and carrier sheet with fortified asphalt layers, protective weathercoating, and removable plastic release liner. Furnish manufacturer's accessories, including bonding asphalt, pointing mastics, and self-adhering joint tape.
1. Product: Subject to compliance with requirements, products which may be incorporated in the Work include the following:
a. Premoulded Membrane Vapor Seal with Plasmatic Core; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com
2. Water-Vapor Permeance: 0.0011 grains/h x sq. ft. x inches Hg; ASTM E 154.
3. Tensile Strength: 140 lbf/; ASTM E 154.
4. Puncture Resistance: 90 lbf; ASTM E 154.

2.8 CHEMICAL HARDENERS

A. Colorless aqueous solution containing a blend of magnesium fluosilicate and zinc fluosilicate combined with a wetting agent, containing not less than 2 lbs. of fluosilicates per gal.
1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
a. MasterKure HD 300WB; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
b. Surfhard; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
c. Liqui-Hard; W.R. Meadows, Inc. 800-342-5976; www.wrmeadows.com

2.9 LIQUID FLOOR TREATMENTS

A. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or siliconate materials and proprietary components complying with ASTM C 309, Type I-D, Class A; odorless; that penetrates, hardens, and densifies concrete surfaces.

1. Provide material that has a maximum volatile organic compound (VOC) rating of 350 mg per liter.
2. Do not use curing compound on recessed slab areas which receive paver tile, quarry tile, ceramic tile or terrazzo finish floor material. These areas shall be water cured only.
3. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
a. A-H 3 Way Sealer WB Anti-Hydro International, Inc. 800-777-1773; www.anti-hydro.com
b. MasterKure CC series BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
c. Cure and Seal series; Dayton Superior; 888-977-9600; www.daytonsuperior.com
d. Eucocure VOX; Euclid Chemical Company ;800-321-7628; www.euclidchemical.com
e. L&M Cure R; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
f. Seal N Kure; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
g. CS-309-25; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

2.10 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.
   1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
      a. MasterKure ER 50; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
      b. Aquafilm series; Dayton Superior; 888-977-9600; www.daytonsuperior.com
      c. Eucobar; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      d. E-Con; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
      e. Waterhold; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
      f. Evapre; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

D. Water: Potable.

E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B.
   1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
      a. MasterKure CC Series; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
      b. Cure and Seal series Dayton Superior 888-977-9600 www.daytonsuperior.com
      c. Aqua-Cure VOX; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
      d. Dress & Seal WB; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
      e. Metcure; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
      f. Vocomp-20;W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

2.11 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber.

B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Type A shore durometer hardness of 80 according to ASTM D 2240.

C. Bonding Agent: ASTM C 1059/C 1059M, Type II, nonredispersible, acrylic emulsion or styrene butadiene.
   1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
      a. Polyvinyl Acetate (Interior Only):
         1) PVA Bonding Agent J41; Dayton Superior; 888-977-9600; www.daytonsuperior.com
         2) Tammsweld; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
         3) Weld-Crete ; Larsen Products Corp.; 800-633-6668; www.larsenproducts.com

4) Herculox; Metalcrete Industries; 800-526-5602 ; www.metalcreteindustries.com
5) Intralok ; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

b. Acrylic or Styrene Butadiene:
1) MasterEmaco A 660; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
2) Acrylic Bonding Agent J40; Dayton Superior; 888-977-9600; www.daytonsuperior.com
3) SBR Latex; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
4) Daraweld C; W. R. Grace & Co.-Conn; 866-333-3726; www.graceconstruction.com
5) Everbond; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
6) Acrylpave; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
7) Acry-Lok; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

D. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:

1. Products: Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
a. MasterInject 1500; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us
b. Sure Bond J58 ; Dayton Superior; 888-977-9600; www.daytonsuperior.com
c. Euco Epoxy System #452; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com
d. Epobond; LATICRETE International, Inc.; 800-243-4788; www.laticrete.com
e. Metco Hi Mod Epoxy; Metalcrete Industries; 800-526-5602; www.metalcreteindustries.com
f. Sikadur 32 Hi-Mod; Sika Corporation, USA; 800-933-7452; www.sikaconstruction.com
g. Stonset Primer; Stonhard; 800-257-7953; www.stonhard.com
h. Rezi-Weld 1000; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

E. Reglets: Fabricate reglets of not less than 0.022-inch- thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.

F. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034 inch thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

2.12 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.

1. Cement Binder: ASTM C 150/C 150M, Portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.

4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109/C 109M.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.

1. Cement Binder: ASTM C 150/C 150M, Portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109/C 109M.

2.13 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.
1. Use a qualified testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures. Use qualified testing agency to develop supplementary performance test data for additional requirements identified in this specification.

2. Design mixtures shall meet the specified strength and durability requirements listed below or as provided in the Contract Documents, whichever is more stringent. Exposure classes listed below are defined by ACI 318, and the design mixture shall comply with the durability requirements of each exposure class.

B. Cementitious Materials - Unless otherwise indicated in the Contract Documents or as indicated below, concrete mixtures may use any cementitious materials listed in PART 2 section “Concrete Materials”.
1. Cementitious materials other than Portland cement shall not exceed the ACI 318 limits for the designated exposure classifications of each mix class.

C. Limit water-soluble, chloride-ion content in hardened concrete to following limits depending on the exposure category assigned to the structural member identified in this section of the specification or in the contract documents, whichever is more stringent. The limits are stated in terms of chloride ions in percent by weight of cement.
1. Reinforced in Exposure Category C0 – 1.00%
2. Reinforced in Exposure Category C1 – 0.30%
3. Reinforced in Exposure Category C2 – 0.15%

D. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as required, for placement and workability.
2. Use water-reducing and -retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a w/c ratio below 0.50.
4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.

E. Air Content: Provide total air content for each class of concrete based on the nominal maximum size of aggregate and the assigned exposure class for resistance to freezing and thawing indicated in 2.12. Concrete for members categories as Exposure Category F0 should be non-air entrained, unless noted otherwise on the Contract Documents.

Nominal Maximum Aggregate Size, inch	Total Air Content (%)	
	Exposure Class F2 and F3	Exposure Class F1
3/8	6.0 to 9.0%	4.5 to 7.5%
1/2	5.5 to 8.5%	4.0 to 7.0%
3/4	4.5 to 7.5%	3.5 to 6.5%
1	4.5 to 7.5%	3.0 to 6.0%
1-1/2	4.0 to 7.0%	3.0 to 6.0%
2	3.5 to 6.5%	2.5 to 5.5%
3	3.0 to 6.0%	2.0 to 5.0%

F. Slump – Provide documentation in submittal prior to commencement of Work of target slump or slump flow value for each class of concrete. Consistency of concrete shall be established to facilitate placement with minimized potential for segregation.

G. Alkali silica reactivity – For structural concrete members that will be moist in service and when it is determined as per Section 2.2B that the aggregate source used needs to include mitigative measures, submit documentation demonstrating that the proposed cementitious materials used with the aggregates by ASTM C1567 tests with an expansion after 14 days of exposure less than or equal to 0.1%.

H. The installer and manufacturer shall coordinate to establish properties of fresh concrete to facilitate placement and finishing with reduced potential for segregation and bleeding. Factors shall include but are not limited to slump or slump flow, setting time, method of placement, rate of placement, hot and cold weather placement, curing, and concrete temperature. Selection of fresh concrete properties shall be notified to the Engineer of Record in the submittal.

I. Contractor shall indicate reportable changes in sources of materials and quantities when such changes are necessary to ensure constructability, performance of concrete and compliance with the specification requirements. The contractor is permitted to make minor adjustments less than the reportable deviations noted in the original submittal to concrete mixtures to ensure uniformity of concrete without a re-submittal for review or approval.

2.14 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

B. Identification: Deliver all reinforcement to the project site bundled, tagged and marked. Use metal tags indicating bar size, lengths, and other information corresponding to markings shown on placement diagrams.

C. Rejected Materials: Reinforcing with any of the following defects will not be permitted in the work:
   1. Bar lengths, depths, and bends exceeding the specified fabrication tolerances. Bends or kinks not indicated on drawings or final shop drawings.
   2. Bars with reduced cross section due to excessive rusting or other cause.

2.15 CONCRETE MIXING

A. General: Concrete may be mixed at batch plants or it may be transit mixed as specified herein. Batch plants must comply with the requirements of ACI 304, with sufficient capacity to produce concrete of the quality specified, in quantities required to meet the construction schedule. All plant facilities are subject to the acceptance of the Architect/Engineer. Plant facilities shall be calibrated by testing agencies specifically qualified for this as frequently as necessary to insure accuracy to plus or minus 0.4% of the total capacity of the components of the plant, but at a frequency not to exceed 6 months.

B. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, furnish batch ticket information, and as specified, provided the quantity and rate of delivery will permit unrestricted progress of the work in accordance with the placement schedule. Discharge of the concrete shall be completed within l l/2 hours after water is added to the mix or by the time the drum has revolved 300 times, whichever occurs first.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

C. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For mixer capacity of 1 cu. yd. or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For mixer capacity larger than 1 cu. yd., increase mixing time by 15 seconds for each additional 1 cu. yd.
3. Do not exceed the catalog rating or nameplate capacity for a total volume of materials used per batch.
4. Equip the mixer with automatic controls, or semi-automatic controls, if acceptable, for proportioning materials and the proper measured quantities.
5. Do not exceed 30 minutes total elapsed time between intermingling of damp aggregates and cement to the discharge of the completed mix.
6. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.\

2.16 FABRICATION OF REINFORCEMENT

A. General: Shop-fabricate reinforcing bars to conform to the required shapes and dimensions, with fabrication tolerances complying with ACI 315. In case of fabricating errors, do not re-bend or straighten reinforcement in a manner that will injure or weaken the material.

B. Identification: Deliver all reinforcement to the project site bundled, tagged and marked. Use metal tags indicating bar size, lengths, and other information corresponding to markings shown on placement diagrams.

C. Rejected Materials: Reinforcing with any of the following defects will not be permitted in the work:

1. Bar lengths, depths, and bends exceeding the specified fabrication tolerances. Bends or kinks not indicated on drawings or final shop drawings.
2. Bars with reduced cross-section due to excessive rusting or other cause.

PART 3 - EXECUTION

3.1 FORMWORK INSTALLATION

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support assumed values of live load, dead load, weight of moving equipment operated on formwork, concrete mix, height of concrete drop, vibrator frequency, ambient temperature, foundation pressures, stresses, lateral stability, and other factors pertinent to safety of the structure during construction.

B. Construction loads, including reshoring loads, on in place construction shall at no time exceed the live load for which the in place construction was designed. If the contractor is uncertain about the design live loads, it shall be his responsibility to obtain these from the Architect/Engineer.

C. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.
   1. Earth forming of grade beams is permitted, with the exception that the top 6-inches of exterior grade beams must be formed. Earth forming must be accompanied by lime-stabilization of the subgrade to prevent sloughing. Trench width shall be 2-inches wider than stated beam width to account for increase cover thickness required by ACI, i.e. 3-inches at sides and bottom for cast-against earth.

D. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

   1. Class A, 1/8 inch for smooth-formed finished surfaces.
   2. Class C, 1/2 inch for rough-formed finished surfaces.

E. Construct forms tight enough to prevent loss of concrete mortar.

F. Construct forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

   1. Install keyways, reglets, recesses, and the like, for easy removal.
   2. Do not use rust-stained steel form-facing material.

G. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

H. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

I. Chamfer exterior corners and edges of permanently exposed concrete.

J. Forms for Exposed Concrete: Drill forms to suit ties used and to prevent leakage of concrete mortar around tie holes. Do not splinter forms by driving ties through improperly prepared holes.

   1. Do not use metal cover plates for patching holes or defects in forms.

K. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

L. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

M. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

N. Coat contact surfaces of forms with an approved, non-residual, low-VOC form-release agent, according to manufacturer's written instructions, before placing reinforcement.

1. Do not allow excess form coating material to accumulate in forms or come into contact with in place concrete surfaces against which fresh concrete will be placed. Apply according to manufacturer's instructions.
2. Coat steel forms with a non-staining, rust preventative material. Rust stained steel formwork is not acceptable.

3.2 EMBEDDED ITEM INSTALLATION

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Anchor bolts shall be set with securely fastened templates, and the threaded area shall be protected from concrete laitance. Anchor bolts shall be accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
    a. Where conduit, pipe, or other items are to be embedded in concrete beams, slabs, or columns, they shall be placed not closer than the diameter of the largest of the adjacent items and with a net reduction in the concrete area (of a 12 inch wide strip in slabs) not in excess of 9% without prior approval of the Engineer. The location of such embedded items shall generally be at the middle or centroid of the member.
3. Install dovetail anchor slots in concrete structures as indicated.
4. Hole Forms for Slabs: Install “hole forms” in concrete structures where railing posts are indicated on drawings.
5. Forms for Slabs: Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and contours in finished surfaces. Provide and secure units to support screed strips using strike off templates or compacting type screeds.

3.3 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.
1. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place may not be removed in less than 14 days and until concrete has achieved at least 70 percent of its 28-day design compressive strength. Determine potential compressive strength of in place concrete by testing field cured specimens representative of concrete location or members.
2. Form facing material may be removed 4 days after placement only if shores and other vertical supports have been arranged to permit removal of form facing material without loosening or disturbing shores and supports.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material are not acceptable for exposed surfaces. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 SHORING AND RESHORING INSTALLATION

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

C. Keep reshores in place a minimum of 15 days after placing upper tier, or longer, if required, until concrete has attained its required 28 day strength and heavy loads due to construction operations have been removed.

3.5 VAPOR-RETARDER INSTALLATION

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 6 inches and seal with manufacturer's recommended tape.

B. Bituminous Vapor Retarders: Place, protect, and repair bituminous vapor retarder according to manufacturer's written instructions.

3.6 STEEL REINFORCEMENT INSTALLATION

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcing by metal chairs, runners, bolsters, spacers, and hangers, as approved by Architect/Engineer to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.
1. Provide sufficient numbers of supports and of strength to carry the reinforcement. Do not place reinforcing bars more than 2 inches beyond the last leg of any continuous bar support. Do not use supports as bases for runways for concrete conveying equipment and similar construction loads.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded-wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.7 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

1. Locate construction joints, if required, but not shown so as to divide the slab into areas not in excess of 6000 sq. ft.(as close to square in configuration as possible), unless otherwise accepted by the Architect/Engineer. Con-form to slab placement, where shown. Before adjacent pour is made, the surface shall be roughened to an amplitude of a minimum of 1/4 inch except at exposed surfaces.

2. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
3. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete. Bulkheads designed and accepted for this purpose may be used for slabs. Keyways are to be horizontal or vertical as directed by the Architect/Engineer. Install preformed plastic adhesive waterstops in the keyway of all construction joints where vinyl, bulb type waterstops are not detailed.
4. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
6. Space vertical joints in walls as indicated in the Construction Documents. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
7. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:
1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface, dislodge aggregates, and before concrete develops random contraction cracks, but not longer than 12 hours after slab finishing.
2. Formed Contraction Joints: Insert premolded plastic, hardboard, or fiberboard strip into fresh concrete until top surface of strip is flush with slab surface. Tool slab edges round on each side of insert. After concrete has cured, at least 7 days remove inserts and clean groove of loose debris.
3. Contraction joints in unexposed floor slabs may be formed by saw cuts as soon as possible after slab finishing as may be safely done without dislodging aggregate.
4. If joint pattern is not shown, provide joints not exceeding 15 feet in either direction and located to conform to bay spacing wherever possible (at column centerlines, half bays, third bays).

D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
   1. Joint fillers and sealants are specified in Division 7 Section "Joint Sealants."

E. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.8 WATERSTOP INSTALLATION

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.9 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections are completed. Notify other trades to permit installation of their work. Notify the Architect/Engineer and Testing Laboratory 24 hours before placing concrete.

B. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

   1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

C. Do not use concrete which becomes non-plastic and unworkable, or does not meet the requirements quality control limits, or which has been contaminated by foreign materials. Do not use re-tempered concrete. Remove rejected concrete from the project site and dispose of in an acceptable location.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

E. Concrete Conveying: Handle concrete from the point of delivery and transfer to the concrete conveying equipment and to the locations of final deposit as rapidly as practical by methods which will prevent segregation and loss of concrete mix materials.

   1. Provide mechanical equipment of such size and design for conveying concrete to insure a continuous flow of concrete at the delivery end. Provide run ways above top of finished slab in all places for wheeled concrete conveying equipment for the concrete delivery point to the locations of final deposit. Do not wheel concrete directly over steel reinforcement. Keep interior surfaces of conveying equipment, including chutes, free of hardened concrete, debris, water, snow, ice, and other deleterious materials.

F. Pumping Concrete: The Contractor may at his option use pumping machines for placing the concrete subject to the following requirements:
   1. If for pumping requirements the mix design is other than specified, the Contractor shall furnish to the Architect/Engineer a mix for approval not less than 15 days prior to the time required for its use. The laboratory will make and test this mix design. After the results of these tests are noted and approval is received, this mix can be used. Cost of this laboratory work shall be paid by the Contractor.
   2. Whenever concrete is placed by pumping, it is recommended a second pump complete with sufficient pipes and hose for a complete and independent set up, or other placement equipment, be at the job prior to any placing of concrete. The Contractor shall be responsible for any corrective work which results from equipment breakdown.

G. Placing Concrete in Forms: Deposit concrete in forms in horizontal layers no deeper than 24 inches and in a manner to avoid inclined construction joints. Where placement consists of several layers, place each layer while preceding layer is still plastic to avoid cold joints.

   1. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
   2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 309.
   3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

H. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

   1. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
   2. Maintain reinforcement in position on chairs during concrete placement.
   3. Screed slab surfaces with a straightedge and strike off to correct elevations.
   4. Slope surfaces uniformly to drains where required.
   5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

I. Bonding: Roughen surfaces of set concrete at all joints, except where bonding is obtained by use of a concrete bonding agent. Clean surfaces of laitance, coatings, loose particles, and foreign matter. Roughen surfaces in a manner to expose bonded aggregate uniformly and to not leave laitance, loose particles of aggregate, or damaged concrete at the surface.

3.10 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

   1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view, to receive a rubbed finish, or to be covered with a coating or covering material applied directly to concrete, such as waterproofing, dampproofing, veneer plaster, painting, or another similar system.

C. Rubbed Finish: Apply the following to smooth-formed-finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix 1 part Portland cement to 1-1/2 parts fine sand with a 1:1 mixture of bonding admixture and water. Add white Portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.11 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch in one direction.

1. Apply scratch finish to monolithic slab surfaces to receive concrete floor topping or mortar setting beds for tile, Portland cement terrazzo, and other bonded applied cementitious finish flooring material, and where indicated.

2. After placing slabs, finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:

a. Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and of levelness, F(L) 15.

3. Slope surfaces uniformly to drains where required.

C. Float Finish: After screeding, consolidating, and leveling concrete slabs, do not work surface until ready for floating. Begin floating, using float blades or float shoes only, when surface water has disappeared, or when concrete has stiffened sufficiently to permit operation of power-driven floats, or both. Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats. Restraighten, cut down high spots, and fill low spots. Uniformly slope surfaces to drains. Repeat float passes and re-straightening until surface is left with a uniform, smooth, granular texture.

1. Apply float finish to monolithic slab surfaces to receive trowel finish and other finishes as specified; slab surfaces to be covered with membrane or elastic waterproofing, membrane or elastic roofing, or sand bed terrazzo; and where indicated.

2. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:

    a. Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and of levelness, F(L) 15.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to monolithic slab surfaces exposed to view and slab surfaces to be covered with resilient flooring, carpet, ceramic or quarry tile, paint, or another thin film-finish coating system.
2. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:
    a. Specified overall values of flatness, F(F) 35; and of levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 17; for slabs-on-grade.
    b. Specified overall values of flatness, F(F) 30; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 15; for suspended slabs.

E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces where ceramic or quarry tile is to be installed by either thickset or thinset method. While concrete is still plastic, slightly scarify surface with a fine broom.

1. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

G. Chemical Hardener Finish: On concrete floors which remain exposed and as directed apply chemical hardener finish to interior concrete floors. Apply liquid chemical hardener after complete curing and drying of the concrete surface. Dilute liquid hardener with water (parts of hardener/water as follows), and apply in 3 coats; first coat, 1/3 strength; second coat, 1/2 strength; third coat, 2/3 strength. Evenly apply each coat, and allow 24 hours for drying between coats.

1. Apply proprietary chemical hardeners, in accordance with manufacturer's printed instructions.

2. After final coat of chemical hardener solution is applied and dried, remove surplus hardener by scrubbing and mopping with water.

3.12 MISCELLANEOUS CONCRETE ITEM INSTALLATION

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations:

1. Coordinate sizes and locations of concrete bases with actual equipment provided.
2. Construct concrete bases as indicated on the Contract Documents.
3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete substrate.
4. Prior to pouring concrete, place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Cast anchor-bolt insert into bases. Install anchor bolts to elevations required for proper attachment to supported equipment.

D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel finish concrete surfaces.

3.13 CONCRETE PROTECTING AND CURING

A. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

B. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for remainder of curing period.

C. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

D. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than three days with the following materials:

   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 4-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 3 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.

   a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
   b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.

c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies does not interfere with bonding of floor covering used on Project.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions, followed by shading or moist curing adequate to keep temperature of the concrete at 80 degrees F or below during the curing period. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

   a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

5. Temperature of Concrete During Curing: When the atmospheric temperature is 85 degrees F. and above, or during other climatic conditions which will cause too rapid drying of the concrete, make arrangements before the start of concrete placing for the installation of wind breaks or shading, and for fog spraying, wet sprinkling, or moisture retaining covering. Protect the concrete continuously for the concrete curing period. Provide hot weather protection complying with the requirements of Part 1 “GENERAL”, Article “FIELD CONDITIONS”.

6. Protection from Mechanical Injury: During the curing period, protect concrete from damaging mechanical disturbances including load stresses, heavy shock, excessive vibration, and from damage caused by rain or flowing water. Protect all finished concrete surfaces from damage by subsequent construction operations. Concrete trucks, cranes, or excessive concentrations of loads will not be permitted on any slab without prior written approval of the Architect/Engineer during the curing period or subsequent construction.

7. Sealer and Dustproofer: Apply a second coat of specified curing and sealing compound only to surfaces given a first coat.

3.14 LIQUID FLOOR TREATMENT APPLICATION

A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.

1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
2. Do not apply to concrete that is less than seven (7) days' old.
3. Apply liquid until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.

B. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.

3.15 JOINT FILLING

A. Joint fillers and sealants are specified in Division 7 Section "Joint Sealants."

3.16 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part Portland cement to 2-1/2 parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/4 inch in any dimension to solid concrete. Limit cut depth to 1 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
2. Repair defects on surfaces exposed to view by blending white Portland cement and standard Portland cement so that, when dry, patching mortar matches surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, pop-outs, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
2. After concrete has cured at least 14 days, correct high areas by grinding.
3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
4. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
5. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Architect's approval. Under no circumstances will "dusting" of wet concrete during finishing operations be allowed.

3.17 SOURCE QUALITY CONTROL

A. Concrete Batch Facility: The testing laboratory shall perform inspections of the concrete batching facility at intervals not to exceed one per 1,000 cubic yards of concrete placed or at least one each six months. The inspection shall include verification of the calibration of scales, aggregate analysis of the current stockpiles, verification of batching procedures, and compliance with the original mix design. First inspection shall take place before any concrete is placed. The cost of each inspection shall be paid by the testing allowance.
   1. Test results will be reported in writing to Architect, Structural Engineer, ready mix producer, and Contractor within 24 hours after tests. Reports of compressive strength tests shall contain the Project identification name and number, date of concrete placement, name of concrete testing service, concrete type and class, location of concrete batch in structure, design compressive strength at 28 days, concrete mix proportions and materials, compressive breaking strength, and type of break for both 7 day tests and 28 day tests. If any breaks are below specified or expected strengths, the Testing Laboratory shall report any visible anomalies.

3.18 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

   1. The testing laboratory shall monitor concrete properties at time of placement and report to the Contractor any deviation from the project specifications. It shall be the responsibility of the Contractor to control the concrete and comply with the project specifications. If the Contractor cannot adequately control the quality of the concrete, then the Architect/Engineer shall direct the testing laboratory to control the concrete. The cost of this service shall be paid for by the Contractor.

B. Perform testing and inspections as indicated on the Contract Documents.

C. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172/C 172M shall be performed according to the following requirements:
   1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd., plus one set for each additional 50 cu. yd. or fraction thereof. One specimen tested at 7 days, two specimens tested at 28 days, and one specimen retained in reserve for later testing if required.

      a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

   2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
   3. Air Content: ASTM C 231/C 231M, pressure method, for normal-weight concrete; ASTM C 173/C 173M, volumetric method, for structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.

4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below or 80 deg F and above, and one test for each composite sample.
5. Unit Weight: ASTM C 567/C 567M, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
6. Compression Test Specimens: ASTM C 31/C 31M.

    a. Cast and laboratory cure one set of four standard cylinder specimens for each composite sample.
    b. For pumped concrete, one set of compression test cylinders shall be obtained at both the point of discharge and point of placement.
7. Curing of Compression Test Specimens: After preparation of the test cylinders, to prevent evaporation of water from the unhardened concrete, cover the cylinders immediately after finishing with a non-reactive plate or impervious plastic sheeting. Protect the outside surface of cardboard molds from any source of water for the first 24 hours after casting. Field curing procedures for test cylinders for 28 day compressive strengths are not the same as those for determining strength for form removal time.
    a. For test cylinders for 28 days compressive strength determination, during the first 24 hours after molding, store all test cylinders under conditions that maintain the temperature immediately adjacent to the cylinders in the range of 60 to 80 degrees F. and prevent loss of moisture from the specimens. If the Architect/Engineer or testing laboratory have questions concerning the storage temperature, they may require that the contractor provide a temperature record of the cylinders by means of maximum minimum thermometers. At the end of 20 hours plus or minus four hours, cylinders are to be transported to the laboratory, removed from the molds, and placed in a moist condition at 73.4 plus or minus 3 degrees F. until the moment of testing.
    b. Cure test cylinders to be used for determining strength for form removal time as nearly as practical in the same manner as the concrete in the structure. Cylinders shall be stored in or on the structure as near the point of use as possible, and as far as is practical, with the same exposure to the elements. Remove test cylinders from field storage and store in lime water at 73.4 plus or minus 3 degrees F. for 24 hours plus or minus 4 hours immediately before testing.
    c. Cylinders shipped from the field to the laboratory shall be packed in sturdy wood boxes or other suitable containers surrounded by wet sawdust or other suitable packing material and shall be protected from freezing during shipment.

8. Compressive-Strength Tests: ASTM C 39/C 39M; test one laboratory-cured specimens at 7 days, two specimens at 28 days, and retain one specimen in reserve for later testing if required.

    a. Test one set of two field-cured specimens at 7 days and one set of two specimens at 28 days.
    b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.
    c. If the compressive strength tests fail to meet the minimum requirements specified, the concrete represented by such tests will be considered deficient in strength and subject to additional testing as herein specified.

9. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
10. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive

strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

11. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
12. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
13. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
14. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
15. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

D. Measure floor and slab flatness and levelness according to ASTM E 1155 within 48 hours of finishing.

E. Formed Concrete Dimensional Tolerances: Formed concrete having any dimension smaller than required, and outside the specified tolerance limits, will be considered deficient in strength and subject to additional testing as herein specified.
1. Formed concrete having any dimension greater than required will be rejected if the appearance or function of the structure is adversely affected, or if the larger dimensions interfere with other construction. Repair, or remove and replace rejected concrete as required to meet the construction conditions. When permitted, accomplish the removal of excessive material in a manner to maintain the strength of the section without affecting function and appearance.

F. Strength of Concrete Structures: The strength of the concrete structure in place will be considered potentially deficient if it fails to comply with any of the requirements which control the strength of structure, including the following conditions:
1. Failure to meet compressive strength test requirements.
2. Concrete which differs from the required dimensions or location in such a manner to reduce strength.
3. Concrete subjected to damaging mechanical disturbances; particularly load stresses, heavy shock, and excessive vibration.
4. Poor workmanship and quality control likely to result in deficient strength.

3.19 PROTECTION OF LIQUID FLOOR TREATMENTS

A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

END OF SECTION 03 30 00

SECTION 03 52 16

LIGHTWEIGHT INSULATING CONCRETE ROOF FILL (LWIC)

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Insulating concrete fill over structural roof decking.

1.02 REFERENCES

A. Reference Standards

B. ASTM C138/C138M - Standard Test Method for Density (Unit Weight), Yield, and Air Content (Gravimetric) of Concrete; 2024a.

C. ASTM C150/C150M - Standard Specification for Portland Cement; 2024.

D. ASTM C172/C172M - Standard Practice for Sampling Freshly Mixed Concrete; 2025.

E. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete; 2022.

F. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2025a.

G. ASTM C332 - Standard Specification for Lightweight Aggregates for Insulating Concrete; 2023.

H. ASTM C495/C495M - Standard Test Method for Compressive Strength of Lightweight Insulating Concrete; 2012 (Reapproved 2019).

I. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation; 2023.

J. ASTM C796/C796M - Standard Test Method for Foaming Agents for Use in Producing Cellular Concrete Using Preformed Foam; 2019.

K. ASTM C869/C869M - Standard Specification for Foaming Agents Used in Making Preformed Foam for Cellular Concrete; 2024.

L. ASTM C1077 - Standard Practice for Agencies Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Testing Agency Evaluation; 2025a.

M. FM (AG) - FM Approval Guide; Current Edition.

1.03 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Include plans, sections, and details showing roof slopes, lightweight concrete roof insulation thicknesses, embedded board insulation, roof penetrations, roof perimeter terminations and curbs, control and expansion joints, and roof drains.

C. Product Data: Provide physical characteristics, thermal values, product limitations and application instructions.

D. Manufacturer's Installation Instructions: Indicate mix instructions.
   1. Provide mix for each lightweight concrete roof insulation mix.

E. Installer's Qualification Statement.

F. Material Test Reports: From a qualified testing agency indicating and interpreting test results of the following for compliance with requirements indicated, based on comprehensive testing of current materials:
   1. Cement.
   2. Admixtures.
   3. Insulation board.

G. Research/Evaluation Reports: Evidence of lightweight insulating concrete roof insulation's compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed cellular lightweight insulating concrete roof installations similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
   1. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience . Approved in writing by lightweight insulating concrete manufacturer. Approved in writing by roofing system manufacturer for the specified roof type.

B. Tested Systems:
   1. Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1077 and ASTM E329 to conduct the testing indicated, as documented according to ASTM E 548.
   2. ASCE-7: Provide wind uplift standard with a tested assembly to meet uplift calculation where building is located, matched to the roofing system specified FM (AG) Listing: Provide system listed in FM's "Approval Guide" for Class 1 fire rating, listed in UL “Roofing Materials Directory”.

C. Provide aggregates containing no detectable asbestos as determined by the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."

D. Provide copy of cellular lightweight insulating concrete fill manufacturer’s 20 year, NDL warranty meeting requirements as specified herein.

E. Installer is responsible for ensuring positive drainage of the cellular lightweight insulating concrete deck. Ponding water shall be cause for rejection of the installation. Prior to installation of the roof system, the installer shall perform a ponding water test on the deck to confirm deck drainage with no evidence of ponding water. Test shall be conducted in the presence of the Architect.

1.05 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in manufacturer's original undamaged packages or acceptable bulk containers.

B. Store packaged materials to protect them from elements or physical damage.

C. Do not use cement that shows indications of moisture damage, caking, or other deterioration.

1.06 WARRANTY

A. Manufacturer’s Warranty: Insulating concrete roof fill manufacturer shall warrant the insulating concrete roof fill system from the Project date of Substantial Completion as follows:
   1. Refer to roofing system specification section for length of warranty period.Warranty shall be a NDL “No Dollar Limit” / no penal sum type, with total replacement cost.
   2. The warranty shall provide manufacturer’s maximum extended wind rated coverage (up to hurricane force winds) as defined by the Beaufort Scale.
   3. The warranty shall guarantee the entire insulating concrete roof fill system against defective materials and workmanship of installation, with NO exclusion for ponding water.
   4. The full insulating concrete roof fill system warranty shall be guaranteed against failure of workmanship and materials. Repair of the system, including materials and labor, shall be done at no cost to the Owner.
   5. The cellular lightweight insulating concrete assembly R-Value shall be warranted to be stable, with no R-Value drift, and acceptable to the roofing manufacturer, and will be covered under the roofing manufacturer’s warranty for the same period of time.
   6. Installer’s Warranty: Installer shall guarantee that the work performed under this Contract will be free from defects in workmanship and materials, and that the insulating concrete roof fill will remain in good condition for a five-year warranty period from the date of Substantial Completion.

1.07 FIELD CONDITIONS

A. Do not place insulating concrete mix at ambient temperatures lower than 40 degrees F (5 degrees C) without heating mix water to 90 to 110 degrees F (32 to 43 degrees C).

B. Do not place cellular lightweight insulating concrete assembly during rain or snow or on surfaces covered with standing water, snow, or ice.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Coordination: It is the responsibility of Insulating Concrete Roof Fill Bidders to coordinate during the bid period with listed roofing membrane manufacturers in the Roofing Section to ensure that the Insulating Concrete Roof Fill product proposed meets all requirements of the roofing membrane manufacturers for their product and the specified roofing warranty.

B. Lightweight Insulating Concrete:
   1. Elastizell Corp. of America; www.elastizell.com
   2. Celcore Incorporated; www.celcoreinc.com
   3. Siplast Inc.; www.siplast.com

4. Aerix Industries; aerixindustries.com/mearlcrete/
5. Substitutions: See Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Cement: ASTM C150/C150M, Portland Type I, II or III, gray color.

B. Lightweight Aggregate: ASTM C332; Group I, perlite.

C. Water: ASTM C1602/C1602M; clean, potable, and not detrimental to concrete.

D. Foaming Agent: Comply with ASTM C869/C869M, when tested according to ASTM C796/C796M.

E. Prohibited Materials: Vermiculite aggregates, expanded clay, and shales are strictly prohibited for use in this Project.

2.03 CONCRETE MIX

A. Test for compressive strength in accordance with ASTM C495/C495M, for wet density in accordance with ASTM C138/C138M, and for dry density after oven drying.

B. Provide concrete mix with the following minimum properties (provide greater than minimums where required by the roofing membrane manufacturer):
1. Wet Density: 53 to 63 lb./cu. ft. when tested according to ASTM C138/C138M.
2. Oven-Dry Density: 31 to 37 lb/cu.ft., when tested according to ASTM C495/C495M.
3. Compressive Strength: Minimum 350 psi when tested according to ASTM C495/C495M.

C. Polypropylene Linked: 3/4” pre-packaged reinforcing fibers impregnated with a dispersing agent. Brand as recommended by the lightweight insulating concrete manufacturer.

2.04 ACCESSORIES

A. Perimeter Joint Filler: Glass fiber strips, compressible to 50 percent original thickness under load of 25 psi (170 kPa) with full recovery.

B. Curing Compound: Type recommended by manufacturer.

C. Insulation: ASTM C578, Type I molded polystyrene with venting holes to 3 percent of board area, 0.90-lb/cu. ft. (15-kg/cu. m) minimum density.
1. Products:
a. *Insulperm* as manufactured by Siplast; www.siplast.com
b. *Aeroroof Holey Board* as manufactured by Kingspan Industries; www.kingspan.com
c. *Starrfoam-HB* as manufactured by Starrfoam Manufacturing
d. Substitutions: See Section 01 60 00 - Product Requirements.

2.05 DESIGN MIXES - GENERAL

A. Prepare design mixes for each type and strength of lightweight concrete roof insulation by either laboratory trial batch or field-test data methods. For trial batch method, use a qualified independent testing agency for preparing and reporting proposed mix designs.

B. Limit water-soluble chloride ions to the maximum percentage by weight of cement or cementitious material permitted by ACI 301.

C. Do not use the same testing agency for field quality-control testing.

D. Do not use Calcium dioxide in lightweight insulating concrete fill.

E. Design mix to produce lightweight concrete roof insulation with the specified minimum physical properties using the minimum amount of water necessary to produce a workable mix. Do not exceed maximum air content recommended by aggregate manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Metal Deck: Ensure that metal deck to receive insulating concrete fill is g-90 galvanized, 22-ga.and **ventilated** to meet or exceed manufacturer's requirements. Lightweight insulating concrete shall not be installed over a non-ventilated deck regardless of whether allowed by manufacturer or submittals.

B. Control Joints: Install control joints at perimeter of roof deck and at junctures with vertical surfaces, including curbs, walls, and vents, for full depth of lightweight concrete roof insulation. Fill control joints with joint filler.
   1. Provide 1 inch (25 mm) wide control joints for roof dimensions up to 100 feet (30 m) in length; 1-1/2 inch (38 mm) wide control joints for roof dimensions exceeding 100 feet (30 m).

C. Verify joints in precast roof members are grouted or taped to prevent seepage of wet insulating concrete.

D. Verify roof deck is free of standing water, dirt, debris, ice, or other detrimental materials.

E. Verify roof slopes and elevations are as shown on the drawings and ready to receive insulating concrete.

F. Notify Architect immediately of conditions that would prevent correct and timely installation.

G. Do not proceed with work until detrimental conditions have been corrected.

3.02 PREPARATION

A. Install 1 inch (25 mm) thick expansion joint filler at:
   1. Perimeter of roof decking.
   2. Around penetrations through deck.
   3. Every 100 ft (30 m) of deck surface dimension.
   4. Each change of deck direction on metal roof deck surfaces.

B. Install 1.5 inch (37 mm) thick expansion joint filler for roof dimensions exceeding 100 feet (30

3.03 INSTALLATION

A. Mixing and Placing

1. Mix and place lightweight concrete roof insulation according to manufacturer's written instructions, using equipment and procedures to avoid segregation of mix and loss of air content.
    a. Add 1-lb./cu. yd. of the specified reinforcing fibers to each batch during mixing operations.
2. Install insulation board according to lightweight concrete roof insulation manufacturer's written instructions.
    a. Install slurry to fill steel deck to a minimum of 1/4-inch above top of flutes.
    b. Place board insulation in wet slurry and walk board in to ensure full contact of board insulation with slurry. Do not kick the boards into place.
    c. Stagger joints, and tightly butt insulation boards.
    d. Where insulation changes thickness, install insulation boards in a stair-step configuration with a maximum step-down of 1-inch.
3. Install lightweight concrete and screed to a minimum thickness of 2-inches above top of insulation boards.
4. Deposit and screed lightweight concrete roof insulation in a continuous operation until an entire panel or section of roof area is completed. Do not vibrate or work mix except for screeding or floating. Place to depths and slopes indicated.
5. Finish top surface smooth, free of ridges and depressions, and maintain surface in condition to receive subsequent roofing system.
6. Begin curing operations immediately after placement, and air cure for not less than three days according to manufacturer's written instructions.
7. If ambient temperature falls below 32-deg F (0 deg C), protect lightweight concrete roof insulation from freezing and maintain temperature recommended by manufacturer for 72 hours after placement.

B. Venting
    1. Ensure metal deck venting remains unobstructed during slurry placement to allow for downward dehydration of the LWIC system.

C. Slope concrete for roof surface drainage as indicated.
    1. Slope top surface to 1/4 inch/foot (1:50) minimum for roof surface drainage.
    2. Deposit and screed lightweight concrete roof insulation in a continuous operation until an entire panel or section of roof area is completed. Do not vibrate or work mix except for screeding or floating. Place to depths and slopes indicated.
    3. Finish top surface smooth, free of ridges and depressions, and maintain surface in condition to receive subsequent roofing system.
    4. Begin curing operations immediately after placement, and air cure for not less than three days according to manufacturer's written instructions.
    5. If ambient temperature falls below 32-deg F (0 deg C), protect lightweight concrete roof insulation from freezing and maintain temperature recommended by manufacturer for 72 hours after placement.

D. Curing
    1. Cure in accordance with lightweight aggregate manufacturer's instructions.
    2. Protect insulating concrete from excess evaporation of surface moisture.
    3. During low humidity conditions, sprinkle water over concrete surface to aid hydration and curing.
    4. Protect installed lightweight concrete from rain until installation of roof membrane.

3.04 FIELD QUALITY CONTROL

A. An independent testing agency, as specified in Section 01 40 00 - Quality Requirements, will perform field inspection and testing for dry density.
   1. Testing Agency: Take three test samples from each 100 cubic yards (76.5 cu m) of insulating concrete placed, daily.
      a. Test 1 cylinder after 7 days and 2 cylinders after 28 days. Report failed tests to Owner immediately.
      b. If needed, final cylinder will be tested after 56 days at the request and expense of the Contractor.
      c. Testing Agency: Take one additional test sample during cold weather concreting.

B. Testing agency shall take samples according to ASTM C172/C172M, Standard Practice for Sampling Freshly Mixed Concrete except as modified by ASTM C495/C495M, Standard Test Method for Compressive Strength of Lightweight Insulating Concrete.
   1. Installed materials shall be considered as non-complying if representative samples do not show test results for the physical properties specified herein, or additional non-specified properties as required by the Insulating Concrete manufacturer.

C. Pull Tests: Reference roofing section for pull test requirements.

3.05 DEFECTIVE WORK

A. Refinish, or remove and replace, insulating concrete roof fill if surfaces are excessively scaled or too rough to receive roofing, according to roofing membrane manufacturer's written requirements.

B. Remove and replace insulating concrete roof fill that fails to comply with compressive-strength and oven-dry unit weight requirements.

3.06 CLEANING

A. Promptly remove all lightweight insulating concrete spillage, overspray, and debris from adjacent surfaces, equipment, and finishes.

B. Do not use cleaning methods or materials that could damage or stain adjacent finished work. If spillage occurs on finished surfaces, consult the surface manufacturer for recommended cleaning procedures.

C. Ensure all roof drains, scuppers, and gutters are clean, open, and free of all installed materials and construction debris.

D. Leave project site and staging areas "broom clean" and free of all packaging, excess materials, and equipment related to this Section.

3.07 PROTECTION

A. Protect installed lightweight insulating concrete from damage, foot traffic, and construction loads. Do not permit traffic of any kind on the deck until it is fully cured per the manufacturer's instructions.

B. After curing, limit access to only essential personnel required for subsequent roofing operations.

C. Provide and maintain temporary walkways, protection boards (e.g., OSB, plywood), or sacrificial high-density insulation boards in all areas subject to foot traffic or material staging to distribute loads and prevent surface damage, indentation, or crushing.

D. Do not allow concentrated loads, sharp objects, or heavy equipment on the surface of the installed deck.

E. Any damage to the cured lightweight insulating concrete system shall be repaired in accordance with the manufacturer's written instructions, prior to the installation of the roofing membrane, at no additional cost to the Owner.

END OF SECTION

SECTION 03 62 00 – NON-SHRINK GROUT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.

1.2 SUMMARY

A. This specification describes non-shrink epoxy grout and non-shrink cement-based grout to be used wherever shown or implied on the drawings or called for in the specifications.

1.3 SUBMITTALS

A. Product data: Submit product data for the non-shrink grout verifying the products' compliance with this specification and describing the manufacturer's placement recommendations.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Non-Shrink Epoxy Grout: All epoxy grout shall be a pourable, non-shrink, 100% solids epoxy system. The epoxy grout system shall be supplied in units consisting of three components: resin, hardener, and specially-blended aggregate, all premeasured and prepackaged.

1. Resin component shall not contain any non-reactive diluents. Resins containing butyl glycidyl ether (BGE) or other highly volatile and hazardous reactive diluents are not acceptable.

2. Variation of component ratios is not permitted unless specifically recommended by the manufacturer.

3. The non-shrink epoxy grout shall exhibit the following properties:

    a. Working life: The mixed epoxy grout system shall have a minimum "working life" of 45 minutes at 75 degrees F.
    b. Compressive Strength: The hardened epoxy grout shall attain a minimum compressive strength of 5,500 psi in 24 hours and 10,000 psi in seven days when tested according to ASTM C 579, Method B.
    c. Thermal Coefficient: The epoxy grout shall exhibit a maximum thermal coefficient of .000030 -6 in./in./Fahrenheit when tested according to ASTM C 531 or ASTM D 696.
    d. Effective Bearing Area: The epoxy grout shall exhibit a minimum effective bearing area of 95%.

B. Non-Shrink Cement-Based Grout: Non-Shrink grout shall consist of premeasured, prepackaged materials supplied by the manufacturer requiring only the addition of water. The manufacturer's instructions must be printed on the outside of each bag.

1. The non-shrink cement-based grout shall exhibit the following properties:

    a. Non-Shrink: Grout shall comply with ASTM C1107. No shrinkage (0.0 percent) and a maximum 4.0% expansion when tested in accordance with ASTM C827. No shrinkage (0.0 percent), and a maximum of 0.3 percent expansion in the hardened state when tested in accordance with ASTM C1090.
    b. Compressive Strength: A minimum 28day compressive strength of 5,000 psi when tested in accordance with ASTM C 109.
    c. Setting Time: A minimum initial set time of 60 minutes when tested in accordance with ASTM C 191.

C. Water: Potable water.

D. Coarse Aggregate: Provide a clean, coarse aggregate conforming to ASTM C 404 (maximum size 3/8") for grout thickness greater than three inches.

2.2 MANUFACTURERS

A. Non-Shrink Epoxy Grout:

1. E³-F; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com

2. Five Star HP Epoxy Grout; Five Star Products, Inc.; 800-243-2206; www.firestarproducts.com

6. Polytops GC Grout; ChemMasters; 440-428-2105; www.chemmasters.net

B. Metallic Non-Shrink Cement-Based Grout

1. NS Metallic Grout; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com

2. MasterFlow 885; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us

C. Non-metallic Non-Shrink Cement-Based Grout:

1. MasterFlow 100; BASF Construction Chemicals – Building Systems; 800-722-8899; www.master-builders-solutions.basf.us

2. NS Grout; Euclid Chemical Company; 800-321-7628; www.euclidchemical.com

3. Sure‑Grip Grout; Dayton Superior; 888-977-9600; www.daytonsuperior.com

4. Five Star Grout; Five Star Products, Inc.; 800-243-2206; www.firestarproducts.com

5. Crystex;L&M Construction Chemicals, Inc.; 800-362-3331; www.lmcc.com

6. Conset Grout; ChemMasters; 440-428-2105; www.chemmasters.net

7. 588-10K Nonshrink Grout; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

8. CG-86 Nonshrink Grout; W.R. Meadows, Inc.; 800-342-5976; www.wrmeadows.com

PART 3 - EXECUTION

3.1 GENERAL

A. Placing: The Contractor shall perform all mixing and placement in accordance with the manufacturer's recommendations.

B. Temperature: The temperature of the grouting surfaces and the grout shall be maintained between 50 degrees F and 90 degrees F during grouting and for a minimum of 24 hours thereafter.

C. Elimination of Voids: Grout placement shall proceed in a manner that will assure the filling of all spaces and intimate contact of the grout with contact surfaces. Grout holes shall be used; location to be approved by Architect/Engineer if not otherwise detailed.

3.2 SURFACE PREPARATION

A. Concrete Surfaces: The concrete on which the grout will bear shall have attained its design strength before grouting.

1. Concrete shall be sound and all surfaces to be in contact with the grout shall be entirely free of oil, grease, laitance, curing compounds, and other deleterious substances.

2. Surfaces shall be roughened by chipping, sandblasting or other mechanical means to assure bond of the grout to the existing concrete.

B. Metal Surfaces: All metal surfaces which are to be in direct contact with the grout shall be thoroughly cleaned to bare metal immediately before grouting. Cool down hot base plates with cold water. Heat cold base plates with hot water.

C. Adjacent Surfaces: Treat adjacent surfaces and formwork with a bond breaking material to prevent bonding of excess grout.

3.3 INSTALLATION

A. Formwork: Forms shall remain in full contact with the grout until it hardens.

1. Forms shall be watertight and capable of supporting the grout until it cures.

2. Wood forms must be sealed.

B. Non-Shrink Epoxy Grout:

1. Surface Dryness: All surfaces shall be kept completely dry before grouting.

2. Grout Removal: Surfaces from which grout is to be removed after placing shall be treated with a paste wax or release agent before placement.

C. Non-Shrink Cement-Based Grout:

1. Composition: For interior column base plates not exposed to weather, grout containing metallic particles such as aluminum powders or iron filings may be used. For any other applications, the grout shall not contain metallic particles such as aluminum powders or iron fillings or expansive cement.

2. Mixing: For grouting depths greater than three (3) inches, add 3/8" coarse aggregate to the mix following manufacturer's recommendations. Use the minimum water necessary for proper installation in accordance with flowability requirements and manufacturers recommendations for specific applications.

D. Grouting Operation: Concrete surfaces shall be washed clean, then saturated with water for 24 hours prior to placement of cement-based grout. Excess water must be removed prior to grouting. The placement of grout should be rapid and continuous so as to avoid cold joints.

1. Protect grout from external vibration caused by operating machinery for at least 24 hours.

2. Curing: Cover all exposed grout with wet burlap immediately after placement. Keep area moist for a minimum of 48 hours.

END OF SECTION 03 62 00

SECTION 04 05 03

MASONRY MORTARING AND GROUTING

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes mortar and grout for masonry.

B. Related Sections:
   1. Section 01 40 00 – Quality Requirements: Materials Testing.
   2. Section 04 20 00 - Unit Masonry Assemblies.
   3. Section 04 29 00 - Engineered Unit Masonry.
   4. Section 08 11 13 - Standard Steel Frames: Grouting steel door frames.

1.02 REFERENCE STANDARDS

A. ACI 530.1-13 - Building Code Requirements and Specification for Masonry Structures; 2013.

B. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar; 2018.

C. ASTM C150/C150M - Standard Specification for Portland Cement; 2024.

D. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes; 2018.

E. ASTM C270 - Standard Specification for Mortar for Unit Masonry; 2019a, with Editorial Revision.

F. ASTM C404 - Standard Specification for Aggregates for Masonry Grout; 2018.

G. ASTM C476 - Standard Specification for Grout for Masonry; 2022.

H. ASTM C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry; 2020.

I. ASTM C1019 - Standard Test Method for Sampling and Testing Grout for Masonry; 2020.

J. ASTM C1314 - Standard Test Method for Compressive Strength of Masonry Prisms; 2022a.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Samples: Submit two samples of each type of colored mortar, illustrating mortar color and range.

C. Design Data: Submit design mix when Property specification of ASTM C270 is to be used, required environmental conditions, and admixture limitations.

D. Test Reports:

1. Submit reports on mortar indicating conformance of mortar to property requirements of ASTM C270.
2. Submit reports on grout indicating conformance of grout to property requirements of ASTM C476.
3. Include descriptions of types and proportions of mortar and grout ingredients.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.04 QUALITY ASSURANCE

A. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from one manufacturer for each cementitious component and from one source or producer for each aggregate.

B. Preconstruction Testing Services: Provide Material Certificates in lieu of testing, unless otherwise directed by Architect. If Material Certificates are unavailable, notify the Architect immediately upon discovery. Engage a qualified independent testing agency to perform preconstruction testing indicated below if directed by the Architect. Payment for these services will be made by the Owner except in the case of retesting for substandard materials and in the case of first time testing for substandard materials where Material Certificates were submitted as part of the Quality Control procedures for the job. Where considered appropriate by the Architect/Engineer, Prism Test shall be used where completed masonry assemblies are built with potentially substandard materials. Testing of built assemblies determined to contain substandard materials, shall be at the Contractor's expense.

C. Material Certificates (non-load bearing walls): Material Certificates proving compliance with the test below (except the Prism Test) are usually available from manufacturers. Certificates indicating compliance are acceptable to satisfy Quality Control requirements for the individual materials listed when used in masonry assemblies. Use this method of Quality Control in lieu of Prism Test unless total cost of Certificate acquisition is greater than the Prism Tests.
1. Mortar Test (Property Specification): For each mix required, per ASTM C780.
2. Grout Test (Compressive Strength): For each mix required, per ASTM C1019 with minimum compressive strength of 2,500 psi.
3. Prism Tests (required for load bearing walls, conditionally allowed for non-load bearing walls): At the Contractors option, with agreement of the Architect/Engineer, Prism Tests may be used to confirm non-load bearing masonry assembly compressive strength in lieu of Material Certificates.
    a. Prism Test: For each type of reinforced wall construction indicated, per ASTM C1314.
    b. Prepare one set of prisms for testing at 7 days and one set for testing at 28 days.
    c. Fabricate concrete masonry prisms with height-to-thickness ratio of not less than 1.33 nor more than 3.0.

1.05 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Cold Weather Requirements: In accordance with ACI 530.1-13 when ambient temperature or temperature of masonry units is less than 40 degrees F.

C. Hot Weather Requirements: In accordance with ACI 530.1-13 when ambient temperature is greater than 100 degrees F or ambient temperature is greater than 90 degrees F with wind velocity greater than 8 mph.

PART 2 - PRODUCTS

2.01 COMPONENTS

A. Portland Cement: ASTM C150/C150M, Type I, gray or white color as required to produce mortar color indicated.

B. MASONRY CEMENT SHALL NOT BE USED.

C. Mortar Aggregate: ASTM C144, standard masonry type.

D. Hydrated Lime: ASTM C207, Type S.

E. Grout Aggregate: ASTM C404, fine and coarse.

F. Water: Clean and potable.

G. Mortar Color: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes. Use only pigments with a record of satisfactory performance in masonry mortars.
   1. Manufacturers:
      a. "SGS Mortar Colors"; Solomon Grind-Chem Service, Inc., www.solomoncolors.com
      b. "True Tone Mortar Colors"; Davis Colors, A Subsidiary of Rockwood Industries, Inc., www.daviscolors.com

H. Water Repellent Admixture: Liquid water repellent mortar admixture intended for use with exterior decorative concrete masonry units containing integral water repellent.
   1. Manufacturers:
      a. Dry-Block Mortar Admixture; W. R. Grace & Co., www.grace.com
      b. Rheopel; Master Builders., https://master-builders-solutions.com/en-us/
      c. RainBloc for Mortar; ACM Chemistries, Inc., www.acmchem.com

I. Calcium chloride is not permitted.

J. AIR ENTRAINING ADMIXTURES SHALL NOT BE USED.

K. ANTIFREEZING ADMIXTURES SHALL NOT BE USED.

2.02 MIXES

A. Mortar Mixes:
   1. Mortar for Reinforced CMU Walls: ASTM C270, Type S using Proportion specification.
   2. Mortar for Face Brick and Unreinforced CMU Walls: ASTM C270, Type N using Proportion specification.

B. Mortar Mixing:
   1. Thoroughly mix mortar ingredients in accordance with ASTM C270 in quantities needed for immediate use.

2. Achieve uniformly damp sand immediately before mixing process.
3. Add mortar color to achieve uniformity of mix and coloration. Limit mineral-oxide pigments to no more than 10 percent of cement content by weight.
4. Re-temper only within two hours of mixing.

C. Grout Mixes:
1. Grout for Load Bearing and Non-Load Bearing Masonry: Strength as indicated on Drawings; mixed in accordance with ASTM C476.
2. Application:
a. Coarse Grout: For grouting spaces with minimum 4 inches dimension in every direction.
b. Fine Grout: For grouting other spaces.

D. Grout Mixing:
1. Thoroughly mix grout ingredients in quantities needed for immediate use in accordance with ASTM C476.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Request inspection of spaces to be grouted.

3.02 INSTALLATION

A. Install mortar in accordance with Section 04 20 00.

B. Low-Lift Grouting:
1. Use Low-Lift grouting technique for all walls and bond beams.
2. Provide minimum clear dimension of 2 inches and clear area of 8 sq. in. in verti cal cores to be grouted.
3. Place vertical reinforcement prior to laying of CMU. Extend above elevation of maximum pour height as required for splicing. Support in position at ver tical intervals not exceeding 192 bar diameters nor 10 ft.
4. Place horizontal beam reinforced as the masonry units are laid.
5. Lay CMU to maximum pour height. Do not exceed 5 foot height, or if bond beam oc curs below 5 foot height stop pour at course below bond beam.
6. Pour grout using chute or container with spout. Rod or vibrate grout during placing. Place grout continuously; do not interrupt pouring of grout for more than one hour. Terminate grout pours 1-1/2 inches below top course of pour.
7. Bond Beams: Stop grout in vertical cells 1-1/2 inches below bond beam course. Place horizontal reinforcing in bond beams; lap at corners and intersections as shown. Place grout in bond beam course before filling vertical cores above bond beam.

3.03 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Testing Frequency:
   1. One set of prism tests for every 5,000 S.F. of completed wall area.
   2. One set of mortar tests in accordance with ASTM C780 for aggregate ratio and water content, air content, consistency, and compressive strength, for every 25 C.Y. mortar.
   3. One set of grout tests in accordance with ASTM C780 for compressive strength and slump, for every 25 C.Y. grout.

END OF SECTION

SECTION 04 20 00

UNIT MASONRY ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
1. Face brick with weeps and inserts.
2. Concrete masonry units.
3. Decorative concrete masonry units.
4. Masonry joint reinforcement.
5. Ties and anchors.
6. Embedded flashing.
7. Miscellaneous masonry accessories.

B. Related Sections:
1. Section 04 05 03 - Masonry Mortaring and Grouting: Mortar and grout.
2. Section 04 29 00 - Engineered Unit Masonry.
3. Section 05 12 00 - Structural Steel Framing: Product requirements for steel anchors for placement by this section.
4. Section 05 50 00 - Metal Fabrications: Product requirements for loose steel lintels for placement by this section.
5. Section 07 27 26 - Fluid-Applied Membrane Air Barrier.
6. Section 07 90 00 - Joint Protection: Rod and sealant at control and expansion joints.

9. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.

D. National Fire Protection Association:
1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Product Data:
1. Submit data for decorative masonry units, fabricated wire reinforcement, wall ties, anchors, cavity drainage material, and other accessories.
2. Submit data for cleaning solutions, including detailed description of methods, materials, equipment and site cleanup procedures to be used. Provide with letters of approval from brick and cleaning material manufacturers regarding the compatibility of proposed use of products together for cleaning purposes.

C. Samples:
1. Submit four samples of each type of decorative masonry unit and face brick, to illustrate color, texture and full color range. Furnish additional samples when necessary to fully illustrate the complete range of highly variable materials.
2. Submit color samples for glazed units.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

E. Shop Drawings:
1. Submit shop drawings for fabrication, bending, and placement of reinforcement bars and for steel templates for layout of dowels for masonry columns and pilasters. Comply with ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures". Show bar schedules, diagrams of bent bars, lateral ties and other arrangements and assemblies as required for fabrication and placement of reinforcement for unit masonry work.
2. Provide dimensioned plan and details indicating layout, sizes, and shapes, and vertical heights of all structural glazed tile walls.
3. Submit detailed shop drawings for custom sized/shaped units including shaped brick and cast stone.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 530 Building Code Requirements for Masonry Structures and ACI 530.1 Specification for Masonry Structures.

B. Fire Rated Wall Construction: Rating as indicated on Drawings.
1. Tested Rating: Determined in accordance with ASTM E119.

1.05 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three years documented experience.

1.06 MOCKUP

A. Section 01 40 00 - Quality Requirements: Mockup requirements.

B. Construct cavity masonry wall mockup, 8 feet (243.84 cm) long by 8 feet high, including masonry, mortar and accessories, structural backup, flashings, wall insulation, and weeps.
   1. Structural backup wall to be same as building designed backup, whether CMU, steel studs, or other. Verify with Architect where building design utilizes more than one type of backup.
   2. Include a sealant-filled control joint.
   3. Omit masonry above flashing to leave a 12 inch (304.8 mm) length of the flashing exposed to view.
   4. Clean face of mockup with masonry cleaner using methods anticipated for the Work.
   5. Include representative masonry ties and anchors for each backup substrate to demonstrate proper engagement and fastener installation.

C. Furnish removable cover to protect completed mock-up from rain or other environmental or site conditions that may alter its appearance.

D. Locate where directed by Architect/Engineer. Keep top of mock up wall covered with weighted waterproof tarp.

E. Remove mockup when directed by Architect/Engineer.

1.07 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept masonry units and accessories on site. Inspect for damage.

1.09 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Cold Weather Requirements: In accordance with ACI 530.1 when ambient temperature or temperature of masonry units is less than 40 degrees Fahrenheit (4.44 degrees Celsius).

C. Hot Weather Requirements: In accordance with ACI 530.1 when ambient temperature is greater than 100 degrees Fahrenheit (37.78 degrees Celsius) or ambient temperature is greater than 90 degrees Fahrenheit (32.22 degrees Celsius) with wind velocity greater than 8 mph.

D. Bracing of Work in Progress:
   1. Where masonry erection may be exposed to high winds, installation shall be adequately braced until masonry construction has attained sufficient strength to resist wind forces.
   2. Shores and forms shall not be removed until masonry construction has attained sufficient strength to support its own weight and all other construction or environmental loads.

1.10 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate work with work of other trades built into or adjoining masonry work.

PART 2 PRODUCTS

2.01 MASONRY MATERIALS

A. Face Brick: ASTM C652, Grade SW, Type HBS, HBX, or HBA in accordance with the particular units selected for use, as indicated on Drawings.

B. Hollow Load Bearing Concrete Masonry Units (CMU): ASTM C90, lightweight.
   1. Size: Nominal modular size of 16 inches (406.4 mm) long x 8 inches (203.2 mm) high x thickness indicated.
   2. Furnish special units for bond beams and lintels as noted on structural drawings.
   3. Furnish bullnose corners at units exposed to interior of building.

C. Decorative Concrete Masonry Units: ASTM C90
   1. Ground-Faced with decorative aggregate as manufactured by Headwaters or approved equivalent in color and finish by Best or Boral.
   2. Sizes: Nominal modular size of 16-inches long x 8-inches high x indicated thicknesses.
   3. Integral Water Repellent: Units installed exposed to the exterior shall be fabricated with integral liquid polymeric water-repellent admixture. Admixture shall not reduce flexural bond strength. Units made with integral water repellent, when tested as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive according to ASTM E514, with test period extended to 24 hours, show no visible water or leaks on the back of the test specimen.
      a. Manufacturers:
         1) Dry-Block; W. R. Grace & Co., Construction Products Division, www.grace.com
         2) Rheopel; BASF www.basf-admixtures.com
         3) RainBloc; ACM Chemistries, Inc., www.acmchem.com

D. Mortar and Grout: As specified in Section 04 05 03 and as noted on Structural Drawings.

2.02 ANCHORS, TIES AND REINFORCEMENT

A. Manufacturers:
   1. AA Wire Products
   2. Heckman Building Products, www.heckmannbuildingprods.com
   3. Hohmann & Barnard (Dur-O-Wall), www.h-b.com
   4. Masonry Reinforcing Corp. of America (Wire-Bond)

5. Substitutions: Section 01 60 00 - Product Requirements.

B. Single Wythe Joint Reinforcement: ASTM A951; ladder type; steel; 9 gage side rods and cross ties; hot dip galvanized

C. Strap Anchors: Bent steel, 1-1/2 inches (38 mm) wide x 24 inches (609.6 mm) long x 1/4 inch (6.35 mm) thick, with ends turned up not less than 2 inches (50.8 mm); ASTM A153/A153M hot dip galvanized.

D. Veneer Ties for CFMF Stud Backup Walls: Rib-stiffened sheet metal plate anchors with screw holes top and bottom and projecting tabs with slotted holes for receiving vertical legs of adjustable wire ties; ASTM A153/A153M hot dip galvanized.
   1. Anchor Size: 2-3/4 inches (70 mm) wide by 3 inches (76.2 mm) high.
   2. Tie Size: 0.1875 inch (4.76 mm) diameter wire, length as required to extend to within 1 inch (25.4 mm) of veneer face.
   3. Tie Shape: Rectangular
   4. Fasteners: Type 304 stainless steel hex-washer head screws with carbon drill point as provided by Hohmann & Barnard.
      a. Size: #12 diameter x length required to penetrate steel stud flange by not less than 3 exposed threads.
      b. Complete with stainless steel backed neoprene sealing washer.
   5. Basis of Design:
      a. Running Bond Brick: Running Bond Brick: Hohmann & Barnard HB-213.
      b. Stacked Bond or Soldier Course Brick: Hohmann & Barnard HB-213 SH or 300C/HB-213 Seismic. Provide with hot-dip galvanized 0.1875 inch (4.76 mm) diameter wire reinforcing continuous within horizontal brick joint.

E. Veneer Ties for CMU Backup Walls: ASTM A82; ladder type joint reinforcement with adjustable eye and pintle type wire ties; ASTM A153/A153M hot dip galvanized.
   1. Tie Size: 0.1875 inch (4.76 mm) diameter wire, length as required to extend to within 1 inch (25.4 mm) of veneer face.
   2. Tie Shape: Rectangular
   3. Fasteners: #12 stainless steel screws self-tapping screws.
   4. Basis of Design:
      a. Modular Brick: Hohmann & Barnard, #270 Ladder Eye-Wire.
      b. King Size Brick: Hohmann & Barnard, 2-SealTM Concrete Seal Tie, wire tie with hot-dip galvanized 0.1875 inch (4.76 mm) diameter wire reinforcing continuous within horizontal brick joint.

F. Veneer Ties for Grade Beams and Concrete Backup Walls: Zinc-alloy barrel section with flanged head and eye, fastened with corrosion-resistant, self-drilling screw. Eye designed to receive tie and to serve as head for drilling fastener into concrete. Provide barrel length to suit cavity wall insulation thickness, allowing screw to seat directly against the concrete wall with flanged head covering hole in insulation.
   1. Tie Size: 0.1875 inch (4.76 mm) diameter wire, length as required to extend to within 1 inch (25.4 mm) of veneer face.
   2. Tie Shape: Triangular.
   3. Basis of Design: Hohmann & Barnard, 2-SealTM Concrete Seal Tie.

G. Dovetail Anchors: Bent steel strap formed from 0.1046 inch (2.66 mm) thick steel, with 0.1875 inch (4.76 mm) diameter triangular-shaped wire tie sized to extend within 1 inch (25.4 mm) of masonry face; ASTM A153/A153M hot dip galvanized.

H. Steel Beam and Column Anchors: Crimped 1/4 inch (6.35 mm) diameter wire anchor welded to steel member, with 0.1875 inch (4.76 mm) diameter triangular-shaped wire tie for solid masonry and rectangular-shaped wire tie for hollow masonry, sized to extend within 1 inch (25.4 mm) of masonry face; ASTM A153/A153M hot dip galvanized.

I. Reinforcing Steel: Type specified in Section 03 20 00.

J. Anchor Bolts: ASTM A307; Grade A; J-shaped or L-shaped; complete with flat washers and heavy hex nuts; hot-dipped galvanized finish, ASTM A153/A153M.

2.03 EMBEDDED FLASHING MATERIALS

A. Stainless Steel: ASTM A240, Type 304, soft temper; 0.016 inch (0.41 mm) thick; smooth finish.

B. Asphalt-Coated Copper Flashing: 5 oz/sq ft rolled sheet copper coated with flexible asphalt.
   1. Manufacturers:
      a. Cop-A-Cote; AFCO Products, Inc., www.afcoproducts.com
      b. Type ACC-Asphalt Bituminous Coated; Phoenix Building Products.
      c. Coated Copper Flashing; Sandell Manufacturing Co., Inc., www.sandellmfg.com
      d. Substitutions: Section 01 60 00 - Product Requirements.

C. Rubberized Asphalt Flashing: Composite flashing sheet consisting of self-adhesive rubberized asphalt compound bonded to a high-density cross-laminated polyethylene film; overall thickness of 0.030 inch (0.76 mm).
   1. Do not install rubberized asphalt flashing adjacent to or in contact with flexible vinyl or PVC products.
   2. Manufacturers:
      a. Perm-A-Barrier Wall Flashing; W. R. Grace & Co., www.grace.com
      b. Vycor V-40; W. R. Grace & Co., www.grace.com
      c. Polyguard 400; Polyguard Products, Inc., www.polyguardproducts.com
      d. Cloaked Flashing System, Hyload Inc., www.HyloadFlashing.com
      e. Substitutions: Section 01 60 00 - Product Requirements.

D. Lap Sealant: Type specified in Section 07 90 00.

2.04 ACCESSORIES

A. Joint Filler: ASTM D1056, Grade 2A1, closed cell neoprene; oversized 50 percent to joint width; self-expanding.

B. Cavity Wall Insulation: Extruded polystyrene board specified in Section 07 21 13.

C. Cavity Drainage Material: Open polyethylene mesh thickness required to fill cavity space, and shaped to ensure moisture drainage to cavity weeps.
   1. Manufacturers:
      a. Mortar Break; Advanced Building Products Inc., www.advancedflashing.com
      b. Mortar Net; Mortar Net USA, Ltd., www.mortarnet.com

c. CavClear Masonry Mat, Archovations, Inc., www.cavclear.com
d. Substitutions: Section 01 60 00 - Product Requirements.

D. Weeps and Inserts:
1. Open Head Joints: Full head height for face brick, 3 inches (76.2 mm) high for CMU. Space at 20” or 24” O.C depending on brick size. All weep joints to receive inserts.
2. Weep Inserts: Install stainless steel inserts at each weep. Inserts as manufactured by Weepa, www.weepa.com or approved equivalent by Rid-O-Mice.

E. Cleaning Solutions:
1. Job-Mixed Detergent Solution: Solution of 1/2-cup (0.14-L) dry measure tetrasodium polyphosphate and 1/2-cup (0.14-L) dry measure laundry detergent dissolved in 1 gal. (4 L) of water.
2. Proprietary Acidic Cleaner: Standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry and pigmented mortar surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
a. Manufacturers:
1) Diedrich Technologies, Inc.
2) EaCo Chem, Inc.
3) ProSoCo, Inc.
4) AHI Supply
5) Substitutions: Section 01 60 00 - Product Requirements.

F. Steel Lintels: Size as indicated on Drawings, hot-dip galvanized.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive work.

C. Verify items provided by other sections of work are properly sized and located.

D. Verify built-in items are in proper location, and ready for roughing into masonry work.

3.02 PREPARATION

A. Direct and coordinate placement of metal anchors supplied to other sections.

B. Furnish temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent support.

C. Wet clay and shale brick before laying when initial rate of absorption is greater than 30 grams when tested in accordance with ASTM C67.

3.03 INSTALLATION

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form bed and head joints of uniform thickness.

C. Lay exposed masonry to match existing bond pattern(s):
   1. Coursing of Concrete Masonry Units:
      a. Bond: Running or match existing.
      b. Coursing: One unit and one mortar joint to equal 8 inches (203.2 mm).
      c. Mortar Joints: Concave.
   2. Typical Coursing of Modular Brick Units:
      a. Bond: 1/2 running.
      b. Coursing: Three units and three mortar joints to equal 8 inches (203.2 mm).
      c. Mortar Joints: Concave.
   3. Typical Coursing of King Size Brick Units:
      a. Bond: 1/3 running.
      b. Coursing: Three units and three mortar joints to equal 9 inches (228.6 mm).
      c. Mortar Joints: Concave.
   4. Coursing of Reinforced Concrete Masonry Units:
      a. Bond: Running.
      b. Coursing: One unit and one mortar joint to equal 8 inches (203.2 mm).
      c. Mortar Joints: Tooled concave.
   5. Coursing of Decorative Concrete Masonry Units:
      a. Bond: Running.
      b. Coursing: One unit and one mortar joint to equal 8 inches (203.2 mm).
      c. Mortar Joints: Concave.

D. Placing and Bonding:
   1. Lay solid masonry units in full bed of mortar, with full head joints.
   2. Lay hollow masonry units with face shell bedding on head and bed joints.
      a. Bed webs in mortar in starting course on footings and in all courses of piers, columns, and pilasters, and where adjacent to cells or cavities to be filled with grout.
      b. For starting course on footings where cells are not grouted, spread out full mortar bed, including areas under cells.
   3. Buttering corners of joints or excessive furrowing of mortar joints are not permitted.
   4. Remove excess mortar as work progresses.
   5. Interlock intersections and external corners.
   6. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment is required, remove mortar and replace.
   7. Perform job site cutting of masonry units with motor-driven saws to assure straight, clean, un-chipped edges. Prevent broken masonry unit corners or edges. Where possible, use full-size units without cutting.
   8. Install cut units with cut surfaces and edges concealed.
   9. Select and arrange exposed units to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.

10. Cut mortar joints flush where wall tile is scheduled or bitumen dampproofing is applied.
11. Cut mortar fins protruding into cavity from back side of face brick as work progresses.
12. Isolate masonry from vertical structural framing members.
13. At full-height walls, leave a 1” space between top of masonry and floor or roof structure above. Brace masonry from structure with 16- gauge galvanized steel angles having 4” equal legs and 8” lengths mechanically anchored to the floor or roof structure and spaced not more than 4’-0” on center.
14. Isolate top of masonry from horizontal structural framing members and slabs or decks with compressible joint filler.

E. Weeps and Inserts: Install weeps and inserts in outer wythe at maximum 24 inches (609.6 mm) oc horizontally above through-wall flashing, above shelf angles and lintels, at bottom of walls, and above other obstructions of wall cavity continuity.

F. Cavity Wall: Do not permit mortar to drop or accumulate into cavity air space or to plug weeps. Build inner wythe ahead of outer wythe to receive cavity insulation and bituminous dampproofing.
1. Install cavity drain material, notched end up, continuously at bottom of each cavity above embedded flashing.

G. Stain Prevention: As work progresses, prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
1. Protect base of walls from rain-splashed mud and from mortar splatter by coverings spread on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

H. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
1. Extend cover a minimum of 24 inches (609.6 mm) down both sides and hold cover securely in place.
2. Where one wythe of multi-wythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches (609.6 mm) down face next to unconstructed wythe and hold cover in place.

3.04 JOINT REINFORCEMENT AND ANCHORAGE

A. Install horizontal joint reinforcement in CMU walls 16 inches (406.4 mm) oc.

B. Place joint reinforcement in first and second horizontal joints above and below openings greater than 12 inches (304.8 mm) wide. Extend minimum 16 inches (406.4 mm) each side of opening.

C. Place joint reinforcement continuous in first and second joints below tops of walls.

D. Lap joint reinforcement ends minimum 6 inches (152.4 mm).

E. Cut or interrupt joint reinforcing at control and expansion joints.

F. At corners, install horizontal joint reinforcement with prefabricated “L” intersections.

G. At intersecting and abutting walls, unless vertical expansion or control joints are shown at juncture, install horizontal joint reinforcement with prefabricated “T” intersections.

H. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch (12.7 mm) of dimensioned position.

I. Install anchors attached to concrete and steel structural members:
   1. Leave an open space not less than 1 inch (25.4 mm) in width between back of masonry and face of structural member. Keep open space free of mortar or other rigid materials.
   2. Install anchors at maximum 16 inches (406.4 mm) o.c. vertically and horizontally.

J. Install Wall Ties at CMU Backup Walls:
   1. Install wall ties at 16 inches (406.4 mm) oc vertically and maximum 16 inches oc horizontally.
   2. Coordinate ties to accommodate installation of 16 inch (406.4 mm) widths of cavity wall insulation specified in Section 07 21 13.
   3. Place additional wall ties within 12 inches (304.8 mm) of openings at intervals not exceeding 36 inches (914.4 mm).

3.05 MASONRY FLASHINGS:

A. Provide concealed flashing in masonry work at or above shelf angles, lintels, ledges and other obstructions to the downward flow of water in the wall so as to divert such water to the exterior.

B. Form flashings from the following materials:
   1. Exposed flashings: Stainless steel.
   2. Concealed flashings: Asphalt-coated copper or rubberized asphalt, at contractor’s option.

C. Prepare masonry surfaces smooth and free from projections which could puncture flashing. Place through-wall flashing on sloping bed of mortar and cover with mortar. Seal penetrations in flashing with mastic before covering with mortar.

D. Extend flashings horizontally through exterior face of masonry and turn down 1/4 inch (6.35 mm) to form drip.

E. Turn flashing up minimum 8 inches (203.2 mm) and bed into mortar joint of CMU backup wall or seal to sheathing over CFMF stud backup wall.

F. Lap end joints minimum 6 inches (152.4 mm) and seal watertight.

G. Extend flashing the full length of lintels and shelf angles and minimum of 4" into masonry each end; turn up ends not less than 2" to form end dams as recommended by BIA and illustrated in BIA Technical Note 7, Figure 21, current edition.

H. Turn flashing, fold, and seal at corners, bends, and interruptions.

I. Lintels:
   1. Install loose steel lintels over openings more than 12 inches (304.8 mm) wide in brick walls.

2. Install reinforced unit masonry lintels over openings more than 24 inches (609.6 mm) wide in CMU walls.
    a. Reinforce lintels as indicated on Drawings.
    b. Do not splice reinforcing bars.
    c. Support and secure reinforcing bars from displacement.
    d. Place and consolidate grout fill without displacing reinforcing.
    e. Allow masonry lintels to attain specified strength before removing temporary supports.
3. Maintain minimum 8 inch (203.2 mm) bearing on each side of opening.

J. Grouted Components:
1. Reinforce bond beams and pilasters as indicated on Drawings.
2. Splice reinforcement in accordance with Section 03 20 00.
3. Support and secure reinforcing bars from displacement.
4. Place and consolidate grout fill without displacing reinforcing.
5. At bearing locations, fill masonry cores with grout for minimum 12 inches (304.8 mm) both sides of opening.
6. Fill cores in hollow concrete masonry units with grout 24 inches (609.6 mm) under bearing plates, beams, lintels, posts, and similar items, unless otherwise indicated.

K. Reinforced Masonry:
1. Lay masonry units with core cells vertically aligned and cavities between wythes clear of mortar and unobstructed.
2. Place reinforcement bars as indicated on Drawings.
3. Splice reinforcement in accordance with Section 03 20 00.
4. Support and secure reinforcement from displacement.
5. Place and consolidate grout fill without displacing reinforcing.
6. Place grout in accordance with ACI 530.1 Specification for Masonry Structures.

L. Control And Expansion Joints:
1. Install control and expansion joints at the following maximum spacings, unless otherwise indicated on Drawings:
    a. Interior Partitions: 25'-0" o.c. horizontally.
    b. Exterior Cavity Walls: 20'-0" o.c. horizontally.
    c. Steel Lintels: Provide horizontal bond breaks as detailed on Drawings at the end bearing to allow for thermal expansion and contraction.
    d. Openings in Exterior and Interior Walls: At masonry with steel lintels, provide expansion joints on each side of the opening continuing to the top and bottom of the brick wythe and as specified above. At CMU lintels, provide control joints in alignment with the outside ends of the lintel continuing to the bed joint and then with horizontal bond breaks at the end bearing.
    e. Veneer Construction: Provide horizontal pressure relieving joints beneath shelf angles as recommended by BIA Technical Note 28B current edition.
    f. At changes in wall height.
2. Do not continue horizontal joint reinforcement through control and expansion joints.
3. Form control joint with sheet building paper bond breaker fitted to one side of hollow contour end of block unit. Fill resultant core with grout fill. Rake joint at exposed unit faces for placement of backer rod and sealant.

4. Form expansion joint by omitting mortar and cutting unit to form open joint.

M. Built-In Work:
1. As work progresses, install built-in door and window frames, wood nailing strips, anchor bolts, plates, and other items to be built-in the work and furnished by other sections.
2. Install built-in items plumb and level.
3. Bed anchors of metal door and window frames in adjacent mortar joints. Fill frame voids solid with grout or mortar. Fill adjacent masonry cores with grout minimum 12 inches (304.8 mm) from framed openings.
4. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath in the joint below and rod mortar or grout into core.
5. Do not build in materials subject to deterioration.

N. Cutting and Fitting:
1. Cut and fit for chases, pipes, conduit, sleeves, grounds, and other items penetrating masonry. Coordinate with other sections of work to provide correct size, shape, and location.
2. Obtain Architect/Engineer’s approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.06 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Alignment of Columns and Pilasters: 1/4 inch (6.35 mm).

C. Maximum Variation From Unit to Adjacent Unit: 1/16 inch (1.59 mm).

D. Maximum Variation from Plane of Wall: 1/4 inch (6.35 mm) in 10 ft and 1/2 inch (12.7 mm) in 20 ft or more.

E. Maximum Variation from Plumb: 1/4 inch (6.35 mm) per story non-cumulative; 1/2 inch (12.7 mm) in two stories or more.

F. Maximum Variation from Level Coursing: 1/8 inch (3.18 mm) in 3 ft; 1/4 inch (6.35 mm) in 10 ft; 1/2 inch (12.7 mm) in 30 feet (914.4 cm)

G. Maximum Variation of Joint Thickness: 1/8 inch (3.18 mm) in 3 feet (91.44 cm)

H. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch (6.35 mm).

I. Maximum Variation for Steel Reinforcement:
1. Install reinforcement within the tolerances specified in ACI 530.1 for foundation walls.
2. Plus or minus 1/2 inch (12.7 mm) when distance from centerline of steel to opposite face of masonry is 8 inches (203.2 mm) or less.
3. Plus or minus 1 inch (25.4 mm) when distance is between 8 and 24 inches (609.6 mm).
4. Plus or minus 1-1/4 inch (32 mm) when distance is greater than 24 inches (609.6 mm).
5. Plus or minus 2 inches (50.8 mm) from location along face of wall.

3.07 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess mortar and mortar smears as work progresses.

C. Replace defective mortar. Match adjacent work.

D. Clean soiled surfaces with cleaning solution.

E. Use non-metallic tools in cleaning operations.

F. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
   1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
   2. Protect adjacent stone and non-masonry surfaces from contact with cleaner by covering them with liquid strippable masking agent, polyethylene film or waterproof masking tape.
   3. Saturate wall surfaces with water prior to application of cleaners; remove cleaners promptly by rinsing thoroughly with clear water.
   4. Clean brick by the bucket-and-brush hand-cleaning method described in BIA Technical Notes No. 20, using job-mixed detergent solution, or clean masonry with approved cleaner applied according to the brick and the cleaning manufacturer's written instructions and approval.
   5. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2 applicable to type of stain on exposed surfaces.
   6. Do not use high-pressure washing methods (greater than 700psi as described in BIA Technical Notes No. 20) on single wythe construction, on concrete masonry incorporating integral or applied water repellents, or on sand-finished face brick.

3.08 DEFECTIVE CONSTRUCTION

A. Correct defects appearing in the finished work for a period of one year after the date of Substantial Completion.

B. Defects shall include, but not be limited to, cracking, separating or color leaching of mortar, cracking, discoloration, or deterioration of masonry units, efflorescence in masonry units or joints, and water penetration through face brick or joints under normal exposure.

3.09 PROTECTION OF FINISHED WORK

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for protecting finished Work.

B. Protect exposed external corners subject to damage.

C. Protect base of walls from mud and mortar splatter.

D. Protect masonry and other items built into masonry walls from mortar droppings and staining caused by mortar.

E. Protect tops of masonry work with waterproof coverings secured in place without damaging masonry. Provide coverings where masonry is exposed to weather when work is not in progress.

END OF SECTION

SECTION 04 29 00 - ENGINEERED UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes furnishing all labor, materials, and services incidental to the installation of steel reinforcing for CMU, brick, and stone masonry:

B. Related Sections:
   1. Section 01 40 00 – Quality Requirements: Materials testing.
   2. Section 04 20 00 – Unit Masonry Assemblies.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to work of this Section.

B. Requirements of Division 4 Section "Unit Masonry Assemblies" apply to Work of this Section.

1.3 SUMMARY

A. This Section consists of furnishing all the labor, materials, and services incidental to the installation of reinforced unit masonry.

1.4 DESCRIPTION OF WORK

A. Extent of each type of reinforced unit masonry work is indicated on drawings and in schedules.

1.5 SUBMITTALS

A. Shop Drawings: Submit shop drawings for fabrication, bending, and placement of reinforcement bars. Comply with ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures". Show bar schedules, diagrams of bent bars, stirrup spacing, lateral ties and other arrangements and assemblies as required for fabrication and placement of reinforcement for unit masonry work. Submit shop drawings showing wall elevations with all masonry openings, reinforcement, and control joints.

B. Material certificates in lieu of material laboratory test reports when permitted by Architect/Engineer. Material certificates shall be signed by manufacturer and Contractor, certifying that each material item complies with or exceeds specified requirements. Provide certification from admixture manufacturers that chloride content complies with specification requirements.

C. Testing Reports: The independent testing laboratory shall submit laboratory test reports for materials used directly to the Architect/Engineer with copy to others in accordance with the provisions of Division 1 Section "Quality Control Services." State in each report whether or not the test specimens comply to the specified requirements and indicate any deviations therefrom.

PART 2 - PRODUCTS

2.1 UNIT MASONRY

A. General: Refer to Division 4 Section "Unit Masonry Assemblies" for masonry materials and accessories not included in this Section.

B. Masonry Compressive Strengths:

1. Minimum masonry compressive strength (Fm) = 2000 psi.
2. Concrete Masonry Units: ASTM C 90, with a minimum compressive strength of 2500 psi, minimum average of three units on the net area.
3. Mortar : ASTM C 270, Type S.
4. Grout : ASTM C 476, with a minimum compressive strength of 2500 psi.

2.2 REINFORCEMENT BARS

A. General: Provide deformed bars to following grades complying with ASTM A 615, except as otherwise indicated.

1. Provide Grade 40 for bars No. 3, except as otherwise indicated.
2. Provide Grade 60 for bars No. 4 to No. 18, except as otherwise indicated.
3. Shop-fabricate reinforcement bars which are shown to be bent or hooked.

PART 3 - EXECUTION

3.1 PLACING REINFORCEMENT

A. General: Clean reinforcement loose rust, mill scale, earth, ice or other materials which will reduce bond to mortar or grout. Do not use reinforcement bars with kinks or bends not shown on drawings or final shop drawings, or bars with reduced cross-section due to excessive rusting or other causes.

B. Position reinforcing accurately at the spacing indicated. Support secure vertical bars against displacement. Horizontal reinforcing may be placed as the masonry work progresses. Where vertical bars are shown in close proximity, provide a clear distance between bars of not less than the nominal bar diameter or 1" (whichever is greater). Minimum clearance between masonry and reinforcement shall be 1/2".

1. For columns, piers and pilasters, provide a clear distance between vertical bars as indicated, but not less than 1-1/2 times the nominal bar diameter or 1-1/2", whichever is greater. Provide lateral ties as indicated. Refer to the general notes on the drawings for minimum clearance between the main reinforcement and the masonry.

C. Splice reinforcement bars where shown; do not splice at other points unless acceptable to the Architect. Provide lapped splices, unless otherwise indicated. In splicing vertical bars or attaching to dowels, lap ends, place in contact and wire tie.

D. Embed metal ties in mortar joints as work progresses, with a minimum mortar cover of 5/8" on exterior face of walls and 1/2" at other locations.

E. Embed prefabricated horizontal joint reinforcement as the work progresses, with a minimum cover of 5/8" on exterior face of walls and 1/2" at other locations. Lap units not less than 6" at ends. Use prefabricated "L" and "T" units to provide continuity at corners and

intersections. Cut and bend units as recommended by manufacturer for continuity at returns, offsets, column fireproofing, pipe enclosures and other special conditions.

F. Anchoring: Anchor reinforced masonry work to supporting structure as indicated.
   1. Anchor reinforced masonry walls to non-reinforced masonry where they intersect.

G. Foundation dowels: Dowels in the foundation shall be placed to align with cores containing reinforcement.

3.2 INSTALLATION, GENERAL

A. Refer to Division 4 Section "Unit Masonry Assemblies" for general installation requirements to unit masonry.

B. Temporary Formwork: Provide formwork and shores as required for temporary support of reinforced masonry elements.

   1. Construct Formwork to conform to shape, line and dimensions shown. Make sufficiently tight to prevent leakage of mortar grout, or concrete (if any). Brace, tie and support as required to maintain portion and shape during construction and curing of reinforced masonry.

C. Do not remove forms and shores until reinforced masonry member have hardened sufficiently to carry their own weight and all other reasonable temporary loads that may be placed on them during construction.

   1. Allow not less than the following minimum time to elapse after completion of members before removing shores or forms, provided suitable curing conditions have been obtained during the curing period.
      a. 10 days for girders and beams.

3.3 INSTALLATION OF REINFORCED BRICK MASONRY

A. Mortar Jointing and Bedding:
   1. Pattern Bond: Lay exterior wythes in the pattern bond shown, or if not shown, lay in 1/2-running bond with vertical joints in each course centered on units in courses above and below. Lay inner wythes (if any) with all units in a wythe bonded by lapping not less than 2". Bond and interlock each course of each wythe at corners and intersections. Do not use units with less than 4" nominal horizontal face dimension at corners or jambs.
   2. Lay exterior wythes with bed (horizontal) and head (vertical) joints between units completely filled with mortar. Top of bed joint mortar may be sloped toward center of walls. Butter ends of units with sufficient mortar to completely fill head joints and shove into place. Do not furrow bed joints or slush head joints. Remove any mortar fins which protrude into grout space.

      a. Maintain joint widths shown for head and bed joints, but adjust thickness of bed joints, if required, to allow for not less than 1/4" thickness of mortar between reinforcement and masonry units, except 1/4" bars (if any) may be laid in 1/2" thick bed joints and No. 6 gage or smaller wire reinforcing (if any) may be laid in 3/8" thick bed joints.

B. Two-Wythes Wall Construction: Lay both wythes as previously specified for exterior wythes. Maintain grout space (collar or continuous vertical joint between wythes) of width indicated, but adjust, if required, to provide grout space not less than 1/2" wider than the sum of the vertical and horizontal (if any) reinforcement bars shown to be placed in grout space. Do not parge or fill grout space with mortar.

C. Limit extent of masonry construction to sections which do not exceed the maximum pour requirements specified hereafter. Provide temporary dams or barriers to control horizontal flow of grout at ends of wall sections. Build dams full height of grout pour. If masonry units are used, do not bond into permanent masonry wythes. Remove temporary dams after completion of grout pour.

D. Low-Lift Grouting:
   1. Use Low-Lift grouting technique with "Fine Grout" per ASTM C 476 for the following:
      a. Two-wythe walls with grout space of 2" or less in width.

   2. Use Low-Lift grouting technique with "Coarse Grout" per ASTM C 476 for the following:
      a. Columns, piers or pilasters where masonry units are shown in core areas enclosed by exterior masonry units.

   3. Construct low-lift masonry by placing reinforcement, laying masonry units and pouring grout as the work progresses.

   4. Place vertical reinforcement bars and supports prior to laying of masonry units. Extend above elevation of maximum pour height as required to allow for splicing. Horizontal reinforcement bars may be placed progressively with laying of masonry units.

   5. Limit grout pours as required to prevent displacement of masonry by grout pressures (blowout), but do not exceed 12" pour height.

   6. Lay masonry units prior to each grout pour, but do not construct more than 12" above maximum grout pour height in one exterior wythe and 4" above in other exterior wythe. Provide metal wall ties if required to prevent blowouts.

   7. Pour grout using container with spout and consolidate immediately by rodding or puddling; do not use trowels. Place grout continuously; do not interrupt pouring of grout for more than one hour. If poured in lifts, place from center-to-center of masonry courses. Terminate pour 1-1/2" below top of highest course in pour.

3.4 INSTALLATION OF REINFORCED CONCRETE UNIT MASONRY

A. Do not wet concrete masonry units (CMU).

B. Lay CMU units with full-face shell mortar beds. Fill vertical head joints (end joints between units) solidly with mortar from face of unit to a distance behind face equal to not less than the thickness of longitudinal face shells. Solidly bed cross-webs of starting courses in mortar. Maintain head and bed joint widths shown, or if not shown, provide 3/8" joints.

   1. Where solid CMU units are shown, lay with full mortar head and bed joints.

C. Walls:

   1. Pattern Bond: Lay CMU wall units in 1/2 running bond with vertical joints in each course centered on units in courses above and below, unless otherwise indicated. Bond and interlock each course at corners and intersections. Use special-shaped units where shown, and as required for corners, jambs, sash, control joints, lintels, bond beams and other special conditions.

   2. Maintain vertical continuity of core or cell cavities, which are to be reinforced and grouted, to provide minimum clear dimensions indicated and to provide minimum

clearance and grout coverage for vertical reinforcement bars. Keep cavities free of mortar. Solidly bed webs in mortar where adjacent to reinforced cores or cells.

3. Where horizontal reinforced beams (bond beams) are shown, use special units or modify regular units to allow for placement of continuous horizontal reinforcement bars. Place small mesh expanded metal lath or wire screening in mortar joints under bond beam courses over cores or cells of non-reinforced vertical cells, or provide units with solid bottoms.

4. Columns, Piers and Pilasters:
   a. Use CMU units of the size, shape and number of vertical core spaces shown. If not shown, use units which provide minimum clearances and grout coverage for number and size of vertical reinforcement bars shown.
   b. Provide pattern bond shown, or if not shown, alternate head joints in vertical alignment.
   c. Lay wall and pilaster units together to maximum pour height specified.

D. Grouting:
   1. Use “Fine Grout" per ASTM C 476 for filling spaces less than 4" in one or both horizontal directions and bond beams.
   2. Use "Coarse Grout" per ASTM C 476 for filling 4" spaces or larger in both horizontal directions and formed beams.

E. Low-Lift Grouting:
   1. Use Low-Lift grouting technique for all walls and bond beams.

   2. Provide minimum clear dimension of 2" and clear area of 8 sq. in. in vertical cores to be grouted.

   3. Place vertical reinforcement prior to laying of CMU. Extend above elevation of maximum pour height as required for splicing. Support in position at vertical intervals not exceeding 192 bar diameters nor 10 ft.

   4. Place horizontal beam reinforced as the masonry units are laid.

   5. Lay CMU to maximum pour height. Do not exceed 5' height, or if bond beam occurs below 5' height stop pour at course below bond beam.

   6. Pour grout using chute or container with spout. Rod or vibrate grout during placing. Place grout continuously; do not interrupt pouring of grout for more than one hour. Terminate grout pours 1-1/2" below top course of pour.

   7. Bond Beams: Stop grout in vertical cells 1-1/2" below bond beam course. Place horizontal reinforcing in bond beams; lap at corners and intersections as shown. Place grout in bond beam course before filling vertical cores above bond beam.

F. High-Lift Grouting:
   1. High-lift grouting technique may be used for the following masonry construction:
      a. Columns, piers, pilasters, or formed beams.

   2. Provide cleanout holes in first course of each grout pour at all vertical cells which are to be filled with grout.
      a. Use units with one face shell removed and provide temporary supports for units above, or use header units with concrete brick supports, or cut openings in one face shell.

3. Construct masonry to full height of maximum grout specified, prior to placing grout.
   a. Limit grout lifts to a maximum height of 5' and grout pour to a maximum height of 12', unless otherwise indicated.

4. Place vertical reinforcement before grout placement. Place before or after laying masonry units, as required by job conditions. Tie vertical reinforcement to dowels at base of masonry where shown and thread CMU over or around reinforcement. Support vertical reinforcement at intervals not exceeding 192 bar diameters nor 10'.
   a. Where individual bars are placed after laying masonry, place wire loops extending into cells as masonry is laid and loosen before mortar sets. After insertion of reinforcing bar, pull loops and bar to proper position and tie free ends.

5. Where reinforcement is prefabricated into cage units before placing, fabricate units with vertical reinforcement bars and lateral ties of the size and spacing indicated.

6. Embed lateral tie reinforcement in mortar joints where indicated. Place as masonry units are laid, at vertical spacing shown.

   a. Where lateral ties are shown in contact with vertical reinforcement bars, embed additional lateral tie reinforcement in mortar joints. Place as shown, or if not shown, provide as required to prevent grout blowout or rupture of CMU face shells, but provide not less than No. 2 bars or 8 gage wire ties spaced 16" o.c. for members with 20" or less side dimensions, and 8" o.c. for members with side dimensions exceeding 20".

7. Preparation of Grout Spaces: Prior to placement, inspect and clean grout spaces. Remove dust, dirt, mortar droppings, loose pieces of masonry and other foreign materials from grout spaces. Clean reinforcing and adjust to proper position. Clean top surface of structural members supporting masonry to ensure bond. After final cleaning and inspection, close cleanout holes and brace closures to resist grout pressures.

   a. Do not place grout until entire height of masonry to be poured has attained sufficient strength to resist displacement of masonry units and breaking of mortar bond. Install shores and bracing, if required, before starting grouting operations.

   b. Place grout by pumping into grout spaces unless alternate methods are acceptable to the Architect.

   c. Limit grout pours to sections which can be completed in one working day with not more than one hour interruption of pouring operation. Place grout in lifts which do not exceed 5'. Allow not less than 30 minutes, nor more than one hour between lifts of a given pour. Rod or vibrate each grout lift during pouring operation.

   d. When more than one pour is required to complete a given section of masonry, extend reinforcement beyond masonry as required for splicing. Pour grout to within 1-1/2" of top course of first pour. After grouted masonry is cured, lay masonry units and place reinforcement for second pour section. Repeat sequence if more pours are required.

3.5 FIELD QUALITY CONTROL

A. General: An independent testing agency shall perform tests and to submit test reports.

B. Minimum Tests and Submittals:
   1. Certificate for materials used in masonry construction indicating compliance with contract documents.

2. Verification of Minimum masonry compressive strength (f'm) prior to construction and every 5000 sq. ft during construction. Perform compressive strength "Prism Test" per ASTM C1314.

3. Verification of proportions of materials and grout as delivered to the site.

4. Test mortar in accordance with the property specification of ASTM C 270 or evaluate with ASTM C 780.

5. Sample and test grout in accordance with ASTM C 1019 for each 5000 sq. ft.

C. Minimum Inspection:

1. From the masonry construction and continuously during construction of masonry, verify the following are in compliance:
   a. Proportion of site-mixed mortar and grout.
   b. Placing of masonry units and construction of mortar joints.
   c. Placement of reinforcement and connectors.
   d. Grout space prior to grouting.
   e. Placement of grout.

2. Observe preparation of grout specimens, mortar specimens, and/or prisms.

3. Verify compliance with the required inspection provisions of the contract documents and the approved submittals.

D. Test results will be reported in writing to Architect, Structural Engineer, and Contractor within 24 hours after tests. Reports of tests shall contain the Project identification name and number, date of test, name of testing service, mortar or grout type and class, location of mortar or grout batch in structure, design compressive strength at 28 days, mortar or grout mix proportions and materials, compressive breaking strength, and type of break for both 7-day tests and 28-day tests. If any breaks are below specified or expected strengths, the Testing Laboratory shall report any visible anomalies.

E. Additional Tests: The testing agency will make additional tests of in-place masonry when test results indicate specified strengths and other characteristics have not been attained in the structure, as directed by Architect/Engineer. Testing agency may conduct tests to determine adequacy of materials by cored cylinders complying with ASTM C 42, or by other methods as directed.

END OF SECTION 04 29 00

SECTION 04 73 00

MANUFACTURED STONE MASONRY

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:
   1. Manufactured Stone Masonry: Calcium silicate product; may be identified as “Cast Stone” on the drawings.
   2. Miscellaneous masonry ties, anchors, and accessories related to manufactured stone masonry.

B. Related Sections:
   1. Section 04 05 03 - Masonry Mortaring and Grouting: Mortar and grout for Cast Stone.
   2. Section 04 20 00 – Unit Masonry Assemblies.
   3. Section 07 90 00 - Joint Protection: Rod and sealant at control and expansion joints.

1.02 REFERENCES

A. American Society for Testing and Materials
   1. ASTM C73-14 – Standard Specification for Calcium Silicate Brick (Sand-Lime Brick).

B. American Concrete Institute:
   1. ACI 530 - Building Code Requirements for Masonry Structures.
   2. ACI 530.1 - Specifications for Masonry Structures.

C. Masonry Institute:
   1. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Product Data:
   1. Submit data for manufactured stone masonry units, fabricated wire reinforcement, wall ties, anchors, and other accessories.
   2. Submit data for cleaning solutions, including detailed description of methods, materials, equipment and site cleanup procedures to be used. Provide with letters of approval from manufacturer regarding the compatibility of proposed use of products together for cleaning purposes.

C. Samples:
   1. Submit four samples of each type of manufactured stone masonry to illustrate color, texture and extremes of color range. Furnish additional samples when necessary to fully illustrate the complete range of highly variable materials.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 530 Building Code Requirements for Masonry Structures and ACI 530.1 Specification for Masonry Structures.

1.05 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three years' documented experience.

1.06 MOCKUP

A. Section 01 40 00 - Quality Requirements: Mockup requirements.

B. Construct mockup minimum 4 ft. x 4 ft. unless detailed otherwise in the drawings, including masonry, mortar and accessories, structural backup, flashings, wall insulation, and weeps.
   1. Structural backup wall to consist of CMU and cold formed metal framing.
   2. Include a sealant-filled control joint.
   3. Omit masonry above flashing to leave a 12 inch length of the flashing exposed to view.
   4. Clean face of mockup with masonry cleaner using methods anticipated for the work.

C. Furnish removable cover to protect completed mock-up from rain or other environmental or site conditions that may alter its appearance.

D. Locate in well-lit area where approved Architect/Engineer.

E. Remove mockup when directed by Architect/Engineer, unless part of permanent construction.

1.07 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept masonry units and accessories on site. Inspect for damage.

1.09 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Cold Weather Requirements: In accordance with ACI 530.1 when ambient temperature or temperature of masonry units is less than 40 degrees F.

C. Hot Weather Requirements: In accordance with ACI 530.1 when ambient temperature is greater than 100 degrees F or ambient temperature is greater than 90 degrees F with wind velocity greater than 8 mph.

D. Bracing of Work in Progress:

1. Where masonry erection may be exposed to high winds, installation shall be adequately braced until masonry construction has attained sufficient strength to resist wind forces.
2. Shores and forms shall not be removed until masonry construction has attained sufficient strength to support its own weight and all other construction or environmental loads

1.10 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate work with work of other trades built into or adjoining masonry work.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Manufacturers:
1. Arriscraft International, distributed by Upchurch Kimbrough Company, www.arriscraft.com.
2. Substitutions: Section 01 60 00 – Product Requirements.

B. Manufactured Stone Masonry Units: ASTM C1364, architectural manufactured stone masonry units fabricated by dry casting methods, with fine grained texture, simulating natural cut stone.
1. Type: Calcium silicate masonry units meeting requirements of ASTM C73, Grade SW; solid units that have been pressure-formed and autoclaved to standard and special shapes.
2. Size(s): As indicated in the drawings.
3. Reinforce units as indicated and as required by ASTM C1364. Use galvanized or epoxy-coated reinforcement when covered with less than 1-1/2 inches of material.
4. Curing: Cure units to develop concrete quality, and to minimize appearance blemishes including non-uniformity, staining, or surface cracking.
5. Colors and Textures: As scheduled.
6. Mortar Color: As selected by the Architect.

2.02 ANCHORS, TIES AND REINFORCEMENT

A. Manufacturers:
1. AA Wire Products
2. Heckman Building Products (Dur-O-Wall), www.heckmannbuildingprods.com
3. Hohmann & Barnard, www.h-b.com
4. Masonry Reinforcing Corp. of America (Wire-Bond)
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Strap Anchors: Bent steel, 1-1/2 inches wide x 24 inches long x 1/4 inch thick, with ends turned up not less than 2 inches; ASTM A153/A153M hot dip galvanized.

C. Veneer Ties for CFMF Stud Backup Walls: Rib-stiffened sheet metal plate anchors with screw holes top and bottom and projecting tabs with slotted holes for receiving vertical legs of adjustable wire ties; ASTM A153/A153M hot dip galvanized.
1. Anchor Size: 2-3/4 inches wide by 3 inches high.

2. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.
3. Tie Shape: Rectangular
4. Fasteners: Steel drill screws, #10 diameter x length required to penetrate steel stud flange by not less than 3 exposed threads, complying with ASTM C954 except with hex washer head and neoprene washer, cadmium-plated.
5. Basis of Design: Hohmann & Barnard HB-200/DA-213.

D. Veneer Ties for CMU Backup Walls: ASTM A82; ladder type joint reinforcement with adjustable eye and pintle type wire ties; ASTM A153/A153M hot dip galvanized.
1. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.
2. Tie Shape: Rectangular
3. Basis of Design: Hohmann & Barnard, #270 Ladder Eye-Wire.

E. Veneer Ties for Grade Beams and Concrete Backup Walls: Zinc-alloy barrel section with flanged head and eye, fastened with corrosion-resistant, self-drilling screw. Eye designed to receive tie and to serve as head for drilling fastener into concrete. Provide barrel length to suit cavity wall insulation thickness, allowing screw to seat directly against the concrete wall with flanged head covering hole in insulation.
1. Tie Size: 0.1875 inch diameter wire, length as required to extend to within 1 inch of veneer face.
2. Tie Shape: Triangular
3. Basis of Design: Heckman Building Products, Pos-i-Tie.

F. Dovetail Anchors: Bent steel strap formed from 0.1046 inch thick steel, with 0.1875 inch diameter triangular-shaped wire tie sized to extend within 1 inch of masonry face; ASTM A153/A153M hot dip galvanized.

G. Steel Beam and Column Anchors: Crimped 1/4 inch diameter wire anchor welded to steel member, with 0.1875 inch diameter triangular-shaped wire tie for solid masonry and rectangular-shaped wire tie for hollow masonry, sized to extend within 1 inch of masonry face; ASTM A153/A153M hot dip galvanized.

2.03 EMBEDDED FLASHING MATERIALS

A. Stainless Steel: Reference Section 07 62 00 Sheet Metal Flashing and Trim for material requirements.
1. Flexible Flashing: Reference Section 07 11 00 Dampproofing and Flexible Flashing.

B. Pre-Coated Galvanized Steel or Aluminum Sheet: Not allowed for embedment in masonry walls.

C. Galvanized or Precoated Steel Sheet: Not allowed for embedment in masonry walls.

2.04 ACCESSORIES

A. Expansion Joint Filler: ASTM D1056, Grade 2A1, closed cell neoprene; oversized 50 percent to joint width; self-expanding.
1. Weeps: Open head joints, maximum 3 inches high.
2. Cleaning Solutions:

3. Job-Mixed Detergent Solution: Solution of 1/2-cup (0.14-L) dry measure tetrasodium polyphosphate and 1/2-cup (0.14-L) dry measure laundry detergent dissolved in 1 gal. (4 L) of water.
4. Proprietary Acidic Cleaner: Standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry and pigmented mortar surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
5. Manufacturers:
    a. AHI Supply, www.ahi-supply.com.
    b. Diedrich Technologies, Inc., www.diedrichtechnologies.com.
    c. EaCo Chem, Inc., www.eacochem.com.
    d. ProSoCo, Inc., www.prosoco.com.
    e. Substitutions: Section 01 60 00 - Product Requirements.

B. Steel Lintels: Size as indicated on Drawings, hot-dip galvanized.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive manufactured stone masonry work.

C. Verify items provided by other sections of work are properly sized and located.

D. Verify built-in items are in proper location, and ready for roughing into masonry work.

3.02 PREPARATION

A. Direct and coordinate placement of metal anchors supplied to other sections.

B. Furnish temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent support.

3.03 INSTALLATION

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form bed and head joints of uniform thickness.

C. Placing And Bonding:
1. Lay solid manufactured stone masonry units in full bed of mortar, with full head joints.
2. Buttering corners of joints or excessive furrowing of mortar joints are not permitted.
3. Remove excess mortar as work progresses.
4. Do not shift or tap units after mortar has achieved initial set. Where adjustment is required, remove mortar and replace.

5. Perform job site cutting of units with motor-driven saws to assure straight, clean, unchipped edges. Prevent broken masonry unit corners or edges. Where possible, use full-size units without cutting.
6. Install cut units with cut surfaces and edges concealed.
7. Select and arrange exposed units to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.

D. Weeps and Vents: Furnish weeps and vents in outer wythe at maximum 24 inches oc horizontally above through-wall flashing, above shelf angles and lintels, at bottom of walls, and above other obstructions of wall cavity continuity.

E. Stain Prevention: As work progresses, prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
1. Protect base of walls from rain-splashed mud and from mortar splatter by coverings spread on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

F. Protection of manufactured stone masonry units: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

3.04 TIES AND ANCHORS

A. Install anchors attached to concrete and steel structural members:
1. Leave an open space not less than 1 inch in width between back of masonry and face of structural member. Keep open space free of mortar or other rigid materials.
2. Install anchors at maximum 16 inches o.c. vertically and horizontally.

B. Install Wall Ties at CMU Backup Walls:
1. Install wall ties at 16 inches oc vertically and maximum 16 inches oc horizontally.
2. Coordinate ties to accommodate installation of 16 inch widths of cavity wall insulation specified in Section 07 21 13.
3. Place additional wall ties within 12 inches of openings at intervals not exceeding 36 inches.

C. Install Wall Ties at CFMF Backup Walls:
1. Install wall tie anchor plates at 16 inches oc vertically and maximum 16 inches oc horizontally.
2. Coordinate anchor plates to accommodate installation of 16 inch widths of cavity wall insulation specified in Section 07 21 13.
3. Place additional wall ties within 12 inches of openings at intervals not exceeding 36 inches.
4. Secure wall tie anchor plates through sheathing to CFMF studs.

3.05 EMBEDDED FLASHINGS

A. Flexible Flashings: Ensure flexible flashing is properly installed at or above shelf angles, lintels, ledges and other obstructions to the downward flow of water in the wall so as to divert such water to the exterior through masonry weep openings.

B. Sheet Metal Flashings: Coordinate with Division 7 section Sheet Metal Flashing and Trim for sheet metal flashings to be built-in to masonry work. Only specified stainless steel is approved to be built-in to masonry work unless otherwise specifically approved in writing by the Architect.

C. Prepare masonry surfaces smooth and free from projections which could puncture flashing. Place through-wall flashing on sloping bed of mortar and cover with mortar. Seal penetrations in flashing with mastic before covering with mortar.

D. Extend flexible flashings horizontally to exterior face of masonry and neatly trim flush below weep holes.

E. Extend stainless steel flashings horizontally through exterior face of masonry and turn down to form counterflashing to roofing flashing or other flashing materials as indicated in the drawings. .

F. Turn flashings up minimum 8 inches and bed into mortar joint of CMU backup wall. Ensure that vertical leg of flexible flashings are properly sealed to sheathing over CFMF stud backup wall.

G. Lap end joints of flashings minimum 6 inches and seal watertight.

H. Ensure flashings are extended the full length of lintels and shelf angles and minimum of 4" into masonry each end; turn up ends not less than 2" to form end dams as recommended by BIA and illustrated in BIA Technical Note 7, Figure 21, current edition.

I. Turn flashings, fold, and seal at corners, bends, and interruptions.

3.06 LOOSE LINTELS

A. Install loose steel lintels for manufactured stone masonry unis for openings more than 12 inches wide.

B. Maintain minimum 8 inch bearing on each side of opening.

3.07 MISCELLANEOUS

A. Control and Expansion Joints: Continue masonry control and expansion joints through manufactured stone masonry units.

B. Built-In Work:
   1. As work progresses, install built-in door and window frames, wood nailing strips, anchor bolts, plates, and other items to be built-in the work and furnished by other sections.
   2. Install built-in items plumb and level.
   3. Bed anchors of metal door and window frames in adjacent mortar joints. Fill frame voids solid with grout or mortar. Fill adjacent masonry cores with grout minimum 12 inches from framed openings.
   4. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath in the joint below and rod mortar or grout into core.

5. Do not build in materials subject to deterioration.

C. Cutting And Fitting:
1. Cut and fit for chases, pipes, conduit, sleeves, grounds, and other items penetrating masonry. Coordinate with other sections of work to provide correct size, shape, and location.
2. Obtain Architect/Engineer's approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.08 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess mortar and mortar smears as work progresses.

C. Replace defective mortar. Match adjacent work.

D. Clean soiled surfaces with cleaning solution.
1. Use non-metallic tools in cleaning operations.

3.09 DEFECTIVE CONSTRUCTION

A. Correct defects appearing in the finished work for a period of one year after the date of Substantial Completion.

B. Defects shall include, but not be limited to, cracking, separating of mortar, cracking, discoloration, or deterioration of masonry units, efflorescence in masonry units or joints, and water penetration through manufactured stone masonry or joints under normal exposure.

3.10 PROTECTION OF FINISHED WORK

1. Section 01 70 00 - Execution and Closeout Requirements: Requirements for protecting finished Work.
2. Protect exposed external corners subject to damage.
3. Protect base of walls from mud and mortar splatter.
4. Protect masonry and other items built into masonry walls from mortar droppings and staining caused by mortar.
5. Protect tops of masonry work with waterproof coverings secured in place without damaging masonry. Provide coverings where masonry is exposed to weather when work is not in progress.

END OF SECTION

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Structural steel.
2. Field-installed shear connectors.
3. Shop and Field Welding.
4. Galvanizing.
5. Prime Painting.

B. Related Requirements:
1. Section 03 62 00 “Non-Shrink Grout” for structural steel bearing and base plate connections.
2. Section 05 21 00 “Steel Joist Framing” for field installation of joists on supporting steel.
3. Section 05 31 00 "Steel Decking" for field installation of shear connectors through deck.
4. Section 05 50 00 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other steel items not defined as structural steel.
5. Section 05 12 13 “Architecturally Exposed Structural Steel” for critical exposed steel member requirements (refer to S002 for additional information).

1.3 DEFINITIONS

A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

B. Heavy Sections: Rolled and built-up sections as follows:

1. Shapes included in ASTM A 6/A 6M with flanges thicker than 1-1/2 inches.
2. Welded built-up members with plates thicker than 2 inches.
3. Column base plates thicker than 2 inches.

C. Protected Zone: Structural members or portions of structural members indicated as "Protected Zone" on Drawings. Connections of structural and nonstructural elements to protected zones are limited.

D. Demand Critical Welds: Those welds, the failure of which would result in significant degradation of the strength and stiffness of the Seismic-Load-Resisting System and which are indicated as "Demand Critical" or "Seismic Critical" on Drawings.

1.4 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.5 PREINSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference prior to any work beginning by trade. Time, date and location as determined by a construction manager.

1.6 ACTION SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections. In addition to Division 1 requirements, provide one half-size hard copy (paper) of any drawings submitted in the electronic files.

B. Product Data: For each type of product.

C. Shop drawings prepared under supervision of a Registered Professional Structural Engineer licensed in the state in which the project is constructed, including complete details and schedules for fabrication and assembly of structural steel members, procedures, and diagrams.
1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pre-tensioned and slip-critical, high-strength bolted connections.
5. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed as work of other Sections.
6. Original contract documents shall not be reproduced for use as a portion of the Shop Drawings.
7. Indicate locations and dimensions of protected zones.
8. Identify demand critical welds.

D. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing, including the following:

1. Power source (constant current or constant voltage).
2. Electrode manufacturer and trade name, for demand critical welds.

E. Delegated-Design Submittal: For structural-steel connections indicated to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, fabricator, testing agency.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

D. Mill test reports for structural steel, including chemical and physical properties, and country of origin (must be domestic, including Canada).

E. Product Test Reports: For the following:

1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength, bolt-nut-washer assemblies.
4. Shear stud connectors.
5. Shop primers.
6. Non-shrink grout.

F. Survey of existing conditions.

G. Source quality-control reports.

H. Field quality-control and special inspection reports.

1.8 QUALITY ASSURANCE

A. Source Limitations:
1. Steel shapes shall be domestically milled and manufactured. Foreign milled steel shall not be used.
2. To the greatest extent possible steel shapes shall be manufactured with recycled material and shall be manufactured locally or within the State of Texas.

B. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD, or is accredited by the IAS Fabricator Inspection Program for Structural Steel (AC 172).
1. Fabricators not meeting the requirements noted above may be submitted for consideration in writing as a substitution request DURING BIDDING PHASE ONLY. Refer to Section 4.1 for substitution request requirements. This request will be evaluated on a case-by-case basis and is subject to Owner approval.

C. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Steel Erector, CSE.

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
1. Provide certification that welders to be employed in work have satisfactorily passed AWS qualification tests.
2. If recertification of welders is required, retesting will be Contractor's responsibility.

3. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by

AWS D1.8/D1.8M. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

E. Comply with applicable provisions of the following specifications and documents:

1. AISC 303.
2. AISC 341 and AISC 341s1.
3. AISC 360.
4. RCSC's "Specification for Structural Joints Using High-Strength Bolts."

F. Correct deficiencies in structural steel work that inspections and laboratory test reports have indicated to be not in compliance with requirements. Perform additional tests, at Contractor's expense, as necessary to reconfirm any non-compliance of original work and to show compliance of corrected work.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site at such intervals to ensure uninterrupted progress of work.

B. Deliver anchor bolts and anchorage devices, which are to be embedded in cast in place concrete or masonry, in ample time to not to delay work.

C. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

D. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
2. Clean and re-lubricate bolts and nuts that become dry or rusty before use.
3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 1852 fasteners and for retesting fasteners after lubrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Connections: Provide details of connections required by the Contract Documents to be selected or completed by structural-steel fabricator, including comprehensive engineering analysis by a qualified professional engineer, to withstand loads indicated and comply with other information and restrictions indicated.
1. Select and complete connections using schematic details indicated and AISC 360. Details shown are typical; similar details apply to similar conditions, unless otherwise indicated. Verify dimensions at site whenever possible without causing delay in the work.

a. Promptly notify Architect/Engineer whenever design of members and connections for any portion of structure are not clearly indicated.

2. Use Allowable Stress Design; data are given at service-load level.

B. Moment Connections: Type FR, fully restrained.

2.2 STRUCTURAL-STEEL MATERIALS

A. W-Shapes: ASTM A 992/A 992M, Grade 50 or ASTM A572 Grade 50.

B. Channels, Angles, M, S-Shapes: ASTM A 36/A 36M.

C. Plate and Bar: ASTM A 36/A 36M

D. Baseplates: ASTM A572 Grade 50

E. Cold-Formed Hollow Structural Sections: ASTM A 500/A 500M, Grade B, structural tubing.

F. Steel Pipe: ASTM A 53/A 53M, Type E or Type S, Grade B.
1. Finish: Black except where indicated to be galvanized.

G. Welding Electrodes: Comply with AWS requirements.

2.3 BOLTS, CONNECTORS, AND ANCHORS

A. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade C, heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers; all with plain finish.
1. Direct-Tension Indicators: ASTM F 959, Type 325, compressible-washer type with plain finish.

B. High-Strength Bolts, Nuts, and Washers: ASTM A 490, Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers with plain finish.
1. Direct-Tension Indicators: ASTM F 959, Type 490, compressible-washer type with plain finish.

C. Zinc-Coated High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade DH heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers.

1. Finish: Hot-dip or mechanically deposited zinc coating.
2. Direct-Tension Indicators: ASTM F 959, Type 325, compressible-washer type with mechanically deposited zinc coating finish.

D. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, heavy-hex head assemblies consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

1. Finish: Mechanically deposited zinc coating.

E. Shear Connectors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.

F. Unheaded Anchor Rods: ASTM F 1554, Grade 36, 55 (S1) & 105

1. Configuration: Straight, unless otherwise indicated.
2. Nuts: ASTM A 563 heavy-hex carbon steel.
3. Plate Washers: ASTM A 36/A 36M carbon steel.
4. Washers: ASTM F 436, Type 1, hardened carbon steel.
5. Finish: Plain, unless otherwise indicated on the Contract Documents.

G. Headed Anchor Rods: ASTM F 1554, Grade 36, straight.

1. Nuts: ASTM A 563 heavy-hex carbon steel.
2. Plate Washers: ASTM A 36/A 36M carbon steel.
3. Washers: ASTM F 436, Type 1, hardened carbon steel.
4. Finish: Plain, unless otherwise indicated on the Contract Documents.

H. Threaded Rods: ASTM A 36/A 36M.

1. Nuts: ASTM A 563 hex carbon steel.
2. Washers: ASTM A 36/A 36M carbon steel.
3. Finish: Plain, unless otherwise indicated on the Contract Documents.

I. Clevises and Turnbuckles: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1035.

J. Eye Bolts and Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1030.

K. Sleeve Nuts: Made from cold-finished carbon steel bars, ASTM A 108, Grade 1018.

L. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint, as specified in Division 5 section "Teflon Bearing Pads".

2.4 PRIMER

A. Primer: Exposed structural steel shall comply with Section 099000 "Painting and Coating."

B. Primer: Fabricator's standard lead- and chromate-free, non-asphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

C. Galvanizing Repair Paint: ASTM A 780/A 780M.

2.5 GROUT

A. Grout for use under steel bearing or base plates shall be a high strength, non-bleeding, non-shrink grout of high durability, as specified in Division 3 section "Non-shrink Grout".

2.6 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," and to AISC 360.

1. Camber structural-steel members where indicated.

2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel according to ASTM A 6/A 6M and maintain markings until structural steel has been erected.
4. Mark and match-mark materials for field assembly.
5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

C. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 1, "Solvent Cleaning" and SSPC-SP 2, "Hand Tool Cleaning."

F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.7 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened, unless otherwise indicated on the Contract Documents.
2. All bolts shall have threads excluded from the shear plane.
3. Torque wrenches shall be used to tighten high strength fasteners unless prior written approval has been obtained from the Architect/Engineer.
4. If for any reason a high strength bolt has to be removed after being stressed to "Proof Load", it shall not be reused.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.8 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces of high-strength bolted, slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
5. Galvanized surfaces.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 2, "Hand Tool Cleaning."
2. SSPC-SP 3, "Power Tool Cleaning."
3. SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 2 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

D. Structural steel delivered to the job site showing evidence of rust, mill scale, spatter, slag or flux deposits shall be either returned to the shop for proper cleaning and repriming, or sand blasted clean and reprimed at the job site.

2.9 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.

1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.

B. Minimize distortion and warpage of steel members being galvanized by following recommendations according to ASTM A 384/A 384 M.

1. Do not apply galvanizing using double- dip or progressive processes without Architect’s or Engineer’s written approval.
2. Galvanize lintels and exposed plates, angles, tubes, shelf angles and rolled shapes attached to structural-steel frame and located in exterior walls.

2.10 SOURCE QUALITY CONTROL

A. General: Materials and fabrication procedures are subject to inspection and tests in mill, shop, and field, conducted by a qualified inspection agency. Such inspections and tests will not relieve Contractor of responsibility for providing materials and fabrication procedures in compliance with specified requirements.

1. Promptly remove and replace materials or fabricated components that do not comply.

B. Testing Agency: Owner will engage a qualified testing agency to perform shop tests and inspections.
   1. Testing agency shall conduct and interpret tests, state in each report whether test specimens comply with requirements, and specifically state any deviations therefrom.

   2. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.

A. Bolted Connections: Inspect and test shop-bolted connections according to RCSC's "Specification for Structural Joints Using High-Strength Bolts."

   1. Verify that gaps of installed Direct Tension Indicators are less than gaps specified in ASTM F 959, Table 2.

B. Welded Connections: Visually inspect shop-welded connections according to AWS D1.1/D1.1M. In addition to visual inspection, provide non-destructive testing as indicated by AISC 360 and the contract documents, whichever is more stringent. Test and inspect field welds according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

   1. Liquid Penetrant Inspection: ASTM E 165.
   2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
   3. Ultrasonic Inspection: ASTM E 164.
   4. Radiographic Inspection: ASTM E 94.

C. In addition to visual inspection, test and inspect shop-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

   1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
   2. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.

D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete and masonry bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Shoring shall have the effect of being continuous down to foundation level unless written approval is obtained from Architect/Engineer to do otherwise. Point loads from shoring shall be distributed to main structural members as necessary to prevent localized

overstressing of supporting members. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

B. Temporary Planking: Provide temporary planking and working platforms as necessary to effectively complete work.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

B. Baseplates, Bearing Plates, and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.
2. Weld plate washers to top of baseplate.
3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

C. Maintain erection tolerances of structural steel within AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

D. Cranes or other erection machinery shall not be permitted on the foundation slab. The construction shall be scheduled so the structural steel is not erected from the foundation slab.

E. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.
2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

F. Splice members only where indicated. Splices will be permitted only with prior written approval of the Architect/Engineer.

G. Do not use thermal cutting during erection for correcting fabrication errors in primary structural framing. Cutting will be permitted only on secondary members that are not under stress, as acceptable to Architect/Engineer. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.

H. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

I. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

J. Erection Bolts: On exposed welded construction, remove erection bolts, fill holes with plug welds, and grind smooth at exposed surfaces.

1. Comply with AISC Specifications for bearing, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened, unless otherwise indicated on the Contact Documents.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or runoff tabs where indicated, back gouge, and grind steel smooth.
3. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," for mill material.
4. Where fillet welding of members thicker than one half inch is indicated on the drawings, preheating of members shall be accomplished as directed by the Testing Laboratory prior to welding.
5. Where one of the members is embedded in concrete, extreme care shall be taken not to overheat the concrete so as to cause cracking or spalling. Adequate time shall be allowed between multiple passes to allow cooling of the concrete adjacent to the welded members.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:

1. Verify structural-steel materials and inspect steel frame joint details.
2. Verify weld materials and inspect welds.
3. Verify connection materials and inspect high-strength bolted connections.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Testing agency shall conduct and interpret tests, state in each report whether test specimens comply with requirements, and specifically state any deviations therefrom.

D. Bolted Connections: Inspect and test bolted connections according to RCSC's "Specification for Structural Joints Using High-Strength Bolts."

1. Verify that gaps of installed Direct Tension Indicators are less than gaps specified in ASTM F 959, Table 2.

E. Welded Connections: Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, provide non-destructive testing as indicated by AISC 360 and the contract documents, whichever is more stringent. Test and inspect field welds according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

a. Liquid Penetrant Inspection: ASTM E 165.
b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
c. Ultrasonic Inspection: ASTM E 164.
d. Radiographic Inspection: ASTM E 94.

F. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests according to requirements in AWS D1.1/D1.1M on additional shear connectors if weld fracture occurs on shear connectors already tested.

3.6 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780/A 780M.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Field Rusting: Special steps shall be taken after erection of steel members to prevent rusting. Any rust appearing on any structural member shall be removed by wire brushing, sand blasting, or other approved techniques. The area shall then be repainted per above. This process shall be continued until the steel member is enclosed in its final waterproof or architectural covering. The Contractor shall notify the Architect/Engineer so that all structural steel may be inspected not more than 36 hours prior to attachment of blocking, sheathing, and/or other covering materials.

PART 4 - SUBSTITUTION REQUESTS

4.1 STRUCTURAL STEEL FABRICATORS

A. The following items are required to be inspected by the Owner's special inspection laboratory (or their subcontractor) at the expense of the Contractor if specification section 051200 – Structural Steel Framing (1.8.B Quality Assurance – Fabricator Qualifications) cannot be met:

1. Direction and Leadership

Management review requirements will be defined by the Fabricator and include a specific method to obtain, appropriately assess and analyze, and then report the following:

- Results of internal and external audits
- Customer feedback (surveys, letters of recognition, personal interviews, etc.)
- The level of qualification training of personnel
- Channels for communication to address and resolve all quality issues
- Product nonconformance of manufactured product (in process or final)

2. Personnel

Name and title of qualified management team assigned to the project including (but not limited to):

- Management representative
- Detailing manager (minimum three years experience)
- Purchasing manager (minimum three years experience)
- Fabrication process manager (minimum three years experience)
- Quality assurance (minimum five years experience)
- Quality control manager (minimum five years experience)
- ASNT-TC-1A certified staff (minimum one of each on staff or available under contract)
    - Certified Level II technician for each NDT method performed in shop

3. Facility

A fabrication facility shall consist of areas and buildings that provide space for the routine functions considered to be part of steel fabrication. The areas and buildings shall be conducive to achieving a consistent high quality of work meeting the requirements of the contract documents.

4. Fabrication Process Equipment

The fabricator shall have under their control the equipment and software necessary to perform the functions common to fabrication consistent with the specifications and standards common to the work being performed and consistent with meeting the requirements of the contract documents.

5. Documentation Requirements

The Quality Management System documentation shall include (but not be limited to) and be signed/dated by the highest ranking organizational individual responsible for the facility:

- A Quality Manual
  - Applicable reference documents
  - Industry and government regulations, codes and contract requirements
  - Organizational chart describing responsibility, authority and interrelationship of functional positions that manage, perform and verify work regarding quality
  - Job descriptions and required qualifications for key personnel and functions
  - Facility plan
  - Equipment list (including maintenance records)
  - Established documented procedures
  - Description of the interaction and communication between the processes of the Quality Management System used by the Fabricator to produce products of the required quality
- A statement of a quality policy and quality objectives
- Procedures and their associated Quality Records

6. Contract and Project Specification Review and Communication

The fabricator shall develop a documented procedure for contract and project specification review. The procedure shall require that a contract and project specification review be completed for each structural steel project performed. The review shall begin no later than the fabricator's acceptance of responsibility for performing the work.

The review shall identify, determine, plan, and record the specific project requirements as well as define distribution of the recorded specific project requirements to the responsible individuals in the fabricator's organization. This review will consider any issue that affects the fabricator's capability to perform the work.

The procedure shall provide for review of the original contract documents, revised contract documents and changes received through clarification (e.g. requests for information or other sources) to assure that the fabricator fully understands the contract requirements. Evidence of contract review can take the form of technical summaries, signoffs, change orders, schedules and allocation of adequate resources.

7. Design and Detailing

The shop and erection drawings produced shall incorporate all customer requirements, specifications, codes, and relevant standards to adequately procure materials, fabricate, and erect the structural steel frame and provide in instructions to the erector for location of shipping pieces in the completed structure.

To ensure and verify this, a documented procedure for preparation of shop and erection drawings shall be developed, which describes:

- How project requirements are reviewed and incorporated.
- How the fabricator coordinates, clarifies, resolves, and tracks information with the Customer (e.g., construction change documents, Requests for Information [RFI]) and how the associated resolutions are tracked and controlled).

For products that are standard components, the manufacturer shall have on file and available to the customer a set of design calculations reviewed and stamped by a professional engineer to signify that the designed product meets the current applicable code requirements for its intended use. Any design tables or design processes published with the product literature shall also be reviewed and stamped by a professional engineer. Shop drawings for these components shall include a statement that the component details are based on designs that have been reviewed and stamped by a professional engineer and are on file with the manufacturer.

For products that are job-specific, the manufacturer shall retain the services of a professional engineer to review and stamp the site-specific design of the component. The engineer shall also review the shop drawings produced for the component and verify their consistency with the design. The results of this review shall be indicated on the component shop drawings.

8. Detailing Standards

The fabricator will prepare and utilize detailing standards describing technical preferences and requirements customarily used in the shop. These standards will show special information required on advance bills such as allowances for cuts, camber, or supplementary requirements. The detailing standards will include how mill order lists are prepared which, at a minimum, include:

- Sizes and quantities
- Appropriate ASTM specification references
- Special ordering information
- Any allowances or tolerances

The detailing standards shall describe the fabricator’s preferred methods of drawing layout, including but not limited to:

- Sections and views
- Title block information
- Piece marking system
- Dimensional preferences
- Commonly used shop abbreviations
- Showing bolt placement lists (including bolt type and installation requirements)
- Information required on weld symbols including any special NDT requirements

The detailing standards shall describe the fabricator’s preferred method for:

- Selection of connection geometry and material (including sizes and specifications)
- Detailing holes, fasteners, washers, cuts, and copes
- Assignment of appropriate welding symbols (shop and field welds)
- Selecting bolt type and installation method
- Showing surface preparation (including specification of surface finish)
- Designating coating requirements (including coating materials and dry film thickness)
- Showing any necessary special instructions to fabricate and erect the structural steel frame

9. Shop and Erection Drawings

The fabricator shall develop a documented procedure to provide for checking of all shop and erection drawings and to describe the approval method used to release shop drawings for fabrication.

10. Checking of Shop and Erection Drawings

The documented procedure for checking of shop and erection drawings shall describe the method by which the fabricator or its subcontractor performs and records final check of shop and erection drawings to ensure compliance with contract documents before release for fabrication and erection. Such methods may include signatures, stamps, logs, files, or lists. Records shall provide means for identification of the individual checker who performed the final check of each shop or erection drawing. When detailing is performed by a subcontractor, the procedure will define the extent of review by detailing management and checking of received detailing products before release for fabrication.

11. Approval of Shop Drawings

The procedure for checking of shop and erection drawings shall describe the method used to document approval of shop drawings released for fabrication. Such methods may include signatures, stamps, logs, files, or lists. The method shall have provisions for recording Owner's designated representatives for design and construction approval of shop drawings—whether produced in house or by a subcontractor. The procedure shall require that waiver of approval from the Owner's designated representative for design or from the Owner's designated representative for construction be in writing.

12. Detailing Resource Material

The fabricator shall maintain as a minimum, a library of the required references as follows:

- AISC Steel Construction Manual, which includes the following specifications, codes, and standards:
- AISC Specification for Structural Steel Buildings
- RCSC Specification for Structural Joints Using ASTM A325 or A490 Bolts
- AISC Code of Standard Practice for Steel Buildings and Bridges
- ANSI/AWS D1.1 Structural Welding Code–Steel
- AISC Selected ASTM Standards for Structural Steel Fabrication

13. Detailing Management

Responsibilities for personnel performing detailing management shall include:

- Overseeing the production of shop and erection drawings
- Liaising with designers
- Scheduling
- Developing and maintaining company detailing standards and detailing procedures
- Transmittals related to Owner's designated representative for design and construction approvals and connection consultation subcontracting
- Coordinating and incorporating construction requirements
- Training detailers and checkers

Qualification requirements for detailing management personnel shall include one or more of the following:

- Experience in detailing and checking shop and erection drawings that have met the approval of the Owner's representative for design for a variety of structures representative of projects the company provides. The fabricator shall determine and describe a way to demonstrate competence.
- Graduate engineer with experience related to structural steel fabrication.
- Licensed P.E. or S.E., with experience related to structural steel fabrication.

14. Connection Consultation

Qualification requirements for personnel providing connection development guidance to detailers performing connection detailing shall include one or more of the following:

- Experience in connection development and in detailing and checking of shop and erection drawings for steel that have met the approval of the Owner's representative for design for a variety of structures representative of projects the company provides. The fabricator shall determine and describe a way to demonstrate competence.
- Graduate engineer with experience related to structural steel fabrication.
- Licensed P.E. or S.E., with experience related to structural steel fabrication.

In lieu of employed staff personnel, subcontractors may be used for the following functions: detailing, connection consultation, checking of shop and erection drawings, training of detailers and checkers. However, the fabricator retains the responsibility for compliance.

15. Control of Quality Records

The fabricator shall develop a documented procedure for quality records that provides for:

- Identification, collection, storage, maintenance, retention, and disposition

All quality records shall be legible and shall be stored and retained in such a way that they are retrievable from facilities that provide a suitable environment to prevent damage, deterioration or loss. Quality records typically include, but are not limited to:

- Inspection records, NDT reports, drawing logs, MTRs, C of Cs, design changes, RFIs
- Contract review, contract clarifications, design change records, including contract construction changes and addendums
- Mill and consumable purchase orders, records or summaries of nonconformance reports
- Corrective action requests, training records, subcontractor and supplier evaluations
- Internal and external quality management system audits

Retention times shall be established and recorded for records retained for any purpose. The retention periods will be at least long enough to permit evaluation of the records during the course of project construction.

16. Purchasing Data

The fabricator shall clearly describe subcontracted work and the purchased products, materials, and services ordered in written purchasing documents. This shall include but not be limited to:

- The type of service, material, class, grade, and other unique identification.
- The applicable specifications, drawings, process requirements, and inspection instructions and any witness points.
- Delivery instructions and date.
- Required C of Cs, MTRs, and NDT reports.

Purchasing documents for materials furnished to ASTM specifications shall include the information required in the *"Order Information"* section of the ASTM Standard.

17. Verification of Purchased Product, Materials and Services

The fabricator's procedure for purchasing shall define the extent of control necessary to conform to the project requirements. This may be dependent upon the type of product, the impact of subcontracted product on the quality of the final product or the records available for the demonstrated capability and performance of previous projects. Test reports, C of Cs, or other evidence of quality control shall be kept on file as defined in the fabricator's procedure requirements.
The Owner and/or Owner's representative shall be allowed the right to verify the conformance of the final product to the project requirements at the fabricator's premises.

18. Material Identification

The documented procedure shall describe how the fabricator marks or maintains the identification of base materials from the point of receipt to the point of the first fabricating operation (or beyond, if required; see Section 11.2) to assure incorporation of the correct materials into the product.

- Structural steel material shall be identified as stated in contract documents.
- Welding consumables shall be identified in accordance with the appropriate ANSI/AWS specification.
- Coating materials (excluding metallic coating) shall be identified on the container by, at a minimum, color (pigment description and federal standard number, or manufacturer's number), lot/batch number, ID/stock number, quantity of coating in container, date of manufacture, date of expiration, and manufacturer's name and address.
- Metallic coatings shall be identified by, at a minimum, composition and the appropriate ASTM specification, including hot dip or mechanical galvanizing and metallizing.
- Fasteners shall be stored in containers clearly identified by type, grade, size and lot number(s).

Records that provide a basis for material identification (e.g., MTRs and C of Cs for base materials, fasteners, welding consumables, and coatings) shall be filed and retained as defined in the fabricator's documented procedures.

19. Fabrication Process Control

The fabricator shall develop documented procedures for process control necessary to produce a consistent acceptable level of quality of the furnished product in accordance with the applicable codes or specifications. Fabrication processes include (but are not limited to) thermal and mechanical cutting, fitting and assembly, welding, drilling, bolting, milling, and coating. The fabricator will include additional “special procedures” that cover fabrication processes done at the facility (e.g., cambering).

20. Welding

The fabricator’s welding procedure shall include (but not be limited to):

- WPSs (in close proximity to and used by the welders)
- Preheat requirements
- PQRs (when required)
- Welder, welding operator, and tack welder qualifications and qualification test records
- Welder, welding operator, and tack welder performance records - to provide objective evidence that the “period of effectiveness” has not been exceeded for welder, welding operator, and tack welder qualifications
- Traceability of welds to the welders who produce them

21. Bolt Installation

The fabricator’s documented bolting procedure shall include storage, rotational capacity testing, pre installation verification, installation, and inspection of fastener assemblies for snug-tightened, pretensioned and slip-critical joint types. The documented procedure shall meet the requirements of the RCSC *Specification for Structural Joints Using High-Strength Bolts*.

22. Equipment Maintenance

The fabricator shall develop a documented procedure defining an equipment maintenance program to produce the required quality. The procedure shall define preventative maintenance for, at minimum, equipment critical to product quality and delivery requirements.

23. Inspection and Testing

The fabricator shall develop a documented procedure for inspection and testing activities to verify that the product quality meets the project requirements. The inspection and testing procedure shall define receipt, in-process, and final inspection of all product furnished to a project. Product determined during inspection and testing to be nonconforming shall be addressed by the fabricator’s nonconformance procedure.
For each type of inspection less than 100 percent, the procedure shall describe the methods for establishing sampling plans and for adjusting the level and frequency of inspection to assure expected contract quality. The fabricator’s methods will adjust the level and frequency of inspection at any time the required level of quality is not met. The level or frequency of an inspection sampling plan shall not be zero where a nonconformance has been identified and corrective action has not been fully implemented and verified as effective.

24. Assignment of QC Inspections and Monitoring

The inspection procedure shall define inspection and testing and the required records to meet the project requirements and shall assign QC inspection and QC monitoring duties. Qualification requirements for QC inspectors shall be defined and documented. QC inspectors shall be assigned on the basis of qualification, evidenced by experience, training, and education. Qualification standards and certifications granted by recognized industry organizations related to structural steel fabrication can be used as a basis for qualification. QC inspectors shall be periodically monitored by QA (either by repeating the QC duties or by witnessing their work).
Production personnel shall be assigned to QC inspection duties under the following conditions:

- They shall be trained both in knowledge and practice in proper inspection methods and acceptance criteria specified for the material they are inspecting.
- They are aware of their responsibilities and are given time to perform their inspection responsibilities.
- They do not inspect their own work.
- Their inspections are monitored by qualified QC personnel.

25. Inspection Procedure

The fabricator's procedure shall include (but not be limited to) provisions for the following:

- Material Receipt Inspection:
  Materials received shall be compared to the purchase order requirements. The receiver shall identify the material, grade, and quantity and look for visible shipping damages. The receiver shall inspect shapes and plates for obvious deviations from the requirements of purchase order specifications.

- In-process Inspection:
  The fabricator shall conduct in-process inspection. In-process inspection plans and practices will provide a level of compliance assurance for specified process requirements and inspection acceptance criteria that are not verifiable at final inspection or that can hinder assembly. In-process inspection is appropriate for welds that will be hidden or out of reach during the final inspection, visual examination of fit-up tolerances that will not be visible after welding, areas requiring coatings that will not be accessible during final inspection. Materials shall be inspected for specification and grade, workmanship, and tolerances using appropriate codes, standards, or a documented plan before fabrication begins. Compliance with documented bolting procedures and welding procedures (WPSs, preheat and welding personnel qualifications) shall be monitored. Production personnel should be capable of inspecting the product or subassembly before sending it to the next process.

- Final Inspection:
  The fabricator shall conduct final inspection. QC inspectors qualified and responsible for final inspection shall perform the final inspection of structural steel products after the fitting, welding, and coating operations, but prior to delivery. Qualification requirements for personnel performing final inspection shall be defined and documented. Competency of staff-employed and subcontracted individuals performing final inspection shall be verifiable and evidenced by experience, training, and education.

- Inspection Records:
  The inspection procedure shall indicate what records and marks are used to document inspections. In-process inspections shall be verifiable until the final in-

spection of the piece. Final inspections shall be documented. The quality records produced shall be filed and retained as defined in the fabricator's procedure. Inspection records shall clearly show the products and product aspects that were inspected and who performed the inspection.

26. Calibration of Inspection, Measuring and Test Equipment

The Fabricator shall develop a Documented Procedure to control, calibrate, and maintain inspection, measuring, and test equipment used to demonstrate the compliance of products and processes to the specified requirements. Tools with devices for measuring properties of fabricated pieces or process variables are included in this requirement when they are used to demonstrate the compliance of products and processes to the specified requirements.
The documented procedure shall define equipment calibration frequency. However, the volt/amp meters used to verify compliance with WPS parameters (may be welding machine volt and amp meters or auxiliary volt/amp meters) shall be calibrated whenever the accuracy of the meter is in question and at a minimum every twelve months.
Inspection, measuring and test equipment shall be used in a manner consistent with the required measurement. The precision capability of the equipment used shall support reliable determination of compliance with acceptance criteria. When specifically required, technical data pertaining to the measurement equipment shall be made available for verification that the measuring equipment is performing properly.
For inspection, measuring, and test equipment used to demonstrate the compliance of products and processes to the specified requirements, the documented procedure shall include (but not be limited to):

- An equipment list that provides a means for unique identification of each piece of equipment
- Service use for each piece of equipment including the required precision for the types of inspections, measurements or tests made
- Handling, preservation, and storage of inspection, measuring, and test equipment to maintain accuracy and fitness for use
- Calibration frequency for each piece of equipment based upon service use, requirements of this standard, manufacturer's recommendations, project requirements, specification requirements
- Identification of standards or certified equipment having a known valid relationship to internationally or nationally recognized standards used to calibrate each listed piece of equipment. Where such standards do not exist, the basis used for calibration shall be documented
- The calibration procedure for each piece of equipment calibrated at the fabricator's facility
- The calibration accuracy acceptance criteria for each piece of equipment
- The action to be taken when equipment does not meet the calibration requirements. This action includes disposition of the measuring device and an evaluation of the impact to product that was measured using the device.
- Calibration quality record maintenance as defined in the fabricator's procedure
- Method of preventing inadvertent use of equipment that is not calibrated where calibrated equipment is required

27. Control of Nonconformances

The fabricator shall develop a documented procedure to identify and control nonconformances. These nonconformances may be identified by the fabricator's inspection program, process monitoring, and during internal and external audits, which are then addressed by the corrective action procedure.

28. Nonconforming Product

Nonconforming product shall be documented to ensure that final product not conforming to specified requirements is prevented from reaching the customer. This procedure shall provide for identification, documentation, evaluation, segregation (when practical), treatment of nonconforming product, and for notification of the relevant functions concerned. Nonconforming product shall be clearly marked as soon as practical after it is discovered. Records shall be kept of the pieces affected, the nature of the nonconformance, the treatment selection, authorization, and reinspection results if applicable.
The responsibility for review, authority, and required qualifications for the personnel selecting treatment of nonconforming product shall be defined by the procedure. If the treatment is rework or repair, the result will be inspected per drawing, specification, project requirements, and the fabricator's inspection procedure. The treatment of nonconforming product may be:

- Reworked
- Repaired
- Use as is (after more detailed analysis or acceptance by the fabricator's engineering or management)
- Customer-approved nonconforming product
- Scrapped

Approval from the Owner's designated representatives for design and construction may be required by contract for treatment of nonconformances. These approvals shall be in writing for treatments resulting in "use as is," "repaired," or "reworked."

29. Corrective Action

The fabricator shall develop a documented procedure for corrective action. Any corrective action taken shall be to the degree appropriate to the magnitude of problems and commensurate with the risks to product quality.
The corrective action procedure shall include periodic review of records or summaries of nonconformances and of internal and external quality audit reports for determination and initiation of corrective actions. Corrective action may be applied when:

- There is a nonconformance that is repetitive in nature. This can be identified by periodically reviewing nonconformance reports or summaries for negative trends
- Process nonconformances are found during the internal and external quality audits indicating that the quality management system may not be implemented and functioning as stated in the quality manual
- Nonconformance with the quality management system is found during the day-to-day execution of the system
- Nonconformance is unacceptable due to cost or severity
- A customer complaint has been received
- A complaint has been received from an owner, general contractor or erector

The Corrective Action Procedure shall address these steps:

1. Document a Corrective Action Request (CAR) that includes the nonconformance to be addressed by the corrective action and the requirement that has not been met. The corrective action procedure shall define the functional positions authorized to issue a CAR and initiate the corrective action process.
2. Assign responsibility and establish a timeframe for the response to a CAR.
3. Investigate and document the scope of the nonconformance, root causes, corrective measures taken, and list the actions to be taken to prevent recurrence.
4. Communicate the CAR and resolution to the management team and appropriate members of the organization.
5. Follow up the corrective action taken with periodic monitoring to assure the corrective action is implemented and is effective.

30. Handling, Storage and Delivery of Product and Materials

Material shall be stored, loaded, and shipped to avoid damage and deterioration. Material shall be marked with its identification and shall be listed on a manifest or shipping documents.
Delivery instructions and any shipping agreements (e.g., sequencing that complies with erection needs) between the fabricator, the customer, the fabricator's subcontractors, or the fabricator's suppliers shall be included in written purchasing documents. Shipments by subcontractors and suppliers shall be coordinated and monitored for compliance with shipping and delivery instructions.

31. Internal Audit

The fabricator shall perform an internal audit of each element of the quality management system at least once a year to evaluate their compliance and the effectiveness of implementation. The management representative or a qualified individual, independent of the function being audited, shall perform the audit and provide a written record of the audit result from each element.

END OF SECTION 05 12 00

SECTION 051213 - ARCHITECTURALLY EXPOSED STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes architecturally exposed structural-steel (AESS).

1. Requirements in Section 051200 "Structural Steel Framing" also apply to AESS.

B. Related Requirements:

1. Section 051200 "Structural Steel Framing" for additional requirements applicable to AESS.
2. Section 055000 "Metal Fabrications" for steel lintels and shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other metal items not defined as structural steel.
3. Section 078100 Applied Fireproofing: Intumescent Paint for surface preparation and priming requirements.

1.3 DEFINITIONS

A. AESS: Structural steel designated as "architecturally exposed structural steel" or "AESS" in the Contract Documents.

B. Category 1 AESS: AESS that is within 96 inches vertically and 36 inches horizontally of a walking surface and that is visible to a person standing on that walking surface or is designated as "Category 1 architecturally exposed structural steel" or "AESS-1" in the Contract Documents.

C. Category 2 AESS: AESS that is within 20 feet vertically and horizontally of a walking surface and that is visible to a person standing on that walking surface or is designated as "Category 2 architecturally exposed structural steel" or "AESS-2" in the Contract Documents.

D. Category 3 AESS: AESS that is not defined as Category 1 or Category 2 or that is designated as "Category 3 architecturally exposed structural steel" or "AESS-3" in the Contract Documents.

1.4 COORDINATION

A. Coordinate installation of anchors for AESS members that connect to the work of other trades. Furnish setting drawings, templates, and directions for installing anchors, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to the project site in time for installation. [Anchorage concepts shall be as indicated on drawings and approved on final shop drawings.]

B. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.5 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Division 1 Section "Project Meetings." As a minimum, the meeting shall include the General Contractor, Fabricator, Erector, the finish-painting subcontractor, and the Architect. Coordinate requirements for shipping, special handling, attachment of safety cables and temporary erection bracing, touch up painting and other requirements for AESS.

1.6 ACTION SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections. In addition to Division 1 requirements, provide one half-size hard copy (paper) of any drawings submitted in the electronic files.

B. Shop Drawings: Show fabrication of AESS components. Shop Drawings for structural steel may be used for AESS provided items of AESS are specifically identified and requirements below are met for AESS.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include details that clearly identify all of the requirements listed in the "Fabrication" Article and the "Erection" Article of this specification. Provide connections for exposed AESS consistent with concepts shown on the architectural or structural drawings.
3. Include embedment Drawings.
4. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain. Indicate grinding, finish, and profile of welds.
5. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections. Indicate orientation of bolt heads.
6. Indicate exposed surfaces and edges and surface preparation being used.
7. Indicate special tolerances and erection requirements.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification data for firms and persons specified in the 'Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects names and address, names and addresses of architects and owners, and other information specified. For each project, submit photographs showing detail of installed AESS.

B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.8 QUALITY ASSURANCE

A. Fabricator Qualifications: In addition to those qualifications listed in Division 5 Section 'Structural Steel,' engage a firm experienced in fabricating AESS similar to that indicated for this Project with a record of successful in-service performance, as well as sufficient production capacity to fabricate AESS without delaying the Work.

B. Installer Qualifications: In addition to those qualifications listed in Division 5 Section 'Structural Steel,' engage an experienced Erector who has completed AESS work similar in material, design, and extent to that indicted for this Project and with a record of successful in-service performance.

C. Mockups: At least four weeks prior to fabricating AESS, the contractor shall construct mockups to demonstrate aesthetic effects as well as qualities of materials and execution. Mockups shall be built by the Contractor or Subcontractor responsible for the Project Work. Build mockups to comply with the following requirements, using all conditions and materials indicated for completed unit of Work.
   1. Locate mockups on-site or in the fabricator's shop as directed by Architect. Mockups shall be full-size pieces unless the Architect approves smaller models.
   2. Notify the Architect 7 days in advance of the dates and times when mockups will be available for review.
   3. Demonstrate the proposed range of aesthetic effects regarding each element listed under the fabrication heading below.
   4. Mockup will have finished surface (including surface preparation and paint system).
   5. Obtain Architect's approval of mockups before start of fabrication of final units.
   6. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed work.
   7. Coordinate painting requirements with Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."
   8. Coordinate high-performance coatings requirements with Section 099600 "High-Performance Coatings."
   9. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Use special care in handling to prevent twisting, warping, nicking, and other damage. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

   1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.10 FIELD CONDITIONS

A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the work.

PART 2 - PRODUCTS

2.1 BOLTS, CONNECTORS, AND ANCHORS

A. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

   1. Finish: Mechanically deposited zinc coating.

B. Corrosion-Resisting (Weathering Steel), Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 3, round-head assemblies, consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

2.2 FILLER

A. Filler: Polyester filler intended for use in repairing dents in automobile bodies.

2.3 PRIMER

A. Primer: Comply with Section 078100 Applied Fireproofing: Intumescent Paint.

B. Etching Cleaner for Galvanized Metal: MPI#25.

C. Galvanizing Repair Paint: ASTM A 780/A 780M.

D. Shop Primer for Galvanized Steel: MPI#26, cementitious galvanized metal primer, MPI#80, vinyl wash primer, or MPI#134, water-based galvanized metal primer.

2.4 FABRICATION

A. Shop fabricate and assemble AESS to the maximum extent possible. Locate field joints at concealed locations if possible. Detail assemblies to minimize handling and to expedite erection.

B. In addition to special care used to handle and fabricate AESS, comply with the following:

1. Fabricate with exposed surfaces smooth, square, and free of surface blemishes including pitting, rust, scale, and roughness.
2. Grind sheared, punched, and flame-cut edges of Category 1 AESS to remove burrs and provide smooth surfaces and edges.
3. Fabricate Category 1 AESS with exposed surfaces free of mill marks, including rolled trade names and stamped or raised identification. Mill marks shall be omitted by cutting of mill material to appropriate lengths where possible. Where not possible, the fabricator can fill and/or grind to a surface finish consistent with the approved mock up.
4. Fabricate Category 1 and Category 2 AESS with exposed surfaces free of seams to maximum extent possible.
5. Remove blemishes by filling or grinding or by welding and grinding, before cleaning, treating, and shop priming.
6. Fabricate with piece marks fully hidden in the completed structure or made with media that permits full removal after erection.
7. Fabricate Category 1 AESS to the tolerances specified in AISC 303 for steel that is designated AESS.
8. Fabricate Category 2 and Category 3 AESS to the tolerances specified in AISC 303 for steel that is not designated AESS.
9. Seal-weld open ends of hollow structural sections with 3/8-inch closure plates for Category 1 AESS.

C. Curved Members: Fabricate indicated members to curved shape by rolling to final shape in fabrication shop.

1. Distortion of webs, stems, outstanding flanges, and legs of angles shall not be visible from a distance of 20 feet under any lighting conditions.
2. Tolerances for walls of hollow steel sections after rolling shall be approximately 1/2 inch.

D. Coping, Blocking, and Joint Gaps: Maintain uniform gaps of 1/8 inch with a tolerance of 1/32 inch for Category 1 AESS.

E. Bolt Holes: Cut, drill, mechanically thermal cut, or punch standard bolt holes perpendicular to metal surfaces.

F. Cleaning Corrosion-Resisting Structural Steel: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.5 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
1. Joint Type: Snug tightened, unless otherwise indicated on the Contract Documents.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work, and comply with the following:

1. Appearance and quality of welds shall be consistent with the mock up.
2. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding specified tolerances.
3. Use weld sizes, fabrication sequence, and equipment for AESS that limit distortions to allowable tolerances.
4. Provide continuous, sealed welds at angle to gusset-plate connections and similar locations where Category 1 AESS is exposed to weather.
5. Provide continuous welds of uniform size and profile where Category 1 AESS is welded.
6. Make butt and groove welds flush to adjacent surfaces within tolerance of plus 1/16 inch, minus zero inch for Category 1 and Category 2 AESS. Do not grind unless required for clearances or for fitting other components, or unless directed to correct unacceptable work.
7. Remove backing bars or runoff tabs; back-gouge and grind steel smooth for Category 1 and Category 2 AESS.
8. At locations where welding on the far side of an exposed connection of Category 1 and Category 2 AESS occurs, grind distortions and marking of the steel to a smooth profile aligned with adjacent material.
9. Make fillet welds for Category 1 and Category 2 AESS of uniform size and profile with exposed face smooth and slightly concave. Do not grind unless directed to correct unacceptable work.
10. Where fillet welds are indicated to be ground-contoured, or blended, oversize welds as required and grind to provide a smooth transition and to match profile on approved mock-up.

2.6 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to AESS according to ASTM A 123/A 123M.

1. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
2. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
3. Fabricate such that all connections of assemblies are made in the field with bolted connections. Provide galvanized finish or members and assemblies within the range of color and surface textures presented in the mock ups.

B. Minimize distortion and warpage of steel members being galvanized by following recommendations according to ASTM A 384/A 384 M.

1. Do not apply galvanizing using double- dip or progressive processes without Architect's or Engineer's written approval.

2.7 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces to be high-strength bolted with slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials.
5. Galvanized surfaces.

B. Surface Preparation for Nongalvanized Steel: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 2, "Hand Tool Cleaning."
2. SSPC-SP 3, "Power Tool Cleaning."
3. AESS receiving epoxy primers, rust-inhibitive primers, or polyurethane finish coats shall receive surface preparation according to SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
    a. Coordinate the required blast profile with the approved paint submittal prior to beginning surface preparation.

C. Preparing Galvanized Steel for Shop Priming: After galvanizing, thoroughly clean steel of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.

D. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 2 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Examine AESS for twists, kinks, warping, gouges, and other imperfections before erecting.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep AESS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated. Handle, lift and align pieces using padded slings and/or other protection required to maintain the appearance of the AESS through the process of erection.

1. If possible, locate welded tabs for attaching temporary bracing and safety cabling where they will be concealed from view in the completed Work or where approved by the Architect during the pre-installation meeting. Methods of removing temporary erection devices and finishing the AESS members shall be approved by the Architect prior to erection.

3.3 ERECTION

A. Set AESS accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

1. Erect Category 1 AESS to the tolerances specified in AISC 303 for steel that is designated AESS.
2. Erect Category 2 and Category 3 AESS to the tolerances specified in AISC 303 for steel that is not designated AESS.

B. Do not use thermal cutting during erection unless approved by Architect. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
1. Joint Type: Snug tightened, unless otherwise indicated on the Contract Documents.
2. Orient bolt heads as indicated on the contract documents. Where bolt-head alignment is specified, the orientation shall be noted for each connection on the erection drawings. Where not noted, the bolt heads in a given connection shall be oriented to one side.

B. Weld Connections: Comply with requirements in "Weld Connections" Paragraph in "Shop Connections" Article.

1. Remove backing bars or runoff tabs; back-gouge and grind steel smooth for Category 1 and Category 2 AESS.
2. Remove erection bolts in Category 1 and Category 2 AESS, fill holes, and grind smooth.
3. Fill weld access holes in Category 1 and Category 2 AESS and grind smooth.
4. Obtain Architects approval for appearance of welds in repaired or field modified work.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect AESS as specified in Section 051200 "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.

B. Architect will observe AESS in place and determine acceptability based on the mockup. The Testing Agency shall have no responsibility for enforcing the requirements of this section.

3.6 REPAIRS AND PROTECTION

A. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Grind steel smooth.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

C. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

D. Touchup Painting: Cleaning and touchup painting are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

E. Touchup Priming: Cleaning and touchup priming are specified in Section 099600 "High-Performance Coatings."

END OF SECTION 051213

SECTION 05 21 00 - STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. K-series steel joists.
2. KCS-type K-series steel joists.
3. K-series steel joist substitutes.
4. LH-series long-span steel joists.
5. Joist accessories.

B. Related Requirements:

1. Section 05 12 00 "Structural Steel Framing" for field-welded shear connectors.
2. Section 05 31 00 "Steel Decking" for roof decking.

1.3 DEFINITIONS

A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."

B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 ACTION SUBMITTALS

A. Product Data: Submit manufacturer's specifications and installation instructions for each type of joist and accessories. Include manufacturer's certification that joists comply with SJI "Specifications".

B. Shop Drawings:
1. In addition to Division 1 requirements, provide one half-size hard copy (paper) of any drawings submitted in the electronic files.
2. Include layout, designation, number, type, location, and spacing of joists.
3. Include joining and anchorage details; bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
4. Indicate locations and details of bearing plates to be embedded in other construction.
5. A highly visible statement shall appear on the joist shop drawings indicating which joists are to receive special inspection by internal quality control personnel and which are to be inspected by the independent testing laboratory.

1.5 INFORMATIONAL SUBMITTALS

A. Testing Agency Qualifications: Prior to approval of the testing agency by the Architect/Engineer, a letter indicating the qualifications of the agency and all personnel to be utilized in the inspection of the joists, a statement about the proposed techniques for inspection, and a statement that they have read and understood these specifications, shall be submitted to the Architect/ Engineer.

B. Test Reports: Submit copies of reports of tests conducted on welded connections directly to the Architect/Engineer with copy to others in accordance with the provisions of Division 1 Section "Quality Control Services." Include data on type(s) of tests conducted and test results.

C. Welding certificates.

D. Manufacturer certificates.

E. Mill Certificates: For each type of bolt.

F. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

G. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Source Limitations:
1. To the greatest extent possible steel shapes shall be manufactured with recycled material and shall be manufactured locally or within the State of Texas.

B. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications**."**

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

C. Distribution of Information: It shall be the responsibility of the general contractor and/or his steel fabrication sub-contractor to ensure that the steel joist fabricator receives a copy of the following prior to the commencement of shop drawings and fabrication.
1. Copies of the contract documents.
2. These specifications.
3. The names and addresses of the general contractor, the Architect's responsible office, and the Structural Engineer for distribution of necessary reports.

D. Acceptable Weld Quality: The quality of welds shall be visually inspected and a weld shall be accepted by visual inspection if the weld shows that:
1. The weld has no cracks.
2. Thorough fusion exists between adjacent layers of weld metal and between weld metal and the base metal at the welded connection.
3. All craters are filled to the full cross section of the weld joint.
4. All weld profiles shall be reasonably uniform. It is recognized that all web joint welds will not have a perfect profile; however, the effective throat and penetration shall be equal to the throat required by the design drawings. Visual inspection of the welds shall be made to confirm that unequal legs, excessive convexity, or overlap conditions do not detract from the effective throat of the weld.

5. Undercutting of welds is undesirable but is acceptable if the depth of undercutting does not exceed 1/32 inch. Welds that have undercutting in excess of 1/32 inch shall be repaired and re inspected.
6. Any cluster of surface porosity in the weld area is to be removed and replaced with sound weld metal.
7. The surface of the shop welds shall be reasonably clean prior to the inspection.

E. All welding procedures shall be covered by a written welding procedure specification, a copy of which shall be made available to the Architect/Engineer upon request.

F. Test Reports: The inspectors, in house or independent, shall issue written reports of the inspection results to the general contractor, structural steel supplier, and the Architect/Engineer. In the case of in house inspection, where multiple production lines and inspectors are involved, the reports may be issued by the quality control supervisor provided it can be proven by the joist manufacturer to the Architect/Engineer that this supervisor is personally involved in observing the work of the line inspectors on a regular and virtually continuous basis and is personally knowledgeable of the contents, intent, and desired results of this specification. These reports shall be issued for each shift for every day the job is in production.

G. The inspector shall observe the technique and performance of each welder and welding operator at such intervals as may be required to assure that the applicable welding requirements are met.

H. The above inspection procedures do not preclude the Architect/Engineer or Owner from employing a separate independent testing agency for the purpose of further inspection at the job site. In the event of conflict or disagreement, the decision of the Architect/Engineer or Owner will be final with regard to acceptance or rejection of the joists.

I. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications**."** Handle and store joists in a manner to avoid deforming members and to avoid excessive stresses.

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Vulcraft Group, Division of Nucor Corporation; 936-687-4665; www.vulcraft.com
2. New Millennium Building Systems, LLC; 870-722-4272; www.newmill.com
3. Canam-buildings, a business unit of Canam Group; 866-466-8769; www.canam-construction.com

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads, including wind uplift loads, as indicated on the Contract Documents.

1. Use ASD; data are given at service-load level.
2. Design special joists to withstand design loads with live-load deflections no greater than the following:

a. Roof Joists: Vertical deflection of 1/360 of the span, or as indicated on the Contract Documents, whichever is more stringent.

2.3 K-SERIES STEEL JOISTS

A. Manufacture steel joists of type indicated according to "Standard Specification for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord.

1. Joist Type: K-series steel joists and KCS-type K-series steel joists.

B. Steel Joist Substitutes: Manufacture according to "Standard Specifications for Open Web Steel Joists, K-Series" in SJI's "Specifications," with steel-angle or -channel members.

C. Provide holes in chord members for connecting and securing other construction to joists; however, deduct area of holes from the area of chord when calculating strength of member.

D. Top-Chord Extensions: Extend top chords of joists with SJI's Type S top-chord extensions where indicated, complying with SJI's "Specifications."

E. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated, complying with SJI's "Specifications."

F. Camber joists according to SJI's "Specifications," unless otherwise noted in Contract Documents.

G. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

H. Crimped Members: Crimped members shall be carefully inspected to detect any splits caused by the crimping process. Splits exceeding one half inch in length are not acceptable. In joists and joist girders used as part of a moment resistive frame, splits are not acceptable regardless of length. Nicks less than one eight inch in length caused by the shearing process are acceptable.

2.4 LONG-SPAN STEEL JOISTS

A. Manufacture steel joists according to "Standard Specification for Longspan Steel Joists, LH-Series and Deep Longspan Steel Joists, DLH-Series" in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements as follows: (unless otherwise indicated on the Contract Documents.)

1. Joist Type: LH-series steel joists.
2. End Arrangement: Underslung.

3. Top-Chord Arrangement: Parallel, unless otherwise indicated on the Contract Documents.

B. Provide holes in chord members for connecting and securing other construction to joists; however, deduct area of holes from the area of chord when calculating strength of member.

C. Camber long-span steel joists according to SJI's "Specifications."

D. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.5 PRIMERS

A. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

2.6 JOIST ACCESSORIES

A. Bridging: Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.

B. Bridging, including X-bridging, indicated on the plans where it would not normally be required, shall be provided to supplement continuity of the lateral bracing system to:
1. Support perimeter conventional framing, beams, posts for roof screens, and as indicated.
2. Offset bridging lines at roof openings, mechanical ductwork, and as indicated.

C. Fabricate steel bearing plates from ASTM A 36/A 36M steel with integral anchorages of sizes and thicknesses indicated. Shop prime paint.

D. Steel bearing plates with integral anchorages are specified in Section 055000 "Metal Fabrications."

E. Header Units: Provide header units to support tail joists at openings in floor or roof system not framed with steel shapes.

F. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within 1/2 inch of finished wall surface unless otherwise indicated.

1. Finish: Plain, uncoated.

G. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts; ASTM A 563 heavy hex carbon-steel nuts; and ASTM F 436 hardened carbon-steel washers.

1. Finish: Plain.

H. Welding Electrodes: Comply with AWS standards.

I. Galvanizing Repair Paint: ASTM A 780/A 780M].

J. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.7 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by hand-tool cleaning, SSPC-SP 2 or power-tool cleaning, SSPC-SP 3.

B. Do not prime paint joists and accessories to receive sprayed fire-resistive materials.

C. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.

B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written instructions, final shop drawings, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.

C. Field weld joists to supporting steel bearing plates and framework, in accordance with the contract documents, or if not shown, with SJI "Specifications" for type of joists used. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

D. Where joists penetrate fire walls, see Division 7 Section "Insulation" for related work.

E. Bolt joists to supporting steel framework using carbon-steel bolts.

F. Bolt joists to steel columns and at other locations where shown on the Contract Documents using high-strength structural bolts. Comply with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for high-strength structural bolt installation and tightening requirements.

G. Provide temporary bridging, connections, and anchors to ensure lateral stability during construction.
1. Where "open web" joist lengths are 40 feet and longer, install a center row of bolted bridging to provide lateral stability before slackening of hoisting lines.

H. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

I. At flat roofs (up to 1/4 inch per foot maximum slope), with joists of the same depth, splices shall be a minimum of 4 inches long with at least 1 1/2 inches of fillet weld on each side, and shall develop a minimum capacity of 700 pounds, whichever is greater. Splices may occur between joists unless a depth change occurs, or other conditions occur which would affect the continuity of the bridging. For either of these cases the splice must occur at the joist. If joists are not flat, splicing and weld requirements for bridging shall be designed by the joist manufacturer and noted in the shop drawings.

J. Sweep: Sweep of joists after installation shall not exceed the greater of one half inch or L/300. Bottom and top chords shall be maintained in a vertical plane.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Visually inspect field welds according to AWS D1.1/D1.1M.
   1. In addition to visual inspection, provide non-destructive testing as indicated by AISC 360 and the Contract Documents, whichever is more stringent. Test field welds according to AWS D1.1/D1.1M and the following procedures, at testing agency's option:

      a. Liquid Penetrant Inspection: ASTM E 165/E 165M.
      b. Magnetic Particle Inspection: ASTM E 709.
      c. Ultrasonic Testing: ASTM E 164.
      d. Radiographic Testing: ASTM E 94.

C. Visually inspect bolted connections.

D. Prepare test and inspection reports.

3.4 PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780/A 780M and manufacturer's written instructions.

B. Top Chord Repair: Repair all locations where the steel deck welding procedures have burned holes in the top chord members. Contact the Architect/Engineer for correction procedures.

C. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists, bearing plates, abutting structural steel, and accessories.

   1. Clean and prepare surfaces by hand-tool cleaning according to SSPC-SP 2 or power-tool cleaning according to SSPC-SP 3.
   2. Apply a compatible primer of same type as primer used on adjacent surfaces.

D. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure joists and accessories are without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 21 00

SECTION 05 31 00 - STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Composite floor deck.
2. Noncomposite vented form deck.
3. Long-span acoustical roof deck.
    a. Perforated vertical webs.
    b. Acoustical Performance: NRC 0.70, with factory-installed sound-absorbing insulation.
4. Long-span exterior roof deck.
    a. Standard wide-rib non-perforated deck, matching the depth and profile of long-span acoustical roof deck for visual continuity.
    b. Acoustical Requirements: None; provide solid-web panels to ensure a moisture-tight exterior assembly.

B. Related Requirements:

1. Section 03 30 00 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
2. Section 03 52 16 "Lightweight Insulating Concrete" for lightweight insulating concrete fill over steel deck.
3. Section 05 12 00 "Structural Steel Framing" for shop- and field-welded shear connectors.
4. Section 05 50 00 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.
5. Section 09 90 00 "Painting and Coatings" for repair painting of primed deck and finish painting of deck.

1.3 ACTION SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specification Sections. In addition to Division 1 requirements, provide one half-size hard copy (paper) of any drawings submitted in the electronic files.

B. Product Data: For each type of deck, accessory, and product indicated.

C. Wood Finish Samples: Submit two 6-inch by 6-inch samples of the specified wood-grain finish on the actual deck substrate for Architect's verification of color, grain pattern, and sheen.

D. Shop Drawings:

1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

2. Indicate clearly on Shop Drawings the extent of Interior-Type and Exterior-Type acoustical decking, including specific transitions and closure details at the building thermal envelope.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product Certificates: For each type of steel deck.

C. Product Test Reports: For tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

1. Power-actuated mechanical fasteners.

2. Acoustical roof deck.

D. Evaluation Reports: For steel deck, from ICC-ES.

E. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
1. Welded decking in place is subject to inspection and testing. Expense of removing and replacing portions of decking for testing purposes will be borne by Owner if welds are found to be satisfactory. Remove work found to be defective and replace with new acceptable work.

C. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.1 DECKING MATERIALS

A. Source Limitations:
1. To the greatest extent possible steel shapes shall be manufactured with recycled material and shall be manufactured locally or within the State of Texas.

2.2 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.3 COMPOSITE FLOOR DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Vulcraft Group, Division of Nucor Corporation; 936-687-4665; www.vulcraft.com
2. New Millennium Building Systems, LLC ; 870-722-4272; www.newmill.com
3. Epic Metals Corporation; 877-696-3742; www.epicmetals.com
4. Canam-buildings, a business unit of Canam Group; 866-466-8769; www.canam-construction.com
5. H.H. Robertson Floor Systems, a CENTRIA company; 800-932-0706; www.hhrobertson.com

B. Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:

1. Prime-Painted Steel Sheet: ASTM A 1008/A 1008M, Structural Steel (SS), Grade as Indicated on Contract Documents, with top surface phosphatized and unpainted and underside surface shop primed with manufacturers' standard gray baked-on, rust-inhibitive primer.
2. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents, G90 zinc coating.
3. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents, G90 zinc coating; with unpainted top surface and cleaned and pretreated bottom surface primed with manufacturer's standard gray baked-on, rust-inhibitive primer.
4. Profile Depth: As indicated on Contract Documents.
5. Design Uncoated-Steel Thickness: As Indicated.
6. Span Condition: Triple span or more.

2.4 NONCOMPOSITE VENTED FORM DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Vulcraft Group, Division of Nucor Corporation; 936-687-4665; www.vulcraft.com
   2. New Millennium Building Systems, LLC ; 870-722-4272; www.newmill.com
   3. Epic Metals Corporation; 877-696-3742; www.epicmetals.com
   4. Canam-buildings, a business unit of Canam Group; 866-466-8769; www.canam-construction.com

B. Non-composite Vented Form Deck: Fabricate ribbed- and vented-steel sheet noncomposite form-deck panels to comply with "SDI Specifications and Commentary for Noncomposite Steel Form Deck," in SDI Publication No. 31, and with the following:

   1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents G90 zinc coating.
   2. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents, G60 zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.

      a. Color: Manufacturer's standard.

   3. Profile Depth: As Indicated.
   4. Design Uncoated-Steel Thickness: As Indicated.
   5. Span Condition: Triple span or more.
   6. Side Laps: Overlapped.
   7. Vent Slot Area: Manufacturer's standard vent slots providing 1-1/2 percent open area.

2.5 LONG-SPAN ACOUSTICAL AND EXTERIOR ROOF DECK

A. Basis-of-Design Product:

   1. Epic Metals Corporation; Envista FA series Roof Deck System with Timberlok wood grain finish system.

B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   1. Epic Metals Corporation; 877-696-3742; www.epicmetals.com
   2. Vulcraft Group, Division of Nucor Corporation; 936-687-4665; www.vulcraft.com
   3. New Millennium Building Systems, LLC ; 870-722-4272; www.newmill.com

C. Long-Span Acoustical Roof Deck (Interior): Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:

   1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents, G90 zinc coating.
   2. Deck Profile: Perforated vertical webs for sound absorption; profiles and depths as indicated on Contract Documents, with bottom plate.
   3. Design Uncoated-Steel Thickness: As indicated on Contract Documents.
   4. Design Uncoated-Steel Thicknesses; Deck Unit/Bottom Plate: As indicated on Contract Documents.
   5. Span Condition: Triple span or more.

6. Side Laps: Overlapped or interlocking seam at Contractor's option.
7. Acoustical Perforations: Deck units with manufacturer's standard perforated vertical webs Single-pan units: Single-pan fluted units with vertical webs perforated with approximate 5/32 inch diameter holes staggered 3/8 inch o.c..
8. Sound-Absorbing Insulation: Manufacturer's standard premolded roll or strip of glass or mineral fiber to fit void space between vertical ribs.
9. Acoustical Performance: NRC 0.70, tested according to ASTM C 423.
10. Factory installed air dams shall be provided by deck manufacturer along perimeter of building envelope if shown on Architectural or Structural design drawings.
11. Shop-Applied Finish for Exposed Surfaces: Clean, pretreat, and factory-finish underside surfaces. Finish Type: Provide a factory-applied, two-coat, oven-cured architectural coating system replicating wood grain. Wood Species/Pattern: As selected by Architect from manufacturer's standard wood-look collection.
    a. Pre-treatment: Surface shall be chemically cleaned and pre-treated to ensure maximum adhesion of the coating system.
    b. Primer: Factory-applied, oven-cured corrosion-inhibitive primer; minimum 0.20 mil dry film thickness.
    c. Topcoat: Topcoat: Factory-applied, oven-cured high-performance architectural color coat (Silicone Modified Polyester or High-Performance Polyester); minimum 0.80 mil dry film thickness.
    d. Total Dry Film Thickness: 1.0 mil minimum.
    e. Application: Ensure the coating application is uniform and does not bridge or clog acoustical perforations.
12. Finish Performance Requirements:
    a. Gloss: As selected by Architect. Provide (2) samples of each type of gloss option available.
    b. Adhesion: No loss of adhesion when tested in accordance with ASTM D3359.
    c. Humidity Resistance: No blistering or loss of adhesion after 1,000 hours of testing in accordance with ASTM D2247.

D. Long-Span Exterior Roof Deck: Fabricate panels to match the profile and depth of the acoustical roof deck for visual continuity, but without acoustical perforations, complying with the following:
1. Galvanized and Shop-Primed Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade as Indicated on Contract Documents, G90 zinc coating; cleaned, pretreated, and primed with manufacturer's standard baked-on, rust-inhibitive primer.
2. Profile: Solid vertical webs (non-perforated) to prevent moisture infiltration into the deck flutes.
3. Design Uncoated-Steel Thickness: As indicated on Contract Documents; 22-gauge minimum.
4. Factory installed air dams shall be provided by deck manufacturer along perimeter of building envelope if shown on Architectural or Structural design drawings.
5. Exterior Finish: Match Interior Acoustical Roof Deck.
    a. Color: To match Interior Acoustical Roof Deck.
6. Finish Performance Requirements:
    a. Gloss: As selected by Architect. Provide (2) samples of each type of gloss option available.
    b. Adhesion: No loss of adhesion when tested per ASTM D3359.
    c. Salt Spray Resistance: No blistering or loss of adhesion after 2,000 hours of testing in accordance with ASTM B117.

2.6 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 31 for overhang and slab depth.

G. Metal Cover Plates: Fabricate metal cover plates for end abutting floor deck units of not less than same thickness as decking. Form to match contour of deck units and approximately 6" wide.

H. Metal Closure Strips: Fabricate metal closure strips, for openings between decking and other construction, of not less than 0.045 inch min. (18 gage) sheet steel. Form to provide tight fitting closures at open ends of cells or flutes and sides of decking.

I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 16 gage thickness, with factory-punched hole of 3/8-inch minimum diameter.

J. Flat Sump Plates: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck. For drains, cut holes in the field.

K. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch thick, of same material and finish as deck, with 3-inch- wide flanges and level recessed pans of 1-1/2-inch minimum depth. For drains, cut holes in the field. Galvanizing Repair Paint: ASTM A 780/A 780M.

L. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Locate deck bundles to prevent overloading of supporting members.

C. Decorative Finish Protection: Use non-marring tools and equipment during installation to prevent scratching of the factory wood finish. Panels with visible surface damage to the wood grain shall be rejected and replaced.

D. Coordination with Lighting:
   1. Reveal and Joint Alignment: Align deck joints and reveals accurately to maintain the continuity of the wood grain pattern as indicated on the Reflected Ceiling Plans.

E. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

   1. Maximum vertical dimension between deck units at a support shall be 1/16 inch.

   2. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

F. Place deck panels flat and square, secured to adjacent framing with top flange having no warping in excess of 1/16 inch across any three adjacent flanges.

G. Do not place deck units on concrete supporting structure until concrete has cured and is dry.

H. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

I. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work. Coordinate reinforcing requirements of openings in first paragraph below with applicable Sections. Reinforce openings as indicated on the contract documents, and not less than:
   1. Reinforce steel deck openings from 6 to 18 inches in size with 2x2x1/4 inch steel angles. Place angles perpendicular to flutes; extend a minimum of two flutes beyond each side of opening and fusion weld to deck at each flute.

J. Deck Transitions: At the building line where Long-Span Acoustical Roof decking meets Long-Span Exterior Roof decking provide a continuous 20-gauge galvanized steel closure strip or "flute plug" to seal the ends of the interior acoustical flutes.

K. Air Seal: Apply a continuous bead of sealant (Section 07 90 00) between the deck closure strip and the building structure to maintain the integrity of the conditioned air plenum.

L. At transitions between Long-Span Acoustical Roof decking and Long-Span Exterior Roof decking, provide a continuous metal closure strip or 'thermal break' as indicated to prevent unconditioned air from infiltrating the interior plenum.

M. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

N. Fastening Deck Units: The top flanges of the beams and the steel deck shall be free of paint, water, ice, oil, rust, or any other material which might interfere with the welding process.

O. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.3 ROOF-DECK INSTALLATION

A. Install temporary shoring before placing deck panels if required to meet deflection limitations.

B. Uplift Loading: Install and anchor roof deck units to resist gross uplift loading as indicated on the Contract Documents.

C. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long, and as follows:

1. Weld Diameter: As Indicated on the Contract Documents.
2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds As indicated on Contract Documents.
3. Weld Washers: Install weld washers at each weld location where deck thickness is less than 0.028 inches.

D. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 36 inches, and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, length as required, carbon-steel screws.
2. For decks with positive registering, interlocking male/female type side laps, join by button punching.

E. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:

1. End Joints: Lapped 2 inches minimum.

F. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and weld or mechanically fasten flanges to top of deck. Space welds or mechanical fasteners not more than 12 inches apart with at least one weld or fastener at each corner.

1. Install reinforcing channels or zees in ribs to span between supports and weld or mechanically fasten.

G. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. [Weld] to substrate to provide a complete deck installation.

1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

H. Sound Absorption Batts: Install sound absorbing batts immediately prior to installation of roof insulation. Keep materials dry before, during, and after installation.

I. Provide minimum 1 inch thick soft composition rubber closures above walls and partitions contiguous to acoustical steel roof deck.

3.4 FLOOR-DECK INSTALLATION

A. Floor decking units shall be temporarily shored in accordance with the manufacturer's Allowable Shoring Tables. Shoring requirements shall be determined as follows:

1. Bending stress shall not exceed 0.60 times the yield strength, nor exceed 36,000 psi under the combined weights of wet concrete, deck and the following construction live loads: 20 psf uniform load, or 150 lb. concentrated load on a 1' 0" width section of deck.
2. Slab dead load shall not cause deflection in excess of 1/180 of the span or a maximum of 3/4 inch. Shoring shall be designed in accordance with local building code provisions. Shoring shall be left in place until the concrete attains 75 percent design compressive strength.

B. Do not use floor deck units for storage or working platforms until permanently secured.

C. Fasten composite floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:

1. Weld Diameter: As Indicated on the Contract Documents.
2. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds at not more than 12 inches apart with a minimum of 2 welds per unit at each support.
3. Weld Washers: Install weld washers at each weld location where deck thickness is less than 0.028 inches**.**

D. Fasten non-composite floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
1. Weld Diameter: As Indicated on the Contract Documents.
2. Weld Spacing: As Indicated on the Contract Documents, at a minimum provide welds at the ends and at all end laps, provide welds at the side of each sheet (including sides where sheets lap), and at the midspan of each sheet. Provide welds at each support, and alternate the two following weld patterns: 1) at each side, and/or at each side lap, 2) at the midspan of each sheet, and at each side.
3. Weld Washers: Install weld washers at each weld location where deck thickness is less than 0.028 inches**.**

E. SDI requires side-lap and perimeter edge fastening if deck spans exceed 60 inches (1524 mm).

F. Side-Lap and Perimeter Edge Fastening: As Indicated on the Contract Documents, at a minimum, fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 36 inches, and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.
2. Mechanically clinch or button punch.
3. Fasten with a minimum of 1-1/2-inch long welds.

G. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:

1. End Joints: 2” minimum lap for non-composite floor deck or Butted for composite floor decking.

H. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

I. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

J. Deformed bar anchors: Deformed bar anchors shall be automatically end welded on centers as shown on drawings in accordance with manufacturer's recommendations.

K. Shear Connectors: Shear connectors shall be solid fluxed and are to be automatically end welded through the metal deck at spacings shown on the drawings and in accordance with manufacturer's recommendations. Do not weld shear connectors through two layers (lapped ends) of decking units. Weld only on clean, dry deck surfaces.

1. A minimum of 2 shear connector studs shall be welded at the start of each production period in order to determine proper generator, control unit, and stud welder settings. These studs shall be capable of being bent 45 degrees from vertical without weld failure. If, after welding, visual inspection reveals that a sound weld or a full 360 degree fillet weld has not been obtained for a particular stud, such stud shall be struck with a hammer and bent approximately 15 degrees off perpendicular to the nearest end of the beam. Studs meeting this test shall be left in this position. Studs failing under this test shall be replaced. When the temperature is below 32 degrees F., one stud in each 100 shall be tested after cooling.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Prepare test and inspection reports.

3.6 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780/A 780M and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint.

1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.

END OF SECTION 05 31 00

SECTION 05 40 00 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS.

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Exterior non-load-bearing wall framing.
2. Interior non-load-bearing wall framing exceeding height limitations of standard, nonstructural metal framing.
3. Ceiling joist framing.
4. Soffit framing.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for miscellaneous steel shapes, masonry shelf angles, and connections used with cold-formed metal framing.
2. Section 061053 "Miscellaneous Rough Carpentry" for subflooring, wall sheathing, or roof sheathing using wood-based structural-use panels, particleboard, fibrous-felted board, and foam-plastic sheathing.
3. Section 092216 "Gypsum Board Assemblies" for standard, interior non-load-bearing, metal-stud framing, with height limitations and ceiling-suspension assemblies.

1.3 DEFINITIONS

A. Uncoated Steel Design Thickness: Minimum uncoated thickness of cold-formed framing delivered to the Project site shall be not less than 95 percent of the indicated thickness used in the cold-formed framing design. Lesser thicknesses shall be permitted at bends due to cold forming. Where decimal thicknesses of framing are not indicated, the thicknesses in “gages” and “mils” shall be provided in conformance with the thicknesses indicated in the Steel Stud Manufacturers Association.

B. Producer: Entity that produces steel sheet coil fabricated into cold-formed members.

C. Engineer of Record: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing cold formed metal framing engineering services and is specifically hired to do so.

D. Engineering Services: Services performed by the Engineer of record for installations of cold-formed metal framing for this Project.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site prior to commencing the Work.
   1. Require attendance of parties directly affecting the Work of the section. The cold-formed metal framing Engineer of Record shall be an attendee of the Preinstallation Conference. If the Engineer of Record is not able to attend the scheduled Preinstallation Conference, the conference shall be rescheduled as many times as necessary, until the Engineer of Record is able to attend the conference.
   2. Review conditions of installation, installation drawings, procedures and coordination with related work.
   3. Approved Cold-Formed Metal Framing shop drawings shall be reviewed at the Preinstallation Conference with the Engineer of Record present for the review.
   4. Review required inspecting, testing, and certifying procedures.
   5. The Owner's Materials Testing Lab shall attend the Preinstallation Conference if the Owner has engaged the service of an independent lab for site inspections of CFMF.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

   1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

B. Shop Drawings:
   1. Provide shop/installation drawings prepared by cold-formed metal framing engineer.
   2. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
   3. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.

C. Delegated-Design Submittal: For cold-formed steel framing. For cold-formed metal framing, connection design including fasteners, clips, anchors and all other related aspects of the framing design: comply with all applicable model code required design loads. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

B. Welding certificates.

C. Product Certificates: For each type of code-compliance certification for studs and tracks.

D. Product Test Reports: For each listed product, for tests performed by a qualified testing agency.

   1. Steel sheet.
   2. Expansion anchors.
   3. Power-actuated anchors.
   4. Mechanical fasteners.
   5. Vertical deflection clips.
   6. Horizontal drift deflection clips
   7. Miscellaneous structural clips and accessories.

E. Evaluation Reports: For nonstandard cold-formed steel framing post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

F. Submittals required as part of component manufacturer's and installer's Quality Control Program(s) that include material control procedures, inspection procedures, and nonconformance procedures.

G. Component manufacturer's and installer's Quality Control Inspector qualifications.

H. Certificates of Compliance: Certificate from Professional Structural Engineer responsible for system design that system was designed in accordance with Contract Documents requirements, applicable Building Code, and generally accepted engineering practices.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Installer Qualifications: An experienced installer who has completed cold-formed metal framing similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.
   1. The installer shall establish and maintain quality control procedures and perform inspections to ensure that the work is in accordance with AISI referenced documents and Contract Documents.

C. Engineer of Record:
   1. Engage a qualified professional Engineer to prepare design calculations, Shop Drawings, and other structural data as required.
   2. The Engineer of Record shall perform two (2) site inspections during installation and one (1) site inspection at completion of cold-formed metal framing.
   3. The Engineer of Record shall provide reports, including any nonconformance, issued to the Construction Manager, Owner, and Architect/Engineer within 48 hours of inspection.

D. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

E. Welding Qualifications: Qualify procedures and personnel according to the following:

   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

F. AISI Specifications and Standards:
   1. Comply with AISI documents as referenced standards in the applicable version of the International Building Code for this project.
   2. Comply with AISI S202-15 "Code of Standard Practice for Cold-formed Steel Structural Framing".
   3. Comply with AISI S240-15 "North American Standard for Cold-Formed Steel Structural Framing", including Section D Quality Control and Quality Assurance.

1.8 DELIVERY, STORAGE AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling in accordance with AISI's "Code of Standard Practice".

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation in accordance with AISI's "Code of Standard Practice".

C. The contractor shall verify that the framing materials delivered meet the requirements of the contract, construction documents, and submittals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design cold-formed steel framing.

B. Structural Performance: Provide cold-formed steel framing capable of withstanding design loads within limits and under conditions indicated. The size of framing members indicated in the drawings, are minimum sizes – provide the indicated sizes, or larger sizes where structural engineering dictates larger sizes are required. Where larger sizes of studs, tighter spacing of studs or more studs are indicated by the Structural Engineer preparing the buildings framing design, provide these material increases to the job, at no additional cost of the Owner. In some instances, the stud sizes indicated may be larger than engineering analysis dictates are necessary - heavier indicated stud sizes may have been chosen, and subsequently indicated in order to support, or otherwise accommodate other building systems which require heavier stud gages than basic structural engineering (framing design to meet the Building Code) dictates – DO NOT DOWN-SIZE THE STUD SIZES INDICATED.

1. Design Loads: As indicated on Drawings
2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:

    a. Exterior Load-Bearing Wall Framing used behind masonry veneer: Horizontal deflection of 1/600 of the wall height.
    b. Exterior Load-Bearing Wall Framing not used behind masonry veneer: Horizontal deflection of 1/360 of the wall height.
    c. Exterior Non-Load-Bearing Framing used behind masonry veneer: Horizontal deflection of 1/600 of the wall height.
    d. Exterior Non-Load-Bearing Framing not used behind masonry veneer: Horizontal deflection of 1/360 of the wall height.
    e. Interior Non-Load-Bearing Framing: Horizontal deflection of 1/360 of the wall height under a horizontal load of 5 lbf/sq. ft.
    f. Roof Rafter Framing: Vertical deflection of 1/360 of the horizontally projected span for live loads.
    g. Ceiling Joist Framing: Vertical deflection of 1/360 of the span for live loads and 1/240 for total loads of the span.

3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:

    a. Upward and downward movement of 1-1/2 inches.

5. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

C. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing shall comply with AISI S100, AISI S200, and the following:

1. Floor and Roof Systems: AISI S210.
2. Wall Studs: AISI S211.
3. Headers: AISI S212.
4. Lateral Design: AISI S213.

D. Design framing installed behind exterior ceramic tile walls to comply with ANSI A108.11-4.0-4.3 requirements for framing.

E. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency acceptable to authorities having jurisdiction.

2.2 COLD-FORMED STEEL FRAMING MATERIALS

A. Steel Sheet: ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:

1. Grade: As required by structural performance.
2. Coating: G60 (Z180) unless otherwise indicated, G90 (Z275) at masonry curtain-wall framing.

B. Steel Sheet for Vertical Deflection Clips: ASTM A 653/A 653M, structural steel, zinc coated, of grade and coating as follows:

1. Grade: As required by structural performance.
2. Coating: G60 (Z180) unless otherwise indicated, G90 (Z275) at masonry curtain-wall framing.

2.3 EXTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-5/8 inches, minimum.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: Matching steel studs.
2. Flange Width: 1-1/4 inches, minimum.

C. Vertical Deflection Clips: Manufacturer's standard bypass clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical

attachment to stud web to permit frictionless vertical movement, 68 mils (1.72 mm) minimum thickness, size as required by structural design calculations.

1. Basis-of-Design: VertiClip, The Steel Network, Inc. 888-474-4876 www.steelnetwork.com
2. Manufacturers: Subject to compliance with requirements, provide the named product, or a comparable product by other manufacturer.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch.
2. Flange Width: As required to accommodate upward or downward deflection of primary structure.

E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.4 INTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-5/8 inches, minimum.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: Matching steel studs.
2. Flange Width: 1-1/4 inches, minimum.

C. Vertical Deflection Clips: Manufacturer's standard head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web to permit frictionless vertical movement, 68 mils (1.72 mm) minimum thickness, size as required by structural design calculations.

1. Basis-of-Design: VertiClip, The Steel Network, Inc. 888-474-4876 www.steelnetwork.com
2. Manufacturers: Subject to compliance with requirements, provide the named product, or a comparable product by other manufacturer.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch.
2. Flange Width: As required to accommodate upward or downward deflection of primary structure .

E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

2.5 CEILING JOIST FRAMING

A. Steel Ceiling Joists: Manufacturer's standard C-shaped steel sections, of web depths indicated, punched with standard holes, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-5/8 inches, minimum.

B. Connector Devices: For transfer of loads from ceiling joist framing members to supporting structure, hanger type and size as required by structural design calculations. ASTM A 653/A 653M, structural steel, zinc coated.
1. Grade: As required by structural performance.
2. Coating: G90 (Z275).
3. Basis-of-Design: StiffClip, The Steel Network, Inc. 888-474-4876 www.steelnetwork.com
4. Manufacturers: Subject to compliance with requirements, provide the named product, or a comparable product by other manufacturer.]

2.6 SOFFIT FRAMING

A. Exterior Soffit Frame: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0428 inch.
2. Flange Width: 1-5/8 inches, minimum.

2.7 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated steel sheet, of same grade and coating designation used for framing members, with a minimum yield strength of 33,000 psi. Where any of the framing’s minimum yield strength is greater than 33,000 psi, i.e. 50,000 psi, accessory minimum yield strength shall be match the framings minimum yield strength.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:

1. Supplementary framing.
2. Bracing, bridging, and solid blocking.
3. Web stiffeners.
4. Anchor clips.
5. End clips.
6. Foundation clips.
7. Gusset plates.
8. Stud kickers and knee braces.
9. Joist hangers and end closures.
10. Hole-reinforcing plates.
11. Backer plates.

2.8 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel bolts, carbon-steel nuts, and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C.

C. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC58 at masonry walls or ICC-ES AC308 at concrete walls as appropriate for the substrate.

1. Uses: Securing cold-formed steel framing to structure.
2. Type: Adhesive anchor.
3. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
4. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) stainless-steel bolts, ASTM F 593 (ASTM F 738M), and nuts, ASTM F 594 (ASTM F 836M).

D. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.

1. Head Type: Low-profile head beneath sheathing; manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.9 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: ASTM A 780/A 780M, MIL-P-21035B, or SSPC-Paint 20.

B. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C 1107/C 1107M, and with a fluid consistency and 30-minute working time.

C. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.

D. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members as required.

2.10 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, Engineer’s shop/installation drawings, manufacturer's written instructions, and requirements in this Section.

1. Fabricate framing assemblies using jigs or templates.
2. Cut framing members by sawing or shearing; do not torch cut.
3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.

    a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    b. Locate mechanical fasteners and install according to Shop Drawings, with screws penetrating joined members by no fewer than three exposed screw threads.

4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies by means that prevent damage or permanent distortion.

C. Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable variation of 1/8 inch in 10 feet and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, conditions, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that required to obtain fire-resistance ratings indicated. Protect remaining fire-resistive materials from damage.

C. Grout bearing surfaces uniform and level to ensure full contact of bearing flanges or track webs on supporting concrete or masonry construction.

D. Install load-bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4 inch to ensure a uniform bearing surface on supporting concrete or masonry construction.

E. Install sealer gaskets at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed steel framing according to AISI S200, AISI S202, Engineer’s shop/installation drawings, and manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.

1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.

D. Provide supplementary framing, blocking, and bracing where metal framing systems are indicated to support fixtures, equipment, services, casework, heavy trim and furnishings, metal roof, wall, and soffit panels, and similar work requiring attachment. Where type of supplementary support is not otherwise indicated, comply with cold- formed metal framing manufacturer's recommendations and industry standards in each case, considering weight or loading resulting from item supported.

E. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.

1. Cut framing members by sawing or shearing; do not torch cut.
2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
b. Locate mechanical fasteners, install according to Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.

F. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.

G. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

H. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.

I. Install insulation, specified in Section 072100 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

J. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

3.4 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs to bottom track unless otherwise indicated. Space studs as follows:

1. Stud Spacing: As indicated on Shop Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Connect vertical deflection clips to bypassing studs and anchor to building structure.
3. Connect drift clips to cold-formed steel framing and anchor to building structure.

E. At exterior walls where walls are adjacent to the primary building structure, connect vertical deflection clips with slip capability, to the studs and anchor the clips to the primary building structure. The connection at the stud is to allow vertical movement only, not horizontal movement. Tighten connection nuts for vertical movement only. Deflection clips shall have vertical slot connection holes for vertical movement. Locate the slots adjacent to the stud, not at the primary building structure. The slip fasteners at the studs shall allow vertical movement without the fastener being able to disconnect from and fall from the framing studs. Slip connection shall be with bolts, nuts and washers unless the framing manufacturer has other recommendations that are acceptable to the Architect – submit designs in shop drawings. If framing manufacturer does not have other permanent fastening options that are acceptable to the Architect, deform the bolt threads after the nuts are in place to create a permanent fastener installation.

F. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Subject to compliance with authorities having jurisdiction and other requirements, provide either bridging method indicated immediately above.
4. Where Portland Cement Plaster (PCP) is to be installed over walls, and the lath used in the PCP is welded wire lath, the wall bracing shall be provided in accordance with the International Building Code section 2308.9.3 or section 2308.12 regardless of type of studs used in the PCP wall.

G. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
1. Install solid blocking at every other stud and at additional locations as indicated on shop drawings.

H. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.5 INTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs tobottom track unless otherwise indicated. Space studs as follows:

1. Stud Spacing: As indicated on Drawings.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single deep-leg deflection tracks and anchor to building structure.
2. Connect vertical deflection clips to studs and anchor to building structure.
3. Connect drift clips to cold-formed steel metal framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Subject to compliance with authorities having jurisdiction and other requirements, provide either bridging method indicated immediately above.
4. Where Portland Cement Plaster (PCP) is to be installed over walls, and the lath used in the PCP is welded wire lath, the wall bracing shall be provided in accordance with the International Building Code section 2308.9.3 or section 2308.12 regardless of type of studs used in the PCP wall.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
1. Install solid blocking at every other stud and at additional locations as indicated on shop drawings.

G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

3.6 JOIST INSTALLATION

A. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated on Shop Drawings.

B. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.

1. Install joists over supporting frame with a minimum end bearing of 1-1/2 inches.
2. Reinforce ends and bearing points of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections.

C. Space joists not more than 2 inches from abutting walls, and as follows:

1. Joist Spacing: As indicated on Drawings.

D. Frame openings with built-up joist headers, consisting of joist and joist track or another combination of connected joists if indicated.

E. Install joist reinforcement at interior supports with single, short length of joist section located directly over interior support, with lapped joists of equal length to joist reinforcement.

1. Install web stiffeners to transfer axial loads of walls above.

F. Install bridging at intervals indicated on Shop Drawings. Fasten bridging at each joist intersection as follows:

1. Bridging: Cold-rolled steel channel, welded or mechanically fastened to bottom flange of joists.

2. Joist-Track Solid Bridging: Joist-track solid blocking of width and thickness indicated, secured to joist webs.
3. Combination Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange of joists and secure solid blocking to joist webs.
4. Subject to compliance with authorities having jurisdiction and other requirements, provide any bridging method indicated above.

G. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.

H. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners, to provide a complete and stable joist-framing assembly.

3.7 ERECTION TOLERANCES

A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.8 FIELD QUALITY CONTROL

A. Inspection: Component manufacturer and installer shall inspect the work as required by their Quality Control Program(s) per AISI S240-15.

B. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

C. Field and shop welds will be subject to testing and inspecting.

D. Testing agency will report test results promptly and in writing to Contractor and Architect.

E. Cold-formed steel framing will be considered defective if it does not pass tests and inspections.

F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.9 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780/A 780M and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 40 00

SECTION 05 50 00

METAL FABRICATIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes shop fabricated metal items.

B. Performance and design criteria for the delegated design for but not limited to the following:
   1. Supports for overhead doors and grilles.
   2. Elevator hoist beam.

C. Loose lintels.

D. Bollards.

E. Steel ladders.

F. Steel ships ladders.

G. Structural supports for miscellaneous attachments.

H. Steel framing and supports for mechanical and electrical equipment.

I. Other miscellaneous steel items indicated or as required for complete installation of indicated work.

J. Performance and design criteria for the delegated design for but not limited to the following:
   1. Supports for overhead doors and grilles.
   2. Elevator and machine hoist beam.

1.02 RELATED SECTIONS:

A. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for embedded anchors and attachments for metal fabrications specified by this section in concrete.

B. Section 05 12 00 - Structural Steel.

C. Section 05 21 00 - Steel Joists.

D. Section 05 31 13 - Steel Floor Decking.

E. Section 05 31 23 - Steel Roof Decking.

F. Section 09 90 00 - Painting and Coating: Field applied paint finishes.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Submit a Delegated-Design Submittal that includes the following, all of which shall be signed and sealed by the retained professional engineer:
   1. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.
      a. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
      b. Design data: Submit drawings and supporting calculations, signed and sealed by a qualified professional structural engineer.
         1) Include the following, as applicable:
            (a) Design criteria.
            (b) Engineering analysis depicting stresses and deflections.
            (c) Member sizes and gauges.
            (d) Details of connections.
            (e) Support reactions.
            (f) Bracing requirements.

C. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

1.05 QUALIFICATIONS

A. Fabricator Qualifications: A firm experienced in producing metal fabrications similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

B. Compliance Responsibility: The Contractor is responsible for ensuring compliance among suppliers, fabricators, and subcontractors.

C. Delegated Design Engineer: The Professional Engineer performing the delegated design shall be licensed in the State of Texas and shall have a minimum of five (5) years of experience in the design of structural metal fabrications and railing systems.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Accept metal fabrications on site in labeled shipments. Inspect for damage.

C. Protect metal fabrications from damage by exposure to weather.

1.07 FIELD MEASUREMENTS

A. Where metal fabrications are indicated to fit walls and other construction, verify dimensions by field measurements before fabrication and indicate measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

B. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating metal fabrications without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions. Allow for trimming and fitting.

PART 2 PRODUCTS

2.01 MATERIALS - STEEL

A. Steel Sections: ASTM A36/A36M.

B. Steel Plate: ASTM A36/A36M.

C. Hollow Structural Sections: ASTM A500, Grade B.

D. Steel Pipe: ASTM A53/A53M, Grade B Schedule 40. .

E. Sheet Steel: ASTM A653/A653M, Grade 33 Structural Quality with galvanized coating.

F. Bolts: ASTM A307; Grade A or B.

G. Nuts: ASTM A563 heavy hex type.

H. Washers: ASTM F436; Type 1.

I. Welding Materials: AWS D1.1; type required for materials being welded.

J. Shop Primer: SSPC-Paint 15, or manufacturer's standard primer complying with performance requirements of SSPC-Paint 15.

K. Touch-Up Primer: Match shop primer.

L. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20.

2.02 LOOSE LINTELS

A. Lintels: Steel sections, size and configuration as indicated on Drawings, length to allow 8 inches (203.2 mm) minimum bearing on both sides of opening.

B. Galvanize loose lintels installed in exterior walls.

2.03 BOLLARDS

A. Fabricate bollards from Schedule 80 steel pipe, size as indicated.

B. Standard Bollards: Fill with 3,000 psi (20684.28 kPa) concrete as specified in Section 03 30 00, with crowned cap.

C. Removable Bollards: Fabricate sleeves from Schedule 40 steel pipe or 1/4 inch (6.35 mm) wall thickness steel tubing with an ID 1/4 inch less than OD of bollards. Match drill sleeve and bollard for 1/2 inch (12.7 mm) steel machine bolt.

D. Cap removable bollards with 1/4 inch (6.35 mm) minimum steel plate. Do not fill with concrete.

2.04 STEEL LADDERS

A. General: Fabricate ladders for locations shown, with dimensions, spacings, details, and anchorages as indicated.

B. Comply with ANSI A14.3, unless otherwise indicated.

C. Provide hot-dip galvanizing after fabrication for exterior ladders.

D. For elevator pit ladders, comply with ASME A17.1.
   1. Unless detailed otherwise in the drawings, provide following fabrication:

E. Side Rails: Continuous 1/2 x 2-1/2 inch (64 mm) flat bars with eased edges, spaced 18 inches (457.2 mm) apart.
   1. Manufactured Bar Rungs: 1-inch round steel bars, spaced 12 inches (304.8 mm) o.c.
      a. Fit bar rungs in centerline of side rails; plug-weld and grind smooth on outer rail faces.
      b. Provide nonslip surfaces on top of each bar rung by light coating of abrasive material:
         1) Mebac Anti-Slip Coatings; IKG Borden www.ikgindustries.com
         2) SLIP-NOT; W. S. Molnar Company www.wsmolnar.com .
   2. Support each ladder at top and bottom and not more than 60 inches (1524 mm) o.c. with welded or bolted steel brackets. Size brackets to support design loads specified in ANSI A14.3.

2.05 STEEL SHIP'S LADDERS

A. Ship’s Ladders: Fabricate with structural steel channel stringers, steel pipe handrails, and steel bar grating treads with open risers, unless otherwise indicated. Provide brackets and fittings for installation.

B. Dimensions:
   1. Width: 36 inches (914.4 mm) or wider as indicated.
   2. Stringer depth: Minimum 10 inches (254 mm).
   3. Inclination: As indicated.

C. Treads: Minimum 7-in. wide galvanized steel bolt-on bar grate stair treads as manufactured by Borden or approved equivalent.
   1. Riser Height: Maximum 12 inches (304.8 mm) and minimum 9 inches (228.6 mm).

D. Railings: As specified in Section 05 52 00 - Metal Railings.

E. Galvanize ship's ladders, including brackets and fasteners, in exterior locations, and elsewhere where indicated.

2.06 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports that are not a part of structural steel framework as necessary to complete the Work.

B. Fabricate units from structural steel shapes, plates, and bars of welded construction, unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction retained by framing and supports. Cut, drill, and tap units to receive hardware, hangers, and similar items.

C. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors 1-1/4 inches (32 mm) wide by 1/4 inch (6.35 mm) thick by 8 inches (203.2 mm) long at 24 inches (609.6 mm) o.c., unless otherwise indicated.

D. Furnish inserts if units must be installed after concrete is placed.
   1. Operable Partitions: Fabricate supports for operable partitions of continuous steel shapes of sizes indicated, with attached bearing plates, anchors, and braces. Drill bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition shop drawings.

2.07 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Continuously seal joined members by continuous welds.

D. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

E. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

F. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.08 FACTORY APPLIED FINISHES - STEEL

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Galvanizing: Hot-dip galvanize all items exposed to the exterior, ASTM A123/A123M, minimum 2.0 oz/sq ft coating thickness.

C. Galvanize after fabrication.

D. After galvanizing, fill vent holes and grind smooth

E. Do not apply galvanizing using double- dip or progressive processes without Architect's or Engineer's written approval.

F. Galvanizing for Fasteners, Connectors, and Anchors:
1. Hot-Dipped Galvanizing: ASTM A153/A153M.
2. Mechanical Galvanizing: ASTM B695; Class 50 minimum.
3. Prime paint items with one coat except where galvanizing or stainless steel to remain unpainted is indicated.

G. Do not prime surfaces in direct contact with concrete or where field welding is required.

H. Do not prime surfaces in direct contact with concrete or where field welding is required.

I. Typical: For items indicated to receive typical interior or exterior acrylic or alkyd finish paint, use Red Oxide or High-performance, lead-and-chromate-free, rust-inhibitive primer compatible with specified finish coatings. Verify compatibility with specified finish paint.

J. Epoxy: For items to receive urethane alkyd enamel, use two-package epoxy primer after power wire-brushing or sandblasting all surfaces to bright steel.

2.09 FABRICATION TOLERANCES

A. Squareness: 1/8 inch (3.18 mm) maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16 inch (1.59 mm).

C. Maximum Misalignment of Adjacent Members: 1/16 inch (1.59 mm).

D. Maximum Bow: 1/8 inch (3.18 mm) in 48 inches (1219.2 mm).

E. Maximum Deviation From Plane: 1/16 inch (1.59 mm) in 48 inches (1219.2 mm).

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive Work.

3.02 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply steel items required to be cast into concrete or embedded in masonry with setting templates to appropriate sections.

3.03 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Make provisions for erection stresses. Install temporary bracing to maintain alignment, until permanent bracing and attachments are installed.

C. Field weld components indicated on shop drawings.

D. Perform field welding in accordance with AWS D1.1.

E. Obtain approval of Architect/Engineer prior to site cutting or making adjustments not scheduled.

F. After erection, touch up welds, abrasions, and damaged finishes with prime paint or galvanizing repair paint to match shop finishes.

G. Grind field welds smooth and flush; apply zinc-rich galvanizing repair paint to match shop-applied finish in accordance with ASTM A780

3.04 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Plumb: 1/4 inch (6.35 mm) per story or for every 12 ft in height whichever is greater, non-cumulative.

C. Maximum Offset From Alignment: 1/4 inch (6.35 mm).

D. Maximum Out-of-Position: 1/4 inch (6.35 mm).

END OF SECTION

SECTION 05 51 00

METAL STAIRS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Steel stair frame of structural sections, with closed risers and pan to receive concrete fill.
      a. Metal nosings at stairs with clear tread coating finish.
      b. Perforated steel sheet at risers where indicated.
   2. Delegated design of the complete metal stair system, including anchorage to the primary building structure.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Concrete fill in stair pans and landings.
   2. Section 05 52 00 - Metal Railings: Railing systems related to metal stairs.
   3. Section 05 73 00 - Glazed Decorative Metal Railings.
   4. Section 09 61 50 - Concrete Floor Clear Finish: Stair tread finish.
   5. Section 09 65 00 - Resilient Flooring and Base: Stair tread finish.
   6. Section 09 90 00 - Painting and Coating: Paint finish.

1.02 REFERENCES

A. ASTM International:
   1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
   2. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
   3. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
   4. ASTM A500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
   5. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts.
   6. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy
   7. ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
   8. ASTM F436 - Standard Specification for Hardened Steel Washers.

B. American Welding Society:
   1. AWS D1.1 - Structural Welding Code - Steel.

C. National Association of Architectural Metal Manufacturers:
   1. NAAMM AMP 510 - Metal Stairs Manual.

D. SSPC: The Society for Protective Coatings:

1. SSPC-Paint 15 - Steel Joist Shop Paint.
2. SSPC-Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

1.03 DESIGN REQUIREMENTS

A. Fabricate stair assembly to support uniform live load of 100 lb/sq ft and concentrated load of 300 lb/sq ft with deflection of treads, stringers, or landings not to exceed L/360.

B. Where local building codes exceed the above design requirements, provide the most stringent.

1.04 PERFORMANCE REQUIREMENTS

A. Delegated Design: The design of the complete metal stair system, including but not limited to, stair stringers, treads, risers, platforms, landings, support framing, guardrails, handrails, and anchorage to the primary building structure, shall be the responsibility of the Contractor.

B. The Contractor shall retain a qualified professional engineer, licensed in the project's jurisdiction, to perform the delegated design and provide all necessary engineering calculations and sealed drawings.

C. Performance Criteria: Design and size components to comply with all applicable requirements of the governing building code.
   1. Design Loads: At a minimum, design the stair system to support:
      a. A uniform live load of 100 psf on all treads and platforms.
      b. A concentrated load of 300 pounds applied over a 4-square-inch area on any tread or platform, whichever condition produces greater stress.
   2. Guardrail and Handrail Loads: Design guardrails and handrails to resist a minimum uniform load of 50 plf or a 200 pound concentrated load applied in any direction, in accordance with the building code.

D. Deflection Limits:
   1. Stair Assembly: Limit deflection of stringers, treads, and platforms under the specified live load to L/360 of the span.
   2. Tread Deflection: Limit deflection of individual treads under a 300-pound concentrated load to 1/8 inch or L/240, whichever is less.
   3. Guardrail Assembly: Limit deflection of guardrail members and attachments under specified loads in accordance with building code requirements.

1.05 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Submit a Delegated-Design Submittal that includes the following, all of which shall be signed and sealed by the retained professional engineer:
   1. Engineering Calculations:
      a. Provide comprehensive engineering analysis and calculations verifying compliance with all specified performance criteria and the governing building code.
      b. Calculations must demonstrate the structural adequacy of all components and anchorage to support specified design loads, including uniform, concentrated, and guardrail/handrail loads.
   2. Shop Drawings

a. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
b. Connection design including fasteners, clips, anchors and all other related aspects of the stair design.
c. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
d. Comply with all applicable model code required design loads.
e. Shop drawings shall be signed and sealed by a professional engineer licensed to practice in the state of Texas. Submit design calculations.

C. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months

1.06 QUALIFICATIONS

A. Prepare Shop Drawings under direct supervision of Professional Engineer experienced in design of this Work and in the State of Texas.

1.07 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Alfab, Inc.; www.alfabinc.com

B. American Stair, Inc.; www.americanstair.com

C. The Sharon Companies, Ltd.; www.sharoncompanies.com

D. Substitutions: Section 01 60 00 - Product Requirements.

2.02 COMPONENTS

A. General: Steel components shall contain not less than 28% recycled steel.

B. Steel Sections: ASTM A36/A36M.

C. Steel Plate: ASTM A36/A36M.

D. Hollow Structural Sections: ASTM A500, Grade B.

E. Steel Pipe: ASTM A53/A53M, Grade B Schedule 40.

F. Sheet Steel:
1. Commercial Quality: ASTM A569/A569M, uncoated cold rolled steel sheet.
2. Structural Quality: ASTM A570/A570M, Grade 30 (unless higher grade is required by design loads) uncoated cold rolled steel sheet

G. Welded Wire Fabric: ASTM A185, 6 x 6 W1.4 x W1.4.

H. Bolts: ASTM A307; Grade A or B.

I. Nuts: ASTM A563 heavy hex type.

J. Washers: ASTM F436; Type 1.

K. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; consistent with design of stair structure.

L. Welding Materials: AWS D1.1; type required for materials being welded.

M. Concrete: Type specified in Section 03 30 00.

N. Shop Primer: SSPC-Paint 15, Type 1, red oxide.
   1. Touch-Up Primer: Match shop primer.

O. Abrasive Nosings: Single-stage surface-mount type meeting requirements of ASTM B221
   1. Provide at stairs with clear finish coating at stair treads.
   2. Black aluminum oxide abrasive strips set in 3-inches wide x 1/4-inches x continuous mill finish extruded aluminum plate with integral turn-down nosing. Provide (5) abrasive strips with a total combined width of not less than 1-inch.
   3. Basis-of-Design: No. A3D mechanically-fastened as manufactured by Babcock-Davis or approved equivalent by Balco.
   4. Predrill for flat-head flush expansion anchors set no more than 3” from each end and maximum 15” O.C.; designed for post-installation on concrete-filled metal pan stair treads. Coordinate installation with concrete polishing contractor.
   5. Each nosing shall be in one-piece section and shall run from stringer to stringer.

2.03 SPECIALTIES

A. Perforated Steel Sheet Riser Infill
   1. Type: Minimum 16 ga. steel sheet with round-hole perforations. Provide as infill at open risers where indicated.
   2. Perforation Pattern: Maximum 1/8-inch diameter holes with a maximum 20% open area.
   3. Finish: Powder coat finish, shop applied. Color as selected by the Architect.
   4. Mounting Accessories: As indicated in the drawings.
   5. Manufacturers:
      a. McNichols Co.; www.mcnichols.com.
      b. Substitutions: Section 01 60 00 - Product Requirements.

2.04 FABRICATION - GENERAL

A. Comply with NAAMM AMP 510, "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" for Commercial Class, unless more stringent requirements are indicated.

B. Preassemble stairs in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. Fabricate components with joints tightly fitted and secured.

D. Continuously seal joined pieces by continuous welds.

E. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

F. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

G. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

H. Accommodate for expansion and contraction of members and building movement without damage to connections or members.

I. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain at slope not to exceed 1/4 inch (6.35 mm) per foot.

2.05 FABRICATION - PAN STAIRS AND LANDINGS

A. Fabricate stairs and landings with closed risers and treads of metal pan construction, ready to receive concrete.

B. Form treads and risers with minimum 14 gage sheet steel stock.

C. Secure tread pans to stringers with clip angles welded in place.

D. Form stringers with rolled steel channels or rectangular hollow sections, minimum 12 inches (304.8 mm) deep. Close exposed ends of channels and tubes with minimum 14 gage steel sheet.

E. Form landings with minimum 14 gage sheet stock. Reinforce underside with angles to attain design load requirements.

2.06 SHOP FINISHING

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Shop prime metal stairs. Do not prime surfaces that will be embedded in concrete or masonry.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive work. Verify concealed blocking and reinforcement is installed and correctly located to receive wall mounted handrails.

3.02 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply items required to be cast into concrete and or embedded in masonry with setting templates.

C. Confirm field-applied paint system is compatible with shop primer specified in this section.

3.03 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Install anchors, plates, angles, hangers, and struts required for connecting stairs to structure.

C. Allow for erection loads. Install sufficient temporary bracing to maintain framing safe, plumb, and in alignment.

D. Clean and strip primed steel items to bare metal where site welding is required.

E. Field weld components indicated on shop drawings. Perform field welding in accordance with AWS D1.1.

F. Field bolt and weld to match shop bolting and welding. Conceal bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

G. Mechanically fasten joints butted tight, flush, and hairline. Grind welds smooth and flush.

H. Obtain approval of Architect/Engineer prior to site cutting or creating adjustments not scheduled.

I. After erection, prime welds, and abrasions, except surfaces to be in contact with concrete.

3.04 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Plumb: 1/4 inch (6.35 mm) per story, non-cumulative. Maximum Variation From Plumb: 1/8 inch (3 mm) in 10 feet (3 m), non-cumulative at stairs with Glazed Decorative Metal Railings.

C. Maximum Offset From Alignment: 1/4 inch (6.35 mm).

3.05 PROTECTION AND COMPLETION

A. Protect steel tread pans during construction. Provide tight-fitting temporary plywood or solid lumber tread infill boards of sufficient thickness to protect against damage to tread pan edges if concrete infill is delayed.

B. Just prior to concrete infill of tread pans, remove any loose rust at pan bottoms and clean thoroughly.

C. Metal Nosings:

1. Install specified metal nosing on cured concrete infill using flat-head flush expansion bolts. Set nosing on cured concrete tread using 2-part epoxy and apply weight to nosing during curing of epoxy.
    a. Where underside of stairs is concealed, or if specifically approved by the Architect, drill through concrete infill and tread pan to install through-bolts with lock-washers and nuts in lieu of expansion bolts. Ping threads or spot weld nuts to bolts after installation.
    b. Keep traffic off of stairs until completed installation of nosing.
2. Prior to nosing installation coordinate with finish tile installer to ensure flush condition at tile interface of tile and nosing plate.
    a. Where installed tile thickness will exceed thickness of nosing plate, provide 2-1/2” wide X min. 14-ga. continuous galvanized sheet steel shimming plate(s) under nosing plate prior to installing expansion bolts to ensure flush condition at tile interface.
    b. Provide epoxy adhesive between shimming and concrete tread infill, between each shimming plate, and between shimming and bottom of nosing plate.

END OF SECTION

SECTION 05 52 00

METAL RAILINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Shop-primed steel railings, ready for finish field painting.
   2. Aluminum handrails.
   3. Stainless steel handrails and railings as defined by material and finish standards in Section 05 73 00.
   4. Delegated design of the complete railing system, including all components, connections, and anchorage.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Execution requirements for placement of anchors specified in this section in concrete.
   2. Section 04 20 00 - Unit Masonry Assemblies: Execution requirements for placement of anchors specified in this section in masonry.
   3. Section 05 51 00 - Metal Stairs.
   4. Section 05 73 00 - Glazed Decorative Metal Railings: Technical requirements for stainless steel alloys, finishes, and fabrication.
   5. Section 09 21 16 - Gypsum Board Assemblies: Execution requirements for placement of anchors specified in this section in stud wall construction.
   6. Section 09 90 00 - Painting and Costing: Paint finish.

1.02 REFERENCES

   2. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels; 2011 (Testing based on 2005 Edition).

B. ASTM International:
   1. ASTM B241/B241m-22 – Standard Specification for Aluminum and Aluminum-Alloy Seamless Pipe and Seamless Extruded Tube.
   2. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
   3. ASTM B221-12 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

C. SSPC: The Society for Protective Coatings:
   1. SSPC Paint 15 - Shop Painting.

1.03 DESIGN REQUIREMENTS

A. Design handrail, guardrail, and attachments to resist forces as required by applicable code. Apply loads non-simultaneously to produce maximum stresses.
   1. Guard Top Rail and Handrail Concentrated Load: 200 pounds applied at any point in any direction.
   2. Guard Top Rail Uniform Load: 50 plf applied in any direction.
   3. Intermediate Rails, Panels, and Baluster Concentrated Load: 50 pounds applied to 1 sf area.

B. Performance Requirements: The Professional Engineer shall design the complete metal railing system, including all members, connections, and anchorage to the building structure, to comply with the code requirements referenced on Drawings, and to resist the following loads:
   1. Guard Top Rail and Handrail Concentrated Load: 200 pounds applied at any point in any direction.
   2. Guard Top Rail Uniform Load: 50 plf applied in any direction.
   3. Intermediate Rails, Panels, and Baluster Concentrated Load: 50 pounds applied to a 1 sq. ft. area.

C. Deflection Limits: Design the system to not exceed the following deflection limits when subjected to design loads:
   1. Top Rail (Vertical and Horizontal): Deflection shall not exceed L/120 between posts, or 1/2 inch (13 mm), whichever is less.
   2. Pickets/Balusters (Horizontal): Deflection shall not exceed L/120 or 1/2 inch (25 mm).

D. Anchorage Design: The Professional Engineer shall design all anchorage (e.F., post base plates, anchor bolts, and connections to building structure) to resist the applied loads. Design shall account for the specific substrate (e.g., concrete, steel, or masonry) at each connection point.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Delegated Design Submittals:
   1. Shop Drawings: In addition to fabrication details, shop drawings shall bear the seal and signature of the responsible Professional Engineer.
   2. Structural Calculations: Submit comprehensive structural calculations, signed and sealed by the Professional Engineer, demonstrating compliance with all specified performance requirements and governing codes. Calculations shall include analysis of:
      a. All railing members (top rails, posts, intermediate rails).
      b. All connections (welds and mechanical fasteners).
      c. Anchorage details, including base plate analysis, anchor bolt selection, and embedment depth.

C. Samples:
   1. Submit one 6” x 6” sample of perforated clear anodized aluminum infill panel.
   2. Provide on-site mock-up of decorative steel railing section with finish painted steel and clear anodized perforated infill panel. Mock-up shall be full size and include at least 2 vertical supports and one infill panel. Mock-up may be utilized in the permanent construction if approved.

D. Product Data: Submit manufacturer's data for wall brackets.

1.05 QUALIFICATIONS

A. Delegated Design Engineer: The Professional Engineer performing the delegated design shall be licensed in the State of Texas and shall have a minimum of five (5) years of experience in the design of structural metal fabrications and railing systems.

B. Fabricator: Firm with a minimum of five (5) years of experience in fabricating railing systems of the type and complexity required for this Project.

1.06 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

PART 2 PRODUCTS

2.01 STEEL RAILING SYSTEM COMPONENTS

A. Tubing: ASTM A513, Type 5, minimum 50 ksi yield strength.

B. Shapes, Plates, and Bars: ASTM A36/A36M.

C. Hollow Structural Sections: ASTM A500, Grade B.

D. Pipe: ASTM A53/A53M, Grade B, Schedule 40.

E. Fittings: Elbows, T-shapes, wall brackets, escutcheons; cast steel.

F. Splice Connectors: Steel welding collars.

G. Shop Primer: SSPC Paint 15, Type 1, red oxide.

H. Touch-Up Primer: Match shop primer.

2.02 ALUMINUM RAILING SYSTEM COMPONENTS

A. Pipe: Extruded aluminum, Schedule 40 Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical, 6061 alloy, T6 temper for extruded structural members.

B. Fittings: Elbows, T-shapes, wall brackets, escutcheons; cast aluminum.

C. Splice Connectors: Welding collars; cast aluminum.

D. Interior Aluminum Surfaces: AAMA A41 anodized, prepared with mechanical pre-treatment, clear anodized.

E. Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical, 6061 alloy, T6 temper for extruded structural members.

F. Apply one coat of bituminous paint to concealed aluminum surfaces in contact with cementitious or dissimilar materials.

2.03 STAINLESS STEEL RAILING COMPONENTS

A. Material and Finish Standards:
   1. Provide stainless steel tubing, pipe, and fittings complying with the alloy and mechanical finish requirements specified in Section 05 73 00.
   2. Alloy: Type 304 stainless steel.
   3. Finish: NAAMM No. 4 directional satin finish.

B. Fabrication:
   1. Fabricate stainless steel components using shop-welded connections in accordance with Section 05 73 00.
   2. Field welding of stainless steel is prohibited.

2.04 MISCELLANEOUS COMPONENTS

A. Exposed Fasteners: Flush countersunk screws or bolts; consistent with design of railing.

B. Cast-in-Place and Post-installed Anchors: Anchors of type indicated below, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete.
   1. Cast-in-place anchors.
   2. Chemical anchors.
   3. Expansion anchors.

C. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

D. Brackets, Flanges, and Anchors: Cast or formed metal of same material and finish as supported rails, unless otherwise indicated.
   1. Manufacturers: Julius Blum and Co. www.juliusblum.com

2.05 FABRICATION

A. Preassemble handrails and railings to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

B. Form changes in direction of railing members as follows:
   1. By flush radius bends.
   2. By inserting prefabricated flush-elbow fittings.

C. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.

D. Fabricate components with joints tightly fitted and secured. Furnish spigots and sleeves to accommodate site assembly and installation.

E. Fasteners for Interconnecting Handrail and Railing Components: Use fasteners fabricated from same basic metal as fastened metal, unless otherwise indicated. Do not use metals that are corrosive or incompatible with materials joined.
   1. Provide concealed fasteners for interconnecting handrail and railing components and for attaching them to other work, unless otherwise indicated.
   2. Provide Phillips flat-head machine screws for exposed fasteners, unless otherwise indicated.

F. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect handrail and railing members to other work, unless otherwise indicated.

G. For railing posts set in concrete, provide preset sleeves of steel not less than 6 inches (152.4 mm) long with inside dimensions not less than 1/2 inch (12.7 mm) greater than outside dimensions of post, and steel plate forming bottom closure.

H. For removable railing posts, fabricate slip-fit sockets from steel tube whose ID is sized for a close fit with posts; limit movement of post without lateral load, measured at top, to not more than one-fortieth of post height. Provide socket covers designed and fabricated to resist being dislodged.

I. Close exposed ends of handrail and railing members with prefabricated end fittings.

J. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated. Close ends of returns, unless clearance between end of railing and wall is 1/4 inch (6.35 mm) or less.

K. Exterior Components: All exterior steel components shall be hot-dip galvanized. Provide shop painting where final finish is field painting. Continuously seal joined pieces by continuous welds. Drill condensate drainage holes at bottom of members at locations not encouraging water intrusion.

L. Interior Components: Continuously seal joined pieces by continuous welds.

M. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

N. Accurately form components to fit stairs and landings, each other, and building structure.

O. Accommodate for expansion and contraction of members and building movement without damage to connections or members.

2.06 FINISHES

A. Anodize all aluminum railings and hardware after fabrication. Provide matching anodized aluminum fittings, brackets, fasteners, sleeves, and other components unless indicated otherwise in the drawings.
   1. Clear Anodic Finish: AA-M12C22A31 (Mech. Finish): nonspecular as fabricated; Chemical Finish: etched, medium matte; anodic coating: Architectural Class I, clear coating 0.7 mil (0.01778 mm) or thicker) complying with AAMA 607.1 and AAMA 611.

B. Shop prime all steel components where final finish is field painting.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify field conditions are acceptable and are ready to receive work.

C. Verify concealed blocking and reinforcement is installed and correctly located to receive wall mounted handrails.

3.02 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply items required to be cast into concrete, embedded in masonry, or placed in partitions with setting templates.

3.03 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Set embedded posts in pipe sleeves and fill space between post and sleeve with nonshrink grout.

C. Fit exposed connections together to form tight, hairline joints.

D. Anchor railings to structure.

E. Field weld anchors as indicated on shop drawings. Touch-up welds with primer. Grind welds smooth.

F. Conceal bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

G. Assemble tube rails with sleeves to accommodate tight joints and secure installation.

H. Attach handrails to wall with wall brackets. Provide bracket with 1-1/2-inch clearance from inside face of handrail and finished wall surface.
   1. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
   2. Secure wall brackets to building construction as follows:
      a. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
      b. For hollow masonry anchorage, use toggle bolts.
      c. For steel-framed gypsum board assemblies, use hanger or lag bolts set into wood backing between studs. Coordinate with stud installation to locate backing members.

3.04 INSTALLATION - STAINLESS STEEL

A. Coordination: Coordinate with Section 09 21 16 and Section 06 10 53 to ensure internal wall blocking is correctly located for handrail brackets.

B. Mounting: Secure wall brackets to building construction using fasteners appropriate for the substrate as specified in Section 05 73 00.

C. General: Install stainless steel railings in accordance with the quality standards and tolerances defined in Section 05 73 00 and this Section.

D. Protection: Apply strippable temporary protective covering to all exposed stainless steel surfaces prior to shipment to the project site. Maintain factory-applied protective coverings until Substantial Completion to prevent "tea-staining" or construction damage.

3.05 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Plumb: 1/4 inch (6.35 mm) per story, non-cumulative.

C. Maximum Offset From Alignment: 1/4 inch (6.35 mm).

D. Maximum Out-of-Position: 1/4 inch (6.35 mm).

END OF SECTION

SECTION 05 73 00

GLAZED DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Post-supported stainless steel railing system with custom specialty glass infill.
   2. Delegated design of structural glass railing system, including all components and anchorage.

B. Related Sections:
   1. Section 05 51 00 - Metal Stairs: Steel stair stringers, treads, and risers.

1.02 REFERENCES

A. American National Standards Institute (ANSI) (www.ansi.org)
   1. Z97.1 - Safety Performance Specifications and Methods of Test for Safety Glazing Material Used in Buildings.

B. ASTM International (ASTM) (www.astm.org):
   1. A240/A240M – Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   2. A554 - Standard Specification for Welded Stainless Steel Mechanical Tubing.
   3. C1048 - Standard Specification for Heat-Treated Flat Glass-Kind HS, Kind FT, Coated and Uncoated Glass.
   4. E985 - Standard Specification for Permanent Metal Railing Systems and Rails for Buildings.

C. National Association of Architectural Metal Manufacturers (NAAMM) (www.naamm.org)
   1. AMP 503 - Finishes for Stainless Steel.

1.03 DEFINITIONS

A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas, pedestrian guidance and support, visual separation, or wall protection.

1.04 PERFORMANCE REQUIREMENTS

A. Structural Performance: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
   1. Handrails:
      a. Uniform load of 50 lbf/ft. applied in any direction.
      b. Concentrated load of 200 lbf applied in any direction.
      c. Uniform and concentrated loads need not be assumed to act concurrently.
   2. Glazing Infill:

a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft.
b. Infill load and other loads need not be assumed to act concurrently.

1.05 SUBMITTALS

A. NAAMM AMP 503 manufacturer's product lines of railings assembled from standard components.

B. Grout, anchoring cement, and paint products.

C. Delegated-Design Submittal: For manufactured glazed infill metal railings, provide connection design including fasteners, clips, anchors and all other related aspects of the framing design: comply with all applicable code-required design loads. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

D. Samples for Initial Selection: For products involving selection of color, finish, or design, including mechanical finishes.

E. Samples for Verification: For each type of exposed finish required.
1. Sections of each distinctly different linear railing member, including handrails, top rails, and posts.
2. Nominal 2 feet (60.96 cm) x 2 ft. laminated glazing panel including approved design for interlayer film.
3. Fittings and brackets.
4. Welded connections.
5. Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, and infill. Show method of finishing members at intersections. Samples need not be full height.

F. Mill Certificates: Signed by manufacturers of stainless-steel products certifying that products furnished comply with requirements.
1. Welding certificates.
2. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E894 and ASTM E935.

1.06 QUALITY ASSURANCE

A. Delegated Design Engineer: The Professional Engineer performing the delegated design shall be licensed in the State of Texas and shall have a minimum of five (5) years of experience in the design of structural metal fabrications and railing systems.

B. Source Limitations: Obtain each type of railing from single source from single manufacturer.

C. Installer Qualifications: Minimum 5-years’ experience in installation of work of this section and similar scope.

D. Product Options: Drawings indicate size, profiles, and dimensional requirements of railings and are based on the specific system indicated. Refer to Section 01 60 00 "Product Requirements."

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

E. Retain "Welding Qualifications" Paragraph below if shop or field welding is required. If retaining, also retain "Welding certificates" Paragraph in "Informational Submittals" Article.

F. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.6, "Structural Welding Code - Stainless Steel."

G. Safety Glazing Labeling: Permanently mark glass with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

H. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockups for each form and finish of railing consisting of panel base, infill panel, top channel, and anchorage system components that are full height and are not less than 48-inches in length.
2. Locate mockups as directed by Architect.

I. Preinstallation Conference: Conduct conference at Project site.

1.07 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.08 COORDINATION AND SCHEDULING

A. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

B. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not suit structural performance requirements.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. C.R Laurence Co., Inc.; www.crlaurence.com
2. Viva Railings; www.vivarailings.com
3. Livers Bronze Co.; www.liversbronze.com
4. P & P Artec.; www.artec-rail.com
5. Shickel Corporation., www.shickel.com

6. Tri Tech, Inc., www.tritechhandrails.com

B. Basis-of-Design: Modified *SOLO Fascia Overlay System* as manufactured by VIVA with custom decorative laminated glass or approved equivalent system by specified manufacturer.

C. Reference drawings for any custom features varying from manufacturer's standard design.

2.02 COMPONENTS

A. General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Stainless Steel:
1. Shapes: ASTM A240/A240M, Series 300.
2. Tube: ASTM A554, Series 300.
3. Finish: No. 4, 380 grit per NAAMM AMP 503.

C. Mounting Base
1. System manufacturer's cast aluminum 4-1/2" high X 2-7-8" wide X continuous Shoe Base anchored to steel stair channels as indicated.
a. Base designed to clamp glazing panel edges within continuous 1" open gap.
b. Provide cut-to-fit neoprene or clear nylon pressure pads between metal and glass.

D. Glazing Infill Panels – Tempered and laminated glazing as engineered by the system manufacturer:
1. Type: Tempered and laminated glazing as engineered by the system manufacturer:
a. 2 lites of minimum 1/4-inch thick clear tempered glass. Provide greater thickness where recommended by Engineer of Record.
b. Plastic Interlayer Film: Color matching Guardian's *LamiGlass Deep Red.* Thickness as recommended by system manufacturer.
c. Total Thickness: Minimum 9/16-inch.
d. Vertical Joints: 1/2" uniform gap open joints spaced as indicated, 5'-0" maximum.
2. Top Cap: System manufacturer's 1" high stainless steel inverted "U" cap, set over top edge of glass with manufacturer's recommended elastomeric adhesive. Run cap continuously over top glass edge and joint gaps. Provide tight hairline joints where a single length cannot be provided.
3. Handrailing:
a. 1.5-inch outside-diameter stainless steel round tubing.
b. Provide In longest practicable lengths between in-line joints.

2.03 WALL MOUNTED STAINLESS STEEL COMPONENTS

A. Wall-Mounted Handrails: 1.5-inch outside-diameter stainless steel round tubing, Type 304, with No. 4 finish.

B. Mounting Brackets: Series 300 stainless steel wall brackets with concealed anchorage, providing 1-1/2 inch clearance from finished wall.

2.04 ACCESSORIES

A. Connector Bolts and Anchors: Series 300 stainless steel bolts, washers, and nuts as part of manufacturer's system.

B. Handrail Brackets: Series 300 stainless steel.

2.05 STAINLESS STEEL

A. Tubing: ASTM A554, Grade MT 304.

B. Pipe: ASTM A312/A312M, Grade TP 304.

C. Castings: ASTM A743/A743M, Grade CF 8 or CF 20.

D. Sheet, Strip, Plate, and Flat Bar: ASTM A 666, Type 304.

E. Bars and Shapes: ASTM A 276, Type 304.

2.06 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.

B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Form work true to line and level with accurate angles and surfaces.

D. Connections: Fabricate railings with shop welded connections unless otherwise indicated.

E. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove flux immediately.
   4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds: no evidence of a welded joint.

F. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
   1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.

G. Form changes in direction as follows:
   1. By bending to smallest radius that will not result in distortion of railing member.

H. Bend railing members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

I. Close exposed ends of hollow railing members with prefabricated end fittings.

J. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch (6.35 mm) or less.

K. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
   1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.

L. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

2.07 GLAZING PANEL FABRICATION

A. Fabricate laminated panels to sizes and shapes required; provide for proper edge clearance on glazing panels.

B. Grind and polish smooth exposed edges, including those at open joints, to produce square edges with slight chamfers at junctions of edges and faces.

2.08 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

E. Stainless Steel and Aluminum Finishes:
   1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
   2. Directional Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches. Run grain of directional finishes with long dimension of each piece to provide No. 6. satin finish.
   3. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
   1. Do not field weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
   2. Set vertical railings and panels plumb within a tolerance of 1/16-inch in 3-feet.
   3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch (6.35 mm) in 12 feet (365.76 cm).

C. Adjust railings before anchoring to ensure matching alignment at abuttin

D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.02 RAILING CONNECTIONS

A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.

B. Welded Connections: Field welding not allowed.

C. Expansion Joints: Install expansion joints at locations required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches (50.8 mm) beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 6 inches (152.4 mm) of post.

3.03 ANCHORING TURN-DOWN POSTS

A. Anchor any turned-down posts to concrete floor slab with floor flanges with welded stub pipe to extend into railing turn-down. Fasten with flush stainless steel machine screw threaded through post and into stub pipe.

3.04 ATTACHING WALL RAILINGS

A. Attach handrails to walls with wall brackets. Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

B. Use type of bracket with flange tapped for concealed anchorage.

C. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

D. Secure wall brackets to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.
3. For steel-framed partitions, use hanger or lag bolts set into wood backing between studs. Coordinate with stud installation to locate backing members.

3.05 INSTALLING GLASS PANELS

A. Install railing system in accordance with railing manufacturer's written instructions and approved Shop Drawings.

B. Install all panels plumb, and panels at landings plumb and level. Panels shall be accurately fitted, free from distortion and defects. Keep open joints uniform in dimension.

C. Do not cut, drill, or alter glass panels in field. Protect edges from damage.

3.06 CLEANING

A. Clean stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.

B. Clean and polish glass as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.

3.07 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units. Glazing panels with edge damaged shall be replaced with new matching panels.

END OF SECTION

SECTION 06 10 53

MISCELLANEOUS ROUGH CARPENTRY

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:
   1. Blocking in wall and roof openings.
   2. Plywood sheathing.
   3. Wood furring and grounds.
   4. Concealed wood blocking for support of toilet accessories, wall cabinets, handrails, and other wall-mounted items.
   5. Telephone and electrical panel back boards.
   6. Fire retardant and preservative treatment of wood.

1.02 REFERENCES

A. American Forest and Paper Association:
   1. AF&PA - National Design Specifications for Wood Construction.

B. American Wood-Preservers' Association:
   1. AWPA U1 - User Specification for Treated Wood.

D. U.S. Department of Commerce National Institute of Standards and Technology:
   1. DOC PS 1 - Construction and Industrial Plywood.
   2. DOC PS 2 - Performance Standard for Wood-Based Structural-Use Panels.
   3. DOC PS 20 - American Softwood Lumber Standard.

E. West Coast Lumber Inspection Bureau:
   1. WCLIB - Standard Grading Rules for West Coast Lumber.

F. Western Wood Products Association:
   1. WWPA G-5 - Western Lumber Grading Rules.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit technical data on wood preservative and fire retardant treatment materials and application instructions.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with the following:
   1. Lumber Grading Agency: Certified by DOC PS 20.
   2. Plywood Grading Agency: Certified by EWA - The Engineered Wood Association.
   3. Lumber: DOC PS 20.
   4. Plywood: DOC PS 1 or DOC PS 2.

B. Surface Burning Characteristics:
   1. Fire Retardant Treated Materials: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Apply label from agency approved by authority having jurisdiction to identify each preservative treated and fire-retardant treated material.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Lumber Grading Rules: AF&PA, SPIB, WCLIB, WWPA G-5.

B. Miscellaneous Framing: Southern pine, mixed southern pine or spruce-pine-fir species; 19 percent maximum moisture content.

C. Plywood: APA/EWA; southern pine or Douglas fir species; 1/2 inch thick, minimum.

2.02 ACCESSORIES

A. Fasteners and Anchors:
   1. Fasteners: Hot dipped galvanized steel for high humidity and treated wood locations, unfinished or cadmium plated steel elsewhere.
   2. Nails and Staples: ASTM F1667.
   3. Anchors:
      a. Toggle bolt type for anchorage to hollow masonry.
      b. Expansion shield and lag bolt type for anchorage to solid masonry or concrete.
      c. Bolt or ballistic fastener for anchorages to steel.

2.03 FACTORY WOOD TREATMENT

A. Preservative Treatment: AWPA U1, Use Category UC2; using inorganic boron (SBX) preservative with 0.25 percent retainage.

B. Fire Retardant Treatment: AWPA U1, Use Category UCFA for interior use, and UCFB for exterior use; chemically treated and pressure impregnated.

C. Moisture Content after Treatment:
   1. Lumber: Maximum 19 percent.
   2. Plywood: Maximum 15 percent.

2.04 FIELD WOOD TREATMENT

A. Preservative Treatment: Brush applied inorganic boron solution, with minimum concentration of 1.5 percent.

B. Touch-up cut wood ends.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify substrate conditions are ready to receive blocking, curbing and framing.

3.02 PREPARATION

A. Coordinate placement of blocking, curbing and framing items.

3.03 INSTALLATION

A. Set members level and plumb, in correct position.

B. Place horizontal members, crown side up.

C. Construct curb members of solid wood sections.

D. Curb roof openings except where prefabricated curbs are provided. Form corners by alternating lapping side members.

E. Coordinate curb installation with installation of decking and support of deck openings.

F. Secure sheathing to framing members with ends over firm bearing and staggered.

G. Install plywood parapet sheathing using 1/- inch thick plywood. Space panels 1/8 inch apart at edges and ends.

H. Install telephone and electrical panel back boards using 3/4 inch thick plywood. Size back boards 12 inches beyond size of electrical and telephone panel, or as indicated on Drawings.

3.04 SCHEDULE OF WOOD TREATMENT

A. Note: The term “Treated” as may be used on the drawings for wood products does not distinguish between Fire-Retardant Treated or Preservative Treated. Conditions as specified below shall take precedence over drawing notations. Where governing code authorities require Fire-Retardant Treatment in addition to conditions stated below or noted in the drawings, those authorities shall govern.

B. Fire-Retardant Treatment: In buildings of Types I-B, II-A, and II-B construction, all rough carpentry items shall be fire retardant treated in the following conditions:

1. All wood including but not necessarily limited to cants, nailers, shims, curbs, equipment support bases, blocking, and sheathing built into the roof or above the roof line. Use only preservative treatment formulated for exterior use.
2. Blocking, nailers, supports, shims or other wood construction within the building whether or not concealed within walls or above-celling shall be fire-retardant treated. For wood in contact with concrete slab-on-grade use only preservative treatment formulated for exterior use
3. Any wood Items indicated on the drawings as “Fire-Retardant Treated”.

C. Preservative Treatment: Install preservative treated wood in the following conditions:
1. All wood including but not necessarily limited to sills, sleepers, blocking, furring, stripping, and wood flooring nailers that are in contact with concrete slab-on-grade or built into exterior walls.
2. All wood framing, blocking, and furring members used in exterior construction except for Fire-Retardant Treated wood conditions as specified above.
3. All wood framing, blocking, furring, and roofing wood including cants, nailers, shims, curbs, equipment support bases, and sheathing used in concession buildings, toilet buildings, press box buildings, and similar free-standing separate ancillary buildings shall be Preservative Treated.

END OF SECTION

SECTION 06 20 24

INTERIOR FINISH CARPENTRY AND MILLWORK

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Miscellaneous wood or plastic laminate clad millwork items that are not included in Section 12 32 16 Plastic Laminate Clad Casework.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood furring, blocking, shims, and hanging strips required for installing finish carpentry and millwork items.
   2. Section 06 61 19 - Quartz Surfacing Fabrications.

1.02 REFERENCES

A. American Forest and Paper Association:

B. AF&PA - National Design Specifications for Wood Construction.

C. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of product indicated.

C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

D. Show locations and sizes of required furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
   1. Indicate wood type and finish of each piece of construction.
   2. Samples:
   3. Submit three representative samples of each finish carpentry and millwork item, illustrating wood grain, edge and corner condition(s), and finish.

1.04 QUALITY ASSURANCE

A. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for interior finish carpentry including wood grades, construction, finishes, and other requirements.

B. Surface Burning Characteristics for Fire Retardant Treated Items: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Where required by authority having jurisdiction, apply label from approved agency identifying each item.

1.05 QUALIFICATIONS

A. Installer Qualifications: An experienced installer who has completed finish interior carpentry similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fabricator Qualifications: A firm experienced in producing finish interior carpentry millwork similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect work from moisture damage.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Comply with AWI requirements.

C. Maintain temperature and humidity conditions within ranges recommended by AWI. Do not deliver or install millwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

D. Allow materials to acclimate to temperature and humidity conditions recommended by AWI for minimum of 48 hours prior to installation. Maintain same conditions during and after installation.

1.08 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.09 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate work with electrical rough-in and installation of associated and adjacent finishes.

C. Coordinate locations and requirements for blocking and backing for support and attachment of work of this section.

PART 2 PRODUCTS

2.01 MATERIALS

A. Plastic Laminate Surfacing: Comply with NEMA Standard GP50 high pressure laminated plastic as provided by Wilsonart, Formica, or Pionite. Provide 0.053-inch thick material at horizontal surfaces, and 0.033-inch thick laminate on exposed vertical surfaces. Provide backing sheet on bottom or concealed surfaces. Color(s) to be selected by the Architect from manufacturer's full range.

B. Hardwood Plywood and Face Veneers: HPVA HP-1, Grade A, min 7-ply wood veneer core, face species to match hardwood lumber.

C. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.

D. Concealed Plywood: U.S. Product Standard PSI-66, 7-ply wood veneer core Douglas Fir plywood, grade trademarked DFPA, sanded. A-D grade. Use only in concealed areas or as core for plastic laminate. Use exterior grade at sink cabinets.

2.02 ACCESSORIES

A. Fasteners and Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors in masonry walls.

B. Adhesive for High Pressure Decorative Laminates: FS A-A-1936 contact adhesive.

C. PVC Edge Trim (mandatory): Extruded rigid PVC; smooth finish, of width to match component thickness; standard or custom color as required to match plastic laminate; 0.04 inch (1 mm) and 0.12 inch (3 mm) thickness.

D. Glass: Clear tempered double strength, as specified in Section 08 80 00.

E. Fasteners and Anchors:
   1. Fasteners: Hot dipped or Electro galvanized steel for high humidity and treated wood locations, unfinished steel elsewhere.

F. Nails and Staples: ASTM F1667.

G. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application.

H. Concealed Joint Fasteners: Threaded steel.

I. Door and Drawer Pulls: Edge Pull by Tudix,www.tydrix.com

J. Length: 3 inch (76.2 mm)

K. Style:SR

L. Roller Diameter: 1/4 inch (6.35 mm)

M. Finish: Satin Nickel US 15

N. Hinges: European style concealed self-closing type, steel with nickel-plated finish.

O. Grommets:
   1. Type: Plastic or nylon 2-1/2” diameter with flip-top tab in cap, in color(s) as selected by the Architect.
   2. Locations: Where indicated on the drawings and where needed for data wiring to pass through counter tops, whether or not indicated.
   3. Basis of Design: Model #EDP3 as manufactured by Doug Mocket & Co., 800-523-1269.
      a. Workstation Countertop Brackets (Hidden):
         1) Material: Steel.
         2) Finish: Manufacturer's standard, factory-applied powder coat, in black color.
   4. Basis of Design: Iron Supports, Hidden Center Mount Countertop Bracket, www.ironsupports.com

2.03 FABRICATION, GENERAL

A. Provide Custom grade interior millwork complying with the referenced quality standard. All work shall be of the highest quality workmanship thoroughly sanded and cleaned, free from tool marks, with all nails properly set, filled and sanded smooth. Moldings and trim shall be furnished in as long lengths as practicable. All pencil and chalk marks shall be removed.

B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Fabricate millwork to dimensions, profiles, and details indicated.

D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

PART 3 EXECUTION

3.01 PREPARATION

A. Condition millwork to average prevailing humidity conditions in installation areas before installation.

B. Before installing architectural millwork, examine shop-fabricated work for completion and complete work as required, including removal of packaging and.

3.02 MISCELLANEOUS MILLWORK INSTALLATION

A. Install miscellaneous millwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch (3.18 mm) in 96 inches (2438.4 mm).

B. Scribe and cut millwork to fit adjoining work and refinish cut surfaces and repair damaged finish at cuts.

C. Anchor millwork to anchors or blocking built in or directly attached to substrates. Secure with concealed fasteners and blind nailing as required for complete installation.

D. Field Finishing:

E. Mask off adjacent surfaces before beginning sanding.
   1. Sand to smooth even finish with no evidence of sander marks. Take precautions to contain dust. Remove dust by vacuum.
   2. Apply filler and stain and three finish coats.
   3. Apply first coat, allow to dry, then buff lightly with steel wool to remove irregularities. Vacuum clean and wipe with damp cloth before applying succeeding coat.
   4. Apply second and successive coats. Allow to dry. Lightly buff between coats with steel wool and vacuum clean before applying succeeding coat.

3.03 ADJUSTING AND CLEANING

A. Repair damaged and defective millwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace millwork. Adjust joinery for uniform appearance.

B. Clean millwork on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION

SECTION 06 42 17

MANUFACTURED DECORATIVE WOOD WALL PANEL SYSTEM - ALTERNATE

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Custom plywood decorative wall panels, shop fabricated and finished.
   2. Shop finishing.

B. Related Sections:
   1. Section 06 20 24 - Interior Finish Carpentry and Millwork.

1.02 REFERENCES

A. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   2. Underwriter’s Laboratories: Class A rating.per UL 723.

B. Architectural Woodwork Institute:
   1. AWI - Quality Standards Illustrated.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate panel materials, shapes and sizes, surface graining, fastening methods, joining methods, and connections to other work, to minimum scale of 1-1/2 inch to 1 ft.

C. Product Data: Submit data on fire retardant classification and treatment.

D. Samples: Submit three representative samples of finished panels, 12 x 12 inch in size illustrating panel construction, decorative pattern, and final finish.

E. Product Data:
   1. Panel manufacturer’s printed data describing panel construction, materials, installation hardware, and decorative pattern.
   2. Finish manufacturer’s printed data describing proposed applied finish material and fire protection characteristics.

1.04 QUALITY ASSURANCE

A. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for grades of interior architectural woodwork, construction, finishes, and other requirements.

B. Receive manufactured panels at shop and finish panels in accordance with AWI Quality Standard Section 1500.

1.05 QUALIFICATIONS

A. Installer Qualifications: An experienced installer who has completed architectural woodwork similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fabricator Qualifications: A firm experienced in producing architectural woodwork similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Source Limitations: Engage a qualified woodworking firm to assume undivided responsibility for finishing, cutting, fitting and installation of manufactured wall panels.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect work from moisture damage.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Comply with AWI requirements.

C. Maintain temperature and humidity conditions within ranges recommended by AWI. Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

D. Allow materials to acclimate to temperature and humidity conditions recommended by AWI for minimum of 48 hours prior to installation. Maintain same conditions during and after installation.

1.08 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.09 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate work with electrical rough-in and installation of associated and adjacent finishes.

C. Coordinate locations and requirements for blocking and backing within finished walls for support and attachment of work of this section.

PART 2 - PRODUCTS

2.01 DECORATIVE WOOD WALL PANELS

A. Basis of Design: Raggio Natura Collection as manufactured by Soelberg, www.soelbergi.com.

B. System Description: 3/4” thick factory-sanded Baltic Birch plywood panels with routed decorative pattern nominal 7/16” deep.

C. Manufacture’s Components
   1. Baltic Birch Panels
      a. Size(s): 3/4” thick x 48” x 96” face size(s) as received from the panel manufacturer. Panels shop cut and fit to size(s) required for measured construction and indicated design.
      b. Material: 7-ply wood-veneer core with sanded Birch faces; Cabinet-grade Baltic Birch plywood, with no voids in panel edges or design cuts.
   2. Mounting System and Trim:
      a. Panel manufacturer’s concealed low-profile aluminum zee clips mounted on panel back and wall. Provide quantity as recommended by panel manufacturer for the particular panel size and substrate material.
      b. Fasteners:
         1) Back of Panels: Flat head counter sunk screws to fasten each half of zee clips to back of plywood panels.
         2) Wall: Flat head counter sunk screws to fasten mated half of each zee clip through finish wall into solid furring. Provide screw type appropriate for furring material.

D. Finish System: Thermoformed rigid decorative surface contoured to the panel surface design. UL Class-A fire rating:
   1. Color/Pattern: As scheduled.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify adequacy of substrate, support framing and concealed furring.

C. Verify any mechanical, electrical, or other building items affecting work of this section are installed and ready to receive this work.

3.02 INSTALLATION

A. Install each half of concealed mounting clips onto furring using wood screws for wood furring, or self-drilling sheet metal screws for cold formed metal furring.

B. Match locations on back of panels with mated halves of mounting clips using wood screws.

C. Install panels plumb, square, and uniformly spaced on mounting clips, and set with minimal amount of construction adhesive behind top panel edges to avoid accidental lift from clips.

D. Joints between panels shall be butted uniformly tight.

END OF SECTION

SECTION 06 42 19

PLASTIC LAMINATE WALL PANELS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Plastic laminate-clad individual panels with all edges finished.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Concealed sheet metal mounting bands required for installing paneling. Wood blocking as may be required by the panel manufacturer or installer.
   2. Section 09 21 16 - Gypsum Board Assemblies: Installation and finishing of drywall after installation of sheet metal mounting bands.
   3. Section 09 90 00 - Painting and Coating: Finish painting of drywall prior to installation of panels.

1.02 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each product indicated.
   1. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.

C. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations based on job measurements.
   1. Show typical and all non-typical details full size.
   2. Show locations and sizes of concealed mounting clips.
   3. Show typical location for exposed false mounting bolts and washers.

D. Samples for Verification: For the following:
   1. Plastic laminate chain of samples for initial approval of color/finish selection.
   2. Plastic-laminate-clad panel sections nominal 8 by 10 inches (254 mm) face size, with matching vinyl edges. Provide one sample panel for each selected color/pattern/finish once initial selections are determined.

E. Provide fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or other testing and inspecting agency acceptable to authorities having jurisdiction

F. Product Certificates: Signed by manufacturers of paneling certifying that products furnished comply with requirements.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed paneling similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fabricator Qualifications: A firm experienced in producing paneling similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for grades of paneling, construction, finishes, and other requirements.

1.04 MOCK-UP

A. Section 01-40 00 - Quality Requirements: Mock-up requirements.

B. Before fabricating panels build onsite mockup using a minimum of (3) stacked panels mounted on finished stud wall. Approved mockup will become the standard of fit, finish, materials and workmanship for the completed Work. Build mockup to comply with the following requirements, using materials indicated for the completed Work:
   1. Build mockup in the location and of the size indicated or, if not indicated, as directed by Architect.
   2. Notify Architect seven days in advance of dates and times when mockups will be installed.
   3. Use only materials that meet the requirements of the specifications, and finish materials in the selected color(s) and finish(es).
   4. Obtain Architect's approval of mockup before starting paneling fabrication.
   5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
   6. Approved mockups may become part of the completed Work.

1.05 PRE-INSTALLATION MEETINGS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Do not deliver paneling until painting and similar operations that could damage paneling have been completed in installation areas. If paneling must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.07 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where paneling is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
   1. Locate concealed framing, blocking, and reinforcements that support paneling by field measurements before being enclosed and indicate measurements on Shop Drawings.
   2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating paneling without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.08 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that paneling can be installed as indicated.

PART 2 PRODUCTS

2.01 PANELING FABRICATORS

A. Available Fabricators: Subject to compliance with requirements, fabricators offering paneling that may be incorporated into the Work include, but are not limited to, the following:
   1. Panel Specialists, Inc. (PSI), www.panelspec.com.
   2. Custom Plastics, www.customplastics.com.
   3. Substitutions: Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. General: Provide materials that comply with requirements of the AWI quality standard for quality grade specified, unless otherwise indicated.

B. Wood Products: Comply with the following:
   1. Particle board: 4-pound density particle board core faced with fire-rated vertical surface type (.030") high-pressure laminate and backed with .028" high pressure laminate backer sheet.
   2. Manufacturer: Provide "Duraflake FR" by Willamette Industries or equivalent.

C. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated, or if not indicated, as required by woodwork quality standard.
   1. Available Manufacturers:
      a. Formica Corporation.
      b. International Paper; Decorative Products Div, www.internationalpaper.com.
      c. Pionite Decorative Surfaces, www.pionite.com.
      d. Laminart, www.laminart.com.

e. Wilsonart International, www.wilsonart.com.

D. Panel Fire-Test-Response Characteristics: Fabricated panels rated Class A in accordance with ASTM E84;
1. Flame spread 25 or less.
2. Smoke developed 460 or less.
3. Cataloged by Underwriters Laboratories as UL 723.
a. Provide fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or other testing and inspecting agency acceptable to authorities having jurisdiction.
4. Rated Class “A”.
5. Flame Spread Rating: Less than 25.
6. Smoke Developed Rating: Less than 100.

E. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln-dried to less than 15 percent moisture content.

F. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

2.03 FABRICATION, GENERAL

A. Paneling Grade: Provide Custom grade paneling complying with the referenced quality standard.

B. Wood Moisture Content: Comply with requirements of the referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Complete fabrication to maximum extent feasible, before shipment to Project site. Disassemble components only as necessary for shipment and installation.

D. Neatly cut openings to receive fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs and seal with clear waterproofing agent.

2.04 PLASTIC-LAMINATE-CLAD PANELS

A. Quality Standard: Comply with AWI Section 500.

B. Plastic-Laminate Cladding: High-pressure decorative laminate, color(s) and finish as scheduled:
1. Faces: Type VGF.
2. Backs: Type BKV.
3. Panel Edges: 3mm PVC edging in color to match panel face.

C. Panel Core Construction: Fire-retardant high-density particleboard.

D. Fire-Retardant-Treated Paneling: Provide panels consisting of fire-retardant plastic laminate and fire-retardant particleboard or fire-retardant medium-density fiberboard. Panels shall have a flame-spread rating of 75 or less and a smoke-developed rating of 450 or less per ASTM E84.

E. Finish Sizes:
   1. Overall finish panel thickness shall be 7/16 inch (11.11 mm) minimum.
   2. Panel face size(s) shall be as indicated in the drawings.

F. Accessories:
   1. Panel anchors: Panel manufacturer's recommended formed steel or extruded aluminum zee clips specially designed for panel mounting. Zee clips shall provide for 1/4-inch gap from face of mounting substrate to back of panel.
   2. Divider moulding: No. 302.
   3. Outside corner moulding, 90 degrees: No. 103-90, with end caps.
   4. Trim moulding: No. 304.

PART 3 EXECUTION

3.01 PREPARATION

A. Condition paneling to average prevailing humidity conditions in installation areas before installation.

B. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and back-priming.

3.02 INSTALLATION

A. Quality Standard: Install panels to comply with AWI Section 1700 for the appropriate grade of materials.

B. Install continuous horizontal bands of 16-ga. x 4" wide sheet metal to metal wall studs prior to installation of gypsum board.
   1. Fasten sheet steel band using minimum of (2) bugle-head drywall screws at each stud. Dimple sheet metal at screw locations for flush heads to avoid interference with gypsum board installation.
   2. Provide continuous metal bands horizontally as required for mounting of panel zee-clip receivers using flat-head sheet metal screws or drywall screws.
      a. Fasten corresponding half of each zee clip to back of panel using flat-head wood screws.
      b. Each panel shall have a minimum total of (6) zee clips mounted to the horizontal mounting bands.

C. Install each panel with long length horizontal; level, plumb, true, and straight with no distortions and with all top and bottom edges in alignment.
   1. Shim as required with concealed shims to ensure full length of each panel is flush with adjacent panel. Install level and plumb to a tolerance of 1/8 inch (3.18 mm) in 96 inches (2438.4 mm).
   2. Install each panel flush with adjacent panels.

3. Install self-adhesive foam backer spacers where required to keep panel mounts tight without rattle.

3.03 ADJUSTING AND CLEANING

A. Adjust installed panels where necessary to provide uniform gaps between panels, all top edges level and in alignment, and with all panel edges flush with each adjacent panel edge.

B. Replace any panels that are damaged during installation or prior to Owner acceptance.

C. Clean exposed surfaces of panels and deliver to the Owner recommended cleaner in quantity suitable for a minimum of 50 cleanings.

END OF SECTION

SECTION 06 61 19

QUARTZ SURFACE FABRICATIONS

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes quartz-based fabricated stone fabrications and countertops.

B. Related Sections:
1. Section 06 20 24 - Interior Finish Carpentry and Millwork: Base cabinet countertop support.
2. Section 12 32 16 - Manufactured Plastic Laminate-Clad Casework

1.02 REFERENCES

A. ASTM International:
1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
2. ASTM C97 - Standard Test Methods for Absorption and Bulk Specific Gravity of Dimension Stone.
3. ASTM D1709 - Standard Test Methods for Impact Resistance of Plastic Film by the Free Falling Dart Method.
4. ASTM C501 - Standard Test Method for Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abraser.
5. ANSI Z124.6 - Stain resistance of plastic fixtures.
6. NEMA LD3 - High Temperature Resistance.

1.03 SUBMITTALS

A. Section 013300 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate dimensions, thicknesses, required clearances, tolerances, materials, colors, finishes, fabrication details, field jointing, adjacent construction, methods of support, integration of plumbing and electrical components, and anchorages.

C. Product Data: Submit data on specified component products.

D. Samples: Submit two samples, 12 x 12 inch in size illustrating each color, texture, and finish.

E. Manufacturer's Installation Instructions: Submit preparation of opening required, rough-in sizes, and tolerances for item placement.

1.04 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit list of approved cleaning materials and procedures required, and list of substances harmful to component materials. Include instructions for stain removal and surface and gloss restoration.

1.05 WARRANTY:

A. Provide manufacturer's limited commercial 10-year warranty against product defects.

1.06 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' documented experience.

B. Installer: Fabricated and installed by manufacturer's certified fabricator/installer with a minimum of 5-years' experience in similar installations. Provide manufacturer's written certification with assurance of manufacturer's warranty.

PART 2 - PRODUCTS

2.01 QUARTZ SURFACING FABRICATIONS

A. Manufacturers:
   1. Basis-of-Design: Corian Quartz, as manufactured by DuPont; www.corian.com
   2. Acceptable Manufacturers:
      a. LX Hausys (Viatera); www.lxhausys.com/us/
      b. Wilsonart Quartz; www.wilsonart.com
   3. Substitutions: Section 01 60 00 - Product Requirements.

B. Performance Characteristics:
   1. Surface Burning Characteristics: Class A (Class 1) per ASTM E84.
      a. Flame Spread: 25 or less.
      b. Smoke Developed: 450 or less.
   2. Water Absorption: Less than 0.05% per ASTM C97.
   3. Performance Standards: Provide products certified as meeting or exceeding performance standards for quartz surfacing as established by the International Surface Fabricators Association (ISFA).

C. Basis of Design: Reference the Drawings: Finish Schedule.

2.02 COMPOSITION

A. Nominal 93% crushed quartz aggregate combined with resins and pigments fabricated into slabs using a vacuum vibro-compaction process.

B. Color: As selected by the Architect from manufacturer's full range of standard and custom colors for polished finish.

2.03 SHOP FABRICATION

A. Finished Slab Thickness: 3/4-inch or 1-1/4-inch as indicated in the drawings.

B. Slab Sizes: As indicated.

C. Identification: Each slab shall be labeled with fabricator’s batch number and imprinted with manufacturer’s identifying mark on the back side.

D. Polish exposed surfaces to manufacturer’s “Polished” finish with gloss rating of 35%.

E. Beveled or slightly radiused corners and edges.

F. Provide all necessary cut-outs. Obtain templates from plumbing subcontractor for fittings, sinks, and lavatories. Provide cut-outs with minimum 3/8” inside corner radius. Reinforce any remaining material less than 3-inches wide with concealed strip(s) of quartz panels, or as recommended by the manufacturer's approved fabrication guidelines.

G. Laminate layers of quartz surfacing as required to create built-up edges or other areas requiring additional thickness as indicated in the drawings.

2.04 ACCESSORIES

A. Adhesives and Sealants:
   1. Provide manufacturer's recommended seaming adhesive for all joints.
   2. Provide a high-grade, 100-percent silicone sealant, in a color matching the countertop, for all joints to dissimilar materials (e.g., backsplashes, walls).
   3. Use mildew-resistant type in wet areas.
   4. Joint Sealants: Clear silicone sealant by Dow Corning or General Electric as recommended by the manufacturer for the specific application and conditions of use. Provide anti-bacterial type at restrooms and food preparation areas.

PART 3 - EXECUTION

3.01 STORAGE AND HANDLING

A. Store in racks in near-vertical position, indoors and away from direct exposure to sun or other heat source.

B. Protect against warpage and breakage.

C. Store with finished face turned toward finished face and separated by heavy paper or cardboard.

3.02 EXAMINATION

A. Reference Section 01 30 00 - Administrative Requirements: Coordination and project conditions

B. Field-verify all relevant dimensions prior to beginning fabrication.

C. Verify that substrates supporting quartz surfacing are plumb, level, and within plane to within 1/16-inch per ten-ft., and that necessary supports and blocking are in place.

D. Ensure that base cabinets are securely fixed to adjoining units and back wall.

E. Verify joint preparation and affected dimensions are acceptable.

3.03 INSTALLATION

A. Align work plumb and level.

B. Rigidly adhere or physically anchor finished panels in concealed manner to prevent movement or misalignment.

3.04 ERECTION TOLERANCES

A. Maximum Variation from Indicated Dimension: 1/8 inch.

B. Maximum Offset from Indicated Position: 1/8 inch.

3.05 FINAL CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean and polish all exposed surfaces of quartz surfacing.

C. Furnish to the Owner (2) 16 oz. or larger containers of manufacturer’s recommended non-abrasive, low pH cleaning and polishing agent.

END OF SECTION

SECTION 07 13 00

SHEET WATERPROOFING

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:
   1. Modified bituminous sheet waterproofing.
      a. Vertical Application
   2. Auxillary Products (accessories).
      a. Protection Board
         1) Rigid asphaltic-compositition protection board for vertical application at locations indicated and as specified herein.

B. Related Sections:
   1. Section 07 27 26 - Fluid-Applied Air Barrier.
   2. Section 07 90 00 - Joint Protection.
   3. Section 09 21 16 - Gypsum Board Assemblies for interior walls at showers.
   4. Section 09 30 00 - Tiling: Membrane liner at shower pan.
   5. Section 14 24 00 - MRL Hydraulic Passenger Elevators.

1.02 REFERENCE STANDARDS

A. ASTM International:
   1. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers - Tension.
   2. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.

B. National Roofing Contractors Association:
   1. NRCA - The NRCA Waterproofing and Dampproofing Manual.

1.03 SYSTEM DESCRIPTION

A. Waterproofing System: Capable of resisting water under positive pressure and preventing moisture migration to interior.

B. General:
   1. Waterproofing sheet material and protection board shall be provided at:
      a. All locations where water resistant membranes and waterproofing membranes are indicated below grade,
      b. All interior or exterior walls that are retaining soil.
      c. At walls separating the inside of the building from soil on the outside of the wall (exterior side of the wall).
      d. Locations where sheet waterproofing will be required include, but are not limited to:
         1) Portions of walls below finish floor level such as auditorium walls, orchestra pit walls, pit walls of any kind, elevator pit walls.

2) Walls retaining soil at open air structures including but not limited to stadiums and parking structures, walls adjacent to ramps, exterior retaining walls and planter walls.

e. Where the Construction Documents for the preceding locations do not indicate sheet waterproofing, Contractor shall provide sheet waterproofing and protection boards as specified in this Section.

f. Sheet waterproofing and protection board shall be considered as a single system – where one is required, both are required.

g. Bituminous dampproofing in liquid or mastic form is not considered a substitute for sheet waterproofing for any portion of the building.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings:
1. Indicate special joint or termination conditions and conditions of interface with other materials.

C. Product Data: Submit data for surface conditioner, flexible flashings, joint cover sheet, and joint and crack sealants, with temperature range for application of waterproofing membrane.

D. Samples: Submit 12 x 12 inch samples of waterproofing sheet and protection board.

E. Manufacturer's Installation Instructions:
1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
2. Submit special procedures and perimeter conditions requiring special attention.

F. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Perform Work in accordance with NRCA Waterproofing Manual NRCA (WM) and manufacturer’s instructions.

1.06 QUALIFICATIONS

A. Applicator: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.

1.07 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.08 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
   1. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application and until liquid or mastic accessories have cured.
   2. Do not apply waterproofing in snow, rain, fog, or mist.

1.09 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for waterproofing failing to resist penetration of water.

C. For warranty repair work, remove and replace materials concealing waterproofing.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations for Waterproofing System: Obtain waterproofing materials, and associated materials, not limited to protection course, and molded-sheet drainage panels from single source from single manufacturer.

2.02 MODIFIED BITUMINOUS SHEET WATERPROOFING

A. Modified Bituminous Sheet: Minimum 60-mil (1.5-mm) nominal thickness, self-adhering sheet consisting of 56 mils (1.4 mm) of rubberized asphalt laminated on one side to a 4-mil- (0.10-mm-) thick, polyethylene-film reinforcement, and with release liner on adhesive side; formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction.

B. Subject to compliance with requirements, products which may be incorporated in the Work include the following:
   1. Bituthene System 4000, GCP Applied Technologies, www.gcpat.com
   2. Mel-Rol, W. R. Meadows, Inc., www.wrmeadows.com
   3. CCW Miradri 860/861, Carlisle Coatings & Waterproofing Incorporated, Division of Carlisle Companies Incorporated www.carlisle-ccw.com
   4. Duramem 700-SM, Pecora Corporation, www.pecora.com
   5. Polyguard 650, Polyguard Products, Inc., www.polyguardproducts.com
   6. TW-60, Tamko Building Products, Inc., www.tamko.com
   7. Substitutions: Section 01 60 00 - Product Requirements.

C. Physical Properties:

Properties	Test	Results
Tensile Strength	ASTM D412	250 psi
Elongation	ASTM D412	300 percent
Low-Temperature Flexibility	ASTM D1970/D1970M	Pass at minus 20 deg F
Crack Cycling	ASTM C836/C836M	100 Cycles of 1/8" movement
Puncture Resistance	ASTM E154/E154M	40 lbf

Water Absorption	ASTM D570	0.15 percent weight gain
Moisture Vapor(perms)	ASTM E96/E96M	0.05 perms
Hydrostatic-Head Resistance	ASTM D5385/D5385M	150 feet

D. Sheet Strips: Self-adhering, rubberized-asphalt strips of same paterial and thickness as sheet waterproofing.

2.03 AUXILIARY MATERIALS

A. Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.

B. Surface Conditioner: Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by sheet-waterproofing material manufacturer.
   1. Compatible with membrane.

C. Primer: Liquid waterborne or solvent-borne primer recommended for substrate by sheet-waterproofing material manufacturer.

D. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity.

E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating.

F. Sealant: As specified in Section 07 90 00.

G. Protection Board: Rigid asphaltic-composition board, nominal 1/4-inch thick, or structural insulating board conforming to ASTM C208.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of waterproofing.
   1. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of waterproofing system.
   2. Verify items penetrating surfaces to receive waterproofing are securely installed.
   3. Verify substrate surface slopes to drain for horizontal waterproofing applications.
   4. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D4263.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protect adjacent surfaces not designated to receive waterproofing.

B. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.

C. Seal cracks and joints with sealant materials using depth to width ratio as recommended by sealant manufacturer.

D. Apply surface conditioner at rate recommended by manufacturer. Protect conditioner from rain or frost until dry.

E. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

F. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

G. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.

H. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D4258.

I. Bridge and cover isolation joints, expansion joints, and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths according to manufacturer's written instructions.
   1. Invert and loosely lay first sheet strip over center of joint. Firmly adhere second sheet strip to first and overlap to substrate.

J. Corners: Prepare, prime, and treat inside and outside corners according to manufacturer's written recommendations.

K. Install membrane strips centered over vertical inside corners. Install 3/4-inch (19-mm) fillets of liquid membrane on horizontal inside corners and as follows:
   1. At footing-to-wall intersections, extend liquid membrane in each direction from corner or install membrane strip centered over corner.
   2. At plaza-deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.

L. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to manufacturer's written instructions.

3.03 MODIFIED BITUMINOUS SHEET-WATERPROOFING APPLICATION

A. Install modified bituminous sheets according to waterproofing manufacturer's written instructions and per recommendations.

B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.

C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- (64-mm-) minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.
   1. When ambient and substrate temperatures range between 25 and 40 deg F (minus 4 and plus 5 deg C), install self-adhering, modified bituminous sheets produced for low-

temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F (16 deg C).

D. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.

E. Seal edges of sheet-waterproofing terminations with mastic.

F. Install sheet-waterproofing and auxiliary materials to tie into any adjacent waterproofing.

G. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches (150 mm) beyond repaired areas in all directions.

H. Immediately install protection course with butted joints over waterproofing membrane.
   1. Molded sheet drainage panels, Insulation drainage panels, or Board insulation may be used in place of a separate protection course to vertical applications when approved by waterproofing manufacturer and installed immediately.

3.04 INSTALLATION - SELF ADHERED MEMBRANE WATERPROOFING

A. Roll out membrane. Minimize wrinkles and bubbles.

B. Remove release paper layer. Roll out on substrate with mechanical roller to encourage full contact bond.

C. Lap sides and ends.

D. Overlap edges and ends minimum 3 inches and seal with contact adhesive. Seal permanently waterproof.

E. Reinforce membrane with multiple thickness of membrane material over joints, whether joints are static or dynamic.

F. Weather lap joints on sloped substrate in direction of drainage. Seal joints and seams. Coordinate with drain installation.

G. Seal membrane to adjoining surfaces.

H. Extend membrane over cants and up intersecting surfaces at membrane perimeter minimum 6 inches above horizontal surface laid in shingle fashion.

I. Seal items protruding to or penetrating through membrane.

3.05 INSULATION DRAINAGE-PANEL INSTALLATION

A. Install insulation drainage panels over waterproofed surfaces. Cut and fit to within 3/4 inch (19 mm) of projections and penetrations.

B. Ensure that drainage channels are aligned and free of obstructions.

C. On vertical surfaces, set insulation drainage panels in adhesive or tape applied according to manufacturer's written instructions.

D. On horizontal surfaces, loosely lay insulation drainage panels according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.]

3.06 FIELD QUALITY CONTROL

A. Testing Agency: Owner may engage a qualified testing agency to perform tests.

B. Manufacturer's Field Service: If required as a condition of warranty, engage a site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components; and to furnish daily reports to Architect.

C. Waterproofing will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.07 PROTECTION, REPAIR, AND CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Do not permit foot or vehicular traffic on unprotected horizontal membranes.

C. Protect waterproofing from damage and wear during remainder of construction period.

D. Protect membrane from damage by adhering protection board immediately after membrane placement.

E. Protect installed insulation drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

F. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

G. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

H. Carefully backfill and compact so as not to damage or dislodge protection board.

END OF SECTION

SECTION 07 21 13

THERMAL WALL INSULATION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes
1. Rigid plastic insulation at exterior masonry wall construction.
2. Rigid mineral fiberboard insulation at exterior masonry wall construction with air spaces exceeding 2-1/2" in clear opening.
3. Rigid mineral fiberboard insulation at exterior ACM metal panel walls.
4. Blanket insulation where specifically indicated at detail areas.

1.02 REFERENCE STANDARDS

A. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications; 2013 (Reapproved 2019).

B. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation; 2014 (Reapproved 2019).

C. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing; 2017.

D. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board; 2022a.

E. ASTM D2842 - Standard Test Method for Water Absorption of Rigid Cellular Plastics; 2019.

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2022.

G. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

H. ASTM E136 - Standard Test Method for Assessing Combustibility of Materials Using a Vertical Tube Furnace at 750 °C; 2022.

I. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components; 2023.

1.03 RELATED SECTIONS:

A. Section 04 20 00 - Unit Masonry Assemblies: Cavity wall construction.

B. Section 04 73 00 – Manufactured Stone Masonry

C. Section 06 10 53 – Miscellaneous Rough Carpentry: Wood stud wall construction.

D. Section 07 27 26 – Fluid-Applied Membrane Air Barrier: Substrate.

E. Section 07 42 13 – Prefinished Metal Wall and Soffit Panels.

F. Section 09 21 16 – Gypsum Board Assemblies: Gypsum sheathing substrate.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit for product characteristics, performance criteria, and limitations.
   1. Provide product data indicating fire-test-response characteristics in accordance with the following, or similar testing and inspecting agency acceptable to authorities having jurisdiction:
      a. Identify materials with appropriate markings of applicable testing and inspecting agency.
         1) Surface-Burning Characteristics tested per ASTM E84.
         2) Fire-Resistance Ratings tested per ASTM E119.
         3) Combustion Characteristics tested per ASTM E136.
      b. Provide product data indicating thermal characteristics.
   2. Provide documentation that the proposed total R-value meets the requirements of ASHRAE 90.1 for project building zone per International Building Code.
   3. Provide coordinated submittal with Air Barrier system and/or other products required to be tested as part of an assembly for meeting requirements of NFPA 285.

C. Manufacturer's Installation Instructions: Submit special environmental conditions required for installation and installation techniques.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.05 QUALITY ASSURANCE

A. Insulation Installed in Concealed Locations Surface Burning Characteristics:
   1. Maximum 75/450 flame spread/smoke developed index when tested in accordance with ASTM E84.
      a. Apply label from agency approved by authority having jurisdiction to identify each foam plastic insulation board.

1.06 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.
   1. Do not install adhesives when temperature or weather conditions are detrimental to successful installation.

1.07 SEQUENCING

A. Section 01 10 00 - Summary: Work sequence.
   1. Sequence Work to ensure air barrier materials are successfully completed before beginning Work of this section.

1.08 PRE-INSTALLATION MEETINGS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration by moisture, soiling, and other sources.

B. Store inside and in a dry location.
   1. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

C. Protect plastic insulation as follows:
   1. Do not expose plastic insulation to sunlight, except to extent necessary for period of installation and concealment.
   2. Protect against ignition at all times.
   3. Do not deliver plastic insulating materials to Project site before installation time.
   4. Once started, complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 PRODUCTS

2.01 APPLICATIONS

A. Use only insulation board products that have been tested as an assembly with other specific products, including Air Barrier system, per NFPA 285. Coordinate with General Contractor to ensure products are submitted as part of a tested assembly.

B. Protection: All plastic insulation boards must be utilized, detailed, and protected in accordance with requirements of NFPA 285- and applicable governing authorities.

2.02 CAVITY WALL PLASTIC RIGID INSULATION BOARD

A. Manufacturers
   1. Thermax; Dow Chemical USA, www.dow.com
   2. EnergyGuard; GAF Corp., www.gaf.com
   3. XCI Class A; Hunter Panels, www.hunterpanels.com
   4. EnergyShield PRO2: Atlas Wall Board, www.atlaswall.com
   5. ThermaSheath; Rmax, www.rmax.com
   6. Substitutions: Section 01 60 00 - Product Requirements.

B. Materials
   1. Polyisocyanurate Insulation Board meeting requirements of ASTM C1289 and NFPA 285:
   2. Board size: 16 x 96 inches (2438.4 mm).
   3. Board Thickness: 2-inches or as indicated in the drawings.

4. Thermal Resistance: 5-year aged R-value of 5.7 per inch thickness or greater.
5. Face Material: Type I foil face or Type II glass mat face as required to meet the specific requirements of ASTM C1289 and NFPA 285 for the tested insulation/air barrier assembly.

C. Accessories
1. Adhesive: Type recommended by insulation manufacturer for application. Ensure compatibility with applied air barrier material.

2.03 FIBERBOARD INSULATION MATERIALS

A. Mineral Fiberboard Insulation: Rigid or semi-rigid mineral fiber, ASTM C612 or ASTM C553; unfaced flame spread index of 0 (zero) when tested in accordance with ASTM E84.
1. Facing: Unfaced, dark.
2. Flame Spread Index: 25 or less, when tested in accordance with ASTM E84.
3. Smoke Developed Index: 0 (zero), when tested in accordance with ASTM E84.
4. Board Thickness: 3-inches, or as indicated in the drawings.
5. Thermal Resistance: R-value of 4.3 per inch of thickness.
6. Maximum Density: 8 pcf, nominal.
7. Location: Exterior cavity wall, continuous insulation within air space.
8. Products:
a. Rockwool (Roxul, Inc); Cavityrock: www.rockwool.com
b. Thermafiber, Inc; Rainbarrier 45: www.thermafiber.com

2.04 BLANKET INSULATION

A. Manufacturers:
1. CertainTeed Corporation www.certainteed.com
2. Johns Manville Corporation. www.jm.com
3. Owens Corning. www.owens-corning.com
4. Substitutions: Section 01 60 00 - Product Requirements.

B. Type: ASTM C665; preformed glass fiber blankets; friction fit, conforming to the following:
1. Thermal Resistance: Minimum R-value of 19.
2. Thickness: 6 inches (152.4 mm).
3. Width: 12 and 16 inches (406.4 mm) wide, as needed for the particular stud spacing.
4. Facing: Unfaced.

C. Applications:
1. Special applications only where specifically indicated in the drawings at exterior stud wall cavities and parapets.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

1. Verify substrate, adjacent materials, and insulation boards are dry and ready to receive insulation.
2. Verify all debris has been cleared from wall cavity.

B. Verify wall ties are properly spaced and ready to receive insulation.

3.02 BOARD INSUALTION

A. Apply adhesive to substrate.

B. Install boards horizontally between wall ties.

C. Stagger end joints. Butt edges and ends tight to adjacent boards.

D. Cut and fit insulation tight to protrusions or interruptions to insulation plane.

3.03 BLANKET INSULATION

A. Install only at areas where board insulation or loose fill insulation is not indicated.

B. Use blanket widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill cavity, provide lengths that will produce a snug fit between ends.

C. Place blankets in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.

D. For metal-framed wall cavities where cavity heights exceed 96 inches (2438.4 mm), support unfaced blankets mechanically.

E. Do not compress insulation.
1. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.
2. Fit insulation tight in spaces and tight to exterior side of mechanical and electrical services within plane of insulation.

3.04 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

SECTION 07 27 26

FLUID-APPLIED MEMBRANE AIR BARRIER

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:
   1. Vapor-permeable, fluid-applied air barriers.

B. Related Sections include the following:
   1. Section 07 21 13 - Thermal Wall Insulation: Board insulation and compatibility.
   2. Section 09 21 16 - Gypsum Board Assemblies: Exterior sheathing board.

1.02 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2016 (Reapproved 2021).

B. ASTM D570 - Standard Test Method for Water Absorption of Plastics; 2022.

C. ASTM D1004 - Standard Test Method for Tear Resistance (Graves Tear) of Plastic Film and Sheeting; 2021.

D. ASTM D1876 - Standard Test Method for Peel Resistance of Adhesives (T-Peel Test); 2008 (Reapproved 2023).

E. ASTM D1938 - Standard Test Method for Tear-Propagation Resistance (Trouser Tear) of Plastic Film and Thin Sheeting by a Single-Tear Method; 19.

F. ASTM D1970/D1970M - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection; 2021.

G. ASTM D2178/D2178M - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing; 2015a (Reapproved 2021).

H. ASTM D2369 - Standard Test Method for Volatile Content of Coatings; 2020.

I. ASTM D4263 - Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method; 1983 (Reapproved 2018).

J. ASTM D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers; 2022.

K. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2023.

L. ASTM E154/E154M - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover; 2008a (Reapproved 2019).

M. ASTM E2178 - Standard Test Method for Determining Air Leakage Rate and Calculation of Air Permeance of Building Materials; 2021a.

N. ASTM E2357 - Standard Test Method for Determining Air Leakage Rate of Air Barrier Assemblies; 2018.

O. NFPA 285 - Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components; 2023.

1.03 REFERENCES

1.04 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

C. Edge Protection: Provide at the following locations: 1) at sheathing perimeter edges, and 2) at edges where holes are cut in sheathing. Protect all instances of the exposed gypsum core of sheathing with a continuous self-adhering sheet flashing compatible with the air barrier system.

D. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.05 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; dry film thickness; and tested physical and performance properties of products.
   2. Include manufacturer’s data from ICC-ES substantiating recent compliance with building code in effect for Project. The ICC-ES report for the submitted Vapor Permeable Weather-resistive Barrier shall indicate that the ”Barrier” is approved for use in the Type of Construction corresponding to the Project’s Type of Construction (i.e. Type I, II, III, IV and Type V). Where this is not the case, the report shall not exclude the Air Barrier from being used for the Type of Construction corresponding to the Project.
   3. Provide documentation showing compliance with NFPA 285 as required by applicable building code for combustible weather-resistive barriers.
   4. Installation Accessories (Tapes, precut closure pieces and other items required or recommended by the manufacturer, if any): Manufacturer’s data sheets and complete installation requirements and recommendations.
   5. Submit proof of proposed product being listed on the ABAA web site as an acceptable Air Barrier.

B. Shop Drawings: For air-barrier assemblies.
   1. Show locations and extent of air-barrier materials, accessories, and assemblies specific to Project conditions.
   2. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
   3. Include details of interfaces with other materials that form part of air barrier.

1.06 INFORMATIONAL SUBMITTALS

A. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.

B. Compatibility: Submit a letter from the primary material manufacturer stating that the materials proposed for use are permanently chemically compatible as well as adhesively compatible with the adjacent materials proposed for use. Submit the letter from manufacturer stating that cleaning materials used during installation are also chemically compatible with adjacent materials proposed for use.

1. Confirm that air / water barrier included in the Masonry “Compatibility Report” is compatible with all Masonry related products to be used on the job, and that the barrier has been checked for compatibility with all other products (not Masonry) which it will touch or be placed in-close-proximity to. Compatibility with the following items, but not limited to the following, shall be confirmed: air / water barrier materials, vapor retarders if any, insulation, and sheathing surfaces. Incompatible products shall not be provided nor combined. Products that are incompatible with the air / water barrier shall not be provided nor combined and used with the air barrier. [If proposed product is asphalt-based, and incompatible with the masonry accessories, state this in the submittal.]

C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

D. Field quality-control reports.

E. NFPA 285 coordination and compliance data shall include, but not be limited to, showing that the air barrier product(s) and other products / materials also being supplied on the job for the wall systems, have been tested together in a wall system matching the job requirements.

F. Quality Assurance:

1. Submit evidence of current accreditation and certification under the Air Barrier Association of America’s (ABAA) Quality Assurance Program. Submit accreditation number of manufacturer and certification numbers of proposed installers.

1.07 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer.

C. Do not install liquid-applied membrane in snow, rain, fog, or mist or when such conditions are expected within 24 hours of completed application. Do not install liquid-applied membrane when the temperature of substrate surfaces and surrounding air temperatures are below those recommended by the vapor permeable air barrier manufacturer.

1.08 PERFORMANCE REQUIREMENTS

A. Material performance: Provide materials that have an air permeance not to exceed 0.004 cu. ft. per minute per sq. ft. under a pressure differential of 0.3 in. water (1.57 psf) (0.02 L/m2@75 Pa.) when tested in in accordance with ASTM E2178.

B. Assembly Performance: Provide a continuous vapor permeable air barrier assembly that has an air leakage not to exceed 0.040 cu. ft. per minute per sq. ft. under a pressure differential of 0.3 in. water (1.57 psf) (0.20 L/m2@75 Pa.) when tested in in accordance with ASTM E2357.
   1. Assembly shall be capable of withstanding combined positive and negative design wind, fan, and stack pressures on the envelope without damage or displacement, and shall transfer the load to the structure.
   2. Assembly shall perform as a liquid drainage plane flashed to discharge condensation or water penetration to the exterior. Assembly shall accommodate movements of building materials by providing expansion and control joints as required, with accessory vapor permeable air barrier materials at such locations, changes in substrate, and perimeter conditions.
   3. Assembly shall not displace adjacent materials under full load.
   4. Assembly shall be joined in an airtight and flexible manner to the air barrier material of adjacent assemblies, allowing for the relative movement of assemblies due to thermal and moisture variations, and any anticipated seismic movement. Connection shall be made between:
      a. Foundation and walls.
      b. Walls and windows or doors.
      c. Different wall systems.
      d. Wall and roof.
      e. Wall and roof over unconditioned space.
      f. Walls, floor and roof across construction, control and expansion joints.
      g. Walls, floors and roof to utility, pipe and duct penetrations.
   5. All penetrations of the air barrier and paths of air infiltration/exfiltration shall be made airtight.

C. System is not suitable for waterproofing applications in hydrostatic condition.

D. System is not compatible with petroleum solvents, fuels and oils, materials containing creosote, pentachlorophenol, or linseed oil.

1.09 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
   1. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.

B. Coordination Requirements: Even though the following conditions exist on the job 1) there may, or may not, be an indicated Basis-of-Design for the combustible wall “air barrier” and the combustible “rigid foam plastic wall insulation” indicated to be used together in the project walls to achieve NFPA 285 wall system testing compliance - and 2) the choice of air barrier (and insulation) to be used on the project is open to the bidding process and contingent on the air barrier product having been tested with other “to be bid” products including but not limited to the combustible rigid foam plastic wall insulation, submit evidence that the proposed air barrier and associated proposed wall system components have been tested together, as a “system” to pass NFPA 285 testing requirements. The lead Contractor shall coordinate as necessary, or cause to be coordinated as necessary, to provide a set of materials that have been fire tested together for the job.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in original packages with seals unbroken, labeled with manufacturer's name, product, date of manufacturer, and any special directions for storage.

B. Store materials in their original undamaged packages in a clean, dry, protected location within temperature range recommended by the manufacturer. Protect stored materials from direct sunlight.

C. Handle materials in accordance with manufacturer's recommendations.

D. Remove and replace liquid materials that cannot be applied within their stated shelf life.

1.11 WARRANTY

A. Material Warranty: Provide Manufacturer's standard form in which manufacturer agrees to replace fluid-applied air barrier membrane materials that fail within specified warranty period when installed and used in accordance with manufacturer's written instructions.
   1. Failures include, but are not necessarily limited to the following:
      a. Failure to maintain air permeance rating not to exceed .004 cfm/sq. ft (0.02 L/s/sq. m.) when tested per ASTM E2178, within specified warranty period.
      b. Failure to maintain a vapor permeance rating greater than 10 perms when tested in accordance with ASTM E96/E96M, Method B.
   2. Warranty Period: Minimum of 20-years from date of Substantial Completion of the Project.

B. Installer's Warranty: Provide air barrier subcontractor's material and installation warranty for a minimum of 2-years from date of Substantial Completion of the Project. Warranty shall cover all components of the air barrier assembly against failure including loss of airtight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.

1.12 PRE-INSTALLATION CONFERENCE

A. A pre-installation conference shall be held prior to commencement of field operations to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work. Pre-installation conference shall include the Contractor, installer, Architect, and system manufacturer's field representative. Agenda for meeting shall include but not be limited to the following:
   1. Review of Submittals.
   2. Review of surface preparation, minimum curing period and installation procedures.
   3. Review of special details and flashings.
   4. Sequence of construction, responsibilities and schedule for subsequent operations.
   5. Review of mock-up requirements.
   6. Review of inspection, testing, protection and repair procedures.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. General: Manufacturer shall be a firm with a minimum of 10-years' experience in the production and sales of waterproofing and air barriers. Manufacturers proposed for use, but not

named in these specifications shall submit evidence of ability to meet all requirements specified, and include a list of projects of similar design and complexity completed within the past five years.

1. Grace Construction Products: Perm-A Barrier VP.
2. Henry Company, Inc.: Air Bloc 31MR
3. Sika Corporation: Sikagard 530
4. Tremco, Inc.: ExoAir 220.
5. W.R. Meadows, Inc.: Air Shield LMP.
6. Substitutions: Section 01 60 00 - Product Requirements.

B. Fluid-Applied Membrane: Single component acrylic vapor-permeable air barrier membrane, resulting in minimum 30-mil dry thickness.

1. Basis of Design: Perm-A Barrier VP as manufactured by Grace Construction Products.
2. Air permeance: Less than 0.004 cfm/ft2 per ASTM E2178.
3. Water vapor transmission: Not less than 11.2 perms (649.6 ng/Pa x s x sq. m); when tested in accordance with ASTM E96/E96M.
4. Pull adhesion to glass faced wall board: 25 psi or greater per ASTM D4541.
5. Tensile strength: 15 psi or greater per ASTM D412.
6. Solids content: Minimum 50% by volume or weight per ASTM D2369.
7. UV exposure limit: Not more than 180 calendar days; per ASTM D412 and ASTM E96/E96M-Method B.

C. Transition Membrane: Perm-A-Barrier Detail Membrane, fully adhered.

D. Through-Wall Flashing: Perm-A-Barrier Wall Flashing: 0.8 mm (32 mils) of self-adhesive rubberized asphalt integrally bonded to 0.2 mm (8 mil) of cross-laminated, high-density polyethylene film to provide a min. 1.0 mm (40 mil) thick membrane. Membrane shall be interleaved with disposable silicone-coated release paper until installed, conforming with the following:

1. Water Vapor Transmission: ASTM E96/E96M, Method B: 2.9 ng/m2sPa (0.05 perms) max.
2. Water Absorption: ASTM D570: max. 0.1% by weight
3. Puncture Resistance: ASTM E154/E154M : 356 N (80 lbs.) min.
4. Tear Resistance:
5. Initiation ASTM D1004: min. 58 N (13.0 lbs.) M.D.
6. Propagation ASTM D1938 : min. 40 N (9.0 lbs.) M.D.
7. Lap Adhesion at -4ºC (25ºF): ASTM D1876: 880 N/m (5.0 lbs./in.) of width
8. Low Temperature Flexibility ASTM D1970/D1970M: Unaffected to -43ºC (-45ºF)
9. Tensile Strength: ASTM D412, Die C Modified: min. 5.5 MPa (800 psi)
10. Elongation, Ultimate Failure of Rubberized Asphalt: ASTM D412, Die C: min. 200%.

E. Primer: Water based Perm-A-Barrier Primer Plus or WB Primer.

F. Penetrations, terminations, and detailing sealant: Bituthene Liquid Membrane.

G. Joint Sealant: As recommended by the primary system manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces are durable, free of matter detrimental to adhesion or application of air barrier system. Verify items penetrating substrate are securely anchored and prepared to receive air barrier system.

C. Ensure the following conditions:
   1. Surfaces are sound, dry, even, and free of oil, grease, dirt, excess mortar or other contaminants.
   2. Concrete surfaces are cured and dry, smooth without large voids, loose aggregate, spalled areas, or sharp protrusions.
   3. Masonry joints are full, flush, and completely filled with mortar, and all excess mortar on masonry ties has been removed.
   4. Corners and edges of drywall sheathing panels are properly screw-fastened to avoid any deflection in the final membrane, and all fastener heads are driven flush with the panel surface.
   5. Substrate dryness meets air barrier system manufacturer’s requirements. Test for capillary moisture in substrate by plastic sheet method according to ASTM D4263.
   6. Verify that substrates have cured and aged for minimum time recommended in writing by air-barrier manufacturer.

D. Verify sealants used in sheathing installation are compatible with proposed air barrier membrane. Perform field peel-adhesion test on materials to which sealants are adhered.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. During wall construction install embedded flashings including all membrane through-wall flashings where indicated and as necessary for successful air barrier installation. Install membrane flashing over vertical and horizontal legs of steel shelf angles and over transition between vertical leg and sheathing or CMU substrate.

B. Protect adjacent construction and surfaces not designated to receive air barrier system.

C. Clean loose dust and dirt from surfaces to receive air barrier system by brushing or use of a clean dry cloth.

D. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

E. Do not apply membrane or sealants to surfaces unacceptable to air barrier system manufacturer without corrective action.

F. Fill surface irregularities, voids, and joints in substrate as recommended by system manufacturer, with particular attention to expansion and construction joints. Remove any high spots to ensure uniform surface.

G. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

H. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.

I. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

J. On highly dusty or porous substrates apply a scratch coat of liquid membrane prior to spraying to full thickness.

K. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through air barrier and protrusions.

L. Protection of Other Work: Do not allow liquid and mastic compounds to enter and clog drains and conductors. Prevent spillage and migration onto other surfaces of work by masking or otherwise protecting adjoining work.

M. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.03 INSTALLATION

A. General: Install transition strip materials and fluid-applied vapor-permeable air and liquid water barrier to prevent air infiltration and exfiltration through the exterior wall construction without prohibiting the movement of water vapor through the wall.
   1. Install materials in accordance with manufacturer’s printed instructions, the approved submittals, and as specified herein.
   2. Do not allow materials to come in contact with other chemically incompatible materials.

B. Reinforcement and Joint Treatments
   1. Reinforce joints, corners, and changes in plane of substrate using air barrier system manufacturer’s approved transition membrane and sealant.
   2. Tape all vertical and horizontal joints in gypsum sheathing using 2-inch wide x continuous mesh wallboard tape or approved transition membrane as recommended by the system manufacturer. Joint gaps greater than 1/4” wide shall be filled with approved mastic or caulk and allowed to fully cure before application of tape. Ensure that open-mesh tape and any remaining joint gap is fully filled with specified-applied membrane material.

C. Priming:
   1. Apply primer for transition strips at rate recommended by manufacturer. Allow primer to dry completely before transition strip application. Prime all wood, metal, painted and shop coated substrates.
   2. Apply as many coats as necessary for proper adhesion.
   3. Prime masonry or concrete substrates with conditioning primer for fluid-applied vapor permeable air barrier as recommended by system manufacturer. Apply as many coats as necessary for proper adhesion. Provide adequate drying time between coats.
   4. Prime glass-fiber faced gypsum sheathing with number of coats as required to achieve proper bonding. Provide adequate drying time between coats.

D. Detailing:

1. Connect vapor permeable air barrier in exterior wall assembly continuously to the air barrier of the roof, to concrete below-grade structures, to windows, curtain wall, storefront, louvers, exterior doors, and other intersection conditions, and perform sealing of penetrations using accessory materials in accordance with system manufacturer's recommendations and approved submittals.
2. Transitions to beams, columns, and similar appurtenances shall be made with system manufacturer's transition membrane.
3. Apply transition strips and flashing to shed water naturally. Seal all sheet edges with permanently flexible termination mastic.
4. Install transition strips in shingle fashion so that any subsequent sheet overlaps sheet below by a minimum of 2-inches. Overlap horizontally adjacent transition strips a minimum of 2-inches. Roll overlaps into place using hand roller.
5. Seal all penetrations with termination mastic, extruded silicone sealant, membrane counter flashing or other material approved by the system manufacturer and the approved submittals.
6. At changes in substrate plane install approved transition material of sealant, mastic, membrane counter flashing or other material approved by the system manufacturer and the approved submittals. Eliminate all sharp 90-degree inside corners and provide a smooth transition from one plane to another.
7. At through-wall flashings provide an additional 6-inch wide strip of manufacturer's recommended membrane counter flashing to seal top of through-wall flashing to fluid-applied membrane. Seal top edge of strip with bead of approved sealant or mastic.
8. At expansion and control joints provide backup for the membrane to accommodate anticipated movement. Provide transition at all joint assemblies.
9. Apply a continuous bead or trowel coat of mastic along membrane seams at reverse-lapped seams, rough cuts, and as recommended by the manufacturer and the approved submittals.
10. Membrane shall be continuously supported by substrate. Provide mechanically fastened non-corrosive sheet metal to span gaps in substrate plane and to make smooth transition from one plane to another.
11. At the end of each working day, seal top edge of self-adhered membrane to substrate with termination mastic.

E. Fluid-Applied Membrane:
1. Ensure that all detailing of wall and sheathing is completed prior to applying the full coverage of fluid-applied membrane.
2. Apply fluid-applied vapor permeable air barrier using spray equipment and methods as required to achieve at a minimum the specified dry film thickness. Dry mil thicknesses thinner than specified shall not be acceptable even if tested and allowed by the system manufacturer.
3. Spray number of coats as required to achieve the specified dry film thickness. Allow for required drying time between each coat.

F. Inspection
1. Installer shall arrange for system manufacturer's field representative shall make a minimum of three inspection trips to the jobsite to review processes and work completed. Representative shall provide written report of relevant observations to the Contractor:
   a. At work commencement.
   b. At nominal 50% completion.
   c. Just prior to system cover-up.

2. All penetrations of the air barrier and paths of air infiltration/exfiltration shall be made airtight. Installer shall inspect completed system with manufacturer's field representative just prior to cover-up and make corrections to any tears, scuffs, cracks, penetrations, or other damage as directed by the manufacturer.

3.04 FIELD QUALITY CONTROL

A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.

B. Inspections/Photographs: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Subcontractor responsible for the work, or his agent, shall photograph items to be inspected, unless otherwise indicated, and submit to one copy each to the Architect and Owner in an electronic report printable on 8.5 inch x 11 inch format. Inspections shall include the following:
   1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes. This will require continuous structural support of air-barrier system over the entire area over which it is installed.
   2. Air-barrier dry film thickness.
   3. Maximum exposure time of materials to UV deterioration has not been exceeded.
   4. Surfaces have been primed, if applicable.
   5. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
   6. Termination mastic has been applied on cut edges.
   7. Strips and transition strips have been firmly adhered to substrate.
   8. Compatible materials have been used. Provide letters from manufacturers.
   9. Transitions at changes in direction and structural support at gaps have been provided.
   10. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
   11. All penetrations have been sealed.

C. Air barriers will be considered defective if they do not pass tests and inspections.
   1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
   2. Remove and replace deficient air-barrier components for retesting as specified above.

D. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

E. Prepare test and inspection reports.

3.05 CLEANING AND PROTECTING

A. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

B. Inspect installation just prior to final covering of system, and repair punctures, tears, damaged areas, and inadequately lapped seams with patches of membrane lapped and sealed per manufacturer's recommendations.

C. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
   1. Coordinate scheduling with installation of cover materials to ensure that membrane is not exposed to sunlight longer than recommended by the system manufacturer. Board insulation shall not be installed until fluid-applied membrane is fully cured.
   2. Protect air barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed materials according to air-barrier manufacturer's written instructions.
   3. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

D. Remove masking materials after installation.

END OF SECTION

SECTION 07 42 13

METAL WALL PANELS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Prefinished steel metal panel systems with concealed fasteners.
   2. Related flashings and accessory components.

B. Related Sections:
   1. Section 05 40 00 - Cold-Formed Metal Framing: Stud wall framing system.
   2. Section 05 50 00 – Metal Fabrications: Secondary support framing for perforated screen.
   3. Section 07 21 13 – Thermal Wall Insulation.
   4. Section 07 27 26 – Fluid-Applied Membrane Air Barrier.
   5. Section 07 62 00 – Sheet Metal Flashing and Trim.

1.02 REFERENCES

A. ASTM International:
   1. ASTM A755/A755M - Standard Specification for Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products.
   2. ASTM A924/A924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
   3. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.

1.03 PERFORMANCE REQUIREMENTS

A. Components: Design and size components to withstand dead and live loads caused by positive and negative wind pressure acting normal to plane of wall as calculated in accordance with applicable code.

B. Maximum Allowable Deflection of Panel: 1/180 of span.

C. Movement: Accommodate movement within system without damage to components or deterioration of seals, movement within system; movement between system and perimeter components when subject to seasonal temperature cycling; dynamic loading and release of loads; deflection of structural support framing.

D. Drainage: Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate dimensions, layout, joints, expansion joints, construction details, methods of anchorage, and interface with adjacent materials.

C. Product Data: Submit data on panels.

D. Samples:
   1. Submit two samples of each type panel and panel finish, 12 x 12 inch (304.8 mm) in size, illustrating panel profile and finish color, sheen, and texture.
   2. Submit two samples of fasteners, closures, and other accessories.

E. Manufacturer's Installation Instructions: Submit special procedures.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience and approved by manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.

C. Store prefinished material off ground protected from weather, to prevent twisting, bending, or abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

D. Prevent contact with materials capable of causing discoloration or staining.

1.07 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with installation of wall sheathing and dampproofing.

C. Coordinate Work with installation of windows, doors, and adjacent components or materials.

1.08 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Fluoropolymer Finish Warranty: Submit a written warranty, signed by manufacturer, covering failure of the factory-applied exterior finish on metal wall panels within the specified warranty period and agreeing to repair finish or replace wall panels that show evidence of finish deterioration. Deterioration of finish includes, but is not limited to, color fade, chalking, cracking, peeling, and loss of film integrity.
   1. Fluoropolymer Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 METAL WALL AND SOFFIT PANELS

A. Manufacturers - Prefinished Galvanized Steel Panels:
   1. Berridge Manufacturing Co. www.berridge.com
   2. Centria www.centria.com
   3. Petersen Aluminum Corp. www.pac-clad.com
   4. Substitutions: Section 01 60 00 - Product Requirements.

2.02 STEEL WALL PANELS

A. Base Material: Prefinished galvanized steel sheet. ASTM A755/A755M coil coated
   1. Base Metal: ASTM A653/A653M; Structural Quality; G90 zinc coating.
   2. Exposed Finish: Faux wood grain fluoropolymer coil coating with minimum 70 percent polyvinylidene fluoride resin.
      a. Color to be selected by the Architect.
         1) Color and wood grain pattern shall be the same matched color for all metal panel types, trim, and flashing provided under this Section.
   3. Unexposed Finish: Manufacturer's standard coating.
   4. Trim, Closure Pieces, and Flashings: Same material, thickness and finish as panel sheets; brake formed to required profiles
   5. 20-year finish warranty.
      a. MWP: Exterior Wall Panels:
         1) Vee-Panel as manufactured by Berridge Manufacturing, Houston, Texas or approved equivalent by specified manufacturer.
         2) Minimum 24 gage prefinished steel stock.
         3) 12-3/4-inch coverage with 3/8-inch deep vee grooves at 4-1/4” centers.
         4) Smooth-faced.
         5) Install horizontally with overlapping and interlocking long edges in shingle style. Panel ends lapped.
         6) Install with stainless steel concealed fasteners.

2.03 ACCESSORIES

A. Sealants: Specified in Section 07 90 00; color to match siding.

B. Fasteners: Manufacturer's standard type to suit application; with soft neoprene washers, stainless steel; fastener cap same color as exterior panel.

C. Field Touch-up Paint: As recommended by panel manufacturer.

D. Slip Sheet: Manufacturer's recommended non-asphaltic, high-perm synthetic slip sheet or drainage mat to prevent adhesion between metal panels and air barrier membrane.

2.04 FABRICATION

A. Form sections to shape indicated on Drawings, accurate in size, square, and free from distortion or defects.

B. Form pieces in longest practicable lengths.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify plywood sheathing and bituminous dampproofing are in place and ready to receive metal wall panels.
   1. BUILDING PAPER – Only where specifically required by the panel manufacturer:

C. Install 1 layer building paper over air barrier membrane on walls to receive metal siding.

D. Weather lap edges 6 inches (152.4 mm) and ends minimum 6 inches, minimum.

E. Securely fasten in place.

F. Building paper when required by the panel manufacturer is in addition to specified Air Barrier.

3.02 METAL PANEL INSTALLATION

A. Install panels in accordance with manufacturer’s instructions using manufacturer’s standard flashing and trim details unless modified by Drawings.

B. Protect surfaces in contact with cementitious materials and dissimilar metals with bituminous paint. Allow to dry prior to installation.

C. Fasten wall panels through gypsum sheathing into cold formed metal framing members; space fasteners maximum 16 inches (406.4 mm) on center horizontally and vertically to suit application.

D. Use proper tools to obtain controlled, uniform compression for positive seal without rupture of neoprene washer.

E. Form laps and joints to shed water.

F. Field cutting panels by torch is not permitted.

G. Accessories: Install components necessary for complete wall panel assembly, including trim, flashings, sealants, gaskets, and similar items.

H. Seal and place gaskets to prevent weather penetration. Maintain neat appearance.

I. Installation Tolerances: Shim and align panel units within installed tolerance of 1/4 inch (6.35 mm) in 20 feet (609.6 cm) on level, plumb, and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.03 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove site cuttings from finish surfaces.

C. Remove protective films from panel surfaces within 60 days of installation.

D. Clean and wash prefinished surfaces with mild soap and water; rinse with clean water.

END OF SECTION

SECTION 07 54 23

THERMOPLASTIC MEMBRANE ROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fully adhered TPO roof membrane over insulating concrete roof fill.
   2. Walkway pads.

B. Related Sections:
   1. Section 03 52 16 - Insulating Concrete Roof Fill: Roof deck.
   2. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood nailers.
   3. Section 07 62 00 - Sheet Metal Flashing and Trim: Sheet metal flashing and counterflashing.

1.02 REFERENCES

A. American Society of Civil Engineers:
   1. ASCE 7 - Minimum Design Loads for Buildings and Other Structures.

B. National Roofing Contractors Association:
   1. NRCA - The NRCA Roofing and Waterproofing Manual.

C. Single Ply Roofing Institute:
   1. SPRI ES-1 - Wind Design Standard for Edge Systems used for Low Slope Roofing Systems.

D. Underwriters Laboratories Inc.:
   1. UL - Fire Resistance Directory.
   2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
   3. UL 790 - Tests for Fire Resistance of Roof Covering Materials.

1.03 SYSTEM DESCRIPTION

A. Thermoplastic Sheet Membrane Roofing System: One ply fully adhered with base flashing. System meeting “Cool Roof” aged requirements for Solar Reflectance:

B. Low Sloped Roofs: Roofs with slopes of 2:12 or less shall have Solar reflectance of not less than 0.64 when tested in accordance with ASTM E903, at 3-years after installation under normal conditions.

C. Steep Sloped Roofs: Roofs with slopes steeper than 2:12: Solar reflectance of not less than 0.16 when tested according to ASTM E903, at 3-years after installation under normal conditions

D. Roof Deck:

1. Insulating Concrete Roof Fill: NRCA Specification Plate: Lightweight insulating concrete deck - TP-N-A-S

1.04 PERFORMANCE REQUIREMENTS

A. Wind Uplift: In accordance with ASCE 7 requirements. Refer to Structural Drawings for wind design criteria.

B. Flashings and Fastening: Comply with requirements of Section 07 62 00 - Sheet Metal Flashing and Trim. Provide base flashings, perimeter flashings, detail flashings and component materials and installation techniques that comply with requirements and recommendations of the following:
   1. ANSI/SPRI ES-1 for Perimeter detail, metal edges and copings.
   2. NRCA Roofing and Waterproofing Manual for construction details and recommendations.
   3. SMACNA Architectural Sheet Metal Manual for construction details.

1.05 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate joint and termination detail conditions for membrane and base flashing. Indicate membrane layout and seam locations.

C. Product Data: Submit characteristics on membrane materials, adhesives, seaming materials, flashing materials, walkway pads, and any other roofing products specified.

D. Samples:
   1. Submit two samples of roof membrane, 12 x 12 inch (304.8 mm) in size, including lap seam.
   2. Submit 6 screw fasteners of each type, length, and finish.

E. Manufacturer's Installation Instructions: Submit special precautions required for seaming membrane.

F. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

G. Installer Certificates: Signed by roofing system manufacturer certifying that Installer is approved, authorized, or licensed by manufacturer to install specified roofing system.

H. Research/Evaluation Reports: Evidence of roofing system's compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

I. Inspection Report: Copy of roofing system manufacturer's inspection report of completed roofing installation.

1.06 QUALITY ASSURANCE

A. Perform Work in accordance with NRCA Roofing and Waterproofing Manual and manufacturer’s instructions.

B. Fire Rated Roof Construction: Rating as indicated on Drawings.
   1. Tested Rating: Determined in accordance with ASTM E119.

C. Roof Assembly Fire Classification: Class A when tested in accordance with ASTM E108 or UL 790.

D. Apply label from agency approved by authority having jurisdiction to identify each roof assembly component.

1.07 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Experienced and specialized in installing roofing similar to that required for this Project and who is approved, authorized, or licensed by the roofing system manufacturer to install manufacturer's product.

1.08 PRE-INSTALLATION MEETINGS

A. Section 01 31 19 - Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Preliminary Roofing Conference: Before starting roof deck construction, conduct conference at Project site. Meet with the same participants and review the same items listed for the preinstallation conference. In addition, review status of submittals and coordination of work related to roof construction. Notify participants at least 5 working days before conference.

C. Preinstallation Conference: Before installing roofing system, conduct meeting at Project site. Notify participants at least 5 working days before meeting.
   1. Meet with Owner; Architect; Owner's insurer, if applicable; testing and inspecting agency representative; roofing Installer; roofing system manufacturer's representative; deck Installer; and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
   2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
   3. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
   4. Review loading limitations of deck during and after roofing.
   5. Review flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing.
   6. Review governing regulations and requirements for insurance, certificates, and inspection and testing, if applicable.
   7. Review temporary protection requirements for roofing system during and after installation.
   8. Review roof observation and repair procedures after roofing installation.
   9. Document proceedings, including corrective measures or actions required, and furnish copy of record to each participant.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Deliver products in manufacturer’s original containers, dry, undamaged, with seals and labels intact.

C. Store products in weather protected environment, clear of ground and moisture.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements: Environmental conditions affecting products on site.

B. Do not apply roofing membrane during inclement weather without proper weather protection.

C. Do not apply roofing membrane to damp or frozen deck surface or when precipitation is expected or occurring.

D. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.

1.11 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with installation of associated roof penetrations and metal flashings, as Work of this section proceeds.

1.12 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for warranties.

B. Manufacturer’s Warranty: Furnish 15-year manufacturer's no dollar limit, full system warranty including coverage of materials and installation resulting from failure to resist penetration of moisture.

C. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering Work of this Section, including membrane roofing, sheet flashing, fasteners, and vapor retarders, if any, for the following warranty period:
   1. Warranty Period: 2-years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SINGLE PLY ROOFING - FULLY ADHERED

A. Manufacturers:
   1. EverGuard TPO, GAF, www.gaf.com.
   2. JM TPO, Johns Manville, www.specjm.com
   3. SureWeld TPO, Carlisle, www.carlisle-syntec.com.
   4. Ultra-Ply TPO, Firestone.
   5. Substitutions: Section 01 60 00 - Product Requirements.

B. Fleece-Back Membrane: TPO, polyester-reinforced, 60 mils (1.524 mm) thick; white color; conforming to the following criteria:

Breaking Strength	AST M D751	330 lbf

Elongation	ASTM D412	30 percent
Seam Strength	ASTM D638	120 lbf
Tear Strength	ASTM D624 ASTM D1004	70 lbf
Permeance	ASTM D96	0.01 Perms
Water Absorption	ASTM D570	0.7 percent
Fleece Backing	Polyester fabric	9 oz per sy.

2.02 COMPONENTS

A. General:

1. Base Flashing: Shall be same material as the white TPO fleece-backed adhered 50 mil (1.27 mm) minimum and be installed using the design principles set forth in the National Roofing Association manual.
    a. Termination Bars: Aluminum bars, 1 inch (25.4 mm) wide, pre-punched for fasteners 6 inches (152.4 mm) oc.
    b. Parapet Caps: Prefinished metal, as specified in Section 07 62 00.
    c. Counterflashings: Stainless steel, as specified in Section 07 62 00.
    d. Prefabricated Roof Specialties: As specified in Section 07 71 00.
    e. Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, thickness, and color as sheet membrane.
    f. Bonding Adhesives: Manufacturer's standard bonding adhesives for membrane and flashings.
    g. Fasteners: Factory-coated steel fasteners and metal plates meeting corrosion-resistance provisions of FM 4470, designed for fastening sheet to substrate, and acceptable to roofing system manufacturer.
    h. Fascia, and Edge Flashings: Manufacturer’s 2-piece compression edge, 24 gage thick, galvanized G90; prefinished with two coat fluoropolymer coating with minimum 70 percent polyvinylidene fluoride resin.
        1) Color as indicated or selected by Architect from manufacturer's full custom range.
2. Counterflashings: As specified in Section 07 62 00.
    a. Walkway Pads: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads, approximately 3/32 inch (2.38 mm) thick, of materials acceptable to roofing system manufacturer. Provide at the top and bottom of all roof ladders, around the front and sides all roof hatches, around all serviceable rooftop equipment, and along the full width of all doors leading onto roof areas.
    b. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, seam calk, termination reglets, and other accessories recommended by roofing system manufacturer for intended use.
        1) Over insulating concrete deck.
3. Fleece-backed membrane as specified.
4. Roof Insulation: Integral with roof deck and provided under Section 03 52 16 - Insulating Concrete Roof Fill.
5. Roofing Protection Board: Not applicable for insulating concrete unless required by the membrane manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify surfaces and site conditions are ready to receive Work.

C. Verify deck is supported and secure.

D. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains or eaves, and suitable for installation of roof system.

E. Verify deck surfaces are dry and free of snow or ice.

F. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, and wood nailers are in place.

G. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
   1. Conduct fastener pull-out tests to verify that lightweight insulating concrete meets membrane manufacturer’s requirements.
   2. Roofing contractor shall provide to the owners testing laboratory the roofing system manufacturers requirements for dryness, walkability, and compressive strength of installed lightweight insulating concrete prior to roofing installation.

H. Verify that wood nailers have been anchored in accordance with SPRI ES-1 requirements and can resist a minimum force of 300 plf in any direction.

I. Moisture Testing: Take moisture readings for the lightweight insulating concrete deck using moisture meter approved by the roofing manufacturer. Do not install roofing system over deck not meeting dryness requirements as determined by the roofing manufacturer.

3.02 PREPARATION

A. Clean substrate of dust, debris, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of the roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roof areas.

3.03 MEMBRANE INSTALLATION

A. Install roofing membrane over insulating concrete roof fil in accordance with roof manufacturer’s written instructions. Unroll roofing membrane and allow to relax before installing.
   1. Install sheet according to ASTM D5082.

2. Start installation of roofing membrane in presence of roofing system manufacturer’s technical personnel.
3. Apply adhesive at rate recommended by membrane manufacturer.
4. Roll out membrane, free from air pockets, wrinkles, or tears. Roll fleece back membrane sheet into place without stretching per manufacturers guidelines.
5. Accurately align roofing membrane sheets and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
6. Apply roofing membrane with side laps shingled with slope of roof deck where possible.
7. Seams: Clean seam areas, overlap roofing membrane, and hot-air weld side and end laps of roofing membrane according to manufacturer’s written instructions to ensure a watertight seam installation. Seams shall be welded daily, no exceptions.
    a. Test lap edges with probe to verify seam weld continuity.
    b. Verify field strength of seams a minimum of twice daily and repair seam sample areas.
    c. Repair tears, voids, and lapped seams in roofing membrane that does not meet requirements.
8. Mechanically fasten membrane around all perimeters, at the base of walls, drains, curbs, vents, and other roof penetrations. Install continuous aluminum termination bar where fully-adhered membrane extends up vertical walls or parapets. Locate as recommended by the membrane manufacturer.
9. Apply water block sealant under deck drain flange at deck drains and securely seal roofing membrane in place with clamping ring.
10. Seal membrane around roof penetrations.
11. Install T-patches over all T-seams.
12. Perimeter Edge: For edge conditions, including parapets, install two-piece compression edge in accordance with manufacturer’s instructions to meet SPRI ES-1 requirements.
13. Install and weld pre-fabricated boots on all pipe penetrations.

B. Base Flashing Installation:
1. Install sheet flashings and preformed flashing accessories and adhere to substrate according to roofing system manufacturer's written instructions.
2. Apply bonding adhesive to substrate and underside of flashing sheet at required rate and allow to partially dry. Do not apply bonding adhesive to seam area of flashing.
3. Flash penetrations and field-formed inside and outside corners with sheet flashing as recommended by manufacturer.
4. Clean seam areas, overlap sheets, and firmly roll flashings into the adhesive. Weld side and end laps to ensure a watertight seam installation.
5. Test lap edges with probe to verify seam weld continuity.
6. Terminate and apply water block seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.04 WALKWAY PADS INSTALLATION:

A. Install walkway pads in locations indicated.

B. Adhere walkway pads to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.05 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Verify field strength of seams a minimum of twice daily, according to manufacturer's written instructions, and repair seam sample areas.

C. Site Visits: Manufacturer or manufacturer’s representative shall visit the project during process minimum of one time per week for the duration of the installation.

D. Final Roof Inspection: Arrange for membrane manufacturer's technical personnel to inspect roofing installation on completion and submit report to the General Contractor and the Architect.
   1. Inspection Report: Copy of roofing system manufacturer's inspection report of completed roofing installation.

3.06 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. In areas where finished surfaces are soiled by Work of this section, consult manufacturer of surfaces for cleaning advice and conform to their documented instructions.
   1. Repair or replace defaced or disfigured finishes caused by Work of this section.

C. Pressure wash clean the entire roof area when the project is complete. Utilize minimal pressure as per membrane manufacturer’s guidelines.

3.07 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.
   1. Protect building surfaces against damage from roofing work.

B. Where rolling traffic such as wheelbarrows, or more than occasional foot traffic must continue over finished roof membrane, protect surfaces using temporary plywood walkways.

C. During installation any roofing system subjected to encroachment of water underneath the membrane will require membrane,through-drying of deck system, and replacement of membrane.

END OF SECTION

SECTION 07 61 00

MANUFACTURED SHEET METAL ROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Structural standing seam metal roofing for conventional structure.
   2. Board insulation under metal roofing.
   3. Roofing underlayment.
   4. Metal fascias with continuous fastening cleats, flashings, and trim.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood blocking.
   2. Section 07 62 00 - Sheet Metal Flashing and Trim.
   3. Section 07 90 00 - Joint Protection.
   4. Section 13 34 19 - Metal Building Systems: Matching non-insulated roofing system for metal building.

1.02 REFERENCES

A. American Society of Civil Engineers:
   1. ASCE 7 - Minimum Design Loads for Buildings and Other Structures.

B. ASTM International:
   1. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   2. ASTM A792 Standard Specification for Steel Sheet, 55% Aluminum-Zinc Ally-Coated by the Hot-Dip Process (Galvalume)
   3. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
   4. ASTM E1680 Standard Test Method for Rate of Air Leakage Through Exterior Metal Roof Panel Systems
   5. ASTM E1646 Standard Test Method for Water Penetration of Exterior Metal Roof Panel Systems by Uniform Static Air Pressure Difference.

C. National Roofing Contractors Association:
   1. NRCA - The NRCA Roofing and Waterproofing Manual.

D. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - Architectural Sheet Metal Manual.

E. Underwriters Laboratories Inc.:
   1. UL 580 - Tests for Uplift Resistance of Roof Assemblies.

1.03 DESIGN REQUIREMENTS

A. Roof Loads: Design to resist live and dead loads with 1/240 maximum deflection.
   1. Live Loads: As indicated on Drawings.
   2. Dead Loads: Actual weight of materials incorporated into Work.

B. Wind Loads: Design and size components to withstand positive and negative wind loads, including increased loads at building corners.
   1. Design Wind Load: As calculated in accordance with applicable code and ASCE 7.

C. Air Infiltration: Limit air leakage through roof assembly to 1.1 cfm/gross leakage of wall area, measured at reference differential pressure across assembly of 6.24 psf as measured in accordance with ASTM E1680.

D. Water Leakage: None, when measured in accordance with ASTM E1646 with test pressure of 8 psf.

E. Exterior Components: Accommodate the following without damage to system, components or deterioration of seals.
   1. Movement within system.
   2. Movement between system and perimeter framing components.
   3. Dynamic loading and release of loads.
   4. Deflection of structural support framing.
   5. Expansion and contraction from temperature range of 170 degrees Fahrenheit (76.67 degrees Celsius) over 12 hour period.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings:
   1. Indicate metal roofing panel profiles, jointing patterns, jointing details, fastening methods, flashings, terminations, and installation details.
   2. Submit additional information as required by manufacturer for special weather-tightness warranty.

C. Product Data:
   1. Submit data on metal types, finishes, and characteristics.
   2. Submit data on roofing panel manufacturer’s recommended corrosion-resistant screw fasteners, including recommended spacing(s) for the specific project.
   3. Submit data on roof insulation and underlayment.
   4. Submit color charts for finish selection.

D. Samples:
   1. Submit two samples illustrating metal roofing mounted on plywood backing illustrating typical seam profile and construction. Include clips, fasteners, seals, and other accessories.
   2. Submit two samples illustrating metal finish color.

E. Design Data:

1. Submit structural design calculations for metal roofing signed and sealed by professional engineer.

F. Manufacturer's Installation Instructions: Submit instructions including special procedures for roofing penetrations, flashings, and perimeter conditions requiring special attention.

G. Manufacturer's Certification: Certify Products meet or exceed specified requirements.

H. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for the following:
1. Metal Roof Panels: Include reports for air infiltration, water penetration, and structural performance.

1.05 QUALITY ASSURANCE

A. Perform Work in accordance with SMACNA Architectural Sheet Metal Manual and The NRCA Roofing and Waterproofing Manual.

1.06 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section with minimum years' experience and approved by manufacturer.

C. Design sheet metal roofing system under direct supervision of Professional Engineer experienced in design of this Work and licensed in the State of Texas.

1.07 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

C. Prevent contact with materials causing discoloration or staining.

1.09 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for warranties.

B. Special Finish Warranty: Submit a written warranty, signed by manufacturer, covering failure of the factory-applied exterior finish on metal wall panels within the specified warranty period and agreeing to repair finish or replace wall panels that show evidence of finish deterioration. Deterioration of finish includes, but is not limited to, color fade, chalking, cracking, peeling, and loss of film integrity.
   1. Finish Warranty Period: 20 years from date of Substantial Completion.

C. Special Weather-tightness Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.
   1. Weathertight Warranty Period: 10 years from date of Substantial Completion.
   2. Include 2-year installer warranty as required by manufacturer for weathertight warranty.

PART 2 PRODUCTS

2.01 MANUFACTURED SHEET METAL ROOFING

A. Manufacturers:
   1. AEP-Span www.aep-span.com
   2. Architectural Building Components (ABC) www.archmetalroof.com
   3. Berridge Manufacturing Co. www.berridge.com
   4. Centria www.centria.com
   5. Metal Building Components, Inc. www.mbci.com
   6. Petersen Aluminum Corp. www.pac-clad.com
   7. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis-of-Design: Berridge Zee-Lock Panel with zinc-coated (galvanized) Zee-Clips and vinyl weatherseal.

C. Structural Standing Seam Metal Roofing: Factory formed metal roofing panel system with concealed fasteners, designed for installation over conventional framing.
   1. Panel Materials: Pre-finished galvanized steel sheet, 24 gage base metal thickness.
   2. Panel Width: Nominal 16 inches (406.4 mm).
   3. Panel Profile: Flat panel with striated surface.
   4. Joint Type: Single folded.
   5. Seam Type: Sanding seam, field locked.
   6. Seam Height: 2 inches (50.8 mm).
   7. Color: As selected.

2.02 SHEET METAL MATERIALS

A. Pre-Finished Galvanized Steel Sheet: ASTM A792/A792M; Structural Quality; AZ50 or AZ55 aluminum-zinc alloy-coated steel.
   1. Base Metal: ASTM A792/A792M; Structural Quality; AZ50 or AZ55 aluminum-zinc alloy-coated steel.
   2. Exposed Finish: Minimum two coat fluoropolymer coating with minimum 70 percent polyvinylidene fluoride resin.
   3. Unexposed Finish: Manufacturer’s standard coating.

2.03 UNDERLAYMENT

A. Plastic Faced Waterproofing Membrane: Self-adhering, high-temperature sheet; 40-mils thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
   1. Thermal Stability: Stable after testing at 240 degrees Fahrenheit (115.56 degrees Celsius); ASTM D 1970.
   2. Low Temperature Flexibility: Passes after testing at minus 20 degrees Fahrenheit (-6.67 degrees Celsius); ASTM D 1970.
   3. Available Products:
      a. Dri-Start "HR."; Carlisle Coatings & Waterproofing www.carlisle-ccw.com
      b. Grace Ultra; W. R. Grace, & Co. www.grace.com
      c. Perma-Seal PE.; Henry Company www.henry.com
      d. MetShield; Metal-Fab Manufacturing, LLC. www.met-fab.com
      e. WIP 300HT; TC MiraDRI. www.mirafi.com

2.04 INSULATION

A. Polyisocyanurate Board Insulation: Unfaced, preformed, rigid, cellular, polyisocyanurate thermal insulation complying with ASTM C591, Type 2, with aged thermal-resistance values for 1-inch thickness of 6.2 degrees Fahrenheit (-14.33 degrees Celsius) x h x sq. ft./Btu at 75 degrees Fahrenheit (23.89 degrees Celsius).
   1. Total insulation thickness: As required for R-values and thicknesses as indicated in the drawings.

B. Attachment Method: Two-component, low-rise polyurethane foam adhesive specifically formulated for bonding rigid insulation to galvanized steel roof decks.

2.05 ACCESSORIES

A. Individual Standing Seam Clips: galvanized steel clips, height as required to clear insulation thickness, designed for puddle-weld attachment to steel deck flutes.
   1. Clip Attachment: Clips shall be specifically designed for structural puddle-welding to the top flutes of the metal deck.

B. Vinyl Weatherseal: Manufacturer’s standard vinyl seal, profile as required to fit panel seams.

C. Fasteners: Puddle welds per AWS D1.3. Mechanical screw fasteners are permitted only for secondary trim-to-trim attachments not visible from the building interior.

D. Sealant: As specified in Section 07 90 00.

E. Sealing Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.

F. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat, unless otherwise indicated. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.06 FABRICATION

A. Form sections shape as indicated on Drawings, accurate in size, square, and free from distortion or defects.

B. Fabricate fascia, trim, flashing, and other metal components from same material as metal roof panels. Provide exposed metal surfaces with same finish as exposed face of metal roof panels.

C. Fabricate fastening cleats of same material as sheet, to interlock with sheet. Cleats shall be continuous.

D. Fabricate starter strips of same material as sheet, continuous, to interlock with sheet.

E. Form roof panels in single length sheets, continuous from eave to ridge.

F. Hem exposed edges on underside 1/2 inch (12.7 mm); miter and seam corners.

G. At moving joints, use sealed lapped, bayonet-type or interlocking hooked seams.

H. Fabricate corners from one piece with minimum 18-inch long legs; seam for rigidity, seal with sealant.

I. Fabricate vertical faces with bottom edge formed outward 1/4 inch (6.35 mm) and hemmed to form drip.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Steel Deck Substrate:
   1. Inspect roof deck to verify deck is clean and smooth, free of depressions, waves, or projections, and properly sloped to eaves.
   2. Cleanliness: Verify that the top surface of the Epic Deck is free of processing oils, dust, or moisture. Any residue that could impair the bond of the polyurethane adhesive must be removed using a manufacturer-approved solvent or cleaning agent.
   3. Verify deck is dry and free of snow and ice. Verify substrate joints are solidly supported and fastened.
   4. Verify wood nailers are installed and correctly located.

C. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, reglets are in place, and nailing strips located.

D. Verify roofing termination and base flashings are in place, sealed, and secure.

3.02 INSTALLATION – SECONDARY STRUCTURAL SUPPORTS

A. Where secondary structural supports for roofing panels are required or indicated, install secondary structural supports in accordance with manufacturer’s recommendations and approved shop drawings.

B. Align supports with top surface in plane, uniformly sloped to valleys and eaves.

C. Install supports spaced maximum feet on center. Provide support at roof panel end laps.

D. Secure supports to building structural frame using mechanical fasteners. Welding is not permitted.

3.03 INSTALLATION - ROOF INSULATION

A. Adhesive Application:
   1. Method: Apply insulation adhesive in continuous ribbons (beads) to the top flutes of the metal deck.
   2. Spacing: Bead spacing shall comply with the most stringent requirements of the manufacturer’s wind uplift testing for the project’s wind zone (typically 6 inches o.c. at corners/perimeters and 12 inches o.c. in the field).
   3. Ribbon Size: Ensure ribbons are sized to achieve a minimum 1-inch wide contact area when the insulation board is set.

B. Setting Boards:
   1. Timing: Place insulation boards into the adhesive while it is still "tacky" and before it begins to skin over.
   2. Compression: Immediately walk-in the boards or use weighted rollers to ensure full contact with the adhesive ribbons.

C. Coordination with Puddle-Welded Clips:
   1. Fitting: Neatly cut and notch insulation boards around the puddle-welded standoff clips.
   2. Gap Control: Ensure gaps around clips do not exceed 1/4 inch; fill any excessive voids with spray-applied polyurethane foam to maintain thermal continuity.

D. Install insulation with long joints in continuous straight lines, perpendicular to roof slope, with end joints staggered between rows.
   1. Cut and fit insulation within 1/4 inch (6.35 mm) of nailers, projections, and penetrations.

E. Where overall insulation thickness is 2-inches or greater, install insulation in two layers with joints of second layer staggered from joints of first layer a minimum of 6 inches (152.4 mm) in each direction.

3.04 INSTALLATION - UNDERLAYMENT

A. Apply one layer plastic-faced waterproof membrane underlayment over entire roof area as follows:
   1. Adhere underlayment to faced insulation.
   2. Install parallel to slope with joints lapped minimum 2 inches (50.8 mm).
   3. Stagger end joints minimum 8 inches (203.2 mm).
   4. Install perpendicular to slope with edges weather lapped minimum 2-inches.

3.05 INSTALLATION - STANDING SEAM METAL ROOFING

A. Conform to SMACNA, NRCA, and manufacturer’s instructions.

B. Install continuous Zee Ribs to secure roof panels without deforming roof panels.

C. Install roofing panels with long dimension perpendicular to eaves.

D. Install vinyl weather seal in seam to achieve manufacturer's weather-tightness warranty.

E. Machine lock standing seam between adjacent roofing panels. Hand lock joints where machine locking is not possible.

F. Accessories: Install components required for a complete roof assembly, including trim, copings, fasciae, continuous fastening cleats, ridge closures, flashings, sealants, gaskets, fillers, closure strips, and similar items.

G. Separate dissimilar metals by painting each metal surface in area of contact with a bituminous coating, by applying rubberized-asphalt underlayment to each metal surface, or by other permanent separation as recommended by manufacturers of dissimilar metals.

H. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not otherwise indicated, types recommended by panel manufacturer.

3.06 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Do not permit traffic over unprotected roof surface.

END OF SECTION

SECTION 07 62 00

SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.01 SUMMARY

A. Section includes fabricated sheet metal items, including:
   1. Flashings and counter flashings not a part of Unit Masonry systems.
   2. Roof fascias and gravel stops.
   3. Gutters and downspouts.
   4. Metal trim not part of manufactured roof or wall systems.

B. Related Sections:
   1. Section 04 20 00 - Unit Masonry Assemblies: Flashings embedded in masonry.
   2. Section 07 54 04 - Thermoplastic Membrane Roofing: Roof fascias, gravel stops, and expansion joints.
   3. Section 07 90 00 - Joint Protection.

B. ASTM International:
   1. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   2. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   3. ASTM A755/A755M - Standard Specification for Steel Sheet, Metallic Coated by the Hot-Dip Process and Pre-painted by the Coil-Coating Process for Exterior Exposed Building Products.
   4. ASTM B32 - Standard Specification for Solder Metal.
   5. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
   6. ASTM D4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free.

C. Federal Specification Unit:
   1. FS TT-C-494 - Coating Compound, Bituminous, Solvent Type, Acid Resistant.

D. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - Architectural Sheet Metal Manual.

E. Single Ply Roofing Institute:
   1. SPRI ES-1 - Wind Design Guide for Edge Systems Used with Low-Slope Roofing Systems.

1.03 PERFORMANCE REQUIREMENTS

A. General: Manufacture and install items of this Section to resist thermally induced movement and exposure to weather without failing, rattling, leaking, and fastener disengagement.

B. Manufacture and install copings and roof edge flashings tested according to SPRI ES-1 and capable of resisting the area wind zone pressures in accordance with ASCE 7 requirements.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.

C. Product Data: Submit data on manufactured components metal types, finishes, and characteristics.

D. Samples: Submit two samples of each exposed metal finish.

E. Product Test Reports: Submit report based on evaluation of comprehensive tests performed by a qualified testing agency, verifying compliance of copings and roof edge flashings with performance requirements.

1.05 QUALIFICATIONS

A. Installer: Engage an experience Installer who has completed sheet metal flashing and trim work similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

1.06 PRE-INSTALLATION MEETINGS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

C. Prevent contact with materials causing discoloration or staining.

1.08 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Finish Warranty for Prefinished Steel Sheet: Submit a written warranty, signed by manufacturer, covering failure of the factory-applied exterior finish on metal wall panels within the specified warranty period and agreeing to repair finish or replace wall panels that show evidence of finish deterioration. Deterioration of finish includes, but is not limited to, color fade, chalking, cracking, peeling, and loss of film integrity.
   1. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 SHEET METAL FLASHING AND TRIM

A. Pre-Finished Galvanized Steel Sheet: ASTM A755/A755M coil coated.
   1. Base Metal: ASTM A653/A653M; Structural Quality; G90 zinc coating, minimum 24 gage thick.
   2. Exposed Finish: Minimum two coat fluoropolymer coating with minimum 70 percent polyvinylidene fluoride resin.
   3. Unexposed Finish: Manufacturer's standard coating.

B. Stainless Steel: ASTM A240/240M; Type 304, dead soft fully annealed; smooth surface, Number 2D finish; minimum 24 gage thick.

2.02 ACCESSORIES

A. Fasteners: Stainless steel, with soft neoprene washers. Match finish of exposed heads with material being fastened.

B. Underlayment: Self-adhering, high-temperature, non-asphaltic slip sheet compatible with fluid-applied air barrier and prefinished metal finishes

C. Protective Backing Paint: FS TT-C-494, Bituminous.

D. Sealant: As specified in Section 07 90 00.

E. Plastic Cement: ASTM D4586, Type I.

F. Solder: ASTM B32; type suitable for application and material being soldered.

2.03 FABRICATION

A. Form sections shape indicated on Drawings, accurate in size, square, and free from distortion or defects.

B. Fabricate cleats of same material as sheet metal, interlocking with sheet.

C. Form pieces in longest possible lengths.

D. Hem exposed edges on underside 1/2 inch (12.7 mm); miter and seam corners.

E. Form nonmoving seams with flat lock seams, except where otherwise indicated. At moving joints, use sealed lapped, bayonet-type or interlocking hooked seams. Form seams and joints in accordance with SMACNA standards.

F. Fabricate corners from one piece with minimum 18 inch (457.2 mm) long legs; seam and seal prefinished steel, solder stainless steel.

G. Fabricate vertical faces with bottom edge formed outward 1/4 inch (6.35 mm) and hemmed to form drip.

H. Separate metal from non-compatible metal or corrosive substrates by coating concealed surfaces at locations of contact with asphalt mastic or other permanent separation as recommended by manufacturer.

I. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of sheet metal exposed to public view.

J. Fabricate gutters to rectangular profile as indicated on Drawings.

K. Fabricate downspouts to square profile, 4-1/2 x 4-1/2 inch (114 mm) size unless indicated otherwise.

L. Fabricate accessories in profile and size to suit gutters and downspouts:
   1. Anchorage Devices: In accordance with SMACNA requirements.
   2. Gutter Supports: Brackets and straps.
   3. Downspout Supports: Straps.

M. Seal metal joints.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, and nailing strips located.
   1. Verify that wood nailers have been anchored in accordance with SPRI ES-1 requirements.

C. Verify roofing termination and base flashings are in place, sealed, and secure.

3.02 PREPARATION

A. Install starter and edge strips, and cleats before starting installation.

B. Paint concealed metal surfaces with protective paint to minimum dry film thickness of 15-mil.

3.03 INSTALLATION

A. Install sheet metal flashing and trim in accordance with SMACNA requirements.

B. Secure flashings in place using concealed fasteners wherever possible. Use exposed fasteners only where not exposed to public view.

C. Install flashings embedded in roofing system in accordance with roofing manufacturer's details and instructions to meet SPRI ES-1 requirements.

D. Install edge flashings in accordance with Section 07 54 05 to meet SPRI ES-1 requirements.

E. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.

F. Expansion Provisions: Provide for thermal expansion of exposed sheet metal Work. Space movement joints at maximum of 10 feet (304.8 cm) with no joints allowed within 18 inches (457.2 mm) of corner or intersection. Where lapped or bayonet-type expansion provisions in Work cannot be used or would not be sufficiently weatherproof and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25.4 mm) deep, filled with mastic sealant (concealed within joints).

G. Secure gutters and downspouts in place.

H. Slope gutters minimum 1/4 inch (6.35 mm) per foot.

I. Seal metal joints watertight.

3.04 SCHEDULE

A. Gutters with Girth up to 20-Inches: Prefinished steel, 24 gage.

B. Gutters with Girth 20 to 25-inches: Prefinished steel, 22 gage.

C. Downspouts: Prefinished steel, 24-gage.

D. Scuppers: Stainless steel, 24-gage.

E. Gravel Stops and Fasciae: Two-piece snap-on edge flashings by roof membrane manufacturer.

F. Exposed Trim: Prefinished steel, 24-gage.

G. Counterflashings and Receivers: Stainless steel, 24-gage.

H. Roof Expansion Joints: Stainless steel, 24-gage.

I. Equipment Support and Roof Penetration Flashing: Stainless steel, 24-gage.

END OF SECTION

SECTION 07 71 00

ROOF SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Roof curbs and equipment supports.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood curbs.
   2. Section 07 54 04 - Thermoplastic Membrane Roofing.
   3. Section 07 72 33 - Roof Hatches.
   4. Section 07 62 00 - Sheet Metal Flashing and Trim: Metal flashings.

1.02 REFERENCES

A. ASTM International:
   1. ASTM D4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free.

B. National Roofing Contractors Association:
   1. NRCA - The NRCA Roofing and Waterproofing Manual.

C. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - Architectural Sheet Metal Manual.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Manufacturer's Installation Instructions: Submit instructions for special procedures and perimeter conditions requiring special attention.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with SMACNA and NRCA details.

1.05 COORDINATION

A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
   1. With Architect's approval, adjust location of roof accessories that would interrupt roof drainage routes or roof expansion joints.

PART 2 PRODUCTS

2.01 ROOF CURBS AND EQUIPMENT SUPPORTS

A. Roof Curbs: Provide metal roof curbs and equipment supports, internally reinforced and capable of supporting superimposed live and dead loads, including equipment loads and other construction to be supported. Fabricate with welded or sealed mechanical corner joints, with integral formed mounting flange at perimeter bottom. Coordinate dimensions with rough-in information or shop drawings of equipment to be supported.

B. Manufacturers:
   1. Custom Curb, Inc.
   2. Roof Products, Inc. www.rpicurbs.com
   3. ThyCurb www.thybar.com
   4. Uni-Curb, Inc.
   5. Vent Products Company, Inc. www.ventprod.com

C. Load Requirements: As indicated.

D. Material: Minimum 0.050” thick aluminum or minimum 24-gage series 300 stainless steel.

E. Factory install wood nailers at tops of curbs and supports.

F. On ribbed or fluted metal roofs, form flange at perimeter bottom to conform to roof profile.

G. Factory insulate curbs with 1-1/2 inch (38 mm) thick glass fiber board insulation.

H. Fabricate units to minimum height of 10 inches (304.8 mm) above finished membrane of adjacent roof surface, unless otherwise indicated.

I. Sloping Roofs: Fabricate curbs and equipment supports with height tapered to match slope to level tops of units.
   1. Where slope of roof exceeds 1:48, fabricate units with water diverter or cricket.

J. Sealant: As specified in Section 07 90 00.

K. Roofing Cement: As recommended by roofing system manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify deck, curbs, roof membrane, base flashing, and other items affecting Work of this section are in place and positioned correctly.

3.02 INSTALLATION

A. Conform to SMACNA - Architectural Sheet Metal Manual and NRCA - Waterproofing Manual.

B. Coordinate installation of components of this section with installation of roofing system and base flashings.

C. Install roof curbs and equipment supports so that top surface of unit is level.

D. Coordinate installation of sealants and roofing cement with Work of this section to ensure water tightness.

END OF SECTION

SECTION 07 72 33

ROOF HATCHES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Roof hatches.
   2. Roof hatch safety railing.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood curbs.
   2. Section 07 54 23 - Thermoplastic Membrane Roofing.
   3. Section 07 62 00 - Sheet Metal Flashing and Trim: Metal flashings.
   4. Section 07 71 00 - Roof Specialties.

1.02 REFERENCES

A. Underwriters Laboratories Inc.:
   1. UL - Building Materials Directory.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data on unit construction, sizes, configuration, jointing methods and locations when applicable, and attachment method.

C. Manufacturer's Installation Instructions: Indicate special installation criteria and interface with adjacent components.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with SMACNA and NRCA details.

PART 2 PRODUCTS

2.01 ROOF HATCHES

A. Manufacturers:
   1. Babcock-Davis www.babcockdavis.com
   2. Bilco Company www.bilco.com
   3. Custom Curb, Inc. www.customcurb.com
   4. Milcor Inc. www.milcorinc.com
   5. Nystrom, Inc. www.nystrom.com
   6. O'Keeffe's Inc. www.okeeffes.com

7. Roof Products, Inc. www.rpicurbs.com
8. ThyCurb www.thybar.com
9. Uni-Curb, Inc.
10. Vent Products Company, Inc. www.ventprod.com
11. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Manufacturer’s standard aluminum, with nominal 12-inch high integral curb, double-wall insulated type.

C. Size: 2’-6” x 3’-0” single-leaf, for ladder access.

D. Loads: Minimum 40-lbf/sq.ft. external live load and 30-lbf/sq.ft. uplift.

E. Integral Aluminum Curb: Minimum 11 gage mill finished aluminum; nominal 1-inch rigid glass fiber insulation; integral cap flashing to receive roof flashings; extended flange for mounting.

F. Flush Aluminum Cover: Minimum 11-gage mill finish aluminum; nominal 1-inch glass fiber or insulation; minimum 18 gage aluminum interior liner; continuous neoprene or vinyl gasket to provide weatherproof seal.

G. Hardware: Manufacturer’s standard Cadmium plated finish:
1. Compression spring operator;
2. Steel manual pull handle for interior and exterior operation;
3. Steel hold open arm with vinyl covered grip handle for easy release,
4. Padlock hasp.
5. Hinges: Manufacturer's recommended type for specific type of roof hatch.

H. Safety Railings: Manufacturer's integral hatch railing and gate system curb-mounted on 3 sides of the hatch.
1. Swinging gate automatically latches in the closed position. Non-roof-penetrating attachment.
2. Fabricated from fiberglass-reinforced polymer pipe and finished in safety yellow factory-applied paint. Mounting brackets Hot dip galvanized steel.
3. 25-year manufacturer’s warranty.
4. Basis of Design: Bil-Guard as manufactured by Bilco.

2.02 ACCESSORIES

A. Anchorage Devices: Type recommended by manufacturer.

B. Counterflashings: Same metal type and finish as roof hatch frame.

C. Protective Coating: Bituminous, FS TT-C-494.

D. Sealant: As specified in Section 07 90 00.

2.03 FABRICATION

A. Fabricate components free of visual distortion and free of defects. Weld corners and joints.

B. Provide for condensation occurring within components and within assembly to drain to exterior above roofing.

C. Fit components for weather tight assembly.

D. Sloped Roofs: Fabricate roof hatch curbs tapered to maintain hatch top level.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify openings and substrate conditions are ready to receive Work of this section.

3.02 PREPARATION

A. Apply protective coating on aluminum surfaces of roof hatches to be in contact with cementitious materials or dissimilar metals.

3.03 INSTALLATION

A. Install curb assembly, fastening securely to roof decking. Flash curb assembly into roof system.

B. Place roof hatch and secure to curb assembly. Install integral setting sealant and counterflashing as required.

C. Final installation to be watertight assembly.

D. Coordinate with installation of roofing system and related flashings for weather tight installation.

E. Apply bituminous paint on surfaces of units in contact with cementitious materials or dissimilar metals.

F. Adjust hinges for smooth operation.

G. Install safety railing in accordance with manufacturer’s printed instructions.

3.04 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Wash down exposed surfaces; wipe surfaces clean.

C. Remove excess sealant.

END OF SECTION

SECTION 07 81 00

APPLIED FIREPROOFING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
1. Spray-on cementitious fireproofing for interior exposed and concealed structural steel where indicated.
2. Intumescent paint fireproofing for interior and exterior exposed structural steel.

B. Related Sections:
1. Section 05 12 00 - Structural Steel.
2. Section 05 21 00 - Steel Joist.
3. Section 07 84 00 - Firestopping.

1.02 REFERENCES

A. ASTM International:
1. ASTM C847 - Standard Specification for Metal Lath.
2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
3. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
4. ASTM E605 - Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.
5. ASTM E736 - Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members.
6. ASTM E760 - Standard Test Method for Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members.
7. ASTM E761 - Standard Test Method for Compressive Strength of Sprayed Fire-Resistive Material Applied to Structural Members.
8. ASTM E859 - Standard Test Method for Air Erosion of Sprayed Fire-Resistive Materials (SFRMs) Applied to Structural Members.
9. ASTM E937 - Standard Test Method for Corrosion of Steel by Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members.
10. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. National Fire Protection Association:
1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

C. Underwriters Laboratories Inc.:
1. UL - Fire Resistance Directory.
2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.

1.03 PERFORMANCE REQUIREMENTS

A. Applied (Sprayed-On) Fireproofing Systems: Provide fire rated assembly ratings as indicated on Drawings.

B. Air Erosion: Maximum 0.025 gram/sq. ft allowable weight loss of fireproofing when tested in accordance with ASTM E859.

C. Corrosion: No contribution to corrosion of steel test panels when tested in accordance with ASTM E937.

D. Mold Resistance: Material to show resistance to fungi growth when tested in accordance with ASTM C665 requirements for fungi resistance of insulation or ASTM G21.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data:
   1. Submit data for each type of fireproofing specified, indicating product characteristics, performance criteria, and limitations of use.

C. Test Reports: Indicate the following:
   1. Compressive Strength: ASTM E761.
   2. Dry Density: ASTM E605.
   3. Bond Strength of Fireproofing: ASTM E736.
   4. Bond Impact: ASTM E760.
   5. Fire test reports of fireproofing application to substrate materials, including primers, similar to Project conditions, conducted in conformance to ASTM E84 and ASTM E119.
   6. Air Erosion: ASTM E859.
   7. Corrosion: ASTM E937.
   8. Mold Resistance: ASTM C665 or ASTM G21.

D. Intumescent Paint Fireproofing Systems Test Reports: Indicate the following:
   1. Fire test reports of fireproofing application to substrate materials, including primers, similar to Project conditions, conducted in conformance to ASTM E84 and ASTM E119.

E. Manufacturer's Installation Instructions: Submit information including special procedures, and conditions requiring special attention.

F. Manufacturer's Certificate: Certify applied fireproofing products meet or exceed specified requirements.
   1. Certify applied fireproofing products contain no asbestos or other finely-divided particulate matter that can be released as airborne health hazard during or after application.

G. Manufacturer's Field Reports: Indicate compliance with manufacturer’s installation instructions and Contract Documents.

1.05 QUALITY ASSURANCE

A. Fireproofing Assembly: Rating as indicated on Drawings.

1. Tested Rating: Determined in accordance with ASTM E119.

B. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

1.06 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section, with minimum three years' experience.

B. Applicator: Company specializing in performing Work of this section, with minimum three years' experience and approved by manufacturer.

1.07 PRE-INSTALLATION MEETINGS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.08 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Maintain minimum ambient and substrate temperature of 40 degrees Fahrenheit (4.44 degrees Celsius) during and for minimum 24 hours after application of fireproofing, unless otherwise recommended by manufacturer.

C. Provide ventilation in areas to receive fireproofing during application and 24 hours afterward, to dry applied material.

1.09 SEQUENCING

A. Section 01 10 00 - Summary: Work sequence.

B. Sequence Work in conjunction with placement of masonry anchors and ties, partition track, and mechanical component hangers.

C. Provide temporary enclosure as required to confine spraying operations and protect the environment.

D. Provide temporary enclosures for applications to prevent deterioration of fire-resistive material due to exposure to weather and to unfavorable ambient conditions for humidity, temperature, and ventilation.

E. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.

F. Do not apply fire-resistive material to metal roof deck substrates until concrete topping, if any, has been completed. For metal roof decks without concrete topping, do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material.

G. Do not apply fire-resistive material to metal floor deck substrates until concrete topping has been completed.

H. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.

I. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.

J. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, and tested and corrections have been made to defective applications.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Warranty: Manufacturer's standard form, signed by Contractor and by Installer, in which manufacturer agrees to repair or replace sprayed fire-resistive materials that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
   1. Cracking, flaking, spalling, or eroding in excess of specified requirements; peeling; or delaminating of sprayed fire-resistive materials from substrates.
   2. Not covered under the warranty are failures due to damage by occupants and Owner's maintenance personnel, exposure to environmental conditions other than those investigated and approved during fire-response testing, and other causes not reasonably foreseeable under conditions of normal use.

C. Warranty Period: Two years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 CONCEALED SPRAY-ON CEMENTITIOUS FIREPROOFING

A. Manufacturers:
   1. Carboline Co., Pyrocrete www.carboline.com
   2. W. R. Grace & Co., Monokote Type MK-6/HY www.grace.com
   3. Isolatek International Corp., Cafco 300 www.cafco.com
   4. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description:
   1. Low Density Cementitious Type: Factory mixed, cementitious material blended for uniform texture with vermiculite or lightweight synthetic aggregate, and conforming to the following requirements:
      a. Type: As recommended by manufacturer for concealed interior applications.
      b. Compressive Strength: ASTM E761, minimum 5.21 psi (34.47 kPa).
      c. Dry Density: ASTM E605, minimum average density of 15 lb/cu ft.
      d. Bond Strength: ASTM E736, 150 psf when set and dry.
      e. Bond Impact: ASTM E760, no cracking, flaking or delamination.

2.02 EXPOSED SPRAY-ON CEMENTITIOUS FIREPROOFING

A. Manufacturers:
   1. Carboline Co., Pyrocrete 241 www.carboline.com
   2. W. R. Grace & Co., Monokote Type Z106 www.grace.com
   3. Isolatek International Corp., Cafco 400 www.cafco.com
   4. Pyrok, Inc., Pyrok-MD www.pyrokinc.com
   5. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description:
   1. Medium Density Cementitious Type: Factory mixed, portland cement blended for uniform texture with mineral aggregates or mineral fibers and additives, without chlorides, approved for exterior use and conforming to the following requirements:
      a. Type: As recommended by manufacturer for exposed interior applications, and for concealed exterior use.
      b. Compressive Strength: ASTM E761, minimum 51 psi (351.63 kPa).
      c. Dry Density: ASTM E605, minimum density of 22 lb/cu ft.
      d. Bond Strength: ASTM E736, 434 psf when set and dry.
      e. Bond Impact: ASTM E760, no cracking, flaking or delamination.

2.03 INTUMESCENT PAINT FIREPROOFING

A. Manufacturers:
   1. AD Fire Protection Systems, www.adfire.com.
   2. Albi Manufacturing, www.albi.com.
   3. Isolatek International Corp., www.cafco.com.
   4. Substitutions: Section 01 60 00 - Product Requirements.

B. Interior Thin-Film Fire-Resistant Intumescent Mastic Coating: Water-based, factory-mixed formulation, for interior use, consisting of intumescent coating and finish coat applied over primed steel. Provide compatible finish coat in color indicated.
   1. Basis-of-Design: Isolatek International Corp., Cafco SprayFilm-WB 3.

C. Exterior Thin-Film Fire-Resistant Intumescent Mastic Coating: Water-based, factory-mixed formulation, for exterior use, consisting of intumescent coating, topseal, and finish coat applied over primed steel. Provide compatible finish coat in color indicated.
   1. Basis-of-Design: Isolatek International Corp., Cafco SprayFilm-WB 4 Topseal.

2.04 ACCESSORIES

A. Primer, Adhesive, Bonding Agent, and Topseal as recommended by fireproofing manufacturer.

B. Metal Lath: Expanded metal lath where required for cementitious fireproofing; 3.4 lb/sq ft, galvanized finish; conform to ASTM C847.

C. Water: Clean, potable.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify surfaces are ready to receive fireproofing.

C. Verify clips, hangers, supports, sleeves, and other items required to penetrate fireproofing are in place.

D. Verify ducts, piping, equipment, or other items interfering with application of fireproofing have not been installed.

E. Verify voids and cracks in substrate have been filled. Verify projections have been removed where fireproofing will be exposed to view as finish material.

F. Verify roof traffic has ceased and roof mounted equipment is in place.

G. Ensure that all steel members and sections scheduled to receive fireproofing have been properly prepared by the fabricator to receive the specified fireproofing application.

3.02 PREPARATION

A. Perform tests as recommended by fireproofing manufacturer in situations where adhesion of fireproofing to substrate is in question.

B. Remove incompatible materials affecting bond by scraping, brushing, scrubbing, or sandblasting.

C. Prepare substrates to receive fireproofing.

D. Apply fireproofing manufacturer's recommended bonding agent on primed steel.

E. Protect surfaces not scheduled for fireproofing and equipment from damage by overspray, fall-out, and dusting.

F. Close off and seal duct work in areas where fireproofing is being applied.

3.03 APPLICATION - SPRAY-ON CEMENTITIOUS FIREPROOFING

A. Install metal lath over steel members as required by fire rated assembly Design Numbers.

B. Apply primer or adhesive as required by fireproofing manufacturer for conditions encountered.

C. Apply fireproofing in sufficient thickness to achieve required fire ratings, with as many passes as necessary to cover with monolithic blanket of uniform density and texture.

D. In exposed locations, trowel surface smooth and form square edges, using tools and procedures recommended by fireproofing manufacturer.

E. Patch damaged work.

3.04 APPLICATION - INTUMESCENT PAINT FIREPROOFING

A. Verify compatibility of primer with intumescent coating.

B. Apply intumescent coating to primed steel in accordance with manufacturer's instructions.

C. Apply intumescent coating in sufficient thickness to achieve indicated fire rating with as many passes necessary.

D. Follow manufacturer's instructions for drying time between successive coats and before application of finish coat.

E. Apply seal coat over intumescent coating at exterior locations, in accordance with manufacturer's instructions.

F. Apply finish coat, in color indicated, in accordance with manufacturer's instructions.

3.05 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.

C. Independent Testing Agency To:
   1. Inspect fireproofing substrates prior to application of fireproofing for surface temperature and surface preparation in accordance with manufacturer's instructions.
   2. Inspect installed fireproofing after application and curing for integrity, prior to its concealment.
   3. Test frequency and type in accordance with applicable code and authorities having jurisdiction.
   4. Inspect for the following:
      a. Installed Thicknesses and Density: ASTM E605.
      b. Bond Strengths: ASTM E736.
   5. Re-inspect installed fireproofing for integrity of fire protection, after installation of subsequent Work.

3.06 MANUFACTURER'S FIELD SERVICES

A. Section 01 40 00 - Quality Requirements: Manufacturers’ field services.

B. Observe site conditions, conditions of surfaces and installation, quality of workmanship, and initiate instructions when necessary.

C. Manufacturer's Field Reports: Document above observations; include environmental conditions under which fireproofing materials were installed.

3.07 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess material, overspray, droppings, and debris.

C. Remove fireproofing from materials and surfaces not required to be fireproofed.

D. At exposed fireproofing, clean surfaces that have become soiled or stained, using manufacturer's recommended procedures.

END OF SECTION

SECTION 07 84 00

FIRESTOPPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Firestopping of joints and penetrations in fire-resistance-rated and smoke-resistant assemblies, whether indicated on drawings or not, and other openings indicated.

B. Protection Provided Under Other Sections – Where no reference to protection of penetrations is provided under the following Sections or their related drawings, then such protection shall be provided under the requirements of this Section 07 84 00:

1. Division 4 Sections - Masonry and mortar used for fireproofing and firestopping.
2. Division 9 Sections - Drywall systems and accessories used for fireproofing and firestopping.
3. Division 21 Sections - Penetrations by fire suppression piping.
4. Division 22 Sections - Penetrations by plumbing piping.
5. Division 23 Sections - Penetrations of HVAC equipment including ducting, wiring, and piping.
6. Division 26 Sections - Penetrations of electrical equipment including raceways, conduit, boxes, outlets, panels, and cabinets.
7. Division 27 Sections - Penetrations of communication and technology equipment including wiring, conduit, outlets, panels, and boxes.
8. Division 28 Sections - Penetrations of electronic safety and security equipment including wiring, conduit, outlets, panels, and boxes.

1.02 REFERENCE STANDARDS

A. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009 (Reapproved 2016).

B. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2022.

C. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2023a.

D. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems; 2015 (Reapproved 2019).

E. ASTM E2174 - Standard Practice for On-Site Inspection of Installed Firestop Systems; 2020a.

F. ASTM E2393 - Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers; 2020a.

G. ASTM E2307 - Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus; 2023b.

H. ASTM E2837 - Standard Test Method for Determining the Fire Resistance of Continuity Head-of-Wall Joint Systems Installed between Rated Wall Assemblies and Nonrated Horizontal Assemblies; 2023a.

I. UL 2079 - Standard for Tests for Fire Resistance of Building Joint Systems; Current Edition, Including All Revisions.

1.03 DEFINITIONS

A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Schedule of Firestopping: List each type of penetration, fire rating of the penetrated assembly, and firestopping test or design number.
   1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Obtain approval of authorities having jurisdiction prior to submittal.

C. Product Data: Provide data on product characteristics, performance ratings, and limitations.

D. Product Test Reports: For each penetration firestopping system, for tests performed by a qualified testing agency.

E. Manufacturer's Installation Instructions: Indicate preparation and installation instructions.

F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

G. Manufacturer's qualification statement.

H. Installer's qualification statement.

I. Substitutions: Refer to "Default Joint Schedule of Joint Firestop Systems" at the end of this section for special substitution requirements.

J. Closeout Submittals:
   1. Installer Certificates: From Installer indicating that joint firestopping systems have been instaled in compliance with requiremnets and manufacturer's written instructions.

1.05 QUALITY ASSURANCE

A. Fire Testing: Provide firestopping assemblies of designs that provide the specified fire ratings when tested in accordance with methods indicated.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section and:
   1. A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with UL's "Qualified Firestop Contractor Program Requirements."

D. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.
   1. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.

E. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.

F. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10 inch water gage minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.

G. A qualified inspection agency shall check installed firestopping systems for compliance with requirements.

1.06 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.07 MOCK-UPS

A. Install one firestopping assembly representative of each fire rating design required on project.
   1. Where one design may be used for different penetrating items or in different wall constructions, install one assembly for each different combination.
   2. Where firestopping is intended to fill a linear opening, install at least 1 linear foot (0.305 linear m) of firestopping.

B. If accepted, mock-up will represent minimum standard for this work.

C. If accepted, mock-up may remain as part of this work if undisturbed at time of Subsantial Completion, if allowed by and coordinated with the Architect in the field. Remove and replace mock-ups not accepted.

D. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.08 FIELD CONDITIONS

A. Comply with firestopping manufacturer's recommendations for temperature and conditions during and after installation; maintain minimum temperature before, during, and for three days after installation of materials.
   1. Do not apply materials when temperature of substrate material and ambient air is below 60 degrees F.

B. Provide natural ventilation per manufacturer's written instructions in areas where solvent-cured materials are being installed. If natural ventilation is not adequate, provide forced-air circulation.

1.09 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping systems can be installed according to specified firestopping system design.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping systems.

C. Coordinate sizing of joints to accommodate joint firestopping systems.

1.10 DELIVERY, STORAGE AND HANDLING

A. Deliver firestopping products to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer; date of manufacture; lot number; shelf life, if applicable; qualified testing and inspecting agency's classification marking applicable to Project; curing time; and mixing instructions for multicomponent materials.

B. Store and handle firestopping materials to prevent their deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Penetration and Joint Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated or adjoined. Penetration and Joint Firestopping Systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any. Subject to compliance with requirements, provide products by one of the following manufacturers:
   1. 3M Fire Protection Products: www.3m.com/firestop
   2. A/D Fire Protection Systems Inc: www.adfire.com
   3. Grabber Construction Products, Inc; GrabberGard EFC: www.grabberman.com
   4. Hilti, Inc: www.hilti.com/
   5. HoldRite, a Brand of Reliance Worldwide Corporation; HydroFlame: www.holdrite.com/#sle.
   6. Passive Fire Protection Partners; Firestop 3600EX: www.firestop.com
   7. NUCO Inc.; http://sealantcentre.com
   8. RectorSeal; www.rectorseal.com
   9. STC Architectural Products; www.stcsoundseal.com/
   10. Specified Technologies Inc: www.stifirestop.com
   11. Tremco Commercial Sealants & Waterproofing; TREMstop Acrylic: www.tremcosealants.com
   12. Substitutions: See Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Firestopping Materials
   1. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer sleeve lined with an intumescent strip, a flange

attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

2. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.
3. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
4. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced intumescent elastomeric sheet bonded to galvanized-steel sheet.
5. Intumescent Putties: Nonhardening, water-resistant, intumescent putties containing no solvents or inorganic fibers.
6. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.
7. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers and lightweight aggregate formulated for mixing with water at Project site to form a non-shrinking, homogeneous mortar.
8. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.
9. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, non-shrinking foam.
10. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants.

B. Mixing Penetration Firestopping Materials: For those products requiring mixing before application, comply with penetration firestopping system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

C. Primers, Sleeves, Forms, Insulation, Packing, Stuffing, and Accessories: Provide type of materials as required for tested firestopping assembly.

2.03 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics:
1. Conform to applicable code for fire resistance ratings and surface burning characteristics.
2. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
3. Test per testing standards referenced in "Firestopping Assembly Requirements" Article. Provide rated systems complying with the following requirements:
    a. Penetration firestopping systems shall bear classification marking of a qualified testing agency.
        1) UL in its "Fire Resistance Directory."
        2) Intertek Group in its "Directory of Listed Building Products."
        3) FM Global in its "Building Materials Approval Guide."

2.04 FIRESTOPPING ASSEMBLY REQUIREMENTS

A. General: A qualified inspection agency shall check installed firestopping systems for compliance with requirements.

B. Perimeter Fire Containment Firestopping: Use system that has been tested according to ASTM E2307 to have fire resistance F Rating equal to required fire rating of floor assembly.

C. Head-of-Wall (HW) Joint System Firestopping at Joints Between Fire-Rated Wall Assemblies and Non-Rated Horizontal Assemblies: Use system that has been tested according to ASTM E2837 to have fire resistance F Rating equal to required fire rating of wall assembly.

D. Floor-to-Floor (FF), Floor-to-Wall (FW), Head-of-Wall (HW), and Wall-to-Wall (WW) Joints, Except Perimeter, Where Both Are Fire-Rated: Use system that has been tested according to ASTM E1966 or UL 2079 to have fire resistance F Rating equal to required fire rating of the assembly in which the joint occurs.

E. Through Penetration Firestopping: Use system that has been tested according to ASTM E814 to have fire resistance F Rating equal to required fire rating of penetrated assembly.
   1. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.01 inch water gage minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated, but not less than 1-hour.
      a. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.
      b. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

F. Floor Penetrations Within Wall Cavities: T-Rating is not required.

G. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.
   1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
   2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.
   3. Penetrations in Horizontal Assemblies: Penetration firestopping systems with ratings determined per ASTM E 814 or UL 1479 applicable to F-Rating and T-Rating, hourly-rated systems, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).
      a. F-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated.
      b. Ratings in "T-Rating" Subparagraph below indicate resistance to excessive thermal transmission.
      c. T-Rating: At least one hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.
      d. Unrated Assemblies: An approved fill, void or cavity material that is, 1) tested in the form and manner intended for use to demonstrate that it will stay in place, 2) classified for use in through-penetration firestop systems. Firestopping is required in the annular space between the face of the penetrating item and the face of the floor opening, to resist the passage of flame and the products of combustion.

H. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.01 inch water gage minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.

I. Penetrations in Smoke Barriers: Penetration firestopping systems with ratings determined per UL 1479, based on testing at a positive pressure differential of 0.30-inch wg (74.7 Pa).

1. L-Rating: Not exceeding 5.0 cfm/sq. ft. (0.025 cu. m/s per sq. m) of penetration opening at and no more than 50-cfm (0.024-cu. m/s) cumulative total for any 100 sq. ft. (9.3 sq. m) at both ambient and elevated temperatures.

J. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, per ASTM E 84.

K. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping system manufacturer and approved by qualified testing and inspecting agency for conditions indicated.
1. Retain accessories in subparagraphs below required.

L. Permanent forming/damming/backing materials.
1. Substrate primers.
2. Collars.
3. Steel sleeves.

M. Joints at Exterior Curtain-Wall/Floor Intersections: Provide joint firestopping systems with rating determined per ASTM E 2307.

N. Acoustically Rated Firestopping: Provide system tested in accordance with ASTM E90 with STC rating 50 to match penetrated assembly, minimum.

2.05 FIRESTOPPING FOR PERIMETER CONTAINMENT
1. Subject to compliance with requirements, products which may be incorporated in the Work include, but are not limited to, the following:
2. F-Rating: Equal to or exceeding the fire-resistance rating of the floor assembly.
3. Basis of Design: HI/BPF 120-10 Perimeter Fire Barriers Firestop Joint Spray DFS-SP WB by Hilti, Inc. www.us.hilti.com/ Engineering Judgements are required for this system to be used differently than tested.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify openings are ready to receive the work of this section.

B. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning: Before installing penetration firestopping systems, clean out openings immediately to comply with manufacturer's written instructions and with the following requirements:
1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping materials.

2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping materials. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed upon completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestopping materials. Remove tape as soon as it is possible to do so without disturbing firestopping's seal with substrates.

D. Remove incompatible materials that could adversely affect bond.

E. Install backing materials to prevent liquid material from leakage.

3.03 INSTALLATION

A. Install materials in manner described in fire test report and in accordance with manufacturer's written instructions, completely closing openings. For this job, firestopping is required at all penetrations in all floors, rated and unrated, and includes, but is not limited to pipes, cables and conduits. Due to the variable and complex nature of what is required by the Building Code for unrated floors, and the desire to simplify the job with a single requirement, all penetrations in both unrated floors and rated floors are required to be treated with firestopping material, including penetrations within rated “shafts”. Any firestopping **within** rated “shafts” is not required to be rated, as the rated “shaft” will provide the rated separation of atmospheres between floors. If a penetration exits a “shaft” terminus at a floor, the penetration firestopping at the floor penetration shall be rated equal to the higher rating of either the rated “shaft” or the floor.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.
1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.

C. Install fill materials by proven techniques to produce the following results:
1. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items to achieve required fire-resistance ratings.
2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.
4. Tool nonsag sealants immediately after sealant application and prior to the time skinning or curing begins. Form smooth, uniform beads of configuration indicated or required to produce fire-resistance rating, as well as to eliminate air pockets, and to ensure contact and adhesion of sealants with sides of joint. Remove excess sealant from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

D. Install elastomeric fill materials for fire-resistive joint systems by proven techniques to produce the following results:
   1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
   2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
   3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 IDENTIFICATION

A. Wall Identification: Permanently label walls containing penetration firestopping systems with the words "FIRE AND/OR SMOKE BARRIER - PROTECT ALL OPENINGS," using lettering not less than 3 inches (76 mm) high and with minimum 0.375-inch (9.5-mm) strokes.
   1. Locate in accessible concealed floor, floor-ceiling, or attic space at 15 feet (4.57 m) from end of wall and at intervals not exceeding 30 feet (9.14 m) on center where structural bays are more than 30 feet wide. Where structural bays are shorter than 30 feet wide, locate wall identification at each structural bay, or fraction of structural bay width.

B. Penetration Identification: Identify each penetration firestopping system with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of penetration firestopping system edge so labels are visible to anyone seeking to remove penetrating items or firestopping systems. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
   1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
   2. Contractor's name, address, and phone number.
   3. Designation of applicable testing and inspecting agency.
   4. Date of installation.
   5. Manufacturer's name.
   6. Installer's name.

C. Joint Identification: Identify joint firestopping systems with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of joint edge so labels are visible to anyone seeking to remove or joint firestopping system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
   1. The words "Warning - Joint Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
   2. Contractor's name, address, and phone number.
   3. Designation of applicable testing agency.
   4. Date of installation.
   5. Manufacturer's name.
   6. Installer's name.

3.05 FIELD QUALITY CONTROL

A. Independent Testing Agency: Inspection agency employed and paid by Owner, will examine penetration firestopping in accordance with ASTM E2174 and ASTM E2393.

B. Repair or replace penetration firestopping and joints at locations where inspection results indicate firestopping or joints do not meet specified requirements, where deficiencies are found or penetration firestopping system is damaged or removed because of testing

C. Proceed with enclosing penetration firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

3.06 CLEANING

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping system manufacturers and that do not damage materials in which openings occur.

3.07 PROTECTION

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping system manufacturers and that do not damage materials in which openings occur.

END OF SECTION

SECTION 07 90 00

JOINT PROTECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes sealants and joint backing, pre-compressed foam sealers, and accessories for control joints and joints between dissimilar materials where not a part of work specified under other sections. Sealant for specified systems such as roofing, waterproofing, air barriers, firestopping, glazing, sidewalks, paving, plumbing is provided under those sections.

B. Sections Related to Work Under This Section:
   1. Section 03 30 00 – Cast-In-Place Concrete: Sealant at expansion and control joints in interior and exterior walls, and in exposed interior concrete floors.
   2. Section 04 20 00 – Unit Masonry Assemblies: Sealant at expansion and control joints.
   3. Section 08 11 13 – Standard steel Doors and Frames: Perimeter sealant at interior and exterior door frames.
   4. Section 08 41 13 – Aluminum Framed Entrances and Storefronts: Perimeter joints
   5. Section 08 91 00 - Louvers: Perimeter joints between louvers and adjacent materials.
   6. Section 09 21 16 - Gypsum Board Assemblies: Joints between drywall assemblies and adjacent materials.

C. Sealant Work Specified in Other Sections:
   1. Section 06 20 24 - Finish Carpentry and Millwork: Sealant between millwork assemblies and adjacent materials.
   2. Section 07 84 00 - Firestopping: Sealant as part of firestopping assemblies.
   3. Section 08 80 00 - Glazing: Glazing sealants.
   4. Section 09 21 16 - Gypsum Board Assemblies: Acoustic sealant at drywall partitions.
   5. Section 09 30 00 - Tiling: Sealant as part of tiling systems, including expansion and control joints.
   6. Section 12 32 16 - Plastic Laminate-Clad Casework: Sealant between casework assemblies and adjacent materials.
   7. Division 22 Sections: Sealants as part of plumbing systems and fixture installations.
   8. Division 32 Sections: Sealants at paving and sidewalk joints.

1.02 REFERENCES

A. ASTM International:
   1. ASTM C834 - Standard Specification for Latex Sealants.
   2. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.
   3. ASTM C1193 - Standard Guide for Use of Joint Sealants.
   4. ASTM D1056 - Standard Specification for Flexible Cellular Materials-Sponge or Expanded Rubber.
   5. ASTM D1667 - Standard Specification for Flexible Cellular Materials-Vinyl Chloride Polymers and Copolymers (Closed-Cell Foam).

6. ASTM D2628 - Standard Specification for Preformed Polychloroprene Elastomeric Joint Seals for Concrete Pavements.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Products Data: Submit data indicating sealant chemical characteristics, performance criteria, substrate preparation, limitations, and color availability.

C. Samples: Submit two samples illustrating sealant colors for selection.

D. Manufacturer's Installation Instructions: Submit special procedures, surface preparation, and perimeter conditions requiring special attention.

E. Warranty: Include coverage for installed sealants and accessories failing to achieve watertight seal, exhibit loss of adhesion or cohesion, and sealants which do not cure.

1.04 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Applicator: Company specializing in performing Work of this section with minimum three years’ experience.

1.05 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Maintain temperature and humidity recommended by sealant manufacturer during and after installation.

1.06 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with sections referencing this section.

PART 2 PRODUCTS

2.01 JOINT SEALERS

A. Manufacturers:
1. Dow Corning Corp. www.dowcorning.com.
2. GE Silicones www.gesilicones.com.
3. Pecora Corp. www.pecora.com.
4. Sika Corp. www.sikaconstruction.com.
5. Tremco Sealants & Waterproofing www.tremco.com.
6. Substitutions: Section 01 60 00 - Product Requirements.

2.02 EXTERIOR SEALANTS:

A. Non-Staining Silicone Sealant: ASTM C920, Grade NS, Uses M and A; not expected to withstand continuous water immersion or traffic.
   1. Movement Capability: Plus and minus 50 percent, minimum.
      a. Non-Staining To Porous Stone: Non-staining to light-colored natural stone when tested in accordance with ASTM C1248.
   2. Dirt Pick-Up: Reduced dirt pick-up compared to other silicone sealants.
   3. Hardness Range: 15 to 35, Shore A, when tested in accordance with ASTM C661.
   4. Color: To be selected by Architect from manufacturer's standard range.
   5. Service Temperature Range: minus 65 to 180 degrees Fahrenheit (82.22 degrees Celsius).
   6. Applications: Use for:
      a. Exposed exterior joints between metal wall panels.
      b. Joints between unframed edges of glass panels without vertical mullions.
         1) Perimeter joints separating metal door frames, window frames, and louvers, vents and similar items from exterior wall materials.
   7. Manufacturers:
      a. Basis of Design: Dow Chemical Company; DOW 795 Silicone Building Sealant: Required for all exposed building sealant joints including masonry control and expansion joints, perimeter frame joints. May be used other concealed applications such as setting of thresholds and sill plates, or as substitute for butyl or polyisobutylene below. Color(s) selected by the Architect from manufacturer’s minimum of 15 colors.
      b. Alternate products:
         1) Pecora Corporation; Pecora AVB Silicone: www.pecora.com.
         2) Tremco Commercial Sealants & Waterproofing: www.tremcosealants.com/#sle.
         3) Substitutions: See Section 01 60 00 - Product Requirements.

B. Exterior Metal Lap Joint Sealant: Butyl or polyisobutylene, non-drying, non-skinning, non-curing (or specified silicone above).
   1. Type: Butyl Sealant manufactured by Tremco.
   2. Applications: Use for concealed sealant bead in sheet metal work and concealed sealant bead in siding overlaps.

C. Exterior Foam Expansion Joint Sealer: Precompressed foam sealer; Polyurethane with water-repellent, +/- 25 percent movement capability.
   1. Color: Face color as selected.
   2. Size: As required to provide watertight and airtight seal when installed.
   3. Applications: Use for exterior wall expansion joints.
   4. Manufacturers:
   5. Basis of design: Colorseal; Emseal Corp. www.emseal.com.
   6. Alternate products:
      a. Polytite R or Polytite Standard; Dayton Superior www.daytonsuperior.com.
      b. Illmod 600; Tremco www.tremco.com.
      c. Willseal 600; Willseal USA LLP www.willsealusa.com.
      d. Substitutions: Section 01 60 00 - Product Requirements.

2.03 INTERIOR SEALANTS:

A. General Purpose Interior Sealant: Acrylic emulsion latex; ASTM C834, single component, paintable.
   1. Type: Tremflex 834 manufactured by Tremco.
   2. Color: Standard colors matching finished surfaces.
   3. Applications: Use for interior wall and ceiling control joints, joints between door and window frames and wall surfaces, and other interior joints for which no other type of sealant is indicated.
   4. For interior control joints in brick, unpainted concrete masonry, cast stone, or stone, use General Purpose Exterior Sealant.

B. General Purpose Interior Traffic Bearing Sealant: Polyurethane; ASTM C920, Type S, Grade P, Class 50, Use T; single- component, semi self-leveling.
   1. Type: Vulkem 45 SSL manufactured by Tremco.
   2. Color: Standard colors matching finished surfaces.
   3. Applications: Use for interior pedestrian traffic bearing joints.

2.04 ACCESSORIES

A. Primer: Non-staining type, recommended by sealant manufacturer to suit application.
   1. Interior Sealants and Sealant Primers: Maximum volatile organic compound content in accordance with SCAQMD Rule 1168.
   2. Prime for every sealant joint – no exceptions.

B. Joint Cleaner: Non-corrosive and non-staining type, recommended by sealant manufacturer; compatible with joint forming materials.

C. Joint Backing: Round foam rod compatible with sealant; ASTM D1056, sponge or expanded rubber; oversized 30 to 50 percent larger than joint width.

D. Bond Breaker: Pressure sensitive tape recommended by sealant manufacturer to suit application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces and joint openings are ready to receive work.

C. Verify joint backing and release tapes are compatible with sealant.

3.02 PREPARATION

A. Remove loose materials and foreign matter impairing adhesion of sealant.

B. Clean and prime joints.

C. Perform preparation in accordance with ASTM C1193.

D. Protect elements surrounding Work of this section from damage or disfiguration.

3.03 INSTALLATION

A. Perform installation in accordance with ASTM C1193.

B. Measure joint dimensions and size joint backers to achieve the following:
   1. Width/depth ratio of 2: 1.
   2. Neck dimension no greater than 1/3 of joint width.
   3. Surface bond area on each side not less than 75 percent of joint width.

C. Install bond breaker where joint backing is not used.

D. Install sealant free of air pockets, foreign embedded matter, ridges, and sags.

E. Apply sealant within recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

F. Tool joints concave.

G. Pre-compressed Foam Sealant: Do not stretch; avoid joints except at corners, ends, and intersections; install with face 1/8 to 1/4 inch (6.35 mm) below adjoining surface.

3.04 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean adjacent soiled surfaces.

3.05 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect sealants until cured.

END OF SECTION

SECTION 07 95 00

PREMANUFACTURED EXPANSION JOINT SYSTEMS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes: The following types of metal expansion joint covers:
   1. Interior pedestrian traffic joints.
   2. Interior wall and ceiling joints.
   3. Interior soffit joints.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Block-outs and cast-in anchorage and frames for expansion joint systems in concrete floors, parking decks, and walls.
   2. Section 07 62 00 - Sheet Metal Flashing and Trim: Sheet metal roof and wall joint systems.
   3. Section 07 90 00 - Joint Protection; Elastomeric sealants and preformed compressed-foam sealants without metal frames.

1.02 DEFINITIONS

A. Expansion Joint System: Any filler or cover used to span, fill, cover, or seal a joint, except expanding foam seals and applied sealants.

B. Cyclic Movement: Periodic change between widest and narrowest joint widths in an automatically mechanically controlled system.

C. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist passage of flame and hot gases through a movement joint.

D. Movement Capability: Value obtained from the difference between widest and narrowest widths of a joint opening typically expressed in numerical values (mm or inches) or a percentage of nominal value of joint width.

E. Revise below if it is impossible either to indicate nominal joint widths based on a prediction when the joint system will be installed or, if none is indicated, to establish them based on maximum and minimum joint widths.

F. Nominal Joint Width: Width of linear gap indicated as representing the conditions existing when expansion joint systems will be installed or, if no nominal joint width is indicated, a width equal to the sum of maximum and minimum joint widths divided by two.

1.03 PERFORMANCE REQUIREMENTS

A. General: Provide factory-fabricated expansion joint systems capable of withstanding the types of loads and of accommodating the kinds of movement, and the other functions for which they are designed including those specified below, without failure. Types of failure include those listed in Appendix X3 of ASTM E1399.
   1. Pedestrian Traffic Joints: Support pedestrian traffic across joint.

2. Joints in Fire-Resistance-Rated Assemblies: Maintain fire-resistance ratings of assemblies.
3. Joints in Smoke Barriers: Maintain integrity of smoke barrier.
4. Joints in Acoustically Rated Assemblies: Inhibit passage of airborne noise.
5. Other Joints: Where indicated, provide joint systems that prevent penetration of water, moisture, and other substances deleterious to building components or content.
6. Joints in Surfaces with Architectural Finishes: Serve as finished expansion joint closures.

1.04 SUBMITTALS

A. Product Data: Include manufacturer's product specifications, construction details, material and finish descriptions, and dimensions of individual components and seals.

B. Shop Drawings: For each joint system specified, provide the following:
1. Placement Drawings: Include line diagrams showing entire route of each joint system, plans, elevations, sections, details, joints, splices, locations of joints and splices, and attachments to other Work. Where joint systems change planes, provide Isometric Drawings depicting how components interconnect to achieve continuity of joint covers and fillers.

C. Samples for Verification: Full-size units 6 inches (152.4 mm) long of each type of joint system indicated; in sets for each finish, color, texture, and pattern specified, showing the full range of variations expected in these characteristics.

D. Product Test Reports: From a qualified testing agency indicating expansion joint systems comply with requirements, based on comprehensive testing of current products.

E. Research/Evaluation Reports: Evidence of expansion joint system's compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain expansion joint systems through one source from a single manufacturer. Coordinate compatibility with adjoining joint systems specified in other Sections.

B. Fire-Test-Response Characteristics: Where indicated, provide joint systems incorporating fire barriers that are identical to those of assemblies tested for fire resistance per ASTM E119 and UL 2079, including hose-stream test of vertical wall assemblies, by a testing and inspecting agency acceptable to authorities having jurisdiction.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design Products: The design for each expansion joint system specified in Part 2 "Expansion Joint Systems" Article below is based on the products named. Subject to compliance with requirements, provide either the named products or comparable products by one of the other manufacturers listed.

2.02 MATERIALS

A. Aluminum: ASTM B221 (((ASTM B221M))), alloy 6063-T5 for extrusions; ASTM B 209 (ASTM B 209M), alloy 6061-T6 for sheet and plate.
   1. Apply manufacturer's standard protective coating on aluminum surfaces to be placed in contact with cementitious materials.

B. Preformed Seals: Single or multicellular extruded elastomeric seals designed with or without continuous, longitudinal, internal baffles. Formed to be installed in frames or with anchored flanges, in color indicated or, if not indicated, as selected by Architect from manufacturer's standard colors.

C. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint.

D. Accessories: Manufacturer's standard anchors, clips, fasteners, set screws, spacers, flexible moisture barrier and filler materials, drain tubes, lubricants, adhesives, and other accessories compatible with material in contact, as indicated or required for complete installations.

2.03 EXPANSION JOINT SYSTEMS

A. General: Provide joint systems of design, basic profile, materials, and operation indicated. Provide units with the capability to accommodate joint widths indicated and variations in adjacent surfaces.
   1. Furnish units in longest practicable lengths to minimize number of end joints. Provide hairline mitered corners where joint changes directions or abuts other materials.
   2. Include closure materials and transition pieces, tee-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous joint systems.
   3. Public Arena Seals: Non-slip seals designed for installation on treads and risers and to lie flat with adjacent surfaces and complying with ADA guidelines for public areas.
   4. Nominal Joint Widths: As indicated.
   5. Type of Movement Capability: Expansion and contraction.
   6. Preformed Seal Material: Manufacturer's standard.
      a. Seal Color: Selected by Architect.
   7. Exposed Frame Material: Aluminum.
   8. Fire-Resistance Ratings: For joint systems at rated conditions, provide manufacturer's standard fire barrier with a rating not less than that of adjacent construction.

B. Basis-of-Design Products: The design for each expansion joint system specified below is based on the products named. Subject to compliance with requirements, provide either the named products or comparable products by one of the following manufacturers:
   1. Architectural Art Manufacturing, Inc. www.archart.com
   2. Balco Metalines, www.balcousa.com
   3. Construction Specialties, Inc. www.c-sgroup.com
   4. InPro Corp. www.inprocorp.com.
   5. MM Systems, Inc. www.mmsystemscorp.com

C. Expansion Joint System: Metal frames and preformed seals for the following interior conditions:
   1. Floor-to-Floor Joints, Basis-of-Design Product: Construction Specialties, Inc.; "ALS" Series.

2. Floor-to-Wall Joints, Basis-of-Design Product: Construction Specialties, Inc.; ″ALSW″ Series.
3. Wall-to-Wall Joints, Basis-of-Design Product: Construction Specialties, Inc.; ″AFW″ Series.
4. Wall-to-Ceiling Joints, Basis-of-Design Product: Construction Specialties, Inc.; ″FCSC″ Series
5. Ceiling-to-Ceiling Joints, Basis-of-Design Product: Construction Specialties, Inc.; ″FCS″ Series.
6. Wall-to-Soffit Joints, Basis-of-Design Product: Construction Specialties, Inc.; ″FCSC″ Series.
7. Soffit-to-Soffit Joints, Basis-of-Design Product: Construction Specialties, Inc.; ″FCS″ Series.

2.04 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.05 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Mill Finish: AA-M10 (Mechanical Finish: as fabricated; no other applied finish unless buffing is required to remove scratches, welding, or grinding produced in fabrication process.
   1. Provide at floor conditions unless otherwise indicated.

C. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: Non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0 inch (0.01 mm) or thicker) complying with AAMA 607.1.
   1. Provide at wall, ceiling, and soffit conditions unless otherwise indicated.

PART 3 EXECUTION

3.01 PREPARATION

A. Prepare substrates according to expansion joint system manufacturer's written instructions.

B. Coordinate and furnish anchorages, Placement Drawings, and instructions for installing joint systems to be embedded in or anchored to concrete or to have recesses formed into edges of concrete slab for later placement and grouting-in of frames.

C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure joint systems to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of joint systems.

3.02 INSTALLATION

A. Comply with manufacturer's written instructions for handling and installing expansion joint assemblies and materials, unless more stringent requirements are indicated.

B. Coordinate installation of expansion joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.

C. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required to install joint systems.
   1. Install joint cover assemblies in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
   2. Allow adequate free movement for thermal expansion and contraction of metal to avoid buckling.
   3. Set covers in horizontal surfaces at elevations that place exposed surfaces flush with adjoining finishes.
   4. Locate wall, ceiling, and soffit covers in continuous contact with adjacent surfaces.
   5. Securely attach in place with required accessories.
   6. Locate anchors at interval recommended by manufacturer, but not less than 3 inches (76.2 mm) from each end and not more than 24 inches (609.6 mm) o.c.

D. Continuity: Maintain continuity of joint systems with a minimum number of end joints and align metal members. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal to avoid buckling of frames. Adhere flexible filler materials, if any, to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.

E. Extruded Preformed Seals: Install seals to comply with manufacturer's written instructions and with minimum number of end joints.
   1. For straight sections, provide preformed seals in continuous lengths.
   2. Vulcanize or heat-weld field splice joints in preformed seal material to provide watertight joints using procedures recommended by manufacturer.
   3. Apply adhesive, epoxy, or lubricant adhesive approved by manufacturer to both frame interfaces before installing preformed seals.
   4. Seal transitions according to manufacturer's written instructions.

F. Seismic Seals: Install interior seals in continuous lengths. Install exterior seal in standard lengths and vulcanize or heat-weld field splice joints to provide watertight joints using manufacturer's recommended procedures. Seal transitions and end joints according to manufacturer's written instructions.

G. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and end joints.

3.03 CLEANING AND PROTECTION

A. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.

END OF SECTION

SECTION 08 11 13

STANDARD STEEL DOORS AND FRAMES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Steel frames for doors, sidelights, and windows.

B. Related Sections:
   1. Section 08 14 16 - Flush Wood Doors: For wood veneered or plastic laminate clad doors set in steel frames.
   2. Section 08 71 00 - Door Hardware: For finish hardware requirements of steel frames.
   3. Section 08 80 00 - Glazing: For glazing panels set in steel frames and glass lights set in steel door faces.
   4. Section 09 90 00 - Painting and Coating: Field painting of shop-primed steel doors and frames.

1.02 REFERENCES

A. American National Standards Institute:
   1. ANSI A250.8 - Recommended Specifications for Standard Steel Doors and Frames.

B. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   2. ASTM E413 - Standard Classification for Rating Sound Insulation.

C. National Fire Protection Association:
   1. NFPA 80 - Standard for Fire Doors, Fire Windows.
   2. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies.
   3. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

D. Steel Door Institute:
   1. SDI 108 - Recommended Selection and Usage Guide for Standard Steel Doors.

E. Underwriters Laboratories Inc.:
   1. UL 10B - Fire Tests of Door Assemblies.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Requirements for submittals.

B. Shop Drawings: Indicate door elevations, frame elevations, internal reinforcement, anchor types and spacing, door closure method, and cut-outs for hardware, glazing, and louvers.

C. Product Data: Submit door configurations, frame configurations, location of cut-outs for hardware reinforcement.

D. Manufacturer's Installation Instructions: Submit special installation instructions.

E. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

F. Oversize Construction Certificates: For door assemblies required to be fire rated and exceeding size limitations of labeled assemblies.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with ANSI A250.8.

B. Fire Rated Door and Frame Construction: Conform to NFPA 252.

C. Installed Fire Rated Door Assembly: Conform to NFPA 80 for fire rated class as indicated on Drawings.

D. Attach label from agency approved by authority having jurisdiction to identify each fire rated door and frame.

E. Surface Burning Characteristics:
   1. Foam Insulation in Fire Rated Doors: Maximum 75/450 flame spread/smoke developed index when tested in accordance with ASTM E84.
   2. Apply label from agency approved by authority having jurisdiction to identify each foam plastic insulation board.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years’ experience.

B. Installer: Company specializing in performing work of this section with minimum 3 years’ experience and approved by manufacturer.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept doors and frames on site in manufacturer's packaging. Inspect for damage.

C. Break seal on site to permit ventilation.

1.07 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Requirements for coordination.

B. Coordinate Work with door opening construction, door frame, and door hardware installation.

C. Coordinate installation to accommodate door hardware electric wire connections.

PART 2 PRODUCTS

2.01 STANDARD STEEL FRAMES

A. Manufacturers:
1. Amweld Building Products www.amweld.com
2. Ceco Door www.cecodoor.com
3. Curries www.curries.com
4. Deansteel Manufacturing, Inc. www.deansteel.com
5. Kewanee Corporation www.kewaneecorp.com
6. Mesker Door, Inc. www.meskerdoor.com
7. Pearland Industries
8. Pioneer Industries Inc. www.pioneerindustries.com
9. Republic Doors and Frames www.republicdoor.com
10. Substitutions: Section 01 25 00 – Substitution Procedures.

B. Product Description - Frames: Fully welded steel frames, to suit ANSI A250.8 and the following:
1. Exterior: Level 3 - Extra heavy Duty, 14 gage thick material, galvanized A60.
2. Interior: Level 3 - Extra heavy Duty, 16 gage thick material, ungalvanized.
a. Furnish 14 gage thick material for frames over 48 inches (1219.2 mm) wide.

2.02 FRAME COMPONENTS

A. Frames: Steel sheet in accordance with ANSI A250.

2.03 ACCESSORIES

A. Removable Stops: Rolled steel, channel shape, butted corners; prepared for countersink style screws.

B. Vision Lite Systems: Manufacturer's standard kits consisting of glass lite moldings to accommodate glass thickness and size of vision lite indicated.

C. Primer: ANSI A250.10, manufacturer’s standard rust inhibitive type.

D. Silencers: Specified in Section 08 71 00; resilient rubber fitted into drilled hole.

2.04 FABRICATION

A. Frames:
1. Fabricate frames as welded unit.
2. Mullions for Double Doors: Removable, specified in Section 08 71 00.
3. Transom Bars for Glazed Lights: Fixed type, of same profiles as jamb and head.
4. Fabricate frames with hardware reinforcement plates welded in place. Provide mortar guard boxes.
5. For frames installed in masonry walls, and which will receive stop-applied seals or weatherstripping, fill the stops with strips of rigid insulation to keep the grout out of the stops and to facilitate installation of the seals and weatherproofing.

6. Prepare frames for silencers. Provide three single silencers for single doors on strike side. Provide two single silencers on frame head at double doors.
7. Attach fire rated label to each fire rated frame.
8. Glazing Stops: Provide non-removable stops on the outside and removable, screw-applied stops on the room side of doors and frames for glass.

B. Acoustical Ratings:
1. Fabricate doors not scheduled as “Acoustical Door” to provide an STC rating of 33 or better.
2. Reference Section 08 34 73 for assemblies requiring STC ratings greater than specified herein.

2.05 SHOP FINISHING

A. Primer: Baked-on shop primer, ready for field finish painting.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify opening sizes and tolerances are acceptable.

3.02 FRAME INSTALLATION

A. Install frames in accordance with ANSI A250.8.

B. Coordinate with masonry and gypsum board wall construction for anchor placement.

C. Provide at least three wall anchors per jamb. For openings 90 inches (2286 mm) or more in height, install four wall anchors per jamb.

D. Coordinate installation of glass and glazing specified in Section 08 80 00.

E. Coordinate installation of frames with doors and with hardware specified in Section 08 71 00.

F. Coordinate installation of frames with installation of doors specified in Section 08 14 16.

3.03 DOOR INSTALLATION

A. Install doors in accordance with ANSI A250.8.

B. Install door louvers and glazing frames plumb and level.

C. Coordinate installation of glass and glazing specified in Section 08 80 00.

D. Coordinate installation of doors with frames and with hardware specified in Section 08 71 00.

E. Touch-up damaged shop finishes.

3.04 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Diagonal Distortion: 1/16 inch (1.59 mm) measured with straight edge, corner to corner.

C. Clearances for Non-Fire-Rated Doors: Not more than 1/8 inch (3.18 mm) at jambs and heads, except not more than 1/4 inch (6.35 mm) between pairs of doors. Not more than 3/4 inch (19.05 mm) at bottom.

D. Clearances for Fire-Rated Doors: In accordance with NFPA 80.

3.05 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for adjusting.

B. Adjust door for smooth and balanced door movement.

END OF SECTION

SECTION 08 14 16

FLUSH WOOD DOORS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Flush wood doors with plastic laminate faces.

B. Related Sections:
   1. Section 08 11 13 - Standard Steel Doors and Frames: Steel frames.
   2. Section 08 71 00 - Door Hardware: Finish hardware requirements for doors.
   3. Section 08 80 00 - Glazing: Glass lights set in door faces.

1.02 REFERENCES

A. ASTM International:
   1. ASTM E413 - Standard Classification for Rating Sound Insulation.

B. Architectural Woodwork Institute:
   1. AWI - Quality Standards Illustrated.

C. National Electrical Manufacturers Association:
   1. NEMA LD 3 - High Pressure Decorative Laminates.

D. National Fire Protection Association:
   1. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; 2022.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Illustrate door opening criteria, elevations, sizes, types, swings, undercuts required, special beveling, special blocking for hardware, factory machining criteria, identify cutouts for glazing and louvers.

C. Product Data: Submit information on door core materials and construction.

D. Samples:
   1. Submit two samples of door construction, 12 x 12 inch (304.8 mm) in size, cut from top corner of door.
   2. Submit two samples of plastic laminate illustrating laminate pattern and color.
   3. Submit two samples of lite opening frames, 6 inches (152.4 mm) long, for each material, type, and finish required.

E. Manufacturer's Installation Instructions: Submit special installation instructions.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with AWI Quality Standard Section 1300, Custom Grade.

B. Finish doors in accordance with AWI Quality Standard Section 1500.

C. Fire Rated Door Construction: Conform to NFPA 252.

D. Attach label from agency approved by authority having jurisdiction to identify each fire rated door.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Package, deliver and store doors in accordance with AWI Section 1300.

C. Accept doors on site in manufacturer's packaging. Inspect for damage.
   1. Break seal on site to permit ventilation.

1.07 PROJECT CONDITIONS

A. Do not deliver or install doors until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.08 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with door opening construction, door frame and door hardware installation.

1.09 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Include coverage for delamination, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.

C. Furnish manufacturer's "Life of Installation" warranty for interior doors.

PART 2 PRODUCTS

2.01 FLUSH WOOD DOORS

A. Manufacturers:

1. Algoma Hardwoods Inc. www.algomahardwoods.com
2. Eggers Industries www.eggersind.com
3. Graham Manufacturing Corp. www.grahamdoors.com
4. IPIK Door Company www.ipikdoor.com
5. Marshfield Door Systems Inc. www.marshfielddoors.com
6. VT Industries www.vtindustries.com
7. Substitutions: Section 01 60 00 - Product Requirements.

B. Product Description: Solid core flush wood doors; 1-3/4 inches (44 mm) thick, five ply construction, plastic laminate facing material; fire and acoustic rated as indicated on Drawings.

2.02 COMPONENTS

A. Plastic Laminate Doors: Solid core, AWI Section 1300, core as follows:
1. Non-Rated: Solid stave wood core.
2. 20- and 45-Minute Rating: Solid stave wood core.
3. 60-Minute Rating: Mineral core.
4. 90-Minute Rating: Mineral core.

B. Acoustical Doors: Not applicable.

C. Plastic Laminate Facing (Interior): NEMA LD 3, General Purpose Type, 0.050-inch-thick, type as indicated on Drawings.

D. Cross Banding Behind Laminate Finish: 1 ply; manufacturer’s standard construction.

E. Facing Adhesive: Type II - water resistant.

2.03 ACCESSORIES

A. Glazing Stops - Plastic Laminate-Clad Doors:
1. Rolled steel, factory primed frames.

2.04 FABRICATION

A. Fabricate doors in accordance with AWI Quality Standards requirements.

B. Furnish lock blocks at lock edge and top of door for hardware reinforcement.

C. Vertical Exposed Edge of Stiles: Hardwood painted or stained to match laminate for plastic laminate doors.

D. Factory machine doors for finish hardware in accordance with hardware requirements and dimensions. Do not machine for surface hardware. Furnish solid blocking for through bolted hardware.

E. Factory fit doors for frame opening dimensions identified on shop drawings.

F. Provide edge clearances in accordance with AWI 1300.

2.05 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish direct to the Owner an additional two full 4’ x 8’ sheets of each plastic laminate color used for flush wood doors in the project. Roll and box sheets together for Owner storage.

C. Obtain a receipt from the Owner.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes and tolerances are acceptable.

C. Do not install doors in frame openings that are not plumb or are out-of-tolerance for size or alignment.

3.02 INSTALLATION

A. Install doors in accordance with AWI Quality Standards requirements.

B. Trim non-rated door width by cutting equally on both jamb edges.

C. Trim door height by cutting bottom edges to maximum of 3/4 inch (19.05 mm).
   1. Trim fire door height at bottom edge only, in accordance with fire rating requirements.

D. Machine cut doors for hardware installation.

E. Coordinate installation of doors with installation of frames specified in Section 08 11 13 and hardware specified in Section 08 71 00.

F. Coordinate installation of glass and glazing specified in Section 08 80 00.

3.03 INSTALLATION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Conform to AWI requirements for fit and clearance tolerances.

C. Conform to AWI Section 1300 requirements for maximum diagonal distortion.

3.04 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust door for smooth and balanced door movement.

C. Adjust closer for full closure.

END OF SECTION

ACCESS DOORS AND PANELS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Section includes fire resistive rated and non-rated access doors and panels with frames for walls and ceilings.
   1. Provide for access to controls, valves, traps, dampers, cleanouts, and similar items requiring operation behind inaccessible finished surfaces.
   2. Coordinate exact locations with the various trades to assure proper placement of access doors and panels.

1.02 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Provide sizes, types, finishes, hardware, scheduled locations, and details of adjoining work for each type of product and application.
   1. Include construction details, fire ratings for doors in rated assemblies, material descriptions, dimensions of individual components and profiles, and finishes.

C. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 6 by 6 inches (150 by 150 mm) in size.

D. Product Schedule: For access doors and frames.
   1. Obtain specific locations and sizes for required access doors from trades requiring access to concealed equipment, and indicate on submittal schedule.
   2. Special-Size Access doors: Use where required or requested, indicate on schedule.

E. Manufacturer's Installation Instructions: Indicate installation requirements and rough-in dimensions.

1.03 QUALITY ASSURANCE

A. Single Source Responsibility: Obtain access doors for entire project from one source from a single manufacturer.

B. Size Variations: Obtain Architect's acceptance of manufacturer's standard size units, which may vary slightly from sizes indicated.

C. Coordination: Furnish inserts and anchoring devices that must be built into other work for installation of access doors. Coordinate delivery with other work to avoid delay

D. Coordinate Work with work requiring controls, valves, traps, dampers, cleanouts, and similar items requiring operation being located behind finished surfaces.

E. Fire Resistance Ratings: Where indicated as fire rated provide assemblies from manufacturers listed in UL Directory or Intertek Testing Services (Warnock Hersey Listed) Directory.

F. Fire Rated Access Doors: Rating as indicated on Drawings.
   1. Tested Rating: Determined in accordance with ASTM E119.

G. Attach label from agency approved by authority having jurisdiction to identify each fire rated access door.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Fire-Rated Access Doors and Frames: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection **and temperature-rise limit** ratings indicated, according to NFPA 252 or UL 10B. At acoustically rated assemblies, provide acoustical rated doors and frames with STC ratings equal to or better than the STC rating of the assembly.

2.02 MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include, but are not limited to, the following:
   1. Bauco: https://bauco.com/products/
   2. Karp Associates, Inc.: www.karpinc.com
   3. Milcor, Commercial Products Group of Hart & Cooley, Inc.: www.commercialproductsgroup.com
   4. Nystrom, Inc.: www.nystrom.com
   5. Substitutions: See Section 01 60 00 - Product Requirements.

2.03 ACCESS DOORS AND PANELS ASSEMBLIES

A. Flush Framed Access Doors: Frames and nominal 1-inch wide exposed flanges of 16-gage steel and door panels of 14-gage steel (see Finishes for stainless steel).

B. Gypsum Board Access Doors: Frames and nominal 1-inch wide flanges of 16-gage steel and door panels of 14-gage steel. Design flanges to be concealed by gypsum board joint finishing compound specified in Section 09 21 16.

C. Plaster Access Doors: Frames and nominal 1-inch wide flanges of 16-gage steel and door panels of 14-gage steel. Design flanges to be concealed by plaster specified in Section 09 24 00.

D. Fire Rated Access Doors: Frames and nominal - inch wide exposed flanges of minimum 16-gage steel and door panels of 20-gage steel. Provide self-closing and latching doors with keyed lock to match cylinders specified in Section 08 71 00.

E. Gypsum Board Fire Rated Access Doors: 16-gage steel frames with minimum 22-gage galvanized steel drywall bead flanges and door panels of 20-gage steel. Design flanges to be concealed by gypsum board joint finishing compound specified in Section 09 21 16. Provide self-closing and latching doors with keyed lock to match cylinders specified in Section 08 71 00.

2.04 MATERIALS

A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A 879/A 879M, with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.

C. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

D. Retain the more expensive "Type 316" option in "Stainless-Steel Sheet, Strip, Plate, and Flat Bars" Paragraph below for more corrosion resistance; verify availability with manufacturers.

E. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 304. Remove tool and die marks and stretch lines, or blend into finish.

F. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063.

G. Aluminum Sheet: ASTM B 209 (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

H. Frame Anchors: Same material as door face.

I. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

2.05 FABRICATION

A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

B. Fabricate units of continuous welded construction; weld, fill, and grind joints to assure flush and square unit.

C. Size Variations: Obtain acceptance of manufacturer’s standard size units which vary slightly from sizes shown or scheduled.

D. Wall and Ceiling Access Door and Panel Hardware:
   1. Hinge: Standard continuous or concealed spring pin type, 175 degree steel hinges.
   2. Lock: Self-latching lock. Screw driver slot for quarter turn cam lock.

E. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

F. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.
   1. For concealed flanges with drywall bead, provide edge trim for gypsum panels securely attached to perimeter of frames.
   2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded-metal lath and exposed casing bead welded to perimeter of frames.

G. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling. Provide access sleeves for each latch operator and install in holes cut through finish.
   1. For recessed doors with plaster infill, provide self-furring expanded-metal lath attached to door panel.

H. Latch and Lock Hardware:
   1. Quantity: Furnish number of latches and locks required to hold doors tightly closed.
   2. Keys: Furnish two keys per lock and key all locks alike.
   3. Mortise Cylinder Preparation: Where indicated, prepare door panel to accept cylinder specified in Section 08 71 00 Door Hardware.

2.06 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
   1. Base Metal Protection: Galvanized, hot dipped wiped coat finish.
   2. Factory Finished: Apply manufacturer's standard baked-enamel or powder-coat finish immediately after cleaning and pretreating, with minimum dry-film thickness of 1 mil (0.025 mm) for topcoat. Color as selected by Architect from full range of industry colors.

E. Stainless-Steel Finishes:

F. Provide series 300 brushed stainless steel panels and frames for all restrooms.
   1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify that rough openings are correctly sized and located.

C. Begin installation only after substrates have been properly prepared, and if the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to proceeding with this work.

B. Prepare surfaces using methods recommended by manufacturer for applicable substrates in accordance with project conditions.

3.03 INSTALLATION

A. Install units in accordance with manufacturer's instructions.

B. Install frames plumb and level in openings, and secure units rigidly in place.

C. Install frames with plane of door and panel face aligned with adjacent finished surfaces.
   1. Set concealed frame type units flush with adjacent finished surfaces.

D. Install fire rated units in accordance with NFPA 80 and requirements for fire listing.

E. Position units to provide convenient access to concealed equipment when necessary.

END OF SECTION

SECTION 08 33 13

OVERHEAD COILING COUNTER SHUTTERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Prefinished steel overhead coiling counter shutter at Concession opening.
   2. Interior location.
   3. Motorized operation.

B. Related Sections
   1. 09 90 00 - Painting: Field painting of steel hood and recessed end guides.
   2. Division 26 sections: Power, conduit, boxes, conductors and final electrical connections.

1.02 REFERENCES

A. ASTM International:
   1. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   2. ASTM A924/A924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.

B. National Electrical Manufacturers Association:
   1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
   2. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC.
   3. NEMA MG 1 - Motors and Generators.

1.03 DESIGN REQUIREMENTS

A. Operation: Design door assembly to operate for not less than 10,000 cycles.

B. Rating: Not applicable.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, and installation details.

C. Product Data: Submit manufacturer’s general material and construction description, component connections and details.

D. Samples: Submit two door slats of each material, 12 inch long, illustrating shape, color and finish texture.

E. Manufacturer's Installation Instructions: Indicate installation sequence and procedures, and adjustment and alignment procedures.

1.05 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit lubrication requirements and frequency, and periodic adjustments required.

1.06 MANUFACTURER'S WARRANTY

A. Counter door manufacturer shall provide written warranty against defects in materials and workmanship for the door, motor, and operator system for a minimum period of 1-year after date of Substantial Completion of the Project.

1.07 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section with minimum three years' experience and approved by manufacturer.

PART 2 PRODUCTS

2.01 OVERHEAD COUNTER SHUTTERS

A. Manufacturers:
1. The Cookson Company, www.cooksondoor.com
2. Cornell Iron Works, Inc., www.cornelliron.com
3. McKeon Rolling Steel Door Company, Inc., www.mckeondoor.com
4. Overhead Door Corporation, www.overheaddoor.com
5. Wayne-Dalton Corporation, www.wayne-dalton.com
6. Substitutions: Section 01 60 00 - Product Requirements.

2.02 COMPONENTS

A. Curtain: Conform to following:
1. Steel Slats: Interlocking, minimum 24 gage.
   a. Type: Single thickness flat slat.
2. Nominal Slat Size: 2 inches wide by required length.
3. Slat Ends: Alternate slats fitted with end locks to act as wearing surface in guides and to prevent lateral movement.
4. Curtain Bottom:Steel tube-shape, providing reinforcement and vinyl astragal.
5. Finish: Factory-applied powder coat. Color as selected by the Architect.

B. Guides: Material to match curtain. Provide continuous integral wear strips to prevent metal-to-metal contact and minimize noise of travel. Provide removable stops on guides to prevent overtravel of curtain. Provide weatherstripping for exterior units.

C. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension.

D. Hood Enclosure: Square shape, minimum 24 gage steel; internally reinforced to maintain rigidity and shape.

2.03 ELECTRIC OPERATOR:

A. General: Provide electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operational life specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.

B. Comply with NFPA 70.

C. Disconnect Device for Manual Operation: Provide hand-operated disconnect or mechanism for automatically engaging sprocket-chain operator and releasing brake while disconnecting motor, without affecting timing of limit switch. Mount disconnect and operator so they are accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

D. Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency auxiliary operator.

E. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V, ac or dc.

F. Door-Operator Type: Provide wall-, hood-, or bracket-mounted, jackshaft, gear-head hoist-type door operator unit consisting of electric motor, enclosed worm-gear running-in-oil primary drive, chain and sprocket secondary drive, and auxiliary chain-hoist and floor level disconnect.

G. Electric Motors: Provide high-starting torque, reversible, continuous-duty, Class A insulated, electric motors, complying with NEMA MG 1, with overload protection, sized to start, accelerate, and operate door in either direction, from any position, at not less than 2/3 fps or more than 1 fps, without exceeding nameplate ratings or considering service factor.
   1. Type: Polyphase, medium-induction type.
   2. Service Factor: According to NEMA MG 1, unless otherwise indicated.
   3. Coordinate wiring requirements and electric characteristics of motors with building electrical system.
   4. Provide open dripproof-type motor, and controller with NEMA ICS 6, Type 1 enclosure.

H. Remote-Control Station: Provide keyed control station with spring-release switch. Dorr will operate only when key is held in OPEN or CLOSE position. Release of key immediately stops door movement.
   1. Provide one control station on secure side of door.
   2. Provide switch body accepting removable cylinder keyed to Owner’s master keying requirements (Sargent Large Format). Removable cylinder provided under the Hardware Section.

I. Provide interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.

J. Limit Switches: Provide adjustable switches, interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes, tolerances and conditions are acceptable.

3.02 INSTALLATION

A. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

B. Securely and rigidly brace components suspended from structure.

C. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

D. Coordinate installation of sealants and backing materials at frame perimeter as specified in Section 07 90 00.

E. Install perimeter trim and closures.

3.03 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maintain dimensional tolerances and alignment with adjacent Work.

C. Maximum Variation from Plumb: 1/16 inch.

D. Maximum Variation from Level: 1/16 inch.

E. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 ft straight edge.

3.04 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust door, hardware and operating assemblies for smooth and noiseless operation.

3.05 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean door and components.

C. Remove labels and visible markings.

END OF SECTION

SECTION 08 33 23

OVERHEAD COILING DOORS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Overhead coiling doors.
   2. Electric operation with manual override.

B. Related Sections:
   1. Section 05 50 00 - Metal Fabrications: Support framing.
   2. Section 08 71 00 - Hardware: Removable cylinder keyed to Owner's building system for coiling door control stations.
   3. Section 09 90 00 - Painting and Coating: Field painted finish of factory-primed guides and hood enclosure.
   4. Division 26 and 28 Sections:
      a. Power and final connections.
      b. Coordination with emergency generator circuit and fire/smoke alarm activation.

1.02 REFERENCES

A. ASTM International:
   1. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   2. ASTM A924/A924M - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.

B. National Electrical Manufacturers Association:
   1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
   2. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC.
   3. NEMA MG 1 - Motors and Generators.

1.03 SYSTEM DESCRIPTION

A. Electric Operation: Electric motor operated unit with manual override in case of power failure.

1.04 DESIGN REQUIREMENTS

A. Wind Loads: Design exterior door assembly to withstand wind/suction loads indicated on Drawings, with maximum deflection of 1/120, and without damage to door shutter or assembly components.

B. Operation: Design door assembly, including operator, to operate for not less than 10,000 cycles.

1.05 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details, including wiring diagrams for electric operators.

C. Product Data: Submit general construction, component connections and details, wiring diagram and electrical equipment.

D. Samples: Submit two door slats, 12 inches (304.8 mm) long, illustrating shape, color and finish texture.

E. Manufacturer's Installation Instructions: Indicate installation sequence and procedures, and adjustment and alignment procedures.

1.06 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit lubrication requirements and frequency, and periodic adjustments required.

1.07 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by UL or another testing firm acceptable to authority having jurisdiction.

B. Surface Burning Characteristics:
1. Foam Insulation: Maximum 75/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Apply label from agency approved by authority having jurisdiction to identify each foam plastic insulation board.

1.08 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Installer: Company specializing in performing work of this section with minimum years’ experience and approved by manufacturer.

PART 2 PRODUCTS

2.01 OVERHEAD COILING DOORS

A. Manufacturers:
1. The Cookson Company www.cooksondoor.com/index
2. Cornell Iron Works Inc. www.cornelliron.com
3. McKeon Rolling Steel Door Company, Inc. www.mckeondoor.com
4. Overhead Door Corporation. www.overheaddoor.com

5. Raynor Garage Doors. www.raynor.com/index.cfm
6. Southwestern Steel Rolling Door Co.
7. Windsor Door www.windsordoor.com.
8. Substitutions: Section 01 60 00 - Product Requirements.

2.02 COMPONENTS

A. Curtain for Exterior Doors: Conforming to the following:
   1. Steel Slats: Interlocking, minimum 24 gage of ASTM A653/A653M steel, with galvanized coating designation G90 in accordance with ASTM A924/A924M.
      a. Type: Sandwich slat construction with insulated core.
   2. Nominal Slat Size: 2 inches (50.8 mm) wide x required length.
   3. Slat Ends: Alternate slats fitted with end locks to act as wearing surface in guides and to prevent lateral movement.
   4. Windlocks: Malleable-iron castings secured to curtain slats with galvanized rivets or high-strength nylon, as required to comply with wind load.
   5. Curtain Bottom: Fitted with minimum 1-1/2 x 1-1/2 x 1/8 inch (3.18 mm) angles to provide reinforcement and positive contact with floor in closed position; galvanized.
      a. Provide motor-operated doors with combination bottom astragal/sensor edge.

B. Guides: Minimum 3/16 inch (4.76 mm) thick; galvanized steel conforming to ASTM A653/A653M, minimum galvanized coating designation G90 in accordance with ASTM A924/A924M.
   1. Furnish continuous angles of profile to retain door in place; mounting brackets of same metal. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to ensure smooth operation of curtain from any position and capable of holding position at mid-travel; with adjustable spring tension.

C. Hood Enclosure: Round shape, minimum 24 gage galvanized steel; internally reinforced to maintain rigidity and shape.

D. Electric Operator:
   1. General: Provide electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operational life specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
   2. Comply with NFPA 70.
   3. Disconnect Device for Manual Operation: Provide hand-operated disconnect or mechanism for automatically engaging sprocket-chain operator and releasing brake while disconnecting motor, without affecting timing of limit switch. Mount disconnect and operator so they are accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
   4. Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency auxiliary operator.
   5. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V, ac or dc.
   6. Door-Operator Type: Provide wall-, hood-, or bracket-mounted, jackshaft, gear-head hoist-type door operator unit consisting of electric motor, enclosed worm-gear running-in-oil primary drive, chain and sprocket secondary drive, and auxiliary chain-hoist and floor level disconnect.

7. Electric Motors: Provide high-starting torque, reversible, continuous-duty, Class A insulated, electric motors, complying with NEMA MG 1, with overload protection, sized to start, accelerate, and operate door in either direction, from any position, at not less than 2/3 fps or more than 1 fps, without exceeding nameplate ratings or considering service factor.
    a. Type: Polyphase, medium-induction type.
    b. Service Factor: According to NEMA MG 1, unless otherwise indicated.
    c. Coordinate wiring requirements and electric characteristics of motors with building electrical system.
    d. Provide open dripproof-type motor, and controller with NEMA ICS 6, Type 1 enclosure.
8. Remote-Control Station: Provide keyed control station with 3-position controls labeled "Open," "Close," and "Stop."
    a. Provide one control station on each side of door where doors are installed across corridors or other traffic areas.
    b. Provide switch body accepting removable cylinder keyed to Owner’s master keying requirements (Sargent Large Format). Removable cylinder provided under the Hardware Section.
9. Provide interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
10. Obstruction Detection Device: Provide each motorized door with indicated external automatic safety sensor able to protect full width of door opening. Activation of sensor immediately stops and reverses downward door travel.
    a. Sensor Edge: Provide each motorized door with an automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor immediately stops and reverses downward door travel. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
    b. Provide electrically actuated automatic bottom bar.
    c. Self-Monitoring Type: Provide self-monitoring, 4-wire configured device.
11. Limit Switches: Provide adjustable switches, interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

2.03 SHOP FINISHING

A. Curtain Slats: Steel, with factory powder coat finish, color as selected by Architect from manufacturer’s full range.

B. Steel Guides and Hood Enclosure: Prime for field painting.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes, tolerances and conditions are acceptable.

3.02 INSTALLATION

A. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

B. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.

C. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

D. Coordinate installation of electrical service. Complete wiring from disconnect to unit components and from fire alarm system to door operator.

E. Coordinate installation of sealants and backing materials at frame perimeter as specified in Section 07 90 00. Provide a continuous, non-hardening sealant bead behind the exterior guide angles prior to mechanical fastening to prevent 'wicking' of wind-driven rain into the building envelope.

F. Install perimeter trim and closures.

3.03 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maintain dimensional tolerances and alignment with adjacent Work.

C. Maximum Variation from Plumb: 1/16 inch (1.59 mm).

D. Maximum Variation from Level: 1/16 inch (1.59 mm).

E. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch (3.18 mm) per 10 ft straight edge.

3.04 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust door, hardware and operating assemblies for smooth and noiseless operation.

3.05 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean door and components.

C. Remove labels and visible markings.

END OF SECTION

SECTION 08 33 26

OVERHEAD COILING GRILLES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Overhead coiling grilles.
   2. Electric operation.

B. Related Sections:
   1. Section 05 50 00 - Metal Fabrications: Support framing. Framed opening.

1.02 REFERENCES

A. ASTM International:
   1. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

B. National Electrical Manufacturers Association:
   1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
   2. NEMA ICS 2 - Industrial Control and Systems: Controllers, Contactors, and Overload Relays, Rated Not More Than 2000 Volts AC or 750 Volts DC.
   3. NEMA MG 1 - Motors and Generators.

1.03 SYSTEM DESCRIPTION

A. Electric Operation: Electric motor operated unit with manual override in case of power failure.

B. Self-Opening: Designated units self-opening in case of alarm or power failure without the need for power or battery back-up.

1.04 DESIGN REQUIREMENTS

A. Operation: Design grille assembly, including operator, to operate for not less than 10,000 cycles.

1.05 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details, including wiring diagrams for electric operators.

C. Product Data: Submit general construction, component connections and details, and electrical equipment.

D. Samples: Submit portion of grille members, 12 x 12 inch in size illustrating pattern, shape, color and finish texture.

E. Manufacturer's Installation Instructions: Submit installation sequence and procedures, adjustment and alignment procedures.

1.06 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Indicate lubrication requirements and frequency, and periodic adjustments required.

1.07 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by UL., or another testing firm acceptable to authority having jurisdiction.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience and approved by manufacturer.

PART 2 PRODUCTS

2.01 OVERHEAD COILING GRILLES

A. Manufacturers:
1. Cornell Iron Works, Inc. www.cornelliron.com
2. McKeon Rolling Steel Door Company, Inc. www.mckeondoor.com
3. Overhead Door Corporation www.overheaddoor.com
4. Raynor Garage Doors. www.raynor.com
5. Windsor Door www.windsordoor.com
6. Substitutions: Section 01 60 00 - Product Requirements.

2.02 COMPONENTS

A. Grilles: Straight pattern grilles conforming to the following.
1. Material: Aluminum conforming to ASTM B221.
2. Sizes: Fabricated of 5/16 inch minimum diameter horizontal members spaced at 2 inches oc.
3. Vertical Connecting Members: 5/8 x 1/8 inch flat bar, links spaced at 9 inches oc.
4. Ends: Members with nylon or wool pile runners for quiet operation.
5. Bottom Bar: Tube or back-to-back angles, of material to match grille.
    a. Provide motor-operated grilles with combination bottom astragal and sensor edge.

B. Guides: Extruded aluminum conforming to ASTM B221. Provide continuous integral wear strips to prevent metal-to-metal contact and minimize noise of travel. Provide removable stops on guides to prevent overtravel of curtain.

C. Roller Shaft Counterbalance: Steel pipe and helical steel spring system, capable of producing torque sufficient to assure smooth operation of grille from any position; with adjustable spring tension.

D. Hood Enclosure: round shape, minimum 0.040-inch thick aluminum; internally reinforced to maintain rigidity and shape.

E. Mounting Tube Frame: Provide manufacturer's standard mounting tube frame designed to support grille; factory fabricated from structural-steel tubes; fastened to floor and structure above grille; to be built into wall construction; and complete with anchors, connections, and fasteners. Hardware: Specified in Section 08 71 00.

F. Electric Operator:
   1. General: Provide electric grille operator assembly of size and capacity recommended and provided by grille manufacturer for grille and operational life specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking grille, and accessories required for proper operation.
   2. Comply with NFPA 70.
   3. Disconnect Device: Provide hand-operated disconnect or mechanism for automatically engaging sprocket-chain operator and releasing brake for emergency manual operation while disconnecting motor, without affecting timing of limit switch. Mount disconnect and operator so they are accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
   4. Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency auxiliary operator.
   5. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V, ac or dc.
   6. Grille-Operator Type: Provide wall-, hood-, or bracket-mounted, jackshaft, gear-head-type grille operator unit consisting of electric motor, enclosed worm-gear running-in-oil primary drive, chain and sprocket secondary drive, and quick disconnect-release for manual operation.
   7. Electric Motors: Provide high-starting torque, reversible, continuous-duty, Class A insulated, electric motors, complying with NEMA MG 1, with overload protection, sized to start, accelerate, and operate grille in either direction, from any position, at not less than 2/3 fps and not more than 1 fps, without exceeding nameplate ratings or considering service factor.
      a. Type: Polyphase, medium-induction type.
      b. Service Factor: According to NEMA MG 1, unless otherwise indicated.
      c. Coordinate wiring requirements and electric characteristics of motors with building electrical system.
      d. Provide open dripproof-type motor, and controller with NEMA ICS 6, Type 1 enclosure.
   8. Remote-Control Station: Provide momentary-contact, keyed control station with 3-position controls labeled "Open," "Close," and "Stop."
      a. Provide interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
      b. Provide one control station on each side of grille where grilles are installed across corridors or other traffic areas.
   9. Obstruction Detection Device: Provide each motorized grille with indicated external automatic safety sensor able to protect full width of grille opening. Activation of sensor immediately stops and reverses downward grille travel.

10. Sensor Edge: Provide each motorized grille with an automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor immediately stops and reverses downward grille travel. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
    a. Provide electrically actuated automatic bottom bar.
    b. Self-Monitoring Type: Provide self-monitoring, 4-wire configured device.
11. Limit Switches: Provide adjustable switches, interlocked with motor controls and set to automatically stop grille at fully opened and fully closed positions.
12. Self-Opening Mechanism: Automatic release mechanism triggered by fire alarm system or power failure. When activated, the grille shall self-open by means of a fail-safe operator to the fully open position without the need of power operation or battery backup systems. When the alarm is cleared and power is restored, the grille shall operate normally. Provide adjustable time delay of up to 10 seconds from signal or power failure until start of grille opening.

2.03 FINISHES

A. Grille Components: Aluminum, clear anodized.

B. Guides and Hood Enclosure: Match grille finish.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes, tolerances and conditions are acceptable.

3.02 INSTALLATION

A. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

B. Securely and rigidly brace components suspended from structure.

C. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

D. Coordinate installation of electrical. Complete wiring from disconnect to unit components.

E. Coordinate installation of sealants and backing materials at frame perimeter as specified in Section 07 90 00.

F. Install perimeter trim and closures.

3.03 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maintain dimensional tolerances and alignment with adjacent Work.

C. Maximum Variation from Plumb: 1/16 inch.

D. Maximum Variation from Level: 1/16 inch.

E. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch per 10 ft straight edge.

3.04 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust grille, hardware and operating assemblies for smooth and noiseless operation.

C. Engage a factory-authorized service representative to perform startup service.
   1. Perform installation and startup checks according to manufacturer's instructions.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   3. Test grille opening when activated by fire-alarm system and power failure. Reset grille-opening mechanism after successful test.

3.05 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean grille and components.

C. Remove labels and visible markings.

END OF SECTION

SECTION 08 34 73

SOUND CONTROL DOOR ASSEMBLIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Steel sound-control doors, frames, seals, and certain hardware for special sound doors as scheduled.

B. Related Sections:
   1. Section 08 71 00 - Door Hardware: For required hardware not provided under this section.
   2. Section 09 90 00 - Painting and Staining: For field-applied paint finishes for steel doors and frames.

1.02 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of product indicated. Include sound ratings, construction details, material descriptions, core descriptions, and finishes.

C. Shop Drawings: Include the following:
   1. Elevations of each door design.
   2. Details of sound-control seals, door bottoms, and thresholds.
   3. Details of doors, including vertical and horizontal edge details and metal thicknesses.
   4. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   5. Locations of reinforcement and preparations for hardware.
   6. Details of each different wall opening condition.
   7. Details of anchorages, joints, field splices, and connections.
   8. Details of accessories.
   9. Details of moldings, removable stops, and glazing.
   10. Details of conduit and preparations for power, signal, and control systems.

D. Samples:
   1. Finishes: For each type of exposed finish required, prepared on Samples of not less than 3 by 5-inches.
   2. Retain both subparagraphs below if fabrication Samples are required.
   3. Doors: Include section of vertical-edge, top, and bottom construction; automatic door bottom or gasket; core construction; glazing; and hinge and other applied hardware reinforcement.
   4. Frames: Include profile, corner joint, floor and wall anchors, and seals. Include separate section showing fixed sound panels if applicable.

E. Schedule: Provide a schedule of sound-control door assemblies prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with the Door Hardware Schedule.

F. Product Certificates: For each type of sound-control door assembly, from manufacturer.

G. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each type of sound-control door assembly.

H. Warranty: Samples of special warranty.

1.03 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sound-control door assemblies to include in maintenance manuals.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain sound-control door assemblies, including doors, frames, sound-control seals, hinges (when integral for sound control), thresholds, and other items essential for sound control, from single source from single manufacturer.

B. Sound Rating: Provide sound-control door assemblies identical to those of assemblies tested as sound-retardant units by an acoustical testing agency, and have the following minimum rating:
   1. STC Rating(s): STC 50 or as indicated in the drawings, and as determined by ASTM E413 when tested in an operable condition according to ASTM E90 and ASTM E 1408.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in the section with minimum three years' experience.

B. Installer: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

C. Acoustical Testing Agency: An independent agency accredited as an acoustical laboratory according to the National Voluntary Laboratory Accreditation Program of NIST.

1.06 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Deliver doors and frames palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use non-vented plastic.
   1. Provide additional protection to prevent damage to finish of factory-finished wood doors.

C. Shipping Spreaders: Deliver welded frames with two removable spreader bars across bottom of frames, tack welded or mechanically attached to jambs and mullions.

D. Store doors and frames under cover at Project site. Place units in a vertical position with heads up, spaced by blocking, on minimum 4-inch high, wood blocking. Avoid using non-vented plastic or canvas shelters that could create a humidity chamber.
   1. If wrappers on doors become wet, remove cartons immediately. Provide a minimum of 1/4-inch space between each stacked door to permit air circulation.

1.08 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.09 COORDINATION

A. Coordinate installation of anchorages for sound-control door assemblies. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for warranties.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sound-control door assemblies that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Failure to meet sound rating requirements.
      b. Faulty operation of sound seals.
      c. Deterioration of metals, metal finishes, and other materials beyond normal use or weathering.
   2. Warranty Period for Steel Doors: Five-years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 STEEL SOUND-CONTROL DOOR ASSEMBLIES

A. Manufacturers:
   1. Assa Abloy, www.assaabloydooraccessories.us.com.
   2. Krieger Specialty Products Company, www.kriegerproducts.com
   3. Overly Door Company, www.overly.com
   4. Protective Door Industries, www.protectivedoor.com
   5. Wenger Corporation, www.wengercorp.com
   6. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis of Design: Acoustical Door and Frame as manufactured by Wenger, or approved equivalent by specified manufacturer.

C. Description: Provide flush-design sound-control doors, minimum 1-3/4” thick or greater where required to meet specified STC rating, of seamless construction; with manufacturer's standard sound-retardant core as required to provide STC ratings indicated. Construct doors with smooth, flush surfaces without visible joints or seams on exposed faces or stile edges. Fabricate according to ANSI/NAAMM HMMA 865.
   1. Interior Doors: Fabricate from cold-rolled steel sheet unless otherwise indicated, 14-ga. outside face and 16-ga. inside face, or thicker as required to achieve STC rating indicated.
   2. Loose Stops for Glazed Lites in Doors: Same material as face sheets.
   3. Top and Bottom Channels: Closed with continuous channels of same material as face sheets, spot welded to face sheets not more than 6-inches o.c.
   4. Hardware Reinforcement: Same material as face sheets.

D. Materials:
   1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.
   2. Glazing: As required by sound-control door assembly manufacturer to comply with sound-control requirements.

2.02 SOUND-CONTROL FRAMES

A. Description: Fabricate sound-control door frames with corners mitered, reinforced, and continuously welded full depth and width of frame. Fabricate according to ANSI/NAAMM HMMA 865.
   1. Weld frames according to NAAMM-HMMA 820.
   2. Interior Frames: Fabricate from cold-rolled steel sheet unless otherwise indicated, 0.075-inch nominal thickness, or thicker as required to provide STC rating indicated.
   3. Sound-Control Panel Stops: Formed integral with frames, a minimum of 5/8-inch high, unless otherwise indicated.
   4. Hardware Reinforcement: Fabricate according to ANSI/NAAMM HMMA 865 of same material as face sheets.
   5. Head Reinforcement: Reinforce frames with metallic-coated steel channel or angle stiffener, 0.108-inch nominal thickness, welded to head.
   6. Jamb Anchors:
      a. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.064-inch nominal thickness metallic-coated steel with corrugated or perforated straps not less than 2-inches wide by 10-inches long; or wire anchors not less than 0.156-inch thick.
      b. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.048-inch nominal thickness uncoated steel unless otherwise indicated.
      c. Post-installed Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch diameter, metallic-coated steel bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.
   7. Floor Anchors: Not less than 0.079-inch nominal thickness metallic-coated steel, and as follows:
      a. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.

B. Materials:
   1. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Commercial Steel (CS), Type B, suitable for exposed applications.

2. Supports and Anchors: After fabricating, galvanize units to be built into exterior walls according to ASTM A153/A153M, Class B.
3. Inserts, Bolts, and Fasteners: Provide items to be built into exterior walls, hot-dip galvanized according to ASTM A153/A153M or ASTM F 2329.
4. Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching sound-control door frames of type indicated.
5. Mineral-Fiber Insulation: Insulation composed of rock-wool fibers, slag-wool fibers, or glass fibers.

2.03 FINISHES

A. Prime Finish: Apply manufacturer's standard primer immediately after cleaning and pretreating.

B. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and scheduled field-applied coatings.

C. Final Finish: Field applied.

2.04 SOUND-CONTROL HARDWARE

A. Description: Provide manufacturer's standard sound-control system, including head and jamb seals, door bottoms, cam-lift hinges, and thresholds, as required by testing to achieve STC rating indicated.
1. Compression Seals: One-piece units; consisting of closed-cell sponge neoprene seal held in place by metal retainer; with retainer cover of same material as door frame; attached to door frame with concealed screws.
2. Magnetic Seals: One-piece units; consisting of closed-cell sponge neoprene seal and resiliently mounted magnet held in place by metal retainer; with retainer cover of same material as door frame; attached to door frame with concealed screws.
3. Automatic Door Bottoms: Neoprene or silicone gasket, held in place by metal housing, that automatically drops to form seal when door is closed; mounted to bottom edge of door with screws.
    a. Mounting: Mortised or semi-mortised into bottom of door as required by testing to achieve STC rating indicated.
    b. Cam-Lift Hinges: Full-mortise template type that raises door 1/2-inch when door is fully open; with hardened pin; fabricated from stainless steel.

B. Other Hardware: Comply with requirements in Division 08 Section "Door Hardware".

2.05 SOUND-CONTROL ACCESSORIES

A. Glazing: Comply with requirements in Division 08 Section "Glazing."

B. Grout: Comply with ASTM C476, with a slump of not more than 4-inches as measured according to ASTM C143/C143M.

C. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.06 FABRICATION

A. Sound-Control Steel Door Fabrication: Sound-control doors to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
   1. Seamless Edge Construction: Fabricate doors with faces joined at vertical edges by welding; welds shall be ground, filled, and dressed to make them invisible and to provide a smooth, flush surface.
   2. Glazed Lites: Factory install glazed lites according to requirements of tested assembly to achieve STC rating indicated. Provide fixed stops and moldings welded on secure side of door.
      a. Double pane glazing as with have combination of 1/4” and 3/8” thick panes.
   3. Hardware Preparation: Factory prepare sound-control doors to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in "Door Hardware".
      a. Reinforce doors to receive non-templated mortised and surface-mounted door hardware.
      b. Locate door hardware as indicated, or if not indicated, according to NAAMM HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
   4. Tolerances: Fabricate doors to tolerances indicated in ANSI/NAAMM HMMA 865.

B. Sound-Control Frame Fabrication: Fabricate sound-control frames to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
   1. Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated from same thickness metal as frames.
   2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
   3. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
   4. Jamb Anchors: Provide number and spacing of anchors as follows:
      a. Masonry Type: Locate anchors not more than 18-inches from top and bottom of frame. Space anchors not more than 32-inches o.c. and as follows:
         1) Two anchors per jamb up to 60-inches in height.
         2) Three anchors per jamb from 60 to 90-inches in height.
         3) Four anchors per jamb from 90 to 96-inches in height.
      b. Stud Wall Type: Locate anchors not more than 18-inches from top and bottom of frame. Space anchors not more than 32-inches o.c. and as follows:
         1) Three anchors per jamb up to 60-inches in height.
         2) Four anchors per jamb from 60 to 90-inches in height.
         3) Five anchors per jamb from 90 to 96-inches in height.
         4) Two anchors per head for frames more than 42-inches wide and mounted in metal stud partitions.

c. Post-installed Expansion Type: Locate anchors not more than 6-inches from top and bottom of frame. Space anchors not more than 26-inches o.c.

5. Head Reinforcement: For frames more than 48 inches (1219.2 mm) wide, provide continuous head reinforcement for full width of opening, welded to back of frame at head.
6. Hardware Preparation: Factory prepare sound-control frames to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping, according to the Door Hardware Schedule and templates furnished as specified in "Door Hardware."
   a. Reinforce frames to receive non-templated mortised and surface-mounted door hardware.
   b. Locate hardware as indicated, or if not indicated, according to NAAMM HMMA 831, "Recommended Hardware Locations for Custom Hollow Metal Doors and Frames."
7. Plaster Guards: Weld guards to frame at back of hardware cutouts and glazing-stop screw and sound-control seal preparations to close off interior of openings in frames to be grouted.
8. Tolerances: Fabricate frames to tolerances indicated in ANSI/NAAMM HMMA 865.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of sound-control door assemblies.

B. Examine roughing-in for embedded and built-in anchors to verify actual locations of sound-control door frame connections before frame installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation and with installation spreaders in place, adjust and securely brace sound-control door frames to the following tolerances:
   1. Squareness: Plus or minus 1/16-inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   2. Alignment: Plus or minus 1/16-inch, measured at jambs on a horizontal line parallel to plane of wall.
   3. Twist: Plus or minus 1/16-inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   4. Plumbness: Plus or minus 1/16-inch, measured at jambs on a perpendicular line from head to floor.

C. Drill and tap doors and frames to receive non-templated mortised and surface-mounted door hardware.

3.03 INSTALLATION

A. General: Install sound-control door assemblies plumb, rigid, properly aligned, and securely fastened in place; comply with manufacturer's written instructions.

B. Frames: Install sound-control door frames in sizes and profiles indicated.
   1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
      a. Install sound-control frames with removable glazing stops located on secure side of opening.
      b. Remove temporary braces only after frames or bucks have been properly set and secured.
      c. Check squareness, twist, and plumbness of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
      d. Apply corrosion-resistant coatings coating to backs of frames to be filled with mortar or grout.
   2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with post-installed expansion anchors.
      a. Floor anchors may be set with powder-actuated fasteners instead of post-installed expansion anchors, if so indicated and approved on Shop Drawings.
   3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation behind frames.
   4. In-Place Concrete or Masonry Construction: Secure frames in place with post-installed expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
   5. Grouted Frames: Solidly fill space between frames and substrate with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.
   6. Installation Tolerances: Adjust sound-control door frames for squareness, alignment, twist, and plumbness to the following tolerances:
      a. Squareness: Plus or minus 1/16-inch, measured at door rabbet on a line 90-degrees from jamb perpendicular to frame head.
      b. Alignment: Plus or minus 1/16-inch, measured at jambs on a horizontal line parallel to plane of wall.
      c. Twist: Plus or minus 1/16-inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
      d. Plumbness: Plus or minus 1/16-inch, measured at jambs on a perpendicular line from head to floor.

C. Doors: Fit sound-control doors accurately in frames, within clearances indicated below. Shim as necessary.
   1. Non-Fire-Rated Doors: Fit non-fire-rated doors accurately in frames with the following clearances:
      a. Jambs: 1/8-inch.
      b. Head with Butt Hinges: 1/8-inch.
      c. Head with Cam-Lift Hinges: As required by manufacturer, but not more than 3/8-inch.
      d. Sill: Manufacturer's standard.
      e. Between Edges of Pairs of Doors: 1/8-inch.

D. Sound-Control Seals: Where seals have been prefit and preinstalled in the factory and subsequently removed for shipping, reinstall seals and adjust according to manufacturer's written instructions.

E. Cam-Lift Hinges: Install hinges according to manufacturer's written instructions.

F. Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with sound-control door assembly manufacturer's written instructions.
   1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9-inches o.c. and not more than 2-inches o.c. from each corner.

3.04 ADJUSTING AND CLEANING

A. Final Adjustments: Check and adjust seals, door bottoms, and other sound-control hardware items right before final inspection. Leave work in complete and proper operating condition.

B. Remove and replace defective work, including defective or damaged sound seals and doors and frames that are warped, bowed, or otherwise unacceptable.
   1. Adjust gaskets, gasket retainers, and retainer covers to provide contact required to achieve STC rating.

C. Clean grout off sound-control door frames immediately after installation.

D. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying primer.

E. Metallic-Coated Surfaces: Clean abraded areas of doors and repair with galvanizing repair paint according to manufacturer's written instructions.

END OF SECTION

SECTION 08 41 13

ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
1. Aluminum-framed storefronts, interior and exterior.
2. Aluminum entrance doors, interior and exterior.
3. Exterior and interior fixed window frames.
4. Aluminum frames for butt-jointed glazing panels.

B. Related Sections:
1. Section 07 90 00 - Joint Protection.
2. Section 08 71 00 - Door Hardware.
3. Section 08 80 00 - Glazing.

1.02 REFERENCES

A. American Architectural Manufacturers Association:
1. AAMA 501 - Methods of Test for Exterior Walls.
2. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum.
3. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections.
4. AAMA CW-10 - Care and Handling of Architectural Aluminum from Shop to Site.
5. AAMA SFM-1 - Aluminum Store Front and Entrance Manual.

B. ASTM International:
1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
2. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
4. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
5. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
6. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference.

C. SSPC: The Society for Protective Coatings:
1. SSPC-Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

1.03 SYSTEM DESCRIPTION

A. Aluminum-framed storefront system includes: tubular aluminum sections; aluminum and glass entrances; shop fabricated, factory finished, with glass and glazing specified in Section 08 80 00 and installed by this Section; related flashings, anchorage and attachment devices.

B. System Assembly: Site assembled.

1.04 PERFORMANCE REQUIREMENTS

A. System Design: Design and size components to withstand dead and live loads caused by positive and negative wind pressure acting normal to plane of wall, including building corners.
   1. To design pressure indicated on Drawings, as tested in accordance with ASTM E330.

B. Deflection: Limit mullion deflection to 1/175 for spans under 13’-6” and 1/240 plus 1/4 inch (6.35 mm) for spans over 13’-6”, with full recovery of glazing materials.

C. System Assembly: Accommodate without damage to components or deterioration of seals, movement within system, movement between system and peripheral construction, dynamic loading and release of loads, deflection of structural support framing.

D. Air Infiltration: Limit air leakage through assembly to 0.06 cfm/min/sq ft of wall area, measured at reference differential pressure across assembly of 1.57 psf as measured in accordance with AAMA 501.

E. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with glass.

F. Water Leakage: None, when measured in accordance with AAMA 501 with test pressure difference of 20 percent of design pressure, with minimum differential of 2.86 lbf/sq ft and maximum of 12.00 lbf/sq ft.

G. Thermal Transmittance of Assembly (Excluding Entrances): Maximum U Value of 0.69 Btu/sq ft per hour per deg F when measured in accordance with AAMA 1503.

H. Expansion / Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees Fahrenheit (76.67 degrees Celsius) over 12 hour period without causing detrimental effect to system components and anchorage.

I. System Internal Drainage: Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior by weep drainage network.

1.05 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work and expansion and contraction joint location and details.

C. Product Data: Submit component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

D. Samples: Submit two samples 12 x 12 inches (304.8 mm) in size illustrating finished aluminum surface.

E. Design Data: Indicate framing member structural and physical characteristics and dimensional limitations.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.06 QUALITY ASSURANCE

A. Perform Work in accordance with AAMA SFM-1 and AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

1.07 QUALIFICATIONS

A. Manufacturer and Installer: Company specializing in manufacturing aluminum glazing systems with minimum three years' experience.

1.08 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.09 DELIVERY, STORAGE, AND PROTECTION

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Handle Products of this section in accordance with AAMA MCWM-1 - Curtain Wall Manual #10.

C. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install sealants nor glazing materials when ambient temperature is less than 40 degrees Fahrenheit (4.44 degrees Celsius) during and 48 hours after installation.

1.11 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including, but not limited to, excessive deflection.
      b. Noise or vibration caused by thermal movements.
      c. Deterioration of metals and other materials beyond normal weathering.
      d. Adhesive or cohesive sealant failures.

e. Water leakage through fixed glazing and framing areas.
f. Failure of operating components to function properly.

2. Warranty Period: Two years from date of Substantial Completion.

C. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.

1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 ALUMINUM-FRAMED STOREFRONTS

A. Manufacturers:

1. Arch Aluminum & Glass Co., Inc. www.arch.amarlite.com
2. Columbia Commercial Building Products, www.ccbpwin.com
3. EFCO Corporation www.efcocorp.com
4. Kawneer www.kawneer.com
5. Ranger Glass, www.rangerglass.com
6. United States Aluminum. www.usalum.com
7. Vistawall Architectural Products. www.vistawall.com/
8. YKK AP America Inc., www.ykkap.com.
9. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis-of Design:

1. Exterior Storefront Door and Window Frames: Kawneer Trifab 601T.
2. Exterior Entrance Doors: Kawneer Heavy Wall Series Entrance.
3. Interior Door and Window Frames: Kawneer Trifab VG 450.

C. Product Description:

1. Exterior Aluminum Frames: Thermally broken; flush glazing stops; center glazed to accommodate specified glazing units.
   a. For exterior entry systems and exterior fixed windows.
   b. Size: 6” deep with 2” profile.
   c. Basis of Design: Trifab 601T as manufactured by Kawneer.
   d. Furnish closed backs at heads and jambs of exterior frames
2. Interior Aluminum Frames: Non-thermally broken; flush glazing stops; center glazed to accommodate specified glazing units at interior.
   a. For interior entry systems and interior fixed windows.
   b. Size: 4” deep with 1-3/4” profile.
   c. Basis of Design: Trifab 450 as manufactured by Kawneer
3. Doors: Aluminum Framed Glass Doors; 2-inches thick, nominal 5 inch (127 mm) wide top rail and vertical stiles, 10-1/4 inch (260 mm) wide bottom rail to meet ADA requirements; 3/16” wall thickness; beveled glazing stops.
   a. All-welded corners. Provide intermediate rail for mounting of exit device hardware
   b. Basis of Design: Heavy Wall, Wide Stile as manufactured by Kawneer.

2.02 COMPONENTS

A. Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical, 6061 alloy, T6 temper for extruded structural members.

B. Sheet Aluminum: ASTM B209, 5005 alloy, H15 or H34 temper.

C. Sheet Steel: ASTM A653/A653M; galvanized to minimum G90.

D. Steel Sections: ASTM A36/A36M; shaped to suit mullion sections where needed for reinforcing, galvanized.

E. Glass: Specified in Section 08 80 00.

F. Glazing Materials: Storefront manufacturer’s standard types to suit application and to achieve weather, moisture, and air infiltration requirements.

G. Flashings: Minimum 0.032 inch (0.81 mm) thick aluminum to match mullion sections where exposed.

H. Hardware: In accordance with Section 08 71 00 and as follows:
   1. Weather Stripping: Manufacturer's standard replaceable components.
      a. AAMA 701, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

I. Flashings: Minimum 0.032 inch (0.81 mm) thick aluminum to match mullion sections where exposed.

J. Sealant and Backing Materials:
   1. Sealant Used Within System (not used for glazing): Manufacturer’s standard materials to achieve weather, moisture, and air infiltration requirements.
   2. Perimeter Sealant: Specified in Section 07 90 00.

K. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum brackets and reinforcements. Provide non-staining, nonferrous shims for aligning system components.

L. Fasteners: Manufacturer’s standard stainless steel, compatible with adjacent materials.

M. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.03 FABRICATION

A. Fabricate components with minimum clearances and shim spacing around perimeter of assembly, yet enabling installation and dynamic movement of perimeter seal.

B. Fabricate sill pans with sealed end dams at jambs and changes in sill height.

C. Fabricate frames for glazing from inside.

D. Accurately fit and secure joints and corners. Make joints flush, hairline, and weatherproof.

E. Prepare components to receive anchor devices. Fabricate anchors.

F. Arrange fasteners and attachments to conceal from view.

G. Prepare components with internal reinforcement for door hardware.
   1. Coordinate with hardware provider, obtain approved hardware submittal(s), and fabricate doors and frames to receive approved hardware items.
   2. At exterior door frames, provide weatherstripping at fixed stops.
   3. At interior door frames, provide weatherstripping or silencers at stops to prevent door-to-frame contact.

H. Reinforce framing members for imposed loads.

2.04 SHOP FINISHING

A. As scheduled in the drawings, provide the following finishes:
   1. Class I, Clear Anodic Finish: AA-M12C22A31 Mechanical Finish: Nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.7 mil (0.01778 mm) or thicker) complying with AAMA 607.1 and AAMA 611.

B. Concealed Steel Items: Galvanized to ASTM A123/A123M; minimum 1.2 oz/sq ft coating thickness; galvanize after fabrication.

C. Apply bituminous paint to concealed aluminum surfaces in contact with cementitious materials or dissimilar metals.

D. Touch-Up Primer for Galvanized Steel Surfaces: SSPC-Paint 20 zinc rich.

E. Extent of Finish:
   1. Apply factory coating to surfaces exposed at completed assemblies.
   2. Apply touch-up materials recommended by coating manufacturer for field application to cut ends and minor damage to factory applied finish.

2.05 SUNSHADE SYSTEM

A. Refer to Section 08 44 13 Glazed Aluminum Curtain Walls.

B. Integration: Provide specialized mounting brackets and internal steel reinforcement for the Trifab 601T Storefront to accommodate the specific sunshade cantilever and project wind loads.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify dimensions, tolerances, and method of attachment with other Work.

C. Verify wall openings and adjoining air and vapor seal materials are ready to receive Work of this Section.

3.02 INSTALLATION

A. Install systems in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent Work.

E. Install sill pans. Turn up ends and edges; seal to adjacent Work to form water tight dam.

F. Coordinate attachment and seal of perimeter air and vapor retarder materials.

G. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

H. Install integral flashings and integral joint sealers.

I. Set thresholds in sealant and secure.

J. Install hardware using templates provided. Refer to Section 08 71 00 for installation requirements.

K. Coordinate installation of glass with Section 08 80 00; separate glass from metal surfaces.

L. Coordinate installation of perimeter sealants with Section 07 90 00.

M. Provide expansion mullions maximum 20 feet (609.6 cm) oc at window runs of 25 feet (762 cm) or more.

3.03 INSTALLATION - SUNSHADES

A. Coordination: Coordinate the placement of internal steel reinforcement within the storefront mullions prior to the installation of glazing.

B. Sealing: Provide high-performance sealant (Section 07 90 00) at all sunshade mounting penetrations to ensure the integrity of the storefront's water-management system.

3.04 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation from Plumb: 0.06 inches (1.52 mm) every 3 ft non-cumulative or 1/16 inches (1.59 mm) per 10, feet (304.8 cm) whichever is less.

C. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch (0.79 mm).

3.05 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting and balancing.

B. Adjust operating hardware and sash for smooth operation.

3.06 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove protective material from pre-finished aluminum surfaces.

C. Wash down surfaces with solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

D. Remove excess sealant by method acceptable to sealant manufacturer.

3.07 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect finished Work from damage.

END OF SECTION

SECTION 08 44 13

GLAZED ALUMINUM CURTAIN WALLS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Aluminum-framed thermally improved curtain wall system.
   2. Cantilevered sunshade attached to curtain wall.
   3. Delegated design.
      a. The design of the complete aluminum-framed curtain wall system, including but not limited to, all framing members, internal reinforcing, fasteners, clips, gaskets, and anchorage to the primary building structure, shall be the responsibility of the Contractor.
      b. The Contractor shall retain a qualified professional engineer, licensed in the State of Texas, to perform the delegated design and provide all necessary engineering calculations and sealed drawings.
      c. The delegated design must be based on, and fully comply with, the criteria specified in the "Performance Requirements" article of this Section and the design loads indicated on the Structural Drawings.

B. Related Sections:
   1. Section 07 90 00 - Joint Protection: For perimeter joint sealing.
   2. Section 08 41 13 - Aluminum-Framed Entrances and Storefronts: Glazed doors for curtain wall systems.
   3. Section 08 71 00 - Door Hardware.
   4. Section 08 80 00 - Glazing.

1.02 REFERENCES

A. American Architectural Manufacturers Association:
   1. AAMA 501 - Methods of Test for Exterior Walls.

   4. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

5. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
6. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference.

C. SSPC: The Society for Protective Coatings:
1. SSPC-Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

1.03 SYSTEM DESCRIPTION

A. Glazed aluminum curtain wall system includes: tubular aluminum sections; shop fabricated, factory finished, with glass and glazing specified in Section 08 80 00 and installed by this Section; related flashings, anchorage and attachment devices.
1. System to include manufacturer’s sunshade attached to curtainwall framing as indicatd in Drawings.
2. System Assembly: Site assembled.

1.04 PERFORMANCE REQUIREMENTS

A. General: Provide a curtain wall system capable of meeting or exceeding the requirements of AAMA/WDMA/CSA 101/I.S.2/A440 (NAFS), designated as a CW-PG50 Performance Class, in addition to the specific requirements below.

B. Structural Performance (Wind Loads):
1. Design and size all components to withstand all applicable loads, including dead loads and live loads caused by positive and negative wind pressure acting normal to the plane of the wall, including at building corners.
2. Design Wind Loads: Shall be as indicated on the Structural Drawings.
3. Design and Test Pressures: Meet designed and tested pressures for Structural, Water Resistance, and Air Leakage in accordance with ANSI/AAMA/NWWDA-97.
4. Design and size components to withstand dead and live loads caused by positive and negative wind pressure acting normal to plane of wall, including building corners to design pressure indicated on Drawings, as tested in accordance with ASTM E330
5. Design glazed system to withstand positive and negative wind loads normal to the plane of the wall in excess of 20 psi (137.90 kPa).

C. Deflection Limits:
1. Deflection: Limit mullion deflection to 1/175 for spans under 13’-6” and 1/240 plus 1/4-inch for spans over 13’-6”, with full recovery of glazing materials.
2. Parallel to Wall Plane: Deflection of any member abutting interior construction (e.g., partition walls) shall not exceed 1/16 inch (1.6 mm) to prevent damage to adjacent finishes.
3. Dead Load: Deflection of horizontal members supporting glass shall not exceed L/175 of the clear span or 1/8 inch (3.2 mm), whichever is less.
a. Provide fully concealed steel reinforcement as may be required to meet design requirements.

D. Thermal Performance:
1. Provide curtain wall assemblies (including frame and glass) capable of meeting the following performance values for the complete assembly when tested by an accredited laboratory.

2. Thermal Transmittance (U-Factor): The overall assembly shall have a maximum U-Factor of 0.50 Btu/hr·ft²·°F when determined in accordance with NFRC 100.
3. Solar Heat Gain Coefficient (SHGC): The overall assembly shall have a maximum SHGC of 0.25 when determined in accordance with NFRC 200.
4. Condensation Resistance Factor (CRF): The assembly shall have a minimum CRF (frame) of 50 when tested in accordance with AAMA 1503.

E. Reinforcing: Provide fully concealed steel reinforcement as may be required to meet all specified design and performance requirements.

F. Air Infiltration: Limit air leakage through assembly to 0.06 cfm/min/sq ft of wall area, measured at reference differential pressure across assembly of 1.57 psf as measured in accordance with AAMA 501.

G. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with glass.

H. Water Leakage: None, when measured in accordance with AAMA 501 with test pressure difference of 20 percent of design pressure, with minimum differential of 2.86 lbf/sq ft and maximum of 12.00 lbf/sq ft.
1. Coordinate with Contractor to provide water spray testing in accordance with AAMA 501 installed on at least two completed installation locations to ensure watertightness.

I. Thermal Transmittance of Assembly for fixed glazing and entrance doors shall not exceed maximum allowable U-factors listed in ASHRAE 90.1-2022.

J. Expansion / Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees Fahrenheit (76.67 degrees Celsius) over 12 hour period without causing detrimental effect to system components and anchorage.

K. System Internal Drainage: Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior by weep drainage network.

1.05 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Delegated Design Submittals: Submit the following items as a single, coordinated package for review. Submittals shall not be split.
1. Shop Drawings:
   a. Submit comprehensive drawings signed and sealed by the responsible professional engineer.
   b. Drawings must show all plans, elevations, sections, and connection details.
   c. Clearly indicate all framing member profiles, sizes, and all required internal steel or aluminum reinforcing.
   d. Detail all anchorage methods, showing fastener types, sizes, spacing, embedment, and edge distances, as verified by the structural calculations.
   e. Detail all joinery, corner connections, expansion joints, and intersections with adjacent construction (e.g., air barrier tie-ins, flashings, roofing).
2. Structural Calculations:
   a. Submit comprehensive calculations, signed and sealed by the professional engineer, demonstrating compliance with all specified Performance Requirements.

b. Calculations must clearly identify the design loads (wind, seismic, dead) and building code used.
c. Include analysis of all components, including framing members, reinforcing, fasteners, and anchorage, verifying they are not overstressed and do not exceed specified deflection limits.

3. Engineer’s Qualifications:
a. Submit documentation (e.g., resume, statement of qualifications, proof of licensure) for the delegated design engineer, verifying compliance with the "Quality Assurance" article.
b. Product Data: Submit component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.

C. Samples: Submit two samples 12 x 12 inches (304.8 mm) in size illustrating finished aluminum surface.

D. Design Data: Indicate framing member structural and physical characteristics and dimensional limitations.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.06 QUALITY ASSURANCE

A. Perform Work in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

B. Systems specified under this section and Section 08 41 13 Aluminum-Framed Entrances and Storefronts shall be provided by the same manufacturer.

1.07 QUALIFICATIONS

A. Manufacturer and Installer: Company specializing in manufacturing aluminum glazing systems with minimum three years’ experience.

1.08 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.09 DELIVERY, STORAGE, AND PROTECTION

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Handle Products of this section in accordance with AAMA MCWM-1 - Curtain Wall Manual.

C. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install sealants nor glazing materials when ambient temperature is less than 40 degrees Fahrenheit (4.44 degrees Celsius) during and 48 hours after installation.

1.11 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Assembly Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of aluminum-framed systems that do not comply with requirements or that deteriorate as defined in this Section within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including, but not limited to, excessive deflection.
      b. Noise or vibration caused by thermal movements.
      c. Deterioration of metals and other materials beyond normal weathering.
      d. Adhesive or cohesive sealant failures.
      e. Water leakage through fixed glazing and framing areas.
      f. Failure of operating components to function properly.
   2. Warranty Period: Two years from date of Substantial Completion.

C. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
   1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 GLAZED ALUMINUM CURTAIN WALLS

A. Manufacturers:
   1. Kawneer; www.kawneer.us
   2. YKK AP America Inc.; www.ykkap.com
   3. Oldcastle Building Envelope; www.obe.com
   4. Apogee Architectural Metals; apogeearchmetals.com
   5. Substitutions: Section 01 60 00 – Product Requirements.

B. Basis-of Design: Kawneer *1600UT*, 7-1/2 inch depth as indicated on drawings, plus attached sunshade, thermally-improved for specified glazing units and front-glazed system.

2.02 COMPONENTS

A. Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical, 6061 alloy, T6 temper for extruded structural members.

B. Sheet Aluminum: ASTM B209, 5005 alloy, H15 or H34 temper.

C. Sheet Steel: ASTM A653/A653M; galvanized to minimum G90.

D. Steel Sections: ASTM A36/A36M; shaped to suit mullion sections where needed for reinforcing; galvanized.

E. Glass: Specified in Section 08 80 00.

F. Glazing Materials: Curtain wall manufacturer’s standard types to suit application and to achieve weather, moisture, and air infiltration requirements.

G. Manufacturer’s Hardware and Seals: In accordance with Section 08 71 00 and as follows:
   1. Weather Stripping: Manufacturer's standard replaceable components.
      a. AAMA 701, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing

H. Flashings: Minimum 0.032 inch (0.81 mm) thick aluminum to match mullion sections where exposed.

I. Sealant and Backing Materials:
   1. Sealant Used Within Framing System (Not Used for Glazing): Manufacturer’s standard materials to achieve weather, moisture, and air infiltration requirements.
   2. Glazing Joint Sealant: Specified in Section 08 80 00 Glazing.
   3. Perimeter Sealant: Specified in Section 07 90 00 Joint Protection.

J. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum brackets and reinforcements. Provide non-staining, nonferrous shims for aligning system components.

K. Fasteners: Manufacturer’s standard stainless steel, compatible with adjacent materials.

L. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.03 FABRICATION

A. Take accurate job measurements of openings prior to fabrication.

B. Fabricate components with minimum clearances and shim spacing around perimeter of assembly yet enabling installation and dynamic movement of perimeter seal.

C. Fabricate sill pans with welded end dams at jambs and changes in sill height.

D. Fabricate frames for glazing from exterior.

E. Accurately fit and secure joints and corners. Make joints flush, hairline, and weatherproof.

F. Prepare components to receive anchor devices. Fabricate anchors.

G. Arrange fasteners and attachments to conceal from view.

H. Where framing members cannot be installed in one-piece length, provide concealed internal splice plates and tight hairline joints in exposed members.

I. Provide internal galvanized carbon steel reinforcing for aluminum framing members requiring for imposed loads.

J. Provide splayed sections specially fabricated for designed angles where glazing panels are not in-line. Do not combine standard sections to form angular changes.

2.04 SHOP FINISHING

A. Anodized Aluminum Surfaces for Framing: AAMA 611, AA-M12C22A44 non-specular as fabricated mechanical finish, medium matte chemical finish, and Architectural Class I, 0.7 mils (0.01778 mm) clear black anodized coating. Class ll coating allowable for interior systems only.

B. Concealed Steel Items: Galvanized to ASTM A123/A123M; minimum 1.2 oz/sq ft coating thickness; galvanize after fabrication.

C. Apply bituminous paint to concealed aluminum surfaces in contact with cementitious materials or dissimilar metals.

D. Touch-Up Primer for Galvanized Steel Surfaces: SSPC-Paint 20 zinc rich.

E. Extent of Finish:
   1. Apply factory coating to surfaces exposed at completed assemblies.
   2. Apply touch-up materials recommended by coating manufacturer for field application to cut ends and minor damage to factory applied finish.

2.05 SUNSHADE SYSTEM

A. Manufacturers:
   1. Construction Specialties; www.c-sgroup.com
   2. YKK AP America Inc; www.ykkap.com
   3. Kawneer; www.kawneer.us
   4. Oldcastle Building Envelope; www.obe.com
   5. Apogee Architectural Metals; apogeearchmetals.com
   6. Substitutions: See Division 01.

B. System: Louvered aluminum sun control devices cantilevered from storefront framing. All extruded aluminum construction.

C. Thermal Isolation: Brackets shall include thermal isolation gaskets or separators to prevent thermal bridging between the exterior sunshade and the interior curtain wall framing.

D. Design Requirements: Design and size components to withstand design loads indicated on Drawings without damage or permanent set.

E. Basis of Design: *Versoleil™ SunShade Outrigger System* with square fascia as manufactured by Kawneer.
   1. Note: Sun control devices shall be covered under the frame manufacturer’s warranty.
   2. Size: 20-in. deep or as indicated on drawings.
   3. Blade Design: “Airfoil”.
   4. Finish and Color: Match frames.

PART 3 EXECUTION

3.01 EXAMINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Verify dimensions, tolerances, and method of attachment with other Work.

C. Verify wall openings and adjoining air and vapor seal materials are ready to receive Work of this Section.

3.02 INSTALLATION

A. Install wall system in accordance with AAMA MCWM-1 - Metal Curtain Wall, Window, Store Front and Entrance - Guide Specifications Manual.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure. Shims shall be galvanized (ASTM A36 or ASTM A283) or series 300 stainless steel. Do not use aluminum or plastic shims.

D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent Work.

E. Install sill pans. Turn up ends and edges; seal to adjacent Work to form water tight dam.

F. Coordinate attachment and seal of perimeter air and vapor retarder materials.

G. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

H. Install integral flashings and integral joint sealers.

I. Coordinate installation of glass with Section 08 80 00; separate glass from metal surfaces.

J. Coordinate installation of perimeter sealants with Section 07 90 00.

K. Separate dissimilar metals, such as reinforcing, using one of the following concealed materials:
   1. Bituminous Paint: FS TT-C494 or MIL-P6883A.
   2. Mastic Bulk Compound: FS SS-S-153, Type I or Type II.
      a. Preformed Mastic Tape: NAAMM Specifications for Non-Shrinking, Non-Resilient Preformed Sealing Compound.
   3. Zinc- Rich Paint: MIL-P38 336.

3.03 INSTALLATION - CURTAIN WALL INTEGRATED SUNSHADES

A. Structural Coordination:
   1. Internal Reinforcement: Install internal steel or aluminum stiffeners within curtain wall mullions at all sunshade attachment points as required by the manufacturer’s structural calculations to resist wind-induced torque and dead loads.

B. Weatherproofing and Sealing:
   1. Penetration Sealing: Seal all bracket penetrations through the curtain wall pressure plate and cover cap using high-performance silicone sealant (Section 07 90 00) to ensure the continuity of the system's air and water barriers.

C. Alignment and Tolerances:

1. Visual Continuity: Align sunshade blades accurately across multiple curtain wall bays. Maintain a horizontal tolerance of 1/8 inch (3 mm) in 20 feet (6 meters).

3.04 ERECTION TOLERANCES

A. Division 01 - Quality Requirements: Tolerances.

B. Maximum Variation from Plumb: 0.06 inches (1.52 mm) every 3 ft non-cumulative or 1/16 inches (1.59 mm) per 10, feet (304.8 cm) whichever is less.

C. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch (0.79 mm).

3.05 ADJUSTING

A. Division 01 - Execution and Closeout Requirements: Testing, adjusting and balancing.

B. Adjust operating hardware and sash for smooth operation.

3.06 CLEANING

A. Division 01 - Execution and Closeout Requirements: Final cleaning.

B. Remove protective material from pre-finished aluminum surfaces.

C. Wash down surfaces with solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

D. Remove excess sealant by method acceptable to sealant manufacturer.

3.07 PROTECTION OF INSTALLED CONSTRUCTION

A. Division 01 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect finished Work from damage.

END OF SECTION

SECTION 08 56 53

OPERABLE TRANSACTION WINDOWS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
1. Horizontal sliding transaction windows mounted within interior storefront framing system.
2. Factory-installed security glazing.

B. Related Sections:
1. Section 08 80 00 - Glazing: General glass requirements.
2. Section 08 87 23 - Impact Resistant Glazing Film: Field applied film for all glass this unit.

1.02 PERFORMANCE REQUIREMENTS

A. Forced-Entry Resistance: Comply with Performance Level 10 requirements when tested according to ASTM F588.

1.03 REFERENCES

A. Glass Association of North America:
1. GANA - Sealant Manual.
2. GANA - Glazing Manual.
3. GANA - Laminated Glass Design Guide.

1.04 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product Data for each type of window required, including the following:
1. Construction details and fabrication methods.
2. Profiles and dimensions of individual components.
3. Data on hardware, accessories, and finishes.
4. Recommendations for maintaining and cleaning exterior surfaces.

C. Shop Drawings showing fabrication and installation of each type of window required including information not fully detailed in manufacturer's standard Product Data and the following:
1. Layout and installation details, including anchors.
2. Elevations at 1/4 inch (6.35 mm) = 1 foot (30.48 cm) scale and typical window unit elevations at 3/4 inch (19.05 mm) = 1 foot (30.48 cm) scale.
3. Full-size section details of typical composite members, including reinforcement and stiffeners.
4. Hardware, including operators.
5. Glazing details.

6. Accessories.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed installation of aluminum windows similar in material, design, and extent to those required for this Project and with a record of successful in-service performance.

B. System Qualifications: Fully shop-assembled and finished, including security glazing, prior to delivery to the Project.

C. Single-Source Responsibility: Obtain aluminum windows from one source and by a single manufacturer.

D. Product Options: The Drawings indicate sizes, profiles, dimensional requirements, and aesthetic effects of aluminum windows and are based on the specific window types and models indicated. Other aluminum window manufacturers whose products have equal performance characteristics may be considered provided deviations in size, profile, and dimensions are minor and do not alter the aesthetic effect. Refer to Division 1 Section "Substitutions."

1.06 PROJECT CONDITIONS

A. Field Measurements: Check window openings by field measurements before fabrication and show recorded measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
   1. Where field measurements cannot be made without delaying the Work, guarantee opening dimensions and proceed with fabricating aluminum windows without field measurements. Coordinate wall construction to ensure that actual opening dimensions correspond to guaranteed dimensions.

1.07 WARRANTY

A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.

B. Warranty Period: Minimum 1 year after date of Substantial Completion. Warranted failures include but are not limited to:
   1. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.
   2. Structural failures including deflections exceeding 1/4 inch (6.35 mm).
   3. Failure of welds.
   4. Faulty operation of sliding window hardware or locking hardware.

PART 2 PRODUCTS

2.01 SYSTEM

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Amortex, www.amortex.com.
2. Insulgard Security Products, www.insulgard.com.
3. Quickserv Corporation, www.quikserv.com.
4. U.S. Bulet Prooing, www.usbulletproofing.com.
5. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis-of-Design: Custom horizontal slider as manufactured by Quikserv or approved equivalent by specified manufacturer.
   1. Self-closing horizontal slider without magnetic hold-open.
   2. Top-hung ball bearing glide system.
   3. Offset bottom guide to prevent push-in from outside. Bottom track recessed into counter top.
   4. Custom size to fit closely within aluminum storefront framing based on finished frame job measurements.
   5. Heavy duty maximum security lock with hook bolt and inside thumb-turn.
   6. Automatically locks each time door closes to prevent outside penetration.
   7. Frame flush to wall at customer-side, or as indicated.
   8. Configuration: Combination of fixed and sliding units with triple track as indicated.

2.02 MATERIALS

A. Aluminum Extrusions: Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 22,000-psi (150-MPa) ultimate tensile strength and not less than 0.125 inch (3.18 mm) thick at any location for main frame and sash members.

B. Fasteners: Provide mechanical fasteners that are noncorrosive and compatible with aluminum window members, trim, hardware, anchors, and other components of window units.
   1. Reinforcement: Where fasteners screw anchor into aluminum less than 0.125-inch thick, reinforce interior with aluminum or nonmagnetic stainless steel to receive screw threads or provide standard, noncorrosive, pressed-in, splined grommet nuts.
   2. Exposed Fasteners: Except where unavoidable for application of hardware, do not use exposed fasteners. For application of hardware, use fasteners that match finish of member or hardware being fastened, as appropriate.

C. Anchors, Clips, and Window Accessories: Fabricate anchors, clips, and window accessories of aluminum, nonmagnetic stainless steel, or hot-dip zinc-coated steel complying with requirements of ASTM B633.

D. Sealant: For sealants required within fabricated window units, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, nonshrinking, and nonmigrating. Comply with Division 7 Section "Joint Sealants" of these Specifications for selection and installation of sealants.

2.03 HARDWARE

A. General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, or other corrosion-resistant material compatible with aluminum system and of sufficient strength to perform the function for which it is intended.

B. In addition to automatic latching, provide factory-installed lock body that will accept removable cylinder keyed to building system. Cylinder provided under the hardware section.

2.04 FABRICATION

A. General: Fabricate aluminum window units to comply with indicated standards. Include a complete system for assembly of components and anchorage of window units.

B. Preglazed Fabrication: Preglaze window units at the factory:
   1. Multi-ply laminated pane: 1/4-inch clear annealed glass + 0.08-inch Clear PVB interlayer + 1/4-inch clear annealed glass. Total unit thickness: 9/16-inch.
   2. Provide units that are reglazable without dismantling sash or ventilator framing.

2.05 FINISHES

A. Comply with NAAMM "Metal Finishes Manual" for recommendations relative to applying and designating finishes.

B. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.

C. Clear anodized finish or as indicated.

PART 3 EXECUTION

3.01 INSPECTION

A. Inspect openings before installation. Verify that rough opening is correct and sill condition is level.
   1. Masonry surfaces shall be visibly dry and free of excess mortar, sand, and other construction debris.
   2. Metal surfaces shall be dry; clean; free of grease, oil, dirt, rust and corrosion, and welding slag; without sharp edges or offsets at joints.
   3. Drywall surfaces shall be taped and floated and ready for painting.

3.02 INSTALLATION

A. Comply with manufacturer's specifications and recommendations for installing window units, hardware, operators, and other components of the Work.

B. Set window units plumb, level, and true to line, without warp or rack of frames or sash. Provide proper support and anchor securely in place.

C. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials by complying with requirements specified under "Dissimilar Materials" Paragraph in appendix to AAMA 101.

D. Refer to Division 7 Section "Joint Sealants" for compounds, fillers, and gaskets to be installed concurrently with window units. Coordinate installation with wall flashings and other components of the Work.

3.03 ADJUSTING

A. Adjust operating sash and hardware to provide a tight fit at contact points for smooth operation.

3.04 CLEANING

A. Clean aluminum surfaces promptly after installing windows. Exercise care to avoid damage to protective coatings and finishes. Remove excess glazing and sealant compounds, dirt, and other substances. Lubricate hardware and other moving parts.

B. Clean glass of pre-glazed units promptly after installing windows. Comply with requirements of Division 8 Section "Glazing" for cleaning and maintenance.

3.05 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptable to aluminum window manufacturer, that ensure window units are without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 08 71 00
DOOR HARDWARE

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Hardware for wood, aluminum, hollow metal, and miscellaneous doors as noted.

B. Hardware for fire-rated doors.

C. Thresholds.

D. Smoke and draft control seals.

E. Weatherstripping and gasketing.

1.02 RELATED REQUIREMENTS

A. Section 06 20 00 - Finish Carpentry.

B. Section 08 11 13 - Hollow Metal Doors and Frames.

C. Section 08 14 16 - Flush Wood Doors.

D. Section 08 43 13 - Aluminum-Framed Storefronts:

E. Division 28 – Security Access

1.03 REFERENCE STANDARDS

A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.

B. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2019.

C. DHI (H&S) - Sequence and Format for the Hardware Schedule 2019.

D. DHI (KSN) - Keying Systems and Nomenclature 2019.

E. DHI (LOCS) - Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames 2004.

F. DHI WDHS.3 - Recommended Locations for Architectural Hardware for Flush Wood Doors 1993; also in WDHS-1/WDHS-5 Series, 1996.

G. ICC (IBC) - International Building Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. ICC A117.1 - Accessible and Usable Buildings and Facilities 2017.

I. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2022.

K. NFPA 101 - Life Safety Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

L. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives 2022.

M. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies 2022.

N. TDI - Texas Department of Insurance.

O. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the manufacture, fabrication, and installation of products that door hardware is installed on.

B. Sequence installation to ensure facility services connections are achieved in an orderly and expeditious manner.

C. Preinstallation Meeting: Convene a preinstallation meeting one week prior to commencing work of this section; require attendance by affected installers and the following:
   1. Architect.
   2. Hardware Supplier’s Architectural Hardware Consultant (AHC).

3. Hardware Installer.
4. Owner's Security Consultant.

D. Furnish templates for door and frame preparation to manufacturers and fabricators of products requiring internal reinforcement for door hardware.

E. Keying Requirements Meeting:
1. Schedule meeting at project site prior to Contractor occupancy.
2. Attendance Required:
   a. Contractor.
   b. Owner.
   c. Hardware Supplier’s Architectural Hardware Consultant (AHC).
   d. Door Hardware Installer.
   e. Owner's Security Consultant.
   f. Cylinder Manufacturer’s Keying Consultant
3. Agenda:
   a. Establish keying requirements.
   b. Verify locksets and locking hardware are functionally correct for project requirements.
   c. Verify that keying and programming complies with project requirements.
   d. Establish keying submittal schedule and update requirements.
4. Incorporate "Keying Requirements Meeting" decisions into keying submittal upon review of door hardware keying system including, but not limited to, the following:
   a. Access control requirements.
   b. Key control system requirements.
5. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.
6. Deliver established keying requirements to manufacturers.

1.05 SUBMITTALS

A. See Division 1 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's catalog literature for each type of hardware, marked to clearly show products to be furnished for this project, and includes construction details, material descriptions, finishes, and dimensions and profiles of individual components.

C. Shop Drawings - Door Hardware Schedule: A detailed listing that includes each item of hardware to be installed on each door.
1. Prepared by or under supervision of Architectural Hardware Consultant (AHC).
2. Comply with DHI (H&S) using door numbering scheme and hardware set numbers as indicated in Contract Documents.
   a. Submit in vertical format.
3. List groups and suffixes in proper sequence.
4. Include complete description for each door listed.
5. Include manufacturer's and product names, and catalog numbers; include functions, types, styles, sizes and finishes of each item.
6. Include account of abbreviations and symbols used in schedule.

D. Shop Drawings - Electrified Door Hardware: Include diagrams for power, signal, and control wiring for electrified door hardware that include details of interface with building safety and security systems. Provide elevations and diagrams for each electrified door opening as follows:
1. Prepared by or under supervision of Architectural Hardware Consultant (AHC) and/or Electrified Hardware Consultant (EHC).
2. Elevations: Include front and back elevations of each door opening showing electrified devices with connections installed and an operations narrative describing how opening operates from either side at any given time.
3. Diagrams: Include point-to-point wiring diagrams that show each device in door opening system with related colored wire connections to each device.

E. Samples for Verification:
1. If requested, submit one (1) sample of any hardware items illustrating style, color, and finish.
2. Architect will return full-size samples to Contractor.

3. Include product description with samples.

F. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

G. Maintenance Data: Include data on operating hardware, lubrication requirements, and inspection procedures related to preventative maintenance.
1. Bitting List: List of combinations as furnished.

H. Keying Schedule:
1. Submit three (3) copies of Keying Schedule in compliance with requirements established during Keying Requirements Meeting unless otherwise indicated.

I. Warranty: Submit manufacturer's warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

J. Maintenance Materials and Tools: Furnish the following for Owner's use in maintenance of project.
1. See Division 1 - Product Requirements, for additional provisions.
2. Tools: One set of each special wrench or tool applicable for each different or special hardware component, whether supplied by hardware component manufacturer or not.

1.06 QUALITY ASSURANCE

A. Standards for Fire-Rated Doors: Maintain one copy of each referenced standard on site, for use by Architect and Contractor.

B. Installer Qualifications: Company specializing in performing work of the type specified for commercial door hardware with at least three years of documented experience.

C. Supplier Qualifications: Company with certified Architectural Hardware Consultant (AHC) and Electrified Hardware Consultant (EHC) to assist in work of this section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Package hardware items individually; label and identify each package with door opening code to match door hardware schedule.

1.08 WARRANTY

A. Manufacturer Warranty: Provide manufacturer warranty against defects in material and workmanship for period indicated, from Date of Substantial Completion. Complete forms in Owner's name and register with manufacturer.
1. Closers: Thirty Five, minimum.
2. Exit Devices: Five years, minimum.
3. Locksets and Cylinders: Five years, minimum.
4. Other Hardware: Two years, minimum.
5. Where the manufacturer’s standard warranty does not meet the above requirements, provide a letter of compliance from the manufacturer or the manufacturer’s representative for the owner’s use.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Provide specified door hardware as required to make doors fully functional, compliant with applicable codes, and secure to extent indicated.

B. Door Pulls and Push Plates:
1. Provide door pulls and push plates on doors without a lockset, latchset, exit device, or auxiliary lock unless otherwise indicated.

C. Closers:
1. Provide door closer on each exterior door, unless otherwise indicated.
2. Provide door closer on each fire-rated and smoke-rated door.

D. Thresholds:
1. Exterior Applications: Provide at each exterior door, unless otherwise indicated.

E. Smoke and Draft Control Seals:
1. Provide gasketing for smoke and draft control doors (Indicated as "S" on Drawings) that complies with local codes, requirements of assemblies tested in accordance with UL 1784.

F. Weatherstripping and Gasketing:
   1. Provide weatherstripping on each exterior door at head, jambs, and meeting stiles of door pairs, unless otherwise indicated.
   2. Provide door bottom sweep on each exterior door, unless otherwise indicated.
   3. Fabricate as continuous gasketing, do not cut or notch gasketing material.

G. Electrically Operated and/or Controlled Hardware: Provide necessary power supplies, power transfer hinges, relays, and interfaces as required for proper operation; provide wiring between hardware and control components and to building power connection in compliance with NFPA 70.

H. Fasteners:
   1. Provide fasteners of proper type, size, quantity, and finish that comply with commercially recognized standards for proposed applications.
   2. Provide machine screws for attachment to reinforced hollow metal and aluminum frames.
   3. Provide stainless steel machine screws and lead expansion shields for concrete and masonry substrates.
   4. Provide wall grip inserts for hollow wall construction.
   5. Fire-Resistance-Rated Applications: Comply with NFPA 80.
   6. Concealed Fasteners: Do not use through or sex bolt type fasteners on door panel sides indicated as concealed fastener locations, unless otherwise indicated or required per manufacturer's testing requirements.

2.02 PERFORMANCE REQUIREMENTS

A. Provide door hardware products that comply with the following requirements:
   1. Applicable provisions of federal, state, and local codes.
      a. ICC (IBC).
      b. NFPA 101.
      c. Local codes as required.
   2. Accessibility: ADA Standards and ICC A117.1.
   3. Fire-Resistance-Rated Doors: NFPA 80, listed and labeled by qualified testing agency for fire protection ratings indicated, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.
   4. Hardware Preparation for Steel Doors and Steel Frames: BHMA A156.115.
   5. Hardware Preparation for Wood Doors with Wood or Steel Frames: BHMA A156.115W.
   6. Regulatory and Operational Requirements:
      a. Provide hardware for all openings, whether specified or not, in compliance with NFPA Standard No. 80, proper operation and local building code requirements. Where required, provide only hardware which has been tested and listed by UL or FM for types and sizes of doors required and complies with requirements of door and door frame labels. Label hardware, as required, for compliance with pressure testing criteria as dictated in IBC.
      b. Provide hardware which meets or exceeds handicap accessibility per local building code requirements. Conform to the Americans with Disabilities Act (ADA) of 1990 as amended by the D.O.J. September 15, 2010, as adopted by the Authority Having Jurisdiction (AHJ).
      c. At smoke partition doors, verify with local jurisdiction that doors specified with gaskets and latching do not need to be self-closing. Refer to hardware sets and provide door closers if required.
   7. Products Requiring Electrical Connection: Listed and classified by UL (DIR) as suitable for the purpose specified.

2.03 HINGES

A. Manufacturers:
   1. Listed in Door Hardware Schedule: Best
   2. Substitutions: Hager, McKinney
   3. Continuous hinges are as manufactured by Best. Equal products by ABH or Select are acceptable.

B. Butt Hinges: As applicable to each item specified.

a. Standard Weight Hinges: Minimum of two (2) permanently lubricated non-detachable bearings.
b. Heavy Weight Hinges: Minimum of four (4) permanently lubricated bearings on heavy weight hinges.
c. Template screw hole locations.
d. Pins: Easily seated, non-rising pins.
e. UL 10C listed for fire-resistance-rated doors.

C. Continuous Hinges: As applicable to each item specified.
a. Geared Continuous Hinges: As applicable to each item specified.
1) Non-handed.
2) UL 10C listed for fire-resistance-rated doors.
3) Sufficient size to permit door to swing 180 degrees

D. Finishes: See Door Hardware Schedule.

E. Grades:
1. Butt Hinges: Comply with BHMA A156.1 and BHMA A156.7 for templated hinges.
2. Continuous Hinges: Comply with BHMA A156.26, Grade 1.

F. Types:
1. Butt Hinges: Include full mortise hinges.
2. Continuous Hinges: Include geared hinges.

G. Options: As applicable to each item specified.

H. Quantities:
1. Butt Hinges: Three (3) hinges per leaves up to 90 inches in height. Add one (1) for each additional 30 inches in height or fraction thereof.
a. Hinge weight and size unless otherwise indicated in hardware sets:
1) For doors up to 36 inches wide and up to 1-3/4 inches thick provide hinges with a minimum thickness of 0.134 inch and a minimum of 4-1/2 inches in height.
2) For doors from 36 inches wide up to 42 inches wide and up to 1-3/4 inches thick provide hinges with a minimum thickness of 0.145 inch and a minimum of 4-1/2 inches in height.
3) For doors from 42 inches wide up to 48 inches wide and up to 1-3/4 inches thick provide hinges with a minimum thickness of 0.180 inch and a minimum of 5 inches in height.
4) For doors greater than 1-3/4 inches thick provide hinges with a minimum thickness of 0.180 inch and a minimum of 5 inches in height.
2. Continuous Hinges: One per door leaf.

I. Applications: At swinging doors.
1. Provide non-removable pins at out-swinging doors with locking hardware and all exterior doors.

J. Products:
1. Butt Hinges:
a. Concealed or Exposed bearing, five (5) knuckle.
b. Plain Bearing, Five (5) Knuckle.
2. Continuous Hinges:
a. Aluminum geared hinges.

2.04 BOLTS

A. Manufacturers:
1. Listed in Door Hardware Schedule: Trimco
2. Substitutions: ABH, Glynn Johnson, as approved per division 1

B. Properties:
1. Flush Bolts:
a. Pairs of Swing Doors: At inactive leaves, provide flush bolts of type as required to comply with code.
b. Manual Flush Bolts: Manually latching upon closing of door leaf.
1) Bolt Throw: 3/4 inch, minimum.

c. Provide automatic flush bolts where required by code.

C. Options:
1. Flush Bolts: In leading edge of door, one bolt into floor, one bolt into top of frame. Fire bolt if required or as specified.

D. Products:
1. Manual flush bolts.
2. Automatic flush bolts.

2.05 LOCK CYLINDERS

A. Manufacturers:
1. Listed in Door Hardware Schedule: Best
2. Substitutions: None – facility standard

B. Properties:
1. Lock Cylinders: Provide key access on outside of each lock, unless otherwise indicated.
a. Provide cylinders from same manufacturer as locking device.
b. Provide cams and/or tailpieces as required for locking devices.
c. Provide cylinders with appropriate format interchangeable cores where indicated.

C. Material:
1. Manufacturer's standard corrosion-resistant brass alloy.

D. Products:
1. Rim/mortise.

2.06 KEYS AND CORES

A. Manufacturers:
1. Listed in Door Hardware Schedule: Best Cormax Patented
2. Substitutions: None – facility standard

B. Properties: Complying with guidelines of BHMA A156.28.
1. Provide small format interchangeable core.
2. Provide keying information in compliance with DHI (KSN) standards.
3. Keying Schedule: Arrange for a keying meeting, with Architect, Owner and hardware supplier, and other involved parties to ensure locksets and locking hardware, are functionally correct and keying complies with project requirements.
4. Keying: Master keyed.
a. Contractor to coordinate all hardware delivery schedules and end user key meetings.
5. Include construction keying and control keying with removable core cylinders.
6. Do not make brass construction cores and construction control and operating keys a part of Owner's permanent keying system, nor furnish in the same keyway (or key section) as Owner, permanent keying system.
7. Key to new keying system.
8. Supply keys in following quantities:
a. Master Keys: 4 each.
b. Construction Keys: 20 each.
c. Construction Control Keys: 2 each.
d. Control Keys: 2 each.
e. Change Keys: 2 each for each keyed core.
f. Spare Cylinder Cores: 20 each
9. Deliver keys with identifying tags to Owner by security shipment direct from manufacturer.
10. Permanent Keys and Cores: Stamped with applicable key marking for identification. Do not include actual key cuts within visual key control marks or codes. Stamp permanent keys "Do Not Duplicate."

2.07 MORTISE LOCKS

A. Manufacturers:
1. Listed in Door Hardware Schedule: Best 45H
2. Substitutions: None – facility standard

B. Properties:
1. Mechanical Locks: Manufacturer's standard.
a. Fitting modified ANSI A115.1 door preparation.
b. Door Thickness Coordination Fitting 1-3/4 inch to 2-1/4 inch thick doors.
c. Latch: Solid, one-piece, anti-friction, self-lubricating stainless steel or manufacturer’s standard anti friction as required.
1) Latchbolt Throw: 3/4 inch, minimum.
d. Auxiliary Deadlatch: One piece stainless steel, permanently lubricated.
e. Backset: 2-3/4 inch.
f. Lever Trim:
1) Functionality: Allow the lever handle to move up to 45 degrees from horizontal position prior to engaging the latchbolt assembly.
2) Strength: Locksets outside locked lever designed to withstand minimum 1,400 inch-lbs of torque. In excess of that, a replaceable part will shear. Key from outside and/or inside lever will still operate lockset.
3) Spindle: Designed to prevent forced entry from attacking of lever.
4) Independent spring mechanism for each lever.
(a) Trim to be self-aligning and thru bolted.
2. Electrified Locks: Same properties as standard locks, and as follows:
a. Voltage: 24 VDC.
b. Function: Electrically locked (Fail Safe) or unlocked (Fail Secure), as indicated for each lock in Door Hardware Schedule.

C. Finishes: See Door Hardware Schedule.
1. Core Faces: Match finish of lockset.

D. Products: Mortise locks, including standard and electrified types.

2.08 EXIT DEVICES

A. Manufacturers:
1. Listed in Door Hardware Schedule: Precision 2000
2. Substitutions: None – facility standard

B. Properties:
1. Touchpads: “T” style metal touchpads and rail assemblies with matching chassis covers end caps.
2. Latch Bolts: Stainless steel deadlocking with 3/4 inch projection using latch bolt.
3. Cylinder: Include where cylinder dogging or locking trim is indicated.
4. Strike as recommended by manufacturer for application indicated.
5. Sound dampening on touch bar.
6. Dogging:
a. Non-Fire-Resistance-Rated Devices: Manual dogging feature UNO
b. Fire-Resistance-Rated Devices: Manual dogging not permitted.
7. Handing: Field-reversible.

C. Grades: Complying with BHMA A156.3, Grade 1.

D. Standards Compliance:
1. Provide UL (DIR) listed exit device assemblies for fire-resistance-rated doors.
2. Comply with UL 10C.

E. Code Compliance: As required by authorities having jurisdiction in the State in which the Project is located.

2.09 REMOVABLE MULLIONS

A. Manufacturers:
1. Listed in Door Hardware Schedule: Precision 2000
2. Substitutions: None – facility standard

B. Properties:
1. Rectangular shape 3 inches by 2 inches tubes with minimum 1/8 inch wall thickness.
2. Furnished by the same manufacturer as exit devices.
3. Spacers: Provide as required for proper installation, based on frame profile and dimensions.

C. Grades: Complying with BHMA A156.3.

D. Materials: Manufacturer's standard for items specified.
   1. Top and Bottom Brackets: Investment-cast steel.

E. Options:

F. Applications: As indicated on drawings and in Door Hardware Schedule.

2.10 DOOR PULLS, PUSH/PULL SETS AND PUSH PLATES

A. Manufacturers:
   1. Listed in Door Hardware Schedule: Trimco
   2. Substitutions: Rockwood, Ives, per Division 1

B. Properties:
   1. Pull Type: Straight, unless otherwise indicated.
   2. Push Plate Type: Flat, with square corners, unless otherwise indicated.

C. Grades: Comply with BHMA A156.6.

D. Material: Stainless steel, unless otherwise indicated.

E. Products:
   1. Push-Pull Systems.

2.11 CLOSERS

A. Manufacturers:
   1. Listed in Door Hardware Schedule: Best 8016 Series
   2. Substitutions: None – facility standard

B. Properties:
   1. Surface Mounted Closers: Manufacturer's standard.
      a. Construction: R14 high silicon aluminum alloy or cast iron.
      b. Covers:
         1) Type: Standard for product selected.
            (a) Full.
         2) Material: Plastic.
         3) Finish: Painted.

C. Grades:
   1. Closers: Comply with BHMA A156.4, Grade 1.
      a. Underwriters Laboratories Compliance:
      b. Testing Standards Compliance: Meeting requirements of UL 10C for positive pressure.

D. Code Compliance: As required by authorities having jurisdiction in the State in which the Project is located.

E. Types:
   1. Rack-and-pinion, surface-mounted. 36MM minimum bore.

F. Installation:
   1. Mounting: Includes surface mounted installations.
   2. Mount closers on non-public side of door and stair side of stair doors unless otherwise noted in hardware sets.
   3. At outswinging exterior doors, mount closer on interior side of door.
   4. Provide adapter plates, shim spacers, and blade stop spacers as required by frame and door conditions.
   5. Where an overlapping astragal is included on pairs of swinging doors, provide coordinator to ensure door leaves close in proper order when automatic flush bolts are used

2.12 PROTECTION PLATES

A. Manufacturers:
   1. Listed in Door Hardware Schedule: Trimco
   2. Substitutions: Rockwood, Ives, per Division 1

B. Properties:
   1. Plates:

a. Kick Plates: Provide along bottom edge of push side of every wood door with closer, except aluminum storefront and glass entry doors, unless otherwise indicated.
b. Edges: Beveled, on four (4) unless otherwise indicated.

2. Provide UL fire rated stamp/sticker where required.

C. Grades: Comply with BHMA A156.6.

D. Material: As indicated for each item by BHMA material and finish designation.
1. Metal Properties: Stainless steel.

E. Installation:
1. Fasteners: Countersunk screw fasteners
2. .

2.13 STOPS AND HOLDERS

A. Manufacturers:
1. Listed in Door Hardware Schedule: Trimco
2. Substitutions: Rockwood, Ives, per Division 1

B. General: Provide overhead stop/holder when wall or floor stop is not feasible.

C. Grades:
1. Door Holders, Wall Bumpers, and Floor Stops: Comply with BHMA A156.16 and Resilient Material Retention Test as described in this standard.

D. Material: Base metal as indicated for each item by BHMA material and finish designation.

E. Types:
1. Wall Bumpers: Bumper, concave, wall stop.
2. Floor Stops: Provide with rubber bumper floor stop, heavy duty as specified.

F. Installation:
1. Non-Masonry Walls: Confirm adequate wall reinforcement has been installed to allow lasting installation of wall bumpers.

2.14 THRESHOLDS

A. Manufacturers:
1. Listed in Door Hardware Schedule: National Guard
2. Substitutions: Reese, Pemko, per Division 1

B. Properties:
1. Threshold Surface: Fluted horizontal grooves across full width.

C. Grades: Thresholds: Comply with BHMA A156.21.

D. Types: As applicable to project conditions. Provide barrier-free type at every location where specified.

2.15 WEATHERSTRIPPING AND GASKETING

A. Manufacturers:
1. Listed in Door Hardware Schedule: National Guard
2. Substitutions: Reese, Pemko, per Division 1

B. Grades: Comply with BHMA A156.22.

C. Products:
1. Weatherstripping: See Door Hardware Schedule.
2. Door Bottom Seals:
a. Door Sweeps: See Door Hardware Schedule.
b. Door Shoes: See Door Hardware Schedule.

2.16 MISCELLANEOUS ELECTRIFIED HARDWARE

A. Manufacturers:
1. Listed in Door Hardware Schedule: Best/RCI
2. Substitutions: Rixson, ABH, per Division 1

B. Properties:
1. Wire Harnesses: Of sufficient length, with quick connectors.

a. Wire Harness End Connection to Power Supply or Junction Box: One end with bare leads.

C. Products:
1. Power Supplies:
a. RCI DKPS as noted
2. Wire Harnesses:
a. BEST wire harnesses as noted

2.17 FINISHES

A. Finishes: Provide door hardware of same finish, unless otherwise indicated.
1. Finish: 630; satin stainless steel. 652; satin chromium plated with steel base material, 626, satin chromium plated with brass/bronze base material and 689; aluminum painted, with any base material

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that doors and frames are ready to receive this work; labeled, fire-rated doors and frames are properly installed, and dimensions are as indicated on shop drawings.

B. Correct all defects prior to proceeding with installation.

C. Verify that electric power is available to power operated devices and of correct characteristics.

3.02 INSTALLATION

A. Install hardware in accordance with manufacturer's instructions and applicable codes.

B. Install hardware using the manufacturer’s fasteners provided. Drill and tap all screw holes located in metallic materials. Do not use “Riv-Nuts” or similar products.

C. Install hardware on fire-rated doors and frames in accordance with applicable codes and NFPA 80.

D. Install hardware for smoke and draft control doors in accordance with NFPA 105.

E. Use templates provided by hardware item manufacturer.

F. Do not install surface mounted items until application of finishes to substrate are fully completed.

G. Wash down masonry walls and complete painting or staining of doors and frames.

H. Complete finish flooring prior to installation of thresholds.

I. Door Hardware Mounting Heights: Distance from finished floor to center line of hardware item. As indicated in following list; unless noted otherwise in Door Hardware Schedule or on drawings.
1. For Steel Doors and Frames: Install in compliance with DHI (LOCS) recommendations.
2. For Wood Doors: Install in compliance with DHI WDHS.3 recommendations.
3. Mounting heights in compliance with operational and ADA Standards:

J. Set exterior door thresholds with full-width bead of elastomeric sealant at each point of contact with floor providing a continuous weather seal; anchor thresholds with stainless steel countersunk screws.

K. Include in installation for existing doors and frames any necessary field modification and field preparation of doors and frames for new hardware. Provide necessary fillers, reinforcements, and fasteners for mounting new hardware and to cover existing door and frame preparations.

3.03 FIELD QUALITY CONTROL

A. Perform field inspection and testing under provisions of Division 1 - Quality Requirements.

B. Provide an Architectural Hardware Consultant (AHC) to inspect installation and certify that hardware and installation has been furnished and installed in accordance with manufacturer's instructions and as specified.

3.04 ADJUSTING

A. Adjust work under provisions of Division 1 - Execution and Closeout Requirements.

3.05 CLEANING

A. Clean finished hardware in accordance with manufacturer's written instructions after final adjustments have been made.

B. Clean adjacent surfaces soiled by hardware installation activities.

C. Replace items that cannot be cleaned to manufacturer's level of finish quality at no additional cost.

D. See Division 1 - Construction Waste Management and Disposal, for additional requirements.

3.06 PROTECTION

A. Protect finished Work under provisions of Division 1 - Execution and Closeout Requirements.

B. Do not permit adjacent work to damage hardware or finish.

3.07 MAINTENANCE

A. Approximately six months after the acceptance of hardware in each area, the hardware installer shall:
   1. Return to the project and re-adjust every item of hardware to restore proper function of doors and hardware.
   2. Consult with and instruct Owner's personnel in recommended additions to the maintenance procedures.
   3. Replace hardware items which have deteriorated or failed due to faulty design, materials or installation of hardware units.
   4. Prepare a written report of current and predictable problems (of substantial nature) in the performance of the hardware and submit to the Architect.

3.08 HARDWARE SCHEDULE

SECTION 08 80 00

GLAZING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes glass and glazing for the following:
   1. Doors and sidelites.
   2. Aluminum glazed framing for interior and exterior.
   3. Applied decorative films for certain interior glazing.
   4. Glazing and glazing materials and installation requiremnets are included in this section for other sections referencing this section.

B. Related Sections:
   1. Section 01 23 00 - Alternates.
   2. Section 05 73 00 - Glazed Decorative Metal Railings.
   3. Section 07 90 00 - Joint Protection: Sealant and back-up material other than glazing sealants.
   4. Section 08 11 13 - Standard Steel Doors and Frames: Glazing in steel doors and fixed windows.
   5. Section 08 14 16 - Flush Wood Doors: Glazing in door-lights.
   6. Section 08 41 13 - Aluminum-Framed Glazing Systems.
   7. Section 08 44 13 - Glazed Aluminum Curtain Walls.
   8. Section 08 87 23 - Impact Resistant Glazing Film - Alternate.

   2. GANA - Glazing Manual.
   3. GANA - Laminated Glass Design Guide.

1.03 PERFORMANCE REQUIREMENTS

A. Glass Thickness: Glass thickness designations indicated are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites in the thickness designations indicated for various size openings, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:
   1. Wind Loads: As indicated, but not less than wind loads required by ASCE 7 "Minimum Design Loads for Buildings and Other Structures": Section 6.0 "Wind Loads."
   2. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
      a. Load Duration: 3-seconds.
   3. Maximum Lateral Deflection: For exterior glass supported on all 4 edges, provide thickness required that limits center deflection at design wind pressure to 1/50 times the short side length or 1-inch, whichever is less.
   4. Minimum Glass Thickness for Exterior Lites: Not less than 1/4 inch (6.35 mm).

B. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components.
   1. Temperature Change (Range): 120 degrees Fahrenheit (48.89 degrees Celsius), ambient; 180 degrees Fahrenheit (82.22 degrees Celsius), material surfaces.

C. Thermal and Solar Optical Performance: Measured or calculated in accordance with the following:
   1. U-Values: NFRC 100.
   2. Solar Heat Gain Coefficients: NFRC 200.
   3. Solar Optical Properties: NFRC 300.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

1.05 PRODUCT DATA:
   1. Glass and Plastic: Provide structural, physical, and thermal and solar optical performance characteristics, size limitations, special handling or installation requirements.
   2. Glazing Sealants, Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements. Identify available colors where exposed.

B. Samples:
   1. Glass: Submit two samples 12x12 inch in size, of each type and color of glass specified, including spandrel and wire glass.
   2. Glazing Materials: Submit 12-inch long bead of glazing sealant for each color other than black.

C. Manufacturer's Certificate: Certify sealed insulating glass and low-E coated glass meet or exceed specified requirements.

D. Installer's Certificate: Certify glass furnished without identification label is installed in accordance with Construction Documents and applicable code.

1.06 QUALITY ASSURANCE

A. Perform Work in accordance with GANA Glazing Manual for glazing installation methods.

B. Safety Glazing Products: Comply with testing requirements in 16 CFR 1201 and, for wired-glass, ANSI Z97.1.
   1. Obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council or another certification agency or manufacturer acceptable to authorities having jurisdiction.
   2. Where glazing units are specified for lites more than 9 sq. ft. in exposed surface area, and lites of any size in certain hazardous locations such as sliding glass doors, doors and enclosures for bathtubs, showers, hot tubs, whirlpools, saunas, and steam rooms, provide glazing products that comply with Category II materials; for lites 9 sq. ft. or less in exposed surface area, provide glazing products that comply with Category I or II materials.

1.07 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.08 PRE-INSTALLATION MEETING

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.
   1. Convene minimum one week before starting Work of this section.

1.09 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install liquid glazing sealants when ambient and substrate temperature conditions are outside limits permitted by glazing sealant manufacturer or below 40 degrees Fahrenheit (4.44 degrees Celsius).

1.10 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

1.11 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. In addition to General Contractor's one-year warranty, provide the following:
   1. Furnish ten-year warranty to include coverage for coated glass units from coating deterioration or failure, and replacement of same.

2. Furnish ten-year warranty to include coverage for sealed glass units from seal failure, interpane dusting or misting, and replacement of same.

PART 2 PRODUCTS

2.01 MATERIALS

A. Manufacturers:
   1. Guardian Industries Corp.; www.guardianglass.com/us/en
   2. Oldcastle Building Envelope; www.obe.com
   3. Vitro Architectural Glass; www.vitroglazings.com
   4. Pilkington North America, Inc.; www.pilkington.com
   5. Viracon www.viracon.com
   6. Substitutions: Section 01 60 00 - Product Requirements.

B. Tempered Glass: ASTM C1048, Type 1 transparent flat, Quality Q3, Kind FT fully tempered, Condition A uncoated, float glass with horizontal tempering; furnish tempered glass conforming to CPSC 16 CFR 1201 Category II.
   1. Clear Tempered Glass: Class 1 Clear; 1/4 inch (6.35 mm) thick, as manufactured by Guardian or approved equivalent by specified manufacturer.
      a. Used for typical interior glazing unless otherwise indicated.
   2. Tinted Tempered Glass: Class 2 tinted and spectrally selective, 1/4 inch (6.35 mm) thick.
      a. Used for exterior glazing unless otherwise indicated.
      b. Colors: Tint colors standard for Guardian, or approved equivalent by specified manufacturer.
      c. Locations: As indicated.
   3. Low-E Coating: ASTM C1376, vacuum deposited, low-E coating applied to No. 2 surface of exterior glass; Guardian SNX70 or equal alternative, to meet Code minimum.

C. Exterior Insulating Glass Panels: ASTM E2190 certified by Insulating Glass Certification Council (IGCC) with glass lites separated by a dehydrated airspace that is hermetically dual sealed with a primary seal of polyisobutylene (PIB), or thermo plastic spacer (TPS) and a secondary seal of silicone or an organic sealant as determined by the manufacturer for the specific application. At typical exterior glazing fabricate for typical aluminum framing conditions with resilient glazing gaskets.
   1. Fully Tempered: Glazing units above 7 ft. shall include two fully-tempered panes. One tinted, and one clear. Tint is integral with the glass pane.
   2. Tempered plus Laminated: Glazing units below 7 ft. shall include one fully-tempered pane and one laminated pane. Tint is provided in the plastic interlayer of the laminated pane.
   3. Matching: Selected gray tint for fully tempered and tempered plus laminated shall match in color and color density when observed from the exterior.

D. Glazing Types – As Scheduled on the Drawings.
   1. **Type GL-1** - Tinted, Insulated Glazing Units (use at exterior glazing above 7 ft):
      a. Total unit thickness: 1-inch.
         1) Outer Pane:1/4-inch thick fully tempered tinted, with low-E coating on No. 2 surface, Class 2.
         2) 1/2-in dry air core.
         3) Inner Pane: 1/4-inch thick fully tempered, Class 1, with *Crystal Gray* tint.

b. Edge Condition: Black edge seal color.

2. **Type GL-2**: Insulated Spandrel Glazing Units:
   a. Total unit thickness: 1-inch.
      1) Outer Pane: 1/4-inch thick fully tempered clear with low-E coating on No. 2 surface. Class 2.
      2) 1/2-in dry air core.
      3) Inner Pane: 1/4-inch thick fully tempered spandrel glass with semi-opaque ceramic coating on No. 3 surface. ASTM C1048. Color: As selected by Architect or indicated on drawings.
   b. Edge Condition: Black edge seal color.
3. Type **GL-3**: Insulated Glazing Unit (use at exterior glazing below 7 ft.).
   a. Total Unit Thickness: 1-5/16 inch.
      1) Outer Pane: Clear tempered glass 1/4-inch thickness with specified low-E coating applied to number 2 surface.
      2) 1/2-inch dry air core.
      3) Inner Pane: Clear laminated glass consisting of 2-plies of 1/4-inch annealed clear glass bonded together with 0.080-in PVB clear interlayer. Pane thickness nominal 9/16-inch. Color *Crystal Gray.*
   b. Installed system shall meet TEA requirements and UL 972 for Delayed Forced Entry.
4. **Type GL-4**: Typical Interior Glazing Units:
   a. Class 1 clear, fully tempered.
   b. Minimum 1/4-inch thick.
5. **Type GL-5a and GL-5b:**
   a. GL-5a: Clear laminated glass: ASTM C1172 (use interior storefront glazing below 7 ft., including factory-glazed transaction window specified in Section 08 56 53).
      1) Fabrication: 1/4-inch clear annealed glass + 0.08-inch Clear PVB interlayer + 1/4-inch clear annealed glass. Total unit thickness: 9/16-inch.
   b. GL-5b: Same as GL-5a but with the addition of ½" thick Mape's finished panel on back side of mullions to conceal Reception counter.
6. **Type GL-6**: Fire-Rated Glazing Units:
   a. Composed of multiple sheets of clear tempered glass laminated with intumescent interlayers meeting requirements of ASTM E119 and safety standards of ANSI Z97.1 and/or CPSC 16CFR1201 (Cat. I and II).
   b. Basis of Design: *SuperLite II-XL* as manufactured by SaftiFirst or approved equivalent by Firelite.
   c. Thickness minimum 5/8" thick or greater as required to meet indicated rating.
   d. Labeling: Each piece of fire-rated glazing shall be labeled with a permanent logo including name of product, manufacturer, testing laboratory (UL), fire rating period, safety glazing standards, and date of manufacture.
7. **Type GL-7:** Grey-Colored, Transleucent Laminated Glass: ASTM C1172, with plastic interlayer (use at Dance Room)
   a. Total unit thickness: 9/16-inch.
      1) Fabrication: 1/4-inch clear annealed glass + 0.06-inch Grey-Colored PVB interlayer + 1/4-inch clear annealed glass.
   b. PVB Interlayer: *LamiGlass Color Grey* as manufactured by Guardian, or approved alternate matching Architect's sample.
8. **Type GL-8:** Red-Colored, Transleucent Laminated Glass: ASTM C1172, with plastic interlayer.

a. Total unit thickness:
1) Fabrication: 1/4-inch clear annealed glass + 0.06” Red-Colored PVB interlayer + 1/4-inch clear annealed glass.
b. PVB Interlayer: *LamiGlass Colour Deep Red* as manufactured by Guardian, or approved alternate matching Architect's sample.

9. **Type GL-9:** White-Colored, Transleucent Laminated Glass: ASTM C1172, (use at Dance Room) with plastic interlayer.
a. Total unit thickness: 9/16-inch.
1) Fabrication: 1/4-inch clear annealed glass + 0.06-inch Transleucent White-Colored PVB interlayer + 1/4-inch clear annealed glass.
b. PVB Interlayer: *LamiGlass Color TransWhite* as manufactured by Guardian, or approved alternate matching Architect's sample.

10. **Type GL-10:** Laminated Glass for Horizontal Sliders at Reception: ASTM C1172, with plastic interlayer.
a. Total unit thickness: 9/16-inch
1) Fabrication: 1/4-inch clear annealed glass + 0.09-inch PVB interlayer + 1/4-inch clear annealed glass.
b. Installed system shall meet TEA requirements and UL 972 for Delayed Forced Entry.

2.02 GLAZING ACCESSORIES

A. Dense Gaskets: Resilient extruded shape to suit glazing channel retaining slot; black color.
1. Neoprene: ASTM C864.
2. EPDM: ASTM C864.
3. Silicone: ASTM C1115.

B. Soft Gaskets: ASTM C509 Type II; resilient extruded shape to suit glazing channel retaining slot; black color.
1. Neoprene.
2. EPDM.
3. Silicone.

C. Pre-Formed Glazing Tape: Size to suit application.
1. Preformed butyl compound with or without integral resilient tube spacing device; 10 to 15 Shore A durometer hardness; coiled on release paper; black color.
a. Butyl Corner Sealant: ASTM C920 single component non-skinning butyl compatible with glazing tape; color to match tape.
b. Interior Sealants and Sealant Primers: Maximum volatile organic compound content in accordance with SCAQMD Rule 1168.

D. Setting Blocks: Elastomeric material recommended by glass manufacturer, 80 to 90 Shore A durometer hardness, length of 0.1 inch (2.54 mm) for each square foot of glazing or minimum 4 inch (101.6 mm) x width of glazing rabbet space minus 1/16 inch (1.59 mm) x height to suit glazing method and pane weight and area.

E. Spacer Shims: Elastomeric material recommended by glass manufacturer, 50 to 60 Shore A durometer hardness, minimum 3-inch long x one half the height of glazing stop x thickness to suit application, self-adhesive on one face.
1. Clear Acoustical Sealant for Interior Glazed Butt Joints: Clear, non-structural silicone.

a. GE5000 as manufactured by General Electric, or approved equivalent by Dow Corning.
b. Use at open joints at glazing without vertical mullions where indicated.

F. Applied Decorative Films: Dimensionally stable cast vinyl graphics film with permanent, pressure-activated adhesive back; suitable for adhering to glass surfaces.
1. Product: Solyx Films, www.solyxfilms.com.
2. Size: As indicated.
3. Description: Minimum 2-m self-adhering vinyl graphics film for glass. Patterns and colors as scheduled.
4. Flammability Characteristics: Class A, tested in accordance with ASTM E84.
5. Printing: Digitally-imaged graphics using solvent inkjet or screen printing method as recommended by manufacturer for intended purpose.
6. Warranty: 4-year manufacturer's warranty against defects in materials.
7. Installation
a. Provide wet application of decorative films for bubble-free and wrinkle-free surface.
b. Install protective Schotchcal Gloss Overlaminate 8518 for additional protection.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.
1. Verify openings for glazing are correctly sized and within acceptable tolerance.

B. Verify surfaces of glazing channels or recesses are clean, free of obstructions impeding moisture movement, weeps are clear, and ready to receive glazing.

3.02 PREPARATION

A. Clean contact surfaces with solvent and wipe dry.
1. Seal porous glazing channels or recesses with substrate compatible primer or sealer.
2. Prime surfaces scheduled to receive sealant.

3.03 INSTALLATION

A. Perform installation in accordance with GANA Glazing Manual.
1. Glazing Sealants: Comply with ASTM C1193.
2. Do not allow metal-to-glass contact.

B. Exterior Dry Method (Gasket Glazing):
1. Cut glazing gasket to length; install on glazing pane. Seal corners by butting tape and sealing junctions with compatible butyl sealant.
2. Place setting blocks at 1/4 points with edge block no more than 6 inches (152.4 mm) from corners.
3. Rest glazing on setting blocks and push against fixed stop with sufficient pressure to attain full contact.
4. Install removable stops without displacing glazing spline. Exert pressure for full continuous contact.

C. Interior Dry Method (Tape and Tape) Installation:
   1. Cut glazing tape to length and set against permanent stops, projecting 1/16 inch (1.59 mm) above sight line.
   2. Place setting blocks at 1/4 points with edge block no more than 6 inches (152.4 mm) from corners. Provide additional setting blocks where recommended by the glazing panel manufacturer.
   3. Rest glazing on setting blocks and push against tape for full contact at perimeter of pane or unit.
   4. Place glazing tape on free perimeter of glazing in same manner described above.
   5. Install removable stop without displacement of tape. Exert pressure on tape for full continuous contact.
   6. Knife trim protruding tape.
      a. Interior Wet Method Installation – for butt-jointed supported at top and bottom edges only:
         1) Place setting blocks at 1/4 points with edge block no more than 6 inches (152.4 mm) from corners.
         2) Rest glazing on setting blocks and push against tape for full contact at perimeter of pane or unit.
         3) Install resilient spacers on both sides of glass marker board panels to maintain glazing in center of glazing channel.
         4) Fill both sides of glazing channels of top and bottom aluminum framing with black color structural silicone glazing, and apply light pressure to consolidate.
         5) Where indicated for vertical butt joints to be sealant filled, install clear silicone sealant flush with faces of glazing panels.
         6) Prior to all sealant applications, mask-off glazing faces with temporary tape to ensure sharp sealant lines.
            (a) Silicone-Filled Butt Joints.
         7) Apply masking tape backer over one face of open joint. Tool along glazing edges to ensure maximum adhesion.
         8) Apply masking tape along each edge of opposing face, leaving open joint. Tool along glazing edges to ensure maximum adhesion.
         9) Fill joint with silicone from open face, and tool joint to remove air bubbles and compress sealant fully against glazing edges and backing tape.
         10) After silicone has cured, remove tape from both faces of glass.

3.04 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.
   1. Remove glazing materials from finish surfaces.
   2. Remove labels after Work is complete.
   3. Clean glass and adjacent surfaces.

3.05 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. After installation, mark pane with an 'X' by using removable plastic tape or paste. Do not mark heat absorbing or reflective glass units.

END OF SECTION

SECTION 08 83 00

UNFRAMED MIRRORS

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes glass mirrors for frameless installation at Dance Instruction and other locations as indicated.

B. Related Sections:
   1. Section 08 80 00 - Glazing: Glass and glazing.
   2. Section 10 28 00 - Toilet and Bath Accessories: Metal framed mirrors.

1.02 REFERENCES

A. American National Standards Institute:
   1. ANSI Z97.1 - Safety Glazing Materials Used in Buildings Safety.

B. ASTM International:
   1. ASTM C1048 - Standard Specification for Heat-Treated Flat Glass-Kind HS, Kind FT Coated and Uncoated Glass.

C. Consumer Product Safety Commission:
   1. CPSC 16 CFR 1201; Safety Standard for Architectural Glazing.

D. Glass Association of North America:
   1. GANA - Glazing Manual.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data:
   1. Mirror Types: Submit structural, physical and environmental characteristics, size limitations, special handling or installation requirements.
   2. Glazing Materials: Submit chemical, functional, and environmental characteristics, limitations, special application requirements. Identify available colors.

C. Manufacturer's Certificate: Certify mirrors meet or exceed specified requirements.

D. Preconstruction Mirror Mastic Glass Coating Compatibility Test: Submit mirror mastic products to organic protective coating manufacturer for testing to determine compatibility of adhesive with mirrored glass coating.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with GANA Glazing Manual for mirror installation methods.

B. Safety Glass: Category II materials complying with testing requirements in 16 CFR 1201 and ANSI Z97.1.

1.05 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five-year warranty to include coverage for reflective coating on mirrors and replacement of same.

PART 2 - PRODUCTS

2.01 MIRRORS

A. Tempered Safety Mirror Glass: ASTM C1048, Kind FT fully tempered, Type 1 transparent flat, Class 1 clear, Quality q1 mirror select; type with copper and silver coating, and organic overcoating.
   1. Edges: Polished.
   2. Thickness: 1/4 inch.
   3. Size: As noted on Drawings.

2.02 ACCESSORIES

A. Mirror Attachment Accessories: Extruded aluminum J-profile channels with concealed fasteners.

B. Setting Blocks: Neoprene, 70 to 90 Shore A hardness.

C. Edge Sealer: Coating compatible with glass coating and approved by mirrored glass manufacturer for use in protecting against silver deterioration at mirrored glass edges.

D. Mirror Adhesive: Chemically compatible with mirror coating and wall substrate.
   1. Interior Adhesives: Maximum volatile organic compound content in accordance with SCAQMD Rule 1168.

2.03 FABRICATION

A. Cut mirrored glass to final sizes and shapes to suit Project conditions.

B. Fabricate cutouts for notches and holes in mirrored glass without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrored glass.

C. Seal edges of silvered mirrored glass after edge polishing to prevent chemical or atmospheric penetration of glass coating.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify wall surfaces are clean, free of obstructions, and ready to receive mirrors.

3.02 PREPARATION

A. Clean contact surfaces with solvent and wipe dry.

3.03 INSTALLATION

A. Perform installation in accordance with GANA Glazing Manual.
   1. Set mirrors plumb and level, free of optical distortion.
   2. Set mirrors with edge clearance free of surrounding construction including counter tops and backsplashes.
   3. Provide space for air circulation between back of mirrored glass units and face of mounting surface.

B. Frameless Mechanical Installation:
   1. Set mirrors with J-profile stainless steel continuous channel along top and bottom edges. Anchor rigidly to wall construction.
   2. Gap vertical joints uniformly 3/16”.
   3. Place plumb and level without visible distort.
   4. For continuous bottom supports, provide setting blocks 1/8 inch thick by 4 inches long at quarter points.

C. Frameless Adhesive Installation:
   1. Apply barrier coat to mirrored glass backing where approved in writing by manufacturers of mirrored glass and backing material.
   2. Set mirrors with adhesive.
   3. Place plumb and level without visible distortion.

3.04 FIELD QUALITY CONTROL

A. Section 01 40 00 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Inspect for quality of glazing.

C. Do not permit edges of silvered mirrored glass to be exposed to standing water.

D. Maintain environmental conditions that will prevent silvered mirrored glass from being exposed to moisture from condensation or other sources for continuous periods of time.

3.05 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove labels after Work is complete.

C. Clean mirrors and adjacent surfaces.

END OF SECTION

SECTION 08 87 23

IMPACT RESISTANT GLAZING FILM

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes installation of impact-resistant glazing film for all first floor exterior glazing assemblies and as indicated in the drawings.
   1. Not required at ballistic rated glazing assemblies incorporating laminated glass with factory-installed interlayer film.

B. Related Sections:
   1. Section 08 80 00 - Glazing.

1.02 REFERENCES

A. American Society of Civil Engineers
   1. ASCE 7 “Minimum Design Loads for Buildings and Other Structures": Section 6.0 "Wind Loads."

B. American National Standards Institute:
   1. ANSI Z97.1 - Safety Glazing Materials Used in Buildings Safety.

C. CPSC 16 CFR 1201 CAT I and II Test

D. General Services Administration
   1. GSA “Standard Testing Method for Windows and and Glazing systems Subject to Dynamic Overpressure Loadings”.

E. ASTM International:
   1. ASTM F-1642-04 “Standard Test Method for Glazing and Glazing systems Subjected to Airblast Loadings.”

1.03 PERFORMANCE REQUIREMENTS

A. Glass Thickness: The Project glass pane thickness for glazing film application is 1/4” unless indicated otherwise. Exterior glazing panels are comprised of (2) 1/4” thick tempered panes separated by 1/2” gasketed seals for an overall insulated glazing unit thickness of 1”.

B. Provide impact-resistant glazing film for single-pane and dual-pane insulated glass units as required to meet or exceed the following criteria:
   1. Wind Loads for Exterior Glazing:
      a. As may be indicated, but not less than wind loads required by ASCE 7.
      b. Probability of Breakage for Vertical Glazing: 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action with a load duration of 3-seconds.

c. Maximum Lateral Deflection: For exterior glass supported on all 4 edges, provide thickness required that limits center deflection at design wind pressure to 1/50 times the short side length or 1 inch (25.4 mm), whichever is less.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data:
1. Glazing Films: Provide structural, physical, and thermal and solar optical performance characteristics, size limitations, special handling or installation requirements.
2. Perimeter Sealants, Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements. Identify available colors where exposed.

C. Samples:
1. Glass Panels: Submit two samples 12x12 inch in size, for each type of glazing film required, and each type of glass to receive glazing film, including spandrel and wire glass.
2. Perimeter Sealant: Submit 12-inch long bead of proposed perimeter sealant.
3. Sealant Cover: Submit 12-inch long strip of proposed vinyl cover and preformed corner.

D. Film Manufacturer's Certificate: Certify specified glass products including sealed insulating units, spandrel glass, tinted glass, low-E coated glass, and any fire-rated glass are appropriate products to receive glazing film and will not negatively affect glazing panel performance.

1.05 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.06 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not install glazing films or liquid glazing sealants when ambient and substrate temperature conditions are outside limits permitted by glazing sealant manufacturer or below 40 deg F.

1.07 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish ten-year warranty to include coverage for glazing films from delamination, color change, optical transparency change, failure to provide impact protection within limitations as specified herein.

PART 2 - PRODUCTS

2.01 SYSTEM MANUFACTURERS

A. 3MTM, www.3m.com

B. Eastman Chemical Company, Llumar, www.llumar.com

C. Madico SafetyShield, Inc., St. Petersburg, FL, 526-277-8775, www.safetyshield.com

D. Solar Gard (Saint-Gobain) www.solargard.com

E. Substitutions: Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Glazing Film: High strength Mylar polyester, optically clear and without waviness or other distortion. Colorless or tinted as selected.
   1. Basis of Design: SafetyShield 1500 clear film as manufactured by Madico, Inc. or approved equivalent by specified manufacturer.
   2. Film thickness:
      a. Minimum 15-mil at interior entry and transaction window systems and as indicated in the drawings.
      b. Minimum 8-mil at exterior glazing systems and as indicated in the drawings.

B. Application Solution/Bonding Agent: Film manufacturer’s recommended and approved application solution for use with security and safety films as tested to meet performance criteria.

C. Perimeter Sealant: Dow 995 Structural Silicone Sealant, black color.

D. Sealant Cover: Black vinyl bonding cap with preformed corners; BondKap system or approved equivalent.

E. Glass Cleaner: As recommended by glazing film manufacturer.

F. Applied system shall be odor-free and non-toxic after 72-hour cure time.
   1. Flame Spread: 0.
   2. Smoke Developed: 0.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify surfaces of glazing panels are clean, free of haze or visual distortion, dry, and ready to receive glazing.

C. Verify that frames are securely anchored and free of defects.

D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

A. Remove any glazing labels or protective tape or other markings on film application side of glazing panel. Replace any removed safety labels or tape on non-application side of glass.

B. Clean contact surfaces with mild water-based solution, rinse thoroughly with clear potable water, and wipe dry.

C. Ensure surfaces of glazing panels are clean, free of haze or visual distortion, dry, and ready to receive glazing film.

3.03 INSTALLATION

A. Do not apply glazing film when surface temperature is less than 40 degrees Fahrenheit (4.44 degrees Celsius) or if precipitation is imminent.

B. Install in accordance with manufacturer's instructions, without air bubbles, wrinkles, streaks, bands, thin spots, pinholes, or gaps, as required to achieve specified performance.

C. Accurately cut film with straight edges to required sizes allowing 1/16 inch (1.59 mm) to 1/8 inch (3.18 mm) gap at perimeter of glazed panel unless otherwise required by anchorage method.

D. Seams: Seam film only as required to accommodate material sizes; form seams vertically without overlaps and gaps; do not install with horizontal seams.

E. Uniformly spray apply bonding agent to interior face of exterior glazing and to secure side of interior glazing.

F. Exterior Glazing:
   1. Exterior Windows:
      a. Apply film on interior face of glass.
      b. Anchor film to frame with structural sealant with BondKap over sealant.
         1) Must achieve minimum 1/2” contact between structural sealant bead to frame and minimum 1/2” contact between structural sealant bead to window film.
   2. Exterior doors with glass.
      a. Apply film on edge to edge of glass on interior face of glass.
      b. Apply structural sealant under caps/stops to adhere film to frame to cap/stop.
   3. Ballistic rated glass: Not required.

G. Interior Glazing:
   1. Interior Windows:
      a. Apply film on secure side of glass. Confirm with Architect.
      b. Anchor film to frame with structural sealant with BondKap over sealant.
         1) Must achieve minimum ½” contact between structural sealant bead to frame and minimum ½” contact between structural sealant bead to window film.
   2. Interior doors with glass.
      a. Apply film on edge to edge of glass on interior of glass.

b. Apply structural sealant under caps/stops to adhere film to frame to cap/stop.

3. Ballistic rated glass: Not required.

H. Clean glass and anchoring accessories following installation. Remove excess sealants and other glazing materials from adjacent finished surfaces.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

3.05 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Provide final cleaning and polishing of applied film.

C. Do not remove any safety labels or tape from non-application side until removal is approved by General Contractor.

D. Clean adjacent surfaces.

END OF SECTION

SECTION 08 91 00

LOUVERS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fixed louvers, frames and accessories.

B. Related Sections:
   1. Section 07 90 00 - Joint Protection: Sealant at louver perimeter.
   2. Division 23 Sections - HVAC ducting with direct connections to louvers.

1.02 REFERENCES

A. ASTM International:
   1. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
   2. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

1.03 PERFORMANCE REQUIREMENTS

A. As follows, determined by testing per AMCA Standard 500:
   1. Louver Free Area: Not less than 45%.
   2. Static Pressure Loss: Not more than 0.14 inch (3.56 mm) water gage at an airflow of 810 fpm free area intake velocity.
   3. Water Penetration: Not more than 0.02 oz. per sq. ft. of free area at an airflow of 855 fpm free area velocity when tested for 15 minutes.

B. AMCA Seal: Mark units with AMCA Certified Ratings Seal.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, tolerances; head, jamb and sill details; blade configuration, screens, blankout areas required, and frames.

C. Product Data: Submit data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.

D. Samples: Submit two samples illustrating finish and color of exterior surfaces.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.05 QUALITY ASSURANCE

A. Perform Work in accordance with AMCA Certification for Water Penetration, Air Performance, and Wind Driven Rain, in compliance with AMCA 500-L. Attach AMCA seal to louvers.

1.06 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.07 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with installation of metal siding and masonry flashings.

C. Coordinate Work with installation of mechanical ductwork.

1.08 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish twenty-year manufacturer warranty for louvers.

C. Warranty: Include coverage for degradation of fluoropolymer finish.

PART 2 PRODUCTS

2.01 LOUVERS

A. Manufacturers:
   1. Airline Products Co.
   2. Airolite Co. www.airolite.com
   3. Airstream Products www.pennvent.com
   4. Construction Specialties, Inc. www.c-sgroup.com
   5. Greenheck Fan Corporation www.greenheck.com
   6. Reliable Metal Products. www.reliablelouvers.com
   7. Ruskin Mfg. www.ruskin.com
   8. Substitutions: Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Basis of Design: Series HZ700 as manufactured by Ruskin, or approved equivalent by specified manufacturer.

B. Aluminum Sheet: ASTM B209, alloy 3003 or 5005, temper as required to produce required finish.

C. Aluminum Extrusions: ASTM B221, alloy 6063-T5 or T52. Not less than 22,000 pounds per square inch ultimate tensile strength; not less than 16,000 pounds per square inch minimum yield strength; and not less than 0.090-inch thickness at any location for the main frame.

D. Flashings: Of same material and finish as louver frame.

E. Sealants: As specified in Section 07 90 00.

2.03 COMPONENTS

A. Wall Louvers: Non-Drainable Style
   1. Louver Construction: Aluminum.
   2. Louver Depth: 4 inches (101.6 mm), unless otherwise indicated.
   3. Frame Type: Channel flange.
   4. Frame Thickness: 0.081 inch (2.06 mm).
   5. Louver Blade Thickness: 0.081 inch (2.06 mm).
   6. Louver Blade Profile: Horizontal storm-resistant.
   7. Louver Blade Angle: 37 1/2 degrees.
   8. Louver Blade Spacing: 3".

2.04 ACCESSORIES

A. Bird Screen: Interwoven 1/2 inch (12.7 mm) mesh of 0.04 inch (1.02 mm) diameter galvanized steel wire.

B. Fasteners and Anchors: Stainless steel type.

C. Blank-Out Sheeting on Interior of Louver: Same material and finish as louver and frame:
   1. Configuration: Single sheet.

2.05 FABRICATION

A. Louver Frame: Mechanically fastened corner joints. Form perimeter of frames with recessed channel to retain backer rod for sealant application.

B. Intermediate Mullions: Concealed, of extruded aluminum, profiled to suit louver frame.
   1. Space at 72 inches (1828.8 mm) o.c. or as recommended by manufacturer.

C. Sill Extensions: Provide sill extensions and loose sills made of same material as louvers where required for drainage to exterior.

D. Screens: Install screen mesh in channel-shaped frame; reinforce corner construction.

2.06 FACTORY FINISHING

A. Aluminum - Painted Finish: Manufacturer's 2 coat fluoropolymer finish with minimum 50 percent polyvinylidene fluoride resin; complying with AAMA 2605.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify prepared openings and flashings are ready to receive Work and opening dimensions are as indicated on shop drawings.

3.02 INSTALLATION

A. Install louvers level and plumb.

B. Align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

C. Secure louvers in opening framing with concealed fasteners.

D. Install bird screen and frame to interior of louver. Attach to frame with stainless steel machine screws.

E. Attach blank-off sheet to back of frame with stainless steel sheet metal screws.

F. Install perimeter sealant and backing rod in accordance with Section 07 90 00.

3.03 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements - Final cleaning.

B. Strip protective finish coverings.

C. Clean surfaces and components.

END OF SECTION

SECTION 09 21 16

GYPSUM BOARD ASSEMBLIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal stud wall framing.

B. Metal channel ceiling framing.

C. Resilient sound isolation channels.

D. Acoustic insulation and sealant.

E. Gypsum sheathing.

F. Fire-rated gypsum sheathing.

G. Cementitious backing board.

H. Tile backing board for non-wet areas.

I. Gypsum wallboard.

J. Rated shaft wall assemblies.

K. Abuse-resistant gypsum board.

L. Joint treatment and accessories.

M. Plenum space sound control.

N. Partial height wall framing support.

O. Preformed aluminum reveals.

P. End wall trim.

1.02 RELATED REQUIREMENTS

A. Section 06 10 00 - Rough Carpentry: Wood blocking product and execution requirements.

B. Section 07 25 00 - Weather Barriers: Water-resistive barrier over sheathing.

1.03 REFERENCE STANDARDS

A. AISI S220 - North American Standard for Cold-Formed Steel Nonstructural Framing; 2020.

B. AISI S240 - North American Standard for Cold-Formed Steel Structural Framing; 2015, with Errata (2020).

C. ANSI A108.11 - American National Standard Specifications for Interior Installation of Cementitious Backer Units; 2018.

D. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units; 2019.

E. ASHRAE Std 62.1 - Ventilation for Acceptable Indoor Air Quality; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

K. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board; 2020.

L. ASTM C954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness; 2022.

M. ASTM C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs; 2022.

N. ASTM C1047 - Standard Specification for Accessories for Gypsum Wallboard and Gypsum Veneer Base; 2019.

O. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing; 2017.

P. ASTM C1280 - Standard Specification for Application of Exterior Gypsum Panel Products for Use as Sheathing; 2018.

Q. ASTM C1325 - Standard Specification for Fiber-Mat Reinforced Cementitious Backer Units; 2022.

R. ASTM C1396/C1396M - Standard Specification for Gypsum Board; 2017.

S. ASTM C1629/C1629M - Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels; 2019.

T. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2021.

U. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2022.

V. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2023.

W. ASTM E413 - Classification for Rating Sound Insulation; 2022.

X. GA-216 - Application and Finishing of Gypsum Panel Products; 2021.

Y. GA-226 - Application of Gypsum Board to Form Curved Surfaces; 2025.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate the installation of gypsum board assemblies with size, location, and installation of service utilities.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this section; require attendance by all affected installers.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data:
   1. Provide data on all products specified in Part 2 of this section. metal framing, gypsum board, glass mat faced gypsum board, accessories, and joint finishing system
   2. Provide manufacturer's data on partition head to structure connectors, showing compliance with requirements.

C. Shop Drawings: Indicate special details associated with fireproofing and acoustic seals.

D. Test Reports: For stud framing products that do not comply with AISI S220 or ASTM C754, provide independent laboratory reports showing maximum stud heights at required spacings and deflections.

1.06 QUALITY ASSURANCE

A. Perform Work in accordance with ASTM C840.

B. Fire Rated Wall and Ceiling Construction: Rating as indicated on Drawings, tested in accordance with ASTM E119.
   1. Fire Rated Ceilings and Partitions: Listed assembly by UL, WH, or GA.
   2. Fire Rated Shaft Wall Requirements: Listed assembly by UL, WH, or GA.

C. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.

D. Company specializing in manufacturing gypsum based products with minimum five years of documented experience.

E. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store gypsum products and accessories indoors and keep above freezing. Elevate boards above floor, on nonwicking supports, in accordance with manufacturer's recommendations.

B. Store metal products to prevent corrosion.

PART 2 PRODUCTS

2.01 GYPSUM BOARD ASSEMBLIES

A. Provide completed assemblies complying with ASTM C840 and GA-216.

B. Interior Partitions, Indicated as Acoustic: Provide completed assemblies with the following characteristics:
   1. Acoustic Attenuation: STC as indicated calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

C. Shaft Walls: Provide completed assemblies with the following characteristics:
   1. Air Pressure Within Shaft: Sustained loads of 5 lbf/sq ft (0.24 kPa) with maximum mid-span deflection of L/240.
      a. Provide gypsum board shaft-wall assemblies capable of withstanding the full air-pressure loads indicated for maximum heights of partitions without failing and while maintaining an airtight and smoke-tight seal.
      b. Evidence of failure includes deflections exceeding limits indicated, bending stresses causing studs to break or to distort, and end-reaction shear causing track (runners) to bend or to shear and studs to become crippled.
      c. Fire-Resistance-Rated Assemblies: Provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction
      d. Cavity Insulation: Sound attenuation blankets.
   2. Acoustic Attenuation: STC of 35-39 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.

D. Fire-Resistance-Rated Assemblies: Provide completed assemblies with the following characteristics:
   1. Fire Rated Assemblies are indicated on drawings.
   2. Furnish one of the Type X panels specified above that meet the requirements for the specified fire rated assembly as well as the respective use and location requirements for Typical or Moisture-Resistant panels.
   3. Furnish Type C gypsum board panels only where specifically indicated or where otherwise required for the indicated fire rated assembly.
      a. Basis of Design: FireBloc Type C as manufactured by American Gypsum or approved equivalent by specified manufacturer.
      b. 5/8” Type X gypsum core with enhanced fire-resistant properties.

2.02 METAL FRAMING MATERIALS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.

B. Manufacturers - Metal Framing, Connectors, and Accessories:

1. ClarkDietrich: www.clarkdietrich.com/
2. MarinoWARE: www.marinoware.com/
3. Phillips Manufacturing Co: www.phillipsmfg.com/
4. Substitutions: See Section 01 60 00 - Product Requirements.

C. Nonstructural Framing System Components: AISI S220; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 for the spacing indicated, with maximum deflection of wall framing of L/120 at 5 psf (L/120 at 240 Pa).
   1. Studs: C-shaped, 25 gauge thick, depth as indicated..
      a. Furnish 20 gauge studs at the following locations:
         1) Studs framing doors.
         2) Walls finished with tile.
         3) Walls finished with abuse resistant gypsum board.
         4) Studs supporting wall-mounted accessories and TV brackets
      b. Section Modulus Requirements
         1) 3-5/8" Studs: S=0.135
         2) 2-1/2" Studs: S-0.082
   2. Standard Runners: U shaped, sized to match studs.
   3. Deflection Tracks:
      a. Non-Rated Walls: 2-inch deep flanges, gauge to match studs.
      b. Rated Walls:
         1) Combination deflection track and fire stop system consisting of mineral fiber, fire caulk, zee clips and accessories as required to achieve the design rating.
         2) Basis of Design: *Shadowline* as manufactured by Firetrack Corp.
      c. Installed deflection tracks shall allow 3/4” or more of vertical movement up or vertical movement down.
   4. Ceiling Channels: C-shaped.
   5. Grid Suspension System for Interior Ceilings: direct-hung system composed of galvanized cold-formed main beams and interlocking cross-furring members.
      a. Manufacturers:
         1) Armstrong World Industries, Inc.; Furring Systems/Drywall.
         2) USG Interiors, Inc.; Drywall Suspension System.
   6. Furring Members: As indicated in Drawings, hat-shaped sections, minimum depth of 7/8 inch (22 mm).
   7. Furring Members: As indicated in Drawings, U-shaped sections, minimum depth of 3/4 inch (19 mm).
   8. Furring Members: As indicated in Drawings, Zee-shaped sections, minimum depth of 1 inch (25 mm).
   9. Resilient Furring Channels: Single or double leg configuration; 1/2 inch (13 mm) channel depth.
      a. Products:
         1) ClarkDietrich; RC Deluxe Resilient Channel: www.clarkdietrich.com/#sle.
         2) Phillips Manufacturing Co; RC-2 Resilient Sound Channel: www.phillipsmfg.com/
         3) Substitutions: See Section 01 60 00 - Product Requirements.

D. Shaft Wall Studs and Accessories: AISI S220; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 and specified performance requirements.
   1. Manufacturer's standard profile for repetitive members and corner and end members and for fire-resistance-rated assembly indicated.
      a. Depth: As indicated.
      b. Minimum Base Metal Thickness: Manufacturer's standard thicknesses that comply with structural performance requirements for stud depth indicated.
   2. Track (Runner): Manufacturer's standard J-profile track with long-leg length as standard with manufacturer, but at least 2 inches (51 mm), in depth matching studs.
      a. Minimum Base Metal Thickness: Manufacturer's standard thicknesses that comply with structural performance requirements for stud depth indicated.
   3. Jamb Struts: Manufacturer's standard J-profile strut with long-leg length of 3 inches (76.2 mm), in depth matching studs, and not less than 0.0329 (0.84 mm) thick.

E. Non-structural Framing Accessories:
   1. Fasteners: ASTM C1002; Type S; length to suit application.
   2. Ceiling Hangers: Type and size as specified in ASTM C754 for spacing required.
   3. Partial Height Wall Framing Support: Provides stud reinforcement and anchored connection to floor.
      a. Materials: ASTM A36/A36M formed sheet steel support member with factory-welded ASTM A1003/A1003M steel plate base.
      b. Height: 35-3/4 inches (908 mm).
         1) Fabricate or job-cut height of brace tube to be no lower than 2" below knee-wall height.
      c. Products:
         1) ClarkDietrich; Pony Wall (PW): www.clarkdietrich.com/#sle.
         2) Softforms; *SKB Knee Brace Kit*; www.kneewall.com.
         3) Substitutions: See Section 01 60 00 - Product Requirements.

F. Grid Suspension Systems: Steel grid system of main tees and support bars connected to structure using hanging wire.
   1. Anchorage to Substrate: Tie wire, nails, screws, and other metal supports, of type and size to suit application; to rigidly secure materials in place.
   2. Suspension Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.0625 inch diameter wire, or double strand of 0.0475 inch diameter wire.
   3. Products:
      a. CertainTeed Corporation: www.certainteed.com/ceilings-and-walls/#sle.
      b. USG Corporation; Drywall Suspension System: www.usg.com/#sle.
      c. Substitutions: See Section 01 60 00 - Product Requirements.

2.03 BOARD MATERIALS

A. Manufacturers - Gypsum-Based Board:
   1. American Gypsum Company: www.americangypsum.com/
   2. CertainTeed Corporation: www.certainteed.com/
   3. Georgia-Pacific Gypsum: www.gpgypsum.com/
   4. Gold Bond Building Products, LLC provided by National Gypsum Company; ____: www.goldbondbuilding.com/#sle.

5. USG Corporation: www.usg.com/#
6. Substitutions: See Section 01 60 00 - Product Requirements.

B. General: Meet the following requiremnets unless otherwise noted:
   1. Conform to ASTM C1396 section 5 (C 36) and Federal Specification SS-L-30D Type lll, Grade X fire- resistant.
   2. Ends square cut, tapered long edges wrapped.
   3. 5/8” gypsum core faced and edge-wrapped with mold and moisture resistant 100% recycled paper.
   4. Surface Burning Characteristics per ASTM E 84:
      a. Flame Spread = 0
      b. Smoke Developed = 0.
   5. Intended for interior applications only.

C. Gypsum Wallboard: Paper-faced gypsum panels as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.
   1. Typical Gypsum Board Panels:
      a. Basis of Design: *FireBloc Type X Gypsum Wallboard*; American Gypsum Company or approved equivalent by specified manufacturer.
      b. Use throughout the interior of the Project except for specialized uses and locations requiring other panel types as indicated below.
   2. Thickness:
      a. Vertical Surfaces: 5/8 inch (16 mm).
      b. Ceilings: 5/8 inch (16 mm).
   3. Mold-Resistant, Paper-Faced Products:
      a. Basis of Design: American Gypsum Company; *M-Bloc Type X* or approved equlvalent by specified manufacturer.
         1) 5/8" water-resistant gypsum core faced with mold and moisture resistant 100% green-colored paper.
         2) Water absorption: Less than 5% per ASTM 1396.
         3) Meet requirements of Federal Specification SS-L-30D Type VII, Grade X.
         4) Use at restrooms, shower rooms, custodial rooms and othe rareas subject to high moisture. Where board is not surfaced with tile, prepare for finish painting.
            (a) Behind wall tile.
            (b) Toilet room walls not receiving cementitous backer board.

D. Abuse Resistant Wallboard:
   1. Application: Interior, High-traffic areas indicated.
   2. Indentation: Level 1, minimum, when tested in accordance with ASTM C1629/C1629M.
   3. Soft Body Impact: Level 2, minimum, when tested in accordance with ASTM C1629/C1629M.
   4. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
   5. Paper-Faced Type: Gypsum wallboard, as defined in ASTM C1396/C1396M.
      a. Basis of Design: M-Bloc® Abuse-Resistant Type X as manufactured by American Gypsum or approved equivalent by specified manufacturer.
   6. Type: Fire-resistance-rated Type X, UL or WH listed.
   7. Thickness: 5/8 inch (16 mm).
   8. Edges: Tapered.

9. Water Absorption: Less than 5% per ASTM 1396.
10. Meet requirements of Federal Specification SS-L-30D Type lll, Grade X.
11. Use at locations indicated in the Drawings.

E. Backing Board For Wet Areas: One of the following products:
   1. Application:
      a. All shower walls and shower ceilings.
      b. All wet walls, including behind lavatories, toilets, and urinals, and side walls adjacent to these fixtures.
   2. ANSI Cement-Based Board: Non-gypsum-based; aggregated Portland cement panels with glass fiber mesh embedded in front and back surfaces complying with ANSI A118.9 or ASTM C1325.
      a. Thickness: 1/2 inch (13 mm).
      b. Products:
         1) Custom Building Products; Wonderboard Cement Backerboard: www.custombuildingproducts.com/#sle.
         2) PermaBASE Building Products, LLC provided by National Gypsum Company; PermaBase Cement Board: www.goldbondbuilding.com/#
         3) USG Corporation; Fiberock Brand Aqua-Tough AR Interior Panels Regular 1/2 in. (12.7 mm): www.usg.com/
         4) Substitutions: See Section 01 60 00 - Product Requirements.
   3. Membrane: Per TCA W244 install waterproof membrane direclty behind cementitious backer board, overlapping joints 4 inches - 6 inches.
      a. #15 asphalt saturated felt meeting requirements of ASTM D226, Type 1.
      b. Minimum 6 mil polyethylene film meeting requiremnts of ASTM D4397.

F. Backing Board For Non-Wet Areas: Water-resistant gypsum backing board as defined in ASTM C1396/C1396M; sizes to minimum joints in place; ends square cut.
   1. Application: Vertical surfaces behind thinset tile, except in wet areas.
   2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
   3. At Assemblies Indicated with Fire-Resistance Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.
   4. Type: Regular and Type X, in locations indicated.
   5. Type X Thickness: 5/8 inch (16 mm).
   6. Edges: Tapered.
   7. Products:
      a. American Gypsum Company; M-Bloc Type X: www.americangypsum.com/
      b. Georgia-Pacific Gypsum; DensArmor Plus: www.gpgypsum.com/
      c. Gold Bond Building Products, LLC provided by National Gypsum Company; Gold Bond XP Fire-Shield Gypsum Board: www.goldbondbuilding.com/
      d. Substitutions: See Section 01 60 00 - Product Requirements.

G. Exterior Sheathing Board: Sizes to minimize joints in place; ends square cut.
   1. Application: Exterior sheathing, unless otherwise indicated.
   2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
   3. Glass Mat Faced Sheathing: Glass mat faced gypsum substrate as defined in ASTM C1177/C1177M.

4. At Assemblies Indicated with Fire-Resistance Rating: Use type required by indicated tested assembly; if no tested assembly is indicated, use Type X board, UL or WH listed.
5. Core Type: Regular and Type X, as indicated.
6. Type X Thickness: 5/8 inch (16 mm).
7. Regular Board Thickness: 1/2 inch (13 mm).
8. Edges: Square.
9. Flame Spread Rating: 0.0.
10. Smoke Developed: 0.0.
11. Fasteners: ASTM C954; steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing board to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B117
12. Glass Mat Faced Products:
    a. American Gypsum Company; M-Glass Exterior Sheathing Type X: www.americangypsum.com/
    b. American Gypsum Company; M-Glass 1/2" Exterior Sheathing: www.americangypsum.com/
    c. CertainTeed Corporation; GlasRoc 1/2" Exterior Sheathing: www.certainteed.com/
    d. CertainTeed Corporation; GlasRoc Type X Exterior Sheathing: www.certainteed.com/
    e. Georgia-Pacific Gypsum; DensGlass Sheathing: www.gpgypsum.com/
    f. Georgia-Pacific Gypsum; DensGlass Fireguard Sheathing: www.gpgypsum.com/
    g. USG Corporation; Securock Brand UltraLight Glass-Mat Sheathing 1/2 in. (12.7 mm): www.usg.com/
    h. USG Corporation; Securock Brand UltraLight Glass-Mat Sheathing Firecode X 5/8 in. (15.9 mm): www.usg.com/
    i. Substitutions: See Section 01 60 00 - Product Requirements.

H. Shaftwall and Coreboard: Type X; 1 inch (25 mm) thick by 24 inches (600 mm) wide, beveled long edges, ends square cut.

2.04 PLENUM SPACE SOUND CONTROL

A. Description: Acoustical extension wall board for noise control within ceiling plenums above wall partitions.

B. General Requirements:
1. Airstream surfaces installed in return air plenum to comply with requirements in ASHRAE Std 62.1.

2.05 GYPSUM BOARD ACCESSORIES

A. Acoustic Insulation: ASTM C665; preformed mineral-fiber, friction fit type, unfaced; thickness 3 inch (75 mm) minimum and as required for indicated, required STC rating.
1. If required by fire-resistance requirements for fire rated walls, furnish mineral fiber insulation complying with ASTM C665, Type I.

B. Sound Isolation Tape: Elastomeric foam tape for sound decoupling.

1. Surface Burning Characteristics: Provide assemblies with flame spread index of 75 or less and smoke developed index of 450 or less, when tested in accordance with ASTM E84.
2. Tape Thickness: 1/4 inch (6 mm).

C. Acoustic Sealant: Acrylic emulsion latex or water-based elastomeric sealant; do not use solvent-based non-curing butyl sealant.
1. Non-hardening, non-skinning, for use in conjunction with gypsum board.
2. Products:

D. Water-Resistive Barrier: See Section 07 25 00.

E. Finishing Accessories: ASTM C1047, extruded aluminum alloy (6063 T5) or galvanized steel sheet ASTM A924/A924M G90, unless noted otherwise.
1. Types: As detailed or required for finished appearance.
2. Special Shapes: In addition to conventional corner bead and control joints, provide LC-bead at exposed panel edges.
3. Furnish rolled-zinc material at exterior locations.

F. Joint Materials: ASTM C475/C475M and as recommended by gypsum board manufacturer for project conditions.
1. Reinforcing tape, joint compound, and water.

G. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.

H. Screws for Fastening of Gypsum Panel Products to Cold-Formed Steel Studs Less than 0.033 inches (0.84 mm) in Thickness and Wood Members: ASTM C1002; self-piercing tapping screws, corrosion-resistant.

I. Screws for Fastening of Gypsum Panel Products to Steel Members from 0.033 to 0.112 inch (0.84 to 2.84 mm) in Thickness: ASTM C954; steel drill screws, corrosion-resistant.

J. Use screws recommended by manufacturer for fastening cementitious backer board to metal framing.

K. Aluminum Reveal Molding
1. Type: 6063 T5 alloy extruded aluminum open reveal.
2. Size(s): 5/8” deep x continuous x widths as indicated in the drawings.
3. Finish: Clear anodized aluminum.
4. Fabricate with wings and edge beads for taping and floating.
5. Mill finish or clear anodized.
6. Locate as indicated in the drawings over continuous drywall framing support.
7. Basis of Design: “F” reveal as manufactured by Fry Reglet Corp. or approved equivalent by Schluter.

L. End-Wall Trim
1. Where indicated provide prefinished aluminum end-wall trim at walls terminating on window mullions.
2. Type: Cased Jamb as manufactured by Raco Interior or approved equivalent.
3. Finish: Anodized to match window system mullions.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that project conditions are appropriate for work of this section to commence.

B. Ensure that all exterior air-barrier work and roofing is completed, roof-top equipment fully installed and flashed, exterior wall openings including windows and doors are installed, and building is environmentally controlled prior to beginning any gypsum wallboard or ceiling board installation.

3.02 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
   1. Suspend overhead framing from structural members or floor slabs only; do not suspend members from steel roof decks.

B. Coordination with Sprayed Fire-Resistive Materials:
   1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling tracks to surfaces indicated to receive sprayed-on fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
   2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of gypsum board assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

3.03 SHAFT WALL INSTALLATION

A. Shaft Wall Framing: Install in accordance with manufacturer's installation instructions.
   1. Fasten runners to structure with short leg to finished side, using appropriate power-driven fasteners at not more than 24 inches (600 mm) on center.
   2. Install studs at spacing required to meet performance requirements.

B. Shaft Wall Liner: Cut panels to accurate dimensions and install sequentially between special friction studs.
   1. On walls over sixteen feet high, screw-attach studs to runners top and bottom.
   2. Seal perimeter of shaft wall and penetrations.

C. Install gypsum board shaft-wall assemblies to comply with requirements of fire-resistance rated assemblies indicated, manufacturer's written installation instructions, and ASTM C 754 for installing steel framing.

D. Install supplementary framing in gypsum board shaft-wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, and similar items that cannot be supported directly by shaft-wall assembly framing.

E. Where handrails directly attach to gypsum board shaft-wall assemblies, provide galvanized steel reinforcing strip with 0.0312 inch (0.79 mm) minimum thickness of base (uncoated) metal, accurately positioned and secured behind at least 1 face-layer panel.

F. At penetrations in shaft wall, maintain fire-resistance rating of shaft-wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.

G. Isolate gypsum finish panels from building structure to prevent cracking of finish panels while maintaining continuity of fire-rated construction.
   1. Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly. Install acoustical sealant to withstand dislocation by air-pressure differential between shaft and external spaces; maintain an airtight and smoke-tight seal; and comply with manufacturer's written instructions or ASTM C 919, whichever is more stringent.

H. In elevator shafts where gypsum board shaft-wall assemblies cannot be positioned within 2 inches (51 mm) of the shaft face of structural beams, floor edges, and similar projections into shaft, install 1/2 or 5/8 inch (12.7 or 15.9 mm) thick, gypsum board cants covering tops of projections.
   1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches (610 mm) o.c. with screws fastened to shaft-wall framing.

I. Where steel framing is required to support gypsum board cants, install framing at 24 inches (610 mm) o.c. and extend studs from the projection to the shaft-wall framing.

3.04 FRAMING INSTALLATION

A. Metal Framing: Install in accordance with AISI S220 and manufacturer's instructions.

B. Ceiling Framing:
   1. Space framing and furring members as indicated.
   2. Install framing after work above ceiling or soffit is complete. Coordinate the location of hangers with other work.
   3. Install framing independent of walls, columns, and above-ceiling work.
   4. Install suspension system components in sizes and spacings indicated on Drawings, but not less than those required by referenced installation standards for assembly types and other assembly components indicated.
   5. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
   6. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
   7. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
   8. Do not attach hangers or suspend members from steel roof deck.
   9. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
   10. Do not connect or suspend steel framing from ducts, pipes, or conduit.
   11. Grid Suspension Systems:

a. Install grid suspension system in accordance with manufacturer's instructions
b. Attach perimeter edge angle where ceiling system meets vertical surfaces.
c. Mechanically join main beam and cross furring members to each other and butt-cut to fit into wall track.

12. Level ceiling system to a tolerance of 1/360.
13. Laterally brace entire suspension system.
14. Install acoustical sealant between tops of partitions and bottom of ceiling board.

C. Soffit Framing Installation:
1. Install in accordance with ASTM C754.
2. Coordinate location of hangers with other work.

D. Install soffit framing independent of walls, columns, and above soffit work.
1. Reinforce openings in suspension system which interrupt main carrying channels or furring channels, with lateral channel bracing. Extend bracing minimum 24 inches past each end of openings.
2. Do not attach hangers to steel deck tabs.
3. Do not attach hangers to steel roof deck. Attach hangers to structural members.
4. Do not connect or suspend steel framing from ducts, pipes, or conduit.
5. Brace system to resist lateral loads and wind uplift at exterior locations. Provide cross-bracing and additional framing required to resist wind uplift for design loads of 20 psf inward and outward.

E. Studs: Space studs at 16 inches on center (at 406 mm on center) maximum.
1. Walls to receive tile may require 12-inches on center spacing.
2. Extend partition framing to structure where indicated..
3. Partitions Terminating at Ceiling: Attach ceiling runner securely to ceiling track in accordance with manufacturer's instructions.
4. Partitions Terminating at Structure: Attach top runner to structure, maintain clearance between top of studs and structure, and connect studs to track using specified mechanical devices in accordance with manufacturer's instructions; verify free movement of top of stud connections; do not leave studs unattached to track.
5. Fasten stud ends to floor and ceiling tracks (except at deflection tracks). Do not rely solely on gypsum board panels for stud-to-track connections.
6. Refer to Drawings for indication of partitions extending stud framing through ceiling to structure above. Maintain clearance under structural building members to avoid deflection transfer to studs. Install deflection track at tops of walls to avoid axial loading.
7. For fire-resistance-rated and STC-rated partitions that extend to the underside of floor/roof slabs and decks or other continuous solid-structure surfaces to obtain ratings, install framing around structural and other members extending below floor/roof slabs and decks as needed to support gypsum board closures and to make partitions continuous from floor to underside of solid structure.
8. Do not bridge building expansion joints with framing or furring members. Frame both sides of joints independently.

F. Openings: Reinforce openings for weight of doors or operable panels, using not less than double studs at jambs.

G. Acoustic Furring: Install resilient channels at maximum 24 inches (600 mm) on center. Locate joints over framing members.

H. Curved Partitions:
   1. Frame curved partitions to comply with GA-226 and with gypsum board manufacturer's applicable written recommendations, unless otherwise indicated.
   2. Cut top and bottom tracks through leg and web at 2-inch intervals for arc length. In cutting lengths of track, allow for uncut straight lengths of not less than 12 inches at ends of arcs.
   3. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
   4. Support outside (cut) leg of track by clinching steel sheet strip, 1-inch high-by-thickness of track metal, to inside of cut legs using metal lock fasteners.
   5. Begin and end each arc with a stud, and space intermediate studs equally along arcs at stud spacing recommended in writing by gypsum board manufacturer for radii indicated. On straight lengths of not less than 2 studs at ends of arcs, place studs 6 inches o.c.

I. Blocking: Install wood blocking support for, but not limited to the following:
   1. Framed openings.
   2. Wall-mounted cabinets.
   3. Plumbing fixtures.
   4. Toilet partitions.
   5. Toilet accessories.
   6. Wall-mounted door hardware.
   7. Architectural woodwork.
   8. Light fixtures.
   9. Equipment.
   10. Wall protection.

3.05 ACOUSTIC ACCESSORIES INSTALLATION

A. Acoustic Insulation: Place tightly within spaces, around cut openings, behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.

B. Sound Isolation Tape: Apply to vertical studs and top and bottom tracks/runners in accordance with manufacturer's instructions.

C. Acoustic Seal Tape: Use to close voids where finished end of gypsum board partition abuts a dissimilar material such as a metal mullion or frame. Apply continuous to the abutting surface and install the gypsum board tight against it to provide compression along its entire length. Tapte to form an acoustic, vision and light barrier.

D. Acoustic Sealant: Install in accordance with manufacturer's instructions.
   1. Apply at partition conditions indicated as Sound-Rated. Use Fire-Rated Acoustic Sealant at fire-rated partition assemblies only.
   2. Place one bead continuously on substrate before installation of perimeter framing members. Including the following locations:
      a. Partition ends abutting other materials.
      b. Partition tops abutting structure.
      c. Partition bottom abutting floor.
      d. Opening frame perimeter joint to abutting materials.
   3. Place continuous bead at perimeter of each layer of gypsum board.
   4. Seal around all penetrations by conduit, pipe, ducts, and rough-in boxes, except where firestopping is provided.

3.06 BOARD INSTALLATION

A. Comply with ASTM C840, GA-216, and manufacturer's instructions. Install to minimize butt end joints, especially in highly visible locations.

B. Fire-Resistance-Rated Construction: Install gypsum board in strict compliance with requirements of assembly listing.

C. Single-Layer Nonrated: Install gypsum board in most economical direction, with ends and edges occurring over firm bearing.
   1. Use maximum practical lengths to eliminate end joints. Fit ends and edges closely together. Stagger joints between panels to avoid 4-way joint intersections.
   2. Lift and maintain bottom of panels 1/2" above finish floor level prior to fastening.
   3. For single-layer vertical application of gypsum panels, space screws 12" o.c. maximum in field of panels and 8" o.c. staggered along vertical abutting edges. For horizontal panel application, space screws 12" o.c. maximum in field and along abutting end joints.
   4. For ceiling and soffit panel application, space screws 12" o.c. maximum in field and 8” o.c. maximum along abutting end joints.
   5. At fire-rated partitions, erect single layer gypsum board vertically, with edges and ends occurring over firm bearing.

D. Double Layer Applications: Place second layer parallel with first layer. Offset joints of second layer from joints of first layer. Stagger joints on opposite sides of partition.

E. Fire-Resistance-Rated Construction: Install gypsum board in strict compliance with requirements of assembly listing.

F. Exterior Sheathing: Comply with ASTM C1280. Install sheathing vertically, with edges butted tight and ends occurring over firm bearing.
   1. Seal joints, cut edges, and holes with water-resistant sealant.
   2. Paper-Faced Sheathing: Immediately after installation, protect from weather by application of water-resistive barrier.

G. STC-Rated Assemblies: Seal construction at perimeters, behind control and expansion joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and manufacturer's instructions for locating edge trim and closing off sound-flanking paths around or through gypsum board assemblies, including sealing partitions above acoustical ceilings.

H. Place acoustic insulation in partitions tight within spaces, around cut openings, behind and around electrical and mechanical items within or behind partitions, and tight to items passing through partitions.

I. Install acoustic sealant where indicated.

J. Cover both faces of stud framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.

K. Erect ceiling board panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in the central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

L. Seal penetrations of partitions by conduit, pipe, duct work, and rough-in boxes.

M. Exterior Soffits: Install exterior soffit board perpendicular to framing, with staggered end joints over framing members or other solid backing.
   1. Seal joints, cut edges, and holes with water-resistant sealant.

N. Cementitious Backing Board: Install over steel framing members where indicated, in accordance with ANSI A108.11 and manufacturer's instructions.
   1. Install at wet walls receiving tile.

O. Coated Glass Mat Backer Board:
   1. Install at locations other than wet walls indicated to receive tile, and at custodial closets behind FRP panel material.

P. Installation on Metal Framing: Use screws for attachment of gypsum board except face layer of nonrated double-layer assemblies, which may be installed by means of adhesive lamination.

Q. Place corner beads at external corners as indicated on Drawings. Use longest practical length. Place edge trim where gypsum board abuts dissimilar materials

R. Curved Surfaces: Apply gypsum board to curved substrates in accordance with GA-226.

S. Install cementitious backer board in the following locations:
   1. Shower walls.
   2. Rear and side walls (wet walls) adjacent to lavatories, toilets, and urinals.

T. Install moisture resistant gypsum board in the following locations:
   1. Behind wall tile.
   2. Toilet room walls not receiving cementitious backer board.

U. Install abuse-resistant gypsum board at areas indicated in the drawings.

3.07 INSTALLATION OF TRIM AND ACCESSORIES

A. Control Joints: Place control joints consistent with lines of building spaces and as indicated.

B. Corner Beads: Install at external corners, using longest practical lengths.

C. Edge Trim: Install at locations where gypsum board abuts dissimilar materials.

D. Decorative Trim: Install at locations shown on drawings and in accordance with manufacturer's instructions.

E. Moisture Guard Trim: Install on bottom edge of gypsum board according to manufacturer's instructions and in locations indicated on drawings.

3.08 JOINT TREATMENT

A. Glass Mat Faced Gypsum Board and Exterior Glass Mat Faced Sheathing: Use fiberglass joint tape, embed and finish with setting type joint compound.

B. Paper Faced Gypsum Board: Use paper joint tape, embed with drying type joint compound and finish with drying type joint compound.

C. Finish gypsum board in accordance with levels defined in ASTM C840, as follows:
   1. Level 5: Walls and ceilings to receive semi-gloss or gloss paint finish and other areas specifically indicated.
   2. Level 4: Walls and ceilings to receive paint finish or wall coverings, unless otherwise indicated.
   3. Level 3: Walls to receive textured wall finish.
   4. Level 2: In utility areas, behind cabinetry, and on backing board to receive tile finish.
   5. Level 1: Fire-resistance-rated wall areas above finished ceilings, whether or not accessible in the completed construction.

D. Tape, fill, and sand exposed joints, edges, and corners to produce smooth surface ready to receive finishes.
   1. Feather coats of joint compound so that camber is maximum 1/32 inch (0.8 mm).
   2. Taping, filling, and sanding are not required at base layer of double-layer applications.

E. Where Level 5 finish is indicated, spray apply high build drywall surfacer over entire surface after joints have been properly treated; achieve a flat and tool mark-free finish.

F. Float solid between any corner beads or J-molds less than 36” apart to eliminate tapered or concave appearance.

G. Float control joints flush with wall surface so that ceiling trim will run straight without gaps or deformation.

H. Fill and finish joints and corners of cementitious backing board as recommended by manufacturer.

3.09 TOLERANCES

A. Maximum Variation of Finished Gypsum Board Surface from True Flatness: 1/8 inch in 10 feet (3 mm in 3 m) in any direction.

3.10 FIELD QUALITY CONTROL

A. Above-Ceiling Observation: Before Contractor installs gypsum board ceilings, Architect shall conduct an above-ceiling observation and report deficiencies in the Work observed. Do not proceed with installation of gypsum board to ceiling support framing until deficiencies have been corrected.

B. Notify Architect seven days in advance of date and time when Project, or part of Project, is to be ready for above-ceiling observation.

C. Before notifying Architect, complete the following in areas to receive gypsum board ceilings:
   1. Installation of 80 percent of lighting fixtures, powered for operation.
   2. Installation, insulation, and leak and pressure testing of water piping systems.
   3. Installation of air-duct systems.
   4. Installation of air devices.
   5. Installation of mechanical system control-air tubing.
   6. Installation of ceiling support framing.

3.11 PARTITION MARKINGS

A. Mark fire-rated partitions and smoke barriers with 3-inch-high upper case letters with 3/8 inch stroke stenciled in red paint.

B. Place markings 6-inches above ceilings both sides of partitions as follows:
   1. Centered over doors.
   2. Maximum 30 feet on center inverval and not less than 15 feet from end of partition.
   3. Lettering Copy (as applicable):
      a. "1-HOUR FIRE RATED-PROTECT ALL OPENINGS"
      b. "2-HOUR FIRE RATED-PROTECT ALL OPENINGS"
      c. "4-HOUR FIRE RATED-PROTECT ALL OPENINGS"
      d. "SMOKE BARRIER, PROTECT ALL OPENINGS" (with appropriate fire rating).

C. Mark point of partition type demarcation with 1 inch wide painted vertical line from ceiling line to bottom of structure at the following conditions:
   1. From rated partition type to non-rated partition type;
   2. From change in partition type rating.

3.12 PROTECTION

A. Protect installed gypsum board assemblies from subsequent construction operations.

3.13 SCHEDULES

A. Finishes in accordance with GA-214 Level:
   1. **Level 1:** Embed tape at joints in ceiling plenum areas, concealed areas, on portions of walls above ceilings between the ceilings and the tops of walls and where indicated, unless a higher level of finish is required for fire-resistance-rated assemblies and sound-rated assemblies.
   2. **Level 2:** Embed tape and apply first coat of joint compound to tape, fasteners, and trim flanges where panels are substrate for tile.
   3. **Level 3:** Embed tape and apply separate first and fill coats of joint compound to tape, fasteners, and trim flanges where panels are substrate for medium or heavy textures or heavy-grade wallcoverings. Verify with wallcovering installer that gypsum board finish is acceptable for wallcovering application.
   4. **Level 4** (Standard Finish): Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges where panels are substrate for light textures, flat paints, or standard vinyl wallcoverings.
   5. **Level 5:** Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges, and apply skim coat of joint compound over entire surface where panels are substrate for gloss or semi-gloss paints.
      a. Provide at drywall panels in high-level natural or artificial lighting areas such as near glazed entries, clerestory windows, or down-lighting mounted on or near walls.
   6. Provide at drywall scheduled to receive dry-erase coatings or wall coverings to be used as dry-erase marker surfaces.
      a. Level 5 finish at specialty backdrop painted walls.

END OF SECTION

SECTION 09 30 00

TILING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Tile for floor applications.

B. Tile for wall applications.

C. Miscellaneous Trim.

D. Thinset mortar installation method.

E. Mortar Bed installation method.

1.02 REFERENCE STANDARDS

A. ANSI A108.1a - American National Standard Specifications for Installation of Ceramic Tile in the Wet-Set Method, with Portland Cement Mortar; 2023.

B. ANSI A108.11 - American National Standard Specifications for Interior Installation of Cementitious Backer Units; 2018.

C. ANSI A118.4 - American National Standard Specifications for Modified Dry-Set Cement Mortar; 2019.

D. ANSI A118.4e - ANSI for Modified Dry-Set Cement Mortar - Extended Open Time; 2024.

E. ANSI A118.6 - American National Standard Specifications for Standard Cement Grouts for Tile Installation; 2019.

F. ANSI A137.1 - American National Standard Specifications for Ceramic Tile; 2022.

G. ASTM C373 - Standard Test Methods for Determination of Water Absorption and Associated Properties by Vacuum Method for Pressed Ceramic Tiles and Glass Tiles and Boil Method for Extruded Ceramic Tiles and Non-tile Fired Ceramic Whiteware Products; 2018 (Reapproved 2023).

H. ASTM C627 - Standard Test Method for Evaluating Ceramic Floor Tile Installation Systems Using the Robinson-Type Floor Tester; 2018.

I. TCNA (HB) - Handbook for Ceramic, Glass, and Stone Tile Installation; 2023.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting one week before starting work of this section; require attendance by affected installers.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Provide manufacturers' data sheets on tile, mortar, grout, and accessories. Include instructions for using grouts and adhesives.

C. Shop Drawings: Indicate tile layout, patterns, color arrangement, perimeter conditions, junctions with dissimilar materials, control and expansion joints, thresholds, ceramic accessories, and setting details.
   1. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

D. Samples for Initial Selection: For each type of tile and grout indicated. Include Samples of accessories involving color selection.

E. Samples for Verification:
   1. Full-size units of each type and composition of tile and for each color and finish required.
   2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least 12 inches square, but not fewer than 4 tiles. Use grout of type and in color or colors approved for completed Work.
   3. Submit two full-size units of each type of trim and accessory for each color and finish required.
   4. Stone thresholds in 6-inch lengths.
   5. Metal edge strips in 6-inch lengths.

F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

G. Master Grade Certificate: Submit for each type of tile, signed by the tile manufacturer and tile installer.

H. Material Test Reports: For each tile-setting and -grouting product.

I. Installer's Qualification Statement:

J. Maintenance Data: Include recommended cleaning methods, cleaning materials, and stain removal methods.

1.05 QUALITY ASSURANCE

A. Source Limitations for Tile: Obtain tile of each type from one source or producer.
   1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from one manufacturer and each aggregate from one source or producer.

C. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer for each product:
   1. Stone thresholds.
   2. Waterproof membrane.

3. Crack isolation membrane.
4. Joint sealants.
5. Metal edge strips.

D. Perform Work in accordance with TCNA Handbook and ANSI A108 Series/A118 Series.

E. To ensure warranty requirements and compatibility of products provide all tile grout, setting materials, additives, accessories, and factory-prepared dry-set mortars from the same manufacturer.

F. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, with minimum threeyears of documented experience.

G. Installer Qualifications:
1. Company specializing in performing tile installation, with minimum of three years of documented experience.

1.06 MOCK-UPS

A. See Section 01 40 00 - Quality Requirements for general requirements for mock-up.

B. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build integrated mockup of floor tile installation per Division 01 Section “Quality Requirements”.
2. Build integrated mockup of wall tile installation per Division 01 Section “Quality Requirements”.
3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect adhesives from freezing or overheating in accordance with manufacturer's instructions.

1.08 FIELD CONDITIONS

A. Do not install solvent-based products in an unventilated environment.

B. Maintain ambient and substrate temperature above 50 degrees F (10 degrees C) and below 100 degrees F (38 degrees C) during installation and curing of setting materials.

1.09 EXTRA MATERIALS

A. Furnish one unopened box of each type and color of ceramic tile installed, including accent colors, to the Owner. Obtain receipt.

B. Furnish four unopened boxes of each type and color of porcelain tile installed, including accent colors, to the Owner. Obtain receipt.

C. Furnish one unopened box of each type and color of quarry tile installed, including accent colors, to the Owner. Obtain receipt.

PART 2 - PRODUCTS

2.01 GENERAL

A. ANSI Ceramic Tile Standards:
   1. Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
      a. Provide tile complying with Standard grade requirements unless otherwise indicated.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCA installation methods specified in tile installation schedules, and other requirements specified.

C. FloorScore Compliance: Tile for floors shall comply with requirements of FloorScore Standard.

D. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

E. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
   1. Where tile is indicated for installation in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.

2.02 PERFORMANCE REQUIREMENTS

A. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C 1028:
   1. Level Surfaces: Minimum 0.6.

B. Dynamic Coefficient of Friction of Hard Surface Flooring Materials: For tile installed on walkway surfaces, provide products Tile to conform to requirements of ANSI A326.3.

C. Load Bearing Performance: for ceramic tile installed on walkway surfaces, provide installations rated for the following load-bearing performance level based on testing assemblies according to ASTM C627 that are representative of those indicated for this Project:
   1. Heavy: Passes cycles 1 through 12.

2.03 TILE

A. Tile Manufacturers: Refer to specific manufacturers and products indicated in the Drawings to determine the Project requirements. Subject to compliance with requirements, provide products indicated or equal product by one of the following manufacturers, unless a specific product is referenced as “No Substitutions”.
   1. Acceptance of products other than those indicated is contingent upon submittal of proposed alternate products to the Architect. Submittal of proposed alternate products must occur prior to bidding as described in Division One specification section “Product Substitutions”.
   2. Submittals must demonstrate to the Architect that the proposed alternate product line has colors that match the basis-of-design indicated. The Architect may reject the proposed

product for technical non-compliance or, at his discretion, on the basis of lack of color match alone.

B. Manufacturers:
   1. Manzarri; https://www.marazziusa.com/
   2. Concept Surfaces; https://www.conceptsurfaces.com/
   3. Crossville, Inc.; https://www.crossville.com/
   4. Summitville Tile, Inc.; https://summitville.com/
   5. Trinity Tile; https://www.trinitytile.com/
   6. American Olean Corporation: www.americanolean.com/
   7. Dal-Tile Corporation: www.daltile.com/
   8. Additional manufacturers as may be listed in the Finish/Color Schedule.

C. Types: Tile Types correspond to Types indicated on the Finish/Color Schedule:
   1. Porcelain Mosaic Floor Tile
      a. Basis of Design: As scheduled.
      b. Moisture Absorption: 0 to 0.5 percent.
      c. Size(s): As scheduled.
      d. Edge: Square, rectified.
      e. Surface Finish: Unglazed.
      f. Joint Size: 1/8”.
      g. Type: Through-color.
      h. Use sanded acid-resistant Portland cement grout, sealed at restroom floors.
      i. Use epoxy emulsion grout at shower floors.
   2. Quarry Tile: ANSI A137.1 standard grade.
      a. Size: 6 by 6 inch (152 by 152 mm), nominal.
      b. Thickness: 1/2 inch (12.7 mm), nominal.
      c. Edges: Square.
      d. Surface Finish: Non-slip.
      e. Joint Size: 3/8"
      f. Base:
         1) Size: 5" high x 6" long.
         2) Top Edge: Bullnose.
         3) Toe: Cove flush with floor tile.
      g. Use eposy emulsion grout.
   3. Porcelain Tile: ANSI A137.1 standard grade.
      a. Moisture Absorption: 0 to 0.5 percent as tested in accordance with ASTM C373.
      b. Size: As scheduled, rectified.
      c. Edges: Square.
      d. Surface Finish: Unglazed.
      e. Type: Through-color.
      f. Joint Size: 1/8"
      g. Color(s): As indicated on drawings.
      h. Use sanded acid-resistant Portland cement grout, sealed at restroom walls.

2.04 TRIM AND ACCESSORIES

A. Miscellaneous Trim: Satin natural anodized extruded aluminum or as otherwise noted below and on drawings, style and dimensions to suit application, for setting using tile mortar or adhesive.
   1. Applications:
      a. Porcelain floor tile to porcelain floor tile transition.
      b. Continuous cove strip between restroom wall tile and floor tile where no base is indicated: Schluter Dilex-HKS stainless steel.
      c. Tile to concrete floor, hard-surface floor, and resilient flooring: Schluter-RENO-U, aluminum.
      d. Tile to Carpet: Schluter SCHIENE same-height, aluminum
      e. Top of Wainscot Edge Strip: Schluter-JOLLY, extruded clear satin anodized aluminum.
      f. Corridor Wainscot Tile to Floor Tile: No base, not trim. Provide sealant joint.
      g. Floor Transition at Restrooms: prefabricated marble threshold.
      h. Floor Transition from Curbless Shower to Adjacent Floor: Schluter ShowerProfile WSK + WSC set on clear silicone bead.
   2. Manufacturers:
      a. Schluter-Systems: www.schluter.com/#sle.
      b. Genesis APS International: www.genesis-aps.com/#sle.

B. Thresholds: 2 inches (51 mm) wide by full width of wall or frame opening; beveled edge on both long edges; without holes, cracks, or open seams. Provide at each entry door or framed opening to restrooms or restroom vestibules.
   1. Material: Carrara white marble, Grade A.
   2. Configuration: One-piece material, 2-in. wide x full width of door. ADA compliant with long edges beveled and top surface of threshold 3/8” – 1/2” higher than finish flooring on either side.
   3. Finish: Sealed with clear non-yellowing penetrating sealer.
   4. Location:
      a. Door: Center threshold on door.
      b. Opening without door: Center on wall opening or frame.

C. Steel Reinforcing Mesh: 2 x 2 inch size weave of 16/16 wire size, galvanized welded fabric for mortar beds. Optional as recommended by the mortar manufacturer for the particular conditions.

2.05 SETTING MATERIALS

A. Provide setting and grout materials from same manufacturer.

B. Manufacturers:
   1. ARDEX Engineered Cements: www.ardexamericas.com/
   2. Bostik Inc: www.bostik-us.com/
   3. Mapei Corporation; www.mapei.com
   4. TEC Specialty Products, Inc.; www.tecspecialty.com/products/
   5. LATICRETE International, Inc: www.laticrete.com/
   6. Substitutions: See Section 01 60 00 - Product Requirements.

C. Mortar Bed Materials at Recessed Slabs: ANSI A108.1A; Portland cement, sand, latex additive, and water; proportioned in accordance with TCNA specifications.

D. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.
   1. Cleavage Membrane: Asphalt felt, ASTM D 226, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils (0.1 mm) thick.
   2. Reinforced Wire Fabric: Galvanized, welded wire fabric, 2 by 2 inches by 0.062-inch diameter; comply with ASTM A 185 and ASTM A 82 except for minimum wire size.
   3. Latex Additive: Manufacturer's standard water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed.

E. Large-Format Floor and Wall Tile Mortar (Medium Set): ANSI A118.4HTE & A118.11.
   1. Provide prepackaged, dry-mortar mix combined with required additives at Project site.
   2. See Evaluations for discussion on difference between normal and nonsagging mortar.
   3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.

F. Latex-Portland Cement Mortar Bond Coat, single-component type polymer-modified thin-set or medium bed mortar.: ANSI A118.4e
   1. Provide prepackaged, dry-mortar mix combined with acrylic resin or styrene-butadiene-rubber liquid-latex additive at Project site.
   2. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4e.
   3. Basis of Design:
      a. Small Format Floor or Wall Tile (all dimensions less than 15”): *Ultraflex-2* thin-set as manufactured by Mapei or approved equivalent by specified manufacturer; meets or exceeds requirements of ANSI A118.4E, ANSI A118.11, and ISO C2TE.
      b. Large Format Floor Tile (any dimension 15” or greater): *Ultraflex-LFT* medium bed as manufactured by Mapei or approved equivalent by specified manufacturer; meets or exceeds requirements of ANSI A118.4, ISO 13007 C2TES1P1, and TE and ANSI A118.11.
      c. Large Format Wall Tile (any dimension 12” or greater): *Ultralite Pro* non-sag type as manufactured by Mapei or approved equivalent by specified manufacturer; meets or exceeds requirements of ANSI A118.4TE, ANSI A118.4TE, and ISO 13007 C2TE.

2.06 GROUTS

A. Provide setting and grout materials from same manufacturer.

B. Manufacturers:
   1. ARDEX Engineered Cements: www.ardexamericas.com/
   2. Bostik Inc: www.bostik-us.com/
   3. Mapei Corporation; www.mapei.com
   4. TEC Specialty Products, Inc.; www.tecspecialty.com/products/
   5. LATICRETE International, Inc; LATICRETE PERMACOLOR Grout: www.laticrete.com/
   6. Substitutions: See Section 01 60 00 - Product Requirements.

C. Standard Grout: ANSI A118.6 standard cement grout.

1. Applications: Use this type of grout where indicated and where no other type of grout is indicated.
2. Use sanded grout for joints 1/8 inch (3.2 mm) wide and larger; use unsanded grout for joints less than 1/16 inch (3.2 mm) wide.
    a. Sanded Grout: Calcium Aluminate Cement type that meets or exceeds requirements of ANSI A118.6.
        1) Color: As selected.
        2) Basis of Design: *Ultracolor Plus FA* as manufactured by Mapei or approved equivalent by specified manufacturer.
    b. Non-Sanded Grout: Latex-Portland cement polymer-modified type that meets or exceeds requirements of ANSI A118.6.
        1) Color: As selected.
        2) Basis of Design: *Keracolor-U* as manufactured by Mapei or approved equivalent by specified manufacturer.
3. Color(s): As selected by Architect from manufacturer's full line.

2.07 MAINTENANCE MATERIALS

A. Grout Sealer: Liquid-applied, moisture and stain protection for existing or new Portland cement grout. Manufacturer's standard silicone product for sealing grout joints and that does not change color or appearance of grout.
    1. Composition: Water-based colorless silicone.
    2. Products: Subject to compliance with requirements, provide one of the following:
        a. Bonsal American; an Oldcastle company; Grout Sealer.
        b. Bostik, Inc.; CeramaSeal Grout & Tile Sealer.
        c. C-Cure; Penetrating Sealer 978.
        d. Custom Building Products; Grout Sealer.
        e. MAPEI Corporation; KER 003, Silicone Spray Sealer for Cementitious Tile Grout
        f. Southern Grouts & Mortars, Inc.; Silicone Grout Sealer.
        g. Summitville Tiles, Inc.; SL-15, Invisible Seal Penetrating Grout and Tile Sealer.
        h. TEC; a subsidiary of H. B. Fuller Company; TA-256 Penetrating Silicone or TA-257 Silicone Grout Sealer.
        i. Substitutions: See Section 01 60 00 - Product Requirements.

B. Tile Sealer: Stain protection for ceramic tile and natural stone tile.

C. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
    1. MAPEI *Ultracare Stone, Tile & Grout Care* Solutions or approved equivalent.

2.08 ACCESSORY MATERIALS

A. Concrete Floor Slab Crack Isolation Membrane: Manufacturer's standard product,complying with ANSI A118.12; not intended as waterproofing, and is recommended by the manufactuer for the application intended. Include reinforcement and accessories recommended by manufacturer.
    1. For Covering Shrinkage Cracking and Non-Structural Cracks to less than 1/8” - Use one of the following:

a. Mapelastic C1 as manufactured by MAPEI: Liquid-applied.
b. Blue 92 as manufactured by Laticrete: Liquid-applied.
c. Mapeguard 2 with SM Primer as manufactured by MAPEI: Sheet
d. NobleSeal CIS as manufactured by Noble Corp: Sheet.

2. For Bridging Construction Joints and Any Cracks 1/8" or greater– Use one of the following membrane sheets meeting or exceeding requirements of ASTM C627-*Extra Heavy*:
   a. Mapeguard 2 with SM Primer as manufactured by MAPEI.
   b. Crack Isolation Mat as manufactured by Laticrete.
   c. NobleSeal CIS as manufactured by Noble Corp.
3. In addition install sealant-filled control joint at or within 12" of construction joints or any joints exceeding 1/4" in width.

B. Cleavage Membrane Under Thick Mortar Bed:
   1. Material: No. 15 (6.9 kg) asphalt saturated felt.

C. Underlayment at Floors: Specifically designed for bonding to thin-set setting mortar; not primarily a waterproofing material and having the following characteristics:
   1. Type: Fluid or Trowel Applied.
      a. Products:
         1) Planiprep SC by Mapei: www.mapei.com
         2) LATICRETE International, Inc; LATICRETE 125 Sound and Crack Adhesive: www.laticrete.com/
         3) Merkrete, by Parex USA, Inc; Merkrete Fracture Guard: www.merkrete.com/
         4) Proflex Products, Inc; Hydra-Seal: www.proflex.us/

D. Cementitious Backer Board: As specified in Section 09 21 16 for use at shower walls and wet walls behind lavatories, toilets, and urinals, and side walls adjacent to these fixtures.

E. Sealants
   1. Interior Non-Traffic Joints: Vertical expansion joints up to 1/4" wide and less than 25% movement; for filling joints where tile abuts dissimilar surfaces such as countertops; at inside corners of wall tile; for dry or occasionally wet surfaces.
      a. Single-component siliconized acrylic in color(s) to match adjacent grout(s).
      b. Mold and mildew resistant.
      c. Paintable.
      d. Non-structural.
      e. Meets ASTM C834 for low-movement sealant.
      f. *Keracaulk* sanded or unsanded as manufactured by Mapei, or approved equivalent by Laticrete. Match tile joint colors.
   2. Interior Tile Floors: Floor expansion joints; joints exceeding 25% movement; perimeter floor joints at wall Interface or other vertical interruptions; for all vertical or horizontal sealant joints in showers, pool decks, dressing rooms, and other areas continually wet.
      a. High performance, single-component, neutral cure, 100% silicone formulated for ceramic tile and stone applications. In color(s) matching adjacent grout(s).
      b. Low Sheen to match finish of grout joints.
      c. Mold and mildew resistant.
      d. Non-structural.

e. *Mapesil-T* as manufactured by Mapei or approved equivalent by Laticrete. Match tile joint colors.

3. Exterior Tile Walls, Floors, Expansion Joints, and Other Surfaces: *Mapesil-T* as manufactured by Mapei or approved equivalent by Laticrete. Match tile joint colors.

4. Backer Rods and Strips: Closed-cell compressible foam polyurethane as recommended by sealant manufacturer and sized to:
   a. Fit snugly within the joint without compressing.
   b. Provide a sealant depth of 1/2 the dimensional width of the joint.
   c. Prevent adhesion to the backup surface.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that subfloor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive tile.

B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive tile.

C. Verify that subfloor surfaces are dust free and free of substances that could impair bonding of setting materials to subfloor surfaces.

D. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Protect surrounding work from damage.

B. Vacuum clean surfaces and damp clean.

C. Seal substrate surface cracks, holes, depressions and inconsistancies with filler. Level existing substrate surfaces to acceptable flatness tolerances.
   1. Use trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.

D. Install crack control membrane at substrate cracking and construction/expansion joints in accordance with membrane manufacturer’s printed recommendations.

E. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1a and is sloped 1/4 inch per foot (1:50) toward drains.

F. Install specified liquid-applied membrane over walls and mortar bed at showers, and over entire concrete substrate at upper-floor restrooms prior to installing tile.
   1. Apply two-coats over entire concrete floor area. Allowing recommended drying time between coats.
   2. Where floor interfaces with masonry walls turn membrane up wall 3”.
   3. Where floor interfaces with stud walls, apply membrane manufacturer’s recommended sealant between concrete floor and bottom of drywall, allow to cure and turn membrane up wall 3”.

4. Allow membrane to cure thoroughly in accordance with membrane manufacturer's recommendations prior to beginning tile work.

G. Blending of Ceramic Tile: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

H. Install backer board in accordance with ANSI A108.11 and board manufacturer's instructions. Tape joints and corners, cover with skim coat of setting material to a feather edge.

3.03 INSTALLATION - GENERAL

A. Install tile, thresholds, and stair treads and grout in accordance with applicable requirements of ANSI A108.1a through ANSI A108.20, manufacturer's instructions, and TCNA (HB) recommendations.

B. Apply sealant to junction of tile and dissimilar materials and junction of dissimilar planes.

C. For the following installations, follow procedures in the ANSI A108 Series of tile installation standards for providing 95 percent mortar coverage:
1. Tile floors in wet areas.
2. Tile floors composed of tiles 8 by 8 inches (200 by 200 mm) or larger.
3. Tile floors composed of rib-backed tiles.

D. Lay tile to pattern indicated. Do not interrupt tile pattern through openings.

E. Cut and fit tile to penetrations through tile, leaving sealant joint space. Form corners and bases neatly. Align floor joints.

F. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make grout joints without voids, cracks, excess mortar or excess grout, or too little grout.

G. Place metal edge strips at exposed tile edges.

H. Form internal angles square and external angles bullnosed.

I. Install non-ceramic trim in accordance with manufacturer's instructions.

J. Install thresholds where indicated.

K. Sound tile after setting. Replace hollow sounding units.

L. Keep control and expansion joints free of mortar, grout, and adhesive.

M. Prior to grouting, allow installation to completely cure; minimum of 48 hours.

N. Grout tile joints unless otherwise indicated. Use standard grout unless otherwise indicated.

O. At changes in plane and tile-to-tile control joints, use tile sealant instead of grout, with either bond breaker tape or backer rod as appropriate to prevent three-sided bonding.

P. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

Q. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

R. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.

S. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
   1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
   2. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
   3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.

T. Joints: Place tile with joints uniform in width, subject to variance in tolerance allowed in tile size. Make joints watertight, without voids, cracks, excess mortar, or excess grout.
   1. Ceramic or Porcelain Floor or Wall Tile:
      a. 1” x 1” to 4” x 4” Tile: 1/16-inch.
      b. 6” x 6” to 12” x 12” Tile: 1/8-inch
      c. Large Format Tile, Rectified: 1/8 inch.
      d. Large Format Tile, Non-Rectified: 1/4 inch.
   2. Glass Wall Tile: 1/16 inch.
   3. Quarry Tile: 1/4 inch - 3/8 inch.

U. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.

V. Match tiles within each space by selecting tiles to achieve uiformaity of color and pattern, consistant with design intent shown on drawings and reviewed tile samples. Reject or relocate tiles that do not match color and pattern of adjacent tiles.

W. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
   1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
   2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

X. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
   1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in latex-portland cement mortar (thin set).
   2. Do not extend cleavage membrane, waterproofing, or crack isolation membrane under thresholds set in latex-portland cement mortar. Fill joints between such thresholds and

adjoining tile set on cleavage membrane, waterproofing, or crack isolation membrane with elastomeric sealant.

Y. Metal Edge Strips: Where exposed edge of tile flooring meets carpet, or other flooring that finishes flush with or below top of tile; at joints between wall bases and floor; and where indicated. Provide and install all profiles, setting and accessory materials as required by manufacturer for complete, durable, and water-resistant assembly.

Z. Door Transitions/Thresholds: Reference Door Schedule for type:
   1. Metal Edge Strips:
      a. Install floor transition strips at all floor tile terminations where stone or solid surfacing thresholds are not scheduled.
      b. Install wall edge strips at exposed edges of tile where wall tile terminates away from inside corners.

AA. Grout Sealer: Apply grout sealer to cementitious grout joints in tile floors according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

BB. When bonding large-format tiles, install in accordance with TCNA and tile manufacturer’s recommendations to achieve full coverage of mortar bed under tile surface. Back-butter tiles as necessary to ensure full coverage.

3.04 WATERPROOFING INSTALLATION

A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.

B. Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

3.05 CRACK ISOLATION MEMBRANE INSTALLATION

A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.

B. Do not install tile or setting materials over crack isolation membrane until membrane has cured.

3.06 INSTALLATION - FLOORS - THIN-SET METHODS

A. Over interior concrete substrates, install in accordance with TCNA (HB) Method F113, dry-set or latex-Portland cement bond coat, with standard grout, unless otherwise indicated.
   1. Where waterproofing membrane is indicated, install in accordance with TCNA (HB) Method F122, with latex-Portland cement grout.
   2. Where epoxy bond coat and grout are indicated, install in accordance with TCNA (HB) Method F131.

B. At upper-floor restrooms apply specified liquid-applied membrane over concrete subfloor before installing tile. install in accordance with TCNA Handbook Method F122, using specified latex-Portland cement mortar compatible with the cured membrane.

C. Install tile-to-tile floor movement joints in accordance with TCNA (HB) Method EJ171F.

3.07 INSTALLATION - FLOORS - MORTAR BED METHODS

A. Over interior concrete substrates, install in accordance with TCNA (HB) Method F112, bonded with latex-Portland cement bonding mortar.
   1. Install over mortar bed at recessed slabs, align with adjacent floor level.
   2. Where waterproofing membrane is indicated, with standard grout or no mention of grout type, install in accordance with TCNA (HB) Method F121.
   3. At quarry tile installations, install in accordance with TCNA Handbook Method F112, with epoxy grout.

B. Cleavage Membrane: Lap edges and ends.

C. Mortar Bed Thickness: Minimum 5/8 inch (15.9 mm), unless otherwise indicated.

3.08 INSTALLATION - WALL TILE

A. On exterior walls install in accordance with TCNA (HB) Method W244, thin-set over cementitious backer units, with waterproofing membrane.

B. Over cementitious backer units on studs, install in accordance with TCNA (HB) Method W244, using membrane at toilet rooms.

C. Over coated glass mat backer board on studs, install in accordance with TCNA (HB) Method W245.

D. Over gypsum wallboard on wood or metal studs install in accordance with TCNA (HB) Method W243, thin-set with dry-set or latex-Portland cement bond coat, unless otherwise indicated.
   1. Where mortar bed is indicated, install in accordance with TCNA (HB) Method W222, one coat method.
   2. Where waterproofing membrane is indicated other than at showers and bathtub walls, install in accordance with TCNA (HB) Method W222, one coat method.

E. Over interior concrete and masonry install in accordance with TCNA (HB) Method W202, thin-set with dry-set or latex-Portland cement bond coat.

F. Over metal studs without backer install in accordance with TCNA (HB) Method W241, mortar bed, with membrane where indicated.

3.09 CLEANING

A. Clean tile and grout surfaces.
   1. Broom clean and cover tiled floors with heavy non-staining, non-asphaltic building paper taped in place until just prior to final clean and polish for Owner acceptance.

3.10 PROTECTION

A. Do not permit traffic over finished floor surface for 4 days after installation.
   1. Where temporary access across tiled floors cannot be avoided, cover traffic path with 3/4” plywood or lumber.

B. Keep epoxy grout free of construction and drywall dust until fully cured, as determined by the epoxy grout manufacturer.

END OF SECTION

SECTION 09 51 00

ACOUSTICAL PANEL CEILINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Suspended metal grid ceiling system.

B. Acoustical units.

1.02 REFERENCE STANDARDS

1.03 ADMINISTRATIVE REQUIREMENTS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

C. Sequence work to ensure acoustical ceilings are not installed until building is enclosed, sufficient heat is provided, dust generating activities have terminated, and overhead work is completed, tested, and approved.

D. Do not install acoustical units until after interior wet work is dry.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Shop Drawings: Indicate grid layout and related dimensioning. Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
   1. Ceiling suspension system members.
   2. Method of attaching suspension system hangers to building structure.
   3. Ceiling-mounted items including light fixtures; air outlets and inlets; speakers; sprinklers; and special moldings at walls, column penetrations, and other junctures of acoustical ceilings with adjoining construction.
   4. Minimum Drawing Scale: 1/8 inch = 1 foot (1:96).

C. Product Data: Provide data on suspension system components and acoustical units.

D. Samples: Submit two samples 6 by 6 inch in size illustrating material and finish of acoustical units.

E. Samples: Submit two samples each, 12 inches long, of suspension system main runner, cross runner, and perimeter molding.

F. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

G. Certification: Provide certification from manufacturer of products that all materials used in food preparation and food serving areas have USDA approval for use in food preparation and food serving areas.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. Extra Acoustical Units: Quantity equal to 2 percent of total installed.
   2. Furnish 1 box of suspension system material to Owner.

1.05 QUALITY ASSURANCE

A. Conform to CISCA requirements.

B. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Certify all materials used in food preparation and food serving areas have USDA approval for use in food serving and food preparation areas.

D. Suspension System Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

E. Acoustical Unit Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.06 FIELD CONDITIONS

A. Maintain uniform temperature of minimum 60 degrees F (16 degrees C), and maximum humidity of 40 percent prior to, during, and after acoustical unit installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Acoustic Tiles/Panels:
   1. Armstrong World Industries, Inc: www.armstrongceilings.com
   2. CertainTeed Corporation: www.certainteed.com/ceilings-and-walls
   3. Rockfon: www.rockfon.com
   4. USG Corporation: www.usg.com/ceilings
   5. Substitutions: See Section 01 60 00 - Product Requirements.

B. Suspension Systems:
   1. Basis of Design: Armstrong, Prelude XL 15/16" or 9/16" Exposed Tee.
   2. Armstrong World Industries, Inc: www.armstrongceilings.com
   3. CertainTeed Corporation: www.certainteed.com/ceilings-and-walls
   4. Rockfon: www.rockfon.com
   5. USG Corporation: www.usg.com/ceilings
   6. Substitutions: See Section 01 60 00 - Product Requirements.

2.02 ACOUSTICAL UNITS

A. General:
1. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances, unless otherwise indicated.
   a. Mounting Method for Measuring Noise Reduction Coefficient: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface per ASTM E 795.
2. Acoustical Panel Colors and Patterns: Match appearance characteristics indicated for each product type.
   a. Where appearance characteristics of acoustical panels are indicated by referencing ASTM E 1264 pattern designations and not manufacturers' proprietary product designations, provide products selected by Architect from each manufacturer's full range of products that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.
3. Products: Subject to compliance with requirements, provide one of the named products that follow, in each designation:

B. **APC-1**: ASTM E1264, Type IV conforming to the following:
1. Basis of Design: *School Zone Fine Fissured #1713* as manufactured by Armstrong or approved equivalent by specified manufacturer.
2. Typical locations: Primary learning areas and classrooms, or as noted in drawings.
3. Size: 24 x 24 inches.
4. Thickness: 3/4 inches.
5. Composition: Mineral fiber, wet-formed.
6. NRC: 0.70.
7. CAC: 35.
8. Edge: Square lay-in.
9. Surface Color: White, typical.
10. Surface Finish: Medium texture.
11. Special Treatment: HumiGuard Plus and BioBlock.
12. Grid: 15/16” wide, factory powder coat white, Prelude XL.

C. **APC-2:** ASTM E1264, Type IV, Form 2, Pattern G, conforming to the following:
1. Basis of Design: *Ultima Health Zone #1920* as manufactured by Armstrong or approved equivalent by specified manufacturer.
2. Locations: As noted on drawings.
3. Size: 24 x 24 inches.
4. Thickness: 3/4 inches.
5. Composition: Mineral fiber, wet-formed.
6. Light Reflectance Coefficient: 0.90.
7. CAC: 35.
8. Edge: Square edge.
9. Surface Color: White.
10. Surface Finish: Factory-applied acrylic latex paint, smooth texture.
11. Special Treatment: Bioblock.
12. Grid: 15/16” wide, factory powder coat white, Prelude XL.

D. **APC-3**: ASTM E1264, Type IV conforming to the following:
   1. Basis of Design: *School Zone Fine Fissured #1713BL* as manufactured by Armstrong or approved equivalent by specified manufacturer.
   2. Typical locations: Primary learning areas and classrooms, or as noted in drawings.
   3. Size: 24 x 24 inches.
   4. Thickness: 3/4 inches.
   5. Composition: Mineral fiber, wet-formed.
   6. NRC: 0.70.
   7. CAC: 35.
   8. Edge: Square lay-in.
   9. Surface Color: Black.
   10. Surface Finish: Factory-applied acrylic latex paint, smooth texture.
   11. Special Treatment: HumiGuard Plus and BioBlock Plus.
   12. Grid: 15/16” wide, factory powder coat black, Prelude XL.

2.03 SUSPENSION SYSTEM(S)

A. Metal Suspension Systems, General:
   1. Metal Suspension System Standard: Provide 1) manufacturer's standard direct-hung metal suspension systems of types, 2) all accessories available and designed for the installation of the particular system being installed, 3) in appropriate structural classifications, and 4) finishes indicated that comply with applicable ASTM C 635 requirements.
   2. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.
   3. Grid Members:
      a. Minimum 0.015 inch bare metal thickness.
      b. Minimum 300 lb. tension/ compression connection value.
      c. UL-certified for load compliance as required by ASTM C635.
   4. Attachment Devices: Size for five times design load indicated in ASTM C 635, Table 1, Direct Hung, unless otherwise indicated.
      a. Postinstalled Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.
   5. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
      a. Zinc-Coated Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
      b. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635, Table 1, Direct Hung) will be less than yield stress of wire, but provide not less than 0.106 inch (2.69 mm) diameter wire.
   6. Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that fit acoustical panel edge details and

suspension systems indicated; formed from extruded aluminum, or sheet metal of same material and finish as that used for exposed flanges of suspension system runners.

a. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.

b. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

c. For narrow-face suspension systems, provide suspension system and manufacturer's standard edge moldings that match width and configuration of exposed runners.

B. Non-fire Rated Grid: ASTM C635, intermediate duty; exposed T; components die cut and interlocking.

1. Grid Materials: Commercial quality cold rolled steel with galvanized coating.
2. Basis of design, Prelude XL as manufactured by Armstrong or approved equivalent by specified manufacturer.
3. Grid Finish:
   a. Factory painted white or black steel face as scheduled.
   b. 15/16” face typical. 9/16” face for tegular edged tile.

C. Accessories: Stabilizer bars, clips, splices, perimeter moldings, hold down clips, and other items required for suspended grid system.

1. For circular penetrations of ceiling, provide perimeter moldings fabricated to diameter required to fit penetration exactly.

D. Support Channels and Hangers: Galvanized steel; size and type to suit application and ceiling system flatness requirement specified.

1. Post-installed Powder-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.
2. Zinc-Coated Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper. Select wire diameter so its stress at three times hanger design load will be less than yield stress of wire but provide not less than 0.106 inch diameter wire.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage, and other conditions affecting performance of acoustical panel ceilings.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Verify that layout of hangers will not interfere with other work.

3.02 PREPARATION

A. Install after major above-ceiling work is complete.

B. Coordinate the location of hangers with other work, verify layout of hangers will not interfere with other work.

C. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans

3.03 INSTALLATION - SUSPENSION SYSTEM

A. Install after major above ceiling work is complete. Coordinate location of hangers with other work.

B. Install suspension system in accordance with ASTM C636/C636M, ASTM E580/E580M, and manufacturer's instructions and as supplemented in this section.

C. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.

D. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

E. Install system capable of supporting imposed loads to deflection of 1/360 maximum.

F. Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

G. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

H. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure; that are appropriate for substrate; and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.

I. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, powder-actuated fasteners, or drilled-in anchors that extend through forms into concrete.

J. Do not attach hangers to steel deck tabs.

K. Do not attach hangers to steel roof deck. Attach hangers to structural members.

L. Do not support components on main runners or cross runners when weight causes total dead load to exceed deflection capability. Support fixture loads by supplementary hangers located within 6 inches of each corner; or support components independently.

M. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers, unless otherwise indicated; and provide hangers not more than 8 inches (200 mm) from ends of each member.

N. Lay out system to a balanced grid design with edge units no less than 50 percent of acoustical unit size. Confirm in writing any divergence from Architect's ceiling layout shown on drawings.

O. Suspension System, Non-Seismic: Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.

P. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.

Q. Do not eccentrically load system or induce rotation of runners.

R. At all lighting systems installed in ceiling suspension systems, and particularly at linear light systems, coordinate requirements of Lighting and Ceiling Manufacturers for a complete integrated installation where all parts of the lighting system will stay in place and function properly. Linear light systems will require additional accessory structure and possibly additional accessories.

S. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
   1. Use longest practical lengths.
   2. Overlap corners.
   3. Do not use exposed fasteners, including pop rivets, on moldings and trim.
   4. Install at junctions with other interruptions.
   5. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

T. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m). Miter corners accurately and connect securely.
   1. Delete subparagraph below or qualify if exposed fasteners are allowed.

U. Do not use exposed fasteners, including pop rivets, on moldings and trim.

3.04 INSTALLATION - ACOUSTICAL UNITS

A. Install acoustical units in accordance with manufacturer's instructions.

B. Install units after above-ceiling work is complete.

C. Fit acoustical units in place, free from damaged edges or other defects detrimental to appearance and function.

D. Lay directional patterned units with pattern parallel to longest room axis.

E. Fit border trim neatly against abutting surfaces.

F. Install acoustical units level, in uniform plane, and free from twist, warp, and dents.

G. Cutting Acoustical Units:
   1. Cut to fit irregular grid and perimeter edge trim.
   2. Make field cut edges of same profile as factory edges.
   3. Double cut and field paint exposed reveal edges.

H. Where round obstructions occur, provide preformed closures to match perimeter molding.

I. Install hold-down clips on panels within 20 ft (6 m) of an exterior door.

J. Install acoustical panels with undamaged edges and fitted accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
   1. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.
   2. For reveal-edged panels on suspension system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
   3. For reveal-edged panels on suspension system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension system surfaces and panel faces flush with bottom face of runners.
   4. Paint cut panel edges remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
   5. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions, unless otherwise indicated or required.
   6. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.

K. Reveal edge panels (Tegular Panels):
   1. Provide factory cut, custom panels.

3.05 TOLERANCES

A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).

B. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.06 CLEANING

A. See Section 01 70 00 - Execution and Closeout Requirements for additional requirements.

B. Clean surfaces. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

C. Replace damaged or abraded components.

END OF SECTION

SECTION 09 54 23

LINEAR METAL CEILING SYSTEM

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes suspended decorative metal ceilings as a manufactured system.

B. Related Sections include the following:
1. Section 09 51 13 - Acoustical Panel Ceilings: For ceilings consisting of mineral-base and glass-fiber-base acoustical panels and suspended grid systems.
2. Division 23 Sections for grilles, registers, and diffusers.
3. Division 26 Sections for light fixtures.

1.02 REFERENCES

A. ASTM International:
1. ASTM C635 - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.
2. ASTM C636 - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.

B. Ceilings and Interior Systems Construction Association:
1. CISCA - Acoustical Ceilings: Use and Practice.

1.03 1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
1. Ceiling pattern.
2. Ceiling suspension members.
3. Method of attaching suspension system hangers to building structure.
4. Indicate all required end joints in panel lengths.
5. Ceiling-mounted or above-ceiling items including lighting fixtures, air outlets and inlets; speakers; sprinklers; access panels, column penetrations, and any other junctures, penetrations, or interfaces with specialty metal ceilings.
6. Submit details indicating special conditions.

C. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

D. Physical Samples: Submit (2) 12” lengths of factory-finished panel sections, (2) 12” lengths of factory-finished support grid, and (2) 12” lengths of each type of matching trim.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed specialty metal ceilings similar in material, design, and extent to those indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Source Limitations for Specialty Metal Ceilings: Obtain specialty metal ceilings from one source with resources to provide products of consistent quality in appearance and physical properties.

C. Fire-Test-Response Characteristics: Provide specialty metal ceiling components with the following surface-burning characteristics as determined by testing identical assemblies per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify ceiling units with appropriate markings of applicable testing and inspecting agency.
   1. Flame Spread: 25 or less.
   2. Smoke Developed: 50 or less.

D. Mockups: Prior to installing specialty metal ceilings, construct mockups for each form of construction and finish required to verify selections made under Sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution. Mockups shall be built by the Subcontractor responsible for the Project Work. Build mockups to comply with the following requirements, using all conditions and materials indicated for the completed Work:
   1. Build mockups on-site in the location and of the size indicated or, if not indicated, as directed by Architect.
   2. Erect mockups 10’ by 10’ (3 m by 3 m) using materials indicated for final Work.
   3. Notify Architect 7 days in advance of dates and times when mockups will be constructed.
   4. Demonstrate the proposed range of aesthetic effects and workmanship.
   5. Obtain Architect's approval of mockups before beginning final installation of specialty metal ceilings.
   6. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work. Approved mockups may be incorporated into the final installation.

E. Preinstallation Conference: Conduct conference at Project site to comply with requirements of Division 1 Section "Project Meetings."

1.05 DELIVERY, STORAGE, AND HANDLING

A. All materials shall be delivered to the Project site in the original, labeled, unopened packages.

B. Materials shall be stored off of the floor level, flat and level, in a fully enclosed space.

C. Exercise care in handling to avoid damage.

1.06 PROJECT CONDITIONS

A. Do not install specialty metal ceilings until spaces are enclosed and weatherproof, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.07 COORDINATION

A. Coordinate layout and installation of specialty metal panels and suspension system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

1.08 WARRANTY

A. Installed suspension system and ceiling panels shall be warranted by Contractor to be free from rusting, sagging, warping, shrinking, buckling, or delaminating for a minimum of one year from date of Substantial Completion of the Project.

B. For sag-resistant panels, provide ceiling panel manufacturer's written warranty against sagging, warping, shrinking, buckling or delaminating as a result of manufacturing defects for a period of ten years from date of Substantial Completion of the Project.

C. Provide suspension manufacturer's written warranty against material defects for a period of fifteen years from date of Substantial Completion.
   1. Where suspension manufacturer and non-sag ceiling panel manufacturer are the same, provide combination warranty including protection from sagging, warping, shrinking, buckling or delaminating of ceiling panels as a result of manufacturing defects.

D. Provide suspension manufacturer's written warranty against the occurrence of 50% red rust on grid face for a period of thirty years from date of Substantial Completion.

1.09 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents.
   1. Specialty Metal Ceiling Units: Full-length units equal to 2.0 percent of quantity installed.
   2. Suspension System Components: Quantity of each exposed component equal to 2.0 percent of quantity installed.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers:
   1. CertainTeed Architectural, www.certainteed.com
   2. Hunter-Douglas Ceilings & Walls, www.hunterdouglasarchitectural.eu
   3. Reference Section 01 25 13-Product Substitutions.

2.02 LINEAR METAL BOX CEILING SYSTEM

A. Type: *Box Series Metal Ceiling System*, as manufactured by CertainTeed or approved equivalent by specified manufacturer.

B. Panels:
   1. Profile: Roll formed nominal 5-1/4" wide x 5/8" deep with x 3/4" reveal joints to form 6" module of one panel and one joint.

2. Length: One-piece lengths as indicated in the drawings.
3. Material:
   a. 0.025” formed aluminum with non-perforated face.
4. Joints: Open.
5. Finish: Factory finished.

C. Trim and Accessories:
1. Panel End Caps: Formed, stamped, or milled end caps in matching finish.
2. Splicing System: Manufacturer’s formed aluminum back-mounted inserts designed to snap-fit between ends of two ceiling panels.
   a. Provide cross joints only where length of installed panels exceeds manufacturer’s standard maximum panel lengths.
   b. Stagger cross joints uniformly a minimum of 12” between adjacent panels.
   c. Perimeter Edges: Where floating perimeters are indicated, provide 6” high clip on metal edge in finish matching ceiling panels.
   d. Acoustical Material: Not applicable.

D. System Performance:
1. Recycled Content: 75% - 100% content with 100% locally recyclable.

E. Linear Suspension System: Non-fire rated system.
1. Carrier: Universal hat-shaped 0.038" roll-formed aluminum section with hook-shaped tabs spaced to receive ceiling panels at 2" on-center and 27/32" apart. Support holes spaced 4" on-center. Factory-applied black enamel finish.
2. Wire-suspended at nominal 4 ft. intervals with not less than 12-ga. inch diameter zinc-coated steel wire screw-fastened or powder-actuated fastening system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for system with capability to sustain a load equal to 10 times that imposed by ceiling construction per ASTM E 1190.

2.03 PANEL FINISH

A. Factory powder coat in scheduled faux wood color/finish. Finish protected with strippable temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in appearance of abutting or adjacent pieces are not acceptable.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine overhead construction prior to beginning installation of specialty metal ceilings to ensure that all overhead work including finish painting of deck, structure, ducting, conduits, piping, etc. is completed.

B. Proceed with installation only after unsatisfactory conditions have been corrected. Beginning of specialty ceiling installation indicates acceptance of overhead work.

C. Verify layout of hangers will not interfere with other work.

3.02 INSTALLATION

A. General: Install linear metal ceilings in accordance with manufacturer's recommendations and requirements and to comply with the following:
   1. Standard for Ceiling Suspension System Installations: Comply with ASTM C 636.
   2. CISCA Recommendations for Acoustical Ceilings: Comply with CISCA's "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings--Seismic Zones 0-2."

B. Install system capable of supporting imposed loads to deflection of 1/360 maximum.

C. Suspend ceiling hangers from building's structural members and as follows:
   1. Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.
   2. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or ceiling suspension system.
   3. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   4. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with the location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
   5. Secure hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for structure to which hangers are attached and for type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
   6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, powder-actuated fasteners, or drilled-in anchors that extend through forms into concrete.
   7. Do not attach hangers to steel deck tabs.
   8. Do not attach hangers to steel roof deck. Attach hangers to structural members.

D. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs.
   1. Fasten bracing wires into concrete with cast-in-place or post-installed anchors.
   2. Bracing wires shall be located as to not be visible from below ceiling.

E. Install suspension system carriers so they are aligned and securely interlocked with stabilzers and face panels. Remove and replace dented, deformed, or kinked members

F. Neatly cut finished panels for accurate fit at interruptions and penetrations through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.

G. Install finished panels in coordination with suspension system and exposed moldings and trim.

1. Where finished length exceeds manufacturer’s maximum standard lengths, fit adjoining units to form flush, tight joints. Finished lengths less than manufacturer’s maximum lengths shall be one-piece without joints.
2. Install panels requiring butt joints using internal panel splices and in aligned configuration.
3. Install directionally patterned panels in directions indicated.
4. Install matching end caps at open ends of finished units.
5. Do not use exposed fasteners, including pop rivets, on moldings and trim.

3.03 CLEANING

A. Clean exposed surfaces of specialty metal ceilings, including visible support framing. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and deformed units.

END OF SECTION

SECTION 09 61 50

CONCRETE FLOOR CLEAR FINISH

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Water-based clear finish for interior concrete floors to remain exposed.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Concrete slab-on-grade surfaces and curing agents.
   2. Section 07 90 00 - Joint Protection: Sealants

1.02 REFERENCE STANDARDS

A. UL 410 - Standard for Slip Resistance of Floor Surface Materials; 2020.

1.03 SYSTEM DESCRIPTION

A. Applied Finish: Material to restrict moisture absorption and provide slip-resistant and abrasion-resistant finished appearance for interior concrete flooring indicated to remain exposed.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit details of product description, tests performed, limitations to coating, and chemical properties including percentage of solids.

C. Samples: Of each substrate indicated to receive water repellent, 12 inches (304.8 mm) square, with specified repellent treatment applied to half of each sample.

D. Manufacturer's Installation Instructions: Submit special procedures and conditions requiring special attention, and cautionary procedures required during application.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements, including local requirements controlling the emission of VOCs.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section for a minimum of three years.

B. Applicator: Company specializing in performing Work of this section with minimum three years' experience and approved by manufacturer for this application.

1.06 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect product from freezing.

1.08 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not apply coating when ambient or surface temperature is lower than 40 degrees Fahrenheit (4.44 degrees Celsius) or higher than 100 degrees Fahrenheit (37.78 degrees Celsius).

1.09 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish manufacturer's written warranty for sealer/finish for a minimum of two-years after Substantial Completion of Project.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

A. Euclid Chemical Company; www.euclidchemical.com

B. Sika; sika.com

C. W.R. Meadows; www.wrmeadows.com

D. Substitutions: Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Concrete Finish: Water-based clear and colorless high solids type sealer and finish that is VOC-compliant. Provides high slip-resistance dry or wet. Low odor.
   1. Basis-of-Design: *Selectseal Plus* as manufactured by Scofield.
   2. VOC Content: less than 100 g/L.
   3. Semi-Gloss or Gloss finish.
   4. High solids content; low odor.
   5. Certified wet-slip resistant per UL 410.
   6. Abrasion-resistant.
   7. Apply at interior concrete floors scheduled to remain exposed.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify joint sealants are installed and cured.

C. Verify surfaces to be coated are dry, clean, and free of efflorescence, oil, or other matter detrimental to application of coating.

D. Obtain product information from Contractor for curing agent that was used on floors scheduled to receive a clear finish coat to ensure that the proposed finish coat is compatible.

3.02 PREPARATION

A. Test the surface of previously sealed concrete before applying finish to ensure it absorbs drops of water within 20-30 seconds.
   1. Surfaces not readily absorbing moisture will require mild acid-etching prior to finish application. AND
   2. Remove curing agents remaining on surface of affected slabs. Ensure compatibility of curing agent and any installed joint sealants with proposed clear finish product.

B. Delay Work until concrete substrate is cured minimum of 60 days, and all other trades have completed work in the affected areas.

C. Remove loose particles and foreign matter. Remove oil or foreign substances that may interfere with appearance or performance of sealer/finish. Remove drywall compound and paint drips by scraping.

D. Remove curing agents remaining on surface of affected slabs. Ensure compatibility of curing agent and any installed joint sealants with proposed clear finish product.

E. Scrub and rinse surfaces with water and let dry while restricting foot traffic. Vacuum dry surface just prior to application of sealer/finish.

F. Test for pH level of substrate before applying. Do not apply to substrates with pH level outside of manufacturer’s recommended limits.

G. Protect adjoining work, including sealant bond surfaces at joints. Mask-off wall bases and adjoining surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces.

H. Coordination with Sealants:
   1. Coordinate with finish manufacturer to determine whether sealer/finish should be applied prior to or after installation of any joint sealants in concrete slab. Sealant joints installed prior to application of sealer/finish shall be fully cured.
   2. Sealer/finish application may precede joint sealant installation only if sealant adhesion and compatibility have been tested and verified.

3.03 APPLICATION

A. Apply in accordance with manufacturer’s instructions.

B. Apply a saturation coating of clear sealer/finish on indicated surfaces using foam, microfiber, or lamb's wood applicators. Cover all surfaces to remain exposed.

C. Apply second coat in accordance with manufacturer's directions for drying and scuffing of first coat. Final coat shall be free of lap or brush marks.

3.04 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Immediately remove sealer/finish from adjacent surfaces by methods as instructed by coating manufacturer. Repair damage to surfaces not indicated to receive sealer/finish.

END OF SECTION

SECTION 09 65 00

RESILIENT FLOORING AND BASE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
1. Solid vinyl tile flooring (luxury vinyl tile).
2. Rubber base: Provide and install rubber base where scheduled throughout the project, regardless of floor finish.
3. Rubber stair covering.

B. Related Sections
1. Section 05 51 00: Metal Stairs and nosings.
2. Section 09 65 69: Modular Resilient Athletic Flooring.

1.02 REFERENCES

A. ASTM International:
1. ASTM F1700 - Standard Specification for Solid Vinyl Floor Tile.
2. ASTM F1861 - Standard Specification for Resilient Wall Base.
3. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

C. Samples:
1. Submit manufacturer's complete set of color samples for initial selection.
2. Submit two full size samples of each tile and base item specified.

1.04 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning, stripping, and re-waxing.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Store tiles on flat surfaces.

1.07 MANUFACTURER'S WARRANTY

A. Provide manufacturer's written warranty against defects in materials or workmanship for a period of 5-years after date of Substantial Completion of the Project. Warranted defects shall include but not necessarily be limited to:
   1. Shrinking, cracking, crazing, or delaminating of plies of material.
   2. Color fading.
   3. Off-gassing of material.
   4. Loss of resiliency.
   5. Delaminating of flooring from substrate.

1.08 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Maintain temperature in storage area between 55 degrees Fahrenheit (12.78 degrees Celsius) and 90 degrees Fahrenheit (32.22 degrees Celsius).

C. Store materials for not less than 48 hours prior to installation in area of installation at temperature of 70 degrees Fahrenheit (21.11 degrees Celsius) to achieve temperature stability. Thereafter, maintain conditions above 55 degrees Fahrenheit (12.78 degrees Celsius).

1.09 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish one additional sealed carton of matching material for Owner's future use for each type, color, and pattern of flooring installed.

C. Furnish one gallon of each type of adhesive used to Owner.

PART 2 PRODUCTS

2.01 SOLID VINYL TILE FLOORING

A. Manufacturers:
   1. Armstrong Commercial Flooring; www.armstrong.com
   2. Mohawk Industries; www.mohawkflooring.com
   3. Mannington Commercial; www.mannington.com

4. Roppe Corporation; www.roppe.com
5. Shaw Contract; www.shawcontract.com
6. Tarkett; www.commercial.tarkett.com
7. Substitutions: Section 01 60 00 - Product Requirements.

B. Type: ASTM F1700, Class 3, Type B
1. Basis of Design: Solid luxury vinyl tile by as scheduled or approved equivalent by a specified manufacturer.
2. Size(s): As indicated.
3. Overall Thickness: Minimum 0.12 inch (3 mm).
4. Wear Layer: 28-mil thick with manufacturers protective coating.
5. Warranty: Minimum 20-years.
6. Colors/Patterns: As indicated.

2.02 RESILIENT BASE

A. Manufacturers:
1. Armstrong World Industries; www.armstrong.com
2. Mannington Commercial; www.mannington.com
3. Johnsonite; www.johnsonite.com
4. Marley Flexco; www.flexcofloors.com
5. Roppe Corporation; www.roppe.com
6. Substitutions: Section 01 60 00 - Product Requirements.

B. Rubber Base: ASTM F1861, rubber, Type TP:
1. Height: 4-inch.
2. Thickness: 1/8 inch (3.18 mm).
3. Finish: Smooth.
4. Length: Continuous rolls.
5. Style: Coved with top-set toe.

2.03 ACCESSORIES

A. Subfloor Filler: Self-leveling latex-modified cementitious type, ARDEX SD-F “Feather Finish” as manufactured by Ardex Engineered Cements.

B. Adhesives:
1. Flooring Adhesive: Waterproof type recommended by the flooring manufacturer. Maximum volatile organic compound content in accordance with SCAQMD Rule 1168.
2. Base Adhesive: Latex type as recommended by the rubber base manufacturer.
3. Use clear adhesive.

C. Moldings and Edge Strips: Extruded aluminum, one edge tapered, of height necessary to flush with tile thickness.

2.04 RUBBER STAIR COVERING

A. A. Manufacturers:

1. Armstrong; www.armstrong.com
2. Mannington Commercial (Burke Collection); www.burkeflooring.com
3. Flexco; www.flexcofloors.com
4. Johnsonite (Tarkett); commercial.tarkett.com
5. Roppe Corporation; www.roppe.com
6. VPI Flooring; www.vpicorp.com
7. Substitutions: Section 01 60 00 - Product Requirements.

B. Stair Treads: ASTM F2169 Type TS; full width and depth of stair tread in one piece; tapered thickness.
   1. Composition: Compression molded, high grade rubber with color throughout.
   2. Thickness: 0.20” inch.
   3. Nosing Style: Metal nosing provided under Section 05 51 00.
   4. Basis of Design: *Vantage* raised pattern as manufactured by Roppe or approved equivalent by specified manufacturer.
   5. Color: As selected.

C. Landings: Material, color and finish to match treads.

D. Stair Risers: Maintain height and length in one piece, matching treads in material and color with non-patterned surface:
   1. Thickness: 1/8 inch.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify concrete floors are dry to maximum moisture content as recommended by manufacturer, and exhibit negative alkalinity, carbonization, and dusting. Maximum allowable amount of moisture emission from substrate is 3.0 pounds per 1,000 sq feet (1.07643 sq cm) in 24-hour period and shall not exceed 85% or the maximum allowable moisture content as recommended or allowed by flooring manufacturer.
   1. Perform deep-probe moisture meter testing per ASTM F2170 for each area receiving the specified floor finish.
   2. Perform number of tests recommended by the flooring system manufacturer per each floor area, but no less than one test per each 1,000 sq. ft.
   3. Provide written test results to the Architect, along with flooring manufacturer’s recommended maximum moisture values.

C. Verify floor surfaces are free of substances capable of impairing adhesion of new adhesive and finish materials.

D. Starting installation of flooring indicates installer’s acceptance of flooring substrate conditions.

E. Verify new concrete substrates are dry to maximum moisture content as recommended by manufacturer, and exhibit negative alkalinity, carbonization, and dusting. Maximum allowable amount of moisture emission from substrate is 3.0 pounds per 1,000 sq feet (1.07643 sq cm) in

24-hour period and shall not exceed maximum allowable moisture content as recommended or allowed by flooring manufacturer.

F. Verify floor and lower wall surfaces are free of substances capable of impairing adhesion of new adhesive and finish materials.

G. Starting installation of flooring indicates installer’s acceptance of flooring substrate conditions.

3.02 PREPARATION

A. At existing floors, remove flooring and shot-blast exposed concrete slab to clean white finish with slight texture for proper adhesion.

B. Remove sub-floor ridges and bumps. Fill minor low spots, cracks, joints, holes, and other defects with sub-floor filler to achieve smooth, flat, hard surface.

C. Prohibit traffic until filler is cured.

D. Clean substrate.

E. Apply flooring manufacturer’s recommended primer as required to prevent "bleed-thru" or interference with adhesion by substances that cannot be removed.

3.03 INSTALLATION - TILE FLOORING

A. Mix tile from container to ensure shade variations are consistent when tile is placed.

B. Lay flooring with joints and seams butted tight and parallel to building lines to produce symmetrical tile pattern.

C. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints.

D. Where floor finishes are different on opposite sides of door, terminate flooring under centerline of door.

E. Install edge strips at unprotected or exposed edges, where flooring terminates, and where flooring materials change.

F. Install flooring in recessed floor access covers designed for finish material installation. Maintain floor pattern.

G. At movable partitions, install flooring under partitions without interrupting floor pattern.

H. Extend flooring into knee recesses under casework and other recesses.

I. Install under all permanently installed casework.

3.04 INSTALLATION - BASE

A. Fit joints tightly and make vertical. Maintain minimum dimension of 18 inches (457.2 mm) between joints.

B. Use factory-preformed exterior corners, and factory preformed or job-mitered interior corners. Do not wrap exterior corners without express approval of the Architect.

C. Install base on solid backing. Bond tightly to wall and floor surfaces.

D. Scribe and fit to door frames and other interruptions.

E. Install base at cabinets, shelving, and other fixed equipment and permanently installed casework.

3.05 INSTALLATION - RUBBER STAIR COVERING

A. Install stair coverings in accordance with manufacturer's written instructions using recommended adhesives, primers, and sealers.

B. Use flooring manufacturer's recommended stair nosing adhesive (typically epoxy) for all tread nosings. Use recommended contact or pressure-sensitive adhesive for treads, risers, and landings as appropriate for the substrate.

C. Install landing tile first, running parallel to the top stair nosing. Center tile on landings to ensure cut tiles at walls are of equal and maximum possible size.

D. Install risers before treads. Install risers in one-piece lengths. Apply adhesive and fit riser tight against the underside of the tread or nosing above.

E. Install treads after risers. Install treads in one-piece, full-width lengths. Apply adhesive and press tread firmly onto the substrate and against the riser.

F. At treads specified with a separate metal nosing, scribe and fit rubber tread to butt tight, level, and flush against the back edge of the metal nosing.

G. Roll all treads, risers, and landings with a 100 lb. roller, followed by hand-rolling all nosings, joints, and coves to ensure full adhesion.

3.06 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess adhesive from floor, base, and wall surfaces without damage.

C. Clean, seal, and maintain resilient flooring products.

3.07 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Prohibit traffic on resilient flooring for 48 hours after installation.

C. Do not slide furnishings, equipment, or other objects directly over floor surfaces. Place plywood or hardboard panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels. Remove and replace damaged tiles.

END OF SECTION

SECTION 09 65 66

RESILIENT ATHLETIC FLOORING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Resilient exercise sheet flooring, adhesively applied with heat-welded seams. Installed at Gym and Dance as scheduled.
   2. Field applied game court layout lines as indicated.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Concrete leveling infill.
   2. Section 09 65 00 - Resilient Flooring and Base: 4-inch rubber coved base.

1.02 REFERENCES

A. ASTM International:
   1. ASTM-F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

C. Samples:
   1. Submit manufacturer's complete set of color samples for initial selection.
   2. Submit two 12-in x 12-in samples of each color/pattern specified.

1.04 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Installer: Company specializing in performing Work of this section with minimum three years’ experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Unroll sheet material and allow to relax in environmentally controlled room for 24 hours prior to installation.

C. Maintain temperature in storage area between 55 degrees F and 90 degrees F.

D. Store materials for not less than 48 hours prior to installation in area of installation at temperature of 70 degrees F to achieve temperature stability. Thereafter, maintain conditions above 55 degrees F.

1.07 WARRANTY

A. Provide manufacturer's written material warranty against material defects and failures due to surface wear-through and moisture vapor intolerance.
   1. Warranty Period: Minimum 15-years after Project Substantial Completion.

B. Provide installer's written warranty against defects in installation and workmanship.
   1. Warranty Period: Minimum 2-years after Project Substantial Completion.

1.08 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish additional 5% of packaged material for Owner's future use for each type, color, and pattern of flooring installed.

PART 2 PRODUCTS

2.01 RUBBER FLOORING

A. Manufacturers:
   1. Tarkett Sports; www.tarkettsportsindoor.com
   2. Substitutions: Section 01 60 00 - Product Requirements.

B. Rubber Athletic Sheet Flooring: 100-percent recycled high-density rubber flooring.
   1. Basis of Design: *Tarkett Ominisports.*
   2. Color/texture as scheduled.
   3. Construction: Embossed, homogeneous product of vulcanized natural and synthetic rubbers with mineral aggregates, stabilizing agents, and pigmentation.
      a. Surface: Printed faux wood design coated with clear PVC and UV cured urethane treatment.
      b. Foam force reduction layer: High density closed cell PVC foam with honeycomb embossing.
      c. Intermediate Layers: Reinforced with a non-woven fiberglass grid for dimensional stability.
      d. Total Thickness: Layers vulcanized to form 0.27" (7.1 mm) overall thick sheet.

e. Antimicrobial treatment.

4. Recyclability:
   a. Made from 30% recycled content and 100% manufacturing waste recycled.
   b. FloorScore certified.
5. Wear Layer: Type 1 – Grade 1 per ASTM F1303/F410.
6. Impact Resistance: Passes EN 1717.
7. Ball Rebound: >90% per ASTM F2772.
8. Fire Rating: Class I per ASTM E648.
9. Roll Width: 6’-6”.

2.02 ACCESSORIES

A. Primers and Adhesives: Waterproof; types approved by flooring manufacturer.

B. Seam Welding Rods: Matching color and compatible material provided by flooring manufacturer.

C. Game-Line and Marker Paint: Enamel or other approved product, compatible with flooring and recommended by flooring and paint manufacturers for use indicated.
   1. Colors: As indicated, or if not indicated, as selected by Architect from manufacturer’s full range of line colors

D. Transition Strips: Beveled strips that transition smoothly from the surface of rubber athletic flooring to the adjacent flooring.

E. Rubber Base: Coved, 4-inch high as specified in Section 09 65 00.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Perform in-situ relative humidity testing (ASTM F2170) to determine moisture condition of concrete subfloor.

C. Verify concrete subfloors are dry to maximum moisture content as recommended by manufacturer, and exhibit negative alkalinity, carbonization, and dusting. Maximum allowable amount of moisture emission from substrate is 3.0 pounds per 1,000 square feet in 24-hour period and shall not exceed 85% or the maximum allowable moisture content as recommended or allowed by flooring manufacturer.
   1. Perform deep-probe moisture meter testing per ASTM-F2170 for each area receiving the specified floor finish.
   2. Perform number of tests recommended by the flooring system manufacturer per each floor area, but no less than one test per each 1,000 sq. ft.
   3. Provide written test results to the Architect, along with flooring manufacturer’s recommended maximum moisture values.

D. Verify substrate surfaces are free of substances capable of impairing adhesion of new adhesive and finish materials.

E. Ambient temperature of installation area shall be maintained at 65-degrees F or greater.

F. Starting installation of flooring indicates installer’s acceptance of flooring substrate conditions.

3.02 PREPARATION

A. Remove coatings, including curing compounds and other substances that are incompatible with flooring adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.

B. Remove sub-floor ridges and bumps. Fill minor low spots, cracks, joints, holes, and other defects with sub-floor filler to achieve smooth, flat, hard surface.

C. Prohibit traffic until filler is cured.

D. Clean and vacuum substrate thoroughly.

E. Apply primer as required to prevent "bleed-thru" or interference with adhesion by substances that cannot be removed.

3.03 INSTALLATION

A. Lay flooring with joints and seams parallel to building lines. Provide wall-to-wall lengths where possible to avoid end seams. Gap seams uniformly for flush application of matching filler using heat-welded rods. Stagger end seams nominal 24”.

B. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints

C. Where floor finishes are different on opposite sides of door, terminate flooring under centerline of door.

D. Adhere products to substrates using a full spread of adhesive applied to substrate to comply with adhesive and flooring manufacturers' written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.
   1. Roll flooring for maximum adhesion and flatness using minimum 50 lb. roller.
   2. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

E. Install manufacturer’s pre-formed transition strips at exposed edges where flooring does not abut vertical surfaces.

F. Mask flooring at game lines and markers and apply paint to produce sharp edges and opaque coverage.

G. At movable partitions, install flooring under partitions without interrupting floor pattern.

H. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

I. Reference Section 09 65 00 for installation requirements of rubber base.

J. Remove excess adhesive from floor, base, and wall surfaces without damage.

K. Clean and maintain resilient flooring products.

3.04 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect flooring against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods indicated or recommended in writing by flooring manufacturer.

C. Do not move heavy or sharp objects directly over floor surfaces. Place plywood or hardboard panels over flooring and under objects while they are being moved. Slide or roll objects over panels without moving panels.

D. Prohibit traffic on resilient flooring for 48 hours after installation.

END OF SECTION

SECTION 09 68 13

TILE CARPETING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Carpet tile, fully adhered.

B. Fully-adhered modular carpet as scheduled and specified.

1.02 REFERENCE STANDARDS

A. Consumer Products Safety Commission: CPSC 16 CFR 1630 - Standard for the Surface Flammability of Carpets and Rugs.

B. NFPA 253 - Standard Method of Test for Critical Radiant Flux for Floor Covering Systems Using a Radiant Heat Energy Source.

C. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2022.

D. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2019a.

1.03 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

C. Shop Drawings: Indicate layout of joints, direction of carpet pile, and location of edge moldings, type of subfloor, type of installation, pattern of installation, patterns and colors, location, and direction..

D. Samples: Submit two carpet tiles illustrating color and pattern design for each carpet color selected. Label each sample with manufacturer's name, material description, color, pattern, and designation indicated on the Drawings and in schedules.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

F. Operation and Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 01 60 00 - Product Requirements, and Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products, for additional provisions.
   2. Extra Carpet Tiles: Quantity equal to 2 percent of total installed of each color and pattern installed. Confirm quantity with Architect and Owner during construction.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing specified carpet tile with minimum three years documented experience.

B. Installer Qualifications: Company specializing in installing carpet tile with minimum three years documented experience and approved by carpet tile manufacturer.
   1. FCIB or IFCI certified carpet installers or demonstrate compliance with certification program requirements.

C. Surface Burning Characteristics:
   1. Floor Finishes: Comply with one of the following:
      a. Class I, minimum 0.45 watts/sq cm when tested in accordance with NFPA 253.
      b. CPSC 16 CFR 1630.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section and is approved by manufacturer.
   1. FCIB or IFCI certified carpet installers or demonstrate compliance with certifiction program requirements.

1.06 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.07 ENVIRONMENTAL REQUIREME

A. Section 01 60 00 - Product Requirements.

B. Store materials in area of installation for 48 hours prior to installati

C. Do not install carpet until wet work in spaces is complete and dry, and ambient temperatire and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

D. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet manufacturer.

1.08 MOCKUPS

A. Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
   1. Build mockups at locations and in sizes shown on Drawings, or, if not shown, as directed by the Architect.

1.09 FIELD CONDITIONS

A. Section 01 60 00 - Product Requirements.

B. Store materials in area of installation for minimum period of 48 hours prior to installation.

C. Do not install carpet until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project.

D. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Tile Carpeting:
   1. Tarkett; https://www.tarkettna.com/
   2. Substitutions: None.

2.02 MATERIALS

A. Tile Carpeting: Tufted, manufactured in one color dye lot.
   1. Selection: Selected pattern(s) and color(s) as indicated on Material/Finish Schedule.
   2. Format type: Modular, size(s) as indicated on Material/Finish Schedule.
   3. Pile Construction: Patterned loop pile
   4. Dye Method: Solution Dyed.
   5. Stain Repel and Soil Release: Manuifactrer's Eco-Ensure (Fluorine-Free Soil Protection) treatment.
   6. Backing: Manufacturer's synthetic non-woven, Flex-Aire Modular Cushion backing with Manufacture's RS Adhesive "peel and stick" self-adhesion.

B. Manufacturer's Warranties:
   1. Lifetime antimicrobial protection.
   2. Lifetime anti-stain protection.
   3. Lifetime edge ravel protection.
   4. Lifetime face fiber wear.
   5. Lifetime antistatic.
   6. Lifetime cushion delamination and resiliency.

C. ADA Compliance: Less than 0.6 static coefficient of friction.

2.03 ACCESSORIES

A. Subfloor Filler: White premix latex; type recommended by flooring material manufacturer.

B. Subfloor Primer: Compatible with carpet material and recommended by carpet manufacturer.

C. Edge Strips: Embossed aluminum, color as selected by Architect.

1. Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

D. Adhesives:

E. Carpet Tile Adhesive: Recommended by carpet tile manufacturer; Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that comply with flammability requiremnets for installed carpet tile, and are recommended by carpet tile manufacturer for releasable installation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive carpet tile.

B. Cementitious Subfloor Surfaces: Verify that substrates are ready for flooring installation by testing for moisture and alkalinity (pH).
   1. Test as Follows:
      a. Alkalinity (pH): ASTM F710.
         1) Verify that concrete slabs comply with ASTM F710 and the following
            (a) Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by the carpet manufacturer.
            (b) Arrange for the Owner's independent testing laboratory to perform calcium-chloride testing or deep-probe moisture meter testing per ASTM-F2170 for new and existing substrates for each area receiving the specified floor finish. Provide written test results to the Architect.
            (c) Subfloor finishes comply with requiremnets specified in Section 03 30 00 for slabs receiving carpet
            (d) Subfloors are free of cracks, ridges, depressions, scale and foreign deposits.
      b. Internal Relative Humidity: ASTM F2170.
   2. Verify subfloor finishes comply with requirements specified in Section 03 30 00 for slabs receiving carpet.
   3. Verify subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
   4. Obtain instructions if test results are not within limits recommended by flooring material manufacturer and adhesive materials manufacturer.

C. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

A. Remove existing carpet tile.

B. Prepare floor substrates as recommended by flooring and adhesive manufacturers.

C. Remove subfloor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with subfloor filler.

D. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch (3 mm) wide or wider, and protrusions more than 1/32 inch (0.8 mm) unless more stringent requirements are required by manufacturer's written instructions.

E. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet tile manufacturers.

F. Metal Substrates: Clean grease, oil, soil and rust, and prime if recommended in writing by adhesive manufacturer. Rough sand painted metal surfaces and remove loose paint. Sand aluminum surfaces, to remove metal oxides, immediately before applying adhesive.

G. Broom and vacuum clean substrate immeditaly before installing carpet tile. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 INSTALLATION

A. Comply with the Carpet and Rug Institute's CRI 104, Section 10, "Carpet Tile," and with carpet tile manufacturer's written installation instructions.

B. Starting installation constitutes acceptance of subfloor conditions.

C. Apply primer as recommended by manufacturer.

D. Install carpet tile in accordance with manufacturer's instructions.

E. Maintain dye-lot integrity. Do not mix dye lots in same area.

F. Blend carpet from different cartons to ensure minimal variation in color match.
   1. Do not mix carpet from different cartons unless from same dye lot.

G. Cut carpet tile clean. Fit carpet tight to intersection with vertical surfaces without gaps.

H. Lay carpet tile in square pattern, with pile direction parallel to next unit, set parallel to building lines.

I. Locate change of color or pattern between rooms under door centerline.

J. Adhere carpet tiles using manufacturer’s trowel-applied waterborne adhesive.

K. Trim carpet tile neatly at walls and around interruptions.

L. Complete installation of edge strips, concealing exposed edges.

M. Roll tiles with 100 lb. roller for complete contact of carpet backing to floor.

N. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

O. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

3.04 CLEANING

A. See Section 01 70 00 - Execution and Closeout Requirements for additional requirements.

B. Remove excess adhesive without damage, from floor, base, and wall surfaces.

C. Replace any damaged or stained carpet that cannot be cleaned.

D. Thoroughly clean and vacuum carpet surfaces.

E. Arrange for carpet manufacturer’s local area representative to inspect the completed installation and provide written report to Architect indicating any deviations from the project specifications.

END OF SECTION

SECTION 09 68 16

SHEET CARPETING

GENERAL

1.01 SUMMARY

A. Section includes fully-adhered broadloom and walk-off carpet as scheduled and specified.

B. Related Sections:
1. Section 03 30 00 - Cast-In-Place Concrete: Subfloor at carpeted areas.
2. Section 09 65 00 - Resilient Flooring and Base: Rubber base at carpeted areas.
3. Section 09 68 16 – Tile Carpeting.

1.02 REFERENCES

A. Consumer Products Safety Commission:
1. CPSC 16 CFR 1630 - Standard for the Surface Flammability of Carpets and Rugs.

B. National Fire Protection Association:
1. NFPA 253 - Standard Method of Test for Critical Radiant Flux for Floor Covering Systems Using a Radiant Heat Energy Source.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate layout of joints, direction of carpet pile, patterns and colors, and location of edge moldings.

C. Product Data: Submit data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

D. Samples:
1. Submit two carpet tiles illustrating color and pattern design for each type and color of carpet selected.
2. Submit two 12 inch long samples of transition edge strip and accessories.

E. Manufacturer's Installation Instructions: Submit special procedures and perimeter conditions requiring special attention.

1.04 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, including:
1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to carpet.

1.05 QUALITY ASSURANCE

A. Surface Burning Characteristics:
   1. Floor Finishes: Comply with one of the following:
      a. Class I, minimum 0.45 watts/sq cm when tested in accordance with NFPA 253.
      b. CPSC 16 CFR 1630.

1.06 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section and is approved by manufacturer.
   1. FCIB or IFCI certified carpet installers or demonstrate compliance with certification program requirements.

1.07 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.08 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Store materials in area of installation for 48 hours prior to installation.

C. Do not install carpet until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

D. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet manufacturer.

1.09 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish additional 10% of each installed material type/color installed to Owner. Obtain receipt.

PRODUCTS

2.01 MANUFACTURERS

A. Tarkett Johnsonite Floor Covering, www.commerical.tarkett.com

B. Substitutions: None.

2.02 COMPONENTS

A. Roll Carpet: 100 percent nylon, tufted textured loop on synthetic cushion backing.
   1. Basis of design: Patterns and colors as scheduled; manufactured by Tarkett.
   2. Construction: Tufted.
   3. Primary Backing: Synthetic Non-Woven.
   4. Secondary Backing: Powerbond Cushion RS cushion backing with manufacture's Peel & Stick installation.
   5. Face Weight: 20 oz. per S.Y
   6. Finished Pile Height: 0.080".
   7. Fiber System: Dynex® Nylon.
   8. Dye Method: Solution dyed/yarn dyed.
   9. Stain Repel and Soil Release: Manufacturer's Eco-Ensure (Fluorine-Free Soil Protection) treatment.
   10. Flammability: Class I per ASTM E662.

B. Entry Mat Carpet (walk-off carpet): 100% TDX® Nylon.
   1. Basis of Design: Assertive Action 100% recyclable as manufactured by Tandus.
   2. Roll Width: 6 feet or wider.
   3. Primary Backing: Non-woven synthetic fiber.
   4. Construction Type: Symtex®.
   5. Dye Method: 100% Solution Dyed.
   6. Soil/Stain Protection: Eco-Ensure.
   7. Gauge: 1/10.
   8. Color(s) as indicated in the Color/Finish Schedule.
   9. Warranty: Lifetime stain-resistance and 20-year wear warranty.
      a. Manufacturer's Warranties:
   10. Lifetime antimicrobial protection.
   11. Lifetime anti-stain protection.
   12. Lifetime edge ravel protection.
   13. Lifetime face fiber wear.
   14. Lifetime antistatic.
   15. Lifetime cushion delamination and resiliency.

2.03 ACCESSORIES

A. Subfloor Filler: Self-leveling latex-modified cementitious type, ARDEX SD-F "Feather Finish" as manufactured by Ardex Engineered Cements.

B. Subfloor Primer: Compatible with carpet material and recommended by carpet manufacturer.

C. Moldings and Edge Strips: Extruded aluminum, clear anodized; height as required to protect carpet edge.

EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify floor surfaces are smooth and flat within tolerances specified in Section 03 30 00 and are ready to receive work.

C. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:
   1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by the carpet manufacturer.
   2. Arrange for the Owner's independent testing laboratory to perform calcium-chloride testing or deep-probe moisture meter testing per ASTM-F2170 for new and existing substrates for each area receiving the specified floor finish. Provide written test results to the Architect.
   3. Subfloor finishes comply with requirements specified in Section 03 30 00 for slabs receiving carpet.
   4. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

3.02 PREPARATION

A. Remove coatings, including curing compounds and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by the carpet manufacturer.

B. Remove sub-floor ridges and bumps. Fill minor low spots, cracks, joints, holes, and other defects with trowel-applied sub-floor filler to achieve smooth, flat, hard surface. Prohibit traffic until filler is cured

C. Clean subfloor and apply flooring manufacturer's recommended primer as required to prevent "bleed-thru" or interference with adhesion by substances that cannot be removed.

D. Broom and vacuum clean primed subfloor immediately prior to installing carpet. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 SHEET CARPET INSTALLATION

A. Primer: Apply primer to concrete substrate as recommended by manufacturer.

B. Carpet:
   1. Verify carpet match before cutting to ensure minimal variation between dye lots.
   2. Adhere carpet using manufacturer's peel and stick self-adhesive backing.
   3. Lay out carpet and locate seams in accordance with CRI 104 section 7.2:
      a. Locate seams in area of least traffic, out of areas of pivoting traffic, and parallel to main traffic.
      b. Do not locate seams perpendicular through door openings.
      c. Align run of pile in same direction as anticipated traffic and in same direction on adjacent pieces.

d. Locate change of color or pattern between rooms under door centerline.
e. Provide monolithic color, pattern, and texture match within each contiguous area.

4. Install carpet tight and flat on subfloor. Trim carpet neatly at walls and around interruptions.
5. Double cut carpet seams.
   a. Make cuts straight, true, and unfrayed.
      1) Apply a bead of carpet manufacturer's seam sealer to carpet edges at proper height to seal all edges. Thoroughly clean all seams. Ensure that seams are seam straight, not overlapped or peaked, and free of gaps.
      2) Roll with 100 lb. roller for complete contact of carpet backing to floor and with uniform appearance.
6. Complete installation of edge strips, concealing exposed edges.

3.04 WALKOFF CARPET INSTALLATION

A. Primer: Apply primer to concrete substrate as recommended by manufacturer.

B. Carpet:
1. Do not mix carpet from different cartons unless from same dye lot.
2. Cut carpet cleanly, fitting tight to intersection with vertical surfaces without gaps.
3. Adhere carpet using cold-applied latex adhesive, applied with manjrecommended notched trowel.
4. Trim carpet tile neatly at walls and around interruptions.
5. Roll installed carpet with 100 lb. roller for complete contact of carpet backing to floor.
6. Complete installation of edge strips, concealing exposed edges.

3.05 CLEANING AND MANUFACTURER'S INSPECTION

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess adhesive or seam sealant from floor, base, and wall surfaces without damage.

C. Replace any damaged or stained carpet that cannot be cleaned to the satisfaction of the Architect.

D. Thoroughly clean and vacuum all carpet surfaces.

E. Arrange for carpet manufacturer's local area representative to inspect the completed installation and provide written report to Architect indicating any deviations from the project specifications.

END OF SECTION

SECTION 09 72 00

WALL COVERINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Synthetic fabric wall covering as scheduled.

B. Related Sections:
   1. Section 09 21 16 - Gypsum Board Assemblies: Wall substrate.

1.02 REFERENCES

A. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. National Fire Protection Association:
   1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.
   2. NFPA 265 - Standard Methods of Fire Tests for Evaluating Room Fire Growth Contribution of Textile Coverings on Full Height Panels and Walls.

C. Underwriters Laboratories Inc.:
   1. UL 723 - Tests for Surface Burning Characteristics of Building Materials.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data on covering and adhesive.

C. Shop Drawings: Indicate wall elevations with seaming layout.

D. Samples: Submit two samples of each selected wall covering, 12x12 inch in size illustrating color, finish, and texture.

E. Manufacturer's Installation Instructions: Submit special installation procedures and perimeter conditions requiring special attention.

1.04 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit data on cleaning, touch-up, and repair of covered surfaces.

1.05 QUALITY ASSURANCE

A. Surface Burning Characteristics:
   1. Comply with one or both of the following:
      a. Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.
      b. Comply with requirements of applicable code when tested in accordance with NFPA 265 Method A or Method B test protocols.
         1) City of Houston: Approved for vertical wall applications per the City of Houston.

1.06 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section and approved by manufacturer.

1.07 MOCK-UP

A. Section 01 40 00 - Quality Requirements: Mock-up requirements.

B. Install full-size mock-up of each type of wall covering specified in location designated by Architect; include substrate preparation, trim and accessories, and seaming.
   1. Approved mock-up will be used as standard of quality to evaluate remainder of work.

C. Approved mock-up may be incorporated into the work.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver materials to site in unbroken and undamaged original factory wrappings, clearly labeled with the manufacturer's identification label, quality or grade, and lot number.

C. Inspect roll materials on site to verify acceptance.

D. Protect packaged adhesive from temperature cycling and cold temperatures.

E. Store material in a flat position; do not store roll goods on end; do not cross stack material; support material off the floor in a manner to prevent sagging and warping.

1.09 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. Do not apply materials when surface and ambient temperatures are outside temperature ranges required by adhesive or wall covering product manufacturer.

C. Maintain these conditions 24 hours before, during, and after installation of adhesive and covering.

D. Provide lighting level of 80 ft candles measured mid-height at substrate surfaces.

PART 2 PRODUCTS

2.01 WALL COVERINGS

A. Vinyl Sheet.
   1. Basis of Design: Color/Pattern as scheduled, and as manufactured by MDC, www.mdcwall.com
   2. Type: Type ll commercial grade white color, smooth, matte-faced vinyl on poly-cotton osnaburg backing.
   3. Color/Pattern: As indicated on the Material Schedule.
   4. Product Weight: 20-oz. per square yard.
   5. Width: 52/54”
   6. Additives:
      a. Mildew inhibitors to pass ASTM G21
      b. Factory-applied Teflon film.
   7. Fire Rating: Class A with Flame Spread of 10 and Smoke Developed 40.

2.02 ACCESSORIES

A. Adhesive: Use only type recommended by wall covering manufacturer. Adhesive shall be rated mildew resistant by the manufacturer.

B. Release Coat: Provide sealer or undercoat for new gypsum wallboard substrates as recommended by wallcovering manufacturer.

C. Substrate Filler: As recommended by adhesive and wall covering manufacturers; compatible with substrate.

D. Substrate Primer and Sealer: Type recommended by wall covering manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces are ready to receive work and conform to requirements of covering manufacturer.
   1. Gypsum board shall be finished to Standard Level 4 finish or better in accordance with Section 09 21 16.

C. Measure moisture content of surfaces using electronic moisture meter. Do not apply coverings unless moisture content of surfaces is below the following maximums:
   1. Plaster and Gypsum Wallboard: 5-percent.
   2. Masonry, Concrete, and Concrete Unit Masonry: 12-percent.
   3. Wood Surfaces: 15-percent, measured in accordance with ASTM D4442.

D. Verify flatness tolerance of surfaces does not vary more than 1/8 inch (3.18 mm) in 10 feet (304.8 cm) nor vary at rate greater than 1/16 inch (1.59 mm)/ft.

E. Verify substrate surfaces are clean, dry, smooth, structurally sound and free from surface defects and imperfections that would show through the finished surface.

F. Evaluate all marked, stained, or painted surfaces for the possibility of pigment bleed-through.

G. Beginning wall covering installation indicates acceptance of substrates and conditions.

3.02 PREPARATION

A. Prepare surfaces in accordance with manufacturer's instructions.

B. Fill cracks in substrate and smooth irregularities with filler; sand smooth.

C. Wash impervious surfaces with tetra-sodium phosphate, rinse and neutralize; wipe dry.

D. Surface Appurtenances: Remove electrical plates, hardware, light fixture trim, escutcheons, and fittings prior to preparing surfaces or finishing.

E. Surfaces: Correct defects and clean surfaces which affect work of this section. Remove existing coatings that exhibit loose surface defects.

F. Marks: Seal with shellac those which may bleed through surface finishes.

G. Apply primer sealer to substrate surfaces as required, in accordance with manufacturer's instructions. Allow to dry. Lightly sand smooth.

H. Vacuum clean surfaces free of loose particles.

I. Store unpackaged wall covering in environmentally controlled areas of installation a minimum of 24 hours before applying to finish surfaces.

J. Inspect and confirm product for uniform color, texture and quality.

3.03 INSTALLATION

A. Install wallcovering with long dimension vertical. Lay out accurately between corners, jambs, walls, or other interruptions to equalize spacing of joints.
   1. Do not locate joints at or within 2" of inside corners or within 6" of outside corners.
   2. Install seams vertically and plumb. Horizontal seams are not acceptable.

B. Use covering in roll number sequence. Change run numbers at partition breaks and corners only.

C. Razor trim edges on flat worktable, changing blade often to prevent rough cut edges. Do not razor cut on gypsum board surfaces.

D. Wall coverings shall be fully adhered to substrates using manufacturer's recommended adhesive capable of permanently supporting the weight of the wallcovering material to the particular substrate. Apply adhesive uniformly to back of wallcovering. Install wallcovering with full substrate bond, smooth, clean without wrinkles, gaps, or overlaps. Eliminate air pockets and ensure full bond to substrate surface.

E. Place wallcovering panels consecutively in the same order as cut from rolls. Install rolls in consecutive order as numbered by the manufacturer.
   1. Trim selvages as required to assure color uniformity and pattern match at seams.
   2. Patterns shall come from same lot.
      a. Overlap and double-cut seams through overlapped edges, lifting and removing underlayer after cutting. Lay down seams butted tightly together smoothly and apply hand roller to flatten and smooth. Cut wallcovering neatly to all penetrations.

F. Remove excess adhesive while wet from seam before proceeding to next covering panel. Wipe clean with dry cloth.

G. Trim wall covering 3/4” below top of resilient base.

3.04 CLEANING

A. Reference Section 01 70 00 - Execution and Closeout Requirements: Final cleaning

B. Clean wallcovering of all adhesive, dirt, stains, or marks. Reinstall wall plates and any other removed accessories.

C. Clean coverings of excess adhesive, dust, dirt, and other contaminants.

D. Reinstall wall plates and accessories removed prior to work of this section.

E. Package and deliver to the Owner any partial or full rolls or usable scrap material.

END OF SECTION

SECTION 09 77 00

FRP WALL PANELS

PART 1 GENERAL

1.01 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2022.

1.02 SUMMARY

A. Section Includes: FRP pre-laminated wall panels.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Include physical characteristics, installation methods for each different type of substrate, and maximum permissible moisture content of substrates.

C. Shop Drawings: Show location and extent of wall panels, panel terminations, installation details, and elevations showing nonstandard conditions.

D. Samples for Initial Selection: For initial selection of color, pattern and surface texture, provide the manufacturer's standard color chips consisting of actual sections of each FRP wall panel and vinyl plastic material required showing the full range of materials, colors, and textures available.

E. Samples for Verification: Provide the following samples for verification of compliance with requirements indicated. Prepare samples from the same material to be used in the Work.
   1. 6 inch (152.4 mm) by 6 inch square samples of each wall panel material required for verification of color, pattern, and texture selected.
   2. 12 inch (304.8 mm) long sample of each molding accessory.

F. Product Test Reports: From a qualified independent testing laboratory showing compliance of FRP wall panel materials with requirements indicated based on tests performed by the laboratory within the past five years.

G. Maintenance data for FRP wall panel material components for inclusion in the operating and maintenance manuals specified in Division 1.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has previously installed FRP wall panel materials similar in design and extent to the materials required on this Project.

B. Fire Performance Characteristics: Provide FRP wall panels that are identical to those tested in accordance with ASTM E84 for the fire performance characteristics indicated below. Identify wall panel materials with appropriate markings from the testing and inspection organization.

1. Flame Spread: 25 or less.
2. Smoke Developed: 450 or less.

C. Single Source Responsibility: Obtain each color, texture, grade, finish, and type of FRP wall panel material from a single source with resources to provided products of consistent quality in appearance and physical properties without delaying progress of the Work.

1.05 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to Project site in original factory wrappings, clearly labeled with identification of manufacturer, brand name, lot number, quality or grade, and fire hazard classification.

B. Store materials inside in original undamaged packages in a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity. Do not store rolled goods upright; lay flat, blocked off the ground to prevent sagging and warping.
1. Maintain room temperature within the storage area at not less than 70 degrees Fahrenheit (21.11 degrees Celsius) during the period FRP wall panel and accessory materials are stored. Keep material out of direct sunlight to avoid surface distortion.

1.06 PROJECT CONDITIONS

A. Environmental Conditions: Do not install FRP wall panel material until the space to receive the wall panel material is enclosed and weatherproof. Do not install materials until the ambient temperature within the building is maintained and stabilized at not less than 70 degrees Fahrenheit (21.11 degrees Celsius) for not less than 72 hours prior to beginning of the installation.

1.07 SEQUENCING AND SCHEDULING

A. Schedule installation with other construction activities to minimize the possibility of damage and soiling during the remainder of the construction period.

1.08 MAINTENANCE

A. Maintenance Instructions: Provide the manufacturer's instructions for maintenance of installed work. Include recommended methods and frequency for maintaining materials in optimum condition under anticipated traffic and use conditions. Include precautions against cleaning materials and methods that may be detrimental to finishes and performance.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Products:
1. Fire-X Glasbord, Kemlite Company, www.kemlite.com.
2. Substitutions: 01 16 00 - Product Requirements.

2.02 FRP WALL PANELS

A. Wall Panels: Provide manufacturer's standard FRP wall panels. Panels shall consist of 0.09 inch (2.29 mm) thick, textured, USDA approved panel.

B. Sheet Size: Typically 4 X 9 feet (274.32 cm).

C. Colors and Textures of Plastic Material: Provide plastic material that matches color and texture indicated by reference to the manufacturer's standard color and texture designation.

D. Adhesive: Provide the type of adhesive recommended by the manufacturer for use with the wall panel material on the substrate indicated.

E. Trim: Provide extruded, impact-resistant, vinyl plastic trim members matching color of wall panel materials.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates scheduled to receive FRP wall panel materials for compliance with manufacturer's requirements and conditions affecting performance.
   1. Wall surfaces to receive FRP wall panel materials shall be dry and free from dirt, grease, loose paint, and scale.
   2. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. General: Prior to installation, clean substrate to remove dust, debris, and loose particles. Provide skim coat over rough walls to smooth surface.
   1. Complete all finishing operations, including painting, before beginning installation of FRP wall panel materials.
   2. Test masonry and plaster substrates to receive FRP wall panel with an electronic moisture meter. Moisture content shall be within manufacturer's recommended limits.
   3. Prime and seal substrates, if required, in accordance with the FRP wall panel material manufacturer's recommendations for the type of substrate.

3.03 INSTALLATION

A. General: Install FRP wall panel materials in accordance with manufacturer's recommendations using adhesive recommended for use over the substrate.
   1. Moldings: Furnish moldings for perimeter edging where indicated. Install moldings in the longest practical lengths. Tightly butt end joints and miter corners.
   2. Installation Type: full wall height, from top of wall base to 8 inches (203.2 mm) above ceiling.

3.04 CLEANING

A. General: Immediately upon completion of installation, clean FRP wall panels and accessories using a manufacturer's recommended cleaning agent. Clean moldings in accordance with the manufacturer's recommendations.

B. Remove excess adhesive, using methods and materials recommended by manufacturer.

C. Remove surplus materials, rubbish, and debris resulting from installation upon completion of work, and leave areas of installation in neat, clean condition.

END OF SECTION

SECTION 09 77 23

FABRIC WRAPPED ACOUSTICAL WALL PANELS

GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Fabric-wrapped acoustical wall panels, absorptive type for acoustical panels mounted below above 9 ft. from finish floor level.
   2. Fabric-wrapped impact resistant wall panels for acoustical panels mounted below 9 ft. from finish floor level.

1.02 SUBMITTALS

A. Shop Drawings: Submit shop drawings showing layout and components, including details of hanging method for wall panels and suspension method for baffles, accessories. Identify each panel and baffle as to size, type, and fabric.

B. Product Data: Submit manufacturer's technical data for each type of acoustical panel and baffle required.

C. Submit manufacturer's standard size swatches of scheduled fabric for each type of panel and facing material required.

D. Certified Test Reports: Submit test data from an independent testing agency, acceptable to authorities having jurisdiction, evidencing that panel assemblies comply with requirements indicated for fire performance characteristics.

E. Certificates: Submit certificates from manufacturers of acoustical panels attesting that their products comply with specified requirements including those for fire performance characteristics.

1.03 QUALITY ASSURANCE:

A. Fire Performance Characteristics: Provide acoustical panels, with surface-burning characteristics as indicated below, which have been determined by testing assemblies of identical materials and construction according to ASTM E 84 by a testing organization acceptable to authorities having jurisdiction.
   1. Flame Spread: 25 or less.
   2. Smoke Developed: 450 or less.

1.04 PRODUCT HANDLING:

A. Protect acoustical wall panels from excessive moisture in shipment, storage, and handling. Deliver in unopened bundles and store in a dry place with adequate air circulation. Do not deliver material to building until "wet work" such as concrete and plaster have been completed and cured to a condition of equilibrium.

1.05 PROJECT CONDITIONS:

A. Do not begin installation until spaces to receive acoustical panels have been enclosed and maintained at approximately the same humidity and temperature conditions as planned for occupancy. Maintain temperature and humidity as recommended by panel manufacturer.

1.06 EXTRA MATERIALS:

A. Deliver extra materials to Owner. Furnish extra materials described below matching products installed, packaged with protective covering for storage and identified with appropriate labels:
   1. Fabrics: Furnish quantity of each fabric equal to 5.0 percent of each type of fabric installed.
   2. Fabric shall be provided in continuous rolls, packaged for storage.

PART 2 PRODUCTS

2.01 GENERAL

A. MANUFACTURERS: Subject to compliance with requirements, approved manufacturers include the following:
   1. Acoustical Surfaces, Inc. www.soundsilencer.com
   2. Conwed, Inc.
   3. Decoustics. www.decoustics.com
   4. Golterman & Sabo, www.golterman.com
   5. Lamvin http://www.lamvin.com
   6. MBI Products Company, www.mbiproducts.com
   7. Wall Technology. www.walltechnology.com

2.02 FABRICATION - GENERAL:

A. Fabricate panels to sizes and configurations indicated; attach facing materials to cores to produce installed panels with visible surfaces fully covered and free from wrinkles, sags, blisters, seams, adhesive or other foreign matter.
   1. Fabricate back-mounted panels in factory to sizes required to fit wall surfaces based on field measurements of completed substrates indicated to receive wall panels.
   2. Fabricate suspended baffles in factory to indicated sizes, complete with hanging system.
   3. Each panel shall be faced with approved fabric bonded directly to the panel face and edges. Provide panels with flat, wrinkle-free surface, and tailored corners.

B. Provide panel manufacturer's accessories for securely mounting panels of type and size indicated to substrates provided and complying with the following requirements:
   1. Provide manufacturer’s 2-part zee-clips with one part screw- fastened to back of panel and receiving part fastened to wall using appropriate anchoring. In addition provide heavy-duty Velcro anchoring to stabilize panel and provide resistance to removal.
   2. Unless indicated otherwise, anchoring system shall be designed to hold back of panel within 1/4” of wall surface.

2.03 ACOUSTICAL WALL PANELS:

A. Sound Absorption Performance: Provide acoustical panels with noise reduction coefficients (NRC) indicated as determined by testing per ASTM C 423 for mounting type specified under individual product requirements.

B. Octave Band Center Frequencies (Hz)/Nominal Absorption Coefficient: Panels tested at 2” thick shall have the following nominal octave band absorption coefficients within a tolerance of plus or minus 5% when mounted directly on a hard surface:
   a. 125/0.40
   b. 250/0.98
   c. 500/1.00
   d. 1000/1.00
   e. 2000/1.00
   f. 4000/1.00

C. Back-Mounted Edge-Reinforced Acoustical Wall Panels: Manufacturers standard panel construction consisting of scheduled fabric laminated to front, edges and back border of molded glass fiber board core, with edges chemically hardened to a minimum depth of 1/8" to reinforce panel perimeter against warping and edge damage. structural framing using wood, plastic, or metal will not be accepted:

D. Typical Panels:
   1. Core Density: 7 lbs. per cu. ft.
   2. Panel Face Size: As indicated, custom sizes.
   3. Panel Thickness: 2” thick unless otherwise indicated.
   4. Edge Detail: Square, fabric wrapped.
      a. Fabric:
         1) Custom Color(s) and pattern(s) as scheduled or selected during construction.
   5. Mounting: Provide 1” x 3” wood furring strips or metal furring channels.

E. Impact-Resistant Wall Panels:
   1. Use for panels mounted with any portion of panel installed at a height of less than 9'-0" above finish floor.
   2. Provide construction as specified above plus impact-resistant rigid fiberglass sheet laminated to front, edges, and back border of glass fiber board core.
   3. Color(s) and pattern(s) as scheduled or selected during construction.
   4. Mounting: Provide 1” x 3” wood furring strips or metal furring channels.

PART 3 EXECUTION

3.01 INSTALLATION:

A. Install acoustical wall panels in locations indicated with vertical surfaces and edges plumb, top edges level, and in alignment with other panels,
   1. Scribe to fit adjoining work accurately at borders and at penetrations.
   2. Comply with panel manufacturer's printed instructions for installation of panels using type of mounting accessories as specified above.

3. Remove and replace panels which are damaged and are unacceptable to Architect.

END OF SECTION

SECTION 09 77 33

CEMENTITIOUS WOOD FIBER ACOUSTIC PANELS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Cementitious wood fiber acoustical wall-mounted panels.

B. Related Sections:
   1. Section 09 90 00 – Painting and Coating: For field-painted finish of cementitious wood fiber panels.

1.02 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit manufacturer's technical data for each type of cementitious wood fiber wall panel required.

C. Maintenance Procedures: Submit recommended procedures for normal cleaning and removal of stains including precautions in use of cleaning materials that may be detrimental to surfaces.

D. Samples: Submit minimum 6” x 6” sample panel for each wall panel type and color selected, showing full range of exposed texture to be expected in completed work. Samples shall have 2 fabricated edges and corner as specified.

E. Test Reports and Certifications: Submit certified test reports from recognized test laboratories. Submit manufacture’s certificate that products meet or exceed specified requirements, including fire, smoke, and acoustical ratings.

1.03 QUALITY ASSURANCE

A. Fire Performance Characteristics: Provide cementitious wood fiber wall panels, with surface-burning characteristics as indicated below, which have been determined by testing assemblies of identical materials and construction according to ASTM E 84 Standard Test Method for Surface Burning Characteristics of Building Materials by a testing organization acceptable to authorities having jurisdiction.
   1. Flame Spread: 25 or less.
   2. Smoke Developed: 450 or less.

B. Acoustical Performance: Provide panels with acoustical ratings of minimum 0.75 per inch thickness.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect cementitious wood fiber wall panels from excessive moisture in shipment, storage, and handling.
   1. Deliver in unopened cartons and store in a dry place with adequate air circulation. Open cartons at each end during storage to stabilize moisture content and temperature.
   2. Do not deliver material to building until "wet work" such as concrete and plaster have been completed and cured to a condition of equilibrium.
   3. Protect panels from soiling and abrasion on surfaces that will be exposed to view in final construction. Discard damaged panels at time of installation

1.05 PROJECT CONDITIONS

A. Do not begin installation until spaces to receive cementitious wood fiber wall panels have been stored within the area of installation.
   1. Maintain installation area at approximately the same humidity and temperature conditions as planned for occupancy at least 48 hours before beginning installation of panels.
   2. During and after installation maintain temperature and humidity as recommended by panel manufacturer.

PART 2 PRODUCTS

2.01 CEMENTITIOUS WOOD FIBER WALL PANELS

A. Manufacturers:
   1. Armstrong www.armstrongceilings.com.
   2. Substitutions: Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Basis of Design: Basis of Design: Tectum Finale direct-mount panels as manufactured by Armstrong.
   1. Cementitious Wood Fiber Panels: Manufacturer's standard precast panels composed of long, chemically-processed Aspen wood fibers bonded with inorganic hydraulic cement, pressure bonded with a uniform bottom face texture to provide shapes and sizes as required, with the following properties:
   2. Density: 30 to 45 lbs. per cu. ft. with maximum 10% moisture content; ASTM C 209.
   3. Fire Resistance: Tested and classified by UL for flame spread, fuel contribution and smoke classifications of not more than 25, 15 and 5, respectively; ASTM E 84.
   4. Cementitious wood fiber Absorption: NRC of 0.85 for 1-inch thickness; NRC of 0.70 for 2-inch thickness; ASTM C 423.

B. Fabrication
   1. General: Factory-fabricate the panels to sizes and configurations indicated and as follows:
      a. 1-1/2 inch thick cementitious panels in face sizes as indicated on the drawings.
      b. Edges: Factory-beveled or square as indicated.
   2. Finish: Manufacturer's factory white or off-white primer on exposed face and edges ready for field or shop painting.
   3. Perimeter Frame: None.

2.03 FINISHING

A. Panel Finishing: Field or shop painting provided under Section 09 90 00 Painting and Coating. Paint exposed face and edges minimum 2 coats using acrylic paint as recommended by the panel manufacturer.
   1. Provide custom paint color(s) as selected by the Architect.
   2. Provide number of coats necessary to provide complete hiding of raw wood fibers on all exposed surfaces.

B. Fastener Finishing: Paint heads of screws to match panels after installation.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install cementitious wood fiber wall panels in locations indicated with vertical surfaces and edges plumb, top edges level, and in alignment with adjacent panels.

B. Comply with panel manufacturer's printed instructions for installation of panels.

C. Panels direct to Drywall: Use flat-head self-drilling wall screws, spacing as recommended by the manufacturer, but no less than 12" o.c. along each stud. Set screw heads flush with panel face. Each panel must be fastened to at least two vertical studs.
   1. Where a panel width does not allow the panel to be fastened to at leas two studs, Install continuous horizontal bands of 16-ga. x 4” wide sheet metal across 3 or more metal studs prior to installation of gypsum board.
      a. Fasten sheet steel band using minimum of (2) bugle-head drywall screws at each stud. Dimple sheet metal at screw locations for flush heads to avoid interference with gypsum board installation.
      b. Provide continuous metal bands horizontally as required for mounting of panels with a minimum of two columns of fasteners, maximum 12” on center vertically.
   2. All screw heads to be field painted to match selected panel paint color.

D. Remove and replace panels which are damaged and are unacceptable to Architect.

3.02 CLEANING AND ADJUSTING

A. Clean exposed surfaces of panels and trim in accordance with manufacturer’s recommendations for cleaning.

B. Fill minor scratches or gouges and touch-up with matching paint.

END OF SECTION

SECTION 09 84 00

SUSPENDED ACOUSTICAL BAFFLES AND CLOUDS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Prefabricated modular acoustical baffle system in wave pattern suspended from overhead building structure.
   2. Prefabricated two-dimensional cloud circles suspended from overhead building structure.

B. Related Sections:
   1. 09 90 00 Painting and Coating: Finish painting of exposed and partially exposed floor or roof structure and decking prior to beginning work under this Section.

1.02 REFERENCES

A. ASTM International:
   1. ASTM C423 Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
   2. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials.
   3. ASTM E795 Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

1.03 PERFORMANCE DATA

A. Surface Burning Characteristics ASTM E84-15a:
   1. Rated Class A
   2. Flamespread: 0.
   3. Smoke Developed: 45.

B. Acoustics
   1. Noise Reduction Coefficient: Manufacture’s published NRC rating of minimum 0.50.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures.

B. Product Data:
   1. Submit product data sheet for specified products. Include performance criteria.
   2. Submit certified test reports showing compliance with specified performance requirements

C. Shop Drawings: Submit shop drawings showing layout and components, including suspension method, accessories, finish colors and textures.

D. Samples: Submit selection and verification samples of finishes, colors and textures.

1.05 DELIVERY, STORAGE & HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Delivery: Deliver materials in manufacturer’s original, unopened, undamaged containers with identification labels intact.

C. Storage and Protection: Store materials protected from exposure to harmful environmental conditions and at temperature and humidity conditions recommended by the manufacturer.

1.06 PROJECT CONDITIONS

A. A. Environmental Requirements: Do not install baffles or clouds until overhead work, including finish painting, is complete.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Autex Acoustics, www.autexacoustics.com

B. Substitutions: Section 01 60 00 - Product Requirements.

2.02 COMPONENTS

A. Acoustical Baffles: Frontier Talus™ Acoustic Fins as manufactured by Autex.
   1. Thickness: 1/2 inches (12 mm) unless indicated otherwise.
   2. Length: As indicated.
   3. Depth: Varies with wave pattern.
   4. Construction: Formed from 100% polyester fiber (PET) using minimum 60% recycled material.
   5. Color and Pattern: As indicated.
   6. End Caps: At open ends of suspension channels, provide manufacturer’s color-matching PET end caps.

B. Acoustical Circles: Frontier Horizon™ prefabricated circles as manufactured by Autex.
   1. Thickness: 1- inch.
   2. Construction: Formed from 100% polyester fiber (PET) using minimum 80% recycled material.
   3. Color and Pattern: As indicated.

C. Mounting Accessories: All-threaded steel rods and manufacturer’s mounting clips, aluminum channels, and cross rails.

2.03 LAYOUT

A. Parallel continuous panels at 12” centers unless indicated otherwise.

PART 3 - EXECUTION

3.01 MANUFACTURER'S INSTRUCTIONS

A. Comply with manufacturer's product data, including product technical bulletins, product catalog installation instructions and product carton instructions for installation.

3.02 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: coordination and project conditions.

B. Site Verification of Conditions: Verify that the supporting structure for suspension of acoustical baffles and clouds is acceptable for product installation in accordance with manufacturer's instructions.
   1. Do not install baffles or clouds until unsatisfactory conditions are corrected.
      a. Ensure that hangers are fastened as intended at each panel, are secured to panel core, and are fully capable of supporting at least 3 times the weight of the panel.

3.03 INSTALLATION

A. Suspend system manufacturer's 24 mm aluminum mounting channels from roof or floor structure using manufacturer's adjustable suspension set composed of fully-threaded steel rods or stainless steel aircraft cable as determined by the manufacturer for the particular installation. Utilize manufacturer's custom aluminum or stainless steel connectors. Mount channels perpendicular to planned run of acoustical baffles. For installations near exterior entries or HVAC vents, always use threaded rods to avoid wind movement of baffles or clouds.
   1. Space mounting channels at maximum 48". Provide suspension cables to each channel at maximum 48" spacing. Provide closer spacing of channels and or suspension cables where recommended by the system manufacturer for the specific substrate or system weight.
   2. Where floor or roof joist locations permit, suspend wires or threaded rods from bottom chord of joists. For cable installation, loop end of each wire around bottom chord of joists and secure loop with crimped sleeves. Use beam clamps where connecting wires or rods to "H"-shaped beam with flange.
   3. Where joist spacing does not allow for fastening to joists, use system manufacturer's recommended screws to fasten system mounting clips securely to metal floor or roof deck.

B. Anchor aluminum top cap of each baffle to suspended channels at 12" centers using manufacturer's removable twist-clips. as recommended by the manufacturer for the panel weight and length.

C. Suspend baffle panels at uniform height, with top edges of panels level and in-plane.

D. Suspend cloud panels at heigh(s) and locations as indicated.

3.04 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Follow manufacturer's instructions for cleaning materials soiled during installation. Replace baffles and clouds that cannot be cleaned and repaired to as-new condition.

END OF SECTION

SECTION 09 84 16

REFLECTIVE LAY-IN CEILING DIFFUSERS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Pyramidal-shaped ceiling diffusers for standard ceiling grid.
   2. Extent of diffusers is shown on drawings.

B. Related Sections:
   1. Section 09 51 13 – Acoustical Panel Ceilings: Ceiling grid for ceiling-mounted diffusers.

1.02 SUBMITTALS

A. Section 01 33 00 – Submittal Procedures: Submittal procedures.

B. Product Data: Submit manufacturer's technical data for each type of diffuser required.

C. Samples for Verification Purposes: Submit 12" square samples of each type of diffuser required. Include representative samples of installation devices and accessories.

D. Certificates: Submit certificates from manufacturers of diffusers attesting that their products comply with specified requirements including those for fire performance characteristics.

1.03 QUALITY ASSURANCE

A. Fire Performance Characteristics: Provide diffusers with surface-burning characteristics as indicated below, which have been determined by testing assemblies of identical materials and construction according to ASTM E 84 by a testing organization acceptable to authorities having jurisdiction.
   1. Flame Spread: 25 or less.
   2. Smoke Developed: 450 or less.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 – Product Requirements: Product storage and handling requirements.

B. Protect diffusers from excessive moisture in shipment, storage, and handling. Deliver in unopened bundles and store in a dry place with adequate air circulation. Do not deliver material to building until "wet work" such as concrete and plaster have been completed and cured to a condition of equilibrium.

1.05 ENVIRONMENTAL REQUIREMENTS

A. Section 10 60 00 – Product Requirements: Product storage and handling requirements.

B. Do not begin installation until spaces to receive diffusers have been enclosed and maintained at approximately the same humidity and temperature conditions as planned for occupancy. Maintain temperature and humidity as recommended by diffuser manufacturer.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers:
   1. Wenger Corp., www.wingercorp.com
   2. Kinetics Noise Control, www.kineticsnoise.com
   3. Wall Technology. www.walltechnology.com
   4. Conwed Designscape, www.conweddesignscape.com
   5. RPG Inc., www.rpginc.com
   6. Melhart Music, www.melhart.com
   7. Substitutions: Section 01 25 00 – Substitution Procedures

2.02 DIFFUSERS

A. Ceiling Suspended Pyramidal Diffusers: Pyramidal diffusers shall be constructed of 0.125-inch thick thermoformed plastic, molded into one-piece special offset pyramidal shape, nominal 4 x 4 foot size.
   1. Edges flanged for laying into standard ceiling grid as specified.

B. Acoustical Performance: Diffusers shall have a Noise Reduction Coefficient of 0.13 or below with an E-400 mounting according to ASTM E795.

C. Finish: Factory white color paint, lightly textured.

PART 3 EXECUTION

3.01 PREPARATION

A. Do not begin installation until all wet work, such as plastering, concrete, etc. is complete. The panels are designed for installation under standard occupancy conditions from 60 degrees F to 85 degrees F and at not more than 80 percent R.H. in an enclosed building.

3.02 INSTALLATION

A. Install diffusers in accordance with the manufacturer’s instructions.

B. Furnish all hardware and accessories necessary for complete installation.

C. Protection – Protect installed work from damage due to subsequent construction activity. Remove and replace diffusers which are damaged and are unacceptable to Architect.

END OF SECTION

SECTION 09 90 00

PAINTING AND COATING

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Surface preparation.

B. Field application of paints, interior.

C. Scope: Finish surfaces exposed to view, unless fully factory-finished and unless otherwise indicated.
   1. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.
   2. It is the intent of this Section that all exterior and interior materials normally requiring finish paint, coating, or stain/finishing as determined by the Architect, will be painted, coated, or stain/finished under this Section except for specialty coatings and finishes specifically covered under other Sections.
      a. Painting shall include but not be limited to the following:
         1) Unfinished Materials.
         2) Backpriming.
         3) Concrete.
         4) Masonry.
         5) Metals, including hidden surfaces and galvanized finishes.
         6) Woods and fabrications of wood.
         7) Sheet metal.
         8) Spray-fireproofed steel framing, metal deck.
         9) Gypsum board.
         10) Glass fiber reinforced gypsum plaster.
         11) Doors.
         12) Exposed piping, conduits, ducts, hangers, exposed steel and iron supports, panels, and surfaces of mechanical, electrical equipment and items that do not have a factory-applied final finish.
         13) Roof-top equipment.
         14) Miscellaneous items.
         15) Surfaces behind mirrors.
   3. Where the Bidder is uncertain of whether a specific item is intended to be painted,coated, or stain/finished, contact the Architect during the Bidding period for clarification.

D. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.
   1. Painting includes field painting of exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.
   2. Exposed Roof Decks:

a. Paint galvanized roof deck and exposed structure.

E. Do Not Paint or Finish the Following Items:
1. Items factory-finished unless otherwise indicated; materials and products having factory-applied primers are not considered factory finished including but not limited to the following:
a. Plastic laminate faced casework and millwork.
b. Acoustical wall panels.
c. Toilet compartment doors and partitions.
d. Metal lockers.
e. Finished mechanical and electrical equipment, unless roof-top equipment visible from ground level.
f. Light fixtures.
2. Items indicated to receive other finishes.
3. Items indicated to remain unfinished.
4. Fire rating labels, equipment serial number and capacity labels, bar code labels, and operating parts of equipment.
5. Floors, unless specifically indicated.
6. Glass.
7. Concealed pipes, ducts, and conduits.
8. Concealed surfaces including walls or ceilings in the following generally inaccessible spaces:
a. Foundation spaces.
b. Furred areas.
c. Ceiling plenums.
d. Utility tunnels.
e. Pipe spaces.
f. Duct shafts.
g. Elevator shafts.
9. Finished metal surfaces including the following:
a. Anodized aluminum.
b. Stainless steel.
c. Chromium plate.
d. Copper and copper alloys.
e. Bronze and brass.
10. Operating parts include moving parts of operating equipment and the following:
a. Valve and damper operators.
b. Linkages.
c. Sensing devices.
d. Motor and fan shafts.

1.02 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; current edition.

B. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating; 2023.

C. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials; 2020.

D. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual; Current Edition.

E. SSPC-SP 1 - Solvent Cleaning; 2015, with Editorial Revision (2016).

F. SSPC-SP 2 - Hand Tool Cleaning; 2018.

G. SSPC-SP 6 - Commercial Blast Cleaning; 2007.

H. SSPC-SP 13 - Surface Preparation of Concrete; 2018.

1.03 ADMINSTRATIVE REQUIREMENTS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.04 DEFINITIONS

A. Conform to ASTM D16 for interpretation of terms used in this section.
   1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85-degree meter.
   2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60-degree meter.
   3. Semigloss and satin refer to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60-degree meter.
   4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60-degree meter.

1.05 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide complete list of products to be used, with the following information for each:
   1. Manufacturer's name, product name and/or catalog number, and general product category (e.g., "alkyd enamel").
   2. MPI product number (e.g., MPI #47).
   3. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference to specified paint system products to be used in project; include description of each system. Identify each material by manufacturer's catalog number and general classification.
   4. Manufacturer's installation instructions.
   5. Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.
   6. VOC content.

C. Samples: For each color and material to be applied, with texture to simulate actual conditions, on representative Samples of the actual substrate.
   1. Provide stepped Samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing Samples for review. Resubmit until required sheen, color, and texture are achieved.
   2. Provide a list of materials and applications for each coat of each Sample. Label each Sample for location and application.

D. Submit two Samples on the following substrates for Architect's review of color and texture only:
   1. Concrete: 4 inch square Samples for each color and finish.
   2. Concrete Unit Masonry: 4 x 8 inch Samples of masonry, with mortar joint in the center, for each finish and color.
   3. Painted Wood: 12 inch square Samples for each color and material on hardboard.
   4. Stained or Natural Wood: 4 x 8 inch Samples of natural or stained wood finish on representative surfaces.

E. Paint Schedule: Submit schedule of proposed paint type and sheen for each room. Use room names and numbers as appearing in the Architect’s drawings.

F. Maintenance Data: See Section 01 70 00 - Execution and Closeout Requirements: *Closeout procedures.* Submit data including finish schedule showing where each product/color/finish was used, product technical data sheets, material safety data sheets (MSDS), care and cleaning instructions, touch-up procedures, repair of painted and finished surfaces, and color samples of each color and finish used.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 01 70 00 - Execution and Closeout Requirements*: Spare parts and maintenance products* for additional provisions.
   2. Extra Paint and Finish Materials:
      a. 10-gallons of each type and color used for walls, ceilings, steel doors, and exposed structure.
      b. 3-gallons of each type and color used for door frames, trim, and accents.
   3. Label each container with color in addition to the manufacturer's label.

H. Qualification Data: For firms and persons specified in the “Quality Assurance” Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.06 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for paints and coatings.

1.07 QUALITY ASSURANCE

A. Obtain primers and block fillers from the same manufacturer as the finish coats.

B. Applicator: Company specializing in performing work of this section on projects similar in materials, design, and extent to those of this project, and whose work has resulted in applications with successful in-service performance.

C. Sequencing:
   1. Section 01 10 00 - Summary: Work sequence.
   2. Sequence application to the following:
   3. Do not apply finish coats until paintable sealant is applied at all joints and transitions of differing material.
   4. Back prime wood trim before installation of trim.

1.08 MOCK-UP

A. See Section 01 40 00 - Quality Requirements, for general requirements for mock-up.

B. Provide a full-coat mock-up for each type of coating and substrate required. Comply with procedures specified in PDCA P5. Duplicate finish of approved sample Submittals.
   1. Architect will select one room or surface to represent surfaces and conditions for application of each type of coating and substrate.
      a. Wall Surfaces: Provide mock-up on at least 100 sq. ft.
      b. Small Areas and Items: Architect will designate items or areas required.
   2. Apply mock-up samples according to requirements for the completed Work, after permanent lighting and other environmental services have been activated. Provide required sheen, color, and texture on each surface.
      a. After finishes are accepted, Architect will use the room or surface to evaluate coating systems of a similar nature.

C. Final approval of colors will be from mock-ups.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

C. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

D. Paint Materials: Store at minimum ambient temperature of 45 degrees F (7 degrees C) and a maximum of 90 degrees F (32 degrees C), in ventilated area, and as required by manufacturer's instructions.

1.10 FIELD CONDITIONS

A. Do not apply materials when surface and ambient temperatures are outside the temperature ranges required by the paint product manufacturer.

B. Do not apply exterior coatings during rain or snow when relative humidity is outside humidity ranges, or moisture content of surfaces exceed those required by paint product manufacturer.

1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

C. Minimum Application Temperatures for Latex Paints: 45 degrees F for interiors; 50 degrees F for exterior; unless required otherwise by manufacturer's instructions.

D. Minimum Application Temperature for Varnish Finishes: 65 degrees F for interior or exterior, unless required otherwise by manufacturer's instructions.

E. Provide lighting level of 80 ft candle measured mid-height at substrate surface.

F. Follow manufacturer's recommended procedures for producing best results, including testing of substrates, moisture in substrates, and humidity and temperature limitations.

G. Provide lighting level of 80 fc (860 lux) measured mid-height at substrate surface.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Paints:
1. Pittsburgh Paints: www.ppgpaints.com/
2. Sherwin-Williams Company: www.sherwin-williams.com/
3. Benjamin Moore & Co: www.benjaminmoore.com/
4. Substitutions: See Section 01 60 00 - Product Requirements

B. Applications Schedules:
1. Reference Schedules under Part 3 below for locations and applications of specific paint systems, coatings, stains, finishes, and sealers for this Project.
2. Certain of the paint and coating systems specified in Part 2 may not be required or scheduled for this particular Project.

2.02 PAINTS AND FINISHES - GENERAL

A. Paints and Finishes: Ready-mixed, unless intended to be a field-catalyzed paint.
1. Provide paints and finishes of a soft paste consistency, capable of being readily and uniformly dispersed to a homogeneous coating, with good flow and brushing properties, and capable of drying or curing free of streaks or sags.
2. Supply each paint material in quantity required to complete entire project's work from a single production run.
3. Do not reduce, thin, or dilute paint or finishes or add materials unless such procedure is specifically described in manufacturer's product instructions.

B. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

C. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified that are factory formulated and recommended by manufacturer for application indicated. Paint-material containers not displaying manufacturer's product identification will not be acceptable.

1. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated

D. Alternate Manufacturers: Sherwin-Williams products are specified. Equivalent products by listed manufacturers are acceptable upon approval by Architect.
   1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

E. Colors: As indicated in the Color Schedule in the Drawings.
   1. Provide custom colors of the finished paint systems to match the Architect’s samples. If other manufacturer’s materials cannot match the color, finish, sheen or light reflectance or the Architect’s approval, the named manufacturer’s products shall be required. The Architect’s decision will be final.
   2. The Contractor is advised that certain special colors may be required for some of the Work. Such colors if required shall be furnished and installed at no additional cost.

F. Volatile Organic Compound (VOC) Content:
   1. Provide paints and finishes that comply with the most stringent requirements specified in the following:
      a. 40 CFR 59, Subpart D--National Volatile Organic Compound Emission Standards for Architectural Coatings (EPA Method 24).
         1) Flat Paints and Coatings: 50 g/L maximum.
         2) Nonflat Paints and Coatings: 150 g/L maximum.
         3) Dry-Fog Coatings: 400 g/L maximum.
         4) Primers, Sealers, and Undercoaters: 200 g/L maximum.
         5) Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L maximum.
         6) Zinc-Rich Industrial Maintenance Primers: 340 g/L maximum.
         7) Pretreatment Wash Primers: 420 g/L maximum.
         8) Floor Coatings: 100 g/L maximum.
         9) Shellacs, Clear: 730 g/L maximum.
         10) Shellacs, Pigmented: 550/L maximum.
   2. Determination of VOC Content: Testing and calculation in accordance with 40 CFR 59, Subpart D (EPA Method 24), exclusive of colorants added to a tint base and water added at project site; or other method acceptable to authorities having jurisdiction.

2.03 CONCRETE UNIT MASONRY BLOCK FILLERS

A. Concrete Unit Masonry Block Filler: Factory-formulated latex block fillers.

B. Sherwin-Williams; PrepRite Interior/Exterior Block Filler B25W25: Applied at a dry film thickness of not less than 8.0 mils per coat.

2.04 EXTERIOR PRIMERS

A. Exterior Metal Field Primers:
   1. Factory-formulated metal primer for galvanized or bare metal without shop primer.
      a. Sherwin-Williams; Pro-Cryl Universal Water Based Primer, B66 Series: Applied at a dry film thickness of 2.0 – 4.0 mils per coat.

2. Field Welds in Galvanized Metal:
   a. ZRC Worldwide “Galvilite” zinc-rich coating.

B. Shop Primers: Typically applied by steel or miscellaneous metals fabricator.
1. Verify compatibility of finish paint with shop-applied primers.
2. Reference Division 5 metals sections for special epoxy shop primers required at items specified or indicated to be shop primed and field painted with urethane alkyd enamel.

C. Exterior Concrete and Masonry Primer: Factory-formulated masonry primer for exterior application:
1. Sherwin-Williams; Loxon Masonry Primer A24W300: Applied at a dry film thickness of not less than 3.0 mils.

2.05 EXTERIOR FINISH COATS

A. Urethane Alkyd Enamel: Factory-formulated full-gloss urethane alkyd enamel for exterior application.
1. Sherwin-Williams; Industrial Urethane Alkyd Enamel, B54E51: Applied at a dry film thickness of 2.0 – 4.0 mils per coat.

B. Alkyd Enamel: Factory-formulated formulated full-gloss alkyd enamel for exterior application.
1. Sherwin-Williams; Industrial Enamel B-54WZ101: Applied at a dry film thickness of not less than 2.0 mils per coat.
2. Apply two (2) coats over specified primer.

C. Exterior Low-Luster Acrylic Paint: Factory-formulated low-sheen (eggshell) acrylic-latex paint for exterior application.
1. Sherwin-Williams; A-100 Exterior Latex Satin House & Trim Paint A82 Series: Applied at a dry film thickness of not less than 1.5 mils.
2. Apply two (2) coats over specified primer.

D. Concrete Curb Enamel:
1. Sherwin-Williams; H&C Concrete Sealer Solid Color solvent-based flat enamel (fire lane curbs).
2. Finish Coats: Two coats specified exterior full-gloss alkyd enamel.

2.06 INTERIOR PRIMERS

A. Interior Concrete and Concrete Masonry (CMU) Primer: Factory-formulated alkali-resistant acrylic-latex interior primer for interior application.
1. Sherwin-Williams; Loxon Concrete & Masonry Primer, A24W8300: Applied at a dry film thickness of not less than 3.0 mils per coat.
2. Use equivalent zero VOC primer when building will be occupied by students or staff within 5 days after application

B. Interior Gypsum Board Primer: Factory-formulated latex-based primer for interior application.
1. Sherwin-Williams; Pro Mar 200 Zero VOC Latex Primer B28W2600 Series: Applied at a dry film thickness of not less than 1.5 mils per coat.

C. High Performance Gypsum Board Primer: Factory-formulated acrylic primer for application under epoxy finish coats.

1. Sherwin-Williams; PrepRite 200 Latex Wall Primer B28W200 Series: Applied at a dry film thickness of not less than 1.0 mils per coat.

2.07 INTERIOR FERROUS METAL PRIMER: FACTORY-FORMULATED FOR GALVANIZED OR BARE METAL NOT SHOP PRIMED.

A. Sherwin-Williams; Pro Cryl Universal Water Based Primer B66 series: Applied at a dry film thickness of 2.0 – 4.0 mils per coat.

B. Reference Division 5 metals sections for special epoxy shop primers required at items specified or indicated to be shop primed and field painted with urethane alkyd enamel

2.08 INTERIOR DRYFALL UNDERCOAT: FACTORY-FORMULATED ACRYLIC UNDERCOAT FOR EXPOSED ROOF STRUCTURE, ROOF DECK, PIPING AND DUCTING THAT HAS NOT BEEN SHOP PRIMED.

A. Sherwin-Williams: Waterborne Acrylic Dry Fall, B42 Series.

2.09 INTERIOR FINISH COATS

A. Reference Schedule Information in Part 3 for specific usage of each paint system.

B. Interior Low-VOC Latex Enamel: Factory-formulated acrylic-latex interior enamel.
1. Sherwin-Williams; Pro Mar 200 Zero VOC Latex Enamel: Applied at a dry film thickness of not less than 1.7 mils per coat. Gloss, semigloss, and eggshell/satin as scheduled.
2. Sherwin-Williams; Pro Industrial Zero-VOC Acrylic Semigloss, B66W651 over shop primer: Applied at a dry film thickness of 2.5 – 4.0 mils per coat. Where specifically indicated for industrial finish.

C. Interior Dryfall Finish Coat: Factory-formulated acrylic finish coat for exposed roof structure, roof deck, piping, ducting, and cementitious wood fiber planks, both unprimed and primed.
1. Sherwin-Williams: Waterborne Acrylic Dryfall, B42 Series.

D. Urethane Alkyd Enamel: Factory-formulated full-gloss urethane alkyd enamel for interior application.
1. Sherwin-Williams; Industrial Urethane Alkyd Enamel, B54E51: Applied at a dry film thickness of 2.0 – 4.0 mils per coat.

E. Interior Semigloss Epoxy: Factory-formulated, two-component, waterbased, catalyzed epoxy resin for high performance applications.
1. Sherwin-Williams: Waterbased Catalyzed Epoxy B70-200 Series: Applied at a dry film thickness of not less than 2.5 mils per coat.

2.10 INTERIOR WOOD STAINS AND LACQUERS

A. 250 VOC Interior Wood Stain: Factory-formulated penetrating wood stain for interior application, 250 g/L VOC. Use where stain or color is specifically indicated, and verify with Architect:

B. Sherwin-Williams; Wood Classics Interior Oil Stain-250.

C. Interior Waterborne Polyurethane Varnish: Factory-formulated clear varnish, Gloss or Satin.

1. Sherwin-Williams; Wood Classics Waterborne Polyurethane Varnish, A68 Series: Applied at a dry film thickness of 0.8 - 1.0 mils per coat. Satin finish unless otherwise indicated

2.11 ACCESSORY MATERIALS

A. Accessory Materials: Provide primers, sealers, cleaning agents, cleaning cloths, sanding materials, and clean-up materials as required for final completion of painted surfaces. Linseed oil, shellac, turpentine, paint thinners and other materials not specifically indicated but required to achieve finishes specified; commercial quality.

B. Patching Material: Latex filler.

C. Fastener Head Cover Material: Latex filler.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Do not begin application of paints and finishes until substrates have been adequately prepared.

C. Verify that surfaces are ready to receive work as instructed by the product manufacturer.

D. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially affect proper application.

E. Test shop-applied primer for compatibility with subsequent cover materials.

F. Measure moisture content of surfaces using an electronic moisture meter. Do not apply finishes unless moisture content of surfaces is below the following maximums:
   1. Gypsum Wallboard: 12 percent.
   2. Plaster and Stucco: 12 percent.
   3. Masonry, Concrete, and Concrete Masonry Units: 12 percent.
   4. Interior Wood: 15 percent, measured in accordance with ASTM D4442.
   5. Concrete Floors and Traffic Surfaces: 8 percent.

3.02 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Manual" applicable to substrates indicated.

B. Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.
   1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved. Remove

C. Clean surfaces thoroughly and correct defects prior to application of paint, other surface treatments. Remove oil and grease before cleaning.
   1. Clean substrates of substances that could impair bond of paints,
   2. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
   3. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

D. Prepare surfaces using the methods according to manufacturer's written instructions for achieving the best result for each substrate under the project conditions.
   1. Provide barrier coats over incompatible primers or remove and re-prime.
   2. Cementitious Materials: Prepare concrete, concrete unit masonry, cement plaster, and mineral-fiber-reinforced cement panel surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
      a. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
      b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
      c. Clean concrete floors to be painted with a 5 percent solution of muriatic acid or other etching cleaner. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.

E. Remove or mask surface appurtenances, including electrical plates, hardware, light fixture trim, escutcheons, and fittings, prior to preparing surfaces or finishing.

F. Seal surfaces that might cause bleed through or staining of topcoat.

G. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

H. Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.

I. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
   1. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
   2. Use only thinners approved by paint manufacturer and only within recommended limits.

J. Painted Surfaces: When painting over surfaces that have been previously painted, prepare surfaces in accordance with paint manufacturer’s instructions, and verify with manufacturer that new coatings are compatible with the existing coatings.
   1. Provide adhesion testing of existing paint. Remove completely any loose, flaking, or non-adhering paint.
   2. Clean existing finishes of grease, oil, dust or other materials that may tend to adversely affect adhesion of new paint. Do not use cleaners that will leave a residue.

3. Remove by sanding any gloss or sheen on existing painted surfaces before application of paint. Remove all sanding dust.
4. Apply an alkyd bonding primer to all prepared existing painted surfaces prior to application of new paint. Use manufacturer's recommended epoxy primer for new epoxy painting. Verify proper primer for the specific application with the finish paint manufacturer and submit to the Architect.
5. Where encountering existing no-sheen finishes, primer may not be required if preparation of existing surfaces will produce sufficient bonding of new paint, as demonstrated to the Architect through industry standard pull testing.

K. If specified new coating is determined to be incompatible with exiting coatings, do not proceed, and notify Architect for direction.

L. Concrete:
1. Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.
2. Clean concrete according to ASTM D4258. Allow to dry.
3. Prepare surface as recommended by top coat manufacturer and according to SSPC-SP 13.

M. Masonry:
1. Remove efflorescence and chalk. Do not coat surfaces if moisture content, alkalinity of surfaces, or if alkalinity of mortar joints exceed that permitted in manufacturer's written instructions. Allow to dry.
2. Prepare surface as recommended by top coat manufacturer.
3. Clean surfaces with pressurized water. Use pressure range of 600 to 1,500 psi (4,140 to 10,350 kPa) at 6 to 12 inches (150 to 300 mm). Allow to dry.

N. Steel Substrates: Remove rust, oil, grease, dirt, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer but not less than the following:.
1. SSPC-SP 3, "Power Tool Cleaning."
2. SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
3. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."

O. Aluminum: Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.

P. Galvanized Surfaces:
1. Remove surface contamination and oils and wash with solvent according to SSPC-SP 1.
2. Remove all soluble and insoluble contaminants and corrosion from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints. Perform Sweep (Abrasive) Blasting per ASTM D 6386 to achieve a uniform anchor profile (1.0-2.0 mils).
3. Prepare surface according to SSPC-SP 2.

Q. Ferrous Metal:
1. Solvent clean according to SSPC-SP 1.

2. Shop-Primed Surfaces: Sand and scrape to remove loose primer and rust. Feather edges to make touch-up patches inconspicuous. Clean surfaces with solvent. Prime bare steel surfaces. Re-prime entire shop-primed item.
3. Remove rust, loose mill scale, and other foreign substances using methods recommended in writing by paint manufacturer and blast cleaning according to SSPC-SP 6 Commercial Blast Cleaning. Protect from corrosion until coated.
4. Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with same primer as the shop coat.

R. Wood: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand surfaces exposed to view smooth and dust off.
1. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before applying primer.
2. Sand surfaces that will be exposed to view, and dust off.
3. Prime, stain or seal wood to be painted immediately on delivery.
4. Prime edges, ends, faces, undersides, and backsides of wood.
5. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.
6. Back-prime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on back side.
    a. If transparent finish is required, backprime with spar varnish.
7. Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately on delivery.

S. Material Preparation: Mix and prepare paint

3.03 APPLICATION

A. Apply products in accordance with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual".
1. Paint colors, surface treatments, and finishes are indicated in the paint schedules.
2. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
3. Provide finish coats that are compatible with primers used.
4. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, grilles, convector covers, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.
5. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
6. Paint interior surfaces of ducts with a flat, non-specular black paint where visible through registers or grilles.
7. Paint back sides of access panels and removable or hinged covers to match exposed surfaces.
8. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.
9. Finish interior of wall and base cabinets and similar field-finished casework to match exterior.
10. Sand lightly between each succeeding coat and clean with tack-cloth.

B. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

C. Apply each coat to uniform appearance in thicknesses specified by manufacturer, to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
   1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.
   2. Omit primer over metal surfaces that have been shop primed and touchup painted.
   3. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure that edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
   4. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, and does not deform or feel sticky under moderate thumb pressure, and until application of another coat of paint does not cause undercoat to lift or lose adhesion.

D. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.
   1. Brushes: Use brushes best suited for type of material applied. Use brush of appropriate size for surface or item being painted.
   2. Rollers: Use rollers of carpet, velvet-back, or high-pile sheep's wool as recommended by manufacturer for material and texture required.
   3. Spray Equipment: Use airless spray equipment with orifice size as recommended by manufacturer for material and texture required.

E. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

F. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate to achieve dry film thickness indicated. Provide total dry film thickness of the entire system as recommended by manufacturer.

G. Mechanical and Electrical Work: Painting of mechanical and electrical work is limited to items exposed in occupied spaces.

H. Mechanical items to be painted include, but are not limited to, the following:
   1. Uninsulated metal piping.
   2. Uninsulated plastic piping.
   3. Pipe hangers and supports.
   4. Tanks that do not have factory-applied final finishes.
   5. Visible portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets.
   6. Duct, equipment, and pipe insulation having "all-service jacket" or other paintable jacket material.
   7. Mechanical equipment that is indicated to have a factory-primed finish for field painting.

I. Electrical items to be painted include, but are not limited to, the following:

1. Switchgear.
2. Panelboards.
3. Electrical equipment that is indicated to have a factory-primed finish for field painting.

J. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.

K. Prime Coats: Before applying finish coats, apply a prime coat, as recommended by manufacturer, to material that is required to be painted or finished and that has not been prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.

L. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.

M. Stipple Enamel Finish: Roll and redistribute paint to an even and fine texture. Leave no evidence of rolling, such as laps, irregularity in texture, skid marks, or other surface imperfections.

N. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

O. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

P. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.04 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for general requirements for field inspection.

B. Owner reserves the right to test installed work at any time and as often as Owner deems necessary during the period when paint is being applied:
1. Owner will engage a qualified independent testing agency to sample paint material being used. Samples of material delivered to Project will be taken, identified, sealed, and certified in the presence of Contractor.
2. Owner may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from Project site, pay for testing, and repaint surfaces previously coated with the noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

3.05 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Collect waste material that could constitute a fire hazard, place in closed metal containers, and remove daily from site.

3.06 PROTECTION

A. Protect finishes until completion of project.

B. Touch-up damaged finishes after Substantial Completion.

C. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.
   1. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

3.07 SCHEDULE - INTERIOR SURFACES (EXCEPT EPOXY)

A. Scheduling of paint types below is a general reference for the Project. Where specific paint types on the Color/Finish Schedule in the drawings vary from below, the Color/Finish Schedule shall govern.

B. Concrete (other than concrete masonry units): Provide the following paint systems over interior concrete:
   1. Primer: Specified interior concrete and masonry primer.
   2. Finish Coats: Interior low-VOC acrylic enamel.
      a. Semigloss finish in Classrooms and Laboratories.
      b. Eggshell/satin finish elsewhere unless otherwise scheduled.

C. Concrete Unit Masonry: Provide the following finish systems over interior concrete masonry units, except where scheduled for epoxy:
   1. Block Filler:
      a. Typical: 2 coats.
      b. Music and Theater: At Band, Practice Rooms, Shared Ensemble, orchestra, choir, stage, and auditorium provide 3-coats.
   2. Finish Coats: 2-coats specified interior low-VOC latex enamel, semigloss finish.

D. Gypsum Board Partitions: Provide the following finish systems over interior gypsum board partitions (unless otherwise scheduled):
   1. Primer: Specified interior gypsum board primer.
   2. Finish Coats: 2-coats specified interior low-VOC latex enamel.
      a. Semigloss finish in laboratory and prep.rooms, restrooms, custodial closets, wet areas and corridors.
      b. Satin finish in classrooms.
      c. Flat finish (black) at “Black Box” theater room.
      d. Light orange peel texture at all interior walls.

E. Gypsum Board Ceilings and Furrings: Provide the following finish systems over interior gypsum board ceilings and furrings in dry or normal humidity areas:
   1. Eggshell/Satin: Zero-VOC Latex Enamel Finish: Two finish coats over specified primer.
   2. Primer: Interior gypsum board primer.
   3. Finish Coats at typical dry or low humidity areas: 2-coats specified interior Eggshell/Satin low-VOC latex enamel.
   4. Finish Coats in wet or high humidity areas: 2-coats specified interior Semigloss low-VOC latex enamel.

F. Metals: Provide the following finish systems over exterior galvanized or non-galvanized metal surfaces indicated to be painted:
   1. Stair treads, risers, and stringers; railings; other items specifically indicated for urethane alkyd enamel.
      a. Two coats specified urethane alkyd enamel over specified primer or shop primer.
   2. Miscellaneous piping, bollards, equipment supports; loose lintels.
      a. Primer: Specified metal primer or shop primer.
      b. Finish Coats: Two coats specified exterior full-gloss alkyd enamel.
   3. Field Welds and Cuts in Galvanized Metals: Apply 2-coats of specified zinc-rich coating over wire-brushed and cleaned galvanized metal.
   4. Removable door mullions and wall hanger brackets: Spray apply satin black enamel to all surfaces of removable mullions (steel or aluminum), as well as their respective wall hanging brackets.
   5. Metals with intumescent paint: Coordinate with intumescent paint manufacture.

G. Exposed roof structure and roof deck (including piping, conduit, etc.): provide the following finish systems:
   1. Undercoat: Specified interior dryfall paint.
   2. Finish coat: Specify interior dryfall paint.

3.08 SCHEDULE - INTERIOR EPOXY COATINGS

A. Scheduling of paint type below is a general reference for the Project. Where specific paint types on the Color/Finish Schedule in the drawings vary from below, the Color/Finish Schedule shall govern.

B. Concrete Unit Masonry or Concrete: Provide the following epoxy system over interior concrete masonry or rubbed concrete:
   1. Semigloss Epoxy Finish: Two finish coats over specified primer.
      a. Block Filler: Concrete unit masonry block filler.
      b. Finish Coats: 2-coats specified interior water based semigloss epoxy finish.

C. Gypsum Board: Provide the following epoxy systems over interior gypsum board surfaces:
   1. Semigloss Epoxy Finish: Two finish coats over specified primer.
      a. Primer: Specified high performance gypsum board primer.
      b. Finish Coats: 2-coats specified interior water based semigloss epoxy finish.

3.09 SCHEDULE - INTERIOR TRANSPARENT COATINGS

A. Transparent Finished Woodwork: Provide the following catalyzed lacquer system over wood surfaces:
   1. Stain Coat: Specified interior oil wood stain where specifically indicated. Provide 1 or 2 coats as required to achieve selected uniform color.
   2. Finish Coats: 2-coats specified interior polyurethane satin finish.
   3. Lightly sand between all coats for best adhesion. Wipe with tack-cloth.

END OF SECTION

SECTION 09 96 53

ELASTOMERIC COATINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes surface preparation and application of elastomeric coatings to interior/exterior CMU surfaces where specifically indicated.

B. Related Sections:
   1. Section 09 90 00 – Painting and Coating:
      a. General preparation and painting requirements.
      b. Block filler for concrete masonry units to receive paint and coatings.

1.02 PERFORMANCE REQUIREMENT

A. Provide elastomeric coating systems with the following properties as determined by the test methods indicated:

B. Elongation at Break: Not less than 280 percent at 77 degrees Fahrenheit (25 degrees Celsius) and not less than 50 percent at 0 degrees Fahrenheit (-17.78 degrees Celsius) according to ASTM D412.

C. Low-Temperature Flexibility: Passes a 1/8 inch, 180 degree mandrel bend at minus 15 deg F at 20 mil (0.508 mm) dry film thickness according to ASTM C 711.

D. Water-Vapor Transmission: Not less than 2.0 perms according to ASTM E 96.

E. Wind-Driven Rain Resistance: No water penetration according to procedures in FS TT-C-555.

F. Minimum Solids Content by Volume: Not less than 45 percent.

1.03 SUBMITTALS

A. Product Data: For each elastomeric coating system specified. Include block fillers and primers.
   1. Material List: An inclusive list of each required coating material. Indicate each material and cross-reference the specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
   2. Manufacturer's Information: Manufacturer's technical information and instructions for handling, storing, and applying each coating material proposed for use.
   3. Certification by elastomeric coating manufacturer that products supplied comply with local regulations controlling use of VOCs.

B. Samples for Verification: Of each color and material to be applied, with texture to simulate actual conditions, on representative samples of actual substrate.
   1. Provide stepped samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing samples for review. Resubmit until required sheen, color, and texture are achieved.

2. Provide a list of materials and applications for each coat of each sample. Label each sample for location and application.
3. Submit samples on the following substrates for the Architect's review of color and texture only:
    a. Concrete, Masonry, and Stucco: Provide two 4 inch (101.6 mm) square samples of actual substrate material for each color and texture.
    b. Concrete Masonry: Two 8 inch (203.2 mm) square samples of concrete masonry, with mortar joint in the center, for each color and texture.

C. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

D. Product Test Reports: From a qualified independent testing and inspecting agency indicating compliance of elastomeric coatings with requirements based on comprehensive testing within the last 2 years of current product formulations.

E. Material Certificates: In lieu of agency test reports, when permitted by the Architect, certificates signed by manufacturers certifying that each material complies with requirements specified.

1.04 QUALITY ASSURANCE

A. Applicator Qualifications: Engage an experienced applicator who has completed coating system applications similar in material and extent to those indicated for this Project with a record of successful in-service performance.

B. Source Limitations: Obtain block fillers, primers, and other undercoat materials from the same manufacturer as the finish coats.

C. Benchmark Samples (Mockups): Provide full-coat benchmark finish samples of each type of coating and substrate required on the Project. Comply with procedures specified in PDCA P5. Duplicate finish of approved prepared Samples. Benchmark finish shall be applied by the Subcontractor responsible for the Project Work.
1. The Architect will select one exterior wall surface to represent surfaces and conditions for each substrate.
    a. Wall Surfaces: Prepare benchmark samples on at least 100 sq. ft. of wall surface.
2. After benchmark samples are approved, these surfaces will be used to evaluate coating systems.
3. Obtain the Architect's approval of benchmark samples before starting application of coatings.
4. Final approval of colors will be from benchmark samples, not samples submitted for verification.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the Project site in manufacturer's original, unopened packages and containers bearing the manufacturer's name and label, and the following information:
1. Product name or title of material.
2. Manufacturer's stock number and date of manufacture.
3. Contents by volume, for pigment and vehicle constituents.

4. Thinning instructions (if permitted).
5. Application instructions.
6. Color name and number.
7. Handling instructions and precautions.
8. VOC content.

B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 degrees Fahrenheit (7.22 degrees Celsius). Maintain containers used in storage of coatings in a clean condition, free of foreign materials and residue.
   1. Protect elastomeric coating materials from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily. Take necessary measures to ensure workers and work areas are protected from fire and health hazards resulting from handling, mixing, and applying coatings.

1.06 PROJECT CONDITIONS

A. Temperature Conditions: Apply coatings only when temperature of surfaces to be coated and surrounding air temperatures are between 50 and 90 degrees Fahrenheit (32.22 degrees Celsius), unless otherwise permitted by manufacturer's written instructions.

B. Weather Conditions: Do not apply coatings in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; or at temperatures less than 5 degrees Fahrenheit (-15 degrees Celsius) above the dew point; or to damp or wet surfaces.
   1. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before starting or continuing coating operation.

1.07 WARRANTY

A. Elastomeric Coating Warranty: Submit a written warranty, executed by the manufacturer, agreeing to repair or replace elastomeric coatings that fail within the specified warranty period. Failures include, but are not limited to, water penetration through the coating.

B. Warranty Period for Elastomeric Coatings: 10 years from the date of Substantial Completion.

1.08 EXTRA MATERIALS

A. Furnish extra elastomeric coating materials from the same production run as the materials applied in quantities described below. Package materials in unopened, factory-sealed containers for storage and identify with labels describing contents. Deliver extra materials to the Owner.
   1. Quantity: Furnish the Owner with an additional 5 percent, but not less than 1 gal. or 1 case, as appropriate, of each color applied.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Subject to compliance with requirements, provide one of the products for each condition indicated in the Coating Schedule, or a comparable product by other manufacturer.

B. Manufacturers Names: The following manufacturers are referred to in the Coating Schedule by use of shortened versions of their names, which are shown in parentheses:
   1. BASF Construction Chemicals, www.buildingsystems.basf.com
   2. PPG Industries, Inc. (PPG Pittsburgh Paints), www.pittsburghpaints.com
   3. Sherwin-Williams Co., www.sherwin-williams.com

2.02 CRACK FILLERS

A. Crack Fillers: Provide the manufacturer's standard factory-formulated acrylic emulsion crack fillers that are compatible with substrate and finish coat materials indicated.

B. Products: Subject to compliance with requirements, crack fillers that may be incorporated in the Work include, but are not limited to, the following:
   1. For cracks up to 1/16 inch (1.59 mm), provide the following:
      a. PPG Pittsburgh Paints: Perma-Crete 4-1002/4-1003 Brush Grade.
      b. Sonneborn: Hydrocide 750 Brush Grade or Knife Grade Patching Compound.
      c. Thoro: Thorolastic Knife Grade.
   2. For cracks more than 1/16 inch (1.59 mm), provide the following:
      a. PPG Pittsburgh Paints: Perma-Crete 4-1002/4-1001 Knife Grade.
      b. Sonneborn: Hydrocide 750 Knife Grade Patching Compound.
      c. Tamms: Tamms Thin Patch.
      d. Thoro: Thorolastic Knife Grade.
   3. Block Filler: Reference Section 09 90 00.2.
   4. Primer: Reference Section 09 90 00.

2.03 BLOCK FILLERS AND PRIMERS

A. Materials: Block fillers and primers as specified in Section 09 90 00, or by manufacturers listed in this Section. Materials must be approved by the elastomeric coating system manufacturer.

B. Application: As specified in Section 09 90 00 and this Section.

2.04 ELASTOMERIC COATING MATERIALS

A. Material Compatibility: Provide crack fillers, block fillers, primers, elastomeric finish coat materials, and related materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. Material Quality: Provide the manufacturer's best-quality elastomeric coating material complying with requirements of FS TT-C-555. Material containers not displaying manufacturer's product identification are not acceptable.
   1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers.
   2. Furnish manufacturer's material data and certificates of performance of proposed substitutions.

C. Colors and Textures: Provide custom colors and textures of the finished elastomeric coating system to match the Architect's samples.

D. Products: Smooth, factory-formulated, 100 percent acrylic elastomeric coatings:
   1. Kelly-Moore: 1128 Kel-Seal Smooth Elastomeric Coating.
   2. PPG Pittsburgh Paints: 4-110 Perma-Crete Pitt-Flex Elastomeric Coating Smooth.
   3. Sherwin-Williams Co: SherLastic Smooth Elastomeric Coating.
   4. Sonneborn: Hydrocide colorflex Waterproof Elastomeric Coating.
   5. Tamms: Tammolastic Smooth Elastomeric Decorative and Protective Coating.
   6. Thoro: Thorolastic Smooth Elastomeric Coating.
   7. Primer: As recommended by the coating manufactuer.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with the Applicator present, under which elastomeric coating systems will be applied for compliance with application requirements. Surfaces to receive elastomeric coatings must be thoroughly dry before coatings are applied.
   1. Notify the Architect in writing of anticipated problems using coatings specified with substrates primed by others.
   2. Begin application only after unsatisfactory conditions have been corrected and surfaces to receive coating are thoroughly dry.
   3. Start of coating within a particular area will be construed as the Applicator's acceptance of surface conditions.

3.02 PREPARATION

A. General: Remove hardware and hardware accessories, plates, machined surfaces, light fixtures, and similar items already installed that are not to be coated. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.
   1. After completing coating operations in each area, reinstall items removed, using workers skilled in trades involved.

B. Cleaning: Before applying coatings or other surface treatments, clean substrates of substances that could impair bond of coating systems. Remove oil and grease before cleaning.
   1. Schedule cleaning and coating application so dust and other contaminates will not fall on wet, newly coated surfaces.

C. Surface Preparation: Clean and prepare surfaces to be coated according to manufacturer's written instructions for the particular substrate conditions and as specified.
   1. Cementitious Surfaces: Prepare concrete, concrete masonry, stucco, and similar surfaces to receive elastomeric coatings. Remove efflorescence, chalk, dust, dirt, release agents, grease, oils, and similar conditions by water blasting followed by a clear water rinse.
      a. Remove mildew and neutralize surfaces according to manufacturer's written recommendations before patching materials are applied.
      b. Roughen as required to remove glaze. Use abrasive blast-cleaning methods if recommended by coating manufacturer.
      c. If hardeners or sealers have been used to improve concrete curing, use mechanical methods for surface preparation.

d. Determine alkalinity and moisture content of surfaces to be coated by performing appropriate tests. Do not apply coatings over surfaces where moisture content exceeds that permitted in manufacturer's written instructions.

2. Crack Repair: Fill cracks according to manufacturer's written recommendations before coating surfaces.

3. Deep Hairline Cracks: Remove dust and dirt from around cracks. Remove mildew by sterilizing before filling. Apply manufacturer's recommended primer to cracks before patching. If shrinkage occurs after applying crack filler, apply additional filler material to cracks before initially applying elastomeric coatings.

   a. Cracks up to 1/16 Inch: Clean surface around cracks. Apply primer penetrating cracks as deeply as possible, overflowing crack 2 inches (50.8 mm) on each side. When primer is dry, apply manufacturer's recommended sealant, forced well into cracks using a brush, putty knife, or trowel. Smooth edges around cracks over primed area. Allow for sealant shrinkage when applying.

   b. Cracks up to 3/8 Inch: Open cracks to 1/4 to 3/8 inch (9.52 mm) wide and 1/8 inch (3.18 mm) deep. Clean cracks and surrounding area removing dust, dirt, and other impurities. Apply primer recommended by manufacturer with a brush to obtain uniform coverage and spread approximately 2 inches (50.8 mm) on each side of cracks. Fill cracks with manufacturer's recommended crack filler applied with a putty knife or trowel, and allow for shrinkage. If excessive shrinkage occurs, reapply crack filler.

4. Material Preparation: Mix and prepare materials according to coating manufacturer's written instructions.

   a. Stir materials before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film that may form into material. Remove film and, if necessary, strain coating material before using.

   b. If manufacturer permits thinning, use only thinners recommended by manufacturer, and only within limits recommended by manufacturer.

3.03 APPLICATION

A. General: Apply elastomeric coatings to exposed surfaces indicated, according to manufacturer's written instructions.

B. Labels: Do not paint over UL, FM, or other code-required labels or equipment name, identification, performance rating, or nomenclature plates.

C. Scheduling Coating: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.

1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer.

2. If undercoats or other conditions show through final coat, apply additional coats until coating film is of uniform finish, color, and appearance. Ensure that surfaces, including edges, corners, crevices, welds, and exposed fasteners, receive a dry film thickness equivalent to that of flat surfaces.

3. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until coating has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and where application of another coat does not cause undercoat to lift or lose adhesion.

D. Application Procedures: Apply elastomeric coatings by brush, roller, or spray according to manufacturer's written instructions.
   1. Brushes: Use brushes best suited for material being applied.
   2. Rollers: Use professional-quality quick-release rollers of carpet, velvet back, or high-pile sheep's wool covers with a 1 to 1-1/4 inch (32 mm) nap as recommended by the manufacturer for material and texture required.
   3. Spray Equipment: Use airless spray equipment with orifice size as recommended by the manufacturer for material and texture required.
   4. Minimum Coating Thickness: Apply each material no thinner than manufacturer's recommended spreading rate. Provide total dry film thickness as recommended by the manufacturer.
   5. Wherever spray application is used, apply each coat to provide equivalent hiding of brush-applied coats. Do not double back with spray equipment, building up film thickness of 2 coats in 1 pass.

E. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.

F. Prime Coats: If recommended by the manufacturer, apply a primer to material being coated before applying finish coats.

G. Brush Application: Brush out and work brush coats into surfaces in an even film. Eliminate cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Neatly draw glass lines and color breaks.

H. Roller Application: Keep the cover wet at all times; do not dry roll. Work in sections. Lay on required amount of material, working material into grooves and rough areas; then level material, working it into surface.

I. Spray Application: Use spray equipment for application only when permitted by manufacturer's written recommendations and authorities having jurisdiction.

J. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or recoat work not complying with specified requirements.

3.04 CLEANING

A. Cleanup: At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from the Project site.
   1. After completing coating work, clean glass and spattered surfaces. Remove spattered coatings by washing, scraping, or other methods, being careful not to scratch or damage adjacent finished surfaces.

3.05 PROTECTION

A. Protect work of other trades from damage whether being coated or not. Correct damage by cleaning, repairing, replacing, and recoating as approved by the Architect. Leave in an undamaged condition.

B. Provide "Wet Paint" signs to protect newly coated finishes. Remove temporary protective wrappings provided by others to protect their work after completing coating operations.

1. After construction activities of other trades are complete, touch up and restore damaged or defaced coated surfaces.

END OF SECTION

SECTION 10 11 00

VISUAL DISPLAY SURFACES

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:
   1. Fixed Porcelain-Enamel Markerboards.
   2. Fixed Vinyl-Faced Tackboards.
   3. Sliding Visual Display Units: Custom horizontal-sliding vinyl tackboard panels.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood grounds.
   2. Section 09 77 12 – Special Wall Coverings: Dry-erase vinyl wall coverings and laminated tackable wall coverings.

1.02 REFERENCES

A. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate wall elevations, dimensions, joint locations, and special anchor details and accessories.
   1. Include elevations and sections of sliding units showing track attachment to walls and clearance from interior storefront glass plane.

C. Product Data: Submit data on each type of visual display surface specified.

D. Samples:
   1. Submit two panels, 8-1/2 x 11 inches (279.4 mm) in size, illustrating materials, colors, and textures of each visual display system specified.
   2. Submit two 6-inch long sections of each piece of aluminum trim specified, illustrating profile, color, and texture.

E. Manufacturer’s Certificates: Certify that vinyl tackboard coverings comply with surface burning characteristics specifies.

1.04 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit Operation and Maintenance Data.

1.05 QUALITY ASSURANCE

A. Surface Burning Characteristics: Maximum 200/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

B. Flame Resistant Fabric: Passes when tested in accordance with NFPA 701, Test 1 or Test 2.

C. Source Limitations: Obtain all visual display surfaces from a single manufacturer.

1.06 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

1.07 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.08 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish 50-year manufacturer warranty for magnetic markerboards.

C. Warranty: Include coverage of markerboard surface from discoloration due to cleaning, crazing or cracking, staining, and failing to retain original writing and erasing qualities.

PART 2 - PRODUCTS

2.01 VISUAL DISPLAY BOARDS

A. Manufacturers:
   1. American Visual Display Products, LLC. www.americanvisualdisplay.com
   2. Best-Rite Chalkboard Co. www.bestrite.com
   3. Claridge Products and Equipment, Inc. www.claridgeproducts.com
   4. General Binding Corporation, www.GBC.com
   5. Lemco, Inc. www.adplemco.com
   6. New Line Products www.newlineproduct.com.
   7. Platinum Visual Systems www.pvsusa.com.
   8. Substitutions: Section 01 60 00 - Product Requirements.

2.02 COMPONENTS

A. Markerboards: Balanced, high-pressure-laminated, magnetic markerboards.
   1. Basis-of-Design: LCS3 Series Porcelain as manufactured by Claridge.
   2. Face Sheet: 28 gauge (0.0157 inch) enameling grade steel... Coat exposed face... with a 3-coat process... Fuse cover and ground coats to steel at manufacturer's standard firing temperatures, but not less than 1200 degrees Fahrenheit.

3. Cover Coat: For magnetic markerboards, provide manufacturer's standard, light-colored, special writing surface with gloss finish intended for use with erasable dry markers.
4. Panel Construction:
    a. Core: 1/2-inch thick, particleboard core material complying with requirements of ANSI A208.1, Grade 1-M-1.
    b. Backing Sheet: Manufacturer's standard 0.005-inch aluminum foil moisture barrier.
    c. Laminating Adhesive: Manufacturer's standard, moisture-resistant adhesive, factory laminated.
5. Panel Thickness: 1/2-inch, nominal.

B. Vinyl Faced Tackboards:
1. Basis-of-Design: As provided by Claridge or approved equivalent by specified manufacturer. Provide 4-VCS Panel for sliding units.
2. Vinyl-Fabric-Faced Tackboards: Mildew-resistant, washable vinyl fabric complying with FS CCC-W-408, Type II, weighing not less than 13 oz./sq. yd., laminated to [1/8] inch ([3.18] mm) thick cork sheet.
3. Factory laminate cork face sheet under pressure to 3/8-inch thick fiberboard core to produce a nominal 1/2-inch thick panel.
4. Provide fabric with a flame-spread rating of 25 or less when tested according to ASTM E84. Provide color and texture as scheduled or as selected from manufacturer's standards.

C. Sliding Systems: Sliding tackboard panel in normal position is adjacent to framed interior window. Tackboard will be used to slide over window, providing full window coverage, and exposed slider track on adjacent wall..
    a. Sliding Panel: Specified vinyl-faced tackboard panel laminated to 3/8” honeycomb core. overall thickness nominal 1/2”.
    b. Frames: Provide custom 1-1/2 inch wide clear anodized box frames to match corridor window frames.
    c. Panel Sizes: As indicated in the drawings.
    d. Configuration(s) as indicated in the drawings

2.03 ACCESSORIES

A. Metal Trim and Accessories: Fabricate frames and trim of not less than 0.062 inch (1.57 mm) thick extruded aluminum alloy, size and shape as indicated, to suit type of installation. Provide straight, single-length units. Keep joints to a minimum. Miter corners to a neat, hairline closure. Where tackboards are combined with magnetic markerboards, chalk trays and map rails shall be continuous across width of combination unit.
1. Where size of visual display boards or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer's standard structural support accessories to suit conditions indicated.
2. Map Rail: Furnish map rail at top of each unit, complete with the following accessories:
    a. Display Rail: Provide continuous cork display rail, 2 inches (50.8 mm) wide, integral with map rail.
    b. End Stops: Provide one end stop at each end of map rail.
    c. Map Hooks: Provide 2 map hooks with flexible metal clips for every 48 inches (1219.2 mm) of map rail or fraction thereof. Provide a minimum of 6 map hooks per classroom.

B. Adhesives: Type used by manufacturer, waterproof.

C. Music Staff Lines: If indicated provide manufacturer’s permanently fused music staff lines where indicated or directed; 5 lines each staff with 1" between each line; 5" between each staff and 3" boarder at top and bottom; Line thickness 1/16".

2.04 FABRICATION

A. Magnetic Markerboards: Laminate facing sheet and backing sheet to core material under pressure with manufacturer's recommended flexible, waterproof adhesive.
   1. Cut joints straight and true. Space joints symmetrically. Fit and match panels before shipment to provide a continuous, uniform writing surface.
   2. Length: Furnish panels approximately equal in length with permissible variation not more than 3 inches (76.2 mm) in either direction of equal spacing. Allow 1/4 inch (6.35 mm) clearance at trim in length and width for fitting. Provide lengths of panels in each space as follows:
      a. Up to 16 feet (487.68 cm), 1 panel.
      b. More than 16 feet (487.68 cm) but less than 32 feet (975.36 cm), 2 panels.

B. Assembly: Provide factory-assembled chalkboard and tackboard units, unless field-assembled units are required.
   1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, balanced around center of board, as acceptable to Architect.
   2. Provide manufacturer's standard vertical joint system between abutting sections of chalkboards.
   3. Provide manufacturer's standard mullion trim at joints between chalkboards and tackboards.

2.05 FACTORY FINISHING

A. Porcelain Enamel: Glass fibered enamel, baked to vitreous surfaces; Porcelain Enamel Institute Type A; white color.

B. Aluminum Frame, Chalk Rail, and Accessories: Class II clear anodized finish.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify internal wall blocking is ready to receive Work and positioning dimensions are as indicated on shop drawings.

3.02 INSTALLATION

A. Deliver and install visual display boards completely assembled in one piece without joints, where possible. If dimensions exceed panel size, install in 2 or more pieces of equal length as acceptable to Architect. When installation requires delivery in separate units, pre-fit

components at the factory, disassemble for delivery, and make final joints at the site. Use splines at joints to maintain surface alignment.

B. Establish top of chalk rail and bottom of perimeter frame at height indicated on Drawings.

C. Secure units level and plumb.

D. Coordinate units with grounds, trim, and accessories. Join parts with a neat, precision fit.

3.03 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean units in accordance with manufacturer’s instructions.

END OF SECTION

SECTION 10 12 00

DISPLAY CASES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Recessed display cases.

B. Surface-mounted display cases.

1.02 RELATED REQUIREMENTS

A. Section 06 10 00 - Rough Carpentry: Blocking and supports.

B. Section 09 21 16 - Gypsum Board Assemblies: Concealed supports in metal stud walls.

1.03 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2020.

B. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

C. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2021.

D. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2018.

E. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2022.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit complete printed data and installation details indicating products to be provided as specified.
   1. Submit color charts for selection by the Architect.

C. Shop Drawings: Submit complete installation details. Include dimensioned elevations.

D. Samples: Submit samples of material and trim to illustrate finish, color, and texture.

E. Specimen Warranty.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least three years of documented experience.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver display cases and materials to the Project site with manufacturer’s protective crate covering and do not open until ready for use.

B. Protect display cases before, during, and after installation. In case of damage, immediately provide necessary repairs and replacements.

1.07 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty against defects and in materials, finish product and workmanship.

PART 2 PRODUCTS

2.01 DISPLAY CASES

A. Manufacturers:
1. Provide visual display boards as manufactured by Stylmark 800-328-2495 www.stylmark.com
2. Claridge Products and Equipment, Inc; ____: www.claridgeproducts.com/#sle.
3. MooreCo, Inc; ____: www.moorecoinc.com/#sle.
4. Nelson Adams NACO; ____: www.nelsonadamsnaco.com/#sle.

2.02 COMPONENTS

A. Wood Case Construction: 3/4 inch (19 mm) 7-ply maple veneer plywood with manufacturer's standard stain.

B. Aluminum Framed Case Construction: 1-1/2 inch by 2 inch (38 mm by 51 mm) extruded aluminum tube frame with tempered glass, laminate-faced, and stained veneer plywood infill panels.

C. Aluminum Case Construction: Aluminum side, bottom, and top panels fabricated from extruded aluminum shapes.

D. Face Frame Trim for Recessed Installation: 2 inch (51 mm) flat face dimension extruded aluminum trim mitered with corner clips and mechanical fasteners.

E. Glazed Sliding Doors:
1. 1/4 inch (6 mm) clear tempered glass with plastic finger pulls.
2. Door track: Extruded aluminum glass shoe with bottom rollers and top plastic guide.
3. Lock: Glass door cylinder lock.

F. Glazed Hinged Doors:
   1. 1/4 inch (6 mm) clear tempered glass framed with 1/2 inch by 1 inch (13 mm by 25 mm) extruded aluminum trim.
   2. Hinges: 1 inch by .040 inch (25 mm by 1 mm) nickel-plated steel-continuous piano hinges.
   3. Lock: Glass door cylinder lock.

G. Glass Shelves:
   1. 1/4 inch (6 mm) clear tempered glass with flat-polished edges.
   2. Shelf Depth: 6 inches (152 mm).
   3. Shelves per Unit: Two.

H. Shelf Standards and Brackets: Single-slotted channel standards for brackets adjustable in 1 inch (25 mm) increments along entire length of standard, drilled and countersunk for screws.
   1. Standards Mounting: Recess-mounted into back panel.
   2. Face Width: 5/8 inch (16 mm).
   3. Material: 16 gauge, 0.0598 inch (1.52 mm) sheet steel.
   4. Lengths: As indicated on drawings.
   5. Finish: Anochrome.
   6. Brackets: Boltless with lip front; 16 gauge, 0.0598 inch (1.52 mm) sheet steel, reinforced, locking into slots; size to suit shelves; same finish as standards.

I. Tackable Back Panel: Fine-grained, homogeneous natural cork on hardboard.
   1. Cork Thickness: 1/8 inch (3 mm).
   2. Fabric: Vinyl fabric; minimum fabric weight: 13 oz/sq yd (440 g/sq m).
   3. Surface Burning Characteristics: Flame spread index of 25, maximum, and smoke developed index of 450, maximum, when tested in accordance with ASTM E84.

J. Laminate Back Panel: Low-pressure laminate on one face of plywood substrate.

K. Lighting: Manufacturer's standard fluorescent light fixture housed at top of case with louvered aluminum access door with keyed lock.

2.03 MATERIALS

A. Aluminum Extrusions for Framing and Trim: Alloy as recommended by manufacturer for construction and specified finish; nominal 1/8 inch (3.2 mm) wall thickness.

B. Aluminum Extrusions: ASTM B221 (ASTM B221M), 6063 alloy, T5 temper.
   1. Finish: Factory anodized; AAMA 611: Clear anodized.

C. Plywood: Softwood plywood with veneer core, waterproof glue, 3/4 inch (19 mm) thick.

D. Heat-Strengthened and Fully Tempered Glass: ASTM C1048, Kind FT.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide factory trained installers.

C. Refer to drawings for display case mounting heights.

D. Clean case and glass using manufacturers recommended procedures.

E. Provide mitered and wrapped hairline joints for all trims.

3.02 ADJUSTING AND CLEANING

A. Verify that all accessories are installed as detailed for each unit.

B. At completion of work, clean glass surfaces, back panels and trim in accordance with manufacturer’s recommendations leaving units ready for use.

3.03 CLOSEOUT ACTIVITIES

A. See Section 01 78 00 - Closeout Submittals, for closeout submittals.

END OF SECTION

SECTION 10 14 00

GRAPHICS PANELS, PLAQUES, AND BUILDING LETTERS

PART 1 GENERAL

1.01 SUMMARY

A. This Section includes the following types of signs:
   1. Room Identification plaques.
   2. Dimensional letters and numbers.

B. Related Sections: The following Sections contain requirements that relate to this Section:
   1. Section 01 50 00 - Temporary Facilities: Temporary project identification signs.
   2. Section 10 14 26 - Post and Panel Signs: Freestanding exterior signs.
   3. Section 14 21 23 - Elevators: Elevator door jamb markings.
   4. Division 23 for labels, tags, and nameplates for mechanical equipment.
   5. Division 26 for labels, tags, and nameplates for electrical equipment.
   6. Division 26 for illuminated exit signs.

1.02 SUBMITTALS

A. General: Submit the following according to the Conditions of the Contract and Division 1 Specification Sections.
   1. Product data for each type of graphics panel and plaque specified, including details of construction relative to materials, dimensions of individual components, profiles, and finishes.
   2. Shop drawings:
      a. Drawings showing fabrication and erection of graphics panels. Include plans, elevations, and large-scale sections of typical members and other components. Show anchors, grounds, layout, reinforcement, accessories, and installation details.
      b. Schedule of room identification plaques with information about each individual sign furnished, including, but not limited to: door number, room name and number, sign type, sign text, and sign illustration graphics.
         1) Schedule shall be prepared by contractor or supplier; schedule will not be furnished by Architect.
         2) Provide message list for each plaque required, including large-scale details of wording and lettering layout.
   3. For custom graphics panels anchored to permanent construction, provide installation drawings indicating size and type of stand-offs and anchors.

B. Templates:
   1. Furnish full-size spacing templates for individually mounted dimensional letters and numbers.
   2. Furnish full-size rubbings for metal plaques.

C. Samples for initial selection of color, pattern, and texture:

1. Plastic Sheets and Plastic Laminates: Manufacturer's color charts consisting of actual sections of material including the full range of colors available for each material required.

D. Samples for verification of color, pattern, and texture selected and compliance with requirements indicated:
   1. Plastic Sheets: Provide a sample panel not less than 8-1/2 inches (216 mm) by 11 inches (279.4 mm) for each panel color selected. Include a representative sample of the graphics film applied to the sample(s).
   2. Room Identification Panels: Provide full-size representative panel in the selected color, finish, and graphics required. Sample panel may be used in project installation after approval.
   3. Dimensional Letters: Provide full-size representative samples of each dimensional letter type required, showing letter style, color, and material finish and method of attachment. Sample letters may be used in project installation after approval.
   4. Stand-Off Anchors: Submit one complete unit in selected size, configuration, and finish.

1.03 QUALITY ASSURANCE

A. Sign Fabricator Qualifications: Firm experienced in producing signs similar to those indicated for this Project, with a record of successful in-service performance, and sufficient production capacity to produce sign units required without causing delay in the Work.

B. Single-Source Responsibility: For each separate sign type required, obtain signs from one source of a single manufacturer.

C. Design Concept: The Drawings indicate sizes, profiles, and dimensional requirements of signs and are based on the specific types and models indicated. Sign units by other manufacturers may be considered provided deviations in dimensions and profiles do not change the design concept as judged by the Architect. The burden of proof of equality is on the proposer.

D. Regulatory Requirements: Comply with the Americans with Disabilities Act (ADA) and with code provisions as adopted by authorities having jurisdiction.

1.04 PROJECT CONDITIONS

A. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication to ensure proper fitting. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:
   1. Manufacturers of Panel Signs:
      a. Basis-of-Design: ASI Sign Systems, Inc.; www.asisign.com
      b. Alternate Manufactuers:
         1) Adler I.D. Systems; www.adlersign.com
         2) Takeform; www.takeform.com
   2. Manufacturers of Dimensional Letters:

a. Basis-of-Design: ASI Sign Systems, Inc.; www.asisign.com
b. Alternate Manufactuers:
    1) Adler I.D. Systems; www.adlersign.com
    2) Takeform; www.takeform.com

2.02 MATERIALS

A. Room Identification Plaques - Provide custom laminated panels constructed of matte-finished clear acrylic with opaque color coating subsurface applied, or plastic laminate in selected color and finish:
    1. Cast Acrylic Sheet: Provide cast (not extruded or continuous cast) methyl methacrylate monomer plastic sheet, in sizes and thicknesses indicated, with a minimum flexural strength of 16,000 psi (110316.16 kPa) when tested according to ASTM D790, with a minimum allowable continuous service temperature of 176 degrees Fahrenheit (80 degrees Celsius), and of the following general types:
        a. Transparent Sheet: Where sheet material is indicated as "clear," provide colorless sheet in matte finish, with light transmittance of 92 percent, when tested according to the requirements of ASTM D1003.
        b. Opaque Sheet: Where sheet material is indicated as "opaque," provide colored opaque acrylic sheet in colors and finishes as selected from the manufacturer's standards.
        c. Plastic Laminate Sheet: High Pressure Decorative Laminate: NEMA LD 3, GP50 or GP28 Color, pattern, and surface texture as selected by the Architect from laminate manufacturer’s full range of colors and finishes.
            1) Manufacturers: Wilson Art, Formica, Nevamar, or Pionite.
        d. Permanently laminate face panels to backing sheets of material and thickness indicated using the manufacturer's standard process.
        e. Fabricate signs with edges mechanically and smoothly finished to conform with the following requirements:
    2. Edge Condition: Square, unless otherwise indicated.
    3. Corner Condition: Round corners, unless otherwise indicated.
        a. Colored Coatings for Acrylic Plastic Sheet: Use colored coatings, including inks and paints for copy and background colors that are recommended by acrylic sheet or plastic laminate manufacturers for optimum adherence and color fastness.
        b. Graphic Content and Style: Provide sign copy that complies with the requirements indicated for size, style, spacing, content, position, material, finishes, and colors of letters, numbers, and other graphic devices.
        c. Subsurface Copy: Apply copy to the back face of clear acrylic sheet forming the panel face by process indicated to produce precisely formed opaque images free from rough edges.
        d. Use reverse silk-screen process to print copy; overspray the copy with an opaque background color coating.
        e. Use Dupont Chromalin heat- and pressure-laminated photopolymer film system to form copy and background color.
        f. Manufacturer has the option of selecting either process indicated above, or using subsurface engraving process, as appropriate to the copy form and the economics of production.
        g. Raised Copy: Machine-cut copy characters from matte-finished opaque acrylic sheet and chemically weld onto the acrylic sheet forming sign panel face. Produce precisely formed characters with square cut edges free from burrs and cut marks.

1) Raised Copy Thickness: Not less than 1/32 inch (0.79 mm).

B. Dimensional Letters and Numbers:
1. Fabricated Letters and Numbers: Form individual letters and numbers by casting. Produce characters with smooth, flat faces, sharp corners, and precisely formed lines and profiles, free from pits, scale, sand holes, or other defects.
a. Cast aluminum with clear anodized finish, in styles, thicknesses, and heights as indicated.
b. Depending on installation type cast lugs into the back or bottom of characters and tap to receive threaded mounting studs.
c. Comply with requirements indicated for color, finish, style, and size.
2. Mounts
a. Back-Mounted: Cast lugs into the back of characters and tap to receive threaded brass or stainless steel mounting studs for mounting to building walls.
b. Free-Standing Mounted: Cast lugs into the bottom of characters and tap to receive threaded stainless steel mounting studs for bolting to continuous aluminum angle.
3. Letter Heights and Styles: As indicated.
a. Miscellaneous:
b. Aluminum Castings: Provide aluminum castings of alloy and temper recommended by the sign manufacturer for the casting process used and for the color and finish indicated.
c. Fasteners: Use concealed fasteners fabricated from metals that are not corrosive to the sign material and mounting surface.
d. Anchors and Inserts: Use stainless steel anchors and inserts for exterior installations and where exposed to view. Use aluminum or brass studs let into back of letters for anchoring letters to masonry or concrete walls.
1) Custom Graphics Panels
4. Colored Panels:
a. Translucent colored polyester resin panels in 1/4” thickness.
b. Basis of Design: Chroma as manufactured by 3-Form, Salt Lake City, Utah; www.3-Form.com
c. Color(s) as selected by the Architect.
d. Provide panels with all edges square and polished.
e. Produce smooth, even, level sign panel surfaces, constructed to remain flat under installed conditions within a tolerance of plus or minus 1/16 inch (1.59 mm) measured diagonally.
5. Stand-Off Anchors for Graphics Panels
a. Machined aluminum stand-offs with modified anchoring for mounting to steel structure.
b. Basis of Design: 1.0” x 1.5” Satin Aluminum Stand-Off as manufactured by Sign Bracket Store, Carlsbad, CA, www.signbracketstore.com or approved equivalent.
c. Drill-out inner ring of manufacturer’s brass mounting stud to accommodate 1/4” mounting bolt in lieu of manufacturer’s standard wood screw.
1) Cast Metal Plaques
(a) Castings shall be free from pits, scale, sand holes, or other defects. Comply with requirements specified for metal, border style, background texture, and finish and with requirements shown for thickness, size, shape, and copy. Hand-tool and buff borders and raised copy to produce the manufacturer's standard satin polished finish.

(b) Basis of Design: Style AL-300 as manufactured by A.R.K. Ramos and distributed locally by South Texas Graphics, Inc.

d. Base Plaque: Cast aluminum, 24”W x 18”H x ¾”D.

e. Border: None.

f. Edge: Square.

g. Background Texture: Manufacturer's standard leatherette finish.

h. Background and Edge Finish: Baked-enamel black color.

i. Raised Letters and Characters: Satin aluminum natural color.

2.03 FINISHES

A. Colors and Surface Textures: For exposed sign material that requires selection of materials with integral or applied colors, surface textures or other characteristics related to appearance, provide color matches indicated, or if not indicated, as selected by the Architect from the manufacturer's standards.

B. Metal Finishes: Comply with NAAMM "Metal Finishes Manual" for finish designations and applications recommendations.

C. Aluminum Finishes: Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.

1. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0 inch (0.02 mm) or thicker) complying with AAMA 607.1.

PART 3 EXECUTION

3.01 INSTALLATION

A. General: Locate sign units and accessories where indicated, using mounting methods of the type described and in compliance with the manufacturer's instructions.

1. Install signs level, plumb, and at the height indicated, with sign surfaces free from distortion or other defects in appearance.

B. Wall-Mounted Panel Signs: Attach panel signs to wall surfaces using the methods indicated below:

1. Vinyl-Tape Mounting: Use double-sided foam tape to mount signs to smooth, nonporous surfaces. Do not use this method for vinyl-covered or rough surfaces.
2. Silicone-Adhesive Mounting: Use liquid silicone adhesive recommended by the sign manufacturer to attach sign units to irregular, porous, or vinyl-covered surfaces. Use double-sided vinyl tape where recommended by the sign manufacturer to hold the sign in place until the adhesive has fully cured.
3. Shim Plate Mounting: Provide 1/8-inch-thick concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other mounting methods are not practicable. Attach the plate with fasteners and anchors suitable for secure attachment to the substrate. Attach panel sign units to the plate using the method specified above.
4. Where plaques are mounted on glass and are visible from back side, provide same-size, same-color blank plate on opposite side of glass.

C. Individual Dimensional Letters and Numbers:

1. Freestanding Characters: Mount using threaded stainless steel studs set in tapped lugs at bottom of letters and shop-bolted to continuous anodized aluminum support plate. Alternate mounting using heli-arc welding prior to anodizing.
    a. Continuous Support: Bolt continuous aluminum angle supports to top of masonry walls using stainless steel expansion anchors.
    b. For security spot weld bolt heads to mounting angle.

D. Back-Mounted Characters: Mount using threaded stainless steel or brass studs set in tapped lugs at backs of letters. Drill holes in finished masonry slightly larger than threaded studs and set in two-component clear epoxy adhesive. Use sufficient epoxy such that small amount of material pushes out of the mounting holes and seals to back of letters or spacers.

E. Custom Graphics Panels:
1. Mount manufacturer’s brass mounting stud to steel frame structure using 1/4” bolt with machine threads or self-cutting threads for steel. Pre-drill hole in steel structure sized for self-cutting threads or drilled and tapped for machine threads.
2. Mount threaded stand-off barrel onto fixed threaded brass stud.
3. Locate stand-offs as indicated in the drawings, nominal 24” o.c. each way.
4. Secure graphics panels to stand-off barrels by installing threaded cap into barrel. If barrel has no set screw, provide epoxy coating of nominal 1/2” of threads prior to installing cap.

F. Cast Metal Plaques: Mount plaques using one of the following methods dependent on substrate.
1. Concealed Mounting in Masonry: Mount the plaques by inserting threaded studs into tapped lugs on the back of the plaque. Set in predrilled holes filled with quick-setting cement.
2. Mounting in Drywall: Coordinate with Contractor for installation of solid wood blocking between studs for mounting of plaque. Use countersunk, flat-head, square-drive stainless steel mounting screw in each corner.

3.02 CLEANING AND PROTECTION

A. After installation, clean soiled sign surfaces according to the manufacturer's instructions. Protect units from damage until acceptance by the Owner.

END OF SECTION

SECTION 10 14 26

POST AND PANEL SIGNS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Non-illuminated single-panel-type post and panel signs.

B. Related Sections:
   1. Section 01 50 00 - Temporary Facilities: Temporary project identification, information, and directional signs.
   2. Section 03 30 00 - Cast-In-Place Concrete: Concrete fill for post holes.
   3. Section 10 14 00 - Signs: Wall-mounted interior and exterior signs.

1.02 SUBMITTALS

A. Product Data: For each type of post and panel sign specified. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes. Provide manufacturer's written instructions for maintaining and cleaning sign surfaces.

B. Shop Drawings: For each type of post and panel sign indicated.
   1. Provide plans, elevations, and at least 3/4-inch (1:20) scale sections of typical members and other components. Show anchors, reinforcement, accessories, layout, and installation details.
   2. Provide message list, including details of wording and lettering layout, at least half size. Include full-size details of special graphics.

C. Samples for Verification: Of the following products, showing color, texture, or finish selected. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected. Prepare Samples from the same material to be used for the Work.
   1. Aluminum: Samples of each finish type and color, on 6-inch long sections of extrusions and squares of sheet or plate at least 4 inches (101.6 mm).
   2. Include a representative sample of the graphic-image process required in each panel. Show graphic style and colors and finishes of letters, numbers, and other graphic devices.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the sign manufacturer and who has completed installation of post and panel signs similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

B. Source Limitations: Obtain post and panel signs through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of post and panel signs and are based on the specific type and model indicated. Other manufacturers' signs may be considered provided deviations are minor and do not change the design concept and are approved by the Architect.

D. Do not modify intended aesthetic effects, as judged solely by the Architect, except with Architect's approval and only to the extent needed to comply with performance requirements. Where modifications are proposed, submit comprehensive explanatory data to Architect for review.

1.04 DELIVERY AND HANDLING

A. Delivery: Provide protective covering or crating as recommended by the manufacturer to protect sign components and surfaces against damage during transportation and delivery.
   1. Coordinate delivery time so signs can be installed within 24 hours of receipt at Project site.

B. Handle signs carefully to prevent breakage, surface abrasion, denting, soiling, and other defects. Comply with the manufacturer's written handling instructions for unloading components subject to damage.
   1. Inspect sign components for damage on delivery.
   2. Do not install damaged sign components.
   3. Repair minor damage to signs, provided the finished repair is equal in all respects to the original work and is approved by Architect; otherwise, remove and replace damaged sign components.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Apco Graphics Inc., www.apcosigns.com.
   2. ASI Sign System, Inc.,www.asisign.com
   3. Charleston Industries, Inc., www.cisigns.com.
   4. Vomar Products, Inc., www.vomarproducts.com.

2.02 MATERIALS

A. Aluminum Sheet or Plate: Alloy and temper recommended by the aluminum producer and finisher for the type of use and finish indicated, and with at least the strength and durability properties specified in ASTM B 209 (ASTM B 209M) for 5005-H15 alloy.

B. Aluminum Extrusions: Alloy and temper recommended by the aluminum producer and finisher for the type of use and finish indicated, and with at least the strength and durability properties specified in ASTM B221 (((ASTM B221M))) for 6063-T5 alloy.

C. Vinyl Film: Opaque, non-reflective vinyl film, 0.0035-inch minimum thickness, with pressure-sensitive adhesive backing, suitable for exterior applications.

D. Colored Coatings for Plastic Sheet: Use nonfading colored coatings, including inks and paints for copy and background colors that are recommended by the manufacturers for optimum adherence to the type of surface used.

2.03 COMPONENTS

A. Aluminum Posts: Manufacturer's standard 0.125-inch thick, structural aluminum tubing extruded from 6063-T5 alloy, with vertical slots to engage sign panels. Provide stop blocks in slots to hold panels in position. Include post caps, fillers, spacers, junction boxes, access panels, and related accessories required for a complete installation. Comply with the following requirements for post shape, finish, and mounting method:
   1. Post Shape: 2 by 2 inches (50.8 mm) square.
   2. Post Finish: Match finish of panel.
   3. Post Mounting Method: Provide sign posts of length required for permanent installation by direct-burial mounting method.

B. Sign Panels: Provide smooth, even, level sign panel surfaces constructed to remain flat under installed conditions within a tolerance of plus or minus 1/16 inch (1.59 mm) measured diagonally from corner to corner.
   1. Framed Single-Sheet Panels: Provide framed single-sheet sign panels with edges mechanically and smoothly finished to conform to the following:
      a. Panel Material: 0.125-inch thick aluminum plate.
      b. Panel Finish: Baked enamel.
   2. Frame Material: Extruded aluminum, fabricated to profile indicated with integral slots to receive sign message panel; comply with the following:
      a. Frame Finish: Match finish of panel.
      b. Corner Condition: Square corners.

C. Graphic Content and Style: Provide sign copy to comply with requirements indicated for sizes, styles, spacing, content, positions, materials, finishes, and colors of letters, numbers, symbols, and other graphic devices.
   1. Surface-Applied, Die-Cut Vinyl Copy: Provide die-cut characters from nonreflective vinyl film with pressure-sensitive adhesive backing. Apply copy to exposed face of sign panel.

2.04 ACCESSORIES

A. Fasteners: Use concealed fasteners fabricated from metals that are noncorrosive to sign material and mounting surface.

B. Anchors and Inserts: Use nonferrous metal or hot-dip galvanized anchors and inserts. Use toothed steel or lead expansion-bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete.

2.05 FABRICATION

A. General: Provide manufacturer's standard double-post, single-panel-type post and panel signs. The completed sign assembly shall consist of a message panel supported between 2 posts. Comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction.
   1. Allow for thermal movement resulting from a maximum ambient temperature change (range) of 100 degrees Fahrenheit (37.78 degrees Celsius). Design, fabricate, and install

post and panel sign assemblies to prevent buckling, opening up of joints, and overstressing of welds and fasteners.

a. Base design on actual surface temperatures of metals due to both solar heat gain and nighttime-sky heat loss.

2. Welded Connections: Comply with AWS standards for recommended practices in shop welding. Provide welds behind finished surfaces without distortion or discoloration of exposed side. Clean exposed welded surfaces of welding flux and dress on exposed and contact surfaces.
3. Mill joints to a tight, hairline fit. Form joints exposed to the weather to exclude water penetration.
4. Preassemble signs in the shop to the greatest extent possible to minimize field assembly. Disassemble signs only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation, in a location not exposed to view after final assembly.
5. Conceal fasteners if possible; otherwise, locate fasteners where they will be inconspicuous.

B. Posts: Fabricate posts to lengths required for mounting method indicated.

1. Direct Burial: For permanent sign installation, provide posts 36 inches (914.4 mm) longer than height of sign to permit direct embedment in concrete foundations.

C. Panels: Form panels to required size and shape. Comply with requirements indicated for design, dimensions, finish, color, and details of construction.

1. Increase metal thickness or reinforce with concealed stiffeners or backing materials as required to produce surfaces without distortion, buckles, warp, or other surface deformations.
2. Continuously weld joints and seams, unless other methods are indicated; grind, fill, and dress welds to produce smooth, flush, exposed surfaces with welds invisible after final finishing.

2.06 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.

B. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.

C. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Apply baked enamel complying with paint manufacturer's specifications for cleaning, conversion coating, and painting.

D. Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system complying with AAMA 603.8, except with a minimum dry film thickness of 1.5 mils (0.0381 mm), medium gloss.

E. Color: As indicated by manufacturer's color designations.

F. Colors and Textures: For exposed sign material that requires selection of materials with integral or applied colors, textures, or other characteristics related to appearance, provide color matches as selected by Architect from manufacturer's standards.

PART 3 EXECUTION

3.01 INSTALLATION

A. General: Locate sign units and accessories where indicated, using mounting methods of type described and complying with manufacturer's written instructions.

B. Excavation: In firm, undisturbed or compacted soil, drill or (using a post-hole digger) hand-excavate holes for each post to the minimum diameter recommended by sign manufacturer, but at least 4 times the largest post cross-section.

C. Excavate hole depths approximately 3 inches (76.2 mm) lower than required post bottom, with bottom of posts set at least 36 inches (914.4 mm) below finished grade.

D. Install signs level, plumb, and at height indicated, with surfaces free from distortion or other defects in appearance.

3.02 CLEANING AND PROTECTING

A. At completion of installation, clean soiled surfaces of sign units according to manufacturer's written instructions.

B. Protect installed sign units from damage until acceptance by Owner.

END OF SECTION

SECTION 10 14 63

MONUMENT MESSAGE SIGNS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Full-color animated LED electronic message board mounted on masonry base with shop-finished metal housing as indicated on the drawings.

B. Related Sections:
   1. Section 04 20 00 - Unit Masonry: Masonry base for monument-type signs.
   2. Division 26 Sections – Power and conduit to monument sign.

1.02 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide signs capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated, determined according to ASCE 7, "Minimum Design Loads for Buildings and Other Structures":
   1. Wind Loads: As indicated on Drawings.

B. Thermal Movements: Provide signs that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change (Range): 120 degrees Fahrenheit (48.89 degrees Celsius) ambient; 180 degrees Fahrenheit (82.22 degrees Celsius) material surfaces.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes. Include manufacturer's written instructions for maintaining and cleaning sign surfaces.

B. Shop Drawings: Show fabrication and installation details for monument-type signs.
   1. Include plans, elevations, and at least 3/4-inch (1:20) scale sections of typical members and other components. Show anchors, reinforcement, accessories, layout, and installation details.
   2. Show locations of electrical service connections.
   3. Wiring Diagrams: For internally illuminated signs and LED message boards.

C. Samples for Initial Selection: Manufacturer's color charts consisting of actual units or sections of units showing the full range of colors available for the following:
   1. Aluminum.

D. Samples for Verification: For each type of product indicated, of size below:
   1. Aluminum: For each form, finish, and color, on 6-inch long sections of extrusions and squares of sheet at least 4 by 4 inches (101.6 mm).

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative of sign manufacturer for installation and maintenance of units required for this Project.

B. Source Limitations: Obtain monument-type signs through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of monument-type signs and are based on the types and features indicated. Refer to Division 1 Section "Product Requirements."
   1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.05 DELIVERY AND HANDLING

A. Deliver monument-type signs in protective covering and crating to protect sign components and surfaces against damage.

1.06 COORDINATION

A. Coordinate installation of anchorages for monument-type signs. Furnish setting drawings, templates, and directions for installing anchorages and other items that are to be embedded in concrete. Deliver such items to Project site in time for installation.

B. Coordinate delivery time so signs can be installed within 24 hours of receipt at Project site.

1.07 WARRANTY

A. Message Sign Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace panels and components that fail in materials or workmanship during specified warranty period. Failures include, but are not limited to, the following:
   1. Coating degradation.
   2. Chalking.
   3. Fading.
   4. Failure of LEDs or electronic message board components.

B. Warranty Period: 7 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Basis-of-Design: Entech Signs; www.entechsigns.com

B. Daktronics, www.daktronics.com

C. Robson Corporation, www.robsonschoolsigns.com

D. Spectrum Corporation, www.spectrumscoreboards.com

E. Nevco Display, www.nevco.com

F. Substitutions: Section 01 60 00 - Product Requirements.

2.02 LED MESSAGE BOARDS

A. Basis-of-Design: Entech Signs, Alpha-LED Series.

2.03 MATERIALS

A. Aluminum Extrusions: ASTM B221/B221M, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with at least the strength and durability properties of alloy 6063-T5.

B. Structural Steel:
   1. Hot-Rolled Structural-Steel Shapes: ASTM A36/A36M or ASTM A529/A529M.
   2. Steel Tubing or Pipe: ASTM A500, Grade B.
   3. Steel Members Fabricated from Plate or Bar Stock: ASTM A529/A529M or ASTM A572/A572M, 42,000-psi minimum yield strength.
   4. Bolts for Steel Framing: ASTM A307 or ASTM A325/A325M as necessary for design loads and connection details.
   5. For steel exposed to view on completion, provide materials selected for surface flatness, smoothness, and freedom from surface blemishes. Do not use materials whose surfaces exhibit pitting, seam marks, roller marks, rolled trade names, or roughness.

C. LED Message Boards: Provide double-face LED message panels with the following characteristics:
   1. LED Matrix: 24 x 176
   2. Pitch: 0.67 inch (17 mm)
   3. Point of Convergence: 1.1 inch (28 mm)
   4. Size: As indicated.
   5. LEDs per Pixel: 1
   6. Color: RGB full color and dimming levels
   7. Minimum Character Height: 4.7 inch (119.38 mm).
   8. Graphics Capability: Text, animation, pictures, video.
   9. Frame Rate: 60 frames/sec.
   10. Scan Rate: 300 Hz
   11. Communication: Hardwired Ethernet (CAT6) connection.

2.04 ACCESSORIES

A. Fasteners: Use concealed fasteners fabricated from metals that are noncorrosive to sign material and mounting surface.

B. Anchors and Inserts: Use stainless steel or hot-dip galvanized anchors and inserts. Use torque-controlled expansion-bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete.

C. Temperature and Ambient Light Sensor: Mount sensor on side of masonry sign- support wall. Temperature probe shall provide ambient temperature read-out on screen when programmed. Light sensor shall automatically brighten and dim LED lighting for optimum brightness depending on ambient light condition.

2.05 OPERATION

A. Controlled remotely by wireless 4G cellular communication using sign-mounted cellular antennae. Label terminal as “Wireless Control”. Access to control link shall be password-protected.

B. Emergency Power: Power circuit to monument sign is from the emergency power panel. In the event of a power outage, transfer to emergency power will be delayed for several seconds. Upon temporary short-term power loss, sign shall be capable of self-rebooting and continuing to operate without manual reset.

2.06 FABRICATION, GENERAL

A. General: Provide manufacturer's standard monument-type sign assembly consisting of double-sided LED message boards mounted on masonry base with concealed structural framing system.
   1. Welded Connections: Comply with AWS standards for recommended practices in shop welding. Provide welds behind finished surfaces without distortion or discoloration of exposed side. Clean exposed welded surfaces of welding flux and dress exposed and contact surfaces.
   2. Mill joints to a tight, hairline fit. Form joints exposed to weather to exclude water penetration.
   3. Preassemble signs in the shop to greatest extent possible. Disassemble signs only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation, in location not exposed to view after final assembly.
   4. Conceal fasteners if possible; otherwise, locate fasteners where they will be inconspicuous.

2.07 STRUCTURE

A. Base: Provide monument-type signs with integral base consisting of channels, angles, plates, or other fittings. Drill holes in members for anchor-bolt connection.
   1. Provide anchor bolts of size required for connecting base to concrete foundations.

B. Internal Frames: Manufacturer's standard internal steel framing system, designed to withstand wind pressure indicated. Provide welded construction using mitered joints. Cut, drill, and tap units to receive hardware, bolts, and similar items.
   1. Hot-dip galvanize steel framing system after fabrication to comply with ASTM A123/A123M.

2.08 PAINTED FINISHES – ALUMINUM HOUSING

A. Minimum two coat fluoropolymer coating with minimum 70-percent polyvinylidene fluoride resin (Kynar).
   1. Match approved sample in color, finish, and sheen.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Set anchor bolts and other embedded items required for installation of signs. Use templates furnished by suppliers of items to be attached.

B. Install signs level and plumb, with surfaces free from distortion or other defects in appearance.

C. Install control system including primary and secondary controls including antenna, receiver and all related wiring. Install temperature/lighting sensor and related wiring. Make all final connections including data and power. Install manufacture’s control software.

3.02 CLEANING

A. At completion of installation, clean soiled surfaces of sign units according to manufacturer's written instructions.

3.03 TESTING AND TRAINING

A. Test installed equipment thoroughly for proper operation. Provide operational testing for both primary and secondary control system.

B. Train Owner’s designated personnel in the proper maintenance and operation of the sign and related equipment. Instruct Owner’s personnel in the proper use of the installed control software. Leave the sign in operating condition using the primary control system and set up initial programming as needed by the Owner.

END OF SECTION

SECTION 10 21 13

PHENOLIC-CORE TOILET COMPARTMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Phenolic-core through-color overhead-braced toilet compartments and matching urinal screens.

B. Related Sections:
   1. Section 06 10 00 - Rough Carpentry: Concealed wood framing and blocking for compartment support.
   2. Section 10 28 00 - Toilet Accessories.

1.02 REFERENCES

A. ASTM International:
   1. ASTM A 666 - Standard Specification for Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate partition plan, elevation views, dimensions, details of wall and floor supports, and door swings.

C. Product Data: Submit data on panel construction and each type of hardware and accessory.

D. Samples: Submit two samples, 12 x 12 inch (304.8 mm) in size, illustrating panel finish, color, and sheen.

E. Manufacturer's Installation Instructions: Submit special procedures and perimeter conditions requiring special attention.

1.04 QUALITY ASSURANCE

A. Perform Work in accordance with Texas Accessibility Standards (TAS).

B. Partition system installation company shall have a minimum of five (5) years’ experience in the installation of similar systems for projects of similar size and scope and be authorized by the system manufacturer for this installation.

1.05 MANUFACTURER’S WARRANTY

A. Provide manufacturer’s written warranty against defects in workmanship and materials for a minimum of twenty-five (25) years after date of Substantial Completion of the Project.

B. Warranted items shall include, but not limited to: color change, sagging, crazing, or cracking of panel material; corrosion of metal parts; failure or improper operation of moving parts.

1.06 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.

B. Convene minimum one week prior to commencing work of this Section.

1.07 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with placement of support framing and anchors in wall and ceiling.

PART 2 PRODUCTS

2.01 TOILET COMPARTMENTS AND URINAL SCREENS

A. Manufacturers:
1. Accurate Partitions Corporation; asi-accuratepartitions.com
2. Bobrick Washroom Equipment, Inc.; www.bobrick.com
3. Bradley Corporation; www.bradleycorp.com
4. General Partitions Mfg. Corp.; www.genpartitions.com
5. Metpar; www.metpar.com
6. PSISC Partition Systems Intl. (Columbia Partitions); www.psisc.com
7. Tex-Lam Manufacturing, Inc.; www.texlam.com
8. Substitutions: Section 01 60 00 - Product Requirements.

B. Basis of Design: Floor-mounted and overhead braced compartments and matching urinal screens as manufactured by PSIAC or approved equivalent by specified manufacturer.

2.02 COMPONENTS

A. Door, Panel and Pilaster Construction: Solid phenolic-core panel material with plastic facing on both sides fused to substrate during panel manufacture (not separately laminated), and with eased and polished edges, and matching through-color cores. Provide minimum 3/4-inch material for all components.
1. Facing Sheets Color: Formica “Steller” finish in color as indicated.
2. Core Color: Manufacturer's through-color material matching faces.

B. Urinal Screens: Wall-mounted and floor-braced, of same material, finish, and color as toilet compartments. Brace with 2” x 2” x 1/8” thickness clear anodized extruded aluminum tube to floor with concealed stainless steel or aluminum floor mounting plate.

2.03 ACCESSORIES

A. Pilaster Shoe: Formed stainless steel sheet, ASTM A 666 Type 304, with No. 4 finish, 3-inch high, concealing floor fastenings.

B. Head Rails: Hollow extruded aluminum tube with anti-grip profile and cast socket wall brackets; clear anodized finish.

C. Brackets: Polished stainless steel, full-height (continuous) type.

D. Attachments, Screws, and Bolts: Stainless steel, tamper proof type.
   1. For attaching panels and pilasters to brackets: Through-bolts and nuts; tamper proof.

E. Hardware: Stainless steel:
   1. Full length stainless steel piano hinge, self-closing, adjustable to hold door open at any angle up to 90 degrees.
   2. Heavy-duty stainless steel thumb-turn or sliding-type door latch with brushed finish; at compartments indicated to be handicapped accessible, provide latches that comply with accessibility requirements of authorities having jurisdiction.
   3. Door strike and keeper with rubber bumper; mounted on pilaster in alignment with door latch.
   4. Coat hook with rubber bumper; one for each compartment, mounted on doors of regular compartments and pilasters adjacent to doors at handicapped compartments.
   5. Furnish door pull and rubber-tipped bumper for out-swinging doors. Provide pulls on both sides of doors at compartments indicated to be handicapped accessible.
   6. Furnish continuous channel brackets at walls.

2.04 FABRICATION

A. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, fasteners, and anchors at pilasters to suit floor conditions. Make provisions for setting and securing continuous head rail at top of each pilaster. Provide shoes at pilasters to conceal supports and leveling mechanism.

B. Doors:
   1. Standard Compartments: Provide 24- inch wide in-swinging doors at toilet stalls unless indicated otherwise.
   2. Handicapped Accessible Toilet Compartments: Provide 34-inch wide out-swinging doors with a minimum 32-inch wide clear opening.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify field measurements are as indicated on shop drawings.

C. Verify correct spacing of plumbing fixtures.

D. Verify correct location of built-in framing, anchorage, and bracing.

3.02 INSTALLATION

A. Maintain the following maximum clearances:
   1. Walls and panels: 1 inch (25.4 mm).
   2. Walls and pilasters: 1 inch (25.4 mm).
   3. Panels and pilasters: 1/2 inch (12.7 mm).

B. Attach continuous panel brackets securely to walls using anchor devices.

C. Secure pilasters to floor; level, plumb, and tighten.

D. Secure continuous head rail to each pilaster with not less than two fasteners.

E. Hang doors to align tops of doors with tops of panels and adjust so tops of doors are parallel with overhead brace when doors are in closed position.

F. Urinal Screens: Attach to floors and walls with anchoring devices to suit supporting structure. Set units level and plumb and to resist lateral impact.

3.03 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation from Indicated Position: 1/4 inch (6.35 mm).

C. Maximum Variation from Plumb: 1/8 inch (3.18 mm).

3.04 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust and align hardware to uniform clearance at vertical edge of doors, not exceeding 3/16 inch (4.76 mm).

C. Adjust hinges to position doors in partially opened position when unlatched. Return out-swinging doors to closed position.

D. Adjust adjacent components for consistency of line or plane.

END OF SECTION

SECTION 10 22 13

WIRE MESH PARTITIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Wire mesh partition system with hinged doors.

B. Related Sections:
1. Section 08 71 00 - Door Hardware: Cylinders for locksets.

1.02 REFERENCES

A. ASTM International:
1. ASTM A36/A36M - Standard Specification for Carbon Structural Steel.
2. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
4. ASTM A510 - Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel.

B. American Welding Society:
1. AWS D1.1 - Structural Welding Code - Steel.

1.03 DESIGN REQUIREMENTS

A. Design partition system to provide for movement of components without damage, undue stress on fasteners or other detrimental effects, when subject to design loads.

B. Design system to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate plan and vertical dimensions, elevations, component details; head, jamb, and sill details; location of hardware. Include component details, anchorage, type and location of fasteners, and accessories or items required of related work.

C. Product Data: Submit data for screen materials and finishes.

D. Samples: Submit two samples, 12 x 12 inch (304.8 mm) in size illustrating screen material.

E. Manufacturer's Installation Instructions: Include special procedures and perimeter conditions requiring special attention.

1.05 SUSTAINABLE DESIGN SUBMITTALS

A. For products used to meet specified goals for recycled content or local and regional materials, submit manufacturer's certificate certifying the following:
   1. Recycled Content: Recycled material content.
   2. Local and Regional Materials: Source for materials and distance from project site.

1.06 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

1.07 FIELD MEASUREMENTS

A. Verify field measurements are as shown on shop drawings.

PART 2 PRODUCTS

2.01 WIRE MESH PARTITIONS

   10. SpaceGuard Products. www.spaceguardproducts.com/home.htm
   11. Wire and Iron Products, Inc. www.jescoonline.com
   12. Substitutions: Section 01 25 00 – Substitution Procedures

2.02 COMPONENTS

A. Framing Members:
   1. ASTM A36/A36M, formed steel sections
   2. ASTM A500, Grade B cold formed steel tubing.

B. Woven Screen Wire: ASTM A510 uncoated crimped steel wire; conforming to the following:
   1. Wire Size: 6 gage.
   2. Mesh Size: 2 x 2 inch (50.8 mm).
   3. Mesh Weave Design: Plain weave, intercrimp design.

C. Welding Materials: AWS D1.1; type required for materials being welded.

D. Bolts, Nuts and Washers: Hot dip galvanized.

E. Anchorage Devices: Type required for materials being anchored.

F. Exposed Mechanical Fastenings: Flush countersunk screws or bolts, unobtrusively located, consistent with design of structure.

2.03 ACCESSORIES

A. Mesh Panels: Woven screen wire securely clinched into 1-1/2 x 3/4 inch (19.05 mm) steel channel frames.

B. Corner Posts: 1-3/4 x 1-3/4 inch (44 mm) steel angles.

C. Intermediate Posts: 2-1/2 x 5/16 inch (7.94 mm) flat steel bars.
   1. Where partition runs exceed 20 feet (609.6 cm) without intersecting or connecting to overhead framing, furnish 3 inch (76.2 mm) by 4.1 lb steel channel line posts with 5 x 18 x 1/4 inch (6.35 mm) steel base plates located at recommended intervals to ensure partition rigidity and stability.

D. Floor Shoes: Manufacturer's standard, cast steel or aluminum, 2-1/2 inches (64 mm) high, with set screw adjustment to set bottom horizontal frame members approximately 3 inches (76.2 mm) above floor.

E. Intermediate Horizontal Members: 1-1/2 x 3/4 inch (19.05 mm) steel channel, mortised and tenoned into vertical member.

F. Intersection Posts for 3- or 4-Way Intersections: 2 x 2 inch (50.8 mm) steel tubes.
   1. For other than 90-degree intersections, use system's tubular steel corner posts and installation accessories.

G. Top Rail Horizontal Members: 3 inch (76.2 mm) x 4.1 lb steel channel, mortised and tenoned into vertical member.

H. Hinged Doors: Door frame of 1-1/2 x 3/4 x 1/8 inch (3.18 mm) steel channels with 1-1/2 x 1/8 inch flat steel bar cover plates on 3 sides, and 1/8 inch thick strike bar on lock side. Provide 1-1/2 pairs of 3-1/2 x 3-1/2 inch (89 mm) butt hinges riveted or welded to door and frame, and mortise-type cylinder lock operated by key outside with recessed lever handle complying with Texas Accessibilty Standards (TAS) inside. Align bottom of door with bottom of adjacent panels.

I. Cylinder Locks: As specified in Section 08 71 00.

J. Touch-Up Primer for Galvanized Surfaces: SSPC 20 zinc rich.

2.04 FABRICATION

A. Fabricate posts and panel frames with 3/8 inch (9.52 mm) diameter bolt holes spaced 18 inches (457.2 mm) oc

B. Fit and assemble in largest practical sections for delivery to site, ready for installation.

C. Make exposed joints flush and tight.

D. Furnish components required for anchorage to adjacent construction.

E. Frame openings made for penetrating mechanical and electrical components.

F. Fabricate door for hinged operation.

2.05 SHOP FINISHING

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Galvanizing: ASTM A123/A123M; galvanize after fabrication.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces and required openings are ready to receive work.

3.02 PREPARATION

A. Clean substrate surfaces.

3.03 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Provide additional field bracing as necessary for rigid, secure installation.

C. Perform field welding in accordance with AWS D1.1.

D. After installation, touch-up field welds, and scratched or damaged surfaces with touch-up primer.

3.04 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Variation From Plumb or Level: 1/4 inch (6.35 mm).

C. Maximum Misalignment From Indicated Position: 1/4 inch (6.35 mm).

3.05 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust hinged doors to achieve free movement.

END OF SECTION

SECTION 10 28 00

TOILET AND CUSTODIAL ACCESSORIES

PART 1 GENERAL

1.01 SUMMARY

A. The following items are Contractor furnished and Contractor installed:
   1. Sanitary napkin disposal units.
   2. Grab bars in student and adult toilet rooms.
   3. Stainless steel framed mirrors.
   4. Mop and broom holders with shelf at custodial closets.

B. The following items are Owner-Furnished and Contractor Installed (OFCI):
   1. Surface-mounted paper towel dispensers.
   2. Toilet tissue dispensers
      a. Big roll in student toilet room stalls.
      b. Double roll in adult toilet room stalls.
   3. Liquid soap dispensers.

1.02 SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and Division 1 Specifications Sections.

B. Product Data for each toilet accessory item specified, including details of construction relative to materials, dimensions, gages, profiles, method of mounting, specified options, and finishes.

C. Schedule: Indicating types, quantities, sizes, and installation locations (by room) for each toilet accessory item to be provided for project.

D. Setting Drawings: Where cutouts are required in other work, provide templates, substrate preparation instructions, and directions for preparing cutouts and for installation of anchorage devices.

1.03 QUALITY ASSURANCE

A. Inserts and Anchorages: Furnish inserts and anchoring devices that must be set in concrete or built into masonry; coordinate delivery with other work to avoid delay.

B. Single-Source Responsibility: Provide products of same manufacturer for each type of accessory unit and for units exposed to view in same areas, unless otherwise acceptable to Architect.

1.04 PROJECT CONDITIONS

A. Coordination: Coordinate accessory locations, installation, and sequencing with other work to avoid interference and to assure proper installation, operation, adjustment, cleaning, and servicing of toilet accessory items.

1.05 WARRANTY

A. Special Project Warranty: Provide manufacturer's written 5-year warranty against silver spoilage of mirrors, agreeing to replace any mirrors that develop visible defects within warranty period.

PART 2 PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide toilet accessories by one of the following:
   1. Toilet and Bath Accessories
      a. A & J Washroom Accessories www.ajwashroom.com
      b. American Specialties, Inc. www.americanspecialties.com
      c. Bobrick Washroom Equipment, Inc. www.bobrick.com
      d. Bradley Corporation www.bradleycorp.com
      e. Georgia-Pacific www.gp.com
      f. General Accessory Manufacturing Co. www.gamcousa.com
      g. Kimberly-Clark Professional www.kcprofessional.com
      h. McKinney/Parker

2.02 MATERIALS, GENERAL

A. Stainless Steel: AISI Type 302/304, with polished No. 4 finish, 22-gage minimum thickness, unless otherwise indicated.

B. Brass: Leaded and unleaded, flat products, ASTM B 19; rods, shapes, forgings, and flat products with finished edges, ASTM B16, Castings, ASTM B-30.

C. Sheet Steel: Cold-rolled, commercial quality ASTM A366, 20-gage minimum, unless otherwise indicated. Surface preparation and metal pretreatment as required for applied finish.

D. Galvanized Steel Sheet: ASTM A527, G60.

E. Chromium Plating: Nickel and chromium electro-deposited on base metal, ASTM B456, Type SC 2.

F. Vinyl-Backed Safety Mirror Glass: Nominal ¼ inch thick, conforming to ASTM C1036, Type I, Class 1, Quality q2, and with silvering, electro- plated copper coating, and protective organic coating. Apply vinyl backing with pressure-sensitive adhesive coating over glass coating by method recommended by vinyl-backing manufacturer to produce a surface free of bubbles, blisters, or other imperfections. Use adhesives and vinyl backing compatible with glass coating as certified by organic coating manufacturer.

G. Galvanized Steel Mounting Devices: ASTM A 153, hot-dip galvanized after fabrication.

H. Fasteners: Screws, bolts, and other devices of same material as accessory unit or of galvanized steel where concealed.

I. Keys: Unless otherwise indicated, provide universal keys for access to toilet accessory units requiring internal access for servicing, resupply, etc. Provide minimum of six (6) keys to Owner's representative and obtain receipt.

2.03 SANITARY NAPKIN DISPOSAL UNITS

A. Surface-mounted stainless steel disposal unit with seamless exposed walls, tightly self-closing top cover and locking bottom panel with continuous stainless steel piano hinge.
   1. Basis-of-Design: Bradley Corporation No. 4781-15.

2.04 GRAB BARS

A. Stainless Steel Type: Provide grab bars with wall thickness not less than 18 gage and as follows:
   1. Mounting: Concealed, manufacturer's standard flanges and anchorages.
   2. Clearance: 1-1/2 inches (12.7 mm) clearance between wall surface and inside face of bar.
   3. Gripping Surfaces: Smooth, satin finish.
   4. Heavy-Duty Size: Outside diameter of 1-1/2 inches (12.7 mm).
   5. Length: 42", at sides of water closet; 36", behind water closet.
   6. Shower "L": "L" style 18" x 30".
   7. Shower "U": "L" style 36" x 48" x 36□.

2.05 FRAMED MIRRORS

A. Stainless Steel Framed Tempered Glass Mirror Units:
   1. Glass: 1/4" thick tempered.
      a. Fabricate frame with angle shapes of not less than 18 gage, with square corners mitered, welded, and ground smooth. Type 430 stainless steel in No. 4 satin polished finish.
      b. All mirrors within toilet rooms shall be stainless steel framed.

2.06 MISCELLANEOUS ACCESSORIES

A. Mop and Broom Holder: 18 gage Type 304 stainless steel "hat" channel with spring-loaded rubber cam-type mop/broom holders and integral shelf. Provide unit 48 inches (1219.2 mm) long and complete with 5 holders.
   1. Basis-of-Design: Bobrick B-224 x 48.

B. Soap Dispensers:
   1. Basis-of-Design: Bobrick B-4112 Contura liquid soap dispenser, in brushed stainless steel cabinet.

2.07 FABRICATION

A. General: Only a maximum 1-1/2 inch (12.7 mm) diameter, unobtrusive stamped logo of manufacturer, as approved by Architect, is permitted on exposed face of toilet or bath accessory units. On either interior surface not exposed to view or back surface, provide

additional identification by means of either a printed, waterproof label or a stamped nameplate, indicating manufacturer's name and product model number.

B. Surface-Mounted Toilet Accessories, General: Except where otherwise indicated, fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous stainless steel piano hinge. Provide concealed anchorage wherever possible.

C. Recessed Toilet Accessories, General: Except where otherwise indicated, fabricate units of all welded construction, without mitered corners. Hang doors or access panels with full-length stainless steel piano hinge. Provide anchorage that is fully concealed when unit is closed.

D. Framed Mirror Units, General: Fabricate frames for glass mirror units to accommodate wood, felt, plastic, or other glass edge protection material. Provide mirror backing and support system that will permit rigid, tamperproof glass installation and prevent accumulation of moisture. Provide galvanized steel backing sheet, not less than 22 gage and full mirror size, with non-absorptive filler material. Corrugated cardboard is not an acceptable filler material.

E. Mirror Unit Hangers: Provide system of mounting mirror units that will permit rigid, tamperproof, and theft-proof installation including heavy-duty wall brackets of galvanized steel, equipped with concealed locking devices requiring special tool to remove.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install toilet accessory units in accordance with manufacturers' instructions, using fasteners appropriate to substrate and recommended by manufacturer of unit. Install units plumb and level, firmly anchored in locations and at heights indicated.

B. Secure mirrors to walls in concealed, tamperproof manner with special hangers, toggle bolts, or screws. Set units plumb, level, and square at locations indicated, in accordance with manufacturer's instructions for type of substrate involved.

C. Install grab bars to resist tensile and moment forces generated by a load of 250 lb. applied in any direction, or as otherwise required by authorities having jurisdiction, whichever is more stringent.

3.02 ADJUSTING AND CLEANING

A. Adjust toilet accessories for proper operation and verify that mechanisms function smoothly. Replace damaged or defective items.

B. Clean and polish all exposed surfaces in strict accordance with manufacturer's recommendations after removing temporary labels and protective coatings.

END OF SECTION

SECTION 10 28 10

MISCELLANEOUS SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Clinic curtain and track.
   2. Wall corner guards.
   3. Ceiling suspended projectors.

B. For installation use only personnel who are skilled in the work required.

1.02 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each miscellaneous specialty and accessory specified.
   1. Installation Instructions: Submit manufacturer's recommended installation instructions showing all requirements for blocking and bracing.
   2. Samples: Submit samples of each finish material exposed to view, 6 x 6 inches in size, showing full range of colors and patterns.
   3. Shop drawings: Show location and extent of miscellaneous specialty items. Include plans, elevations, large-scale details of anchorages, and accessory items. Indicate typical and special details.
   4. Changing Station: Provide drawings prepared by manufacturer showing location of steel support members within wall cavity for full support of changing station.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.
   1. Protection: Protect specialties before, during and after installation. Protect installed work of other trades.

B. Replacements: In event of damage, make necessary replacements.

PART 2 PRODUCTS

2.01 CLINIC CURTAIN AND TRACK

A. Manufacturers
   1. ADC Hospital Equipment, www.automaticdevices.com
   2. Clickeze Cubicle Tracking System, InPro Corp., Muskego, WI 800-222-5556
   3. General Cubicle Company Inc., www.generalcubicle.com
   4. Graber Industries, Middleton, WI 800-356-9102
   5. Imperial Fastener Company, www.imperialfastener.com

6. A. R. Nelson Co.
7. Pryor Products, www.pryorproducts.com
8. Salsbury Industries, www.mailboxes.com
9. Substitutions: Section 01 60 00 - Product Requirements.

B. Components
1. Track: Extruded aluminum sections, not less than 1-1/4 inches wide by 3/4 inch high, with minimum wall thickness of 0.062 inch; one piece for each cubicle track run.
   a. Basis of design: Model #9-994 as manufactured by Graber.
   b. Track Accessories: Fabricate splices, end caps, connectors, end stops, coupling and joining sleeves, wall flanges, brackets, ceiling clips, and other accessories from same material and with same finish as track.
   c. End Stop: Non-removable.
   d. Curtain Track: Hand-drawn ceiling mounted extruded aluminum curtain track in clear anodized finish. Provide 48” baton for hand operation and all slides and hardware required for a complete installation.
   e. Curtain Carriers: Nylon roller to accurately fit track; designed to eliminate bind when curtain is pulled; fitted to curtain to prevent accidental curtain removal; one carrier for each 6 inches of fabric width.
2. Wand: Aluminum or plastic hollow section, attached to lead carrier, for pull-to-close action.
3. Custom Curtain:
   a. Primary Fabric:
      1) Basis of Design: Vel 35, Spa as manufactured by Stinson in color/pattern as selected by the Architect.
      2) Machine Washable.
      3) NFPA 701 Method #1 flame resistance.
   b. Open Mesh Cloth: No. 50 nylon mesh to permit air circulation; flameproof.
   c. Curtain Grommets: Two-piece, rolled edge, rustproof, nickel-plated brass, machined into top hem.
   d. Curtain shall be 10% wider than opening with flat panel, grommets at 6-inch centers, and 20-inches of open mesh along top. Bottom of curtain shall hang uniformly 6-inches above the floor.
4. Curtain Tieback: Nickel-plated brass chain; one at each curtain termination.
5. Provide curtain and track configurations as indicated in the drawings.

2.02 WALL CORNER GUARDS

A. Type: 16-ga. brushed finish Type 304 stainless steel, surface-mount type. as manufactured by Powerhold or approved equivalent by Metalines or Boss

B. Size:
1. Typical: 2” x 2”. one-piece length from top of floor base to ceiling.
2. Kitchen: 4” x 4” one-piece length from top of floor base to ceiling.

C. Fastening: Flat head stainless steel screws set flush with face.

D. Provide at outside corners of drywall construction as indicated.

2.03 SUSPENDED PROJECTOR MOUNTS

A. Universal Leg Type Projector Ceiling Mount #PM-3 as provided by www.videomountstore.com, or approved equivalent by Peerless.
   1. Load capacity 75 lbs. Provide with 1-1/2” diameter steel suspension pipe, length as necessary to reach overhead building structure.
   2. Black powder coat finish.
   3. Cable Lock: Kensington MicroSaver Lock for Projectors. 6-ft x 6mm thick steel composite cable with carbon tempered steel core.
   4. Ceiling finishing ring kit for 1-1/2" diameter suspension pipe.

B. Securely bolt column to building structure above ceiling. Provide 1-1/2” Unistrut bracing between joists where necessary for proper ceiling location. Adjust location to avoid cutting of ceiling grid.

PART 3 PRODUCTS

3.01 PREPARATION

A. Review manufacturer’s installation instructions and notify Architect in the event of discrepancies or incompatibility with existing conditions; do not proceed with installation until all such discrepancies have been resolved.

B. Ensure that solid wood blocking for wall-mounted items is properly installed and sufficient to support the maximum rated loads.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions and with requirements of authorities having jurisdiction.
   1. Anchor specialties securely in place in accordance with manufacturer’s instructions.
   2. Sequence installation to accommodate required utility connections.

B. Touch-up surfaces damaged during installation. Replace damaged components that cannot be satisfactorily repaired.

3.03 CLEANING

A. Reference Section 01 71 00 – Execution and Closeout Requirements: Final cleaning.

B. Remove packing material from miscellaneous specialties and leave in clean condition, ready for operation.

END OF SECTION

SECTION 10 44 00

EMERGENCY AID AND FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes the following items provided and installed by Contractor:
   1. Portable fire extinguishers and extinguisher cabinets.
   2. Brackets for wall mounting fire extinguishers.
   3. Defibrillators and cabinets.
   4. Fire Department lock boxes.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood blocking and shims.

1.02 REFERENCES

A. National Fire Protection Association:
   1. NFPA 10 - Standard for Portable Fire Extinguishers.

B. Underwriters Laboratories Inc.:
   1. UL - Fire Protection Equipment Directory.

C. International Code Council (ICC)
   1. ICC A117.1 - Accessible and Usable Buildings and Facilities.

1.03 PERFORMANCE REQUIREMENTS

A. Conform to NFPA 10.

B. Provide extinguishers classified and labeled by Underwriters Laboratories Inc. for purpose specified and indicated.

C. Provide fire rated cabinets classified and labeled by Underwriters Laboratories Inc. for purpose specified and indicated.

D. Comply with ICC A117.1 requirements for protruding objects and maximum reach ranges for semi-recessed cabinets and wall-mounted devices.

1.04 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittal procedures.

B. Product Data: For each product specified, submit operational features, color and finish, and anchorage details.
   1. Fire extinguishers: Include rating and classification.

2. Cabinets: Include rough-in dimensions, mounting details, door hardware, cabinet type, and trim style.

C. Manufacturer's Installation Instructions: Submit special criteria and wall opening coordination requirements.

D. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

E. Coordination Submittal: For Fire Department Lock Boxes, including other requriements such as padlocks, gate key switches. Submit a copy of the official order form or written directive from the local Fire Marshal indicating the approved model, options, and mounting location.

1.05 CLOSEOUT SUBMITTALS

A. Division 01 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit test, refill or recharge schedules and re-certification requirements.

1.06 QUALITY ASSURANCE

A. Source Limitations: Obtain fire extinguishers and cabinets through one source from a single manufacturer.

PART 2 PRODUCTS

2.01 FIRE EXTINGUISHERS

A. Manufacturers:
1. JL Industries; www.jlindustries.com.
2. Larsen’s Manufacturing Co.; www.larsensmfg.com
3. Nystrom Products Co.; www.nystrom.com
4. Potter Roemer; www.potterroemer.com
5. Substitutions: Section 01 60 00 - Product Requirements.

2.02 FIRE EXTINGUISHERS

A. Multipurpose Dry Chemical Type: Cast steel tank with pressure gage; 4-A:80-B:C, 10 lb capacity.

2.03 FIRE EXTINGUISHER CABINETS

A. Tub: Formed sheet steel, 0.036 inch thick base metal.

B. Doors and Trim: Formed stainless steel sheet with satin finish.

C. Configuration: Semi-recessed type, sized to accommodate extinguisher.

D. Door: 0.0478 inch thick, partially-glazed panel, reinforced for flatness and rigidity; with nominal 1/2-inch thick square-edge frame. No more than 1/2-inch projection from face of wall.

E. Door Glazing: Clear acrylic, 1/8 inch thick.

F. Door Hardware: Manufacturer's standard door-operating hardware cam-action latch or door pull and friction latch. Provide concealed or continuous-type hinge permitting door to open 180 degrees.

G. Cabinet Mounting Hardware: Appropriate to cabinet.

H. Form cabinet enclosure with right angle inside corners and seams. Form perimeter trim in one piece with corners mitered, welded, and ground smooth.

I. Pre-drill for anchors.

J. Weld, fill, and grind components smooth.

K. Glaze doors with resilient channel gasket glazing.

L. Finishing Tub and Interior: Baked enamel, color as selected.

M. Finishing Doors and Trim: No. 4 stainless steel.

2.04 FIRE-RATED FIRE EXTINGUISHER CABINETS

A. Where cabinets are indicated to be installed in fire-rated walls, provided cabinets listed and labeled to meet requirements of ASTM E 814 for fire-resistance rating of wall.

B. Match construction of non-rated cabinets except as follows:
   1. Construct fire-rated cabinets with double walls fabricated from 0.0478-inch thick, cold-rolled steel sheet lined with minimum 5/8 inch thick fire-barrier material.
   2. Provide factory-drilled mounting holes.

2.05 AUTOMATED EXTERNAL DEFIBRILLATORS (AED) AND CABINETS

A. AED Unit
   1. Manufacturer
      a. Cardiac Science; www.cardiacscience.com
      b. Substitutions: Section 01 60 00 - Product Requirements
   2. Basis of Design
      a. PowerHeart AED G3, #9390A-1001
      b. Where manufacturer has produced upgraded or replacement model, bidder shall submit manufacturer's data for the newer unit, regardless of availability of the original unit.
   3. Manufacturer’s Warranty – 7 year warranty; Batteries – 4 year warranty

B. Cabinet
   1. Cabinet with Door: Allied Medical Products AMP180-SSRM: Inside size is 14.125 inch x 14.125 inch x 7 inch. Prior to ordering, confirm interior dimensions are adequate to hold defribrillator and accessories.
      a. Cabinet Style: Semi-recessed.
      b. Components: Cold-rolled steel tub.
      c. Door and Trim Construction: Cold-rolled steel; flush doors.

d. Door: Full Glazing; Pull & AED Decal.
e. Finish for all components: Stainless Steel.
f. Alarms: Standard audible cabinet-mounted alarm standard (battery powered) to protect against theft or tampering. Alarm deactivated when door is closed.
g. Fire-Rating: As indidcated on Drawings, match wall on which product is installed.
h. Provide with wall sign: AMP 3858.

2.06 FIRE DEPARTMENT LOCK BOXES

A. Provide locking security boxes for fire department access to building and service courtyard as required by local authorities. Coordinate specific requirements with local authorities.

B. Building Mounted: Fire Department Lock Box: *Model 4400* recessed-mount with flange as manufactured by Knox Company.

C. Fence mounted: Fire Department Lock Box: *KnoxVault 440*0 surface-mount as manufactured by Knox Company.

D. Coordinate box types and general locations with local area fire department having jurisdiction. Normally located at main entry.
1. Coordinate specific location on the building front with Architect.
2. Substitutions: None.

2.07 ACCESSORIES

A. Extinguisher Brackets: Formed steel, plated or baked enamel finish.
1. Furnish brackets for extinguishers mounted inside cabinets.
2. Furnish brackets for extinguishers not mounted inside cabinets.

B. Cabinet Signage: Provide lettering to comply with authorities having jurisdiction for letter style, color, size, spacing, and location.
1. Identify bracket-mounted extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to wall surface.
2. Identify fire extinguisher in cabinet with the words "FIRE EXTINGUISHER" applied to door.

PART 3 EXECUTION

3.01 EXAMINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Verify rough openings for cabinet are correctly sized and located.

3.02 INSTALLATION

A. Install cabinets plumb and level in wall openings.

B. Install wall brackets to walls and cabinets at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

C. Secure rigidly in place.

D. Place extinguishers on wall brackets and brackets inside cabinets.

E. Position cabinet signage as required by authorities having jurisdiction.

F. Mount fire extinguisher cabinets, brackets, and AED cabinets to comply with the following:
   1. ADA/ICC A117.1 Protrusion: In paths of travel, mount semi-recessed and surface-mounted cabinets so that no part projects more than 4 inches from the finished wall.
   2. ADA/ICC A117.1 Reach Range: Mount units so that the highest operable part (e.g., extinguisher handle, cabinet handle, AED handle) is no more than 48 inches above the finished floor.

G. Install Fire Department Lock Boxes at locations coordinated with the local authorities having jurisdiction, typically at a height between 48 and 72 inches above the finished floor.

END OF SECTION

SECTION 10 56 13

METAL STORAGE SHELVING

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes: Metal storage shelving units.

1.02 SUBMITTALS

A. Division 01 - Submittal Procedures: Submittal requirements.

B. Shop Drawings: Indicate shelving locations and configurations; show installation details at special or non-standard conditions.

C. Product Data: Submit for each type of metal shelving unit specified, including physical characteristics, durability and resistance to fading and flame resistance characteristics.

D. Samples: Submit two samples, minimum 6 x 6 inches in size, of each color and finish specified.

E. Manufacturer's Installation Instructions: Submit manufacturer's product literature and installation instructions for each type of metal storage systems and installation accessory required. Include methods of installation for each type of substrate.

F. Maintenance Data: Include data in Maintenance Manual specified in Division 01.

1.03 QUALITY ASSURANCE

A. Provide all metal shelving units by a single manufacturer.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product warranties and product bonds.

B. Accept metal storage shelving on site. Inspect on arrival for damage.

1.05 COORDINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Sequence metal storage shelving installation with other work to minimize possibility of damage and soiling during remainder of construction period.

1.06 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Requirements for warranties.

B. Special Project Warranty: Submit a written warranty, executed by the Contractor, Installer and the Manufacturer, agreeing to repair or replace shelving units which fail in materials or workmanship within the specified warranty period. This warranty shall be in addition to and not a limitation of other rights the Owner may have against the Contractor under the Contract Documents.
   1. Warranty Period: 2 years from date of Substantial Completion.

1.07 MAINTENANCE

A. Maintenance Instructions: Submit manufacturer's printed instructions for maintenance of installed Work, including methods and frequency recommended for maintaining optimum condition under anticipated use conditions. Include precautions against materials and methods which may be detrimental to finishes and performance.

B. Replacement Materials: After completion of Work, deliver not less than 2 of each type, color, and pattern of metal storage shelving, exclusive of material required to properly complete installation. Furnish 2% of accessory components as scheduled. Furnish replacement materials from same production run as materials installed. Package replacement materials with protective covering, identified with appropriate labels.

PART 2 - PRODUCTS

2.01 METAL STORAGE SHELVING

A. Manufacturers:
   1. Acme Visible Records; www.acmevisible.com
   2. Dixie Shelving (Shelving Concepts, Inc.); www.dixieshelving.com
   3. E-Z Shelving Inc.; www.e-zshelving.com
   4. Lyon Workspace Products, Inc.; https://www.lyonworkspace.com/
   5. Penco Products Inc.; www.pencoproducts.com
   6. Republic Storage Systems; www.republicstorage.com
   7. Spacesaver Corp.; www.spacesaver.com
   8. Tab Products https://storage.tab.com/
   9. Aurora Storage Products, Inc. www.aurorastorage.com
   10. Substitutions: Section 01 60 00 - Product Requirements.

2.02 COMPONENTS

A. General: Minimum 18 gauge cold-rolled steel sheet metal, washed to receive powder coated baked enamel finish, higher gauge where indicated to provide appropriate loading capacity.

B. Shelving Units: Heavy-duty open shelving units consisting of four upright corner pilasters, minimum 13 gage thick, slotted to receive clips clipped together with shelves as indicated. Provide cross-braces laterally and at ends as required for stability with intended load. Shelves adjustable 1-1/2 inches on center.
   1. Size: 36-inches wide x 84-inches high unless indicated otherwise.
   2. Shelf Depth: As indicated on Drawings.
   3. Number of Shelves: As indicated on Drawings; if not indicated, provide fixed bottom and top shelves and 4 intermediate adjustable shelves.

C. Load Capacities: In addition to minimum gage, load capacity for each shelf shall be as follows:
   1. For units up to 36" wide: Minimum 400 lbs. per shelf.
   2. For units 42” to 48” wide: Minimum 425 lbs. per shelf.

2.03 SHOP FINISHING

A. Steel: Manufacturer’s standard baked enamel finish, color as selected.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Inspect areas and conditions in which metal storage shelving will be installed. Verify locations of power feeds, positioning of exits and aisle ways and overall dimensions of space, including height and HVAC venting.

C. Verify that metal shelving components, including size and finish, are as specified before beginning assembly or installation.

3.02 PREPARATION

A. Prior to installation of shelving system, vacuum floor surface to remove dust, debris and loose particles. Resilient flooring wet mopped and dried or finish buffed. Verify that components, including size and finish are those specified before installing.

3.03 INSTALLATION

A. Install metal storage shelving after finishing operations, including painting, have been completed. Install system to comply with final layout drawings, in accordance with manufacturer’s instructions. Position units level, plumb, and at proper location relative to adjoining units and related work. Adjust accessories to provide visually acceptable installation.

B. Bolt shelving units to wall and bolt adjacent end-to-end and back-to-back shelving units together to form single unit.

C. Field touch-up blemishes to original finish.

3.04 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Immediately upon completion of installation, clean components and surfaces following manufacturer's recommended procedures.

C. Remove surplus materials, rubbish and debris resulting from installation upon completion of Work and leave areas of installation in neat, clean condition.

3.05 FIELD QUALITY CONTROL

A. Remove and replace shelving components which are chipped, scratched, or otherwise damaged and which do not match adjoining work. Provide new matching units, installed as specified and in manner to eliminate evidence of replacement.

3.06 ADJUST

A. Adjust components and accessories to provide visually acceptable installation.

3.07 DEMONSTRATION

A. Upon completion of installation of system, inspect and determine capability and compliance with requirements. Repair or replace units which are not functional. All shelves and/or accessories shall be smoothly in place with no visual buckling or non-alignment of parts evident.

3.08 PROTECTION OF INSTALLED CONSTRUCTION

A. Section 01 70 00 - Execution and Closeout Requirements: Protecting installed construction.

B. Do not permit finished shelving units to be exposed to continued construction activity.

C. Protect system against damage during remainder of construction period. Advise owner of additional protection needed to ensure that system will be without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 10 56 26

HIGH DENSITY MOBILE STORAGE SHELVING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
1. Shop-manufactured manually operated high density mobile storage systems.

1.02 REFERENCES

A. American Laminators Assoc. Performance Standard ALA 1985.

B. ANSI - BHMA Standard A156.9, Grade 1.

C. American Society for Testing and Materials (ASTM)

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of product indicated.

C. Shop Drawings: Show fabrication and installation details for mobile storage system. Include plans, elevations, sections, details, and attachments to other Work. Provide precise location of tracks and anchorage points. Provide location and details of anchorage devices to be fastened to other construction or embedded within.

D. Samples: Provide nominal 6” square sample of selected laminate pattern/color.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative of the system manufacturer for installation and maintenance of units required for this Project.

B. Product Designations: Drawings and specifications indicate sizes, configurations, and finish material of frame, storage cabinets, hardware, and accessories by referencing designated manufacturer's system. Other manufacturers' systems of similar sizes and configurations, of same finish material, and complying with these Specifications may be considered.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver mobile storage system components only after painting, utility roughing-in, and similar operations that could damage, soil, or deteriorate cabinets have been completed in installation areas. If system must be stored in other than installation areas, store only in areas where environmental conditions meet requirements specified in "Project Conditions" Article.

C. Keep finished surfaces covered with polyethylene film or other protective covering during handling and installation.

1.06 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Warranty: Manufacturer's ten-year written warranty agreeing to repair or replace components of system frame, cabinets, or accessory parts that fail in materials or workmanship. Failures include, but are not limited to, the following:
   1. Delamination of components or other failures of glue bond.
   2. Warping or sagging of components.
   3. Failure of operating hardware.
   4. Deterioration of finishes.

C. Maintenance Information: Submit manufacturer’s printed information for operating, repair, and periodic maintenance of installed system.

1.07 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install system until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where field measurements cannot be made without delaying the Work, coordinate dimensions with the Contractor to ensure that actual dimensions correspond to established dimensions.

1.08 SYSTEM DESCRIPTION

A. Basis of Design: Standard Mobile Storage System with capacity of 1.000 lbs. per linear ft. as manufactured by Spacesaver or approved equivalent by specified manufacturer.

B. Carriage-mounted high-density storage units movable on support rails providing uniform carriage movement along the total length of travel, with balanced or unbalanced loads using echanically-assisted manual crank.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Aurora Storage Products, www.aurorastorage.com

B. Hi-Density Spacesaving Systems, www.hdspacesaving.com

C. Patterson-Pope, www.pattersonpope.com

D. Spacesaver, www.spacesaver.com

E. Substitutions: Section 01 60 00 - Product Requirements.

2.02 COMPONENTS

A. Cabinets fabricated with 3/4” thick industrial grade composite wood, minimum 48-pcf, with no added formaldehyde and thermos-fused polyester laminated finish.
   1. Cabinet Dimensions: 24” deep x 96” long x 92-1/2” high (7-shelf unit).
   2. Finish both faces all cabinet components.
   3. Each cabinet furnished with four adjustable shelves and three fixed shelves, all reinforced with aluminum extrusion that includes slot with vinyl labeling material.
   4. Each cabinet furnished with four minimum 5-inch diameter wheels; minimum allowable load capacity of 3.200 lbs. per wheel.
   5. Provide cabinets with bumpers for control of side and outward movement.
   6. Frame shall be 1” x 1” x 16-gauge tubular steel with welded connections.
      a. Factory-applied black enamel powder coat finish.
      b. Steel floor plates at vertical cabinet standards for permanent anchorage to floor slab.
      c. Standard anchorage plates for fastening frame to wall in addition to floor anchorage.
   7. Shelving: 1” thick with maximum span of 36”. Both faces plastic laminate finished with PVC edge trim matching finish laminate.
   8. Laminate: NEMA LD 3, GP-28 for vertical surfaces, and GP-50 for horizontal surfaces. Color/pattern as selected by Architect from manufacturer’s full line of standard and custom colors. Edges finished with 1mm extruded PVC edge trim in color matching finish laminate.

B. Drive System: Positive type mechanically-assisted drive that minimizes end plan, ensures no play in the drive handle, and stopping of carriages without drifting.
   1. Triple or single arm operating wheels with rotating hand knobs provided on the drive ends of shelf units. Manually turning handle transmits power through chain drive to drive wheels on each carriage.
   2. Drive system gearing shall provide mechanically assisted units capable of being moved by exerting a maximum horizontal force of 5 pounds on the operating wheel.
   3. When unlocked, a safety lock button on each operating wheel hub permits moving of a carriage in either direction to create a new access aisle.
   4. Permanently shielded and lubricated bearings.
   5. Tensioning device located on each chain drive accessible without removing end panels.

C. Accessories Provided
   1. Safety sweep system.
   2. Top closure constructed of 3/4” plywood with polyester laminate finish to match cabinets.
   3. Hasps for Owner-provided padlock.
   4. Through-bolted pull handles.
   5. ID label on face of each cabinet.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas for compliance with requirements for installation tolerances, location of wall anchorage reinforcements, and other conditions affecting operational performance and safety of installed mobile library system.
   1. Proceed with installation only after any unsatisfactory conditions have been corrected.

2. Proceeding with installation indicates acceptance of all existing conditions and substrates.

3.02 SYSTEM INSTALLATION

A. Install frame plumb, level, and true; level rails as required using concealed shimming.
   1. Anchor floor plates to concrete slab using minimum 3/8” diameter stainless steel expansion bolts.
   2. Where mobile system abuts finished walls, apply narrow filler strips and scribe to wall for accurate fit. Conceal all wall fasteners and anchorages.

B. Storage Cabinets: Set cabinets straight, level, and plumb. Adjust all adjacent tops within 1/16-inch of a single plane. Adjust bumpers and guides for proper open, closed, and traveling positions.

C. Install pulls, ID frames, and hardware uniformly and precisely. Adjust and align locking hasps so moving parts operate freely and contact points meet accurately. Allow for final adjustment after installation.

D. Lubricate casters for smooth and noiseless operation.

3.03 CLEANING AND PROTECTING

A. Repair or remove and replace defective work as directed on completion of installation.

B. Clean finished surfaces, touch up as required, and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

C. Protection: Provide 6-mil or heavier clear plastic sheeting over finish surfaces. Tape to underside of shelves and frame, and remove protection after final Owner acceptance.

END OF SECTION

SECTION 10 73 26

ALUMINUM WALKWAY COVERS AND ENTRY CANOPIES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Aluminum walkway covers.
   2. Aluminum entry canopies.
   3. Prefinished metal canopy soffits.
   4. Flashing where connections to buildings are made.

B. Related Work:
   1. Section 04 20 00 - Unit Masonry: Items built into masonry walls.
   2. Section 07 90 00 - Joint Protection: Joint sealants.
   3. Section 07 62 00 - Sheet Metal Flashing and Trim.

1.02 QUALITY ASSURANCE

A. Installer Qualifications: Use for installation, only personnel who are skilled in the work required, familiar with the manufacturer's recommended methods of installation and the requirements of the work.

1.03 SUBMITTALS:

A. Shop Drawings: Submit Shop Drawings in accordance with Division 1 Section "Submittals".

B. Contractor shall submit shop drawings for approval by the Architect prior to fabrication of any materials. Shop Drawings shall clearly illustrate all details including but not limited to: Plan views, column layout and measurements, footing sizing and details, drainage locations and details, building wall condition details, flashing details, Canopy component sizing and thickness, Fastener sizing, large scale assembly details, and finishes by component.
   1. Contractor shall verify all dimensions and elevations prior to submittal to Architect and are to be checked by Manufacturer prior to fabrication.
      a. The site specific shop drawings and calculations shall bear the seal of a Civil or Structural engineer authorized to practice in the state of Texas where the project is located.
      b. Design loads for live load, wind uplift, and wind load shall be identified in the submittal.

C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for units with factory-applied color finishes.

D. Samples for Verification: Of each type of exposed finish required in manufacturer's standard sizes. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.

E. Installation Methods: Submit two copies of manufacturer's recommended installation methods.

1.04 PRE-INSTALLATION MEETINGS

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.
   1. Convene minimum one week prior to commencing work of this Section.

1.05 PRODUCT HANDLING

A. Protection: Protect walkway covers before, during and after installation. Protect installed work of other trades.

B. Replacements: In the event of damage, make repairs or replacements as necessary.

PART 2 PRODUCTS

2.01 GENERAL

A. Designs are based on the product of AVAdek Walkway Cover Systems.

B. Manufacturers: Subject to compliance with requirements, provide products of one of the following manufacturers.
   1. ASA Builders, Inc., www.asabuildersinc.com.
   2. AVAdek Walkway Cover Systems & Canopies www.avadek.com
   3. Dittmer Architectural Aluminum; Ditt-Deck Extruded Aluminum Walkway Covers www.ditt-deck.com
   4. E.L. Burns Company, Inc.; Burns Walkway Covers www.burnscovers.com
   5. Peachtree Protective Covers www.peachtreecovers.com
   6. Substitutions: Section 01 60 00 - Product Requirements.

C. Design Requirements:
   1. Systems shall be designed for a minimum 20 psf Live load and 25 psf Wind Uplift Load, or additional should state or local building codes require.
   2. Systems shall be designed to withstand a 150-mph wind event.
   3. It is the responsibility of the walkway cover/canopy manufacturer to verify the design meets the structural load requirements as specified.

2.02 MATERIALS

A. Beams: “U” Beams sized by manufacturer to meet all required design loads, including wind loads, (minimum 6” x 4” x .125”) Alloy 6063-T6 temper

B. Columns: 8” diameter Schedule 40 extruded aluminum round Alloy 6063-T6 temper.

C. Deck: Sized by manufacturer to meet all required design loads, including wind loads, (minimum 2-3/4” ht. x 6” x .078” thickness); extruded aluminum, Alloy 6063-T6 temper; roll-formed not acceptable.

D. Fascia / Trim: Extruded Aluminum 12”-18” ht. X 3” x 0.125” “G” Alloy 6063-T6 temper

E. Aluminum Soffit Panels: Standard 12” wide flat soffit panels as manufactured by AVAdek.

1. Basis-of-Design: AVAdek "Flat Panel" Soffit System, or approved equivalent by specified manufacturer.
2. Material: Smooth, non-vented aluminum panels, minimum 0.032-inch thickness.
3. Profile: 12-inch wide (nominal) flat-face panel with interlocking side joints.
4. Suspension: Manufacturer's standard proprietary concealed suspension system, designed to attach to the underside of the structural deck.
5. Finish: As indicated on drawings. If not indicated, match finish specified for Decking and Fascia or as indicated

F. The component sizes noted above are minimums and shall be precluded by component sizes called out on the drawings, or larger components as required to achieve the required structural performance.

G. Fasteners: Stainless Steel

H. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements, except containing no asbestos, formulated for 30-mil (0.762-mm) thickness per coat.

I. Miscellaneous:
1. Provide fasteners, sealant, flashing, additional components, etc., to match bents, deck, and trim as required to provide for a complete and finished system.

2.03 ALUMINUM FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Aluminum Finishes: Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.
1. Typical: Class I, Clear Anodic Finish: AA-M12C22A41 Anodic coating, Architectural Class I, clear coating 0 inch (0.02 mm) or thicker) complying with AAMA 607.1
2. Drop-Off Canopies: As indicated.
a. Fascia: Two-coat, factory applied, baked-on fluoropolymer coil-coating system; Kynar 500 as manufactured by PPG Industries.
1) Coating system shall provide minimum 1.0 mil (0.0254 mm) dry film thickness consisting of minimum 0.20 mil (0.00508 mm) primer and minimum 0.80 mil (0.02032 mm) color coating.
2) Color: Custom as selected by the Architect.
b. Soffit Panels:
1) Faux Wood Finish: Factory polyester powder coat finish meeting AAMA 2604 in faux wood-grain design. Color(s) as selected by the Architect. Product as manufactured by Quality Powder Coating, www.qualitypowdercoating.com.
2) Finish electrostatically applied to 2-4 mil thickness and polymerized along with ink printing film for faux wood grain by baking at 400-degrees F for 20-minutes.

3. Remaining Canopies: As indicated.
    a. Fascia: Specified medium bronze color anodic coating.
    b. Soffit Panels (not faux wood):.
        1) Two-coat, factory applied, baked-on fluoropolymer coil-coating system in solid color; Kynar 500 as manufactured by PPG Industries.
        2) Color: Custom as selected by the Architect.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances, foundation locations, and other conditions affecting performance of the Work.

B. Verify that concrete footings are properly located, dimensioned, cured, and ready to receive canopy columns.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Verify all field measurements prior to beginning installation.

B. Clean all component surfaces thoroughly prior to assembly and installation.

3.03 INSTALLATION

A. Install canopy system in strict accordance with manufacturer's written instructions and approved shop drawings.

B. Install components plumb, level, and true to line, with no visible distortion or warping.

C. Coordinate installation with scheduled concrete, masonry and roofing work.
    1. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
    2. Erection shall be by manufacturer in accordance with approved Shop Drawings.

D. Anchor columns securely to concrete footings. After final alignment, place non-shrink grout at column bases to provide uniform bearing.

E. Assemble components with manufacturer's standard stainless steel fasteners. Conceal fasteners where possible.

F. Isolate Dissimilar Materials:
    1. At connections to dissimilar metals, apply a heavy coat of zinc-chromate primer or other manufacturer-approved separation coating.
    2. At contact surfaces with concrete or masonry, apply a heavy coat of bituminous paint.

3. Install flashing at connections to adjacent building walls to provide a watertight installation. Coordinate with Section 07 62 00 - Sheet Metal Flashing and Trim.

G. Soffit System Installation:
1. Install proprietary suspension carriers securely to the underside of the structural deck, per manufacturer's instructions.
2. Engage soffit panels into carriers and adjacent panels, ensuring full, positive interlock.
3. Cut and trim panels neatly to fit at perimeters, columns, and penetrations. Install perimeter trim for a finished appearance.

3.04 CLEANING

A. Clean all exposed surfaces promptly after installation using mild detergent and clean water, in accordance with manufacturer's recommendations.

B. Do not use abrasive, acid, or caustic cleaners.

C. Remove and replace any damaged components that cannot be repaired to the Architect's satisfaction.

3.05 PROTECTION

A. Protect installed canopy and soffit systems from damage during subsequent construction.

END OF SECTION

SECTION 10 75 00

FLAGS AND FLAGPOLES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Ground-set aluminum flagpoles.
   2. Flags.

B. Related Sections include the following:
   1. Section 03 30 00 - Cast-In-Place Concrete: Concrete footings for flagpoles.
   2. Section 07 90 00 - Joint Protection: Elastomeric sealant filling the top of the foundation tube.

1.02 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide flagpole assemblies, including anchorages and supports, capable of withstanding the effects of wind loads, determined according to NAAMM FP 1001, "Guide Specifications for Design of Metal Flagpoles."
   1. Base flagpole design on polyester flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.
   2. Basic Wind Speed Resistance: 110 mph or greater for 3-second gust speed at 33 feet above ground.

1.03 SUBMITTALS

A. Product Data: For each type of flagpole required.

B. Structural Calculations: For flagpoles indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Qualification Data: For professional engineer.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain each flagpole as a complete unit, including fittings, accessories, bases, and anchorage devices, from a single manufacturer.
   1. Obtain flagpoles through one source from a single manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. General: Spiral wrap flagpoles with heavy paper and enclose in a hard fiber tube or other protective container.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. American Flagpole www.hapcopoles.com
   2. The Baartol Company Inc. www.baartol.com
   3. Concord Industries, Inc. www.flagpoles.com
   4. Lingo Inc.; Acme Flagpole Division www.lingoinc.com
   5. Pole-Tech Company Inc. www.poletech.com

2.02 FLAGPOLES

A. Flagpole Construction, General: Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:

B. Fabricate shop and field joints without using fasteners, screw collars, or lead calking.

C. For tapered flagpoles, provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.

D. Exposed Height: 30-feet unless indicated otherwise on the drawings.

E. Aluminum Flagpoles: Provide entasis-tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B 241/ (B 241M), Alloy 6063, with a minimum wall thickness of 3/16 inch (4.76 mm). Heat treat after fabrication to comply with ASTM B 597, Temper T6.

F. Foundation Tube: Galvanized corrugated-steel foundation tube, 0.064-inch minimum nominal wall thickness. Provide with 3/16 inch (4.76 mm) steel bottom plate and support plate; 3/4 inch (19.05 mm) diameter, steel ground spike; and steel centering wedges all welded together. Galvanize steel parts, including foundation tube, after assembly. Provide loose hardwood wedges at top of foundation tube for plumbing pole.
   1. Provide flashing collar of same material and finish as flagpole.

2.03 FITTINGS

A. Finial Ball: Manufacturer's standard flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.
   1. 0.063 inch (1.6 mm) spun aluminum, finished to match flagpole.

B. External Halyard: Ball-bearing, non-fouling, revolving truck assembly of cast metal with continuous 5/16 inch (7.94 mm) diameter, braided steel halyard and 9 inch (228.6 mm) cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.
   1. Provide one halyard and one cleat at each flagpole.
   2. Provide cast-metal cleat covers, finished to match flagpole, secured with cylinder locks.
   3. Provide halyard covers consisting of a 2 inch (50.8 mm) channel, 60 inches (1524 mm) long, finished to match flagpole.

C. Halyard Flag Snaps: Provide two stainless-steel swivel snap hooks per halyard.
   1. Provide with neoprene or vinyl covers.

2.04 MISCELLANEOUS MATERIALS

A. Concrete: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3000 psi (20684.28 kPa) unless otherwise indicated.

B. Sand: ASTM C 33, fine aggregate.

C. Elastomeric Joint Sealant: Single-component neutral-curing silicone joint sealant complying with requirements in Division 7 Section "Joint Sealants" for Use NT (non-traffic) and for Use M, G, A, and, as applicable to joint substrates indicated, O joint substrates.

2.05 FLAGS

A. Flags: Commercial-quality nylon, 4 x 6 foot (182.88 cm) size; furnish one flag of each of the following types:
   1. United States.
   2. State of Texas.

2.06 FINISHES

A. Metal Finishes, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Aluminum: Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
   1. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0 inch (0.02 mm) or thicker) complying with AAMA 611.

PART 3 EXECUTION

3.01 PREPARATION

A. Prepare uncoated metal flagpoles that are set in foundation tubes by painting below-grade portions with a heavy coat of bituminous paint.

B. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete.

C. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms and foundation tube, sleeve, or anchor bolts in position, to prevent displacement during concreting.

D. Place concrete immediately after mixing. Compact concrete in place by using vibrators. Moist-cure exposed concrete for not less than seven days or use non-staining curing compound.

E. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.02 FLAGPOLE INSTALLATION

A. General: Install flagpoles where shown and according to manufacturer's written instructions.

B. Foundation-Tube Installation: Install flagpole in foundation tube, seated on bottom plate between steel centering wedges. Plumb flagpole and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2-inch layer of elastomeric joint sealant and cover with flashing collar.

END OF SECTION

SECTION 11 31 00

RESIDENTIAL GRADE APPLIANCES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Equipment provided and installed by Contractor:
      a. Refrigerator with freezer.
      b. Microwave Oven.
      c. Side-By-Side Clothes washers and dryers
      d. Clothes Washers and Dryers.
      e. Electric ranges.
      f. Kitchen Vent hood.
      g. Dishwasher.
   2. Equipment provided and installed under other Sections:
      a. Division 22 Sections – Plumbing: Disposal unit at Life Skills Kitchen.

B. Related Work Described Elsewhere:
   1. Division 22, 23, and 26 Sections: Power, water, drainage, and ventilation systems related to appliances is provided under Mechanical, Plumbing and Electrical Sections.
      a. Coordinate with all other trades to ensure proper and adequate provision for the required utility sizing, capacities, and locations.

1.02 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is an authorized representative of the residential appliance manufacturer for both installation and maintenance of appliances required for this Project.

B. Product Options: These specifications indicate sizes, profiles, plumbing and power requirements of residential-grade appliances that are based on the specific types and models indicated. Contractor is responsible for coordinating sizes, profiles, plumbing and power requirements for products provided by other named manufacturers (or substitute models by the same manufacturer for products no longer available). Refer to Division 1 Section "Substitutions."

C. UL and NEMA Compliance: Provide electrical components required as part of residential-grade appliances that are listed and labeled by UL and that comply with applicable NEMA standards.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each appliance, indicating product specifications and options

C. Operation and Maintenance Instructions: For each appliance.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver appliances only after utility rough-in is complete and construction in the spaces to receive appliances is substantially complete and ready for installation.

C. Protect appliances before, during, and after installation, including the installed work and materials of all other trades.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no additional cost to the Owner.

1.05 WARRANTY

A. Section 01 70 00 - Execution and Closeout requirements: Product warranties and product bonds.

B. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

PART 2 PRODUCTS

2.01 RESIDENTIAL APPLIANCES

A. Manufacturers:
1. GE Appliances, http://www.ge.com
2. Substitutions: No Substitutions.

2.02 COMPONENTS

A. Refrigerator/Bottom-Freezer with Internal Water Dispenser:
1. Basis of Design: *Model No. GFE24JMKES / GFE24JYKES* freestanding type as manufactured by GE or approved equivalent by specified manufacturer.
2. Cabinet Size: Nominal 69-7/8 in H x 35-3/4 in W x 31-1/4 in" D.
3. Fabrication and Components:
a. Configuration:
1) Refrigerator Compartment: Two French doors, adjustable spill-proof glass shelves, humidity-controlled drawers, and adjustable door bins.
2) Freezer Compartment: Bottom pull-out drawer with multi-level baskets.
b. Features:
1) Water Dispenser: An internal water dispenser that provides filtered water.
2) Water Filtration: Utilizes the manufacturer's advanced water filtration system (GE XWF Filter or approved equal).
3) Icemaker: Factory-installed automatic icemaker located in the freezer compartment.

4) Controls: Upfront electronic temperature controls with a digital display.
5) Lighting: High-efficiency LED lighting illuminates the interior.
6) Defrost Type: Frost-free.

c. Utility Requirements:
1) Electrical: 120V, 60 Hz, 15A. Requires a dedicated, grounded, 3-prong receptacle.
2) Plumbing: Requires a 1/4" outer diameter copper or manufacturer-approved tubing water line with a nearby, accessible shut-off valve.

B. Microwave Oven:
1. Basis of Design: *Model No. PEB9159* built-in combination convection and microwave oven as manufactured by GE or approved equivalent by specified manufacturer.
a. Capacity: 1.5 Cu. Ft.
b. Power Output (Nominal):
c. Microwave: 1000 Watts.
d. Convection: 1500 Watts.
2. Fabrication and Components
a. Cooking Technology:
1) Convection Bake and Convection Roast capability.
2) Broil function.
3) Microwave function with sensor cooking controls for automatic power level and time adjustments.
b. Controls: Electronic touch controls with a digital display.
c. Interior: Stainless steel interior for ease of cleaning. Includes a 13.5-inch recessed, removable glass turntable.
d. Lighting: Includes an interior oven light.
e. Utility Requirements:
1) Electrical: 120V, 60 Hz, 15A. Requires a dedicated, grounded, 3-prong receptacle.
3. Accessories:
a. Required Trim Kit: The oven shall be installed with the manufacturer's matching trim kit to ensure proper ventilation and a finished, built-in appearance.
b. Basis-of-Design:
1) For 27-inch wide cabinets: GE Model JX9152.
2) For 30-inch wide cabinets: GE Model JX9153.
c. Contractor shall provide the trim kit size that corresponds to the cabinet dimensions shown on the Architectural Drawings.
4. Finish:
a. Oven and Trim Kit: Fingerprint-resistant Stainless Steel (or other finish as selected by Architect from manufacturer's standard options).

C. Dishwasher:
1. Basis of Design: *Model No. GDT550PGR* built-in, undercounter dishwasher as manufactured by GE Appliances.
a. Type: Built-in, undercounter dishwasher with front controls.
b. Overall Dimensions (Nominal):
1) Width: 24 inches.

2) Height: 34 inches.
3) Depth: 24 inches.

c. Capacity: Minimum of 16 place settings.
d. Sound Level: Shall not exceed 51 dBA during operation.

2. Fabrication and Components:
a. Tub and Interior:
1) Material: The tub and inner door liner shall be fabricated from stainless steel for durability, stain resistance, and improved drying performance.
b. Racks:
1) Configuration: Three (3) racks: an adjustable upper rack, a lower rack, and a dedicated third rack for flatware and small items.
2) Material: Racks shall be nylon-coated.
c. Wash System:
1) Features: The system shall include, at a minimum:
(a) Steam + Sani: A pre-wash steam cycle and a high-temperature sanitizing rinse.
(b) Dry Boost™: A heated drying system for improved performance.
(c) Hard Food Disposer: An integrated food disposer to pulverize food particles.
(d) Multiple wash cycles, including an "Auto Sense" cycle that adjusts based on soil level.
d. Controls:
1) Type: Electronic front controls with cycle status indicator lights.
e. Utility Requirements:
1) Electrical: 120V, 60 Hz. Requires a dedicated, grounded, 15A circuit. The unit shall be hardwired in accordance with the manufacturer's instructions and local codes.
2) Plumbing (Water): Requires a 3/8-inch outer diameter copper hot water supply line with a nearby, accessible shut-off valve.
3) Plumbing (Drain): Requires a 5/8-inch minimum inner diameter drain line. The drain line must be installed with a high loop or an air gap as required by local plumbing code.
f. Finish:
1) Exterior Door: Slate finish (as indicated by "-PGR" suffix, or other finish as selected by Architect).
2) Handle: Manufacturer's standard matching pocket or bar handle.

D. Kitchen Fume Hood:
1. Basis of Design: *Model No. JVX5360SJSS* built-in, kitchen hood as manufactured by GE Appliances.
a. Type: Undercabinet-mount, 36-inch width.
b. Venting Configuration: The unit shall be convertible for multiple ducting options. For this project, the installation shall be ducted vertically or horizontally to the exterior as shown on the Mechanical Drawings. Non-ducted, recirculating installations are not permitted.
c. Performance (Ducted Operation):
1) Airflow Capacity: A minimum of 390 CFM at the maximum fan speed setting.
2) Sound Level: Shall not exceed 6.5 Sones at the maximum fan speed setting.

2. Fabrication and Components:
    a. Material and Finish:
        1) Chassis and Exterior: Fabricated from Stainless Steel.
    b. Controls:
        1) Type: Push-button controls for fan speed and lighting.
    c. Fan:
        1) Speeds: A minimum of four (4) fan speeds, including a high-speed boost setting.
    d. Lighting:
        1) Type: Integrated dual LED lighting modules with at least two brightness levels (high/low).
    e. Filtration:
        1) Grease Filter: One or more removable, dishwasher-safe aluminum mesh grease filters.
    f. Utility Requirements:
        1) Electrical: 120V, 60 Hz. Requires a dedicated, hardwired electrical connection.
        2) Ducting: The unit shall be equipped with a damper and a connection collar for a 7-inch round duct or as indicated on mechanical drawings.

E. Clothes Washer and Dryer:
1. Basis of Design: *Model No. GFW655SPVDS* - residential, front-loading automatic clothes washers and Model No. GFD65ESPVDS - residential, front-loading automatic clothes washer as manufactured by GE Appliances.
2. Clothes Washer:
    a. Type: Front-loading, automatic clothes washer.
    b. Dimensions (Nominal): 28" W x 32" D x 39-3/4" H.
    c. Capacity: 4.8 Cu. Ft.
    d. Features:
        1) Venting System: Shall include an antimicrobial gasket and a vent system to dry the interior after a cycle to prevent odor.
        2) Dispenser: Automatic detergent dispensing system.
        3) Smart Features: WiFi connectivity for remote monitoring and control.
    e. Utility Requirements:
        1) Electrical: Requires a NEMA 5-15R, 120V, 60 Hz, 15A receptacle.
        2) Plumbing: Requires hot and cold water supply connections and a 2-inch minimum diameter drain standpipe.
3. Clothes Dryer:
    a. Type: Front-loading, electric clothes dryer.
    b. Dimensions (Nominal): 28" W x 32" D x 39-3/4" H.
    c. Capacity: 7.8 Cu. Ft.
    d. Features:
        1) Drying System: Sensor-based system to monitor moisture and prevent over-drying.
        2) Steam Cycle: Includes a steam feature for de-wrinkling and refreshing clothes.
        3) Smart Features: WiFi connectivity for remote monitoring and control.
    e. Utility Requirements:
        1) Electrical: Requires a NEMA 14-30R, 240V, 60 Hz, 30A receptacle.

2) Venting: Requires a 4-inch diameter rigid metal exhaust duct connected to the exterior.

4. Accessories:
   a. Configuration: Install units as indicated on the Architectural Drawings:
      1) Stacked Configuration: If shown stacked, provide the manufacturer's corresponding stacking kit (e.g., GE Model GFA28KITN).
      2) Side-by-Side on Pedestals: If shown on pedestals, provide two (2) of the manufacturer's corresponding laundry pedestals (e.g., GE Model GFP1528).

F. Electric Range:
   1. Basis of Design: *Model No. GE-JSS86* freestanding, slide-in electric ranges as manufactured by GE Appliances.
      a. Overall Dimensions (Nominal):
         1) Width: 30 inches.
         2) Height: 37-1/4 inches.
         3) Depth: 28 inches.
   2. Cooktop Components:
      a. Type: Radiant electric cooktop with a black glass-ceramic surface.
      b. Elements: Five (5) elements, including:
         1) Two (2) 8-inch power boil elements.
         2) One (1) 12-inch/9-inch dual-ring element.
         3) One (1) 6-inch element.
         4) One (1) 6-inch warming zone.
   3. Oven Components:
      a. Type: Electric Convection Oven with Air Fry.
      b. Capacity: 5.3 Cu. Ft.
      c. Cooking System: True convection with a rear fan and heating element for even heat distribution.
      d. Features:
         1) No-Preheat Air Fry Mode.
         2) Self-Cleaning: Steam self-clean option.
         3) Bake Element: Hidden bake element for easy cleaning.
         4) Storage: Full-width storage drawer at the base of the unit.
   4. General Features and Utilities:
      a. Controls: Backlit, glass touch controls combined with professional-style control knobs.
      b. Utility Requirements:
         1) Electrical: 240V/208V, 60 Hz. Requires a dedicated, properly grounded, 40-Amp circuit terminating in a NEMA 14-50R receptacle.
      c. Finish:
         1) Exterior: Stainless Steel.
         2) Handle: Manufacturer's standard professional-style brushed handle.
   5. Installation:
      a. Install the range in strict accordance with the manufacturer's written installation instructions.

b. Install the Anti-Tip Bracket: The installer shall securely install the anti-tip bracket (supplied with the unit) to the rear wall or floor. This is a mandatory safety requirement.
c. Carefully slide the range into the opening, ensuring the rear leveling leg fully engages with the anti-tip bracket.
d. Adjust the leveling legs to ensure the range is level and the cooktop is flush with the countertop.
e. Plug the power cord into the designated receptacle.

G. Standard Clothes Washers:
1. Design Basis: G.E. #WJRR4170EWW.
2. Size: 42” H. x 25-1/2” D. x 27” W.
3. Automatic, Top-Loading Type: 3.5 cu ft capacity; stainless steel washbasket; controls as follows: presettable metered fill-level, presettable wash/rinse water temperatures, variable speed cycle/fabric selector; removable lint filter; bleach and fabric softener dispensers; spin cycle safety switch.
4. ENERGY STAR qualified.

H. Standard Clothes Dryers:
1. Design Basis: G.E. #DLSR483EGWW.
2. Size: 42”H. x 28-1/4”D. x 27”W.
3. All-Electric Type: 120/240V service with 5,000 W heat input, 7.0 cu ft capacity; timed cycle selection, fabrics selector, cycle end signal, and safety starting control; removable lint filter; long vent design for duct runs to 150 feet (4572 cm)

PART 3 EXECUTION

3.01 PREPARATION

A. Review manufacturers’ installation instructions and notify Architect in the event of discrepancies; do not proceed with installation until all such discrepancies have been resolved.

3.02 INSTALLATION

A. Install in accordance with manufacturer’s instructions and with requirements of authorities having jurisdiction.

B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and rough openings are completely concealed. Allow for proper air circulation for all heat-generating appliances.

C. Sequence installation to accommodate required utility connections.

D. Free-Standing Equipment:
1. Clearances:
a. Install unit level and plumb.
b. Provide minimum clearances as recommended by the manufacturer.
1) Minimum Clearance: 0 inches (all sides and top).

2) Recommended Clearance for Service/Performance: 1/2 inch (each side).

c. Closet Installation: Unit is approved for closet installation. Closet doors must be louvered or otherwise ventilated with a minimum of 60 square inches (387 sq. cm) of open area.

3.03 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Test each appliance to verify proper operation. Make necessary adjustments.

C. Verify that accessories required have been furnished and installed.

3.04 CLEANING

A. Section 01 71 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove packing material from residential appliances and leave units in clean condition, ready for operation.

END OF SECTION

SECTION 11 40 00

FOOD SERVICE EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The general provisions of the Contract, including General and Supplementary Conditions and General Documents, apply to the Work specified in this Section.

1.2 SUMMARY OF THE WORK

A. Project Name and Location: Crosby Sixth Grade Campus
Crosby, TX

B. Approval of Working Surface: Any contractor performing work over the work of other contractors shall notify the Architect of any unsatisfactory conditions. The beginning of work by any contractor shall constitute acceptance of the previous work.

C. Field Verification of All Dimensions: Before ordering any materials or doing any work, field verify all measurements of the building and be responsible for their accuracy. No extras will be allowed for variations from drawings in existing conditions or work performed under this contract. Any discrepancies found shall be submitted to the Architect or Foodservice Design Professionals (FDP) for instructions before proceeding.

D. Cutting and Patching: No excessive cutting will be permitted, nor shall any structural members be cut without the written approval of the Architect. Each Contractor shall leave all chases and openings straight, true, and of the proper size in their work, as may be necessary for the proper installation of their and other contractors' work. After such work has been installed, the contractor shall carefully fit around, close, repair, patch, and point up the same as directed to the satisfaction of the Architect.

E. Cooperation: The General Contractor, all other contractors, and all subcontractors shall coordinate their work with all adjacent work and shall cooperate with all other trades to facilitate the general progress of the work. Each trade shall afford all the other trades every reasonable opportunity to install their work and store their material.

F. Inspection and Tests: The architect, Owner, Foodservice Design Professionals (FDP), and their representative shall always have access to the work, whether in preparation or progress. Provide proper and safe facilities for such access and inspection.

G. Fees, Permits, and Inspections: Secure and pay fees for all permits, licenses, and inspections as required by all authorities having jurisdiction. Give all notices and comply with all laws, ordinances, codes, rules, regulations, and contract requirements bearing on the work.

1.3 SCOPE OF WORK

A. Include the Work specified, shown, or inferable as part of Food Service Equipment. Portions of this Work may be subcontracted to those qualified to do such work as necessary because of jurisdictional trade agreements and restrictions.

B. The General Contractor is responsible for Related Work specified in other Sections: i.e., final plumbing, electrical and mechanical connections. The Kitchen Equipment Contractor (KEC) is responsible for all internal connections.

C. Specifications and drawings have been prepared to form the basis for procurement, erection, start-up, and equipment adjustment in this contract. Plans and specifications shall be considered mutually explanatory. Work required by one, but not by the other, shall be performed as though required by both. Items required by one but not by the other shall be provided as though required by both. Work shall be accomplished as called for in specifications and shown on drawings so that all equipment items shall be entirely functional for the purpose for which they were designed and intended. Provide all necessary material, tools, equipment, and labor required for the complete delivery, un-crating, erection, and installation as designated on the food service equipment plan and, in the specifications, to be made ready for final connection by the appropriate Division contractors. When there is any discrepancy between drawings and specifications, bidders should seek clarification of any discrepancies from the Architect and or Foodservice Design Professionals (FDP) before bidding.

D. Should the drawings disagree in themselves or the specifications with the drawings *(and clarification was not sought before bidding)*, the higher cost, better quality, more stringent, and greater quantity of the work or materials shall be completed without additional costs to the Owner.

1.4 OTHER DIVISIONS/CONTRACTORS RELATED WORK

A. Division 03 (Concrete) is responsible for but not limited to:

1. Slab depressions reinforced concrete wearing bed at prefabricated walk-in assemblies.

2. Concrete or masonry platforms (with a finished top and coved base at the perimeter) for the raised setting of food service equipment.

3. Slab depressions to receive stainless steel drain trench liner/grate assemblies (provided under this Section).

B. Division 09 (Finishes) responsible for but not limited to:

1. Interior finished floor with a coved base at prefabricated walk-in assemblies.

C. Division 10 (Specialties) responsible for but not limited to:

1. S/S Corner Guards throughout the kitchen (unless specified otherwise).

2. Lockers.

D. Division 22 (Plumbing) is responsible for but not limited to:

1. All connections shall be made in accordance with local codes and national standards, except where plans and specifications exceed those codes and standards.

2. Empty EMT conduit with pull-wire and wide-sweeping bends for beverage lines, refrigeration to beverage lines, CO2 lines, and all plumbing lines required for water-cooled equipment.

3. Rough-in and final connection of plumbing systems to food service equipment and between components (including materials and labor). Accessories provided loose with food service equipment by Section 11 40 00 to be field installed by Division 22. This includes but is not limited to the installation of all faucets (water fill faucets, pre-rinse faucets, etc.), hoses, gas disconnects and drains from the equipment point of connection to building plumbing systems. All drain lines are provided and installed by Div. 22.

a. Kitchen Equipment Contractor is responsible for providing all faucets (water fill faucets, pre-rinse faucets, etc.), drain fittings, mixing valves, control valves, water pressure regulators, vacuum breakers, and all accessories for equipment specified under 11 40 00. Division 22 is responsible for installation.

4. Indirect drain line runs from the equipment to the nearest drain or floor sink—lines to be type 'K' Copper.

5. If any plumbing accessories or fittings are provided loose with equipment by 11 40 00, Div. 22 is to attach to equipment and provide final connection.

6. Gas Supply Systems with all components and fittings required for a complete system.

7. Water Supply Systems with all components and fittings required for a complete system.

8. Compressed Air Systems with all components and fittings required for a complete system (if required for this project).

9. Piping and Drainage Systems (Sanitary and Grease-laden). ***Systems must be cleaned and flushed before the final connection with food service equipment - Critical.***

10. Floor Sinks (Provide and Install). Flange and grates to be flush with the finished floor.

11. Floor Drains (Provide and Install). Flange and grates to be flush with the finished floor.

12. Trench Drains (Provide and Install). Trench Liners provided by 11 40 00. Flange and liners to be flush with the finished floor.

13. Grease Traps as required (Size, Provide, Locate, and Install). Verify with local codes to bypass or pipe through Grease Trap and/or Interceptor.

14. P-Traps as required (including all disposers).

15. Interconnect water through Water Filter (Filter provided by 11 40 00 unless otherwise specified) to equipment.

16. Gas Quick Disconnect Installation (Quick Disconnect provided by 11 40 00).

17. Safety Restraint Cable Installation (Safety Restraint Cable Provided by 11 40 00).

18. Specified couplings and piping to all equipment furnished by 11 40 00.

19. Air Compressors (if required for this project) (Size, Provide, and Install unless otherwise specified).

20. Water Softeners (if required for this project) (Size, Provide, and Install unless otherwise specified).

21. Pressure Boilers (if required for this project) (Size, Provide, and Install unless otherwise specified).

22. Hand Sinks (Provide (unless otherwise specified) and Install). Provide a hot water tempering valve if required. Water temperature to be at least 100 degrees and flow for at least 20 seconds.

23. Ice Bin Drain Insulation (if Ice Machine is provided in this project) (Provide and Install).

24. Unions at disposer solenoid valves (if Disposer is provided in this project) (Provide and Install).

25. Back Flow Prevention as required (Provide and Install - including all disposers). Back-Siphonage shall be installed at all fixtures and equipment where backflow and/or back-siphonage may occur and where a minimum air gap cannot be provided between the water to the fixture or equipment at its flood/level rim. When furnished with equipment, vacuum breakers shall override the above if acceptable with applicable codes. Division 22 is responsible for verifying requirements with local codes.

26. Janitor Sink with Faucet (Provide and Install).

27. Freeze Proof Hydrant at the exterior of the building by receiving door (Provide and Install - unless otherwise specified).

28. Reverse Osmosis Systems (Size, Provide (unless otherwise specified), Locate, and Install).

29. All piping within the counter body or under fabricated counters must be run to a connection point below the counter body by Section 11 40 00—final connection by Division 22.

30. Exhaust Hood condensate drain connections (if Exhaust Hood is provided in this project) (Provide and Install).

31. Interconnection of ½" CW to Pre-Rinse and Disposers cone/body inlets piped through the solenoid and vacuum breaker (if Disposer is provided in this project).

32. Fire System Piping. The exposed piping is to be chrome plated.

33. Pipe ½" cold water to swirl inlets at disposers (if Disposer is provided in this project).

34. Water Treatment for Ice Builders (Non-chlorinated water with a pH level of 10 or higher) and any drains and overflows. Piping from Ice Builders to Tumble Chillers by Div. 23 (if Ice Builders and Tumble Chillers are provided in this project).

35. Manifold drain lines together for all multi-compartment sinks (two-compartment, three-compartment, etc.).

36. Refer to Section 2.2 PLUMBING / MECHANICAL REQUIREMENTS for additional information.

E. Division 23 (Mechanical) responsible for but not limited to:

1. All connections shall be made following local codes and national standards, except where plans and specifications exceed those codes and standards.

2. Rough-in and final connection of mechanical systems to food service equipment, walk-in assemblies, and between components (including materials and labor).

3. A mechanical contractor will test and balance rooms and exhaust hoods. **Balance report for food service Exhaust Hoods to be provided to Foodservice Design Professionals (FDP) immediately upon completion (send to Houston.Submittal@fdp.org) and must be submitted with O&M manuals.**

4. Exhaust Hoods, Condensate Hoods, Fire Suppression Systems, connections, and controls (Provide and Install – unless otherwise specified). Provide tempered air at all supply ducts.

    a. If Exhaust/Condensate Hoods and Fire Suppression Systems are specified under Section 11 40 00, Division 23 is responsible for all Exhaust and Condensate Hood connections (Provide and Install).

5. VFD System and controllers when required by code (Provide and Install).

6. Provide and install all ventilation (direct or indirect), air conditioning, and heating systems (unless otherwise specified).

7. Coordinate Supply and Return ducts above Serving Counters. No cold air is to blow directly on hot food counters or open-air refrigerated merchandisers.

8. Coordinate Supply and Return ducts away from equipment with top-mounted refrigeration. No cold air is to blow directly on compressors.

9. Mechanical Contractor to locate temperature monitors within return ducts.

10. Circulating air above walk-in assemblies (Provide and Install).

11. Circulating air above and in air gaps at warehouse cold storage assemblies (Provide and Install).

12. Water Chillers as required (if equipment is provided in this project) (Provide, Size, and Locate).

13. Piping from Ice Builders to Tumble Chillers (if equipment is provided in this project) (Size, Provide and Install).

14. Refer to Section 2.2 PLUMBING / MECHANICAL REQUIREMENTS for additional information.

F. Division 26 (Electrical) responsible for but not limited to:

1. Rough-in and final connection of electrical systems to food service equipment, walk-in assemblies, and between components (including materials and labor). Accessories provided loose with food service equipment by Section 11 40 00 to be field installed by Division 26.

2. Empty EMT Conduit with pull-wire and wide-sweep bends for remote refrigeration evaporator control wires, temperature monitor panel, and emergency alarm/strobes as required.

3. Empty EMT Conduit with pull-wire and wide-sweep bends for interconnect cables between LAN and POS terminals, change-makers, pre-check units, printers, CPUs, etc. Division 26 to verify where the conduit will run for POS System (i.e., Manager's Office or IDF Room).

4. Empty EMT Conduit with pull-wire and wide-sweep bends for fire suppression systems. Interconnect the Fire Protection System to panel box shunt trips and building alarm.

5. Walk-in Assembly Light Fixture Installation (Provided loose by Section 11 40 00) (if Walk-in is provided in this project).

6. Table Limit Switch (Provided loose by Section 11 40 00) (if Dishmachine is provided in this project) – Install and interconnect to Dishmachine.

7. Electrical Materials and Devices (Shunt-trip breakers, surge protectors, lighting control devices, conduit, wire, etc.).

8. Switches and Stainless Steel Disconnects as required (Provide, Locate, and Install – to be in an accessible location).

9. Charging Stations for Forklifts, Pallet Stackers, and Pallet Jacks (Size, Provide, Locate, and Install) (if equipment is provided in this project).

10. Interconnection between Condensate Fan and Dishmachine control panel (if equipment is provided in this project).

11. Interconnection between Exhaust Hood fans and switch (if equipment is provided in this project).

12. Interconnection between Exhaust Hood lights and switch (if equipment is provided in this project).

13. Door Heaters, Lights, Coils, and Heated Pressure Relief Ports pre-wired to the junction box at the top of walk-in assemblies (if equipment is provided in this project) provided by Section 11 40 00—final connection by Div. 26.

14. If any electrical accessories, fittings, and cord/plugs are provided loose with equipment by 11 40 00, Div. 26 is to attach to equipment and provide final connection.

15. Provide waterproof receptacles in wet areas.

16. All electrical connections beneath Exhaust Hoods (if equipment is provided in this project) to extend to shunt trip breakers with electrical panel box for shutdown during fire mode.

17. Receptacles will be pre-wired to Junction Box or Load Center for final connection by Division 26.

18. All electrical lighting, power, and distribution systems.

19. Do not interconnect more than three (3) convenience outlets on one (1) breaker.

20. Other than convenience outlets, all electrical connections on food service plans are dedicated breakers.

21. Doorbell at receiving door (Provide and Install –audible throughout Kitchen, Office, and Dry Storage room).

22. Adequate lighting at receiving door.

23. (if Walk-in is provided in this project) Walk-in Manufacturer is to provide Three (3) Edwards 860 Series (or equal) red lens, surface-mounted Xenon Emergency Strobe Beacons. Div 26 will install One (1) located in the Kitchen in architectural ceiling above Walk-In Cooler door, One (1) located in the Kitchen in architectural ceiling above Walk-In Freezer door, and the third unit located in the Cafetorium (Division 26 to coordinate location with Owners and Architect). Division 26 is to provide all conduit and wiring required and interconnect the illuminated Push Button Panic Alarm in the Walk-In Cooler and Freezer to all Strobe Beacons (***Critical***). Coordinate with Division 27.

24. Dedicated circuit for heated drain line connection in Walk-In Freezer (120/1/16.0 Amp) at each coil (if Walk-In is provided in this project).

25. GFCI Breaker for all receptacles under Exhaust Hoods (if Hoods are provided in this project) and Holding Cabinets (if Holding Cabinets are provided in this project), to be located within Kitchen's electrical Breaker Panel and not at the receptacles.

26. Remote GFCI reset switches to be accessible to end user.

27. All electrical below Exhaust Hoods (if Hoods are provided in the project) are to have Shunt Trip Breakers.

28. Interconnect Temp Sensor to Exhaust / Supply fans (if Hoods are provided in this project).

29. Electrical contractor to provide conduit with pulled wires prior to installation of equipment.

30. Refer to Section 2.5, ELECTRICAL REQUIREMENTS, for additional information.

G. Division 27 (Communication) responsible for but not limited to:

1. Data line coordination for food service equipment.

2. Time clocks as required.

3. Video cameras for learning assistance in food service areas as required (Provide, Locate, and Install).

4. (if Walk-in is provided in this project) Provide conduit, data line, and interconnect the illuminated Push Button Panic Alarm inside the Walk-In Cooler and Freezer to the Building Automation System (BAS). When activated, facility personnel are to be notified - coordinate notification requirements with the Owner (***Critical***). Coordinate with Division 26.

5. (if Walk-in is provided in this project) Provide conduit, data line, and interconnect Leak Detection System to Building Automation System or Owner alarm system as maybe be required for communication of alarm to Owner.

H. Division 28 (Electronic Safety and Security) is responsible for but not limited to:

1. Security Cameras as required (Provide, Locate, and Install).

I. General Contractor responsible for but not limited to:

1. Any wall penetration required for food service equipment utilities. Escutcheon plates or S/S sleeves are to be provided and installed as needed.

2. Bulk Freezer Ventilation Pipe (if Bulk Freezer is provided in this project) (Provide and Install unless otherwise specified).

3. Core drilling for Guide Rails (if Guide Rails are provided in this project).

4. Refrigeration Roof Curbs / Roof Jack (if Refrigeration System is provided in this project and located on the roof).

5. Interior Bollards (if required for this project) – to be epoxy painted per local codes (Provide and Install).

6. Furnish and Install ¾" Plywood blocking in the wall for mounting equipment furnished by Section 11 40 00 as required.

7. Walk-in Depressions (to be dead level) and sand leveling bed (if Walk-in is provided in this project and recess is shown).

8. Structural bracing for Bulk Walk-in Assembly ceiling panels if required.

9. Menu System Video Monitors in Servery (unless otherwise specified).

10. Structural bracing for Menu System Video Monitors if required.

11. Interior/Exterior refrigeration penetrations and sleeves at building penetrations.

12. DoorScope viewer (peephole) with wide viewing angle at receiving door.

13. Canopy at receiving door. Coordinate height with the height of Receiving Door (8') and the mounting height of Air Screen above the door.

14. Soap and towel dispenser provided by Owner. G.C. is responsible for installation.

15. Washer and Dryer (Provide and Install, unless otherwise specified).

16. Dwarf wall at exposed front/ends of cafeteria serving counters with the finish as selected by the Architect (if required in this project).

17. Substrate (Provide and Install) at SS Wall Caps for pony walls.

18. Final cleaning of all equipment before demonstrations.

1.5 QUALITY ASSURANCE

A. In addition to complying with all applicable laws, statutes, building codes, and regulations of public authorities, comply with the following:

1. National Sanitation Foundation (all equipment to bear label)

2. National Electric Code

3. Underwriters' Laboratories, Inc. (all applicable equipment to bear label)

4. American Gas Association Laboratories

5. National Fire Protection Association

6. Americans with Disabilities Act

7. Food and Drug Administration HAACP Guidelines

8. International Energy Conservation Code (IECC)

9. Department of Energy

10. Environmental Protection Agency

11. CSA Group

B. Furnish certification of regularly manufactured equipment listing or classification by Underwriters Laboratories, Inc., with the initial submittal.

C. Furnish a list of equipment and components (internal and external) that are not of domestic origin. All equipment and components (internal and external) should be of domestic origin when possible. This information should be provided with the initial submittal.

D. Projects outside the continental United States shall adhere to all local authorities having jurisdiction over that project.

1.6 SUBSTITUTIONS

A. **The specified equipment items or components are intended to be the basis of the bid. All other brands, including any additional names, which may be listed as "Alternates" or "Approved Equal," must conform with the general and item specifications, warranties, size/dimensions, quality, accessories, function, voltage, horsepower, etc. of the first-named brand and be subject to Paragraph C-03 of this Article.**

B. Proposed Substitutions:

1. Submitted at least 14 calendar days before Bid Date.

2. Submit proposed substitutions with catalog data and manufacturer's shop details indicating all modifications required to conform with the specified brand.

3. List of deviations must include equipment name, model number, accessories, and features with deviation(s) noted for specified and proposed alternate equipment. Equipment without listed deviation(s) will be considered furnished as specified.

C. Substitutions with prior approval:

1. Submitted on Bidder's letterhead attached to Proposal Form with individual additive/deductive amounts stipulated and the documentation required in Paragraph B-02.

2. Owner reserves the right to accept or reject any or all substitution proposals before execution of the Contract.

3. Provide all design/engineering services required to adjust in space, systems, utilities, etc., and pay all additional costs of utilities, construction, or professional services that may be incurred due to the acceptance of any substitution.

D. All appliances or other equipment within a common group or category (e.g., refrigerators, kettles, ovens, shelving, etc.) must be from the same manufacturer.

1.7 INTERPRETATION OF DOCUMENTS

A. During Bidding: Bidder's, supplier's, or vendor's questions and comments about Construction Document's clarity or intent will be addressed by addendum.

B. After Award:

1. Clarification Bulletin will confirm Construction Document requirements.

2. Request for Information submitted by Contractor shall contain Contractor's proposed resolution.

1.8 WARRANTY

A. Provide a written warranty for parts and labor for one year ***from the date of Substantial Completion***, including an extended four-year replacement warranty on compressor bodies.

B. Components of equipment subject to replacement before one year's use (such as refrigerator door gaskets) and those items which may fail due to improper or inadequate periodic maintenance by the Owner/Operator (such as an uncleaned refrigeration system condenser) are not intended to be included within the scope of the Warranty.

C. Refrigeration Systems/Equipment: One-year free service available within twenty-four hours of notification.

D. Furnish three copies of a list of all equipment and their respective local service agencies, indicating the address, telephone number, and name of the person to contact. The service agencies selected shall be factory-authorized for the equipment assigned whenever possible.

E. Provide the following for refrigeration systems/equipment unless specified otherwise:

1. One (1) year of free refrigeration system service is available within twenty-four hours of notification.

2. Provide five (5) year manufacturer's registered written replacement warranty certificate covering compressor bodies. Warranty to cover labor costs for the first year.

3. Provide ten (10) years of the manufacturer's registered written replacement/repair warranty certificate covering walk-in assembly panels. Warranty to cover defects in material and workmanship. Warranty to cover labor costs for the first year.

4. Provide two (2) year parts and labor warranty for ***all parts/components (including third-party components that may be utilized)*** of the refrigeration system(s) ***(including freon)***, walk-in cooler(s), and freezer(s) not otherwise covered herein.

F. ***All above-stated warranty periods are from the date of Substantial Completion***. All replacement parts due to a warranty call should be the same quality as the original, or better if the original were defective. Replacement parts should be of domestic origin where possible.

1.9 SUBMITTAL DATA

A. **All submittals must be received, reviewed, and approved as noted prior to equipment procurement. If any equipment is procured prior to this process, it is on the KEC to replace any equipment, accessories, or other components that may not meet the specifications or design intent for the facility, including all costs associated with rectifying the errors made in procuring the equipment before this critical process.**

B. Special Requirements: The following are in addition to any general requirements given elsewhere in the Documents.

C. Submittal Requirements:

1. Kitchen Equipment Contractor to furnish all submittals via PDF, drawings to be scaled per General Specifications and provided in Three (3) submittal packages.

2. Foodservice Design Professionals requires the below-listed business days for each package submitted. Packages are to be submitted within 14 days between each issued package. Each package should contain individual submittal sets.

a. Package One to include (2) Individual sets: 10 Business Days for Review

i. Equipment rough-in

ii. Equipment Brochure

b. Package Two to include (3) Individual sets: 10 Business Days for Review

i. Exhaust Hoods

ii. Walk-in Cold Storage Assemblies

iii. Refrigeration

c. Package Three to include (4) Individual sets: 15 Business Days for Review

i. Custom Fabrication

ii. Serving Counters

iii. Merchandising Equipment

iv. Miscellaneous Submittals

D. Submittals to be identified with the below-listed file name structure:

1. 11 40 00-1 EQUIPMENT BROCHURE

2. 11 40 00-2 EQUIPMENT ROUGH-IN PLANS

3. 11 40 00-3 CUSTOM FABRICATION

4. 11 40 00-4 SERVING COUNTER

5. 11 40 00-5 EXHAUST HOODS

6. 11 40 00-6 WALK-IN COLD STORAGE ASSEMBLY

7. 11 40 00-7 REFRIGERATION

8. 11 40 00-8 BEVERAGE MERCHANDISER

E. Package One (1) requires both submittals: Brochure and Rough-in plans. **If not sent together, the submittal will be rejected.**

F. Foodservice Design Professionals (FDP) will notate all submittals in RED. Architects and General contractors will be notated in color per their direction.

G. If hard copy submittals are required, Kitchen Equipment Contractor will furnish all copies to the specified trades as required.

H. If discrepancies, missing information, or incorrect information occur within the documents, Kitchen Equipment Contractor is to seek clarification or note the need for further direction on submittals. The Kitchen Equipment Contractor is to bid the higher of the discrepancies. *Refer to Section 1.3 SCOPE OF WORK: Subsection D.*

I. Brochure Format (for regularly manufactured equipment and components):

1. Front and rear protective cover with labeled project name.

2. Brochure index: Indicate Functional Area/Room number, item number, quantity, description, and manufacturer.

3. A separate flysheet for each component or item of equipment, indicating item number, name, quantity, manufacturer, optional equipment, modifications, special instructions, and utility requirements. Any equipment or assembly containing more than one buyout sub-assembly or component shall have the second item listed in parenthesis beside the primary item name—for example, Serving Counter (hot food well).

4. Catalog specification sheet with all options notated on the specification sheet and manufacturer's drawing.

J. Shop Drawings (Rough-In Drawings):

1. Separate drawing sheets: same size as Contract Drawings (Contract Drawings are not to be traced or reproduced). Submittal drawings are to be provided by Kitchen Equipment Contractor and not copied or reproduced from Contract Documents. Any reproduced submittal drawings will be rejected.

2. ¼" scale drawing of fixed/movable food service equipment and prefabricated Walk-in assemblies with itemized schedules.

3. Special Conditions Drawings, sizing, and locating the following conditions:

a. Slab depressions, cores, sleeves, or block-outs (walk-in assemblies, drain trenches, piping, etc.).

b. Concrete or masonry platforms.

c. Pipe sleeves or roof jacks.

d. Wall openings or block-outs for pass-through equipment, recessed control panels, in-wall fire-protection system components, etc.

e. Blocking grounds or anchor plates required in walls for equipment support/attachment.

f. Above-ceiling hanger assemblies for support of exhaust hoods, ceiling-mounted pot racks, etc.

g. Access panels in walls or ceiling for service of equipment.

h. Ceiling pockets or recesses for unusually high equipment.

i. In-wall carriers for wall-hung or cantilevered equipment.

4. Electrical Rough-In Drawing

5. Plumbing and Mechanical Rough-In Drawing

6. Required information:

a. All fixed and portable food service equipment shown on Contract Drawings.

b. All prefabricated Walk-In Assemblies and Conveyor/Dishtable Assemblies shown on Contract Drawings.

c. All general-use and convenience utilities or services indicated on Contract Drawings, including those required by or connected to equipment or devices, not in this Section.

d. All Rough-In Drawings: Fully dimensioned from engineering benchmark (column lines, when provided) and finished-room surface to the point of stub-up through floor and stub-out through wall or ceiling for all mechanical, electrical, and plumbing services.

e. Connection number/tag system and symbols: Identical to Contract Drawings.

K. Shop Drawings (Manufacturer's and Fabricator's):

1. Sheet Size: Identical to Contract Drawings, drawn or plotted at a ¼" scale for plan view, ½" for elevations, and 1½" for sections and construction details.

2. Included information: The item number, name, and quantity.

3. Construction details, sections, and elevations to reflect the requirements of the Specifications and Drawings.

4. Indicate adjacent walls, columns, and equipment.

5. Indicate plumbing and electrical schematic drawings for equipment such as conveyors, waste systems, self-cleaning exhaust hoods, exhaust hood fire protection systems, and fabricated fixtures with a single electrical or plumbing connection.

6. Mechanical or electrical operating components or products integrated into a fabricated fixture: ventilation and service access required or recommended by the manufacturer, including panel size and location to permit easy lubrication, adjustment, or replacement of all moving parts.

L. All equipment and engineering rough-in plans sheet numbers are to match the contract documents. All equipment item numbers and engineer item numbers located on the schedules are to match the contract documents. All engineering requirements must be updated to accommodate the provided equipment and match the contract documents. The Kitchen Contractor coordinates any MEP revisions to accommodate the supplied and proposed equipment. The Kitchen Equipment Contractor is responsible for any costs associated with equipment substitution.

M. Foodservice Design Professionals (FDP) drawings and schedules are not to be copied in any way. Any replicated drawings of Foodservice Design Professionals (FDP) will be rejected.

1.10 SERVICE MANUAL

A. Three copies bound in 1½" hardback, three-ring binders (as many volumes as required by the scope of the project) with the same data as the brochure after installation (Refer to "Submittal Data"). Provide separate service manuals for each independent area within the project scope (Main Kitchen, Culinary, Concession, etc.).

B. Each Volume: Section for maintenance of finish materials (e.g., stainless steel, plastic laminates, FRP, Plexiglas, etc.).

C. Catalog specification sheet and/or manufacturer's shop drawings, including wiring diagrams when applicable.

D. Each Volume: Index of items, manufacturer's operating/maintenance information, replacement parts data, list of all product warranties, and price lists. Provide the name, title, and address of personnel at each respective manufacturer and service personnel to be contacted for spare/replacement parts and service after the warranty period.

E. To the greatest extent possible, provide two copies of the manufacturer's instructional video cassettes for operating, maintenance, and equipment service.

F. Internally subdivide binder contents with permanent page dividers, logically organized by equipment item number or manufacturer name, with tab titling printed under reinforced, laminated plastic tabs.

G. Electronically submitted manuals must follow the formatting requirements listed above.

H. **Service Manual to be provided to the owner before kitchen equipment demonstration.**

1.11 VERIFICATION AND COORDINATION OF PROJECT / DATA

A. Utilities Rough-in Drawings and field verifications are to be completed within four weeks after receipt of notice-to-proceed. Review Contract Drawings and Submittal Data for accuracy and completeness and notify Architect of conflicts and proposed adjustments. Coordinate work with other sub-contractors.

1. KEC to provide on-site field verification of all underground utilities before pouring concrete for capacity and location and coordinate with General Contractor. Submit a review to Architect and General Contractor. If rough-ins need to be relocated, KEC will compensate other trades for the required relocation.

2. KEC to provide on-site field verification of all other utility connections and locations and coordinate with General Contractor. Submit a review to Architect and General Contractor.

B. On-Site Inspection Reports

1. Before concrete pour: The Kitchen Equipment Contractor is to submit a copy of the report below to the Architect, General Contractor, and Foodservice Design Professionals (FDP) within 24 hours of the inspection. The form to be submitted is contained within these General Specifications.

2. Before delivery of equipment: The Kitchen Equipment Contractor is to submit a copy of the report below to the Architect, General Contractor, and Foodservice Design Professionals (FDP) within 24 hours of the inspection. The form to be submitted is contained within these General Specifications.

Contact Name_____ **Email** _____

- ☐ **Walk-In panels are installed square, plumb, and level. Inspected prior to interior concrete pour.**
- ☐ **Ceiling panels are installed flush and tight to wall panels with undamaged gasket material. Any signs of condensation at joints or walls should be reported to FDP and addressed immediately. Caulk at panel seams will not be an acceptable solution.**
- ☐ **All cam-locks are engaged, and buttonholes are in place.**
- ☐ **Gaps under the screed or floor angle (due to shimming) are entirely sealed to the slab.**
- ☐ **Penetrations in the ceiling or wall panels are insulated and sealed.**
- ☐ **Weatherproofing / thermal barrier material is installed.**
- ☐ **All sharp edges of metal doors and diamond treadplate are clean of sharp edges and deburred.**
- ☐ **Door bumper or wall protection is installed and located as to prevent damage of door to adjacent walls.**
- ☐ **Cove base installed at all wall bases internal and external of walk-in.**
- ☐ **Door systems are correctly installed, and the door is self-closing and seals around the opening perimeter and at the floor threshold. Threshold has a smooth and level transition.**
- ☐ **Upon completion of the electrical connections, confirm the final operation of the IC/IC+ control, door heaters and light switches.**
- ☐ **Entrapment hardware and alarm systems are installed and functioning.**

An on-site Inspection to verify the location of INSTALLED utilities was conducted on this date. The following conditions were observed and brought to the attention of the General Contractor. (KEC is to provide a written description and copy of the Utility Plan indicating the corrective action required).

1. What difficulties were encountered?

Inspector's Initials _____

This Inspection Report is the responsibility of the Kitchen Equipment Supplier and the General Contractor. Coordination between the two parties is mandatory.
Neither the Architect nor FDP need to be present at these inspections.

EMAIL A COPY OF THIS REPORT AND ANY ADDITIONAL INFORMATION TO THE ARCHITECT, GENERAL CONTRACTOR AND FOODSERVICE DESIGN PROFESSIONALS, LLC.

C. Review critical systems/components for application, performance, and capacity and submit calculation worksheets with the initial submission of brochure/rough-in drawings, with all proposed adjustments noted, including:

1. Exhaust hood removal/supply air volume, velocity, static pressure, duct collar sizes, and locations.

2. Refrigeration Systems (compressor, condenser, and evaporator) capacities/sizes, quantities, and refrigerant piping distances/sizes.

3. Exhaust Hood Fire Suppression Systems (nozzle locations, air handler, fuel interlocks, piping/distance limitations).

4. Locations of Vacuum Breakers.

5. Conformance of Refrigerated Components/Equipment with HACCP Guidelines (e.g., salad/sandwich pans, upright/open refrigerator cabinets, salad bars) with HACCP Guidelines.

6. Gas and water line sizes and manifold configurations.

7. Diameter and length of flexible connector lines for fixed/movable gas appliances.

8. Fabricated Equipment load center panels (individual and total amperage calculations and circuit balance).

9. ADA compliance of workstations, service positions, passageways, etc.

D. Ceiling mounted appliances/fixtures: Verify and coordinate dimensions/location of support framing/hangers with the General Contractor—all material and installation below 12’-0” AFF: Section 11 40 00.

E. Dimension Responsibility: Obtain actual or guaranteed measurements for the proper equipment fit. All dimensions indicated in Contract Documents are approximate and are as accurate as can be determined at the time. Field-check all horizontal/vertical measurements and conditions at the building before fabrication or delivery of equipment and notify the Architect of all conflicts or deviations from the dimensions shown.

F. Checking Dimensions at Site: Before ordering any materials or doing any work, verify all measurements of the building and be responsible for their correctness. No extras will be allowed for variations from drawings in existing conditions or work performed under this contract. Any discrepancies found shall be submitted to the Architect for instructions before proceeding.

G. Scheduling to Fit Openings: Should it become necessary to schedule the construction of walls or partitions before delivery of fixed equipment, the equipment must be fabricated for passage through finished openings. Maintain close contact with the project and be cognizant of all conditions, including vertical handling limitations within the building (elevator cabs or openings, stairs, etc.) and possible hoisting requirements. Coordinate all procedures with General Contractor and Project Team.

H. Refrigerated and Dry Storage Areas: Verify and coordinate dimensions to accommodate scheduled modular shelf sections. Notify Architect of the variance between the Contract Documents and actual conditions.

I. Color/Pattern Selections: Submit selection samples of solid polymer products, plastic laminate, paint or stain finishes, and vinyl-coated surface material of equipment as selected by the Owner.

J. Movable Equipment Interface: Rolling stock (pan racks, carts, dollies, dish/tray/rack dispensers) required to fit through or into fixed equipment (roll-in refrigerators, counter bodies, etc.) is to be reviewed and coordinated for compatibility at the time initial of shop drawing submittal. Indicate conflicts and proposed adjustments.

K. Relocation of Work: Relocate or re-route work as required to coordinate related items free of charge if no extra work is involved.

L. **Kitchen Equipment Contractor must provide FDP with the food service equipment lump sum pricing (including material and labor) after the contract has been executed and *before submittals* are provided to FDP. *This information is critical to FDP for accounting/billing purposes.***

1.12 EQUIPMENT FURNISHED / INSTALLED BY OTHERS

A. Obtain and coordinate utility requirements of Owner-Furnished/Owner-Installed (OF/OI) equipment with the building utilities and rough-in drawings/provisions.

B. Coordinate physical data of OF/OI appliances or equipment and incorporate information into Submittal Drawings. Vendor- or Purveyor-Furnished equipment (e.g., coffee/tea equipment): same as OF/OI.

1.13 WORK INSTALLED BUT FURNISHED BY OTHERS

A. Coordinate delivery/installation schedule of Owner-Furnished/Contractor-Installed (OF/CI) equipment with the Owner at least ninety (90) days before equipment requirement.

B. Obtain and coordinate utility requirements of OF/CI equipment with the building utilities and rough-in drawings/provisions.

C. Receive at the job site and fully incorporate into installation procedures as if furnished under this Section.

PART 2 - PRODUCTS

2.1 FABRICATED FIXTURES MATERIAL / COMPONENTS

A. Stainless steel sheets or shapes: 18-8, Type 302, polished to 180 grit No. 4 finish.

1. Stainless steel joints and seams: Heli-arc welded, free of pits and flaws, ground smooth, and polished to a No. 4 finish.

2. The “grain” direction of horizontal stainless-steel surfaces: Longitudinal, including the backsplash. The polishing procedure at right-angle corners of fixtures shall provide a mitered appearance.

B. Galvanized Iron Sheets: Armco copper bearing Zinc Grip or Zinc Grip/Paint Grip.

1. Galvanized iron joints and seams: Arc-welded, free of pits, flaws, and ground smooth.

2. Galvanized sheets or shapes: Washed with mineral spirits and painted with Rust-Oleum gray semi-gloss enamel.

C. Sound Deadening: Schnee Butyl Sealant ½" wide rope positioned continuously between all frame members or contact material and underside of stainless-steel surface (sinks, tabletops, food wells, over shelves, and undershelves). Tighten stud bolts for maximum compression of sealant and trim excess.

D. Plastic Laminates: Color/pattern selected by Architect, in 1/16" thickness for flat surfaces: 1/32" thickness for radiused surfaces. Plastic laminates and adhesives must be NSF-approved (Standard No. 35).

E. Solid Polymer products: Color/pattern/material selected by Architect in thickness as specified. Solid Polymers and adhesives must be N.S.F. approved (Standard No. 51).

F. Casters:

1. Fabricated fixtures with "Open Base" construction: Jarvis and Jarvis Model No. 5-405-113P-NSF swivel casters with grease seals on forks and wheels; Zerk fitting in swivel; two casters: Model No. E-75 Verti-Lock brakes. All casters: B-7" rolling bumpers with stainless steel top discs.

G. Cutting Boards: 1/2" thick Read Products, Inc. "Richlite" cutting board, size as indicated.

H. Identification Plates, Labels, Tags:

1. Prohibited Information: Names of suppliers, fabricators, and contractors.

2. NSF Labels: Required on all pieces of equipment.

3. Required Information: Function or purpose of controls such as display light switches, food warmer controls, etc.

4. Plate Construction: Engraved phenolic plastic, secured to equipment with epoxy cement or stainless-steel screws. Furnish samples.

2.2 PLUMBING / MECHANICAL REQUIREMENTS

A. Plumbing Fittings and Components: Furnished under this Section as follows:

Note: Fitting and components described in Items 1, 2, 3, 4, and 5 are furnished loose by 11 40 00 for final installation and connection by Division 22.

1. Control valves and appliance pressure regulators for water, gas, steam, and vacuum breakers: wherever required on food service equipment (chrome-plated where exposed).

2. Faucets and drains with and without connected overflows (unless otherwise indicated) for all sinks.

3. Specialty food service water-fill faucets, hose bibbs, or hose assemblies indicated in drawings/specifications.

4. Wade Model No. W-10 Shock-Stop shock absorbers for all food service equipment with quick-opening or solenoid-operated water valves.

5. Dormont Series Water Quick Disconnect hose, diameter per water connection size requirements, with safety fitting, w/coiled restraining device, full port ball valve, antimicrobial coating, lifetime warranty.

6. Extensions of indirect waste fittings to open-sight floor sink or floor drains from sinks, under bar equipment, and food-holding components of serving counters (e.g., cold pans, hot food wells, refrigerator/freezer coils not equipped with condensate evaporators) furnished and installed by Division 22. Drains: All drains to be type 'K' Copper – Paint with aluminum paint where exposed**. Div. 22 to ensure a minimum air gap of 1" and not less than twice the effective opening of the indirect waste pipe, per code. Div. 22 to ensure all drain lines are centered over floor sink grate openings and no water splashes on the floor.**

7. Piping brackets and supports beneath fabricated equipment.

8. Closed Base Bodies: Removable 18-gauge stainless steel closure panel at plumbing penetrations under the top.

9. Control valves on Open Base fixtures: Mounted on a 14-gauge stainless steel gusset-shaped panel with h 3½" setback from the countertop edge/rim to the face of the control handle.

10. Fill hose/faucet at support pedestals or Closed Base Body: Installed in a 15" x 18" x 5" deep recessed mounting panel. Panel bottom: sloped on a 60° angle, with 3/8" stainless steel rod hanger-bracket for the hose.

11. Provide filtration option as shown on contract documents (a, b, c, or combination thereof):

    a. Water Filter System:

        i. In-line System: Everpure System filters for coffee/tea brewers, water chillers, and beverage systems. They should be sized per the manufacturer's recommendation.

        ii. Combi Ovens, Convection Steamers, and Ice Maker Filter Systems: **Provided by manufacturer as required.**

    b. Remote Central Water Filter System.

    c. Remote and/or In-line Reverse Osmosis system.

B. Gas-Heated Equipment Fittings and Components: Furnished under this Section as follows:

1. Fixed Equipment: Dormont 1675KIT2S48 gas appliance connector: Diameter per fuel volume/connection size requirements. Gas valve diameter size per fuel volume/connection size requirements.

    a. Restraining device: Heavy duty steel cable, fastened to equipment and walls, 3" to 6" shorter than equipment connector length.

C. Final Plumbing Connections Provisions:

1. Fabricated equipment containing components, fittings, and devices indicated on food service connection drawings to be connected to the building systems: each component, fitting, or group thereof pre-piped to a utility compartment for final connection by Division 22. Refer to drawings for capacities.

2. Field-assembled equipment (e.g., prefabricated walk-in assemblies, exhaust hoods, ware wash machines, convection ovens, etc.): plumbing components completely interconnected under this Section for final connection arrangements indicated on Utility Connection Drawings.

3. All plumbing final connection points of equipment shall be tagged, indicating the following:

    a. Item number

    b. Name of devices or components

    c. Type of utility (water, gas, steam, drain, chilled water)

D. Ducts and Vents:

1. Exhaust hoods furred-in to ceiling: 2” high duct collar for final connection to the duct system.

2. Warewash machines equipped with integral vent cowls or extended hoods: furnished with 18-gauge stainless steel seamless duct risers to 6” above the finished ceiling for final connection. The duct: trimmed at the ceiling with a 16-gauge stainless steel angle flange with all corners welded.

E. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Sub Sections E. Plumbing and F. Mechanical for additional information.

2.3 FOOD SERVICE EQUIPMENT REFRIGERATION SYSTEMS

A. Install complete with all refrigerants, oil, dials, dehydrators, gauges, and controls required for the system’s proper operation.

B. Self-contained or factory-installed compressors: Check and adjust to the proper operating temperature prescribed by FDA/HACCP.

2.4 PLUMBING TRIM

A. Faucets: Furnished for all sinks or equipment requiring open water supply.

B. Fill Faucets: Furnished for appliances requiring open water supply.

C. Drain Fittings: Furnished for all sinks or equipment requiring removal of liquids. Install specified chrome-plated or stainless-steel fittings in die-stamped openings with washers and locknuts. The solder may be used as a sealer but shall not be applied to the top surface of the drain fittings.

2.5 ELECTRICAL REQUIREMENTS

A. All electrical systems, components, and accessories within the work of this Section: Certified to be in accordance with NEC 70.

B. Electrical Fittings and Components: Furnished under this Section as follows. Coordinate food service equipment loads, voltage, and phase with the building system and confirm any existing or OF/OI equipment requirements.

C. Cord and Caps:

1. Coordinate all food service equipment cord/caps with related receptacles.

2. All 120, 120/208, and 208 volts “plug-in” equipment shall have Type SO or SJO cord and plug with ground wire fastened to the frame/body of the item.

3. Cord lengths for fixed equipment: Adjusted to eliminate loose-hanging excess.

4. All non-fixed plug-in “buy-out” equipment: Hubbell configuration and ratings as required.

5. All mobile electrical support equipment (heated cabinets, dish carts, etc.) and counter appliances mounted on mobile stands (mixers, food cutters, toasters, coffee makers, microwave ovens, etc.): 8’-0” cord length with cord-hanger strap secured to the rear of equipment or mobile stand.

D. Switches and Controls:

1. Each motor-driven appliance or electrically heated unit: Equipped with a control switch or starter per Underwriters’ Laboratories, Inc., with low-voltage and overload protection.

2. Disposer controls recess-mounted in the wall: External fittings and accessories removed from the enclosure and furnished with 12-gauge stainless steel perimeter angle flange with welded corners. Install control at 4’-0” AFF to the bottom of the enclosure.

3. Disposer controls recess-mounted in counter-splash risers: External fittings and accessories removed from NEMA 4 enclosure and furnished with 12-gauge stainless steel perimeter angle flange with welded corners. Install control at 3’-0” AFF to the bottom of the enclosure. Provide the panel with a 60” long Seal-Tite electrical conduit from the bottom of the control panel for final field connections under Division 26.

4. Equipment that is not provided with built-in circuit breakers or fused terminal block and is indicated on Utility Connections Drawings to be directly connected to the building electrical system: a NEMA 4 stainless steel disconnect switch furnished and installed by Division 26.

5. All remote manual starters, disconnect switches, magnetic contactors or starters, and push-button stations: NEMA Type 4 enclosure; NEMA Type 1 enclosure only when installed in a Closed Base Body.

E. Heating Elements:

1. Electrically heated equipment: Thermostatic controls.

2. Water heating equipment: Equipped with positive low water shut-off.

F. Receptacles and Switches:

1. Receptacles installed in vertical panels of support pedestals or Closed Base Bodies: installed in 12” x 8½” x 3” deep recessed mounting panel sloped at a 60° angle and turned up to the top of the opening.

2. Pre-wire receptacles in closed base fixtures to a junction box installed within 6” from the bottom of utility or compressor compartments.

3. Receptacles mounted on Open Base fixtures: Installed on a 12” x 10½” x 4½” deep 14-gauge stainless steel panel with returned ends and sloping recess—secure panel to the underframe of fixture top.

4. Pre-wire receptacles on open base fixtures to a junction box secured to a leg or mounted on the underside of the lower shelf. Vertical runs of wiring: Made in rigid conduit or within the tubular leg.

5. Receptacles installed in/on-fabricated equipment: Hubbell, Inc. assemblies horizontally mounted in a metal box with stainless steel cover plate.

6. Switches installed in/on-fabricated equipment: Hubbell, Inc. with metal box and stainless-steel cover plate. Switches: pre-wired to the controlled device and a junction box installed within 6” from the bottom of the utility or compressor compartment. All refrigeration system switches: Installed within the compressor compartment near the door opening.

7. Load centers installed in/on fabricated equipment to have all fixture components pre-wired to the load center with balanced phase loading. Load center: Ready for final connection by Division 26 and flush-mounted within the utility compartment rear panel, set back 8” from the access door. All breaker/device information will be typewritten on the circuit schedule in the load center door (number corresponding breaker/device) with an enclosed schematic wiring diagram of fixture components.

8. All receptacles are to be pre-wired to the cord and plug assembly and routed through the over-shelf post at all island equipment locations unless specified otherwise.

G. Light Fixtures:

1. Light fixtures with lamps installed in/on fabricated or field-assembled equipment: pre-wired to a junction box for final connection (continuous-run fixtures when indicated).

2. LED Display Light: Install light fixtures full-length of Display Stand and Serving Shelf with stud bolts and pre-wire through support posts to an apron-mounted switch.

3. Heat Lamps: Installed to the underside of serving shelf assemblies. When multiple 24” heat lamps are specified, provide maximum length heat lamp chassis. Install all switches remotely from lamps.

4. **Walk-in assembly LED Light Fixtures: Furnished by Section 11 40 00, final installation by Div. 26. All electrical wiring and conduit, provided by Div. 26, electrically connected through the Vapor Proof light fixture base connection, located on the interior door header—all Conduit to be Seal-tight conduit. Door frame wiring stubs out the top of panels 8” in flexible conduit for final connection by the electrical contractor. All horizontal conduits: below ceiling panels. All lighting fixtures will be wired from inside the assembly—no penetrations through the ceiling panels. Seal-sleeved penetrations are airtight at both sides of the panel. KEC is responsible for verifying that trade contractors seal all penetrations.**

H. Final Electrical Connection Provisions:

1. Fabricated equipment containing electrically operated components or fittings indicated on Utility Connections Drawings: Direct connected, with each component, fitting, or group pre-wired to a junction box for final connection by Division 26. Refer to drawings for circuit loading.

2. Fabricated equipment containing electrically operated components and devices indicated: Circuit-breaker load center with each component or device pre-wired to a separate circuit breaker for balanced phase loading and single final connection by Division 26.

3. Field-assembled equipment (e.g., prefabricated walk-in assemblies, exhaust hoods, ware wash machines, etc.) shall have electrical components completely interconnected in this Section for final connection arrangements as indicated on Utility Connection Drawings by Division 26.

4. Pre-wire the following groups of walk-in assembly electrical devices to a top-mounted junction box for final connection by Division 26 per compartment grouping (unless otherwise indicated).

   a. Light fixtures and switches; heated pressure-relief ports.

   b. Door/jamb heaters.

   c. Evaporator fans, defrost elements and drain line heaters.

5. All electrical final connection points of equipment shall be tagged, indicating the following:

   a. Item number.

   b. Name of devices on the circuit.

   c. Total electrical load.

   d. Voltage and phase.

I. Lamps: in all food service equipment containing light fixtures. Refrigerator or heated cabinets: All exposed LED lamps above or within a food zone: Shat-R-Shield lamps or standard lamps, sleeved with end caps.

J. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsection F. Division 26 (Electrical) for additional information.

2.6 CUSTOM – FABRICATED / ASSEMBLED UNITS

A. Mechanical or electrical operating components or products integrated into a fabricated fixture: Ventilation and service access required or recommended by the manufacturer. The size and placement of the service access panel(s) permit easy lubrication, adjustment, or replacement of all moving parts and are to be indicated on fabrication shop drawings.

2.7 BAKER TABLETOPS (Unless specified otherwise)

A. 14-gauge 304 S/S top with 2” square turn down at the front, 6” high enclosed splash at two (2) sides and rear. Brace same as “Counter/Tabletops.”

B. 1¼” x 6” high integral coved riser at rear and ends unless indicated otherwise on drawings.

C. 16-gauge stainless steel flour-trough at free long sides, secured to the underside of the top. Trough: 3” diameter with eased edges/corners.

2.8 COUNTER / TABLETOPS

A. 14-gauge stainless steel; all free edges turned down 2” with ¾” tight hem at the bottom—free corners: rounded on ¾” radius.

B. Marine edges: Turned up ½" on 45º angle and turned down 2" with ¾" tight hem at the bottom.

C. Cafeteria serving countertops at hot food stations: Full-length x 3½" x ½" high raised rail at (customer's) front side with 45º integral turndown to counter surface.

D. Tops abutting high fixtures or walls: Cove up specified height and slope back 1½" at the top on 45º angle; 2½" slope where piping occurs. Turn down 1" at the rear of the splash and tight ends to the bottom of the top turndown. Secure splash turndown to the wall with a 4" long 14-gauge stainless steel "Z" clip anchored to the wall, 36" OC.

E. Freestanding tables and all serving counter splash-risers: Turned back at a 90º angle with 1" turndown at the rear.

F. Brace tops with rigid-welded 1½" x 1½" x 1/8" galvanized steel angle frame at the perimeter with cross bracing 2'-0" OC maximum. Provide 4" x 4" x 12-gauge stainless steel triangular pads where leg gusset welds to frame. Paint the entire frame with Rust-Oleum gray semi-gloss enamel. Angle frames: Secured to the underside of top surfaces with ¼" studs welded 9" OC maximum with chrome-plated washer, lock washer, and cap nut. Studs: Such length that cap nuts can be made up tight, bringing the top down snugly on the angle frame, eliminating all vibrations or "oil-canning."

G. Tops: 1½" overhang at free sides of underframe or Closed Base Body.

H. Mockett Model No. SG5-26 chrome-plated/plastic grommet assembly or integrally welded stainless-steel flange or inverted gusset where service utilities or support posts penetrate or abut tops, ground, and polished to match the top. When conditions permit, provide a 1" x 1½" rectangular backsplash opening for service utilities instead of piercing the horizontal surface. Install stainless steel split tubing at the raw edge of the opening.

I. Extend underbracing members to the wall, turn down 6", and anchor to the wall when specified to be mounted on leg/bracket assembly.

J. All openings in tops: 3/16" high raised die-formed edges.

K. All top openings for pans or inserts: 20-gauge stainless steel, watertight liners, 8½" deep, secured to the underside of the countertop.

L. All "built-in" and "drop-in" counter equipment/appliances to have framing members at the perimeter of the opening.

M. Scrap Basket: 18-gauge stainless steel construction 6½" x 6½" x 21¾" long. Top of container: 5/8" wide x ¼" high full perimeter flange with ¼" diameter stainless steel rod bail handle. Interior vertical corners coved on ½" radius. Countertop: Fitted with 6¾" square die-stamped opening.

2.9 COLD PANS

A. 14-gauge stainless steel with ¾" coved interior welded integrally to the countertop with a 3/16" raised edge at the perimeter of the opening – depth of cold pan to follow NSF 7 compliance.

B. Slope bottom to required quantity of Component Hardware Model No. E16-4021 drain fittings at 48" OC maximum. Sleeve through insulation at drain fittings and extend common drain line into utility compartment for indirect waste connection.

C. ½" OD copper refrigerant lines in a serpentine pattern, 1½" OC flattened for maximum contact. Secure tubing to the underside of ¼" thick aluminum "distribution plate" installed tight to the underside of the frost plate area and apply cold-conductive mastic to all surfaces.

D. Component Hardware Model No. E16-4021 drain fittings at 48” OC maximum, sleeved through the insulation with common drain line extended into utility compartment.

E. Heat Cable: Low-wattage, full-perimeter, below countertop at the edge of depression. Secure with “Z” clips, 9” OC, and interwire with compressor switch for simultaneous operation.

F. Enclose the sides and bottom of pans with an airtight 18-gauge galvanized jacket and pack with 2” fiberglass insulation set in mastic.

G. Compressor: Size as indicated or required to accommodate the size of the cold pan. Locate the compressor in the compartment below the unit or as shown on the drawings.

H. Sectional 16-gauge stainless steel perforated false bottom (¼” holes, @ ¾” OC). Turn down 1½” on all sides, weld corners, and provide finger rings. False bottom sections: 24” long maximum.

2.10 DRAWERS

A. Stainless Steel Liners: Component Hardware Model No. S81-2020C (20” x 20”), easily removable with drawer in the fully extended position.

B. Drawer Frame: 16-gauge stainless steel flanged out at the top. Weld the frame to a double-panel 16-gauge stainless steel drawer front with full-length recessed pull at the top (similar profile as Garcy Model No. R-1060) with closed ends.

C. Channel-formed horizontal pull: ¾” turndown at the front and ends with ½” tight hem. The front edge of the pull: flush with the face of the drawer. Recess behind pull: sloped up on a 60° angle, terminating 1” below the bottom edge of pull.

D. Mount drawer frame on Component Hardware Model No. S52-2020 self-closing slides, with Delrin bearings, full-depth of the fixture. Secure slides to the body or brackets to eliminate lateral movement in the extended position. Refrigerator drawers: Component Hardware Model No. S52-2024 stainless steel slides with Delrin bearings.

E. Drawer enclosure in an Open Base Fixture: 18-gauge stainless steel flanged out at the top for attachment to the underside of the tabletop. The lower edge of the enclosure is flanged in toward the open bottom. Mount drawer slides to enclosure and brace as required. The face of the enclosure is to be the same length and height of the drawer face. Provide ¾” deep offset in front of the enclosure and 2½” from the underside of the tabletop for a flush-fitting appearance.

F. Drawer enclosure on freestanding fixture: Full depth of table framing.

G. Drawer enclosure in a Closed Base Fixture: Completely partitioned from the adjoining area. Drawer front: Flush fitting with the face of the body.

H. Drawer Liners other than tool/utility: **Bread Drawer:** S/S liner sized to fit drawer; **Refrigerated Drawer:** S/S liner sized to fit drawer.

I. Cash Drawer: Integral stainless-steel body, 3” deep.

2.11 FOOD WELLS (UNLESS SPECIFIED OTHERWISE)

A. Food Warmer Controls: Remote-mounted in sloping recessed apron panel. The control panel is recessed 2½” from the bodyline at the top of the 60° slope and 1” at the lower edge. Terminate slope angle 2½” below the countertop. Mount panel on concealed piano hinge at bottom edge; secure with screws at upper corners.

B. Manifold all warmer drains and extend to within the utility compartment for indirect waste connection. Install valve in the drain line and extend handle through compartment door.

C. Removable 18-gauge stainless steel closure panel at the underside of warmers.

D. 14-gauge stainless steel plate/utensil shelf full-length of hot food station unless noted otherwise: 10” below countertop x 9” deep, with rear panel coved up to the underside of the countertop; end panels turned up square. Front of shelf: Turned down 1½” and returned under for closure panel attachment.

E. Food wells: Hatco Model No. HWBIBRT-FULD insulated food warmer (1200 watts, 208 volts, single phase) secured to the underside of 12” x 20” die-stamped countertop openings with thermal breaker mastic rope applied at the perimeter of food well flange.

F. Soup Warmers: Hatco Model No. HWB-11QTD soup warmer secured to the underside of 11” diameter die stamped countertop opening with thermal breaker mastic rope applied at the perimeter of soup well flange. The maximum allowable temperature of the countertop at the contact surface is: 120°F. Each warmer: Equipped with one 11-quart stainless steel round insert and slotted cover.

2.12 SINKS

A. 14-gauge stainless steel; all interior corners (horizontal/vertical) coved on ¾” radius. 1½” wide double-walled partitions with flat tops between compartments.

B. Continuous exterior panels of multiple-compartment sinks: 14-gauge stainless steel filler panel welded, ground, and polished between compartments.

C. Sinks (with overflow): Score and slope sink bottom ½” to die-stamped opening fitted with Fisher 22306 twist waste valve 3 1/2” x 2” with overflow and tailpiece. 18-gauge stainless steel bracket: Welded to sink bottom for drain stem with 1½” handle clearance.

D. Where sinks are installed in fixtures with Closed Base Body, provide a Fisher 22306 twist waste valve 3 1/2” x 2” with overflow and tailpiece. (Sinks with dimensions larger than 20” x 20” in Closed Base Body will not have overflow fitting.) 18-gauge stainless steel bracket: welded to sink bottom with T & S Model No. BL-4740-1 guide bushing. Install on shortened drain stem, one T & S Model No. BL-4710-1 remote control stem assembly only (length as required) with Model No. 113-L universal joint and white blank button. Set drain control handle in Cambro Model PSB-6 bowl with bottom omitted (dress raw edge) to permit passage of drain handle—secure bowl in utility compartment door or body panel with clear silicone.

E. When single-hole deck-mounted faucets are specified, install overflow fitting in the sidewall of the sink compartment and provide ell-fitting in connecting tubing.

F. Flush Covers when specified: 1/2” thick Read Products, Inc. “Richlite” cutting board with two (2) finger holes, size as indicated. Support clips: ¼” stainless steel rod 2” long, formed at 45º with two ¾” leg ends (¼” long threaded ends). Insert rod clips through tight-clearance holes in the sink, seal watertight, and secure with stainless steel acorn nuts or tack-weld at the exterior of the sink wall. Set support clips ½” below the top. Provide a 14-gauge stainless steel channel or angle support frame to store covers when not in use. Cover holder: Adjacent to sink compartment, below countertop, or under drawer assembly.

G. Manifold drain lines together for all multi-compartment sinks (two-compartment, three-compartment, etc.).

2.13 TRAY SLIDES (UNLESS OTHERWISE SPECIFIED)

A. Tray slides: 12” wide, solid 14-gauge stainless steel turned up 2” at the rear behind countertop turndown; turned down 4” at the front and free ends unless otherwise indicated.

B. Three ¼” high die-formed inverted “V” ridges at 4” OC, 2” from the leading edge, terminating 2” from ends of tray slide with tapered ridge ends.

C. Ridges formed on radius: Equal-length segments with 2” separation between chords.

D. Secure tray slides to countertop/body frame, same as “Countertops.” Enclose the exposed underside of the tray slide with 18-gauge stainless steel.

E. When indicated, project tray slides 2” beyond the serving countertop and return the entire width of the serving counter at free ends.

F. All tray slides are to be provided and mounted per ADA requirements.

2.14 DISHTABLES

A. Soiled/clean dishtable: 14-gauge stainless steel; free edges coved up 3” with 1½” diameter rolled rim and bullnose corners.

B. Edge of dishtables next to high fixtures or walls: Coved up 10” and sloped back 1½” on 45º angle; 2½” slope where piping occurs. Turn down 1” at the rear of splash and secure to wall with 4” long 14-gauge stainless steel “Z” clips anchored to the wall, @ 36” OC.

C. Exposed rear splash: 16-gauge stainless steel finish panel from the top of the splash to the bottom edge of the rolled rim with a welded vertical joint at the end. Secure the panel with concealed attachment and install bracing 24” OC.

D. Cove all interior corners (horizontal/vertical) on ¾” radius and slope tables 1/8” per foot to sinks, scuppers, or ware wash machines, maintaining level crown/splash.

E. Brace dishtables with 1” x 4” 12-gauge stainless steel channels down the top centerline and between each pair of legs, with closed ends. Bracing: secured to the underside of the dishtable with ¼” studs welded 6” OC maximum, with chrome-plated washer, lock washer, and cap nut. Studs: such length that the cap nuts can be made up tight, bringing the dishtable down on the channel members, eliminating all vibration and “oil-canning.”

F. Integrally welded stainless steel flange or inverted gusset where service utilities or support posts penetrate or abut tops; ground and polished to match the top.

G. Hose Bibb: Chicago Model No. 305VBRCF; mounted on 12-gauge stainless steel flange or inverted gusset bracket with 3/8” stainless steel rod hose hanger.

H. Extend underbracing members to the wall, turn down 6”, and anchor to the wall when specified to be mounted on leg/bracket assembly.

I. Paper-Drop Opening: 9” square with 4” integral chute having hemmed bottom edge. Slope dishtable top 1” toward the opening, forming a 16” square tapered deposit point.

J. Accessible Tray-Drop Opening: 10” x 18” with integral 16-gauge stainless steel seamless chute sloped at 45º angle toward the center of mobile soak sink position.

K. All dishtables with a conveyor-type Type Dishmachine must have a table limit switch provided by Manufacturer and installed by Division 26. Prepare clean dishtable with holes for table limit switch and provide s/s back cover. Wiring must be concealed within dishtable fabrication.

2.15 DISH / TRAY DEPOSIT ASSEMBLY

A. 14-gauge stainless steel deposit shelf, size as indicated. Extend the frame through the opening, flush with the public side of the partition, height as local code authorities require. Turn the shelf down 1" at the front with ¾" return at the bottom (either scribed into a partition or forming reveal). Shelf: 1" square turndown at the long rear side, integral with conveyor slider pan, tray-accumulator, or dishtable. Extend the rear/end splash to align with the head of the deposit station opening. Modify rolled rim at the operator's side of the tray drop window to have a 3" rolled rim.

B. 18-gauge stainless steel window frame with perimeter flange channel-formed 1" x ¾" at both wall sides. Weld all corners of the frame and install with concealed attachment. Align/abut one jamb of the frame with end splash of conveyor slider pan or dishtable whenever adjacent.

2.16 UTENSIL – WASH COUNTERS

A. 14-gauge stainless steel; all free edges coved up 3" with 1½" diameter rolled rim and bullnose corners.

B. Edges of utensil-wash counters next to high fixtures or walls: Coved up 10" and sloped back 1½" on 45º angle; 2½" slope where piping occurs. Turn down 1" at the rear of splash and secure backsplash to the wall with 4" long 14-gauge stainless steel "Z" clip anchored to wall @ 36" OC. Vacuum breaker pockets: 4" long square turnback sections aligned with the slope break line.

C. Exposed Rear Splash: 16-gauge stainless steel finished panel from the top of the splash to the bottom edge of the rolled rim with a welded vertical joint at the end of the splash and ½" turnback at the bottom of the panel. Secure the panel with concealed attachment and install bracing 24" OC.

D. Cove all interior corners (horizontal/vertical) on ¾" radius and slope tables 1/8" per foot, maintaining level crown.

E. Brace utensil-wash counters with 1" x 4" 12-gauge stainless steel channels down the centerline of the top and between each pair of legs, with closed ends. Bracing: Secured to underside of dishtable with ¼" studs welded 6" OC. maximum, with a chrome-plated washer, lock washer, and cap nut. Studs: Such length that the cap nuts can be made up tight, bringing the dishtable down on the channel members, eliminating all vibration and "oil-canning."

F. Integrally welded stainless steel flange or inverted gusset where service utilities or support posts penetrate or abut tops: ground and polished to match the top.

G. Extend underbracing members to the wall, turn down 6", and anchor to the wall when specified to be mounted on a leg/bracket assembly.

H. Hose Bibb: Chicago Model No. 305VBRCF; mounted on 12-gauge stainless steel flange or inverted gusset bracket with 3/8" stainless steel rod hose hanger.

2.17 DOORS

A. 18-gauge x 1” stainless steel double pan-formed welded construction, insulated with 1” thick polyurethane boards. Seal the perimeter joint of the pans. Offset the lower horizontal framing member of the Closed Base Body to align the flush access door with the bottom of the Body.

B. Channel-formed full-length horizontal recessed pull: ¾” turndown at the front and ends with ½” tight hem. The front edge of the pull: Flush with the face of the door. Recess behind pull: Sloped up on a 60° angle and terminated 1” below the bottom edge of pull.

C. Door Hardware

1. Two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge location).

2. Component Hardware Model No. 35-2000 Concealed Magnetic Catch.

3. Component Hardware Model No. D30-4780 lock in the upper free corner of the door.

D. Louvered opening: Cut out opening size as indicated, turn in 1”, and weld. All corners: Ground and polished.

1. Full-height 18-gauge stainless steel louver with 1” vanes at 45º, ½” spacing. Perimeter channel-formed frame: 1½” x 1”.

2. 45º x 1” x ½” x opening width plus ½” 18-gauge stainless steel louver.

3. Tack the louver flange's weld tab to the door's back panel.

E. Drain handles opening: 6” diameter hole through the double pan to accommodate Cambro Model No. PSB-6 Bowl:

1. Secure the bowl to the door panel with clear silicone.

2. Omit the bottom of the bowl. Dress raw edges of opening for passage of drain handle.

3. Exposed insulation at the penetration of the door pan: Painted black.

F. Sliding Doors: fabricate same as Paragraph “A.”

1. Aluminum Sliding Door Track: Component Hardware Model No. B57-0000 Series, length as required. Secure to angle frame at the top of the underside.

2. Front/rear door sheaves: Stainless steel ¾” side-mounted door hangers; two (2) required per door.

3. Recessed Vertical Pull at Upper Corner of Door: Component Hardware Model No. P63-1012.

4. By-Passing Door Guides secured to bottom shelf: Component Hardware Model No. B62-1093.

5. Door Stop at the bottom edge of door: Component Hardware Model No. B60-1086.

G. Offset the lower horizontal framing member of the Closed Base Body/utility compressor compartment to align the door flush with the bottom of the Body.

2.18 CLOSED BASE BODIES

A. Frame: Rigid-welded 1½" x 1½" x 1/8" galvanized steel angle forming a continuous structure around the top and bottom perimeters of the fixture, a post at each corner, studs spaced 48" OC maximum. The top of the frame is cross-braced with 1½" angles, 2'-0" OC maximum.

B. 18-gauge stainless steel panels and trim with concealed attachment. All seams: Welded, ground, and polished.

C. Exposed Vertical Corners: Rounded on ¾" radius. Closed Base Bodies adjacent to walls or fixtures: square corners.

D. Vertical and horizontal channel members at shelf interior or drawer enclosures, such as corners and center mullions: Closed and sealed.

E. Closed Base Bodies set on finished masonry platforms: closed and caulked at the underside of equipment overhang and bolted to the platform. Body overhang of the platform: 1" at free ends and 2" at the front and exposed rear sides.

F. Closed Base Bodies not set on the platform: Component Hardware Model No. A54-2-6, 6" legs spaced 4'-0" OC maximum.

2.19 COMPRESSOR COMPARTMENTS

A. Same material as Closed Base Bodies with back and end partitions; omit bottoms only.

B. 10-gauge steel slide-out support: Channel frame on full extension slides with 125 lb. minimum capacity secured to fixture frame with anti-vibration mountings for maximum sound deadening. Closed Base Body on the solid platform: front-to-back slide-out support channels set 4" above the bottom for air circulation.

C. Access Door: 18-gauge stainless steel double-pan type with a channel formed horizontal recessed pull full length of the top (similar profile as Garcy Model No. R-1060) with closed ends. Channel-formed horizontal pull: ¾" turndown at front and face of the door. Recess behind pull slopes up on a 60° angle, terminating 1" below the bottom edge of pull. Offset the lower horizontal framing member of the Closed Base Body to align the flush access door with the bottom of the body. Door hardware: two Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge locations) and Component Hardware Model No. 35-2000 concealed magnetic catch.

D. Access Doors Louver: Full-height, with 1½" x 1" x 18-gauge stainless steel channel-formed frame with welded corners. 18-gauge stainless steel louver. Submit a sample of the design for approval.

2.20 UTILITY COMPARTMENTS

A. Closed Base Bodies or Pedestal Supports: Fitted with utility compartments wherever piping or wiring is required in/on the fixture.

B. Same material as Closed Base Bodies with full-height back and end partitions. Omit bottoms except at hose-reel locations.

C. Access Doors: 18-gauge stainless steel double-pan type with a channel formed horizontal recessed pull full-length of the top (similar profile to Garcy Model No. R-1060) with closed ends. Channel-formed horizontal pull: ¾" turn down at the front of the door, a recess behind the pull slopes up on a 60° angle, terminating 1" below the bottom edge of the pull. Offset the

lower horizontal framing member of the Closed Base Fixture to permit flush alignment of the door with the face and bottom edge of the body. Door hardware: two (2) Component Hardware Model No. M75-1002 stainless steel hinges (notch door/jamb at hinge locations) and one Component Hardware Model No. 35-2000 concealed magnetic catch.

D. No shelves of Closed Base Fixtures are to be penetrated.

2.21 UTENSIL RACKS

A. Rack: ¼" x 2" 300 series stainless steel flat bar with No. 4 finish, fully welded and formed to match the shape shown on drawings. Lowest band - 7'-6" AFF unless otherwise indicated.

B. Ceiling Mount Supports 1-5/8" diameter 16-gauge stainless steel tubing from band to 18" above the ceiling. Anti-sway bracing above the ceiling - 1½" Unistrut members. Tubing penetrations at the ceiling - Component Hardware Model No. A16-0206 stainless steel gussets.

C. Table Mount Supports 1-5/8" diameter 16-gauge stainless steel tubing extended through countertop. Secure to closed base framing or cross rail/undershelf on the open base fixture. Tubing penetrations of countertops - integrally welded stainless steel inverted gusset.

D. Utensil Rack Hooks - Component Hardware Model No. J77-4401 stainless steel hooks spaced 8" OC maximum.

E. Electrical Receptacle: NEMA No. 5-20-R or as noted. Mount in fully welded 3½" x 5½" x 3" 14-gauge stainless steel enclosure with ½" radius corners. Stainless steel cover plate to fit specified receptacle. Pre-wire through tubular support for final connection above the ceiling by Division 26.

2.22 CASHIER / SERVING COUNTERS

A. Exterior Body Panels, when specified: ¾" thick marine grade hardwood plywood with plastic laminate or solid polymer in Architect's selection of color/pattern at all exposed surfaces; backing sheet where concealed.

B. Position, size, and finish horizontal or vertical reveal as Architect directs.

C. Secure panels to counter body framing in a concealed manner. Install removable panels with "Z" clips overlapping body framing members.

D. Hinged doors in exterior body panel(s) - Grass Model No. 1200VZ or 1200VZ8 self-closing hinges. Three (3) required per door; Grass Model No. G/HRZ base plate at each hinge; Ives Model No. TM820 concealed push latch at each door. Confirm Model No. and provide samples with the submittal.

E. Cashier counter to have 16-gauge s/s intermediate shelf, turned down 1 1/2" with tight hem at front. Cove up 2" at rear and sides. Brace undershelf with 1" x 4" 14-gauge stainless steel channel at the longitudinal centerline. Provide an outlet for power/data within the body above the intermediate shelf. Provide cash drawer inserts per district standards.

F. Sneeze Guards to be adjustable and meet NSF standards.

2.23 OPEN BASE STRUCTURES

A. 1-5/8" OD x 16-gauge seamless stainless-steel tubing legs bevelled at the bottom. 1¼" OD cross rails fully welded (360° smooth and polished) to legs at 10" AFF, OC.

B. Top of Leg: Inserted in Component Hardware Model No. A20-0206 gusset fully welded to table frame or sink bottom.

C. Bullet Foot: Component Hardware Model No. A10-0851.

D. Freestanding fixtures requiring utility connections: Component Hardware Model No. A10-0854 flanged feet at the fixture corners, anchored to the floor with non-corrosive bolts.

E. Table Bases: Maximum leg spacing of 6'-0" OC; dishtable and utensil wash counter bases at 5'-0" OC.

F. Open Base equipment specified to be supported by brackets at the rear side only (not completely cantilevered): Tubular legs at the front side only with Component Hardware Model No. A10-0854 flanged feet anchored to the floor with non-corrosive bolts. Front-to-back cross rail: fitted into Component Hardware Model No. A20-0406 circular gusset secured to the wall with non-corrosive bolts.

2.24 UNDER SHELVES

A. Open Base Structures: 16-gauge stainless steel turned down 1½" with tight hem at the bottom. Notch all corners to fit tubular legs and weld from the underside to fill the gap, grind, and polish. Cove up 2" at the rear or ends adjacent to wall, columns, refrigerators, etc. The turn-up at freestanding fixtures is to be hemmed tight to the bottom of the turndown. Brace undershelf with 1" x 4" 14-gauge stainless steel channel at the longitudinal centerline and each intermediate pair of legs.

B. Open Base Structure specified to be supported by brackets at the rear side only (not completely cantilevered): 16-gauge stainless steel turned down 1 ½" at free sides with tight hem at the bottom edge. Notch all corners to fit tubular legs as required and weld from the underside to fill the gap, grind, and polish. Cove up 2" at rear ends, as indicated. Fill the gap at the front-to-back rail, grind, and polish. Brace undershelf with 1" x 4" x 1" 14-gauge stainless steel channel at longitudinal centerline between front to back rails.

C. Closed Base Fixtures: 16-gauge stainless steel turned down 1½" at front. Front edge of bottom shelf: Turned back and sealed to finished masonry platform or boxed for leg application. Center shelf has ¾" tight hem.

1. Shelves: Turn up square at ends (coved up at rear only) to the shelf above or countertop flanged out for attachment with no open spaces at interior.

2. All shelf partitions at exposed ends of cabinet bodies or interiors: Free of exposed framing members.

3. Reinforce shelves with full-length 1" x 4" x 14-gauge stainless steel closed hat channel.

4. Unless otherwise noted, all closed base undershelves must be 22" deep and clear.

5. Fully weld smooth and polish the vertical seam of the shelf turndown/turn up with the face of the body partition.

6. Seal the vertical seam of the square turn-in at the exposed interior of open shelf sections.

2.25 ANCHOR PLATES / WOOD GROUNDS

A. Behind the finished surface, wherever building walls, partitions, or ceiling construction will not accommodate direct attachment of equipment such as over shelves, wall cabinets, hose reels, utensil racks, exhaust hoods, display cases, etc. Material and installation by General Contractor. Location and coordination with trades by Section 11 40 00.

B. Anchor Plates: Not less than 12” x 12” x ¼” thick steel, secured to the structure above or behind the finished surface, positioned at attachment points.

C. Wood Grounds: Length required by fixture, component, or device, 24” wide x ¾” thick plywood secured to partition system before gypsum board installation.

D. Above ceiling supports: Structural shapes (4” x 8.0 lb. channel) suspended from the structure. Maximum height 15’-0” AFF. Size: width of equipment x length of equipment plus 6’-0”. Cross bracing at 6’-0” OC maximum.

2.26 OVER SHELVES

A. 16-gauge stainless steel with free edges turned down 1” with ½” tight hem at the bottom—¾” radius at free corners.

B. Turn up 2” raw at walls and sides with a horizontal coved corner at the rear. Round front corners of turn up on ¾” radius.

C. Where shelf width exceeds 12” width, reinforce with ½” x 4” x 14-gauge stainless steel closed hat channel full-length of the shelf.

D. Wall-Mounted Shelves: 16-gauge stainless steel brackets 48” OC maximum, set in 6” from ends.

E. Freestanding Shelves: Where splash is required at free over shelves, turn up square 2” at ends, cove up at the rear, and hem tight to lower edge of front turndown. Weld exposed corners.

1. Freestanding over shelves: 16-gauge stainless steel cantilevered brackets at the rear of the table; double-cantilevered brackets at the center of the table. Posts for cantilevered over shelves are 1-5/8” OD x 16-gauge stainless steel secured to the underframe, 4’-0” OC. Ends of shelves: Secured to adjacent wall/fixture or mounted on 1¼” diameter stainless steel posts.

2. Freestanding over shelves not on cantilevered brackets: 1¼” OD x 16-gauge stainless steel posts, each pair at 4’-0” OC maximum.

F. Baker Table Over shelves: Supported 18” above the top with 1¼” OD stainless steel tubular supports with channel shoe secured to risers.

G. Glass/Cup Rack Over shelf at Dishtables: 14-gauge stainless steel with 1½” deep “vee” trough at free long sides with 1” tight hem inside the trough. Provide a ½” marine edge at free ends and; a 4” splash at the wall. Suspend shelf at 18” above dishtable surface on posts/brackets anchored to dishtable frame/wall at rear; 1” OD stainless steel tubing supports from the structure above the ceiling at front edge, 60” OC at each end.

1. Install at both ends a ½" stainless steel drain tube (connecting both vee-troughs) extended to the dishtable surface through splash turnback.

2. Rack-rest: horizontal full-length 1-5/8" OD stainless steel tubing supported at 10" OC above shelf (8" OC for double service shelf) by 1¼" OD stainless steel tubing with closed ends. Support tubing: welded, ground, and polished, spaced 60" OC.

3. Rack-rest supports to wall: 4" x 4" x 10-gauge stainless steel flange plates welded to support tubing. Anchor flanged plates to blocking ground with non-corrosive bolts.

2.27 DRAIN TRENCH LINER / GRATING

A. Liners: 14-gauge stainless steel in sizes as indicated.

B. Interior of liners: 6" deep with all interior corners (horizontal/vertical) coved on ¾" radius; sloped and scored 1" to integrally welded Component Hardware Model No. D34-Y011 basket drain assemblies @ 48" OC, fitted with 6" long welded tailpiece. Stainless steel safety chain: connected to basket strainer assembly and top of liner wall.

C. Liners: 1" wide perimeter shoulder at the top, turned up flush with finished floor, tight hemmed back down to the shoulder level, and flanged out 2" for attachment to the slab.

D. Underside of sloping liner portion: 2" long "Z" clips.

E. Grating: IMC-TEDDY PFD-ADA removable fiberglass grating:

1. 1" deep "I" bearing bars with 0.6" wide top flange.

2. Full perimeter frame, section quantities, and sizes indicated.

3. Maximum of 2'-0" sections.

4. Grating bars should be spaced 0.4" apart per ADA requirements.

5. Grating to be two (2) equal sizes.

2.28 WALL PANELS

A. Wall Panels: 18-gauge stainless steel, double pan-formed ½" thick with internal stiffener members. Fill with USDA-approved thermal insulation, full height, and width of panels, and attach to the interior with mastic. The maximum allowable temperature at the rear side of the panel: is 120°F.

1. Height of panels as required: Top of tile base to the underside of the hood, top of tile base to the top cap of stub wall, or top of splash to the underside of the hood.

2. Level and square lower edge and sides.

3. Butt joints on all panels.

2.29 EXHAUST HOODS (SURFACE-MOUNTED CONDENSATE)

A. Hoods: Size/shape as indicated: 18" high on the interior.

B. Body: 16-gauge stainless steel, with all seams welded, ground, and polished.

C. Continuous condensate trough at perimeter: 3" x 1".

D. Frame the top of the hood with 1½" angle iron assembly and suspend from the structure above the ceiling by ½" diameter steel rods, drawn tight against the finished ceiling surface.

E. Duct opening/collar as specified with stainless steel louvered grille over the opening.

F. Div. 22 to extend drain line to floor sink when shown. The drain line is to be silver painted. Div. 22 to ensure all drain lines are centered over floor sink grate openings and no water splashes on the floor.

G. ½" diameter steel hanger rods at 4'-0" OC maximum to be by Kitchen Equipment Contractor, but they are to be anchored to the supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.

H. Hoods and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements.

2.30 EXHAUST HOODS (UNLESS SPECIFIED OTHERWISE)

A. Exhaust to be provided to meet all current local jurisdiction mechanical and energy code requirements. Kitchen Equipment Contractor to verify code requirements and coordinate with Divisions 23 and 26. Hoods over production equipment to be Type 1 with continuous capture. All Type 1 hoods should be 6' deep to ensure smoke/steam capture unless otherwise noted.

B. Install fire suppression system(s) in all ventilators specified in this section. Install per the manufacturer's recommendations and applicable codes or standards. Submit installation certification form to Architect.

C. Locate chemical cylinders as indicated on drawings and install piping to exhaust hood(s) in a concealed manner. Set cylinders and cabinets at 7'-0" clear AFF unless noted otherwise. Provide polished chrome plated tubing piping/fittings, where exposed at cylinder location and at the interior of exhaust ventilator—exposed pipe threads in/above the food zone are not allowed. Submit a schematic installation diagram and confirm critical distances from cylinders to nozzles.

D. Remote manual release located in the path of egress from the protected exhaust hood area. Kitchen Equipment Contractor to coordinate location with local Fire Marshal requirements before submittal review. All conduits will be recessed within the wall; SURFACE MOUNTING WILL NOT BE ACCEPTED.

E. Provide one (1) handheld Type 'K' and ABC 6-liter fire extinguisher per Ansul system, surface wall mounted.

F. Required quantity and sizes of mechanically operated gas valves.

G. Confirm interconnection of all equipment as required to ensure exhaust hood and fire suppression systems are entirely operational and meet local jurisdiction code requirements.

H. ½" diameter steel hanger rods at 4'-0" OC maximum to be by Kitchen Equipment Contractor, but they are to be anchored to the supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.

I. Provide an appropriate quantity of fire suppression systems as required by local jurisdiction code requirements.

J. Double wall insulated construction at ends. S/S where exposed.

K. Hoods and components to meet all NSF standards, NFPA 96, UL 710 and current IECC requirements.

L. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsection E. Division 23 (Mechanical) for additional information.

2.31 HIGHLIGHTING

A. Polish the following vertical surfaces to a No. 8 finish:

1. Serving and display shelf turndowns.

2. Conveyor and dish/tray deposit station turndowns/frame.

3. Tray slide turndowns.

2.32 SHOP / FIELD JOINTS

A. Field joints: The least number is used only when equipment size must be limited for building or interior space access.

B. Stainless steel tops (including edges and splashes): Fully welded, ground, and polished to match adjacent surfaces.

C. Vertical field joints of fixture backsplashes that are inaccessible from the back: terminate 1” above the horizontal coved corner. The remaining height of the field joint: hairline butt joint with offset draw-angle behind. All horizontal/vertical draw joints: located and noted on shop drawings.

D. Hairline butt joint: 1½” x 1½” x 1/8” steel angles welded to the back/underside of countertop/shelf. Offset angle beyond joining metal edge ½” (min.) to provide a flat backing surface for a joint with the angle of other joining metal edge, set for ½” space between vertical legs of angles. Bolt sections together with 5/16” machine bolts, lock washers, acorn head cap nuts, set 3” OC.

E. Closed Base Bodies: Draw-type with hairline seam fully field-welded.

F. Millwork: Plastic laminated joints shall be dowelled, glued, and draw-bolted with fasteners.

G. Solid Polymer: Surfaces drawn tight, filled, sanded, and finished to match adjacent surfaces.

2.33 PREFABRICATED WALK-IN COLD STORAGE ASSEMBLIES

A. Assembly to be installed by Factory Authorized Installers only.

B. KEC to provide a 1-year walk-in assembly panel installation warranty. Panel installation warranty to cover labor and part replacement issues resulting from a failure to complete the following during installation:

1. Walk-in assembly panels to be installed square, plumb, and level.

2. To create a proper seal, ceiling panels must be installed flush and tight to wall panels with undamaged gasket material. Any signs of condensation at joints or assembly wall panels should be reported to FDP and addressed immediately. Caulk at panel seams will not be an acceptable solution.

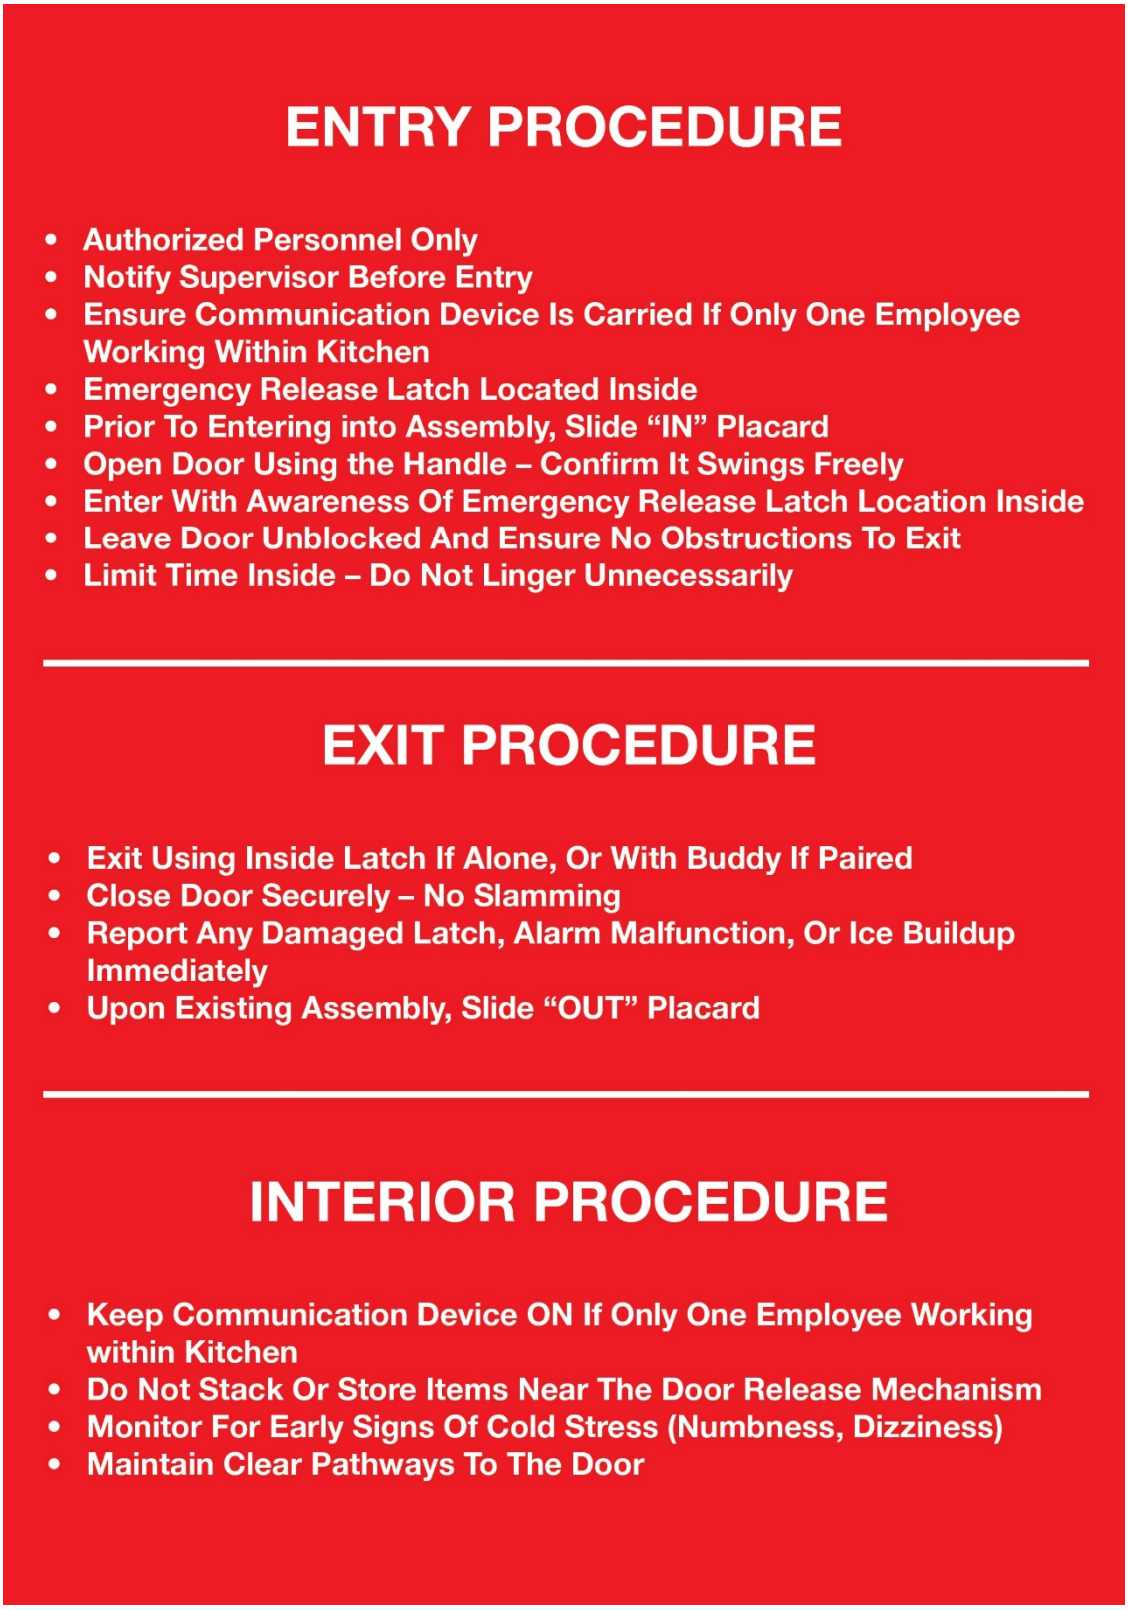
3. All cam-locks should be engaged and cam-lock covers in place.

4. Any gaps under the floor angle (due to shimming) must be entirely sealed to the slab.

5. All penetrations in the ceiling or wall panels should be insulated and sealed by appropriate trade contractors and verified by KEC, including but not limited to Light Fixtures, Refrigeration Lines, Sprinklers, Temperature Sensors, etc.

6. Proper installation of the door systems should allow the door to self-close and seal around the perimeter of the door opening and at the floor threshold.

7. Final operation of the IC/IC+ control, door heaters, and light switches should be confirmed upon completion of the electrical connections.



8. Manufacturer to provide component-specific safety/emergency placards at the exterior and interior of all cold storage door assemblies. Signage to be mounted on door at ADA level when a window is not present or below view window when window is included **(see below)**.

4" X 4" PLACARD FOR INTERIOR OF WALK-IN COOLER AND FREEZER

9. The walk-in assembly panel installation warranty will cover service issues resulting from faulty installation.

7” X 10” PLACARD FOR EXTERIOR OF WALK-IN COOLER AND FREEZER

ENTRY PROCEDURE
• Authorized Personnel Only
• Notify Supervisor Before Entry
• Ensure Communication Device Is Carried If Only One Employee Working Within Kitchen
• Emergency Release Latch Located Inside
• Prior To Entering into Assembly, Slide "IN" Placard
• Open Door Using the Handle – Confirm It Swings Freely
• Enter With Awareness Of Emergency Release Latch Location Inside
• Leave Door Unblocked And Ensure No Obstructions To Exit
• Limit Time Inside – Do Not Linger Unnecessarily
EXIT PROCEDURE
• Exit Using Inside Latch If Alone, Or With Buddy If Paired
• Close Door Securely – No Slamming
• Report Any Damaged Latch, Alarm Malfunction, Or Ice Buildup Immediately
• Upon Existing Assembly, Slide "OUT" Placard
INTERIOR PROCEDURE
• Keep Communication Device ON If Only One Employee Working within Kitchen
• Do Not Stack Or Store Items Near The Door Release Mechanism
• Monitor For Early Signs Of Cold Stress (Numbness, Dizziness)
• Maintain Clear Pathways To The Door

C. **KEC is responsible for overall install accuracy/quality and quality control of work performed, regardless of the installer or any field modifications due to building/construction conditions. KEC is to provide the CSA Installation Approval Report (provided in this document) to Foodservice Design Professionals (FDP) upon completed installation, verifying that all items above have been inspected by the KEC for completeness and installed per manufacturer requirements. This report will be required as part of the completion of the contract.**

D. Sectional Assemblies: Size/shape indicated on drawings; 9'-6" interior clearance unless otherwise specified. Door locations/size: exactly as shown.

E. Sandwich Panel Insulation: Class 1 Urethane with a vapor barrier, 4" thickness (unless specified otherwise) with mature "U" factor of .030 or lower. Finished panels shall be UL-listed and demonstrate a flame spread rating of 20 or less. Panels must meet performance standards as outlined in U.S. Government legislation.

F. Wherever compartment dimension exceeds the clear-span ability of ceiling panels, provide I-beam support on the exterior of the ceiling or spline-hangers. Install ½" diameter steel rods through beams/hangers and secure them to the structure above. Beams or posts within compartments are not acceptable.

G. Reinforce prefabricated wall panels to rigidly support the door assemblies. The perimeter of the door and frame shall be built of a fiberglass reinforced polymer (FRP) pultrusion. All pultrusion's shall be non-conductive, non-corrosive, rust proof and NSF listed. All doors shall be furnished with a replaceable aluminum braided heater wire, electronically monitored, and controlled as to initiation temperature, termination temperature and percentage of operation time as required. Install 2" x 4" 16-gauge stainless steel hat-channel full-width of the jamb with 1/8" stainless steel removable flush sill, secured with stainless steel screws and sealed watertight to channel.

H. Reinforcement as required to be provided in panel for Push Button Panic Alarm and Release knob..

I. Provide an aluminum cove base at the interior and exterior of exposed panels (unless otherwise specified) for all floor assemblies.

J. Floor Installations:

1. **4" Recessed Exposed Factory Floor Installation (if required):**

   a. 6 mil polyethylene sheets in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

   b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

   c. Provide and install factory or custom fabricated door threshold as required. To be flush and level to finished kitchen floor. Floor threshold to be surfaced with Graphene Oxide Anti-Slip or similar surface to reduce freezing and prevent slip hazards.

   d. 4" commercial grade manufacturer's dura floor with diamond treadplate surface and marine grade plywood subfloor.

   e. 15# felt slip sheet over insulation with 6" lapped joints flashed up the height of the finished floor base.

f. 1/2” sand leveling bed by G.C.

2. **8-1/2” Recessed Floor Installation (if required):**

a. Factory floor in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

c. Provide and install factory or custom fabricated door threshold as required. To be flush and level to finished kitchen floor. Floor threshold to be surfaced with Graphene Oxide Anti-Slip or similar surface to reduce freezing and prevent slip hazards.

d. 4” manufacturer’s floor.

e. 15# felt slip sheet over insulation with 6” lapped joints flashed up the height of the finished floor base.

f. 1/2” sand leveling bed by G.C.

g. Concrete flooring and tile over insulation by Divisions 03/09.

3. **12” Recessed Floor Installation (if required):**

a. 6 mil polyethylene sheets in slab recess with all joints lapped 6 inches and sealed to form a watertight seal.

b. Level and square prefabricated perimeter and partition wall panels anchored to slab recess. Protect the exposed surface of panels.

c. Provide and install factory or custom fabricated door threshold as required. To be flush and level to finished kitchen floor. Floor threshold to be surfaced with Graphene Oxide Anti-Slip or similar surface to reduce freezing and prevent slip hazards.

d. 4” manufacturer’s floor.

e. 15# felt slip sheet over insulation with 6” lapped joints flashed up the height of the finished floor base.

f. 1/2” sand leveling bed by G.C.

g. Concrete flooring over insulation by Division 03:

i. Concrete mix: 5000 psi @ Freezers and 3000 psi @ Coolers.

ii. No limestone or fly ash; fiberglass reinforced.

iii. #3 rebar, set on 12” centers in both directions.

iv. Center rebar vertically in wearing bed.

v. 10” high concrete 45° angled wall curb at interior perimeter per food service details.

h. Diamond treadplate wall panels on the interior and exposed exterior by 11 40 00. Refer to drawings for height. Coordinate diamond treadplate wall covering at the interior with angled wall curb.

i. Ventilation Pipe Requirements by G.C.:

i. Bottom perforated vent pipes to be #40 PVC on six ft. max centers open on both ends with the thermostatically controlled fan on (1) end and perforated mesh on the opposite end of the fan at the exterior of the building.

ii. Vent pipes are to be turned parallel with the exterior wall - 180°turn down.

iii. Vent pipe openings to be held at 24” above grade or roof per design.

iv. Fans to be Grainger Manufacturer and sized per airflow needs. Airflow is to be sized based on the length and number of bends.

v. If no exterior wall is adjacent, vent pipes will route up and extend past the roof. Roof penetrations by Division 07.

4. **Surface Mounted Factory Floor Installation (if required):**

a. 4” commercial grade manufacturer’s dura floor with diamond treadplate surface and marine grade plywood subfloor.

b. 36” reinforced diamond treadplate internal ramp.

c. 10-gauge stainless steel threshold to provide a smooth transition to the interior walk-in assembly floor.

K. KE2 Therm Combo Display model no. 21877 (Unless otherwise specified). Integrated, flush-mounted temperature monitor/alarm with sensor and probe-cord length required to extend from the exterior front of the assembly to a mounting position of the sensor within the evaporator return airstream. System to have an easy-to-read LCD with high and low alarm set points with audible and visual alerts for alarm conditions. System to include Adaptive Programming for automatic set point control. Wi-Fi connectivity is included for remote notifications of alarms such as power failure, high and low temperatures, entrapment, and door open. System to include a built-in panic alarm. The system is to be interconnected to the Building Automation System (BAS) or the Owner’s Network (by Division 27) and to notify facility personnel of the district/owner choosing when activated. Refrigeration Installer to interconnect panic alarm to refrigeration system to shut off evaporator coils when panic alarm is engaged.

L. Kason Interior Panic Alarm model no. 1967-A7 (unless otherwise specified). Illuminated Push Button Panic Alarm with protective cover and Phenolic Label “PANIC” for entrapment **within Cooler and within Freezer** (ADA mounting height). Panic Alarm encasing is to be Safety Yellow/Black. ***Installer to maintain 18" clearance in front of controls for ease of access.***

Manufacturer to pre-run conduit within panel from Panic Alarm to junction above Cooler and Freezer door panel (or Cooler door if ‘inline’ assembly) for installation of Emergency Strobe/Horn and furnish loose (3) external Emergency Strobe/Horn Beacons. Division 11 40 00 to interconnect Panic Button to KE2 Switch at refrigeration system to disable refrigeration system when engaged.

Division 26 to install strobes/horns at locations indicated and interconnect to Panic Button at Walk-In Cooler and Walk-In Freezer junction. Division 27 will interconnect the Push Button

Panic Alarm to the Building Automation System for Owner notification. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsections F. Division 26 (**Electrical**) and G. Division 27 (**Communication**) for additional information.

M. ***CRITICAL- Required: Manufacturer Representative to provide training on controls and inside emergency release mechanisms.***

N. KE2 Combo Therm (unless otherwise specified). Confirm all component model numbers for complete installation and operation.

O. LED surface-mounted light fixture, in quantity/arrangement shown on drawings. Light fixtures to be perpendicular to coils. Light fixtures wired to interior and exterior temperature control panel. Light fixtures are to be provided by Section 11 40 00 and installed by Division 26. Division 26 is to seal all conduit penetrations at light fixtures. KEC to verify that penetrations are sealed.

P. Penetrations of Panels: To be sealed by factory installer and appropriate trade contractors, with Dow Corning 3-6548 silicone RTV foam, total depth of the panel. Trim excess flush. KEC to verify that all penetrations are sealed.

Q. Install closure panels and trim strips to building walls and ceiling with concealed attachment. Closure material: same as wall panels unless noted otherwise.

R. Compartment Entrance Doors: 36” x 78” nominal clearance unless otherwise noted.

1. Mount hinged doors on two Kason Model No. 1346; polished chrome-plated nylon cam-lift hinges. All doors to be equipped with polished chrome Kason 1094 or equivalent door closer assembly. Doors to be adjusted so all doors fully self-close.

2. Hinge doors as indicated on drawings.

3. Defrost heater: Thermostatically controlled and replaceable at the entire perimeter of all doors. ***-CRITICAL- Defrost heaters to be wired for continuous service***.

4. 36” high x full-length diamond aluminum treadplate at front and rear of all hinged doors.

5. 12” x 2” engraved phenolic plastic compartment identification sign in Architect’s color selection with 1” letters, mounted above door window.

6. 14” x 24” four-panel glass view window with heater and molded non-metallic inner and outer frame. The heater is to be wired and controlled via the door monitor for continuous service.

7. Padlock/key provisions in the door latch with safety release mechanisms.

8. Kason 1826 Intelli-Vent LED Heated Pressure Relief Ports with Dual Port Vent and Security Light. Locate Two (2) 12” below ceiling on Cooler/Freezer common wall panel and Two (2) 12” below ceiling on Cooler wall panel. If Cooler and Freezer are separate units, locate one on the Freezer wall panel as well, 12” below ceiling and mounted in the door frame assembly. All ports to have separate dedicated electrical connections and be wired for continuous service. Located and installed by Manufacturer.

9. Kason Model No. 1238 (unless specified otherwise) Pacesetter Locking Handle QTLC with twist-off knob disassembly type inside release.

10. Provide Three (3) Edwards 860 Series (or equal) red lens, surface-mounted Xenon Emergency Strobe Beacons. Div 26 will install one (1) located in the Kitchen in

architectural ceiling above Walk-In Cooler door, one (1) located in the Kitchen in architectural ceiling above Walk-In Freezer door and provide the third unit located in the Cafetorium (Division 26 to coordinate location with Owners and Architect). Division 26 is to provide all conduit and wiring required and interconnect the Push Button Panic Alarm in the Walk-In Cooler and Freezer to Strobe Beacons (***Critical***).

S. Provide refrigeration calculations and refrigeration alarm to meet local jurisdiction code requirements.

T. If air screens or air shields are specified above doors or on the interior of the assembly, the manufacturer must provide adequate blocking in panels to support these components and pre-wired electrical connections. Installer to coordinate location of door closure to not interfere with air screens or air shields. Clear-VU, swinging door assemblies, are not required if air shields are specified.

U. S/S trim above walk-in assembly to conceal manufacturer ceiling grid.

V. Field-check all horizontal/vertical measurements and conditions at the building before fabrication or delivery of equipment.

W. Walk-in Assemblies to be installed by the PRE-APPROVED INSTALLERS listed below:

1. QBR Refrigeration, 30083 Hwy 90 Blvd., Katy, TX 77493, Mr. Andy Spellins, 713-973-2875, andy.spellins@qbrsales.com

2. Machine Ice, 8915 Sweetwater Ln., Houston, TX 77037, Mr. Will Weaver, 281-448-7823

3. Coolers Inc., 6922 Alder Dr., Houston, TX 77081, Mr. Lee Mamone, 713-665-8886

2.34 WALK-IN COLD STORAGE ASSEMBLY REFRIGERATION SYSTEMS

A. Unit Coolers: specified quantity and model, ceiling-hung by ½" OD nylon bolts with stainless steel washers and nuts. Insert hanger bolts through the plastic sleeve and seal penetration airtight.

1. Unit cooler drain fittings: positioned as indicated on drawings. Installation of cast tee-fittings on drain pan outlet with union and cleanout plug, and extension of 1" Type K copper drain line through wall panel to airgap fitting or floor drain under this Section.

2. Slope drain line ½" per foot, trap at the exterior of assembly and turn down into the drain. Manifold drain lines of adjacent compartments wherever possible.

3. Install drain line plastic sleeve through compartment wall, seal around drain line, and install stainless steel escutcheon with setscrews.

4. Electric drain line heater cable (self-regulating 7 watts): on all unit coolers operating below 36°F., installed from coil drain line fitting to wall penetration under this Section. Heater cables: the minimum rating of 15 watts/lineal foot, 208 volts, single phase. Wrap drain line with maximum 2" loop spacing and interwire to unit cooler for continuous operation.

5. Mounted, pre-piped, and pre-wired evaporator components:

   a. Sporlan thermostatic expansion valve with external equalizer.

   b. Shut-off valve at evaporator suction and liquid lines.

   c. Sporlan "Catch-All" refrigerant filter/dehydrator on liquid line.

   d. White Rogers 1609-101 adjustable thermostat with remote bulb positioned in return airstream of the evaporator.

   e. Electrical disconnect switch in NEMA 4 enclosure.

   f. **For any facility within 20 miles of a salt air environment:** Condenser and Evaporators to be built with Electrofin coating to retard salt air deterioration. Coils are to be coated with Technicoat 10-2 coating for protection against a salt air environment.

   g. 110° Ambient Temperature Operation.

6. Two (2) fan door activation switches to turn off evaporator coils when the door is opened. Interconnect door activation switches through Panic Alarm to turn off evaporator coils also when Panic Switch is engaged.

B. Refrigerant System Installation:

1. Refrigerant Lines; Type "L" rigid copper tubing. Fittings: Wrought copper or brass designed for use with high-temperature solder. Piping joints: Made with silver solder (Sil-Fos). Piping: Properly suspended from and anchored to the structure with adjustable hangers 6' OC maximum. Suction lines: Sized to have a maximum pressure drop of two pounds in medium-temperature systems; one pound in low-temperature systems. Liquid lines: Sized to give maximum pressure to prevent trapping of oil. Insulation on all suction lines: Armaflex insulation by Armstrong. ¾" thick at medium-temp 1" thick at low temp. Refrigerant lines in PVC conduit: Sealed at both ends with Dow Corning 3-6548 silicone RTV foam. The refrigeration system installer will wrap Exterior Refrigerant Lines in the self-fastening jacket of Type 3003-H14 aluminum alloy, 0.016-inch thick. Provide aluminum strapping and seals for applying aluminum jackets and covers, per the manufacturer's recommendations, to ensure a completely weather-tight covering.

2. System to include a leak detection system as required for any A2L system with the capability to turn on the main blower, shut off compressors, and shut off any additional sources of heat in the system. Leak detection is critically important and must be wired to interrupt all controls when the system is in failure. System to include connectors for the Building Automation System or the Owner alarm system, as may be required for communication of alarm to the Owner. Connection to external systems by Div. 27. Refer to Section 1.4: OTHER DIVISIONS/CONTRACTORS RELATED WORK; Subsection G. Division 27 (**Communication**) for additional information

C. Evacuation and Charging:

1. After completion of the pressure test, the system shall be evacuated using an approved auxiliary vacuum pump. Connections for evacuation: Following the manufacturer's recommendations.

2. Charging the condensing unit (R454A Non-CFC Ozone Depletion Refrigerant for use in High, Medium, and Low Temp units) – (Refrigerant must meet Industry Standards and Local Codes): given through the charging valve in the high side, passing all the liquid refrigerants through a charging dehydrator. All charging lines and gauges must be purged of air before connection with the system. Refrigerant: unused and shall be delivered in a clean container. After the system is fully charged, start and place it in full operation.

D. Refrigeration system to be installed by the **PRE-APPROVED INSTALLERS** listed below:

1. QBR Refrigeration, Mr. Andy Spellins 30083 Hwy 90 Blvd., Katy, TX 77493, 713.973.2875, andy.spellins@qbrsales.com

2. Machine Ice, Mr. Will Weaver, 8915 Sweetwater Ln., Houston, TX 77037, 281.448.7823

3. Coolers Inc., 6922 Alder Dr, Houston, TX 77081, Mr. Lee Mamone, (713) 665-8886

2.35 PRE-APPROVED KITCHEN EQUIPMENT CONTRACTORS

A. Only the following named Subcontractors and those approved later, if any, are approved for inclusion in the Contractor's Bid.

B. **Any contractor requesting inclusion within this bid must submit AIA form 305 a minimum of 14 days before the bid date for review or as required by Architect.**

1. Stafford Smith, Mr. JP Garcia, 7129 North Loop East, Houston, TX 77028, Phone: 713.892.5001, Email: jpgarcia@staffordsmith.com

2. Texas Metal Equipment Company, Mr. Travis Andrews, 23518 Coons Road, Tomball, Texas 77375, Phone: 713.466.8722, Email: tandrews@tmeco.com

3. Kirby Restaurant Supply, Mr. Dave Newman, 809 S. Eastman Road, Longview, Texas 75602, Phone: 903.746.0421, Email: daven@kirbysupply.com

4. Mission Restaurant Supply, Mr. Robert Snoddy, 1126 S. St. Mary's Street, San Antonio, Texas 78210, Phone: 832.970.4020, Email: roberts@missionrs.com

5. Kommercial Kitchens, Mr. Terry Woodard, 13544 East Fwy., Houston, TX 77015, Phone: 409.769.1199, Email: terry@kommercialkitchens.com

6. Supreme Fixtures Co., Inc., Mr. Tim Hampel, 11900 Vinny Ridge Road, P.O. Box 193655, Little Rock, AR 72219, Phone: 501.455.2552, Email: tim@supremefixture.com

7. Amundsen Commercial Kitchens, Mr. Lewis Beville, 105 Montie, Longview, TX 75604, Phone: 903.576.6354, E-mail: lewis@afeok.com

2.36 PRE-APPROVED STAINLESS-STEEL FABRICATION SUPPLIERS

A. Only the following named Subcontractors and those approved later, if any, are approved for inclusion in the Contractor's Bid. Pre-approved fabricators shown below shall not sub-out fabrication.

B. **Any supplier requesting inclusion within this bid must submit AIA form 305 at least 14 days before the bid date for review or as required by Architect.**

1. Texas Metal Equipment Company, Mr. Travis Andrews, 23518 Coons Road, Tomball, Texas 77375, Phone: 713.466.8722, Email: tandrews@tmeco.com

2. Kommercial Kitchens, Mr. Terry Woodard, 13544 East Fwy., Houston, TX 77015, Phone: 832.767.5287, Email: terry@kommercialkitchens.com

3. Mission Restaurant Supply, Mr. Robert Snoddy, 1126 S. St. Mary's Street, San Antonio, Texas 78210, Phone: 832.970.4020, Email: roberts@missionrs.com

4. CSS Manufacturing, Mr. Jared Woodard, 7430 Fairbanks North Houston Rd., Houston, Texas 77040, Phone: 832.444.6311, Email: jared.woodard@css-mfg.com

PART 3 - EXECUTION

3.1 DELIVERY AND INSTALLATION

A. Supervision: Provide a skilled and proficient foreman or supervisor who shall remain on the job during the entire installation.

B. Delivery: Coordinate with the progress of construction and Owner's operation schedules. Unless otherwise instructed and documented by Owner or General Contractor, the following procedures apply:

1. Field-assembled fixed equipment integrated into the structure (e.g., walk-in assemblies, exhaust hoods, drain trench/grate assemblies, conveyor systems, ceiling-mounted utensil racks) are to be sent to the job site when directed by the General Contractor and installed or protected accordingly.

2. All other Fixed Equipment: delivered after completion of work on adjacent finished ceilings, lighting, finished floor, wall systems (including painting), and painted gas lines.

3. Major Movable Equipment: delivered, when possible, to inventory in a secured area for interim job-site storage or, if the secured area is unavailable when fixed equipment installation/clean-up has been completed.

4. Minor appliances and loose items (e.g., pans, covers, flatware containers, etc.) should be delivered only when the Owner is prepared to receive and inventory such items.

C. Installation: performed by the manufacturer of custom fabricated fixtures.

1. Assemble, square, level, and ready all items for the final utility connections.

2. Cut neatly around obstructions to provide sanitary conditions.

3. Where gaps of ¼" or less occur adjacent to or between equipment, insert rope backing and smoothly apply General Electric construction sealant Series SE-1200 silicone mastic (clear color). Mask both sides of the gap for neat sealant application and remove excess. If space exceeds ¼," neatly install 18-gauge stainless steel trim molding of proper shape with concealed attachment. Use epoxy cement or "Z" clips wherever possible to secure stainless steel trim. Exposed edges or corners of trim: eased and smooth.

4. Refrigeration coil drain line runs to an indirect drain connection greater than 2" from the face of the wall or panel: Either of the following field procedures:

a. Trench the floor and provide a 6” wide x 2” deep 16-gauge stainless steel sloping (-1” to -2”) trough from the face of the cooler/freezer wall to the body of the floor sink/floor drain. Trough: turned up 4” at the wall; ¾” flange with ½” turndown at both long sides. Set trough in waterproof mastic and seal 1” OD drain tube penetration into floor sink/floor drain at -2½” BFF. Patch the floor to match adjacent material/surface.

b. Provide 12” x 6” x 2” deep 16-gauge stainless steel condensate pan mounted to cooler/freezer wall at 6” AFF clear. Trench the floor and install a 1” OD drain line from the bottom of the pan to the body of the floor sink/drain. Slope drain line ¼” per foot and seal all connections watertight. Patch the floor to match adjacent material/surface.

D. Protection of Work:

1. Fabricated fixtures: Fiberboard or plywood taped to tops and exposed body panels/components.

2. Manufactured Equipment: Fiberboard or plywood taped as required by equipment shape and installation-access requirements.

3. Prohibited use of equipment: Tool and materials storage, workbench, scaffold, stacking area, etc.

4. Damaged Equipment: Immediately documented and submitted to the Owner with the Contractor’s recommendation of action for repair or replacement and its impact on the Project Schedule and Contract Amount, if any.

3.2 CLEAN AND ADJUST

A. Clean up and remove all debris from this Work from the job site as the installation progresses.

B. Lubricate and adjust drawer slides, hinges, and casters.

C. Adjust pressure regulating valves, timed-delay relays, thermostatic controls, temperature sensors, exhaust hood grilles, etc.

D. Clean or replace faucet aerators and line strainers.

E. Touch-up damage to painted finishes.

F. Start up and check the operation of all refrigeration systems for at least 72 hours before acceptance.

3.3 EQUIPMENT START-UP/DEMONSTRATION

A. Carefully test, adjust, and regulate all equipment following the manufacturer’s instructions and certify in writing to the Owner that the installation, adjustments, and performance are in full compliance.

B. Provide the Owner or food service Operators with a thorough operational demonstration of all equipment and furnish instructions for general and specific care and maintenance. Coordinate and schedule selected equipment items and attendees with the Owner at least two weeks before the demonstration starts.

3.4 FINAL OBSERVATION

A. Final observation will be made when the Contractor certifies that they have completed their work, thoroughly reviewed the installation/operation of each item in the contract and found it to comply with the Construction Documents.

B. Repetitive final observations (more than two) and all costs associated with it which may be incurred due to the Contractor's failure to comply with the requirements of this Article will be invoiced to this Contractor on a $70.00/hr and expense basis.

PART 4 - EQUIPMENT SCHEDULE

4.1 REGULARLY MANUFACTURED EQUIPMENT/COMPONENTS: Standard finishes and accessories unless specifically deleted or superseded by the Contract Documents.

4.2 FABRICATED AND FIELD-ASSEMBLED EQUIPMENT: Arrangement and configuration as shown on Plans, Elevations, Detail Drawings, and outlined in Specifications.

4.3 REFER TO DRAWINGS: For unit quantities and plumbing, electrical or mechanical provisions are required, including the manufacturer's optional voltages, wattages, burner capacities, etc.

4.4 REFER TO PART 2 – PRODUCTS: For accessories, fittings, requirements, and procedures related to the listed buy-out and fabricated equipment.

4.5 ALTERNATE MANUFACTURER REQUIREMENTS: A specific product manufactured by the listed pre-approved equals shown under Section 4.7 Food Service Equipment are acceptable only if the specific product can evidence compliance with the specified line items and the contract documents (Refer to Section 1.6; Sub-Section A.).

4.6 RE-USED EXISTING EQUIPMENT IF PROVIDED IN THIS PROJECT

A. Existing equipment scheduled for re-use is to be inventoried and documented that equipment is in operating condition once Kitchen Contractor has taken ownership.

B. Provide pictures of all equipment once inventoried and issue them to the architect to ensure that equipment has not been damaged.

C. Verify the locations of all equipment with the owner.

D. Existing equipment that is to be reused may need parts or accessories for proper and complete operation. Submit a report listing all items with pricing for approval to allow complete installation.

E. Utility disconnection and re-connection: Under Divisions 22 and 26. Kitchen Contractor to verify utility requirements of existing equipment and coordinate with Foodservice Design Professionals (FDP) as required. If utilities shown on FDP drawings do not match the requirements of existing equipment – KEC is to relay that to FDP immediately. All utilities not scheduled for re-use must be capped and covered by required disciplines.

F. Disassembly, removal, transportation, and relocation: under this Section and scheduled with General Contractor. The owner's representative must be present and coordinate the date/time with the owner.

G. Thoroughly clean inside and out before relocation.

H. Review functional parts (e.g., doors, controls, heating elements, compressors, etc.) and submit a report of required repairs and cost estimates. Any finishes or equipment damaged due to construction will be repaired as required.

I. Existing equipment not scheduled for reuse is to be carefully removed/relocated by the Kitchen Contractor per the Owner's direction. Kitchen Contractor to coordinate the date/time with General Contractor and Owner.

J. Removal or replacement of existing equipment is to be scheduled for times of least interruption and inconvenience to the food service operation. Submit the proposed time frame schedule, task sequence, and process for approval before starting work.

K. Kitchen Contractor to verify size and shape for all existing re-used equipment and coordinate with Foodservice Design Professionals (FDP) as required.

L. Any modification(s) required/desired for re-used existing equipment to be verified by the Kitchen Contractor. Before the changes are made, all modifications must be approved by the Owner and Foodservice Design Professionals (FDP).

M. The KEC is to verify and coordinate all the utility requirements with the construction documents as required. Refer to the general specifications regarding conflicts.

4.7 FOOD SERVICE EQUIPMENT

A. All equipment is to have a performance check from factory-authorized personnel. Warranties will begin on the day of the performance check.

B. All equipment and internal components should be of domestic origin where possible.

C. Architect to verify/coordinate the aesthetic options below (Food Service color, material, or signage selections) if these items are provided in this project:

1. Countertops: Stone (stainless steel is provided unless otherwise specified)
2. Tray slides: Corian or Stone (stainless steel is provided unless otherwise specified)
3. Counter fronts: Ceramic tile, 3 Form, or Plastic Laminate
4. Sneeze Guards: Stone insets
5. General color, material, and graphic selections:
    a. Display Air Screen Merchandisers – Color selection: Powder Coat or Plastic Laminate (stainless steel is provided unless otherwise specified)
    b. Bakery Display Cases – Color selection: Powder Coat or Plastic Laminate (stainless steel is provided unless otherwise specified)
    c. Pass Thru or Reach-In Holding Cabinets - Color selection: Powder Coat (Mfg.: True) or Plastic Laminate (Mfg.: Traulsen) (Stainless steel is provided unless otherwise specified)
    d. Hanging Heat Lamps – Track and Fixture color selection
    e. Heated Merchandisers
    f. Portable Guide Rails – Stanchion and Belt color selection

g. Popcorn machine – Signage selection

h. Bottle Cooler – Signage selection

i. Graphics Package information

j. Hot Food Well covers

D. Architect to verify/coordinate the finishes below:

1. Walls: Ceramic Tile, Flat FRP, or Molded FRP (Smooth, Impervious, and easily cleanable as approved by local jurisdiction)

2. Ceilings: Removable Vinyl Face Tile (Smooth, impervious, and easily cleanable as approved by local jurisdiction)

3. Floors: Tile, Epoxy, or Rubberized flooring system (Smooth, impervious, easily cleanable and slip resistant as approved by local jurisdiction) (Coordinate floor tile transition at serving lines)

4. Floors: Walk-in Assembly – Extend kitchen floor flush into Walk-in assembly with coved base

5. Furr Downs above Serving Counters

KITCHEN

ITEM NO. 102 COLD STORAGE ASSEMBLY

QUANTITY 1

Manufacturer:	Thermokool
Model:	---
Size and Shape:	Refer to drawings
Alternate:	American Panel, ThermalRite, Kolpak,

1. Installation to be completed by Factory Approved / Authorized installer. Refer to Section 2.33 Submittal drawings to include factory approval letter or certificate. The warranty will not start until letter has been provided to FDP confirming installation meets manufacturer requirements.
2. Manufacturer to review final installation and provide a letter confirming installation meets manufacturer requirements.
3. Assembly to have 9'-6” interior clearance.
4. 304 #3 finish 20 gauge stainless steel finish where exposed, 26 gauge acrylume where concealed.
5. Factory floor with smooth aluminum finish, recessed in slab 8 1/2". Secure floor to wall assembly with cam-lock assembly. KEC to ensure the floor assembly is level prior to the wearing bed installation. Kitchens finished floor to extend to walk-in. Critical: Floor to be smooth and level prior to concrete pour and at each stage of installation.
6. Threshold to be smooth and level with finished floor. Critical: Floor threshold to be surfaced with Graphine Oxide Anti-Slip or similar surface to reduce freezing and prevent slip hazards.
7. Interior walls to be baked white enamel embossed texture .040” aluminum.
8. Ceiling to be baked white enamel smooth textured .040” aluminum.
9. Two (2) 36" doors. Doors to be 20 gauge stainless steel, type 304 (18-8), #3 finish, with heated perimeter / door jambs / windows and threshold heaters. Each door to be equipped with 3'-0" high diamond tread kick plate on both sides of doors. Mount hinged doors on two (2) Kason model no. 1346 (or equal); polished chrome plated nylon cam-lift hinges. All doors to be equipped with polished chrome Kason 1094 or equivalent door closer assembly.
10. Each door to be equipped with 3'-0" high diamond tread kick plate on both sides of doors. Mount hinged doors on two (2) Kason model no. 1346 (or equal); polished chrome plated nylon cam-lift hinges. All doors to be equipped with polished chrome Kason 1094 or equivalent door closer assembly.
11. Doors to be provided with CCI Industries, Inc., Clear-VU swinging door assemblies, Alternate: Kason.
12. Provide Kason model No. 1238CQ door handles with Kason 0485 Quarter Turn Frost Free inside release, glow in dark surface, tether to external strike mechanism, ADA compliant.
13. Kason Model No. 0027C Safeguard Deadbolt Locking Handle with Kason 0485 glow-in-the-dark backplate and turn knob safety release.
14. Provide heated illuminated Push Button Panic Alarm with protective cover and Phenolic Label “PANIC ALARM” for entrapment within Freezer (ADA mounting height). Panic Alarm Encasing is to be stainless steel (not plastic). Manufacturer to pre-run conduit within panel from Panic

Alarm to panel above Freezer door (or Cooler door if 'inline' assembly) for installation of Emergency Strobe/Horn. Division 114000 to provide (2) external Emergency Strobe/Horn Beacons and interconnect the Push Button Panic Alarm to external Beacons (One above the Freezer door and One in the Cafetorium in location as directed by Architect) furnished loose for install by Division 26. Division 27 will interconnect the Push Button Panic Alarm to the Building Automation System for Owner notification.

15. Reinforcement as required to be provided above Freezer door (exterior) and panel next to door (handle side - interior) for mounting of Emergency Strobe Beacon, Push Button Panic Alarm and Release Knob.
16. The Cooler and Freezer will have the standard control panel with standard panic button tied into the Owner's network for notification.
17. Manual backup vacuum release mechanism to punch 6" diameter hole in ceiling panel to release vacuum within freezer assembly. Mechanism to include a pull-down handle with freeze-proof hand grip. Handle to have the ability to penetrate and/or punch hole in wall accordingly to assist with opening of door assembly in the event of entrapment (and failure of inside release knob). Release mechanism assembly to be built-in/mounted to panel structural frame to minimize mechanism tear-out and/or failure. Handle to be glow-in-dark yellow with phenolic label "Vacuum Pressure Release." Punch out portion to be replaceable in opening without the use of tools or sealants. Punch out is not to be located directly over interior ramp.
18. 18-gauge stainless steel, type 304 (18-8), #3 finish trim where adjacent to walls and enclosure panels that extend to 2" above finished ceiling.
19. Freezer: One (1) lot LED light fixtures to operate in temperatures to -20 F. Lights to be installed perpendicular to coils.
20. Cooler: One (1) lot LED light fixtures. Lights to be installed perpendicular to coils.
21. Provide door bumper at doors.
22. Interior and exterior to be sealed with clear silicone. Stainless steel surfaces can be sealed factory approved waterproof and mildew resistant aluminum based metallic sealant.
23. 3'-0" high diamond tread plate at exposed exterior surfaces. Fasten to wall with stainless steel fasteners.
24. Compartments to have all electrical concealed within the walls or located above the ceiling.
25. Electrical conduit for lights to be exposed, ran from fixture to fixture with no penetration in ceiling panel. Tap off existing light fixture circuit at door. Div. 26 to provide watertight conduit for lights.
26. Provide Manufacturers alarm/control system that includes hi/low limits. Route temperature sensor to be located to the side of evaporator coil.
27. All holes in assembly are to be sealed by assembly installer.
28. KEC to coordinate location of network switch with cold storage assembly as required.
29. Kason 1832 Large Spring Valve Heated Pressure Relief Port. Locate at 12" below ceiling on cooler/freezer common wall panel and at 12" below ceiling on exterior cooler wall. All ports are to have separate dedicated electrical circuits. Pressure relief ports to be wired for continuous service. Relief port to be located, sized, and installed by Walk-in Manufacturer.

30. KEC to field verify all horizontal/vertical measurements and conditions at the building prior to fabrication or delivery of equipment.
31. KEC to provide 1-year walk-in panel installation warranty. KEC is responsible for overall install accuracy/quality and quality control of work performed regardless of installer or any field modifications due to building/construction conditions. KEC to provide Letter of Install Approval to FDP upon completed install.
32. Manufacturer to provide One Year Parts and Labor Warranty upon receipt of warranty letter.
33. Interwiring of temperature monitor panel to master building alarm system or to the Owner's network. Technology department to provide all interfacing of alarm system and with the building alarm system. Conduit from refrigeration system to monitor by Division 26. Temperature Monitor installation at 4'-0" above finished floor. All conduit to be located above walk-in cooler/freezer ceiling. Exposed electrical conduit is not acceptable.
34. Manufacturer Representative to provide training on controls and inside emergency release mechanisms.

ITEM NO. 103.1 REFRIGERATION SYSTEM - LARGE

QUANTITY 1

Manufacturer:	RDT
Model:	ZS1-2 EcoSmart
Size and Shape:	Refer to drawings
Alternate:	---

1. Air cooled system.
2. Scroll Compressors.
3. Cooler temperature to be +35 degrees.
4. Freezer temperature to be -10 degrees.
5. EcoSmart system on demand defrost.
6. Refrigeration system to accommodate 110F ambient exterior temperature. Coils to be oversized by 20%.
7. KE2 Evap Controllers located per Owner requirements.
8. S/S covered housing.
9. A dedicated electrical connection to be provided for heated condensate drain line. Refer to electrical plan for location.
10. All exterior piping to be aluminum wrapped.
11. System to accommodate Item No. 102 Cold Storage Assembly.
12. S/S covered housing mounted to a 24" tall 1/8 galvanized angle iron frame anchored to concrete pad. Provide S/S skirting around frame.
13. Mount condensing unit on common exterior rack. Refer to Architectural and Engineering drawings for exact location of remote unit. Coordinate routing of refrigeration lines and conduit with appropriate trades. Heat tape and insulate all drain lines. General Contractor to seal all building penetrations at refrigeration lines.
14. Provide two (2) year parts and labor warranty for all parts and components (including third-party components that may be utilized).

ITEM NO. 104 COLD STORAGE SHELVING

QUANTITY 2

Manufacturer:	Metro
Model:	Metro Max Q
Size and Shape:	Refer to drawings
Alternate:	---

1. Each unit to be four (4) tiers high with open grid mats.
2. Four (4) 74" post per unit. Provide foot plates at all posts when assembly is supplied with walk-in floor.
3. Refer to drawings for size, width and lengths.
4. Quantity Two (2) to equal One (1) lot: all shelving shown within cold storage assembly.
5. Verify shelving requirements with approved submittal prior to ordering.

ITEM NO. 105 DUNNAGE RACK

QUANTITY 3

Manufacturer:	Metro
Model:	Bow Tie Series
Size and Shape:	Refer to drawings
Alternate:	---

1. Size as shown.

ITEM NO. 107 DRY STORAGE SHELVING

QUANTITY 1

Manufacturer:	Metro
Model:	MetroMax Q
Size and Shape:	Refer to drawings
Alternate:	---

1. Each unit to be five (5) tiers high with open grid shelving.
2. Four (4) 86" posts per unit.
3. Quantity One (1) to equal One (1) Lot: all shelving shown within the dry storage room.
4. Refer to drawings for size, width and lengths.
5. Verify shelving requirements with approved submittal prior to ordering.

ITEM NO. 108 CAN RACK

QUANTITY 1

Manufacturer:	New Age
Model:	97294CK
Size and Shape:	Refer to drawings
Alternate:	---

1. Four (4) 6" plate casters, (2) swivel with brakes, (2) rigid.

ITEM NO. 109 ICE MAKER WITH BIN - 500 LB CAPACITY

QUANTITY 1

Manufacturer:	Manitowoc
Model:	IYT-0450A/D570
Size and Shape:	Refer to drawings
Alternate:	Scotsman

1. Energy Star Rated.
2. Stainless steel bin.
3. Stainless steel legs.
4. Provide bin adapter kit as required.
5. Easy Touch Controls, set filter reminders, get error messages/faults, program run/stop times, display serial/model information, view step-by-step cleaning/sanitizing prompts, view warranty expiration timer.
6. Provide Luminice II Virus and Bacteria Inhibitor.
7. Provide sizes and quantities as required: Dormont s/s water disconnect from filter to Ice Machine.
8. Cord and plug assembly, coordinate NEMA configuration with electrician.
9. One (1) pre-filter and water filter sized to manufacturers recommendations. Provide two (2) sets of replacement filters. Mount on wall adjacent to ice machine in an easily accessible location.
10. Coordinate cord and cap with receptacle. Water supply to filter to be hard copper plumbed. 72" long flex hose from filter to ice maker with 48" wall restraint cable. Interconnection thru water filter to ice machine and final connection by Division 22. Water filter overflow tube to be strapped to back side of ice machine and extend to 1" above floor sink.

ITEM NO. 110 CLOTHES WASHER

QUANTITY 1

Manufacturer:	Whirlpool
Model:	Residential
Size and Shape:	Refer to drawings
Alternate:	GE

1. Contractor to provide current model numbers at the time of delivery.
2. Top load washer.
3. 4.2 cu. Ft. capacity, minimum.
4. Six (6) cycle, two (2) speed washer.
5. White acrylic finish.
6. Cord and plug.
7. Water and drain connection hoses as required.

ITEM NO. 110A CLOTHES DRYER

QUANTITY 1

Manufacturer:	Whirlpool
Model:	Residential
Size and Shape:	Refer to drawings
Alternate:	GE

1. Front load dryer.
2. 3.4 cu. ft. capacity, minimum.
3. Seven (7) cycle-four (4) temperature, Dryer.
4. White acrylic finish.
5. Cord and plug.
6. Vent kit with dryer.
7. Contractor to provide current model numbers at the time of delivery.

ITEM NO. 111 CHEMICAL SHELF

QUANTITY 1

Manufacturer:	Metro
Model:	MetroMax Q
Size and Shape:	Refer to drawings
Alternate:	---

1. Each unit to be four (4) tiers high with open grid mats.
2. Four (4) 74" posts per unit.

ITEM NO. 121 TWO COMPARTMENT SINK W. DISPOSER

QUANTITY 1

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. Top: 14 gauge type 304 S/S marine edge with 2" turndown at free sides.
2. Open base construction.
3. 10" high splash where adjacent to walls/fixtures.
4. Two (2) 24" x 26" x 15" deep sink compartments.
5. One (1) T&S model no. B-0291, splash mount faucet, 18" swing nozzle,LL inlets, for ¾" hot and cold water connections.
6. Two (2) Fisher 22306 twist waste valve 3 1/2" x 2" with overflow and tailpiece. Provide 18 gauge S/S bracket for drain handle welded to sink bottom.
7. Provide One (1) T&S model no. B-0133-EE-CR-8C pre-rinse, ***two (2)*** B-0108-C spray head, two(2) B-0109-04 18" long wall bracket (dealer to cut to correct length), one (1) additional spray face model no. 108SFRK with ceramic cartridges.
8. 16 gauge S/S undershelf per drawings.

9. Disposer - installed in top integrally welded disposer cone. Notch and punch splash turn back for vacuum breaker. 14 gauge S/S bracket mounted below counter top for disposer control panel ground and polished to match top.
10. 12" deep single post mounted overshelf at 18" above counter top, punched to accommodate spray rinse.
11. Post mounted utensil rack, extend 1-5/8" diameter S/S post from back splash, turn forward 12" and weld full length x 2" x ¼" S/S bar with Component Hardware model no. V-77-4401 S/S sliding hooks at 8" on center. Verify height with owner.
12. One (1) Chicago model no. 305-VBRCF hose bibb and rack mounted on 14 gauge S/S bracket ground and polished to match top. Hose and spray nozzle by owner.
13. Omit rear rail at sink compartments, disposer and front rail at hose bibb.
14. Two (2) "Richlite" ½" thick removable sink covers installed at each sink. Weld ¼" bar stock, set 5/8" below work surface at all four corners for support of sink covers. Two (2) finger holes per board.
15. Provide top and bottom c-channel support storage for sink covers at right or left end of counter.
16. One (1) Edlund model no. S-11 Manual can opener, mounted on raised platform.
17. Flanged feet at front only.
18. Seal at all splash penetrations.

ITEM NO. 123 DISPOSER-CONE MOUNT

QUANTITY 2

Manufacturer:	Salvajor
Model:	300-CA-18-ARSS -LD
Size and Shape:	Refer to drawings
Alternate:	In-Sink-Erator

1. Fixed nozzle.
2. Delete standard syphon breakers and provide T & S B-0456-04 vacuum breakers and mount 6” from tabletop to base of breaker.
3. Solenoid valve.
4. Flow control.
5. Model no. ARSS-LD control panel.
6. Auto-reverse.
7. Dejamming tool.
8. Install vacuum breaker in splash
9. S/S cone cover.
10. Perforated silver saver and disposer cone with scrap ring.
11. Two (2) Swirl inlet located in disposer cone at a 45 degree angle.
12. GC to pipe 1/2" cold water to disposer body and swirl inlets. Excess electrical cord to be secured to fabrication as required. Install into counter by section 114000.

ITEM NO. 134 40 QUART MIXER

QUANTITY 1

Manufacturer:	Hobart
Model:	HL400
Size and Shape:	Refer to drawings
Alternate:	---

1. Mixer, floor model, 40 qt. Capacity.
2. 208/60/1 cord and cap assembly by KEC.
3. 15 Minute timer, thermal overload, with magnetic starter
4. Epoxy enamel finish-floor model.
5. Stainless steel 40 & 30 qt bowl.
6. Aluminum "B" flat beater 40 & 30 qt.
7. Stainless steel "D" wire whip 40 & 30 qt.
8. One (1) "ED" dough hook 40 & 30 qt.
9. Bowl Scraper D340.
10. Aluminum Bowl truck.
11. One (1) CHUTE-D34 D340 40 & 30 qt, bowl guard with ingredient chute.
12. One (1) Year Extended warranty - parts and labor.
13. One (1) custom fabricated mixer accessory rack, wall mounted per the contract documents. To be located in an accessible location by the owner.
14. Coordinate cord and cap assembly with receptacle. KEC to provide cord and plug assembly to Division 26 for installation.

ITEM NO. 136 BAKER'S TABLE

QUANTITY 1

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. Top: 14 gauge S/S top, type 304, with 2” turndown at all free sides. Provide 10" high backsplash at wall. Provide 10" high back/end splash at wall, equipment, columns, and chases as required.
2. Provide finished back at exposed backsplash.
3. 12" deep post mounted overshelf at 18" above counter top.
4. 18 gauge butt joint wall panel from splash to underside of shelf.
5. One (1) tier of three (3) 20" x 20" x 5" deep all stainless steel drawers. To be in #18 gauge stainless steel housing having 3/4" radius (vertical) exterior corners. S/S drawer liners.
6. Rear rail only.
7. One (1) lot Rubbermaid no. FG360288WHT ingredient bins.
8. Post mounted utensil rack, extend 1-5/8" diameter S/S post from back splash, turn forward 12" and weld full length x 2" x ¼" S/S bar with Component Hardware model no. V-77-4401 S/S sliding hooks at 8" on center. Verify height with owner.
9. 16 gauge S/S flour trough.

ITEM NO. 138 PAN RACK

QUANTITY 5

Manufacturer:	CresCor
Model:	207-UA-13A
Size and Shape:	Refer to drawings
Alternate:	Lakeside

1. Four (4) 5" casters.
2. Adjustable universal slides on 1-1/2" centers.
3. Corner bumpers.
4. Omit bumper on roll-in racks.
5. Coordinate pan rack with roll-in cabinets.

ITEM NO. 139 INSUL. MOBILE PROOFER

QUANTITY 1

Manufacturer:	CresCor
Model:	H-137-WSUA-12D
Size and Shape:	Refer to drawings
Alternate:	Metro, FWE

1. Insulated proofer/heated cabinet.
2. Field reversible doors.
3. Adjustable universal angles.
4. Four (4) 5" casters, two (2) with brakes.
5. Tempered glass door windows.
6. Key lock handle.
7. Corner bumpers.
8. Cord and plug. Coordinate NEMA configuration with Electrician.
9. Thermometer.
10. 1500 watt heater.

ITEM NO. 145 WORKTABLE W. SINK & DBL BAR UT RACK

QUANTITY 1

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. Top: 14 gauge type 304 S/S, 2" turn down at all sides.
2. Provide table in two (2) sections-one (1) 27" and one (1) 33" section. Refer to detail.
3. Open base construction.
4. Full length 16 gauge S/S undershelf.
5. Four (4) 20" W x 20" L drawer assemblies. Component Hardware #S52-2020 drawer slides with delrin bearings - 200lb capacity. Component Hardware #S81-2020C drawer pan.
6. One (1) 15" x 20" x 10" deep sink compartment. Coordinate location with drain overflow.

7. One (1) T&S model no. B-0320-BB-CR, rigid gooseneck, ceramic cartridges, deck faucet for ¾" hot and cold water connections.
8. One (1) Fisher 22306 twist waste valve 3 1/2" x 2" with overflow and tailpiece. Provide 18 gauge S/S bracket for drain handle welded to sink bottom.
9. Post mounted double bar utensil rack, extend 1-5/8" diameter S/S posts from cross rail thru top and weld Two (2) full length 2" x 1/4" S/S bars with 12" radiused outside ends and One (1) additional bar between post with Component Hardware model no. V-77-4401 sliding hooks at 8" on center. Provide gussets for posts at countertop penetrations. Verify height with Owner. 48" max. upright post spacing.
10. Provide a duplex receptacle and housing mounted below countertop per drawings. Interconnect and prewire a 5'-0" cord and plug out of receptacle housing for plugging into ceiling drop cord receptacle. 114000 and Div. 26 to coordinate location of drop cord receptacle.
11. Omit rear cross rail at sink section.
12. Flanged feet, secured to the floor with non corrosive anchors.

ITEM NO. 151 FIRE PROTECTION SYSTEM

QUANTITY 3

Manufacturer:	Ansul
Model:	R102
Size and Shape:	Refer to drawings
Alternate:	---

1. Duct and plenum protection to exhaust hood.
2. Surface protection for cooking equipment.
3. Locate remote fire pulls as recommended by Fire Marshal.
4. One (1) lot Mechanical gas valve (maximum diameter as required). Size as required. Furnished by Section 114000, installed by Division 22. Kitchen Equipment Contractor to coordinate location with local Fire Marshal requirements prior to submittal review. All conduits to be recessed within wall, SURFACE MOUNTING WILL NOT BE ACCEPTED.
5. System to meet U.L. 300 requirements.
6. Provide one (1) hand held Type 'K' and ABC 6 liter fire extinguisher per Ansul System, surface wall mounted. Verify mounting locations as required.
7. Exposed pipe threads are unacceptable.
8. All exposed piping to be chrome plated.
9. All hood penetrations to have U.L. listed "Quick Seal". Provide s/s escutcheons at all hood penetrations.
10. Provide phenolic I.D. labels for exhaust hood, remote fire pull, light/fan switches and fire protection system.
11. Provide a manufacturer performance test and report that verifies this system is fully operational.
12. Provide s/s cabinet as shown on plan.
13. Installer to provide one (1) Ansul system per exhaust hood, review drawings and provide systems as required.

14. Install hand held extinguishers, maximum of 3'-2" A.F.F. to top of unit.

ITEM NO. 152 EXHAUST HOOD

QUANTITY 1

Manufacturer:	Mod-U-Serve
Model:	W
Size and Shape:	Refer to drawings
Alternate:	---

1. Size and shape as per plan.
2. Supply Air. Ceiling mounted supply plenumwith light fixtures, coordinate conditioned/tempered air with engineer. Locate supply plenum in ceiling, coordinate location with GC as required.
3. Exhaust only canopy (W).
4. U.L. Listed and fire rated 48” recessed LED lights located within the hood canopy. To meet minimum requirements of 50’ candles of illumination.
5. Simple on/off switches for hood fans and lights to be provided by Division 26. Control panels will not be accepted.
6. Hood to meet requirements of ALL current local Mechanical and local Energy Codes.
7. Collars to be field installed. Coordinate with existing conditions and install as approved by Hood manufacturer.
8. All 18 gauge S/S construction. S/S finish where exposed.
9. For extended cooking line-ups provide Continuous Capture canopies without partitions between hoods.
10. Hood to have insulated front face and ends to allow for ceiling grid attachment where ceiling grid meets hood capture area.
11. S/S filters and grease cup. Provide filter removal tool.
12. ½" diameter steel hanger rods at 4'-0" O.C. maximum to be by Kitchen Equipment Supplier, but they are to be anchored to supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.
13. All hood penetration to be fire rated and U.L. Listed and sealed with s/s escutcheons.
14. S/S c-channel closure panel from top of hood to ceiling.
15. S/S filler panel between hoods if back-to-back.
16. 4" air space at rear of hood. Provide S/S finished back where rear air space would otherwise be exposed.
17. Ductwork and final connection to hood above ceiling to be by the Mechanical Contractor.
18. Clearance requirement: Where any exterior surface of a hood is installed less than 18" from a combustible or semi-combustible surface, provide a minimum of 4" air space containing a code approved fire resistant material to that surface in a manner as prescribed by the manufacturer of that fire-resistant material. Protective materials provided by 3M Fire Barrier Duct Wrap 615+ and Fry Ware Elite are compliant with state and local mechanical codes. In addition, both systems meet the requirements of the testing standards of ASTM E2336 AND ARE THEREFORE APPROVED TO BE USED IN CLEARANCE REDUCTION APPLICATIONS.

19. Provide Mod-U-Serve model number ASTS-90 pre-set temperature sensor for automatic start of exhaust fan when the condition exists where the exhaust fan is not initiated at the wall switch and the temperature in the exhaust canopy reaches 110 degrees F. At the end of the cooking day when the fan is disengaged at the wall switch the thermostat (temperature sensor) will keep the exhaust fan on until the temperature in the exhaust canopy drops below 110 degrees F.
20. Provide minimum 18-gauge stainless steel non-insulated flat wall panel. Extend from top of cove base to underside of hood. Provide with panels, "T" type joining strips at interior seams and "C" type strips at outside panel ends. Wall panels to extend the full length of the hood or to top of half wall.
21. Refer to individual hood lengths as shown on drawings for each assembly required. Install at 6'-10" A.F.F. to bottom of hood, coordinate duct and fan requirements with Mechanical Contractor. Interconnect to wall mounted light switch by Division 26. Bulbs for light fixtures to be furnished and installed by Kitchen Equipment Contractor.
22. Mechanical contractor to test and balance exhaust hoods. Balance report to be provided to FDP upon completion.
23. **Special Instruction:** Refer to individual hood and plenum box lengths as shown on drawings for each assembly required. Install bottom of hood at 6'-10" A.F.F. Install plenum boxes recessed and interconnect to wall mounted light switch by Division 26.

ITEM NO. 153 EXHAUST HOOD

QUANTITY 1

Manufacturer:	Mod-U-Serve
Model:	W-CPB
Size and Shape:	Refer to drawings
Alternate:	---

1. Size and shape as per plan.
2. Supply Air. Ceiling mounted supply plenum with light fixtures, coordinate conditioned/tempered air with engineer. Locate supply plenum in ceiling, coordinate location with GC as required.
3. Exhaust only canopy (W).
4. U.L. Listed and fire rated 48” recessed LED lights located within the hood canopy. To meet minimum requirements of 50’ candles of illumination.
5. Simple on/off switches for hood fans and lights to be provided by Division 26. Control panels will not be accepted.
6. Hood to meet requirements of ALL current local Mechanical and local Energy Codes.
7. Collars to be field installed. Coordinate with existing conditions and install as approved by Hood manufacturer.
8. All 18 gauge S/S construction. S/S finish where exposed.
9. For extended cooking line-ups provide Continuous Capture canopies without partitions between hoods.
10. Hood to have insulated front face and ends to allow for ceiling grid attachment where ceiling grid meets hood capture area.
11. S/S filters and grease cup. Provide filter removal tool.

12. ½" diameter steel hanger rods at 4'-0" O.C. maximum to be by Kitchen Equipment Supplier, but they are to be anchored to supporting structure (or slab) by the General Contractor in the locations required by exhaust hood shop detail.
13. All hood penetration to be fire rated and U.L. Listed and sealed with s/s escutcheons.
14. S/S c-channel closure panel from top of hood to ceiling.
15. S/S filler panel between hoods if back-to-back.
16. 4" air space at rear of hood. Provide S/S finished back where rear air space would otherwise be exposed.
17. Ductwork and final connection to hood above ceiling to be by the Mechanical Contractor.
18. Clearance requirement: Where any exterior surface of a hood is installed less than 18" from a combustible or semi-combustible surface, provide a minimum of 4" air space containing a code approved fire resistant material to that surface in a manner as prescribed by the manufacturer of that fire-resistant material. Protective materials provided by 3M Fire Barrier Duct Wrap 615+ and Fry Ware Elite are compliant with state and local mechanical codes. 19. Provide Mod-U-Serve model number ASTS-90 pre-set temperature sensor for automatic start of exhaust fan when the condition exists where the exhaust fan is not initiated at the wall switch and the temperature in the exhaust canopy reaches 110 degrees F. At the end of the cooking day when the fan is disengaged at the wall switch the thermostat (temperature sensor) will keep the exhaust fan on until the temperature in the exhaust canopy drops below 110 degrees F.
20. Provide minimum 18-gauge stainless steel non-insulated flat wall panel. Extend from top of cove base to underside of hood. Provide with panels, "T" type joining strips at interior seams and "C" type strips at outside panel ends. Wall panels to extend the full length of the hood or to top of half wall.
21. Refer to individual hood lengths as shown on drawings for each assembly required. Install at 6'-10" A.F.F. to bottom of hood, coordinate duct and fan requirements with Mechanical Contractor. Interconnect to wall mounted light switch by Division 26. Bulbs for light fixtures to be furnished and installed by Kitchen Equipment Contractor.
22. Mechanical contractor to test and balance exhaust hoods. Balance report to be provided to FDP upon completion.
23. **Special Instruction:** Refer to individual hood and plenum box lengths as shown on drawings for each assembly required. Install bottom of hood at 6'-10" A.F.F. Install plenum boxes recessed and interconnect to wall mounted light switch by Division 26.

ITEM NO. 154 EXHAUST HOOD

QUANTITY 1

Manufacturer:	Mod-U-Serve
Model:	W-CPB
Size and Shape:	Refer to drawings
Alternate:	---

1. Size and shape as per plan.

2. Supply Air. Ceiling mounted supply plenum with light fixtures, coordinate conditioned/tempered air with engineer. Locate supply plenum in ceiling, coordinate location with GC as required.
3. Exhaust only canopy (W).
4. U.L. Listed and fire rated 48” recessed LED lights located within the hood canopy. To meet minimum requirements of 50’ candles of illumination.

23. **Special Instruction:** Refer to individual hood and plenum box lengths as shown on drawings for each assembly required. Install bottom of hood at 6'-10" A.F.F. Install plenum boxes recessed and interconnect to wall mounted light switch by Division 26.

ITEM NO. 161 CONVECTION OVEN- GAS DBL

QUANTITY 2

Manufacturer:	Blodgett
Model:	DFG-200 DBL
Size and Shape:	Refer to drawings
Alternate:	Vulcan

1. S/S front, top and sides.
2. Two (2) 1/2 HP 2-speed motors.
3. Natural gas.
4. SSI-M solid state infinite control with manual timer.
5. Electronic spark ignition.
6. Five (5) oven racks per compartment.
7. Dual pane thermal windows.
8. Simultaneous door operation.
9. Heavy duty casters, two (2) with brakes.
10. Provide quantities and sizes required: Dormont Model #VER-KIT-2S-48” Gas Conn. Kit, 48” long, Moveable Gas Connector Kit, covered with stainless steel braid, coated with blue antimicrobial PVC, SnapFast® Quick Disconnect, Swivel MAX®, full port valve, coiled restraining cable with hardware, limited lifetime warranty.
11. Dedicated gas connections, do not manifold.
12. Shunt trip breaker by Division 26.
13. Provide Eagle model CC-S, Stainless Steel Caster Cradle Stabilizing Device for all mobile production equipment under the exhaust hoods. Coordinate locations with the Owner prior to installation. Quantity One (1) equals One (1) lot. Alternate: Regency Stainless Steel Caster Placement System, model #600Safetyset.

ITEM NO. 162 CONVECTION STEAMER - GAS DBL

QUANTITY 1

Manufacturer:	Cleveland
Model:	(2) 22CGT66.1 Double
Size and Shape:	Refer to drawings
Alternate:	Groen

1. SteamChef™ 6 Convection Steamer, Gas, boilerless, double stacked, twelve (12) pan capacity. Stainless steel exterior, UL, NSF, and ENERGY STAR® rated.
2. Two (2) compartments each with individual connections.
3. 60-minute electro-mechanical timer & manual (continuous steaming) bypass switch.
4. Automatic drain & water level controls, KleanShield™ interior.
5. Model #ES26304466G equipment stand, 4" adjustable legs with flanged feet.
6. One (1) year parts and labor warranty.
7. Provide quantities and sizes required: Dormont Model #VER-KIT-2S-48” Gas Conn. Kit, 48” long, Moveable Gas Connector Kit, covered with stainless steel braid, coated with blue antimicrobial PVC, SnapFast® Quick Disconnect, Swivel MAX®, full port valve, coiled restraining cable with hardware, limited lifetime warranty.
8. Provide sizes and quantities as required: Dormont s/s water disconnect from filter to steamer,color coded for filtered and non-filtered water.
9. Provide filtration system as recommended by the manufacturer. Provide one set of replacement filters. Div 22 to interconnect equipment to the filter system.
10. KEC to coordinate filtered and unfiltered water with steamer, do not connect filtered water to unfiltered water connection.
11. Coordinate location; Floor sink to be outside equipment footprint and outside steam-free zone. Division 26 to provide shunt trip breaker.

ITEM NO. 164.1 40 GAL. TILT BRAISING PAN- GAS POWER TILT

QUANTITY 1

Manufacturer:	Cleveland
Model:	SGL40T1
Size and Shape:	Refer to drawings
Alternate:	Groen

1. PowerPan tilt braising pan with easyDial Controls, selector dial with LED ring, large display screen.
2. Power tilt with spring-assisted cover with vent.
3. S/S construction.
4. Open leg frame.
5. Steamer pan inserts.
6. Pan carrier.
7. Etch marks.
8. Double pantry swing faucet.
9. Provide sizes and quantities as required: Dormont s/s water disconnect from water connection to pantry faucet.
10. Flanged feet. Secure rear to floor with non-corrosive anchors.
11. Provide quantities and sizes required: Dormont Model #VER-KIT-2S-48” Gas Conn. Kit, 48” long, Moveable Gas Connector Kit, covered with stainless steel braid, coated with blue antimicrobial PVC, SnapFast® Quick Disconnect, Swivel MAX®, full port valve, coiled restraining cable with hardware, limited lifetime warranty.

12. Trench liner to consist of:
13. S/S trench liner by 114000. Installation by G.C.
14. IMC/Teddy or Custom Fabrication.
15. Fibergrate: Gray #2 1" Thick, 1 1/2" squares mesh, Quartz grit top. Provide in two (2) equal sections, all ends to be finished ends.
16. 14 gauge s/s liner.
17. IMC Teddy model no. BSPC basket strainer with pullout handle and chain.
18. Location of trench liner is critical. G.C. and 114000 to verify location prior to concrete pour. Oversize trench liner block out to accommodate equipment pour path.

ITEM NO. 168 SS WALL CAP

QUANTITY 2

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. 2" square turndown at free ends.
2. Caulk and seal at wall with clear silicone.
3. Eased edges at exposed corners.
4. Coved turn up at full height wall, extended to ceiling.
5. Locate per drawings.
6. GC to provide and install substrate at all wall caps.

ITEM NO. 172 COMBI OVEN - GAS DBL

QUANTITY 2

Manufacturer:	Rational
Model:	ICP 6-FULL/6-FULL N/G
Size and Shape:	Refer to drawings
Alternate:	Alto-Shaam, Convotherm

1. Pre-Installation Site Consultation, to verify building utilities and access are in place for the units ordered prior to units being installed on site.
2. 208/240V 1PH
3. Standard door hinging.
4. Six (6) 18" x 26" or twelve (12) 12" x 20" pan capacity, per unit.
5. Standard warranty: 2 year parts and labor, installation inspection/start up.
6. Doors hinged per drawings.
7. Combi-Duo Stacking Kit, mobile.
8. Cleaner Tablets
9. Care Tablets.
10. **AutoDose option, with Cartridge chemicals.**
11. Fry baskets, qty. 3 per oven.
12. KEC to coordinate pan accessories with Owner prior to ordering.

13. Four hour chef training.
14. Heat shield.
15. Installation Kit "10", per unit, article number 8720.1560US.
16. Rational offers Certified Installation of units by Commercial Kitchens.
17. System installation to be reviewed by an authorized factory installer, provide report confirming installation meets factory's requirements.
18. Provide filtration system as recommended by the manufacturer. Provide one set of replacement filters. Div 22 to interconnect equipment to the filter system.
19. Provide sizes and quantities as required: Dormont s/s water disconnect from filter to Combi Oven,color coded for filtered and non-filtered water.
20. KEC to coordinate filtered and unfiltered water with Combi Oven, do not connect filtered water to unfiltered water connection.
21. Provide quantities and sizes required: Dormont Model #VER-KIT-2S-48” Gas Conn. Kit, 48” long, Moveable Gas Connector Kit, covered with stainless steel braid, coated with blue antimicrobial PVC, SnapFast® Quick Disconnect, Swivel MAX®, full port valve, coiled restraining cable with hardware, limited lifetime warranty.
22. Provide Eagle model CC-S, Stainless Steel Caster Cradle Stabilizing Device for all mobile production equipment under the exhaust hoods. Coordinate locations with the Owner prior to installation. Quantity One (1) equals One (1) lot. Alternate: Regency Stainless Steel Caster Placement System, model #600Safetyset.
23. Water supply to have shut-off valve and back flow preventer furnished and installed by Division 22. Supply water to interconnect thru water filter and then to each oven. Indirect drain line to be ran outside of the footprint of the unit, coordinate location of the related floor sink.

ITEM NO. 186 PASS-THRU HEATED CABINET- 1DR

QUANTITY 1

Manufacturer:	Traulsen
Model:	HF-132WP
Size and Shape:	Refer to drawings
Alternate:	---

1. Anodized aluminum interior and S/S exterior.
2. Interior lights with bulbs.
3. Exterior digital thermometer.
4. Locking hardware.
5. EZ-Clean Tray racks, for 18" x 26", 14" x 18" or 12" x 20" pans. Provide a total of (12) levels for each section.
6. Four (4) 6" casters with L14-30P plug.
7. Furnish start-up and Six (6) year parts and labor warranty.
8. Controls mounted on kitchen side.
9. Half height doors hinged as per plan. Glass doors located on kitchen side, solid doors located on server side.
10. Re-hinging feature.

11. Fully welded telescoping S/S trim at wall. Trim is not to be secured to the equipment.
12. **Special Instruction:** Provide opening in wall 2" taller than equipment and 2" wider, KEC to coordinate with GC as required. Trim is not to be secured to the equipment.

ITEM NO. 187 PASS-THRU HEATED CABINET- 2DR

QUANTITY 2

Manufacturer:	Traulsen
Model:	HF-232WP-HHS
Size and Shape:	Refer to drawings
Alternate:	---

1. Anodized aluminum interior and S/S exterior.
2. Interior lights with bulbs.
3. Exterior digital thermometer.
4. Locking hardware.
5. EZ-Clean Tray racks, for 18" x 26", 14" x 18" or 12" x 20" pans. Provide a total of (12) levels for each section.
6. Four (4) 6" casters with L14-30P plug.
7. Furnish startup and Six (6) years parts and labor warranty.
8. Controls mounted on kitchen side.
9. Half height doors hinged as per plan. Glass doors located on kitchen side, solid doors located on server side.
10. Re-hinging feature.
11. Fully welded telescoping S/S trim at wall. Trim is not to be secured to the equipment.
12. **Special Instructions:** Provide opening in wall 2" taller than equipment and 2" wider, KEC to coordinate with GC as required. Trim is not to be secured to the equipment.

ITEM NO. 188 PASS-THRU REFRIGERATOR - 1DR

QUANTITY 2

Manufacturer:	Traulsen
Model:	HT-132WPUT
Size and Shape:	Refer to drawings
Alternate:	---

1. Anodized aluminum interior and S/S exterior.
2. Interior lights with bulbs.
3. Exterior digital thermometer.
4. Locking hardware.
5. EZ-Clean Tray racks, for 18" x 26", 14" x 18" or 12" x 20" pans. Provide a total of (12) levels for each section.
6. Four (4) 6" casters with 5-15P plug.
7. Furnish start-up and Six (6) year parts and labor warranty.
8. Controls mounted on kitchen side.
9. Five (5) Year compressor warranty.

10. Half height doors hinged as per plan. Glass doors located on kitchen side, solid doors located on server side.
11. Re-hinging feature.
12. Fully welded telescoping S/S trim at wall. Trim is not to be secured to the equipment.
13. **Special Instruction:** Provide opening in wall 2" taller than equipment and 2" wider, KEC to coordinate with GC as required. Trim is not to be secured to the equipment.

ITEM NO. 189 PASS-THRU REFRIGERATOR - 2DR

QUANTITY 1

Manufacturer:	Traulsen
Model:	HT-232WPUT
Size and Shape:	Refer to drawings
Alternate:	---

1. Anodized aluminum interior and S/S exterior.
2. Interior lights with bulbs.
3. Exterior digital thermometer.
4. Locking hardware.
5. EZ-Clean Tray racks, for 18" x 26", 14" x 18" or 12" x 20" pans. Provide a total of (12) levels for each section.
6. Four (4) 6" casters with 5-15P plug.
7. Furnish start-up and Six (6) years parts and labor warranty.
8. Seven (7) Year compressor warranty.
9. Controls mounted on kitchen side.
10. Half height doors hinged as per plan. Glass doors located on kitchen side, solid doors located on server side.
11. Re-hinging feature.
12. Fully welded telescoping S/S trim at wall. Trim is not to be secured to the equipment.
13. **Special Instruction:** Provide opening in wall 2" taller than equipment and 2" wider, KEC to coordinate with GC as required. Trim is not to be secured to the equipment.

ITEM NO. 201M.1 SERVING COUNTER-MODULAR

QUANTITY 1

Manufacturer:	Mod-U-Serve
Model:	---
Size and Shape:	Refer to drawings
Alternate:	Counter Craft

1. Modular counter, size and shape per drawings.
2. CONSTRUCTION:
3. All electrical to be pre-wired to single point receptacle per module. Coordinate receptacles with slab rough-ins.
4. Pin and sleeve connection for final connection to load center located per drawings.

5. Cashiers station to be integral with counter, lockable cashiers drawer, undershelf to accommodate owners POS System, outlet to accommodate POS system and data line.
6. S/S removable intermediate shelves and undershelves where possible.
7. Provide remote on/off switch for beverage merchandising if location is not accessible.
8. Adjustable kickplates.
   6" adjustable s/s legs.
9. Line-up locks as required per factory.
10. Dedicated Convenience outlet to accommodate beverage or milk merchandiser.
11. Convenience outlet located at flat top countertops, provide grommetted hole in counter as required.
12. TRAYSLIDE:
13. Group "E" corian trayslide with 1/4" rounded s/s runners. Trayslide to be supported with finished plywood with white melamine at exposed areas. Trayslide brackets to be fully welded to angle iron frame.
14. LED lights located at tray slide.
15. COUNTER COMPONENTS:
16. Size, shape, and quantities as shown on plans.
17. One (1) lot hot/cold dry wells as shown on drawings, recess in countertop to accommodate 18"X26" sheet pan.
18. Stainless steel flat top counter sized per drawings. Dedicated electrical for countertop equipment or convenience outlet.
19. One (1) lot Hatco drop in mechanical cold pan, 3 pan capacity unless counter drawings shows otherwise.
20. One (1) lot Hatco drop in frost top pan, to accommodate two (2) 18" x 26" sheet pan capacity unless counter drawings shows otherwiset.
21. Coordinate counter fabrication with Item 800 Built-In Refrigerated Merhcandiser.
22. Hot food well covers, verify color selection with architect.
23. Stainless steel louvered panels to be provided on operator's side only at compressor locations. Louvers to be provided per manufacturer's minimum requirements.
24. SNEEZE GUARDS:
25. Sneeze guards, mirror finish, single tier at hot food wells and two tier at cold pans/frost tops. Lights only at hot/cold sections. All posts to be fully welded to countertop. 3/8" Tempered glass. Glass to be adjustable to accommodate self and full service operation. Heat lamps located at hot food well and heated tops, sized to accommodate equipment. Sneeze guards to meet NSF requirements.
26. Frost top in overshelf where shown on drawings.
27. Sneeze guards to be secured to base of counter and welded to countertop.
28. COUNTER FINISHES:
29. 14-gauge Stainless Steel top at 32" aff.
30. Backer board finish installed by manufacturer to accept tile by G.C. Coordinate finish with GC, provide s/s shelf as required to accommodate finish.

31. Plastic laminate front panels. Color as selected by Architect.
32. Manufacturers are to bid all items per specifications, deviations from the specified manufacturers or fabrication will not be accepted.
33. Counter template to coordinate with servery walls, furr downs, electrical and plumbing locations. KEC to coordinate installation and any site conditions with the Trade/General Contractor as required.

ITEM NO. 201M.2 SERVING COUNTER-MODULAR

QUANTITY 1

Manufacturer:	Mod-U-Serve
Model:	---
Size and Shape:	Refer to drawings
Alternate:	Counter Craft

1. Modular counter, size and shape per drawings.
2. CONSTRUCTION:
3. All electrical to be pre-wired to single point receptacle per module. Coordinate receptacles with slab rough-ins.
4. Pin and sleeve connection for final connection to load center located per drawings.
5. Cashiers station to be integral with counter, lockable cashiers drawer, undershelf to accommodate owners POS System, outlet to accommodate POS system and data line.
6. S/S removable intermediate shelves and undershelves where possible.
7. Provide remote on/off switch for beverage merchandising if location is not accessible.
8. Adjustable kickplates.
9. 6" adjustable s/s legs.
10. Line-up locks as required per factory.
11. Dedicated Convenience outlet to accommodate beverage or milk merchandiser.
12. Convenience outlet located at flat top countertops, provide grommetted hole in counter as required.
13. TRAYSLIDE:
14. Group "E" corian trayslide with 1/4" rounded s/s runners. Trayslide to be supported with finished plywood with white melamine at exposed areas. Trayslide brackets to be fully welded to angle iron frame.
15. LED lights located at tray slide.
16. COUNTER COMPONENTS:
17. Size, shape, and quantities as shown on plans.
18. Stainless steel flat top counter sized per drawings. Dedicated electrical for countertop equipment or convenience outlet.
19. One (1) lot Hatco drop in mechanical cold pan, 3 pan capacity unless counter drawings shows otherwise.
20. One (1) lot Hatco drop in frost top pan, to accommodate two (2) 18" x 26" sheet pan capacity unless counter drawings shows otherwise.
21. Coordinate counter fabrication cut outs with Refrigerated Merchandisers.

22. Stainless steel louvered panels to be provided on operator's side only at compressor locations. Louvers to be provided per manufacturer's minimum requirements.
23. SNEEZE GUARDS:
24. Sneeze guards, mirror finish, single tier at hot food wells and two tier at cold pans/frost tops. All posts to be fully welded to countertop. 3/8" Tempered glass. Glass to be adjustable to accommodate self and full service operation. Heat lamps located at hot food well and heated tops, sized to accommodate equipment. Sneeze guards to meet NSF requirements.
25. Frost top in overshelf where shown on drawings.
26. Sneeze guards to be secured to base of counter and welded to countertop.
27. COUNTER FINISHES:
28. 14-gauge Stainless Steel top at 32" aff.
29. Backer board finish installed by manufacturer to accept tile by G.C. Coordinate finish with GC, provide s/s shelf as required to accommodate finish.
30. Plastic laminate front panels. Color as selected by Architect.
31. Manufacturers are to bid all items per specifications, deviations from the specified manufacturers or fabrication will not be accepted.
32. Counter template to coordinate with servery walls, furr downs, electrical and plumbing locations. KEC to coordinate installation and any site conditions with the Trade/General Contractor as required.

ITEM NO. 204 HEATED MERCHANDISER - 40”

QUANTITY 2

Manufacturer:	Hatco
Model:	HZMH-36D
Size and Shape:	Refer to drawings
Alternate:	---

1. Refer to drawings for size.
2. LED red accent light at support post.
3. Verify color selection with Owner/Architect.
4. Coordinate NEMA configurations/requirements with 201 Counter.

ITEM NO. 207 48 REAR LOAD REF MERCHANDISER MILK CASE

QUANTITY 2

Manufacturer:	RPI Olympus
Model:	SCAS48R-III MC
Size and Shape:	Refer to drawings
Alternate:	Federal LMDM4878SC

1. 48" slide-in air screen merchandiser with rear loading doors. Recess bottom compartment to accommodate milk crates.
2. Custom model, MLED-4.
3. Extra tall hinged rear door, to be hinged per plans in lieu of sliding doors.
4. Roll up security door with insulated plex sides with lock.

5. Fully insulated glass to reduce condensation.
6. One-way mirror backed with hinged rear loading doors.
7. Three (3) tempered glass shelves with lights
8. LED lighting.
9. Locate recessed on/off and light switch in back side of unit, accessible to operator.
10. Five (5) Year compressor part warranty.
11. Drain to floor sink. Floor sink to be located below Air Screen.
12. KEC to verify unit is 5-6’ away from air vents. Coordinate in field.
13. Glass sides, door windows and perimeter of doors to be heated.
14. Cord and plug assembly.
15. Stainless steel trim as required to seal gaps at counters.
16. Provide finished stainless steel front and sides if unit is freestanding in lieu of a counter slide-in.
17. Provide submittal shop drawing for review by Consultant.
18. **Special Instruction:**Start-up and calibration of unit must be by factory authorized service agency, prior to customer demonstration. K.E.C. to coordinate 18” height clearance at top of unit.

ITEM NO. 214 CASH REGISTER

QUANTITY 4

Manufacturer: Owner Furnished
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

ITEM NO. 215 GUIDE RAIL

QUANTITY 5

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. 1-5/8" O.D. stainless steel tubular guide rails with 1-5/8" uprights set in sleeves set in concrete at maximum 4'-0" on center.
2. Top of rails to be 34" A.F.F. for high schools.
3. Section 11 40 00 to coordinate guide rails with ADA requirements.

ITEM NO. 249 THREE COMPARTMENT SINK WITHOUT DISPOSER

QUANTITY 1

Manufacturer: Custom Fabricated
Model: ---
Size and Shape: Refer to drawings
Alternate: ---

1. Top: 14-gauge S/S 3" high 1-1/2" rolled rim at free sides, 10" high splash at walls.
2. Open base construction.

3. Omit rear rail at sink.
4. Three (3) 30" x 26" x 15" deep sink compartment.
5. Two (2) T&S model no. B-0291, splash mount faucet, 18" swing nozzle, LL inlets, for ¾" hot and cold water connections.
6. Three (3) Fisher 22306 twist waste valve 3 1/2" x 2" with overflow and tailpiece. Provide 18 gauge S/S bracket for drain handle welded to sink bottom.
7. 12" deep single post mounted perforated overshelf mounted at 18" above counter top.
8. 18-gaugebutt jointwall panel from splash to underside of shelf.
9. Post mounted utensil rack, extend 1-5/8" diameter S/S post from back splash, turn forward 12" and weld full length x 2" x ¼" S/S bar with Component Hardware model no. V-77-4401 S/S sliding hooks at 8" on center.
10. 16-gauge S/S undershelf as per drawings.
11. Flanged feet at front only of counter.
12. Anchor flanged feet to floor with non-corrosive bolts. Secure wall mounted equipment / components to in wall grounds or anchor plates. Coordinate installation with the general contractor.

ITEM NO. 250.1 CONVEYOR DISHMACHINE W. BUILT-IN BOOSTER

QUANTITY 1

Manufacturer:	Hobart
Model:	CL44-BAS
Size and Shape:	Refer to drawings
Alternate:	Champion

1. 44" Conveyor dishmachine with built-in water tempering kit and built-in booster heater.
2. Full display touchscreen control.
3. Prewired 15 KW Electric tank heat.
4. Booster Heater built-in 18KW.
5. Programmable, automatic dosing, pumped delime system.
6. Built-in Drain Water Tempering kit. Kit to be installed by Hobart Service.
7. Verify direction of dishmachine with drawings.
8. One (1) Year Extended warranty - One (1) Year parts and labor.
9. One (1) Year Extended warranty on booster heater - One (1) Year parts and labor.
10. Interior Chamber height to be 4" taller than standard.
11. CONNECTIONS: *CHOOSE WHICH YOU REQUIRE*
12. Unit comes with single point connection from factory. Div. 26 to use manufacturer provided wiring schematic to separate into a dual point connection, One (1) connection for the motors, controllers and tank heaters and One (1) connection for the boosters. Div. 26 to provide S/S disconnect switches located as per plans interconnected to dishmachine and booster heater.
13. Two (2) vent cowls with 4 x 16 vent and damper. Provide 18 gauge stainless steel seamless duct risers 6" above finish ceiling for final connection. The duct: trimmed at ceiling with 16 gauge stainless steel flange with all corners welded.

14. One (1) table limit switch with stainless steel cover to conceal back. Provided by Manufacturer / Installed by Div. 26.
15. Four (4) 20"x20" Peg racks.
16. Four (4) 20" x 20" sheet pan racks.
17. Two (2) 20" x 20" combination racks.
18. Vent fan controls.
19. Peak Rate of drain flow = 38 gpm. Division 22 to provide and install backflow preventor between booster heater and filter. Final connection by Division 22. Coordinate location of electrical disconnects on free wall.

ITEM NO. 254 SOILED & CLEAN DISHTABLE

QUANTITY 1

Manufacturer:	Custom Fabricated
Model:	---
Size and Shape:	Refer to drawings
Alternate:	---

1. Top: 14 gauge type 304 S/S 3" high 1-1/2" rolled rim at free sides. 10" high splash at walls.
2. 14 gauge S/S recessed deposit shelf. Extend shelf through opening to be flush with wall at deposit side. Turn shelf down 2" at front with ¾" return at bottom (either scribed into partition or forming reveal). Shelf: integral with dishtable. Provide Component Hardware E32-4900 drain - extend drain line to floor sink.
3. **18 gauge butt joint wall panel from splash to underside of shelf.**
4. Install Disposer as shown. Notch and punch splash turn back for vacuum breaker. 12 gauge S/S bracket mounted below counter top and polished to match top for disposer control panel.
5. Provide One (1) T&S model no. B-0133-EE pre-rinse, B-0108-C spray head, two (2) B-0109-04 18" long wall bracket (dealer to cut to correct length), one (1) additional spray face model no. 108SFRK with ceramic cartridges.
6. One (1) Chicago model no. 305-VBRCF hose bibb and rack mounted on 12 gauge S/S bracket ground and polished to match top. Hose and spray rinse by owner.
7. One (1) 18" disposer cone.
8. #18 gauge stainless steel perforated removable basket on 1/2" O.D. stainless steel rod legs 1" high and 3/8" O.D. stainless steel rod handles.
9. Provide ½" slope in top towards dishmachine per the general specifications.
10. S/S corner filler at backsplash; slope to dishtable.
11. S/S cover to conceal table limit switch.
12. 2 1/2" backsplash at dishmachine portion, single thickness of s/s will not be accepted.
13. Anchor flanged feet to floor with non-corrosive bolts. Secure wall mounted equipment / components to in wall grounds or anchor plates. Coordinate installation with the general contractor.

ITEM NO. 255 MOBILE DRYING RACK

QUANTITY 2

Manufacturer:	Metro
Model:	PR48VX3
Size and Shape:	Refer to drawings
Alternate:	---

1. Four (4) tier, includes two (2) drop-ins and (1) cutting board/tray drying rack, built in Microban antimicrobial product protection.
2. Two (2) no. 5MPX casters per unit.
3. Two (2) no. 5MPBX locking casters per unit.

ITEM NO. 260 HAND SINK - WALL MTD

QUANTITY 7

Manufacturer:	Advance Tabco
Model:	7-PS-50
Size and Shape:	Refer to drawings
Alternate:	---

1. 20 gauge stainless steel construction.
2. Basket drain and wall bracket.
3. Gooseneck faucet with wrist handles.
4. Soap and towel dispensers by Owner.
5. P-Trap assembly, delete open/close drain valve.
6. Custom fabricated removable end splashes on sides as required by code. Height same as rear splash.
7. Trade contractor to provide temperature adjustment valves as required.

ITEM NO. 268 REFRIGERATED GRAB & GO MERCHANDISER

QUANTITY 2

Manufacturer:	RPI Vienna
Model:	VIAS3-34-R-SQ-SC-INS
Size and Shape:	Refer to drawings
Alternate:	---

1. Slide-in, self contained refrigerated Grab & Go Merchandiser, sized per plan.
2. Bottom of front opening to be 34” AFF with stainless steel adjustable legs to align with counter height.
3. Stainless steel interior.
4. Stainless steel exterior.
5. Fully insulated glass to reduce condensation.
6. Qty of three (3) tempered glass shelves with lights.
7. Two (2) bi-parting doors on rear.
8. Five (5) year compressor warranty.
9. Drain to floor sink. Floor sink to be located below Air Screen.

10. KEC to verify unit is 5-6’ away from air vents. Coordinate in field.
11. Rear air ventilation kit.
12. Cord and plug assembly.
13. Stainless steel trim as required to seal gaps at counters.
14. Provide submittal shop drawing for review by Consultant.
15. **Special Instruction:**Start-up and calibration of unit must be by factory authorized service agency, prior to customer demonstration. K.E.C. to coordinate 18” height clearance at top of unit.

ITEM NO. 614 FILL FAUCET

QUANTITY 2

Manufacturer:	T & S
Model:	B-0610
Size and Shape:	Refer to drawings
Alternate:	---

1. Pot Filler Faucet, splash-mounted, 8" centers, vacuum breaker, flexible S/S hose, 68" long, hooked nozzle with self-closing valve, ½" IPS female inlets, built-in check valves.
2. 12" square 14 ga. S/S wall plate with hose rack with radius corners.
3. Install at 48" A.F.F. by Division 22. Coordinate height of backflow preventor with highest water level of associated equipment.

ITEM NO. 632 SIX BURNER RANGE - GAS

QUANTITY 1

Manufacturer:	Vulcan
Model:	36S-6B
Size and Shape:	Refer to drawings
Alternate:	---

1. Standard oven with two (2) oven racks.
2. Stainless steel front, sides.
3. 3/4" rear gas connection.
4. 10" high stainless steel backguard.
5. Manual rotary ignitor with flame safety device.
6. Heavy duty casters, two (2) with brakes.
7. Provide quantities and sizes required: Dormont Model #VER-KIT-2S-48” Gas Conn. Kit, 48” long, Moveable Gas Connector Kit, covered with stainless steel braid, coated with blue antimicrobial PVC, SnapFast® Quick Disconnect, Swivel MAX®, full port valve, coiled restraining cable with hardware, limited lifetime warranty.
8. Provide Eagle model CC-S, Stainless Steel Caster Cradle Stabilizing Device for all mobile production equipment under the exhaust hoods. Coordinate locations with the Owner prior to installation. Quantity One (1) equals One (1) lot. Alternate: Regency Stainless Steel Caster Placement System, model #600Safetyset.

ITEM NO. 800 BUILT-IN REFRIGERATED MERCHANDISER

QUANTITY 1

Manufacturer:	STRUCTURAL CONCEPTS
Model:	OASIS C43R-UC
Size and Shape:	Refer to drawings
Alternate:	

1. Front discharge.
2. Coordinate with serving counters.
3. 6’ cord and plug.
4. Condensate pan.

END OF KITCHEN

SECTION 11 43 55

ICE MACHINES

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Self-contained ice machine with built-in storage bin

B. Related Work Described Elsewhere: Utility hook-up to equipment is described in Plumbing and Electrical Sections of these Specifications; cooperate as necessary with all other trades to ensure proper and adequate provision for the required utility sizing and locations.

1.02 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is an authorized representative of the ice machine manufacturer for both installation and maintenance of appliances required for this Project.

B. Product Options: Drawings indicate sizes, profiles, and dimensional requirements of residential appliances and are based on the specific types and models indicated. Other manufacturers' appliances with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."

C. Electrical Appliances: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

D. UL and NEMA Compliance: Provide electrical components required as part of residential appliances that are listed and labeled by UL and that comply with applicable NEMA standards.

E. AGA and ANSI Standards: Provide gas-burning appliances that carry the design certification seal of AGA and that comply with ANSI Z21-Series standards.

F. AHAM Standards: Provide appliances that comply with the following AHAM standards:
   1. Refrigerators and Freezers: Total volume and shelf area ratings certified according to ANSI/AHAM HRF-1.

G. Energy Ratings: Provide residential appliances that carry labels indicating energy-cost analysis (estimated annual operating costs) and efficiency information as required by the Federal Trade Commission.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each ice machine, indicating product specifications and options

C. Operation and Maintenance Instructions: For each ice machine.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver appliances only after utility rough-in is complete and construction in the spaces to receive appliances is substantially complete and ready for installation.

C. Protect ice machines before, during, and after installation, including the installed work and materials of all other trades.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Architect and at no additional cost to the Owner.

1.05 WARRANTY

A. Section 01 70 00 - Execution and Closeout requirements: Product warranties and product bonds.

B. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

PART 2 PRODUCTS

2.01 ICE MACHINES

A. Manufacturers:
   1. Hoshizaki Ice Machines; www.hoshizakiamerica.com.
   2. Substitutions: Not allowed.

2.02 SELF-CONTAINED UNIT

A. Type: Model F-330BAJ air-cooled self-contained Flaker unit manufactured by Hoshizaki America, Inc.
   1. Production: 322 lbs/day @ 45-1000 F ambient air temperature and 900 F and 450 F water-in temperature.
   2. Storage: Up to 80 lbs capacity.
   3. Cabinet Finish: Stainless steel.
   4. Ice Shape: Flake style.
   5. Dimensions: Nominal 24” W x 26” D x 39” H with 6” legs.
   6. Electrical Characteristics: 115V, single phase, 6.9 Amps.
   7. Stainless steel evaporator.
   8. Provide and install with in-line Arctic Pure water filter with changeable cartridge.
   9. Removable air filter.
   10. Manufacturer’s Warranty
      a. 3-years parts and labor on entire machine.
      b. 5-years parts and labor on evaporator.
      c. 5 years parts on compressor and air-cooled condenser coil.

PART 3 EXECUTION

3.01 PREPARATION

A. Review manufacturer’s installation instructions and notify Architect in the event of discrepancies; do not proceed with installation until all such discrepancies have been resolved.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions and with requirements of authorities having jurisdiction.

B. Anchor equipment securely in place in accordance with manufacturer’s instructions.

C. Sequence installation to accommodate required utility connections.

3.03 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Test each appliance to verify proper operation. Make necessary adjustments.

C. Verify that accessories required have been furnished and installed.

3.04 CLEANING

A. Section 01 71 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove packing material from ice machines and leave units in clean condition, ready for operation.

END OF SECTION

SECTION 11 52 13

MANUAL PROJECTION SCREENS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes: Front-projection screens.
   1. Ceiling-mounted pull-down projection screens where indicated.

B. Related Sections:
   1. Section 09 51 13 - Lay-In Acoustical Ceilings: Additional ceiling-support wiring at screen locations.

1.02 DEFINITIONS

A. Gain: Ratio of light reflected from or refracted by screen material to that reflected perpendicularly from a magnesium carbonate surface as determined per FS GG-S-00172D(1).

B. Half-Gain Angle: The angle, measured from the axis of the screen surface, to the most central position on perpendicular plane through the horizontal centerline of the screen where the gain is half of the peak gain.

1.03 SUBMITTALS

A. Product Data: For each type of screen specified.

B. Shop Drawings: Show layout and types of projection screens. Include the following:
   1. Connections to suspension systems for pendant- and recess-mounted screens.
   2. Anchorage details.
   3. Details of juncture of exposed surfaces with adjacent finishes.
   4. Accessories.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain projection screens through one source from a single manufacturer. Obtain each screen as a complete unit, including necessary mounting hardware and accessories.

B. Coordination of Work: Coordinate layout and installation of projection screens with other construction supported by, or penetrating through, ceilings, including light fixtures, HVAC equipment, fire-suppression system, and partitions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver projection screens until building is enclosed, other construction within spaces where screens will be installed is substantially complete, and installation of screens is ready to begin.

PART 2 PRODUCTS

2.01 FRONT-PROJECTION SCREENS

A. Material and Viewing Surface of Front-Projection Screens: Provide screens manufactured from mildew- and flame-resistant fabric of type indicated for each type of screen specified and complying with the following requirements:
   1. Matte-white viewing surface with gain characteristics complying with FS GG-S-00172D(1) for Type A screen surface.
   2. Material: Vinyl-coated glass-fiber fabric.
   3. Mildew Resistance: Provide mildew-resistant screen fabrics as determined by FS 191A/5760.
   4. Fire-Test-Response Characteristics: Provide projection-screen fabrics identical to materials that have been tested for flame resistance according to both small- and large-scale tests of NFPA 701.
   5. Seamless Construction: Provide screens in sizes indicated without seams.
   6. Provide extra drop length of dimension indicated to comply with the following requirements for fabric color and location of drop length:
      a. Color: Same as viewing surface.
      b. Location: At top of screen.
   7. Size of Viewing Surface: As indicated.

B. Manually Operated Screens: Provide manufacturer's standard spring-roller-operated units designed and fabricated for wall or ceiling installation and consisting of case, screen, mounting accessories, and other components necessary for a complete installation.
   1. Screen Case: Fabricated in 1 piece from steel sheet not less than 0.0299 inch (0.76 mm), with flat back design and vinyl covering or baked-enamel finish. Provide end caps with integral roller brackets and universal mounting brackets, finished to match end caps, for wall or ceiling mounting.
   2. Screen Mounting: Top edge securely anchored to a 3-inch diameter, rigid steel spring roller; bottom edge formed into a pocket holding a tubular metal slat, with ends of slat protected by plastic caps, and saddle and pull attached to slat by screws.

C. Size(s): 70” x 70” unless indicated otherwise in the drawings.

D. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
   1. Manually Operated Front-Projection Screens:
      1) Model C; Da-Lite Screen Co., Inc.; www.da-lite.com
      2) Luma 2; Draper Shade & Screen Co., Inc; www.draperinc.com
      3) Communicator; Stewart Filmscreen Corp.; www.stewartfilm.com

PART 3 EXECUTION

3.01 INSTALLATION

A. General: Install projection screens at locations indicated to comply with screen manufacturer's written instructions.

B. Install front-projection screens with screen cases in position and relationship to adjoining construction indicated. Securely anchor to supporting substrate in a manner that produces a smoothly operating screen with vertical edges plumb and viewing surface flat when screen is lowered.
   1. Manually operated units:
      a. At installations with suspended acoustical panel ceilings at 9'-0"- a.f.f. or less, suspend units from ceiling suspension system with manufacturer's standard scissor clips. Do not exceed carrying capacity of clips or ceiling suspension system.
      b. At installations with suspended acoustical panel ceilings at greater than 9'-0" a.f.f., or with other ceiling types, suspend units from wall with manufacturer's wall brackets with standard or extended arm as required to clear adjacent wall-mounted fixtures or equipment.

3.02 PROTECTING AND CLEANING

A. Protect projection screens after installation from damage during construction. If damage occurs despite such protection, remove and replace damaged components or entire unit as required to provide units in their original, undamaged condition.

END OF SECTION

SECTION 11 52 15

ELECTRIC PROJECTION SCREENS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Front-projection screens.
   1. Wall-mounted electric operation with factory-finished exposed case.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood backing for recessed screen installation.
   2. Division 26 Sections for electrical wiring, connections, and installation of remote-control switches for electrically operated projection screens.

1.02 DEFINITIONS

A. Gain: Ratio of light reflected from or refracted by screen material to that reflected perpendicularly from a magnesium carbonate surface as determined per FS GG-S-00172D(1).

B. Half-Gain Angle: The angle, measured from the axis of the screen surface, to the most central position on perpendicular plane through the horizontal centerline of the screen where the gain is half of the peak gain.

1.03 SUBMITTALS

A. Product Data: For each type of screen specified.

B. Shop Drawings: Show layout and types of projection screens. Include the following:
   1. Location of screen centerline relative to ends of screen case.
   2. Location of wiring connections.
   3. Location of seams in viewing surfaces.
   4. Anchorage details.
   5. Details of juncture of exposed surfaces with adjacent finishes.
   6. Accessories.
   7. Wiring Diagrams: For electrically operated units.

1.04 QUALITY ASSURANCE

A. Source Limitations: Obtain projection screens through one source from a single manufacturer. Obtain each screen as a complete unit, including necessary mounting hardware and accessories.

B. Coordination of Work: Coordinate layout and installation of projection screens with other construction supported by, or penetrating through walls, including light fixtures, scoreboards, HVAC equipment, fire-suppression system, and partitions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver projection screens until building is enclosed, other construction within spaces where screens will be installed is substantially complete, and installation of screens is ready to begin.

PART 2 - PRODUCTS

2.01 FRONT-PROJECTION SCREENS

A. Material and Viewing Surface of Front-Projection Screens: Provide screens manufactured from mildew- and flame-resistant fabric of type indicated for each type of screen specified and complying with the following requirements:
   1. Matte-white viewing surface with gain characteristics complying with FS GG-S-00172D (1) for Type A screen surface.
   2. Material: Vinyl-coated glass-fiber fabric.
   3. Mildew Resistance: Provide mildew-resistant screen fabrics as determined by FS 191A/5760.
   4. Fire-Test-Response Characteristics: Provide projection-screen fabrics identical to materials that have been tested for flame resistance according to both small- and large-scale tests of NFPA 701.
   5. Seamless Construction: Provide screens in sizes indicated without seams.
   6. Edge Treatment: Black masking borders.
   7. Provide extra drop length of dimension indicated to comply with the following requirements for fabric color and location of drop length:
      a. Color: Same as viewing surface.
      b. Location: At top of screen.
   8. Size of Viewing Surface: As indicated.

B. Electrically Operated Screens, General: Provide manufacturer's standard UL-labeled units consisting of case, screen, motor, controls, mounting accessories, and other components necessary for a complete installation. Remotely control operation of each screen to comply with the following:
   1. Single-Station Control: 3-position control switch with metal device box and cover plate for flush wall mounting and for connection to 120-V, ac power supply.
      a. Provide key-operated switch.
         1) Manufacturer’s keyed controls shall be prepared to receive interchangeable core as scheduled in the hardware section. Core shall be coordinated with Owner’s master keying and hardware standards.
   2. End-Mounted Motor: Instant-reversing, gear-drive motor of size and capacity recommended by screen manufacturer with permanently lubricated ball bearings, automatic thermal-overload protection, preset limit switches to automatically stop screen in up and down positions, and positive-stop action to prevent coasting. Locate motor in its own compartment as follows:
      a. On right end of screen, unless otherwise indicated.
      b. Provide with twist-lock electrical plug for secure connection.
   3. Screen Mounting: Top edge securely anchored to rigid metal roller and bottom edge formed into a pocket holding a 3/8-inch diameter, metal rod with ends of rod protected by plastic caps.
      a. Roller for end-mounted motor supported by self-aligning bearings in brackets.

4. Cabinet Enclosure: Constructed plywood or MDF board construction, factory painted in color as selected by the Architect.
    a. Cabinet shall have sloping top at minimum 30-degree angle to protect against collection of debris or game balls.
    b. Cabinet construction shall be sufficient to withstand impact of thrown basketballs.

C. Size(s): As indicated on the drawings.

D. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
1. Matte-White Viewing Surfaces:
    a. Matte White; Bretford Manufacturing, Inc. www.bretford.com
    b. Matte White; Da-Lite Screen Co., Inc. www.da-lite.com
    c. Fiberglass Matte White; Draper Shade & Screen Co., Inc. www.draperinc.com
2. Electrically Operated Matt White Screens with Protective Cabinet and End-Mounted Motor:
    a. Executive Electrol; Da-Lite ScreenCo., Inc., www.da-lite.com.
    b. Ambassador; Draper Shade & Screen Co., Inc., www.draperinc.com

PART 3 - EXECUTION

3.01 INSTALLATION

A. General: Install projection screens at locations indicated to comply with screen manufacturer's written instructions.

B. Install front-projection screens with screen cases in position and relationship to adjoining construction indicated. Securely anchor to supporting substrate in a manner that produces a smoothly operating screen with vertical edges plumb and viewing surface flat when screen is lowered.
1. Anchorage:
    a. Ensure that wall construction is sufficient to accept full weight of screen system, including case and motor.
    b. For screens mounted on drywall, ensure that solid wood blocking is installed between studs for screw-fastening.
    c. For screens mounted on hollow CMU walls, utilize toggle bolts rather than expansion anchors or masonry screws for secure anchoring.
2. Coordinate with the Contractor for final electrical connections and installation of keyed cylinder into switch body.

3.02 TESTING

A. Test electrically operated units to verify that screen, controls, limit switches, closure, and other operating components are in optimum functioning condition.

3.03 PROTECTING AND CLEANING

A. Protect projection screens after installation from damage during construction.
1. Provide matching paint touch-up to factory-finished cabinet where damaged due to shipping or construction operations.

2. Remove and replace damaged components or entire unit as required to provide units in their original, undamaged condition.

END OF SECTION

SECTION 11 61 43

STAGE CURTAINS AND TRACKS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes the following types of stage curtains:
   1. Front-setting curtains including house curtain and valance.
   2. Rear curtain.
   3. Black Box curtains.

B. Related Sections:
   1. Section 05 50 00 - Metal Fabrications: Supplementary members supporting stage curtain systems to structure.

1.02 REFERENCE STANDARDS

A. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2016a.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2022.

C. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films; 2023, with Errata.

1.03 SUBMITTALS

A. Product Data: Include types, styles, materials, operating instructions, and maintenance recommendations.
   1. Setting Drawings, and templates for built-in or embedded anchor devices.

B. Shop Drawings: Include plans, elevations, and detail sections of typical track and rigging elements. Show anchors, hardware, operating equipment, and other components not included in manufacturer's Product Data. Include the following:
   1. Locations for blocking to be provided by others.
   2. Extent of required operating clearances.
   3. Calculations: Calculate requirements for supporting curtains, track, and equipment and verify capacity of each curtain, track, and rigging component to support loads.

C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors, textures, and patterns available, together with 12-inch- square sample (any color) of each type fabric.

D. Samples for Verification: Not less than 36 inches (914.4 mm) square of each fabric from dye lot to be used for the Work, with specified treatments applied, and showing complete pattern repeat, if any. Mark top and face of fabric.

E. Product Certificates: Signed by manufacturers of stage curtains certifying that products furnished comply with requirements. Give name of flame-retardant chemical used, identification of applicator, treatment method, application date, allowable life span for treatment, and details of any restrictions and limitations.

F. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed installation of stage curtains similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Fire-Test-Response Characteristics: Provide stage curtains with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or a testing and inspecting agency acceptable to authorities having jurisdiction. Permanently attach label to each fabric of curtain assembly indicating that fabric is inherently and permanently flame resistant.
   1. Flame-Resistance Ratings: Passes NFPA 701.

C. PRE-INSTALLATION MEETING

D. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.
   1. Convene minimum one week prior to commencing work of this Section.

1.05 PROJECT CONDITIONS

A. Field Measurements: Verify stage curtain openings and dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
   1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish opening and construction dimensions and proceed with fabricating stage curtains without field measurements. Coordinate construction to ensure that actual opening and construction dimensions correspond to established dimensions.

PART 2 PRODUCTS

2.01 CURTAIN FABRICS

A. General: Provide fabrics inherently and permanently flame resistant (IFR). Provide fabrics from the same dye lot.

B. Colors, Textures, and Patterns: Match Architect's samples.

C. Products: Subject to compliance with requirements, provide the following:
   1. Woven Polyester Velour:
      a. Prestige (IFR); KM Fabrics, Inc.; kmfabrics.com

b. Plateau (IFR); KM Fabrics, Inc.; kmfabrics.com

2.02 FRONT-SETTING CURTAIN FABRIC

A. Woven Polyester Velour: Napped fabric of 100 percent polyester; 54-inch minimum width; and other characteristics as follows:
   1. K-M Prestige (IFR): Fabric weighing 26 oz./linear yard nominal, with pile height not less than 101 mils (2.56541 mm), with not less than 48 picks per inch; inherently and permanently flame resistant.

2.03 REAR SETTING CURTAIN FABRIC

A. Woven Polyester Velour: Napped fabric of 100 percent polyester; 54-inch minimum width; and other characteristics as follows:
   1. K-M Plateau(IFR): Fabric weighing 13 oz./linear yard nominal, with pile height not less than 110 mils (2.79401 mm), with not less than 105 picks per inch; inherently and permanently flame resistant

2.04 METAL PRODUCTS

A. Steel Pipe: ASTM A 53, Grade A, standard weight (Schedule 40), black, 1-1/2-inch nominal diameter, unless otherwise indicated.

B. Galvanized Steel Sheet: Commercial-quality, zinc-coated, carbon-steel sheet; complying with ASTM A653/A653M, G60 (Z180) coating designation.

C. Supports, Clamps, and Anchors: Sheet steel in manufacturer's standard thicknesses, galvanized after fabrication according to ASTM A153/A153M, Class B.

D. Trim and Support Cable: 1/4-inch- diameter, 7x19 galvanized steel aircraft cable with a breaking strength of 7000 lb. Provide fittings complying with cable manufacturer's written recommendations for size, number, and method of installation, including a drop-forged galvanized turnbuckle to allow for leveling.

E. Inserts, Bolts, Rivets, and Fasteners: Manufacturer's standard corrosion-resistant units.

2.05 CURTAIN FABRICATION

A. General: Affix permanent label, stating compliance with requirements of authorities having jurisdiction, in accessible location on curtain not visible to audience. Provide vertical seams, unless otherwise indicated. Arrange vertical seams so they do not fall on faces of pleats. Do not use fabric cuts less than half width.
   1. Vertical Hems: Provide vertical hems not less than 2 inches (50.8 mm) wide, with not less than a 1-inch tuck, and machine-sewn with no selvage material visible from front of curtain. Sew open ends of hems closed.
   2. Leading Edge Turnbacks: Provide turnbacks formed by folding not less than 12 inches (304.8 mm) of face fabric back, with not less than a 1-inch tuck, and secured by sewing turnback vertically.
   3. Top Hems: Reinforce top hems by double-stitching 3-1/2-inch-wide, heavy-duty synthetic polyester webbing to top edge with not less than 2 inches (50.8 mm) of face fabric turned under.

4. Pleats: Provide 75% added fullness in curtains, exclusive of turnbacks and hems, by sewing additional material into 6-inch double-stitched box pleats spaced at 6 inches (304.8 mm) o.c. along top hem reinforcement.
5. Grommets: Brass, centered on box pleats and 1 inch (25.4 mm) from corner of curtain, for snaps or S-hooks.
    a. Provide not less than No. 2 grommets except, for velour curtains, provide not less than No. 3 grommets.
6. Bottom Hems: For curtains that do not hang to the floor, provide hems not less than 3 inches (76.2 mm) deep with 3/4-inch weight tape. For floor-length curtains, provide hems not less than 6 inches (152.4 mm) deep with 1-inch weight tape. Sew open ends of hems closed.
7. Velour Curtains: Fabricate with the fabric nap down.

B. Curtain Battens: Fabricate battens from steel pipe with a minimum number of joints. As necessary for required lengths, connect pipe with a drive-fit pipe sleeve not less than 18 inches (457.2 mm) long and secure with four flush rivets, plug welds, threaded couplings, or another equally secure method. Shop-paint completed pipe battens with black paint with 1-inch-wide yellow stripe at the center of each batten.

C. Snap Hooks: Track manufacturer's heavy-duty hooks.

D. Tie Lines: Braided, flame-resistant synthetic tie lines (e.g., polyester or nylon)., black or white to best match curtain; not less than 5/8-inch-wide by 36 inches (914.4 mm) long.

2.06 STRAIGHT CURTAIN TRACK FABRICATION

A. Steel-Track Channels: Fabricate of roll-formed galvanized steel sheet, with continuous bottom slot, and with each half of track in one continuous piece.
1. Minimum Base-Metal Thickness: Not less than 0.0677 inch (1.72 mm).

B. Heavy-Duty Track System: Equip track with heavy-duty, live-end, double-wheel pulley; heavy-duty, dead-end, single-wheel pulley; and adjustable, heavy-duty floor block; each with not less than 5-inch molded-nylon- or glass-filled-nylon-tired ball-bearing wheels, enclosed in steel housings. Provide single curtain carriers of molded nylon with a pair of neoprene-tired ball-bearing wheels riveted parallel to body. Provide one master carrier, for each leading curtain edge, of plated steel with two pairs of nylon-tired ball-bearing wheels and with two-line guides per carrier. Equip carriers with neoprene or rubber bumper to reduce noise, and heavy-duty, plated-steel swivel eye and manufacturer's standard trim chain for attaching curtain snap or S-hook. Provide end stops for track. Design adjustable floor block to maintain proper tension on operating line.
1. Operating Line: Manufacturer's standard 3/8-inch stretch-resistant operating cord consisting of braided synthetic-fiber jacket over solid, synthetic-fiber, linear, center filaments.
2. Track Lap Clamp: Metal to match track channel for attaching double-sectioned track at center overlap.
3. Curtain Carriers: For track spaced at 12 inches (304.8 mm) o.c.
4. Fold Guide: Equip carriers with rear-fold or backpack guide and rubber spacers to permit offstage curtain folding, sized for use with operating line, if any.

C. Products: Subject to compliance with requirements, provide one of the following:
1. Silent Steel Model No. 281 with No. 2863, No. 2864, and No. 2866 pulleys; Automatic Devices Company; www.adctracks.com

2. Atlas Silk Model No. 418S; H & H Specialties, Inc.; www.hhspecialties.com
3. Tru-Roll Model No. 1000; Tru-Roll, Inc.; www.truroll.com
4. Substitutions: Section 01 60 00 - Product Requirements.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for supporting members, blocking, installation tolerances, clearances, and other conditions affecting performance of stage curtain work. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Examine inserts, clips, blocking, or other supports required to be installed by others to support tracks and battens. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 INSTALLATION, GENERAL

A. Install stage curtain system according to track manufacturer's and curtain fabricator's written instructions.

3.04 BATTEN INSTALLATION

A. Install battens by suspending at heights indicated with steel cables spaced to support load, but do not exceed 10 feet (304.8 cm) o.c. between cables.

B. Secure cables either directly to structures or to inserts, eye screws, or other devices that are secure and appropriate to substrate and that will not deteriorate or fail with age or elevated temperatures. Attach other cable end to pipe clamps with turnbuckles, moused or fixed with nuts after adjustment, to prevent loosening.

3.05 TRACK INSTALLATION

A. Batten-Hung Tracks: Install track by suspending from pipe batten with manufacturer's track clamp hangers attached to batten pipe clamps at spacing, according to manufacturer's written instructions.
   1. Heavy-Duty Track: Do not exceed 72 inches (1828.8 mm) between supports.

B. Install track for center-parting curtains with not less than 24-inch overlap of track sections at center, supported by special lap clamps.

3.06 CURTAIN INSTALLATION

A. Track Hung: Secure curtains to track carriers with track manufacturer's special heavy-duty S-hooks or snap hooks.

B. Batten Hung: Secure curtains to pipe battens with tie lines.

3.07 DEMONSTRATION

A. Engage a factory-authorized service representative to test system and to train Owner's personnel to rig, adjust, operate, and maintain stage curtains, tracks, and draw-curtain machines.
   1. Schedule training with Owner, through Architect, with at least seven days' advance notice.

END OF SECTION

SECTION 11 66 00

ATHLETIC EQUIPMENT

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes: The following types of athletic equipment as shown on the Drawings:
   1. Protective wall padding.
   2. Volleyball Equipment.
   3. Basketball/Volleyball scoreboards.

B. Related Sections:
   1. Division 26 sections - for power, conduit, boxes, conductors, and connections for scoreboards.

1.02 QUALITY ASSURANCE

A. For installation use only personnel who are skilled in the work required.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product data on physical characteristics and durability characteristics for each type of gymnasium equipment and accessory specified.

C. Installation Methods: Submit two copies of manufacturer's recommended installation method showing all requirements for blocking and bracing.

D. Shop drawings showing location and extent of athletic equipment and accessories. Include plans, elevations, large-scale details of anchorages, and accessory items.
   1. Indicate unit conditions at openings, typical and special details, and location and installation requirements for hardware and operators.
   2. Provide dimensioned locations of volleyball floor inserts to General Contractor for locating thickened slab areas.

E. Template drawings prepared by manufacturer showing location of items supported or anchored by permanent construction.

1.04 PRODUCT HANDLING

A. Protection: Protect equipment before, during and after installation. Protect installed work of other trades.

B. Replacements: In event of damage, make necessary replacements.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Athletic Equipment:
1. Bison IPI; www.bisoninc.com
2. Porter Athletic; www.porterathletic.com
3. Aalco Manufacturing Co.; www.aalcomfg.com
4. ADP Lemco, Inc.; www.adplemco.com
5. Arizona Courtlines; www.arizonacourtlines.com
6. Douglas Industries, Inc.; www.douglas-sports.com
7. Performance Sport Systems; www.perfsports.com
8. Sports Imports; www.sportsimports.com
9. Substitutions: Section 01 60 00 - Product Requirements.

B. Scoreboards:
1. Daktronics; www.daktronics.com
2. Nevco; www.nevco.com
3. Spectrum Scoreboards; www.spectrumscoreboards.com
4. Substitutions: Section 01 60 00 - Product Requirements.

2.02 MATERIALS:

A. Protective Wall Padding:
1. Basis-of-Design: Porter Equipment Co. wall wainscot padding No. 90350-326
2. Provide protective wainscot wall padding, 2' x 6' x 1-1/2" thick 6 lbs density urethane foam filled panels, covered with nylon reinforced vinyl fabric, fire retardant, color to be selected by Architect. Backing to be 7/16" thick plywood or OSB. Ends to be finished, no lip. Work to include special shaped column covers and cut outs for other trades.
3. Provide all related accessories required for installation. Mechanically anchor Wall Padding to walls concealing anchors. No lip shall be exposed beyond the edge of the padding. Use separate top pad, velcro attached to anchor strip to conceal anchors. Locate bottom of pads 8" above finish floor.
4. Fasteners: At hollow masonry walls use toggle bolt fasteners to anchor manufacturer’s hanger track.

B. Volleyball Equipment:
1. Inserts: 3 inch I.D. steel sleeve with screw-down flange pre-drilled to receive cast brass, flush mounted floor plate with hinged access door.
a. Model: Bison VB22.
2. Designed for mounting in cored concrete sub-slab with wood flooring.
a. Volleyball System: Steel pin-lock uprights, net, ratchet, pads, and antenna.
b. Basis-of-Design: Bison Centerline VB2000T System.
c. Uprights: Steel pin-lock uprights to fit inserts.
d. Safety Pads: Provide Bison VB21P safety pads for each upright.
e. Net Ratchet: Provide Bison VB1250K winch with removable crank.
f. Net: 1 meter wide Technora net (Bison VB1200T) with non-kinking top cable, sideline markers, and wooden dowels.

g. Antenna: Adjustable antenna with molded cable clamps (Bison VB1300).

3. International Official Stand: Adjustable-height steel official stand with platform and safety pads.
   a. Model: Bison VB76.
4. Wall Racks: Wall-mounted storage rack for 1 pair uprights.
   a. Model: Bison VB26.

C. Basketball/Volleyball Scoreboard:
1. Basketball/Volleyball Scoreboard:
   a. Basis-of-Design: Daktronics model BB-2101.
2. Size: 8'-0" wide x 4'-0" high x 6" deep.
3. Cabinet Color: To be selected by Architect from manufacturer's standard colors.
4. Features:
   a. 13-inch high-intensity LED digits for clock and scores.
   b. 10-inch high-intensity LED digit for period.
   c. Displays period time up to 99:59; shows 1/10th of a second during the final minute.
   d. Team scores display from 0-199.
   e. Digital period display from 0-9.
   f. Possession and Bonus/Double Bonus indicators.
   g. Built-in horn, synchronized with clock.
5. Construction and Certifications:
   a. All-aluminum cabinet construction designed to withstand impacts from sports balls without requiring a protective screen.
   b. Certifications: ETL Listed, tested to CSA standards.
6. Controller:
   a. Daktronics All Sport® 5000 series console, capable of multi-sport operation (basketball, volleyball, wrestling) with sport-specific keyboard inserts.
   b. Provide with wireless control functionality and durable carrying case.
   c. Power Requirements: 120V, 1.3 Amps, 60Hz. (Note: Power draw increases with options).
7. Customization:
   a. Provide with custom vinyl team name caption reading "CROSBY" in place of the standard "HOME" caption.
   b. Provide two Electronic Team Name Message Centers (TNMCs) in place of standard HOME and GUEST captions to allow for programmable team names.

PART 3 EXECUTION

3.01 INSPECTION

A. Inspection: Inspect installed work of other trades and verify that such work is complete to a point where this work may commence. Verify that installation may be made in accordance with approved shop drawings and manufacturer's instructions.
1. Discrepancies: In event of discrepancy, notify Architect. Do not proceed with installation until discrepancies have been resolved.

3.02 INSTALLATION

A. Install where indicated, anchoring all components firmly in place in complete accordance with approved shop drawings and the manufacturer's recommendations.

3.03 SCOREBOARDS

A. Inspection: Inspect installed work of other trades and verify that such work is complete to a point where the work of this Section may commence. Verify that installation may be made in accordance with approved shop drawings and manufacturer's instructions.
   1. Discrepancies: In event of discrepancy, notify Architect. Do not proceed with installation until discrepancies have been resolved.

B. After delivery but prior to installation, system manufacturer’s technician shall field-test all equipment for proper operation. Correct any deficiencies prior to installation.
   1. Install all equipment in accordance with manufacturer's instructions and reviewed submittal drawings and specifications.

C. Install where indicated, anchoring all components firmly in place in complete accordance with approved shop drawings and the manufacturer's recommendations.

D. Provide and install all control cabling, and make all required power connections.

E. Conduits, power, and transformer provided and installed under Division 26 Sections.

3.04 CONSULTATION, TRANING AND SERVICES

A. Starting, Adjusting, And Demonstrating: Provide demonstration and training session for Owner's representative(s) covering operation and maintenance of all equipment provides under this Section.

B. Manufacturer shall coordinate corrective action required by Substantial Completion checklist.

C. During installation and testing manufacturer’s technician shall provide coordination, testing, maintenance, and training. Technician shall be onsite during first two events where equipment is utilized.

D. Provide two sets of operating manuals, and two sets of mechanical drawings and electrical diagrams to the Owner.

E. Manufacturer shall provide toll-free telephone technical support during the warranty period.

END OF SECTION

SECTION 11 66 24

BASKETBALL BACKSTOPS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Indoor basketball backstops, backboards, goals and nets.

B. Related Sections:
   1. Section 05 50 00 - Metal Fabrications: Supplementary framing.
   2. Section 11 66 00 - Athletic Equipment: Exterior basketball goals.

1.02 REFERENCES

A. National Electrical Manufacturers Association:
   1. NEMA MG 1 - Motors and Generators.

B. National Federation of State High School Associations:
   1. NFHS - Basketball Rules Book.

C. Underwriters Laboratories Inc.:
   1. UL - Electrical Construction Equipment Directory.

1.03 SYSTEM DESCRIPTION

A. Indoor Backstops: Forward-folding, ceiling-mounted backstops with rectangular glass backboards at main court and cross courts.

1.04 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Requirements for submittals.

B. Shop Drawings:
   1. Indicate size and location of backstops, mounting details, accessory anchoring members. Include wiring diagrams for electric operators and controls.

C. Product Data:
   1. Submit data indicating materials of construction, thicknesses, colors available.

1.05 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for submittals.

B. Operation and Maintenance Data: Include the following.
   1. Parts catalog with complete list of replacement parts.
   2. Schematic wiring diagrams of installed electrical equipment.

1.06 QUALITY ASSURANCE

A. Products Requiring Electrical Connection: Listed and classified by UL or another testing firm acceptable to authority having jurisdiction.

1.07 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section with minimum three years' experience and approved by manufacturer.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept backstops on site in manufacturer's original packaging. Inspect for damage.

C. Store backstops indoors, protected from weather and contamination until installed.

1.09 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for warranties.

B. Furnish manufacturer's standard 25-year warranty for structural components and 1-year for electrical components.

PART 2 PRODUCTS

2.01 BACKSTOPS

A. MANUFACTURERS:
1. Bison IPI; www.bisoninc.com
2. Porter Athletic; www.porterathletic.com
3. Aalco Manufacturing; www.aalcomfg.com
4. ADP Lemco, Inc.; www.adplemco.com
5. Draper, Inc.; www.draperinc.com
6. Institutional Products, Inc.; www.instprod.com
7. Substitutions: Section 01 60 00 - Product Requirements.

2.02 INDOOR BACKSTOPS

A. Center strut design, retractable, front folding, suspended from overhead building structural frame to support. Bison *Model No. BA48SF* or equal. Height adjustable. Electrical/Key and Manual operation, refer to Drawings.
   1. Tubular steel center post mast, approx. 6-5/8-in dia., welded and bolted construction, designed to minimize sway and vibration during play; painted finish.
   2. Furnish manufacturer's standard hardware for backstop mounting.
   3. Furnish supplemental steel framing to span between building structural frame and support backstop at position indicated on Drawings.
   4. Steel framing factory painted in color as selected by the Architect.
   5. All switches for goal controls shall have a Sargent interchangeable core lock that is keyed to the gym entry key.

B. Backboards: Square Glass Backboard:
   1. Basis-of-Design: Bison *Model No. BA42XL*.
   2. Type: Rectangular, 72 inches wide by 42 inches high.
   3. Material: 1/2-inch thick, fully tempered glass.
   4. Frame: Heavy-duty extruded aluminum frame with a mill or clear anodized finish.
   5. Markings: Official rectangular white target and border, permanently fired-in to the glass.
   6. Goal Mounting: Factory drilled for standard 5-inch x 4-1/2-inch hole pattern to accommodate specified breakaway goal.

C. Backboard Padding:
   1. Basis-of-Design: Bison *Model No. BA68U* Bolt-On Backboard Padding.
   2. Material: High-density, molded polyurethane foam with an internal steel spine.
   3. Mounting: Bolt-on design securely attached to the bottom and lower sides of the backboard frame.
   4. Standards: Meet all NFHS requirements.
   5. Color: As selected by Architect from manufacturer's standard range.

D. Goals: Steel, removable type; fabricated from 5/8-inch rod; 18 Inches inside clear diameter; with no-tie style net hooks; painted finish.
   1. Breakaway Goal: Single rim, rigid play up to 230 lbs, flexible for forces greater than 230 lbs.
   2. Basis-of-Design: Bison *Model No. BA35E Ultimate Breakaway Goal*.

E. Net: Woven, size and style to fit goal; 15 to 18 inches (457.2 mm) long.
   1. Chord Net: Nylon. Basis-of-Design: Bison *Model BA39N.*

2.03 WINCHES

A. Electric Winch: Geared drive and cables designed to hold backstop at any position.
   1. Basis-of-Design: Bison *Model No. BA980 "Posilok" Electric Hoist.*
   2. Motor and belt drive operated sized to suit application with adjustable upper and lower limit switches.
   3. Motor: NEMA MG 1; 1 hp, 115 volts, single phase, 60 Hz; continuous duty rated, with adjustable limit switches.
   4. Controls: Furnish one 3-position, momentary-contact, wall-mounted key switch for each hoist. Switches shall be ganged together in a single lockable steel control box with a common cover plate.

B. Manual Winch:
   1. Basis-of-Design: Bison *Model No. BA975W Manual Winch*.
   2. Operation: Worm-gear construction for positive locking and load holding.
   3. Controls: Provide one removable operating handle for each winch.

2.04 ACCESSORIES

A. Safety Lock: Furnish Bison *Model No. BA990S "SafeStrap"* backstop safety lock at each folding backstop.

2.05 FABRICATION

A. Fabricate components in largest practical sizes for delivery.

B. Grind exposed welded joints flush and smooth with adjacent finish surface.

C. Provide fittings and hardware to accommodate site assembly and installation.

D. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.06 SHOP FINISHING

A. Painted Metal Finishes:
   1. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.
   2. Do not paint surfaces in direct contact with concrete or where field welding is required.
   3. Shop Painting:
      a. Indoor Backstops: Manufacturer's standard enamel coating; black color.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify walls are ready to receive backstops.

C. Verify electrical power is available with correct characteristics.

D. Verify finishing operations, including painting, are complete before installing backstops.

3.02 INSTALLATION

A. Install backstops in accordance with NFHS requirements.

B. Assemble components furnished loose for field assembly.

C. Install backboards plumb, level, and parallel to basketball court end line.

D. Install goals level and at elevation indicated.

E. Touch up damaged finishes to match shop finish.

3.03 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for starting and adjusting.

B. Adjust limit switches to prevent damage to equipment.

3.04 DEMONSTRATION

A. Section 01 70 00 - Execution and Closeout Requirements: Requirements for demonstration and training.

B. Demonstrate operation and maintenance of folding backstops.

END OF SECTION

SECTION 12 24 13

ROLLER SHADES

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes electrically operated roller shades.

B. Related Sections:
1. Section 06 10 53 - Miscellaneous Rough Carpentry: Blocking for attachment of roller shades.
2. Section 09 21 16 - Gypsum Board Assemblies: Suspension framing for attachment of roller shade housings.
3. Section 09 51 13 - Acoustical Panel Ceilings: Additional ceiling hanger wires at roller shade locations.
4. Division 26 Sections - Electrical power and final connections.

1.02 REFERENCES

A. WCMA - Window Covering Manufacturer's Association.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal requirements.

B. Shop Drawings: Indicate opening sizes, tolerances required, method of attachment, clearances, and operation.
1. Include wiring diagrams, showing power, system, and control wiring.

C. Product Data: Submit data indicating physical and dimensional characteristics, fabric(s), and finishes.

D. Samples:
1. Submit two samples, 12 x 12 inches (304.8 mm) in size, of shade material.
a. Submit 24” square section of shade material with full scale section of custom graphics made from master art provided by Architect.

E. Manufacturer's Installation Instructions: Submit special procedures, and perimeter conditions requiring special attention.

1.04 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Provide roller shade band materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
1. Flame-Resistance Ratings: Passes NFPA 701.

B. Product Standard: Provide roller shades complying with WCMA A100.1.

1.05 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in installing products specified in this section with minimum three years' experience and approved by manufacturer.

1.06 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.07 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate the Work with window installation and placement of concealed blocking to support blinds.

1.08 WARRANTIES

A. Installer's Warranty: Provide written warranty against defects in materials and workmanship for a period of 1-year after date of Substantial Completion of the Project.

B. Manufacturer's Warranty: Provide manufacturer's written 25-year warranty covering brackets, rollers, and shades.

PART 1 PRODUCTS

2.01 MANUFACTURERS

A. BTX Window Automation, Inc. www.btxinc.com.

B. Draper Shade & Screen Co., Inc. 800-238-7999 www.draperinc.com

C. Hunter Douglas Contract. 800-727-8953 www.hunterdouglascontract.com

F. SWF Contract, www.swfcontract.com

G. Sol-R-Veil www.solrveil.com.

H. Substitutions: Section 01 60 00 - Product Requirements

2.02 COMPONENTS

A. Shade Band Material: Vinyl-coated polyester.

1. General:
    a. Material Width: As required to eliminate or minimize vertical seams.
    b. Bottom Hem: Straight.
    c. Characteristics: Durable, washable, mold and mildew resistant. Non-fading and 100% UV resistant.
2. Decorative:
    a. Material Openness Factor: Nominal 3%.
    b. Material Color: As selected from manufacturer’s standard colors/patterns.
3. Blackout: Not applicable.
4. Rollers: Electrogalvanized or epoxy primed steel or extruded-aluminum tube of diameter and wall thickness required to support and fit internal components of operating system and the weight and width of shade band material without sagging; designed to be easily removable from support brackets; with manufacturer's standard method for attaching shade material. Provide capacity for one roller shade band per roller, unless otherwise indicated on Drawings.
5. Direction of Roll: Regular, from back of roller.

B. Mounting Brackets:
1. End Brackets: Fabricated from steel finished to match fascia or headbox.
2. Pocket with Ceiling Slot Opening: Six-sided box units for recessed installation; fabricated from formed-steel sheet, extruded aluminum, or wood; with a bottom consisting of slot opening of minimum dimension to allow lowering and raising of shade and a removable or an openable, continuous metal access panel concealing rollers, brackets, and operating hardware and operators within.

C. Mounting: Recessed in ceiling pocket mounting permitting easy removal and replacement without damaging roller shade or adjacent surfaces and finishes.

D. Bottom Bar: Steel or extruded aluminum, with plastic or metal capped ends. Provide exposed-to-view, external-type bottom bar with concealed weight bar as required for smooth, properly balanced shade operation.

2.03 FABRICATION

A. Product Description: Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.

B. Concealed Components: Non-corrodible or corrosion-resistant-coated materials.
1. Lifting Mechanism: With permanently lubricated moving parts.

C. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 degrees Fahrenheit (23.33 degrees Celsius):
1. Adjacent shades: Make open gaps between adjacent shades as close as possible, but no closer than 1/4”.
2. Shade Units Installed between (Inside) Jambs: Edge of shade not more than 1/4 inch (6.35 mm) from face of jamb. Length equal to head to sill dimension of opening in which each shade is installed.

D. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting fascia, roller, and operating hardware and for hardware position and shade mounting method indicated.

E. Installation Fasteners: Not fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.

F. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

G. Colors of Metal and Plastic Components Exposed to View: As indicated by manufacturer's designations, unless otherwise indicated.

2.04 MOTORIZED ROLLER SHADE OPERATORS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Manufacturer of roller shade.
   2. Elero USA Inc.
   3. SIMU US, Inc.
   4. SOMFY Systems.

B. General: Provide factory-assembled motorized shade operation systems designed for lifting shades of type, size, weight, construction, use, and operation frequency indicated. Provide operation systems of size and capacity and with features, characteristics, and accessories suitable for Project conditions and recommended by shade manufacturer, complete with electric motors and factory-prewired motor controls, remote-control stations, remote-control devices, power disconnect switches, enclosures protecting controls and all operating parts, and accessories required for reliable operation without malfunction. Include wiring from motor controls to motors. Coordinate operator wiring requirements and electrical characteristics with the building electrical system.

C. Comply with NFPA 70.

D. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6.

E. Electric Motors: UL-approved or -recognized, totally enclosed, insulated motor, complying with NEMA MG 1, with thermal-overload protection, brake, permanently lubricated bearings, and limit switches; sized by shade manufacturer to start and operate size and weight of shade considering service factor or considering Project's service conditions without exceeding nameplate ratings.
   1. Service Factor: According to NEMA MG 1, unless otherwise indicated.
   2. Motor Characteristics: Single phase, 110 V, 60 Hz.

F. Controls: Electric controls with NEMA ICS 6, Type 1 enclosure for recessed or flush mounting. Provide the following devices for remote-control activation of shades:
   1. Remote Group Control Stations: Keyed, momentary-contact, three-position, switch-operated control station with open, close, and off functions for single switch group control of all shade units.
   2. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop shade at fully raised and fully lowered positions.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify openings are ready to receive work.

C. Verify structural blocking and supports are correctly placed.

3.02 INSTALLATION

A. Install roller shades level, plumb, square, and true according to manufacturer's written instructions.

3.03 ERECTION TOLERANCES

A. Section 01 40 00 - Quality Requirements: Tolerances.

B. Maximum Offset from Level: 1/8 inch (3.18 mm).

3.04 CLEANING AND ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust blinds for smooth operation.
   1. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer that ensures roller shades are without damage or deterioration at time of Substantial Completion.
   2. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.
   3. Clean roller shade surfaces after installation and just prior to occupancy, according to manufacturer's written instructions.

3.05 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain roller shades.

END OF SECTION

SECTION 12 32 16

MANUFACTURED PLASTIC LAMINATE CLAD CASEWORK

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Plastic laminate-clad cabinets and countertops assembled from stock components.
   2. Custom chemical-resistant plastic laminate-clad cabinets with epoxy resin countertops and integral epoxy resin sinks at science classrooms/labs and preparation rooms.
   3. Coordinate work between section 06 20 24 Interior Finish Carpentry and Millwork and this section for consistency in design intent, material compatibility, and installation sequencing.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Miscellaneous grounds and support framing.
   2. Section 06 20 23 - Interior Finish Carpentry and Millwork: For miscellaneous items of custom millwork not provided under this Section.
   3. Section 07 90 00 – Joint Protection: For requirements of sealant used at interface of casework and other materials.
   4. Section 08 80 00 - Glazing: Requirements for any casework glazing.
   5. Division 22 Plumbing – Fittings and stainless steel sinks.
   6. Division 22 Plumbing – Fittings for epoxy sinks at science casework.
   7. Division 26 Electrical – Outlets mounted on science casework.

1.02 REFERENCES

A. American National Standards Institute:
   1. ANSI A208.1 - Mat-Formed Wood Particleboard.

B. Architectural Woodwork Institute:
   1. AWI - Quality Standards Illustrated.

C. Federal Specification Unit:
   1. FS A-A-1936 - Adhesive, Contact, Neoprene Rubber.

D. National Electrical Manufacturers Association:
   1. NEMA LD 3 - High Pressure Decorative Laminates.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate materials, component profiles and elevations, assembly methods, joint details, fastening methods, accessory listings, hardware location and schedule of finishes.

C. Product Data: Submit data for each type of casework unit and hardware accessory.

D. Samples:
   1. Submit two samples, 6 x 6 inches (152.4 mm) in size, of each selected laminate color/finish.
   2. Submit two samples, 6 x 6 inches (152.4 mm) in size, of epoxy resin countertop and sink material in specified color.
   3. Mockups: Refer to Mockup Diagram.
      a. Submit one full size sample of a typical base cabinet unit, complete with doors, drawers, and hardware, but without countertop.
      b. Submit one full size sample of a typical wall cabinet unit, complete with doors, shelves, and hardware.
      c. Approved samples may be incorporated into the Work. If not incorporated into the Work, retain approved samples in building until completion of the Work and remove when directed by Architect.

1.04 QUALITY ASSURANCE

A. Perform work in accordance with AWI (Architectural Woodwork Institute) Architectural Woodwork Quality Standards Illustrated, Custom Grade.

B. Single Source Responsibility: All casework, countertops, and accessories furnished under this Section shall be supplied by a single manufacturer.

1.05 MANUFACTURER'S WARRANTY

A. Provide fabricator's written warranty against defects in materials and workmanship for a period of five years after date of Substantial Completion for the Project.

1.06 QUALIFICATIONS

A. Fabricator: Company specializing in performing Work of this section with minimum three years' experience.

1.07 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Protect units from moisture damage.

1.09 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 - Product Requirements.

B. During and after installation of Work of this section, maintain same temperature and humidity conditions in building spaces as will occur after occupancy.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

PART 2 PRODUCTS

2.01 PLASTIC LAMINATE-CLAD CASEWORK

A. Manufacturers:
1. A&M Casework, Inc.
2. Ameritek Design, Inc., www.ameritekdesign.com
3. Calmar Manufacturing Co. Inc.; Calmar, Iowa
4. Case Systems, Inc., www.casesystems.com
5. Global Casework Manufacturing, Inc., www.globalcasework.com
6. Imperial Mill & Fixtures, Inc.
7. JC Millwork, Inc., www.jccompany.org.
8. Jericho Woodworks, www.educationalcaseork.com
9. Jim R. Reynolds & Associates, Inc., www.jimreynolds.com
10. MGC, Inc., www.mgcinc.net.
11. South Texas Woodmill, Inc.
12. Stephens Industries Inc., www.stevensind.com
    a. Terrill Manufacturing, Company; San Angelo, Texas. www.terrillmfg.com
    b. TMI Systems Design Corp.; Dickinson, ND www.tmisystems.com
    c. Top Notch Cabinets and Installation, www.topnotch@aol.com
13. Victoria Cabinet Works; Victoria, Texas
14. Westmark Commercial Case Work, Houston, Texas www.westmarkproducts.com
15. Substitutions: Section 01 60 00 - Product Requirements.

B. Definitions: The following definitions apply to plastic laminate-clad casework:
1. Exposed portions of casework (Finish Surfaces) include surfaces visible when doors and drawers are closed. Bottoms of cases more than 4'-0" above floor, tops of cases less than 6′-6″ above floor, and visible members in open cases or behind glass doors shall be considered exposed.
2. Semi-exposed portions of casework includes those members behind opaque doors, such as shelves, divisions, interior faces of ends, case back, drawer sides, backs and bottoms, and back face of doors. Tops of cases 6'-6" or more above floor shall be considered semi-exposed.
3. Concealed portions of casework include sleepers, web frames, dust panels, and other surfaces not usually visible after installation.

2.02 COMPONENTS

A. Solid Lumber: AWI Custom Grade; maximum moisture content of 6-8 percent.

B. Plywood: AWI Grade B; wood veneer core; type of glue recommended for application.
   1. Furnish 7-ply veneer plywood for 3/4 inch (19.05 mm) thickness.
   2. Furnish 5-ply veneer plywood for 1/2 inch (12.7 mm) thickness.

C. Core Material: medium density fiberboard (MDF) average 54-lb. density manufactured from pre-consumer recycled wood and formaldehyde-free adhesive system; meeting requirements of ANSI A208.2-2009 and ASTM E84-09. Flame Spread rating of 25 or less, and Smoke Developed rating of 50 or less.

D. Particleboard: Not allowed.

E. High-Pressure Decorative Laminate: NEMA LD 3, GP50 for horizontal surfaces, GP28 for vertical surfaces, CL20 for cabinet liner surfaces, BK20 for undecorated backing sheets; color, pattern, and surface texture as indicated. Wilson-Art, Formica, Nevamar, or Pionite.
   1. Provide Wilson-Art Chemsurf or approved equivalent for all cabinet surfaces at science labs and prep rooms.

F. Epoxy Resin Countertops and Integral Sinks:
   1. Size: 1-inch thick x Maximum practicable lengths.
   2. Cast Epoxy Resin: Factory molded tops of modified epoxy resin chemical-resistant formulation, uniform mixture throughout full thickness. 14,000 psi compressive strength Color, non-glaring black.
   3. Basis of Design: Durcon as manufactured by Wilsonart, or approved equivalent.
   4. Sinks:
      a. Matching countertops in material and color. Molded in one piece with surfaces smooth, corners coved and bottom sloped to outlet. Minimum 1/2” thickness of same material as tops.
      b. Sizes: As indicated in the drawings.
      c. Outlets: 1-1/2 inch (12.7 mm) diameter, 6 inch (152.4 mm) length, fabricated of silicon iron, cast epoxy resin, or stainless steel.
      d. Overflows: Standard beehive or open top design and with separate strainer. Height 2-inches less than sink depth.
   5. Mechanical Service Fixtures: Provided under Div. 22

2.03 ACCESSORIES

A. Adhesive for High Pressure Decorative Laminates: FS A-A-1936 contact adhesive or white PVA glue.

B. PVC Edge Trim: Extruded rigid PVC; smooth finish, of width to match component thickness; standard or custom color as required to match plastic laminate;
   1. Minimum 1-mm thickness at doors and drawers.

C. Glass: Clear tempered double strength, as specified in Section 08 80 00.

D. Fasteners and Anchors:
   1. Fasteners: Hot dipped or Electro galvanized steel for high humidity and treated wood locations, unfinished steel elsewhere.
      a. Nails and Staples: ASTM F1667.

E. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application.

F. Concealed Joint Fasteners: Threaded steel.

G. Grommets: Metal, nylon, or high strength plastic material for cut-outs.

H. Hardware: Manufacturer's standard commercial-quality, heavy-duty hardware complying with requirements indicated, constructed with base materials and finishes as selected from manufacturer’s full range of standard materials and finishes.

1. Butt Hinges: Semi-concealed, 5-knuckle hinges complying with BHMA A156.9, Grade 1, constructed from minimum 0.095-inch tempered steel, with antifriction bearings and rounded tips. Provide minimum 170º door swing. Provide 2 hinges for doors less than 48 inches (1219.2 mm) high and 3 hinges for doors 48 inches or more high.
    a. No European style hinges.
2. Pulls: Solid metal, for drawers and swing doors, mounted with 2 screws fastened from back. For sliding doors, provide recessed flush pulls. Provide 2 pulls for drawers 30" wide and wider. 4” wire design pulls, brushed chrome finish.
3. Door Catches: Dual self-aligning permanent magnet type. Provide 2 catches on doors over 4 feet (121.92 cm) high.
4. Drawer Slides:
    a. Allow full extension for drawer slides.
    b. Light and Medium Duty Drawers, provide one of the following:
        1) Accuride 3832, KV 8400 or approved equivalent by Blum or Royal. Full extension all ball bearing 100 lbs. load rated with lever disconnect and positive outstop preventing inadvertent drawer removal.
        2) 100 pound load rated epoxy powder coated steel, bottom corner mounted with smooth, quiet nylon rollers. Positive stop in both directions and self-closing feature.
5. File Drawer and Wide Heavy Duty Drawers, provide one of the following:
    a. Accuride 4032, KV 8400 or approved equivalent equivalent by Blum or Fulterer. Full extension all ball bearing 150 lbs. load rated with rail mount, hold-in detent, progressive movement and positive outstop preventing inadvertent drawer removal.
    b. 150-pound load rated epoxy powder coated steel, bottom corner mounted with smooth, quiet nylon rollers. Positive stop in both directions and self-closing feature.
6. Label Holders: Provide where indicated, size to receive standard label cards approximately 1” x 2” nominal size, finished to match other exposed hardware.
7. Locks: 5-pin tumbler cam type of metal case construction. Provide locks only where indicated in the drawings.
    a. Provide with removable core and metal strike. All casework locks within a room keyed alike, each room keyed differently.
    b. Provide 2 keys per room for rooms with casework locks. Cylinder face and keys engraved with matching numbers.
    c. Brass body with dull chrome finish. Core removable and interchangeable with control key. Master key operates all locks
8. Sliding Door Hardware Sets: Manufacturer’s standard, to suit type and size of sliding door units.
9. Cabinet Base: Resilient base provided under Section 09 65 00 on exposed sides, fronts, and backs of floor-mounted cabinets.
10. Adjustable Shelf Supports: BHMA B84073, wrought steel, mortise mounted or Injection molded transparent polycarbonate friction fit into cabinet end panels and vertical dividers, adjustable on approximately 1.375-inch centers. Each shelf support to have two integral support pins, 5mm minimum diameter, to interface predrilled holes and to prevent rotation

of support. Provide four supports per shelf. The support automatically adapts to 3/4-inch or 1-inch thick shelving and provides non-tip feature for shelving. Supports shall be designed so that they may be field fixed if desired. Structural load to 1200 pounds without failure (300 pounds per support).

2.04 FABRICATION

A. General Cabinet Requirements:
   1. Cabinet bases shall be fabricated from solid lumber.
   2. Frames and structural parts of cabinets shall be fabricated from plywood or solid lumber.
   3. Face, side, and divider panels shall have cores fabricated from minimum 3/4 inch (19.05 mm) thick medium density fiberboard or plywood.
      a. Back panels shall be fabricated from 1/2-inch thick medium density fiberboard.
      b. or plywood.
   4. Doors, shelves, drawer fronts, and tall cabinet tops shall have cores fabricated from minimum 3/4 inch (19.05 mm) thick medium density fiberboard.
   5. 3/4” thick plywood when used for cabinet bodies and shelving.
   6. Drawer sides shall be fabricated from sealed hardwood lumber, and bottoms shall be fabricated from minimum 1/2-inch thick sealed medium density fiberboard.
   7. Multiple shelf cabinets 84” tall and greater than 36” wide to have fixed center shelf.

B. Laminate Cladding:
   1. Countertops and splashes: GP50 or PF42.
   2. Exposed surfaces other than countertops and splashes: GP28.
   3. Semi-exposed surfaces: CL20.
   4. Concealed faces of exposed and semi-exposed surfaces: CL20 or BK20; all laminated construction shall be balanced and edge banded.

C. Edge Banding:
   1. Countertops and splashes: PVC, 3-mm.
   2. Doors, shelves, drawer fronts, and face frames of open shelving units: PVC, 3-mm.
   3. Face frames other than open shelving units, and tops and bottoms of drawers: PVC, 0.04 inch (1 mm).

D. Countertop Construction:
   1. Size: Maximum practicable lengths.
   2. Thickness: Nominal 1-1/4 inch (6.35 mm); provide front and end overhang of 1-inch over base cabinets.
      a. Rounded Corners: Provide min. 1-inch radius at all outside corners.
   3. Plastic Laminate: Shop-bond with waterproof adhesive to 1-1/8 inch (29 mm) thick medium density fiberboard. At countertops with sinks or other plumbed fixtures, use only marine grade plywood full width of the sink plus 12″ to either side. Apply backing sheet to underside of countertop. Edge exposed edges of countertop and openings with same plastic laminate used for countertops.
      a. Splash: Construct splashes of 3/4 inch (19.05 mm) thick medium density fiberboard.
      b. Use marine-grade plywood for plastic laminate cores for countertops and splashes at sink cabinets.

4. At epoxy resin tops provide front and end overhang of 1 inch (25.4 mm) over base cabinets, formed with continuous drip groove on under surface 1/2 inch (12.7 mm) from edge. Cast surfaces very smooth, with factory cut-outs for sinks and drip grooves.
5. Shop-assemble casework for delivery to site in units easily handled and to permit passage through building openings.

E. Door and Drawer Fronts: Flush overlay style.

F. Fit exposed plastic laminate edges with PVC edging. Use one piece for full length only.

G. When necessary to cut and fit on site, fabricate materials with ample allowance for cutting. Furnish trim for scribing and site cutting.

H. Apply high pressure decorative laminate finish in full uninterrupted sheets consistent with manufactured sizes. Fit corners and joints hairline; secure with concealed fasteners Locate counter butt joints minimum 2 feet (60.96 cm) from sink cut-outs.

I. Apply laminate backing sheet to reverse side of plastic laminate finished surfaces.

J. Provide all cutouts for plumbing fixtures, inserts, appliances, outlet boxes, and other fixtures and fittings. Verify locations of cutouts from on-site dimensions.

K. Shop glaze glass materials using Hafele plastic blead glazing insert or interior dry method specified in Section 08 80 00.

L. Clear seal or paint concealed (back and side) edges of shelving to match shelving laminate (instead of plastic laminate)

M. Hardwood bottoms only at drawers.

PART 3 EXECUTION

3.01 EXAMINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Verify adequacy of backing and support framing.

C. Verify location and sizes of utility rough-in associated with work of this section.

3.02 INSTALLATION

A. Set and secure casework in place; rigid, plumb, and level.

B. Use concealed joint fasteners to align and secure adjoining cabinet units, counter tops, and splashes.

C. Carefully scribe casework abutting other components, with maximum gaps of 1/32 inch (0.79 mm). Do not use additional overlay trim for this purpose.

D. Base Cabinets:

1. Fasten each individual cabinet to floor at toe space, with fasteners spaced 24 inches (609.6 mm) o.c. Bolt continuous cabinets together. Secure individual cabinets with not less than 2 fasteners into floor, where they do not adjoin other cabinets.
2. Where required, assemble units into one integral unit with joints flush, tight, and uniform. Align similar adjoining doors and drawers to a tolerance of 1/16 inch (1.59 mm).

E. Wall Cabinets:
1. Securely fasten to solid supporting material, not plaster, lath, or wallboard. Anchor, adjust, and align wall cabinets as specified for base cabinets.
2. Reinforcement of stud walls to support wall-mounted cabinets will be performed during wall erection by trade involved, but responsibility for accurate location and sizing of reinforcement is part of this Work.

F. Adjust casework and hardware so that doors and drawers operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

G. Countertops:
1. Field Jointing: Where practicable, make in same manner as factory jointing using dowels, splines, adhesives, and fasteners recommended by manufacturer. Locate field joints as shown on accepted shop drawings, factory prepared so there is no job site processing of top and edge surfaces.
2. Fastenings: Use concealed clamping devices for field joints, located within 6 inches (152.4 mm) of front, at back edges and at intervals not exceeding 24-inches. Tighten in accordance with manufacturer's instructions to exert a constant, heavy clamping pressure at joints. Secure tops to cabinets with zee-type fasteners or equivalent, using 2 or more fasteners at each front, end, and back.
3. Workmanship: Abut top and edge surfaces in one true plane, with internal supports placed to prevent any deflection. Provide flush hairline joints in top units using clamping devices.
4. After installation, carefully dress joints smooth, remove any surface scratches, clean and polish entire surface.
5. Provide holes and cutouts as required for mechanical and electrical service fixtures.
6. Provide scribe moldings for closures at junctures of top, curb and splash with walls as recommended by manufacturer for materials involved. Use permanently elastic sealing compound recommended by manufacturer.
7. Seal space between countertop backsplash and wall with sealant as specified in Section 07 90 00.

H. Accessories: Install in accordance with manufacturer's directions. Turn screws to a flat seat; do not drive. Adjust moving parts to operate freely without excessive bind.

3.03 ADJUSTING

A. Section 01 70 00 - Execution and Closeout Requirements: Testing, adjusting and balancing.

B. Adjust moving or operating parts to function smoothly and correctly.

3.04 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean casework, counters, shelves, hardware, fittings, and fixtures.

END OF SECTION

SECTION 12 35 00

MANUFACTURED MUSICAL INSTRUMENT STORAGE CABINETS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Musical instrument storage cabinet systems.

B. Related Sections:
   1. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood blocking for anchoring musical instrument storage cabinets.
   2. Section 09 21 16 - Gypsum Board Assemblies: Reinforcing in gypsum board partitions for anchoring musical instrument storage cabinets.

1.02 REFERENCES

A. American Laminators Assoc. Performance Standard ALA 1985.

B. ANSI - BHMA Standard A156.9, Grade 1.

1.03 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Product Data: For each type of product indicated.

C. Shop Drawings: Show fabrication and installation details for musical instrument storage cabinets. Include plans, elevations, sections, details, and attachments to other Work.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative of musical instrument storage cabinet manufacturer for installation and maintenance of units required for this Project.

B. Source Limitations: Obtain musical instrument storage cabinets through one source from a single manufacturer.

C. Product Designations: Drawings indicate sizes, configurations, and finish material of musical instrument storage cabinets by referencing designated manufacturer's catalog numbers. Other manufacturers' cabinets of similar sizes and door configurations, of same finish material, and complying with the Specifications may be considered.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver musical instrument storage cabinets only after painting, utility roughing-in, and similar operations that could damage, soil, or deteriorate cabinets have been completed in installation areas. If cabinets must be stored in other than installation areas, store only in areas where environmental conditions meet requirements specified in "Project Conditions" Article.

C. Keep finished surfaces covered with polyethylene film or other protective covering during handling and installation.

1.06 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of institutional cabinets that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
   1. Delamination of components or other failures of glue bond.
   2. Warping of components.
   3. Failure of operating hardware.
   4. Deterioration of finishes.

C. Warranty Period: Three years from date of Substantial Completion.

D. Warranty Period for Cabinet Shelving: Ten years from date of Substantial Completion.

1.07 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install musical instrument storage cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where musical instrument storage cabinets are indicated to fit to other construction, verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings.
   1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating musical instrument storage cabinets without field measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.08 COORDINATION

A. Section 01 30 00 - Administrative Requirements: Coordination and project conditions.

B. Coordinate layout and installation of metal framing and reinforcements in gypsum board assemblies for support of musical instrument storage cabinets.

1.09 SYSTEM DESCRIPTION

A. Design Requirements:

1. Provide one-piece high molecular polyethylene shelving with integral ventilation grooves, designed and engineered to withstand continuous use without surface or front edge breakdown.
2. Individual cabinets shall be manufactured with thermofused polyester laminated panels, finish both faces all components. All end panels to be factory jigged and drilled to accept unit-to-unit through-bolting: no conventional wood screws attaching units side-to-side will be permitted. Each cabinet will be furnished with an integral base and four (4) steel levelers accessible from within the unit but concealed in final installation.
    a. Provide wire grille hinged door panels as indicated the drawings. All hinges shall be structurally attached to vertical panels using engineered and tested through-bolt hardware that is welded to wire grille doors. Screw-mounted hinges not acceptable.

B. Manufacturer to Provide Documentation of Following Minimum Performance Requirements:
1. Molded plastic instrument storage shelf shall have a static load capacity of over 1,000 lbs.
2. Wire grille door hinge to be welded to door frame in five places, pull-tested to withstand 3,000 lbs.

PART 2 PRODUCTS

2.01 MUSICAL INSTRUMENT STORAGE CABINETS

1. Manufacturers:
    a. Melhart Music, www.melhart.com
    b. Stephens Industries Inc., www.stevensind.com
    c. TMI Systems Design Corp., www.tmisystems.com
    d. Wenger Corp., www.wengercorp.com
    e. Substitutions: Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Cabinet Wall Panels:
1. 3/4-inch thick industrial (cabinet) grade particleboard, minimum 48 pcf with thermoset polyester (melamine not acceptable) laminate on both sides for totally finished construction. No backer sheets or unfinished surfaces may be used on unexposed sides. Color: As selected by Architect from manufacturer’s full line of standard and custom colors.
    a. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.

B. Cabinet Shelving:
1. Cabinets up to 27 inches (685.8 mm) wide: One-piece high molecular blow-molded polyethylene with 1-3/- inch radius front edge. Mount to cabinet walls with one-piece molded rigid ST nylon clip. Shelf is replaceable without damage to adjacent surfaces. Doweled shelves will not be permitted.
2. Cabinets over 27 inches (685.8 mm) wide: One-piece high molecular formed polyethylene with radius front edge and 3/16" wall thickness. Ribbed for structural integrity. Supported by four structural tubular members 1-1/2" x 1" x 16-ga. wall thickness with 14-gauge welded end plates.

C. Doors:

1. Grille doors: Welded steel grille construction with powder coat finish, color as selected by Architect from manufacturer's full line of standard and custom colors. Welds at T-joints must be 360º.
    a. Hinges, 5-knuckle institutional type hinge, supplied by ISO 9002 vendor. Hinge will support 315 lbs. dynamic vertical load. Hinge pin shall be 2-3/4" long. Hinge welded to door frame in five places.
    b. Finish: Manufacturer's standard powder coat. Provide two hinges on compartment doors, four on full height doors.
2. Locking slide-bolt: All doors shall be provided with locking slide-bolt designed for padlocks, with formed steel strike plate through-bolt connected to cabinet end panel; 12-gauge steel. Provide clear plastic label holder for identification card insert. Finish: Manufacturer's standard powder coat.
3. Edging: Heat bonded 3mm beveled PVC edge-banding, machine applied using hot-melt adhesives, edges and corners machine profiled for safety, integral color to match door panels.

D. Finish Hardware:
1. Joinery Hardware: Two inch, 1/4-20 panel connectors with 0.59 inch (15 mm) head diameter, and steel thread inserts shall be utilized to join desired cabinets side-to-side; use factory jigged and drilled joinery holes.
2. Finish: Manufacturer's standard powder coat.
3. Cabinet levelers: Structural levelers each cabinet, accessible from within the unit when desired, concealed in complete installation; glides with minimum 3/8 inch (9.52 mm) diameter threaded rod mounted in steel corner brackets. Provide minimum four glides per cabinet, six glides for cabinets with divider panels.

E. Cabinet Back Panel: Standard cabinet back to be 1/4" thick prefinished hardboard, color: match interior of side and top panels.
1. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.

F. Vertical Closure Kit: Provide visual closure between wall and cabinet. Constructed of 3/4" thick thermoset polyester composite wood to match cabinet side panels.
1. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.

G. Horizontal Closure Kit: Provide visual closure between top of cabinet and soffit. Constructed of 3/4" thick thermoset polyester composite wood to match cabinet side panels.
1. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.

H. Top Back Filler Kit: Provide visual closure between back wall and top panel of cabinet. Constructed of 3/4" thick thermoset polyester composite wood to match cabinet top panels.
1. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.

I. Finished Back Panel: Provide panel to attach to cabinet back that is exposed. Constructed of 1/2" thick thermoset polyester composite wood to match cabinet.
1. Interior Composite Wood Products: Contain no added urea-formaldehyde resins.

J. Base Molding: ASTM F1861, Type TS (rubber, vulcanized thermoset), black, 4 inches (101.6 mm) high. Provide on fronts and exposed sides of floor-mounted cabinets.
1. Style: A, straight with no toe.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances, location of reinforcements, and other conditions affecting performance of musical instrument storage cabinets.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 CABINETS INSTALLATION

A. Install plumb, level, and true; shim as required, using concealed shims. Where musical instrument storage cabinets abut other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical.

B. Base Cabinets: Set cabinets straight, level, and plumb. Adjust subtops within 1/16 inch (1.59 mm) of a single plane. Fasten cabinets to partition framing, wood blocking, or reinforcements in partitions with fasteners spaced 24 inches (609.6 mm) o.c. Bolt adjacent cabinets together with joints flush, tight, and uniform. Align similar adjoining doors and drawers to a tolerance of 1/16 inch.
   1. Where base cabinets are not installed adjacent to walls, fasten to floor at toe space with fasteners spaced 24 inches (609.6 mm) o.c. Secure sides of cabinets to floor, where they do not adjoin other cabinets, with not less than two fasteners.

C. Wall Cabinets: Hang cabinets straight, level, and plumb. Adjust fronts and bottoms within 1/16 inch (1.59 mm) of a single plane. Fasten to hanging strips, masonry, partition framing, blocking, or reinforcements in partitions. Align similar adjoining doors to a tolerance of 1/16 inch.
   1. Fasten through back, near top and bottom, at ends, and not more than 16 inches (406.4 mm) o.c. with No. 10 wafer-head screws sized for 1-inch penetration into wood framing, blocking, or hanging strips; No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish; or toggle bolts through metal backing or metal framing behind wall finish.

D. Install hardware uniformly and precisely. Set hinges snug and flat in mortises, unless otherwise indicated. Adjust and align hardware so moving parts operate freely and contact points meet accurately. Allow for final adjustment after installation.
   1. Adjust cabinets and hardware so doors and drawers operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

3.03 CLEANING AND PROTECTING

A. Repair or remove and replace defective work as directed on completion of installation.

B. Clean finished surfaces touch up as required and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

C. Protection: Provide 6 mil (0.1524 mm) plastic or other suitable water-resistant covering over countertop surfaces. Tape to underside of countertop at a minimum of 48-inches o.c. Remove protection at Substantial Completion.

END OF SECTION

SECTION 12 56 51

MANUFACTURED LIBRARY FURNITURE

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Stationary wood shelving units with continuous plastic laminate tops.
   2. Mobile wood shelving units with individual plastic laminate tops.
   3. Plastic laminate custom library furnishings including circulation desk.

B. Related Sections:
   1. Section 06 10 53 - Interior Finish Carpentry and Millwork: For miscellaneous items of shop-fabricated millwork not included in this Section.
   2. Section 12 32 16 - Plastic Laminate-Clad Casework: For miscellaneous items of plastic laminate clad casework not included in this Section.

1.02 SUBMITTALS:

A. Product Data: Submit manufacturer's product literature for each type of library furniture item and installation accessory required.
   1. Submit written data on physical characteristics, load bearing capabilities and durability.

B. Maintenance Data: Include data in Maintenance Manual as specified in Division-1.

C. Maintenance Instructions: Submit manufacturer's printed instructions for maintenance of installed work, including methods and frequency recommended for maintaining optimum condition of wood and painted metal surfaces under anticipated use conditions. Include precautions against materials and methods which may be detrimental to finishes and performance.

D. Shop Drawings: Submit installation drawings showing location extent of library furniture. Indicate location and extent of wiring for manufacturer provided electrical components.

E. Samples for Initial Selection Purposes: Submit manufacturer's standard size samples of library furniture finishes, but not less than 3" X 3", including wood, plastic laminate, and painted surfaces. Provide samples showing full range of colors, textures and patterns available for each type of component required.

F. Samples for Verification Purposes: Submit 12" square samples of each wood, plastic laminate, and paint finish required, prepared from same material to be used for the work.

1.03 QUALITY ASSURANCE:

A. Manufacturer's Qualifications: Firm (material producer) with not less than 3 years of production experience, whose published literature clearly indicates general compliance of products with requirements of this section.

B. Installer's Qualifications: Firm specializing in furniture installation with not less than 2 years of experience in installation similar to those required for this project.

C. Single Source Responsibility: Provide material produced by a single manufacturer for all free-standing library furniture.

1.04 PRE-INSTALLATION MEETING

A. Section 01 31 19 – Project Meetings: Schedule and coordinate pre-installation meeting that includes the trade(s) for the work of this Section and other trades that whose work is related to the work of this Section.
   1. Convene minimum one week prior to commencing work of this Section.

1.05 DELIVERY, STORAGE AND HANDLING:

A. Deliver materials to project site in original factory wrappings and containers, clearly labeled with identification of manufacturer, brand name, and lot number. Store materials in original undamaged packages and containers, inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, humidity; laid flat, blocked off ground to prevent sagging and warping.

B. Comply with instructions and recommendations of manufacturer for special delivery, storage, and handling requirements.

1.06 SEQUENCING AND SCHEDULING:

A. Sequence library furniture installation with other work to minimize possibility of damage and soiling during remainder of construction period.

1.07 WARRANTY:

A. Special Project Warranty: Submit a written warranty, executed by the Contractor, Installer and the Manufacturer, agreeing to repair or replace units which fail in materials or workmanship within the specified warranty period.
   1. This warranty shall be in addition to and not a limitation of other rights the Owner may have against the Contractor under the Contract Documents.
      a. Control Manufacturer’s Warranty: Minimum 5-years after the date of Substantial Completion for the Project, including all parts and labor. Life of elevator system software updates.

1.08 MAINTENANCE:

A. Replacement Materials: Furnish accessory components as required. Furnish replacement materials from same production run as materials installed. Package replacement materials with protective covering, identified with appropriate labels.
   1. At Project close-out provide direct to the Owner an additional six (6) book shelves, packaged and labeled for storage, for each unique shelf size installed. Obtain receipt.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
   1. Brodart Company; www.brodart.com
   2. Buckstaff Company; www.buckstaff.com
   3. Library Bureau www.librarybureau.com
   4. Russwood Library Furniture, www.russwood.net
   5. TEC Educational Furniture; www.tecedfurniture.com
   6. Tesco Industries; www.tesco-ind.com
   7. Worden Co.; www.wordencompany.com

2.02 MATERIALS:

A. Solid Wood: Plain sliced select Red or White Oak, free from imperfections, thoroughly air seasoned, kiln dried.

B. Lumber Core Stock: Free from imperfections, thoroughly air seasoned stock, kiln-dried to moisture content of 5-7%, sealed top, bottom and exposed edges.
   1. Exposed material to match solid wood species, color and finish.

C. Plywood: Constructed with odd number of plies, all interior plies except core of center ply, occurring in pairs. Plies of each interior pair of same species, thickness and grain direction, placed on opposite sides of core. Grain direction of each ply at right angles to grain of adjacent plies, and edges of panels. All plies free of blisters, wrinkles, laps or other defects.
   1. Finish face ply to match solid wood species, color and finish.

D. Particleboard Core Stock: Medium density, complying with ANSI A208.1, 45 lbs./cu. ft. minimum average modulus of rupture of 2400 psi (16547.42 kPa), minimum average modulus of elasticity of 400,000 psi (2757904.00 kPa).

E. High Pressure Laminate: 0.050" thick, backing sheet not less than 0.020" thick, complying with NEMA LD 3 Standard.

F. Glue: Water-resistant resin adhesive which retains strength when subjected to thorough wetting and drying.

G. Exposed Veneers: Plain-sliced, AWI standard A grade, uniform even grain.

2.03 MANUFACTURED UNITS:

A. Provide library furniture items with the following details, in sizes, quantities and configurations as scheduled.
   1. Unit Tops: Minimum 1" thick, 5-ply Veneer Core Plywood construction, with 1" x 3" solid hardwood banding, face veneer on exposed surface, plain veneer on underside.
   2. Continuous Tops: All side-by-side units shall have continuous finished tops. Minimum 1" thick, 5-ply Veneer Core Plywood construction, with 1" x 3" solid hardwood banding, face

veneer on exposed surface, plain veneer on underside. Make finished tops as long as practicable without joints.

3. End Panels and Back Panel: Same construction as worksurface top; height and width for sizes scheduled.
4. Box Drawers: 1/2" solid hardwood sides, dovetailed and glued. 1/4" five ply hardwood bottom, fitted into dado, glued and blocked into place. Equipped with full extension drawer glides and stops to prevent accidental removal.
5. Letter File Drawers: 1/2" solid hardwood sides, dovetailed and glued. 1/2" five ply hardwood bottom- fitted into dado, glued and blocked into place. Equipped with full extension file drawer slides, 150 lb. load capability.
6. Kickbase: 4" rubber base to match rubber wall base specified in Section 09 65 00 - Resilient Flooring.
7. Sliders: Install non-marking nylon sliders on stationary casework bottoms for ease of relocation.

B. Mobile Shelving Units: Provide minimum 2” diameter hard rubber wheeled casters at 4-corners of each unit. Casters shall be locking type with foot lever.

C. Provide custom circulation desk as indicated in the drawings in finishes matching the library furniture
1. Include built-in book-return unit with depressible platform and rolling casters.

2.04 FINISHES:

A. Wood Finishes: Provide library furniture with wood finish as specified.
1. Wood finish as selected by Architect from manufacturer's standard finishes.

B. Metal Finishes: Provide metal finish complying with ANSI A156.18, as scheduled
1. Chrome: Mirror Polished.
2. Stainless Steel: Polished.

C. Plastic Laminate Finish: As selected by Architect from selected laminate manufacturer's full range of available color and finishes.

PART 3 EXECUTION

3.01 PREPARATION:

A. Verify that all library furniture components, including size and finish, are those specified before installing.

B. Verify that all required electrical hook-up provisions are in place prior to installing.

3.02 INSTALLATION:

A. Install furniture and accessories after finishing operations, including painting, have been completed.

B. Install furniture to comply with final layout drawings in strict compliance with manufacturer's printed instructions. Position units level, plumb; at proper location relative to adjoining units and related work. Adjust accessories to provide visually acceptable installation.

3.03 FIELD QUALITY CONTROL:

A. Remove and replace components which are chipped, scratched or otherwise damaged, or do not operate smoothly and which do not match adjoining work. Provide new matching units, installed as specified and in manner to eliminate evidence of replacement.

3.04 CLEANING:

A. Immediately upon completion of furniture installation, clean components and surfaces.

B. Remove surplus materials, rubbish and debris resulting from installation, upon completion of work and leave areas of installation in neat clean condition.

3.05 PROTECTION:

A. Protect furniture against damage during remainder of construction period. Advise Owner of additional protection needed to ensure that furniture will be without damage or deterioration at time of substantial completion.

END OF SECTION

SECTION 12 66 00

TELESCOPING STANDS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Wall-attached telescoping stands.
   2. Molded plastic bench seating modules.
   3. Delegated-design of the complete telescoping stand system, including all platforms, understructure, seating, and anchorage to the building structure.

B. Related Sections:
   1. Division 26 Sections: Power outlets for power-assistance unit.

1.02 DEFINITIONS

A. Operable systems of multiple-tiered bench seating on interconnected folding platforms that close, without being dismantled, into a nested vertical stack for storing or moving.

1.03 PERFORMANCE REQUIREMENTS

A. Structural Performance Characteristics: Engineer, fabricate, and install telescoping stands to withstand the design loads specified in NFPA 102, "Standard for Assembly Seating, Tents, and Membrane Structures," Chapter 5, "Folding and Telescopic Seating," without exceeding the allowable design working stresses of the materials involved, including anchors and connections. Apply each load to produce the maximum stress in each respective component of each telescoping stand unit.

1.04 PRODUCT-SPECIFIC SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Delegated-Design Submittal: Submit a comprehensive package for the telescoping stands, signed and sealed by the qualified professional engineer specified in the "Quality Assurance" article. The submittal shall include:
   1. Shop Drawings: Show plans, elevations, sections, fabrication details, anchorage details, and all attachments to building structure.
   2. Structural Calculations: Provide a comprehensive structural analysis demonstrating compliance with NFPA 102 and all other specified performance requirements and design loads.

C. Product Data for each type of telescoping stand specified, including details of construction relative to materials, dimensions of individual components, profiles, and finishes.

D. Shop Drawings showing fabrication and installation of telescoping stands including plans, elevations, sections, details of components, and attachments to other units of Work.

1. For installed products indicated to comply with certain design loadings, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

E. Samples for initial selection in the form of manufacturer's color charts consisting of actual units or sections of units showing the full range of colors, textures, and patterns available for each exposed material involving color selection.

F. Samples for verification of the following items, in the size indicated below. Prepare Samples from the same material to be used for the Work. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.
1. Plywood: 12 inch (304.8 mm) square samples of finished material.
a. Painted Steel: 6-inch square sample of painted steel sheet.
b. Colors for Plastic Benches: Manufacturer’s chain of plastic samples in full range of available colors.
c. Molded-Plastic Benches: (2) 6”x6” plastic sample panels per each color selected.

G. Qualification data for firms and persons specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

H. Maintenance data for telescoping stands, including detailed instructions for operation and annual inspection requirements of authorities having jurisdiction, to include in the operation and maintenance manual specified in Division 1.

1.05 QUALITY ASSURANCE

A. NFPA Standard: Comply with requirements of NFPA 102, "Standard for Assembly Seating, Tents, and Membrane Structures," Chapter 5, "Folding and Telescopic Seating," except where more stringent requirements are indicated or imposed by authorities having jurisdiction.

B. Installer Qualifications: Engage an experienced Installer to perform work of this Section who has specialized in installing types of telescoping stands similar to those required for this Project and who is acceptable to, or certified by, manufacturer of telescoping stands.

C. Professional Engineer Qualifications: A professional engineer who is legally authorized to practice in the jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of telescoping stands that are similar to that indicated for this Project in material, design, and extent.

D. Welding Standards: Comply with applicable provisions of AWS D1.1 "Structural Welding Code--Steel" and AWS D1.3 "Structural Welding Code - Sheet Steel."
1. Engage certified welders that have satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, have undergone recertification.

1.06 PROJECT CONDITIONS

A. Field Measurements: Check actual dimensions of construction affecting telescoping stands by accurate field measurements before fabrication and show recorded measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.07 ADDITIONAL MATERIALS

A. Provide to Owner boxed and sealed ten (10) additional plastic seat tops matcing those installed in the Project.

PART 2 PRODUCTS

2.01 TELESCOPING STANDS

A. Manufacturers
   1. Basis-of-Design: Sheridan Seating, Inc.; www.sheridanseating.com
   2. Hussey Seating Co.; www.husseyseating.com
   3. Interkal Inc.; www.interkal.com
   4. Irwin Seating Company; Folding Bleacher Company Subsidiary; www.foldingbleacher.com
   5. Substitutions: Section 01 60 00 - Product Requirements.

2.02 MATERIALS

A. Plywood: Softwood plywood panels, 5/- inch nominal thickness, 5-ply construction with grade designation American Plywood Association (APA) A-C Exterior, with solid cross bands, Group 1 veneer species for plies, and exterior glue, APA grade trademarked, complying with DOC PS 1 requirements, unless otherwise noted.

B. Structural Steel Shapes, Plates, and Bars: ASTM A-6, except where higher strength steel is indicated or standard with manufacturer.

C. Commercial-Quality Uncoated Steel Sheet: ASTM A366 cold-rolled steel sheet, or ASTM A569 hot-rolled steel sheet, stretcher leveled.

D. Structural-Quality Uncoated Steel Sheet: ASTM A570 hot-rolled steel sheet, or ASTM A 611 cold-rolled steel sheet, stretcher leveled.

E. High-Strength Uncoated Steel Sheet: ASTM A-607 hot or cold-rolled steel sheet, stretcher leveled.

F. Galvanized Steel Sheet: ASTM A 653, G60 coating designation, phosphatized, stretcher leveled.

G. Steel Tubing: ASTM A-500, cold formed; or ASTM A-501, hot formed.

H. Extruded Aluminum: ASTM B221, alloy as standard for manufacturer.

I. Polyethylene Plastic: ASTM D1248, Type III, Class B; molded, color-pigmented, textured, impact-resistant, structural formulation.

J. Fasteners: Vibration proof, of size and material standard with manufacturer.

2.03 COMPONENTS

A. General: Provide manufacturer's standard telescoping stands fabricated to comply with requirements indicated. Smoothly round corners, edges, and exposed fasteners to eliminate

snagging and pinching hazards. Form exposed sheet metal with flat, flush surfaces, true to line and level, and without cracking and grain separation. Perform welding by operators and processes complying with AWS requirements.

B. Bench Seats and Skirts: Bench Seats and Skirts: Provide seats with a uniform height of manufacturer's standard 17 to 18 inches (432 to 457 mm), complying with NFPA 102.
   1. Material: Polyethylene plastic in color selected by Architect from manufacturer's full range of colors.
   2. Profile: Contoured Seat Module, as standard with Basis of Design manufacturer.
   3. Depth: Nominal 10-inches unless otherwise indicated.

C. Cutouts for wheelchair accessible seating at first tier locations indicated. Provide front rails attached to front of second tier at rear of wheelchair accessible seating area. Provide full-width front closure panel at cutout that matches decking construction and finish and extends from underside of second tier to 1-1/2 inches (38 mm) from finished floor.

D. Footrests: Fabricate fully cosed footrests from plywood, with finish selected by Architect.

E. Understructure: Fabricate understructure from structural steel members of size, spacing, and form required to support design loads.

F. Cantilever bench seat supports to produce toe space uninterrupted by vertical bracing.

G. Support Column Wheels: Provide manufacturer's non-marring, soft, rubber-face wheel assembly under each support column. Include wheels of size, number, and design required to support stands and to achieve smooth operation without damage to flooring surface, but not less than 4 per column or less than 3-1/2 inches (89 mm) in diameter and 1 inch (25.4 mm) wide.

H. Aisles: Fabricate stands with the following aisle configuration, at locations and of widths indicated:
   1. Footrest-Level Configuration: Interrupt seats to provide aisle walking surfaces at footrest level.

I. Row-Spacing: Fabricate units with row spacing of manufacturer's standard nominal [26 inches (660 mm).

J. Row-Rise: Fabricate units with row rise of manufacturer's standard nominal 9-5/8 to 10-1/2 inches (244 to 267 mm).

K. Operation: Provide telescoping stands incorporating manufacturer's standard system of seating and understructure members that permit opening and closing of adjacent rows, allow individual and collective rows to be locked open for use, and close with vertical faces of upper skirts in the same vertical plane.
   1. Manual Operation: Provide manufacturer's standard pair of operating handles to attach under the first-row kick board for manual operation.
      a. Provide manufacturer’s portable electric tractor system (“mule”) for stand-up power-assist for opening and closing of seating sections.

L. Types of Telescoping Stands: Provide assemblies of the following types, fabricated in lengths and number of rows indicated:
   1. Wall-Attached Type: Construct stands to provide for permanent attachment of rear of understructure to wall construction.

2. Manual-rotate end and aisle railings.

M. Accessories: Provide the following accessories of manufacturer's standard design and construction at locations indicated or required to comply with referenced code standard:
1. Nonslip abrasive tread surfaces at vertical aisles.
2. Intermediate aisle steps, fully enclosed, at each vertical aisle.
3. Hinged front steps, fully enclosed, at each vertical aisle, that flip up on hinges and store between first and second row of seating.
4. Non-removable folding aisle handrails located at centerline of each vertical aisle and discontinuous with gaps or breaks at intervals not exceeding 5 rows.
5. End railings of non-removable, self-storing type.

2.04 STEEL FINISHES

A. Surface Preparation: Solvent-clean surfaces to comply with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel complying with SSPC-SP 5 (White Metal Blast Cleaning) or SSPC-SP 8 (Pickling).

B. Rust-Inhibitive Finish: Immediately after cleaning and pretreating, apply manufacturer's standard rust-inhibitive finish to exposed and concealed metal surfaces including understructure, except where other types of finishes are indicated.
1. Powder-Coat Finish: Immediately after cleaning and pretreating, apply a factory-applied, thermoset powder-coat finish to all exposed and concealed metal surfaces of the understructure. Color as selected by Architect from manufacturer's standard range.

2.05 WOOD FINISHES

A. Transparent Finish: Prepare surfaces by machine sanding, supplemented by hand sanding where required, followed by application of sealer coats and transparent topcoats of type, in number, and by process standard with manufacturer. Apply to wood surfaces, except where otherwise indicated.

B. Painted Plywood: Manufacturer's standard wear-resistant finish in manufacturer's standard color.

PART 3 EXECUTION

3.01 EXAMINATION

A. Examine areas where telescoping stands are to be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of telescoping stands. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install telescoping stands to comply with manufacturer's instructions and Shop Drawings. Provide accessories indicated and anchors, fasteners, inserts, and other items required for installing and attaching units to adjoining construction.

3.03 ADJUSTING AND CLEANING

A. On completion of installation, including work of other trades, lubricate, test, and adjust each telescoping stand unit to operate easily and to comply with manufacturer's specifications.

B. Clean installed telescoping stands on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to demonstrate and train Owner's maintenance personnel as specified below.
   1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   2. Train Owner's maintenance personnel on procedures and schedules related to operation, troubleshooting, servicing, inspection, and maintenance.

B. Review data in the operation and maintenance manuals. Refer to Division 1 Section "Contract Closeout."

C. Schedule training with Owner, through Architect, with at least 7 days' advance notice.

3.05 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure telescoping stands are without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 12 93 00

SITE FURNISHINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Bicycle racks.

1.02 SUBMITTALS

A. Product data for each type of outdoor furnishings specified, with installation instructions for each unit built-in or connected to other construction. Include methods of installation for each type of substrate.

B. Shop drawings showing installation details of accessories permanently affixed to construction, including full scale installation details of special conditions.

C. Samples for initial selection purposes consisting of manufacturer's standard size samples showing full range of colors, textures, and patterns available for each type of accessory required.

D. Samples for verification purposes in full size units of each type of building accessory indicated.

1.03 QUALITY ASSURANCE

A. Manufacturer Qualifications: Firm (material producer) with not less than 3 years of production experience, who’s published literature clearly indicates general compliance of products with requirements of this section.

B. Single Source Responsibility: Provide material produced by a single manufacturer for each outdoor furnishing type.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in original factory wrappings and containers, clearly labeled with identification of manufacturer, brand name, and lot number. Store materials in original undamaged packages and containers, inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity. Store materials laid flat and blocked off from the ground or slab to prevent sagging and warping.

B. Comply with instructions and recommendations of manufacturer for special delivery, storage, and handling requirements.

1.05 SEQUENCE AND SCHEDULING

A. Sequence outdoor furnishing installation with other work to minimize possibility of damage and soiling during remainder of construction period.

1.06 MAINTENANCE

A. Maintenance Instructions: Submit manufacturer's printed instructions for maintenance of installed work, including methods and frequency recommended for maintaining optimum condition under anticipated use conditions. Include precautions against materials and method which may be detrimental to finishes and performance.

B. Deliver extra materials to Owner. Furnish replacement materials described below from same production run as materials installed. Package replacement materials with protective covering, identified with appropriate labels.
   1. For each item indicated, furnish quantity of units equal to 5 percent of amount installed.

PART 2 PRODUCTS

2.01 COMPONENTS

A. Bicycle Racks:
   1. Formed steel pipe, nominal 2 inch (50.8 mm) diameter Sched.40, seamless, embedded in concrete footings at each end; capacity of 13 bikes; galvanized finish.
      a. Furnish 1/2-inch diameter lock bar welded to each vertical member.
   2. Basis-of-Design: Bike Security Racks Co., www.bikeracks.com, Model BS-12-AE.

2.02 FABRICATION

A. Provide accessory items, both free standing and permanently installed, equipped with functions as specified. Fabricate units with tight seams and joints, exposed metal edges rolled. Manufacturer or product identification on exposed surfaces is unacceptable. Provide products with smooth welds, consistent finish with no evidence of wrinkling, chipping, uneven coloration, dents, or other imperfections.

PART 3 EXECUTION

3.01 INSTALLATION

A. Verify that materials are those specified before installing.

B. Install outdoor furnishings after other finishing operations, including painting, have been completed.

C. Site Furnishing Units: Install accessories complying with manufacturer's printed instruction, using fasteners as recommended by manufacturer as appropriate to substrate.

D. Adjust site furnishing items for proper operation. Clean and polish exposed surfaces, using materials and methods recommended by the manufacturer.

3.02 PROTECTION

A. Protect site furnishings against damage during remainder of construction period, complying with manufacturer's directions.

END OF SECTION

SECTION 14 24 23

MRL HYDRAULIC PASSENGER ELEVATORS

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes: Hydraulic passenger elevators as shown and specified. Elevator work includes:
   1. Type: Standard capacity pre-engineered hydraulic passenger elevators with finished cab interiors.
   2. Elevator car enclosures, hoistway entrances, and signal equipment, 2 or 3-stage jacks.
   3. Equipment, machines, controls, systems and devices as needed for safely operating the specified elevators at their rated speed and capacity.
   4. Accessibility provisions for physically disabled persons.
   5. Materials and accessories as required to complete the elevator installation.
   6. Emergency Communication System: Integrated emergency telephone system as manufactured by Honeywell or Bosch, coordinated with the elevator control system.

B. Related Sections:
   1. Section 03 30 00 - Cast-In-Place Concrete: Installing inserts, sleeves, and anchors in concrete. Concrete for foundation and pit.
   2. Division 5 Sections - Structural Steel and Metals:
      a. Providing hoist beams, pit ladders, steel framing, auxiliary support steel and divider beams for supporting guide-rail brackets.
      b. Providing steel angle sill supports and grouting hoistway entrance sills and frames.
   3. Section 07 13 00 - Sheet Waterproofing: Waterproofing of elevator pits.
   4. Division 08 - Access Control System: Elevator manufacturer to provide and install hall control stations coordinated with Owner’s key control system for elevator access.
   5. Division 9 Sections - Finishes:
      a. Providing elevator car finish flooring and field painting of unfinished primed ferrous materials.
      b. Gypsum Board Assemblies: Rated shaft walls where indicated.
   6. Division 22 Sections - Plumbing:
      a. Sump pump and oil interceptor.
   7. Division 26 Sections - Electrical:
      a. Providing electrical service to elevators, including fused disconnect switches.
      b. Emergency power supply, transfer switch and auxiliary contacts.
      c. Heat and smoke sensing devices.
      d. Convenience outlets and illumination in hoistway and pit.
      e. CAT5E and coax cabling in travelway for camera and telephone.

C. Other Related Work Not Included in This Section: The following work is provided by other trades in accordance with the requirements of the Model Building Code and ANSI A17.1 Code.
   1. Elevator hoist beam to be provided at top of elevator shaft. Beam to accommodate proper loads and clearances for elevator installation and maintenance.

a. Include all inserts, anchors, bearing plates, brackets, supports, and bracing including all setting templates and diagrams for placement

2. Hoistway walls with a minimum two-hour fire rating. Hoistway shall be clear and plumb with variations not to exceed 1/2” at any point.
3. Elevator hoistways to have temporary barricades as required.
4. Install bevel guard at 75 degrees on all recesses, projections or setbacks over 2” (4” for A17.1 2000 areas) except for loading or unloading.
5. Provide rail bracket supports at pit, each floor and roof. For guide rail bracket supports, provide divider beams between hoistway at each floor and roof.
6. Pit floor shall be level and free of debris. Reinforce dry pit to sustain normal vertical forces from rails and buffers.
7. Where pit access is by means of the lowest hoistway entrance, a vertical ladder of non-combustible material extending 42” minimum (48” minimum for A17.1-2000 areas) shall be provided at the same height above sill of access door or handgrips.
8. Access to the machinery space must be in accordance with the governing authority or code.
9. Provide cutouts as required for oil line and wiring duct, coordinated with elevator contractor at the building site. Final sealing of all penetrations.
10. All wire and conduit shall run remote from the hoistway. Final sealing of all penetrations in hoistway.
11. When heat, smoke, or combustion sensing devices are required contacts on the sensors shall be sized for 120 volt D.C.
12. Install and furnish finished flooring in elevator cab.
13. Finished floors and entrance walls shall not be constructed until after sills and door frames are in place. Coordinate rough opening size with elevator contractor. When drywall construction is used, provide cold-form metal framing as required to maintain fire resistance rating.
14. Where drywall construction is used for front walls, it shall be of sufficient strength to maintain the doors in true lateral alignment. Coordinate with elevator contractor.
15. Before erection of rough walls and doors, erect hoistway sills, headers, and frames. After rough walls are finished, erect fascias and toe guards. Set sill level and slightly above finished floor at landings.
16. To maintain legal fire rating in masonry construction, door frames shall be anchored to walls and properly grouted in place.
17. The elevator wall shall interface with the hoistway entrance assembly and be coordinated with the elevator contractor’s requirements.
18. Fill and grout around entrances as required.
19. Elevator sill supports shall be provided at each opening.
20. All walls and sill supports must be plumb where openings occur.
21. Jack Hole: Not applicable.
22. Locate a light fixture and convenience outlet in pit with switch located adjacent to the access door.
23. A light switch and fused disconnect switch for each elevator shall be located per the National Electrical Code (NFPA No. 70).
24. Provide a light outlet for each elevator in center of hoistway. Coordinate location with elevator contractor.
25. For signal systems and power operated door provide ground and branch wiring circuits, including main line switch. For car light and fan provide a feeder and branch wiring circuits, including main line switch.

26. Adjust wall thicknesses shown with actual fixture requirements. Coordinate with elevator contractor.
27. Provide supports, patching and recesses to accommodate hall button boxes, signal fixtures, etc.
