- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.4 ADDITIONAL REQUIREMENTS FOR COMMERCIAL KITCHEN HOOD EXHAUST DUCT

- A. Install commercial kitchen hood exhaust ducts without dips and traps that may hold grease and sloped a minimum of 2 percent to drain grease back to the hood.
- B. Install fire-rated access panel assemblies at each change in direction and at maximum intervals of 20 feet in horizontal ducts, and at every floor for vertical ducts, or as indicated on Drawings. Locate access panel on top or sides of duct a minimum of 1-1/2 inches from bottom of duct.
- C. Do not penetrate fire-rated assemblies except as allowed by applicable building codes and authorities having jurisdiction.

3.5 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

3.6 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Where practical, install concrete inserts before placing concrete.

2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
 5. For fastening of sheet metal support straps on each side of the duct, provide (2) two sheet metal screws on the side of the duct and (1) one on the bottom of the duct for a total of (6) six sheet metal screws for maximum fastening of strap to sheet metal duct.
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1 (Table 5-1M), "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum interval of 16 feet.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.7 CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.8 PAINTING

- A. Paint all outdoor ductwork, exposed ductwork and exterior of metal ducts that are visible through cloud ceilings, registers, and grilles, etc. and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer; refer to paint manufacturer's instructions to prevent peeling. Coordinate final paint color with architect. Paint materials and application requirements are specified in Division 09 painting Sections.

3.9 DUCT STORAGE / CLEANING

- A. Ductwork shall be kept clean at all times. Ductwork stored on the job site shall be placed a minimum of 4" above the floor and shall be completely covered in plastic with no exposed ends. Installed ductwork shall be protected with plastic. Do not install the ductwork if the building is not "dried-in". If this is required, the entire lengths of duct shall be covered in plastic for protections. The Owner / Engineer shall periodically inspect that these procedures are followed. If deemed unacceptable, the Contractor shall be required to clean the duct system utilizing NADCA certified Contractor.

- B. The working area shall be clean, dry and the ductwork protected from dust. Protective coverings shall only be removed immediately before installation and inspected to determine if additional wipe down is necessary.

3.10 START UP

- A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

3.11 DUCT SCHEDULE

- A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:
 - 1. All exposed ducts in spaces such as but not limited to: Gymnasiums, Natatoriums, Cafeteria's, Libraries, etc.: Double wall insulated round ductwork.
- B. Supply Ducts:
 - 1. Ducts Connected to Fan Coil Units, Split-DX System Air Units, Furnaces, Heat Pumps, and Terminal Units:
 - a. Pressure Class: Positive 1-inch wg.
 - b. Minimum SMACNA Seal Class: C.
 - c. SMACNA Leakage Class for Rectangular: 24.
 - d. SMACNA Leakage Class for Round: 12.
 - 2. Ducts Connected to Constant-Volume Air-Handling and Rooftop Units:
 - a. Pressure Class: Positive 2-inch wg.
 - b. Minimum SMACNA Seal Class: B.
 - c. SMACNA Leakage Class for Rectangular: 12.
 - d. SMACNA Leakage Class for Round: 6.
 - 3. Ducts Connected to Variable-Air-Volume Air-Handling and Rooftop Units:
 - a. Pressure Class: Positive 4-inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 6.
 - d. SMACNA Leakage Class for Round: 3.
- C. Return and Outside Air Ducts:
 - 1. Ducts Connected to Fan Coil Units, Split-DX System Air Units Furnaces, Heat Pumps, and Terminal Units:
 - a. Pressure Class: Positive or negative 1-inch wg.
 - b. Minimum SMACNA Seal Class: C.
 - c. SMACNA Leakage Class for Rectangular: 24.
 - d. SMACNA Leakage Class for Round: 12.
 - 2. Ducts Connected to Air-Handling and Rooftop Units:
 - a. Pressure Class: Positive or negative 2-inch wg.
 - b. Minimum SMACNA Seal Class: B.

- c. SMACNA Leakage Class for Rectangular: 12.
- d. SMACNA Leakage Class for Round: 6.

D. Exhaust Ducts:

1. Ducts Connected to Fans Exhausting (ASHRAE 62.1, Class 1 and 2) Air:
 - a. Pressure Class: Negative 1-inch wg.
 - b. Minimum SMACNA Seal Class: C if negative pressure, and A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: 12.
 - d. SMACNA Leakage Class for Round: 6.
2. Ducts Connected to Air-Handling and Rooftop Units:
 - a. Pressure Class: Positive or negative 2-inch wg.
 - b. Minimum SMACNA Seal Class: B if negative pressure, and A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: 12.
 - d. SMACNA Leakage Class for Round: 6.
3. Ducts Connected to Commercial Kitchen Hoods: Comply with NFPA 96.
 - a. Exposed to View: 18-gauge Type 304, stainless-steel sheet, No. 4 finish.
 - b. Concealed: 16-gauge Carbon-steel sheet.
 - c. Continuously welded seams and joints
 - d. Pressure Class: Positive or negative 2-inch wg.
 - e. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
 - f. SMACNA Leakage Class: 3.
4. Ducts Connected to Dishwasher Hoods:
 - a. 18-gauge Type 304, stainless-steel sheet.
 - b. Exposed to View: No. 4 finish.
 - c. Concealed: No. 2D finish.
 - d. Continuously welded seams and joints
 - e. Pressure Class: Positive or negative 2-inch wg.
 - f. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
 - g. SMACNA Leakage Class: 3.
5. Ducts Connected to Shower Return air grilles:
 - a. 18-gauge Type 304, stainless-steel sheet.
 - b. Exposed to View: No. 4 finish.
 - c. Concealed: No. 2D finish.
 - d. Continuously welded seams and joints
 - e. Pressure Class: Positive or negative 2-inch wg.
 - f. Minimum SMACNA Seal Class: Welded seams, joints, and penetrations.
 - g. SMACNA Leakage Class: 3.

E. Intermediate Reinforcement:

1. Galvanized-Steel Ducts: Galvanized steel or carbon steel coated with zinc-chromate primer.
2. Stainless-Steel Ducts:

- a. Exposed to Airstream: Match duct material.
 - b. Not Exposed to Airstream: Match duct material.
 3. Aluminum Ducts: Aluminum or galvanized sheet steel coated with zinc chromate.
- F. Elbow Configuration:
 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
 2. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
 - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
 1. Radius-to Diameter Ratio: 1.5.
 - b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
 - c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam or welded.
- G. Branch Configuration:
 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
 - a. Rectangular Main to Rectangular Branch: 45-degree entry.
 - b. Rectangular Main to Round Branch: Spin in.
 2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
 - a. Velocity 1,000 fpm or Lower: 90-degree tap.
 - b. Velocity 1,000 to 1,500 fpm: Conical tap.
 - c. Velocity 1,500 fpm or Higher: 45-degree lateral.

END OF SECTION 23 31 13

SECTION 23 31 18- FABRIC DUCT

PART 1-GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2. DESCRIPTION OF WORK

- A. Extent of non-metal ductwork is indicated on drawings and by requirements of this section.
- B. Types of non-metal ductwork required for this project include the following:
 - 1. Fabric Air Dispersion Products suitable for Natatoriums and Gymnasiums.

1.3. QUALITY ASSURANCE

- A. Building Codes and Standards:
 - 1. Product must be Classified by Underwriter's Laboratories in accordance with the 25/50 flame spread / smoke developed requirements of NFPA 90-A and UL 2518.
 - 2. All product sections must be labeled with the logo and classification marking of Underwriter's Laboratories.
- B. Design & Quality Control
 - 1. Manufacturer must have documented design support information including duct sizing; vent, orifice, and/or nozzle location; vent, orifice, and/or nozzle sizing; length; and suspension. Parameters for design, including maximum air temperature, velocity, pressure and textile permeability, shall be considered and documented.
 - 2. Manufacturer's Environmental Product Declaration (EPD) must be inclusive of the following:
 - a. Fabric.
 - b. Cutting, sewing, processing of DuctSox.
 - c. Zippers.
 - d. Metal suspension system parts and framework (if applicable).
 - e. Energy, water, recycled & waste of plant processing fabric & suspension.
 - f. Complete packaging including boxes, bags & staples.
 - g. Transportation.

1.4. SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: Submit manufacturer's specifications on materials and manufactured products used for work of this section.

- C. Building Code Data: Submit UL file number under which product is Classified by Underwriter's Laboratories for both NFPA 90-A and UL 2518.
- D. Provide detailed drawings confirming configuration of Textile Dispersion System (diameter, lengths, airflow, pressure, and textile permeability).
- E. Provide detailed installation instructions for components to be installed.
- F. Provide warranty and maintenance documentation.
- G. Provide product's Environmental Product Declaration (EPD) that includes the following:
 - 1. Fabric.
 - 2. Cutting, sewing, processing of DuctSox.
 - 3. Zippers.
 - 4. Metal suspension system parts and framework (if applicable).
 - 5. Energy, water, recycled & waste of plant processing fabric & suspension.
 - 6. Complete packaging including boxes, bags & staples.
 - 7. Transportation.

1.5. WARRANTY

- A. Manufacturer must provide a complete product (10) ten-year warranty for products supplied for the fabric and suspension of this system as well as a Design and Performance Warranty. Laundering frequency nor any other conditions shall pertain to warranty terms.

1.6. DELIVERY, STORAGE AND HANDLING

- A. Protect textile air dispersion system and Hoops (IHS) components from damage during shipping, storage, and handling.
- B. Contractor shall adequately protect ductwork from damage after delivery to the project. Ductwork shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- C. Do not deliver ductwork to the project site until progress of construction has reached the stage where ductwork is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

PART 2 – PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, provide products manufactured in the United States by the following:
 - 1. DuctSox - Sedona-Xm.
 - 2. FabricAir, Inc. - Combi 80.

2.2 TEXTILE DISPERSION SYSTEM

- A. Air diffusers constructed with internal tensioning frame.
 - 1. System shall cylindrically tension fabric along the entire length of fabric duct, including all fittings (crosses, elbows, reducers, and tees).
 - 2. Tensioning system shall include full 360-degree tensioning and intermediate rings with quick connection spacer tubes concealed inside the fabric system.
 - 3. Interior structure to include multiple mechanically adjustable tension devices. To provide proper fabric tensioning, structural and fabric system shall be configured in segments of no more than 42 feet.
 - 4. Fabric components supported solely by metal cylindrical rings.
 - 5. Each cylindrical ring shall require vertical metal to metal vertical cable safety attachment.
- B. Air diffusers constructed with external structural frame.
 - 1. The system shall be made with sewn in but removable aluminum hoops. The hoops shall:
 - a. Maintain the ducts' cylindrical shape at all times.
 - b. Be made to a circular arc angle of 180° (8" - 48"), 120° (49" - 60"), 90° (61" - 68") or 60° (69" - 80") depending on duct diameter.
 - c. Shall be centered at the 12:00 o'clock position of the duct.
 - d. Shall be installed at the factory, on-site installation shall not be allowed.
 - 2. Diameter and spacing of hoops shall be determined by the manufacturer based on duct diameter.
 - 3. Elbows of 70° or more shall have at least two hoops.
 - 4. Air dispersion shall be accomplished with linear or polar arrays of laser cut orifices. Size of laser cut orifices shall be from 1" to 5" diameter. Due to exact throw requirements and NC requirements alternative flow models are not acceptable.
 - 5. Number of orifices shall be determined by manufacturer.
 - 6. Fabric system shall include connectors to attach to suspension system.
 - 7. If within a natatorium, all metal structural components shall be able to withstand chlorinated environment and shall not be susceptible to corrosion. Provide necessary coatings and materials.
- C. TEXTILE
 - 1. Sedona-Xm

- a. Textile Construction: Filament / filament twill polyester treated with a machine washable anti-microbial agent by the fabric manufacturer, fire retardant in accordance with UL 2518.
 - b. Air Permeability: 2 (+2/-1) CFM/ft² per ASTM D737, Frazier.
 1. The air permeability of the fabric must NOT be created by perforating the fabric.
 2. The air permeability must be confirmed by third party testing to eliminate the formation of condensate on the fabric.
 - a. Weight: 6.8 oz. /yd² per ASTM D3776.
 - b. Warranty: 10 years.
2. Textile Color
 - a. Standard: blue, white, tan, red, green, silver, black.
 - b. Custom.

D. TEXTILE SYSTEMS FABRICATION REQUIREMENTS

1. Provide system in modular lengths optimized for maintenance, connected by zippers with proper radial securing clips (inlets, endcaps and mid-sections) and top access zippers (if required) for vertical cable safety attachment. Zippers shall provide closure completely around the circumference to prevent leakage. Required number of zippers shall be specified by the manufacturer.
2. Integrated air dispersion outlets (orifices, nozzles, linear vents or other) shall be specified and approved by manufacturer.
3. The system shall be made of permeable fabric. Base permeability of fabric shall be reached based on a combination of weave construction and a thermo fixation process in order to prevent permeability degradation after wash. Fabric permeability based on a calendaring process is not acceptable.
4. Inlet connection to metal duct via fabric draw band with anchor patches as supplied by manufacturer. Anchor patches to be secured to metal duct via zip screw fastener – supplied by contractor.
5. Inlet connection includes zipper for easy removal / maintenance.
6. Lengths to include required intermediate zippers as specified by manufacturer.
7. End cap includes zipper for easy maintenance.
8. Each section of the fabric shall include identification labels documenting order number, section diameter, section length, piece number, code certifications and other pertinent information

E. DESIGN PARAMETERS

1. Fabric air diffusers shall be designed from 0.25" water gage minimum to 3" maximum, with 0.5" as the standard.

2. Fabric air diffusers shall be limited to design temperatures between -40°F and +284°F.
3. Design CFM, diameter, dispersion, static pressure, and diffuser length shall be designed or approved by the manufacturer.
4. Do not use fabric diffusers in concealed locations.
5. Use fabric diffusers only for positive pressure air distribution components of the mechanical ventilation system.

PART 3 – INSTALLATION

3.1 INSTALLATION OF TEXTILE AIR DISPERSION SYSTEM

- A. Install chosen suspension system with minor noise and fabric motion at start-up in accordance with the requirements of the manufacturer. Instructions for installation shall be provided by the manufacturer with product. Suspension Track and cable within a natatorium shall be able to withstand chlorinated environment and shall not be susceptible to corrosion. Provide necessary coatings and materials.

3.2 CLEANING AND PROTECTION

- A. Clean air handling unit and ductwork prior to the fabric air dispersion system unit-by-unit as it is installed. Clean external surfaces of foreign substance which may cause corrosive deterioration of facing.
- B. Temporary Closure: At ends of ducts which are not connected to equipment or distribution devices at time of ductwork installation, cover with polyethylene film or other covering which will keep the system clean until installation is completed.
- C. If fabric dispersion system becomes soiled during installation, they should be removed and cleaned following the manufacturers standard terms of laundry.

END OF SECTION 23 31 18

SECTION 23 33 00 - AIR DUCT ACCESSORIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Back-draft dampers.
 - 2. Combination fire-and-smoke dampers.
 - 3. Duct access doors.
 - 4. Fire dampers.
 - 5. Smoke dampers.
 - 6. Volume control dampers.
 - 7. Flexible duct connections
 - 8. Duct Taps
 - 9. Duct test holes
 - 10. Flexible duct elbow supports
- B. Related Sections:
 - 1. Section 23 31 00 - HVAC Duct and Casings: Requirements for duct construction and pressure classifications.

1.3 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate shop fabricated assemblies including volume control dampers, duct access doors, and duct test holes.
- C. Product Data: Submit data for shop fabricated assemblies including fire dampers including locations and ratings, smoke dampers including locations and ratings, backdraft dampers, flexible duct connections, volume control dampers, duct access doors, duct test holes and hardware used. Include electrical characteristics and connection requirements.
- D. Manufacturer's Installation Instructions: Submit for Fire, Smoke and Combination Fire/Smoke Dampers.
- E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect dampers from damage to operating linkages and blades.

1.6 COORDINATION

- A. Coordinate Work where appropriate with building control Work.
- B. Coordinate fire alarm wiring requirements with Division 26.

1.7 WARRANTY

- A. Furnish five (5) year manufacturer warranty for duct accessories.

1.8 EXTRA MATERIALS

- A. Furnish two (2) of each size and type of fusible link for fire rated dampers.

PART 2 - PRODUCTS

2.1 BACK-DRAFT DAMPERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Arrow United Industries
 - 2. American Warming and Ventilating
 - 3. Ruskin
 - 4. Air Balance
 - 5. NCA
 - 6. Pottorff
 - 7. Greenheck
- B. Product Description: Multi-Blade, back-draft dampers: Parallel-action, gravity-balanced, Galvanized 16 gage thick steel, or extruded aluminum. Blades, maximum 6-inch width, center pivoted, with felt or flexible vinyl sealed edges. Blades linked together in rattle-free manner with 90-degree stop, steel ball bearings, and plated steel pivot pin. Furnish dampers with adjustment device to permit setting for varying differential static pressure.

2.2 COMBINATION FIRE AND SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Cesco
 - 2. NCA
 - 3. Ruskin
 - 4. Nailor
 - 5. Pottorff
 - 6. Greenheck
- B. Fabricate in accordance with NFPA 90A, UL 555, and UL 555S. Dampers shall be Leakage Class 1. Damper shall include a factory installed sleeve.
- C. Construction: Fabricate with 16 gage roll formed, galvanized steel hat-shaped channel frame. Furnish stainless steel sleeve bearings and plated steel axles, stainless steel jamb seals, concealed linkage, and 1/2-inch actuator shaft. Blades shall be airfoil type, 14-gauge equivalent. Blade edge seals shall be mechanically fastened to blade.

- D. Operators: UL listed and labeled two-position, fail close, electric type suitable for 120 volts, single phase, 60 Hz. Furnish end switches to indicate damper position. Locate damper operator on exterior of sleeve and link to damper operating shaft.
- E. Temperature rating: 250°F.
- F. Normally Closed Smoke Responsive Fire Dampers: Curtain type, opening by gravity upon actuation of Electro thermal link, flexible stainless-steel blade edge seals to produce constant sealing pressure.
- G. Coordinate fire alarm control wiring with Division 26.
- H. Rating: 1-1/2 hours in wall rated at less than three (3) hours.
- I. Normally Open Smoke Responsive Fire Dampers: Curtain type, closing upon actuation of Electro thermal link, flexible stainless-steel blade edge seals to produce constant sealing pressure, stainless steel springs with locking devices to maintain positive closure for units mounted horizontally.
- J. Electric Fuse Link: Heat actuated, quick detecting to release at 165 degrees Fahrenheit, UL listed and labeled. Controlled closing and locking of damper in 7-15 seconds to allow duct pressure to equalize. Instantaneous closure is not acceptable. Manual reset at damper.

2.3 DUCT ACCESS DOORS

- A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
- B. Fabrication: Rigid and close fitting of galvanized steel with sealing gaskets and quick fastening locking devices. For insulated ductwork, furnish minimum 1-inch-thick insulation with sheet metal cover.
 - 1. Less Than 12 inches square, secure with sash locks.
 - 2. Up to 18 inches Square: Furnish two hinges and two (2) sash locks.
 - 3. Up to 24 x 48 inches: Three hinges and two compression latches with outside handles.
 - 4. Larger Sizes: Furnish additional hinge.
 - 5. Access panels with sheet metal screw fasteners are not acceptable.

2.4 FIRE DAMPERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Cesco
 - 2. NCA
 - 3. Ruskin
 - 4. Nailor
 - 5. Pottorff
 - 6. Greenheck

- B. Fabricate in accordance with NFPA 90A and UL 555, and manufacturer's condition of listing. Permanently mark dampers for use in dynamic systems.
- C. Ceiling Fire Dampers: Galvanized steel, 24 gage frame and 24 gage blades with UL classified insulation if required. Provide with radiation blanket.
- D. Curtain Type Dampers: 20 gage Galvanized steel frame with interlocking 24 gage galvanized steel blades. Furnish stainless steel closure springs and latches for horizontal installations and closure under airflow conditions. Configure with blades out of air stream.
- E. Multiple Blade Dampers: 16 gage galvanized steel frame and blades, oil-impregnated bronze or stainless-steel sleeve bearings and plated steel axles, 1/8 x 1/2-inch plated steel concealed linkage, stainless steel closure spring, blade stops, and lock.
- F. Fusible Links: UL 33, separate at 165 degrees Fahrenheit.
- G. Rating: 1-1/2 hours in wall rated at less than three (3) hours.

2.5 SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Cesco
 - 2. NCA
 - 3. Ruskin
 - 4. Nailor
 - 5. Pottorff
 - 6. Greenheck
- B. Fabricate in accordance with UL 555S, Leakage Class I.
- C. Construction: Fabricate with 16 gage roll formed, galvanized steel hat-shaped channel frame. Furnish self-lubricating stainless-steel sleeve bearings and plated steel axles, stainless steel jamb seals, concealed linkage and 1/2-inch actuator shaft. Blades shall be airfoil type, 14-gauge equivalent. Blade edge seals shall be mechanically fastened to blade.
- D. Operators: UL listed and labeled two-position, fail close, electric type suitable for 120 volts, single phase, 60 Hz. Furnish end switches to indicate damper position. Actuator to be mounted internally or externally as required.
- E. Temperature rating: 250°F.
- F. Coordinate fire alarm control wiring with Division 26.

2.6 VOLUME CONTROL DAMPERS

- A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated on Drawings.
- B. Splitter Dampers:
 - 1. Material: Same gage as duct to 24 inches size in both dimensions, and two gages heavier for sizes over 24 inches.

2. Blade: Fabricate of single thickness sheet metal secured with continuous hinge or rod with end bearings.
 3. Operator: Minimum 1/4-inch diameter rod in self aligning, universal joint action, flanged bushing with set screw.
- C. Single Blade Dampers: Fabricate for duct height up to 12".
- D. Multi-Blade Damper: Opposed blade interlocking type pattern for duct height 12" and greater. Assemble blades in galvanized frame channel with suitable hardware and linkage concealed in frame. Provide multiple section dampers for sizes larger than 48-inch x 72 inch. Provide jack shafting configuration and crossovers.
- E. Damper Blades:
1. Provide 16-gauge galvanized steel center and edge grooved blade type where velocities do not exceed 1500 FPM.
 2. Provide 14 gage galvanized steel. Roll formed airfoil blade type where velocities exceed 1500 FPM.
 3. Maximum leakage shall be 8 CFM per square foot of damper area at four (4) inches wg pressure.
- F. End Bearings: Except in round ductwork 12 inches and smaller, furnish end bearings. On multiple blade dampers, furnish oil-impregnated nylon or bronze bearings. Furnish closed end bearings on ducts having pressure classification over two (2) inches wg.
- G. Quadrants:
1. Furnish locking, indicating quadrant regulators on single and multi-blade dampers that do not have actuators.
 2. On insulated ducts mount quadrant regulators on 2" standoff mounting brackets, bases, or adapters.
 3. Where rod lengths exceed 30 inches furnish regulator at both ends.
 4. Provide remote damper operators for concealed dampers. Operator shall utilize miter gears, worm gears and couplings or be cable operated. Coordinate operator trim and location with Architect / Engineer.
- H. Actuators:
1. Maximum damper area per actuator shall be 24 square feet face area.
 2. Actuators shall be two position or modulating spring return type.
 3. Duct mounted dampers shall have actuators mounted outside of air stream.
 4. Coordinate with Section 23 09 23 – Direct-Digital Control System for HVAC.

2.7 FLEXIBLE DUCT CONNECTIONS

- A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.

- B. Connector: Fabric crimped into metal edging strip.
 - 1. Fabric: UL listed fire-retardant neoprene coated woven glass fiber fabric conforming to NFPA 90A, minimum density 30 oz per sq yd.
 - 2. Net Fabric Width: Approximately six (6) inches wide.
 - 3. Metal: Three (3) inch wide, galvanized steel. Same gage as connecting duct.
 - 4. Install flexible connections with a minimum of one (1) inch between metal edges.
 - 5. Provide flexible duct connections at every duct connection to equipment.
- C. Application:
 - 1. Flexible duct connectors are not permitted on duct connections to internally isolated equipment. Internal isolation shall be in accordance with Section 230548.

2.8 DUCT TAPS

- A. Provide 24-gauge galvanized steel conical fittings with integral balancing damper for duct taps serving single ceiling diffuser. Balancing damper shall consist of 24 gauge, 3/8" steel axel and nylon end bearings with 2" standoff quadrant mount.
- B. Provide 24-gauge galvanized steel 45 degree, rectangular to round, side takeoff fitting with integral balancing damper when airflow is less than or equal to 20 percent of main duct airflow. Balancing damper shall consist of 24 gauge, 3/8" steel axel and nylon end bearings with 2" standoff quadrant mount.
- C. Provide tee split with radius elbow when takeoff or branch duct airflow is greater than 20 percent of main duct. Square throat elbows are acceptable in areas of limited clearances. Provide splitter damper. Refer to Section 23 31 00 - HVAC Duct and Casings.
- D. Provide volume damper at all takeoffs in constant volume systems and at all takeoffs downstream of terminal units in variable volume systems.

2.9 DUCT TEST HOLES

- A. Permanent Test Holes: Factory fabricated, airtight flanged fittings with screw cap. Furnish extended neck fittings to clear insulation.
- B. Coordinate test hole locations and requirements with TAB contractor. If additional test holes are required for TAB, contractor will provide at no additional cost.

2.10 FLEXIBLE DUCT ELBOW SUPPORTS

- A. Elbow supports shall be constructed of durable composite material and be fully adjustable to support flexible duct diameters 6" – 16". Elbow supports shall be UL listed for use in return air plenum spaces.
- B. Provide elbow supports at each diffuser connection.
- C. Manufactured by Thermaflex – FlexFlow Elbow

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify rated walls are ready for fire damper installation.
- B. Verify ducts and equipment is ready for accessories.
- C. Check location of air outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

3.2 REPORTS

- A. Per NFPA 90A, all fire dampers, smoke dampers and fire/smoke dampers must be tested prior to occupancy and contractor shall provide written confirmation if the dampers are operating as required. Provide pass / fail report in excel spreadsheet. Include type of damper, damper manufacturer / model, actuator manufacturer / model, fusible link in the excel spreadsheet.
- B. Contractor to provide as-built drawings of location of all fire, smoke and fire/smoke dampers with appropriate label that matches the installation.
- C. Per NFPA 80, contractor shall test and inspect all dampers prior to one (1) year warranty period. All inspections, testing and maintenance of dampers must be documented, indicating the location of the damper, date(s) of inspection, name of inspector and deficiencies discovered. The document must have a space to indicate when and how the deficiencies were corrected. All documentation is expected to be maintained and made available for review by the AHJ.
- D. After first year, test and inspection frequency must be every 4 years.

3.3 INSTALLATION.

- A. Install in accordance with NFPA 90A and follow SMACNA HVAC Duct Construction Standards Metal and Flexible. Refer to Section 23 31 00 - HVAC Duct and Casings for duct construction and pressure class.
- B. Install back-draft dampers on exhaust fans or exhaust ducts nearest to outside if motorized dampers are not shown on plans.
- C. Install duct access doors for inspection and cleaning before and after filters, coils, fans, automatic dampers, at fire dampers, combination fire and smoke dampers, and as indicated on Drawings. Install at locations for cleaning kitchen exhaust ductwork in accordance with NFPA 96. Install minimum 8 x 8-inch size for hand access, 18 x 18-inch size for shoulder access, and as indicated on Drawings. Review locations prior to fabrication.
- D. Install temporary duct test holes required for testing and balancing purposes. Cut or drill in ducts. Cap with neoprene plugs, threaded plugs, threaded or twist-on metal caps.
- E. Provide fire dampers, combination fire and smoke dampers and smoke dampers at locations as indicated on Drawings. Install with required perimeter mounting angles, sleeves, and breakaway duct connections.

- F. Install smoke dampers and combination fire and smoke dampers in accordance with NFPA 92A.
- G. Install volume dampers at points on supply, return, outside air and exhaust systems where branches extend from larger ducts. For air systems with common return air plenum provide volume dampers in both outside air and return air ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
 - 1. Install steel volume dampers in steel ducts.
 - 2. Install aluminum volume dampers in aluminum ducts.
 - 3. Install stainless steel volume dampers in stainless steel ducts.
 - 4. Install aluminum volume dampers in natatoriums.

3.4 DEMONSTRATION

- A. Demonstrate re-setting of fire dampers, fire and smoke dampers and smoke dampers to Owner's representative.

END OF SECTION 23 33 00

SECTION 23 33 19 - DUCT SILENCERS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Duct silencers.
 - 2. Crosstalk silencers.
 - 3. Ductwork lagging.

1.3 PERFORMANCE REQUIREMENTS

- A. Sound control components are selected to maintain the sound level of space at levels not to exceed those listed below. The midpoint of Noise Criteria (NC) curves shall apply.
- B. Sound control components are designed to maintain rooms at the following maximum sound levels, in Noise Criteria (NC) as defined by HVAC Applications and ANSI S1.8.
 - 1. **Offices**
 - a. Executive: 30
 - b. Conference rooms: 30
 - c. Private: 35
 - d. Open-plan areas: 35
 - e. Computer/business machine areas: 40
 - f. Public circulation: 40
 - 2. **Schools**
 - a. Lecture and classrooms: 30
 - b. Open-plan classrooms: 35
 - 3. **Libraries:** 25
 - 4. **Theaters**
 - a. Theater: 25
 - b. Stage house: 25
 - c. Trap room: 25
 - d. Orchestra pit: 25
 - e. Rehearsal rooms: 25
 - f. Teaching studios: 30
 - g. Practice rooms: 30
 - h. Ensemble rooms: 30
 - i. Shop: 45

1.4 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.

- B. Shop Drawings: Indicate assembly, materials, thickness, dimensional data, pressure losses, acoustical performance, layout, and connection details for sound attenuation products fabricated for this project.
- C. Product Data: Submit catalog information indicating, materials, dimensional data, pressure losses, and acoustical performance for standard sound attenuation products.
- D. Design Data: Submit selection of each individual trap. Selection shall indicate airflow and pressure drop. Sound attenuators shall be selected based on full return airflow.
- E. Test Reports: Indicate acoustic housings meet or exceed specified sound transmission loss values.
- F. Manufacturer's Installation Instructions: Submit special procedures and setting dimensions. Indicate installation requirements maintaining integrity of sound isolation.
- G. Manufacturer's Certificate: Certify silencers meet or exceed specified requirements.
- H. Manufacturer's Field Reports: Indicate sound isolation installation is complete and in accordance with instructions.

1.5 CLOSEOUT SUBMITTALS

- A. Project Record Documents: Record actual locations of crosstalk silencers, acoustic housings, duct silencers and ductwork lagging. Record actual locations of hangers including attachment points.

1.6 QUALITY ASSURANCE

- A. Perform Work in accordance with AMCA 300, ANSI S1.13, ARI 575, ANSI S12.36, standards and recommendations of ASHRAE 68.
- B. Combustion ratings for the silencer acoustic fill material shall not be greater than the following when tested to ASTM E84, NFPA Standard 255 or UL No. 723:
 - 1. Flame Spread Classification: 20
 - 2. Smoke Development Rating: 20
 - 3. Fuel Contribution: 20

1.7 QUALIFICATIONS

- A. Installer: Company specializing in performing Work of this section with minimum three (3) year's experience.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

- B. Do not deliver Equipment to the project site until progress of construction has reached the stage where sound attenuators are actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

PART 2 - PRODUCTS

2.1 DUCT SILENCERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
1. Aerosonics
 2. United McGill
 3. IAC
 4. Vibro-Acoustics
 5. Dynasonics
 6. Commercial Acoustics
 7. Ruskin
 8. Price
- B. Description: Sheet metal outer casing, sound absorbing fill material with coating, and inner casing of perforated sheet metal with integral interior baffles of similar construction. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
- C. Configuration:
1. Tubular with inner casing and liner, aerodynamically shaped center body with nose cone and truncated tail cone, diameter and length as indicated on Drawings.
 2. Rectangular with lined splitters with radius nose and contoured tails. Size as indicated on Plans.
- D. Materials:
1. Outer Casing: Minimum 22 gage thick galvanized steel stiffened with mastic filled lock formed seams, two (2) inch long, 11 gage button punched slip joints on both ends.
 2. Inner Casing and Splitters: Minimum 24 gage thick perforated galvanized steel.
 3. Fill: Glass fiber or mineral wool of minimum 3 lb/cu ft density with antimicrobial and erosion coatings.
- E. Rating:
1. ASTM E477 Insertion Loss and Maximum Generated Noise based on 1000 fpm Face Velocity. Performance criteria listed below based on IAC model LFM:

Insertion Loss (dB)

Length - Octave Band Center Frequency (Hz)

DUCT SILENCERS
23 33 19 - 3

		63	125	250	500	1000	2000	4000
Forward Flow	3 FT	4	7	13	16	15	10	9
	5 FT	6	10	17	25	25	14	11
Reverse Flow	3 FT	5	7	13	17	16	11	10
	5FT	7	12	19	27	27	14	13

Generated Noise (dB)

		Octave Band Center Frequency (Hz)						
		63	125	250	500	1000	2000	4000
Forward Flow (all lengths)			32	24	32	25	34	39
Reverse Flow (all lengths)			31	30	34	35	40	45

2. Maximum static pressure shall not exceed 0.17 inches wg.
3. Return air silencers installed at mechanical room walls shall be sized for full design return flow to mechanical room. Outside air and exhaust air shall not be subtracted from return in order to ensure silencers operate within design parameters for all modes of operation.

2.2 CROSS-TALK SILENCERS / TRANSFER DUCT

- A. Description: Double wall sheet metal duct elbow with 1" insulation and perforated liner covering entire inside surface. Size as indicated on plans. Refer to Section 23 31 13 and detail on Plans.
- B. Casing: Construct elbow using duct gauges specified for size shown.
- C. Rating:
 1. Size transfer duct at a maximum of 500 fpm Face Velocity.
 2. Full design return air flow form space shall be used for sizing transfer ducts.
 3. Maximum static pressure loss through transfer duct shall not exceed 0.05 inches wg.

2.3 DUCTWORK LAGGING

- A. Acoustic Insulation: Two (2) inch thick, 3 to 5 lb/cu ft density glass fiber or mineral wool insulation.
- B. Covering: Gypsum board with surface weight minimum 4 lb/sq ft. All joints of covering shall be sealed as specified.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Support duct silencers independent of ductwork.
- B. Install crosstalk silencers in wall. Pack and resiliently seal wall penetration.

- C. Lag ductwork at wall by wrapping with insulation and covering. Lagging of duct will be identified on the plans. Apply covering to be airtight. Do not attach covering rigidly to ductwork. Fire damper sleeve shall be lagged at wall penetration, no exception.
- D. Silencers shall be installed in accordance with manufacturer recommendations.
- E. Silencers installed in duct systems that generate excessive system effect and pressure drop shall be removed and installed correctly by contractor at no additional cost.
- F. Duct transition upstream of silencers shall be 30 degrees maximum. Duct transition downstream of silencer shall be 15 degrees maximum.
- G. Silencers shall be installed a distance of (3x duct diameter) from elbows.
- H. Silencers shall be installed a minimum of (1x duct diameter) from fan or unit outlets / inlets.
- I. Where multiple silencers are ganged together provide continuous galvanized steel nosing, crimped or button punched, on internal partitions.
- J. Silencers at mechanical room walls shall be installed with wall at midway point of casing. Pack and resiliently seal wall penetration. Silencers may be placed with overhang on either side of wall to allow coordination with trades.
- K. Silencers located at fire rated walls shall be connected to wall sleeve of damper. Provide duct lagging on damper sleeve.

END OF SECTION 23 33 19

SECTION 23 34 00 - HVAC FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide complete, fully operational fans where indicated on Drawings.
- B. Section Includes:
 - 1. Hooded propeller roof fans
 - 2. Upblast centrifugal roof fans
 - 3. Upblast centrifugal roof fans – Grease exhaust
 - 4. Centrifugal filtered supply fans
 - 5. Inline Fans
 - 6. High Volume, Low Speed Fans
- C. Related Sections:
 - 1. Section 23 31 00 - HVAC Duct and Casings - Ducts: Product requirements for hangers for placement by this section.
 - 2. Section 23 33 00 - Air Duct Accessories: Product requirements for duct accessories for placement by this section.
 - 3. Coordinate work in this Section with Division 7.

1.3 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate size and configuration of fan assembly, mountings, weights, ductwork and accessory connections.
- C. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics, and connection requirements.
- D. Manufacturer's Installation Instructions: Submit fan manufacturer's instructions.
- E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

1.5 QUALITY ASSURANCE

- A. Performance Ratings: Conform to AMCA 210 and bear AMCA Certified Rating Seal.

- B. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.
- C. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705 and UL 762 for kitchen exhaust.
- D. Balance Quality: Conform to AMCA 204.

1.6 WARRANTY

- A. Furnish one (1) year manufacturer's warranty for fans. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up will not be acceptable.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Fans shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver Equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

1.8 UNIT IDENTIFICATION REQUIREMENTS

- A. Furnish each fan with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:
 - Unit identification as indicated within Contract Documents.
 - Serial Number.
 - Model Number.
 - Capacity (CFM) and static pressure (w.g.).
 - Motor Horsepower.
 - Fan RPM.
 - Unit Power Supply: Volts / PH / Amps.
 - Supply Fan Drive Type.

- Sales Order #.
- Date of unit manufactured.

PART 2 - PRODUCTS

2.1 HOODED PROPELLER ROOF FANS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
1. Greenheck
 2. Cook
 3. Twin City
 4. ACME
- B. Unit shall be a low profile, hooded, roof mounted, belt driven or direct drive, propeller supply ventilator. Coordinate drive with fan schedule on drawings.
- C. Fan shall be constructed in accordance with UL 705. Fan shall bear the AMCA certified ratings seal for air performance.
- D. Construction: The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The motor, bearings and drives shall be mounted on a welded tubular steel power assembly. The power assembly shall be rigidly secured to the fan housing. The powder coated steel fan housing shall include a minimum 14-gauge base with integral spun venturi and continuously welded or application of butyl tape to inside of the curb cap for maximum leak protection. The fan shall be enclosed with a minimum 18-gauge galvanized steel hood bolted to the fan housing. The hood shall have a removable top cap to allow unobstructed access to the motor and power assembly without removing entire hood. The fan outlet shall be protected from entry of foreign material by ½" x ½" galvanized steel screen. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- E. Coating: All ungalvanized steel fan components shall be treated with an electrostatically applied, baked polyester powder coating. Each component shall be subject to a five stage environmentally friendly wash system, followed by a minimum 2 mil thick baked powder finish. Paint must exceed 1,000-hour salt spray under ASTM B117 test method.
- F. Propeller: Propeller shall be a high-efficiency fabricated steel design with blades securely fastened to a minimum 7-gauge steel hub. The hub shall be keyed and locked to the fan shaft utilizing two setscrews. Propeller shall be balanced in accordance with AMCA Standard 204-96, Balance Quality and Vibration Levels for Fans.
- G. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase, and enclosure.
- H. Bearings: Bearings shall be designed and tested specifically for use in air handling applications. Construction shall be heavy duty regreasable ball type in a cast iron housing selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.
- I. Drives: Shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150% of the installed motor horsepower. The variable pitch motor drive must be factory set to the specified fan RPM.

- J. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.
- K. Accessories:
 - 1. Motorized damper in damper tray of roof curb. Actuator shall be same voltage as motor in fan. Damper shall energize fan through integral end switch. Damper shall be epoxy coated.
 - 2. Disconnect Switch: Coordinate with Division 26. Provide factory wired disconnect switch on 120v motor only. Factory provided disconnect switches shall be rated for outdoor use. Three phase combination disconnect/starter shall be provided by Division 26.
 - 3. Direct drive units shall be provided with motor speed control option.

2.2 UPBLAST CENTRIFUGAL ROOF FANS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Greenheck
 - 2. Cook
 - 3. Twin City
 - 4. ACME
- B. Fan shall be a spun aluminum, roof mounted, belt driven or direct drive, upblast centrifugal ventilator. Coordinate drive with fan schedule on drawings.
- C. Fan shall be constructed in accordance with UL 705. Fan shall bear the AMCA certified ratings seal for air performance.
- D. Construction: The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of minimum 16-gauge marine alloy aluminum, bolted to a rigid aluminum support structure. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. The windband shall have a rolled bead for added strength. A two-piece top cap shall have stainless steel quick release latches to provide access into the motor compartment without the use of tools. An integral conduit chase shall be provided into the motor compartment to facilitate wiring connections. The motor, bearings and drives shall be mounted on a minimum 14-gauge steel power assembly, isolated from the unit structure with rubber vibration isolators. These components shall be enclosed in a weather-tight compartment, separated from the exhaust airstream. Lifting lugs shall be provided to help prevent damage from improper lifting. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- E. Wheel: Wheel shall be centrifugal backward inclined, constructed of 100 percent aluminum, including a precision machined cast aluminum hub. Wheel inlet shall overlap an aerodynamic aluminum inlet cone to provide maximum performance and efficiency. Wheel shall be balanced in accordance with AMCA Standard 204-96, Balance Quality and Vibration Levels for Fans.

- F. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase and enclosure.
- G. Bearings: Bearings shall be designed and individually tested specifically for use in air handling applications. Construction shall be heavy duty regreasable ball type in a cast iron pillow block housing selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.
- H. Drives: Shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150 percent of the installed motor horsepower. The variable pitch motor drive must be factory set to the specified fan RPM.
- I. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.
- J. Accessories:
 - 1. Motorized damper in damper tray of roof curb. Actuator shall be same voltage as motor in fan. Damper shall energize fan through integral end switch. Damper shall be epoxy coated.
 - 2. Disconnect Switch: Coordinate with Division 26. Provide factory wired disconnect switch on 120v motor only. Factory provided disconnect switches shall be rated for outdoor use. Three phase combination disconnect/starter shall be provided by Division 26.
 - 3. Direct drive units shall be provided with motor speed control option.

2.3 UPBLAST CENTRIFUGAL ROOF FANS - GREASE EXHAUST

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Greenheck
 - 2. Cook
 - 3. Twin City
 - 4. ACME
- B. Unit shall be a low profile, hooded, roof mounted, belt driven or direct drive, propeller ventilator. Coordinate drive with fan schedule on drawings.
- C. Unit shall be constructed in accordance with UL 762. Fan shall bear the AMCA certified ratings seal for sound and air performance.
- D. Construction: The fan shall be of bolted and welded construction utilizing corrosion resistant fasteners. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. The windband shall have a rolled bead for added strength. A two-piece top cap shall have stainless steel quick release latches to provide access into the motor compartment without the use of tools. An external wiring compartment to facilitate wiring connections. The motor, bearings and drives shall be mounted on a 14-gauge steel power assembly. These components shall be enclosed in a weather-tight compartment, separated from the exhaust airstream. A one (1) inch thick, three-pound density foil back heat shield shall be utilized to protect the motor and drive components from excessive

heat. Lifting lugs shall be provided to help prevent damage from improper lifting. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.

- E. Wheel: Wheel shall be centrifugal backward inclined, constructed of 100 percent aluminum, including a precision machined cast aluminum hub. Wheel inlet shall overlap an aerodynamic aluminum inlet cone to provide maximum performance and efficiency.
- F. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase, and enclosure.
- G. Bearings: Heavy duty regreasable ball type in a cast iron pillow block housing selected for a minimum L50 life in excess of 200,000 hours.
- H. Drives: Drives shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150 percent of the installed motor horsepower. The variable pitch drive must be factory set to the specified fan RPM.
- I. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.
- J. Accessories:
 - 1. Disconnect Switch: Coordinate with Division 26.
 - 2. Direct drive units shall be provided with motor speed control option.
 - 3. Provide minimum 10" tall, vented curb extension.
 - 4. Provide grease trap with drain connection.
 - 5. Provide heat baffle.
 - 6. Provide Clean-Out Port.

2.4 CENTRIFUGAL FILTERED SUPPLY FAN - KITCHEN HOOD

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Greenheck
 - 2. Cook
 - 3. Twin City
 - 4. ACME
- B. Unit shall be a low profile, hooded, roof mounted, belt driven or direct drive, propeller supply ventilator. Coordinate drive with fan schedule on drawings.
- C. Description: Fan shall be a side intake, roof mounted, belt driven, centrifugal filtered supply fan.
- D. Fan shall be constructed in accordance with UL 705. Fan shall bear the AMCA certified ratings seal for air performance.
- E. Construction: The fan shall be of bolted construction utilizing corrosion resistant fasteners. Housing shall be minimum 18-gauge galvanized steel, bolted to a minimum 16-gauge steel fan base with pre-punched mounting holes. Unit shall be provided with an insulated top cover and 1" washable permanent aluminum filter. Internal blower and motor assembly shall be mounted on rubber vibration isolators. Unit shall bear an

engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.

- F. Wheel: Wheel shall be DWDI centrifugal forward curved type, constructed of painted steel. Wheel shall be balanced in accordance with AMCA Standard 204-96, Balance Quality and Vibration Levels for Fans.
- G. Motor: Motor shall be heavy duty type with permanently lubricated sealed ball bearings and furnished at the specified voltage, phase, and enclosure.
- H. Bearings: Bearings shall be permanently lubricated, sealed ball type selected for a minimum L50 life in excess of 200,000 hours at maximum cataloged operating speed.
- I. Drives: Drives shall be precision machined cast iron type, keyed and securely attached to the wheel and motor shafts. Drives shall be sized for 150% of the installed motor horsepower. The variable pitch motor drive must be factory set to the specified fan RPM.
- J. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.
- K. Accessories:
 - 1. Motorized damper in damper tray of roof curb. Actuator shall be same voltage as motor in fan. Damper shall energize fan through integral end switch. Damper shall be epoxy coated.
 - 2. Disconnect Switch: Coordinate with Division 26. Provide factory wired disconnect switch on 120v motor only. Factory provided disconnect switches shall be rated for outdoor use. Three phase combination disconnect/starter shall be provided by Division 26.
 - 3. Direct drive units shall be provided with motor speed control option.

2.5 INLINE FANS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Greenheck
 - 2. Cook
 - 3. Twin City
 - 4. ACME
- B. Fan shall be a duct mounted, centrifugal, belt driven or direct drive, inline type supply or exhaust ventilator.
- C. All fans shall bear the AMCA Certified Ratings Seal for both sound and air performance.
- D. Construction: The fan housing shall be of the square design constructed of heavy gauge galvanized steel and shall include square duct mounting collars. Fan construction shall include two removable access panels located perpendicular to the motor mounting panel. The access panels must be of sufficient size to permit easy access to all interior

components. Each fan shall bear a permanently affixed manufacturer's nameplate containing the model number and individual serial number for future identification.

- E. Coating: For fans serving Natatoriums or corrosive environments provide epoxy coating on all inside and outside surfaces including fan wheel and pulley.
- F. Wheel: The fan wheels shall be centrifugal backward inclined, constructed of aluminum and shall include a wheel cone carefully matched to the inlet cone for precise running tolerances. Wheels shall be statically and dynamically balanced.
- G. Motor: Motors shall be heavy duty ball bearing type, carefully matched to the fan load, and furnished at the specified voltage, phase, and enclosure. Motor Pulleys shall be adjustable for system balancing.
- H. Bearings: Precision ground and polished shafts shall be mounted in permanently sealed, lubricated pillow block ball bearings. Bearings shall be selected for a minimum (L10) life in excess of 100,000 hours at maximum catalogued operating speed.
- I. Drives: Drives shall be sized for a minimum of 150% of driven horsepower. Pulleys shall be of the fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.
- J. Accessories:
 - 1. Disconnect Switch: Coordinate with Division 26. Provide factory wired disconnect switch on 120v motor only. Three phase combination disconnect/starter shall be provided by Division 26.
 - 2. Gravity actuated back-draft damper with adjustable counterweight. Damper shall be epoxy coated.
 - 3. Direct drive units shall be provided with motor speed control option.
 - 4. Companion Flanges: For inlet and outlet duct connections.
 - 5. Fan Guards: 1/2 by 1-inch mesh of galvanized steel in removable frame. Provide guard for inlet or outlet for units not connected to ductwork.
 - 6. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.

2.6 HIGH VOLUME, LOW SPEED FANS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. MacroAir: AVDX
 - 2. Big Ass Fans: Powerfoil D
- B. Construction: Fan shall be TUV certified and built pursuant to the construction guidelines set forth by the UL standard 507 and CSA standard 22.2. No. 113. The fan shall be designed to move an effective amount of air for cooling and destratification in commercial applications. The sound levels from the fan operating at maximum speed shall not exceed 61 dBA (measured 20' or below the blades and 20' or horizontally from the center of the fan).

- C. Air Foils: The fan shall be equipped with high volume, low speed airfoils of precision extruded, anodized aluminum alloy, and an anodized finish. The airfoils shall be connected to the hub and interlocked with high strength steel retainers and two (2) sets of high strength steel locking bolts and washers per airfoil.
- D. Motor: The fan motor shall be a permanent magnet brushless motor rated for continuous operation at maximum speed with the capability of modulating the fan speed from 0-100%. The motor shall be non-ventilated, heat sink design with the capability of continuous operation in 14°F to 122°F ambient conditions.
- E. Hub: The fan hub shall be constructed of zinc plated steel or aluminum for high strength and durability. The hub shall be machined to achieve a well-balanced and solid rotating assembly. The motor housing shall be provided with pressed in steel studs to securely accept removable, anodized aluminum beam struts.
- F. Mounting System: The fan mounting system shall be designed for quick and secure installation from a variety of structural supports. The fan mounting system shall be equipped with hardware, no less than SAE grade 5 for safe installation. The fan shall be equipped with a universal mount. The mounting system shall be powder coated for appearance and resistance to corrosion. All mounting bolts shall be metric stainless steel or equivalent. No mounting hardware substitutions, including cast aluminum are acceptable. The fan extension tube shall be a round, extruded aluminum tube.
- G. Safety Cables: The fan shall be equipped with upper and lower safety cables. The upper safety cable shall provide an additional means of securing the fan assembly to the building structure. The lower safety cable shall provide an additional means of securing the motor unit to the mounting system. All safety cables shall be 3/16" diameter and fabricated out of 7x19 braided galvanized steel. Field construction of safety cables is not permitted.
- H. Controller: The controller shall be incorporated into the fan assembly. The controller shall be factory programmed to minimize starting and breaking torques. The controller shall be housed in an enclosure to prevent accidental contact with the enclosed equipment and to prevent entry of unwanted substances.
- I. Fire Control Panel Integration: The fan shall be capable of receiving a stop command from the Fire Alarm Panel, ASD, or any amount of smoke, flame, or heat detectors. The fire alarm contractor shall furnish and install a relay for fire alarm control. Fans shall be interlocked to shut down immediately upon receiving a water flow signal from the alarm system in accordance with requirement of NFPA 72 – National Fire Alarm and Signaling Code.
- J. Wall Control: The fan shall be equipped with a low voltage wired remote wall control providing control of all fan functions. The wall control shall be capable of mounting to a standard electrical box or directly to a wall surface. The wall control shall include a touchscreen wall controller capable of multiple fan functions. Communication with the fan drive and controller shall be a standard, commercially available CAT 5 (or higher) Ethernet cable that is field installed and provided by the installer.
- K. Warranty:
 - 1. Furnish fifteen (15) year manufacturers' warranty for high volume low speed fans on the airfoils and mounting hardware. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or startup will not be acceptable. Startup and installation to be done by factory authorized representative.

2. Furnish fifteen (15) year electrical warranty on the motor, VFD, and fan controller.
 3. Startup must be performed by factory authorized representative to get the full 15-year electrical warranty.
 4. The manufacturer shall replace any products or components defective in material or workmanship, free of charge to the customer (including all transportation charges).
 5. The warranty shall not require the submission of a post installation form or photographs of the installed fan(s) to the manufacturer for the warranty to be in effect.
 6. The warranty shall not require the periodic submission of maintenance records for the warranty to remain in effect.
- L. Accessories:
1. Provide clear lockable enclosure for wall controller with two sets of keys.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify roof curbs are installed, and dimensions are as shown on shop drawings.

3.2 INSTALLATION

- A. Secure roof fans with cadmium plated steel lag screws to roof curb structure.
- B. Install power ventilators level and plumb.
- C. Install dampers in roof curb damper tray.
- D. Provide hinged curb adapter to permit access to dampers and duct connection.
- E. Install safety screen where inlet or outlet is exposed.
- F. Provide sheaves required for final air balance.
- G. Install units with clearances for service and maintenance.
- H. Label units according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.3 CLEANING

- A. Vacuum clean inside of fan cabinet.

3.4 DEMONSTRATION

- A. Demonstrate fan operation and maintenance procedures.

3.5 PROTECTION OF FINISHED WORK

- A. Do not operate fans until ductwork is clean, bearings are lubricated, and fan has been test run under observation.

END OF SECTION 23 34 00

SECTION 23 36 00 - AIR TERMINAL UNITS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Single duct air terminal units
 - 2. Dual-duct air terminal units
 - 3. Series Fan-Powered Air Terminal Units
- B. Related Sections:
 - 1. Section 23 09 23 – Direct Digital Controls: Controls remote from unit.
 - 2. Section 23 09 93 – Sequences of Operation for HVAC System.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Hangers and supports shall withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible".

1.4 ACTION SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: For each type of the following products, including rated capacities, furnished specialties, sound-power ratings, and accessories.
 - 1. Air terminal units.
 - 2. Liners and adhesives.
 - 3. Sealants and gaskets.
- C. Shop Drawings: For air terminal units. Include plans, elevations, sections, details, and attachments to other work within shop coordination drawings.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Wiring Diagrams: For power, signal, and control wiring.
 - 3. Hangers and supports, including methods for duct and building attachment and vibration isolation.
- D. Delegated-Design Submittal:
 - 1. Materials, fabrication, assembly, and spacing of hangers and supports.

- E. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
 - 1. Ceiling suspension assembly members.
 - 2. Size and location of initial access modules for acoustic tile.
 - 3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
- F. Field quality-control reports.
- G. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in "Operation and Maintenance Data," include the following:
 - 1. Instructions for resetting minimum and maximum air volumes.
 - 2. Instructions for adjusting software set points.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Test and rate air terminal unit performance for air pressure drop, flow performance, and acoustical performance in accordance with ARI 880 and ARI 885. Attach ARI seal to each terminal unit.
- C. All electrical components shall be UL Listed and installed in accordance with the National Electric Code. Electrical connections to terminal units shall be single point. The energy terminal shall be UL Listed as a complete assembly.
- D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

1.6 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Filters shall be provided by air terminal unit manufacturer and not by the mechanical contractor.
 - 1. Fan-Powered-Unit Filters: Furnish [one] 1 spare filter(s) for each filter installed.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts lists. Include directions for resetting constant volume regulators.

1.8 QUALIFICATIONS

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

1.9 COORDINATION

- A. Coordinate Work with Section 23 09 23 - Direct-Digital Control System for HVAC.

1.10 WARRANTY

- A. Furnish one (1) year manufacturer warranty for air terminal units. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up will not be acceptable.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Air Terminal Units shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

PART 2 - PRODUCTS

2.1 SINGLE DUCT AIR TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Titus
 - 2. Price
 - 3. Metalaire
 - 4. Krueger

- B. Configuration: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.
- C. Identification: Furnish each air terminal unit with identification label and airflow indicator. Include unit nominal airflow, maximum factory-set airflow and minimum factory-set airflow and coil type.
- D. Casing: Minimum 22-gauge galvanized steel.
 - 1. Casing Lining: Fiber free, 1/2-inch thick, engineered polyurethane foam, 1.5 lb. / cu. ft. insulation complying with NFPA 90A, UL 181 erosion requirements, UL 181 Mold Growth and Humidity, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84. Exposed fiberglass is not acceptable. The casing shall be designed for hanging by 10-gauge sheet metal hanger brackets for suspending unit with threaded rod.
 - 2. Air Inlets: Round stub connections or oval connections for duct attachment.
 - 3. Air Outlet: S-slip and drive connections.
 - 4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
 - 5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- E. Volume Damper: Heavy gauge galvanized steel with peripheral gasket and self-lubricating bearings.
 - 1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
 - 2. Damper Position: Normally open.
- F. Velocity Sensors: Multi-point array, center-averaging differential pressure, with velocity sensors in air inlets and air outlets. Sensors that deliver the differential pressure signal from one end of the sensor is not acceptable. Balancing taps and airflow calibration charts shall be provided for field airflow measurements.
- G. Actuators shall be capable of supplying at least 35 inches per pound of torque to the damper shaft and shall be mounted externally for service access.
- H. Factory installed hydronic heating coils (where scheduled): Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.
- I. Factory installed Electric-Resistance Heating Coils (where scheduled): Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.
 - 1. Provide 480v / 3ph / 60Hz 4W wye single point power connection.

2. Stage(s): Refer to schedule.
 3. Access door interlocked non-fused disconnect switch.
 4. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
 5. Nickel chrome 80/20 heating elements.
 6. Airflow switches for proof of airflow.
 7. Fan interlock contacts.
 8. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
 9. Magnetic contactor for each step of control (for three-phase coils).
- J. Factory-Mounted and Wired Controls: Electrical components mounted in control box with removable cover. Incorporate single-point electrical connection to power source for terminal units with electric heat.
1. Control Transformer (Required only for terminal units with electric heat): Factory mounted for control voltage. Coordinate equipment voltage requirement with electrical plans.
 2. Wiring Terminations: Coordinate required wiring diagrams with Building Automation System controls subcontractor.
 3. The following equipment items are to be furnished by Specification Section 23 09 23 - Direct-Digital Controls and installed by air terminal unit manufacturer.
 - a. Auto temperature control card (DDC).
 - b. 24-volt damper actuator.
 4. The following equipment items are to be furnished and installed by the air terminal unit manufacturer:
 - a. Volume Control Damper.
 - b. Multi-point flow sensor.
 - c. Controller enclosure.
 - d. Power transformer; required only for terminal units with electric heat. (Coordinate voltage with electrical plans).
- K. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.
- L. Sound Ratings: Not to exceed 35 NC at one (1) inch static pressure. Sound performance shall be ARI certified.
1. Maximum discharge sound power level of 62 DB.
 2. Maximum radiated sound power level of 70 DB.
 3. DB level based on third octave band.
- M. Temperature sensor provided, wired, and installed by Building Automation System Control Contractor: Refer to Section 23 09 23 – Direct Digital Controls.

- N. For Sequence of Operation: Refer to Section 23 09 93.

2.2 DUAL-DUCT AIR TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Titus
 2. Price
 3. Metalaire
 4. Krueger
- B. Configuration: Two volume dampers inside unit casing with mixing attenuator section and control components inside a protective metal shroud.
- C. Identification: Furnish each air terminal unit with identification label and airflow indicator. Include unit nominal airflow, maximum factory-set airflow and minimum factory-set airflow and coil type.
- D. Casing: Minimum 22-gauge galvanized steel.
1. Casing Lining: Fiber free, 1/2-inch thick, engineered polyurethane foam, 1.5 lb. / cu. ft. insulation complying with NFPA 90A, UL 181 erosion requirements, UL 181 Mold Growth and Humidity, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84. Exposed fiberglass is not acceptable. The casing shall be designed for hanging by 10-gauge sheet metal hanger brackets for suspending unit with threaded rod.
 2. Air Inlets: Round stub connections or oval connections for duct attachment.
 3. Air Outlet: S-slip and drive connections.
 4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
 5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- E. Volume Damper: Heavy gauge galvanized steel with peripheral gasket and self-lubricating bearings.
1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
 2. Damper Position: Normally open.
- F. Velocity Sensors: Multi-point array, center-averaging differential pressure, with velocity sensors in cold- and hot-deck air inlets and air outlets. Sensors that deliver the differential pressure signal from one end of the sensor is not acceptable. Balancing taps and airflow calibration charts shall be provided for field airflow measurements.
- G. Cooling and heating inlets shall have separate damper assemblies for complete pressure independent control of each airstream for variable or constant volume total discharge applications. Terminals with inlet dampers mechanically interconnected are not acceptable. The dampers shall be heavy gauge steel with solid shaft rotating in self-

lubricating bearings. Nylon bearings are not acceptable. Shaft shall be clearly marked on the end to indicate damper position. Stickers or other removable markings are not acceptable. The damper shall incorporate a mechanical stop to prevent over-stroking and a synthetic seal to limit close-off leakage.

- H. Actuators shall be capable of supplying at least 35 inches per pound of torque to the damper shaft and shall be mounted externally for service access.
- I. Factory-Mounted and Wired Controls: Electrical components mounted in control box with removable cover.
 - 1. Wiring Terminations: Coordinate required wiring diagrams with Building Automation System controls subcontractor.
 - 2. The following equipment items are to be furnished by Specification Section 23 09 23 – Direct Digital Controls and installed by air terminal unit manufacturer.
 - a. Auto temperature control card (DDC).
 - b. 24-volt damper actuator.
 - 3. The following equipment items are to be furnished and installed by the air terminal unit manufacturer:
 - a. Volume Control Damper.
 - b. Multi-point flow sensor.
 - c. Controller enclosure.
- J. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.
- K. Sound Ratings: Not to exceed 35 NC at one (1) inch static pressure. Sound performance shall be ARI certified.
 - 1. Maximum discharge sound power level of 62 DB.
 - 2. Maximum radiated sound power level of 70 DB.
 - 3. DB level based on third octave band.
- L. Temperature sensor provided, wired and installed by Building Automation System Control Contractor: Refer to Section 23 09 23 – Direct Digital Controls.
- M. For Sequence of Operation: Refer to Section 23 09 93.

2.3 SERIES FAN-POWERED AIR TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Titus
 - 2. Price
 - 3. Metalaire
 - 4. Krueger
- B. Configuration: Volume-damper assembly and fan in series arrangement inside unit casing with control components inside a protective metal shroud for installation above a ceiling.

- C. Identification: Furnish each air terminal unit with identification label and airflow indicator. Include unit nominal airflow, maximum factory-set airflow and minimum factory-set airflow and coil type.
- D. Casing: Minimum 20-gauge galvanized steel.
 - 1. Casing Lining: Fiber free, 1/2-inch thick, engineered polyurethane foam, 1.5 lb. / cu. ft. insulation complying with NFPA 90A, UL 181 erosion requirements, UL 181 Mold Growth and Humidity, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84. Exposed fiberglass is not acceptable. The casing shall be designed for hanging by 10-gauge sheet metal hanger brackets for suspending unit with threaded rod.
 - 2. Air Inlets: Round stub connections or oval connections for duct attachment.
 - 3. Air Outlet: S-slip and drive connections.
 - 4. Access: Removable top and bottom access panels, which allows removal of fan assembly and servicing of terminal without disturbing duct connections; with airtight gasket and quarter-turn latches.
 - 5. Fan: Forward-curved centrifugal; direct-drive.
 - 6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- E. Volume Damper: Heavy gauge galvanized steel with flow-sensing ring and peripheral gasket and self-lubricating bearings.
 - 1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
 - 2. Damper Position: Normally open.
- F. Velocity Sensors: Multi-point array, center-averaging differential pressure, with velocity sensors in cold- and hot-deck air inlets and air outlets. Sensors that deliver the differential pressure signal from one end of the sensor is not acceptable. Balancing taps and airflow calibration charts shall be provided for field airflow measurements.
- G. Motor:
 - 1. Type: General Electric electronically commutated motor (ECM), variable speed dc brushless. Motor shall be complete and operated by a single-phase integrated controller/inverter that operates the wound stator and senses rotor position to electronically commutate the stator. All motors shall be designed for synchronous rotation. Rotor shall be permanent magnet type with near zero rotor losses. Motor shall have built-in soft start and soft speed change ramps. Motor shall be able to be mounted with shaft in horizontal or vertical orientation. Motor shall be permanently lubricated with ball bearings. Motor shall be directly coupled to the blower. Motor shall maintain a minimum of 70 percent efficiency over its entire operating range. Provide a motor that is designed to overcome reverse rotation and not affect life expectancy.
 - 2. Fan-Motor Assembly Isolation: Rubber isolators.

3. Enclosure: Totally enclosed, air over.
 4. Enclosure Materials: Rolled Steel.
 5. Motor Bearings: Permanently lubricated ball bearings.
 6. Unusual Service Conditions:
 7. Efficiency: Premium efficient.
 8. NEMA Design: NEMA MG-1.
 9. Service Factor: 1.15.
 10. Motor Speed: Infinitely adjustable, factory provided and mounted PWM controller for adjustable fan speed control. PWM controller shall be field adjustable with standard screwdriver. Fan CFM shall be pre-set at factory as shown on plans.
 11. Electrical Characteristics:
 - a. Horsepower: Refer to detail
 - b. Volts: 277
 - c. Phase: Single.
 - d. Hz: 60.
- H. Construction Filters for induced air inlet: Minimum arrestance according to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
1. Material: Pleated cotton-polyester media having 90 percent arrestance and minimum MERV 8.
 2. Thickness: 1 inch.
- I. Factory manufactured and mounted Induced air inlet and discharge air attenuator section: steel sheet outer casing, sound absorbing fill material with coating, and inner casing of perforated sheet metal (Provide where scheduled).
1. Lining: Adhesive attached, 3/4-inch thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- J. Factory installed hydronic heating coils (where scheduled): Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.
- K. Factory installed hydronic heating coils (where scheduled): Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.

- L. Factory-Mounted and Wired Controls: Electrical components mounted in control box with removable cover. Incorporate single-point electrical connection to power source.
 - 1. Control Transformer: Factory mounted for control voltage. Coordinate equipment voltage requirement with electrical plans.
 - 2. Wiring Terminations: Coordinate required wiring diagrams with Building Automation System controls subcontractor.
 - 3. Disconnect Switch: Factory-mounted, non-fuse type in control panel.
 - 4. The following equipment items are to be furnished by Specification Section 23 09 23 - Direct-Digital Controls and installed by air terminal unit manufacturer.
 - a. Auto temperature control card (DDC).
 - b. 24-volt damper actuator.
 - 5. The following equipment items are to be furnished and installed by the air terminal unit manufacturer:
 - a. Volume Control Damper.
 - b. Multi-point flow sensor.
 - c. Controller enclosure.
 - d. Power transformer (Coordinate voltage with electrical plans).
- M. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.
- N. Sound Ratings: Not to exceed 35 NC at one (1) inch static pressure. Sound performance shall be ARI certified.
 - 1. Maximum discharge sound power level of 62 DB.
 - 2. Maximum radiated sound power level of 70 DB.
 - 3. DB level based on third octave band.
- O. Temperature sensor provided, wired, and installed by Building Automation System Control Contractor: Refer to Section 23 09 23 – Direct Digital Controls.
- P. For Sequence of Operation: Refer to Section 23 09 93.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."
- B. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.
- C. Install ceiling access doors or locate units above easily removable ceiling components.

3.2 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Where practical, install concrete inserts before placing concrete.
- C. Hangers Exposed to View: Threaded rod and angle or channel supports.
- D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.3 CONNECTIONS

- A. Install piping adjacent to air terminal unit to allow service and maintenance.
- B. Hot-Water Piping: In addition to requirements in Section 232113 "Hydronic Piping," connect heating coils to supply with shutoff valve, strainer, control valve, and union or flange; and to return with balancing valve and union or flange.
- C. Connect ducts to air terminal units according to Section 233113 "Metal Ducts."
- D. Coordinate duct installations and specialty arrangements with Drawings.
- E. Make connections to air terminal units with flexible connectors complying with requirements in Section 233300 "Air Duct Accessories."

3.4 IDENTIFICATION

- A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
 - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
 - 2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- C. Air terminal unit will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.6 STARTUP SERVICE

- A. Perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
 - 3. Verify that controls and control enclosure are accessible.
 - 4. Verify that control connections are complete.
 - 5. Verify that nameplate and identification tag are visible.
 - 6. Verify that controls respond to inputs as specified.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.

3.8 ADJUSTING

- A. Reset volume with damper operator attached to assembly allowing flow range modulation from 100 percent of design flow to 0 percent full flow. Set units with heating coils for minimum 50 percent full flow.

END OF SECTION 23 36 00

SECTION 23 37 13 - DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes: Air devices.

1.3 REFERENCES

- A. Air Movement and Control Association International, Inc.:
 - 1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.
- B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
 - 1. ASHRAE 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets.
- C. Sheet Metal and Air Conditioning Contractors:
 - 1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated, include the following:
 - 1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static pressure drop, and noise ratings.
 - 2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
- B. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.
- C. Test Reports: Rating of air outlet and inlet performance.
- D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.5 CLOSEOUT SUBMITTALS

- A. Project Record Documents: Record actual locations of air outlets and inlets.

1.6 QUALITY ASSURANCE

- A. Test and rate diffuser, register, and grille performance in accordance with ASHRAE 70.
- B. Test and rate louver performance in accordance with AMCA 500.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Air Devices shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

PART 2 - PRODUCTS

2.1 AIR DEVICES

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
 - 1. Titus
 - 2. Price
 - 3. Metalaire
 - 4. Kruger
- B. Mounting:
 - 1. Plaster Surfaces: Provide with plaster frames or plaster rings to make airtight seal against mounting surface.
 - 2. "T" Bar Ceilings: Lay-in type.
 - 3. Gyp Board and Wall surfaces: 1-1/2" overlap flange.
- C. Fire rated diffusers for fire rated roof/ceiling assembly: Refer to diffuser schedule for fire rated assembly requirement.
 - 1. UL classified fire rated ceiling diffuser assembly listed in The Underwriters Laboratories "Fire Resistance Directory".
 - 2. Shall have a fire resistance rating of 3 hours.

3. Heavy Gauge Steel Diffusers shall be tested in accordance with UL 263 and must meet NFPA 90A requirements. Diffusers must be able to operate in (3) three-hour fire rated ceiling and must be installed in accordance with the installation instructions.
 4. UL 555C Fire resistance rating: 3-hour ceiling radiation damper with fusible link assembly. Fire closure temperature of 165°F.
 5. UL listed thermal blanket insulation, mineral fiber around entire diffuser.
 6. Complete fire rated damper assembly with blanket shall be provided and submitted by/with Diffusers, Registers, and Grilles.
- D. Source Quality Control
1. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."
- E. Accessories:
1. Square to round neck adapter.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify inlet and outlet locations.
- B. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.
- D. Verify ceiling and wall systems are ready for installation.
- E. Refer to Architectural Code Information and Fire Rated Assemblies Drawing to verify if ceiling is fire rated. If ceiling is fire rated provide U.L. tested radiation damper with thermal blanket for all ceiling mounted supply and return air grilles.

3.2 INSTALLATION

- A. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers
- B. Install balancing dampers on duct take-off to diffusers, grilles, and registers, whether or not dampers are furnished as part of diffuser, grille, and register assembly. Refer to Section 23 33 00 – Air Duct Accessories.
- C. Install diffusers, registers, and grilles level and plumb.
- D. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure

drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

- E. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.
- F. Paint visible portion of ductwork behind air outlets and inlets matte black. Refer to Section 09 91 00.

3.3 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

3.4 INTERFACE WITH OTHER PRODUCTS

- A. Check location of outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

3.5 SCHEDULES:

- A. Refer to Drawings.

END OF SECTION 23 37 13

SECTION 23 37 23 - HVAC GRAVITY VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide complete, fully operational fans where indicated on Drawings.
- B. Section Includes:
 - 1. Dryer vent roof cap
 - 2. Roof mounted intake hood
 - 3. Roof mounted relief hood
- C. Related Sections:
 - 1. Section 23 31 00 - HVAC Duct and Casings: Product requirements for hangers for placement by this section.
 - 2. Section 23 33 00 - Air Duct Accessories: Product requirements for duct accessories for placement by this section.
 - 3. Coordinate work in this Section with Division 7.

1.3 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Shop Drawings: Indicate size and configuration of fan assembly, mountings, weights, ductwork, and accessory connections.
- C. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics, and connection requirements.
- D. Manufacturer's Installation Instructions: Submit fan manufacturer's instructions.
- E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit instructions for lubrication, motor and drive replacement, spare parts list and wiring diagrams.

1.5 QUALITY ASSURANCE

- A. Performance Ratings: Conform to AMCA 210 and bear AMCA Certified Rating Seal.
- B. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.

- C. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705 and UL 762 for kitchen exhaust.
- D. Balance Quality: Conform to AMCA 204.
- E. Energy Recovery Unit Wheel Energy Transfer Rating: Meet ARI 1060.

1.6 WARRANTY

- A. Furnish one (1) year manufacturer's warranty. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up will not be acceptable.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Ventilators shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

PART 2 - PRODUCTS.

2.1 DRYER VENT ROOF CAP

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Greenheck
 - 2. Cook
 - 3. PennBarry
- B. Unit shall be a spun aluminum, roof mounted gravity ventilator.
- C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of

minimum 16-gauge marine alloy aluminum, bolted to a rigid aluminum support structure. The aluminum base shall have continuously welded curb cap corners for maximum leak protection. The spun aluminum baffle shall have a rolled bead for added strength. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.

- D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.
- E. Accessories: Gravity actuated back-draft damper with adjustable counterweight.

2.2 ROOF MOUNTED INTAKE HOOD

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Greenheck
 - 2. Cook
 - 3. PennBarry
 - 4. Twin City
- B. Unit shall be an aluminum roof mounted intake hood.
- C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The aluminum hood shall be constructed of minimum 14-gauge marine alloy aluminum, bolted to a minimum 8-gauge aluminum support structure. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. Birdscreen constructed of 1/2" mesh shall be mounted across the intake opening. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.
- E. Accessories:
 - 1. Motorized damper in damper tray of roof curb. Actuator shall be low voltage for control wiring from DDC controller. Damper shall include integral end switch.

2.3 ROOF MOUNTED RELIEF HOOD

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Greenheck
 - 2. Cook
 - 3. PennBarry
 - 4. Twin City
- B. Unit shall be an aluminum roof mounted relief hood.

- C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The aluminum hood shall be constructed of minimum 14-gauge marine alloy aluminum, bolted to a minimum 8-gauge aluminum support structure. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. Bird screen constructed of 1/2" mesh shall be mounted across the intake opening. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.
- D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.
- E. Accessories:
 - 1. Gravity actuated back-draft damper with adjustable counterweight.
 - 2. Motorized damper: actuator shall be low voltage for control wiring from DDC controllers. Damper shall include integral end switch.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify roof curbs are installed, and dimensions are as shown on shop drawings.

3.2 INSTALLATION

- A. Secure intake/relief hoods with cadmium plated steel lag screws to roof curb structure.
- B. Install dampers in roof curb damper tray.
- C. Provide hinged curb adapter to permit access to dampers and duct connection.
- D. Install safety screen where inlet or outlet is exposed.

3.3 MANUFACTURER'S FIELD SERVICES

- A. Furnish services of factory trained representative for minimum of one (1) day to start-up, calibrate controls, and instruct Owner on operation and maintenance.

3.4 CLEANING

- A. Vacuum clean inside of fan cabinet.

3.5 DEMONSTRATION

- A. Demonstrate fan operation and maintenance procedures.

3.6 PROTECTION OF FINISHED WORK

- A. Do not operate until ductwork is clean, bearings are lubricated, and fan has been test run under observation.

END OF SECTION 23 37 23

SECTION 23 51 00 - BREECHINGS, CHIMNEYS, AND STACKS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Category IV Condensing Appliance double wall metal vents.
- B. Related Sections:
 - 1. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for hangers and supports for placement by this section.

1.3 REFERENCES

- A. Underwriters Laboratories Inc.:
 - 1. UL 103 - Factory-Built Chimneys for Residential Type and Building Heating Appliances.
 - 2. UL 378 - Draft Equipment.
 - 3. UL 441 - Gas Vents.
 - 4. UL 641 - Type L Low-Temperature Venting Systems.
 - 5. UL 959 - Medium Heat Appliance Factory Built Chimneys.

1.4 DESIGN REQUIREMENTS

- A. Design refractory lined metal stacks for wind loading of 110 mph.

1.5 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. **Flue pipe shall be provided and submitted by boiler sales representative submitting on project. Flue pipe shall not be submitted separately by a third party, sheet metal contractor, mechanical contractor, etc.; no exception. Flue piping shall be submitted concurrently, but separately, at the same time as boilers.**
- C. Manufacturer shall provide a 1/4" = 1'-0" scaled drawing within submittal showing flue pipe routing in plan and elevation views. Drawing of flue routing must be provided with dimensions showing code required distances away from intake hoods, intake louvers, etc. Include dimensions from finished roof to top of flue. Flue gasses discharged must not recirculate back into building by winds or inadequate spacing between any building envelope intakes.
- D. Product Data: Submit data indicating factory-built chimneys, including dimensional details of components and flue caps, dimensions and weights, electrical characteristics, and connection requirements.

- E. Product Data: Submit data on draft fans and accessories including fan curves with specified operating point plotted, power, RPM, and electrical characteristics and connection requirements.
- F. Manufacturer's Installation Instructions: Submit assembly, support details, and connection requirements.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.6 QUALITY ASSURANCE

- A. All products furnished under this Section shall conform to the requirements of NFPA-211. Products shall be listed to UL-103 and shall carry the appropriate UL and cUL listing mark or label.
- B. Flue pipe shall be provided and submitted by boiler manufacturer submitting on project.

1.7 QUALIFICATIONS

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Maintain water integrity of roof during and after installation of chimney or vent.

PART 2 - PRODUCTS

2.1 CATEGORY IV CONDENSING APPLIANCE DOUBLE WALL METAL VENTS

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
 - 1. Metal-Fab
 - 2. Heat-Fab
 - 3. Simpson Dura-Vent
 - 4. Ampco
- B. Fabrication: Inner pipe of sheet AL29-4C and outer pipe of 430 stainless steel, tested in compliance with UL 441.
- C. All products furnished under this Section shall conform to the requirements of The National Fuel Gas Code, NFPA-54; and NFPA-211, the Standard for Positive Pressure Condensing Appliances. Products shall be listed to UL-441 and shall carry the appropriate UL or cUL listing mark or label.
- D. The vent shall be of the double-wall, factory-built type for use with approved Category IV condensing appliances burning natural or LP gas, which produce flue gases exhausted at temperatures not exceeding 550° F.
- E. The vent shall be constructed of an outer wall of 430 stainless steel, .018" thick for sizes 3" to 14" diameter, and .024" thick for sizes 16" to 30" diameter. The inner wall shall be constructed of AL29-4C, .035" thick for sizes 3" to 8" diameter and .048" thick for sizes 10" to 30" diameter. The vent shall include an integral, annular insulating air space, 1/4" thick for sizes 3" to 6" diameter and 1/2" thick for sizes 7" to 30" diameter.

- F. Edges of inner and outer walls shall be sealed and joined according to manufacturer installation instructions.
- G. All fittings, flashing, storm collar, cap, and appliance adapter required to install the vent shall be included.
- H. Vent shall be tested and listed for a minimum clearance to combustibles of 1" for sizes 3" to 24" diameter and 2" for sizes 26" to 30" diameter.
- I. Vent shall terminate as required by code.
- J. Vent shall be installed in accordance with the vent manufacturer's installation instructions, UL listing and state or local codes.
- K. Warranty: Furnish 1-year manufacturer warranty for manufactured units to begin at substantial completion.
- L. Accessories, UL labeled:
 - 1. Ventilated Roof Thimble: Consists of roof penetration, vent flashing with spacers and storm collar.
 - 2. Stack Cap: Consists of conical rain shield with inverted cone for partial rain protection with low flow resistance.
 - 3. Exterior pipe and fittings shall be constructed entirely of type 304 stainless steel.
- M. Application: Category IV Condensing Gas Appliances.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Install concrete inserts for support of breeching, chimneys, and stacks in coordination with formwork.

3.2 INSTALLATION - GENERAL

- A. Install in accordance with NFPA 54.
- B. Install breeching with minimum of joints. Align accurately at connections, with internal surfaces smooth.
- C. All double wall gas vents maintain UL listed minimum clearances from combustibles. Assemble pipe and accessories for complete installation.
- D. Install vent dampers, locating close to draft hood collar, and secured to breeching.
- E. Assemble and install stack sections in accordance with NFPA 82, industry practices, and in compliance with UL listing. Join sections with acid-resistant joint cement. Connect base section to foundation using anchor lugs.
- F. Level and plumb chimney and stacks.
- G. Clean breeching, chimneys, and stacks during installation, removing dust and debris.

- H. Install slip joints allowing removal of appliances without removal or dismantling of breeching, breeching insulation, chimneys, or stacks.
- I. Provide the appropriate and/or applicable chimney system continuous from appliances.

3.3 BOILER STACK

- A. Installation shall conform to the manufacturer's installation instructions, UL listing and state or local codes.
- B. Support system from building structure using rigid structural shapes for attachment of fixed point supports (Plate Support Assembly). Anchor supports to structure by welding to inserts, bolting, steel expansion anchors or concrete inserts. Size of structural shapes shall be in accordance with manufacturer's recommendations.
- C. Protect incomplete installations by attaching temporary closures over open ends of sections.
- D. Clean all system sections of dust and debris prior to final connection to appliances.
- E. Maximum unsupported horizontal spacing shall be nine (9) feet between guides.
- F. Maximum unsupported vertical spacing shall be 19 feet between guides.
- G. Pipe to be routed to minimize flow resistance.
- H. Provide double wall bellows joint between each support and for every three (3) inches of expected expansion.
- I. Provide support at roof penetration to support free standing of exhaust above roof and to keep stack centered in ventilated thimble assembly.
- J. Provide drain bucket at bottom of vertical stack, piped to nearest floor drain.
- K. Provide ventilated thimble and storm collar at roof penetration.
- L. Provide flip top fitting at stack termination or engine exhaust.
- M. Provide stack cap on boiler stack termination.

END OF SECTION

SECTION 23 52 16 - CONDENSING BOILER

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes:
 - 1. Heating water boiler heat exchanger.
 - 2. Boiler control panel.
 - 3. Hot water boiler trim.
 - 4. Natural gas fired burner.
- B. Boiler shall be completely factory assembled and tested on a structural steel base and be ready for water, gas, and electric connections.
- C. Boiler and all components shall be CSA certified.
 - 1. ASME Section IV (Heating Boilers)
 - 2. ANSI Z21.13 / CSA 4.9 (Gas Fired Low Pressure Boilers)
 - 3. NFPA 54 (ANSI Z221.3) National Fuel Gas Code
 - 4. ASME CSD-1 (Controls and Safety Devices)
- D. Related Sections:
 - 1. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for Vibration Isolators for placement by this section.
 - 2. Section 23 11 23 - Gas Piping: Execution requirements for gas piping connections to boilers specified in this section.
 - 3. Section 23 51 00 - Breechings, Chimneys, and Stacks: Execution requirements for breeching, chimney, and stack connections to boilers specified in this section.
 - 4. Division 26 - Wiring Connections: Execution requirements for electric connections to boilers specified in this section.

1.3 REFERENCES

- A. ASME Section IV (Heating Boilers)
- B. ANSI Z21.13/CSA 4.9 (Gas Fired Low Pressure Boilers)
- C. NFPA 54 (ANSI Z221.3) National Fuel Gas Code
- D. ASME CSD-1 (Controls and Safety Devices)

1.4 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.

- B. Flue pipe as specified per 23 51 00 Breechings, Chimneys, and Stacks, shall be provided and submitted by boiler sales representative submitting on project. Flue pipe shall not be submitted separately by a third party, sheet metal contractor, mechanical contractor, etc.; no exception. Flue piping shall be submitted concurrently, but separately, at the same time as boilers.**
- C. Product Data: Submit capacities and accessories included with boiler. Include general layout, dimensions, size and location of water, fuel, electric and vent connections, electrical characteristics, weight and mounting loads.
- D. Test Reports: Indicate boilers meet or exceed specified performance and efficiency. Submit results of combustion test.
- E. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.
- F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.
- G. Manufacturers Field Reports: Indicate condition of equipment after start-up including control settings and performance chart of control system.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.

1.6 QUALITY ASSURANCE

- A. Conform to ASME Section IV for construction of boilers. Provide boilers registered with National Board of Boiler and Pressure Vessel Inspectors.
- B. Gas Train and Safety Controls: Industrial Risk Insurers.
- C. Unit Certification: CSA certified.
- D. Boilers shall comply with 2012 International Energy Conservation Code.

1.7 QUALIFICATIONS

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Boilers shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If

protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

1.9 WARRANTY

- A. The boiler manufacturer shall provide an entire boiler parts and labor warranty (including circulating pump) for a period of one (1) year. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start dates from shipment or startup will not be accepted.
- B. Provide an extended parts and labor warranty for the following:
 - 1. Burner and Heat Exchanger: Five (5) years from date of substantial completion.
 - 2. Thermal shock: Ten (10) years from date of substantial completion.
- C. In addition to entire parts and labor warranty, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, and any expenses related to service calls required to diagnose and correct warranty issues.
- D. The manufacturer shall provide factory certificates for each boiler listing at a minimum the model, serial number and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.
- E. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.

1.10 GENERAL

- A. Each factory "packaged" boiler shall be complete with all components, accessories, and appurtenances necessary for a complete and operable boiler as hereinafter specified. Each unit shall be furnished factory assembled with required wiring and piping as a self-contained unit. Each unit shall be readily transported and ready for installation.
- B. Each factory "packaged" boiler, including pressure vessel, trim, valve trains, burner, control system, and all related components, accessories and appurtenances as herein specified shall all be assembled and furnished by the boiler manufacturer. The boiler manufacturer shall provide unit responsibility for the engineering, coordination, workmanship, performance, warranties, and all field services for each factory "packaged"

boiler as specified herein. The boiler manufacturer shall be fully responsible for all components assembled and furnished by him whether or not they are of his own manufacture.

PART 2 – PRODUCTS

2.1 CONDENSING WATER BOILERS

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
 - 1. RBI: Flexcore
 - 2. Camus: Avenger
- B. Each boiler shall be capable of operating continuously at rated capacity while maintaining a CSA certified efficiency of not less than 97 % on 500 MBH input boilers and less and not less than 97% on larger than 500 MBH input boilers. Each boiler shall be capable of operating with a minimum outlet water temperature of 68° F.
- C. Boiler shall comply with ASME Section IV for 80 psig, max 200° F (100 psig on 1500 MBH and larger units).
- D. Fuel shall be natural gas with an assumed higher heating value of 1,030 Btu/Cu Ft and an assumed specific gravity of 0.60 (relative to air). Natural gas shall be supplied at a pressure of no less than 3.5 in.wc. to the inlet gas valve. Maximum inlet gas pressure shall not exceed 14 in.wc.

2.2 BOILER DESIGN

- A. Each hot water boiler shall consist of a stainless-steel primary only heat exchanger complete with trim, valve trains, burner, and boiler control system. The boiler manufacturer shall fully coordinate the boiler as to the interaction of its elements with the burner and the boiler control system in order to provide the required capacities, efficiencies, and performance as specified. Boilers requiring a secondary heat exchanger (economizer) to achieve condensing operation will not be permitted as well as copper-finned heat exchangers.
- B. Each boiler heat exchanger shall be stainless-steel or cast iron, counter-flow design for maximum heat transfer with the multiple sections arranged in a reverse return configuration to assure balanced flow through each section.
- C. Contractor must, when filling the system, verify that the pH level is maintained between 6.0 and 8.5.
- D. All boiler pressure parts shall be constructed in accordance with the latest revision of the ASME Boiler and Pressure Vessel Code, Section IV, and shall be so stamped.
- E. Boiler heat exchanger headers shall be fabricated steel and be completely removable for inspection. Seals shall be EPDM, rated for 400 deg F service. Push nipples or gaskets between the sections are not permitted.
- F. Boiler shall be enclosed with a single wall outer casing. It shall be fabricated from minimum 16-gauge carbon steel. The front and top wall shall be secured in place with ¼ - 20 NC bolts (sheet metal screws are not acceptable). The complete outer casing shall be finished, inside and out, with a powder coat finish. The composite structure of the boiler combustion chamber, insulating air gap and outer casing shall be of such thickness and

materials to assure an outer casing temperature of not more than 50°F above ambient temperature when the boiler is operated at full rated load.

- G. An observation port shall be located on the boiler to allow for observation of the burner flame.
- H. Flue gas outlet shall be located on the rear of the boiler. Boiler to be certified for installation with Category IV venting (stack) as defined in NFPA 54 (ANSI Z221), latest edition. Contractor must provide venting (stack) certified for installation on a Category IV appliance.

2.3 BOILER TRIM

- A. Each boiler shall be provided with all necessary trim. Boiler trim shall be as follows:
 - 1. Safety relief valve shall be provided in compliance with the ASME code. Contractor to pipe to acceptable drain.
 - 2. Water pressure-temperature gauge.
 - 3. Primary low water flow fuel cutoff (probe type with manual reset).
 - 4. Manual reset high limit water temperature controller.
 - 5. Operating temperature control to control the sequential operation of the burner.

2.4 BOILER FUEL BURNING SYSTEM

- A. The boiler manufacturer shall furnish each boiler with an integral, power type, straight gas, fully automatic fuel burner. The fuel burner shall be an assembly of gas burner, combustion air blower, valve train, and ignition system. The burner manufacturer shall fully coordinate the burner as to the interaction of its elements with the boiler heat exchanger and the boiler control system in order to provide the required capacities, efficiencies, and performance as specified.
- B. Each burner shall be provided with an integral gas firing combustion head.
- C. Each burner shall provide adequate turbulence and mixing to achieve proper combustion without producing smoke or producing combustibles in the flue gases.
- D. Each boiler shall be provided with an integral variable speed power blower to premix combustion air and fuel within the blower. The combustion air blower shall have sufficient capacity at the rated firing rate to provide air for stoichiometric combustion plus the necessary excess air. Static and total pressure capability shall comply with the requirements of the boiler. The blower shall be a maximum of 900 watts and operate at 6,000 RPM maximum without undue vibration and noise and shall be designed and constructed for exposure to temperatures normal to its location on the boiler. The operating fan speed will be tachometer sensed and be capable of being displayed at the LED display.
- E. Each burner shall of the radial-fired (down-fired) type and constructed of steel with a stainless-steel inner and stainless-steel mesh outer screen.
- F. Each boiler shall be provided with a "Full Modulating" firing control system whereby the firing rate is infinitely proportional at any firing rate between 20% and 100% as determined by the pulse width modulation input control signal. Both fuel input and air input must be sequenced in unison to the appropriate firing rate without the use of mechanical linkage.

- G. The Microprocessor shall use a Proportional Integral Algorithm to determine the firing rate. The control must have the following capabilities:
1. Maintain single set point
 2. Reset the set point based on outdoor air temperature.
 3. Boiler shutdown based on outdoor air temperature.
 4. Internal dual set point program with an external switchover. (e.g. - night setback w/external clock, supplied by others)
 5. Alarm relay for any for any manual reset alarm function.
 6. Programmable Low Fire Delay to prevent short cycling based on a time and temperature factor for release to modulation.
 7. LED Display showing current supply and return temperatures, current set points as well as differential set points. It must also display any fault codes whether automatically reset or manually reset.
 8. Local Manual Operation.
 9. Remote Control System (Building Management / Sequencer Control) - The boiler control shall be capable of accepting a 0 -10vdc remote external analog signal to control the firing rate.
 10. Computer (PC) interface for programming and monitoring all functions

2.5 MAIN GAS VALVE TRAIN

- A. Each boiler shall be provided with an integral main gas valve train. The main gas valve trains shall be factory assembled, piped, and wired. Each gas valve train shall include at least the following:
1. Two (2) safety shutoff valves. Valves equipped with dual solenoids that can independently energized for leak testing.
 2. Air – Gas ratio control (maximum inlet pressure 14 in.wc.)
 3. One (1) low gas pressure switch (manual reset).
 4. One (1) high gas pressure switch (manual reset).
 5. Two (2) pressure test ports.

2.6 IGNITION SYSTEM

- A. Each boiler shall be equipped for direct spark ignition.

2.7 COMBUSTION AIR CONTROL

- A. Each boiler shall be provided with an integral combustion air control system. The combustion air system shall be factory assembled. Each combustion air control system shall include at least the following:
 - 1. The primary control shall vary the speed of the blower based on load demand. The blower shall apply a varying negative pressure on the gas valve which will open or close to maintain zero pressure at the valve orifice, thereby increasing or decreasing the firing rate. Both the air and gas shall be premixed in the blower.
 - 2. One (1) low airflow differential pressure switch to ensure that combustion air is supplied.
 - 3. High exhaust back pressure switch

2.8 BURNER CONTROL SYSTEM

- A. The control system shall be supplied with a 24 VAC transformer (120 VAC, single phase, 60 hertz primary). The 120/1/60 power supply to each boiler shall be protected by a 15 Amp circuit breaker located in the MCC (supplied by contractor).
- B. The boiler shall include an electric spark ignition system. Main flame shall be monitored and controlled by flame rod (rectification) system.
- C. Each boiler shall be provided with all necessary controls, all necessary programming sequences, and all safety interlocks. Each boiler control system shall be properly interlocked with all safeties.
- D. Each boiler control system shall provide timed sequence pre-ignition air purge of boiler combustion chamber. The combustion airflow sensor shall monitor and prove the airflow purge.

2.9 BURNER CONTROL PANEL

- A. The boiler manufacturer shall provide each boiler with an integral factory prewired control panel. The control panel shall contain at least the following components, all prewired to a numbered terminal strip:
 - 1. One (1) burner "on-off" switch.
 - 2. One (1) electronic combination temperature control, flame safeguard and system control.
 - 3. Control circuit breaker, 5 amp
 - 4. All necessary control switches, pushbuttons, relays, timers, terminal strips, etc.
 - 5. LED Display Panel to adjust set points and control operating parameters. LED display to indicate burner sequence, all service codes (0-65), fan speed, boiler set point, and sensor values such as inlet, outlet, flue gas and outdoor air.

2.10 BUILDING AUTOMATION SYSTEM INTERFACE:

- A. Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.

1. A BACnet communication interface card with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed locally at boiler control panel shall be available through building automation system.

2.11 FACTORY TESTING – HYDROSTATIC

- A. Each factory "packaged" boiler shall be hydrostatically tested and bear the ASME "H" stamp.

2.12 FACTORY TESTING – FIRE TESTING

- A. Each factory "packaged" boiler shall be fire tested. The boiler manufacturer shall perform this fire test under simulated operating conditions, with the boiler attached to a working chimney system and with water circulating through the boiler. The manufacturer shall provide a fire test report, including fuel and air settings and combustion test results permanently affixed to the boiler.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install boilers plumb and level, to plus or minus 1/16 inch over boiler base. Stacking of boilers is unacceptable.
- B. Maintain manufacturers recommended and code minimum clearances around and over boilers.
- C. Install boiler on concrete housekeeping pad, minimum four (4) inches high and six (6) inches larger than boiler base on each side. Refer to Section 23 05 29 - Hangers and Supports For HVAC Piping and Equipment.
- D. Install boiler on vibration isolators in accordance with Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.
- E. Connect natural gas piping in accordance with NFPA 54.
- F. Connect natural gas piping to boiler, full size of boiler gas train inlet. Arrange piping with clearances and unions for burner removal and service.
- G. Connect hot water piping to supply and return boiler connections.
- H. Install the following piping accessories. Refer to Section 23 05 19 - Meters and Gages For HVAC Piping.
 1. On supply:
 - a. Thermometer well for temperature controller.
 - b. Thermometer well and thermometer.
 - c. Well for control system temperature sensor.
 - d. Strainer.
 - e. Nipple and flow switch.

- f. Pressure gage.
 - g. Shutoff valve.
- 2. On return:
 - a. Thermometer well and thermometer.
 - b. Well for control system temperature sensor.
 - c. Pressure gage.
 - d. Shutoff valve.
 - e. Balancing valve.
- I. Install the following piping accessories on natural gas piping connections. Refer to Section 23 11 23 - Gas Piping.
 - 1. Strainer.
 - 2. Pressure gage.
 - 3. Shutoff valve.
 - 4. Check valve.
 - 5. Pressure reducing valve.
 - 6. Unions.
- J. Install discharge piping from relief valves and drain valves to nearest floor drain.
- K. Install boiler trim and accessories furnished loose for field mounting.
- L. Install electrical devices furnished loose for field mounting.
- M. Install control wiring between boiler control panel and field mounted control devices.
- N. Connect flue to boiler outlet, full size of outlet.
- O. Route each gas trim vent, separately, to the outdoors. Vent lines sizes shall be a minimum the equivalent size pipe connection. Provide union at each device to facilitate change-out and in the vertical to allow the burner door to swing open. Terminate vents a sufficient distance from air intakes, turn down and provide insect screen.
- P. Contractor must, when filling the system, verify that the pH level is maintained between 6.0 and 8.5.

3.2 FIELD QUALITY CONTROL

- A. Perform combustion test including boiler firing rate, over fire draft, gas flow rate, heat input, burner manifold gas pressure, percent carbon monoxide, percent NOx, percent oxygen, percent excess air, flue gas temperature at outlet, ambient temperature, net stack temperature, percent stack loss, percent combustion efficiency, and heat output. Perform test at minimum, mid-range, and high fire.
- B. Arrange with local authorities having jurisdiction for inspection of boiler, piping, and for certificate of operation. Provide written certification from boiler manufacturer that installation is in compliance with manufacturer's written instructions.
- C. Prior to boiler startup, Contractor to inform Owner to have boiler inspector inspect installation for proper installation and submit for State Operating Certificate.

3.3 BOILER INSPECTION REQUIREMENTS

- A. All new boilers, regardless of new construction or renovation of existing systems, are required to receive inspection by a state boiler inspector or their assigned agent prior to any boiler being energized, no exceptions. A boiler requiring inspection is generally defined by the following characteristics.
 - 1. Heat input exceeds 200,000 Btuh.
 - 2. Nominal water-containing capacity exceeds 120 gallons.
- B. As per Boiler Safety Administration Rules, 65.20, The Owner or operator are the only persons that can submit a request for inspection of a boiler by the state or their agent. The inspection agent has at least 30 days to schedule an inspection date with the Owner. During an emergency situation where a boiler is replaced due to mechanical failure of an existing boiler, the agent may grant approval to the Owner to allow startup before inspection but that is at the agent's discretion.
- C. The installing contractor is required to submit the following documents to the Owner before the Owner can submit for state inspection.
 - 1. Contractor shall complete the attached Boiler Inspection Installation Report and notify the district HVAC department personnel in charge of maintaining all inspection certification documentation for the district.
 - 2. Contractor shall submit all manufacturer's cut sheets and product information on boiler being inspected.
 - 3. Hydrostatic test results on boiler being inspected.
 - 4. Contractor shall submit this information to the Owner in a timely manner so the inspection can be scheduled and performed prior to project completion.
- D. As per the Health and Safety Code, Chapter 755, September 1, 2003.
 - 1. Nuclear, high pressure or steam boilers must receive an annual certificate of inspection and an annual external inspection if they meet these characteristics.
 - a. Pressures exceeding 160 psi.
 - b. Temperatures exceeding 250 degrees Fahrenheit
 - 2. Steam heating boilers and hot water heating boilers shall be inspected biennially (every two years) if they meet these characteristics:
 - a. Pressures not exceeding 160 psi.
 - b. Heat input exceeds 200,000 Btuh.
 - c. Water temperature greater than 210 F but not greater than 250 degrees Fahrenheit
 - d. Nominal water-containing capacity exceeds 120 gallons.
 - 3. Hot water supply boilers shall be inspected triennially (every three years) if they meet these characteristics:
 - a. Pressures not exceeding 160 psi.

- b. Heat input exceeds 200,000 Btuh.
- c. Water temperature not exceeding 210 degrees Fahrenheit; or
Nominal water-containing capacity exceeds 120 gallons.

E. Inspection Responsibilities

1. Preparing the boiler for inspection is listed in the Boiler Safety Administrative Rules, Section 65.70.
 - a. Water shall be drawn off and the boiler thoroughly washed.
 - b. All manhole and hand hole plates, washout plugs, and plugs in the water column connections shall be removed as necessary for complete inspection. The furnace and combustion chambers shall be thoroughly cooled and cleaned.
 - c. All grates and internally fired boilers shall be removed.
 - d. Brickwork shall be removed as required by the inspector in order to determine the condition of the boiler, headers, furnace, supports or other parts.
 - e. The pressure gage shall be removed for cleaning of the siphon and testing, if necessary.
 - f. The low water cutoff device shall be dismantled, cleaned, and prepared for inspection.
 - g. Before removing the manhole or hand hole covers and entering any part of the boiler connected to a common header with other boilers any leakage of steam or hot water shall be eliminated. The non return and stop valves must be closed, tagged, and preferably padlocked, and drain valves between the two valves opened. The feed water valves must be closed, tagged, and preferably padlocked. After draining the boiler, the blowdown valves shall be closed and preferably padlocked. Blowdown lines, where practicable, shall be disconnected between pressure parts and valves. All vent and drain lines shall be opened.
 - h. If the boiler is jacketed so that the seams of shells, drums or domes cannot be seen, enough of the jacketing, setting wall, or other form of casing or housing shall be removed to permit inspection to determine the safety of the boiler, provided such information cannot be determined by other means.
2. For initial boiler inspection after installation:
 - a. Once an inspection date has been established between the inspector and Owner, the boiler manufacturer's representative shall be available on-site for boiler inspection.
 - b. The manufacturer's representative shall make the boiler available for inspection as per procedures listed above or tests as required by the inspector.

- c. The manufacturer's representative will be responsible to re-assemble boiler back to its original state and then schedule a startup test with the installing contractor and Owner. All product warranties shall begin once startup has been completed and unit is available for use as designed.
- 3. For annual boiler inspection:
 - a. Once an inspection date has been established between the inspector and Owner, the Owner or their assigned contractor shall be available on-site for boiler inspection.
 - b. The Owner or their assigned contractor shall make the boiler available for inspection as per procedures listed above or tests as required by the inspector.
 - c. The Owner or their assigned contractor will be responsible to re-assemble boiler back to its original state and place the boiler in good working condition.

3.4 MANUFACTURER'S FIELD SERVICES

- A. Start-up boilers according to manufacturer's start-up instructions and in presence of boiler manufacturer's representative and Owner's representative. Test controls and demonstrate compliance with requirements. Adjust burner for maximum burning efficiency. Replace damaged or malfunctioning controls and equipment.

3.5 CLEANING

- A. Flush and clean boilers upon completion of installation, in accordance with manufacturer's start-up instructions.

3.6 DEMONSTRATION

- A. Demonstrate operation and maintenance procedures.
- B. Furnish services for manufacturer's technical representative for one (1) 8-hour day to instruct Owner's personnel in operation and maintenance of boilers. Schedule training with Owner, provide at least seven (7) days notice to Architect/Engineer of training date.

END OF SECTION 23 52 16

EQUIPMENT SHALL BID AS AN ALTERATE

SECTION 23 64 23 - SCROLL WATER CHILLERS AIR-COOLED

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes chiller package, controls and control connections, chilled water connections, starters, and electrical power connections.
- B. Related Sections:
 - 1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
 - 2. Section 23 05 48 Vibration and Seismic Controls for HVAC Piping and Equipment - Product requirements for Vibration Isolators for placement by this section.
 - 3. Section 23 05 19 Meters and Gages for HVAC Piping: Product requirements for piping specialties for placement by this section.

1.3 DEFINITIONS

- A. BAS: Building automation system.
- B. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and referenced to ARI standard rating conditions.
- E. KW/Ton (kW/kW): The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons (kW) at any given set of rating conditions.
- F. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and intended for operating conditions other than the ARI standard rating conditions.

1.4 REFERENCES

- A. Air-Conditioning and Refrigeration Institute:
 - 1. ARI 550/590 - Water Chilling Packages Using the Vapor Compression Cycle.

EQUIPMENT SHALL BID AS AN ALTERATE

- B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
 - 1. ASHRAE 15 - Safety Code for Mechanical Refrigeration.
 - 2. ASHRAE 90.1 - Energy Efficient Design of New Buildings Except Low-Rise Residential Buildings.

- D. Underwriters Laboratories Inc.:
 - 1. UL 1995 - Heating and Cooling Equipment.

1.5 ACTION SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.
- C. Shop Drawings: Indicate components, assembly, dimensions, weights, and loads, required clearances, and location and size of field connections. Indicate equipment, piping and connections, valves, strainers, and thermostatic valves required for complete system.
- D. Product Data: Submit rated capacities, specialties and accessories, electrical requirements, and wiring diagrams.
- E. Design Data: Indicate energy input versus cooling load output from 25 to 100 percent of full load at specified and minimum condenser water temperature.
- F. Test Reports: Indicate results of factory performance test.
- G. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.
- H. Manufacturer's Certificate: Certify products meet or exceed specified requirements including components not produced by manufacturer.
- I. Manufacturer's Field Reports: Submit start-up report for each unit. Indicate results of leak test and refrigerant pressure test.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Structural supports.
 - 2. Piping roughing-in requirements.
 - 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.

EQUIPMENT SHALL BID AS AN ALTERATE

- 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- B. Certificates: For certification required in "Quality Assurance" Article.
- C. Source quality-control reports.
- D. Startup service reports.
- E. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit start-up instructions, maintenance data, parts lists, controls, and accessories. Include trouble- shooting guide.

1.8 QUALITY ASSURANCE

- A. ARI Certification: Certify chiller according to ARI 550 certification program.
- B. ARI Rating: Rate chiller performance according to requirements in ARI 550/590.
- C. ASHRAE Compliance:
 - 1. ASHRAE 15 for safety code for mechanical refrigeration.
 - 2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
- E. ASME Compliance: Fabricate and label chillers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1[, as applicable to chiller design]. For chillers charged with R-134a refrigerant, include an ASME U-stamp and nameplate certifying compliance.
- F. Comply with NFPA 70.
- G. Comply with requirements of UL and UL Canada and include label by a qualified testing agency showing compliance.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Chillers shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.
- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

EQUIPMENT SHALL BID AS AN ALTERATE

- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage. Leave factory covers in place until startup of machine.

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- B. If chiller is mounted on structural-steel support structure coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.11 WARRANTY

- A. The chiller manufacturer shall provide a full machine parts, labor, and refrigerant warranty for a period of one (1) year. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start dates from shipment or start up will not be accepted.
- B. Provide an extended four (4) year FULL machine parts, labor, and refrigerant warranty for chillers. All chiller components to be included such as but not limited to refrigerant, compressors, motors, starters, variable frequency drives, condenser coils, evaporator coils, fans, controls, and gear assemblies (as applicable) etc. In the event of failure, the chiller manufacturer shall provide a new motor, compressor, drive assembly, etc. Local or field rebuilt motors, compressors, drive assemblies etc. are not acceptable.
- C. In addition to full machine parts, labor and refrigerant, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, refrigerant, oils, lubricants, belts, filters, insulation, and any expenses related to service calls required to diagnose and correct warranty issues.
- D. All components replaced through the warranty process shall be new and not used or rebuilt.
- E. The manufacturer shall provide factory certificates for each chiller listing as a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.

EQUIPMENT SHALL BID AS AN ALTERATE

- F. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.

1.12 PREVENTATIVE MAINTENANCE SERVICE

- A. Furnish service and maintenance of chillers for period of five (5) years from Date of Substantial Completion.
- B. At substantial completion, provide owner a schedule of proposed service dates for prior approval. Preventative maintenance shall not be conducted without prior owner approval.
- C. Include, on a quarterly basis, systematic examination, required adjustments, lubrication of unit and controls calibration. Repair or replace parts in accordance with manufacturer's operating and maintenance data. Use new parts produced by manufacturer of original equipment.
- D. Provide quarterly inspections, four (4) per year, by factory direct technician. Provide the owner a minimum of one week's notice prior to inspection.
- E. Perform work without removing units from service during building normal occupied hours. Off-line chiller work must be coordinated with Owner.
- F. At no additional cost to owner provide emergency call back service at all hours during this maintenance period.
- G. Maintain locally adequate stock of parts for replacement or emergency purposes. Have personnel available to ensure fulfillment of this maintenance service, without unreasonable loss of time.
- H. All maintenance work shall be performed by factory direct service technician. Maintenance work shall not be performed by installing mechanical contractor.
- I. Do not assign or transfer maintenance service to agent or subcontractor.
- J. Provide owner a copy on company letterhead neatly typed of each quarterly and annual report after each visit.

PART 2 – PRODUCTS

2.1 SCROLL WATER CHILLERS AIR-COOLED

- A. Acceptable Manufacturers: Subject to compliance with specification and mechanical drawing requirements, provide products by one of the following:
 - 1. **Refer to Specification 01 23 00 Alternates for acceptable manufacturers.**
 - 2. **All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.**
- B. Product Description: Factory assembled and tested, packaged air-cooled liquid chiller consisting of semi-hermetic rotary screw or hermetic scroll compressors, suction gas-cooled compressor motor, condenser coils, evaporator, refrigeration accessories and control cabinet with single point power connection.

EQUIPMENT SHALL BID AS AN ALTERATE

2.2 UNIT IDENTIFICATION REQUIREMENTS

- A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:
- Unit identification as indicated within Contract Documents.
 - Serial Number.
 - Model Number.
 - Capacity (tonnage).
 - Entering and leaving water temperature.
 - Flow rate (GPM).
 - Unit Power Supply: Volts / PH / Amps; MCA / MOCP
 - Refrigerant type.
 - Sales Order #.
 - Date of unit manufactured.

2.3 COMPRESSORS

- A. Scroll Compressors:
1. Unit: Direct drive, hermetic, fixed compression, scroll motor-compressor with control panel.
 2. Features: Centrifugal oil pump, sump oil heater, oil level sight glass, oil charging valve, two-point lubrication for each motor bearing, flooded lubrication for journal and thrust bearings, check valve on scroll discharge port.
 3. Motor: Suction-gas cooled hermetically sealed, squirrel cage induction type.
 4. Automatic Capacity Reduction: Electronic logic controller and air temperature sensor controls unit and hot gas bypass regulator valve.
 5. Provide complete refrigerant charge of **R-32** or **R-454B** and oil charge.
- B. Lube oil system shall include filtration devices with proper valves for removal of filter without removal of refrigerant charge.
- C. Ultra Low Sound Compressor Control: Chiller manufacturer shall provide the following attenuation package and meet scheduled maximum A-weighted sound pressure level rating of 70dBA at 30' from the condenser coil side of chiller per AHRI. A complete sound attenuation package shall be provided regardless of if scheduled dBA is met without.
1. Acceptable sound attenuation package manufacturer: BRD-Noise and Vibration Control Inc. (Factory attenuation packages only are not acceptable)
 2. Complete Ultra-low sound package shall be manufactured by BRD – Noise and Vibration Control, Inc., Hushcore™ Product line, no exceptions.
- Contact: Kristopher Gonzalez – (610) 881-449020**
3. Provide ultra-low sound blanket on a minimum of 100% coverage of each compressor, suction line, discharge line and oil separator: no exceptions.

EQUIPMENT SHALL BID AS AN ALTERATE

4. Removable Sound Covers shall be constructed with a Silicone-fiberglass cloth outer jacket, a loaded vinyl barrier septum, fiberglass needle mat (11 lbs./ft.³ density), and a Silicone-fiberglass cloth inner jacket. The covers shall be connected together by means of a cloth straps with "D" rings and Velcro™ fasteners. The inner and outer jackets shall protect against UV rays, oil, and water. Finished Surface Mass – 3 lbs. per sq. ft., to cover compressors and extended components for the specified chiller. Stainless steel wire tie fastening assemblies are not acceptable.
5. Provide detailed ultra-low sound acoustical data with submittal, no exceptions. Data shall include sound pressure rating across each octave band and A-weighted average for chiller as built with attenuation package.

2.4 EVAPORATOR

- A. The evaporator shall be a compact, high efficiency, dual circuit, brazed plate-to-plate type heat exchanger consisting of parallel stainless steel plates. Vent and drain connections shall be provided in the inlet and outlet chilled water piping by the installing contractor.
- B. Furnish multiple refrigerant circuits on multiple compressor units. Include a minimum of two (2) circuits.
- C. Design, test, and stamp refrigerant side for 445 psig working pressure and water side for 150 psig working pressure, in accordance with ASME Section VIII.
- D. Insulate with 0.75-inch minimum thick, closed cell foam, vapor barrier insulation with a maximum K factor of 0.26. This insulation shall have a 3mm thick PE embossed film to provide additional damage resistance as well as be UV resistant. Provide heater plate with thermostat to protect evaporator from freezing down to -20° F. ambient. This heater shall be field powered separate from main unit power by the 120V control circuit connection.

2.5 CONDENSER COILS, FANS AND MOTORS

- A. Coils shall be microchannel and shall have a series of flat tubes containing a series of multiple parallel flow microchannels layered between the refrigerant manifolds. Coils shall consist of a two-pass arrangement. Coil construction shall consist of aluminum alloys for fins, tubes, and manifolds in combination with a corrosion resistant coating. Tubes shall be cleaned, dehydrated, and sealed. Assembled condenser coils shall be pressure tested at the coil factory at 660 psig and subsequently shall be leak tested at 145 psig ±5 psig and pressure tested at 350 psig at final unit assembly.
- B. Louvered/Wire Panels: Factory installed louvered panels on external condenser coil faces, painted to match unit panels. Factory louvered panels around the base and ends of the machine to restrict unauthorized access.
- C. Low Sound Fans: Reduced rpm, vertical direct driven propeller type condenser fans with fan guard on discharge. Fans shall have a minimum of 7 polymer blades with baffling. Metal blade fans are not acceptable.
- D. Fan Motors: High efficiency 8-pole low RPM motor, direct drive fan connection, 3 phase power, insulation class "F", current protected, Totally Enclosed Air-Over (TEAO) with double sealed, permanently lubricated ball bearings.

EQUIPMENT SHALL BID AS AN ALTERATE

2.6 SOUND RATINGS

- A. Noise Rating: Emitted A-Weighted Sound Pressure Level shall not exceed 71 dBA at 30 feet from sides of the unit when measured according to ARI STANDARD 575.
- B. Acoustic sound compressor blankets and Low Sound Fans shall be provided regardless of if scheduled dBA is met without.

2.7 REFRIGERANT CIRCUIT

- A. Dual refrigerant circuits with one compressor per circuit.
- B. Furnish for each refrigerant circuit:
 - 1. Liquid line solenoid valve.
 - 2. Filter dryer (replaceable core type without refrigerant loss or removal).
 - 3. Liquid line sight glass and moisture indicator.
 - 4. Electronic expansion valve.
 - 5. Charging valve.
 - 6. Insulated suction line.
 - 7. Discharge line check valve.
 - 8. Compressor discharge service valve.
 - 9. Pressure relief device.
 - 10. Oil separator.

2.8 CONTROLS

- A. Factory mounted watertight steel control cabinet containing contactors, power and control wiring with factory wired single point power connection and non-fused disconnect switch with handle extending through face of cabinet. Control cabinet shall include microprocessor-based control system. System shall provide control of chiller operation and monitoring of chiller sensors, actuators, relays, and switches. Control panel shall include LCD display with keypad interface. Display messages shall be plain English. A coded two- or three-character display is unacceptable.
- B. Control Panel shall be NEC409 and UL508A compliant (high short circuit current rating).
- C. Chiller manufacturer shall provide a BACnet interface card (gateway) in control panel. Mounting, wiring, programming, and calibration of gateway shall be provided by chiller manufacturer. Chiller supplier shall provide BAS contractor with point list and programming information as needed.
 - 1. A BACnet communication network interface card with building automation system shall enable building automation system operator to remotely control and monitor the chiller from an operator workstation. Control features available, and monitoring points displayed, locally at chiller control panel shall be available through building automation system.
- D. Gateway shall include the following communication ports: One Ethernet port, one serial port configurable for EIA-232 or EIA-485 and one EIA-485 serial port.
- E. Gateways that transfer data in proprietary language are not acceptable.

EQUIPMENT SHALL BID AS AN ALTERATE

- F. Gateway shall support open protocol communication for data sharing, alarm and event management, scheduling, trending and device and network management.
- G. Furnish the following safety control with indicating lights arranged so machine is shut down and requires manual reset.
 - 1. High condenser refrigerant pressure.
 - 2. Low oil pressure.
 - 3. High oil temperature.
 - 4. High motor current.
 - 5. High motor temperature.
 - 6. Low refrigerant (evaporator) pressure.
 - 7. High bearing temperature.
- H. Furnish the following safety controls. Operating any one control shuts down machine:
 - 1. Low chilled water temperature.
 - 2. Chilled Water Integral flow switches within chiller. Flow proving switches shall be thermal dispersion type (IFM U 40100 or approved equal). Switches shall be U.L. listed, SPDT snap-acting, and pilot duty rated (125 VA minimum). Flow switch shall have relay output, wire break output and temperature output. Flow switch shall be redundant; control contractor to provide flow switch within piping.
 - 3. Loss of an electrical phase.
- I. Furnish manual machine off-auto switch on control panel and the following manual or menu driven software display.
 - 1. Oil pump switch.
 - 2. Machine selector switch to allow load, unload and hold or automatic operation.
 - 3. Manual Set Point Adjustments:
 - a. Leaving chilled water temperature.
 - b. Current demand limit.
 - 4. Status display:
 - a. Chilled water flow proven.
 - b. Cooling required.
 - 1. Unit running.
 - 2. Unit loading.
 - 3. Unit unloading.
 - 4. Manual reset required.
 - 5. Remote chilled water set point active.
 - 6. Remote current water set point active.
 - 5. Set point and Temperature Display:
 - a. Chilled water set point.
 - b. Current limit set point.
 - c. Entering evaporator water temperature.
 - d. Leaving evaporator water temperature.
 - e. Entering condenser water temperature.
 - f. Leaving condenser water temperature.

SCROLL WATER CHILLERS AIR-COOLED

EQUIPMENT SHALL BID AS AN ALTERATE

6. Dial or Electronic Type Pressure Indicators.
 - a. Evaporator refrigerant pressure.
 - b. Condenser refrigerant pressure.
 - c. Low oil pressure (oil sump).
 - d. High oil pressure (oil supply).
- J. Furnish the following operating controls:
 1. Multi-step chilled water temperature controller to cycle compressor and activate capacity controls, with remote thermostat.
 2. Five minute off timer prevents compressor from short cycling.
 3. Periodic pump-out-timer to pump down on chilled water flow and high evaporator refrigerant pressure.
 4. Solenoid valve between heat recovery condenser and receiver to limit refrigerant level in condenser.
 5. Provide low ambient control and high ambient options as required to ensure unit is capable of operation from 0°F to 115°F ambient.
 6. Thermostat to cycle fan motors in response to outdoor ambient temperature.
 7. Head pressure switch to cycle fan motors in response to refrigerant condensing pressure.
 8. Solid state control to vary speed of one condenser fan motor in response to refrigerant condensing pressure.
 9. Load limit thermostat to limit compressor loading on high return water temperature.
 10. Three phase monitor to protect unit by stopping compressor on phase loss, phase reversal, phase unbalance, or under voltage.
 11. Provide capacity control system capable of reducing unit capacity to 10% of full load. Compressor shall start in unloaded condition. Application of factory installed hot gas bypass on screw compressors shall be acceptable as required to meet specified minimum load. For scroll compressors, hot gas bypass must be provided and sized for minimum compressor loading on one circuit only. No exceptions.
 12. Cycle counter and operating hour meter.

2.9 MOTOR STARTER

- A. For scroll compressors, furnish across-the-line starter, non-recycling compressor overload, starter relay, and factory mounted control power transformer. Furnish manual reset and current overload protection.

EQUIPMENT SHALL BID AS AN ALTERATE

- B. Design starter enclosure for top or bottom electrical cable entry with front access door. Furnish door with interlock to non-fused disconnect switch. Provide clips to accommodate padlock.
- C. Mount the following devices within enclosure:
 - 1. Non-fused disconnect switch online side with door interlock.
 - 2. Pilot relays to start and stop compressor on signal from chiller control panel.
 - 3. Electronic overload provides overload protection, protects compressor motor from distribution system irregularities, and provides motor current signal to chiller capacity control module.
 - 4. Control power transformer.
 - 5. Fused control circuits for control circuit, oil pump motor, oil heater, and purge control unit.
 - 6. Contactor interlocks for communication between starter and control panel.
 - 7. Capacitors, one for each phase, to correct power factor to minimum 95 percent.
 - 8. Fused disconnect and starter for oil pump-if required.
 - 9. Relay for remote mounted emergency shutdown switch.
- D. Furnish the following devices on starter door or equivalent on unit control panel display:
 - 1. Starter fault trip indicator and reset.
 - 2. Overload trip indicator and reset.
 - 3. Distribution fault trip indicator and reset.
 - 4. Ground fault trip indicator and reset.
 - 5. Ammeters, one for each phase.
 - 6. Voltmeters, one for each phase.

2.10 CHILLER PERFORMANCE

- A. Minimum efficiency shall be per current local adopted IECC Supplement Table.

2.11 ELECTRICAL CHARACTERISTICS AND COMPONENTS

- A. Coordinate voltage with electrical drawings, ensure Overcurrent protective device size and type, and minimum circuit capacity are provided per unit manufacturer's published data.
- B. Factory mounted non-fused molded case disconnect switch.
- C. Single point power connection and grounding lug.
- D. Provide integral 120V control power transformer.

SCROLL WATER CHILLERS AIR-COOLED

EQUIPMENT SHALL BID AS AN ALTERATE

- E. Provide all 120V accessory branch circuits indicated on unit manufacturer's wiring diagram, including separate connection for oil heaters.

2.12 FACTORY CAPACITY TEST

- A. The chiller manufacturer shall provide the necessary special test equipment and services of a factory trained technician to conduct various capacity tests prior to delivery to the project. Tests shall verify and certify that project equipment is in compliance with the Contract Documents.
- B. Four (4) copies of the tests and their results shall be submitted to the Engineer for approval within five (5) calendar days from chiller test date. If test results do not demonstrate compliance with the Contract Documents, the project chillers will be tested with required correction procedures until compliance can be certified.
- C. Conform to UL 1995 code for construction of chillers and furnish UL label.
- D. Conform to ASME Section VIII for construction and testing of chillers.

2.13 PUMPOUT SYSTEM-IF REQUIRED

- A. Provide service valves and connections for refrigerant pump-out to remote storage tank using portable condensing unit. Valves are not required if chiller is capable of pumping the entire refrigerant charge into condenser vessel for storage.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install chiller on concrete housekeeping pad minimum four (4) inches high and six (6) inches wider than chiller base on each side. Refer to Section 23 05 29 Hangers and Supports for HVAC Piping and Equipment.
- B. Install units on vibration isolation. Refer to Section 23 05 48 Vibration and Seismic Controls for HVAC Piping and Equipment.
- C. Maintain manufacturer's recommended clearances for service and maintenance.
- D. Install chiller accessories furnished loose for field mounting.
- E. Install electrical devices furnished loose for field mounting.
- F. Install control wiring between chiller control panel and field mounted control devices.
- G. Provide for connection of electrical wiring between starter and chiller control panel, oil pump, and purge unit. Refer to Division 26, Electrical.
- H. Provide the following piping accessories on evaporator chilled water piping connections.

EQUIPMENT SHALL BID AS AN ALTERATE

3.2 CONNECTIONS

- A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems.
- B. Install piping from chiller rupture disc to outdoors. Size as recommended by manufacturer. Pipe in accordance with local codes and ASHRAE 15.
- C. Comply with requirements for piping specified in Section 23 21 13 "Hydronic Piping" and Section 23 23 00 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- D. Install piping adjacent to chiller to allow service and maintenance. Piping shall be arranged for easy dismantling to permit tube cleaning. Locate shut-off valves to permit removal of piping for access.
- E. Evaporator Fluid Connections: Connect to evaporator inlet with nipple and flow switch, shutoff valve, Y-strainer, flexible connector, thermometer well for temperature controller, thermometer well and thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with flow switch with DDC interface, shutoff valve, balancing valve, flexible connector, thermometer well and thermometer, thermometer well for temperature controller, plugged tee with shutoff valve and pressure gage, and drain connection with valve. Make connections to chiller with a mechanical coupling manufactured by Victaulic. Refer to Sections 23 05 19 Meters and Gages for HVAC Piping and 23 21 13 Hydronic Piping.
- F. Provide control wiring between chiller control panel and field mounted control devices.
- G. Provide connection to electrical service.

3.3 STARTUP SERVICE

- A. A factory direct authorized service representative shall perform startup service. Chiller startup shall not be performed by contractor.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that refrigerant charge is sufficient, and chiller has been leak tested.
 - 3. Verify that pumps are installed and functional.
 - 4. Verify that thermometers and gages are installed.
 - 5. Operate chiller for run-in period.
 - 6. Check bearing lubrication and oil levels.
 - 7. Verify that refrigerant pressure relief device is vented outside.
 - 8. Verify proper motor rotation.
 - 9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.

EQUIPMENT SHALL BID AS AN ALTERATE

10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator and condenser.
 11. Verify and record performance of chiller protection devices.
 12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.
- C. Prepare test and inspection startup reports.

3.4 FIELD QUALITY CONTROL

- A. Furnish cooling season start-up, winter season shutdown service, for first year of operation. When initial start-up and testing takes place in winter and machines are to remain inoperative, repeat start-up and testing operation at beginning of first cooling season.

3.5 MANUFACTURER'S FIELD SERVICES

- A. Manufacturer's representative shall certify in writing that installation is in compliance with manufacturer's recommendations.
- B. Furnish services of factory trained representative for minimum three (3) days to leak test, refrigerant pressure test, and start-up, calibrate controls, and instruct Owner on operation and maintenance.

3.6 DEMONSTRATION AND TRAINING

- A. Demonstrate system operations and verify specified performance. A functional test of the installed chiller control system shall be performed to demonstrate proper functioning of all interlocks and protective systems specified or otherwise required. This testing shall be conducted in the presence of the Owner's representative and the Engineer. The Contractor shall submit test procedure for approval by the Engineer prior to testing.
- B. Coordinate testing with Testing and Balancing Contractor.

3.7 CLEANING

- A. After completing system installation and testing, adjusting, and balancing and after completing startup service, clean chiller externally and internally to remove foreign material and construction dirt and dust. Clean condensing coils, condensing fans, frame, etc.
- B. **Prior to building occupation, contractor shall clean condenser coils free from dirt and debris.**

END OF SECTION 23 64 23

EQUIPMENT SHALL BID AS AN ALTERATE

SECTION 23 64 27 - ROTARY-SCREW WATER CHILLERS AIR-COOLED

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide a complete operational Rotary-Screw Water Chiller.
- B. Related Sections:
 - 1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
 - 2. Section 23 90 00 "Refrigerant Detection Monitoring System" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.
 - 3. Section 23 05 48 Vibration and Seismic Controls for HVAC Piping and Equipment - Product requirements for Vibration Isolators for placement by this section.
 - 4. Section 23 05 19 Meters and Gages for HVAC Piping: Product requirements for piping specialties for placement by this section.

1.3 DEFINITIONS

- A. BAS: Building automation system.
- B. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and referenced to ARI standard rating conditions.
- E. kW/Ton (kW/kW): The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons (kW) at any given set of rating conditions.
- F. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and intended for operating conditions other than the ARI standard rating conditions.

EQUIPMENT SHALL BID AS AN ALTERATE

1.4 REFERENCES

- A. Air-Conditioning and Refrigeration Institute:
 - 1. ARI 550/590 - Water Chilling Packages Using the Vapor Compression Cycle.
- B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
 - 1. ASHRAE 15 - Safety Code for Mechanical Refrigeration.
 - 2. ASHRAE 90.1 - Energy Efficient Design of New Buildings Except Low-Rise Residential Buildings.
- C. American Society of Mechanical Engineers:

- D. Underwriters Laboratories Inc.:
 - 1. UL 1995 - Heating and Cooling Equipment.

1.5 ACTION SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.
- C. Shop Drawings: Indicate components, assembly, dimensions, weights, and loads, required clearances, and location and size of field connections. Indicate equipment, piping and connections, valves, strainers, and thermostatic valves required for complete system.
- D. Product Data: Submit rated capacities, specialties and accessories, electrical requirements, and wiring diagrams.
- E. Design Data: Indicate energy input versus cooling load output from 25 to 100 percent of full load at specified and minimum condenser water temperature.
- F. Test Reports: Indicate results of factory performance test.
- G. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.
- H. Manufacturer's Certificate: Certify products meet or exceed specified requirements including components not produced by manufacturer.
- I. Manufacturer's Field Reports: Submit start-up report for each unit. Indicate results of leak test and refrigerant pressure test.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

EQUIPMENT SHALL BID AS AN ALTERATE

1. Structural supports.
 2. Piping roughing-in requirements.
 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- B. Certificates: For certification required in "Quality Assurance" Article.
- C. Source quality-control reports.
- D. Startup service reports.
- E. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit start-up instructions, maintenance data, parts lists, controls, and accessories. Include trouble- shooting guide.

1.8 QUALITY ASSURANCE

- A. ARI Certification: Certify chiller according to ARI 550 certification program.
- B. ARI Rating: Rate chiller performance according to requirements in ARI 550/590.
- C. ASHRAE Compliance:
1. ASHRAE 15 for safety code for mechanical refrigeration.
 2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
- E. ASME Compliance: Fabricate and label chillers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1[, as applicable to chiller design]. For chillers charged with R-134a refrigerant, include an ASME U-stamp and nameplate certifying compliance.
- F. Comply with NFPA 70.
- G. Comply with requirements of UL and UL Canada and include label by a qualified testing agency showing compliance.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Chillers shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water

EQUIPMENT SHALL BID AS AN ALTERATE

migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage. Leave factory covers in place until startup of machine.

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- B. If chiller is mounted on structural-steel support structure coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.11 WARRANTY

- A. The chiller manufacturer shall provide a full machine parts, labor, and refrigerant warranty for a period of one (1) year. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start dates from shipment or startup will not be accepted.
- B. Provide an extended four (4) year FULL machine parts, labor, and refrigerant warranty for chillers. All chiller components to be included such as but not limited to refrigerant, compressors, motors, starters, variable frequency drives, condenser coils, evaporator coils, fans, controls, and gear assemblies (as applicable) etc. In the event of failure, the chiller manufacturer shall provide a new motor, compressor, drive assembly, etc. Local or field rebuilt motors, compressors, drive assemblies etc. are not acceptable.
- C. In addition to full machine parts, labor and refrigerant, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal

EQUIPMENT SHALL BID AS AN ALTERATE

freight/shipping, refrigerant, oils, lubricants, belts, filters, insulation, and any expenses related to service calls required to diagnose and correct warranty issues.

- D. All components replaced through the warranty process shall be new and not used or re-built.
- E. The manufacturer shall provide factory certificates for each chiller listing as a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.
- F. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.

1.12 PREVENTATIVE MAINTENANCE SERVICE

- A. Furnish service and maintenance of chillers for period of five (5) years from Date of Substantial Completion.
- B. At substantial completion, provide owner a schedule of proposed service dates for prior approval. Preventative maintenance shall not be conducted without prior owner approval.
- C. Include, on a quarterly basis, systematic examination, required adjustments, lubrication of unit and controls calibration. Repair or replace parts in accordance with manufacturer's operating and maintenance data. Use new parts produced by manufacturer of original equipment.
- D. Perform work without removing units from service during building normal occupied hours. Off-line chiller work must be coordinated with Owner.
- E. At no additional cost to owner provide emergency call back service at all hours during this maintenance period.
- F. Maintain locally adequate stock of parts for replacement or emergency purposes. Have personnel available to ensure fulfillment of this maintenance service, without unreasonable loss of time.
- G. All maintenance work shall be performed by factory direct service technician. Maintenance work shall not be performed by installing mechanical contractor.
- H. Provide quarterly inspections, four (4) per year, by factory direct technician. Provide the owner a minimum of one week's notice prior to inspection.
- I. Do not assign or transfer maintenance service to agent or subcontractor.
- J. Provide owner a copy on company letterhead neatly typed of each quarterly and annual report after each visit.

PART 2 – PRODUCTS

2.1 ROTARY-SCREW WATER CHILLERS AIR-COOLED

- A. Acceptable Manufacturers: Subject to compliance with specification and mechanical drawing requirements, provide products by one of the following:

ROTARY-SCREW WATER CHILLERS AIR-COOLED
23 64 27 - 5

EQUIPMENT SHALL BID AS AN ALTERATE

1. **Refer to Specification 01 23 00 Alternates for acceptable manufacturers.**
 2. **All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.**
- B. Product Description: Factory assembled and tested, packaged air-cooled liquid chiller consisting of semi-hermetic rotary screw or hermetic scroll compressors, suction gas-cooled compressor motor, condenser coils, evaporator, refrigeration accessories and control cabinet with single point power connection.

2.2 UNIT IDENTIFICATION REQUIREMENTS

- A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:
- Unit identification as indicated within Contract Documents.
 - Serial Number.
 - Model Number.
 - Capacity (tonnage).
 - Entering and leaving water temperature.
 - Flow rate (GPM).
 - Unit Power Supply: Volts / PH / Amps; MCA / MOCP
 - Refrigerant type.
 - Sales Order #.
 - Date of unit manufactured.

2.3 COMPRESSORS

- A. Rotary Screw Compressor:
1. Semi-hermetic rotary screw compressor with capacity control slide valve, rolling element bearings and differential refrigerant pressure oil pump and oil heater.
 2. Direct drive, constant speed, suction gas-cooled, semi- hermetic motor.
 3. Crankcase heater shall energize when compressor is not running.
 4. Refrigerant used shall be **R-513A**.
 5. Each compressor shall have an isolated refrigerant circuit piped such that burnout of one compressor shall not damage the other compressor(s). Compressors shall not be piped in parallel arrangement into one refrigerant circuit.
- B. Lube oil system shall include filtration devices with proper valves for removal of filter without removal of refrigerant charge.
- C. Ultra Low Sound Compressor Control: Chiller manufacturer shall provide the following attenuation package and meet scheduled maximum A-weighted sound pressure level rating of 70dBA at 30' from the condenser coil side of chiller per AHRI. A complete sound attenuation package shall be provided regardless of if scheduled dBA is met without.

EQUIPMENT SHALL BID AS AN ALTERATE

1. Acceptable sound attenuation package manufacturer: BRD-Noise and Vibration Control Inc. (Factory attenuation packages only are not acceptable)
2. Complete Ultra-low sound package shall be manufactured by BRD – Noise and Vibration Control, Inc., Hushcore™ Product line, no exceptions.

Contact: Kristopher Gonzalez – (610) 881-449020

3. Provide ultra-low sound blanket on a minimum of 100% coverage of each compressor, suction line, discharge line and oil separator: no exceptions.
4. Removable Sound Covers shall be constructed with a Silicone-fiberglass cloth outer jacket, a loaded vinyl barrier septum, fiberglass needle mat (11 lbs./ft.³ density), and a Silicone-fiberglass cloth inner jacket. The covers shall be connected together by means of a cloth straps with “D” rings and Velcro™ fasteners. The inner and outer jackets shall protect against UV rays, oil, and water. Finished Surface Mass – 3 lbs. per sq. ft., to cover compressors and extended components for the specified chiller. Stainless steel wire tie fastening assemblies are not acceptable.
5. Provide detailed ultra-low sound acoustical data with submittal, no exceptions. Data shall include sound pressure rating across each octave band and A-weighted average for chiller as built with attenuation package.

2.4 EVAPORATOR VESSEL

- A. Shell and tube type, seamless or welded steel construction with cast iron or fabricated steel, heads, seamless copper tubes or red brass tubes with integral fins, rolled or silver brazed into tube sheets. Furnish multiple refrigerant circuits on multiple compressor units. Include a minimum of two (2) circuits.
- B. Design, test, and stamp refrigerant side for 220 psig working pressure and water side for 300 psig working pressure, in accordance with ASME Section VIII.
- C. Furnish water boxes, with tapped drain and vent connections with flanged or mechanical joint connections arranged to permit inspection of tubes from either end without disturbing refrigerant.
- D. Furnish refrigerant chambers with baffles to distribute entering liquid and separate liquid from leaving gas.
- E. Insulate with 0.75-inch minimum thick, closed cell foam, vapor barrier insulation with a maximum K factor of 0.26. This insulation shall have a 3mm thick PE embossed film to provide additional damage resistance as well as be UV resistant. Provide electric resistance immersion heater with thermostat to protect evaporator from freezing down to -20° F. ambient. This heater shall be field powered separate from main unit power by the 120V control circuit connection.
- F. Furnish water drain connection and thermometer wells for temperature controller and low temperature cutout.

EQUIPMENT SHALL BID AS AN ALTERATE

2.5 CONDENSER COILS, FANS AND MOTORS

- A. Coils shall be microchannel and shall have a series of flat tubes containing a series of multiple parallel flow microchannels layered between the refrigerant manifolds. Coils shall consist of a two-pass arrangement. Coil construction shall consist of aluminum alloys for fins, tubes, and manifolds in combination with a corrosion resistant coating. Tubes shall be cleaned, dehydrated, and sealed. Assembled condenser coils shall be pressure tested at the coil factory at 660 psig and subsequently shall be leak tested at 145 psig \pm 5 psig and pressure tested at 350 psig at final unit assembly.
- B. Louvered/Wire Panels: Factory installed louvered panels on external condenser coil faces, painted to match unit panels. Factory louvered panels around the base and ends of the machine to restrict unauthorized access.
- C. Low Sound Fans: Reduced rpm, vertical direct driven propeller type condenser fans with fan guard on discharge. Fans shall have a minimum of 7 polymer blades with baffling. Metal blade fans are not acceptable.
- D. Fan Motors: High efficiency 8-pole low RPM motor, direct drive fan connection, 3 phase power, insulation class "F", current protected, Totally Enclosed Air-Over (TEAO) with double sealed, permanently lubricated ball bearings.

2.6 SOUND RATINGS

- A. Noise Rating: Emitted A-Weighted Sound Pressure Level shall not exceed scheduled dBA at 30 feet from sides of the unit when measured according to ARI STANDARD 575.
- B. Acoustic sound compressor blankets and Low Sound Fans shall be provided regardless of if scheduled dBA is met without.

2.7 REFRIGERANT CIRCUIT

- A. Dual refrigerant circuits with one compressor per circuit.
- B. Furnish for each refrigerant circuit:
 - 1. Liquid line solenoid valve.
 - 2. Filter dryer (replaceable core type without refrigerant loss or removal).
 - 3. Liquid line sight glass and moisture indicator.
 - 4. Electronic expansion valve.
 - 5. Charging valve.
 - 6. Insulated suction line.
 - 7. Discharge line check valve.
 - 8. Compressor discharge service valve.
 - 9. Pressure relief device.
 - 10. Oil separator.

2.8 CONTROLS

- A. Factory mounted watertight steel control cabinet containing contactors, power and control wiring with factory wired single point power connection and non-fused disconnect switch with handle extending through face of cabinet. Control cabinet shall include microprocessor-based control system. System shall provide control of chiller operation

EQUIPMENT SHALL BID AS AN ALTERATE

and monitoring of chiller sensors, actuators, relays, and switches. Control panel shall include LCD display with keypad interface. Display messages shall be plain English. A coded two- or three-character display is unacceptable.

- B. Control Panel shall be NEC409 and UL508A compliant (high short circuit current rating).
- C. Chiller manufacturer shall provide a BACnet interface card (gateway) in control panel. Mounting, wiring, programming, and calibration of gateway shall be provided by chiller manufacturer. Chiller supplier shall provide BAS contractor with point list and programming information as needed.
 - 1. A BACnet communication network interface card with building automation system shall enable building automation system operator to remotely control and monitor the chiller from an operator workstation. Control features available, and monitoring points displayed, locally at chiller control panel shall be available through building automation system.
- D. Gateway shall include the following communication ports: One Ethernet port, one serial port configurable for EIA-232 or EIA-485 and one EIA-485 serial port.
- E. Gateways that transfer data in proprietary language are not acceptable.
- F. Gateway shall support open protocol communication for data sharing, alarm and event management, scheduling, trending and device and network management.
- G. Furnish the following safety control with indicating lights arranged so machine is shut down and requires manual reset.
 - 1. High condenser refrigerant pressure.
 - 2. Low oil pressure.
 - 3. High oil temperature.
 - 4. High motor current.
 - 5. High motor temperature.
 - 6. Low refrigerant (evaporator) pressure.
 - 7. High bearing temperature.
- H. Furnish the following safety controls. Operating any one control shuts down machine:
 - 1. Low chilled water temperature.
 - 2. Chilled Water Integral flow switches within chiller. Flow proving switches shall be thermal dispersion type (IFM U 40100 or approved equal). Switches shall be U.L. listed, SPDT snap-acting, and pilot duty rated (125 VA minimum). Flow switch shall have relay output, wire break output and temperature output. Flow switch shall be redundant; control contractor to provide flow switch within piping.
 - 3. Loss of an electrical phase.
- I. Furnish manual machine off-auto switch on control panel and the following manual or menu driven software display.
 - 1. Oil pump switch.
 - 2. Machine selector switch to allow hand, off, or automatic operation.
 - 3. Manual Set Point Adjustments:

ROTARY-SCREW WATER CHILLERS AIR-COOLED

EQUIPMENT SHALL BID AS AN ALTERATE

- a. Leaving chilled water temperature.
 - b. Current demand limit.
- 4. Status display:
 - a. Chilled water flow proven.
 - b. Cooling required.
 - 1. Unit running.
 - 2. Unit loading.
 - 3. Unit unloading.
 - 4. Manual reset required.
 - 5. Remote chilled water set point active.
 - 6. Remote current water set point active.
- 5. Set point and Temperature Display:
 - a. Chilled water set point.
 - b. Current limit set point.
 - c. Entering evaporator water temperature.
 - d. Leaving evaporator water temperature.
 - e. Entering condenser water temperature.
 - f. Leaving condenser water temperature.
- 6. Dial or Electronic Type Pressure Indicators.
 - a. Evaporator refrigerant pressure.
 - b. Condenser refrigerant pressure.
 - c. Low oil pressure (oil sump).
 - d. High oil pressure (oil supply).
- J. Furnish the following operating controls:
 - 1. Multi-step chilled water temperature controller to cycle compressor and activate capacity controls, with remote thermostat.
 - 2. Five minute off timer prevents compressor from short cycling.
 - 3. Periodic pump-out-timer to pump down on chilled water flow and high evaporator refrigerant pressure.
 - 4. Provide low ambient control and high ambient options as required to ensure unit is capable of operation from 0°F to 115°F ambient.
 - 5. Thermostat to cycle fan motors in response to outdoor ambient temperature.
 - 6. Head pressure switch to cycle fan motors in response to refrigerant condensing pressure.
 - 7. VFD control to vary speed of one at least one condenser fan motor in response to refrigerant condensing pressure.

EQUIPMENT SHALL BID AS AN ALTERATE

8. Load limit thermostat to limit compressor loading on high return water temperature.
9. Three phase monitor to protect unit by stopping compressor on phase loss, phase reversal, phase unbalance, or under voltage.
10. Provide capacity control system capable of reducing unit capacity to 10% of full load. Compressor shall start in unloaded condition. Application of factory installed hot gas bypass on screw compressors shall be acceptable as required to meet specified minimum load. For scroll compressors, hot gas bypass must be provided and sized for minimum compressor loading on one circuit only. No exceptions.
11. Cycle counter and operating hour meter.

2.9 FACTORY MOUNTED VARIABLE FREQUENCY DRIVE (REQUIRED)

- A. VFDs for each compressor shall have a DC link reactor.
- B. All VFDs on the chiller (compressor motors and fans) shall be fully air-cooled and shall not require an additional glycol cooling system. If supplying a VFD glycol cooling system, the following must be provided in conjunction with and for the duration of the service/maintenance agreement specified in section 23 64 27 – 1.12.
 1. Glycol solution replacement every 5 years.
 2. Annual pH test.
 3. Annual fluid level check.
 4. Annual glycol condenser cleaning.

2.10 CHILLER PERFORMANCE

- A. Minimum efficiency shall be per current local adopted IECC Supplement Table.

2.11 ELECTRICAL CHARACTERISTICS AND COMPONENTS

- A. Coordinate voltage with electrical drawings, ensure Overcurrent protective device size and type, and minimum circuit capacity are provided per unit manufacturer's published data.
- B. Factory mounted non-fused molded case disconnect switch.
- C. Single point power connection and grounding lug.
- D. Provide integral 120V control power transformer.
- E. Provide all 120V accessory branch circuits indicated on unit manufacturer's wiring diagram, including separate connection for oil heaters.

2.12 FACTORY CAPACITY TEST

- A. The chiller manufacturer shall provide the necessary special test equipment and services of a factory trained technician to conduct various capacity tests prior to delivery to the

EQUIPMENT SHALL BID AS AN ALTERATE

project. Tests shall verify and certify that project equipment is in compliance with the Contract Documents.

- B. Four (4) copies of the tests and their results shall be submitted to the Engineer for approval within five (5) calendar days from chiller test date. If test results do not demonstrate compliance with the Contract Documents, the project chillers will be tested with required correction procedures until compliance can be certified.
- C. Conform to UL 1995 code for construction of chillers and furnish UL label.
- D. Conform to ASME Section VIII for construction and testing of chillers.

2.13 PUMPOUT SYSTEM-IF REQUIRED

- A. Provide service valves and connections for refrigerant pump-out to remote storage tank using portable condensing unit. Valves are not required if chiller is capable of pumping the entire refrigerant charge into condenser vessel for storage.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install chiller on concrete housekeeping pad minimum four (4) inches high and six (6) inches wider than chiller base on each side. Refer to Section 23 05 29 Hangers and Supports for HVAC Piping and Equipment.
- B. Install units on vibration isolation. Refer to Section 23 05 48 Vibration and Seismic Controls for HVAC Piping and Equipment.
- C. Maintain manufacturer's recommended clearances for service and maintenance.
- D. Install chiller accessories furnished loose for field mounting.
- E. Install electrical devices furnished loose for field mounting.
- F. Install control wiring between chiller control panel and field mounted control devices.
- G. Provide for connection of electrical wiring between starter and chiller control panel, oil pump, and purge unit. Refer to Division 26, Electrical.
- H. Provide the following piping accessories on evaporator chilled water piping connections.

3.2 CONNECTIONS

- A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems.
- B. Comply with requirements for piping specified in Section 23 21 13 "Hydronic Piping" and Section 23 23 00 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to chiller to allow service and maintenance. Piping shall be arranged for easy dismantling to permit tube cleaning. Locate shut-off valves to permit removal of piping for access.

EQUIPMENT SHALL BID AS AN ALTERATE

- D. Evaporator Fluid Connections: Connect to evaporator inlet with nipple and flow switch, shutoff valve, Y-strainer, flexible connector, thermometer well for temperature controller, thermometer well and thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with flow switch with DDC interface, shutoff valve, balancing valve, flexible connector, thermometer well and thermometer, thermometer well for temperature controller, plugged tee with shutoff valve and pressure gage, and drain connection with valve. Make connections to chiller with a mechanical coupling manufactured by Victaulic. Refer to Sections 23 05 19 Meters and Gages for HVAC Piping and 23 21 13 Hydronic Piping.
- E. Provide control wiring between chiller control panel and field mounted control devices.
- F. Provide connection to electrical service.

3.3 STARTUP SERVICE

- A. A factory direct authorized service representative shall perform startup service. Chiller startup shall not be performed by contractor.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that refrigerant charge is sufficient, and chiller has been leak tested.
 - 3. Verify that pumps are installed and functional.
 - 4. Verify that thermometers and gages are installed.
 - 5. Operate chiller for run-in period.
 - 6. Check bearing lubrication and oil levels.
 - 7. Verify that refrigerant pressure relief device is vented outside.
 - 8. Verify proper motor rotation.
 - 9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.
 - 10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator and condenser.
 - 11. Verify and record performance of chiller protection devices.
 - 12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.
- C. Prepare test and inspection startup reports.

EQUIPMENT SHALL BID AS AN ALTERATE

3.4 FIELD QUALITY CONTROL

- A. Furnish cooling season start-up, winter season shutdown service, for first year of operation. When initial start-up and testing takes place in winter and machines are to remain inoperative, repeat start-up and testing operation at beginning of first cooling season.

3.5 MANUFACTURER'S FIELD SERVICES

- A. Manufacturer's representative shall certify in writing that installation is in compliance with manufacturer's recommendations.
- B. Furnish services of factory trained representative for minimum three (3) days to leak test, refrigerant pressure test, and start-up, calibrate controls, and instruct Owner on operation and maintenance.
- C. Oil Test: An oil sample shall be taken at start-up from each compressor. Sample will be used as a reference for all warranty oil tests. Oil samples shall be taken annually. The samples shall be tested using the Karl Fisher test method. If test indicates moisture in oil, Contractor shall obtain factory recommended procedure to fix problem. Procedure shall be submitted to Engineer prior to any work being done. All labor and materials for corrective work shall be covered by manufacturer. Oil test shall be analyzed, and report submitted to engineer within 30 days of sample date. Oil samples shall be tested by Analysts Services, Inc., or manufacturer provided testing services.

3.5 DEMONSTRATION AND TRAINING

- A. Demonstrate system operations and verify specified performance. A functional test of the installed chiller control system shall be performed to demonstrate proper functioning of all interlocks and protective systems specified or otherwise required. This testing shall be conducted in the presence of the Owner's representative and the Engineer. The Contractor shall submit test procedure for approval by the Engineer prior to testing.
- B. Coordinate testing with Testing and Balancing Contractor.

3.6 CLEANING

- A. After completing system installation and testing, adjusting, and balancing and after completing startup service, clean chiller externally and internally to remove foreign material and construction dirt and dust. Clean condensing coils, condensing fans, frame, etc.
- B. **Prior to building occupation, contractor shall clean condenser coils free from dirt and debris.**

END OF SECTION

EQUIPMENT SHALL BID AS AN ALTERNATE

SECTION 23 73 13 - MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes modular factory fabricated air-handling units and accessories.
- B. Related Sections:
 - 1. Section 23 05 00 - Common Work Results for HVAC.
 - 2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.
 - 3. Section 23 07 16 - HVAC Equipment Insulation: Product requirements for insulation for placement by this section.
 - 4. Section 23 33 00 - Air Duct Accessories: Product requirements for flexible duct connections for placement by this section.
 - 5. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Product requirements for electric motors for placement by this section.
 - 6. Section 23 05 14 - Variable Frequency Controllers.

1.3 ACTION SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.
- C. Provide Footprint Square Footage Discrepancy Chart in spreadsheet form. Clearly show the differences in height, length, and width between the submitted units and designed units per plans for each AHU with corresponding tag.
- D. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements.
- E. Product Data, Submit the following:
 - 1. Published Literature: Indicate capacities, ratings, gages and finishes of materials, and electrical characteristics and connection requirements.
 - 2. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.

EQUIPMENT SHALL BID AS AN ALTERNATE

- 3. Fans: Performance and fan curves with specified operating point plotted, power, RPM.
- 4. Sound Power Level Data: Fan outlet and casing radiation at rated capacity per ARI 260.
- 5. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring. Indicate factory installed and field installed wiring.
- F. Manufacturer's Installation Instructions: Submit.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- C. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.
- D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. Comply with NFPA 70.

1.6 QUALIFICATIONS

- A. Installer: Company specializing in performing Work of this section with minimum three (3) year's experience.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Units shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

EQUIPMENT SHALL BID AS AN ALTERNATE

- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage. Leave factory covers in place until startup of machine.

1.8 WARRANTY

- A. Furnish one (1) year manufacturer parts and labor warranty for air handling units. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or startup is not acceptable.

1.9 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor or "by others".
 - 1. Filters: Furnish three (3) sets for each unit. One set during construction, a new set of filters for Test and Balancing services, and final new set at substantial completion. Filters shall be protected with polyester fabric at all times during construction.

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

EQUIPMENT SHALL BID AS AN ALTERNATE

PART 2 – PRODUCTS

2.1 MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
- 1. Refer to Specification 01 23 00 Alternates for acceptable manufacturers.**
 - 2. All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.**
- B. Configuration: Coordinate with project plans and schedules.
- C. Performance Base: Sea level pressure or altitude.
- D. Fabrication: Conform to AMCA 99 and ARI 430. Units shall be factory assembled and ship in one piece where possible. Shipping splits are acceptable provided manufacturer includes gaskets and bolts.

2.2 SPECIAL PROJECT REQUIREMENTS: CONSTRUCTION

- A. Air handling units shall be constructed to fit scheduled maximum dimensions including factory built mixing boxes and must maintain minimum specified access sections as scheduled and shown on plans. Rotating units to different orientations other than what is drawn on plans will be unacceptable. If potentially submitted equipment shall exceed any scheduled dimension, manufacturer shall provide performance data and dimensional data for consulting engineer to review and determine if proposed unit will fit within allotted space and maintain all required maintenance clearance. Equipment with deviations to dimensions shall be submitted 10 days prior to bid date for review.
- B. Outside air / return air mixing boxes shall be factory fabricated with the same construction as the unit casing. Field supplied or installed mixing boxes are not acceptable. Dampers shall be factory installed on mixing box openings. Actuators shall be provided by the control's contractor. This applies to all the air handling units with energy recovery wheel and any unit with outside and return air ducted to the plenum.

2.3 UNIT IDENTIFICATION REQUIREMENTS

- A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:
- Project name and address.
 - Unit identification as indicated within Contract Documents.
 - Serial Number.
 - Model Number.
 - CFM.
 - Entering and leaving air temperature (DB/WB) (cooling and heating coil).
 - Entering and leaving water temperature (cooling and heating coil).
 - Cooling and heating coil flow rate (GPM).
 - Fan Motor Horsepower.
 - Blower est. ext. sp. (in. wg.).

EQUIPMENT SHALL BID AS AN ALTERNATE

- Unit Power Supply: Volts / PH / Amps; MCA / MOCP
 - Sales Order #.
 - Date of unit manufactured.
- B. Custom label shall be provided by and installed at the factory. Label shall not be by a third party or contractor.

2.4 CASING

- A. Base rail shall be a minimum of 14-gauge or heavier G-90 galvanized steel and shall be a minimum of six (6) inches in height. Base assembly shall be thermally broken and insulated with a minimum of 2" thick, R-13 closed-cell sprayed foam. Assemble multiple sections that are shipped loose with gaskets, caulk, and bolts per the manufacturer's installation instructions.
- B. External Casing:
1. Galvanized Steel: 18-gauge G90 with expanded foam injected insulation.
- C. Internal Casing:
1. Galvanized Steel: Solid 18-gauge G90. Provide 20-gauge perforated panels in fan section and discharge plenum.
- D. Casing shall be supported by free-standing 18-gauge G90 structural frame with removable panels. Framing members shall have thermal break and injected with expanded foam insulation. Structural integrity of frame shall not be affected by removing panels. Top, bottom, and side panels shall be of one-piece double-wall construction, formed and reinforced to provide a rigid assembly. All panels shall be completely gasketed at factory with a minimum 1/4-inch-thick x 3/4 inch wide closed-cell neoprene. Top and side panels shall be easily removable for service.
- E. Insulation: Expanded Foam.
1. 'K' (Ksi) factor at 75 degrees Fahrenheit: Maximum 0.154 Btuh inch / sq. ft. / degrees Fahrenheit.
 2. Density: Two (2) inch thick, minimum 1-1/2 lbs. /cu ft. throughout the entire unit. One (1) inch thick casing panels in any section is unacceptable.
 3. Insulation in perforated sections shall be coated on air side to prevent erosion into air stream. Uncoated insulation is unacceptable.
 4. If air unit structural frame comes into contact with conditioned air, it shall be insulated with the same material throughout the rest of the unit.
- F. Access Section: 24" access section with minimum 19" door clearance of double wall galvanized steel construction for flush mounting, with gasket, latch, and handle assembly, same thickness as casing. Access door frame shall be extruded aluminum, foam filled with a thermal break barrier and include a full perimeter automotive style gasket. All access doors shall match unit casing construction, include a thermal break. Provide access section between parallel coil sections, upstream of coil sections, upstream and

EQUIPMENT SHALL BID AS AN ALTERNATE

downstream of the energy recovery wheels, in fan sections, filter sections, and mixing boxes. Access doors shall be capable of complete 180° swing.

- G. Cooling Coil Drain Pan: Double wall, Type 304 stainless steel IAQ pan with two (2) inch insulation and welded corners. Drain pans without welded corners are not acceptable. Cross break and pitch to drain connection. Cooling coils with a finned height greater than 48 inches shall have an intermediate stainless steel IAQ drain pan extending entire length of coil. Intermediate pan shall have a minimum of two drop tubes to main pan. Drain pans shall allow no standing water and comply with ASHRAE Standard 62. Drain pans must be accessible for cleaning.
- H. Strength: Furnish structure to brace casings for suction pressure of five (5) inch wg, with maximum deflection of 1 in 240. Casing deflection shall not exceed a L/240 ratio when subject to an internal pressure of +/- 8-in wg and shall exhibit no permanent deformation at +/- 9-in wg. L is defined as the longest linear panel or cabinet length (measured to AHRI 1350 Cd Level 2).

2.5 FANS

- A. Direct drive plenum fans shall be single width single inlet type with backward inclined airfoil blades. Plenum fan wheel, airfoil blades and hub shall be constructed from welded aluminum.
- B. For fans 4,000 cfm and greater, provide fan wall.**
- C. Fan shall be statically and dynamically balanced at the factory as a complete fan assembly.
- D. The Fan wheels shall be keyed to shaft to prevent slipping.
- E. Construction: AMCA Class II minimum.
- F. Performance Ratings: Conform to AMCA 210 and label with AMCA Certified Rating Seal.
- G. Sound Ratings: Tested to ARI 260 and label with Certified Sound Rating Seal.
- H. Mounting: Locate fan and motor internally on welded or bolted steel base coated with corrosion resistant paint or rust-resistant G90 steel and factory-mounted motor on slide rails. Furnish access to motor, drive, and bearings through hinged access doors. Mount base on vibration isolators with deflections in accordance with Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment or 2" deflection, whichever requirement is stricter.
- I. Fan Modulation: Variable Frequency Drives.
- J. Fan Motors: All motors shall be premium efficiency, NEMA MG-1 Section 3, Inverter Duty, Totally Enclosed Fan Cooled (TEFC). Refer to Specification 23 05 13 - Common Motor Requirements for HVAC Equipment for acceptable motor manufacturers.
- K. Flexible Connection: Provide internal flexible connection between fan and air unit casing. Flexible connection between air unit casing and connecting duct shall not be provided when fan is internally isolated with flexible connection to casing.

EQUIPMENT SHALL BID AS AN ALTERNATE

2.6 BEARINGS AND DRIVES

- A. Shafts: Solid, hot rolled steel, ground and polished, with keyway, and protectively coated to prevent corrosion.
- B. Motor Shaft Grounding Kit: For all AHU motors connected to a Variable Frequency Drive, a motor shaft grounding kit shall be provided. This shall be factory installed prior to shipment. If not available from the factory, manufacturer is responsible for providing kits and field installation with no additional cost to owner or contractor.
- C. Motor: Motor shall be non-overloading. Motor horsepower shall be sized at a point on fan curve resulting from 105 percent of design RPM at scheduled CFM with a reduction in static pressure of 0.5-inch wg.
 - 1. Motor Enclosure: Totally Enclosed Fan-Cooled (TEFC).
 - 2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
 - 3. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

2.7 COILS

- A. Provide access doors upstream and downstream of coils. Enclose coils with headers and return bends fully contained within casing. Slide coils into casing through removable end panel with blank-offs and casing sealing grommets at connection penetrations. Coils shall be supported by stainless steel coil support members maintaining a minimum of 1" separation between bottom of coil casing and drain pan.
- B. Air Coils: Certify capacities, pressure drops, and selection procedures in accordance with ARI 410.
- C. Water Heating Coils:
 - 1. Headers: Cast iron, seamless copper tube, or prime coated steel pipe with brazed joints.
 - 2. Configuration: Drainable, with threaded plugs for drain and vent; serpentine type with return bends on smaller sizes and return headers on larger sizes.
 - 3. 18-inch access section between parallel coil faces.
 - 4. Casing: Die formed channel frame 16-gauge type 304 stainless steel.
 - 5. Tubes: 5/8-inch OD seamless copper, 0.020" thick, expanded into fins, brazed joints or 1/2-inch OD seamless copper, 0.025" thick, expanded into fins, brazed joints.
 - 6. Fins: Aluminum, maximum of 11 fins per inch. Minimum fin thickness shall be 0.006" aluminum.

EQUIPMENT SHALL BID AS AN ALTERNATE

7. Coil supports shall be 16-gauge type 304 stainless steel.
- D. Water Cooling Coils:
1. Headers: Cast iron, seamless copper tube, or prime coated steel pipe with brazed joints.
 2. Configuration: Drainable, with threaded plugs for drain and vent; threaded plugs in return bends and in headers opposite each tube.
 3. Coils shall be a maximum of eight (8) rows deep.
 4. 18-inch access section between parallel coil faces.
 5. Casing: Die formed channel frame of 16-gauge type 304 stainless steel.
 6. Drain Pans: Extend 12 inches downstream of coil and for coil banks more than 48 inches high provide intermediate pan with down spouts.
 7. Tubes: 5/8-inch OD seamless copper, 0.020" thick, expanded into fins, brazed joints or 1/2-inch OD seamless copper, 0.025" thick, expanded into fins, brazed joints.
 8. Fins: Aluminum, maximum of 11 fins per inch. Minimum fin thickness shall be 0.006" aluminum.
 9. Coil supports shall be 16-gauge type 304 stainless steel.
- E. Tube Velocities: Coil tube design velocity shall be between 2 feet and 5 feet per second and also maintain design water side temperature difference down to 30 percent flow through coil. Provide tubes that are enhanced internally if minimum initial design tube velocity cannot be obtained.

2.8 AIR FILTRATION

- A. Filter Box: Section with filter guides, access doors from both sides, for side loading with gaskets and blank-off plates.
- B. Filter Frames: Filter holding frames shall be permanent metal frames designed to allow replaceable filters to slide into and out of the frame. Frames shall be constructed of 22-gauge, galvanized steel U channel cell sides, expanded metal support grid, 9-gauge hinged retainer gate, wire mesh on the downstream face, sized to fit in standard sized filters, and accept maximum 2" thick media. Acceptable manufacturers: AAF or pre-approved equal.
- C. Replaceable Filter Media: MERV 11 or greater rating in accordance with ASHREA Test Standard 52.2-2007.
- D. High Capacity Angle Filter: Two (2) inch extended area filters. Air quantities as scheduled; clean pressure drop of 0.10 inches wg; dirty pressure drop of 0.75 inches wg.
- E. Filter Area: Max velocity of 350 FPM.

EQUIPMENT SHALL BID AS AN ALTERNATE

- F. Provide a list of each air handling unit with associated filter sizes to owner at substantial completion.

2.9 CONTROLS

- A. Controls: Refer to Section 23 09 23 - Direct-Digital Control System for HVAC.

2.10 CAPACITY

- A. Performance: Provide equipment as scheduled on Drawings.

2.11 ELECTRICAL CHARACTERISTICS AND COMPONENTS

- A. Provide equipment with electrical characteristics as shown on Electrical Drawings.
- B. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Requirements for motors.
- C. Section 23 05 14 - Variable Frequency Controllers: Requirements for drives.
- D. Combination Starter-Disconnect Switch: Provided by Division 26.
- E. Junction Box: Factory provided, mounted, and wired junction boxes on each fan section. J-box shall allow electrical contractor to connect power to device without penetrating through cabinet. Field installed J-boxes will not be acceptable; it shall be the complete responsibility of the manufacturer to install. Units shall be shipped with J-boxes pre-wired and mounted. Within equipment submittal the manufacturer shall show J-box location on plan view dimensional drawing.
- F. Combination Variable Frequency Drive-Disconnect Switch & Bypass: Air units that are scheduled to be controlled by a variable frequency drive shall be equipped with a factory provided variable frequency drives in a NEMA 1 enclosure. VFD shall be wall mounted and wired by mechanical contractor. Drives shall be in accordance with specification Section 23 05 14 - Variable Frequency Controllers. Drives shall be provided with Modbus, BACnet or LON Communications protocol as specified in Section 23 05 14 - Variable Frequency Controllers.
- G. All starters shall be equipped with integral phase-failure relay (automatic resetting type) to shut down motor upon loss of an electrical phase.

2.12 SOURCE QUALITY CONTROL

- A. Fan Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.
- B. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating."
- C. Water Coils: Factory tested to 300 psig according to ARI 410 and ASHRAE 33.

EQUIPMENT SHALL BID AS AN ALTERNATE

- D. Refrigerant Coils: Factory tested to 450 psig according to ARI 410 and ASHRAE 33.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with ARI 430.
- B. The mechanical rooms shall be kept broom clean prior to starting any mechanical equipment to minimize dust in the system.
- C. Install assembled units with internal vibration isolators. Internally isolated fans shall be provided with resilient mountings and flexible electrical leads. Install restraining snubbers as required. Adjust snubbers to prevent tension in flexible connectors when fan is operating. Refer to Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.
- D. Equipment Mounting: Install air-handling units on concrete bases using elastomeric pads. Secure units to anchor bolts installed in concrete bases. Comply with requirements for concrete bases; Comply with requirements for vibration isolation devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."
- E. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.
- F. Insulate coil headers located outside airflow as specified for piping. Refer to Section 23 07 19 - HVAC Piping Insulation.
- G. Provide trapped condensation drain line routed to the nearest floor drain. Refer to detail on Drawings and Section 23 21 13 - Hydronic Piping.
- H. Installation of Hot Water Heating and/or Chilled Water Coil:
1. Make connections to coils with unions. Position unions to permit coil removal.
 2. Connect water supply to leaving airside of coil (counter flow arrangement).
 3. Locate water supply at bottom of supply header and return water connection at top.
 4. Install water coils to allow draining and install drain connection at low points.
 5. Install the following piping accessories on piping connections. Refer to Section 23 21 13 - Hydronic Piping.
 - a. On supply: (refer to coil connection details)
 - 1) Thermometer well and thermometer.
 - 2) Well for control system temperature sensor.
 - 3) Shutoff valve.
 - 4) Pressure gage.
 - 5) Strainer
 - b. On return: (refer to coil connection details)

EQUIPMENT SHALL BID AS AN ALTERNATE

- 1) Air vent.
 - 2) Thermometer well and thermometer.
 - 3) Well for control system temperature sensor.
 - 4) Pressure gage.
 - 5) Modulating control valve (by BAS).
 - 6) Balancing / shut-off valve with pressure / temperature ports.
6. Install valves and piping specialties in accordance with details as indicated on Drawings.
 7. Install manual air vents at high points complete with shutoff valve. Refer to Section 23 21 13 - Hydronic Piping.
 8. Install floor support stands at piping drops to air unit coil connections. Air unit coil shall not carry any suspended piping load.
- I. Air unit manufacturer representative shall remove vibration isolation shipping blocks prior to start-up and ensure that fan base is free floating, and isolators are not short-circuited during operation.

3.2 CONNECTIONS

- A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.
- B. Comply with requirements for piping specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to air-handling unit to allow service and maintenance.
- D. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.
- E. Refrigerant Piping: Comply with applicable requirements in Section 23 23 00 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.
- F. Coordinate duct installations and specialty arrangements with schematics on Drawings and with requirements specified in Section 23 31 13 "Metal Ducts" and Section 23 33 00 "Air Duct Accessories."
- G. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 23 33 00 "Air Duct Accessories."

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.

EQUIPMENT SHALL BID AS AN ALTERNATE

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks.
 2. Charge refrigerant coils with refrigerant and test for leaks.
 3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3.4 STARTUP SERVICE

- A. Perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Verify that shipping, blocking, and bracing are removed.
 3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
 4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
 5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
 6. Verify that zone dampers fully open and close for each zone.
 7. Verify that outdoor- and return-air mixing dampers open and close and maintain minimum outdoor-air setting.
 8. Comb coil fins for parallel orientation.
 9. Verify that proper thermal-overload protection is installed for electric coils.
 10. Install new, clean filters.
 11. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
- B. Starting procedures for air-handling units include the following:

EQUIPMENT SHALL BID AS AN ALTERNATE

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

3.5 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.6 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units externally and internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, comb coils, drain pans, and filter housings, and install new, clean filters.

3.7 DEMONSTRATION

- A. Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

3.8 PROTECTION OF FINISHED WORK

- A. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.
- B. All air units shall remain in manufacturer's protective shipping wrap during construction. Air unit casing openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

END OF SECTION 23 73 13

EQUIPMENT SHALL BID AS AN ALTERNATE

SECTION 23 81 26 - DUCTLESS MINI-SPLIT-SYSTEM AIR-CONDITIONERS

PART I -GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 GENERAL REQUIREMENTS

- A. Indoor, wall or ceiling mounted, direct-expansion fan coils are matched with cooling only outdoor unit.
- B. Outdoor air-cooled split system compressor sections suitable for on-the-ground, rooftop, wall hung or balcony mounting. Units shall consist of a rotary compressor, an air-cooled coil, propeller-type draw-through outdoor fan, metering device(s), and control box. Units shall discharge air horizontally as shown on the contract drawings. Units shall function as the outdoor component of an air-to-air cooling only or heat pump system (refer to schedule).
- C. Indoor unit shall be rated per ARI Standards 210/240 and listed in the ARI directory as a matched system.
- D. A factory provided and installed BACnet communication interface card with building automation system shall enable building automation system operator to remotely control and monitor the system from an operator workstation. Control features available, and monitoring points displayed locally at fan coil controller shall be available through building automation system.
- E. Outdoor unit construction shall comply with ANSI/ASHRAE 15, latest revision, and with the NEC. Units shall be evaluated in accordance with UL standard 1995. Units shall be listed in the CEC directory. Unit cabinet shall be capable of withstanding 500-hour salt spray test per Federal Test Standard No. 141 (method 6061). Air-cooled condenser coils shall be leak tested at 573 psig.
- F. Provide equipment with electrical characteristics as shown on the Electrical Drawings.

1.3 DUCTLESS MINI-SPLIT-SYSTEM AIR-CONDITIONERS:

- A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:
 - 1. **Refer to Specification 01 23 00 Alternates for acceptable manufacturers.**
 - 2. **All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.**

1.4 SUBMITTAL:

- A. Submit in form similar to the schedule on the Drawings. Show all data listed in schedule, electrical characteristics and accessories being provided.

EQUIPMENT SHALL BID AS AN ALTERNATE

- B. Provide line-by-line specification review annotated to certify compliance or deviation.
- C. General: Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures.
- D. Product Data: Submit product data, including manufacturer's □ product sheet for specified products.

1.5 WARRANTY

- A. One (1) year on unit parts other than compressor/motor assembly. Warranty shall begin from date of Certificate of Substantial Completion.
- B. Five (5) years on compressor/motor assembly. Warranty shall begin from date of Certificate of Substantial Completion.
- C. One (1) year on refrigerant and oil. Warranty shall begin from date of Certificate of Substantial Completion.

PART 2 –PRODUCTS

2.1 UNIT CABINET:

- A. Indoor unit cabinet discharge and inlet grilles shall be attractively styled, high-impact polystyrene. Cabinet shall be fully insulated for improved thermal and acoustic performance.
- B. Outdoor unit cabinet shall be constructed of galvanized steel, bonderized and coated with a baked-enamel finish on inside and outside. Unit access panels shall be removable with minimal screws and shall provide full access to the compressor, fan, and control components. Outdoor compartment shall be isolated and have an acoustic lining to assure quiet operation.
- C. Indoor and outdoor unit shall be of the same manufacturer.

2.2 COMPRESSOR

- A. Compressor shall be fully hermetic rotary type. Compressor shall be equipped with oil system, operating oil charge, and motor. Internal overloads shall protect the compressor from over-temperature and over-current. Motor shall be NEMA rated class F, suitable for operation in a refrigerant atmosphere. Compressor assembly shall be installed on rubber vibration isolators.

2.3 COIL

- A. Evaporator coil shall be copper tube with aluminum fins and galvanized steel tube sheets. Fins shall be bonded to the tubes by mechanical expansion. A drip pan under the coil shall have a drain connection for hose attachment to remove condensate. Condensate pan shall have internal trap.
- B. Condenser coil shall be constructed of aluminum fins mechanically bonded to seamless copper tubes, which are cleaned, dehydrated, and sealed.

EQUIPMENT SHALL BID AS AN ALTERNATE

2.4 FANS

- A. Fan shall be tangential direct-drive blower type with air intake at the top of the unit and discharge at the bottom front. Automatic, motor-driven vertical air sweep shall be provided standard. Air sweep operation shall be user selectable. The vertical sweep may be adjusted (using the remote control) and the horizontal air direction may be set manually.

2.5 AIR FILTERS

- A. Unit shall have filter track with factory-supplied cleanable filters.

2.6 BUILDING AUTOMATION SYSTEM INTERFACE:

- A. Controls shall consist of a microprocessor-based control system which shall control space temperature, determine optimum fan speed, and run self-diagnostics. The temperature control range shall be from 62° F to 84°F.
- B. The unit shall have integral controls provided by unit manufacturer to perform input functions necessary to operate the system. Factory installed hardware and software to enable building automation system to monitor, control, and display status and alarms.
 - 1. A factory provided and installed BACnet communication interface card with building automation system shall enable building automation system operator to remotely control and monitor the system from an operator workstation. Control features available, and monitoring points displayed locally at fan coil controller shall be available through building automation system.
 - 2. The unit shall be compatible with interfacing with connection to BACnet networks or interfacing with connection to BMS system.
- C. The unit shall have the following functions as a minimum:
 - 1. An automatic restart after power failure at the same operating conditions as at failure.
 - 2. A timer function to provide a minimum 24-hour timer cycle for system Auto Start/Stop.
 - 3. Temperature-sensing controls shall sense return air temperature.
 - 4. Indoor coil freeze protection.
 - 5. Wireless infrared remote control to enter set points and operating conditions.
 - 6. Automatic air sweep control to provide on or off activation of air sweep louvers.
 - 7. Dehumidification mode shall provide increased latent removal capability by modulating system operation and set point temperature.
 - 8. Fan-only operation to provide room air circulation when no cooling is required.

EQUIPMENT SHALL BID AS AN ALTERNATE

9. Diagnostics shall provide continuous checks of unit operation and warn of possible malfunctions. Error messages shall be displayed at the unit.
10. Fan speed control shall be user-selectable: high, medium, low, or microprocessor controlled automatic operation during all operating modes.
11. Automatic heating-to-cooling changeover in heat pump mode. Control shall include dead band to prevent rapid mode cycling between heating and cooling.
12. Indoor coil high temperature protection shall be provided to detect excessive indoor discharge temperature when unit is in heat pump mode.

PART 3 -EXECUTION

3.1 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.
 1. Leak Test: After installation, fill water coils with water and test coils and connections for leaks. Repair leaks and retest until no leaks exist.
 2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.
 3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.

3.2 STARTUP SERVICE

- A. Refer to Section 23 05 93 Testing, Adjusting, and Balancing for HVAC.

3.3 CLEANING

- A. Clean units internally, on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils entering air face.
- B. After completing system installation and testing, adjusting, and balancing fan coil and air-distribution systems clean filter housings and install new filters.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fan coil units.

END OF SECTION 23 81 26

EQUIPMENT SHALL BID AS AN ALTERNATE

SECTION 23 82 19 - FAN COIL UNITS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes factory fabricated fan coil units and accessories.
- B. Related Sections:
 - 1. Section 23 05 00 - Common Work Results for HVAC.
 - 2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.
 - 3. Section 23 07 16 - HVAC Equipment Insulation: Product requirements for insulation for placement by this section.
 - 4. Section 23 33 00 - Air Duct Accessories: Product requirements for flexible duct connections for placement by this section.
 - 5. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Product requirements for electric motors for placement by this section.
 - 6. Section 23 05 14 - Variable Frequency Controllers.

1.3 SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.
- C. Provide Footprint Square footage Discrepancy Chart in spreadsheet form. Clearly show the differences in height, length, and width between the submitted units and designed units per plans for each FCU with corresponding tag.
- D. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements.
- E. Product Data, Submit the following:
 - 1. Published Literature: Indicate capacities, ratings, gages and finishes of materials, and electrical characteristics and connection requirements.
 - 2. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.

EQUIPMENT SHALL BID AS AN ALTERNATE

- 3. Fans: Performance and fan curves with specified operating point plotted, power, RPM.
- 4. Sound Power Level Data: Fan outlet and casing radiation at rated capacity per ARI 260.
- 5. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring. Indicate factory installed and field installed wiring.
- F. Manufacturer's Installation Instructions: Submit.
- G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: Submit instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- C. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.
- D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. Comply with NFPA 70.

1.6 QUALIFICATIONS

- A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Units shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

EQUIPMENT SHALL BID AS AN ALTERNATE

- B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.
- C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.
- D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.
- E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- F. Protect units from physical damage. Leave factory covers in place until startup of machine.

1.8 WARRANTY

- A. Furnish one (1) year manufacturer parts and labor warranty for air handling units. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up is not acceptable.

1.9 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor or "by others".
 - 1. Filters: Furnish three (3) sets for each unit. One set during construction, a new set of filters for Test and Balancing services, and final new set at substantial completion. Filters shall be protected with polyester fabric at all times during construction.

1.10 COORDINATION

- A. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

EQUIPMENT SHALL BID AS AN ALTERNATE

PART 2 – PRODUCTS

2.2 FAN COIL UNITS

- A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:
 - 1. **Refer to Specification 01 23 00 Alternates for acceptable manufacturers.**
 - 2. **All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.**
- B. Configuration: Coordinate with project plans and schedules.
- C. Performance Base: Sea level pressure or altitude.
- D. Fabrication: Conform to AMCA 99 and ARI 430. Units shall be factory assembled and ship in one piece where possible. Shipping splits are acceptable provided manufacturer includes gaskets and bolts.

2.3 MANUFACTURED UNITS

- A. Fan coil units shall be factory assembled and consist of fans, motor and drive assembly, coils, filters, stainless-steel condensate pans and accessories.

2.4 CABINET

- A. Materials: Formed single-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections gasketed.
 - 1. Outside Casing: 18 gauge, galvanized steel (G90).
 - 2. Utility Lugs: For lifting unit and fastening to permanent structure, 8 gauge, galvanized steel (G90).
- B. Cabinet Insulation: Comply with NFPA 90A or NFPA 90B.
 - 1. Materials: Closed cell foam insulation.
 - 2. Thickness: 1 inch.
 - 3. Density: 1 ½ pounds per cubic foot.
 - 4. Thermal Conductivity (k-Value): 0.26 at 75 deg F mean temperature.
 - 5. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50, when tested according to ASTM C 411.
- C. Access Panels: Same materials and finishes as cabinet complete with threaded bolted fasteners, and gaskets. Inspection and access panels shall be sized and located to allow periodic maintenance and inspections and include hinged access with lift and turn fasteners on both sides of unit. Provide access panels in the following locations:
 - 1. Fan Section: Double wall hinged access doors.

EQUIPMENT SHALL BID AS AN ALTERNATE

2. Coil Section: Inspection panel.
 3. Filter Section: Hinged access doors to allow periodic removal and installation of filters.
- D. Condensate Drain Pans: Formed sections of stainless-steel sheet complying with requirements in ASHRAE 62. Fabricate pans with slopes in two planes to collect condensate from cooling coils (including coil piping connections and return bends) when units are operating at maximum catalogued face velocity across cooling coil.
1. Double-Wall Construction: Fill space between walls with 1 inch, 1 ½ pound fiber glass insulation.
 2. Drain Connections: Main and auxiliary on same side of fan. Provide auxiliary drain pan connection under unit above ceiling.
 3. Float Switch: Provide a factory installed and wired drain pan float switch.

2.5 FAN SECTION

- A. Fan-Section Construction: Direct drive centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor drive assembly, and support structure and equipped with formed-steel channel base for integral mounting of fan, motor, and casing panels. Mount fan with interior torsion flex mount and exterior spring vibration isolation.
- B. Centrifugal Fan Housings: Formed- and reinforced-steel panels to make curved scroll housings with shaped cutoff, spun-metal inlet bell, and access panels or doors to allow entry to internal parts and components.
1. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 2. Horizontal Flanged Split Housing: Bolted construction.
 3. Drive Frame: Rail mounted, heavy gauge steel to allow frame to slide for easy belt tensioning.
- C. Fan Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower.
- D. Forward-Curved Fan Wheels: Galvanized-steel and/or aluminum/painted steel construction with inlet flange, back plate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically secured to flange and back plate; cast-steel hub swaged to back plate and fastened to shaft with set screws.
- E. Coatings (exterior only): Baked Enamel
- F. Shafts: Statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
1. Turned, ground, and polished Stainless steel with keyway. Ship with a protective coating of lubricating oil.

EQUIPMENT SHALL BID AS AN ALTERNATE

2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
- G. Pre lubricated and Sealed Shaft Bearings: Bearings shall be ball bearing type (no sleeve bearings allowed), permanently lubricated and sealed for life.
- H. Fan-Section Source Quality Control:
 1. Factory test fan performance for flow rate, pressure, power, air density, rotation speed, and efficiency. Establish ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."
- I. Inlet/outlet duct collars. Galvanized collars at each inlet and outlet of the unit. Flexible duct connection isolating discharge of scroll from discharge of fan.

2.6 MOTORS

- A. General: Comply with requirements in Section 23 05 13 Common Motor Requirements for HVAC Equipment and Division 26. Matched with fan load.
- B. Maximum Ambient Temperature Rating: 120 degrees F (50 degrees C).
- C. Premium efficiency Electronically Commutated (ECM) with thermal overload protection wired to exterior junction box.
 1. Motor size 1/2 HP and 1 HP shall have integrated control module with thermal overload protection. Motor size 1-1/2 HP and 3 HP shall have remote mounted control with thermal overload protection. Motor control module is mounted in cabinet interior.
 2. Motors shall be factory wired to unit control box with quick connect electrical plugs.
 3. Motors shall be RPM controlled, UL Recognized, or equivalent, continuous duty rated.
 4. Motor service access shall be on same side as coil connections.

2.7 COILS

- A. Coil Sections: Common or individual, insulated, galvanized-steel casings for heating and cooling coils. Design and construct to facilitate removal and replacement of coil for maintenance and to ensure full airflow through coils.
- B. Water Coils: Self-draining coil fabricated according to ARI 410.
 1. Piping Connections: Sweat
 2. Tubes: Copper, 0.016 inch tube thickness
 3. Fins: Aluminum, 10 fins per inch
 4. Fin and Tube Joint: Mechanical bond

EQUIPMENT SHALL BID AS AN ALTERNATE

5. Headers: Seamless copper tube with brazed joints
6. Frames: Galvanized-steel channel frame.
 - a. Working-Pressure Ratings: 250 psig, 300 deg F.
7. Source Quality Control: Test to 500 psig underwater (2000 psig ultimate strength).

2.8 FILTER SECTION

- A. Filters: Comply with NFPA 90A.
- B. Filter Section: Provide maximum 2" thick filter holding frames arranged for vertical orientations, with hinged access panels on both sides of unit. Filters shall be removable from both sides.
- C. Extended-Surface, Disposable Panel Filters: Factory-fabricated, dry, extended-surface filters with holding frames.
 1. Media: Fibrous material formed into deep-V-shaped.
 2. Media and Media-Grid Frame: Nonflammable cardboard.
- D. Replaceable Filter Media: MERV 11 or greater rating in accordance with ASHRAE Test Standard 52.2-2007.

2.9 ELECTRICAL

- A. Fan motor shall be wired to an external electrical. Include a motor control board, motor circuit fusing, 24V control circuit transformer, and terminal strip for connection of field wiring.
- B. For Constant Air Volume Fan Systems: Provide a dial potentiometer for manual airflow adjustment during test and balancing.
- C. For Variable Air Volume Fan Systems: Provide a 0-10VDC input for BAS fan speed control.
- D. Provide a single point power connection with factory installed and wired non-fused disconnect switch with lock-out-tag-out ready feature.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. Install in accordance with ARI 430.
- B. Install assembled units with internal vibration isolators. Internally isolated fans shall be provided with resilient mountings and flexible electrical leads. Install restraining snubbers as required. Adjust snubbers to prevent tension in flexible connectors when fan is operating. Refer to Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.

EQUIPMENT SHALL BID AS AN ALTERNATE

- C. Contractor to provide fixed sheaves required for final air balance as dictated by Test and Balance Contractor.
- D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.
- E. Insulate coil headers located outside airflow as specified for piping. Refer to Section 23 07 19 - HVAC Piping Insulation.
- F. Provide trapped condensation drain line routed to the nearest floor drain. Refer to detail on Drawings and Section 23 21 13 - Hydronic Piping.
- G. Installation of Hot Water Heating and/or Chilled Water Coil:
 - 1. Make connections to coils with unions. Position unions to permit coil removal.
 - 2. Connect water supply to leaving airside of coil (counter flow arrangement).
 - 3. Locate water supply at bottom of supply header and return water connection at top.
 - 4. Install water coils to allow draining and install drain connection at low points.
 - 5. Install the following piping accessories on piping connections. Refer to Section 23 05 19 – Meters and Gages for HVAC Piping.

On supply: (refer to coil connection details)

- 1. Thermometer well and thermometer.
- 2. Well for control system temperature sensor.
- 3. Shutoff valve.
- 4. Pressure gage.
- 5. Y-Strainer

On return: (refer to coil connection details)

- 1. Victaulic / TA 78K (combination balancing / shut-off globe valve with memory stop and pressure / temperature ports).
 - 2. Air vent.
 - 3. Thermometer well and thermometer.
 - 4. Well for control system temperature sensor.
 - 5. Pressure gage.
 - 6. Modulating control valve (furnished and installed by BAS).
 - 7. Shutoff valve.
- 6. Install valves and piping specialties in accordance with details as indicated on Drawings.
- 7. Install manual air vents at high points complete with shutoff valve. Refer to Section 23 21 13 - Hydronic Piping.
- 8. Install floor support stands at piping drops to air unit coil connections. Air unit coil shall not carry any suspended piping load.

EQUIPMENT SHALL BID AS AN ALTERNATE

- H. Fan coil unit manufacturer representative shall remove vibration isolation shipping blocks prior to start-up and ensure that fan base is free floating, and isolators are not short circuited during operation.

3.2 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to low profile fan coil units mounted on vibration isolators with flexible connectors.
- D. Connect condensate drain pans, to drainage piping. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.
- E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Section 23 21 13 Hydronic Piping. Connect to supply and return coil tapings with shutoff or balancing valve and union or flange at each connection.
- F. Condensate Piping: Comply with applicable requirements in Section 23 21 13 Hydronic Piping. Connect to supply and return coil tapings with shutoff valve and union or flange at each connection.
- G. Refrigerant Piping: Comply with applicable requirements in Section 23 23 00 Refrigerant Piping. Connect to supply and return coil tapings with shutoff valve and union or flange at each connection.
- H. Duct installation and connection requirements are specified in Section 23 31 00 HVAC Duct and Casings.
- I. Electrical: Comply with applicable requirements in Division 26 Sections for power wiring, switches, and motor controls.
- J. Ground equipment according to Division 26.
- K. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

EQUIPMENT SHALL BID AS AN ALTERNATE

C. Tests and Inspections:

1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks.
2. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3.4 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that shipping, blocking, and bracing are removed.
3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
6. Verify that zone dampers fully open and close for each zone.
7. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
8. Comb coil fins for parallel orientation.
9. Verify that proper thermal-overload protection is installed for electric coils.
10. Install new, clean filters.

B. Starting procedures for air-handling units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

3.5 ADJUSTING

A. Adjust damper linkages for proper damper operation.

EQUIPMENT SHALL BID AS AN ALTERNATE

- B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.6 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units externally and internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, comb coils, drain pans, and filter housings, and install new, clean filters.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fan coil units.

3.8 PROTECTION OF FINISHED WORK

- B. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

END OF SECTION 23 82 19

SECTION 23 82 39.19 - ELECTRIC UNIT HEATERS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Electric Unit Heaters.
- B. Related Sections:
 - 1. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for hangers for placement by this section.
 - 2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.

1.3 REFERENCES

- A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
 - 1. ASHRAE 90.1 - Energy Efficient Design of New Buildings Except Low-Rise Residential Buildings.
 - 2. ASHRAE 103 - Methods of Testing for Annual Fuel Utilization Efficiency of Residential Central Furnaces and Boilers.
- B. Underwriters Laboratories Inc.:
 - 1. Units to be UL Listed.

1.4 ACTION SUBMITTALS

- A. Provide line-by-line specification review annotated to certify compliance or deviation.
- B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.
- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Plans, elevations, sections, and details.
 - 2. Location and size of each field connection.
 - 3. Details of anchorages and attachments to structure and to supported equipment.

4. Equipment schedules to include rated capacities, operating characteristics, furnished specialties, and accessories.
5. Location and arrangement of integral controls.
6. Wiring Diagrams: Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 1. Suspended ceiling components.
 2. Structural members to which unit heaters will be attached.
 3. Method of attaching hangers to building structure.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling, including the following:
 - a. Air outlets and inlets.
 - b. Speakers.
 - c. Sprinklers.
 - d. Access panels.
 6. Lighting fixtures.
 7. Perimeter moldings for exposed or partially exposed cabinets.

1.6 CLOSEOUT SUBMITTALS

- A. Project Record Documents: Record actual locations of thermostats or other products not mounted on unit.
- B. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listing.

1.7 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Accept heaters and controls on site in factory packaging. Inspect for damage.

1.9 WARRANTY

- A. Furnish a five (5) year manufacturer warranty. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start-up will not be acceptable.

PART 2 - PRODUCTS

2.1 ELECTRIC UNIT HEATERS

- A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.
 - 1. Chromalox
 - 2. Markel
 - 3. Modine
 - 4. Reznor
- B. Self-contained, packaged, factory assembled, pre-wired unit consisting of cabinet, supply fan, heat exchanger, controls, and accessories complying with ARI 440:
 - 1. Discharge Louvers: Individually adjustable horizontal and vertical louvers to match cabinet finish.
 - 2. Control Voltage: 24-volt, 60 hertz
 - 3. Wall mounted adjustable thermostat.
 - 4. Location: Suspended overhead.
 - 5. Comply with UL 2021.
- C. Cabinet: 18-gauge steel with baked enamel finish, easily removed and secured access panels, insulated or double panel construction.
- D. Supply Fan: Propeller type with direct drive, dynamically balanced and mounted with rubber vibration insulators.
- E. Heat Exchanger: High mass, all steel tubular finned type, copper brazed elements.
- F. Controls: Wall mounted Thermostat with fan switch.
- G. Motor: Totally enclosed industrial rated. Motor on units to 20KW shall utilize sealed bearings. Motor on units larger than 20KW shall be 2-speed, permanent capacitor-type, continuous duty.
- H. Wiring:
 - 1. Sub-divided circuits with individual fuse protection
 - 2. Internal 24V control transformer.
 - 3. Heavy duty magnetic contactors.
 - 4. Thermal cutouts on control circuit with automatic reset.

5. Low voltage thermostatic kit with fan switch.
6. Factory wired disconnect switch.
7. Performance: Provide equipment as scheduled on Drawings.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for electrical connections to verify actual locations before unit heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install cabinet unit heaters to comply with NFPA 90A.
- B. Install unit heaters level and plumb.
- C. Suspend cabinet unit heaters from structure with elastomeric hangers. Refer to Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."
- D. Install wall-mounting thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
- E. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.3 CONNECTIONS

- A. Comply with safety requirements in UL 1995.

3.4 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- B. Remove and replace malfunctioning units and retest as specified above.

3.5 ADJUSTING

- A. Adjust initial temperature set points.

3.6 DEMONSTRATION

- A.** Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain cabinet unit heaters.

END OF SECTION 23 82 39.19

SECTION 26 05 00 - COMMON WORK RESULTS FOR ELECTRICAL

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide all work for electrical systems required in the project to be properly installed, tested and performing their intended function.

1.3 QUALITY ASSURANCE

- A. Perform all work in accordance with the latest edition of the national electrical code, and local codes.
- B. All electrical materials and distribution, and utilization equipment shall be UL Listed.
- C. All equipment and materials shall be new and unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.
- D. Eliminate any abnormal sources of noise that are considered by the architect not to be an inherent part of the electrical systems as designed.

1.4 COORDINATION WITH OTHER TRADES

- A. Coordinate the work of this division with all other divisions to ensure that all components of the electrical system will be installed at the proper time and fit the available space.
- B. Locate and size all openings in work of other trades required for the proper installation of the electrical system components.
- C. Make all electrical connections to all equipment furnished by this division and any other division.
- D. Make all electrical connections from all 120 volt and greater dampers and switches to associated exhaust fan(s) furnished by any other division.

1.5 DRAWINGS

- A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Determine exact locations by review of equipment manufacturer's data, by job site measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. The size of the electrical equipment indicated on the Drawings may be based on the dimensions of a particular manufacturer. While other listed manufacturers will be acceptable, it is the responsibility of the Contractor to determine if the equipment that Contractor proposes to furnish will fit in the space. The

drawings are not intended to show exact locations of conduit and wire, or to indicate all wire terminators, connectors, conduit fittings, boxes or supports, but rather to indicate distribution, circuitry, and control.

- B. The Electrical Drawings are necessarily diagrammatic in character and cannot show every connection in detail or conduit in its exact location. These details are subject to the requirements of ordinances and also structural and architectural conditions. The Contractor shall carefully investigate structural and finish conditions and shall coordinate the separate trades in order to avoid interference between the various phases of work. Work shall be laid out so that it will be concealed in furred chases and suspended ceilings, etc., in finished portions of the building, unless specifically noted to be exposed. Work shall be installed to avoid crippling of structural members. All exposed work shall be installed parallel or perpendicular to the lines of the building unless otherwise noted.
- C. When the mechanical and electrical Drawings do not give exact details as to the elevation of pipe, conduit and ducts, physically arrange the systems to fit in the space available at the elevations intended with the proper grades for the functioning of the system involved. Exposed conduit is generally intended to be installed true and square to the building construction, and located as high as possible against the structure in a neat and workmanlike manner. The Drawings do not show all required offsets and their location details. Work shall be concealed in all finished areas.

1.6 SUBMITTALS

- A. Specification Review:
 - 1. Include a paragraph-by-paragraph written specification review for each product listed requiring a submittal. Denote any proposed deviations from specifications.

1.7 EXISTING CONDITIONS

- A. Do all work required to maintain electrical services to the Owner occupied portions of the building during construction.
- B. No connection to existing services or utilities shall be made without Owner's knowledge and permission. All such connections shall be planned and scheduled to minimize the length of service interruption required. Request for shutdown shall be made to Owner at least two (2) weeks in advance and shall be accompanied by detailed written schedule of activities during shutdown and list of materials required for connection and renewal of service. It shall be understood that all such service interruptions shall be made at the Owner's convenience, not the Contractor's. No increase in contract amount will be allowed for reasons of premium time, inefficiency of operations or other considerations not calculated in original bid.
- C. All items removed shall be stored on-site. Schedule a review of the items with the Owner. Remove from site all items the Owner does not choose to keep. Deliver Owner designated items to Owner's storage facility.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
- B. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

- C. Do not deliver items to project before time of installation. Limit shipment of bulk and multiple-use materials to quantities needed for immediate installation.

PART 2 - EXECUTION

2.1 EXISTING WORK

- A. Disconnect electrical systems in walls, floors, and ceilings scheduled for removal.
- B. Provide temporary wiring and connections to maintain existing systems in service during construction.
- C. When performing work on energized equipment or circuits, use personnel experienced and trained in similar operations.
- D. Remove, relocate, and extend existing installations to accommodate new construction.
- E. Repair adjacent construction and finishes damaged during demolition and extension work.

2.2 OWNER INSTRUCTION

- A. Provide on-site Owner training for all new equipment.
- B. Use Operation and Maintenance manuals and actual equipment installed as basis for instruction.
- C. At conclusion of on-site training program have Owner personnel sign written certification they have completed training and understand equipment operation. Include copy of training certificates in final Operation and Maintenance manual submission.

END OF SECTION 26 05 00

SECTION 26 05 19 - LOW VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide a complete system of building wire and cable to all electrical loads.

1.3 SYSTEM DESCRIPTION

- A. Product Requirements: Provide products as follows:
 - 1. Provide stranded conductors for all wiring.
 - 2. Conductor not smaller than 12 AWG for power and lighting circuits.
 - 3. Conductor not smaller than 16 AWG for control circuits.
 - 4. 10 AWG conductors for 20 ampere, 120 volt branch circuits longer than 75 feet
 - 5. 10 AWG conductors for 20 ampere, 277 volt branch circuits longer than 200 feet.
 - 6. Copper.
- B. Wiring Methods: Provide the following wiring methods:
 - 1. Concealed Dry Interior Locations: Use only Type THHN/THWN insulation, in raceway.
- C. Branch Circuit Conductors: No branch circuit conductors are allowed in any slab or under slab on grade unless specifically indicated on drawings.

1.4 COORDINATION

- A. Where wire and cable destination is indicated and routing is not shown, determine routing and lengths required.

PART 2 - PRODUCTS

2.1 BUILDING WIRE

- A. Manufacturers:
 - 1. Diamond Wire & Cable Co.
 - 2. Southwire
 - 3. General Cable Co.
- B. Product Description: Single conductor insulated wire.
- C. Conductor: Copper.
- D. Insulation: NFPA 70; Type THHN/THWN insulation for feeders and branch circuits.

2.2 TYPE AC CABLE

- A. Manufacturers:
 - 1. AFC
 - 2. Southwire
- B. Product Description: A fabricated assembly of insulated conductors in a flexible metallic enclosure.
- C. Comply with NEC 320.
- D. Support, provide separate support to structure for all Type AC cable, spacing not exceeding three (3) feet and at each junction box.
- E. Provide an insulated green grounding conductor in all Type AC cable.
- F. Acceptable Use: Install, at Contractor's option, only for service to light fixtures above accessible ceilings, limit length to six (6) feet whips from accessible junction box to light fixtures.
- G. Provide insulated throat fittings at all terminations of Type AC cable.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify interior of building has been protected from weather.
- B. Verify mechanical work likely to damage wire and cable has been completed.
- C. Verify raceway installation is complete and supported.

3.2 EXISTING WORK

- A. Remove exposed abandoned wire and cable, including abandoned wire and cable above accessible ceiling finishes. Patch surfaces where removed cables pass through building finishes.
- B. Disconnect abandoned circuits and remove circuit wire and cable. Remove abandoned boxes when wire and cable servicing boxes is abandoned and removed. Install blank cover for abandoned boxes not removed.
- C. Provide access to existing wiring connections remaining active and requiring access. Modify installation or install access panel.
- D. Extend existing circuits using materials and methods compatible with existing electrical installations, or as specified.

3.3 INSTALLATION

- A. Route wire and cable to meet Project conditions.
- B. Neatly train and lace wiring inside boxes, equipment, and panelboards.

- C. Identify and color code wire. Identify each conductor with its circuit number or other designation indicated.
- D. Special Techniques - Wiring Connections:
1. Clean conductor surfaces before installing lugs and connectors.
 2. Make splices, taps, and terminations to carry full ampacity of conductors with no perceptible temperature rise.
 - a. MDF/IDF room branch circuits: All branch circuits shall be dedicated and unspliced. Provide dedicated branch circuit 20 or 30 amperes, #10 and or #12 wire, unspliced from wiring device all the way back to the overcurrent device. Do not share ground with any other circuit.
 - b. Computer branch circuits: All branch circuits shall be dedicated. Provide dedicated branch circuit 20 amperes, #10 and or #12 wire from wiring devices all the way back to the overcurrent device. Do not share neutral with any other circuit.
 - c. Kitchen branch circuits: All branch circuits for 125 volt, single phase, 15 and 20 ampere receptacles shall be dedicated. Provide dedicated branch circuit 20 amperes, #10 and or #12 wire from wiring devices all the way back to the overcurrent device. Do not share neutral or ground with any other circuit.
 3. Tape uninsulated conductors and connectors with electrical tape to 150 percent of insulation rating of conductor.
 4. Install split bolt connectors for copper conductor splices and taps, 6 AWG and larger.
 5. Install solderless pressure connectors with insulating covers for copper conductor splices and taps, 8 AWG and smaller.
 6. Install insulated spring wire connectors with plastic caps for copper conductor splices and taps, 10 AWG and smaller.

3.4 WIRE COLOR

A. COLOR CODES FOR CONDUCTORS FOR BRANCH CIRCUITS AND FEEDERS

	Wire Sizes #10 and Smaller: Use Continuous Color Coded Insulation (Note 01)				Wire Sizes #6 and Smaller: Use Continuous Color Coded Insulation (Note 02)	
<u>System/Phase</u>	A	B	C	N	G	IG
120/208	Black	Red	Blue	White	Green	Green/Yellow Stripe
120/240	Black	Orange	Blue	White w/color stripe (Note 03)	Green	Green/Yellow Stripe
277/480	Brown	Purple	Yellow	Gray	Green	Green/Yellow Stripe

Table Notes:

1. Wire size #8 and larger, black conductors with color marking tape at each termination and where accessible; colors as noted above.
 2. Wire sizes #4 and larger, black conductor with green marking tape at each termination and where accessible.
 3. Provide white (no stripe) insulation when 120/208V system is not present at this installation.
- B. Neutral Conductors: White. When two or more neutrals are located in one conduit, individually identify each with proper circuit number and provide color coding at each junction box containing more than one neutral.
- C. Branch Circuit Conductors: Install three or four wire home runs with each phase uniquely color coded.
- D. Feeder Circuit Conductors: Uniquely color code each phase.
- E. Ground Conductors:
For 6 AWG and smaller: Green.
For 4 AWG and larger: Identify with green tape at both ends and visible points including junction boxes.

3.5 GROUPING OF CIRCUITS

- A. Limit the number of current carrying conductors per conduit to 6. Neutrals serving computer receptacle branch circuits shall be counted as current carrying. Grounds shall not be counted.
- B. Grouping of different voltages is not allowed.
- C. Provide metal box sizes per NEC Table 314.16 (A).
- D. Provide conduit per NEC Annex C.
- E. Neutrals serving branch circuits shall not be shared. Provide dedicated neutral per circuit.

3.6 POWER LIMITED CIRCUIT INSTALLATION

- A. Provide a complete system of raceway and covered junction boxes for all power limited circuits installed in exposed areas in finished spaces and spaces without a ceiling.
- B. Provide raceway for all power limited circuit wiring within wall cavities and above sheet rock, plaster and other "hard" (non-lay-in) ceiling types of construction.
- C. Labeling: Provide label on all junction boxes.
 1. Provide permanent labeling with indelible black marker, in neat, legible print indicating the system wiring name.

END OF SECTION 23 05 19

SECTION 26 05 26 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide a continuous low-impedance grounding system for the entire electrical wiring system.

1.3 REFERENCES

- A. Institute of Electrical and Electronics Engineers:
 - 1. IEEE 142 - Recommended Practice for Grounding of Industrial and Commercial Power Systems.
 - 2. IEEE 1100 - Recommended Practice for Powering and Grounding Electronic Equipment.
- B. NFPA 70 - National Electrical Code.

1.4 SYSTEM DESCRIPTION

- A. Grounding systems use the following elements as grounding electrodes:
 - 1. Metal underground water pipe.
 - 2. Metal building frame.
 - 3. Concrete-encased electrode.
 - 4. Ground ring.
 - 5. Rod electrode.
 - 6. Plate electrode.

1.5 SUBMITTALS

- A. Product Data: Submit data on grounding electrodes and connections.

1.6 QUALITY ASSURANCE

- A. Provide grounding materials conforming to requirements of NEC, IEEE 142, and UL labeled.

1.7 GROUND RING PRE-INSTALLATION MEETINGS

- A. This paragraph shall apply to buildings when a ground ring is specified.
- B. Convene minimum one (1) week prior to commencing work of this section.

- C. Coordinate with concrete pour schedule for footings to insure rebar in concrete is available for bonding.

1.8 MADE ELECTRODE INSPECTION

- A. Convene prior to cover up of work of this section.
- B. Coordinate inspection of made electrode, exothermic welds and test well installation.

PART 2 PRODUCTS

PART 3

3.1 ROD ELECTRODES

- A. Manufacturers:
 - 1. Apache Grounding/Erico Inc.
 - 2. Copperweld, Inc.
 - 3. Erico, Inc.
 - 4. O-Z Gedney Co.
 - 5. Thomas & Betts
 - 6. VFC
- B. Product Description:
 - 1. Material: Copper-clad steel
 - 2. Diameter: 3/4 inch
 - 3. Length: ten (10) feet

3.2 WIRE

- A. Material: Stranded copper.
- B. Foundation Electrodes: #2 AWG.
- C. Grounding Electrode Conductor: Copper conductor bare.
- D. Bonding Conductor: Copper conductor bare.

3.3 MECHANICAL CONNECTORS

- A. Manufacturers:
 - 1. Apache Grounding/Erico Inc.
 - 2. Copperweld, Inc.
 - 3. Erico, Inc.
 - 4. ILSCO Corporation
 - 5. O-Z Gedney Co.
 - 6. Thomas & Betts, Electrical
 - 7. VFC
- B. UL Listed for grounding applications.

- C. Provide "ACORN" style ground clamp only for all driven ground rods unless noted to be exothermic connected in this specification. UL listed for connecting ground conductor to a driven ground rod.
- D. Description: Brass connectors, suitable for grounding and bonding applications, in configurations required for particular installation.

3.4 EXOTHERMIC CONNECTIONS

- A. Manufacturers:
 - 1. Cadweld by Erico, Inc.
- B. Product Description: Exothermic materials, accessories, and tools for preparing and making permanent field connections between grounding system components.

3.5 GROUNDING BUSSES

- A. When indicated, provide copper ground busses on walls in areas where special grounding needs will arise. Bus shall consist of copper bar as follows:
 - 1. Ground bar cross section of nominal four (4) inches by 1/4 inch; 24 inches length.
 - 2. Drill to accommodate NEMA Pattern D 2-hole compression lugs for ground wires to be installed. Leave remainder of bar for future drilling by owner.
 - 3. Copper compression lugs to connect conductors to the bar. Lugs shall be 2-hole type for double bolting to ground bar.
 - 4. Install all bolts for compression with top and bottom steel washers plus a Belleville spring washer between top washer and bolt head.
 - 5. Grounding electrode conductor(s) shall be fusion-welded on buss (and not lugged on).
 - 6. Mounting Free air, no enclosure required. Install Harger WBKT-1 brackets to mount bar to wall. Isolate copper bar from mounting brackets with Harger 4200-Series two (2) inch insulators.
 - 7. Fasten clear pexiglass cover on standoff bolts over ground bar. Engrave cover "GROUND BUS". Cover by Harger Lightning Protection, Inc., or approved equal.
 - 8. Ground bar assembly shall be Harger Lightning Protection, Inc. GBI Series (800-842-7437, www.harger.com), Erico, Inc. (800-248-9353) or approved equal.

3.6 DRIVEN ELECTRODE ACCESS WELL AND COVER

- A. Eight (12) inch diameter concrete pipe with belled end.
- B. 24 inches long or longer to reach ground and set flush in grade.
- C. Provide cast iron cover with "GROUND" embossed on top.

PART 4 – EXECUTION

4.1 EXAMINATION

- A. Verify final backfill and compaction has been completed before driving rod electrodes.

4.2 PREPARATION

- A. Remove paint, rust, mill oils, and surface contaminants at connection points.

4.3 EXISTING WORK

- A. Modify existing grounding system to maintain continuity to accommodate renovations.
- B. Extend existing grounding system using materials and methods compatible with existing electrical installations.

4.4 INSTALLATION

- A. Install in accordance with NEC Article 250. Properly bond the system neutral to the system grounding electrode conductor at the main service entrance equipment. Properly maintain the existing neutral-ground bond. Route the grounding electrode conductor to, and bond to, the grounding electrode system. All other neutral busses, bars, etc. on the service voltage system shall be isolated from ground. This system shall be the solid grounded type.
- B. Bond all ground electrodes together to form the grounding electrode system including metal underground water pipe, metal frame of the building or structure, concrete encased electrodes, ground ring, rod and pipe electrodes and plate electrodes.
- C. Install grounding and bonding conductors concealed from view.
- D. Install grounding electrode conductor and connect to reinforcing steel in foundation footing.
- E. Install a green equipment grounding conductor in all feeders and branch circuits, minimum size per NEC Table 250.122.
- F. Transformers: Ground as a separately derived source.
 - 1. Where transformer secondary includes a neutral, the neutral shall be bonded to the equipment enclosure and connected to the system ground conductor.
 - 2. Size bonding jumper per NEC Table 250.66.
 - 3. Grounding conductor shall be in raceway and shall be bonded to nearest available point of interior metal water piping system.
- G. Bond together reinforcing steel and metal accessories in pool and fountain structures.
- H. Concrete-Encased Electrode (NEC 250-52):
 - 1. Concrete-encased electrode is also known as the "Ufer ground". Concrete footings or foundation that are in direct contact with the earth and located at the building periphery shall be made available for use as electrodes. Designated footings shall be used for grounding purposes. Unless otherwise noted on drawings, designated footings are the perimeter building corners plus perimeter footings approximately on 100 feet centers between corners.

- I. Made Electrode:
 - 1. Triple Ground Rod: Provide a building ground rod and bond it to the electrode system. The building ground rod shall consist of three ground rods, arranged in an equilateral triangular pattern located at least five (5) feet outside an exterior building wall or as otherwise directed. Space 15 feet apart and drive into the earth to a point two (2) feet below finished grade to top of rods. Grounding electrode conductor shall form a continuous loop around rods, and conductor shall be properly bonded to each rod by a fusion weld similar to "Cadweld".
 - 2. Extend grounding electrode conductor from this ground rod(s) to the grounded service conductor (neutral) in the building main switchboard at an accessible point on the ground bus per NEC 250-24.
 - 3. Install grounding electrode conductor of 3/0 Copper.
- J. Main Bonding Jumper: Shall be sized in accordance with Section 250-66, if not indicated on the drawings, and installed within the same enclosure as the point of bonding of the system neutral service entrance.
- K. Grounding Busses:
 - 1. Provide a copper bus bar where indicated on Drawings. Provide grounding electrode conductor and connection to the grounding electrode system. AWG No. 2 minimum.
 - 2. Provide in each IDF and MDF room.
 - 3. Provide at each CATV / MATV head-end mounting board.
 - 4. Provide at each building communications rack.
 - 5. Provide at each sound reinforcement equipment rack.
- L. Water Pipe Electrode: A ten (10) foot minimum length of electrically continuous underground metal water pipe. Bond around insulating joints or sections, insulating pipe, and water meters to make pipe electrically continuous.
- M. Metal Building Frame NEC 250-52.
 - 1. The structural steel or other metal frame of the building. Effectively ground the steel structural columns to the ground ring electrode.
 - 2. Cadweld AWG #2 bare copper cable to base of steel column. Route bonding jumper down through column blockout in building floor slab, excavate under grade beam, and extend out to the ground ring. Cadweld jumper (also called "stinger") or install Burndy Hyground™ Type YGHP-C hydraulic compression connector onto ground ring. Install a ground rod at each point where a stinger from a building steel column lands on the ground ring.
- N. Ground Ring Electrode (NEC 250-52):
 - 1. Provide a tinned, bare copper conductor, size AWG #2 or larger, ground loop in direct contact with the earth. Install around and below the entire periphery of the building at least 36 inches underground. The ring conductor shall be in direct contact with the earth and below any concrete mat or seal slab that may be part of the building structural foundation. Bond this ground ring to all other electrodes and to the grounded service conductor (neutral) in the building main switchboard at a point on the supply side of each service disconnect.
- O. Fuel Gas Piping:
 - 1. Each above ground portion of a gas piping system upstream from the equipment shutoff valve shall be made electrical continuous and bonded to the building grounding electrode system, as required in NFPA 54, National Fuel Gas Code.
 - 2. Gas piping shall not be used as a grounding electrode.

- P. Engine Generator Neutral:
 - 1. Ground the generator neutral as a separately derived system per NEC 250-20(d).
 - 2. Sign: Provide a sign at the service entrance equipment indicating type and location of on-site generator.
- Q. Outdoor Lighting Poles:
 - 1. All metallic outdoor poles and luminaries on metallic or non-metallic lighting poles shall be grounded by bonding in an approved manner to the circuit grounding conductor. In addition to this, bond pole to a #8 bare copper wire which shall also be bonded to a ground rod. Install the ground rod adjacent to the pole base with the top driven at least two (2) feet below grade.

3.5 OTHER GROUNDING SYSTEMS:

- A. General Check the drawings for special grounding system or grounding requirements.
- B. Telephone and data equipment grounding connections:
 - 1. Bond each telephone and data equipment ground (buss type or grounding conductor type) at each telephone terminal board and data rack back to the service entrance grounding electrode system with a bare #6awg ground wire.
- C. Other Buildings Served From Common Service:
 - 1. The main building service is the source for electric service to several out buildings on site.
 - 2. Isolate neutral bus from ground at each out-building main panel.
 - 3. Provide an equipment grounding conductor in feeder to each out-building main panel.
 - 4. Provide a local building ground rod at each out-building. Bond at least one building column footing to the ground rod.
 - 5. Bond grounding conductor of building main feeder to grounding electrode system established at the particular building.

3.6 EQUIPMENT GROUNDING SYSTEM

- A. General: Make a firm bond between all enclosures, equipment and metallic raceway system. Grounding conductors shall be continuous from origin to termination and properly bonded with lugs at both ends. The metallic raceway systems shall be made up properly to form a grounding path that has an impedance back to the main system ground that is as low as can be practically obtained.
- B. Over 250 Volts: Provide locknuts and/or listed fittings per NEC 250-97 for bonding of metal raceways in all circuits of over 250 Volts to ground. In case of oversized, concentric or eccentric knockouts, comply with NEC 250-92(B). The use of snap-in, wedge-type, or pivot-type connectors is prohibited.

3.7 FIELD QUALITY CONTROL

- A. Grounding Tests:
 - 1. Test the electrical system after installation is complete. Inspect and test for stray currents, unintended ground shorts, and proper physical condition of grounding system. Correct any deficiencies and re-test to verify satisfactory installation.
 - 2. Provide written test report to document all findings, test values, work done and certification of grounding system.

3. Use true-RMS meters for all voltage and current measurements.
4. Test telecommunications grounding riser to verify continuity.
5. Check all isolated ground receptacles for correct polarity.
6. Test all sub panels of separately derives systems to verify subpanel neutral is isolated from ground.
7. Test theater isolated power system for the sound reinforcement system to verify isolation of ground system from other building systems.
8. Verify continuity and isolation of audio system ground bus and grounding riser.
9. Perform ground resistance and continuity testing in accordance with IEEE 142.
10. When improper grounding is found on receptacle, check receptacles in entire project and correct. Perform retest.

3.8 TEST WELLS

- A. Install test well for designated outdoor driven ground rods. Set tops of well flush with finished grade. Provide mechanical connector for ground rod inside test well so that rod can be disconnected from ground ring or other grounding electrode system for testing.
 1. Designated Ground Rods:
 - a. One (1) at triple ground rod for High School Main Switchboard Electrical Room.
 - b. One (1) at each generator.

END OF SECTION 26 05 26

SECTION 26 05 29 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Conduit supports.
 - 2. Formed steel channel.
 - 3. Spring steel clips.
 - 4. Sleeves.
 - 5. Mechanical sleeve seals.
 - 6. Firestopping relating to electrical work.
 - 7. Firestopping accessories.
 - 8. Equipment bases and supports.

1.3 REFERENCES

- A. Underwriters Laboratories Inc.:
 - 1. UL 263 - Fire Tests of Building Construction and Materials.
 - 2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
 - 3. UL 1479 - Fire Tests of Through-Penetration Firestops.
 - 4. UL - Fire Resistance Directory.

1.4 DEFINITIONS

- A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.5 PERFORMANCE REQUIREMENTS

- A. Firestopping: Conform to Building Code and UL for fire resistance ratings and surface burning characteristics.

1.6 SUBMITTALS

- A. Product Data:
 - 1. Hangers and Supports: Submit manufacturers catalog data including load capacity.

1.7 QUALITY ASSURANCE

- A. Perform Work in accordance with the Building Code.

PART 2 - PRODUCTS

2.1 CONDUIT SUPPORTS

- A. Manufacturers:
 - 1. Allied Tube & Conduit Corp.
 - 2. Electroline Manufacturing Company
 - 3. O-Z Gedney Co.
 - 4. Appleton
- B. Hanger Rods: Threaded high tensile strength galvanized carbon steel with free running threads.
- C. Beam Clamps: Malleable Iron, with tapered hole in base and back to accept either bolt or hanger rod. Set screw: hardened steel.
- D. Conduit clamps for trapeze hangers: Galvanized steel, notched to fit trapeze with single bolt to tighten.
- E. Conduit clamps - general purpose: One hole malleable iron for surface mounted conduits.
- F. Cable Ties: High strength nylon temperature rated to 185 degrees F. Self locking.

2.2 FORMED STEEL CHANNEL

- A. Manufacturers:
 - 1. Allied Tube & Conduit Corp.
 - 2. B-Line Systems
 - 3. Midland Ross Corporation, Electrical Products Division
 - 4. Unistrut Corp.
- B. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

2.3 SLEEVES

- A. Sleeves for raceway Through Non-fire Rated Floors: 18 gage galvanized steel.
- B. Sleeves for raceway Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage galvanized steel.
- C. Sleeves for raceway Through Fire Rated and Fire Resistive Floors and Walls, and Fire Proofing: Prefabricated fire rated sleeves including seals, UL Listed.
- D. Fire-stopping Insulation: Glass fiber type, non-combustible.

2.4 SPRING STEEL CLIPS

- A. Product Description: Mounting clamp, and screw.

2.5 MECHANICAL SLEEVE SEALS

- A. Manufacturers:
 - 1. Thunderline Link-Seal, Inc.

2. NMP Corporation

- B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.6 FIRESTOPPING

- A. Manufacturers:
1. Dow Corning Corp.
 2. Fire Trak Corp.
 3. Hilti Corp.
 4. International Protective Coating Corp.
 5. 3M fire Protection Products .
 6. Specified Technology, Inc.
- B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
1. Silicone Firestopping Elastomeric Firestopping: Multiple component silicone elastomeric compound and compatible silicone sealant.
 2. Foam Firestopping Compounds: Multiple component foam compound.
 3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
 4. Fiber Stuffing and Sealant Firestopping: Composite of mineral or ceramic fiber stuffing insulation with silicone elastomer for smoke stopping.
 5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
 6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
 7. Firestop Pillows: Formed mineral fiber pillows.

2.7 FIRESTOPPING ACCESSORIES

- A. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.
- B. General:
1. Furnish UL Listed products.
 2. Select products with rating not less than rating of wall or floor being penetrated.
- C. Non-Rated Surfaces:
1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where conduit is exposed.
 2. For exterior wall openings below grade, furnish modular mechanical type seal consisting of interlocking synthetic rubber links shaped to continuously fill annular space between conduit and cored opening or water-stop type wall sleeve.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify openings are ready to receive sleeves.

- B. Verify openings are ready to receive firestopping.

3.2 INSTALLATION - HANGERS AND SUPPORTS

- A. Anchors and Fasteners:
 - 1. Concrete Structural Elements: Provide precast inserts, expansion anchors, powder actuated anchors or preset inserts as required.
 - 2. Steel Structural Elements: Provide beam clamps, spring steel clips, steel ramset fasteners or welded fasteners as required.
 - 3. Concrete Surfaces: Provide self-drilling anchors and expansion anchors as required.
 - 4. Hollow Masonry, Plaster, and Gypsum Board Partitions: Provide toggle bolts or hollow wall fasteners as required.
 - 5. Solid Masonry Walls: Provide expansion anchors or preset inserts as required.
 - 6. Sheet Metal: Provide sheet metal screws.
 - 7. Wood Elements: Provide wood screws.
- B. Inserts:
 - 1. Install inserts for placement in concrete forms.
 - 2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
 - 3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over four (4) inches.
 - 4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
 - 5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.
- C. Install conduit and raceway support and spacing in accordance with NEC.
- D. Do not fasten supports to suspended ceiling support system, pipes, ducts, mechanical equipment, or conduit.
- E. Install multiple conduit runs on common hangers.
- F. Supports:
 - 1. Fabricate supports from structural steel or formed steel channel. Install hexagon head bolts to present neat appearance with adequate strength and rigidity. Install spring lock washers under nuts.
 - 2. Install surface mounted cabinets and panelboards with minimum of four anchors.
 - 3. In wet and damp locations install steel channel supports to stand cabinets and panelboards one (1) inch off wall.
 - 4. Support vertical conduit at every floor.

3.3 INSTALLATION - FIRESTOPPING

- A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.
- B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.
- C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating.

- D. Compress fibered material to maximum 40 percent of its uncompressed size.
- E. Place intumescent coating in sufficient coats to achieve rating required.
- F. Remove dam material after firestopping material has cured.
- G. Fire Rated Surface:
 - 1. Seal opening at all rated floors and walls as follows:
 - a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
 - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
 - c. Pack void with backing material.
 - d. Seal ends of sleeve with UL Listed fire resistive silicone compound to meet fire rating of structure penetrated.
 - 2. Where cable tray, bus, or conduit, penetrates fire rated surface, install firestopping product in accordance with manufacturer's instructions.
- H. Non-Rated Surfaces:
 - 1. Seal opening through non-fire rated floors and walls as follows:
 - a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
 - b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
 - c. Install type of firestopping material recommended by manufacturer.
 - 2. Install escutcheons where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
 - 3. Exterior wall openings below grade: Assemble rubber links of mechanical seal to size of conduit and tighten in place, in accordance with manufacturer's instructions.

3.4 INSTALLATION - SLEEVES

- A. Exterior watertight entries: Provide mechanical sleeve seals.
- B. Interior conduit penetrations not required to be watertight: Sleeve and fill with silicon foam.
- C. Set sleeves in position in forms. Provide reinforcing around sleeves.
- D. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.
- E. Extend sleeves through floors and walls one (1) inch above finished floor level. Caulk sleeves.

END OF SECTION 26 05 29

SECTION 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.1 SUMMARY

- A. Section includes conduit and tubing, wireways, outlet boxes, pull and junction boxes, and handholes.

1.2 REFERENCES

- A. American National Standards Institute:
 - 1. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
 - 2. ANSI C80.3 - Specification for Electrical Metallic Tubing, Zinc Coated.
 - 3. ANSI C80.5 - Aluminum Rigid Conduit - (ARC).
- B. National Electrical Manufacturers Association:
 - 1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
 - 2. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
 - 3. NEMA OS 1 - Sheet Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
 - 4. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers, and Box Supports.
 - 5. NEMA RN 1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.
 - 6. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.
 - 7. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.

1.3 SYSTEM DESCRIPTION

- A. Raceway and boxes located as indicated on Drawings, and at other locations required for splices, taps, wire pulling, equipment connections, and compliance with regulatory requirements. Raceway and boxes are shown in approximate locations unless dimensioned. Provide raceway to complete wiring system.
- B. Wet and Damp Locations: Provide rigid steel conduit. Provide cast metal junction and pull boxes. Provide flush mounting outlet box in finished areas.
- C. Concealed Dry Locations: Provide rigid steel intermediate metal conduit on electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.

- D. Exposed Dry Locations: Provide rigid steel conduit, intermediate metal conduit or electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.
- E. In Slab or Under Slab on Grade: No branch circuit raceway is allowed in any slab or under slab on grade unless specifically indicated on drawings.

1.4 DESIGN REQUIREMENTS

- A. Minimum Raceway Size: 3/4 inch.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect conduit from corrosion and entrance of debris by storing above grade. Provide appropriate covering.
- B. Protect PVC conduit from sunlight.

1.6 COORDINATION

- A. Coordinate installation of outlet boxes and raceway for equipment connected under other Divisions.
- B. Coordinate installation of conduit for control wiring in mechanical rooms and in inaccessible locations such as walls and hard ceilings.
- C. Coordinate installation of conduit for all other low-voltage systems in inaccessible locations and all other locations required by drawings or specifications for those systems.
- D. Coordinate mounting heights, orientation and locations of outlets mounted above counters, benches, and backsplashes. Refer to Architectural elevations and equipment specifications and coordinate device locations prior to electrical rough-in.

PART 2 - PRODUCTS

2.1 METAL CONDUIT

- A. Manufacturers:
 - 1. Carlon Electrical Products
 - 2. Hubbell Wiring Devices
 - 3. Thomas & Betts Corp
 - 4. Walker Systems Inc.
 - 5. The Wiremold Co.
 - 6. Multi Cell
 - 7. O-Z Gedney
 - 8. Raco.
 - 9. or approved equal.
- B. Rigid Steel Conduit: ANSI C80.1.
- C. Intermediate Metal Conduit (IMC): Rigid steel.
- D. Fittings and Conduit Bodies: NEMA FB 1; material to match conduit

- E. Electrical Metal Tubing (EMT): All EMT fittings shall be steel not die-cast metal. All conduit stub-ups above ceiling for low voltage and data to be provided with insulating bushing.
- F. Flexible Metal Conduit (Flex): Conduit fittings shall be steel. Provide plastic anti-short bushing for all flex fittings. Comply with NEC 348.
- G. Liquidtight Flexible Metal Conduit: Shall be same as flexible metal conduit specified above except Article 350 in NEC.
- H. PVC-Coated Rigid Steel Conduit: Galvanized rigid steel with additional external coating for 40 mil polyvinyl chloride jacket (PVC). Conforming to UL Standard 6. ANSI C80.1 and NEMA Standard No. RN.1.
 - 1. Manufacturer:
 - a. Ocal Inc.
 - b. Perma Cote Industries
 - c. Rob-Roy Industries
 - d. or Approved equal.
- I. PVC-Rigid Nonmetallic Conduit: PVC and fittings that are listed per the UL Standards. Comply with NEMA Standard TC-2.
- J. Nonmetallic Multi Duct: Provide nonmetallic multi duct that is UL Listed.
 - 1. Type: four (4) inches schedule 40 PVC outer duct, four 1.25 inch ducts of ribbed polyethylene. Duct shall have six (6) inch deep end bell on one end, spigot on the other end.
 - 2. Multi Duct shall have gaskets to seal the inside and outside walls of the inner duct.

2.2 ENCLOSURES

- A. Pull Boxes, Junction Boxes, Cabinets, and Wireways: Provide pull boxes, junction boxes, wireways, and cabinets wherever necessary for proper installation of various electrical systems according to the National Electrical Code and where indicated on the Drawings.
- B. Minimum Size: That size shown on the drawings, as required for the specific function, or as required by the National Electrical Code, whichever is larger.
- C. Construction:
 - 1. Indoors in Dry Areas and Not Buried in Slab: Code gage steel - NEMA 1 construction - sides formed and welded, screw covers unless indicated hinged cover or door on drawings. Hinged doors shall be similar to panelboard doors with the same type locking device. Knockouts shall be factory made or formed O-Z Gedney Type PB or approved equal.
 - 2. Outdoors or Indoors in Wet Areas and Not Buried in Slab: Same as specified above for indoor except provide NEMA 3R (designated by 3R or RT) unless indicated or specified to be NEMA 4 (designated by 4 or WP) or other type rating.
 - 3. Indoors Buried in Slab: Watertight, galvanized cast iron in floors on or below grade, otherwise concrete tight stamped steel.
 - 4. Outdoors Buried in Earth: Watertight, Polymer concrete similar to Hubbell Power System, Inc. "Quazite" or precast concrete type manufactured by Brooks Product, Inc brand for Oldcastle Precast, Inc. Precast box shall have appropriate structural rating for intended use. Install on a level poured concrete base to provide a solid bearing surface. Provide a bolted cast iron traffic cover with

foundry-cast marking "Electrical", "Communications" or "Telephone" as applies. Top of enclosure shall be one (1) inch above finished grade in earth. Top of enclosure shall be flush with finished pavement.

2.3 WIREWAY

- A. Manufacturers: Same as Metal Conduit.
- B. Product Description: General purpose.
- C. Size: As determined by Contractor in accordance with NEC 376.
- D. Cover: Screw cover.
- E. Connector: Slip-in.
- F. Fittings: Lay-in type.
- G. Finish: Rust inhibiting primer coating with gray enamel finish.

2.4 OUTLET BOXES

- A. Manufacturers: Same as Metal Conduit.
- B. Sheet Metal Outlet Boxes: NEMA OS 1, galvanized steel.
 - 1. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported; furnish 1/2 inch male fixture studs where required.
 - 2. Concrete Ceiling Boxes: Concrete type.
- C. Cast Boxes: NEMA FB 1, Type FD, cast fer alloy. Furnish gasketed cover by box manufacturer.
- D. Wall Plates: As specified in Section 26 27 26.

2.5 FLOOR BOXES

- A. UL listed for wet application, watertight cast-iron.
- B. NEMA OS-1, sheet steel outlet boxes, device boxes, covers, and box supports.
 - 1. Floor: Fully adjustable before and after pour.
 - 2. UL Listed for wet application when installed into concrete, stone, tile or floor without carpet cover. Provide carpet flange where installed in carpet.
 - 3. Provide watertight, cast iron on floors at or below grade, and provide concrete tight stamped steel on all upper floors.
 - 4. Multi Gang Floor Box: Fully adjustable watertight cast iron gang floor boxes where shown on Drawings. Provide with removable partition and provide conduit openings in boxes as required. Install power circuits in separate raceway from data, telephone or other signal.
- C. Manufacturers:
 - 1. Appleton
 - 2. Carlon
 - 3. Crouse-Hinds
 - 4. Hubbell
 - 5. Thomas & Betts / Steel City
 - 6. Walker

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify outlet locations and routing and termination locations of raceway prior to rough-in.

3.2 EXISTING WORK

- A. Remove exposed abandoned raceway, including abandoned raceway above accessible ceiling finishes. Cut raceway flush with walls and floors, and patch surfaces.
- B. Remove concealed abandoned raceway to its source.
- C. Disconnect abandoned outlets and remove devices. Remove abandoned outlets when raceway is abandoned and removed. Install blank cover for abandoned outlets not removed.
- D. Maintain access to existing boxes and other installations remaining active and requiring access. Modify installation or provide access panel.
- E. Extend existing raceway and box installations using materials and methods compatible with existing electrical installations, or as specified.
- F. Clean and repair existing raceway and boxes to remain or to be reinstalled.

3.3 INSTALLATION - RACEWAY

- A. Ground and bond raceway and boxes in accordance with Section 26 05 26.
- B. Fasten raceway and box supports to structure and finishes in accordance with Section 26 25 29.
- C. Identify raceway and boxes in accordance with Section 26 05 53.
- D. Arrange raceway and boxes to maintain headroom and present neat appearance.
- E. Raceway routing is shown in approximate locations unless dimensioned. Route to complete wiring system.
- F. Arrange raceway supports to prevent misalignment during wiring installation.
- G. Support raceway using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.
- H. Group related raceway; support using conduit rack. Construct rack using steel channel specified in Section 26 05 29.
- I. Do not support raceway with wire or perforated pipe straps. Remove wire used for temporary supports
- J. Do not attach raceway to ceiling support wires or other piping systems.
- K. Construct wireway supports from steel channel specified in Section 26 25 29.
- L. Route exposed raceway parallel and perpendicular to walls.

- M. Route raceway installed above accessible ceilings parallel and perpendicular to walls.
- N. Maximum Size Conduit in Slab Above Grade: 3/4 inch.
- O. Maintain clearance between raceway and piping for maintenance purposes.
- P. Maintain 12 inch clearance between raceway and surfaces with temperatures exceeding 104 degrees Fahrenheit.
- Q. Cut conduit square using saw or pipe cutter; de-burr cut ends.
- R. Bring conduit to shoulder of fittings; fasten securely.
- S. Join nonmetallic conduit using cement as recommended by manufacturer. Wipe nonmetallic conduit dry and clean before joining. Apply full even coat of cement to entire area inserted in fitting. Allow joint to cure for minimum 20 minutes.
- T. Install conduit hubs or sealing locknuts to fasten conduit to sheet metal boxes in damp and wet locations and to cast boxes. DO NOT route conduit through the top of any outdoor disconnects, panels, etc. conduits must be routed through side or bottom only.
- U. Install no more than equivalent of three 90 degree bends between boxes. Install conduit bodies to make sharp changes in direction, as around beams. Install hydraulic one-shot bender to fabricate factory elbows for bends in metal conduit larger than two (2) inch size.
- V. Avoid moisture traps; install junction box with drain fitting at low points in conduit system.
- W. Install fittings to accommodate expansion and deflection where raceway crosses expansion joints.
- X. Install suitable pull string or cord in each empty raceway except sleeves and nipples.
- Y. Install suitable caps to protect installed conduit against entrance of dirt and moisture.
- Z. Surface Raceway: Install flat-head screws, clips, and straps to fasten raceway channel to surfaces; mount plumb and level. Install insulating bushings and inserts at connections to outlets and corner fittings.
- AA. Close ends and unused openings in wireway.
- BB. Provide tracer wire on all underground raceway outside building slab on grade.

3.4 RACEWAY TYPES

- A. The following raceway types are to be used in the following locations:
 - 1. Under Slab on Grade: Schedule 40 PVC.
 - 2. Outdoor Locations, Above Grade: Rigid galvanized steel.
 - 3. Wet and Damp Locations: Rigid galvanized steel.
 - 4. Exposed or Concealed Dry Locations, Indoors: EMT, IMC, or rigid galvanized steel.
 - 5. Underground:
 - a. All underground electrical wire in schedule 40 PVC or rigid galvanized steel, 208 volts or greater shall be encased in red concrete two (2) inches thick on all sides. Encasement not required under building slabs,

- parking lots or other paved surfaces. Red dye may not be applied to the top of the concrete.
- b. All underground electrical wire in schedule 40 PVC or rigid galvanized steel, 120 volts or less shall have red warning tape 6" above raceway.
- 6. Transformers and Motors: 24 inch flexible metal conduit to equipment.
- 7. Kitchens and outdoor motor and transformer connections: Liquidtight flexible metal conduit for all exposed raceway.
- 8. Cooling Towers: PVC coated rigid galvanized steel within 50 feet of tower.

3.5 INSTALLATION - BOXES

- A. Install wall mounted boxes at elevations to accommodate mounting heights as indicated on Drawings and as approved by the Architect.
- B. Adjust box location up to ten (10) feet prior to rough-in to accommodate intended purpose.
- C. Orient boxes to accommodate wiring devices oriented as specified in Section 126 27 26.
- D. Install pull boxes and junction boxes above accessible ceilings and in unfinished areas only.
- E. In Accessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches from ceiling access panel or from removable recessed luminaire.
- F. Do not fasten boxes to ceiling support wires or other piping systems.
- G. Support boxes independently of conduit. Provide rigid support to structure for all junction boxes. Mount junction boxes within 18" of finished ceilings to facilitate future access. Locate junction boxes to allow ready access to junction box covers without removing any equipment.
- H. All outdoor boxes shall be UL listed for wet location service.
- I. Provide rigid support to structure for all junction boxes.
- J. Provide rigid support to structure for all conduit within 3 feet of each junction box and a maximum spacing of 10 feet.
- K. Install junction boxes above ceilings in readily accessible with no obstructions, locate within 18 inches of finished ceiling to facilitate easy access.
- L. For all flexible whips to light fixtures provide wire support at mid-length of whip to structure above with UL listed conduit support clip.
- M. Provide outlet boxes to meet depth requirement of Architectural walls. Refer to Architectural Spec Section 09250 and 10611 for wall partitions.

3.6 ADJUSTING

- A. Install knockout closures in unused openings in boxes.

3.7 CLEANING

- A. Clean interior of boxes to remove dust, debris, and other material.
- B. Clean exposed surfaces and restore finish.

3.8 INSTALLATION - FLOOR BOXES

- A. Use cast floor boxes for installation in slab on grade.
- B. Set floor boxes level.
- C. Install boxes and fittings to preserve fire resistant rating of slabs and other elements, using materials and methods specified in Section 26 05 29.

3.9 ADJUSTING

- A. Adjust floor box flush with finish material.

3.10 CLEANING

- A. Clean interior of boxes to remove dust, debris, and other material.

3.11 ABOVE CEILING JUNCTION BOXES

- A. Labeling: Provide label on all above ceiling junction boxes.
 - 1. Provide permanent labeling with indelible black marker, in neat, legible print indicating the panelboard name, branch circuit number(s) and voltage of conductors within the junction box. Junction boxes used for emergency power circuits to be painted red.

END OF SECTION 26 05 33

SECTION 26 05 53 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Nameplates.
 - 2. Underground Warning Tape.
 - 3. Lockout Devices.

1.3 QUALITY ASSURANCE

- A. Manufacturers: Firms regularly engaged in manufacture of electrical identification, of types and sizes required, whose products have been in satisfactory use in similar service for not less than 5 years.
- B. Codes and standards: Comply with the following:
 - 1. National Electrical Code, NFPA No. 70.
 - 2. NEMA standards applicable to the product provided.
 - 3. UL standards applicable to the product provided.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to the following:
 - 1. Panduit Corp.
 - 2. American Labelmark Co.
 - 3. Markal Corp.
 - 4. Calpico, Inc.
 - 5. Ideal Industries, Inc.

2.2 NAMEPLATES

- A. Product Description: Laminated three-layer plastic with engraved black letters on light contrasting background color.
- B. Emergency Power panels and Equipment: Laminated three-layer plastic with engraved white letters on **RED** background.
- C. Letter Size:
 - 1. 1/4 inch high letters for identifying individual equipment and loads.

- D. Minimum nameplate thickness: 1/8 inch.

2.3 UNDERGROUND WARNING TAPE

- A. Description: four (4) inch wide plastic tape, colored red with suitable warning legend describing buried electrical lines.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Degrease and clean surfaces to receive adhesive for identification materials.

3.2 INSTALLATION

- A. Install identifying devices after completion of painting.
- B. Nameplate Installation:
1. Install nameplate parallel to equipment lines.
 2. Install nameplate for each electrical distribution and control equipment enclosure with corrosive-resistant mechanical fasteners, or adhesive.
 3. Install nameplates for each control panel and major control components located outside panel with corrosive-resistant mechanical fasteners, or adhesive.
 4. Secure nameplate to equipment front using screws, rivets, or adhesive.
 5. Secure nameplate to inside surface of door on recessed panelboard in finished locations.
 6. Install nameplates for the following:
 - a. Switchboards
 - b. Panelboards
 - c. Transformers
 - d. Service Disconnects
 - 1) Enclosed Switches
 - e. Motor Control Centers
 - f. Stand-alone Motor Controllers
 - g. Generators
 - h. Contactors
- C. Underground Warning Tape Installation:
1. Install underground warning tape along length of each underground conduit, raceway, or cable six (6) to eight (8) inches below finished grade, directly above buried conduit, raceway, or cable. Where multiple lines installed in a common trench or concrete envelope, do not exceed an overall width of 16 inches; install a single line marker.
 2. Install line marker for underground wiring, both direct buried and in raceway.
- D. Printed Panelboard Directory:
1. Provide framed, typed circuit schedules with explicit description and identification of items controlled by each individual breaker for that panel, switchboard, or motor control center.
 2. Panelboard directory shall include a legend indicating insulation color corresponding each phase and voltage in the building electrical system.
 3. Copy in Owner's Manual.

3.3 ABOVE CEILING JUNCTION BOXES

- A. Labeling: Provide label on all above ceiling junction boxes.
 - 1. Provide permanent labeling with indelible black marker, in neat, legible print indicating the panelboard name, branch circuit number(s) and voltage of conductors within the junction box.

3.4 ARC FLASH WARNING LABEL

- A. Switchboards, panel boards and motor control centers requiring examination, adjustments, servicing or maintenance while energized shall be field marked to warn persons of arc flash hazards. Marking shall be located so as to be clearly visible to qualified persons before servicing or maintenance.

END OF SECTION 26 05 53

SECTION 26 05 73.19 - ARC-FLASH HAZARD ANALYSIS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes a computer-based, arc-flash study to determine the arc-flash hazard boundary distance and the incident energy to which personnel could be exposed during work on or near energized electrical equipment.

1.3 DEFINITIONS

- A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.
- B. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
- C. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.
- D. Power Systems Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.
- E. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.
- F. SCCR: Short-circuit current rating.
- G. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
- H. Single-Line Diagram: See "One-Line Diagram."

1.4 ACTION SUBMITTALS

- A. Product Data: Submit information regarding computer software program to be used for studies.
- B. Study Submittals: Submit the following submittals after the approval of system protective devices submittals. Submittals **[shall]** **[may]** be in digital form:

1. Arc-flash study report; signed, dated, and sealed by Power Systems Analysis Specialist.
2. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
3. Exported data from computer-based, one-line diagram detailing the system data used for the arc-flash calculations, provided in .csv or Microsoft Excel format.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data:
 1. For Power Systems Analysis Software Developer.
 2. For Power System Analysis Specialist.
- B. Product Certificates: For arc-flash hazard analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

1.6 CLOSEOUT SUBMITTALS

- A. Arc-Flash Hazard Analysis:
 1. Provide final arc-flash hazard analysis report in hard copy and digital format.
 2. Provide digital file containing electrical system model in a format consistent with power system analysis software used to perform study.
 3. Provide library files for power system analysis software used to perform study.

1.7 QUALITY ASSURANCE

- A. Study shall be performed using commercially developed and distributed software designed specifically for power system analysis.
- B. Software algorithms shall comply with requirements of standards and guides specified in this Section.
- C. Manual calculations are unacceptable.
- D. Power System Analysis Software Qualifications: An entity that owns and markets computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
 1. Computer program shall be designed to perform arc-flash analysis.
- E. Power Systems Analysis Specialist Qualifications: Professional or qualified engineer in charge of performing the arc-flash study, analyzing the arc-flash results, and documenting recommendations, licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional or qualified engineer.
- F. Arc-Flash Study Certification: Arc-Flash Study Report shall be signed and sealed by Power Systems Analysis Specialist.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide software developed and sold by EasyPower software with ANSI ShortCircuit, ArcFlash, PowerProtector, Scenario Manager, SmartDuty and SmartBreaker or comparable product by one of the following:
 - 1. CGI CYME.
 - 2. Power Analytics, Corporation.
 - 3. **<Insert manufacturer's name>**.
- B. Software must provide results consistent with the requirements of the latest versions of IEEE 1584 and NFPA 70E.
- C. Software capable of creation and storage of unlimited number of operating scenarios. All scenarios stored in the same project model file. System changes made to the base case automatically propagated to each operating scenario.

2.2 ARC-FLASH STUDY REPORT CONTENT

- A. Executive summary of study findings.
- B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.
- C. One-line diagram, indicating the following:
 - 1. Protective device designations, locations, and ampere ratings.
 - 2. Conductor types, sizes, and lengths.
 - 3. Transformer kilovolt ampere (kVA) and voltage ratings.
 - 4. Motor and generator ratings.
 - 5. Switchgear, switchboard, motor-control center, and panelboard designations.
 - 6. Utility sources.
- D. Study Input Data: As described in "Power System Data" Article.
- E. Equipment Duty Report: As specified in Section 260573.13 "Short-Circuit Studies."
- F. Data on all protective devices; manufacturers, types, sizes and adjustable settings that were used for the arc-flash calculations.
- G. List of protective devices found to be inoperable or with signs of impending failure. These devices must be clearly listed and excluded from use in determination of the arc time.
- H. Equipment Duty Study: Report to verify that all protective devices have adequate short-circuit ratings to interrupt the calculated maximum short-circuit current.
- I. Arc-Flash Study Calculations and Output Reports:
 - 1. Arcing fault magnitude.
 - 2. Protective device clearing time.
 - 3. Duration of arc.
 - 4. Arc-flash boundary.

5. Restricted approach boundary.
 6. Limited approach boundary.
 7. Working distance.
 8. Incident energy.
- J. Arc-Flash Study input data, scenario descriptions, and arc-flash calculations including a definition of terms and guide for interpretation of the arc-flash hazard report. Study input data must be provided in electronic form as .csv or Excel files.

2.3 ARC-FLASH WARNING LABELS

- A. Provide a weatherproof, self-adhesive equipment label for each location requiring arc-flash hazard identification.
1. Minimum Size: **6 inches (150 mm)** wide by **4 inches (100 mm)** high.
 2. Sample label submitted for review prior to printing of actual labels.
- B. Content: Orange header with the wording, "WARNING, ARC-FLASH HAZARD, Arc-Flash and Shock Risk Assessment, Appropriate PPE Required." and the following information taken directly from the arc-flash hazard analysis:
1. Equipment ID.
 2. Nominal voltage.
 3. Protection boundaries.
 - a. Arc-flash boundary.
 - b. Restricted approach boundary.
 - c. Limited approach boundary.
 4. Available incident energy.
 5. Working distance.
 6. Engineering report number, revision number, and issue date.
- C. Completely machine printed, no field-applied markings.
- D. Compliance: NFPA 70E.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine Project electrical equipment submittals. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study. The report shall clearly state any assumptions that were necessary to complete the analysis.

3.2 ARC-FLASH HAZARD ANALYSIS

- A. Comply with the latest versions of NFPA 70E for the arc-flash hazard analysis study.
- B. Study all operating scenarios to determine the maximum incident energy at each location.

- C. Submit proposed arc-flash analysis scenarios for review prior to performing arc-flash calculations. Arc-flash hazard analysis report shall indicate which scenario created the maximum arc-flash energy for each location. All arc-flash calculations must be performed in accordance with the procedures and recommendations contained in the latest version of IEEE 1584. Calculate the arc-flash hazard boundary and incident energy at all locations in electrical distribution system where personnel could service or examine equipment while energized.
- D. Include all three-phase medium- and low-voltage equipment locations.
- E. Calculate the limited and restricted approach boundaries for each location.
- F. Incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources or fault current that changes with time during the fault. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators shall be decremented based on the recommendations in IEEE 399 and ANSI C37 where applicable.
- G. Arc-flash energy shall generally be reported for the maximum of line or load side of a circuit breaker. However, arc-flash computation shall be performed and reported for both line and load side of a circuit breaker as follows:
 - 1. When the circuit breaker is in a separate enclosure.
 - 2. When the line terminals of the circuit breaker are separate from the work location.
- H. Base arc-flash calculations on the time-current curve or operating time of the fastest upstream device using the predicted arcing current through that device. For medium-voltage circuit breakers, the breaker interrupting time must be automatically added to the relay operating time. Based on the recommendations in IEEE 1584 and sound engineering judgment, a maximum arc time of two seconds can be applied for situations where the protective device operating time is found to exceed two seconds.

3.3 POWER SYSTEM DATA

- A. Obtain all data necessary for conduct of the arc-flash hazard analysis.
 - 1. Verify completeness of data supplied on one-line diagram on Drawings. Call any discrepancies or missing information to Owner's attention.
 - 2. For new equipment, use characteristics from approved submittals under provisions of action submittals and information submittals for this Project.
 - 3. For existing equipment, whether or not relocated, obtain required electrical distribution system data by field investigation and surveys conducted by qualified technicians and engineers.
- B. Electrical Survey Data: Gather and tabulate the following input data to support study. Comply with recommendations in IEEE 1584 and NFPA 70E as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under the direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer. Data shall include, but are not limited to, the following:
 - 1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.

2. Obtain electrical power utility impedance or available short-circuit current at each service.
3. Short-circuit current at each system bus (three phase and line to ground).
4. Voltage level at each bus.
5. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio if available, tap settings, and phase shift.
6. For reactors, provide manufacturer and model designation, voltage rating and impedance.
7. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, short-circuit rating, continuous current rating, and settings for all adjustable settings.
8. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
9. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
10. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.
11. Motor horsepower.
12. Low-voltage conductor sizes, lengths, number, conductor material, and conduit material.
13. Medium-voltage conductor sizes, lengths, conductor material, conductor construction and metallic shield performance parameters, and conduit material.

3.4 LABELING

- A. Apply **[one]arc-flash label on the front cover [of each section of the equipment] [and on side or rear covers with accessible live parts and hinged doors or removable plates]** for each equipment included in the study. Base arc-flash label data on highest values calculated at each location.
- B. Each piece of equipment listed below shall have an arc-flash label applied to it:
 1. Motor-control center.
 2. Low-voltage switchboard.
 3. Switchgear.
 4. Medium-voltage switch.
 5. Low voltage transformers.
 6. Panelboard.
 7. Safety switch.
 8. Fused disconnect switch.
 9. Enclosed circuit breaker.
 10. Adjustable frequency drive.
 11. Control panel.
 12. **<Insert any other equipment that could be serviced or examined while energized>.**

3.5 APPLICATION OF WARNING LABELS

- A. Install arc-flash warning labels under the direct supervision and control of Power System Analysis Specialist.

3.6 DEMONSTRATION

- A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in potential arc-flash hazards associated with working on energized equipment and the interpretation of arc-flash warning labels.

END OF SECTION 26 05 73.19

SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.1 DESCRIPTION

- A. The requirements of this Section apply to all sections of Division 26.
- B. This project will have selected building systems commissioned. The complete list of equipment and systems to be commissioned is specified in Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS. The commissioning process, which the Contractor is responsible to execute, is defined in Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS. A Commissioning Agent (CxA) appointed by the owner will manage the commissioning process.

1.2 RELATED WORK

- A. Section 01 00 00 GENERAL REQUIREMENTS.
- B. Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS.

1.3 SUMMARY

- A. This Section includes requirements for commissioning the Facility electrical systems, related subsystems and related equipment. This Section supplements the general requirements specified in Section 01 91 00 General Commissioning Requirements.
- B. Refer to Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS for more details regarding processes and procedures as well as roles and responsibilities for all Commissioning Team members.

1.4 DEFINITIONS

- A. Refer to Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS for definitions.

1.5 COMMISSIONED SYSTEMS

- A. Commissioning of a system or systems specified in Division 26 is part of the construction process. Documentation and testing of these systems, as well as training of the OWNER's Operation and Maintenance personnel in accordance with the requirements of Section 01 91 00 and of Division 26, is required in cooperation with the OWNER and the Commissioning Agent.
- B. The Facility electrical systems commissioning will include the systems listed in Section 01 91 00 General Commissioning Requirements:

1.6 SUBMITTALS

- A. The commissioning process requires review of selected Submittals that pertain to the systems to be commissioned. The Commissioning Agent will provide a list of submittals that will be reviewed by the Commissioning Agent. This list will be reviewed and approved by the OWNER prior to

forwarding to the Contractor. Refer to Section 01 33 23 SHOP DRAWINGS, PRODUCT DATA, and SAMPLES for further details.

- B. The commissioning process requires Submittal review simultaneously with engineering review. Specific submittal requirements related to the commissioning process are specified in Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.1 CONSTRUCTION INSPECTIONS

- A. Commissioning of Electrical systems will require inspection of individual elements of the electrical systems construction throughout the construction period. The Contractor shall coordinate with the Commissioning Agent in accordance with Section 01 91 00 and the Commissioning plan to schedule electrical systems inspections as required to support the Commissioning Process.

3.2 PRE-FUNCTIONAL CHECKLISTS

- A. The Contractor shall complete Pre-Functional Checklists to verify systems, subsystems, and equipment installation is complete and systems are ready for Systems Functional Performance Testing. The Commissioning Agent will prepare Pre-Functional Checklists to be used to document equipment installation. The Contractor shall complete the checklists. Completed checklists shall be submitted to the OWNER and to the Commissioning Agent for review. The Commissioning Agent may spot check a sample of completed checklists. If the Commissioning Agent determines that the information provided on the checklist is not accurate, the Commissioning Agent will return the marked-up checklist to the Contractor for correction and resubmission. If the Commissioning Agent determines that a significant number of completed checklists for similar equipment are not accurate, the Commissioning Agent will select a broader sample of checklists for review. If the Commissioning Agent determines that a significant number of the broader sample of checklists is also inaccurate, all the checklists for the type of equipment will be returned to the Contractor for correction and resubmission. Refer to SECTION 01 91 00 GENERAL COMMISSIONING REQUIREMENTS for submittal requirements for Pre-Functional Checklists, Equipment Startup Reports, and other commissioning documents.

3.3 CONTRACTORS TESTS

- A. Contractor tests as required by other sections of Division 26 shall be scheduled and documented in accordance with Section 01 00 00 GENERAL REQUIREMENTS. All testing shall be incorporated into the project schedule. Contractor shall provide no less than 7 calendar days' notice of testing. The Commissioning Agent will witness selected Contractor tests at the sole discretion of the Commissioning Agent. Contractor tests shall be completed prior to scheduling Systems Functional Performance Testing.

3.4 SYSTEMS FUNCTIONAL PERFORMANCE TESTING

- A. The Commissioning Process includes Systems Functional Performance Testing that is intended to test systems functional performance under steady state conditions, to test system reaction to changes in operating conditions, and system performance under emergency conditions. The Commissioning Agent will prepare detailed Systems Functional Performance Test procedures for

review and approval by the Engineer. The Contractor shall review and comment on the tests prior to approval. The Contractor shall provide the required labor, materials, and test equipment identified in the test procedure to perform the tests. The Commissioning Agent will witness and document the testing. The Contractor shall sign the test reports to verify tests were performed. See Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS, for additional details.

3.4 TRAINING OF OWNER PERSONNEL

- A. Training of the OWNER operation and maintenance personnel is required in cooperation with the Resident Engineer and Commissioning Agent. Provide competent, factory authorized personnel to provide instruction to operation and maintenance personnel concerning the location, operation, and troubleshooting of the installed systems. Contractor shall submit training agendas and trainer resumes in accordance with the requirements of Section 01 91 00. The instruction shall be scheduled in coordination with the OWNER Resident Engineer after submission and approval of formal training plans. Refer to Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS and Division 26 Sections for additional Contractor training requirements.

END OF SECTION

SECTION 26 09 14 - ELECTRICAL CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide complete and operational electrical control systems as outlined within this Section.
- B. Refrigerant detection and alarm system is provided by Division 23 Mechanical.
- C. Elevator Shutdown System(s): All heat detectors, supervisory addressable modules, and supervised fire alarm wiring shall be furnished and installed as part of building fire alarm system. Refer to section 28 31 00 for additional requirements of fire alarm system.

1.3 SUBMITTALS

- A. Provide submittals according to Section 26 05 00. Coordinate with section 28 31 00 Fire Alarm System Submittal for Items to be furnished and installed as part of the Fire Alarm System.
- B. Product Data:
 - 1. Component manufacturer's literature explaining all components of each system.
- C. Shop Drawings:
 - 1. Complete point to point interface and control wiring schematics.
 - 2. Show size and location of all fused elevator shutdown switches and panels. Identify all fuse types, quantity and ampacity.
- D. Closeout Submittal: Provide manuals as described in Section 26 05 00.

1.4 OWNER'S INSTRUCTION

- A. Provide a one hour period of instruction for each system to the Owner's designated personnel upon completion of system installation. Instruction shall include a functional training session on operation and system test procedures.
- B. Elevator Power Shutdown System: Schedule instruction after building fire alarm system becomes operational. Demonstrate that heat detector(s) is connected to the building fire alarm system and that fire alarm system output connects into shunt trip circuit of the elevator power shutdown switch(s).

1.5 EXTRA MATERIALS

- A. General: Provide extra material's for Owner's use. All parts shall be identical to installed components.
- B. Fuses:

1. Full Set: A full set is (three phase) of each different ampacity fuse in an elevator shutdown panel and in each elevator shutdown switch.
2. Provide two full sets of spare fuses for each elevator shutdown panel and switch. Fuses blown and replaced during construction and commissioning do not count as spares.
3. Provide a metal cabinet in each elevator machine room for the spare fuses. Cabinet shall be furnished by the fuse manufacturer or approved equal.

PART 2 - PRODUCTS

2.1 ELEVATOR POWER SUPPLY AUTOMATIC DISCONNECT SYSTEM:

- A. General: Provide an elevator power automatic disconnect system in each elevator equipment room as required by ASME A17.1 Elevator Safety Code Rule 102.2 (c). Heat detectors and other parts of automatic disconnect means shall be separate from, and independent of, the building fire alarm system. Disconnecting means shall not be self-resetting.
- B. State Regulation: Make arrangements for all inspections required by State of Texas. Correct any deficiencies in elevator electrical power supply automatic disconnect system that may be noted by State elevator inspector. Repeat until successful completion of all State of Texas Inspection Reports and Certificates of Compliance as required for ELEVATORS, ESCALATORS AND RELATED EQUIPMENT by the Texas Department of Licensing and Regulation.
- C. NFPA: Comply with National Fire Protection Association Standard 72-1999, National Fire Alarm Code, Sect. 3-9.4 (1996 NFPA 72 section 3-8.15).
- D. Disconnecting Means:
 1. Single-Car Machine Room: Provide Bussmann Power Module Switch Cat. No. PS in NEMA 3R enclosure. Switch rating amps shall be next size larger than fuses. All fuses shall be Class J current-limiting fuses. Provide shunt trip, 120 Volt control power transformer, Bussmann Option R2 fire alarm interface relay and key test switch for elevator feeder. Entire assembly shall be UL-listed and have 200,000 RMS symmetrical ampere interrupting rating.
 2. Class J Fuse Sizing: 175% Full Load Amps per elevator motor.
 3. Enclosure: NEMA 3R.
 4. Label: Label shunt-trip fused switch "Elevator Automatic Disconnect".
 5. Install wiring to remote heat detectors. Bussmann Option A: Comply with NEC 620-91 (c). For each hydraulic elevator that has automatic recall, provide one Bussmann Option A with fused switch for that elevator shutdown. Option A is a normally-closed mechanical interlock. It prevents inadvertent recall of hydraulic elevator. Automatic recall for hydraulic elevator is typically a Division 14 item for battery pack and electric solenoid on the hydraulic valve at the elevator controller. Automatic recall is typically provided when the hydraulic elevator is not on standby generator power.
- E. Heat Detector:
 1. Install an approved heat detector with replaceable heat element within two feet of each sprinkler head in each elevator equipment room, each elevator pit, and in each elevator hoistway. Connect all heat detectors to contactor shunt trip(s) described above. Heat detector shall cause shunt trip to open the contactor associated with each elevator fused switch.
 2. Heat detector shall have a lower temperature rating than the sprinkler head. Ex. 135°F-fixed temperature detector versus 165°F sprinkler.

3. Heat detector shall also have higher sensitivity than sprinkler. Detector higher sensitivity is often characterized by lower response time index (RTI). Listed spacing of heat detector shall be 40 feet or greater (NFPA 72, sect. Appendix 3-8.15.1).
4. Heat detector shall be combination rate-of-rise and fixed-temperature design as recommended in ASME Handbook to ANSI/ASME A17.1 Safety Code for Elevators and Escalators, explanation for Rule 102.2 (c)(3).
5. Install a heat detector at each sprinkler head in all following locations that have sprinklers:
 - a. Elevator machine rooms;
 - b. Elevator hoistway;
 - c. Elevator pit.
6. Heat detector shall be Notifier Model No. HD-621 or approved equal. Detector shall have Normally Open, dual output contacts. Both contacts shall be rated at least 3A @ 6-125 Vac and 1A @ 6-28 Vdc.

PART 3 - EXECUTION

3.1 INSTALLATION:

- A. All components shall be properly mounted and wired.

3.2 INTERFACE WITH INVOLVED EQUIPMENT:

- A. Each system shall have all necessary control circuitry, relays, and contacts to provide functions as specified, and shall be capable, if necessary of interfacing to voltages 12-120 AC/DC, N/O or N/C contacts, wet or dry contacts, and momentary or maintained signal required. Verify type of interface control required with manufacturer of associated equipment. Provide necessary control power system for any wet contacts that are required, including control transformers, rectifiers, wiring, circuit breakers, etc.

3.3 CONTROL POWER SUPPLY:

- A. Elevators: Provide 120 volt control power as required from the same 208/120 volt circuit breaker panelboard serving the various 120V branch circuits in the elevator machine room.

3.4 ELEVATOR DISCONNECT:

- A. National Electrical Code:

NEC 620-51 (b): Provide a disconnecting means for main power supply conductors to each elevator car. The elevator disconnecting means shall be part of the automatic shutdown system to open the power supply prior to application of sprinkler water.

NEC 620-51: The disconnecting means for the main power supply conductors to each elevator car shall not disconnect the branch circuits required by NEC 620-22, 620-23 and 620-24.

3.5 TESTING:

- A. Test each system in the presence of the Owner, Architect, and Engineer to verify proper operation of elevator power supply automatic disconnect systems.

- B. State Elevator Inspector: Include State Elevator Inspector in test witnessing. At the sole option of the State Elevator Inspector, provide separate testing as that person may require. Provide all testing of disconnect systems as required by State Elevator Inspector to allow all Inspection Reports and Certificates of Compliance to be completed.

END OF SECTION 26 09 14

SECTION 26 09 23 - LIGHTING CONTROL DEVICES

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes enclosed contactors for lighting and general purposes. Provide complete systems using contactors, relays, photocells, time clocks, or digital time switches, where required, all properly mounted in enclosures.

1.3 SUBMITTALS

- A. Product Data: Submit dimensions, size, voltage ratings and current ratings.
- B. Short circuit current rating (SCCR) of equipment.
- C. U.L. Label.
- D. Electrical characteristics of equipment.
- E. Enclosure metal gauge and finish.

1.4 CLOSEOUT SUBMITTALS

- A. Provide manuals as described in Section 26 05 00.

PART 2 - PRODUCTS

2.1 GENERAL PURPOSE CONTACTORS

- A. General: Provide contactors and relays with ratings as indicated or as required to operate the installed load at the applied voltage using the applied contact voltage. Contactor shall be rated for making and breaking motor or other inductive loads.
- B. Manufacturers:
 - 1. ASCO
 - 2. Square D
 - 3. GE
- C. Enclosure: Provide a NEMA 1 enclosure for all contactors located indoors. Provide NEMA 4X for those located outdoors and in wet areas.
- D. Lighting Contactors:
 - 1. Mechanically held, electrically operated.
 - 2. ASCO 918 or approved equal.

3. Provide ASCO Accessory 47 for two-wire control of contactor. Provide time switch and photocell to control contactor.
 4. Some lighting contactors may be designated for control by Division 23 Building Automation System (BAS). Provide contactor and ASCO solid-state Accessory 47 for two-wire control of contactor. Division 23 shall provide all BAS control wiring. BAS provides all time-of-day ON/OFF scheduling.
 5. Three-phase Contactors: When lighting contactors are indicated to control an entire panel or sub-panel, provide ASCO 920 or approved equal. Include two-wire control relay ASCO Accessory 47.
 6. Parking Lot, Exterior Lighting and Sport Lighting Contactors: Provide 3-phase, 3-pole ASCO 920 contactors as indicated on Drawings. Include two-wire control relay ASCO Accessory 47. Also provide solid state control module and housing with Hand-off-Auto selector switch. All contactors that control any branch circuit that serves any lighting fixtures or entire panels that feed outdoor lighting shall be provided with the HOA control feature.
- E. SCCR: Contactor shall have short circuit current rating established by actual testing with specific overcurrent protection device. SCCR shall be UL-listed.

2.2 PHOTO-ELECTRIC CONTROLS:

- A. Description:
1. General: Photo-electric control shall switch load ON at dusk and OFF at dawn.
 2. Housing: Photocell shall be enclosed in a weatherproof, corrosion resistant housing. The housing shall have a 1/2 inch I.P.S. nipple with a locking washer.
 3. Element: Light sensing element shall be Cadmium-Sulfide cell hermetically sealed against moisture. Minimum time delay before change-of-state shall be 15 seconds. If the photo-electric control fails, the load shall switch ON (fail-safe ON).
 4. Adjustment: The housing shall have an adjustable slide shield to vary the ambient light reaching the CdS cell. The slide shield shall not override the control; that is, the ON/OFF function shall occur even when the shield is at either extreme of the adjustment range. Adjustment shall be made by hand without tools.
 5. Temperature: The photocell shall be suitable for operation in an ambient temperature range of -30 degrees Fahrenheit to + 140 degrees Fahrenheit.
 6. Voltage: The photocell shall be suitable for use at voltage equal to the load voltage (120, 208, 277).
 7. Capacity: Photocell shall be SPST rated for a minimum of 1800 Volt-Amps resistive or inductive load.
 8. Leads: Photocell shall have minimum six (6) inch wire leads with wet location insulation. Leads shall be color coded Red/Load, Black/Line and White/Neutral.
 9. Listing: Photocell shall be listed by Underwriters Laboratories.
- B. Manufacturer: Intermatic, Paragon, Precision, Tork.

2.3 TIME CLOCKS:

- A. Manufacturer:
1. Grasslin
 2. Intermatic
 3. Paragon
 4. Precision
 5. Tork

- B. General: Provide time clocks similar to Intermatic Series T 1900 or Tork B8000 Series. Provide wiring to photocells, contactors, relays or other control points as required.
- C. Contacts: Rated for 20 amps minimum at 277 volts. Provide 1, 2, 3 or 4 pole, single or double throw, maintained or momentary contact, as required based on the time clock function and the number of branch circuits controlled. Contacts shall be horse power rated when motors are switched.
- D. Dial: Provide 24-hour dial with 15 minute intervals minimum. Dial shall permit at least 48 ON/OFF cycles per day via 96 adjustable tabs. Dial shall include a skip-a-day wheel and two day-omitting pins. Provide extra trippers and day-omitting pins if required.
- E. Special Dials: Provide special dial where indicated on drawings or in these specifications. Provide astronomic dial for time clock controlling outdoor lighting.
- F. Timing Motor: Provide heavy duty synchronous timing motor, self-starting and permanently lubricated. Motor shall be permanent magnet type for high torque and operate through and ambient temperature range of - 30 degrees Fahrenheit to + 130 degrees Fahrenheit. Motor cover shall have a viewing window to check for rotation of gears. Motor voltage shall be 120, 208, 240 or 277 volts as required.
- G. Reserve Power: Provide a spring driven reserve power drive to operate time clock for at least ten (10) hours after a power failure.
- H. Manual Bypass:
 - 1. Time clock shall include a manual ON/OFF bypass switch capable of overriding time schedule without disturbing trippers or timing sequence.
 - 2. Time clock shall be installed with a pilot-light SPST toggle switch mounted in a separate, adjacent single-gang box. Switch shall be labelled "Bypass" and shall function to turn ON circuit(s) controlled by the time clock. Switch shall be flush or surface mounted to match time clock housing.
- I. Terminals: Time clock shall have a terminal block with screws for line, load, and grounding connections with up to AWG #8 wire. Provide a removable dead-front terminal cover within the time clock case. Timing motor shall have separate, unswitched terminals.
- J. Enclosure: Provide a NEMA 1 enclosure with hasp suitable for padlock and side-hinge door for all clocks located indoors. Enclosure shall have 1/2 inch and 3/4 inch knockouts in bottom and sides. Provide NEMA 4X for those located outdoors and in wet areas.
- K. Nametag: Provide a nametag for each time clock stating load controlled; see Section 26 05 53, Electrical Identification.
- L. Listing: All time clocks shall be listed by Underwriters Laboratories and C.S.A.
- M. Manuals: Provide three sets, each consisting of operating instructions and one-line diagrams.

2.4 DIGITAL TIME SWITCHES:

- A. Recessed in wall: Wattstopper TS-400 or approved equal.
 - 1. The digital time switch shall be programmable to turn lights off after a preset time.

2. Time switch shall be a completely self-contained control system that replaces the standard toggle switch. It shall have a ground wire and ground strap for safety. Switching mechanism shall be a latching air gap relay.
3. Zero Crossing Circuitry shall be used to increase the relay life, protect from the effects of inrush current, and increase the switch's longevity.
4. Time switch shall be compatible with all electronic ballasts, motor loads, compact fluorescent and inductive loads. Triac and other harmonic generating devices shall not be allowed.
5. Time switch shall operate at universal voltages of 100-300 VAC; 50/60 Hz.
6. Time switch shall have no minimum load requirement and shall be capable of controlling 0 to 800 watt incandescent, fluorescent @ 100/120 VAC, 50/60 Hz; 0 to 1200 watts fluorescent @ 230/277 VAC, 50/60 Hz; 1/6 hp @ 125 VAC.
7. Time scroll feature shall allow manual overriding of the preset time-out period. Selecting time scroll UP shall allow time-out period to scroll up throughout the timer possibilities to the maximum. Time scroll DN (down) shall allow time-out period to scroll down to minimum.
8. Time switch shall have the option for a one second light flash warning at five minutes before the timer runs out and twice when the countdown reaches one minute (when used to control lighting loads).
9. Time switch shall have the option for a beep warning that shall sound every five seconds once the time switch countdown reaches one minute.
10. Time switch shall have manual feature for timer reset where pressing the ON/OFF switch for more than 2 seconds resets the timer to the programmed time-out period.
11. Time switch shall have an electroluminescent backlit Liquid Crystal Display that shows the timer's countdown.
12. Time switch shall fit behind a decorator style faceplate. The calibration switch for setting time-out, time scroll, one second light flash, and beep warning shall be concealed to prevent tampering of adjustments and hardware.
13. Time-out period shall be adjustable in increments of 5 minutes from 5 minutes to 1 hour, and in increments of 15 minutes from 1 hour to 12 hours.
14. Time switch shall be capable of operating as an ON/OFF switch.
15. For ease of installation and cleaner wiring, the switch shall utilize terminal style wiring.
16. The time switch shall not protrude more than 1/8" from the wall and should blend in aesthetically.
17. For safety, the time switch shall have a 100% OFF override switch with no leakage current to the load.
18. For safety, in the event there is an open circuit in the AC line such as a ballast or lamp failure, the time switch shall automatically switch to OFF mode.
19. To ensure quality and reliability, time switch shall be manufactured by an ISO 9002 certified manufacturing facility and shall have a defect rate of less than 1/3 of 1%.
20. Time switch shall have 5 year warranty and shall be UL and CUL listed.

2.5 OCCUPANCY SENSORS:

- A. Ceiling Sensors: Require power packs
 1. W-2000- Low voltage ultrasonic ceiling mounted with 2000 square foot coverage. Typical for large restroom.

- DT-300- Low Voltage dual technology ceiling mounted with isolated contact. Typical for classrooms.
 - 2. WT-2250/2255- Typical corridor sensor- Low voltage ultrasonic ceiling mounted with 10' by 90' coverage pattern
- B. Wall Switch Sensors:
- 1. PW-100 Line voltage PIR wall switch sensor for 1 circuit- Typical for small office or single person restroom.
PW-100-24 Low Voltage PIR wall switch sensor. Requires power pack
PW-200- Line voltage PIR wall switch sensor for 2 circuits,
UW-100- Line Voltage ultrasonic wall switch sensor for 1 circuit.
DW-100- Line voltage dual technology wall switch sensor for 1 circuit. Typical for large office or conference room.
DW-100-24- Low voltage dual technology wall switch sensor. Requires Power Pack
DW-200- Line voltage dual technology wall switch sensor for 2 circuits
 - 2. Wall switch sensors shall be capable of detection of occupancy at desktop level up to 300 square feet, and gross motion up to 1000 square feet.
 - 3. Wall switch sensors shall accommodate loads from 0 to 800 watts at 120 volts; 0 to 1200 watts at 277 volts and shall have 180° coverage capability.
 - 4. Wall switch products shall utilize Zero Crossing Circuitry which increases relay life protects from the effects of inrush current, and increases sensor's longevity.
 - 5. Wall switch sensors shall have no leakage current to load, in manual or in Auto/Off mode for safety purposes and shall have voltage drop protection.
 - 6. Where specified, wall switch sensors shall provide a field selectable option to convert sensor operation from automatic-ON to manual-ON.
 - 7. Where specified, vandal resistant wall switch sensors shall utilize a hard lens with a minimum 1.0mm thickness. Products utilizing a soft lens will not be considered.
- C. Power and Auxiliary Packs:
- 1. BZ-50- Standard power pack for use with low voltage sensors. 225ma
 - 2. BZ-150- Power pack for use with low voltage sensors when using a manual on function. 225ma
 - 3. S120/277- Slave relay pack. For controlling more than 1 circuit from a low voltage sensor. Standard BZ-50 can also be used.
- D. High Ceiling Applications
- 1. HB-350B*LENS Low Voltage PIR sensor
 - 2. L1 Lens- 20' x 60' coverage pattern when mounted at 40'
 - 3. L3 Lens- 40' diameter coverage pattern when mounted at 40'
 - 4. L4 Lens- 60' diameter coverage pattern when mounted at 60'
- E. Passive infrared sensors:
- 1. Passive infrared sensors shall utilize Pulse Count Processing and Detection Signature Processing to respond only to those signals caused by human motion.
 - 2. Passive infrared sensors shall provide high immunity to false triggering from RFI (hand-held radios) and EMI (electrical noise on the line).
 - 3. Passive infrared sensors shall have a multiple segmented Fresnel lens, in a multiple-tier configuration, with grooves-in to eliminate dust and residue build-up.
 - 4. Where specified, passive infrared ultrasonic and dual technology sensors shall offer daylighting footcandle adjustment control and be able to accommodate dual level lighting.

- F. Dual technology sensors:
 - 1. Dual technology sensors shall be wall mounted, corner mounted or ceiling mounted in such a way as to minimize coverage in unwanted areas.
 - 2. Dual technology sensors shall consist of passive infrared and ultrasonic technologies for occupancy detection. Products that react to noise or ambient sound shall not be considered.
- G. Ultrasonic sensors:
 - 1. Ultrasonic sensors shall utilize Advanced Signal Processing to adjust the detection threshold dynamically to compensate for constantly changing levels of activity and air flow throughout controlled space.
 - 2. Ultrasonic operating frequency shall be crystal controlled at 25 kHz within $\pm 0.005\%$ tolerance, 32 kHz within $\pm 0.002\%$ tolerance, or 40 kHz $\pm 0.002\%$ tolerance to assure reliable performance and eliminate sensor cross-talk. Sensors using multiple frequencies are not acceptable.
- H. All sensors shall be capable of operating normally with electronic ballasts, PL lamp systems and rated motor loads.
- I. Coverage of sensors shall remain constant after sensitivity control has been set. No automatic reduction shall occur in coverage due to the cycling of air conditioner or heating fans.
- J. When specified, sensors shall utilize SmartSet™ technology for automatically adjustable time delay and sensitivity settings.
- K. All sensors shall have readily accessible, user adjustable settings for time delay and sensitivity. Settings shall be located on the sensor (not the control unit) and shall be recessed to limit tampering.
- L. In the event of failure, a bypass manual override shall be provided on each sensor. When bypass is utilized, lighting shall remain on constantly or control shall divert to a wall switch until sensor is replaced. This control shall be recessed to prevent tampering.
- M. All sensors shall provide an LED as a visual means of indication at all times to verify that motion is being detected during both testing and normal operation.
- N. Where specified, sensor shall have an internal additional isolated relay with Normally Open, Normally Closed and Common outputs for use with HVAC control, Data Logging and other control options. Sensors utilizing separate components or specially modified units to achieve this function are not acceptable.
- O. All sensors shall have UL rated, 94V-0 plastic enclosures.
- P. All occupancy sensors shall be set to maximum 30 minute time delay.
- Q. Provide minimum 5% spare sensors for owner stock of each type of occupancy sensor.

2.6 DAYLIGHT HARVESTING – Wattstopper LightSaver® LS-102 Daylighting Controller

- A. The light level controller shall be capable of detecting changes in lighting levels.
- B. The light level controller shall utilize an internal photocell that measures light in a 100 degree angle cutting the unwanted light from bright sources outside of this cone.
- C. The light level controller shall be capable of controlling any type of lighting through use of power packs. Light level controller shall operate from a 24 volts DC power supply; current draw is 22 milliamps.
- D. The LS-102 light level controller shall be capable of turning lighting on and off for a single zone and has a light sensors over 1 to 1400fc.
- E. The light level controller shall have an adjustable deadband feature with 25%, 50%, 75% or 100% in relation to the setpoints. This prevents lighting from cycling when lighting goes on and off and from minor changes due to cloud cover.
- F. The light level controller shall have an adjustable time delay range of 3, 10, 15 or 30 minutes. This will prevent cycling on partly cloudy days and is necessary with HID lighting.
- G. The LS-102 shall provide a connection for an optional low voltage, normally open momentary contact watt switch override.
- H. The LS-102 provides a “hold on while occupied” feature that prohibits high levels from turning OFF the controlled lights as long as the space remains occupied.
- J. The LS-101 has an ON Setpoint range from 1-850fc and when the daylight drops below that setpoint for 20 seconds the electric lights will be turned ON.
- K. The LS-102 has a microprocessor that allows the photosensor to respond with precision to deliver the desired intensity of electric lighting for the space.
- L. The light level controller has a LED status indicator making it easy to identify if the device has been forced on or off by an override switch or if the device is in test mode.
- M. The LS-102 has a threaded nipple that mounts on a ceiling tile and for more challenging applications such as a side wall or hard rock ceiling the nipple pops off and the LS-101 can be screwed down.
- N. Light level controller shall have standard 5 year warranty.

2.7 SPORTS LIGHTING CONTROL STATION

- A. General: Provide pushbuttons for manual override of programmable relays designated to control the power contactors for the outdoor sports lighting at each field. Arrange pushbuttons into a single enclosure for each field.

- B. Enclosure: Enclosure shall be NEMA 4X stainless steel or polycarbonate with gasketing for outdoor wet locations.
- C. Pushbutton: Similar to Square D Class 9001-Type B, Type BW245, NEMA 4, momentary contact, RED/ON and GREEN/OFF pushbuttons with collar guard.
- D. Wiring: From each pushbutton in the Sports Lighting Control Station, provide low voltage wiring to the programmable relay cabinet.
- E. Control: BAS schedules all power contactors for outdoor sports lighting via the programmable relay system. Each sports field shall have a programmable relay assigned to the contactors for the sports lighting of that field. BAS will program automatic schedules for the sports lighting as required. User shall be able to override automatic schedule from BAS with manual ON/OFF signals from the pushbutton Lighting Control Stations. Pushbutton signals relay cabinet, similar to a classroom light switch, and relay causes the lighting contactors to change state (OFF to ON, ON to OFF).
- F. Engraving: Provide engraved lamacore plate above each pushbutton describing the lighting it will control. Example: TENNIS COURTS; FOOTBALL-EAST POLES, FOOTBALL-WEST POLES, BASEBALL, SOFTBALL.
- G. Relays: For each pushbutton control, provide a relay in the local relay cabinet nearest the sports lighting contactors. Wire relay to the control circuits of the associated sports lighting contactors. Program BAS for both automatic scheduling of the sports lighting and to accept manual override from pushbutton Sports Lighting Control Stations.

PART 3 - EXECUTION

3.1 PHOTO-ELECTRIC CONTROL MOUNTING:

- A. Provide photo-electric control on roof of building. When more than one building is constructed on site, install photo control on each roof. Aim true North and locate in places where ambient night lighting will not cause interference. Wire down to respective contactors in each building.

3.2 TIME CLOCK PROGRAMMING:

- A. Install time clock and photocell for ON by photocell at dusk, OFF by time clock at midnight, then ON by time clock at 5:00 a.m. and OFF by photocell at dawn. Program time clock ON/OFF times to other time(s) when indicated on Drawings.

3.3 INSTALLATION

- A. Install enclosed contactors (as indicated on Drawings), in accordance with NECA "Standard of Installation".
- B. Install engraved nameplates. Refer to Section 26 05 53 for requirements.
- C. Install contactor and relays in Electrical / Mechanical Rooms unless otherwise noted.

END OF SECTION 26 09 23

SECTION 26 09 43 – NETWORKED DIGITAL LIGHTING CONTROLS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Digital Occupancy and Daylighting Sensor Control
 - 2. Emergency Lighting Control
- B. Related Section
 - 1. Section [260926 – Lighting Control Panel Boards:] Lighting panels (switching) controlled by Digital Network Lighting Control System.
 - 2. Section [260936 – Modular Dimming Controls:] Digital Lighting Management
 - 3. Section [262726 - Wiring Devices:] Receptacles
 - 4. Section [265113 – Interior Lighting Fixtures, Lamps, and Ballasts:] Fluorescent electronic dimming ballasts.
 - 5. Section [25000 – Integrated Automation] Building integrator shall provide integration of the lighting control system with Building Automation Systems.
 - 6. Drawings and general provision of the Contact, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section
 - 7. Electrical Sections, including wiring devices, apply to the work of this Section.
- C. Control Intent – Control Intent includes, but is not limited to:
 - 1. Defaults and initial calibration settings for such items as time delay, sensitivity, fade rates, etc.
 - 2. Initial sensor and switching zones
 - 3. Initial time switch settings
 - 4. Task lighting and receptacle controls
 - 5. Emergency Lighting control

1.4 SYSTEM DESCRIPTION & OPERATION

- A. The Lighting Control and Automation system as defined under this section covers the following equipment:
 - 1. Digital Room Controllers – Self-configuring, digitally addressable one, two or three relays controllers with **integral current thyristor**, 0-10 volt control for ballasts.
 - 2. Digital Occupancy Sensors – Self-configuring, digitally addressable and calibrated occupancy sensors with LCD display and two-way active infrared (IR) communications.
 - 3. Digital Switches – Self-configuring, digitally addressable pushbutton switches, dimmers, and scene switches with two-way active infrared (IR) communications.
 - 4. Digital Photosensors – Single-zone closed loop and multi-zone open loop daylighting sensors with two-way active infrared (IR) communications can provide switching or dimming control for daylight harvesting.
 - 5. Configuration Tools – Handheld remote for room configuration provides two way infrared (IR) communications to digital devices and allows complete configuration and reconfiguration of the device / room from up to 30 feet away. Unit to have Organic LED display, simple pushbutton interface, and allow send and receive of room variables and store of occupancy sensor settings. Computer software also customizes room settings.
 - 6. Handheld remotes for personal control – One-button dimming, two-button on/off, or five-button scene remotes provide control using infrared communications. Remote may be configured in the field to control selected loads or scenes without special tools.
 - 7. Digital Lighting Management (DLM) local network – Free topology, plug-in wiring system (Cat 5e) for power and data to room devices.
 - 8. Network Bridge – provides BACnet MS/TP-compliant digital networked communication between rooms, panels and the Segment Manager or building automation system (BAS).
 - 9. Segment Manager – provides web browser-based user interface for system control, scheduling, power monitoring, room device parameter administration and reporting.
 - 10. Emergency Lighting Control Unit (ELCU) – allows a standard lighting control device to control emergency lighting in conjunction with normal lighting in any area within a building

1.5 SUBMITTALS

- A. Submittals Package: Submit the shop drawings, and the product data specified below at the same time as a package.
- B. Shop Drawings:
 - 1. Composite wiring and/or schematic diagram of each control circuit as proposed to be installed (standard diagrams will not be accepted).
 - 2. Scale drawing for each area showing exact location of each sensor, room controller, and digital switch.
- C. Product Data: Catalog sheets, specifications and installation instructions.
- D. Include data for each device which:
 - 1. Indicates where sensor is proposed to be installed.
 - 2. Prove that the sensor is suitable for the proposed application.

1.6 QUALITY ASSURANCE

- A. Manufacturer: Minimum [10] years' experience in manufacture of lighting controls. Provide list of (5) projects that have been complete for more than (1) year within 100 miles of new project location.

1.7 PROJECT CONDITIONS

- A. Do not install equipment until following conditions can be maintained in spaces to receive equipment:
 - 1. Ambient temperature: 0° to 40° C (32° to 104° F).
 - 2. Relative humidity: Maximum 90 percent, non-condensing.

1.8 WARRANTY

- A. Provide a five year complete manufacturer's warranty on all products to be free of manufacturers' defects.

1.9 MAINTENANCE

- A. Spare Parts:
 - 1. Provide 5% spares of each product listed below to be used for maintenance. Electrical Contractor shall deliver items to Owner within 30 days of substantial completion.
 - a. Room Controllers
 - b. Occupancy Sensors
 - c. Emergency Bypass controllers
 - d. Low voltage switches
 - e. Daylighting harvesting photocells

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturer:
 - 1. WattStopper (basis of design)
 - 2. Acuity

2.2 SINGLE / DUAL RELAY WALL SWITCH OCCUPANCY SENSORS

- A. Type PW: Manual-ON, Automatic-OFF passive infrared (PIR) wall switch occupancy sensor. Furnish the Company's model which suits the electrical system parameters, and accommodates the square-foot coverage and wattage requirement for each area (and type of lighting) controlled; WattStopper PW-100, PW-200, PW-103, PW-203, PW-301, PW-302, WS-301.
- B. Type UW: Manual-ON, Automatic-OFF ultrasonic wall switch occupancy sensor with. Furnish the Company's model which suits the electrical system parameters, and accommodates the square-foot coverage and wattage requirement for each area (and type of lighting) controlled; WattStopper UW-100, UW-200.

- C. Type DW: Manual-ON, Automatic-OFF dual technology (passive infrared and ultrasonic) wall switch occupancy sensor. Furnish the Company's model which suits the electrical system parameters, and accommodates the square-foot coverage and wattage requirement for each area (and type of lighting) controlled; WattStopper DW-100, DW-200, DW-103, DW-203, DW-311, DSW-100, DSW-200, DW-103, DW-203, DSW-301, DSW-302.

2.3 DIGITAL WALL OR CEILING MOUNTED OCCUPANCY SENSOR SYSTEM

- A. Wall or ceiling mounted (to suit installation) passive infrared (PIR), ultrasonic or dual technology digital (passive infrared and ultrasonic) occupancy sensor. Furnish the Company's system which accommodates the square-foot coverage requirements for each area controlled, utilizing room controllers, digital occupancy sensors and accessories which suit the lighting and electrical system parameters. Passive infrared only sensors shall not be used for classroom applications.
- B. Digital Occupancy Sensors shall provide graphic LCD display for digital calibration and electronic documentation. Features include the following:
1. Digital calibration and pushbutton programming for the following variables:
 - a. Sensitivity – 0-100% in 10% increments
 - b. Time delay – 1-30 minutes in 1 minute increments
 - c. Test mode – Five second time delay
 - d. Detection technology – PIR, Ultrasonic or Dual Technology activation and/or re-activation.
 - e. Walk-through mode
 - f. Load parameters including Auto/Manual-ON, blink warning, and daylight enable/disable when photosensors are included in the DLM local network.
 2. One or two RJ-45 port(s) for connection to DLM local network.
 3. Two-way infrared (IR) transceiver to allow remote programming through handheld commissioning tool and control by remote personal controls.
 4. Device Status LEDs including:
 - a. PIR Detection
 - b. Ultrasonic detection
 - c. Configuration mode
 - d. Load binding
 5. Assignment of occupancy sensor to a specific load within the room without wiring or special tools.
 6. Manual override of controlled loads.
- C. Units shall not have any dip switches or potentiometers for field settings.
- D. Multiple occupancy sensors may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required.
- E. All devices shall be hard wired. No wireless devices shall be permitted.
- F. WattStopper product numbers: LMPX, LMDX, LMPC, LMUC, LMDC

2.4 DIGITAL WALL SWITCHES

- A. Low voltage momentary pushbutton switches in multiple button configuration; available in white, light almond, ivory, grey, red and black; compatible with wall plates with decorator opening. Wall switches shall include the following features:
1. Two-way infrared (IR) transceiver for use with personal and configuration remote controls.

2. Removable buttons for field replacement with engraved buttons and/or alternate color buttons. Button replacement may be completed without removing the switch from the wall.
 3. Red configuration LED on each switch that blinks to indicate data transmission.
 4. Blue Load/Scene Status LED on each switch button with the following characteristics:
 - a. Bi-level LED
 - b. Dim locator level indicates power to switch
 - c. Bright status level indicates that load or scene is active
 5. Dimming switches shall include seven bi-level LEDs to indicate load levels using 14 steps.
- B. Two RJ-45 ports for connection to DLM local network.
- C. Multiple digital wall switches may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required to achieve multi-way switching.
- D. The following switch attributes may be changed or selected using a wireless configuration tool:
1. Load and Scene button function may be reconfigured for individual buttons (from Load to Scene, and vice versa).
 2. Individual button function may be configured to Toggle, On only or Off only.
 3. Individual scenes may be locked to prevent unauthorized change.
 4. Fade Up and Fade Down times for individual scenes may be adjusted from 0 seconds to 18 hours.
 5. Ramp rate may be adjusted for each dimmer switch.
 6. Switch buttons may be bound to any load on a room controller and are not load type dependant; each button may be bound to multiple loads.
- E. WattStopper product numbers: LMSW-210, LMSW-211, LMSW-220, LMSW-222, LMSW-241, LMSW-250

2.5 ROOM CONTROLLERS

- A. Room Controllers automatically bind the room loads to the connected devices in the space without commissioning or the use of any tools. Room Controllers shall be provided to match the room lighting load and control requirements. The controllers will be simple to install and will not have, dip switches, potentiometers or require special configuration. The control units will include the following features:
1. Automatic room configuration to the most energy-efficient sequence of operation based upon the devices in the room.
 2. Simple replacement – Using the default automatic configuration capabilities, a room controller may be replaced with an off-the-shelf unit without requiring any configuration or setup.
 3. Device Status LEDs to indicate:
 - a. Data transmission
 - b. Device has power
 - c. Status for each load
 - d. Configuration status
 4. Quick installation features including:
 - a. Standard junction box mounting
 - b. Quick low voltage connections using standard RJ-45 patch cable
 5. Plenum rated UL 2043
 6. Manual override and LED indication for each load
 7. Dual voltage (120/277 VAC, 60 Hz)
 8. Zero cross circuitry for each load.

- B. On/Off/Dimming enhanced Room Controllers shall include:
 - 1. Real time current monitoring
 - 2. One, two or three relay configuration
 - 3. Efficient 250 mA switching power supply
 - 4. Four RJ-45 DLM local network ports.
 - 5. One 0-10 volt analog output per relay for control of compatible ballasts and LED drivers.
 - 2. The following dimming attributes may be changed or selected using a wireless configuration tool:
 - a. Establish preset level for each load from 0-100%
 - b. Set high and low trim for each load
 - c. Set lamp burn in time for each load up to 100 hours
 - 6. WattStopper product numbers: LMRC-111, LMRC-112, LMRC-211, LPMC-212, LPMC-213

2.6 DIGITAL PHOTOSENSORS

- A. Digital photosensors work with room controllers to provide automatic switching or dimming daylight harvesting capabilities for any load type connected to a room controller. Closed loop photosensors measure the ambient light in the space and control a single lighting zone. Open loop photosensors measure incoming daylight in the space, and are capable of controlling up to three lighting zones. Photosensors shall be interchangeable without the need for rewiring.
- B. Digital photosensors include the following features:
 - 1. An internal photodiode that measures only within the visible spectrum, and has a response curve that closely matches the photopic curve. The photodiode shall not measure energy in either the ultraviolet or infrared spectrums. The photocell shall have a sensitivity of less than 5% for any wavelengths less than 400 nanometers or greater than 700 nanometers.
 - 2. Sensor light level range shall be from 1-10,000 footcandles (fc).
 - 3. The capability of switching one-third, one-half or all lighting ON and OFF, or raising or lowering lighting levels, for each controlled zone, depending on the selection of room controller(s) and load binding to room controller(s).
 - 4. For switching daylight harvesting, the photosensor shall provide a deadband or a separation between the "ON Setpoint" and the "OFF Setpoint" that will prevent the lights from cycling after they turn off.
 - 5. For dimming daylight harvesting, the photosensor shall provide the option, when the daylight contribution is sufficient, of turning lights off or dimming lights to a user-selectable minimum level.
 - 6. Optional programmable wall switch override to allow occupants to reduce lighting level to increase energy savings or, if permitted by system administrator, raise and lower lighting levels for a selected period of time or cycle of occupancy.
 - 7. Infrared (IR) transceiver for configuration and/or commissioning with a handheld configuration tool, to transmit detected light level to wireless configuration tool, and for communication with personal remote controls.
 - 8. Red configuration LED that blinks to indicate data transmission.
 - 9. Blue status LED indicates test mode, override mode and load binding.
 - 10. Recessed switch to turn controlled load(s) ON and OFF.
 - 11. One RJ-45 port for connection to DLM local network.
 - 12. An adjustable head and a mounting bracket to accommodate multiple mounting methods and building materials. The photosensor may be mounted on a ceiling tile, skylight light well, suspended lighting fixture or backbox.

- C. Closed loop digital photosensors include the following additional features:
 - 1. An internal photodiode that measures light in a 100 degree angle, cutting off the unwanted light from bright sources outside of this cone.
 - 2. Automatic self-calibration, initiated from the photosensor, a wireless configuration tool or a PC with appropriate software.
 - 3. Automatically establishes setpoints following self-calibration.
 - 4. A sliding setpoint control algorithm for dimming daylight harvesting with a "Day Setpoint" and the "Night Setpoint" to prevent the lights from cycling.
 - 5. WattStopper Product Number: LMLS-400.
- D. Open loop digital photosensors include the following additional features:
 - 1. An internal photodiode that measures light in a 60 degree angle cutting off the unwanted light from the interior of the room.
 - 2. Automatically establishes setpoints following calibration using a wireless configuration tool or a PC with appropriate software.
 - 3. A proportional control algorithm for dimming daylight harvesting with a "Setpoint" to be maintained during operation.
 - 4. WattStopper Product Number: LMLS-500.

2.7 EMERGENCY LIGHTING

- A. Emergency Lighting Control Unit – A UL 924 listed device that monitors a switched circuit providing normal lighting to an area. The unit provides normal ON/OFF control of emergency lighting along with the normal lighting. Upon normal power failure the emergency lighting circuit will close, forcing the emergency lighting ON until normal power is restored. Features include:
 - 1. 120/277 volts, 50/60 Hz., 20 amp ballast rating
 - 2. Push to test button
 - 3. Auxiliary contact for remote test or fire alarm system interface
- B. WattStopper Product Numbers: ELCU-100, ELCU-200.
- C. Generator Transfer Device – For corridors and other areas noted on plans that require a UL1008 device, provide Bodine GTD20A device.

2.8 ROOM NETWORK (DLM Local Network)

- A. The DLM local network is a free topology lighting control physical connection and communication protocol designed to control a small area of a building. Digital room devices connect to the network using CAT 5e cables with RJ-45 connectors which provide both data and power to room devices. Features of the DLM local network include:
 - 1. Plug n' Go automatic configuration and binding of occupancy sensors, switches and lighting loads to the most energy-efficient sequence of operation based upon the device attached.
 - 2. Simple replacement of any device in the network with a standard off the shelf unit without requiring commissioning, configuration or setup.
 - 3. Push n' Learn configuration to change the automatic configuration, including binding and load parameters without tools, using only the buttons on the digital devices in the local network.
 - 4. Two-way infrared communications for control by handheld remotes, and configuration by a handheld tool including adjusting load parameters, sensor configuration and binding, within a line of sight of up to 30 feet from a sensor, wall switch or IR receiver.

2.09 LIGHTING CONTROL PANELS

- A. Provide lighting control panels in the locations and capacities as indicated on the plans and schedules. Each panel shall be of modular construction and consist of the following components:
1. Enclosure/Tub shall be NEMA 1, sized to accept an interior with 1 – 8 relays, 1 – 24 relays and 6 four-pole contactors, or 1 – 48 relays and 6 four-pole contactors.
 2. Cover shall be configured for surface or flush wall mounting of the panel as indicated on the plans. The panel cover shall have a hinged and lockable door with restricted access to line voltage section of the panel.
 3. Interior assembly shall be supplied as a factory assembled component specifically designed and listed for field installation. The interior construction shall provide total isolation of high voltage (Class 1) wiring from low voltage (Class 2) wiring within the assembled panel. The interior assembly shall include intelligence boards, power supply, DIN rails for mounting optional Class 2 control devices, and individually replaceable latching type relays. The panel interiors shall include the following features:
 - a. Removable, plug-in terminal blocks with screwless connections for all low voltage terminations.
 - b. Individual terminal block, override pushbutton, and LED status light for each relay.
 - c. Direct wired switch inputs associated with each relay and group channel shall support two-wire, momentary or maintained contact switches.
 - d. Digital inputs (four RJ-45 jacks) shall support 1-, 2-, 3-, 4-, and 8-button digital switches, digital IO modules capable of receiving 0-5V or 0-10V analog photocell inputs, digital IO modules capable of receiving momentary or maintained contact closure inputs, digital photocell modules, and digital occupancy sensors.
 - e. True relay state shall be indicated by the on-board LED and shall be available to external control devices and systems via BACnet.
 - f. Automatically sequenced operation of relays to reduce impact on the electrical distribution system when large loads are controlled simultaneously.
 - g. Group, channel, and pattern control of relays shall be provided through a simple keypad interface from a handheld IR programmer. Any group of relays can be associated with a channel for direct on/off control or pattern (scene) control via a simple programming sequence using the relay and channel override pushbuttons and LED displays for channels 1-9 or a handheld IR programmer for channels 1-99.
 - h. Relay group status for each channel shall be provided through red LED indicators for groups 1-9 and via BACnet for groups 1-99. Solid red indicates that the last group action called for an ON state and relays in the group are on or in a mixed state.
 - i. Single-pole latching relays with modular plug-in design. Relays shall provide the following ratings and features:
 - 1) Electrical:
 - (a) 30 amp ballast at 277V
 - (b) 20 amp ballast at 347V
 - (c) 20 amp tungsten at 120V
 - (d) 30 amp resistive at 347V
 - (e) 1.5 HP motor at 120V
 - (f) 14,000 amp short circuit current rating (SCCR) at 347V
 - (g) Relays shall be specifically UL listed for control of plug loads
 - 2) Mechanical:
 - (a) Individually replaceable, ½" KO mounting with removable Class 2 wire harness.

- (b) Actuator on relay housing provides manual override and visual status indication, accessible from Class 2 section of panel.
 - (c) Dual line and load terminals each support two #14 – #12 solid or stranded conductors.
 - (d) Tested to 300,000 mechanical on/off cycles.
 - 3) Isolated low voltage contacts provide for true relay status feedback and pilot light indication.
- 4. Power supply shall be a multi-voltage transformer assembly with rated power to supply all electronics, occupancy sensors, switches, pilot lights, and photocells as necessary to meet the project requirements. Power supply to have internal over-current protection with automatic reset and metal oxide varistor protection.
- 5. Lighting control panels shall be WattStopper model LMCP8, LMCP24 or LMCP48 as shown on the plans.

2.10 BACnet® BASED DIGITAL COMMUNICATIONS

- A. The lighting control panel shall support digital communications to facilitate the extension of control to include interoperation with building automation systems and other intelligent field devices. Digital communications shall be RS485 master/slave token passing-based using the BACnet® protocol.
 - 1. The panel shall have provision for an individual BACnet device ID. The device ID description property shall be writable via the network to allow unique identification of the lighting control panel on the network.
 - 2. The panel shall support MS/TP MAC addresses in the range of 0 – 127 and baud rates of 9600k, 38400k, 76800k, and 115.2k bits per second.
 - 3. Lighting control relays shall be controllable as binary output objects in the instance range of 1 – 64. The state of each relay shall be readable and writable by the BAS via the object present value property.
 - 4. Lighting control relays shall report their true on/off state as binary input objects in the instance range of 1 – 64.
 - 5. The 99 channel groups associated with the panel shall be represented by binary value objects in the instance range of 201 – 299. The occupancy state of each channel group shall be readable and writable by the BAS via the object present value property. Commanding 1 to a channel group will put all relays associated with the channel into the normal hours mode. Commanding 0 or NULL shall put the relays into the after hours mode.
 - 6. Setup and commissioning of the panel shall not require manufacturer-specific software or a computer. All configuration of the lighting control panel shall be performed using standard BACnet objects or via the handheld IR programming remote. Provide BACnet objects for panel setup and control as follows:
 - a. Binary output objects in the instance range of 1 – 64 (one per relay) for on/off control of relays.
 - b. Binary value objects in the instance range of 1 – 99 (one per channel) for normal hours/after hours schedule control.
 - c. Binary input objects in the instance range of 1 – 64 (one per relay) for reading true on/off state of the relays.
 - d. Analog value objects in the instance range of 1 – 64 (one per relay) shall assign relays to channel groups in the range of 1 – 99.
 - e. Analog value objects in the instance range of 101 – 199 (one per channel group) shall assign a blink warn time value to each channel. A value of 5 shall activate the blink warn feature for the channel and set a 5-minute gracetime

- period. A value of 250 shall activate the sweep feature for the channel and enable the use of sweep type automatic wall switches.
- f. Analog value objects in the instance range of 201 – 299 (one per channel) shall assign an after hours time delay value to the channel in the range of 1 – 240 minutes.
 - g. Multi-state value objects in the instance range of 1 – 99 (one per channel) shall provide the state of the relays assigned to the channel. Valid states shall be ALL ON, MIXED, BLINK, and ALL OFF.
- 7. The description property for all objects shall be writable via the network and shall be saved in non-volatile memory within the panel.
 - 8. The BO and BV 1 – 99 objects shall support BACnet priority array with a relinquish default of off and after hours respectively. Prioritized writes to the channel BV objects shall propagate prioritized control to each member relay in a way analogous to the BACnet Channel object described in addendum aa.
<http://www.bacnet.org/Addenda/Add-135-2010aa.pdf>
 - 9. Panel-aggregate control of relay Force Off at priority 2 shall be available via a single BV5 object. Force On at priority 1 shall be available via a single BV4 object.
 - 10. Lockout of all digital switch buttons connected to a given panel shall be command-able via a single BV2 object. The lock status of any connected switch station shall be represented as BV101-196.
 - 11. Lighting control accessory devices connected to the panel shall be represented via BACnet objects including but not limited to the following:
 - a. Digital occupancy sensor detection states shall be readable as BI objects ranging from BI1-96.
 - b. Digital occupancy sensor configuration parameters shall each be accessible as BACnet objects when applicable to a given product.
 - (1) Occupancy sensor time delay in minutes shall be writeable via AV101-196.
 - (2) Occupancy sensor passive infrared (PIR) sensitivity percentage shall be writeable via AV201-296.
 - (3) Occupancy sensor ultrasonic (US) sensitivity percentage shall be writeable via AV301-396.
 - c. Digital switch buttons shall be readable and writeable as BI objects ranging from BI101 – 9608.
 - d. Digital daylight sensors foot-candle readings shall be readable as follows:
 - (1) Analog 0-5V/0-10V sensors connected to a digital input module shall be represented as AI1-96.
 - (2) Digital closed loop sensors shall be represented as AI4001-4096.
 - (3) Digital open loop sensors shall be represented as AI5001-5096.
 - (4) Digital dual loop sensors shall be represented as follows:
 - (a) The upward facing open loop sensor shall be represented as AI6001-6096.
 - (b) The downward facing closed loop sensor shall be represented as AI6101-6196.
 - e. Digital daylight sensor configuration shall be exposed as BACnet objects as follows:
 - (1) Digital closed loop sensors shall be represented as follows:
 - (a) Daylight Sensor Day Setpoint (ftcd) AV4201-4296.
 - (b) Daylight Sensor Night Setpoint (ftcd) AV4301-4396.
 - (c) Daylight Sensor Off Setpoint Delay (minutes) AV4401-4496.
 - (d) Daylight Sensor On Setpoint (ftcd) AV4501-4596.
 - (e) Daylight Sensor Off Setpoint (ftcd) AV4601-4696.

2.11 USER INTERFACE

- A. Each lighting control panel system shall be supplied with at least (1) handheld IR remote programming interface consisting of a keypad and associated OLED display screen. The user interface shall allow setup, configuration, and diagnostics of the panel without the need for software or connection of a computer. The user interface shall have the following functions as a minimum:
1. Set network parameters including panel device ID, MS/TP MAC address, baud rate and max master range.
 2. Relay Group creation of up to 99 groups. Group creation shall result in programming of all seven key relay parameters for member relays. The seven parameters are as follows: After-hours Override Time Delay, Normal Hours Override Time Delay, Action on Transition to Normal Hours, Action on Transition to After Hours, Sensor Action During Normal Hours, Sensor Action During After Hours, Blink-Warn Time for After Hours.
 3. Program up to 254 separate scheduled events. Events shall occur on seven day intervals with each day selectable as active or inactive, and shall be configurable as to whether the event is active on holidays. Holidays are also defined through the User Interface.
 4. Program up to 32 separate Dark/Light events. Events shall have a selectable source as either calculated Astro with delay, or a digital IO module with an integral 0-5V or 0-10V analog photocell. Dark/Light events shall occur on seven day intervals with each day selectable as active or inactive, and shall be configurable as to whether the event is active on holidays.
 5. Button binding of digital switches to groups shall be accessible via the handheld IR remote and accomplished from the digital switch station.
 6. Programming of panel location information shall be accomplished by the handheld IR remote and include at a minimum LAT, LON, DST zone, and an approximate city/state location.
 7. An additional handheld IR remote may optionally be specified to be permanently mounted to the panel interior via a retractable anti-theft lanyard to allow for convenient programming of the panel while assuring that the handheld programmer is always present at that panel. An unlimited number of handheld IR remotes may also be purchased for facilities staff as seen fit by the end user's representative.

2.12 CONFIGURATIONS TOOLS

- A. A configuration tool facilitates optional customization of DLM local networks, and is used to set up open loop daylighting sensors. A wireless configuration tool features infrared communications, while PC software connects to each local network via a USB interface.
- B. Features and functionality of the wireless configuration tool shall include:
1. Two-way infrared (IR) communication with DLM IR-enabled devices within a range of approximately 30 feet.
 2. High visibility organic LED (OLED) display, pushbutton user interface and menu-driven operation.
 3. Read, modify and send parameters for occupancy sensors, daylighting sensors, room controllers and buttons on digital wall switches.
 4. Save up to nine occupancy sensor setting profiles, and apply profiles to selected sensors.
 5. Temporarily adjust light level of any load(s) on the local network, and incorporate those levels in scene setting.
 6. Adjust or fine-tune daylighting settings established during auto-commissioning, and input light level data to complete commissioning of open loop daylighting controls.
- C. WattStopper Product Numbers: LMCT-100, LMCI-100/LMCS-100

2.13 NETWORK BRIDGE

- A. The network bridge connects a DLM local network to a BACnet-compliant network for communication between rooms, panels and a segment manager or BAS. Each local network shall include a network bridge component to provide a connection to the local network room devices. The network bridge shall use industry standard BACnet MS/TP network communication. Closed or proprietary network communication shall not be acceptable.
1. The network bridge may be incorporated directly into the room controller hardware (LMRC-3xx Room Controllers) or be provided as a separate module connected on the local network through an available RJ-45 port.
 2. Provide Plug n' Go operation to automatically discover all room devices connected to the local network and make all device parameters visible to the segment manager via the segment network. No commissioning shall be required for set up of the network bridge on the local network.
 3. The network bridge shall automatically create standard BACnet objects for selected room device parameters to allow any BACnet-compliant BAS to include lighting control and power monitoring features as provided by the DLM room devices on each local network. Standard BACnet objects shall be provided as follows:
 - a. Read/write the normal or after hours schedule state for the room
 - b. Read the detection state of the occupancy sensor
 - c. Read/write the On/Off state of loads
 - d. Read/write the dimmed light level of loads
 - e. Read the button states of switches
 - f. Read total current in amps, and total power in watts through the room controller
 - g. Read/write occupancy sensor time delay, PIR sensitivity and ultrasonic sensitivity settings
 - h. Activate a preset scene for the room
 - i. Read/write daylight sensor fade time and day and night setpoints
 - j. Read the current light level, in footcandles, from interior and exterior photosensors and photocells
 - k. Set daylight sensor operating mode
 - l. Read/write wall switch lock status
 4. WattStopper product numbers: LMBC-300

2.14 SEGMENT MANAGER

- A. The Digital Lighting Management system shall include at least one segment manager to manage network communication. It shall serve up a graphical user interface via a standard web browser. Each segment manager shall have support for one, two or three segment networks as required and allow for control of a maximum of 40 local networks (rooms) and/or lighting control panels per segment network.
- B. Operational features of the Segment Manager shall include the following:
1. Connection to PC or LAN via standard Ethernet TCP/IP.
 2. Easy to learn and use graphical user interface, compatible with Internet Explorer 8, or equal browser.
 3. Log in security capable of restricting some users to view-only or other limited operations.
 4. Automatic discovery of all DLM devices on the segment network(s). Commissioning beyond activation of the discovery function shall not be required.

5. After discovery, all rooms and panels shall be presented in a standard navigation tree format. Selecting a device from the tree will allow the device settings and operational parameters to be viewed and changed by the user.
6. Ability to view and modify room device operational parameters. It shall be possible to set device parameters independently for normal hours and after hours operation.
7. Ability to set up schedules for rooms and panels. Schedules shall automatically set controlled zones or areas to either a normal hours or after hours mode of operation.
8. Ability to group rooms and loads for common control by schedules, switches or network commands.
9. Ability to monitor connected load current and display power consumption for areas equipped with room controllers incorporating the integral current monitoring feature.
10. Provide seamless integration with the BAS via BACnet IP. Provide export table with available parameters.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. Contractor shall provide to the manufacturer all quantities for system including but not limited to relays, room controllers, relay panels, plug load controllers, switches, sensors and wire lengths and configurations for both network and device cable at least 1 week before bid.
- B. When using wire for connections other than the DLM local network (Cat 5e with RJ-45 connectors), provide detailed point to point wiring diagrams for every termination. Provide wire specifications and wire colors to simplify contactor termination requirements
- C. All MSTP network and Cat 5e low voltage wiring must have "WattStopper" printed on the wire jacket. Any cable substitutions shall be removed and replaced at the contractor's expense.
- D. All MSTP network terminations shall utilize wire ferrules for terminations and MSTP network manufacturer's instructions. Any network deficiencies shall be repaired at the contractor's expense.
- E. Electrical contractor must provide a detailed as-built plan in CAD showing MSTP network cable routing and network bridge serial numbers to the manufacturer at least 3 weeks prior to factory commissioning. Install the work of this Section in accordance with manufacturer's printed instructions unless otherwise indicated.
- F. Electrical contractor shall be responsible for scheduling the following onsite coordination meetings through the duration of the project. Attendance shall be required for the GC, EC, representative from MEP firm, BAS Integrator and lighting control rep.
 1. Pre-Installation- After submittals have been approved and material has arrived onsite and before installation of any devices begins. Review lighting control layout plans, required as-built information and MSTP Terminations.
 2. Pre-Factory startup- Electrical contractor must have all lighting control devices installed, wired and tested at least 90 days prior to substantial completion deadline. At this coordination meeting the electrical contractor shall walk the site with attendees and go room by room to ensure they are ready for factory technician to start the system programming. Electrical contractor shall have his as built documentation of the system completed for this meeting.
 3. Move in- 30 days prior to owner move in all parties shall meet onsite to review completed system. At this time all installation and factory programming shall be completed.

3.2 FACTORY COMMISSIONING

- A. Upon completion of the installation, the system shall be commissioned by the manufacturer's factory authorized representative who will verify a complete fully functional system.

- B. The factory commissioning shall include the following services. Programming of all button stations, configuration of all occupancy sensors and photocells. Verification of a complete and working system including MSTP network status. Provide written or computer-generated documentation on the commissioning of the system including room by room description including:
 - 1. Sensor parameters, time delays, sensitivities, and daylighting setpoints.
 - 2. Sequence of operation, (e.g. manual ON, Auto OFF. etc.)
 - 3. Load Parameters (e.g. blink warning, etc.)
- C. The electrical contractor shall request factory commissioning by submitting a startup request form at least (4) weeks before startup is required.
- D. Electrical contractor must schedule lighting control factory start-up to begin at **least 60 days prior to substantial completion deadline.**
- E. Lighting control technician shall issue daily reports notifying of the project status, open issues, challenges, etc. at the end of each day he/ she is onsite commissioning the system. Reports shall be sent directly to EC, GC and Engineer.
- F. At the completion of the first visit of the lighting control technician, all parties shall meet onsite to walk the project and evaluate any open issues. At this meeting the schedule for owner training shall be determined.
- G. The electrical contractor shall provide at least (1) journeyman electrician, familiar with the installation of the system, dedicated to assisting the factory start-up technician for the entire duration of the commissioning process.
- H. Upon completion of the system commissioning the factory-authorized technician shall provide the proper training to the owner's personnel on the adjustment and maintenance of the system.
- I. Re-commissioning – After 90 days from occupancy the factory authorized representative and electrical contractor shall re-calibrate all sensor time delays and sensitivities to meet the Owner's Project Requirements. Provide a detailed report to the Architect / Owner of re-commissioning activity
- J. Owner operation memo- Lighting control manufacturer shall prepare an operational memo for owner to distribute informing building occupants of the operation of their lighting control system. Memo shall explain the following but not limited to: auto on/ vs manual on, occupancy sensors, daylight harvesting, plug load control, after hours time delays.

END OF SECTION 26 09 43

SECTION 26 20 00 - ELECTRICAL DISTRIBUTION EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Conditions of the Contract Documents and Division 1 - General Requirements as applicable, apply to this Section.

1.2 SUMMARY

- A. Provide all electrical distribution and motor control equipment and accessories required to distribute electrical power to all motors, outlets and systems requiring power.

1.3 QUALITY ASSURANCE

- A. New: Provide all new equipment.
- B. Single Manufacturer: All equipment of each type shall be the product of one manufacturer.
- C. UL: Equipment shall be UL listed. Service entrance equipment shall bear UL Service Entrance label.
- D. NEC: Equipment and installation shall comply with the National Electrical Code.
- E. Wet Locations: Equipment and enclosures installed outdoors and in wet locations shall be approved for the purpose.
- F. IEEE: Institute of Electrical and Electronics Engineers Standard 1015-1997 (Blue Book) Recommended Practice for Applying Low-Voltage Circuit Breakers Used in Industrial and Commercial Power Systems.

1.4 LABELING

- A. Nameplates and labeling shall be provided in accordance with Section 26 05 53. All feeders shall be labeled at the feeder device.

1.5 FINISHES

- A. All equipment shall have a factory applied gray finish applied over a rust inhibiting treatment. Any items which have the finish marred shall be touched up or refinished to a new condition before final acceptance. This shall include, but shall not be limited to, sanding and properly removing rust or other contaminants and completely repainting equipment if damage is extensive. Overall acceptance is subject to approval of the Engineer.

1.6 SUBMITTALS

- A. Provide complete product data for each equipment type. Provide electric service studies when required.
- B. Submittal shall include written recommendation from manufacturer of settings for all electronic trip adjustment setting on all equipment furnished with adjustable trip settings.

Contractor is responsible for adjusting all electronic trip settings per manufacturer recommendations.

- C. Electrical connections to all equipment furnished by any other division shall be coordinated with final approved equipment submittals from other divisions including but not limited to circuit breaker sizes, conduit sizes, wire sizes, fuse sizes, disconnect switch sizes and starter sizes that differ from those shown on the drawings prior to submitting Electrical Distribution Equipment submittal.

1.7 SHORT CIRCUIT CURRENT RATINGS

- A. General: All switchboards and panelboards shall be fully rated and marked with a maximum short circuit current rating. The equipment manufacturer shall have verified this rating with high-amperage testing. All short circuit current ratings are expressed as amperes RMS symmetrical at the applied voltage unless otherwise noted. All equipment shall withstand the specified level of fault current. All overcurrent devices shall interrupt the specified level of fault current.

1.8 ELECTRIC SERVICE STUDIES

- A. Standard: Submit studies in accordance with ANSI/IEEE Standard 242 Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems.
- B. Submit one-line diagram for each electrical service. Key all equipment and components on diagram to items in the studies.
- C. Provide a short-circuit current analysis for each main switchboard. Short-circuit analysis shall calculate short-circuit levels at service transformer secondary, switchboard main breaker, each feeder breaker and all levels of downstream distribution equipment. Assume infinite source bus.
- D. Provide a time-current coordination study for each main switchboard. Coordination study shall compare the operating levels and times of the protective devices to the withstand levels and times that the equipment can sustain without damage or failure. Determine electronic trip unit settings necessary to achieve optimal selective coordination between 480 volt main service circuit breaker and first level of feeder distribution devices. Determine setting for all adjustments of trip units of all electronic circuit breakers that are linked by zone-selective-interlocking. Furnish time-current curves for the two (or more) levels of distribution protected with electronic trips, plus the first additional distribution level served from the switchboard feeder. Show a separate composite plot for each feeder breaker trip rating with the main breaker. Plot composite time-current curves on log-log background. Add a typical frame size of downstream molded-case circuit breaker to each switchboard feeder composite plot.
- E. Contractor shall make all adjustments to circuit breakers per electric service study and provide written documentation that all adjustments have been made.

1.9 OWNER'S INSTRUCTION

- A. Provide a four hour period of instruction to the Owner's designated personnel upon completion of the main switchboards installation. Review manufacturer's recommended

switchboard maintenance. The Operations and Maintenance Manual shall be complete and on-site at the time of Owner instruction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Unless indicated otherwise, all equipment in this section shall be provided from a single manufacturer. The product designations listed are to establish a level of quality. Acceptable manufacturers are,
1. Square D
 2. Siemens
 3. G.E.
 4. Cutler-Hammer

2.2 ENCLOSED SWITCHES

- A. General: Provide heavy duty enclosed switches similar to Square D Class 3100 Type HD.
- B. Switch Interior:
1. All switches shall have switch blades which are visible when the switch is OFF and the cover is open.
 2. Lugs shall be front removable and UL Listed for 75 degrees Celsius conductors.
 3. All current carrying parts shall be plated to resist corrosion.
 4. Switches shall have removable arc suppressors to facilitate easy access to line side lugs.
 5. Switches shall have provisions for a field installable electrical interlock.
- C. Switch Mechanism:
1. Switch operating mechanism shall be quick-make, quick-break such that, during normal operation of the switch, the operation of the contacts shall not be capable of being restrained by the operating handle after the closing or opening action of the contacts has started.
 2. The operating handle shall be an integral part of the box, not the cover.
 3. Provisions for padlocking the switch in the OFF position with at least three padlocks shall be provided.
 4. The handle position shall travel at least 90 degrees between OFF and ON positions to clearly distinguish and indicate handle position.
 5. All switches shall have a dual cover interlock mechanism to prevent unintentional opening of the switch cover when the switch is ON and prevent turning the switch ON when the cover is open. The cover interlock mechanism shall have an externally operated override but the override shall not permanently disable the interlock mechanism. The tool used to override the cover interlock mechanism shall not be required to enter the enclosure in order to override the interlock.
- D. Switch Enclosures:
1. Switch covers shall be attached with welded pin-type hinges.
 2. The enclosure shall be finished with gray baked enamel paint which is electrodeposited on cleaned, phosphate pre-treated steel.
 3. The enclosure shall have ON and OFF markings stamped into the cover.
 4. The operating handle shall be provided with a dual colored, red/black position indication,

5. All switches shall have provisions to accept up to three (3) 3/8 inch hasp padlocks to lock the operating handle in the OFF position.
 6. Tangential knockouts shall be provided to facilitate ease of conduit entry.
- E. Switch Ratings:
1. Switches shall be horsepower rated for ac and/or dc as indicated on the plans.
 2. The UL Listed short circuit current rating of the switches shall be 200,000 rms symmetrical amperes when used with or protected by Class J fuses.
 3. Non-Fusible: 10,000 rms symmetrical amps.
- F. Fuse Clips: NEMA FU 1, Class J fuses.

2.3 SINGLE CIRCUIT BREAKERS WITH ENCLOSURES

- A. Product Description: Enclosed, molded-case circuit breaker conforming to NEMA AB 1, suitable for use as service entrance equipment where applied.
- B. Circuit Breakers: Molded case, quick make, quick break, trip free, common thermal magnetic trip.
- C. Ratings: Continuous current, poles as required, 480 volt system breaker shall interrupt short circuits up to 14,000 rms amps symmetrical; on 120/208 - 240 volt system, 10,000 amp rms symmetrical.
- D. Enclosure: NEMA AB 1, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel.
1. Interior Dry Locations: Type 1.
 2. Exterior Locations: Type 3R.
- E. Nameplate: Provide a nameplate showing load served.

2.4 FRACTIONAL HORSEPOWER MANUAL MOTOR CONTROLLER

- A. Square D - Class 2510 Type F.
1. Description: NEMA ICS 2, ac general-purpose Class A manually operated, full-voltage controller for fractional horsepower induction motors, with thermal overload unit, red pilot light and toggle operator.
 2. Enclosures: ANSI / NEMA ICS 6, Type as indicated.

2.5 MAGNETIC MOTOR CONTROLLERS

- A. Square D - Class 8536 Type S.
1. Description: NEMA ICS 2, ac general-purpose Class A magnetic controller for induction motors rated in horsepower.
 2. Coil Operating Voltage: Provide as required to interface with controls system, including control power transformer.
 3. Coil: Be of encapsulated type.
 4. Poles: as indicated.
 5. Size: as indicated.
 6. Contacts: Totally enclosed, double-break, silver-cadmium-oxide power contacts. Contact inspection and replacement shall be possible without disturbing line or load wiring.
 7. Wiring: Straight-through wiring with all terminals clearly marked.

8. Overload Relay: NEMA ICS.
 - a. Solid State: Trip current rating will be established by selection of overload relay and shall be adjustable (3 to 1 current range). The overload shall be self-powered. Provide phase loss, phase unbalance protection, permanent tamper guard, Trip Class 10 or 20 and a mechanical test function.
 - b. Outputs: Units shall be designed for addition of either a normally open or normally closed auxiliary contact and shall be field convertible. Provide one (1) set of N.O. and N.C. contacts in each starter.
 - c. Reset: Unit shall include both manual reset and remote reset using an external module.
 - d. Select overload current setting based on the motor nameplate data of the actual motor to be protected. All standard NEMA sizes may be used for the overload relay, including Size 00.
9. Enclosure: ANSI / NEMA ICS 6, Type 1, 3R or 4X.
10. Control Power Transformers: 120 volt secondary. VA minimum, in each motor starter. Provide fused primary and secondary.
11. Provide red LED running pilot light and H-O-A switch.

2.6 MAGNETIC MOTOR CONTROLLERS - TWO - SPEED

- A. Square D - Class 8810 Type S.
 1. Description: Include integral time delay transition between FAST and SLOW speeds. Starters shall be electrically and mechanically interlocked to prohibit both starters being energized simultaneously.
 2. Coil operating voltage: Provide as required to interface with controls system, including control power transformer.
 3. Coil: Be of encapsulated type.
 4. Poles: as indicated.
 5. Size: as indicated.
 6. Contacts: Totally enclosed, double-break, silver-cadmium-oxide power contacts.
 7. Contact inspection and replacement shall be possible without disturbing line or load wiring.
 8. Wiring: Straight-through wiring with all terminals clearly marked.
 9. Overload Relay: NEMA ICS.
 - a. Solid State; Trip current rating will be established by selection of overload relay and shall be adjustable (3 to 1 current range). The overload shall be self-powered. Provide phase loss, phase unbalance protection, permanent tamper guard, Trip Class 10 or 20 and a mechanical test function.
 - b. Outputs: Units shall be designed for addition of either a normally open or normally closed auxiliary contact and shall be field convertible. Provide one (1) set of N.O. and N.C. contacts in each starter.
 - c. Reset: Unit shall include both manual reset and remote reset using an external module.
 - d. Select overload current setting based on the motor nameplate data of the actual motor to be protected. All standard NEMA sizes may be used for the overload relay, including Size 00.
 10. Enclosure: ANSI / NEMA ICS 6, Type 1, 3R or 4X.
 11. Two speed motor controllers shall be designed for type of motor winding specified in Division 23 Mechanical Specifications, Drawings, or Equipment Schedule. Coordinate with Division 23 prior to submittal.
 12. Provide red-high, amber-low running pilot lights and H-O-L-A switch.

13. Provide two speed motor controllers for all two speed motors specified in Division 23 Mechanical Specifications, Drawings, or Equipment Schedule. Coordinate with Division 23 prior to submittal.

2.7 COMBINATION DISCONNECT / MOTOR STARTERS

- A. Square D - Class 8538 Type S (Fusible or no fuse, as shown on plans).
 1. Description: Combine magnetic motor controllers with fusible switch disconnect in common enclosure. Switch shall have a color coded externally operated handle. Operating handle shall give positive visual indication of ON/OFF with red and black color-coding.
 2. Fusible Switch Assemblies: NEMA KS 1, enclosed knife switch with externally operable handle. Fuse clips: Designed to accommodate Class J fuses and visible blades. Operating handle shall give positive visual indication of ON/OFF with color-coded operating handle.
 3. Magnetic Motor Controllers: Refer to paragraph(s) specifying magnetic motor controllers for requirements.

2.8 FUSES (600 VOLTS AND BELOW)

- A. Manufacturers:
 1. Bussmann.
 2. Little Fuse
 3. Ferraz Shawmut
- B. Dimensions and Performance: NEMA FU 1, Class as specified or as indicated on Drawings.
- C. Voltage: Rating suitable for circuit phase-to-phase voltage.
- D. Class J (Time Delay) Fuses
 1. Dimensions and Performance: NEMA FU 1.
 2. Voltage: Rating suitable for circuit phase-to-phase voltage.
 3. Dual-element, time delay ten (10) seconds (minimum) at 500 percent rated current.
- E. Spares: Spare fuses shall be provided in the amount of ten (10) percent of each type and size installed. Replacement for fuses and limiters blown during construction shall not count as spares.

2.9 TWO-WINDING TRANSFORMERS

- A. Product Description: Provide transformers in accordance with the following standards, where applicable:
 1. Underwriter's Laboratory 1561, Standard for Safety for Dry-Type General Purpose and Power Transformers
 2. Underwriter's Laboratory 506, Standard for Safety for Specialty Transformers
 3. NEMA ST 20, Dry Type Transformers for General Applications
 4. NEMA 250, Enclosures for Electrical Equipment (1000 V Max)
 5. ANSI / IEEE C57.12.91, Standard Test Code for Dry-Type Distribution and Power Transformers
 6. U.S. Department of Energy 10 CFR Part 431 Energy Conservation Program: Energy Conservation Standards for Distribution Transformers; Final Rule, dated April 18, 2013. These efficiency standards shall take effect January 1, 2016. All

transformers covered in the scope of this document and this specification, manufactured after December 31, 2015, shall be compliant with the new standard.

- B. Ratings as indicated on Drawing.
- C. Primary Voltage: 480 volts, 3 phase or as indicated on plans.
- D. Secondary Voltage: 208Y/120 volts, 3 phase or as indicated on plans.
- E. Insulation system and average winding temperature rise 150 degrees Celsius over 40 degrees Celsius ambient.
- F. Winding Taps:
 - 1. 2 at 2.5 percent above rated voltage.
 - 2. 4 at 2.5 percent below rated voltage.
- G. Sound Levels: NEMA ST 20. Noise levels shall not exceed NEMA and ANSI Standards.
- H. Basic Impulse Level: 10 kV for transformers less than 300 kVA.
- I. Ground core and coil assembly to enclosure by means of visible flexible copper grounding strap.
- J. Mounting:
 - 1. 1-15 kVA: Suitable for wall mounting.
 - 2. 16-75 kVA: Suitable for floor mounting.
 - 3. Larger than 75 kVA: Suitable for floor mounting.
- K. Coil Conductors: Continuous copper windings with terminations brazed or welded.
- L. Enclosure: NEMA ST 20, Type 1 or Type 3R ventilated. Furnish lifting eyes or brackets.
- M. Isolate core and coil from enclosure using vibration-absorbing mounts.
- N. Nameplate: Include transformer connection data and overload capacity based on rated allowable temperature rise.

2.10 TRANSFORMERS FOR NONLINEAR LOADS

- A. Nonlinear load transformer shall be as specified for two winding transformers except as modified by this Section.
- B. Product Description: NEMA ST 20, factory-assembled, air cooled dry type transformers, designed to supply nonlinear load, UL K-9 rated.
- C. Primary Voltage: 480 volts, 3 phase.
- D. Secondary Voltage: 208Y/120 volts, 3 phase.
- E. Insulation and temperature rise: Class 220 insulation system with 115 degrees Celsius average winding temperature rise over 40 degrees Celsius ambient.

- F. Coil Conductors: Continuous copper windings with terminations brazed or welded. Individually insulate secondary conductors and arrange to minimize hysteresis and eddy current losses at harmonic frequencies. Size secondary neutral conductor at 1.73 times the phase conductor ampacity.
- G. Enclosure: NEMA ST 20, Type 1 or Type 3R ventilated. Furnish lifting eyes or brackets.
- H. Isolate core and coil from enclosure using vibration-absorbing mounts.
- I. Nameplate: Include transformer connection data and overload capacity based on rated allowable temperature rise.

2.11 DISTRIBUTION PANELBOARDS

- A. Manufacturers: Square D I-Line, Class 2110.
- B. Product Description: NEMA PB 1, circuit breaker type panelboard.
- C. Panelboard Bus: copper current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard.
- D. Continuous current rating shall be sufficient to protect wiring and equipment served.
 - 1. Panels 400A and smaller, 35,000 amperes rms symmetrical.
 - 2. Panels greater than 400A: 65,000 amperes rms symmetrical.
- E. Molded Case Circuit Breakers: NEMA AB 1, circuit breakers with integral thermal and instantaneous magnetic trip in each pole. Furnish circuit breakers UL listed as Type HACR for air conditioning equipment branch circuits.
- F. Main Circuit Breaker:
 - 1. When distribution panel has main circuit breaker, provide molded case circuit breaker with electronic trip unit. Current sensing to be true-rms.
 - 2. Main breaker shall have minimum interrupting rating of 65,000 amperes rms symmetrical at applied voltage.
 - 3. Electronic trip shall be Square D micrologic with adjustable long-time, short-time and instantaneous pick-up set points.
- G. Cabinet Front: Safety dead front type. Conform to NEMA 1; NEMA 3R if located outdoors. All panelboards located in kitchen areas shall be flush mount with NEMA 4X Stainless Steel enclosures.

2.12 BRANCH CIRCUIT PANELBOARDS

- A. Manufacturers: Square D Type NQ for 208/120V, type NF for 480/277V.
- B. Product Description: NEMA PB1, circuit breaker type, lighting and appliance branch circuit panelboard.
- C. Panelboard Bus: Copper current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard;
- D. For non-linear load applications subject to harmonics furnish 173 percent rated, plated copper, solid neutral.

- E. Minimum Integrated Short Circuit Rating: 14,000 amperes rms symmetrical for 208-240/120 volt panelboards; 22,000 amperes rms symmetrical for 480 volt panelboards.
- F. Molded Case Circuit Breakers: NEMA AB 1, bolt-on type thermal magnetic trip circuit breakers, with common trip handle for all poles, listed as Type SWD for lighting circuits, Type HACR for air conditioning equipment circuits, Class A ground fault interrupter circuit breakers as indicated on Drawings. Do not use tandem circuit breakers.
- G. Enclosure: NEMA PB 1, Type 1 or Type 3R. All panelboards located in kitchen areas shall be flush mount with NEMA 4X Stainless Steel enclosures.
- H. Cabinet Front: Safety dead front type with concealed trim clamps, concealed hinge, metal directory frame, and flush lock keyed alike. Finish in manufacturer's standard gray enamel.
- I. Provide ground-fault circuit breaker for each heat trace branch circuit.
- J. Panelboards indicated to have thru-feed lugs shall be furnished with thru-feed lugs in all sections of panelboard.

2.13 MOTOR CONTROL CENTERS

- A. General:
 - 1. Provide totally enclosed, freestanding, motor control center with sections joined together to form one rigid unit. Motor control centers shall be similar to Square D Model 6 Class 8998.
 - 2. NEMA Class: I.
 - 3. NEMA Wiring Class: Type B.
 - 4. Standard: NEMA Standard ICS 2 Industrial Control and Systems.
 - 5. Underwriters Laboratories: UL 845 "Electric Motor Control Centers". Each vertical section shall be UL listed. Each motor control unit shall be UL listed.
- B. Installation: Freestanding on a four (4) inch concrete pad. Both the entire enclosure to the pad.
- C. Structure:
 - 1. Fabricated of code gage steel with steel doors formed into standardized units. Each vertical section shall have an independent isolated vertical wiring trough with full height hinged door. Back to back mounted devices in the same vertical bus module are unacceptable.
 - 2. Structures shall be totally enclosed, dead front, freestanding assemblies.
 - 3. Structure shall be NEMA type 1 gasketed general purpose.
 - 4. Motor control center structures shall have continuous removable base channels. The top plate(s) shall be removable to facilitate cutting of conduit entry openings.
 - 5. All steel parts shall be provided with a UL listed acrylic baked enamel or powder coat paint finish, except plated parts used for ground connections. All painted parts shall undergo a multi-stage treatment process, followed by the finishing paint coat.
 - 6. Structures shall contain a minimum 12 inch high horizontal wireway at the top of each section and a minimum six (6) inch high horizontal wireway at the bottom of each section. These wireways shall run the full length of the motor control center to allow room for power and control cable to connect between units in different sections.
 - 7. A vertical wireway shall be provided in each motor control center section that accepts modular plug-in units. The vertical wireway shall connect with both the top

and bottom horizontal wireways. The vertical wireway shall be barriered from control units and have a separate hinged door.

8. Unused spaces and spares shall have hinged doors.

D. Bussing:

1. Provide complete horizontal and vertical bussing with wiring spaces at top, bottom, and vertically in each section. All bussing shall be silver plated 98 percent conductivity copper.
2. The main horizontal bus shall be fully rated and shall extend the full length of the motor control center. Include provisions for splicing additional sections onto either end of the motor control center.
3. Each section that accepts plug-in units shall be provided with a vertical bus for distributing power from the main bus to the individual plug-in starter units. This bus shall be of the same material and plating as the main bus, and shall be rated no less than 125 percent of motor FLA in that section. Vertical bus shall extend full height of section, including all spare and space units. For purposes of calculating vertical bus ampacity, each space shall count no less than FLA of smallest motor served in that section.
4. A tin or silver plated copper ground bus shall be provided that runs the entire length of the motor control center. The ground bus shall be rated no less than 1/3 of horizontal main bus amps. Provide a vertical ground bus in each section used for plug-in units. Plug-in units shall have a ground stab arranged for first-make, last-break relative to the power bus stabs.
5. Motor control centers shall be separated into shipping blocks of no more than three vertical sections each.
6. All power bussing and splice connections shall be isolated from the unit compartments and the wireways. The horizontal bus shall be isolated from the horizontal wireways and starters. Barriers shall be removable to allow access to the bus and connections for maintenance.
7. The vertical bus shall be housed in modular glass filled polyester supports that provide bus insulation. These supports shall have openings every three (3) inches for unit stab-on connections. Each opening shall be provided with a closing plug to close off the stab opening.

E. Terminations:

1. Provide proper incoming line lugs. Size lugs to accommodate wire which is to be installed.
2. All starter units shall be provided with unit control terminal blocks.
3. Terminal blocks shall be the pull-apart type rated at 20 amps. The stationary portion shall be used for field connections and will remain attached to the cubicle when the unit is removed. The removable portion of the terminal blocks shall be used for the unit wiring factory connections.

F. Protective Devices:

1. Class J Fusible Switch-Starter Units: Plug in type with silver plated pressure type line disconnecting stabs of high strength copper alloy. Each unit shall be totally enclosed and effectively barriered, and shall be so designed that it can be located anywhere within the structure using the same overload heaters for the same load. Fusible switches shall be manually operated quick make, quick break, horsepower rated. Coordinate fuses and overload heaters for proper acceleration time of motors provided. Operating handle shall clearly indicate ON or OFF. Provide for locking each switch in OFF position by 1 to 3 padlocks. Provide Class J fuse clips. Provide

- magnetic starter components as specified in Article MOTOR CONTROLLERS. Provide fuses field-installed in accordance with Article FUSES.
2. Circuit Breakers (with no motor controller): Molded case, bolted type, quick make, quick break, trip free, common thermal magnetic trips. Operating handle shall clearly indicate ON or OFF. Means shall be provided for locking each breaker in OFF position by one to three padlocks. Automatic tripping indicated by handle at center position.
 3. Fused Switch (with no motor controller): Quick make, quick break, horsepower rated. Operating handle shall clearly indicate ON or OFF. Provide for locking each switch in OFF position by one to three padlocks. Provide Class J Type fuse clips. Provide fuses in accordance to Article FUSES located in this section.
 4. Starters: all starters for motor control center to be size 1 minimum or larger.
- G. Short Circuit Current Ratings:
1. Protective devices, together with the bussing and bracing, shall safely and without failure withstand and interrupt short circuits on a system capable of delivering up to 65,000 amps RMS symmetrical at nominal system voltage. Provide higher ratings when indicated on the Drawings.
 2. Bus bracing shall be provided for the entire bus network to withstand the mechanical forces generated during the specified short circuit.
 3. The main device serving the motor control center, every motor control unit and other overcurrent devices installed in the motor control center shall have an interrupt rating no less than the specified short circuit.
 4. The entire motor control center shall be suitable for operation at the specified available fault current. The motor control center shall be labeled by the manufacturer to indicate the maximum available fault current rating, taking into account the structure, bussing, main feeder and all units and devices included in the motor control center. This fault current withstand rating shall be the basis for the UL Short-Circuit Current Rating.
- H. Nameplate:
1. Identify each device with nameplate showing load served. Refer to "Labeling" in Section 16050.
 2. Provide a master nameplate on face of units similar to following, with correct data shown:

Motor Control Center
480 Volts, 3 Phase, 3 Wire, 60 Hertz
Main Bus: ____amps. braced for ____ amperes RMS Symmetrical
Date Installed:
 3. Provide a nameplate for each vertical section marked with section characteristics and factory identification. This nameplate may be manufacturer's standard construction.
 4. Provide UL listing marks on each section and unit in manufacturer's standard format.
- I. Submittal: Include at least the following:
1. Manufacturer and Model Numbers
 2. Dimensions
 3. Cable Termination Provisions
 4. Current Ratings
 5. Voltage Ratings
 6. Short Circuit Ratings including proof of any UL-listed series ratings (if series rating allowed by specification).

7. Motor Controller and Protective Device Ratings, including catalog pages for all current-limiting devices.
8. Identify NEMA Class of submitted mcc.
9. Identify NEMA Wiring Type of submitted mcc.
10. Single Phase Relay
11. Unit Elevation
12. Bussing Schematic, Sizes and statement of Conductor and Plating Material.
13. Original Manufacturer Brochure and Specifications

2.14 MAIN SWITCHBOARDS:

- A. General: Provide universal building-type switchboards fabricated in accordance with NEMA Standard PB-2, UL Standard 891, and bearing a UL Service Entrance Label. Switchboard characteristics are 480/277 volts, 3 phase, 4 wire. Main connection and unit-mounted branch connections shall be from the rear. Group mounted branch connections shall be from the front or the rear. The entire switchboard assembly shall be similar to Square D Type QED-2.
- B. Structure:
 1. The switchboard shall be freestanding and have front and rear alignment. Provide rear access to main device(s) and all unit-mount branch devices (2000A and less can be front access only). Provide front or rear access to group-mounted devices. Formed up steel channels bolted together to form a rigid structure to which formed up fronts, side sheets, and rear covers are bolted. Galvanized 1-1/2" x 3" mounting channels on bottom, rear, left, and right sides to close all openings at the bottom. Arrange for easy addition of future cubicles at end. Provide pull box, fabricated with unit at factory, on top of switchboard if required for proper entrances and exits of feeders.
 2. When "SPACE" is indicated on one-line diagram, provide full bussing extension to serve that space and all overcurrent device mounting hardware for the given frame size.
- C. Installation: Freestanding, level and bolted to a four (4) inch concrete pad.
- D. Instrumentation:
 1. General: Monitor the incoming line with a Square D PM 5563 meter with BACnet IP communication port protocol.
Meter shall have digital display adjustable to select phase. Monitor with an ammeter any feeder devices indicated on the Drawings.
 2. Wiring Lugs: Provide ring lugs for all wiring terminations of potential transformers (PTs), current transformers (CTs) and current sensors. Fork lugs are not acceptable. Ring lugs are intended to minimize the chance of leads pulling apart and creating an open circuit. (Zero current reading).

- E. Phase, Neutral and Ground Bussing: Silver plated 98% conductivity copper sized to comply with NEMA Temperature Rise Standard. In addition, copper bus shall be sized on the basis of a maximum temperature rise of 65 degree C. The vertical bussing per cubicle shall be sized not less than the sum of all devices, including spare spaces, to be served from that cubicle. **The vertical bus shall be a minimum of 2000 amperes and shall be full height.** Bus supports, connections, and joints shall be bolted with SAE Grade 5 medium carbon steel bolts employing Belleville washers. Provide complete bussing, mounting provisions for circuit protective devices and space screw cover wherever the drawings indicate space only. Arrange and drill bussing for **future full capacity extension.** Provide a full length ground bus, with minimum ampacity of 1/3 phase bus ampacity. Provide full-size neutral rated at 100 percent of phase bus.
- F. Terminations: Provide proper incoming line lugs to accommodate cable shown on plans.
- G. Short Circuit Ratings:
1. Switchboard assembly of protective devices, together with the bussing and bracing, shall be fully-rated to withstand and interrupt short circuits on a system capable of delivering up to 65,000 (or 100,000) amps RMS symmetrical at nominal system voltage.
- H. Provisions for Auto Power Factor Controller (APFC):
1. Provide a circuit breaker with adjustable electronic tripping to protect and disconnect the automatic power factor controller.
 2. Set amp trip at minimum 150 percent of ampacity for the actual KVAR installed.
 3. Provide buss CTs on main incoming buss for use by the remote auto pf controller. These CTs shall be separate and in addition to all other CTs required for switchboard metering. Install a shorting terminal block on CT until the auto pf controller is installed at the job site.
 4. Refer to Section 26 35 33 for additional requirements of auto pf controller.
- I. Protective Devices:
1. Switchboard Main Breaker:
 - a. Stationary mounted, manually operated, 100 percent rated molded case circuit breakers with electronic tripping system and stored energy closing mechanisms. The electronic tripping system shall be similar to Square D Micrologic Full Function Trip unit. Main breakers shall be Square D NW (3000-4000) ampere frame size.
 - b. The breaker shall be UL Listed for continuous duty at 100% of the current rating.
 - c. Minimum interrupting rating of 65,000 amperes rms symmetrical at 480/277 Volts.
 - d. Local trip indicators: overload, short circuit and ground fault.
 - e. Electronic sensing systems shall be true-RMS sensing and not susceptible to adverse harmonic current effects.
 - f. Adjustments:
 - 1) The electronic trip unit shall have LSIG Trip functions.
 2. Feeder Devices:
 - a. Breakers 700 Amps and Larger:

- 1) Branch feeder breakers 700 amp and larger shall be molded case circuit breakers rated 100% with electronic trip units, similar to Square D [NW (3000-4000A)].
 - 2) Interrupting rating shall be at least 65,000 amperes rms symmetrical at 480/277 Volts.
 - 3) The electronic trip unit shall have LSI trip functions.
 - 4) The breaker shall be UL Listed for continuous duty at 100% of the current rating.
 - b. Breakers 600 amps and smaller shall be type L (600A and 400A frame), J (250A frame), and H (150A frame) molded circuit breakers, AIC rating to match main breaker.
 - c. The breaker shall be UL Listed for continuous duty at 100% of the current rating
- J. Transient Voltage Surge Suppressor (TVSS):
1. General: Provide a Square D Class 1310 240kA surge current rated mounted in the switchboard mounted above the main circuit breaker compartment.
- K. Lightning and Overvoltage Surge Arrester:
1. General: Provide a Square D SDSA3650 lightning and overvoltage surge arrester inside the switchboard housing, connected between the service entrance bussing and the ground bus.
 2. Description: Device shall be a heavy duty, three-phase, zinc metal oxide varistor (MOV), secondary class arrester rated for 650 volts and U.L. listed in Category (OWHX) of the Electrical Construction Materials Directory (Green Book). Device shall comply with ANSI/IEEE C62.11-1987 Standard for Metal Oxide Surge Arresters for AC Power Circuits.
 3. Installation shall comply with NEC Article 280. Provide fusing if required by installation instructions from arrester manufacturer.
- L. Identification:
1. General: Identify each device and meter with a nameplate showing load served. Refer to Article on LABELING in Section 26 05 00.
 2. Master Nameplate: Provide a master nameplate on face of boards similar to following, with correct data shown:

Main Switchboard _____
480/277 Volts, 3 Phase, 4 Wire, 60 Hertz
Main Bus: ___amps. braced for ___ RMS sym. amps.
Date Installed: _____
- M. Submittal: Include at least the following:
1. Manufacturer and Model Numbers
 2. Dimensions
 3. Cable Termination Provisions
 4. Current Ratings
 5. Voltage Ratings
 6. Short Circuit Ratings
 7. Protective Device Ratings
 8. Electronic metering system

9. Surge Arrester
10. Unit Elevation
11. Bussing Schematic, Sizes and Statement of Conductor and Plating Materials
12. Original Manufacturer Brochure and Specifications
13. Coordination drawing using dimensions of actual switchboard submitted. Show board footprint, proper clearances, and other equipment in same room.

N. Testing: Test all devices and systems to assure proper operation.

2.15 SERVICE ENTRANCE CABLE TAP BOX (CTB):

A. Cable Tap Box:

1. General: Provide weatherproof, freestanding phase collection and cable tap box. Fabricate in strict accordance with Electric Utility requirements. Line side connection from building pad-mounted transformer shall be through underground conduit and wire, load side connections to the building main switchboard(s) shall be weatherproof outdoor busway.
2. Structure: Formed up steel channels bolted together to form a rigid structure to which formed-up fronts, side sheets, and rear covers are bolted. Front and rear doors shall be hinged. Galvanized 1-1/2 inch x 4 inches mounting channels on bottom, rear left, and right sides to close all side openings at the bottom. Interior framing shall be galvanized steel 1-5/8" rigid channel or approved equal system. Enclosure shall be tamper proof and outdoor weatherproof.
3. Installation: Freestanding and level on an outdoor concrete pad. Provide anchor bolts. Pad shall be outside all Electric Utility easements. Stub up conduits for Electric Utility service lateral and customer-side service entrance conduits. All underground conduit to/from CTB shall be concrete-encased.
4. Bussing: Insulated bussing, silver plated 98 percent conductivity copper. Bussing shall be sized in accordance with UL and NEMA Standards. In addition, size copper bus for not more than 1000 Amperes per cubic inch current density. Provide 3 phase, 4 wire, (100 percent neutral) bussing. Install with rigid supports to meet fault current rating.
5. Fault Current Rating: Bussing and bracing shall safely and without failure withstand short circuits on a system capable of delivering up to 100,000 amperes rms symmetrical at nominal system voltage. Install rope tie as required after cable installation to maintain bracing for short circuit current rating.

B. Electric Utility Requirements:

1. Prior to fabrication, submit three (3) prints of proposed cable tap box (CTB) to the representative designated by the Electric Utility. Submit prints only after shop drawings have been submitted and review cycle is complete with the Architect. Allow at least eight weeks time for review by Electric Utility prior to desired date of new service cut-in. Allow additional time for Architect/Engineer review prior to submittal to Electric Utility.
2. Cable tap box enclosure shall be tamper proof and weatherproof. Entire cabinet shall be tamper-resistant.
3. Form roof with cross-kink to force water to run off the cabinet.
4. Paint Finish Color: Match color of Electric Utility padmount transformer. Minimum finish shall be prime coat plus at least 6 mils of finish coat paint in two (2) applications.
5. Provide full-height doors on both utility side and customer side. Each door shall be hinged and have a vault-style handle with padlocking provisions. Electric Utility will

- install its padlock. Provide weatherproof padlock on customer door and give Owner ten (10) copies of key.
6. Fabricate CTB with two separate compartments; one side for Electric Utility connections and the opposite side for Customer connections. Compartments shall be separated with an insulating barrier. Size cabinet to maintain necessary wire bending radius in Electric Utility and Customer compartments.
 7. All insulating barriers shall be one (1) inch black phenolic resin, NEMA Grade N-1 or XX, or phenolite (Grade GPO-3).
 8. Each bus bar shall be copper, minimum 1/4 inch x 4 inches. Drill and tap for six (6) sets of 2-hole compression lugs per bus bar on Electric Utility side or other configuration stipulated by E.U. Lowest edge of all bus bars shall be 36 inches above top of concrete foundation. All bus bar dimensions, quantities, bracing and exact layout shall be per approved details from the Electric Utility for this specific job site. Parallel sufficient bus bars to achieve ampacity shown on Electrical Drawings for both Electric Utility and Customer side of CTB. Drill and tap for 2-hole NEMA D-tang compression lugs for termination of Customer cables.
 9. Install CTB level and bolted to a concrete foundation. Locate outside work space clearance and easements associated with Electric Utility padmount transformer and primary ductbank.
 10. Cable Termination: Terminate all cables with NEMA-pattern, two-hole, compression lugs.
- C. Submittal to A/E: Include at least the following:
1. Manufacturer and Model Numbers
 2. Dimensions: plan, elevations, bus bars.
 3. Cable Termination Provisions
 4. Current Rating
 5. Voltage Rating
 6. Short Circuit Withstand Rating
 7. Bussing Sizes, Layout and Statement of Conductor and Plating Materials
 8. Certify weatherproof cabinet construction. Certify paint finish type and thickness.
 9. Coordination Drawing showing cable tap box, Electric Utility padmount transformer with required work space clearances, meter location, and underground conduit entrances.
 10. After A/E shop drawing cycle is complete, submit three complete copies to Electric Utility.

2.16 SEQUENCING PANELBOARD FOR THEATER SOUND REINFORCEMENT SYSTEM:

- A. Features:
1. Supply all ac circuits for audio/visual equipment in the high school theater A/V room from time sequence panelboard capable of being remote controlled from multiple locations.
 2. 41 sequenced circuits per panelboard.
 3. A means of visual operator feedback shall provide an indication of the progress of the power turn-on and turn-off sequence at each control point.
 4. Sequencing shall have an adjustable time delay between the low level equipment circuits and the power amplifier circuits.
 5. The sequencing system shall be capable of shedding the load within three (3) seconds after a power failuer and re-sequencing when power resumes without operator intervention.
 6. Provide one LynTec Cat. No. SS-2 Sequencer Switch Set with every 41-circuit panelboard.

7. Provide one LynTec Cat. No. SS-2PL Remote Locking Switch Plate with every 41-circuit panelboard.
 8. Provide for each sequencing panelboard a LynTec Model No. SLC 341-41 filled with MB-Motorized Breakers, 3 phase, 4 wire, 208Y/120 Volt 225 Amp Main Breaker panel or approved equal.
 9. Acceptable Manufacturer: LynTec Inc., 8401 Melrose, Lenexa, KS 66214-1647; telephone 800-724-4047, fax 888-722-4157, www.lyntec.com or email info@lyntec.com.
- B. Cabinet: Safety dead front type; box made of Code gage galvanized steel; minimum gutter space 4" on all sides but not less than NEC requirements; door with flush type latch. Enclosure shall conform to NEMA 1.
- C. Circuit Breakers:
1. General: Provide a breaker for each audio branch circuit to protect wiring and equipment served.
 2. Description: Each breaker shall have motor drive for individual breaker remote control. Breakers shall be quick make, quick break, trip free, thermal magnetic trip. Automatic trip shall be indicated by the handle at the midpoint position. Multiple pole breakers shall have common trip.
- D. Short Circuit Ratings: 120/208 volt systems 10,000 amperes RMS symmetrical.
- E. Phase, Neutral and Ground Bussing: Silver or tin plated 98 percent conductivity copper sized in accordance with NEMA Temperature Rise Standards and installed completely throughout panel for installation of future breakers where schedule shows space only. Provide an equipment grounding bus bonded to the panel cabinet. Ground bus shall have a terminal screw for every breaker in the panel.
- F. Termination: Provide proper incoming line lugs. Size lugs to accommodate wire which is to be installed.
- G. Surge Protective Device: Install a Transient Voltage Surge Suppressor (TVSS) on the sequencing panelboard. TVSS shall be Current Technology TransGuard TG60 Series or Liebert Interceptor Model 111 Series.
- H. Nameplate: Nameplate on front face showing panel name and voltage. Coordinate to give same name as shown on Drawings.
- I. Directory: Complete at end of job, typewritten, contained in frame on the inside of the panel door. Frame shall have a protective plastic shield. Label every breaker to match directory.

2.17 ELEVATOR SHUNT TRIP DISCONNECT

- A. Provide Bussman Power Module Switch PS Series; amperage size and operating voltage shall match elevator branch circuit indicated on drawings.
- B. Provide control power transformer, fire alarm system interface relay, key-to-test switch, mechanical interlock auxiliary contact for hydraulic elevators with automatic recall.
- C. Interconnect with local heat detectors to provide elevator shutdown prior to the discharge of fire protection water in elevator machine room.

PART 3 - EXECUTION

3.1 MOUNTING:

- A. General: All equipment shall be securely fastened in place.
- B. Locations: In all cases mounting locations shall comply with the requirements of the National Electrical Code. This shall include providing suitable working clearances.
- C. Concrete Pads:
 - 1. Provide concrete in accordance with the Division of the Specifications for that product.
 - 2. Indoor concrete pads shall consist of a four (4) inch pad with beveled edges extending two (2) inches beyond the perimeter of supported equipment. Switchboards, motor control centers, transformers greater than 15 KVA, and engine generators shall be installed on a pad. Refer to the drawings and the specifications for each piece of equipment to determine what other equipment shall be mounted on a pad.
 - 3. All equipment, ground mounted outdoors, shall be mounted on a pad. Outdoor pads shall be minimum of one foot thick reinforced with #4 rebar one (1) foot on center each way. Size outdoor pads with at least four (4) feet working clearance in front of equipment and one (1) foot on all sides. Provide anchor bolts for pad-mounted equipment. Refer to Detail on drawings.
- D. Wall Mounted Equipment: Wall mounted equipment shall be suitably positioned on the wall. Equipment mounted on exterior basement wall shall have unistrut channels between the wall and the equipment to prevent condensation problems. Where wall mounted equipment is specified, but a convenient wall not available, a suitable unistrut mounting stanchion anchored in concrete shall be provided. In lieu of this stanchion, small devices may be mounted on to the equipment served if approved by the equipment manufacturer.
- E. Motor rated disconnects: Install disconnects in a vertical orientation with off in the down position.

3.2 DELIVERY, STORAGE AND HANDLING:

- A. General:
 - 1. Store all types of electrical power distribution equipment in a clean, heated building affording appropriate physical protection. Control access to prevent unauthorized tampering with the equipment. However, equipment may be stored in other inside or outside environments under approved conditions.
 - 2. Inspect equipment when received at Project site for shipping damage. Report as required by freight carrier to recover repair or replacement costs from the freight carrier in the event damage was sustained.
 - 3. Covers are required unless indoor, ventilated storage conditions exist. Canvas tarpaulins or the equivalent are preferred over other coverings because they provide better humidity control and enclosure scuff protection. Where exposed to moisture, covers shall be waterproof.
 - 4. The manufacturer's shipping skids shall be left on the equipment to provide structural support until the equipment is set in final resting place.
 - 5. Refer to Section 26 05 00 for additional requirements. Contractor shall furnish new equipment to replace any equipment that is exposed to weather or subjected to other deleterious effects of construction.
- B. Approved Conditions for Equipment Storage:

1. General: Where storage conditions specified above are not available, indoor or outdoor storage shall comply with the following.
 2. Switchboards, Motor Control and Other General Distribution and Utilization Equipment:
 - a. Store metal-enclosed equipment in the upright position. Provide good ventilation of the shelter and protection from dirt, moisture and physical damage.
 - b. Space heaters furnished with the equipment shall be connected to a continuous source of power of the proper rating. Where space heaters are supplied from auxiliary power transformers, care shall be taken that low-voltage heater circuits are properly isolated before power source connection to prevent inadvertent energizing of the auxiliary transformer and associated high-voltage primary wiring.
 - c. Ambient conditions may allow condensation inside waterproof covers. If condensation is occurring, temporary heaters or lamp banks shall be provided of sufficient wattage to prevent condensation.
 - d. Contractor shall ensure that equipment stored in shipping cases receives adequate ventilation to avoid mildew and prevent condensation.
- C. Transformer
1. Indoor storage shall be provided for all transformers.

3.3 GROUND FAULT PROTECTION OF EQUIPMENT:

- A. General: Provide for system performance testing as required by the National Electrical Code. Provide each ground fault relay, sensing device or ground fault protection system with instructions and a test form. The form shall be retained by those in charge of the building's electrical installation and be available to the authority having jurisdiction. The instruction content shall be as required by UL.

3.4 TRANSFORMER VIBRATION ISOLATION:

- A. Floor Mounted Transformers: Install on concrete housekeeping pad with Mason Industries Type WM Neoprene Waffle pad, or equal. Provide Type WM isolation for elevated rack installation.
- B. Wall Mounted Transformers: Install Mason Industries Type WM Neoprene Waffle pad between the wall brackets and the wall.
- C. Suspended Transformers: Install Mason Industries PC30 Pre-compressed spring hanger with neoprene isolator.
- D. Floor Mounted Transformers Greater than 150 kVA: Install on Mason Industries, Inc, or equal, unhoused spring isolators with acoustical pad bonded to bottom. Isolators shall be undamped free-standing spring isolators sized for a minimum of two (2) inches of static deflection. The spring outside diameter shall be no less than 80 percent of the spring operating height. The spring shall have remaining travel to solid of no less than 50 percent of the static deflection. Provide a 1/4 inch neoprene friction pad bonded to the spring base. Bolt each vibration isolator unit to concrete pad, and bolt transformers to the vibration isolator units, using the leveling bolts and nuts provided with the unit.

3.5 TRANSFORMER VENTILATION:

- A. Transformers with ventilating openings shall be installed so that the ventilating openings are not blocked by walls or other obstructions. The required clearances shall be clearly marked on the transformer.

3.6 POWER SHUT OFF UNDER KITCHEN HOODS:

- A. NFPA:
 - 1. Comply with NFPA 96 Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations. The operation of any extinguishing system shall automatically shut off all sources of fuel and heat to all equipment requiring protection by that extinguishing system.
 - 2. Comply with NFPA 17, Standard for Dry Chemical Extinguishing Systems.
 - 3. Comply with NFPA 17A, Standard for Wet Chemical Extinguishing Systems.
- B. Shunt Trip: All electrical sources located under the ventilating equipment (cooking equipment hood) shall be shut off upon the operation of a wet chemical or water fire extinguishing system. Provide shunt trip accessory on each circuit breaker serving an electrical appliance under the hood. Install control wiring between shunt trips and the hood extinguishing system. coordinate all wiring with supplier of hood fire suppression system for proper selection of shunt trip coil voltage, momentary or maintained-contact closure to activate shunt trip and inter-connections. Operation of a hood extinguishing system shall automatically shunt trip all associated circuit breakers.
- C. Fire Alarm System: The operation of any extinguishing system shall automatically signal the building fire alarm system. Refer to Section 26 05 53 for additional fire alarm system requirements.

3.7 LABELING:

- A. Nametag: Provide a nametag for each piece of distribution equipment; see Section 26 05 53, Electrical Identification.

END OF SECTION 26 20 00

SECTION 26 27 26 - WIRING DEVICES

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes wall switches; wall dimmers; receptacles; device plates and box covers. All devices shall be installed in outlet boxes of required size and volume.

1.3 REFERENCES

- A. National Electrical Manufacturers Association: Wiring devices shall comply with NEMA Standards WD-1 and WD-6.
- B. Wet Locations: Wiring devices and their enclosures installed outdoors and in wet locations shall be approved for that purpose.
- C. Minimum Raceway Size: 3/4 inch.

1.4 SUBMITTALS

- A. Submit manufactures product data for all wiring devices, indicate intended color and coverplate.

PART 2 - PRODUCTS

2.1 GENERAL

- A. All devices shall be suitable for use intended, and have voltage and current ratings adequate for loads being served.

2.2 WALL SWITCHES

- A. Single Pole Switch, Toggle Style:
 - 1. Leviton 1221 Series, 20A, 120/277V.
- B. Double Pole Switch, Toggle Style:
 - 1. Leviton 1222 or 3032 Series, 20A or 30A, 120/277V.
- C. Three-way Switch, Toggle Style:
 - 1. Leviton 1223 Series, 20A, 120/277V.
- D. Four-way Switch, Toggle Style:
 - 1. Leviton 1224 Series, 20A, 120/277V.

- E. Indicator Switch, Toggle Style:
 - 1. Leviton 1201 Series, 20A, 120/277V. Switch illuminated when load is on.
- F. Locator Switch, Toggle Style:
 - 1. Leviton 1221 Series, 20A, 120/277V. Switch illuminated when load is off.
- G. Digital Time Switch:
 - 1. Wattstopper TS-400 digital time switch with optional visual warning to flash lights at 5 minutes and 1 minute prior to time-out.
- H. Key lock switches:
 - 1. Provide key lock switches for corridor lighting and other locations indicated on electrical drawings.
 - 2. 20 Amp rated.
 - 3. 120/277 Volt ac rated.
 - 4. Key-lock mechanism can only be turned ON or OFF with key.
 - 5. Single pole: Leviton 1221-2KL or approved equal.
 - 6. 3-Way: Leviton 1223-2kl or approved equal.
 - 7. 4-Way: Leviton 1224-2kl or approved equal.
 - 8. Provide 302 stainless steel wall plate for each switch.
 - 9. Provide 2 keys on ring for each switch.
 - 10. Include a brass tag on every key switch ring. Engrave tag; Example: "Hall East Lights".
 - 11. Key all switches alike to match the owners standard key. Coordinate with school District for key match.
- I. Color: As selected by Architect.

2.3 MOTOR RATED SWITCHES

- A. Provide where a switch is indicated as a local disconnect for all mechanical and plumbing equipment.
- B. Leviton MMS Series.

2.4 WALL DIMMERS

- A. Manufacturers:
 - 1. Lutron Nova "T" Series.
- B. Product Description: Semiconductor dimmer for incandescent lamps with ON-OFF switch.
- C. Body and Handle: Linear slide handle, color as selected by Architect.
- D. Voltage: 120 volts.

2.5 RECEPTACLES

- A. Single Convenience Receptacle:
 - 1. Leviton 5362A Series, 20A/125V.

- B. Duplex Convenience Receptacle:
 - 1. Leviton 5362 Series, 20A/125V, respectively.
- C. GFCI Receptacle:
 - 1. Leviton 7899 Series, 20A/125V.
 - 2. Provide GFCI receptacles for all receptacles on 120v circuits installed in kitchens, bathrooms and outdoors (including rooftops).
- D. Isolated Ground Duplex Receptacle:
 - 1. Leviton 5362-IG, 20A/125V.
- E. Duplex Tamper Resistant Receptacle/ USB Charger
 - 1. Leviton T5832. Duplex 20A/125V receptacle with two 3.6A, 5VDC, 2.0 Type A USB Chargers.
- F. Provide 20 amp receptacle for single-receptacle branch circuits.
- G. For locations where a quadruplex or fourplex is required, provide 2-duplex receptacles under common coverplate.
- H. Color: As selected by Architect.

2.6 WALL PLATES

- A. Type 302 Stainless Steel with matching mounting screws.

2.7 MANUFACTURERS

- A. Each type of wiring device shall be furnished by one (1) manufacturer. The following will be acceptable providing the project specifications:
 - 1. Leviton
 - 2. Pass & Seymour
 - 3. Hubbell / Bryant
 - 4. Cooper

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Disconnect abandoned circuits and remove raceway, wire, and cable. Remove abandoned boxes when connecting wire and cable is abandoned and removed. Install blank cover for remaining abandoned boxes.
- B. Maintain access to existing boxes and wiring connections remaining active and requiring access.
- C. Extend existing circuits using materials and methods compatible with existing electrical installations, or as specified.

3.2 INSTALLATION

- A. Route raceway and cable to meet Project conditions.
- B. Set wall mounted boxes at elevations to accommodate mounting heights indicated.

- C. Adjust box location up to ten (10) feet prior to rough-in when required to accommodate intended purpose.
- D. Do not install flush mounting box back-to-back in walls; install boxes with minimum 24 inches separation.
- E. Install devices plumb and level.

3.3 MOUNTING HEIGHTS

- A. As indicated on Drawings or if not indicated in accordance with the Architects instructions. All other telephone, Data, TV, etc. outlets shall be same as receptacle.

3.4 GANGED SWITCHES

- A. Install permanent barrier between all 277 Volt light switches ganged into one outlet box.
- B. Where multiple switches are grouped on one location, install switches under a one piece, multi-gang cover plate.
- C. Other telephone, data, TV, etc. outlets shall be same as receptacle.

3.5 GFCI

- A. Provide ground-fault circuit-interrupter type receptacles for all 15 and 20 amp receptacles shown on drawings in bathrooms, kitchens, mechanical rooms and outdoors.

END OF SECTION 26 27 26

SECTION 26 32 13 - EMERGENCY GENERATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Provide an emergency power system for emergency egress lighting, fire alarm system, emergency elevator operation, and other emergency power loads required.
- B. Provide all labor, materials, and equipment as necessary to complete all work as indicated on the drawings, and as specified herein.
- C. Products supplied but not installed under this section. Products shall be turned over to the Owner.
 - 1. Emergency generator system equipment as follows:
 - a. Complete set of all special tools required to operate and service the equipment as recommended by the manufacturer for field maintenance.
 - b. One oil filter replaceable element.
 - c. One air filter replaceable element.
- D. Related Sections:
 - 1. Division 1 - General Requirements
 - 2. Applicable sections of Division 16 - Electrical
 - 3. For emergency generators: Fuel gas piping, exhaust gas piping, flexible pipe connections, cooling air duct work, assembling generator accessories.
- E. Power Source: Provide an on-site engine-generator set to generate power for distribution to emergency and standby loads by the emergency power distribution system. Engine-generator set shall be constructed of all-new components.
- F. Transfer: Power to emergency loads shall be automatically transferred from normal utility power to the emergency engine generator upon loss of normal power. Transfer and assumption of load shall occur in ten (10) seconds or less. Loads shall be automatically retransferred upon restoration of normal source.
- G. Distribution System: Distribution equipment devices, and circuits shall be provided as required to distribute power to emergency loads.

1.3 REFERENCES

- A. Emergency generators shall be in accordance with the latest applicable standards as recommended by, SAE, IEEE, and ANSI/NEMA MG-1 Motors and Generators.

1.4 SUBMITTALS

- A. Shop Drawings:
1. Emergency generator systems including:
 - a. Engine-generator set and foundation requirements.
 - b. Auxiliary and remote equipment.
 - c. Make of engine, number of cylinders, compression ratio, bore and stroke, cylinder displacement, and speed.
 - d. Make of generator, electrical rating, number and type of bearings, and exciter type.
 2. Plan and elevation views with overall and interconnection point dimensions, fuel consumption rate curves at various loads, ventilation and combustion air requirements, and electrical diagrams including schematic and interconnection diagrams.
 3. Product data showing dimensions, weights, ratings, interconnection points, and internal wiring diagrams for engine, generator, control panel, battery, battery rack, battery charger, exhaust silencer and vibration isolators.
 4. Installation instructions.
 5. Name, location and phone number of nearest authorized distributor/service facility.
 6. Sequence of Operation - Manufacturer shall prepare a detailed, typewritten sequence of operation and submit as part of the approval documents. Final approved sequence of operation shall be permanently encapsulated in plastic laminate and permanently attached to the equipment. Format shall be 8½" x 11" or 11" x 17" as appropriate.
 7. Include schematic one-line diagram with appropriate symbols and nomenclature properly referenced to text.
- B. Product Data:
1. Specification Review: A complete item by item, line by line specification review.
 2. Output current Amperes and electrical kW rating of engine-generator set.
 3. Brake horsepower rating of engine.
 4. Fuel consumption at 100 percent, 75 percent and 50 percent load.
 5. Cooling requirements.
 6. Sound level (dBA measured on longitudinal and perpendicular axis at ten (10) feet).
 7. Manufacturer's technical data for generator, governor, voltage regulator, and battery charger. Governor submittal shall also identify method of overspeed protection to be furnished.
 8. Generator sub-transient reactance X_d'' , per unit
 9. Generator short circuit current, three-phase amperes.
 10. Generator voltage waveform distortion, measured at Full Load, line-neutral, both total harmonic distortion (THD) and maxim single harmonic order THD.
 11. Generator output circuit breaker(s), including proof or UL listing.
 12. Transfer Switch: Show complete data showing compliance. Include continuous and withstand current ratings of all contacts.
- C. Manuals and Test Data
1. Operation and Maintenance Manuals for all major components including instructions for normal operation, routine maintenance requirements, service manuals for generator, engine, oil sampling and analysis for engine wear, and emergency maintenance procedures.

1.5 QUALITY ASSURANCE

- A. Authority Having Jurisdiction:
 - 1. General: The system shall comply with all applicable Codes and Ordinances as interpreted and enforced by the local authority having jurisdiction.
- B. National Electrical Code: The system shall comply with NFPA 70, National Electrical Code, including: 1) Article 445, 2) 700.
- C. NFPA:
 - 1. General: Comply with applicable requirements of NFPA Standards, including the following:
 - a. NFPA 37: Standard for Installation and Use of Stationary Combustion Engines and Gas Turbines.
 - b. NFPA 101: Life Safety Code.
 - c. NFPA 110: Standard for Emergency and Standby Power Systems.
 - 1) Type ten (10) seconds.
 - 2) Natural gas utility pipeline
 - 3) Category B (engine-generator set).
 - 4) Level 1
 - d. NFPA 54: National Fuel Gas Code.
- D. UL:
 - 1. General: Comply with applicable requirements of UL Standards, including the following.
 - a. UL 1008: Automatic Transfer Switches, Fourth Edition or later.
 - b. ANSI / NEMA: Comply with applicable requirements of ANSI / NEMA MG 1, "Motors and Generators", and MG 2, "Safety and Use of Electric Motors and Generators".
 - c. IEEE: Comply with applicable portions of IEEE Std 446-1987, "IEEE Recommended Practice for Emergency and Standby Power Systems for Industrial and Commercial Applications" (Orange Book)
- E. EPA:
 - 1. General: Comply with all applicable EPA requirements.

1.6 OWNER'S INSTRUCTIONS

- A. Provide a four (4) hour period of instruction to the Owner's designated personnel upon completion of the system installation. Run engine-generator set and review remote annunciator panel for typical readings. Explain operation of generator remote stop switch. Demonstrate complete transfer sequence of utility-generator-utility. Operations & Maintenance Manual shall be complete and on-site for use during Owner's Instruction.

1.7 WARRANTY

- A. Furnish full parts and labor warranty to cover the entire engine generator package and automatic transfer switch including all accessories, components, controls, batteries, etc. for five years. Warranty shall begin from date of Certificate of Substantial Completion. Provide a sample of manufacturer's warranty certificates within equipment submittal. Warranty start dates from shipment or start up will not be accepted.

- B. In addition to full parts, labor, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, oils, lubricants, belts, filters, etc. and any expenses related to service calls required to diagnose and correct warranty issues. No purchase order number shall be required by the owner for service calls within warranty period. Purchase order number can be issued after problem is determined not to be a warranty issue.
- C. The manufacturer shall provide factory certificates for each Generator and associated Automatic Transfer Switch listing at a minimum the model, serial number and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.
- D. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing contractor.

1.8 MAINTENANCE

- A. Furnish one set of tools required for preventative maintenance of each engine generator system. Package tools in adequately sized metal tool box.
- B. Provide two spare sets of each oil, and air filter element required for each engine generator system.

PART 2 - PRODUCTS

2.1 GENERAL INFORMATION

- A. Furnish and install new natural gas engine driven electric generating unit, factory assembled single unit generator set, with continuous output voltage of 480Y/277, 3 phase, 4 wire, at 0.8 power factor, 60 hertz, grounded neutral service, fully rated for operation at the job site altitude at an ambient temperature range of 120 degrees Fahrenheit maximum to -0 degrees Fahrenheit minimum, all mounted on a common steel base suitable for mounting on a concrete foundation pad, complete with a derangement panel and all accessories as specified and required for normal operation in standby service.
- B. Acceptable Manufacturers:
 - 1. Caterpillar
 - 2. Cummins/Onan
 - 3. Kohler
- C. Manual and Automatic Start - Unattended Operation
 - 1. Manual start shall be done by operating the "start" button on the generator or selecting "manual" on the manual-off-automatic selector switch on the automatic transfer switch.
 - 2. Automatic start shall be done by the automatic transfer switch when the manual-off-automatic selector switch on the automatic transfer switch is in the "automatic" position.
- D. Voltage and frequency regulation.
 - 1. Engine/generator shall deliver rated output (kVA) at rated frequency and power factor, at not more than two (2) percent above or below rated voltage.
 - 2. Voltage regulation shall be plus or minus two (2) percent for any constant load between no load and rated load. Random voltage variation shall not exceed ± 1 percent for any constant load. Voltage recovery to 100 percent normal output

- shall take no longer than two seconds after single step application of 100 percent rated load.
3. Frequency regulation shall be isochronous from steady state no load to steady state rated load. Random frequency variation with any steady load from no load to full load shall not exceed plus or minus 1.8 hertz. Frequency adjustable from 57 hertz to 63 hertz (± 5 percent)
 4. The engine-generator set shall be capable of single step load pick up of 100 percent nameplate kW and power factor, less applicable derating factors, with the engine-generator set at operating temperature.
- E. The alternator shall produce a clean AC voltage waveform, with not more than five (5) percent total harmonic distortion at full linear load, when measured from line to neutral, and with not more than three (3) percent in any single harmonic.
- F. Furnish all necessary electrical connections, transfer switch, control panel, relays, etc., for installation of new generator set.
- G. Generator and engine shall be mounted on vibration isolating supports capable of 95 percent isolation to minimize vibration of the remainder of the skid-mounted equipment and transmission of vibration to the supporting pad.
- H. Generator shall be fully enclosed or suitably guarded to prevent exposure to all parts which operate at extremely high temperatures, electrically energized, or rotating. All noncurrent carrying parts shall be grounded.
- I. Thoroughly clean all equipment, and prime and finish paint with manufacturer's standard paint finish.
- J. Outdoor Weather-Protective Housing: Factory-assembled to generator set base and radiator cowling. Housing shall provide ample airflow for generator set operation and exclude entry of moisture into interior components. The housing shall have hinged side-access doors and rear control door. All doors shall be lockable. All sheet metal shall be primed for corrosion protection and finish painted with the manufacturer's standard color.

Specifier's Note: Edit for Diesel Engines.

2.2 ENGINE

- A. Engine shall be standby power rated, multi-cylinder, spark ignited four stroke cycle, liquid cooled, internal combustion engine for use with natural gas fuel, industrial type, designed for full rated power output at 1800 rpm, 60 hertz. The engine shall be arranged for direct connection to the alternating current generator.
- B. Governor shall be electronic isochronous type no load to full load, with recovery to steady state within 2 seconds following sudden load changes. Random frequency variation shall not exceed $\pm 0.25\%$ of its mean value for constant loads from no load to full load. Governor shall be provided with means for manual operation and adjustment.
- C. Lubrication system.
1. Full pressure type with engine driven positive displacement sump pump,
 2. Full flow strainer,
 3. Full flow filter,

4. Pressure relief and automatic bypass valves,
 5. Crankcase ventilator with filter and connection for outside venting,
 6. Bayonet type oil level indicating pressure gauges on the upstream and downstream side of the strainer and filter,
 7. Drain connection,
 8. Oil cooler,
 9. Low oil pressure safety shutoff device,
 10. Provide water shutoff valves and drain on the oil cooler to facilitate draining water without draining the complete engine cooling system.
 11. Provide a radiator coolant level sight glass.
- D. Cooling system.
1. Pressure type, with radiator, blower type fan,
 2. Engine driven circulating pump,
 3. Radiator cap incorporating a pressure-vacuum valve,
 4. Thermostat in conjunction with a radiator bypass,
 5. Drain connection,
 6. High coolant temperature safety device,
 7. Fan shall be sized to maintain safe engine temperature in ambient temperature of 120 degrees Fahrenheit,
 8. Provide gaskets and packing in the cooling system which are unaffected by ethylene glycol base coolant,
 9. Provide a 50% ethylene glycol antifreeze solution for the coolant,
 10. Radiators shall be provided with a duct adapter flange permitting the attachment of air discharge duct for directing discharge air through the wall,
 11. Radiator and Air Intake/Discharge System Flow Restriction requirement shall be no less than 0.5 inches of water.
- E. Provide thermal circulation type engine jacket water heater with integral thermostatic control, sized to maintain minimum coolant temperature of 49 degrees Celsius down to an ambient temperature or 0 degrees Celsius. The heater shall be disconnected whenever the engine starts by an oil pressure switch mounted on engine. Connect heater to 120 volt normal power panel as indicated on Drawings. Install tag at connection on generator to identify power panel and circuit number.
- F. Air intake system shall be complete with a dry type filter, and high frequency filter-type silencer for reducing the sound level at the intake to a point acceptable for residential use.
- G. Air shutoff for emergency shutdown.
- H. Engine exhaust system shall be complete with stainless steel critical type silencer capable of reducing ambient exhaust noise level to 60 dBA when measured 50 feet from the engine under full engine load and clear weather. Silencer shall be supported independently of the engine. Flexible exhaust connection shall be provided from the engine exhaust manifold to the silencer. An exhaust condensation trap with manual drain valve shall be provided to prevent condensation from entering the engine. Furnish and install a steel rain cap at the exhaust stack outlet. Rain cap shall have a high-temp paint finish.
- I. Standard SAE nuts, bolts, and studs.
- J. Standard NPT or SAE tubing and fittings.

- L. Gas Train for Natural Gas Fuel System:
1. General: Provide all fuel system components necessary to allow the generator system to operate under continuous emergency full load. Gas regulator train assembly shall be designed for engine manufacturer's recommended gas pressure from a nominal five (5) pound per-square-inch natural gas service. Install components furnished with engine.
 2. Engine-mounted carburetor.
 3. Fuel gas pressure regulators with vibration isolating, flexible fuel line joint on gas-supply side.
 4. Solenoid valve that automatically shuts off flow of gas if the engine stops for any reason. Install this valve on gas-supply side of gas pressure regulator.
 5. Gas pressure gauge with analog display of ounces-per-square-inch to monitor gas supply pressure. Install this gauge in gas train inside the generator set housing.
 6. Gas line service regulator with atmospheric vent.
 7. Dry filter for vapor withdrawal.
 8. Manual shut-off valve.
 9. Gas surge tank or other components as may be recommended by engine supplier.
 10. Gas fuel line for Emergency Power System shall be connected ahead of the main gas shutoff valve for the building with a separate, dedicated shutoff valve. Mark both generator gas valve and building gas valve with permanent signs to indicate that there is another valve, per NFPA 110, sect. 5-9.7.

2.3 GENERATOR

- A. Generator shall be alternating current, three phase, four pole, reconnectible brushless revolving field synchronous type with brushless exciter directly connected to the generator field windings without slip rings or commutators.
- B. Generator shall have a single prelubricated sealed bearing, direct connected to the engine, by means of a flexible disc coupling for self-alignment and air cooled by a direct drive centrifugal blower fan.
- C. Insulation shall be minimum Class F in a self-ventilated enclosure. Temperature rise shall be 130 degrees Celsius max over ANSI 40 degrees Celsius ambient for standby service.
- D. Bring out all leads from each winding to a generator main lead terminal box adequate in size for making up all connections and grounding the neutral to the generator set supporting frame.
- E. Voltage regulation shall include True RMS 3 phase sensing, generator-mounted volts per Hertz exciter-regulator to match engine and generator characteristics. Include manual controls to adjust voltage output plus or minus 5 percent of nominal voltage level.
- F. The generator shall have the necessary excitation control circuitry to prevent the loss of excitation on fault conditions allowing quick return to full voltage and power to normal and faulted circuits.
- G. Furnish NEMA 1 output terminal and outgoing cable termination compartment integral with the engine-generator frame.

- H. Output Breakers: Provide output molded case circuit breakers of adequate capacity and rating. Provide output breaker for each output circuit running from generator. Breaker shall be UL Listed 100 percent rated for continuous operation at full ampacity. Provide cable extensions and enclosure required to integrally mount output circuit breaker inside outdoor generator housing. Enclosure shall comply with NEC 404-3.
- I. Housing Alternator shall have an open drip-proof construction.

2.4 VOLTAGE REGULATION

- A. Static type, three phase, mounted either on the generator control panel or combined with the exciter. Voltage shall have "manual-automatic" switch and be adjustable +/- 10 percent under all operating conditions.

2.5 ELECTRIC STARTING SYSTEM

- A. Engine starting system shall be a 12 volt or 24 volt DC system depending on size of engine/generator, consisting of a heavy duty electric cranking motor(s) with drive mechanism, heavy duty batteries with metal frame or box, engine driven alternator, battery charger, and transistorized voltage regulator.
- B. Cranking motor shall be capable of starting the engine five times in rapid succession without overheating the motor and at sufficient speed for starting in low ambient temperatures.
- C. Storage batteries shall be lead acid type of voltage and capacity as determined by the engine manufacturer, with sufficient capacity to start the generator set five times consecutively in rapid succession. Provide all battery cables and connections. Provide hydrometer.
- D. Battery charger shall be an automatic, self-protected, self-regulated, dual rate rectifier type of a capacity determined by the engine manufacturer and sufficient to automatically recharge the batteries quickly according to the requirements governed by battery discharge duty, and suitable for 120 volt, single phase, 60 hertz input service from a remote receptacle panel.

2.6 ENGINE-GENERATOR CONTROL PANEL

- A. Control panel shall be engine generator frame mounted in NEMA 1 enclosure, totally front accessible. Control panel shall be completely factory pre-wired. All external connections shall be wired out to terminal blocks for field wiring. Control panel shall be complete with all engine and generator controls and indicators. Include front hinged double doors with latches and provision for padlock.
- B. Control panel shall provide a contact closure to initiate operation of the ventilation system. Wire out to terminal block. Contact shall be field wired by manufacturer as indicated on the Drawings.
- C. Control panel shall include the following fully identified by means of permanent nameplates:
 - 1. Control
 - a. Output voltage adjustment.
 - b. Cranking limiter relay.
 - c. Overspeed shutdown.
 - d. Low oil pressure shutdown.
 - e. High coolant temperature shutdown.

- f. Remote Alarm Contacts: Pre-wired SPST contacts to terminal strip for remote indication of all alarm functions.
 - g. Battery operated service light to illuminate panel during power outage conditions.
 - h. Manual-off-auto engine start switch.
 - 2. Visual monitoring
 - a. Frequency Meter: 45-65 Hz range, 3½ inch (89 mm) dial.
 - b. AC Output Voltmeter: 3½ inch dial, two (2) percent accuracy, with phase selector switch (phase-to-phase and phase-to-ground).
 - c. AC Output Ammeter: 3½ inch dial, two (2) percent accuracy, with phase selector switch and 3 current transformers.
 - d. Push-to-test indicator lamps, one for each:
 - 1) Engine run
 - 2) Low oil pressure
 - 3) High water temperature
 - 4) Overspeed and overcrank
 - 5) Overspeed shutdown
 - 6) Failure to crank
 - 7) Failure to establish voltage or frequency.
 - 8) Failure to reach rated voltage at transfer switch in ten (10) seconds
 - e. Engine running time meter.
 - f. Electrical oil pressure gauge.
 - g. Electrical water temperature gauge.
 - h. Mechanical fuel pressure gauge.
 - i. Radiator sight glass.
 - j. DC voltmeter and ammeter.
 - 3. Audible monitoring
 - a. Low oil pressure alarm condition.
 - b. High coolant temperature alarm.
 - c. Failure to crank.
 - d. Failure to establish voltage or frequency.
 - e. Failure to reach rated voltage at transfer switch in ten (10) seconds.
- D. Battery charging system including alternator and solid state regulator.
- E. Remote Annunciator NFPA 110: Provide a remote annunciator to meet the requirements of NFPA 110, Level 1. The annunciator shall provide remote annunciation of all points stated above and shall incorporate ring-back capability so that after silencing the initial alarm, any subsequent alarms will sound the horn.
Locate annunciator in the Administration Area per owner's instruction.

2.7 WEATHER PROTECTIVE ENCLOSURE

- A. Standard Enclosure:
 - 1. Steel weather protective enclosure with 14 gauge sheet metal and a minimum ambient capability of 43 degrees Celsius (110 degrees Fahrenheit). Shall have removable, and / or hinged doors and removable end panels to allow easy routine maintenance. All hinges and latches shall be rust resistant and doors shall be equipped with rubber seals. A lockable service access cover shall be provided for easy access to the radiator fill cap. The enclosure shall be painted utilizing electrostatically applied powder baked paint.

2.8 AUTOMATIC TRANSFER SWITCHES

- A. Furnish and install automatic transfer switches (ATS) with four (4) poles, amperage, voltage, withstand and close-on ratings as shown on the plans. Each automatic transfer shall consist of an inherently double throw power transfer switch mechanism and a microprocessor controller to provide automatic operation. All transfer switches and controllers shall be the products of the same manufacturer.
- B. Acceptable Manufacturers:
 - 1. ASCO
 - 2. Russ Electric
 - 3. Zenith
 - 4. Kohler
 - 5. Cummins/Onan
- C. Mechanically Held Transfer Switch
 - 1. The transfer switch shall be electrically operated and mechanically held. The electrical operator shall be a momentarily energized, single-solenoid mechanism. Main operators which include overcurrent disconnect devices, linear motors or gears shall not be acceptable. The switch shall be mechanically interlocked to ensure only two possible positions, normal or emergency.
 - 2. All transfer switch sizes shall use only one type of main operator for ease of maintenance and commonality of parts.
 - 3. The switch shall be positively locked and unaffected by momentary outages, so that contact pressure is maintained at a constant value and contact temperature rise is minimized for maximum reliability and operating life.
 - 4. All main contacts shall be silver composition. Switches rated 600 amperes and above shall have segmented, blow-on construction for high withstand and close-on capability and be protected by separate arcing contacts.
 - 5. Inspection of all contacts shall be possible from the front of the switch without disassembly of operating linkages and without disconnection of power conductors. All stationary and moveable contacts shall be replaceable without removing power conductors and/or bus bars.
 - 6. Designs utilizing components of molded-case circuit breakers, contactors, or parts thereof, which are not intended for continuous duty, repetitive switching or transfer between two active power sources are not acceptable.
- D. Microprocessor Controller
 - 1. The controller's sensing and logic shall be provided by a single built-in microprocessor for maximum reliability, minimum maintenance, and the ability to communicate serially through an optional serial communication module.
 - 2. A single controller shall provide twelve selectable nominal voltages for maximum application flexibility and minimal spare part requirements. Voltage sensing shall be true RMS type and shall be accurate to ± 1 percent of nominal voltage. Frequency sensing shall be accurate to ± 0.2 percent. The panel shall be capable of operating over a temperature range of -20 to +60 degrees Celsius and storage from -55 to +85 degrees Celsius.
 - 3. The controller shall be connected to the transfer switch by an interconnecting wiring harness. The harness shall include a keyed disconnect plug to enable the controller to be disconnected from the transfer switch for routine maintenance. Sensing and control logic shall be provided on multi-layer printed circuit boards. Interfacing relays shall be industrial grade plug-in type with dust covers. The panel shall be enclosed with a protective cover and be mounted separately from

the transfer switch unit for safety and ease of maintenance. The protective cover shall include a built-in pocket for storage of the operator's manuals.

4. All customer connections shall be wired to a common terminal block to simplify field-wiring connections.
5. The controller shall meet or exceed the requirements for Electromagnetic Compatibility (EMC) as follows:
 - a. EN 55011:1991 Emission standard - Group 1, Class A
 - b. EN 50082-2:1995 Generic immunity standard, from which:
 - 1) EN 61000-4-2:1995 Electrostatic discharge (ESD) immunity
 - 2) ENV 50140:1993 Radiated Electro-Magnetic field immunity
 - 3) EN 61000-4-4:1995 Electrical fast transient (EFT) immunity
 - 4) EN 61000-4-5:1995 Surge transient immunity
 - 5) EN 61000-4-6:1996 Conducted Radio-Frequency field immunity
 - c. IEEE472 (ANSI C37.90A) Ring Wave Test.

E. Enclosure

1. The ATS shall be furnished in a Type 1 enclosure unless otherwise shown on the plans.

F. Controller Display and Keypad

1. A four line, 20 character LCD display and keypad shall be an integral part of the controller for viewing all available data and setting desired operational parameters. Operational parameters shall also be available for viewing and limited control through the serial communications input port. The following parameters shall only be adjustable via DIP switches on the controller:
 - a. Nominal line voltage and frequency
 - b. Single or three phase sensing
 - c. Operating parameter protection
 - d. Transfer operating mode configuration
(Open transition, Closed transition, or Delayed transition)

All instructions and controller settings shall be easily accessible, readable and accomplished without the use of codes, calculations, or instruction manuals.

G. Voltage, Frequency and Phase Rotation Sensing

1. Voltage and frequency on both the normal and emergency sources (as noted below) shall be continuously monitored, with the following pickup, dropout, and trip setting capabilities (values shown as % of nominal unless otherwise specified):

<u>Parameter</u>	<u>Sources</u>	<u>Dropout / Trip</u>	<u>Pickup / Reset</u>
Undervoltage	N&E,3 ϕ	70 to 98%	85 to 100%
Overvoltage	N&E,3 ϕ	102 to 115%	2% below trip
Underfrequency	N&E	85 to 98%	90 to 100%
Overfrequency	N&E	102 to 110%	2% below trip
Voltage unbalance	N&E	5 to 20%	1% below dropout

2. Repetitive accuracy of all settings shall be within $\pm 0.5\%$ over an operating temperature range of -20°C to 60°C .
3. Voltage and frequency settings shall be field adjustable in 1% increments either locally with the display and keypad or remotely via serial communications port access.
4. The controller shall be capable (when activated by the keypad or through the serial port) of sensing the phase rotation of both the normal and emergency sources. The source shall be considered unacceptable if the phase rotation is not the preferred rotation selected (ABC or CBA).
5. Source status screens shall be provided for both normal & emergency to provide digital readout of voltage on all 3 phases, frequency, and phase rotation.

H. Time Delays

1. An adjustable time delay of 0 to 6 seconds shall be provided to override momentary normal source outages and delay all transfer and engine starting signals.
2. A time delay shall be provided on transfer to emergency, adjustable from 0 to 60 minutes, for controlled timing of transfer of loads to emergency.
3. Two time delay modes (which are independently adjustable) shall be provided on re-transfer to normal. One time delay shall be for actual normal power failures and the other for the test mode function. The time delays shall be adjustable from 0 to 60 minutes. Time delay shall be automatically bypassed if the emergency source fails and the normal source is acceptable.
4. A time delay shall be provided on shut down of engine generator for cool down, adjustable from 0 to 60 minutes.
5. A time delay activated output signal shall also be provided to drive an external relay(s) for selective load disconnect control. The controller shall have the ability to activate an adjustable 0 to 5 minute time delay in any of the following modes:
 - a. Prior to transfer only.
 - b. Prior to and after transfer.
 - c. Normal to emergency only.
 - d. Emergency to normal only.
 - e. Normal to emergency and emergency to normal.
 - f. All transfer conditions or only when both sources are available.

I. Additional Features

1. A three position momentary-type test switch shall be provided for the test / automatic / reset modes. The test position will simulate a normal source failure. The reset position shall bypass the time delays on either transfer to emergency or retransfer to normal.
2. A SPDT contact, rated 5 amps at 30 VDC, shall be provided for a low-voltage engine start signal. The start signal shall prevent dry cranking of the engine by requiring the generator set to reach proper output, and run for the duration of the cool down setting, regardless of whether the normal source restores before the load is transferred.
3. Auxiliary contacts, rated 10 amps, 250 VAC shall be provided consisting of one contact, closed when the ATS is connected to the normal source and one contact closed, when the ATS is connected to the emergency source.
4. LED indicating lights (16 mm industrial grade, type 12) shall be provided; one to indicate when the ATS is connected to the normal source (green) and one to indicate when the ATS is connected to the emergency source (red).

5. LED indicating lights (16 mm industrial grade, type 12) shall be provided and energized by controller outputs. The lights shall provide true source availability of the normal and emergency sources, as determined by the voltage sensing trip and reset settings for each source.
 - a. The following features shall be built-in to the controller, but capable of being activated through keypad programming or the serial port only when required by the user:
 - 1) Provide the ability to select "commit/no commit to transfer" to determine whether the load should be transferred to the emergency generator if the normal source restores before the generator is ready to accept the load.
 - 2) Terminals shall be provided for a remote contact which opens to signal the ATS to transfer to emergency and for remote contacts which open to inhibit transfer to emergency and/or retransfer to normal. Both of these inhibit signals can be activated through the keypad or serial port.
 - 3) An Inphase monitor shall be provided in the controller. The monitor shall control transfer so that motor load inrush currents do not exceed normal starting currents, and shall not require external control of power sources. The inphase monitor shall be specifically designed for and be the product of the ATS manufacturer. The inphase monitor shall be equal to ASCO Feature 27.
- J. Engine Exerciser: The controller shall provide an internal engine exerciser. The engine exerciser shall allow the user to program up to seven different exercise routines. For each routine, the user shall be able to:
 1. Enable or disable the routine.
 2. Enable or disable transfer of the load during routine.
 3. Set the start time,
 - time of day
 - day of week
 - week of month (1st, 2nd, 3rd, 4th, alternate or every)
 4. Set the duration of the run.

At the end of the specified duration the switch shall transfer the load back to normal and run the generator for the specified cool down period. A 10-year life battery that supplies power to the real time clock in the event of a power loss will maintain all time and date information.
- K. Withstand and Close-On Ratings
 1. The ATS shall be rated to close on and withstand the available RMS symmetrical short circuit current at the ATS terminals with the type of overcurrent protection shown on the plans.
 2. The ATS shall be UL listed in accordance with UL 1008 and be labeled in accordance with that standard's 1½ and 3 cycle, long-time ratings. ATSs which are not tested and labeled with 1½ and 3 cycle (any breaker) ratings and have series, or specific breaker ratings only, are not acceptable.
- L. Tests and Certification
 1. The complete ATS shall be factory tested to ensure proper operation of the individual components and correct overall sequence of operation and to ensure that the operating transfer time, voltage, frequency and time delay settings are in compliance with the specification requirements.

M. Service Representation

1. The ATS manufacturer shall maintain a national service organization of company-employed personnel located throughout the contiguous United States. The service center's personnel must be factory trained and must be on call 24 hours a day, 365 days a year.

PART 3 - EXECUTION

3.1 GENERAL

- A. Provide all work required for a complete system, including complete system testing and checkout. The installation of this system shall comply with the directions and recommendations of authorized factory representatives.

3.2 EMERGENCY DISTRIBUTION SYSTEM

- A. All boxes, and enclosures (including transfer switches, generators, and power panels) for emergency circuits shall be permanently marked so they will be readily identified as a component of an emergency circuit or system. Emergency circuits shall be specially marked and shall be run in raceway separate from normal powered circuits. All distribution equipment shall be specifically indicated "EMERGENCY" on the equipment nametag. Color code for emergency markings and all nametags shall be RED.

3.3 COMMISSIONING SERVICE

- A. A final inspection and an initial startup of the system shall be rendered by the authorized factory representatives.
- B. A letter of certification written by the authorized factory representatives, which states that the system is properly installed and does properly function as recommended by the factory and as described in this specification, shall be submitted to the Architect for his approval.
- C. A test run shall be performed by the authorized factory representative in the presence of the Owner, Architect and Engineer; the time of this test run shall be mutually agreed upon by all persons concerned. This test run may, but is not required to, coincide with other testing requirements described in this section.

3.4 INSTALLATION

- A. General: Provide all labor required for a complete installation.
- B. Mounting: Anchor on a four (4) inch concrete pad with bolts and elasto-rib vibration isolators. Pad shall extend a minimum of 18 inches from each side of the generator set skid.

3.5 CONSUMABLES

- A. Refuel during testing as required. After all tests have been performed, fuel tanks shall be filled before system is accepted by Owner. Check oil, coolant, batteries, filters and other consumables. Top off and replace as necessary to leave engine-generator set at full capacity for all consumables.

3.6 TESTING

- A. Factory Testing: The engine generator shall be tested at the factory, demonstrating its performance at full rated load. A certified copy of the test report shall accompany the unit to the field and shall be made available to the building official and copied to the Architect and Engineer.
- B. Field Testing: Conduct tests of the system as required by NEC Article 700 in the presence of the Owner, Architect, Engineer, and Code Authority having jurisdiction. The engine generator set shall demonstrate the actual sequencing of all load onto the generation unit and shall carry the building emergency loads, including any elevator(s), for a minimum period of two (2) hours. Contractor shall insure that all emergency loads are operational before scheduling this test. Test times shall be mutually agreed upon by all persons concerned.

3.7 SYSTEM GROUNDING

- A. The emergency power system generator output shall be grounded as a separately derived system according to the requirements of the Section titled GROUNDING. Bond the generator neutral to the generator ground.

3.8 SIGNS

- A. Refer to Section 16075, Electrical Identification for Sign Requirements.
- B. Service Entrance: A sign shall be placed at the normal power service entrance indicating location of the emergency power engine-generator set.
- C. Generator: Provide a sign arranged to be prominent and legible at the set control panel. Sign shall be an OSHA orange WARNING sign plus text. Sign text shall be "Warning - This equipment starts automatically. Disconnect all sources of supply and load before servicing", or similar approved text.
- D. Fuel Tank: Provide a "Caution - No Smoking" sign on the housing. Sign shall be an OSHA yellow caution sign with text and graphic no-smoking symbol. Provide sign per NFPA 110 Sect. 5.9.7 at both generator gas shut-off valve and building gas shut-off valve to indicate that there is another valve.

3.9 REMOTE WIRING

- A. General: Provide raceway, wiring and control cables from generator control panel to remote points. Underground conduits may be direct buried without concrete encasement if a red plastic warning tape is installed above each conduit.
- B. Remote Points:
 - 1. Engine-Generator Remote Panel
 - 2. Automatic Transfer Switches
 - 3. Automatic Battery Charger. Provide dc wiring from remote charger to battery rack at engine-generator set. Size wire for maximum 2 percent dc voltage drop at full load.
 - 4. Generator control power 120V branch circuit.
 - 5. Engine water jacket heater branch circuit.
 - 6. Outdoor generator housing: battery rack warming jacket 120V branch circuit.
 - 7. Outdoor generator housing: generator strip heater 120V branch circuit. One circuit may serve both jacket heater and generator heater if total load including voltage drop is less than 80% circuit ampacity.

8. Elevator Controllers; (Signals shall be taken from ATS).
9. Building Automation System (BAS); (BAS wires to the ATS).
10. Building Security System
11. Emergency Lighting Automatic Transfer Switches

3.10 EMERGENCY LIGHTING AUTOMATIC TRANSFER SWITCHES

- A. Provide automatic slave transfer switches where indicated on the drawings for transfer of dimmer branch circuits utilized for emergency lighting.

END OF SECTION 26 32 13

SECTION 26 43 00 - SURGE PROTECTION DEVICES (SPDs) FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Section 16400 – Surge Protection Devices, individually mounted and switchboard mounted. Switchboards: Surge Protection Device integrated in switchboards.

1.3 REFERENCES

- A. IEEE C62.41.1, IEEE Guide on the Surge Environment in Low-Voltage (1000 V and Less) AC Power Circuits,
- B. IEEE C62.41.2, IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits,
- C. IEEE C62.45, IEEE Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage (1000 V and Less) AC Power Circuits.
- D. National Electrical Code: Article 285
- E. UL 1283 - Electromagnetic Interference Filters
- F. UL 1449, Third Edition, effective September 29, 2009 – Surge Protection Devices

1.4 SUBMITTALS

- A. Product Data: Submit capacity, dimensions, weights, details, and wiring configuration.
- B. Submittals shall include UL 1449 3rd Edition Listing documentation verifiable by visiting www.UL.com, clicking "Certifications" link, searching using UL Category Code: VZCA and VZCA2:
 - 1. Short Circuit Current Rating (SCCR)
 - 2. Voltage Protection Ratings (VPRs) for all modes
 - 3. Maximum Continuous Operating Voltage rating (MCOV)
 - 4. I-nominal rating (I-n)
 - 5. SPD shall be UL listed and labeled as Type 1 or Type 4 intended for Type 1 or Type 2 applications.
- C. Upon request, an unencapsulated but complete SPD formally known as TVSS shall be presented for visual inspection.

- D. Minimum of ten (10) year warranty Manufacturer's Installation Instructions: Submit installation instructions and connection requirements.

1.5 QUALITY ASSURANCE

- A. List individual units under UL 1449 (Third Addition) and UL 1283.
- B. Single manufacturer: All equipment of each type shall be the product of one manufacturer.
- C. SPD shall comply with NEC Article 285 and shall be permanently marked with the short-circuit current rating of the device.
- D. Manufacturer Qualifications: Engage a firm with at least 5 years experience in manufacturing transient voltage surge suppressors.
- E. Manufacturer shall be ISO 9001 or 9002 certified.
- F. The manufacturer of this equipment shall have produced similar electrical equipment for a minimum period of ten (10) years. When requested by the Engineer, an acceptable list of installations with similar equipment shall be provided demonstrating compliance with this requirement.
- G. The SPD shall be compliant with the Restriction of Hazardous Substances (RoHS) Directive 2002/95/EC.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Accept equipment on site in factory packaging. Inspect for damage.
- B. Protect equipment from damage by providing temporary covers until construction is complete in adjacent space.
- C. Handle and store equipment in accordance with manufacturer's Installation and Maintenance Manuals. One (1) copy of this document to be provided with the equipment at time of shipment.

PART 2 - PRODUCTS

2.1 SURGE PROTECTION DEVICES (SPDs)

- A. Manufacturers:
 - 1. Current Technology
 - 2. Liebert
 - 3. Siemens
 - 4. Square D
 - 5. GE

- B. Product Description: Surge protection devices for protection of AC electrical circuits.
- C. Unit Operating Voltage: As indicated on Drawings.
- D. Construction:
1. Finish: Factory finish of baked enamel.
 2. Balanced Suppression Platform: Equally distribute surge current to Metal Oxide Varistor (MOV) components to ensure equal stressing and maximum performance. Furnish surge suppression platform with equal impedance paths to each matched MOV.
 3. Internal Connections: Hardwired with connections using low impedance conductors and compression fittings.
 4. Safety and Diagnostic Monitoring: Equipped with standard overcurrent protection:
 - a. Continuous monitoring of fusing system.
 - b. Monitor individual MOV's (including neutral to ground). Capable of identifying open circuit failures not monitored by conventional fusing systems.
 - c. Monitor for overheating in each mode due to thermal runaway.
 - d. Furnish green and red solid state indicator light on each phase. Absence of green light and presence of red light indicates which phases have been damaged. Fault detection activates flashing trouble light. Units not capable of detecting open circuit damage, thermal conditions, and over current will not be accepted.
 5. Labeling: Permanently affix UL 1449 (Third Addition) suppression voltage ratings and CSA to unit.
- E. Types:
1. Switchboards; locate as integral part of switchboard, coordinate mounting with switchboard manufacturer.
 2. Panelboards; locate as stand-alone. Component in housing adjacent to protected panelboard.
- F. Protection Modes: For Wye configured system, furnish device with directly connected suppression elements between line-neutral (L-N), line-ground (L-G), and neutral-ground (N-G). For Delta configured system, furnish device with suppression elements between line to line (L-L) and line to ground (L-G).
- G. Switchboards:
1. The SPD shall be UL 1449 labeled as Type 1 or as Type 4 intended for Type 1 or Type 2 applications.
 2. SPD shall meet or exceed the following criteria:
 - a. Maximum 7-Mode surge current capability shall be 300kA per phase.
 - b. UL 1449 - Third Edition Revision; effective September 29, 2009, Voltage Protection Ratings shall not exceed the following:

	MCOV				
VOLTAGE	L-N	L-G	N-G	L-L	
208Y/120	800V	800V	800V	1200V	150V
480Y/277	1200V	1200V	1200V	2000V	320V

3. UL 1449 Listed Maximum Continuous Operating Voltage (MCOV) (verifiable at UL.com):

System Voltage	Allowable System Voltage Fluctuation (%)	MCOV
208Y/120	25%	150V

- | | | | |
|--|----------|-----|------|
| | 480Y/347 | 15% | 320V |
|--|----------|-----|------|
4. SPD shall incorporate a UL 1283 listed EMI/RFI filter with minimum attenuation of -50dB at 100 kHz.
 5. Suppression components shall be heavy duty 'large block' MOVs, each exceeding 30mm diameter.
 6. SPD shall include a serviceable, replaceable module.
 7. SPD shall be equipped with the following diagnostics:
 - a. Visual LED diagnostics including a minimum of one green LED indicator per phase, and one red service LED.
 - b. Audible alarm with on/off silence function and diagnostic test function (excluding branch).
 - c. Form C dry contacts one normally open (NO) and one normally closed (NC) for remote status monitoring.
 - d. Surge Counter

No other test equipment shall be required for SPD monitoring or testing before or after installation.

8. SPD shall have a response time no greater than 1/2 nanosecond.
9. SPD shall have a 10 year warranty.

H. Distribution and Lighting Panelboards:

1. Listing requirements: SPD shall bear the UL Mark and shall be Listed to most recent editions of UL 1449 and UL 1283. "Manufactured in accordance with" is not equivalent to UL listing and does not meet the intent of this specification.
2. Listing requirements: SPD and performance parameters shall be posted at www.UL.com under Category Code: VZCA. Products or parameters without posting at UL.com shall not be approved. (To access UL Category Code click on Certifications in the left menu bar of UL's home page. Type "VZCA" into the Category Code search box and click Search.)
3. SPD shall be UL 1449 labeled with 200kA Short Circuit Current Rating (SCCR). Fuse ratings shall not be considered in lieu of demonstrated withstand testing of SPD, per NEC 285.6.
4. SPD shall be UL 1449 labeled as Type 1 intended for use without need for external or supplemental overcurrent controls. Every suppression component of every mode, including N-G, shall be protected by internal overcurrent and thermal overtemperature controls. SPDs relying upon external or supplementary installed safety disconnectors do not meet the intent of this specification.
5. SPD shall be UL 1449 labeled with 20kA I-nominal (I-n) (verifiable at UL.com) for compliance to UL 96A Lightning Protection Master Label and NFPA 780.
6. Standard 7 Mode Protection paths: SPD shall provide surge current paths for all modes of protection: L-N, L-G, L-L, and N-G for Wye systems; L-L, L-G in Delta and impedance grounded Wye systems
7. If a dedicated breaker for the SPD is not provided in the switchboard, the service entrance SPD shall include an integral UL Recognized disconnect switch. A dedicated breaker shall serve as a means of disconnect for distribution SPD's.
8. SPD shall meet or exceed the following criteria:
9. Minimum surge current capability (single pulse rated) per phase shall be:
 - a. Distribution applications:
 - 1) Siemens Model TPS3 09 with Maximum surge current capability of 100kA per phase

10. UL 1449 Listed Voltage Protection Ratings (VPRs) shall not exceed the following:

VOLTAGE	L-N	L-G	N-G
208Y/120V	700V	700V	700V
480Y/277V	1500V	1500V	1500V

UL 1449 Listed Maximum Continuous Operating Voltage (MCOV) (verifiable at UL.com):

System Voltage	Allowable System Voltage Fluctuation (%)	MCOV
208Y/120	25%	150V
480Y/277V	20%	320V

11. SPD shall include a serviceable, replaceable module (excluding Distribution).
(Deletable note: Delete or adjust as appropriate.)
12. Service Entrance SPD shall have UL 1283 EMI/RFI filtering with minimum attenuation of -50dB at 100kHz.
13. SPD shall have a warranty for a period of ten (10) years, incorporating unlimited replacements of suppressor parts if they are destroyed by transients during the warranty period.
14. SPDs shall be equipped with the following diagnostics:
- a. Visual LED diagnostics including a minimum of one green LED indicator per phase, and one red service LED.
 - b. Audible alarm with on/off silence function and diagnostic test function (excluding branch).
 - c. Form C dry contacts one normally open (NO) and one normally closed (NC) for remote status monitoring.
 - d. Surge Counter

No other test equipment shall be required for SPD monitoring or testing before or after

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify mounting area is ready for equipment.
- B. Verify circuit rough-ins are at correct location.

3.2 INSTALLATION

- A. Install in accordance with IEEE 1100.
- B. Install service entrance suppressors in switchboard.
- C. Install suppressors for panelboards adjacent to panel.

- D. Install surge counter in face of switchboard.
- E. Include surge counter for stand-alone SPD.
- F. Install with maximum conductor length of 24 inches. Install suppressor with internal fusing.
- G. Provide 30 amp, 3 pole circuit breaker in panelboards to feed SPD.

END OF SECTION 26 43 00

SECTION 26 50 00 - LIGHTING

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes interior luminaires, lamps, ballasts, and accessories. Provide all luminaires complete with all new lamps, completely wired, controlled, and securely attached to supports.

1.3 SUBMITTALS

- A. Product Data: Submit dimensions, ratings, and performance data.
- B. Photometric data for each luminaire, lamp and ballast. Include indications of all options and accessories as well as finish color.
- C. Specification Review: A complete item by item, line by line specification review.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Provide luminaires listed by U.L.
 - 2. Luminaires installed in outdoor areas unprotected from weather to be U.L. Listed for wet locations.
 - 3. Insulated ceilings: Luminaires installed into insulated ceilings shall be U.L. Listed Type IC.
- B. Certification: Certify that fixtures submittal have trim compatible with ceilings being installed.
- C. Concrete for outdoor lighting poles foundations shall be provided per Section 03 30 00 - Concrete.

1.5 EXTRA MATERIALS

- A. Provide extra materials for Owners use. All parts shall packaged in suitable carton.
- B. Provide ten (10) percent spare lamps of each lamp type. Deliver to Owner in original packaging.

PART 2 - PRODUCTS

2.1 LUMINAIRES

- A. Acceptable Manufacture: Provide per Fixture Schedule on drawings.
 - 1. Approved equal: Contractor may submit luminaires from other manufacturers. Contractor shall provide a full set of submittals per paragraph 1.2 of this specification section for Engineer and Architects approval. Contractor must have approved submittals stamped and dated from the Engineer and Architect minimum 10 days prior to bid.
- B. Product Description: Complete luminaire assemblies, with features, options, and accessories as scheduled.
- C. All luminaires shall be new and of specification grade.
- D. Manufacturer nomenclature in fixture schedule or otherwise described on the Drawings is given only to show the general fixture series. Contractor shall provide fixture with all required accessories and mounting frame type.
- E. Wire guard at fixtures in mechanical, electrical, and high abuse areas.

2.2 FLUORESCENT LUMINAIRES

- A. Provide fluorescent fixtures complete with lamp ballast.
 - 1. Housing: Fabricated using 22 gage steel minimum. Housing shall have complete coverage of white paint, 85 percent minimum reflectivity applied by light or powder process, then baked until cured.
- B. Fluorescent fixture lenses where required, shall be light-stable 100 percent virgin acrylic, translucent conforming to minimum standards of IES-NEMP-SPI. Lens shall be pattern 12 prismatic unless noted otherwise. Thickness of material shall be nominal 0.125 inches. The lens shall be formed with a minimum of eight (8) ounces of acrylic per square foot.
- C. Parabolic fixtures shall have both ballast housing reflector covers installed including fixtures requiring only a single ballast. Static Luminaires: All luminaires shall be static type with no-air-handling functions. Punchouts closed with dampers or AIA-Pattern control blades are unacceptable.
- D. Reflectors for compact fluorescent lamps (CFL):
 - 1. All reflectors of each type to be from single manufacturer.
 - 2. CFL reflectors shall have low iridescence.
 - 3. Reflector Color: Semi-specular natural aluminum.

2.3 LED LUMINAIRES

- A. Quality Assurance
 - 1. DOE Lighting Facts certified.
- B. LED Specifications

1. Lumen maintenance of the LEDs has been tested in accordance with IESNA LM-80-08 reporting methodology.
 2. CRI: >82 minimum (general); >90 healthcare and retail.
 3. SDCM: <2.5 in linear pendants and linear recessed; <3.5 in discrete recessed.
 4. R9: .0 (general office/school environments); >50 in healthcare and retail environments.
 5. Outdoor luminaires to be rated at a minimum of 40° C.
- C. Lumen Maintenance
1. Minimum L70 at 50K hours based on TM-21 Addendum A Lifetime report at an ambient temperature of 25° C, outdoors at an ambient temperature of 40° C.
- D. Thermal Testing
1. ISTM testing in accordance to UL 1598-2008.
- E. Driver
1. 0-10V enabled.
 2. Output Class 2 rated.
 3. Dimming range: 5-100%.
 4. Constant current.
 5. THD @ max load: <20%.
 6. Power factor: >0.95
 7. Environment protection rating: UL Damp and dry.
 8. Approbations: certified to UL8750, UL1310, UL935, CSA-C22.2 No. 250.13-12, CSA 22.2 No. 223.
 9. ROHS Compliant
- F. Fixture photometry
1. Conducted by a NVLAP accredited testing lab with IESNA LM 79-08.
 2. System flux measured in delivered lumens.
- G. Warranty
1. 5 year total system warranty.

2.4 COMPACT FLUORESCENT LAMP BALLAST

- A. Manufacturers:
1. CFL ballast shall be furnished by luminaire manufacturer.
 2. Manufacturers:
 - a. Advance Transformer
 - b. ESI
 - c. Lightolier
 - d. Motorola
 - e. Magnetek
 3. All CFL ballast shall be solid state electronic type.
- B. Efficiency: All ballast shall comply with Public Law 100-357; "National Appliance Energy Conservation Amendments of 1988". Ballast shall be marked with symbol "E-inside-a-circle".

- C. Standard: UL Listed, 60 hertz line frequency.
- D. CFL Starting Circuit:
 - 1. CFL lamps 4 pin modified rapid start.
- E. Ballast factor of 0.95 minimum.
- F. Class P thermal protector
- G. Ballast shall have Class A sound rating.
- H. Minimum starting temperature indoors: 50 degrees Fahrenheit.
- I. Total harmonic distortion of 10 percent or less.
- J. Power Factor of 90 percent minimum.
- K. Lamp Shutdown Protection: Ballast shall detect lamp fault and disconnect lamp from circuit per NEMA recommendations for CFL lamp shutoff circuits.
- L. Warranty: five (5) years.
- M. Voltage: Branch circuit voltage connection shall be readily adjustable dual voltage (120/277) ballasts

2.5 SOLID STATE ELECTRONIC BALLAST

- A. Manufacturers:
 - 1. Advance Transformer Standard Series.
 - 2. Universal Lighting Technologies, Inc.
 - 3. Howard Industries Precision, Inc.
 - 4. Osram Sylvania / Motorola Gold Edition
 - 5. SLI Lighting
- B. Product Description: High Frequency Solid State Electronic Program Start ballast suitable for lamps specified, with voltage to match luminaire voltage.
- C. Lamp Compatibility:
 - 1. Ballast shall be two or three lamp type as required by Luminaire quantity.
 - 2. Ballast shall not reduce the rated life published by the lamp manufacturer.
- D. Voltage: Branch circuit voltage connection shall be readily adjustable dual voltage (120/277) ballasts.
- E. Inrush Current: Submit ballast manufacturer published data for inrush current for each type of electronic ballast required.
- F. Standards:
 - 1. Power Factor: 0.95 minimum for 20 percent THD models and 0.99 for 10 percent THD models.
 - 2. Total harmonic distortion, 20 percent or less.
 - 3. Ballast Warranty: Ballast shall have five (5) year written warranty from date of manufacturer against mechanical or electrical defects under normal conditions of use.

4. CBM Label: Provide fluorescent ballast comply with Certified Ballast Manufacturers Association (CBM) Standards and carry the CBM Mark on the label.
5. Frequency: 60 hertz line frequency.
6. ANSI Ballast Factor: Minimum ballast factor of 0.85.
7. UL Listed and Class P.
8. When located outdoors provide suitable for starting lamps at 0 Degrees F.

2.6 HIGH INTENSITY DISCHARGE (HID) BALLASTS

- A. All recessed HID fixtures shall be thermally protected at the fixture. Remote ballast shall have thermal protection and line fusing.
- B. All HID ballast shall be High Power Factor type constant wattage.
- C. Ballast Circuit: Shall be magnetic-regulator or auto regulator.
- D. Product Description: ANSI C82.4, metal halide lamp ballast, suitable for lamp specified, with voltage to match luminaire voltage.

2.7 FLUORESCENT LAMPS

- A. T8 Fluorescent:
 1. Lamp Color: Provide NEMA color designated RE 741 lamps. Lamp color temperature shall be 4100 Kelvin with CRI of 75 minimum. Lamp shall have rare earth triphosphor coating.
 2. Watts: All lamps shall be reduced wattage energy saving. Provide four(4) foot lamps rated at 32 watts.
 3. Reduced Mercury: four (4) foot T8 lamps shall be reduced mercury type. Lamps shall be Philips Alto Series, Osram Sylvania ECO Series or GE reduced mercury with green caps.

2.8 EMERGENCY BATTERY PACKS

- A. Provide Emergi-Lite FPSIU series, or approved equal, battery pack for fluorescent fixtures designated to have emergency battery back-up.
- B. Fixture shall include lighted push button test switch installed in visible, accessible location adjacent to fixture.
- C. Provide unswitched alternating current power source per manufacturer's instructions.
- D. Provide connection to local switch where indicated on drawings, connect such that fixture can be controlled on/off from local switch without discharge of battery.
- E. For fixtures designated to have emergency battery pack and be on a contactor controlled circuit, provide unswitched alternating current source ahead of contactor and wiring as required to allow automatic on/off control from the contactor without discharge of battery and local on/off switching where indicated.
- F. Battery pack shall provide 1100 lumen output for 90 minutes per 2'x4' light fixture.
- G. Provide integral battery pack for all exit signs where emergency generator power is not available. Battery pack shall provide minimum of 90 minutes output.

2.9 EMERGENCY LIGHTING AUTOMATIC TRANSFER SWITCHES

- A. Provide automatic transfer switch on all lighting fixtures shown to be on emergency.

2.10 HID LAMPS

- A. All lamps shall be clear unless indicated on the Drawings as phosphor-coated or required to be phosphor-coated by fixture manufacturer for proper photometric performance.
- B. Protect HID Lighting fixtures on the side of the ballast with fuse holder. Size and type of fuse shall be per ballast manufacturer.

2.11 DOWNLIGHT FIXTURES

- A. Provide recessed light fixtures with trim rings compatible with the ceiling material where fixture is to be installed.

2.12 COMPACT FLUORESCENT LAMPS (CFL)

- A. Provide Lamp with NEMA color RE 835. Lamp color temperature of 3500 Kelvin. Lamp color rendering index shall be 82 minimum.
- B. CFL shape shall be triple tube, installed vertical, unless luminaire schedule on Drawings states otherwise. Provide Phillips PL-T Series Amalgam CFL or approved equal.

2.13 ACCEPTABLE LAMP MANUFACTURERS

- A. Manufacturers:
 - 1. General Electric
 - 2. Osram Sylvania
 - 3. Venture Lighting
 - 4. North American Phillips
- B. Products shall be produced by manufacturers shown or as scheduled from each type of lighting fixture.
- C. Furnish all lamps of each type from the same manufacturer.

2.14 EXIT SIGNS

- A. Exit signs shall meet visibility requirements and be listed per UL 924 "Emergency Lighting and Power Equipment". Also shall meet Federal, State and Local Codes.
- B. Chevron Directional Indicator: Provide Chevron per NFPA 101 Section 5-10.4.1.2.
- C. Product Description:
 - 1. LED Exit Sign:
 - a. Provide exit sign with Light Emitting Diodes (LED) illuminance source. Cover LED with diffuser.
- D. Housing: Diecast aluminum with stencil face and matte white paint finish.

- E. Input Voltage: 120/277 volt, dual input voltage.
- F. EPA Energy Star Label.
- G. Wire Guards: Install wire guard on all exit signs installed in gyms, lockers rooms, and athletic wing.

2.15 OUTDOOR LUMINAIRE POLE ASSEMBLIES

- A. Outdoor Pole assemblies shall consist of a pole base, pole, luminaire or group and lighting circuit wiring.
- B. Diesel Standard: 2000 (IBC) International Building Code. Section 1609 requires wind forces on structure to be determined by the provisions of ASCE 7.
- C. Minimum Wind Speed: 120 miles per hour.
- D. Metal poles shall comply with NEC 410-15(b).
- E. Pole Material: Steel.
- F. Pole Shape: Round tapered.
- G. Pole finish shall match luminaires along mounting arms and bolt covers. Provide polyester powder coat finish on pole and luminaire, 3 mil thick.
- H. Pole accessories to include handhole and cover, full matching anchor bolt cover, anchor bolt kit, template, washers and leveling nuts.

PART 3 - EXECUTION

3.1 EXISTING WORK

- A. Disconnect and remove abandoned luminaires, lamps, poles and accessories.
- B. Extend existing luminaire installation using materials and methods compatible with existing installation, or as specified.
- C. Clean and repair existing luminaires to remain or to be reinstalled.

3.2 INSTALLATION

- A. General: All luminaires shall have proper supports.
- B. Install suspended luminaires using pendants supported from swivel hangers.
- C. Locate recessed ceiling luminaires as indicated on Drawings.
- D. Install surface mounted ceiling luminaires plumb and adjust to align with building lines and with each other. Secure to prevent movement.
- E. Chain Hung: Unless otherwise indicated all fluorescent fixtures in Mechanical, Electrical and Elevator Equipment Rooms shall be chain hung. Verify exact mounting height with

Architect before installing fixtures. Provide pendant hangers when equipment room has fire-resistive ceiling.

F. Suspended Ceilings:

1. Provide means of support for luminaires per NEC 410-36. T-bar clips shall be installed on the luminaire and shall be field secured to the inverted ceiling tees so that the luminaire is securely fastened to the ceiling system framing members.
2. Ceiling tiles shall not bear the weight of luminaires. Surface mount luminaires, recessed downlights, light track, exit signs, etc. shall be supported by proper frames or other attachment to main ceiling system grid or building structure above ceiling.
3. Luminaires shall be centered in ceiling tile.
4. Luminaire shall have flange or trim ring for closure of ceiling cutout or opening.
5. Fire-rated Ceiling Assembly: For Luminaires to be flush-mounted into a fire-rated ceiling or surface mounted to a fire-rated ceiling, install with independent, secure support. Raceway, cable assemblies, boxes and fittings located above a fire-rated floor/ceiling or roof ceiling assembly shall not be secured to, or supported by, the ceiling assembly including the ceiling support wires. Provide an independent means of secure support. Independent support wires shall be distinguishable by color, tagging, or other effective means from those that are part of the fire-rated design.

- G. Verify weights and recommended mounting methods of all luminaires with manufacturers. Furnish and install supports. Luminaires weighing more than 30 pounds shall be supported independently of the outlet box.

3.3 LOCATIONS

- A. Luminaires shown on the Electrical Drawings represent general arrangements only. Refer to Architectural Drawings and to Architect on jobsite for more exact locations. Coordinate location with all other trades before installation. Coordinate all light fixtures in Mechanical Rooms with the final installed piping and ductwork layouts. Adjust fixture mounting height and location if required so that light output is not obstructed by piping and ductwork.

3.4 FIRE INTEGRITY OF CEILING PENETRATIONS

- A. Where ceiling is part of a fire-rated assembly, maintain integrity of that assembly with methods given in Section Electrical Hangers and Supports. Obtain ceiling system UL Fire Resistance Directory Design Number from Architectural Drawings.

3.5 AIMING AND ADJUSTMENT

- A. General: All adjustable lighting units shall be aimed, focused, and locked by the Contractor under the supervision of the Architect/Owner. All aiming and adjusting shall be carried out after the entire installation is complete.

3.6 LAMPS

- A. Clean all lamps after installation.

3.7 CLEANING

- A. Lens: Clean lenses of all luminaires after space is finished and prior to project acceptance.
- B. Louvers: Remove plastic bag from parabolic louver luminaires after space is finished and prior to project acceptance. Do not remove bags until luminaires have been cleared by the air-balance subcontractor.

3.8 OUTDOOR LUMINAIRE POLES

- A. Pole Base: Do not grout space between pole base plate and top of concrete pole foundation. Leave open to allow water to drain and for pole to breathe. If grout is recommended by pole manufacture in space between pole base plate and top of concrete pole foundation, provide grout with drain hole through grouting.
- B. Pole Delivery: Unwrap pole upon delivery to job site, unless otherwise instructed by pole manufacturer. Wrapped poles exposed to weather that show wrapper striping or other deterioration of finish shall be replaced at Contractor expense. Replacement shall be new pole or pole refinished at pole factory.
- C. Installation:
 - 1. Poles shall be erected only with luminaire(s) or equivalent damping device, unless otherwise instructed by pole or luminaire manufacturer. Poles installed without luminaires are subject to increased modes of vibration.
 - 2. Do not level pole with shims; leveling nuts above and below pole baseplate provide flexible adjustment and long-term holding of pole position.
 - 3. Provide anchor bolts and pole manufacturer's bolt template prior to concrete formwork for pole bases.
 - 4. Minimum wire size for circuit tap inside pole shall be AWG #12.
 - 5. Install pole base cover. Cover shall rest on top of concrete pole foundation and completely conceal air space under pole base plate.
- D. Fusing:
 - 1. Install fuse holder and fuses as noted in pole base detail on Drawings.
 - 2. All ballast-controlled luminaires shall be protected by Bussmann Fuses FNQ with Holders HEB (1-pole) or (2-pole) HEX. Fuse(s) and holder shall be mounted inside pole at handhole. Size of fuse to be recommended by the luminaire manufacturer.

3.9 RFI

- A. Provide flexible braided metal electrical bonding strap from grounded housing to door frame of all fluorescent parabolic fixtures in designated rooms. Bonding strap shall be braided conductor designed for field installation to either long door side.

END OF SECTION 26 50 00

SECTION 26 55 61 – BROADCAST LIGHTING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Supply of all broadcast lighting devices, equipment and components as required for a complete and operational system. Setup of all loose equipment (e.g. lighting control console, video monitors, printers, etc.) is by this Contractor.
- B. Provision and installation of all conduit, wire, back boxes, junction boxes, pull boxes and terminal boxes as required by the drawings and specifications is by the Electrical Contractor. Installation of all equipment, devices and permanently installed equipment is by the Electrical Contractor. Provision and installation of All 120vac and control wire and terminations shall be by the Electrical Contractor.
- C. Configure lighting control network, including programming of managed switch as required to maximize transmission rate for devices transmitting data at different rates.
- D. Programming of control console shall be provided by a Factory certified technician. Programming will include having a lighting board operator on site to establish "broadcast lighting looks" and save them to the console and preset stations. Programming shall be as defined by the Theater Consultant and the Owner.
- E. Field verification of dimensions, conditions and obstructions at the job site.
- F. Submissions of shop drawings for all components, equipment, materials, systems and interconnection of the same.
- G. Coordination of manufacturing and installation of all systems supplied herein. Field inspection and supervision of installation work provided by the Electrical Contractor.
- H. System inspection, turn-on, commissioning and final adjustment.
- I. Delivery, assembly, installation, focusing as required of all broadcast lighting fixtures. Work shall be conducted by individuals trained and skilled in Broadcast Lighting hanging and focusing. For the TV Broadcast Studio fixtures the contractor will install, focus, assign DMX addresses and program the colorsource lighting control console.
- K. Owner training as outlined by these specifications.
- L. Systems operations and maintenance manuals.
- M. System warranty as defined by these specifications.
- N. The lighting system shall basically be comprised of the following:
 - 1. Broadcast lighting relay panel and control systems
 - 2. Broadcast lighting circuit distribution systems.
 - 3. Broadcast lighting fixtures including installation, focusing and programming.

1.3 QUALITY ASSURANCE

- A. Work shall be done by people skilled in this trade in strict accordance with the requirements and/or specification of the manufacturers of the material being used.
- B. Qualifications:
 - 1. The lighting systems integrator shall be a Factory approved and warranted service center for all of the equipment supplied. Field engineers and service technicians shall be factory

trained and qualified for all on-site and in-shop engineering services required. The Systems Integrator shall be a dealer of all manufacturers of the proposed equipment. Integrator must be a warranted service center for all of the equipment supplied. The manufacturer shall have been engaged in the production of entertainment and theatrical lighting and control systems for a minimum of ten (10) years.

2. The manufacturer shall have completed a minimum of ten (10) system installations of similar or larger size.
3. The manufacturer shall be capable of providing a factory trained field engineer to the job site within 24 hours of a service call. They shall maintain a 24 hour emergency service phone line. A call to the emergency line shall result in an engineer responding within 30 minutes from the time of call.
4. Field engineers and service technicians shall be factory trained and qualified for all on-site and in-shop engineering services required.
5. Specified Broadcast Lighting Manufacturers: (Systems are based on products manufactured by ETC, however Strand Lighting is an approved manufacturer).
 - a. ETC
3030 Laura Lane
Middleton, WI 53562
(608) 831-4116
 - b. SSRC
2172-A River Road
Greer, SC 29650
(864) 848-9770
 - c. Union Connector
300 Babylon Turnpike
Roosevelt, NY 11575
(516) 623-7461
 - d. Pathway Connectivity
480C 36 Avenue SE
Calgary ABT25 W4
(403) 243-8110
 - e. Middle Atlantic Products Inc.
North Corporate Drive
Riverdale, NJ 07457
(973) 839-8821
 - f. Desisti
DESMAR CORPORATION
1011, Route 22 East – Unit “D” – Mountainside, NJ 07092
(908) 317-0020
6. The Lighting Systems shall be provided by one of the following pre-approved Lighting System Integrators:
 - a. Texas Scenic, San Antonio, TX (210) 684-0091
 - b. Vincent Lighting Systems, Pittsburgh, PA (412) 788-5250
 - c. Barbizon Lighting, New York, NY (212) 586-1620

1.4 REFERENCES

- A. Regulatory Agencies:
 1. Electronics Industries Association

2. National Electrical Code
3. National Electrical Manufacturers Association
4. National Fire Protection Association
5. Underwriter's Laboratories
6. Occupational Safety and Health Act of 1970
7. Additional applicable codes, standards, regulations and guidelines shall be adhered to in both spirit and letter of intent.

1.5 SUBMITTALS

A. Shop Drawings

1. Submit field coordinated shop drawings for approval prior to installation. Shop drawings shall indicate all box locations, mounting heights, pull box and junction box locations, conduit routing and conduit wire fill. Site dimensions and conditions affecting the Work shall be verified prior to commencement of Shop Drawings.
2. Shop drawings shall be wholly coordinated with other work of the Electrical Contractor.
3. Shop drawings shall be made in conformity with the best modern practice and all design shall reflect a requirement for minimizing institutional maintenance.
4. Submit electronic shop drawings. All drawings shall be produced on AutoCAD or compatible system to ensure legibility and quality of submission. Obtain approval of the drawings prior to proceeding with manufacture and fabrication. Complete shop drawings shall include:
 - a. General arrangement plans and diagrams indicating location of each device, component and equipment item. (1/4" = 1'-0" minimum)
 - b. Component installation details. (1" = 1'-0" minimum)
 - c. Manufacturer's component equipment drawings
 - d. Manufacturer's catalogs cuts showing weight, dimensions and capacities of mechanical components.
 - e. Power and control riser diagrams indicating wire and cable routing for all lighting devices.

B. As-Builts:

1. Submit in accordance with the General Conditions.
2. Four copies of as-built and installed shop drawings. AutoCAD copies of general arrangement, elevations and connection details shall be provided on disk as part of the As-built drawing submission.

1.6 WARRANTY, SERVICE AND TRAINING

- A. The Contractor shall warrant systems to be free of defective components, faulty workmanship or improper installation/adjustment for a period of one (1) year from the date of Owner's final acceptance.
- B. The field supervisor and project manager for this Contractor shall be present at the Systems turn-on, checkout and testing and Owner training session. The Contractor shall make necessary repairs and advise on field installation nuances at time of training. Failure to attend these meetings may result in delay of final approval of overall system.
- C. Programming of the systems with the Theater Consultant and the Owner's representatives shall include control console setup and channel assignments (including assignment for interface with the house lighting systems), definition of preset / entry station functions and programming of the

various presets (including house lights and various broadcast lighting “looks”), and assignment/setup of all lighting network locations and Gateways as required. Programming session requires a qualified lighting board operator to be on site and operating the console throughout the session. Modifications to the program assignments may be made as part of other training sessions

- D. Training shall consist of (2) two-hour sessions at times mutually agreeable to the Owner and this Contractor. The training session shall occur no later than (7) days after final inspection and approval of the system. Training shall include programming of the control systems as directed by the user group and theater consultant.
- E. This Contractor shall provide one half-yearly visit to the site for checking and adjusting of equipment. The visit shall occur six months after the system has been accepted and shall be at a time mutually agreeable to the Owner and this Contractor. Visit can coincide with training session if mutually agreeable with Owner.
- F. For the first (30) days after final acceptance of the system, the Contractor shall be required to answer all service calls within twenty-four hours of a request being made. After the (30) day period, the Contractor shall meet all requirements established by the one (1) year warranty.

1.7 SUBSTITUTIONS

- A. Requests for substitutions and/or alternate manufacturers for the specified equipment, components and/or accessories shall be made in writing prior to bid. Requests shall provide detailed description of the substituted item, effect the substitution will have on the overall system, benefits of substitution over the specified product and any cost advantages to the substitution. Requests for substitution shall be made minimum (14) days prior to bid. Review of proposed substitution by the Consultant, Architect or Owner shall not be construed as acceptance of the substitution.

PART 2 – PRODUCTS

2.1 GENERAL

- A. Where equipment, components or wiring systems have been omitted from the specifications or drawings, but are necessary for the operation of the system, they shall be provided by this Contractor without claim for additional payment or time.
- B. Where the specified control cables differ from the Manufacturer’s recommended cable and are required for a fully operational system, it shall be the responsibility of this Contractor to bring this discrepancy to the attention of the Architect and Consultant prior to bid.
- C. Items, materials and equipment shall be new and undamaged. Uniform materials shall be used throughout. All steelwork shall be cleaned, primed with rust inhibitor and painted with epoxy resin or baked enamel finish. This Contractor shall replace or repair all damaged equipment. All touch-up paint shall match the manufacturer’s color identically.
- D. The mechanical fabrication and workmanship shall incorporate best practices for good fit and finish. There shall not be any burrs or sharp edges to cause a hazard to operating personnel.

2.2 EQUIPMENT

- A. Major Equipment List: Theater Space

ITEM	MFGR	MODEL	QUANTITY
24 Cct. Relay Panel	ETC	Sensor IQ-24-MCB22k + 120-24S Door	1
DMX Opto-splitter	ETC	RSN-OPTO-Dbox 16 w/Din Enclosure	1
Control Console	ETC	Colorsound 20	1
25’ Power Cable	ETC	Colorsound 20	1
25’ DMX Cable	Proplex	5 Pin XLR	1

Console Dust Cover	ETC	Colorsources 20	1
Circuit Distribution Boxes	ETC	Pipe and Surface Mtd. Boxes	Lot
Control Receptacles	ETC	Pipe and Surface Mtd. Boxes	Lot

2.3 BROADCAST LIGHTING – 120vac DISTRIBUTION EQUIPMENT

- A. This system shall include all 120vac wiring devices for the connection of portable broadcast lighting fixtures. Devices shall be provided as defined by the drawings. Devices shall be constructed of black aluminum in thickness required by structural and NEC requirements.
- B. Provision and installation of all broadcast lighting electrical devices as defined by the device schedules and drawings shall be the responsibility of the Electrical Contractor. All materials must comply with the NEC. All electrical equipment and materials shall have the listing of the Underwriter's Laboratories, Inc. and shall bear the labels attesting to UL listing.
- C. All devices shall be provided with provided prewired with 125 degree XLP high temperature wire to molded barrier terminal blocks. Terminal blocks shall be sized to accept #10 THHN conductors.
- D. All devices shall be appropriately labeled with permanently attached lamacoid circuit numbers. Where custom panels are specified they shall be silk screened or finished as defined by the drawings.
- E. Where components, support devices and other materials have been omitted from the specifications and drawings, but are necessary for the operation of the system, they shall be provided without additional cost to the Owner.

2.4 BROADCAST LIGHTING FIXTURES AND ACCESSORIES

- A. TV BROADCAST STUDIO - Provide the following fixtures and accessories: (See Drawings for more information and accessories)

6 – Desisti Super LED 4.7 Fresnels (tungsten balanced) (DMX controlled) with Powercon Connector, C-Clamp and Four Leaf Barndoors.

6 – ETC ColorSource Junior PAR Deep Blue-Black (CSPARJRDB). With soft focus diffuser, pattern holder & PowerCON connector. Apollo Get-A-Grip Black. Install with Selador Flood Lens, but provide N, M, & EX-W Round Diffusers in Frame –Black.

8 – ETC Colorsources Junior Spots Deep Blue Zoom 25-50 Ellipsoidal Spotlights (CSSPOTJRDB2550) with Powercon connector.

6 – Desisti Soft LED Studio Lights with c-clamp, gel frame, Powercon Connector

20 – 5' Edison to Powercon Adaptors

16 – 5' 5-Pin XLR Extension Cables (DMX)

16 – 10' 5-Pin XLR Extension Cables (DMX)

16 – 5' powerCON Male to powerCON Female Jumper

16 – 10' powerCON Male to powerCON Female Jumper

8 - Altman - 99-DMX Terminator

4 – Matthews Baby Jr. Double Riser Castered Stands Model 386025

8 – Matthews 15# Sand Bag Model 299559

PART 3 – EXECUTION

3.1 PREPARATION

- A. Examine all Work prepared by others to receive Work of this Section and report defects affecting installation to the Consultant. Commencement of Work shall be construed as complete acceptance of preparatory Work. The sphere of inspection shall include but not be limited to:
 - 1. Coordination of device locations with other trades and Work provided by others.
 - 2. Coordination of all box sizes and conduit routing.
 - 3. Assurance all mounting surfaces are ready to accept the Work.
 - 4. Verification of flatness, plumb and level of mounting conditions.
 - 5. Inspection of all components of the Work supplied by others to insure no damage has occurred during shipping or storage.
- B. Examine the site and review the contract drawings to become familiar with the work. Field verify all dimensions at the site prior to installation and advise the Consultant of all system modifications required by field conditions.
- C. Coordinate the Work with related trades. This shall include the preparation of schedules and coordination of equipment delivery and storage.
- D. Appropriate signage shall be furnished during overhead Work to caution of personnel working above.
- E. All broadcast lighting fixtures shall be delivered to the job site, assembled, lamped, installed, circuited, gelled and focused as directed by the owner, theater consultant and the lighting plot. Provide all labor and materials as required to accomplish this work.

3.2 WORKMANSHIP

- A. The installation of all Work shall be neat. All equipment shall be plumb and square. All cables shall be neatly bundled with plastic tie wraps as required.
- B. Surface mounted devices shall be provided with an integral backbox/enclosure by this Contractor. The enclosure shall be designed such that the receptacle faceplate does not overhang the edges of the enclosure. In all surface mounted cases, the faceplates and back box enclosure shall be flush along the outside edges and provided by this Contractor.
- C. Work that is damaged or improperly installed will be removed and replaced. Materials and labor required for such repairs shall be provided without claim for payment.
- D. Terminations shall be accomplished with appropriate connectors. Provide strain-relief at connectors where required.

3.3 INSPECTION AND TESTING

- A. The Consultant following receipt in writing or notification from this Contractor that the installation is completed shall make final inspection.
- B. If inspection reveals any detail of construction, fabrication, or installation not in strict accord with the specification and contract requirements, approval shall be withheld and the Contractor shall be given thirty days to repair the rejected items as required. In addition to the final inspection of components the Consultant shall have the right of inspection during the course of the installation, and shall be allowed access to materials at the side for eventual incorporation in the Work. Preliminary inspection shall not be construed as eliminating the possible rejection of various components during the final inspection detailed above.
- C. The completed installation of the system shall be tested and operated for the approval of the Consultant.
- D. This Contractor's field supervisor and project manager must be on site during the system turn on, check-out and testing and Owner training.
- E. The following condition must be met before final approval can be granted:

1. Final tests and inspections are approved.
2. Punch list items complete.
3. Submittal of three copies of warranty.
4. Submittal of record drawings and instruction manuals.
5. Owner training completed.

END OF SECTION 26 55 61

SECTION 27 00 00 - BASIC MATERIALS AND METHODS

PART 1 – GENERAL

1.01 RELATED WORK

- A. The entire drawing and specification package apply to the work specified in the telecommunications sections of the specifications and shall be complied with in every respect. The Contract Documents are comprised of the drawings and specifications. The Contractor shall examine these Contract Documents, and coordinate required work indicated in each.

1.02 SCOPE OF WORK

- A. The work covered by the specifications includes furnishing materials, labor, transportation, tools, permits, fees, utilities, and incidentals necessary for the complete installation of work required in the Contract Drawings.
- B. It is the intent of the Contract Documents to provide an extension of the existing installed systems interfaced with new systems, complete in every respect.
- C. The Contractor shall be responsible for coordination and proper relation of his work to the building structure and to the work of all trades. The Contractor shall visit the premises and thoroughly familiarize himself with the existing site conditions, details of the work and the working conditions, and verify dimensions in the field. The Contractor shall advise the Engineer of any discrepancy prior to bidding. The submission of bids shall be deemed evidence of the Contractor's site visit; coordination of existing conditions and include consideration for existing conditions.
- D. Provide line-by-line specification review for each Division 27 section annotated to certify compliance or deviation.

1.03 DRAWINGS AND SPECIFICATIONS

- A. The drawings and these specifications are complementary to each other, and what is required by one shall be as binding as if required by both.
- B. If variations or departures from the drawings are deemed necessary by the Contractor, details of such departures and the reasons therefore shall be submitted to the Engineer for review. No departures shall be made without prior written acceptance of the Engineer.
- C. Should the drawings or specifications disagree in themselves or with their counterpart, the better quality or greater quantity of work or materials shall be estimated upon, and unless otherwise directed by the Engineer in writing, shall be performed or furnished. In case the specifications should not fully agree with the Schedules, the latter shall govern. Figures indicated on drawings govern scale measurements and large scale details govern small scale drawings.
- D. Items specifically mentioned in the specifications but not shown on the drawings and/or items shown on the drawings but not specifically mentioned in the specifications shall be installed by the Contractor under the appropriate section of work as if they were both specified and shown.

1.04 CODES AND STANDARDS

- A. All work shall comply with the applicable articles of the National Electrical Code, the National Electrical Safety Code, the National Fire Codes (published by National Fire Protection Association), and City Codes and Ordinances, as well as any other authorities that may have lawful jurisdiction pertaining to the work specified. None of the terms or provisions of this specification shall be construed as waiving any of the rules, regulations, or requirements of these authorities.
- B. Contractor is responsible for knowledge and application of current versions of all applicable standards and codes. In cases where listed standards and codes have been updated, Contractor shall adhere to the most recent revisions, including all relevant changes or addenda at the time of installation.
- C. ANSI/TIA:
 - 1. ANSI/TIA-526-7-A (July 2015) Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant
 - 2. TIA-526.2-A (July 2015) Effective Transmitter Output Power Coupled into Single-Mode Fiber Optic Cable - Adoption of IEC 61280-1-1 ed. 2 Part 1-1: Test Procedures for General Communication Subsystems – Transmitter Output Optical Power Measurement for Single-Mode Optical Fiber Cable
 - 3. ANSI/TIA-4994 (March 2015) Standard for Sustainable Information Communications Technology
 - 4. ANSI/TIA-526-14-C (April 2015) Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant
 - 5. ANSI/TIA-568.0-D (September 2015) Generic B (supersedes TIA-568-C.0 and TIA-568-C-1)
 - 6. ANSI/TIA-568.1-D (September 2015) Commercial Building Telecommunications Infrastructure Standard (supersedes ANSI/TIA-C.1)ANSI/TIA-568.2-D (September 2018) Balanced Twisted-Pair Telecommunications Cabling and Components Standard
 - 7. ANSI/TIA-568.3-D (June 2016) Optical Fiber Cabling Components Standard
 - 8. ANSI/TIA-568.4-D (August 2020) Broadband Coaxial Cabling Components Standard
 - 9. ANSI/TIA-569-E (May 2019) Telecommunications Pathways and Spaces
 - 10. ANSI/TIA-598-D (July 2014) Optical Fiber Cable Color Coding
 - 11. ANSI/TIA-570-C (August 2012) Residential Telecommunications Infrastructure Standard
 - 12. ANSI/TIA-606-C (June 2017) Administration Standard for Telecommunications Infrastructure
 - 13. ANSI/TIA-607-D (July 2019) Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises
 - 14. ANSI/TIA-758-B (March 2012) Customer-Owned Outside Plant Telecommunication Infrastructure Standard
 - 15. ANSI/TIA-862-B (February 2016) Structured Cabling Infrastructure Standard for Intelligent Building Systems
 - 16. ANSI/TIA-942-B (July 2017) Telecommunications Infrastructure Standard for Data Centers
 - 17. ANSI/TIA-1005-A (May 2012) Telecommunications Infrastructure Standard for Industrial Premises
 - 18. ANSI/TIA-1005-A-1 (January 2015) Telecommunications Infrastructure Standard for Industrial Premises, Addendum 1- M12-8 X-Coding Connector - Addendum to TIA-1005-A
 - 19. ANSI/TIA-1183 (August 2012) Measurement Methods and Test Fixtures for Balun-Less Measurements of Balanced Components and Systems
 - 20. ANSI/TIA-1183-1 (January 2016) Measurement Methods and Test Fixtures for Balun-Less Measurements of Balanced Components and Systems, Extending Frequency

Capabilities to 2 GHz - Addendum to TIA-1183

21. TIA-1152 (November 2016) Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling
22. TIA-1179-A (September 2017) Healthcare Facility Telecommunications Infrastructure Standard
23. ANSI/TIA-4966 (May 2014) Telecommunications Infrastructure Standard for Educational Facilities
24. TIA-455-104-B (February 2016) FOTP 104- Fiber Optic Cable Cyclic Flexing Test (supersedes TIA-455-104-A)
25. TIA/EIA-455-25-D (February 2016) FOTP-25 Impact Testing of Optical Fiber Cables
26. TIA-604-18 (November 2015) FOCIS 18 Fiber Optic Connector Intermateability Standard – Type MPO-16
27. TIA-604-5-E (November 2015) FOCIS 5 Fiber Optic Connector Intermateability Standard-Type MPO
28. TIA-5017 (March 2016) Telecommunications Physical Network Security Standard
29. TIA-TSB-155-A (Reaffirmed 10-6-2014) Guidelines for the Assessment and Mitigation of Installed Category 6 Cabling to Support 10GBASE-T
30. TSB-184 (July 2009) Guidelines for Supporting Power Delivery Over Balanced Twisted-Pair Cabling
31. TSB-4979 (August 2013) Practical Considerations for Implementation of Multimode Launch Conditions in the Field
32. TSB-190 (June 2011) Guidelines on Shared Pathways and Shared Sheaths
33. TIA-TSB-162-A (November 2013) Telecommunications Cabling Guidelines for Wireless Access Points
34. TSB-5018 (July 2016) Structured Cabling Infrastructure Guidelines to support Distributed Antenna Systems
35. TIA-492AAAE (June 2016) Detail Specification for 50- μ m Core Diameter/125- μ m Cladding Diameter Class 1a Graded-Index Multimode Optical Fibers with Laser-Optimized Bandwidth Characteristics Specified for Wavelength Division Multiplexing
36. TIA-492AAAB-A (November 2009) Detail specification for 50- μ m core diameter/125- μ m cladding diameter class 1a graded-index multimode optical fibers
37. TIA-455-243 (March 2010) FOTP-243 Polarization-mode Dispersion Measurement for Installed Single-mode Optical Fibers by Wavelength-scanning OTDR and States-of-Polarization Analysis
38. TSB-172-A (February 2013) Higher Data Rate Multimode Fiber Transmission Techniques

- F. National Electric Codes
 1. National Electrical Safety Code (NESC) (IEEE C2-2012)
 2. NFPA 70-2020, National Electrical Code® (NEC®)
 3. ANSI/IEEE C2-207, National Electrical Safety Code®
 4. National Electrical Code (NEC) (NFPA 70)
 5. NFPA 72 National Fire Alarm and Signaling Code
- G. ASHRAE
 1. ASHRAE Standard 90.4P, Energy Standard for Data Centers and Telecommunications Buildings
- H. OSHA Standards and Regulations – all applicable
- I. Local Codes and Standards – all applicable
- J. Anywhere cabling standards conflict with one another or with electrical or safety codes, Contractor shall defer to the NEC and any applicable local codes or ordinances, or default to the most stringent requirements listed by either.

- K. Knowledge and execution of applicable standards and codes is the sole responsibility of the Contractor.
- L. Any violations of applicable standards or codes committed by the Contractor shall be remedied at the Contractor's expense.
- M. In any instance where these Specifications call for materials for construction of a better quality or larger size than required by the codes, the provisions of these Specifications shall take precedence. The codes shall govern in case of direct conflict between the Codes and the Drawings.

1.05 EXISTING UTILITIES

- A. The Contract Documents reflect the general location and routing for all telecommunications services known to exist on this project.

1.06 BUILDING CONSTRUCTION AND LAYOUT OF WORK

- A. General: It shall be the responsibility of the Contractor to consult the Engineering Drawings and Details so as to thoroughly familiarize himself with the type and quality of construction to be provided on this project.
- B. The drawings are diagrammatic in nature and do not show every connection in detail or every line or conduit in its exact location. These details are subject to the requirements of all codes and ordinances as well as all structural and architectural conditions. The Contractor shall carefully investigate structural and finish conditions and shall coordinate the separate trades in order to avoid interference between the various phases of work. Work shall be laid out so that it will be concealed in furred chases unless specifically noted or indicated to be exposed. Work shall be installed to avoid crippling of structural members; therefore, inserts to accommodate conduit hangers shall be set before concrete is poured, and proper openings through floors, walls, beams, etc. shall be provided as hereinafter specified or as otherwise indicated or required before concrete is poured. All work shall be run parallel or perpendicular to the lines of the building unless otherwise noted.
- C. The approximate location of equipment items is indicated on the drawings. Exact locations are to be determined by coordination of dimensions from approved equipment submittals and site-verified field measurements and will in all cases be subject to the approval of the Engineer. The Engineer reserves the right to make any reasonable changes in the indicated locations prior to installation for no additional cost.
- D. In areas of existing special ceiling construction the removal and restoration must be carefully planned such that the existing condition of the ceilings is maintained. It may be necessary for the Contractor to procure a Subcontractor familiar with this work to achieve this requirement.

PART 2 – PRODUCTS

2.01 GENERAL MATERIALS AND EQUIPMENT REQUIREMENTS

- A. Materials, in general, shall conform to the National Electrical Code requirements and shall be listed, inspected, and approved by the Underwriters Laboratories and shall bear the UL label where labeling service is available. The label or listing of the Underwriters

Laboratories, Inc. will be accepted as evidence that the materials or equipment conform to the applicable standards of that agency. In lieu of this listing, the Contractor may submit a statement from a nationally recognized, adequately equipped testing agency, indicating that the items have been tested in accordance with required procedures, and that the materials and equipment comply with all Contract requirements.

2.02 STANDARD PRODUCTS

- A. Materials and equipment shall be the standard catalog products of manufacturers regularly engaged in the manufacture of products conforming to these specifications, and shall essentially duplicate materials and equipment that have been in satisfactory use at least two (2) years prior to bid opening. Where custom or special items are required, these shall be fully described using drawings, material lists, etc., which fully describe in detail the item proposed for use on this project.

2.03 MANUFACTURER'S INSTRUCTIONS

- A. The Contractor is responsible for furnishing the proper telecommunications equipment and/or material and for seeing it is installed as intended by the manufacturer. The Contractor shall, wherever necessary, request advice and supervisory assistance from equipment manufacturers as required for the proper installation, operation, or start-up. The Contractor shall notify the Engineer in writing of any conflict between the Contract Documents and the manufacturer's recommendations and shall obtain from the Engineer instructions/direction before proceeding with the work. The Contractor shall pay for all costs resulting from deficiencies created by installation not in accordance with the manufacturer's recommendations or the instructions of the Engineer.

2.04 RUST PREVENTION

- A. Metallic materials shall be protected against corrosion. Exposed metallic parts of equipment exposed to the elements shall be given a rust inhibiting treatment and standard finish by the manufacturer. Components such as boxes, bodies, fittings, guards, and miscellaneous parts shall be protected in accordance with the ASTM A123 or A153, except where other equivalent protective treatment is specifically approved in writing.

2.05 STORAGE AT SITE

- A. The Contractor shall not receive material or equipment at the job site until ready for installation or until there is suitable space provided to properly protect equipment from rust, weather, humidity, dust, or physical damage.

2.06 CONDITION OF MATERIALS

- A. All materials required for the installation of the telecommunications systems shall be new and unused. Any material or equipment damaged in transit from the factory, during delivery to premises, while in storage on premises, while being erected and installed, or while being tested, until time of final acceptance, shall be replaced by this Contractor without extra cost to Owner.

2.07 NAMEPLATES

- A. Factory assembled components and equipment shall be provided with embossed nameplates, securely attached to the equipment with rivets or screws. Nameplates will have information required to specifically identify the equipment in the future such as the

manufacturer's name, address, catalog number, serial number, etc. All data on nameplates shall be legible at the time of final inspection.

PART 3 – EXECUTION

3.01 ACCEPTABLE MANUFACTURERS

- A. The specifications contain the names of manufacturers which are considered acceptable based on the quality of the product.
- B. Where acceptable manufacturers are listed, only products of those manufacturers may be provided. Additionally, the product must meet all the detailed requirements of the specifications.
- C. If no manufacturer's name is mentioned, the Contractor shall provide equipment and material which meet the specifications.
- D. The drawings represent the manufacturer's equipment scheduled. The listing of acceptable manufacturers in the specifications is not intended to imply that equipment of these other manufacturers will fit in the space provided or have the same electrical, structural or other requirements as the equipment scheduled. The Contractor must ensure that the equipment provided will meet all project requirements prior to submitting data on that equipment.

3.02 SPACE AND EQUIPMENT ARRANGEMENT

- A. Equipment and components shall be installed in a manner to permit access to parts requiring service. Telecommunications equipment shall be installed in such a manner as to allow removal for service without disassembly of adjacent equipment.
- B. Large equipment or apparatus which is to be installed in the building, and which is too large to permit access through stairways, doorways, or shafts shall be brought to the job and placed in the space before the enclosing structure is completed. Following placement in the space, such apparatus shall be thoroughly protected from damage.
- C. Equipment shall have working clearances as required by applicable codes and standards.

3.03 SUBMITTAL AND REVIEW OF MATERIALS

- A. After the Contract is awarded, but prior to proceeding with the Work, the Contractor shall obtain, check, certify, and submit complete Shop Drawings and Brochures from Manufacturers, Suppliers, Vendors, etc., for all materials and equipment specified herein. Submit Shop Drawings and Brochures in sufficient time so as not to impede the progress of work. Three weeks will be required for the processing of Shop Drawings and Brochures in the Engineer's office, exclusive of transmittal time. This time shall be considered by the Contractor when scheduling submittal data. After the Contract is awarded, the Contractor will advise the Engineer in writing of the schedule for submission of shop drawings and product data and the persons authorized to sign submittal data on behalf of the Company.
- B. The Engineer's review of Shop Drawings and Brochures shall not relieve the Contractor of the responsibility for dimensions, errors that may be contained therein, or deviations from Contract Document requirements. It shall be clearly understood that the Engineer's noting some errors but overlooking others does not grant the Contractor permission to proceed in error. Regardless of any information contained in the Shop Drawings, the requirements of

the Contract Documents shall govern and are not waived or superseded in any way by the submittal data review.

- C. Before submission of Shop Drawings and Brochures, the Contractor shall certify that each Shop Drawing and each item of material or equipment complies with the Contract Documents for this Project. Such certification shall be made by the Owner, a Partner, a Corporate Officer of the Contractor, or by a person duly authorized to sign for the Contractor. Unless so certified, Shop Drawings and/or Brochures will be returned for resubmittal. Certifications shall be in the form of rubber stamp impressions or typed letter which states:

I hereby certify that this Shop Drawing and/or brochure and the equipment and material shown on this Shop Drawing and/or Brochure complies in all aspects (except as noted*) with the requirements of the Contract Documents for this Project. I further certify that all data shown herein as to performance, dimensions, construction, materials, and other pertinent items are true and correct.

Name of Contractor _____

Signed _____

Position _____

Date _____

*Refer to exception requirements herein.

- D. Each Shop Drawing shall indicate in the lower right hand corner and each Brochure shall indicate on the front cover the following: Title of the Sheet or Brochure; name and location of the building; names of the Engineer, Contractor, Manufacturer, Supplier, Vendor, etc., the date of submittal; and the date of each correction and revision. So far as is practical, each Shop Drawing and/or Brochure shall bear a cross-reference note to the sheet number or numbers of the Contract Drawings and Specifications showing the same work. Shop Drawings and Brochures shall be prepared as follows:

1. Shop Drawings: Drawings shall be newly prepared and not reproduced from the Contract Documents, drawn to a scale that can be easily read and shall contain sufficient plans, elevations, sections, and isometrics to describe clearly the items in question. Drawings shall be prepared by a draftsman skilled in this type of work. All equipment layouts and similar Shop Drawings shall be drawn to at least 1/4-inch = 1'-0" scale.
2. All Shop Drawings shall indicate the equipment actually purchased. The elevation, location, support points, load imposed on the structure at support and anchor points, shall be indicated. All beam penetrations and slab penetrations shall be indicated and sized and shall be coordinated. All Design Drawing space allocations shall be maintained, such as ceiling height, chase walls, equipment room size, etc., unless proper written authorization is required from the Engineer to change them. All associated equipment shall be coordinated and clearly shown on the Shop Drawings.
3. Brochures: Brochures submitted to the Engineer shall be published by the Manufacturers and shall contain complete and detailed engineering and dimensional information to show that the equipment will fit into the allotted space.
4. Brochures submitted shall contain only information which is relevant to the particular

equipment or materials to be furnished. Do not submit catalogs that describe several different items other than those items to be used unless all irrelevant information is marked out or relevant information is clearly marked.

- E. The submittal format shall follow the Specifications format with a submittal required for each required section. The submittal shall be contained in a three-ring hard back binder. Copies of each submittal shall be three-hole punched and arranged (or folded if required) for the Engineer's filing convenience. Provide one copy of updated TABLE OF CONTENTS and progressive-tabbed index sheets also for the Engineer's filing convenience.
- F. Submittal data for each section must be complete. Partial submittals will not be reviewed. To the greatest extent possible all sections shall be submitted with the first submission. No more than three additional submissions will be allowed to complete the submittal package.
- G. Unless a greater number is indicated within Division One of these specifications, submit six (6) copies of all Brochures for review. Submit one (1) reproducible and one (1) blueprint of shop drawings for review. Comments will be made on the reproducible to facilitate copying.
- H. Any submittal that is disapproved must be resubmitted within two (2) weeks following notification of such disapproval. If no satisfactory material is submitted within the two-week period, the Engineer reserves the right to require the Contractor to furnish items exactly as described in the Contract Documents.
- I. No allowances will be made for submittals which are not made in a timely fashion or which are turned down because they do not meet the specifications. Should delivery problems arise due to the above, affecting the completion time of the project, the Contractor will furnish and install acceptable alternates until the proper materials arrive and then replace the alternate materials with the approved materials, all at no cost to the Owner. If the Contractor is not able to furnish an acceptable alternate until the proper materials arrive, he will assume all costs for furnishing and installing all alternates as directed by the Engineer and/or will pay a suitable penalty for the inconvenience experienced by the Owner. This penalty will be set by the Owner based on the particular circumstances.

3.04 SUPERVISION

- A. A competent certified foreman or superintendent, approved by the Engineer, shall be maintained at the project site to receive instructions and to act for the Contractor. Once this superintendent has been approved, no change shall be made without approval of the Owner or his authorized representative. The Owner and his authorized representative shall have the right to observe the work at any time. The Contractor shall have a representative present when his work is being observed, and he shall give assistance as required.

3.05 CUTTING AND PATCHING

- A. Where it is necessary to cut through walls, floors, or ceilings to permit installation of work under this section of the Contract, or to repair any defects that may appear, up to the expiration of guarantee period, such cutting shall be done under the supervision of the Engineer. The Contractor shall not be permitted to cut or modify any structural members without the written permission of the Engineer.
- B. Patching of all openings and repairing of any damage to the work of other trades occasioned by cutting operations, or occasioned by the failure of any part of work installed under this Contract, shall be performed by the trade whose work is involved, and shall be paid for by

the Contractor.

- C. Openings cut through exterior walls or roofs shall be provided with suitable covers to protect the property or materials involved. Openings cut through walls below grade shall be properly protected to prevent entrance of water or other foreign elements. Openings cut between fire zones or plenums shall be sealed to maintain the fire integrity of the wall or floor. Conduits and cable tray through plenum wall shall be sealed using materials complying with UL 1479, NEC 300-21, and NEC 800-3(C), and shall be UL classified.

3.06 HOISTING, SCAFFOLDING, AND TRANSPORTATION

- A. Provide hoisting and scaffolding facilities as required to set materials and equipment in place.

3.07 CLEANING

- A. The Contractor shall at all times keep the premises free from accumulations of waste material or rubbish. Debris shall be removed from the site and from any street or alley adjacent to the site.
- B. At completion of the project, the Contractor shall remove all tools, scaffolding, and surplus materials. Contractor shall leave the area "broom clean". Before final acceptance, vacuum all panels, cabinets, racks and other equipment enclosures. Wipe clean all fixture lenses and reflectors, all panelboard and switchboard interior and exterior surfaces, being careful to remove all stray paint, construction materials, dust, and particles. Touch-up all marred surfaces to restore existing conditions to those provided by the manufacturer.

3.08 CONDUIT SLEEVES

- A. Where conduits pass through walls or floors not on fill, galvanized sheet metal sleeves shall be provided and shall be sealed to prevent air and noise transmission. In walls, they shall be flush with each finished surface. In pipe chases, they shall extend 1-1/2 inches above floor slab and be cemented in a water tight manner. Size of these sleeves shall be at least 1/2 inch greater than outside diameter of the conduit.
- B. For conduits passing through outside walls, provide and install galvanized steel sleeves having an inside diameter at least 4 inches greater than the outside diameter of contained conduit. Where these occur in walls having a waterproof coating applied, the sleeves shall have welded flanges to build into waterproofing. When conduits are installed, the annular space between pipe and sleeve shall be effectively sealed, using shredded lead hammered in place or an approved mastic sealer.
- C. Pipe and duct sleeves, pitch pockets, and flashings compatible with the roofing installation shall be provided for roof penetrations.

3.09 GROUNDING

- A. Ground buses shall be provided in each Telecommunications room by Division 16 Contractor unless noted on Contract Drawings.
- B. Telecommunications grounding system shall be a single point grounding from the building entrance electrical ground to each Telecommunications room. This Grounding system shall be provided by Division 16 Contractor unless notes on Contract Drawings.
- C. All Conduit systems, cabinets' racks, cable trays, protector blocks, SCTP patch panels

and/or miscellaneous equipment, etc. shall be grounded by being connected to the common telecommunications grounding system. The conductors shall be a # 6awg solid with a green jacket

3.10 RECEDENCE OF WORK

1. This Contract includes many different systems furnished and installed by different trades. All trades shall coordinate their work with that of all other trades so that it may be installed in the most direct and workmanlike manner without hindering or handicapping other trades.

3.11 RECORD DRAWINGS

- A. The Contractor shall keep a set of Drawings on the job, noting daily all changes made in these Drawings in connection with the final installation, including exact dimensioned locations of all new and uncovered existing active and inactive utilities outside the building, and shall turn over a clean, neatly marked set of mylar reproducible Drawings showing "as-installed" work to the Engineer for delivery to the Owner. All underground utilities, services, and systems shall be accurately located by the Contractor and dimensioned on the "as-installed" Drawings.

3.12 OPERATING AND MAINTENANCE MANUAL

- A. The Contractor shall furnish indexed operating and maintenance manuals with complete technical data for each system, piece of equipment, and material installed under this Contract.
- B. Two (2) copies of the manual, bound in hardback binders or an approved equivalent, shall be provided. One copy shall be completed and delivered to the Engineer prior to the time that system and equipment tests are performed. The second copy shall be delivered prior to final acceptance.
 1. Provide one (1) operation and Maintenance manual for each building. Provide one (1) as-built floor plan and one CD for each building.
- C. The manual shall include the following information
 1. Manufacturer's installation instructions.
 2. Manufacturer's local representative and/or distributor's name and address.
 3. Manufacturer's operating and maintenance instructions.
 4. Manufacturer's internal wiring diagrams.
 5. Contractor's installation wiring diagrams.
 6. Replacement part number listings and descriptions.
 7. Framed operating instructions, when required, in individual Specification sections.
 8. Warranties and guarantees.
 9. Provide an approved submittal at the front of each section.
- D. The manuals shall be identified on the cover as "Operating and Maintenance Manual" with additional cover display of the name and location of project, the Owner, the Engineers, the General Contractor, and the Subcontractors installing equipment represented in the brochure.
- E. The manual shall have a Table of Contents and shall be grouped in sections according to the sections of Division 27. Each section shall have a copy of the pages of the Specifications covered within the section. Sections shall be organized as follows:
 1. Each section in the manual shall identify the grouping of all literature required for the

- system or equipment included.
2. The contents of each section shall be arranged in the following sequence: First, the approved engineering submittals with complete performance and technical data; second, the manufacturer's installation brochure; third, the manufacturer's operating and maintenance brochure; fourth, the manufacturer's installation wiring diagram; fifth, the Contractor's field wiring diagram, if different; and sixth, the manufacturer's brochure listing replacement part numbers and description.
 3. Provide a final section entitled, "Warranties and Guarantees", for all equipment, etc.

3.13 EXISTING FACILITIES

1. The Contractor shall be responsible for loss or damage to the existing facilities and shall be responsible for repairing or replacing such loss or damage. The Contractor shall send proper notices and receive written permission from the Owner to enter existing areas. Before beginning work in existing areas, the Contractor shall make necessary arrangements and perform other services required for the care, protection, and in-service maintenance of all electrical, communication, plumbing, heating, air condition, and ventilating services for new and existing facilities. The Contractor shall erect temporary barricades with necessary safety devices to protect personnel from injury, removing all such temporary protection upon completion of the work.
2. The Contractor shall provide temporary or new services to existing facilities as required to maintain their proper operation when normal services are disrupted as a result of the work being accomplished under this project.
3. Where existing construction is removed to provide working and extension access to existing utilities, the Contractor shall remove doors, piping, conduit, outlet boxes, wiring, light fixtures, air condition ductwork, and equipment, etc. to provide this access and shall reinstall same upon completion of work.
4. Where partitions, walls, floors, or ceilings of existing construction are indicated to be removed, the Contractor shall remove and reinstall in locations approved by the Engineer all devices required for the operation of the electrical systems installed in the existing construction. This is to include, but is not limited to, temperature control system devices, electrical switches, relays, fixtures, piping, conduit, etc.

3.14 DEMOLITION AND RELOCATION

1. The Contractor shall modify, remove, and relocate all materials and items so indicated on the drawings or required by the installation of new facilities. All removals and/or dismantling shall be conducted in a manner as to produce maximum salvage. Salvage materials shall remain as directed by the Owner. Materials and items scheduled for relocation and which are damaged during dismantling or reassembly operations shall be repaired and restored to the approval of the Owner. The Contractor may substitute new materials and items of like design and quality in lieu of materials and items to be relocated, if approved by the Owner.
2. All items scheduled for relocation and/or reuse shall be inspected by the Contractor and the Owner or his authorized representative. A written report of the condition of each item shall be made and provided to the Engineer. Where items scheduled for relocation and/or reuse are considered unsuitable for reuse, the Contractor shall so notify the Engineer and await reinstallation instructions before proceeding with removal. Items damaged in reinstallation shall be repaired or replaced by the Contractor as directed by the Owner at not additional cost to the Owner or the Engineer.
3. All items which are to be relocated shall be carefully removed in reverse to original assembly

or placement and protected until relocated. The Contractor shall clean, repair, and provide all new materials, fittings, and appurtenances required to complete the relocation and to restore the items to good operative order. All relocations shall be performed by workmen skilled in the work and in accordance with standard practice of the trades involved.

4. Service lines and wiring to items to be removed, salvaged, or relocated shall be removed to points as indicated on the drawings, specified, or acceptable to the Owner. Service lines and wiring not scheduled for reuse shall be removed to the points at which reuse is to be continued or service is to remain. Such services shall be sealed, capped, or otherwise tied off or connections into the existing facilities in such a manner as to result in minimum interruption of services to adjacent occupied areas. Services to existing areas or facilities which must remain in operation during the construction period shall not be interrupted without prior specific written approval of the Engineer.

3.15 OUTAGES

1. Outages of services as required by the project will be permitted, but only at a time approved by the Owner. The Contractor shall notify the Owner in writing two (2) weeks in advance of the requested outage in order to schedule required outages. No outages shall be taken unless written approval has first been received from the Owner. The time allowed for outages will not be during normal working hours unless otherwise approved by the Owner. All costs of outages, including overtime charges, shall be included in the Contract amount.

END OF SECTION

SECTION 27 05 34 - PATHWAYS AND INFRASTRUCTURE FOR AV SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section describes and specifies infrastructure devices associated with Div. 27 41 15 AV Studio Broadcast Systems.

1.2 DESCRIPTION OF THE WORK

- A. Conduit pathways
- B. Backboxes, Junction Boxes, and Pull Boxes
- C. Cable support devices

1.3 SCOPE OF THE WORK

- A. All Audiovisual Infrastructure devices listed in this Section shall be provided and installed by the Division 26 Electrical Contractor.
- B. Conduit and containment pathways and terminations: Refer to associated AV-series Audiovisual Infrastructure drawings for conduit pathway scope, notes, and requirements.
- C. All enclosures, as listed in the Audiovisual Device Legend sheets in the associated Audiovisual Infrastructure drawing packages, shall be furnished and installed by the Division 26 Electrical Contractor:
 - 1. Specialty enclosures and / or Custom enclosure configurations are listed in this Specification Section.
 - 2. Common enclosures and junction boxes are explicitly called out on Audiovisual Device Legend drawing sheet and are not restated here.
- D. AV Studio Broadcast Systems to be supplied under separate Section (27 41 15 AV Studio Broadcast Systems).

1.4 RELATED DOCUMENTS

- A. The general provisions of the contract, including General Provisions, Supplemental Conditions, and Division 1 – General Requirements, apply to the work specified in this section.
- B. Refer to the associated AV-series Audiovisual Infrastructure drawings for additional information, notes, and exact locations pertaining to Infrastructure devices associated with Audiovisual Systems.

1.5 RELATED SECTIONS

- A. Refer to Division 26 Electrical Drawings and Audiovisual AV-series drawings related to Division 26 electrical for coordination of conduits, pull wires, and connections to electrical power. All conduits, junction boxes, floor boxes and power are by Division 26. Refer to Electrical drawings for all power, and all pathways associated with such power, for Audiovisual systems.
- B. All conduits, junction boxes, and floor boxes associated with Audiovisual System devices shall be provided and installed by the Division 26 Electrical Contractor. Refer to AV-Series Audiovisual drawing sheets for all pathway requirements.

1.6 SUBSTITUTIONS

- A. Refer to Division 1 for specific substitution procedures and submittal requirements.
- B. Many items are listed in the Specifications by the manufacturer's type or model number, without a detailed performance specification, and may not include the phrase "or approved equal". Where this is the case, no substitutions will be accepted, without a written request from the Installer and the written consent of the Consultant and the Owner.
- C. Where the phrase "or approved equal" appears, the item specified shall set a standard of quality and performance, based on the published specifications of the manufacturer and on the actual performance as known by the Consultant.
- D. Requests for substitution, when forwarded by the Installer to the Consultant and Owner, are understood to mean that the Installer represents that he has personally investigated the proposed substitute product and determined that it is equal to or superior in all respects to that specified, that the same guarantee will be provided for the substitution as for the specified product, and that the Installer will coordinate the installation of the accepted substitute, making such changes as may be required for the work to be complete in all respects.
- E. Substitutions will not be considered if they are indicated or implied in Shop Drawing submissions without previous formal request, or, for their implementation, they require a substantial revision of the Contract Documents in order to accommodate their use.
- F. Space allocations and utility rough-ins have been designed on the basis of equipment items named by manufacturer and model number. If any equipment not so named is offered which differs substantially in dimension or configuration from the named equipment, provide scaled shop drawings showing that the substitute can be installed in the space available without interfering with other trades or with access for operation and maintenance in the completed project. The Installer shall coordinate final utility rough-in locations with actual equipment furnished.
- G. Where substitute equipment requiring different arrangement or connections from those shown in the drawings is accepted by the Consultant, install the equipment to operate properly and in harmony with the intent of the Drawings and Specifications, making all necessary incidental changes without increasing the Contract amount. Pay all additional costs incurred by adjoining or connecting trades.
- H. All requests for substitutions shall be submitted 2 weeks prior to the bid opening date. Substitutions shall be requested and approved in writing only, based upon these criteria.

1.7 COOPERATION AND COORDINATION

- A. Cooperate and coordinate as required with the other contractors who are responsible for work not included in this section.
- B. Provide any and all information as required or requested by the Owner, Architect/Engineer, Consultant, or General Contractor in order for this work to be completed to the satisfaction of the Owner, and in the best interests of the Project. Such assistance or information shall be transmitted in writing to the requesting party in all cases. All written correspondence shall be copied to the Consultant.

1.8 GUARANTEE AND WARRANTY

- A. Guarantee all parts, labor, and workmanship furnished under this contract for a period of twelve months from the date of substantial completion.

- B. During the warranty period, report to the site and repair or replace any defective materials or workmanship without cost to the Owner. Warranty service shall be rendered within 48 hours after request by the Owner. Equivalent replacement equipment shall be temporarily provided when immediate on-site repairs cannot be made.
- C. Where warranties on individual pieces of equipment exceed twelve months, the guarantee period shall be extended to the warranty period of the particular items.

1.9 SUBMITTALS

- A. Equipment lists, data sheets, etc. shall be 8-½" x 11" size, properly bound into a single or multiple volumes as necessary, and also submitted in electronic PDF format. Submit quantity in accordance with Division 1, General Requirements.
- B. Within 45 days after the notice to proceed, submit to the Architect/Engineer identical copies of the following for approval:
 - 1. A complete equipment list, with manufacturers' names, model numbers, and quantities of each item;
 - 2. Manufacturers' data sheets on all equipment items;
 - 3. Floor plans and reflected ceiling plans, prepared at a scale not less than 1/8" = 1'-0", showing device locations and orientation for all items in scope;
 - 4. Riser diagrams showing conduit requirements, to include all pull boxes and outlet boxes;
 - 5. Proposed construction details for all devices in this Specification Section. These details shall show dimensions, materials, finishes and color selection;

1.10 JOB CONDITIONS

- A. Coordinate installation of mounts, back-boxes, floor boxes and all other devices specified in this Section with work of other trades.

PART 2 - PRODUCTS

2.1 GENERAL

- A. All items shall be new and unused. The following articles specifically list the acceptable items for this project. Where quantities are not noted, they may be obtained from the associated drawings. In the event of a discrepancy between the specifications and the drawings, the greater quantity or better quality shall be furnished.

2.2 CABLE SUPPORT DEVICES

- A. Furnish and install cable support devices for use with routing Audiovisual cabling at Audiovisual equipment and production locations as shown.
- B. Secure to wall and/or ceiling structure with appropriate hardware and fasteners, as required by wall and/or ceiling type.
- C. Coordinate with other trades, as required, to eliminate interference and obstructions with other devices.
- D. Coordinate penetrations at walls and partitions, as required. Provide fire-stop intumescent bags or other local / superseding code-approved fire-stop mechanisms at all required penetrations. Multiple fire-stop system shall be employed, as required, to equal the full capacity of the cable tray.
- E. Furnish and install the following:

1. Ladder Rack: Hoffman LSS-18BLK, or approved equal, 1'-0" ladder rack system. Provide support brackets and all manufacturer-required hardware and accessories. (Qty: as required to support pathways shown)
2. Type "J" Cable J-Hooks: nVent Caddy CAT64HPBA 4" J-Hook with retaining clip, black. (Qty: as shown)
3. Type "PT" Cable Pass-Through: Beckson Marine DP40B 4" screw-out deck plate, to include manufacturer's captive chain kit. (Qty: 1 deck plate at each side of wall)

PART 3 - EXECUTION

3.1 INSPECTION

- A. Installer must examine substrates and conditions under which floor and wall mounted hardware and equipment enclosures are to be installed and notify the Consultant and Architect in writing of conditions detrimental to proper and timely completion of work.

3.2 INSTALLATION

- A. Install the cable management trays, floor boxes, specialty enclosures and display wall boxes at the locations shown and in accordance with manufacturer's instructions. Install all devices level, plumb, secure and at the proper height. Cooperate with other trades to secure units to finished wall and floor surfaces. Repair and replace damaged items as directed by the Architect.
- B. Coordinate layout of conduits, including specific routing and mounting elevations, with building structure and work of other trades.
- C. Avoid crossing building expansion joints, to the extent possible. Where crossings occur, use expansion joints.
- D. Provide a pull string in all raceways, cable trays, and conduits. Provide high tensile-strength pull lines in all conduits 4" and larger.
- E. Installation of wall boxes back-to-back in opposite sides of a wall shall not be allowed. Allow a minimum of 2'-0" between boxes. At stud walls, provide a minimum separation of 1 stud cavity.
- F. Provide protection for installed components so that all will be in perfect operating condition, without damage at completion of the project.

3.3 ADJUSTMENT AND CLEANING

- A. Clean exposed surfaces of installed products.
- B. Clean up all debris caused by work of this Section, keeping the premises neat and clean at all times.

END OF SECTION 27 05 34

SECTION 27 10 00 – STRUCTURED CABLING SYSTEM (SCS)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 RELATED WORK

- A. 26 05 00 – Grounding and Bonding
- B. 26 05 29 – Electrical Hangers and Supports
- C. 26 05 33 – Raceway and Boxes
- D. All Division 27 and 28

1.3 DESCRIPTION

- A. Summary of Work:
 - 1. Provide a new, complete, and tested Category CAT6A cable distribution system for data interconnections (Local Area Network) in the new campus. The data distribution system shall include fully terminated unshielded twisted pair cables, raceways, conduit, UTP termination devices, data communications outlets, patch panels, patch cables, network racks, and other incidental and miscellaneous premises wiring system hardware as required for a complete and usable system. The installation shall comply with all applicable codes and standards in effect at the job site and as indicated in the Drawings and Specifications.
 - 2. Provide and install building entrance terminals as required.
 - 3. Provide all CommScope POE extender devices and cabling as required to provide fully functional systems as indicated on drawings and herein.

1.4 QUALITY ASSURANCE

- A. Acceptable manufacturers:
 - 1. The equipment/products described herein and furnished per these specifications shall be the product of one manufacturer. All references to model numbers and other detailed descriptive data is intended to establish standards of design performance, and quality, as required
 - 2. The approved manufacturers shall provide a complete Category 6A solution with a 25-year performance warranty.
 - 3. **Acceptable product connectivity and cable shall be Uniprise by CommScope.** Only the manufacturers listed in this paragraph will be accepted.
 - 4. All products shall be Category 6A compliant. NO EXCEPTIONS.
- B. Installer Qualifications:
 - 1. The Data Cable System Installer shall be licensed and shall meet all applicable regulations of the State of Texas and Department of Labor insofar as they apply to this type of system. The proposer shall be a firm normally employed in the low voltage and data cabling industry and shall provide a reference list of ten (10) similar size, Category 6A, projects and contact names confirming successful Category 6A premises wiring system installations.
 - 2. The SCS Installer shall be a certified CommScope Uniprise or Panduit and in good standing in the Partner Program, local area, integrator and must be able to provide the manufacturer's maximum available warranty on the entire SCS. The contractor's certification must have been obtained and held within 75 miles of the project's location.

3. The installing contractor must have a full-time employed RCDD (Registered Communications Distribution Designer) on staff. Current RCDD certification shall be provided in the product submittals.
 4. All individuals installing the SCS must be employees of the certified installer and at least 25% of the installing staff shall have undergone a training class given by the manufacturer. Current certification indicating the successful completion of the training course shall be available upon request at the project and submitted in the contractor's product submittals.
 5. The proposing contractor and the installing contractor must be the same company. No subcontractor to the proposing SCS contractor will be allowed for any portion of the SCS scope of work.
- C. Pre-Construction Meeting:
1. The successful Contractor shall attend a mandatory pre-construction meeting with the project's consultant and individuals deemed necessary by the Owner's representative prior to the start of the work. No SCS work shall begin prior to this meeting.
- D. Acceptance:
1. The Owner's representative reserves the right to reject all, or a portion of the work performed, either on technical or aesthetic grounds.
- E. Warranty:
1. The selected system installer shall be a CommScope Uniprise or Panduit, certified contractor and hold current certification. The contractor shall provide an end-to-end performance warranty of not less than twenty (25) years on all products installed. The proposer shall provide current certification documentation. The performance warranty shall be issued by the manufacturer and shall warrant that ALL Category 6A cable links have been tested bi-directionally (end to end) using a Level 2 tester, per TSB-67, and that all test results conform to the most current TIA/EIA-568-C and/or TSB-67 Link values.
 2. The warranty will also cover multimode fiber optic cabling. Performance testing shall be conducted in accordance with ANSI/EIA/TIA-526-14 Standard, method B.
 3. The warranty will stipulate that all products used in this installation meet the prescribed mechanical and transmission specifications for such products as described in ISO/IEC 11801, ANSI/TIA/EIA-568-A, or EN 50173. Quality and workmanship evaluation shall be solely by the Owner/Designer and designated representatives.

1.5 REGULATORY REQUIREMENTS

- A. Standards: All work shall be performed in accordance with the latest revisions of the following standards and codes:
1. Latest Local Codes and Amendments
 2. 2014 National Electrical Code
- B. Other References:
1. TIA/EIA-568-C Commercial Building Telecommunications Wiring Standard
 2. EIA/TIA-569 Commercial Building Standard for Telecommunication Pathways and Spaces.
 3. TIA/EIA-606 The Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
 4. TIA/EIA-607 Commercial Building Grounding

5. and Bonding Requirements for Telecommunications.
EIA/TIA 455-A Standard Test Procedure for Fiber Optic Fibers, Cables, Transducers, Sensors, Connecting and Terminating Devices and Other Fiber Optic Components.
 6. TIA/EIA TSB 67 Transmission Performance Specification for Field Testing of Unshielded Twisted-Pair Cabling Systems.
 7. TIA/EIA TSB 72 Centralized Optical Fiber Cabling Guidelines
 8. ISO/IEC 11801 Generic Cabling Standard
 9. EN 50173 Generic Cabling Standards for Customer Premises
 10. ANSI/EIA/TIA 526-14 Optical Power Loss Measurements of Installed Multimode Fiber Cable Plan.
- C. Governing Codes and Conflicts: If the requirements of these specifications or the Project Drawings exceed those of the governing codes and regulations, then the requirements of these specifications and the Drawings shall govern. However, nothing in the Drawings or Specifications shall be construed to permit work not conforming to all governing codes, regulations, and manufacturer installation requirements.

1.6 ABBREVIATIONS

- A. The following abbreviations are used in this document:
- | | |
|-----|---------------------------------|
| DC | Direct Current |
| IDF | Intermediate Distribution Frame |
| MDF | Main Distribution Frame |
| PBX | Private Branch Exchange |
| UTP | Unshielded Twisted Pair |

1.7 SUBMITTALS

- A. Project Initiation:
1. Within fourteen (14) days of Notice to Proceed, the data network system installer shall furnish the following in a single consolidated submittal:
 - a. Permits: The Contractor shall obtain all required permits and provide copies to the Owner/Architect/Engineer.
 - b. Product Literature: Complete manufacturer's product literature for all cable, patch panels, cross-connect blocks, cable supports, cable labels, outlet devices, and other products to be used in the installation. In addition, whenever substitutions for recommended products are made, samples (when requested by the Owner/Designer) and the manufacturer's supporting documentation demonstrating compatibility with other related products shall be included. The submittal shall have some type of distinguishing marker or pointer to indicated what specific product is to be provided
 - c. Construction Schedule: A time-scaled Construction Schedule, using PERT/CPM, indicating general project deadlines and specific dates relating to the installation of the cable distribution system.
 - d. Testing: Proposed Contractor Category 6A UTP cable test result forms, fiber optic cable test result forms and a list of instrumentation to be used for systems testing.
 - e. Specification Compliance: A letter shall be provided stating, by section and subsection, that the SCS installer complies with the ENTIRE specification section. If the installer intends to deviate from any portion of the

specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.

- f. Certifications: The contractor shall submit all of the following certifications and the certifications must contain dates which are valid from the date of proposal and not expire any sooner than 12 months after substantial completion of the project.

- 1) BICSI RCDD Certification: This certification must be held by an on-staff, full-time employee of the SCS installer. The holder must be staffed out of the office that is located within 75 miles of the projected.
- 2) Proposed Manufacturer's Strategic Partner Certification: This certification have been obtained by the SCS installer's office that is located within 75 miles of the project and shall be a company certification, not and individual certification.
- 3) Proposed Manufacturer's Installer Certification: This certification must be held by at least 25% of the, on-site, staff and be made available at the site if requested by the owner, architect, and/or project's technology consultant.
- 4) Fiber Optic Technician Certification: This certification must be held by the on-staff/on-site individual that is supervising the fiber optic installation and performing the fiber optic terminations and testing.

B. Shop Drawings:

1. Submit the following items, for Owner review and approval, within twenty-eight (28) days of notice to proceed:
 - a. Proposed circuit routing and circuit grouping plan prepared by a BICSI certified RCDD (Registered Communications Distribution Designer). The RCDD certification must be current. Identifiable, separate routing shall be shown for both the station cabling and the MDF-to-IDF tie cabling.
 - b. In addition to the cable routing, the submitted drawings shall indicate the following, even if the following is expected to be provided by the project's electrical or general contractor:
 - 1) Location of wall penetrations (all penetrations shall be sleeved and contain protective bushings at both ends)
 - 2) Location of sleeved wall pass-thru
 - 3) Size of sleeve at each location installed
 - 4) Quantity of cable passing through each sleeve
 - 5) Location of drops in each room (quantity or labeling of drops are not required in the submittal plans. Labeling shall be provided in the closeout plans and quantities shall be as per the contract documents, addendums, and issued changes. Each drop shall be labeled for the type of outlet that it is)
 - 6) Conduit routing, size, quantity, and stub-up locations for all floor mounted outlets.
 - c. Drawing Compliance: A letter shall be provided stating that the SCS installer complies with the ENTIRE project drawing, including all general, keyed, and notes to contractor. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.

C. Close-out Procedures:

1. Two (2) copies of the following documents shall be delivered to the building owner's representative at the time of system acceptance. The close out submittals shall include:
 - a. Inspection and Test Reports: During the course of the Project, the Contractor shall maintain an adequate inspection system to ensure that the materials supplied and the work performed, conform to contract requirements. The Contractor shall provide written documentation that indicates that materials acceptance testing was conducted as specified. The Contractor shall also provide documentation, which indicates that all cable termination testing was completed and that all irregularities were corrected prior to job completion.
 - b. Provide complete test reports for all cabling and devices that comprise system as outlined in this document.
 - c. Include the Name, address, and telephone of the authorized factory representative with a 24-hour emergency service number.
 - d. The manual shall also include Manufacturer's data sheets and installation manuals/instructions for all equipment installed, a list of recommended spare parts.
 - e. Generic or typical owner's instruction and operation manual shall not be acceptable to fulfill this requirement.
 - f. An up-to-date record ("as-built") set of approved shop drawing prints that have been revised to show each and every change made to the structure cabling system from the original approved shop drawings. Drawings shall consist of a scaled plan of each building showing the placement of each individual item of the technical cabling system equipment as well as raceway size and routing, junction boxes, and conductor size, quantity, and color in each raceway.
 - g. As-built Drawings shall include cable pathways, camera locations with correct labeling and MDF/IDF locations. The as-built drawings shall be prepared using AutoCad 2019 or later. Provide the Owner with electronic versions of the As-Built on (2) 8GB thumb drives.
 - h. All drawings must reflect point to point wiring, device address and programmed characteristics as verified in the presence of the engineer and/or the end user unless device addressing is electronically generated, and automatically graphically self-documented by the system.
 - i. A copy of the manufacturer's warranty on the installed system.
 - j. Any keys to cabinets and/or equipment and special maintenance tools required to repair, maintain, or service the system.
 - k. Operating and Maintenance Instructions for all devices within the system. These instructions shall reflect any changes made during the course of construction, and shall be provided to the Owner, for their use, in a three-ring binder labeled with the project name and description. (4 copies)
 - l. Upon completion of the work and at a time designated by the Architect or owner, provide formal training sessions for the Owner's operating personnel to include location, operation, and maintenance of all included systems and equipment. Minimum amount of training time shall be at least 4 hours.
 - m. One (1) 30" x 42" laminated floor plan sheets illustrating technology drops and cable designation. Contractor shall provide one complete floor plan sheet for each telecommunications room (MDF or IDF)

PART 2 - PRODUCTS

2.1 GENERAL

- A. Installation: The cabling shall be installed per requirements of the manufacturer and the Project Documents utilizing materials meeting all applicable TIA/EIA standards. The Contractor is responsible for providing all incidental and/or miscellaneous hardware not

explicitly specified below as required for a complete and operational system.

- B. Materials: Materials shall be as listed or shall be approved equivalent products of other manufacturers meeting the intent and quality level of the TIA/EIA specifications. All approved equivalent products will be published by addendum ten days prior to proposal for Architect/Engineer to review.
- C. Testing: All installed cabling shall be tested 100% good after installation by the Contractor. All final test results shall be delivered to owner at completion of project. Refer to closeout requirements listed under section 1.5.
- D. Ratings: All products shall be new and brought to the job site in the original manufacturer's packaging. Electrical components (including innerduct) shall bear the Underwriter's Laboratories label. All communications cable shall bear flammability testing ratings as follows:
 - CM Communications Cable
 - CMP Plenum Rated Communications Cable
 - CMR Riser-Rated Communications Cable
- E. Initial Cable Inspection: The Contractor shall inspect all cable prior to installation to verify that it is identified properly on the reel identification label, that it is of the proper gauge, containing the correct number of pairs, etc. Note any buckling of the jacket that would indicate possible problems. Damaged cable or any other components failing to meet specifications shall not be used in the installation.
- F. Cable Lubricants: Lubricants specifically designed for installing communications cable may be used to reduce pulling tension as necessary when pulling cable into conduit.
 - 1. Approved Products
 - a. Twisted-pair cable: Dyna-Blue
American Polywater
- G. Fire Wall Sealant: Any penetration through firewalls (including those in sleeves) will be resealed with an Underwriter Laboratories (UL) approved sealant.
 - 1. Approved Products
 - a. 3M or
 - b. Pre-approved equal

2.2 DATA CLOSET (MDF/IDF) CATEGORY 6A TERMINATION HARDWARE AS SHOWN ON DRAWINGS

A. Equipment Racks/Cabinets:

Provide and install equipment racks and/or cabinets in locations indicated on the attached drawings for the following areas.

For all IDF and MDF locations

Contractor shall provide and install new floor mounted rack systems. Refer to floor plan and enlarged MDF/IDF room layouts for number of racks to provide at each location.

- 1. 2-post Floor mounted racks – CommScope
 - a. 760082479 | RK3-45A
- 2. 4-post Floor mounted racks – CommScope
 - a. 760082560 | RK4P45-36A
- 3. Wall Mounted network cabinet – Chatsworth Products
 - a. 11996-X48 - CUBE-iT Wall-Mount Cabinet
 - b. Provide the following accessories as required

- i. 40972-001 - Standard Fan and Filter Kit
- ii. 40970-7## - Vertical Cabling Section for CUBE-iT Wall-Mount
- iii. 40971-X48 - Vertical Lashing Bracket
- iv. 25190-000 - Cable Port Brush Kit
- v. 11837-701 - Horizontal Wire Management Bar
- vi. 12787-548 - Equipment Mounting Rail Kit
- vii. 40974-X19 - Rack-Mount Shelf
- viii. 40159-009 - Ground Jumpers
- ix. 12820-706 - Power Strip

B. Distribution Rack/Cabinet Grounding

All Racks and/or Cabinets shall be grounded using stranded #6 AWG insulated copper conductor. Connect to service entrance grounding electrode. Provide all required bonding materials and hardware and bond to building grounding electrode subsystem at building electrical service entrance.

1. Grounding Compression Lugs
 - a. 245529-10
2. Wall Mount Bus Bar (one per MDF/IDF location)
 - a. UGBKIT-0210

C. Category 6A Patch Panels – CommScope

The Category 6A data and Wireless Access Point (WAP) station cable shall be terminated on Category 6A RJ45 patch panels with circuit board construction, T568B terminations. Patch panels shall be 19-inch rack mountable. Workstation patch panels shall terminate all workstation communications outlets. Furnish units that adhere to the performance requirements TIA/EIA-568A standards.

1. Approved Products:
 - a. 24 Port Patch Panels- 760162800 | UNP-6A-DM-1U-24
 - b. 48 Port Patch Panels- 760162818 | UNP-6A-DM-2U-48
 - c. Install cable support bars at the back of all patch panels to provide additional support at rear of rack and panels

D. Category 6A Rack Patch Cables – CommScope or Panduit equivalent:

1. Network Rack Patch Cables: Cabling Contractor shall provide district with (1) – Category 6A patch cable for each data drop on entire project. These cables will provide connectivity from the front of the network patch panels to the network equipment provided by district upon move-in. The patch cables are to be terminated properly with RJ-45 connections on each end with the proper pin-out assignments per project configuration.
2. 6' Category 6A Patch Cable
 - 1) UC1AAA2 Series
3. 6' Category 6A Patch Cable Color Scheme:
 - 1) BLUE - Data and VOIP
 - 2) WHITE – Wireless Access Points
 - 3) YELLOW – Security Cameras, Environmental Sensors, Door Access Systems
 - 4) GREEN – PA Systems
 - 5) RED – Fire Alarm
4. Provide the following lengths and percentages of patch cables
 - 1) 10% 12"
 - 2) 30% 3'
 - 3) 30% 5'
 - 4) 30% 7'

E. Cable Management – CommScope or Panduit equivalent

1. Provide cable management panels as required for vertical cable management. Provide vertical wire management on ends and in between all racks on entire project. All vertical cable managers on the entire project shall be black double-sided 10" wide management.
2. Horizontal and Vertical Products
 - a. Vertical
 - i. 760244781 | VCM-DS-84-10B
 - b. Horizontal
 - i. 2U – 760 | HTK-19-DS-2U

2.3 BASKET TRAY AS SHOWN ON DRAWINGS.

- A. Cable tray shall be used to route all cabling in major hallways and corridors. The cable tray shall be a two-tiered system with Fiber on the top and all copper cabling on the bottom. Cable tray shall consist of a minimum 2" deep steel wire mesh tray with all necessary cable dropouts, bend radius protection, connectors and all other components to create a fully functional cable tray system that will not threaten the structural integrity of the cable jacket. All threaded rods supporting the tray will be covered with a plastic sleeve to protect the cable jacket.
- B. Approved manufacturers:
1. Panduit
 2. Owner approved manufacturer.

2.4 LADDER RACKS AS SHOWN ON DRAWINGS.

- A. Ladder Racks shall be used in all MDF/IDF rooms. Ladder Rack shall be 12" wide and 2" deep, minimum. Approved manufacturers:
1. CommScope - 760085647 | CR-SLR-10L12W (black)
 - a. Accessories (black):
 - 1) Cable Runway Elevation Kit (CPI) - #10506-706 – per rack
 - 2) Rack-to-Runway Mounting Plate: 760084053 | CRR2RRMK – per rack
 - 3) Cable Runway Radius Drop: 760083956 | CRDK-12W
 - 4) Ladder Rack 90° Horiz. E-Bend Section: 760085530 | CR90FCB-12W
 - 5) Wall Angle Support Kit: 760084160 | CR12-C24WRSK
 - 6) End Cap Kit: 760084012 | CRPECK
 - 7) Junction Splice Kit: 760084046 | CRTJSK.
 - 8) Other required applicable installation accessories
 - b. Provide Velcro straps for cable dressing in MDF/IDF rooms.

2.5 POLE MOUNTED IP SURVEILLANCE CAMERA FIBER/POE EXTENDERS AS SHOWN ON DRAWINGS.

- A. Provide the following POE extender devices, cabling, connectors and accessories. Quantity as shown on drawings and as required to provide fully functioning systems, to include but not limited to:
1. CommScope Part #: PFU-P-C-O-060-01, PoE Extender, Universal Bracket, Outdoor, 60 Watt, 1-Port.
 2. CommScope Part #: CO11152-01F007, PCOSP-6S-BK-7FT, CAT6, F/UTP, Outdoor Rated Patch Cord, 7ft.
 3. CommScope Part #: FAWLCUC01-AXF006, TeraSPEED® OS2 LC to Unconnectorized, Fiber Pigtail, 0.9 mm Tight Buffer, blue jacket, 6 ft, Spliced onto Powered Fiber Cable, fiber 1

4. CommScope Part #: FAWLCUC01-BXF006, TeraSPEED® OS2 LC to Unconnectorized, Fiber Pigtail, 0.9 mm Tight Buffer, orange jacket, 6 ft, Spliced onto Powered Fiber Cable, fiber 2
5. CommScope Part #: 9701008/00, SFS-SLEEVE, Single Fusion Splice Sleeve, 50 Pack
6. CommScope Part #: PFC-S04O12F, Powered Fiber Cable, OS2, 4 Fibers, Outdoor, 12AWG Conductor
7. Transition Networks Part #: TN-GLC-LX-SM-RGD, 1000BASE-LX SFP, 1000BASE-LX and 1G Fiber Channel (1GFC) 10km Industrial Temperature Gen 3 SFP Optical Transceiver, one installed at each access point and network switch port.
8. CommScope Part #: 760251045, EPX-2U-PNL-ENC, Standard Density 2U sliding Panel, accepts (6) LGX/1000 style splice cassettes, modules or panels, 2U shelf accepts 6 cassettes, modules, or panels
9. CommScope Part #: 760221747, PNL-CS-12LCW-PT, TeraSPEED® Splicing cassette, 12LC, 900µm, 1 Splice cassette accommodated 6 duplex ports (pt- with pigtails)
10. CommScope Part #: FEWLCLC42-JXF006, TeraSPEED® OS2 LC to LC, Fiber Patch Cord, 1.6 mm Duplex, Riser, yellow jacket, 6 ft, Patch cord connects fiber shelf to network switch for each device pair.
11. CommScope Part #: PFP-PX-S2, Power Express Starter Shelf Kit, 1 PE shelf accommodates 2 PE modules (16 total output channels)
12. CommScope Part #: PFP-PX-8M, Power Express 8 port Module, 1 PE module supports 8 x 48VDC output channels
13. CommScope Part #: PFP-PX-SF, Power Express Slot Filler, used when less than 2 modules installed in PE shelf
14. CommScope Part #: PFP-SPS-C1, Rectifier Controller with Display, 1 Controller installed in Rectifier Shelf
15. CommScope Part #: PFP-SPS-1600M, 1 Rectifier Module supplies 1200W to distribution shelf.

2.6 CABLE ROUTING/PATHWAY

- A. Cable Support System: All low voltage cabling shall be installed and supported using a modular cable support system at 48" intervals unless installed in conduit. Do not exceed manufacture recommendation for the quantity of cables supported in an individual support.
- B. All cable bundles shall be grouped together using plenum rated Velcro for the entire run above and below the ceilings.
- C. The innerduct shall be bright orange and shall be labeled fiber optic cables from fiber patch panel to conduit or plenum entrances. Innerduct installed in plenum rated ceilings shall be plenum rated.
 1. Approved products
 - a. Carlon
 - b. Dura-line

2.7 STATION WIRING

- A. Wire: The data and voice wire provided for all outlets shall be (Category 6A) Plenum-Rated unshielded twisted pair, four-pair, 24 AWG solid copper conductor, meeting the intent and quality level of the TIA/EIA-568-A Commercial Building Wiring Standard. Refer to floor plan and data outlet legend for number of active data ports to specified faceplates.
 1. Approved Products: For all voice and data connections: CommScope CS44P or Panduit equivalent
- B. Testing: The Category 6A four-pair UTP cable must be UL Performance Level tested. Each 1000-foot spool must be individually tested with test results affixed to the spool. All cable must be provided on new 1000-foot spools. NO "SHORTS" WILL BE ALLOWED. IF SHORTS ARE DISCOVERED, THE CONTRACTOR WILL BE REQUIRED TO

UNINSTALL ALL CABLE ON THE ENTIRE PROJECT AND INSTALL NEW CABLE AT NO ADDITIONAL COST TO THE OWNER.

- C. Rating: Cable installed in conduit shall be non-plenum rated. Cable not installed in conduit shall be plenum rated if installed in plenum ceiling space, non plenum rated otherwise.
- D. Provide 10 feet service loop at all headend locations properly supported above ceiling. Provide 3' service loop at each workstation outlet properly supported above ceiling. All workstation service loops shall be made in figure eight configurations, no exceptions.
- E. All cable shall be bundled with Velcro from patch panel to outlet. Velcro shall be rated for plenum space.

2.8 STATION HARDWARE

- A. Flush Mount Jacks: Flush mount jacks shall be high quality Category 6A RJ45 modular jacks with circuit board construction and IDC style or 110-style wire, T568B terminations. Jacks shall meet EIA/TIA TSB40 recommendations for Category 6A connecting hardware.
 - 1. Approved Products – Data and Voice Jacks: UNJ10G
 - 2. All blank inserts shall be Gray.
- B. Faceplates: Faceplates shall be a 4-port, flush mounted white CommScope Uniprise solution or Panduit equivalent, for RJ45 outlets at all locations.
Approved Products:
 - 1. 4-Port Single Gang Stainless Steel, CommScope 760072207 | M14SP-L
 - 2. Provide wall mounted handset faceplates where applicable for wall mounted phones. Refer to floor plan for locations. CommScope # 760100891 | M10WL4SP
 - 3. Provide Mounting Straps (where applicable)
- C. Workstation Patch Cables: Cabling Contractor shall provide district with (1) – 10 Foot Category 6A patch cable for each data drop on entire project. Each cable will be terminated properly with RJ45 connections on each end with appropriate pin-out assignments per project configuration. Follow Color Code established in 2.2 D 3
 - 1. Approved Products: CommScope Uniprise or Panduit equivalent, 10 Foot Cat 6A Patch Cable - UC1AAA2

2.9 INDOOR/OUTDOOR PLENUM COPPER CABLE

- A. For those locations where short runs of copper cable from building to building or within a “wet environment” (in slab) will be needed provide the following cables
- B. Indoor/Outdoor Category 6A U/UTP, Plenum, Outdoor Rated, Black Jacket, 4 Pair Count
 - 1. 874036404/10 | CS44P-IO BLK

2.10 Backbone Fiber Optic Cable

- A. All Fiber Optic Cable shall be UL listed OFNP (unless otherwise noted):
- B. Multimode fibers, each with a color-coded PVC tight buffer shall have a maximum attenuation of 1.0dB/km at 1310 nm and 1.0 dB/km at 1550 nm.
- C. No splices will be allowed at any point in the fiber optic runs.
- D. 6-Strand or 12-Strand multimode, OM4, with plenum rated armored jacket shall connect

each IDF with the MDF as specified on technology riser plans.

1. 760128181 | P-006-DZ-5K-FSUAQ
 2. 760128017 | P-012-DZ-5K-FSUAQ
- D. 6-Strand or 12-strand singlemode, with an indoor/outdoor plenum rated jacket, with no metallic elements, shall connect each IDF (that is not connected to the main buildings) with the MDF as specified on the technology riser plans.
1. 760140640 | P-006-LZ-8W-F06BK/25D
 2. 760140475 | P-012-LZ-8W-F12BK/25D

2.11 Fiber Optic Patch Panels

- A. The enclosures used shall provide termination panels for LC type connectors and be of sufficient size and capacity to terminate 110% of the fiber count of the inside of outside fiber optic cables.
- B. Patch Panels must be 19" rack mountable.
- C. Provide all termination accessories, fiber patch cords, enclosures and test for a complete fiber optic distribution system.
1. CommScope 2U fiber shelf #760251047 | EPX-2U-PNL-ENC-FX
 2. CommScope 12 Fiber Inserts LC multimode #760067157 | PNL-BK-012-MFA-LC02-BG-SHUTTERED
 3. CommScope 12 Fiber Inserts LC Single mode #760067165 | PNL-BK-012-SFA-LC02-BL-SHUTTERED
 4. CommScope Wall-Mounted Single Sided Single Door Fiber Enclosure #760248905 | WB2-EMT-BK-2P-PNL

2.12 Fiber Connectors

- A. Optical Fiber Connectors shall be LC type connectors to match fiber type.
1. CommScope LC Multimode #760117887 | MFC-LCF-09-5X Qwik II LC
 2. CommScope LC Single-Mode #760117895 | SFC-LCF-09-8X Qwik II LC

2.13 Fiber Patch Cords

- A. Provide (4) CommScope 3-meter patch cords for each backbone fiber installed on the entire project. Coordinate the required connector type, on the equipment end, with the owner prior to procuring the products.

PART 3 - EXECUTION

3.1 GENERAL

- A. Fire Wall Penetrations: The contractor shall avoid penetration of fire-rated walls and floors wherever possible. Where penetrations are necessary, they shall be sleeved with metallic conduit and resealed with an Underwriter Laboratories (UL) approved sealant. The contractor shall also seal all floor, ceiling and wall penetrations in fire or smoke barriers and in the wiring closet.
- B. Allowable Cable Bend Radius and Pull Tension: In general, communications cable cannot tolerate sharp bends or excessive pull tension during installation. Refer to the cable manufacturer's allowable bend radius and pull tension data for the maximum allowable limits.
- C. Cable Lubricants: After installation, exposed cable and other surfaces must be cleaned free of lubricant residue.
- D. Pull Strings: Provide pull strings in all new conduits, including all conduits with cable installed as part of this contract. Pull test is not to exceed 200 pounds. Data and video cables can be pulled together with pull strings.
- E. Conduit Fill: Conduit fill shall not exceed 40%.
- F. Damage:
 - 1. The Contractor shall replace or rework cables showing evidence of improper handling including stretches, kinks, short radius bends, over-tightened bindings, loosely twisted and over-twisted pairs at terminals and cable sheath removed too far (over 1-1/2 inches).
 - 2. The Contractor shall replace any damaged ceiling tiles that are broken during cable installation.
- G. Clean Up:
All clean up activity related to work performed will be the responsibility of the Contractor and must be completed daily before leaving the facility.

3.2 DOCUMENTATION

- A. LABELING STANDARDS OVERVIEW
 - 1. **Verify labeling standards with Owner.**
 - 2. UNIQUENESS: Each piece of equipment and each cable should have a unique identifier to prevent confusion.
 - 3. CONSISTENCY: Labeling schemes should be consistent within each IDF/MDF and should align with the closet's standard methods.
 - 4. LABEL QUALITY: Use a label maker to ensure clarity, and make sure labels are capable of withstanding environmental factors.
- B. LABEL PLACEMENT:
 - 1. General: All network infrastructure components requiring labels should be carefully marked to ensure clear identification of both the origin and destination of drops. When affixing labels, care should be taken to avoid obstructing LEDs, lenses, or any other features critical to the device's functionality or troubleshooting process.
 - 2. Cables: Attach labels to both ends of each cable. Place labels near termination points, making them easily visible and readable.
 - 3. Wall Plates: Distribute labels evenly between the top and bottom wall plate screws and separate entries with commas. Tape labels right below the top screw and right above the bottom screw.
 - a. Two Port Plates: Place the label for the first drop below the top wall plate screw and the label for the last drop in above the bottom wall plate screw.

- b. Four Port Plates: Comma-separate labels for the first two drops, starting with the first drop below the top wall plate screw. Do the same for the last two drops, starting with the third drop above the bottom wall plate screw.
 - c. Six Port Plates: Comma-separate labels for the first three drops, starting with the first drop below the top wall plate screw. Do the same for the last three drops, starting with the fourth drop above the bottom wall plate screw.
- C. INFORMATION ON LABELS: Labels should contain enough details to identify the cable's or equipment's origin, destination, and function.
- D. LABEL TYPES: Use self-laminating labels or wrap-around labels. Do not use Flag labels or cable tags.
- E. LABEL DIMENSIONS, FONTS, AND MATERIALS:
 - 1. Wall Plate Labels: Use .35" (9mm) laminated black on white label tape. Use 18-point font size for two and four port plates, and 12-point font size for six port wall plates.
 - 2. Access Point (AP) Labels, Camera Labels, and Ceiling Grid Labels: Use .47" (12mm) laminated black on white label tape with a 24-point font size.
 - 3. Ceiling Biscuit Labels: Use .35" (9mm) laminated black on white label tape with an 18-point font size.
 - 4. Wrap Around Cable Labels: Use either .94" (24mm) or .70" (18mm) black on white label tape. Print labels using the Cable Wrap template to ensure the correct font size.
 - 5. Self-Laminating Cable Labels: Use .94" (24mm) black on white label tape with a 12-point font size.
 - 6. Font Style: Use only serif fonts for all labels to ensure readability.
- F. Ceiling Grid Label placement and Marking: Mark the ceiling grid with an orange sticker to identify the environmental drop location. Place the label next to the sticker on the ceiling grid and on the environmental sensor.
- G. Ceiling Plenum Riser Tubes
 - 1. Label each tube according to its service direction (N for North, S for South, E for East, and W for West).
- H. MDF/IDF Patch Cables
- I. Any patch cables exceeding 2 feet in length should be labeled at the patch panel end to indicate the connected switch and port.
 - 1. Use the format: S_P##
 - 2. Where: S = Switch Label, P = Switch Port, ## = Switch Port Number
 - 3. **Examples: 1.12-2_P23 or 1.7_P07**
- J. Floor Plan
 - 1. A floor plan clearly labeled with all outlet jack numbers shall be included in the as-built plans.
 - 2. Contractor shall label wiring on both ends of cable at workstation and headend locations with machine labels, no exceptions.

3.3 EQUIPMENT RACK CONFIGURATION

- A. Equipment Racks: Equipment racks shall be assembled and mounted in locations shown on the Drawings and as detailed. Each rack shall be securely mounted to the floor and braced to the wall with cable tray in accordance with the manufacturer's instructions and

recommendations. Racks shall be mounted such that the side rails are plumb with vertical cable management panels. Racks to be located such that future expansion can occur without relocating existing racks. Racks shall be grounded in accordance with NEC requirements.

- B. Wire Management Components: Horizontal cable management panels shall be installed directly above and below each patch panel, also 1 per patch panel should be left at site to accommodate the switch gear when they are installed. Vertical cable management panels shall be installed on each side of the rack. In instances where more than one rack is installed in a single location, vertical cable management shall be installed between the racks and on either side.
- C. Cable Placement: Cable installation in the Wiring Closet must conform to the Project Drawings. All cabling shall be routed so as to avoid interference with any other service or system, operation, or maintenance location. Avoid crossing area horizontally just above or below any riser conduit. Lay and dress cables to allow other cables to enter the conduit/riser without difficulty at a later time by maintaining a working distance from these openings.
- D. Cable Routing: Cable shall be routed as close as possible to the ceiling, floor, or corners to ensure that adequate wall or backboard space is available for current and future equipment. All cable runs within the Wiring Closet shall be horizontal or vertical within the constraints of minimum cable bending radii. Minimum bend radius shall be observed. Cables shall not be tie-wrapped to electrical conduit or other equipment.
- E. Installation: All incoming cables shall be routed on the cable tray and neatly dressed down to the patch panels.
- F. Hardware: Provide rack and jack panel hardware as required for all data station wiring.

3.4 STATION WIRING INSTALLATION

- A. General:
 - 1. Cabling between wiring closet and workstation locations shall be made as individual home runs. No intermediate punch down blocks or splices may be installed or utilized between the wiring closet and the communications outlet at the workstation location.
 - 2. All cable must be handled with care during installation so as not to change performance specifications. Factory twists of each individual pair must be maintained up to the connection points at both ends of the cable. There shall never be more than one and one-half inches of unsheathed enhanced Category 6A UTP cable at either the wiring closet or the workstation termination locations.
- B. Exposed Cable:
 - 1. All cabling shall be installed inside walls or ceiling spaces whenever possible. Exposed station cable will only be run where indicated on the Drawings.
 - 2. Additional exposed cable runs will require Owner approval and will only be allowed when no other options exist.
- C. Placement: All cabling and associated hardware shall be placed so as to make efficient use of available space. All cabling and associated hardware shall be placed so as not to impair the Owner's efficient use of their full capacity.
- D. Cable Routes:
 - 1. All cabling placed in ceiling areas must be in conduit, cable tray or J-Hooks. Cable support shall be permanently anchored to building structure or substrates. Provide

attachment hardware and anchors designed for the structure to which attached and that are suitably sized to carry the weight of the cables to be supported. Do not route cable through webbing of structural steel. Cabling must be supported in dedicated supports intended to support cabling as described in this section.

2. Attaching cables to pipes or other mechanical items is not permitted. Use J-Hooks for up to 15 cables (Chatsworth hooks with appropriate brackets). All runs of sixteen (16) or more cables, provide cable rings on 36-inch maximum centers to hang cable. Communications cable shall be rerouted so as to provide a minimum of 18 inches spacing from light fixtures, sources of heat, power feeder conduits and EMI sources. Cabling shall not be attached to ceiling grid support wires. Cable runs shall be parallel or perpendicular to building structure. Multiple cables to be bundled together every 6 feet.

3.5 STATION HARDWARE

- A. Flush Mount Jacks: Flush mount jacks shall be mounted in a faceplate with backbox.
- B. Placement: Where possible, the communications outlet shall be located so that its centerline is 18 inches above floor level or 12 inches above permanent bench surfaces. Outlets shall not be mounted on temporary, movable, or removable surfaces, doors, or access hatches.
- C. RJ-45 Jack Pin Assignments:
 1. Pin connections for data station cable outlets and patch panels shall match EIA/TIA 568 modular jack wiring recommendation T568B.
 2. Pin connections at data jack panels shall match pin connections at outlets (straight through wiring).

3.6 CABLE TESTING REQUIREMENTS

- A. Notification: The Owner and Engineer shall be notified one week prior to any testing so that the testing may be witnessed.
- B. Inspection: Before requesting a final inspection, the Contractor shall perform a series of end-to-end installation performance tests. The Contractor shall submit for approval a proposal describing the test procedures, test result forms and timetable for all copper and fiber optic cabling.
- C. Procedures: Trained personnel shall perform all testing. Acceptance of the test procedures discussed below is predicated on the Contractor's use of the recommended products and adherence to the inspection requirements and practices set forth. Acceptance of the completed installation will be evaluated in the context of each of these factors.
- D. Errors: When errors are found, the source of each shall be determined, corrected and the cable retested. All defective components shall be replaced and retested. Re-test results must be provided on Owner approved forms and witnessed by Owner.
- E. Twisted Pair Cable Testing:
 1. At a minimum, the Contractor shall test all station drop cable pairs from Data Closet termination patch panels to outlet device RJ45 jacks. Category 6A products shall be tested for compliance to ANSI/TIA/EIA 568A and ISO/IES 11801 for a Category 6A rated installation. Test equipment used shall meet TIA/EIA TSB-67, Level II accuracy. Further, the contractor shall have a copy of TSB-67 in their possession and be familiar with its contents.
 2. Each wire/pair shall be tested at both ends for the following:
 - a. Wire map (pin to pin connectivity)

- b. Length (in feet)
- c. Attenuation
- d. Near end cross talk (NEXT)
- e. Power Sum
- 3. Test equipment shall provide an electronic and printed record of these tests.
- 4. Test results for each Category 6A four-pair UTP cable must be submitted with identification to match labels on all patch panel ports and RJ45 jacks and must match as-builts associated with that cable.

3.7 INSPECTION

- A. Conformance to the installation practices covered above are to be verified when completed. In some cases, the Owner/Designer may inspect before acceptance.
 - 1. Written Test Report:
 - a. Complete test results, including actual values associated with tests.
 - b. Show all certifications for telecommunications wiring systems.
 - c. Include cable maps showing each cable route and keyed to cable labels. Provide owner with complete floor plans identifying outlet location and cable routing drawing in AutoCad format. Provide electronic copy of drawings to owner in AutoCad version 14 or greater.
 - d. Documentation of outlet, cable, and rack labeling system.
- B. After performing all tests, tabulate results and bind together in format acceptable to Owner. Installer shall provide written certification in the test report that telecommunications cable is properly installed and test results certify system to all specified standards.

END OF SECTION 27 10 00

SECTION 27 41 15 – AV STUDIO BROADCAST SYSTEMS

PART 1 - GENERAL

1.1 DIVISION OF SCOPE

- A. This section includes AV Studio Broadcast System requirements for components within the following areas:
 - 1. Control Booth
 - 2. Green Room
 - 3. Associated support spaces as explicitly identified in the accompanying AV drawing package.
- B. Reference Audio-Visual drawings as follows:
 - 1. 'AV' Sheets: Associated AV Systems Drawings as part of this bid package.

1.2 RELATED DOCUMENTS:

- A. General Conditions and Requirements, Special Provisions, and applicable portions of Division I of the general contract are hereby made a part of this section.
- B. Architectural, structural, mechanical, electrical, and other applicable documents are considered a part of the Audiovisual System documents insofar as they apply as if referred to in full.

1.3 DESCRIPTION OF THE WORK:

- A. A complete new broadcast production system, to include, but not limited to, the following items:
 - 1. Coordination of AV Systems needs with the electrical systems installation contractor currently working under the Owner.
 - 2. Coordination of AV Systems needs with the Owner's technology department with respect to the IT/datacomm systems and Classroom AV systems.
 - 3. Wiring, as needed, to provide a complete and working audiovisual system, as specified in drawings and specifications.
 - 4. Equipment racks for audiovisual systems
 - 5. Furniture and production consoles for audiovisual systems
 - 6. Audiovisual I/O plates, intercom plates, patch bays, and monitor plates
 - 7. Audio and Video routing and monitoring system
 - 8. "On-Air" light system
 - 9. Video Production and Control Rooms: installation, configuration, and training for new equipment as follows:
 - a. TV broadcast production system, to include all associated processing, routing, distribution, and conversion components
 - b. Broadcast audio digital mixing console system
 - c. Studio and robotic video cameras
 - d. Wired and Wireless Microphone systems
 - e. Playback and recording devices
 - f. Production intercom and interrupted foldback (IFB) systems
 - g. Control system with touchpanels
 - h. Podcast system

1.4 SCOPE OF THE WORK:

- A. These Specifications, together with the related drawings and the general requirements of the contract with the Owner, comprise the requirements for the Audiovisual System for the project.

- B. Furnish, deliver, erect, install and connect completely all of the material and appliances described herein and in the Drawings, and supply all other incidental material and appliances, tools, transportation, etc., required to make the work complete, and to leave the Audiovisual Systems in first class operating condition, excluding those items listed under Section 1.11, RELATED WORK IN OTHER SECTIONS.
- C. Perform all assembly of equipment, wiring and inter-connection and soldering of wires to jacks, devices, terminals or equipment, using technical employees only, who are experienced in the installation of Audiovisual Systems equipment and its inter-connectivity. Coordinate final utility rough-in locations with actual equipment furnished.
- D. Verify dimensions and conditions at the job site prior to installation, and perform installation in accordance with these Specifications, manufacturers' recommendations and all applicable code requirements.
- E. Verify all existing conditions before ordering equipment. Owner shall not be liable for costs associated with return of equipment.

1.5 QUALITY ASSURANCE:

- A. The intent of these Specifications is to describe and provide for a complete Audiovisual Production System of high professional quality and reliability. Professional performance standards by the Audiovisual Systems Contractor (hereafter referred to as Installer) and the equipment will be required.
- B. In all cases, the Owner and Architect shall determine the acceptability of the work based upon the visits, observations, and reports of the Audiovisual Systems Consultant (hereafter referred to as Consultant).

1.6 CONDITIONS OF THE PROPOSAL

- A. Provide a proposal to the Owner for a turn-key system as described in these specifications and drawings.
- B. Provide line-item pricing on all equipment, along with labor, profit, and overhead.
- C. Provide all ancillary information required by the Owner to be set up as a vendor/contractor.
- D. Provide proposed schedule for completion of work, along with assumptions on after hours and weekend work. The Owner may restrict access to the building during school hours.

1.7 SUBSTITUTIONS:

- A. Many items are listed in the Specifications by the manufacturer's type or model number, without a detailed performance specification, and may not include the phrase "or approved equal".
- B. Where the phrase "or approved equal" appears, the item specified shall set a standard of quality and performance, based on the published specifications of the manufacturer and on the actual performance as known by the Consultant.
- C. Requests for substitution, when forwarded by the Installer to the Consultant, are understood to mean that the Installer represents that he has personally investigated the proposed substitute product and determined that it is equal to or superior in all respects to that specified, that the same guarantee will be provided for the substitution as for the specified product, and that the Installer will coordinate the installation of the accepted substitute, making such changes as may be required for the work to be complete in all respects.

- D. Substitutions will be considered on the basis of equal performance, only if requested prior to bid date, in writing. No substitutions will be allowed without prior approval.
- E. Space allocations and utility rough-ins have been designed on the basis of equipment items named by manufacturer and model number. If any equipment not so named is offered which differs substantially in dimension or configuration from the named equipment, provide scaled shop drawings showing that the substitute can be installed in the space available without interfering with other trades or with access for operation and maintenance in the completed project. The Installer shall coordinate final utility rough-in locations with actual equipment furnished.
- F. Where substitute equipment requiring different arrangement or connections from those shown in the drawings is accepted by the Consultant, install the equipment to operate properly and in harmony with the intent of the Drawings and Specifications, making all necessary incidental changes without increasing the Contract amount. Pay all additional costs incurred by adjoining or connecting trades.
- G. All requests for substitutions should be submitted before the bid opening date. Substitutions shall be requested and approved in writing only, based upon these criteria. Substitutions requested after bid date will not be considered unless it is determined by the Consultant and Architect that such consideration is in the best interests of the Project.

1.8 INSTALLER QUALIFICATIONS:

- A. The work performed under this Section shall be performed by an Audiovisual Systems contractor, normally engaged in the business of Audiovisual Systems installation. The prospective contractor shall show proof, as part of the bid that the contractor has been in the Audiovisual Systems installation business for a period of not less than five years and has successfully completed projects of similar size and scope.
- B. Each prospective AV Installer shall provide a comprehensive system portfolio of completed projects of comparable size and scope specific to Studio Production and Broadcast applications for review by the AV Consultant.
- C. Each bidder shall hold a current, valid franchise for the major lines of audiovisual equipment furnished by them under these Specifications.
- D. All work shall be performed by employees of the sound subcontractor, and not by contract employees. Work crew must be supervised by a technician holding CTS-I certification.
- E. All systems engineering and shop drawings shall be performed by a technician holding a CTS-D certification.
- F. The Owner and Architect reserve the right to reject any bids submitted by firms without sufficient experience in projects of similar size and scope

1.9 COOPERATION AND COORDINATION:

- A. Cooperate and coordinate as required with the other contractors who are responsible for work not included in this section.
- B. Provide any and all information as required or requested by the Owner and Consultant, in order for this work to be completed to the satisfaction of the Owner, and in the best interests of the Project. Such assistance or information shall be transmitted in writing to the requesting party in all cases. All written correspondence shall be copied to the Consultant.

1.10 GUARANTEE AND WARRANTY:

- A. Guarantee all parts, labor, and workmanship furnished under this contract for a period of twelve (12) months from the date of final commissioning by the consultant.
- B. During the warranty period, report to the site and repair or replace any defective materials or workmanship without cost to the Owner. Warranty service shall be rendered within 48 hours after request by the Owner. Equivalent replacement equipment shall be temporarily provided when immediate on-site repairs cannot be made.
- C. Where warranties on individual pieces of equipment exceed twelve months, the guarantee period shall be extended to the warranty period of the particular items.
- D. Furnish a complete and working Audiovisual System. Be of maximum assistance to the Owner during the guarantee period of the system, to the degree that maximum Owner satisfaction is assured.
- E. After completion of the work, the Installer shall submit a Certificate of Warranty, stating commence and expiration dates and conditions of the warranty, for signature of both parties. Incremental warranties for completed portions of the work may be negotiated at the discretion of the Owner, if delays occur beyond the control of the Installer.

1.11 SHOP DRAWINGS AND SUBMITTALS:

- A. Completely detailed shop drawings shall be prepared prior to the procurement of equipment or commencement of work. Electronic files of select drawings will be made available to the Installer from the Consultant. A digital files disclaimer shall be signed and returned by the Installer to the Consultant prior to release of such files. The available drawings shall include only: (1) Legend/Power requirements, (2) Conduit Riser, (3) Floor and Reflected Ceiling Plans, (4) Section Views. Drawings shall be prepared and submitted in electronic format, and as directed by the Architect. Equipment lists, data sheets, etc. shall be 8-1/2" x 11" size, properly bound into a single electronic format file. Submit in accordance with Division 1, General Requirements.
- B. Within 2 weeks after the notice to proceed, submit to the Architect/Owner identical copies of the following for approval:
 - 1. A complete equipment list, with manufacturers' names, model numbers, and quantities of each item.
 - 2. Manufacturers' data sheets on all equipment items.
 - 3. Equipment rack layouts showing locations of all rack mounted equipment items.
 - 4. Floor plans and reflected ceiling plans, prepared at a scale of not less than 1/8"=1'-0", showing loudspeaker locations and orientation, wall plates, and all other related device locations.
 - 5. Proposed construction details for any custom fabricated items, including loudspeaker mounting, custom interface panels, patch panels, and wall plates. These details shall show dimensions, materials, finishes and color selection.
 - 6. Coordinate with the Architect / Owner regarding color selection of each equipment item and associated mount / mounting hardware for any, and all, exposed devices. Provide factory color options for review in submittal package. The Installer shall request written confirmation from the Architect / Owner on all such devices prior to ordering. Where the Architect's color selection is not a factory color option, the Installer shall coordinate with the device manufacturer for custom color/paint, where available, and, if not available, coordinate with the General Contractor and other trades for field painting.
 - 7. Comprehensive system schematics, showing detailed connections to all equipment, with wire numbers, terminal block numbers, and color coding, at a size and scale that can be read easily from a plotted half-size set.
 - 8. Riser diagrams showing conduit requirements with pull boxes, outlet boxes, physical

9. cable layouts, part numbers of cable types used, and number of circuits in each conduit
Electrical power requirements for head-end and ancillary equipment. Include diagrams for any remote control of electrical power, in sufficient detail to coordinate with the electrical contractor, showing exact conduit requirements and locations for switched duplex receptacles
10. Graphic User Interface layouts showing displays designed for control system panels.
11. IP Addresses for all equipment connected to the AV Network.
12. Certain other submittals as noted elsewhere in this specification, and as may be required for various equipment items prior to construction, fabrication, or finishing of that item.
13. Submission of the AV Contract Documents / Bid Documents does not constitute a legitimate submittal and will not be accepted.
14. Incomplete or partial submittals will not be reviewed.

1.12 FINAL CLOSEOUT DOCUMENTATION:

- A. All final documentation shall be submitted and approved before final acceptance by the Owner will be granted. Submit the following in accordance with Division 1, General Requirements.
 1. A complete as-installed equipment list, listed by room, with manufacturers' names, model numbers, serial numbers, and quantities of each item
 2. A complete loose equipment list, with manufacturers' names, model numbers, serial numbers, and quantities of each provided.
 3. A complete and correct system schematic, showing detailed connections for all parts of the system, including wire numbers, terminal block numbers and layouts, and other designations and codes. System performance measurements as noted elsewhere in this specification shall be documented. Include diagrams or charts showing final settings of all control knobs in the system (mixers, equalizers, power amplifiers, etc.). Submit copies of software settings of each piece of equipment that is software controlled.
 4. Network configuration and routing settings for all network-connected equipment in scope including, but not limited to, the following:
 - a. Full IP settings and addressing for each device.
 - b. Network switch configurations, to include settings for VLANs, QoS, DiffServ, IGMP, and any other setting required for proper AV-network performance.
 - c. Configuration and routing parameters for any Audio / AV-over-IP protocol, to include Dante, QLAN, AES67, AVB, Milan, or any other standard protocol, variant, or proprietary communication platform.
 5. System performance measurements as noted elsewhere in this specification shall be documented. Include diagrams or charts showing final settings of all control knobs in the system (mixers, equalizers, power amplifiers, etc.). Submit copies of processor data files with software settings of each piece of equipment that is software controlled
 6. Complete equipment rack layouts showing locations of all rack mounted equipment items
 7. Floor plans and reflected ceiling plans, prepared at a scale of not less than 1/8"=1'-0", showing loudspeaker locations and orientation, wall plates, rack locations, and other related device locations
 8. Riser diagrams showing as-installed conduit with pull boxes, outlet boxes, physical cable layouts, part numbers of cable types used, and number of circuits in each conduit
 9. Manufacturer's warranties and operating instructions for each and every equipment item furnished. Include a copy of the certificate of warranty, signed by both parties
 10. Technical Systems Operations Manual, custom-written by the Contractor, for the purpose of instructing the Owner's operating personnel in the detailed step-by-step operation of the system and preventive maintenance procedures. This manual shall include descriptions of the system components and their relationship to system function. This manual shall be bound separately and labeled appropriately.
 11. Incomplete submittals will not be reviewed.

1.13 RELATED WORK IN OTHER SECTIONS:

- A. All conduits with pull strings, all electrical pull boxes, and all outlet boxes shall be furnished and installed under the electrical section of Division 26. Conduits shall be run continuously from outlet box to outlet box. Conduit stub-outs are not acceptable except as noted. Coordinate as necessary for proper installation.
- B. All 120VAC power conductors and conduits associated with power circuits to all equipment locations shall be furnished and installed under the electrical section of Division 26. The 120VAC power to the equipment racks shall be terminated inside the racks to Audiovisual Contractor supplied rack mounted outlets.
- C. An insulated THW stranded copper ground wire, sized according to NEC, shall be installed under the electrical section of Division 26 from the equipment racks sheet metal to the primary ground point within the building, and terminated at each end to bare metal using approved connectors and clamps.
- D. All built-in millwork and any grille cloth shall be furnished under other sections.
- E. Electrical circuits shown in the AV system drawings are for reference only in depicting the number of electrical circuits needed for operation of these systems.
- F. Advisory datacomm circuits shown in the AV System drawings associated with the building data network are for reference only in depicting the number of network drop locations needed for operation of these systems.
 - 1. Datacomm circuits associated with the dedicated Audiovisual data network are wholly within the AV Contractor's scope of work, as specified in this Section and shown in the accompanying drawings.

PART 2 - PRODUCTS

2.1 GENERAL:

- A. All items shall be new and unused.
- B. The following sections specifically list the acceptable equipment types and items for this project. Where quantities are not noted, they may be obtained from the drawings. In the event of a discrepancy between the specifications and the drawings, the greater quantity or better quality shall be furnished.
- C. Refer to Section 1.6, SUBSTITUTIONS of this specification.

2.2 INSTALLED WIRE AND CABLE:

- A. All wire and cables shall be new and unused.
- B. Wire not installed in equipment racks, not portable, or not installed in conduit shall be plenum-rated and meet all applicable codes.
- C. Furnish and install the following wire and cable:
 - 1. Voice coil loudspeakers:
 - a. High frequency devices (bi/tri-amped systems only): West Penn 226 14AWG twisted pair.
 - b. Mid frequency devices and speaker monitor circuits (bi/tri-amped systems only): West Penn 227 12AWG twisted pair.
 - c. Low frequency and Full-Range devices: West Penn HA210 10AWG twisted pair.
 - 2. Constant voltage (70.7-volt) loudspeaker cable:
 - a. Runs of less than 200 feet: West Penn 225 stranded 16AWG jacketed twisted

- pair.
 - b. Runs of 200' to 300': West Penn 226 stranded 14AWG jacketed twisted pair.
 - c. Runs of 300' to 500': West Penn 227 stranded 12AWG jacketed twisted pair.
 - d. Runs of 500' or more: West Penn HA210 stranded 10AWG jacketed twisted pair.
3. Audio Cable:
- a. Microphone-level audio cable (installed in conduit, not portable): West Penn Wire 452 stranded 22AWG twisted pair with foil shield.
 - b. Line-level audio cable and all inter-rack audio cable: West Penn Wire 452 stranded 22AWG jacketed twisted pair with foil shield.
 - c. Exterior and below-grade Microphone and Line level cable: West Penn AQ293 stranded 18AWG twisted pair with foil shield.
4. Production Intercom cable (installed in conduit, not portable):
- a. 1-Channel: West Penn 293 stranded 18AWG twisted pair with foil shield.
 - b. 2-Channel: West Penn D440 2-pair stranded 18AWG twisted pair with individual foil shield per pair.
 - c. 4-Channel: West Penn D442 4-pair stranded 18AWG twisted pair with individual foil shield per pair.
 - d. Outdoor Production Intercom Cable (exposed directly to sunlight/weather or installed in conduit below grade): West Penn AQ293 stranded 18AWG twisted pair with foil shield.
5. Wireless microphone and RF Assistive Listening System antenna cable:
- a. For runs less than 50 feet: Belden 9310, 50-ohm RG-58A/U coaxial cable with appropriate connectors.
 - b. For runs that exceed 50 feet: Belden 9914, 50-ohm RG-8A/U type coaxial cable with appropriate connectors.
6. Video Cable:
- a. Digital Video Cable (runs of 1' to 330'): Belden 4794R RG7 Coax Cable, or approved equal
 - b. Digital Video Cable (runs of 330' or more): Belden 7731A RG11 Coax Cable, or approved equal
 - c. Video Sync Cable: Belden 1694A RG-6/U Coax Cable, or approved equal
 - d. HDMI Cable: Extron Pro Series high speed 4K verified 22 AWG cable or approved equal
7. Data cable (copper) for networked Audiovisual systems:
- a. Installed Data cable: Belden 10GX62F Cat6A shield cable or approved equal conforming to project standard.
 - b. Data Patch cables: Belden 10GX F/UTP CMR patch cables, or approved equal conforming to project standard.
 - c. Data Patch Panels: Belden Cat6A Shielded 48-Port flat patch panel. Provide labeling kit for each unit supplied
8. Fiber optic cable for networked Audiovisual systems:
- a. 2-Strand Single Mode: Belden FDSC002R0.
 - b. 4-Strand Single Mode: Belden FDSC004R0.
 - c. 6-Strand Single Mode: Belden FDSC006R0.
 - d. 12-Strand Single Mode: Belden FDSC012R0.
 - e. Fiber optic patch panels: Panduit FRME1U 1-rack unit rackmount fiber enclosure with three (3) fiber adaptor panel slots. For each unit supplied, provide FOSMF Fusion Splice modules and FAP6WBUDLCZ Fiber Adaptor Panels with six (6) singlemode duplex LC connectors, in quantities required to satisfy the schematic diagrams. Provide blank filler plates for unpopulated panel slots.
 - f. Interconnect and Patch Cables at Sound Equipment Racks: Provide dual fiber optic cable assemblies of appropriate wavelength, mode, and connector type for fiber optic patch and inter-rack cabling. All fiber optic connector types associated with Audiovisual systems shall be Duplex LC type, unless noted otherwise.
- D. Other equipment control cables shall be stranded wire, appropriately shielded, of gauge and

number of conductors required by the manufacturer for proper operation of the system or equipment item furnished.

- E. Wire and cable for all other devices shall be supplied in accordance with the recommendations of the device manufacturer and the National Electrical Code.

2.3 JACKS, CONNECTORS, AND WALL PLATES:

- A. All plate-mounted connectors shall be ground-insulated from the plates on which they are mounted.
- B. Floor-mounted jacks, unless noted otherwise, shall be installed in floor boxes. The interior plates shall be anodized black. Nomenclature shall be engraved into the interior plate of each floor box with 1/8" block letters filled with white paint. Coordinate floor box insert connector plates with actual floor boxes provided.
- C. For non-standard custom panels, connectors shall be installed on 1/8" thick black anodized aluminum or brushed stainless steel panels. Nomenclature shall be engraved into the plate with 1/8" block letters filled with contrasting paint color. Coordinate final finish selection with Architect prior to Shop Drawing submittals.
- D. All other jacks shall be installed on standard brushed stainless steel finish plates. Nomenclature shall be engraved into the plate with 1/8" block letters filled with black paint.
- E. All AV signal circuit locations shall be numbered logically and consecutively for each circuit/signal type, starting from one (1).
- F. All plate-mounted jacks at exterior locations shall be provided with captive sealing covers.
- G. Unless otherwise specified, all jacks and connectors for the Audio-Video Systems shall be as follows:
 - 1. Audio connectors:
 - a. Microphone and line-level input jacks (XLR type): Neutrik NC3FD-L-B-1 3-pin female XLR panel-mount jacks with gold-plated contacts.
 - b. Audio output jacks (XLR type): Neutrik NC3MD-L-B-1 3-pin male XLR panel-mount jacks with gold-plated contacts.
 - c. TRS 1/4" jacks: Neutrik NJ3FP6C-B locking TRS jack with gold-plated contacts.
 - d. Production Intercom chassis mounted connectors: Neutrik NC6MSD-L-1 6-pin XLR Male conforming to Switchcraft pin configuration, or approved equal by Switchcraft.
 - e. Female cable-end audio connectors: Neutrik NC3FX-B 3-pin female XLR connectors with gold-plated contacts.
 - f. Male cable-end audio connectors: Neutrik NC3MX-B 3-pin male XLR connectors with gold-plated contacts.
 - 2. Video and RF connectors:
 - a. BNC chassis mounted connector (75-Ohm): Neutrik NBB75DFIX Isolated UHD/4K BNC Bulkhead Jack.
 - b. BNC chassis mounted connector (50-Ohm): Amphenol Connex 112443 BNC Bulkhead Jack.
 - c. BNC cable mounted connector (75-ohm): Canare BCP-D series 12G-SDI 4K/UHD rated crimp cable connectors, model(s) sized for video cable type(s) provided.
 - 3. Loudspeaker connectors:
 - a. Chassis mounted speaker connectors: Neutrik NL4MPXX 4-pole locking jack, or approved equal.
 - b. Cable mounted speaker connectors: Neutrik NL4FXX-W-* 4-pole locking plug, or

- approved equal. * = Provide model variant appropriate for cable O.D. for each assembly.
4. Network Data connectors:
 - a. CAT6A chassis mounted connector: Neutrik NE8FDX-Y6-B CAT6A Shielded Bulkhead Jack, Black with rear IDC terminations.
 - b. CAT6A chassis mounted connector (IP65 Rated): Neutrik NE8FDX-Y6-W CAT6A Shielded Bulkhead Jack, Black with rear IDC terminations, and integrated sealing cover. These devices are associated with any configuration at a non-conditioned or exterior location.
 - c. CAT6A cable connectors: Panduit FP6X88MTG Cat6a straight field term plug, or approved equal.
 5. Fiber optic connectors:
 - a. Fiber optic chassis mounted connector: Neutrik OpticalCON DUO NO2-4FDW-A with duplex LC feedthrough socket and (4) solder contacts. Provide Neutrik SCNO-FDW-A captive sealing cover at each location.
 - b. Field-terminated fiber optic connectors shall not be accepted. Contractor shall fusion splice factory terminated duplex LC pigtails or patch cords of appropriate mode and wavelength to installed fiber optic cabling associated with AV System equipment.
 6. Power Sequencing Remote Low-Voltage connectors:
 - a. Provide connectors for use with remote connections for power sequencing switch sets and standalone sequenced power modules. Connectors shall be in an industry standard form factor with an uncommon pin configuration to alleviate any mis-connection from standard audio, production intercom, or DMX systems.
 - b. Chassis-mount 4-pin XLR male: Neutrik NC4MD-L-B-1 4-pole male receptacle with gold contacts and black metal housing.
 - c. Chassis-mount 4-pin XLR female: Neutrik NC4FD-L-B-1 4-pole female receptacle with gold contacts and black metal housing.
 - d. Cable-mount 4-pin XLR male: Neutrik NC4MX-B 4-pole male cable connector with black metal housing and gold contacts.
 - e. Cable-mount 4-pin XLR female: Neutrik NC4FX-B 4-pole female cable connector with black metal housing and gold contacts.
 7. Power connectors:
 - a. Chassis mounted: Neutrik NAC3MPX-TOP chassis-mounted power inlet connector.
 - b. Portable power cable assembly: 25-foot 12/3 SJO flexible power cable terminated in Neutrik NAC3FX-W-TOP at one end and 15-amp Edison plug (Nema 5-15 male) at the other.
- H. Furnish and install the required number of jacks and connectors as indicated on the drawings.

2.4 EQUIPMENT RACKS AND POWER DISTRIBUTION:

- A. Furnish equipment racks to house equipment as configured in drawings.
- B. Power distribution within racks shall be supplied via Middle Atlantic raceway and rackmount power distribution devices.
- C. Each equipment rack shall include locking front and rear doors, side panels, and top and bottom panels unless otherwise noted.
- D. Equipment rack colors shall be flat black.
- E. Heat-producing components shall be mounted with one RU blank panel installed between units, or as the manufacturer recommends. Fill all other unused portions of rack front sections with

matching blank panels.

- F. Furnish (5) sets of spare keys for each equipment rack.
- G. All mounting screws shall be theft resistant.
- H. Install the required number of units, of sufficient size to accommodate the equipment specified, at the locations indicated in the drawings.
- I. At locations / systems with power sequencing, configure so that power amplifiers and active loudspeakers are the last to turn on in system power-up sequence and first to turn off in power-down sequence.
- J. Label outlets in equipment rack to correspond with the circuit number at the power panel.
- K. Provide wiring ducts, rear rack rails, lace strips, lace bars, cable managers, and brush grommets as necessary to create a clean and neat install in the rear of the equipment racks.
- L. Provide blank panels, vent panels, security covers, and drawers, as shown in drawings.
- M. Provide custom panels, as required, to house all connectors and I/O plates, as well as touchpanels.
- N. Provide Middle Atlantic recessor brackets to appropriate panels to allow front doors to fully close when cables are connected. Adjust front rackrails back into rack so that paging mics, intercom mics, and other protruding items do not keep the door from fully closing.
- O. Furnish and install the following, or approved equal:
 - 1. Type "ER" Equipment Rack:
 - a. Middle Atlantic model WR-44-32 pull-out pivoting equipment rack, to include WRFD-44 Front Door, WR-RR-44 Rear Rack Rail Kit, MW-4QT-FC Fan Top with Integrated Thermostatic Controller, and LT-GN-WL Magnetic Work Light. (Qty: as shown)
 - b. Middle Atlantic BR1 Brush Grommet Panel. (Qty: as required)
 - c. Power:
 - 1) Vertical Power Distribution: Custom Middle Atlantic PDW vertical power strip with integrated surge suppression, part# PDW-113289. (Qty: 1 ea.)
 - 2) Rackmount Power Distribution: Middle Atlantic PDX-920R horizontal rackmount power strips (Qty: as required)
 - 3) UPS: Middle Atlantic UPX-2000R-2 2000VA, 20 Amp UPS. (Qty: 1ea.)

2.5 TECHNICAL FURNITURE SYSTEMS:

- A. Furnish and install custom control room technical furniture systems in configurations shown in drawings.
- B. Final finish material to be determined and approved by Owner. Provide line item pricing for different categories of finish material in the Proposal.
- C. Power distribution within console systems shall be supplied via Middle Atlantic PDT power strips, or equivalent.
- D. Operator's console system to have a video monitor mounting system, power/data management system, locking swing-out lower doors, rack turrets, and black powder coated finish.

- E. Provide LED task lights, custom I/O plates, rack cabinets, and all other accessories called out in drawings.
- F. Provide blank panels, vent panels, security covers, and drawers, as shown in drawings.
- G. Mount equipment as shown in drawings. Provide all necessary mounting hardware and console customization to accommodate specified equipment.
- H. Furnish (5) sets of replacement keys for each lock on the Operator's Console System.
- I. Furnish and install the following, or approved equal:
 - 1. Broadcast Control Desk:
 - a. TBC (Time Base Consoles) custom IntelliTrac Compact Type A, configured as shown in the drawings and consisting of the following: 7 bays with desktop worksurface with counter cutout and drop platform for audio mixing console, side panel pair, 5ea. 4RU angled rack turrets, 3ea. under-counter keyboard/mouse trays, 6ea. single arm monitor mounts, and 5ea. front-accessible convenience power outlets. Contact TBC consoles (631.293.4068) and reference Quote #BAIAU-16839-25 for complete component requirements. (Qty: 1 custom desk system)
 - b. Finish: Standard Finish
 - c. Interior power distribution: Middle Atlantic PDT-Series power strips, with appropriate number, and amperage, of circuits and outlets to support all devices at Broadcast Control Desk. (Qty: as required)

2.6 DIGITAL SIGNAL PROCESSOR

- A. The audio processing shall be in the digital domain following the input source and shall remain until power amplification is required.
- B. All network connections to be coordinated with the Owner's network representatives. The Owner's IT department to set-up static IP addresses in association with the Installer.
- C. Provide all data interconnection cabling as shown.
- D. System programmer shall be QSys Level 2 certified or otherwise advanced manufacturer-certified for programming any respective approved substitute DSP product/system.
- E. Include all licensing for DSP plug-ins and Dante™ routing by software, as required.
- F. The system processor shall provide up to 64 x 64 networked audio channels individually configurable as either Q-LAN or AES67 formatted networked audio. Additionally, the system processor shall include 8 x 8 Software-based Dante network audio channels and is licensable for up to 32 x 32 Software-based Dante capacity. Software-based Dante channels used subtract from the overall 64 x 64 network audio capacity.
- G. The system processor shall support an 8-channel total analog I/O capacity and shall be presented as 8 Flex Channel I/O which shall be software definable as analog inputs or outputs in single channel increments in any combination ratio.
- H. The system processor shall have the following front panel controls and indicators: Unit ID button and Power On blue LED. Device Status, monitoring, and logging shall be provided by a standard web interface. On the rear panel, the system processor shall have two 3-pin RS232 Euro Block Connectors, 8 GPI general purpose control inputs on a 10-pin Euro Block Connector, 8 GPO general purpose control outputs on a 10-pin Euro Block Connector, USB C and B connectors to

support AV bridging with QSC Q-SYS cameras and/or present itself as one or more multi-channel USB audio interfaces. Q-SYS Network: LAN A RJ45 1000 Mbps only, LAN B: RJ45 1000 Mbps only.

- I. The system processor shall operate from a single design, which can be comprised of components, wiring, links, text, and graphics on a single or multiple schematic pages. Designs shall include any of the following DSP function blocks, test and measurement components, control components, and layout components: Acoustic Echo Cancellers, SIP Softphone instances, USB Audio host and device blocks, Audio Players, Audio Streaming components, Crossfaders, Crossovers, Delay components, Auto Gain control elements, Compressors, Gates, Duckers, Expanders, Ambient Noise Compensators, Limiters, Gain blocks, Graphic Equalizers, Parametric Equalizers, FIR Filters, All-Pass Filters, Band-Pass Filters, Band-Stop Filters, High-Pass Filters, Low-Pass Filters, FIR High-Pass filters, FIR Low-Pass Filters, Dual-Shelf Equalizers, Notch Filters, Meters, Matrix Mixers, Gain-Sharing Automatic Mixers, Gated Automatic Mixers, Signal Routers, Public Address Routers, Room Combiners, Signal Presence Meters, Tone Generators, Tone and Noise Generators, Dual Trace FFT Measurement Modules, Real Time Analyzers, Signal Injectors, and Signal Probes.
- J. The system processor shall support custom user control interfaces on either proprietary touch screen controllers, network computers utilizing a control application, iOS devices, or any device with a standard web browser. Custom control interfaces shall be capable of having multiple user-selectable pages with different controls on each. All GUI's shall be submitted to the consultant for approval prior to programming and finalization.
- K. Furnish and install the following as indicated in the accompanying Audiovisual drawings, or approved equal:
 1. Digital Signal Processor (DSP): QSC Q-Sys CORE 8-FLEX. (Qty: as shown)
 2. DSP Input Expanders: QSC Q-Sys QIO-ML4i 4-channel mic/line input expander. To be provided with QIO-RMK rackmount kit, as required to support all devices. (Qty: as shown)
 3. Desktop Touch Control Panels: QSC TSC-70-G3 7" touch control panel, to be supplied with TSC-710T-G3 desktop stand accessory. (Qty: as shown)
 4. Network Switches: Netgear M4300-52G-PoE+ (GSM4352PB) 52-Port switch with 48 1G PoE+ RJ45 ports, 2x 1/10GbE ports (Non-PoE+), 2x SFP/SFP+ ports, 591W PoE+ power budget. (Qty: as shown)
 5. Successful Contractor shall be responsible for programming each software configuration file for each system based on intended functionality shown, or implied, in the drawings.
 - a. Each system shall be programmed so the default operating condition is auto-populated upon system power-up.
 - b. Interface with the presentation and control system at each applicable space and program associated touch control panels for user control of all parameters necessary for successful control and operation of connected devices in each system.
 - c. Include controls at the touch control screen:
 - 1) Source selection between Production Studio live stream and scholastic video feed at TV-B locations indicated in the drawings.
 - 2) Engage / disengage "On-Air" light system.
 - d. Terminate and program fire alarm interface at each system. Each system shall be programmed to mute all program audio upon receipt of contact closure from the addressable fire alarm module, provided by fire alarm vendor, at each system location.
 - e. Contractor shall provide a review copy of the programming file to the Consultant for review at the latest four (4) weeks prior to scheduled commissioning trip.

2.7 LOUDSPEAKERS

- A. The drawings indicate the loudspeaker positions and aiming points for each loudspeaker.

- B. Loudspeakers shall be mounted to the structure, at the positions and angles indicated relative to the aiming points. Suspend each component with commercial rigging hardware, in such a way as to facilitate minor angle adjustments. Safety factor shall be at least 5. Furnish rigging details during submittal process. Secure any loose hardware to prevent vibration and rattling. Orient each speaker at the location and angles indicated in the drawings. Make minor adjustments as required to provide even sound distribution.
- C. Measure and record the impedance of each driver at the amplifier terminals. High frequency drivers shall be measured at 1000Hz; low frequency drivers shall be measured at 250Hz. Include the measurements in the final documentation.
- D. Verify factory color option selection with Owner / Architect prior to product acquisition.
- E. Furnish and install the following assemblies, or approved equal:
 - 1. Type "S1" Control Booth loudspeakers: JBL 306P MkII powered 6" 2-way studio monitor speaker. For each unit supplied, provide K&M US-24167-000-55-BLACK large articulating speaker wall mount. (Qty: 2ea.)
 - 2. Type "S2" wall-mounted loudspeakers: QSC AD-S8T 8" 8Ω / 70V loudspeaker with nominal 105° conical dispersion. For each unit supplied, provide YMS8T yoke mount. (Qty: 2ea.)
 - 3. Control Booth Monitor Speaker Controller: Mackie Big Knob Passive monitor controller with 2 selectable sources, 2 selectable outputs, mono/dim/mute switches, and volume control knob. (Qty: 1ea.)

2.8 AUDIO POWER AMPLIFIERS

- A. Provide power amplifiers for use in amplifying audio signals for distribution to the loudspeakers.
- B. Each power amplifier shall have an analog input connector which is either a screw-type barrier strip or XLR type. Networked amplifiers shall incorporate RJ-45 data jacks for network signal and/or control connectivity. Output connectors shall be either barrier strip or Neutrik Speakon connectors. Other types of connectors shall not be accepted. All power amplifiers shall have detented stepping input level controls. Install the units in the main equipment racks and connect as indicated in the drawings.
- C. Provide (1) one amplifier channel for each loudspeaker home run. Size amplifier based on total power consumption of each home run. Locate amplifiers at sound equipment racks associated with each loudspeaker home run / zone.
- D. Furnish and install the following, or approved equal:
 - 1. 4-channel network amplifiers compatible with specified DSP, 700 watts/ch max. @ 8-Ohms: QSC CX-Q-2K4. (Qty: 1ea.)

2.9 DIGITAL MIXING CONSOLE

- A. Furnish a mixing console for use in processing and routing microphone and line level sources.
- B. The mixing console shall have the I/O specified, and be configured on the Dante network.
- C. Configure the console prior to commissioning and provide configuration file to consultant for review.
- D. Configure all Dante enabled devices, including wireless microphones and audio recorders, on the console.
- E. Configure all routing of signal from console to DSP, via Dante into the Q-SYS platform.

- F. Furnish and install the following at the Auditorium, or approved equal:
1. Digital Mixing Console: 48 input channels, 36 total output busses, 24 in / 16 out local I/O, 24 + 1 master fader configuration, I/O port for audio networking expansion: Allen & Heath SQ6. (Qty: 1ea.)
 2. Dante Expansion Card: Allen & Heath SQ-Dante 64x64 Dante Card. Configure each individual mixing console source, as well as a stereo program mix, to be routed via Dante to the TriCaster system. (Qty: 1ea.)
 3. I/O Rack: 24 analog input, 12 analog output, dSnake digital audio networking, remote head-amp control from specified mixing console: Allen & Heath AR2412. (Qty: 1ea.)

2.10 WIRELESS MICROPHONE SYSTEMS:

- A. A diversity UHF wireless microphone system shall be used in the broadcast systems.
- B. As part of the installer's scope, provide and coordinate the services of a representative from the wireless microphone manufacturer to be onsite to perform frequency scanning and monitoring. Work with the manufacturer's representative to select frequency bands so as to avoid interference. Consult with the manufacturer's representative for final frequency coordination.
- C. The wireless receivers shall be provided with rack-mount kits.
- D. Install and configure the manufacturer's wireless microphone management software on the control room computer and/or an owner-provided computer. Train the owner in the use of the program, including how to scan and find available frequencies.
- E. Furnish and install the following wireless systems and accessories, or approved equal:
1. Shure ULXD4Q Quad-channel digital wireless receiver. (Qty: 1ea.)
 2. Shure ULXD1 Wireless bodypack transmitter. (Qty: 4ea.)
 3. Shure TL48 subminiature lavalier microphone with TA4F connector. Verify with the Owner's representative for factory color selection – Black, Tan, or White. (Qty: 4ea.)
 4. Shure SB900B Lithium-Ion rechargeable batteries. (Qty: 4ea.)
 5. Shure SBRC 8- battery rackmount charging station. (Qty: 1ea.)
 6. Shure SBC-AX 2-battery charging module. (Qty: 2ea.)

2.11 PRODUCTION INTERCOM AND INTERRUPTED FOLDBACK (IFB) SYSTEMS

- A. Provide wired production intercom and IFB systems for use in voice communication for personnel coordination and talent direction during events where indicated in the drawings.
- B. Furnish intercom power supplies in sufficient quantities to accommodate all intercom devices per manufacturer's specifications and recommendations for each system.
- C. Refer to associated Audiovisual drawing package for all device, outlet, and equipment locations.
- D. Furnish and install the following Production Intercom System, or approved equal:
1. Clear-Com MS-702 master intercom station. To be supplied with (1) GM-18 gooseneck microphone. (Qty: 1ea.)
 2. Clear-Com RM-702 2-channel remote station. (Qty: 3ea.)
 3. Clear-Com RS-702 2-channel wired intercom belt pack. (Qty: 4ea.)
 4. Clear-Com YC-36 dual-channel beltpack adaptor "Y" cable. (Qty: 1 ea.)
 5. Clear-Com BP-MOUNT desktop beltpack mounting accessory. This device is associated with the control desk audio position. (Qty: 1 ea.)
 6. Clear-Com CC-300 single muff intercom headset w/ flexible dynamic boom mic. (Qty: 8 ea.)
 7. Whirlwind MK6CC-10 10-foot 6-pin XLR-F to XLR-M intercom cable conforming to SwitchCraft 6-pin configuration. (Qty: 5ea.)

8. Whirlwind MK6CC-25 25-foot 6-pin XLR-F to XLR-M intercom cable conforming to SwitchCraft 6-pin configuration. (Qty: 3ea.)
- E. Furnish and install the following IFB Interrupted Foldback System, or approved equal:
 1. Clear-Com PIC-4744 IFB Router. (Qty: 1ea.)
 2. Clear-Com PS-702 2-channel power supply. (Qty: 1 ea.)
 3. Clear-Com MA-704 Master Control Station. To be provided with CEP-RK Rackmount Kit and (1) GM-18 gooseneck microphone. (Qty: 1ea.)
 4. Clear-Com TR-50 IFB Talent Receiver. For each unit supplied, provide 25-foot balanced XLR cable. (Qty: 4ea.)
 5. Clear-Com CC-010A IFB Earset. Provide 1ea. CC-010-ETUBE replacement ear tube and ear tip for each unit supplied. (Qty: 4ea.)

2.12 ON-AIR WALL SIGNS:

- A. Provide wall indication signs to show when spaces are occupied and in-use during "On-Air" times.
- B. Provide all mounting equipment for a complete and clean installation.
- C. Control of the signs shall be custom rackmount switch panel. Provide controls for: On/Off
- D. Furnish and install the following, or approved equal:
 1. Henry Engineering Superlight LED Tally Light Controller. Provide rackshelf for mounting at equipment rack. (Qty: 3ea.)
 2. Type OA-A On Air Signs: TITUS BPL-RED. (Qty: 2ea.)
 3. Type OA-B On Air Sign: TITUS LPL-HB. (Qty: 1ea.)

2.13 VIDEO PRODUCTION SYSTEM:

- A. Provide a complete TV Broadcast production system, as shown in the drawings, for use with ingest, processing, and switching of video, camera, and character generator sources.
- B. System shall have the following capabilities:
 1. 8 x simultaneous external video inputs, supporting any combination of compatible sources.
 2. 8 x IP video inputs via NDI
 3. 4 x HD/SD-SDI video inputs
 4. 2 x HD/SD-SDI video outputs
 5. 4 x IP video outputs via NDI
 6. 2 x resolution-independent streaming video outputs
 7. 6 x video recording channels
 8. Multiviewer output (HDMI, DVI, or DisplayPort)
 9. 4 x Mix/Effect busses
 10. Robotic camera PTZ control via RS-232, RS-422, and IP
 11. Tally interface
- C. Perform all setup procedures and signal quality adjustments.
- D. As part of the installer's scope, provide and coordinate the services of a representative from the Vizrt Video division to be onsite to perform final setup and additional services, as well as provide a training session to the owner to fully operate the Tricaster Video Package.
- E. Furnish and Install the following, or approved equal:
 1. Broadcast Switcher (Installer shall be an authorized Vizrt TriCaster reseller and be factory certified for TriCaster system operation and training):
 - a. Vizrt Tricaster TC410 Plus in 2RU rackmount form factor. To be supplied with

- keyboard and mouse. (Qty: 1ea.)
- b. Vizrt Flex control panel for Tricaster devices. (Qty: 1ea.)
- c. Protek Ultra 1-year Coverage and Support Plan for Tricaster TC410 (Qty: 1ea.)
- d. Additional Vizrt Tricaster Remote Training - One day (8 hours) operator training for Vizrt Tricaster products that are installed at the facility. Training to be completed by a Vizrt Tricaster Authorized Trainer according to a predetermined training plan. (Qty: 1ea.)
- e. Audinate Dante Virtual Soundcard (DVS) license. Install this software, in conjunction with Audinate Dante Controller (freeware), on TriCaster computer. (Qty: 1 ea.)
- f. Henry Engineering LOGICONVERTER utility control logic interface. This device is for use between the Tricaster Tally Interface and GPIO Controller. Provide manufacturer's rackmount kit for mounting at equipment rack. (Qty: 1ea.)
- g. Skaarhoj ETH-GPI Link GPIO Controller with network interface. Configure with manufacturer's utility software for camera tally light control via Tricaster. (Qty: 1ea.)
- h. KVM Extender: Black Box KVXLCHDP-200 keyboard/video/mouse extender with dual monitor and USB 2.0 support. Provide all cabling and HDMI-DP / DP-HDMI adaptors, as required. Provide rackshelf for mounting at equipment rack. (Qty: 1ea.)

2.14 VIDEO ROUTING SWITCHER:

- A. Furnish a video production routing system to route, sync, and distribute video signals.
- B. Provide all cabling necessary for a complete working system.
- C. Configure routing equipment to connect and communicate over the AV network. Setup control of all available production equipment from the control room computer(s).
- D. Train the owner on how to access all production equipment over the AV network via the control booth computer(s). Setup system for easy access to video recorders for download onto an owner provided external hard drive.
- E. Furnish and install the following, or approved equal:
 - 1. AJA model KUMO 3232-12G 12G-SDI routing matrix switcher (Qty: 1ea.)
 - 2. AJA model KUMO CP2 remote control panel (Qty: 2ea.)

2.15 DISTRIBUTION, PROCESSING, AND CONVERSION

- A. Furnish devices for use in signal distribution, processing, and conversion.
- B. Furnish and Install the following, or approved equal:
 - 1. Card Frame and Modules:
 - a. AJA OG-X-FR card frame with power supply. (Qty: as shown)
 - b. AJA OG-3GDA-2x4 3G-SDI 2x4 reclocking distribution amplifier. (Qty: as shown)
 - c. AJA OG-3GDA-1x9 3G-SDI 1x9 reclocking distribution amplifier. (Qty: as shown)
 - d. AJA OG-UDC 3G-SDI Up, Down, and Cross-Converter. (Qty: as shown)
 - e. AJA OG-3G-AMA 3G-SDI analog audio embedder / de-embedder. (Qty: as shown)
 - 2. Standalone devices:
 - a. Blackmagic Design Mini Converter SDI to HDMI 6G converter with power supply. Provide rack shelf for mounting at equipment rack, where required. (Qty: as shown)
 - b. Blackmagic Design Mini Converter HDMI to SDI 6G converter with power supply. Provide rack shelf for mounting at equipment rack, where required. (Qty: as shown)

- shown)
c. Kiloview N3 SDI and NDI bi-directional converter. Provide RN01 rackmount kit for mounting at equipment rack. (Qty: as shown)

2.16 TEST AND MEASUREMENT

- A. Furnish a master reference generator for use with synchronizing video devices. Provide Sync to all compatible devices in the system.
- B. Unit shall be capable of providing composite or tri-level sync at SD and HD SDI signal rates.
- C. Furnish and install the following, or approved equal:
1. Ensemble Designs model Brighteye 57 Sync and Test Generator, to include power supply and BERKMT-FULL rackmount kit. (Qty: 1ea.)

2.17 VIDEO RECORDING

- A. Furnish a device for use with recording and playback of program video and audio.
- B. Furnish and install the following, or approved equal:
1. Blackmagic Design HyperDeck Studio HD Plus, to include Blackmagic Universal Rackshelf for mounting at control desk equipment bay. (Qty: 1ea.)
 2. Removable Media: SanDisk Extreme Pro UHS-II V90 SDXC 128GB SD Card. (Qty: 2 ea.)

2.18 VIDEO MONITORS AND ACCESSORIES:

- A. Furnish and install video displays, mounts, and cabling at locations shown in the drawings.
- B. Furnish and install signal converters where indicated in the drawings.
- C. Furnish and install the following, or approved equal:
1. Green Room portable studio display monitor:
 - a. Samsung QB65C 65" UHD flat panel display (Qty: 1ea.)
 - b. Chief LPAUB portable display cart. (Qty: 1ea.)
 2. Type TV-A Control Booth wall-mounted display:
 - a. Samsung QB55C 55" UHD flat panel display. (Qty: 1ea.)
 - b. Chief TS525TU Large THINSTALL Dual Swing Arm wall display mount (Qty: 1ea.)
 3. Control Booth desk-mounted displays:
 - a. Dell UltraSharp U2424H 24" IPS 120Hz display monitor. (Qty: 6ea.)
 - b. Mount at single arm mounts provided with Broadcast Control Desk.
 4. Rack Monitor: Blackmagic Design SmartScope Duo 4K dual 8" display with selectable video or waveform monitoring. Install configuration utility software on one of the Control Booth computers. (Qty: 1ea.)
 5. Type TV-B Hallway and AV Studio Flat Panel Displays:
 - a. Samsung QB65C 65" UHD flat panel display. (Qty: as shown)
 - b. Chief LTM1U Large Fusion Tilt Wall mount. (Qty: as shown)

2.19 CHARACTER GENERATOR

- A. Provide a graphics and titling solution compatible with the video production system. System shall be capable of animated graphics, animations, effects and transitions, lower thirds, crawls, main titles, real-time playout, automated sequencing and looping, and TriCaster macro control.
- B. Install computer, peripherals, and software for operation of character generator system.

- C. Provide and Install the following, or approved equal:
 - 1. NewBlue Captivate Broadcast titler and graphics software package (perpetual license). (Qty: 1ea.)
 - 2. Additional Training - 4 hours operator training for titler and graphics software package that is installed at the facility. Training to be completed by a NewBlue Authorized Trainer according to a predetermined training plan. (Qty: 1ea.)
 - 3. Dell XPS Desktop, minimum specs to include Intel Core i7-14700K processor, Windows 11 Pro, Nvidia GeForce RTX 4070 12GB GDDR6X graphics, 32GB Ram, 1TB SSD, wireless keyboard and mouse. Mount in Broadcast Control Desk lower storage bay below control position. (Qty: 1ea.)
 - 4. Capture / Playback Card: Blackmagic Design DeckLink Studio 4K PCIe card. Install in Character Generator computer. (Qty: 1ea.)

2.20 TELEPROMPTERS:

- A. Provide camera mounted teleprompter systems for each of the primary broadcast cameras.
- B. Teleprompters shall include all mounting hardware required to provide a full functional system with the cameras specified.
- C. Provide all cabling required to connect teleprompter systems to camera input plates.
- D. Install computer, peripherals, and software for operation of teleprompter system.
- E. Provide and Install the following, or approved equal:
 - 1. Prompter People Proline Plus Teleprompter Series model PROP-S17HB-15MM, with trapezoidal glass, 17" High Bright model with SDI input, 65/35 glass, and TeleScroll software package. (Qty: 2ea.)
 - 2. Provide 1ea. 30' Canare HD-SDI extra flexible 18AWG RG6 Coax cable to the monitor dressed with camera cables for each camera location (Qty: 2ea.)
 - 3. Dell Optiplex SFF computer system, minimum specs to include Intel Core i5 14500vPro processor, Windows 11 Pro, integrated graphics, 16GB RAM, 512GB SSD, wireless keyboard and mouse. Mount in Broadcast Control Desk lower storage bay below control position. (Qty: 1ea.)

2.21 STUDIO CAMERAS

- A. Furnish, assemble, and configure high definition professional camera systems with all accessories as listed. System to include camera, lens controllers, focus control, and viewfinders. Units to be supplied with lens, tripods, dollies, remote camera controllers, power supplies, fluid heads, and pan bars for a complete ENG and Studio Camera System.
- B. Configure cameras to be accessed and controlled over the AV network via the remote camera controllers in the control room.
- C. Provide and Install the following, or approved equal:
 - 1. JVC GY-HC500UN Professional Camera Recorder with SDI and NDI outputs. Each unit to include lens, lens hood, AC power adaptor and power cable, battery. (Qty: 2ea.)
 - 2. JVC HZ-MH600VZR LANC-compatible wired lens remote control. Mount on tripod handle. To be provided with SmallRig 2201 coiled male-to-female LANC extension cable. (Qty: 2ea.)
 - 3. JVC RM-LP250M multi-camera remote control panel. Route countertop at location shown and flush mount remote control panels at control position. (Qty: 1ea.)
 - 4. Marshall V-LCD70-AFHD 7" LCD On-Camera Monitor with Elvid SHOE-HD Heavy-Duty Camera Shoe mount Adapter and Elvid HDMI-A-015-C2 4k Coiled 1.5' HDMI cable. (Qty: 2ea.)

5. Canare HD-SDI extra flexible 18AWG RG6 Coax cable, 30-feet. (Qty: 2ea.)
6. Dual outlet power extension cable, black, 30-feet. (Qty: 2ea.)
7. Whirlwind ENC6SE030 Tactical Grade Cat6a ethernet cable, 30-feet. (Qty: 2ea.)
8. PortaBrace DVO-2 Camera Case (Qty: 2ea.)
9. Broadcast Camera Tripod System: Libec LX10-STUDIO 2-stage aluminum tripod system with H65B Head, Dual Pan Handles, and Spreader Dolly. (Qty: 2ea.)

2.22 ROBOTIC CAMERAS:

- A. Furnish and install high-definition robotic cameras at the locations shown in the drawings:
- B. Perform all setup procedures and signal quality adjustments.
- C. Configure pan/tilt/zoom IP control at the Broadcast Switcher.
- D. Furnish and install the following, or approved equal:
 1. Type "CA-PTZ" camera: Lumens VC-A61PN 4K NDI / HX PTZ Camera with VM12 Wall Mount. (Qty: as shown)

2.23 PODCAST SYSTEM:

- A. Provide an audio production system for recording podcasts.
- B. Install and configure all software on the specified computer under an owner-provided account (coordinate as necessary).
- C. Furnish and install the following, or approved equal:
 1. Podcast audio mixer: Rode RODECaster Pro2. (Qty: 1ea.)
 2. MicroSD Recording Media: SanDisk Extreme 512GB MicroSDXC UHS-I memory card with 190MB/s data rate. (Qty: 1ea.)
 3. Portable Podcast Desk: U-Line H-11093GR Mobile Activity Table, 72"x30" with casters, adjustable height, 1.25" thick laminate top, and heavy-duty steel legs. (Qty: 1 ea.)
 4. Recording Software: Avid Pro Tools Studio (perpetual license). Load and configure software on Character Generator computer. (Qty: 1ea.)
 5. Sony MDR-7506 headphones (Qty: 3ea.)
 6. Hosa HXSS-025 Pro Headphone Extension Cable, TRS male to female. (Qty: 2 ea.)
 7. Power Strip: Lowell Manufacturing ACS-1506-WW 6-outlet power strip with mounting tabs. Install at underside of podcast desk. Provide additional 25-foot power extension cord (black). (Qty: 1 ea.)

2.24 NETWORK MEDIA ENCODING / DECODING / DISTRIBUTION

- A. Furnish devices for use with encoding and decoding of Audiovisual signals over the dedicated AV-NET audiovisual data network. Devices shall support Gigabit Ethernet connectivity, and local DC or remote PoE+ power.
- B. Devices shall support up to, and including, 4K and UHD video resolution with ultra-low latency and visually lossless video. HDMI 2.0 and HDCP 2.2 shall be supported.
- C. System control shall be natively supported within the Audio DSP environment. Program Audio DSP system and associated touch control panel for individual encoder and decoder routing control to each endpoint location.
- D. Program associated audio routing within the specified Audio DSP system for each space via software Media Stream Receiver and Media Stream Transmitter devices.

- E. Furnish and install the following, or approved equal:
 - 1. Media Decoder at select "TV-B" Display Locations: Visionary Solutions D5100. Refer to drawings for specific locations. (Qty: 2 ea.)
 - 2. Media Encoder at "ER" AV equipment rack: Visionary Solutions E5100. Provide AVIP-Rackmount-3 rackmount kits to support all units. Provide AVIP-BLNK-1 at unpopulated spaces. (Qty: 1 ea)

2.25 MICROPHONES, STANDS, CABLES, DIRECT BOXES:

- A. Furnish microphones, stands, cables, and Direct Boxes for flexible use with the Broadcast and Podcast systems.
- B. Furnish and install the following, or approved equal:
 - 1. Talent Microphones: Shure MX185 wired cardioid condenser lavalier microphone with preamp module. (Qty: 4ea.)
 - 2. Studio Boom Microphones: Rode NTG1 supercardioid condenser shotgun microphone. For each unit supplied, provide Auray DUSM-1 microphone shockmount. (Qty: 2ea.)
 - 3. Podcast Microphones:
 - a. Shure SM7B dynamic cardioid vocal microphone (Qty: 3ea.)
 - b. Yellowtec YT3601-XLR m!ka Mic Arm M, black, with integrated XLR connections. (Qty: 3ea.)
 - c. Yellowtec YT3211 Bushing Mount for Mic Arm. Install at Podcast desk and Control Booth desk. (Qty: 3ea.)
 - 4. Utility Microphones: Shure SM58LC dynamic cardioid vocal microphone (Qty: 2ea.)
 - 5. Studio Boom Stands: AtlasIED SB36WE Studio boom stand with air suspension and casters, black. (Qty: 2ea.)
 - 6. Utility Stands: Atlas Sound TB3664 tripod microphone stand with boom, black. (Qty: 2 ea.)
 - 7. Microphone Cable: Whirlwind MKQ25NP-BLACK 25-foot microphone cable. (Qty: 8 ea.)
 - 8. Microphone Cable: Whirlwind MKQ50NP-BLACK 50-foot microphone cable. (Qty: 4 ea.)
 - 9. Instrument Cable: Whirlwind L15 Leader 15-foot instrument cable. (Qty: 2 ea.)
 - 10. Direct Box: Radial Engineering JDI passive direct box with Jensen transformer. (Qty: 1 ea.)
 - 11. Direct Box: Radial Engineering PRO-AV2 passive stereo multimedia direct box. (Qty: 1 ea.)

PART 3 - EXECUTION

3.1 INSTALLATION:

- A. Furnish components, racks, wire, cabinetry, connectors, materials, parts, equipment and labor necessary for the complete installation of the systems, in full accordance with the recommendations of the equipment manufacturers and the requirements of the drawings and specifications.
- B. Installation shall follow standard broadcast wiring and installation practice, and shall meet or exceed industry standards for such work, with particular attention given to any installation instructions in Part 2 of these Specifications.
- C. Equipment shall be held firmly in place with proper types of mounting hardware. All equipment affixed to the building structure must be self-supporting with a safety factor of at least five. All equipment shall be installed so as to provide reasonable safety to the operator and occupants. Supply adequate ventilation for all enclosed equipment items which produce heat.

- D. Furnish the system to facilitate expansion and servicing using modular, solid-state components. All equipment shall be designed and rated for continuous operation and shall be UL listed, or manufactured to UL standards.
- E. Observe proper circuit polarity and loudspeaker wiring polarity. No cables shall be wired with a polarity reversal between connectors with respect to either end. Special care shall be taken when wiring microphone cables, to ensure that constant polarity is maintained. Balanced audio connectors shall be wired as follows.

Wire	Connector	Signal
Black	Pin #3 or Ring	Negative
Red or White	Pin #2 or Tip	Positive
Bare	Pin #1 or Shield	Ground

- F. Provide all audio circuits balanced and floating, except as noted in the Specifications or directed by the Consultant at the time of final equalization and testing. Shields of audio cables shall be grounded at one end only, at the outputs of the various equipment items in the system.
- G. Route cables and wiring within equipment racks and cabinetry according to function, separating wires of different signal levels (video, microphone level, line level, amplifier output, 120VAC, intercom, control, etc.) by as much physical distance as possible. Neatly arrange and bundle all cables loosely with plastic cable ties. Cables and wires shall be continuous lengths without splices.
- H. All system wire, except spare wire, after being cut and stripped, shall have the wire strands twisted back to their original lay and be terminated by approved soldered or mechanical means. No un-terminated wire ends will be accepted. Heat-shrink type tubing shall be used to insulate and dress the ends of all wire and cables. Include a separate tube for the ground or drain wire.
- I. All cables in conduits shall be insulated from each other and from the conduit the entire length and shall not be spliced. All cables and wires are to be continuous lengths without splices.
- J. All solder joints and terminations shall be made with rosin-core solder.
- K. Temperature regulated soldering irons rated at least 60 watts shall be used for all soldering work. No soldering guns or temperature unregulated irons shall be used on the job site.
- L. Mechanical connections shall be made using approved connectors of the correct size and type for the connection. Wire nuts will not be accepted.
- M. Each mechanical connector shall be attached using the proper size controlled-duty-cycle ratcheting crimp tool which has been approved by the manufacturer of the connectors. Conventional non-ratcheting type crimping tools are unacceptable, and shall not be used on the job site.
- N. Label all wires in racks, backboxes, and console as to destination and purpose with permanent heat shrink labels.
- O. Clearly and permanently label all controls, connections, and equipment at the front and back of the rack with permanent Lamicoid labels. Attach laminated plastic labels with contact cement. Embossed or printed label tape, and press-on or lift-off lettering systems will not be accepted. All labeling shall be completed prior to final system inspection.

- P. Wall plates and custom panels shall be engraved and filled with contrasting paint, unless otherwise noted. All labeling shall be completed prior to final system inspection.

3.2 AUDIO SYSTEM FINAL TESTING AND EQUALIZATION:

- A. Installer shall perform thorough preliminary testing of the Audio-Video Systems prior to the final inspection by the Consultant. All systems and subsystems shall be tested to ensure that they are in proper working order and meet the performance specifications outlined in Part 3.3 below. Build the program for the digital signal processor and submit it to the consultant for review prior to commissioning. Install the processing program on the digital signal processor and test it for functionality.
- B. The completed Audio System shall be physically inspected by the Consultant to assure that all equipment is installed in a neat and professional manner, and in accordance with these Specifications. The Audio System shall be inspected and equalized by the Consultant, BAI, Dallas, Texas with assistance from the Installer. Provide a minimum of two weeks' notice to the Consultant for final inspection and equalization.
- C. The testing and equalization work shall be performed after the installation work has been completed, but prior to any use of the system. During the testing and equalization work, the Installer shall have on the job site at least one (1) competent technician who is familiar with the project, and who will be prepared to stay as long as his services are needed. It is estimated that approximately twelve (12) hours will be required for this work.
- D. The process of equalizing and testing the system may necessitate moving and adjusting certain loudspeakers. Adjustments shall be performed without claim for additional payment.
- E. Coordinate as necessary to ensure a totally quiet room during the Audio-Video systems testing and balancing period.
- F. Prior to requesting systems testing, verify the following:
- G. All systems are in first-class working condition and free of short circuits, ground loops, parasitic oscillations, excessive system noise beyond published specifications of the equipment, hum, RF interference, or instability of any form.
- H. All specified equipment, including loose and portable equipment is on the job site for proper accounting.
- I. All loudspeaker circuits have been tested, are connected to the proper crossover frequency, and are in perfect working order. Furnish impedance measurements of each circuit by facsimile transmission prior to final tests.
- J. All equipment controls are labeled, even if unused. If permanent labels cannot be furnished prior to system inspection, temporarily label every control as to its function with write-on tape. Supply labels or markers suitable for indicating knob settings after equalization is performed.
- K. Operation manuals for every equipment item furnished are on hand at the job site.
- L. Installer shall provide all signal processing software loaded on a portable PC and ready for use at time of testing. Installer shall provide a calibrated RTA and microphone, and pink noise generator at time of testing.
- M. Should the performance testing show that the Installer has not properly completed the systems, the Installer shall make all necessary corrections or adjustments and a second demonstration

shall be arranged at the Installer's expense.

- N. The final acceptance of the system by the Owner will be based upon the report of the Consultant following inspection, testing, and demonstration. A list of items in need of completion or correction shall be prepared by the Consultant, which must be corrected by the Installer before final acceptance will be granted.

3.3 OWNER TRAINING AND FAMILIARIZATION:

- A. The Installer shall furnish the Owner's representatives with training necessary to properly operate the systems. Demonstrate in detail all functions of the systems. Provide a minimum of 16 hours for this basic training, broken up into several training sessions, at the discretion of the owner. Training sessions will be allowed to take place throughout the warranty period. These training sessions shall be videotaped by the installer and copies provided to the Owner with the as-built documentation.

END OF SECTION 27 41 15

27 50 00 – IN-BUILDING CELLULAR AMPLIFICATION SYSTEM

PART 1 - GENERAL

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.01 RELATED WORK

- A. All Division 26, 27 & 28 as it relates to this scope of work.

1.02 SECTION INCLUDES

This specification describes technical and performance criteria for deploying a In-Building Cellular Amplification System capable of supporting Wireless Service Providers (WSP). The components specified in this document include: Donor Antennas, Coverage Antennas, Coax Cable, Singlemode duplex fiber, composite fiber with singlemode duplex and 16/2 AWG copper, and analog repeater.

1.03 SYSTEM DESCRIPTION

- A. Services: Upon commissioning, the In Building cellular amplification system shall provide coverage for the WSPs listed below on all frequencies currently being used by the designated WSPs in the given market that has an exterior signal level is -105 dBm RSRP or greater.

1. AT&T
2. Sprint
3. T-Mobile
4. Verizon
5. US Cellular

<u>Service</u>	<u>Downlink</u>
Cellular	870 - 894
PCS	1930 - 1995
AWS	2110 - 2155
700 LTE	728 - 756

- B. WSP Notification: The Contractor shall register the repeaters with at least one WSP through their web site that the repeaters will be connected to the WSPs' macro networks.

1.04 ALTERNATIVES

- A. No alternative component(s) shall be accepted as equal to the components and manufacturers specified in this document

1.05 CODES, STANDARDS AND CERTIFICATIONS

- A. All work, including but not limited to: cabling, pathways, support structures, wiring, equipment, installation, workmanship, maintenance and testing shall comply with the latest editions of the National Electrical Code, National Electrical Safety Code, all applicable local rules and regulations, equipment manufacturer's instructions, and the National Electrical Contractors Association (NECA) Standard of Installation. In case of discrepancy or disagreement between the documents noted above, the contractor shall satisfy the most stringent requirements.
- B. It is the Contractor's responsibility to ensure that the components comply with

local code, ordinances or requirements established by the AHJ.

1.05 ABBREVIATIONS AND ACRONYMS

- A. AHJ: Authority Having Jurisdiction
- B. ATP: Acceptance Test Plan
- C. AWS: Advanced Wireless Service
- D. BDA: Bi-Direction Amplifier
- E. BOM: Bill-of-Material
- F. DAS: Distributed Antenna System
- G. DAQ: Digital Audio Quality
- H. ESMR: Enhanced Specialized Mobile Radio
- I. FCC: Federal Communications Commission
- J. iDEN: Integrated Enhanced Digital Network
- K. LMR: Land Mobile Radio
- L. LTE: Long Term Evolution
- M. MTBF: Mean Time Between Failure
- N. NFPA: National Fire Protection Association
- O. NMS: Network Management System
- P. PCS: Personal Communications System
- Q. PSN: Public Safety Network
- R. RoF: Radio-over-Fiber
- S. RoHS: Restriction of Hazardous Substances
- T. RSL: Received Signal Level
- U. SIMO: Single-Input, Multiple-Output
- V. SISO: Single-Input, Single-Output
- W. SMR: Specialized Mobile Radio
- X. SMS: Short Message Service
- Y. SNMP: Simple Network Management Protocol
- Z. SOW: Statement of Work
- AA. VSWR: Voltage Standing Wave Ratio
- BB. WSP: Wireless Service Provider

1.06 DEFINITIONS

- A. Acceptance: Expressed approval by the customer
- B. Active: Components that require AC/DC power for operation
- C. Channel: A path for an RF transmission between two points
- D. Component: A main system element of the Amplification system
- E. Contractor: The prime contractor bidding the project
- F. Delivered Audio Quality (DAQ): A measure of audio quality over a transmission medium used to quantify the quality of audio heard over a radio system. DAQ levels are defined by the following scale:
 - a. DAQ 1: Unusable. Speech present but not understandable.
 - b. DAQ 2: Speech understandable with considerable effort. Requires frequent repetition due to noise or distortion.
 - c. DAQ 3: Speech understandable with slight effort. Requires occasional repetition due to noise or distortion.
 - d. DAQ 3.4: Speech understandable without repetition. Some noise or distortion present.
 - e. DAQ 4: Speech easily understandable. Little noise or distortion.
 - f. DAQ 5: Perfect. No distortion or noise discernible.
- G. Sub-contractor: A qualified and experienced integrator performing the

deployment for the Contractor.

- H. Head-End Equipment: The equipment that accepts the RF Source, and then typically amplifies the RF source to the interior antennas
- I. Passive: Components that do not require AC/DC power for operation

1.07 PERFORMANCE REQUIREMENTS

A. WSP :

1. On a per channel basis, the downlink RSL for each frequency band shall meet or exceed the criteria in Table 1.

Table 1. System Parameters

Parameters	Unit	700 LTE	Cellular, PCS, AWS, Commercial 800 MHz
Minimum downlink receive signal RSRP	dBm	-105	-105

2. Contractor shall state the assumed channel loading and frequency bands for the proposed WSP in-building coverage. Prior to installation, contractors shall confirm the channel loading and frequency use in the serving area and shall guarantee coverage for these channels per the criteria in Table 1.
3. The system shall deliver coverage per the criteria in Table 1 throughout 95% of the building.

1.08 SUBMITTALS

A. Submittal Requirements:

1. Product Data: Submit manufacturer datasheets for the following components:
 - a. Coverage Antennas
 - b. Coaxial Cable
 - c. Singlemode duplex Fiber
 - d. Repeaters
 - e. Masts
 - f. Donor antennas
2. Shop Drawings: Submit the following items:
 - a. RF link budget
 - b. Overlay of system Components on floor plans
 - c. Drawings for Donor Antenna and grounding
 - d. Bill-of-Material (BOM)
3. Statement of Work (SOW): Submit sample SOW
4. Acceptance Test Plan (ATP): Submit sample ATP
5. Recommended Spares
6. Warranty Documents:
 - a. Submit for all manufactured Components specified in this Section.
 - b. Submit Contractor's System Warranty.
 - c. Submit Manufacturer's Warranty.

B. Submittal Requirements Prior to Start of Construction

1. Final RF link budget

2. Overlay of system Components on floor plans
 3. Drawings for Donor Antenna and grounding
 4. RF propagation modeling
 5. Bill-of-Material (BOM)
 6. Maintenance Service Contract
 7. Statement of Work (SOW): The contractor shall submit a SOW that has been accepted by the customer or customer's designated representative.
 8. Acceptance Test Plan (ATP): The contractor shall submit an ATP that has been accepted by the customer or customer's designated representative.
- C. Submittal Requirements at Close Out
1. Drawings: Submit as-built drawings indicating:
 - a. Donor antenna, grounding and lighting protection details
 - b. Cable routing, splitters, couplers and coverage antenna locations
 - c. Active component locations, layout and configuration
 2. Test Reports
 - a. WSP: Submit accepted ATP reports confirming the requirements of this specification have been met.
 3. Field Reports: Submit sweep-testing results for all cable runs.
 4. Operation and Maintenance Data: Submit hardware manuals for all Components.
 5. Warranty Documents:
 - a. Submit for all manufactured components specified in this Section.
 - b. Submit Contractor's System Warranty.
 - c. Submit Manufacturer's Warranty

1.09 QUALITY ASSURANCE

- A. Qualifications and Requirements:
1. Contractor or Sub-contractor shall have a minimum of 4-years full-time experience executing work of similar scope and complexity.
 2. Contractor or Sub-contractor shall have deployed a minimum of 10 systems.
 3. Contractor or Sub-contractor Project Managers must be System Certified.
 4. Contractor or Sub-contractor shall provide an onsite construction foreman to oversee the installation.
 5. Contractor or Sub-contractor shall provide a project manager to oversee the deployment.
- B. Certifications:
- a. The manufacturer(s) of the active components shall maintain a formal authorized and certified value-added reseller program, which consists of routine quality audits of the participating value-added resellers. The list of authorized value-added resellers shall be published and the Contractor or Sub-contractor shall be listed in the Manufacturer's publication of value-added resellers.
 - b. Contractor or Sub-contractor(s) shall provide manufacturer certification that their personnel have been trained on the passive and active components being installed.
 - c. Contractor or Sub-contractor shall be an authorized and certified value-added reseller for the proposed manufacturer of passive and active components.

1.10 WARRANTY

- A. Manufacturer Warranty:
1. Splitters, Couplers and Coverage Antennas: 5-year limited warranty from date of system acceptance.
 2. Coaxial Cable and Connectors: 10-year limited warranty from date of system acceptance.
 3. Active Components: The earliest of 3-year limited warranty from date of system installation or 15 months from date of shipment.

1.11 MAINTENANCE

- A. The Contractor shall provide an optional annual maintenance service contract to include:
- Diagnostics & Repair
 - 24x7x365 Technician Dispatch (On-site within 24 hours)
 - Annual Preventive Maintenance
 - Equipment Warranty Management

PART 2 – PRODUCTS

1.01 MANUFACTURERS

1. Specified Manufacturers for 50 Ohm passive components:
Wilson Electronics
Specified Manufacturers for Active components: Wilson Electronics and Zinwave
2. Acceptable Manufacturers: Wilson Electronics Pro Series Equipment and Zinwave

1.02 COMPONENTS

Cellular Repeater

Single Output Amplifier

- A. Single Input Single Output (SISO) wall mount or rack mount cellular repeater shall provide up to +17 dBm downlink power and +26 dBm uplink power with maximum of 70dB gain that is compatible with all North American cell networks
- B. The cellular rep
- C. The cellular repeater shall incorporate eXtended Dynamic Range (XDR) technology to protect the amplifier from shutting down due to strong outside signal (-40dBm or higher) or changes in the outside signals.
- D. The cellular repeater shall incorporate Multi-Tower Targeting (MTT) technology to target specific frequency bands from multiple macro antennas.
- E. The cellular repeater shall incorporate cloud integration for remote monitoring and management. Connectivity to the cloud shall be via LTE connection (using built-in cellular modem) or wired ethernet connection.
- F. The cellular repeater shall auto-detect and prevent any cell tower interference.
- G. Frequencies:
- | | |
|--------------|--------------|
| a. Band 12 | 700MHz |
| b. Band 13 | 700MHz |
| c. Band 5 | 850MHz |
| d. Band 4 | 1700/2100MHz |
| e. Band 25/2 | 1900MHz |

1.03 Multiple Output Amplifier

- A. Single Input Multiple Output (SIMO) wall mount or rack mount cellular repeater shall provide up to +17 dBm downlink power and +26 dBm uplink power with maximum of 70dB gain from the input to each of (4) outputs and is compatible with all North American cell networks
- B. The cellular repeater shall incorporate eXtended Dynamic Range (XDR) technology to protect the amplifier from shutting down due to strong outside signal (-40dBm or higher) or changes in the outside signals.
- C. The cellular repeater shall incorporate Multi-Tower Targeting (MTT) technology to target specific frequency bands from multiple macro antennas.
- D. The cellular repeater shall incorporate cloud integration for remote monitoring and management. Connectivity to the cloud shall be via LTE connection (using built-in cellular modem) or wired ethernet connection.
- E. The cellular repeater shall display RSRP & RSRQ (network scanning) on the LCD referenced to the indoor (server) ports. This represents signal performance after it has been amplified and shall also be available through cloud integration for troubleshooting purposes.
- F. The cellular repeater shall auto-detect and prevent any cell tower interference.
- G. The solution shall have the capability of conversion to RF over fiber utilizing duplex singlemode fiber for backbone distribution and composite duplex singlemode fiber and 16/2 AWG copper for horizontal cabling to remote units.
- H. Frequencies:
 - f. Band 12 700MHz
 - g. Band 13 700MHz
 - h. Band 5 850MHz
 - i. Band 4 1700/2100MHz
 - j. Band 25/2 1900MHz

1.04 Outside Antennas

- A. Omni-Directional Outside Antennas: Omni-Directional outside antennas shall feature a multi-band design, accommodating multiple frequency bands in a single small antenna.
- B. Electrical Band 1:
 - k. Frequency Band: 698 – 800 MHz
 - l. VSWR: < 1.8
 - m. Gain: 2 dBi
 - n. Maximum input power: 100W
 - o. Impedance: 50 Ω
 - p. Beamwidth, Horizontal: 360° omnidirectional
 - q. Beamwidth, Vertical: 60° nominal
- 1. Electrical Band 2:
 - a. Frequency Band: 1710 – 2700 MHz and 800 – 960 MHz
 - b. VSWR: 1.5:1
 - c. Gain: 5 dBi
 - d. Maximum input power: 100W
 - e. Impedance: 50 Ω
 - f. Beamwidth, Horizontal: 360° omnidirectional
 - g. Beamwidth, Vertical: 60° nominal
- 2. Mechanical:
 - a. Connector: 50 Ω N Type Female
 - b. Mounting: Mast Mount

- c. Radome material: ABS, UV resistant
- d. Pigtail cable: KSR195, plenum rated
- 3. Environmental:
 - a. Application: Outdoor
 - b. Operating Temperature: 40 °C to +60 °C (40 °F to +140 °F)
 - c. Relative Humidity: Up to 100%
- 4. Regulatory Compliance/Certifications: RoHS 2002/95/EC

Outside Directional Antennas (YAGI): Outside Directional antennas shall feature a multi-band design, accommodating multiple frequency bands in a single small antenna.

- C. Electrical Band 1:
 - a. Frequency Band: 698 – 800 MHz
 - b. VSWR: < 1.8
 - c. Gain: 2 dBi
 - d. Maximum input power: 100W
 - e. Impedance: 50 Ω
 - f. Beamwidth, Horizontal: 360° omnidirectional
 - g. Beamwidth, Vertical: 60° nominal
- 1. Electrical Band 2:
 - a. Frequency Band: 1710 – 2700 MHz and 800 – 960 MHz
 - b. VSWR: <1.8
 - c. Gain: 4 dBi
 - d. Maximum input power: 100W
 - e. Impedance: 50 Ω
 - f. Beamwidth, Horizontal: 360° omnidirectional
 - g. Beamwidth, Vertical: 60° nominal
- 2. Mechanical:
 - a. Connector: 50 Ω N Type Female
 - b. Mounting: Thru-hole ceiling mount
 - c. Radome material: ABS, UV resistant
 - d. Pigtail cable: KSR195, plenum rated
- 3. Environmental:
 - a. Application: Indoor
 - b. Operating Temperature: 40 °C to +60 °C (40 °F to +140 °F)
 - c. Relative Humidity: Up to 100%
- 4. Regulatory Compliance/Certifications: RoHS 2002/95/EC

Inside Antennas

- D. Omni-Directional Coverage: Omni-Directional Coverage antennas shall feature a multi-band design, accommodating multiple frequency bands in a single small antenna.
- E. Electrical Band 1:
 - a. Frequency Band: 698 – 800 MHz
 - b. VSWR: 1.5:1
 - c. Gain: 7 dBi
 - d. Maximum input power: 50 watts
 - e. Impedance: 50 Ω
 - f. Beamwidth, Horizontal: 360° omnidirectional
 - g. Beamwidth, Vertical: 60° nominal
 - h. Return Loss: 10.9 dB

1. Electrical Band 2:
 - a. Frequency Band: 1710 – 2700 MHz and 800 – 960 MHz
 - b. VSWR: 1.5:1
 - c. Gain: 7 dBi
 - d. Maximum input power: 50 watts
 - e. Impedance: 50 Ω
 - f. Beamwidth, Horizontal: 360° omnidirectional
 - g. Beamwidth, Vertical: 65° nominal
 - h. Return Loss: \leq 13.9 dB
 2. Mechanical:
 - a. Connector: 50 Ω N Type Female
 - b. Mounting: Thru-hole ceiling mount
 - c. Radome material: ABS, UV resistant
 - d. Pigtail cable: KSR195, plenum rated
 3. Environmental:
 - a. Application: Indoor
 - b. Operating Temperature: 40 °C to +60 °C (40 °F to +140 °F)
 - c. Relative Humidity: Up to 100%
 4. Regulatory Compliance/Certifications: RoHS 2002/95/EC
- F. Low Profile Omni-Directional Coverage: Omni-Directional Coverage antennas shall feature a multi-band design, accommodating multiple frequency bands in a single small antenna.
- G. Electrical Band 1:
- i. Frequency Band: 698 – 800 MHz
 - j. VSWR: 1.5:1
 - k. Gain: 7 dBi
 - l. Maximum input power: 50 watts
 - m. Impedance: 50 Ω
 - n. Beamwidth, Horizontal: 360° omnidirectional
 - o. Beamwidth, Vertical: 60° nominal
 - p. Return Loss: 10.9 dB
1. Electrical Band 2:
 - i. Frequency Band: 1710 – 2700 MHz and 800 – 960 MHz
 - j. VSWR: 1.5:1
 - k. Gain: 7 dBi
 - l. Maximum input power: 50 watts
 - m. Impedance: 50 Ω
 - n. Beamwidth, Horizontal: 360° omnidirectional
 - o. Beamwidth, Vertical: 65° nominal
 - p. Return Loss: \leq 13.9 dB
 2. Mechanical:
 - e. Connector: 50 Ω N Type Female
 - f. Mounting: Thru-hole ceiling mount
 - g. Radome material: ABS, UV resistant
 - h. Pigtail cable: KSR195, plenum rated
 3. Environmental:
 - d. Application: Indoor
 - e. Operating Temperature: 40 °C to +60 °C (40 °F to +140 °F)
 - f. Relative Humidity: Up to 100%
 4. Regulatory Compliance/Certifications: RoHS 2002/95/EC
- H. Directional Coverage Antennas: Directional coverage antennas shall feature a

multi-band design, accommodating multiple frequency bands in a single small antenna.

1. Electrical Band 1:
 - a. Frequency Band: 698 – 800 MHz
 - b. VSWR: 1.5:1
 - c. Gain: ≥ 5.0 dBi @ 698 – 800 MHz
 - d. Maximum input power: 50W
 - e. Impedance: 50 Ω
 - f. Beamwidth, Horizontal: 70/60°
 - g. Polarization: Vertical
 - h. Return Loss: ≤ 10.9 dB
 2. Electrical Band 2:
 - a. Frequency Band: 1710 – 2700 MHz and 800 – 960 MHz
 - b. VSWR: $\leq 1.5:1$
 - c. Gain: ≥ 5.0 dBi @ 800 – 960 MHz and ≥ 8.0 dBi @ 1710 – 2170 MHz
 - d. Maximum input power: 50W
 - e. Impedance: 50 Ω
 - f. Beamwidth, Horizontal: 70/60°
 - g. Return Loss: ≤ 13.9 dB
 3. Mechanical:
 - a. Connector: 50 Ω N Type Female
 - b. Mounting: 4-hole wall mounting plate
 - c. Radome material: ABS, UV resistant
 - d. Pigtail cable: RG58, plenum rated
 4. Environmental:
 - a. Application: Indoor
 - b. Operating Temperature: 40 °C to +60 °C (40 °F to +140 °F)
 - c. Relative Humidity: Up to 100%
 5. Regulatory Compliance/Certifications: RoHS 2002/95/EC
- I. Air Dielectric, Plenum Rated Cable:
1. Material Characteristics:
 - a. Jacket: Halogenated, Fire-Retardant
 - b. Outer Conductor Material: Corrugated Aluminum or Corrugated Copper
 - c. Inner Conductor Material: Copper-Clad Aluminum Wire
 2. Electrical Characteristics:
 - a. Impedance: 50 \pm 2.0 Ω
 - b. Frequency Band: 1 - 8800 MHz
 - c. Peak Power Rating: ≥ 40.0 kW
 3. Mechanical Characteristics:
 - a. Diameter Over Jacket: $\leq .627$ in
 - b. Minimum Bending Radius: ≤ 5 in
 - c. One Time Minimum Bending Radius: ≤ 3 in
 4. Attenuation Characteristics:

Frequency (MHz)	Attenuation (dB/100ft)
150	≤ 0.848
450	≤ 1.53
800	≤ 2.105
2000	≤ 3.564

Standard Conditions: VSWR 1.0, ambient temperature 20 °C (68 °F)

J. Foam Dielectric Cable:

1. Material Characteristics:
 - a. Jacket: Non-halogenated, Fire-Retardant Polyolefin
 - b. Outer Conductor Material: Corrugated Copper
 - c. Inner Conductor Material: Copper-Clad Aluminum Wire or Copper Tube
2. Electrical Characteristics:
 - a. Impedance: $50 \pm 1.0 \Omega$
 - b. Frequency Band: 1/2" Nominal: 1 - 8800 MHz, 7/8" Nominal: 1 - 5000 MHz
 - c. Peak Power Rating: $\geq 40.0 \text{ kW}$
3. Mechanical Characteristics:
 - a. Diameter Over Jacket: 1/2" Nominal: $\leq .630 \text{ in}$, 7/8" Nominal: $\leq 1.1 \text{ in}$
 - b. Minimum Bending Radius: 1/2" Nominal: $\leq 5 \text{ in}$, 7/8" Nominal: $\leq 10 \text{ in}$
 - c. One Time Minimum Bending Radius: 1/2" Nominal: $\leq 2 \text{ in}$, 7/8" Nominal: $\leq 5 \text{ in}$
4. Attenuation Characteristics: 1/2" Nominal

Frequency (MHz)	Attenuation (dB/100ft)
150	≤ 0.815
450	≤ 1.447
800	≤ 1.968
2000	≤ 3.251

Standard Conditions: VSWR 1.0, ambient temperature 20 °C (68 °F)

5. Attenuation Characteristics: 7/8" Nominal:

Frequency (MHz)	Attenuation (dB/100ft)
150	≤ 0.417
450	$\leq .744$
800	≤ 1.014
2000	≤ 1.683

Standard Conditions: VSWR 1.0, ambient temperature 20 °C (68 °F)

K. Splitters, Taps, Couplers, and Coax Jumpers:

1. Approved Manufacturer: Wilson Electronics

PART 3 – EXECUTION

3.01 INSTALLATION

- A. The contractor and/or Sub-contractor shall design, install, commission and test the Cellular amplification system in accordance with the manufacturer's instructions and recommendations.
- B. The contractor and/or Sub-contractor shall install the Cellular amplification system in accordance with the accepted SOW.
- C. The contractor and/or Sub-contractor shall adhere to all work and safety requirements while working at the job site.
- D. The contractor and/or Sub-contractor shall have Cellular amplification system

IN-BUILDING CELLULAR AMPLIFICATION SYSTEM

- project foreman on site overseeing the installation.
- E. The contractor and/or Sub-contractor shall have at a minimum one Project Manager on staff overseeing the project. The Project Manager will be responsible for the following:
 - 1. Developing and maintaining a project plan consistent with the overall milestones of the project.
 - 2. Overseeing and coordinating the activities of the Cellular amplification system project, including: initiating and holding weekly project conference calls, as well as maintaining and distributing meeting minutes.
 - 3. Act as the point-of-contact interface for all Cellular amplification system project activities.
 - 4. Provide weekly status updates regarding work performed, worked scheduled, open items, problems/issues and resolutions.
 - F. The contractor and Sub-contractor shall be prepared to deploy the Cellular amplification system in a phased approach as dictated by the building construction and/or work of other trades.
 - G. The contractor and Sub-contractor shall be WilsonPro Certified
 - H. All singlemode fiber connections shall be SC/ APC. No mechanical terminations. Fusion splicing only.
 - I. No more than 5dB optical loss and 35dB back reflection per optical link.
 - J. The contractor and Sub-contractor shall facilitate WSP registration and connection to their respective macro networks.
 - K. The contractor and Sub-contractor shall be prepared to connect to the WSP's network(s) in a phased approach as dictated by the construction schedules.
 - L. Install cabling designed for the environment the cable will be installed in.
 - M. Terminate and test all coaxial cabling with a sweep analyzer.
 - N. Test all fiber cabling utilizing level 3 tester or above
 - O. Label all cabling per the contract drawings to indicate the segment number from each amplifier.
 - P. Provide exterior cell measurements according to the manufacturers recommendations.

3.02 ACCEPTANCE TESTING

- A. Acceptance testing will be performed confirming the requirements of Section 1.07 have been met.
- B. The contractor shall complete the acceptance testing per the requirements and as prescribed in the approved Acceptance Test Plan (ATP) submittal.
- C. Acceptance Testing
 - 1. Acceptance Testing shall comply with the following:
 - a. The Acceptance Test shall ensure that two-way coverage on each floor of the building meets the minimum coverage requirements detailed in Section 1.07.
 - b. Tests shall be made using the frequencies listed in Section 1.02.A.
 - c. Testing shall be coordinated with the Customer and AHJ to ensure no undue interference to any building operations.
 - d. All testing shall be done on frequencies authorized by the FCC.
 - 2. Test Procedures
The test plan shall ensure testing throughout the building. Testing shall be performed on a grid system. A spot located approximately in the center of a grid area will be selected for the test. Once the spot has been selected, prospecting for a better spot within the grid area will not be permitted. A grid is overlaid onto a floor area to provide 20 grid cells. Grid cells are provided with definite minimum and maximum dimensions. For most buildings, using a minimum grid dimension of 20 ft and a maximum grid

IN-BUILDING CELLULAR AMPLIFICATION SYSTEM

dimension of 80 ft will suffice to encompass the entire floor area. A maximum of one area will be allowed to fail the test (95% coverage). Where a floor exceeds the sq ft, which is the floor area that can be covered by the system, the floor be subdivided into 40 equal sectors, with each sector being tested individually. A maximum of two non-adjacent areas will be allowed to fail the test (95% coverage). In addition to the above requirement, all critical areas, which include; the emergency command center(s), the fire pump room(s), exit stairs, exit passageways, elevator lobbies, standpipe cabinets, sprinkler sectional valve locations, and other areas deemed critical by the AHJ, shall be provided with 99 percent floor area radio coverage. Signal strength measurements shall be performed using standardized parameters as specified below.

3. Measurement Parameters

Signal levels shall be measured to ensure the system meets the criteria specified in the Technical Proposal. Downlink measurements shall be made with the following standardized parameters:

1. Measurements shall be recorded using a calibrated automatic signal-level measurement system measuring RSRP in each band with a dipole antenna positioned approximately 4' above the surface.
2. Measurements will be recorded for the test pattern as described above.
3. System acceptance is achieved when 95% of the averaged data points meet or exceed the requirements specified here and in Section 1.07.

END OF SECTION

SECTION 27 51 23 – INTERCOMMUNICATIONS AND PROGRAM SYSTEMS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED WORK

- A. 26 05 00 – Grounding and Bonding
- B. 26 05 29 – Electrical Hangers and Supports
- C. 26 05 33 – Raceway and Boxes

1.2 APPROVED MANUFACTURERS

- A. Carehawk Safety Communications Systems

1.3 GENERAL REQUIREMENTS

- A. The intent of this specification is to provide a complete and properly operating, distributed, digital telephonic communications system for the pick-up, amplification, distribution and reproduction of voice and/or other audio program material and time keeping functions. The system shall be of modular design to facilitate both expansion and service and shall be completely solid state. All necessary hook-up and testing shall be by a factory approved representative.
- B. The system assemblies shall be completely factory built and tested by manufacturers of established reputation, who have and can refer to similar systems which are currently installed and functioning properly. The factory pre-assembled cabinets, consoles, and power supplies shall be UL approved and listed.
- C. The system shall be guaranteed for a period of five (5) years from the date of acceptance or first beneficial use, whichever is first, against defects in materials, workmanship, design and improper adjustment. Any defects in the system shall be corrected at no expense to the Owner, provided the system does not show signs of abuse. During the guarantee period any work found not to be in conformance with the plans, specifications and addenda shall be brought into conformity with same at no additional cost to the owner.
- D. The equipment described herein, and furnished per these specifications shall be supplied and installed by one communications contractor. The contractor shall hold the necessary License for this type of work. All reference to model numbers and other detailed descriptive data is intended to establish standards of design, performance, and quality as required. Contractor is required to submit current certification from manufacturer with submittals.
- E. The communications contractor shall furnish all equipment, accessories and material required for the installation of a comprehensive Intercom / Telephone / Clock Communications System in strict compliance with these specifications and applicable contract drawings. Any material and/or equipment not specified or described herein necessary for the proper operation of the system shall be deemed part of this specification.
- F. The contractor shall instruct personnel designated by the owner in the proper use, basic care, and maintenance of the equipment. Such training shall be provided as an integral component of the system.

- G. The intercom contractor is responsible for all data cabling connections from MDF/IDF headend closets to intercom headend equipment. Coordinate with project data contractor on cabling routing and termination connection points. All data cabling connections to campus network shall be performed by project data contractor who is certified to install network data cabling per Owner's data cabling certification requirements.

1.2 CONTRACTOR QUALIFICATIONS

- A. The installing contractor shall be the authorized representative of the intercom system to sell, install, and service the proposed manufacturer's equipment. The installing contractor shall have represented the intercom manufacturer's product for at least five years.
- B. The contractor shall make available, and maintain a 24 hour, 365 days per year dispatched mobile service department capable of furnishing equipment inspection and timely service at the owner's location.
- C. The contractor shall be prepared to offer a service contract for the maintenance of the system beyond the warranty period.
- D. **The installing contractor must have a permanent office within a 75 mile radius of the project site and be a approved dealer/integrator, of the proposed system, in the nearest major metropolitan area.**
- E. The system shall be supplied by the manufacturer's authorized contractor. Certification shall be submitted verifying that the contractor is the manufacturer's authorized contractor. Included shall be certificates of attendance in manufacturer's installation / maintenance training by the contractors directly employed personnel. The communications contracting company shall have been in business for a minimum of 5 years, continuously furnishing the specified manufacturers' product lines and systems.
- F. **All individuals installing the intercom system must be employees of the certified installer and at least 25% of the installing staff shall have undergone a training class given by the manufacturer. Current certification indicating the successful completion of the training course shall be available upon request at the project and submitted in the contractor's product submittals.**
- G. **The proposing contractor and the installing contractor must be the same company. No subcontractor to the proposing intercom system contractor will be allowed for any portion of the fire alarm system scope of work.**
- H. The contractor shall submit certificates of factory authorization and completion of the manufacturer's installation and maintenance training.
- I. Acceptable manufacturers:
 - 1. The system specified shall be that of Carehawk Safety Communications Systems
 - 2. No other manufacturers will be accepted.

1.4 SUBMITTALS

- A. Provide submittals in as follows:
 - 1. Shop drawings: Provide wiring diagrams clearly indicating proposed equipment and

- interconnection of all internal and external components. Include dimensional details of all mounting including rack elevations and ergonomic layouts. Submit to architect for approval prior to fabrication.
2. In addition to the above listed items, the submitted drawings shall show the following:
 - a. Location of wall penetrations (all penetrations shall be sleeved and contain protective bushings at both ends)
 - b. Location of sleeved wall pass-thru
 - c. Size of sleeve at each location installed
 - d. Quantity of cable passing through each sleeve
 3. Provide complete catalog cuts of all major components including but not limited to:
 - a. Intercom / Telephone / Clock Equipment Racks and Equipment.
 - b. Administrative and Staff Telephone Stations, Station Controls and Displays.
 - c. Classroom and Station Equipment, Jacks, and terminations
 - d. Classroom and Hallway "Amplified Voice" Speakers, Outside Paging Speakers Back boxes and Specialty Rough-Ins
 - e. Wire, Cable, Jacks and Termination fields
 4. Provide an AUTOCAD engineering floor plan diagram, in 11 inches X 17 inches size format, of the system installation details indicating wiring lay-out, proposed wire routing, rough-in and installation information.
 5. Specification Compliance: A letter shall be provided stating, by section and subsection, that the intercom system installer complies with the ENTIRE specification section. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.
 6. Drawing Compliance: A letter shall be provided stating that the intercom system installer complies with the ENTIRE project drawing, including all general, keyed, and notes to contractor. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.
- B. Certifications/Licensing: The contractor shall submit all of the following certifications/licensing and the all must contain dates which are valid from the date of proposal and not expire any sooner than 12 months after substantial completion of the project.
1. State Licenses as applicable to this system
 2. Manufacturer's Authorized Dealer Certification
 3. Manufacture Installer Training Certificate (required for at least 25% of all installers on site.)

1.5 OPERATIONS AND MAINTENANCE MANUALS

- A. Provide 3 qty. complete bound O&M manuals describing maintenance and operation of the system. Include descriptions and service data on all component parts. Manual shall also include the following:
1. Warranty Statement indicating effective dates.
 2. Complete engineering data on all systems furnished including schematics of all equipment, shop drawings on all specially fabricated items, wiring diagrams of the

INTERCOMMUNICATIONS AND PROGRAM SYSTEMS

system in its "as built" condition.

3. Instructions on operational procedures, including master and substation operation, standard and special codes and alarm or maintenance indications and procedures.
4. A listing of all stations connected to the system, the power drawn by each speaker circuit, and the total load in watts connected to the amplifiers.
5. All system programming information and forms.
6. Also provide O&M manuals in digital format (pdf) on 2 qty. 8MB thumb drives.

1.6 SCOPE

- A. Provide a complete and comprehensive distributed, multi-channel, micro-processor School Communications / Clock system integrated with existing intercom / clock and bell system. The system shall incorporate integrated Speaker Intercom and fully non-blocking Digital Telephone systems with connection to outside telephone lines as specified. All system functions shall be enabled by DTMF/microprocessor control. The communications system shall be provided by one supplier to assure smooth coordination of all communications needs. The system shall have the capabilities of processing voice/data transmission at the standard ISDN basic rate interface (BRI).to and from any administrative telephone station. The system shall accept direct DS-1 level interfaces.
- B. Provide wire guards on all devices in gymnasiums/
- C. Clocks shall be 120v or 24v, no batteries.
- D. Provide 3 administrative phones per campus. (front reception, principal and principal secretary).
- E. Integrate campus intercom system to owner's IP phone system.
- F. Size system for 15% spare capacity of zones. Provide 12 spare circuits for future portable buildings (not to be part of the 15% spare capacity).
- G. Separate exterior zones from interior zones.
- H. Provide wall mounted volume control next to door for all conference rooms, offices, library and special needs rooms.
- I. Each classroom shall be individually zoned. Corridors are grouped per floor plan area.
- J. Label all wiring at termination points as per actual room numbers.
- K. All intercom wiring shall be sized correctly based on distance and number of devices being connected.
- L. Provide network capability to allow for remote programming.

1.7 FUNCTION – INTERCOM

- A. GENERAL: The system shall provide the state of the art in distributed technology and include but not limited to; priority based access to voice functions, emergency call-in, covert PC based call-in, pre-recorded emergency announcements, external and internal telephone access, integrated

video surveillance, secondary clock corrections, bell schedule and optional district wide communications functions. The system shall contain RS232, RS485, USB, and Ethernet ports for communication to third party systems. The system shall be easy to learn and operate using Windows based software. All standard system programming shall be user friendly to allow the system administrator the ability to easily program system features both locally and from remote locations.

- B. Provide complete and satisfactorily operating Integrated Intercom/Communications System as described herein, using materials and equipment of types, sizes, ratings, and performances as indicated. Use materials and equipment that comply with referenced standards and manufacturer's standard design and construction, in accordance with published product information. Coordinate the features of all materials and equipment so they form an integrated system, with components and interconnections matched for optimum performance of specified functions.

1.8 FUNCTION - MASTER CLOCK:

- A. Carehawk Safety Communications Products – CH1000. Provide an internal master clock with the following features:
1. Non-volatile memory capacity for storing unlimited schedules with unlimited events on each schedule. Ability to review, edit and delete events. Fully automatic calendar execution capable of future event programming to 30 years. Automatic Daylight Savings Time change with leap year programming. Interface with Dukane, Sapling, Rauland, National Time and Signal, American Time and Signal, Simplex and Latham secondary clocks whether synchronous wired or electronic. Output relays rated at 5 amperes shall be provided on all zone circuits as necessary. Lithium battery will provide not less than 5 years battery back-up for timekeeping function.
 2. The master clock shall be capable of being synchronized by a Network Time Server (NTP).
 3. Provide master clock system with automatic daylight savings and anatomic clock signal capabilities.
 4. Provide for scheduling of tone events, output events, program source events and video camera events.
 5. Secondary clocks for elementary schools shall be single or double faced, analog, corrective, 12" round display according to floor plan, unless noted otherwise. Secondary clocks for high schools shall be 4 inch digital LED clocks single or double faced according to floor plan. Provide protective guards in high activity areas and gymnasiums.
 6. Provide semi-flush back boxes for all single face clocks.
 7. Clock power supply: provide secondary clock power supply. Power supply shall be sized in quantity to meet the load requirements of the system.

PART 2 - PRODUCTS

2.1 EQUIPMENT

- A. Carehawk CH1000: Furnish and install a microprocessor-controlled voice, telephone, communications and clock system with all conduit, wire, outlets, and equipment as shown on the drawings and as herein specified to provide a complete sound, program distribution, and voice intercommunications system in the building.

1. DA1

- a. Furnish and install the required administrative telephones (DA1) with all conduit, wire, outlets, and equipment as shown on the drawings.

2. CTCL

- a. Furnish and install the required Caller ID telephones (CTCL) with all conduit, wire, outlets, and equipment as shown on the drawings.
- b. General—For the purposes of this specification, a Caller ID capable telephone that is connected to the CH1000 System through the Analog Telephone Interface (VFS16/32) shall be referred to as a CTCL. A CTCL is a standard off the shelf display telephone that can be wired or wireless. Various types can be intermixed throughout the system. They may or may not include a speaker phone feature. Note that system audio quality/intelligibility is dependent on these telephones.

3. STEL

- a. Furnish and install the required single line telephones (STEL) with all conduit, wire, outlets, and equipment as shown on the drawings.

B. SYSTEM OPERATION

1. The Carehawk / Dukane CH1000 is a Life Safety Communications System, multichannel, microprocessor-controlled communications system. The system is capable of distribution using Administration telephones (DA1s), IP telephones, standard DTMF telephones (STELs), Caller ID Telephones (CTCLs), loudspeakers, and other devices as described herein. The system central equipment shall be capable of receiving 2048 call-ins simultaneously without data collisions or loss of any call-ins. Call-ins shall remain in the system queue until answered. Emergency Call-ins shall automatically move to the top of the call-in queue and sound in the in-use telephone earpiece to notify the user of an emergency call. The system shall provide two independent intercom channels between any telephone and loudspeakers. Two additional, simultaneously operating channels shall be provided for distribution of program material. Systems not providing multiple, simultaneous speech paths/voice channels shall be unacceptable.

- a. The system shall provide user-programmable room number assignment.
- b. The system shall provide 3-, 4-, 5- or 6-digit alphanumeric format for architectural room numbering and 60 character alphanumeric call ID description associated with each audio port.
- c. The dialing sequence shall incorporate full numeric capabilities as available on industry-standard telephone key pad.
- d. The DA1 and CTCL shall allow the user to view the numeric room address of the calling station and the type of call (e.g., emergency, normal). The DA1 shall use distinctive ringing patterns to annunciate the type of call. The CTCL shall be capable of being programmed to visually

annunciate the call type. It shall be possible for some CTEs to display the date and time.

- e. When a CTE is employed as part of the CH1000 System:
 - f. Emergency and normal call-ins and telephone calls shall be routed to the VoIP Telephone Module (VTM) or the Central Control Card (CC200) for processing and shall be sorted in order of priority as well as time of call placed.
 - g. The CTE shall be used to view call-ins, access the system, and perform many of the functions available from the DA1 at a touch of a button. Some of these functions are emergency paging, tone distribution, music distribution, and intercom.
 - h. Calls from STEs or intercom call-ins shall display in the same manner.
 - i. CTEs shall allow the user to respond to the call and view call information for both telephone and intercom calls. Calls from call-in devices shall be capable of being programmed to call into CTEs. These phones shall ring when called.
 - j. The base system shall support eight FXS Caller-ID enabled telephone ports. FXS ports shall be used to interface with system Administrative phones, standard telephones, and PBX/KSU/.iPBX/VoIP telephone systems. The system shall have the capability to add additional ports in groups of 16 or 32 Administration or standard telephones and any number of IP telephones.
 - k. The system shall allow future expansion of the program channels to a total of two individual channels.
 - l. The system shall be compatible with industry-standard 2500 DTMF telephone instruments with electronic ringers (STEs) and CTEs.
 - m. The system shall not require an Administrative console to operate. All system functions shall be accessible via telephone codes from any internal and/or external telephone.
 - n. The system shall be capable of providing individual control of inputs from and outputs to external devices.
2. Rooms shall be equipped with programmable call-in buttons, STE handsets or IP telephones. Call-ins can additionally be initiated by operation of a personal wireless transmitter, Vcall PC base call button or security sensor. Call-ins from buttons shall be programmed to a minimum of seven priority levels. Upon arrival at the designated DA1 or CTE, the call shall be visually displayed and audibly annunciated. Audible and visual annunciation shall also be received at a remote display unit (RDU) if the system is so equipped. The system shall be capable of accepting up to three call-in devices, each with different priorities.
3. The system shall have the capability for modular capacities of 2048 audio ports including speakers and Call in buttons. The system shall support any number of DA1s, CTEs, STEs, IP telephones, Inputs, and outputs.
- a. All port locations shall be assigned to a 3-, 4-, 5- or 6-digit full numeric/alphanumeric dial number as available on industry-standard telephone key pad.
 - b. Systems that are not modular or expandable or require replacement of any previously installed equipment shall not be acceptable.
 - c. The system shall support a minimum of 8 trunk ports.

4. Provide, if desired by Owner, a unique pre-announce tone to sound prior to the normal class change signal or as desired for unique events. These tones are WAV files and can be adjusted for level and duration, as desired.
 - a. The system shall provide for a minimum of 25 distinct WAV file system tones and 25 custom WAV files, each of which shall be programmed from a selection of tone types.
 - b. The following programmable system tone events shall be available:
 - a. *Emergency page pre-announce*
 - b. *Civil emergency*
 - c. *Auxiliary alarm*
 - d. *Emergency reminder tone*
 - e. *Page pre-announce*
 - f. *Normal reminder tone*
 - g. *Custodial tone*
 - h. *Door tone*
 - i. *Intercom pre-announce*
 - j. *Privacy tone*
5. The system shall provide up to two simultaneously operating, non-restrictive, multiple input source, program distribution channels. This functionality shall be programmed and distributed from DA1s, CTEs, STEs or IP telephones. The system shall provide restriction of programming channels from all or certain designated telephones. Systems that require manually operated switchbanks shall not be acceptable.
6. The system shall have user-assignable groups of stations for zoned audio paging, class change signals, or program distribution, with any station belonging to all zones, some zones, or no zone.
 - a. Paging shall originate from any DA1, CTE, STE, PBX, IP telephone, dedicated paging microphone, or program source input.
 - b. The system shall allow a telephone to be associated directly with a loudspeaker by assigning them the same dial number.
 - c. The system shall include page or intercom priority over class change tones and preprogrammed events. Class change tones occurring simultaneously with an all page or zone page shall be programmable to be delayed until the active page has concluded.
 - d. The system shall use the industry-standard 25-volt method of transmission. Systems using non-standard methods such as 45-ohm loudspeakers without line matching transformers shall not be acceptable.
 - e. The system shall allow each loudspeaker to be a member of up to 64 zones.
 - f. Communications with each classroom loudspeaker shall be hands-free. The staff member or occupant in the classroom need not operate any buttons to reply to a call. The DA1 operator shall use the hands free option or handset on the DA1.
 - g. A mute button shall be provided on the DA1 to allow the operator to mute the outgoing conversation as desired.

7. All audio functions in the system shall operate within the following priority scheme:
- a. A lower priority function shall not interrupt a higher priority event.
 - b. A lower priority event shall be interrupted by a higher priority event.
 - c. Interrupted lower priority functions (automatic) shall be restored after conclusion of the higher priority function. If an event is initiated while a page is occurring, the event shall be optionally delayed until the page is complete.
 - d. Telephone conversations shall not be interrupted by the above listed functions.
 - e. The following priorities are ranked from highest to lowest;
 - a. Emergency intercom
 - b. Emergency page
 - c. Civil emergency
 - d. Manual time tone and high priority event tone
 - e. All call and zone page
 - f. Intercom
 - g. Custodial tone
 - h. Low priority event tone
 - i. Program distribution
8. In rooms provided with a privacy switch, the system shall incorporate all necessary circuitry to prevent overhearing conversations in any room equipped with a loudspeaker. The DA1 shall provide the user with an indication that the classroom privacy switch is in the privacy mode.
9. The system shall distinguish between an emergency call and a normal call from any station, and automatically route each type of call-in to a different DA1, CTEL, STEL or IP telephone.
- a. The system shall also include provisions to allow call-in coverage to be redirected to an assigned coverage group manually, or if the call-in is not answered within a user-defined period of time.
10. Each call-in switch shall be programmable or assignable to one of seven priority levels and up to 32 distinct call-in destination groups. The seven priority levels shall be as follows:
- a. Priorities shall be assignable to any one of three levels of emergency calls:
 - a. *Emergency-1 (E1)*
 - b. *Emergency-2 (E2)*
 - c. *Emergency-3 (E3)*
 - b. Priorities shall be assignable to any one of three levels of normal calls. A normal call shall be remotely upgraded to an emergency call (E1) by pressing the call button twice.
 - a. *High priority (HP)*
 - b. *Normal priority (NP)*
 - c. *Low priority (LP)*
11. Normal and emergency priority levels shall provide a distinctive call-in ring with a programmable cadence.

12. Calls routed to the appropriate DA1, CTEL, STEL or IP telephone destination group's call-in queue shall be placed in the order of priority and time of origination. When a call-in occurs to a specific call destination group, the call-in shall ring at all DA1s, CTEls, STEls and IP telephone in the assigned group. Any telephone within the group shall be able to answer the call. Telephones not within the call group can also answer using a dial code. When a call-in is not answered within a user-designated programmable time and the call-in shall be re-directed to other call groups. The call-in then shall be answered at any DA1, CTEL, STEL or IP telephone by dial code.
13. Calls routed to the DA1 shall display the incoming caller's room number and caller-ID information along with the total number of calls within the call-in queue. Calls can be scrolled by the DA1 using the "Down" key or the "UP" key for selective answering of intercom calls. If the DA1's queue has a high priority or emergency call-in present (Priorities E1-E3), a calling telephone shall receive a busy signal. Emergency calls received at the DA1 shall cause the calling station identification number to be accented in the display. Normal calls shall be displayed steadily.
14. When a system port is dialed from the DA1, the dialed number shall appear in the DA1 display window. Ring back or tones from the DA1 shall indicate the mode of operation currently activated.
15. Calls routed to the CTEL shall display the incoming caller's room number and caller-ID information after first ring cadence. Normal and emergency calls received at the CTEL shall be displayed steadily. Depending upon the type of CTEL employed, the date and time of call shall also be displayed. A Type 2 CTEL already off-hook during second pending call, shall display pending call after a call waiting signal.
16. When a system port is dialed from the CTEL, the dialed number shall appear in the CTEL display window. Ring back or tones from the CTEL shall indicate the mode of operation currently activated.
17. DA1, CTEL, STEL and IP telephone calls to other telephones shall ring the appropriate telephone and be connected when the called party goes off-hook.

18. The system shall allow any system telephone to be programmed to place an off-hook duress call-in to any destination groups. Duress call: A preprogrammed destination group and priority level can be programmed to occur after a preprogrammed off-hook time limit.
19. The system shall allow any telephone to place an emergency voice paging announcement. (This can be restricted to individual telephones through page access restrictions.)
20. The STEL shall also be used to initiate a tone, WAV file or a local program to rooms, zones, or all rooms.
21. The STEL shall be configurable to initiate a normal or emergency priority level voice page to zones, or intercom to a speaker, or dial another telephone automatically when off-hook.
22. The system shall provide the capability for a loudspeaker station, handset, and zero to three call-in devices at each remote location or classroom.
 - a. When an STEL is located in the classroom, the user shall have the ability to toggle back and forth between conversing on the telephone or the speaker station.
 - b. If a call is placed to a classroom loudspeaker, the call is automatically transferred to the handset when the handset is lifted. This is a user-programmable option on a telephone by telephone basis.
 - c. In a room equipped with a loudspeaker, if the handset is off-hook and a call is placed to that room via the loudspeaker, the caller's voice shall be automatically received in the room. This allows the caller to contact an individual room and carry on two-way communications even though the telephone is off-hook. Two separate and distinct voice paths are available to each classroom.
 - d. Call-in devices shall consist of single or multiple switch assemblies, with or without privacy switch capabilities, and with or without call assurance LED capabilities.
23. The system shall allow any telephone to be programmed to allow or exclude initiation of all call, zone page, or emergency announcements.
 - a. The system shall allow any preprogrammed telephone parameter to be circumvented through the use of a pre-assigned account code. Upon hanging up, the telephone returns to its previously programmed state. Up to 256 account codes are available allowing for staff and administrative programming override. Account codes shall be controlled by both day and night Class of Service in addition to 8 different Event Class of Service Groups.
 - b. The system shall support a minimum of 64 different Class of Service parameters with each extension having both day and night class Class of Service. The following attributes are programmable and available for each Class of Service:
 - a. Dial access
 - b. Telephone ring access
 - c. Direct off-hook call-in answer
 - d. Timed off-hook duress call-in
 - e. Page access
 - f. Tone access
 - g. Program access
 - h. Intercom access

- i. Room exclusion access
 - j. Output control access
 - k. Forward access
 - l. Administrative access
 - m. Digit 9 access
 - n. Digit 8x access
 - o. Direct off-hook intercom speaker-to-handset transfer
 - p. Emergency ring access
 - q. Normal ring access
 - r. Direct off-hook page or telephone call
 - s. Direct off-hook intercom answer
24. The DA1s, CTCLs, STELS and IP telephones shall be capable of, but not restricted to, the following:
- a. Two simultaneous, three-party conference circuits
 - b. Extension-to-extension direct dialing
 - c. Extension-to-speaker station direct dialing
 - d. Call on hold
 - e. Call transfer
 - f. Paging
 - g. Tone distribution
 - h. Preprogrammed speed dialing
 - i. Call forwarding
 - j. Interface with electronic key system and/or PBX
25. A group of loudspeakers shall be temporarily excluded from receiving time, non-emergency page, or program distribution by designating the desired stations as excluded stations from a preprogrammed zone.
- a. Using the Dukane / Carehawk Assistant Software, individual rooms desiring exclusion on a temporary basis, (e.g., student testing purposes or quiet times) shall be able to exclude themselves for the day. The initiator can cancel this exclusion at any time. A temporary exclusion shall programmed with the Dukane / Carehawk Calendar Software to automatically return to the preprogrammed station status before the start of class the next day.
 - b. The system shall allow that a group of loudspeakers be permanently excluded.
26. The system shall contain a flexible database capable of addressing each system telephone and assigning unique parameters to each phone.
- a. Each classroom telephone shall be capable of being associated (for answer purposes) with specific administrative telephones. This association can be automatically changed dependent upon time of day.
 - b. Each classroom telephone shall be assigned an architectural or ID number to communicate with its assigned administrative telephone. This coverage shall allow preselected coverage of call-ins from classroom telephones to administrative telephones, on a station-by-station or room-by-room basis.
 - c. Call-ins to administrative telephones shall be programmed to call groups of administrative telephones.

27. The system shall contain an integral master clock and programmer capable of performing the following functions:
- a. Provide unlimited discrete time event entries for programming functions based upon:
 - a. The time of day in hours and minutes
 - b. The day or combination of seven days of the week on which the event is to occur
 - c. The selection of any one or any combination of 64 zones or five internal outputs to be activated
 - d. The selection of any schedule to allow for maximum flexibility due to special circumstances or seasonal changes
 - e. The selection of 25 user-programmable event tones plus 25 WAV files.
 - b. Provide for automatic daylight saving time adjustment with leap year programming.
 - c. Provide momentary contact closures for external device operation. Provide six inputs, five outputs, and two flex-puts.
 - a. Inputs shall be programmable by the installer/system administrator to initiate any desired system activity (e.g., tone, program, events).
 - b. Outputs shall be programmable by the installer/system administrator to activate during any desired system activity (e.g., page, tone, program, time of day).
 - d. Display the time of day in either 12 or 24 hour format at each administrative telephone.
 - e. The master clock shall interface with an existing master clock to allow the two systems to synchronize.
 - f. The master clock shall correct compatible secondary clocks, analog or digital or both.
 - g. The system shall provide for an editing and review routine to permit the user to change and edit time events, zones, and schedules.
 - h. The system shall allow preselected program material to be distributed according to preprogrammed schedules (i.e., march to music, national anthem.)
28. The system shall include facilities to allow automatic control of external devices, (e.g., cameras.) The system shall provide multiple outputs designed to interface with external devices. A total of 133 outputs shall be provided. Outputs to activate/deactivate remote door locks or operate cameras shall be activated manually from an DA1, CTEL, STEL or IP telephone. Refer to the section covering input and output control for additional capabilities.
29. The system Central Control Card (CC200) shall contain a minimum of 1 Gigabytes of removable/upgradable flash storage and 512 Megabytes of RAM. Minimum processor speed shall be 500 MHz to efficiently process the time critical events generated by the CH1000 communications platform. The processor shall control all functions and features of the built-in self-diagnostics and continually monitor the system's integrity. All system programs and changes shall be permanently stored on the Central Control Card (CC200). It shall be possible to review and reload any program or change that was loaded on the system regardless of age. The system shall be provided with a user-friendly PC interface, Windows® based, for system programming and

diagnostics. User or service technicians shall send or receive complete system configuration data, using system software packages. All system programming shall be stored on the Central Control Card (CC200). The system shall allow this information to be reloaded at any time either on-site or from a remote location. The software shall support remote (off-site) diagnostics and system programming through an Ethernet connection.

30. The system shall filter all voice signals through a Digital Signal Processor (DSP) to maximize voice intelligibility.

C. ADMINISTRATIVE TELEPHONE (DA1)

1. The DA1 shall be desk or wall mounted and contain a matching telephone handset with retractable coiled cord and conductive rubber button switches, with clearly designated touch points. The housing shall be constructed of high impact, flame retardant, black plastic. Dimensions shall be 9-1/2" (23.75 cm) wide by 4-1/2" (11.25 cm) high and 8-3/4" (21.9 cm) deep. Dimensions include handset. Weight shall be 4 lb. (1.8 kg). Terminations shall be a RJ-45 modular telephone type jack. Features shall include:
 - a. Plastic moisture-sealed buttons
 - b. Large, easy-to-read, 8 line by 20 character back lit display
 - c. Menu-driven display for ease-of-operation
 - d. Handset or speakerphone
 - e. Alphanumeric 3-, 4-, 5- or 6-digit dialing
 - f. Distinctive electronic ring signals
 - g. 200 speed dials
 - h. Wizard driven menu system
 - i. User-programmable function keys
 - j. Telephone-type modular connector
 - k. Sensitive loudspeaker
 - l. Built-in condenser microphone
 - m. Queuing
 - n. Telephone-style handset with dynamic receiver and electret transmitter
 - o. Head set compatible

D. EQUIPMENT ENCLOSURES: The Intercom Program Equipment shall be wall mounted. The overall equipment cabinet dimensions shall not exceed 18 1/2 "H x 17"W x 5-3/8"D. Color shall be black. All intercom system / program equipment shall be provided as required to fully implement a functioning system. The equipment enclosure will include the Central Control Card, Main Interface Card, Power Supply Module, Intercom Modules, Telephone Communication Modules and Digital Amplifier.

1. The system shall be mounted on 3/4" plywood backboard (painted)
2. The program sources shall be remotely located from the control equipment. The program rack shall be a black metal finish, tabletop rack located at the reception area. Do not provide wood finish cabinet.
3. Provide CAT5 connections for 8 telephone ports and 8 local or remote Switching Security Modules (SS16/32).
4. Provide wall mounted remote Security Switching Modules as required mounted in IDF Rooms.

INTERCOMMUNICATIONS AND PROGRAM SYSTEMS

- E. SPEAKERS, CEILING MOUNTED: Shall be 8" full range loudspeaker baffle combination. 5 oz. nominal magnet eight, 10 watt continuous power, with matching dual 25/70 volt transformer. Transformer shall be capable of delivering at least 5 separate wattage taps from 1/4 watt to 4 watts. Flush mounted onto steel back box. Provide Dukane / Carehawk 6A634 or approved equal. Provide Dukane / Carehawk 145-226 enclosure system and Dukane / Carehawk 677-67 speaker supports for each speaker. All speakers in the following room types shall have volume control on the speaker to allow for adjustments: Classrooms, Admin, Reception, Conference Rooms, Kitchen and staff work areas
- F. Cafetorium, General Purpose Rooms etc. with architectural lay-in ceilings 12 feet above finished floor or greater shall have 8" speaker with 5 oz. magnet complete with line matching transformer. Program rating shall be 12 watts continuous. The speaker shall be Soundolier FD72W or approved equal. Provide Soundolier CS95-8 enclosure system and 81-8R speaker supports for each speaker. 25/75 volt transformers shall have primary taps of 1/2, 1, 2, 4 watts.
- G. CLOCKS: Non-IP, 12 inches 24 VAC synchronous analog clocks for elementary schools or 4 inch, LED digital for high schools. Provide Dukane / Carehawk as shown on plans. Provide backboxes, wiring, and raceway as required for proper operation. Provide wire guards in cafeteria/gym.
- H. WALL MOUNTED SPEAKERS: 8 inches full range speakers with dual 25/70 volt transformer shall mount in flush square speaker baffles as shown on the plans. Soundolier C5A speaker with LT72 transformer 161-8 square baffle, and 198-8 flush square enclosure. If speaker must be surface mounted, provide SE175-4 enclosure.
- I. Outdoor paging speakers shall be on a separate zone from interior speakers. Each individual room such as a classroom, office, conference room, or gymnasium shall be a circuit.
- J. WALL MOUNTED VOLUME CONTROL Provide as shown on floor plans. Provide Soundolier AT-10 or approved equal recessed autotransformer volume control. Routine paging shall not override the volume control.
- K. OUTDOOR WEATHERPROOF PAGING / PROGRAM SPEAKERS: Shall be UL listed, flush mounted water proof type paging speakers for voice and tones with matching transformer. Quantity as shown on plans. Provide Soundolier APF-15T With 193-8-6 Back box and VP161-APF Baffle. Back boxes shall be recessed to allow horn to be flush mounted with wall.
- L. AM - FM ANTENNA: Provide a complete AM/FM antenna system, as required for proper radio reception. Provide a weather headed conduit run from roof to intercom junction box if required. Provide all mounting and connection hardware to receive available off air channels. Feed from building cable system, provided under separate section is an acceptable signal source. Installation shall be in accordance with latest safety standards. All mastings and outdoor mountings shall be capable of with standing winds of up to 100 MPH. Provide lightning protection and grounding as per National Electrical Codes. To minimize likelihood of a lightning strike, contractor shall mount the antenna so that its upper tip is below the metal flashing at the edge of the roof.
- M. SURGE PROTECTOR / UPS: Provide a Minuteman, rack mounted EnterprisePlus Line Interactive Uninterruptible Power Supply, Model #E1500RM2U

INTERCOMMUNICATIONS AND PROGRAM SYSTEMS

N. Program Source

1. 1 qty. AtlasIED AP-S15A power conditioner and distribution unit
2. 1 qty. JBL CSM 28 Line Mixer
 - a. Provide machine printed label on front of device for each input / output indicating function,
3. 1 qty. Tascam CD-400U media player
4. 1 qty. Proco iRack iPod input panel
 - a. 1 qty. Whirlwind MST-06, 6' 3.5mm cable
5. 1 qty. 6RU, black table-top enclosure for all equipment.
6. 1 qty. custom 1RU panel with 4 push buttons to activate 4 distinct tones
 - a. Coordinate tones and tone function with Owner
 - b. Provide machine printed label for each button indicating function
7. Provide Astatic 878HL-2 desktop PTT microphone.
 - a. Provide 1 qty. 10' XLR cable, black; Whirlwind MKQ or approved equal.

2.2 ADDITIONAL EQUIPMENT

- A. Contractor shall include in their pricing, the cost to furnish and install the following additional equipment. These devices shall be used to fulfill any changes request issued until the list is depleted. Upon the completion of the project, all remaining material shall be delivered to the project for owner stock. No devices shall be used without documentation and written authorization from the project's technology consultant. Contractor shall obtain a signed transmittal of additional equipment to the owner at the end of the project. The signed transmittal shall be included in the contractors closeout documents.
- B. Additional Equipment List:
1. (15) Ceiling Mounted Speakers with tile bridges
 2. (15) Wall Mounted Volume Controls
 3. (2) Administrative Call Stations
 4. (5) Exterior Speakers
 5. Provide (1) concealed remote button to activate lockdown tone while simultaneously calling 911.

PART 3 – EXECUTION:

3.1 MATERIALS:

- A. WIRE: Wire between the main equipment cabinet and local or remote Security Switching Modules shall be CAT5 with wire distances not exceeding 2700 feet. Cable for speakers, call-in switches, and security inputs shall be #22 gauge at a minimum or as recommended by the manufacturer under plenum jacket. No splices are permitted except in approved junction boxes. All terminations shall be made on telephone type punch blocks or at specified devices. Display, speaker, and specialty cables shall be as required for best operation under manufacturer recommendations.
- B. JACKS: All station device terminations (except speakers) shall be terminated on USOC standard modular jacks. Jacks for wall mounted telephones shall have lugs for securely attaching the instrument to the wall.

- C. BACKBOARDS: Provide 4 feet x 4 feet plywood backboards for mounting of system cross connects. Mount as shown on the plans. Provide Modular Termination backboards with 66 type terminal blocks as required to terminate all cables. Provide Distribution and cross connect backboards equal to AT&T 66 Series for all cross connect wiring.
- D. Cabling between the Security Switching Modules and the terminal blocks shall be provided with telephone type 50 pin connectors to allow ease in console connections, disconnection's and service. SDA1lite terminal junction boxes shall be provided as needed to allow for station terminations in each building.

3.2 INSTALLATION:

- A. All work under this section shall be performed by persons having specific familiarity with telephone, data and sound system installation. Upon request the contractor shall submit resumes, references or other corroborating documentation, to the engineer to confirm the contractors capabilities and experience.
- B. GROUNDING: Except were specifically indicated otherwise, all exposed non-current carrying metallic parts of the communications system shall be grounded. This may be accomplished via a driven ground rod, cold water pipe or building power ground. If the building power ground is used, a separate ground conductor shall be used from the equipment to the grounding grid. All grounding shall be done with #6 solid copper wire or larger. The contractor shall use every effort to insure system stability and safety.
- C. WIRING: A comprehensive, documented communications wiring system is to be installed. Wiring is to be identified by room number, segregated, neatly laced, and terminated on telephone type punch blocks. Back boards and cross connect fields shall be neatly organized as to function. (ie: intercom, telephone stations, data network etc.) All termination points are to be labeled with function. Data cables shall be certified as usable and checked using the cable certification sheet. Data cables shall be labeled as per the data identification scheme.
- D. SPEAKER WATTAGE TAPS: Tap Corridor Speakers for 1 watt, Outside Horns 7.5 watts, Tap Speakers in High Ceilings (15FT +) at 4 watts. Rest rooms ½ watt.
- E. All communication wires and cables installed above ceiling shall be identified and tagged at each end. The identification shall include the room number one markers similar to T&B sleeve marker.
- F. Provide integration with clock and bell system
- G. Provide integration of local sound reinforcement system override.
- H. Mount all handsets on 2-gang electrical boxes at 42" a.f.f. unless noted otherwise.
- I. Mount outdoor paging speaker in flush mounted box with 15 watt power rating and with built-in matching transformer. Attach firmly to building and provide water tight fit.
- J. Provide for future portable buildings. Provide 12 circuits minimum, pulled and punched down on terminal block above the ceiling at the exterior wall where portables will be located.
- K. All headend equipment and wiring shall be provided and installed for future circuits on initial

installation.

- L. Speakers in very small or very reflective rooms (ex. Restrooms) shall be tapped at ¼ watt.
- M. All communication wiring between the main equipment cabinet and the Security Switching Modules shall be CAT5. Wiring to speakers, call-in switches and security inputs shall be 22 AWG, Type TW and all audio signal wiring shall be # 16 except where indicated otherwise or as required by article 800 of NFPA 70 (NEC).
- N. Final system room designations shall be based on actual room number graphics (Do not use the construction plan Architectural room number designations).

3.3 CABLE PATHWAYS

A. Cable Support:

- 1. All wire not installed inside conduit shall be installed in a dedicated cable support system for the entire run of each cable. Including, but not limited to service loops.
- 2. The approved cable support system shall be attached directly to the building steel at a serviceable height. In the event that the building steel is not 5' of the finished ceiling, the contractor shall provide a dedicated threaded rod extending within 5' of the finished ceiling and mount the support hook to the treaded rod.
- 3. cable support shall be installed at a maximum of 5' on center.
- 4. All cable installed shall be attached to the support system with plenum rated Velcro and a plenum rated Velcro tie shall be installed between each cable support to keep wires neatly bundled throughout the entire run. Tie wraps will only be allowed to be used inside the fire alarm panels as required to manage the wires within each type of panel.
- 5. **ABSOLUTELY NO CABLE, NOT INSTALLED IN CONDUIT, WILL BE ALLOWED TO BE ATTACHED DIRECTLY TO THE BUILDING'S STEEL OR SUPPORTED IN ANY OTHER METHOD THAN THAT STATED ABOVE.**
- 6. **IT IS THE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO COORDINATE WITH ALL OTHER TRADES ON THE PROJECT TO INSURE THAT THE PATHWAY OF THIS SYSTEM DOES NOT INTERFERE WITH THE INSTALLATION OF THE OTHER TRADES AND TO PREVENT THE INSTALLED PRODUCT OF OTHER TRADES FROM PUTTING STRAIN ON THE INSTALLED WIRING.**

B. Conduit / Raceway:

- 1. All wire shall be installed in an approved conduit/raceway system (except where permitted by NEC and the local authority having jurisdiction). Maximum conduit "fill" shall not exceed 40% per NEC.
- 2. Conduit and raceway system shall be installed as specified under the general electrical section of the specifications, and per NEC, local, and state requirements.
- 3. Minimum conduit size shall be 3/4" (19.1 mm). Install conduit per engineered shop drawings.
- 4. Systems utilizing open wiring techniques with low smoke plenum cable shall provide conduit in all inaccessible locations, inside concealed walls, all mechanical/electrical rooms, or other areas where wiring might be exposed or subject to damage.

3.4 TESTING AND ACCEPTANCE

- A. General
 - 1. After completion of installation and start up procedures, commence a verification and testing sequence leading to final acceptance of the owner.
 - 2. Submit for approval, a sample of the form on which the test will be reported.
 - a. Identify project
 - b. Signatures of participants and observers
 - c. Results
 - d. Description of adjustment or corrections of defective components.
 - e. Date
 - 3. Provide schedule of tests. Estimate dates of significant events.
 - f. All testing shall be performed in the presence of the Owner/Architect/Engineer.
 - 4. Test, calibrate and adjust each device in the system
 - 5. Verify operation of all specified functions.
 - 6. Provide documentation of all tests and verifications as specified.
- B. The following tests and adjustments shall be performed by the Contractor. All equipment required supplied by the Contractor. Follow EIA standards RS-160 and RS-219 in performing tests. Make all necessary corrections to bring systems into specification compliance. Record the results of these tests in project record drawings. Submit written results of tests to Architect prior to scheduled equalization and final inspection date.
 - 1. Measure and record impedance of each speaker line terminating at equipment racks at frequency of 1,000 Hz. with loud speakers connected to their respective lines.
 - 2. Check system to ensure freedom from oscillations or stray RF pickup. Check inputs with no signal and with typical program material driving system to full output. Detect unwanted signals.

3.5 INSTRUCTIONS

- A. Provide 4 hours of instruction in two 2-hour blocks or four 1-hour blocks to the Owner designated user and maintenance personnel on the use and operation of the system. Instructing personnel shall be a competent engineer or technician familiar with the installed system. Instruction times shall be arranged by the Owner.

3.6 ACCEPTANCE BY OWNER

- A. Upon completion of initial tests and delivery of all documents, diagrams, and project record drawings, notify the Architect in writing that the installation has been completed in accordance with the requirements of the specification and is ready for equalization and inspection by representatives of the Owner.
- B. Acceptance testing will include operation by the Owner of each major system and other components (microphones, consoles, racks, loud speakers, etc.) deemed necessary. Contractor will assist as necessary in this testing.
- C. In the event the need for further adjustments or work becomes evident during acceptance testing, the Contractor will continue his work until the system is acceptable, at no additional cost to the Owner.

3.7 TESTING AND TRAINING:

- A. Prior to connection of any terminal equipment all cables shall be tested as per REA spec. PC-4. Cables shall be tested for Opens, Splits, Crossed Pairs, Shorts to Ground and Shield Continuity. All defective cabling is to be replaced prior to device hook-up.
- B. Upon completion of the installation the contractor shall test each room station speaker, handset or call switch for proper operation. All telephones, programming and functions are to be tested for proper operation. All emergency and program functions are to be tested. Any malfunction shall be corrected prior to final acceptance.
- C. A minimum of Four hours time shall be included in the bid for instruction of the owners forces in proper operation and routine maintenance of the system. Instruction shall cover all materials indicated in the owners and operations manual.
- D. Operational guidelines shall be given in written form in sufficient numbers so that all key personal have operational instructions of programming, station use and special features. Copies of these instructions shall be provided for permanent record in the operations and maintenance manuals specified above.

END OF SECTION

SECTION 27 51 23.80 – LOCAL SOUND REINFORCING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 GENERAL REQUIREMENTS

- A. Provide all materials, equipment, transportation, and labor to achieve complete and fully functional systems as shown or intended on drawings and in bid specifications.
- B. All applicable equipment shall bear the UL label. All work shall be executed in accordance with the National Electric Code (NEC), the Occupational Safety and Health Act (OSHA) and all applicable State and Local codes, ordinances, and regulations.
- C. The Contractor's installation team shall have at least one member possessing a NICET Level II, CTS-I or C-EST certification; additionally, at least one audio DSP programmer certified in HiQnet Audio Architect, Symetrix, Biamp Tisera, QSC Q-SYS or Dante.
- D. Contractor shall have been in the commercial AVL (Audio, Video, Lighting) installation industry for at least five years. Contractor shall have installed at least five systems of this type and comparable scale in educational facilities within the State of Texas. Contractor shall provide a list of successfully completed projects including completion dates within the past two years from the bid date of this project.
- E. Should the local sound systems include Crestron or AMX hardware which requires programming, the Contractor shall provide a Certified Crestron Programmer or an AMX Certified Expert (ACE) Programmer to program, upload and debug the third-party control systems.
- F. Should the local sound systems include managed network devices, the Contractor shall provide one person on the installation team with valid certification in one of the following: Harman HCNA/P, CompTIA Network+, Cisco CCNA or Cisco CCNP. Provide valid certification credentials in the submittal documentation.
- G. Any discrepancy in quantity or part numbers between the drawings and the bid specifications shall be brought to the attention of the Consultant for clarification during the bidding period. No allowance shall be made to the Contractor by reason of failure to have brought said discrepancies to the attention of the Consultant prior to award of contract. Should discrepancies be discovered, the greater in quality and quantity shown shall be provided.
- H. Systems to be installed but not limited to in the following areas per Part 2:
 - 1. Gymnasium C152

1.2 REGULATORY REQUIREMENTS

- B. Standards: All work shall be performed in accordance with the latest revisions of the following standards and codes:
 - 1. Latest Local Codes and Amendments
 - 2. 2015 National Electrical Code

C. Other References:

1. TIA/EIA-568-A – Commercial Building Telecommunications Wiring Standard
2. EIA/TIA-569 – Commercial Building Standard for Telecommunication Pathways and Spaces.
3. TIA/EIA-606 – The Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
4. TIA/EIA-607 – Commercial Building Grounding and Bonding Requirements for Telecommunications.
5. EIA/TIA 455-A – Standard Test Procedure for Fiber Optic Fibers, Cables, Transducers, Sensors, Connecting and Terminating Devices and Other Fiber Optic Components.
6. TIA/EIA TSB 67 – Transmission Performance Specification for Field Testing of Unshielded Twisted-Pair Cabling Systems.
7. TIA/EIA TSB 72 – Centralized Optical Fiber Cabling Guidelines
8. ISO/IEC 1180 – Generic Cabling Standard
9. EN 50173 – Generic Cabling Standards for Customer Premises
10. ANSI/EIA/TIA 526-14 – Optical Power Loss Measurements of Installed Multimode Fiber Cable Plan.

D. Governing Codes and Conflicts:

1. If the requirements of these specifications or the Project Drawings exceed those of the governing codes and regulations, then the requirements of these specifications and the Drawings shall govern. However, nothing in the Drawings or Specifications shall be construed to permit work not conforming to all governing codes and regulations.

1.3 ABBREVIATIONS

- A. The following abbreviations are used in this document:

1.4 SUBMITTAL DOCUMENTATION

- A. Submit shop drawings as specified in pdf format, ARCH E1 (30x42). Contractor shall be responsible for costs associated with producing and submitting all required documentation.
- B. Submit a room-by-room list of all equipment to be installed, in pdf format.
- C. Submit Manufacturer's product data for all equipment with a table of contents, in pdf format.
- D. Submit a line-item compliance statement indicating that the products being submitted comply with the specified equipment and indicate which products deviate from the specifications.
- E. Submit detailed drawings of all systems, minimum scale 1/8" = 1', in pdf format.
1. Table of Contents.
 2. Rigging details. All hardware must meet or exceed a safety factor of 5:1. Detail the product manufacturer, part numbers and load capacity of all hardware to be used. **Contractor shall employ the services of a professional structural engineer licensed to practice in the State of Texas to verify load ratings of hanging components. Provide attachment details on Shop / Submittal Drawings reviewed by said engineer. Include stamped report of items reviewed by structural engineer with shop drawings submittal. Report shall**

include an itemization of items reviewed by the structural engineer and confirmation that proposed methods of suspending equipment as shown on the shop drawings conform with required safety factors.

3. Floor Plans, Reflected Ceiling Plans and Section Elevations displaying loudspeaker locations and orientation, wall plate locations, rack locations, 120vAC receptacle locations and all other related device locations.
4. Comprehensive system schematics displaying detailed connections to all equipment. These shall display wire numbers, terminal block numbers, patch bay assignments and color coding.
5. Proposed construction details for any custom fabricated items; including interface panels, patch panels and wall plates. These shall display dimensions, materials, finishes, I/O connector labels and color selection.
6. Rack elevations displaying the locations of all equipment within each rack.
7. Riser diagrams displaying conduit requirements with pull boxes, outlet boxes, cable layouts, cable type part numbers and quantity of cables with part number in each conduit.
8. Electrical power requirements for the systems. Include diagrams for any remote control of electrical power displaying locations and elevations for all receptacles in detail sufficient to coordinate with the Electrical Contractor.
9. All submittal drawings not meeting the above criteria shall be deemed incomplete, shall not be reviewed and shall be returned for revision.

1.5 OPERATING AND MAINTENANCE MANUALS

- A. Provide Operating and Maintenance Manuals as specified in Division 26 and Division One and deliver to the Owner.
- B. Include:
 1. Product Data.
 - a. Manufacturer's data for each type of product conforming to the submission format specified herein. Include manufacturer's serial numbers within the list of product.
 - b. For custom circuits or modifications, a description of the purpose, capabilities, and operation of each item.
 - c. Each product's Owner Instruction Manual. Provide high quality copies where necessary, with all text legible and illustrations of equal resolution and sharpness as the original manual. Faxed copies or copies with portions of the information missing or smeared are not acceptable.
 - d. Manufacturer's maintenance and care instructions.
 - e. Separately bound list by manufacturer and model or part number of product incorporated within the systems arranged in alphanumeric order.
Manufacturer's warranty statements bound separately where applicable.
 2. A complete as-installed (As Built) equipment list, listed by room, identifying manufacturers' names, model numbers, serial numbers, quantities and locations of each item.
 3. Complete and correct As Built systems schematics, floor plans, reflected ceiling plans, elevations, rack risers and I/O plate details. Include diagrams or charts displaying final settings of all control knobs in the system (mixers, equalizers, audio amplifiers, etc.).
 4. Each individual system's program software / source code (audio, video, lighting and third party control) with final settings and pass codes and As Built AutoCAD files (2013 or newer) shall be saved onto two separate 8GB thumb drives and included in the close-out documentation. All software programs / source codes are the intellectual property of the Owner.

5. Quick-start Guide for each system written with the assumption that the intended reader is technically inexperienced and unfamiliar with the facility. The Quick-start Guide shall be laminated and affixed to the inside of the front door of the system rack with appropriate mounting hardware. One copy of each individual system schematics printed in ARCH D (24x36) and laminated shall be delivered to the Owner.
6. Two hard copy, paper sets of the as-installed (As Built) drawings in ARCH E1. Drawing sets shall be individually bound.
7. In addition to the hard copy close-out documentation, all close-out documentation shall be included, in pdf format, on the, 8GB thumb drives.
8. Service & Maintenance Manual:
 - a. Provide an original manufacturer's copy of the service manual on every piece of equipment for which the manufacturer offers a service manual. On equipment where there is no service manual, provide statement from company indicating manual is not available. Arrange manuals in the same order as the operations manual.
 - b. Manufacturer's maintenance and care instructions.
 - c. Maintenance Instructions, including maintenance phone numbers and hours; maintenance schedule; description of products recommended or provided for maintenance purposes, and instructions for the proper use of these products.
9. Organize documents into separate bindings containing data relevant to operation, maintenance, and warranty.

1.6 WARRANTY AND SERVICE

- A. The Contractor shall warrant all new equipment to be free of defects in materials and workmanship for not less than one year after the Substantial Completion date.
- B. The systems are to be free of defects and deficiencies and are to conform to the drawings and specifications as to kind, quality, function, and characteristics. The Contractor shall repair or replace defects which may occur in labor or materials within the warranty period without charge to the Owner.
- C. Within the warranty period, respond to requests for service within 24 hours. Service calls to perform warranty work shall be made within 72 hours of request by the Owner. Temporary, equivalent replacement equipment shall be provided at no cost to the Owner when immediate on-site repairs cannot be made.
- D. This warranty shall not void or replace individual manufacturer warranties which extend past this warranty period. This warranty shall not void any rights guaranteed the Owner by law.
- E. The Contractor shall include in the close-out documentation a certificate of warranty which includes the start and end dates of the warranty and contact information, including name, telephone number and email, of individuals to perform warranty service.
- F. This warranty shall not apply to existing Owner Furnished Equipment.
- G. Additional warranties may be negotiated between the Contractor and the Owner at the Owner's discretion.

1.7 SUMMARY OF WORK

- A. The installation shall comply with all applicable codes and standards in effect at the job site and as indicated in the Drawings and Specifications.

1. Reference project drawings for locations, quantities, and coordination with other trades.
- B. All local sound racks shall have cabling installed and routed according to industry standard best practices. Contractor shall employ horizontal lacing rails in the rear of the rack for neat and orderly cable routing. Use Velcro strips for cable bundling. ZIP TIES ARE NOT ACCEPTABLE.
- C. Contractor shall perform an RF scan and shall provide results in pdf format with the close-out documentation. Contractor shall provide an RF coordination sheet, documenting all RF frequencies in use in each system, including in the High School buildings, to ensure there is no RF interference between systems. Coordinate with General Contractor and for access to High School building systems.
- D. Contractor shall tune each system's DSP to provide a flat frequency response.
 1. Tune and set dynamics on all inputs to provide the highest level of gain before feedback while providing intelligibility of all inputs.
 2. Contractor shall perform a "rattle test" of all systems: Apply sine wave sweep signal to each loudspeaker system with a two minute sweep from 20Hz to 550Hz, to 10 - 15dB below full system output. Annotate issues discovered during sweep test. Correct issues resulting from the new system equipment and / or rigging hardware.
- E. Contractor shall provide all required equipment and programming to provide a fire alarm override. All audio shall mute in all local sound systems during a fire alarm.
- F. Contractor shall provide all cabling, connectors, components and equipment required for a complete and functional system.

PART 2 – MATERIALS

- A. All equipment shall be new and unused unless otherwise noted.
- B. Contractor shall provide all necessary patch cables, riser/plenum cabling and connectors interconnecting all equipment to provide for fully functional systems. In addition, all cabling raceway, support systems, sleeves and any other materials required to properly install and support cabling systems.
- C. All equipment quantities shall be as shown on drawings unless otherwise noted.
- D. All materials are to be provided as specified. No substitutions shall be accepted without written request from the Contractor and written consent of the Consultant.

2.12 FIRE ALARM OVERRIDE

- A. Provide for Fire Alarm Override for each Local Sound system. Contractor shall provide all cabling, relays, mounting hardware and any other devices (Fire Alarm System devices by others) to provide a fully functioning Fire Alarm Override system. When Fire Alarm is active, each Local Sound System shall be muted. When Fire Alarm ceases, each Local Sound System shall automatically revert to normal operation.

2.13 SCHOOL INTERCOM PUBLIC ADDRESS OVERRIDE

- A. Provide for School Intercom Public Address Override for each Local Sound System. Contractor shall provide and install (1) RDL TX-70A, 70v to Line level converter. Contractor shall provide, install and terminate cabling to nearest School Intercom speaker and shall integrate devices into local sound system. Provide DSP programming to duck Local Sound System to give priority to the School Intercom PA System. Coordinate with Building Intercom Contractor for integration of systems

2.14 CABLE ROUTING/PATHWAY

- A. Cable Support System: All audio-video cabling shall be installed and supported using a cable support system at 4'-0" intervals unless installed in conduit. Do not exceed manufacture recommendation for the quantity of cables supported in an individual support.
- B. All cable bundles shall be grouped together using plenum rated Velcro for the entire run above and below the ceilings.

2.15 AUDIO-VIDEO SYSTEM WIRING AND TERMINATING HARDWARE

- A. Cabling:
 - 1. Provide a complete audio/video cabling solution from back of each faceplate to device I/O locations as designated on the contract drawings. Each cable provided shall be installed with a minimum of 10' of excess slack above each outlet location. Contractor shall properly support and label all cabling at each outlet.
 - 2. Contractor shall ensure all cabling requirements are met to provide fully functional A/V systems, specified cabling notwithstanding.
 - 3. Contractor shall provide data, video, USB, audio and fiber patch cables for each system.
 - a. Data patch cables – Provide Panduit TX6A-28™ patch cables on a per port basis.
 - b. Video patch cables – Provide Extron HDMI Ultra series patch cables for each video field device and rack equipment. Provide Extron HD Pro Plenum Series optical patch cables where applicable.
 - c. USB patch cables– Provide Extron USB A-B and C series patch cables for all field devices and rack equipment.
 - d. Audio patch cables - Provide Whirlwind MK4 series microphone patch cables for all field devices with microphone inputs/outputs on a per port basis.

2.16 AV SYSTEM SCHEDULING, MONITORING AND CONTROL

- 1. Contractor shall program the QSYS control system to automatically shutdown system everyday at midnight 12am CST and recall a default configuration. This includes putting all amplifiers in standby, projectors lamped off, lifts, shades and projector screens raised, video walls and displays put into standby.
- 2. The contractor shall program a UCI for the District Systems Administrator to access from a district computer with QSYS UCI Viewer, password protected.
- 3. This UCI shall provide all system diagnostics including but not limited to, system wide device health, network audio metering, ptz camera feeds, network video streams per room, display, projector and projector lift status; with the ability to control each rooms UCI remotely.

4. The contractor shall provide the district with QSYS Reflect Enterprise Manager professional tier services during the warranty period for all systems and peripherals.

2.17 GYM

A. LOUDSPEAKERS

1. 20 qty. JBL AM5212/00 12-inch 2-Way Loudspeaker with 100° x 100° Horn
2. 6 qty. JBL ASB4128 Dual 18-inch Subwoofer

B. RIGGING HARDWARE

1. 10 Adaptive Technologies Group SB-18, 18 inch Rigging Swivel Beam.
2. 14 JBL 229-00009-01 , 3-pack of M10 x 35 mm forged shoulder steel eyebolts.
3. 14 Adaptive Technologies Group SC-188-96-SS, 96" Safety Cable with 1/4" Shackles, Stainless Steel.
4. 14 Adaptive Technologies Group TCK-022-S, 22" Adjustable Tilt Cable Kit, Silver.
5. 2 Adaptive Technologies Group SB-30, 30 inch Rigging Swivel Beam.
6. 2 Adaptive Technologies Group TCK2-030S, 30" Silver Double Pulley Speaker Tilt Cable Kit Assembly.

SPEAKER RIGGING HARDWARE NOTE:

Contractor to provide additional steel cabling, mounting hardware and materials as required for hanging the 20 main speakers and 6 subwoofers, per gym. Materials and hardware used must be rated with a safety factor of 5 to 1, as a minimum, based on the total weight of the speakers and mounting components.

C. AMPLIFIERS

1. 4 qty. QSC CX-Q 8K8, Eight-Channel Network Amplifier for the Q-SYS Platform.

D. DSP, CONTROL AND PERIPHERALS

1. 1 qty. QSC TSC-70-G3, 7" Touch screen controller.
 - a. 1 qty. Honeywell CG512A1009 Large Thermostat Guard.
 - b. Provide 5 sets of keys.
2. 1 qty. QSC Core 110F.
 - a. Lan A for QLAN/Dante, Lan B for internet access.
 - b. Coordinate with the District IT department to provide internet access.
 - c. Provides DSP for Gym C152.
3. 1 qty. QSC UCI Deployment license.
4. 1 qty. QSC Scripting license.
5. 1 qty. QSC 32 X 32 Dante license.

6. 1 qty. QSC Microsoft Teams license.
7. 1 qty. QSC QIO-GP8X8 GPIO expander.
 - a. For fire muting and intercom ducking.
8. 1 qty. Attero Tech unD6IO-BT- double-gang US Bluetooth Wall Plate Interface.

E. AUDIO NETWORK

1. 1 qty. M4250-26G4F-PoE+ (GSM4230P) 24x1G PoE+ 300W 2x1G and 4xSFP Managed Switch
2. 1 qty. CommScope 760162800 | UNP-6A-DM-1U-24, 24 Port Cat6a Patch Panel.

F. PLATES AND PANELS - All custom wall plates shall be manufactured by ProCo, RCI or Whirlwind. Anodized aluminum, BLACK with white lettering in 1/8" Sans Serif font.

1. 2 qty. "WPIO" – 12"X12"X1/8" Custom Whirlwind anodized aluminum panel.
 - a. 4 qty. Neutrik NC3FD-L-B-1, 3 pole female panel mount XLR connectors.
 - b. 4 qty. Neutrik NC3MDM3-L-B-1, 3 pole male panel mount XLR connectors.
 - c. 2 qty. Neutrik NE8FDX-Y6-B, Cat6a ethercon panel mount connectors.
 - d. 2 qty. Neutrik UMNO2-4FDW-A, OpticalCon panel mount connectors.
 - e. 1 qty. Hoffman ASE12X12X4, 8"X8"X4" NVENT pull box.
 - i. Installed by Electrical contractor.
2. 1 qty. 'APP' – 4RU Custom anodized aluminum panel with flange.
 - a. 8 qty. Neutrik NC3FD-L-B-1, 3 pole female panel mount XLR connectors.
 - b. 8 qty. Neutrik NC3MDM3-L-B-1, 3 pole male panel mount XLR connectors.
 - c. 4 qty. Neutrik NE8FDX-Y6-B, Cat6a ethercon panel mount connectors.
 - d. 4 qty. Neutrik UMNO2-4FDW-A, OpticalCon panel mount connectors.
3. ANTENNA PLATE, "W2".
 - a. ProCo 2 gang anodized plate, black with 2 qty 50 Ohm BNC connectors, 1 qty Atlas Sound AD-12BE and 1 qty Atlas Sound GN-13E flexible gooseneck – black.
 - b. Quantity and locations as shown on drawings.
4. ASSISTED LISTENING ANTENNA PLATE, "H".
 - a. ProCo single gang antenna plate with 1 qty. 50 Ohm BNC connector.
 - b. Quantity and locations as shown on drawings.

G. WIRELESS MICROPHONES

1. 1 qty. Shure ULXD4Q-G50, Quad channel digital wireless microphone receiver.
2. 2 qty. Shure ULXD2SM58-G50, wireless microphone handheld transmitter.
3. 2 qty. Shure ULXD1-G50, wireless microphone bodypack transmitter.
4. 2 qty. Shure SM31FH Fitness headset microphone.
5. 2 qty. Shure WA360 mute switches.
6. 2 qty. Shure SBC200, 2 bay charging station for wireless microphone transmitters.
7. 4 qty. Shure SB900B, rechargeable wireless microphone batteries.
8. 1 qty. RF Venue DFIN – white, diversity antenna.
 - a. Provide wire guard to protect antenna.

H. WIRED MICROPHONES

1. 4 qty. Shure SM58S, dynamic handheld microphone.
2. 4 qty. K&M 210/9 KM21090, telescoping boom microphone stand.
3. 4 qty. Whirlwind MK430 MK4 Microphone Cable - 30 Foot.

I. MEDIA PLAYER

1. 1 qty. Denon DN-350UI, internet Radio and Media Player with Bluetooth® Technology.

I. ASSISTED LISTENING SYSTEM

1. 1 qty. LS-54-216 Assisted Listening System
2. 1 qty. LA-124 antenna. Install at locations shown on drawings.
3. Provide enough LR-4200-216 Receivers to meet TAS and ADA standards as required by law.
4. Provide with each additional LR-4200-216 Receiver:
 - a. 1 qty. LA-401 Ear Speaker.
 - b. 1 qty. LA-430 Earphone/Neck Loop Lanyard
5. Provide 1 qty. LA-124 antenna.
6. Coordinate with Architect for installation location of each LA-304 Signage Kit.

J. EQUIPMENT RACK AND ACCESSORIES

1. 1 qty. Middle Atlantic DWR-35-26PD, pivoting wall mount rack.
2. 1 qty. Middle Atlantic PDX-920R-SP, Rackmount Power, 9 Outlet, 20A with Series Surge Protection.
3. 1 qty. Middle Atlantic UPS-2200R, Rackmount Uninterruptible Power Supply 1650W.
4. 1 qty. Middle Atlantic Products SS, 1RU Heavy duty sliding shelf.
5. 1 qty. Middle Atlantic D2LK – 2RU Locking Drawer.
6. 1 qty. Middle Atlantic FI-3.
7. 1 qty. Middle Atlantic DWR-FK6-32 Fan Kit.
8. 1 qty. Hoffman A121236T1T Nema Type 1 Wiring Trough.
 - i. Installed by Electrical contractor.
9. Install all rack mounted equipment with Middle Atlantic HTX, T20 Star Post, 10-32 security-screws.
10. Provide 5 extra front door keys to the Owner.
11. Provide front door.
12. Populate all unused rack spaces with blank panels.

K. USER CONTROL INTERFACE / TOUCH PANELS

1. Coordinate with Owner and Consultant for final UCI functionality and layout. Coordinate with Owner for Logo to be displayed on all UCI pages. Provide a numeric (0-9) passcode page immediately after the splash page. Provide a simple way for Owner to change and store new password from the UCI.
2. CONTROL PANEL UCI
 - a. The first page "SYSTEM START UP" shall have the text, "PRESS ANYWHERE TO START SYSTEM". The next page shall display a prompt requesting a passcode. Once the passcode is entered correctly, a System Start Up loading bar shall be visible. After the system has booted, the next page "HOME", shall allow for the selection of "Game Mode" with all loudspeakers unmuted or "Practice Mode" with only subwoofers and court speaker unmuted.
 - b. Once a mode has been selected the "MAIN MENU" page shall display buttons to select auto mixer, manual mixer, media controls and system shutdown.

- c. The "AUTO MODE" page shall include a system mute button, master output volume control fader with buttons to allow the user to navigate back to the home page or a system shutdown page.
- d. The "MANUAL MODE" page shall include a system mute button, channel fader volume controls, preamp controls and mutes for all available inputs, auxiliary buss assignments with buttons to allow the user to navigate back to the home page or system shutdown page.
- e. The "MEDIA CONTROLS" page shall provide transport controls for the Media player, interfaces for all available internet radio apps, Bluetooth pairing and allow the user to navigate back to the Auto mode, Manual Mode or Media Controls page.
- f. When system shutdown is selected, a prompt shall appear with the text "PLEASE CONFIRM SHUTDOWN". The user will then select a button labeled "Yes" or "No". If no is selected, the "HOME" page shall appear. If yes is selected, a system shutdown loading bar shall appear. All amplifiers and video displays/projectors shall be put in standby mode, and projector screens/lifts raised. Once the system shutdown sequence is complete, the "SYSTEM START UP" page shall be visible.

PART 3 – EXECUTION

3.1 WIRING AND INSTALLATION TECHNIQUES

- A. Coordinate all work with all other trades to avoid causing delays in construction schedule. Contractor shall expedite the delivery of materials and provide additional labor as required to meet construction deadline.
- B. Coordinate final connection of power and ground wiring to equipment racks by electrical contractor. Power and ground wiring shall terminate inside equipment racks on standard duplex outlets. Mount as to not interfere with internal equipment of the rack. Power shall be a dedicated circuit and not share with any other source. Ground per NEC with third wire (green) to panel ground lug at breaker supply panel.
- C. All equipment and enclosures described in this specification section shall be plumb and square. All equipment except portable equipment shall be permanently attached to the structure and held firmly in place. Supports shall be adequate to support their loads with a safety factor of at least five.
- D. Wiring and installation under this contract to meet NFPA, NEC, and local code requirements where applicable.
- E. The process of equalizing and testing the Audio Sound System may necessitate moving and adjusting certain component parts (e.g., loudspeakers). This shall be done without claim for additional payment.
- F. Take such precautions as are necessary to prevent and guard against electromagnetic and electrostatic hum. Separate all low level microphone and auxiliary inputs from speaker output conductors, data or other system wiring.
- G. All wiring shall be labeled using vinyl wire labeling tags. Use Brady™ model BMP21 or equal wire labeling printer. Label input, output and wireless wiring. Label electrical power

beaker at electrical panel. Label location of room and power panel/breaker at equipment rack. Protect labels with clear heat shrink.

- H. Label all mixer inputs with their respective input. Example: mixer input 1 – “Mic-1”, etc. Label to reflect name on engraved wall plate.
- I. Solder all microphone connections using rosin core solder. Use temperature controlled soldering equipment. Microphone XLR connectors shall use standard wiring code as follows: pin 1 shield/ground, pin 2 positive, pin 3 negative.
- J. Paint all back boxes and conduit prior to installation of wiring or connectors. Protect and do not paint any wiring or equipment rack cabinets.
- K. Install equipment cabinet in a controlled temperature, dry and accessible area. Provide sufficient space to completely open the front and rear of the cabinet. Equipment not to be in general gym area where it can be damaged.

3.2 CABLING

- A. General: Unless otherwise noted, provide the following cable types (or equivalent) for each application:
 - 1. West Penn 454 #22 AWG twisted pair / shielded for Microphone and Line level signals.
 - 2. West Penn C210 #10 AWG twisted pair for subwoofer / low frequency speakers.
 - 3. West Penn 227 #12 AWG twisted pair for conventional, full range sound reinforcement speakers.
 - 4. West Penn 226 #14 AWG twisted pair for 70v sound reinforcement speakers.
 - 5. West Penn 807X RG-8X coax cable for analog RF signal lines.
 - 6. West Penn 4246 CAT6 cable for Local Sound/Video Network and Dante digital audio devices.
 - 7. West Penn 4246F F/UTP CAT6 for digital audio snake devices.
 - 8. West Penn 4246AF F/UTP CAT6A cable for HDBaseT video devices.
 - 9. Provide plenum rated cable where required.

3.3 INSPECTIONS

- A. General: Conformance to the installation practices covered above is to be verified when completed. In some cases, the Owner/ Designer may inspect before acceptance.
- B. Ensure all systems are installed to provide uniform, balanced audio coverage throughout each intended listening area. Ensure there are no rattles, buzzes, hums, RF interference, electro-static interference, feedback or other audible audio anomalies while the systems are in operation.
- C. Contractor shall use white / pink noise generator and audio spectrum analyzer to set overall frequency response and equalization. Ensure gain structure is properly set to prevent clipping on any device and to provide balanced system functionality. Provide proper limiter programming to prevent damage to all audio components. District Maintenance personnel to be on site during process.

- D. Demonstrate the performance of each system and give instructions of proper operation and maintenance to the Owner. Provide a minimum of eight hours of training and basic system operating instructions for each system in not more than four hour sessions. Include a list of system training attendees in the Close-Out Documentation.
1. Contactor shall record each training session with a 720p, minimum, digital video recording device, with audible audio, in .MOV or .MP4 format and compile sessions onto 128MB thumb drives (as many as required) (SanDisk, Kingston or PNY) and provide to Owner. Contractor shall title each video file with the room name of the system and date; e.g., "Dining Commons – August 15, 2019."
 2. Contractor shall provide an asbuilt QSYS designer file, Dante Controller preset, Shure wireless work bench inventory/RF coordination report and Netgear switch master configuration file supplied on a usb flash drive. In the event when systems are updated during service calls during the warranty period, the contractor shall furnish updated system files to the district.

END OF SECTION

SECTION 28 05 00 - GENERAL ELECTRONIC SAFETY SYSTEMS REQUIREMENTS

PART 1 – GENERAL

1.1 WORK INCLUDES

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1, apply to this Section.
- B. Furnishing of all required materials, equipment, tools, scaffolding, labor, and transportation necessary for the complete installation of the Electronic Safety Systems as shown on the drawings and as specified herein.
- C. Coordinate wireway, raceway, power, and outlet requirements with the builder and the electrical contractor.
- D. Cable pathways, conduit, boxes and cable support systems shall be complete with bushings, de-burred, cleaned, and secure prior to installation of cable.
- E. The Electronic Safety Systems Contractor shall provide and install prior to cable installation plastic snap in bushings at each box opening, passage through a metal stud, and at the end of all open conduit stubs or sleeves to protect the cabling from damage.
- F. Supply in a timely manner to the electrical contractor special backboxes for installation as required.
- G. It is the intent of the Contract Documents to provide complete installations although every item necessary may not be specifically mentioned or shown.
- H. It is the intent of the Contract Documents to provide an extension of the existing installed systems interfaced with new systems, complete in every respect.
- I. Provide line-by-line specification review for each Division 28 section annotated to certify compliance or deviation.

1.2 WORK TO BE INCLUDED BY THE ELECTRICAL CONTRACTOR IN BASE CONTRACT PROPOSAL

- A. Provide utility services conduit as outlined on drawings as required.
- B. All required conduit for accessibility to attic space.
- C. Furnishing and installation of all required standard back boxes and conduit.
- D. Installation of special back boxes supplied by Division 28 contractor(s).
- E. Furnishing and installation of all floor boxes, surface raceways, and other wireways which are detailed or specified under Division 26.
- F. Provide equipment-mounting boards as outlined on drawings.
- G. Provide equipment grounding system, conductors, and bus bars and as outlined in Division 26.
- H. Provide 120-volt power and hook-up to equipment provided in Division 28.

- I. Coordination of requirements of Division 28 with the Builder.

1.3 WORK NOT INCLUDED

- A. Contractors shall make no agreement that obligates the Owner to pay any company providing communications, monitoring, or other services. Contractors shall not make selection, purchase, or installation of interconnect instruments/equipment to be used on this project.

1.4 RELATED SECTIONS

- A. The conditions of the Division 0, Division 1, Division 26 requirements, and the contract requirements that include the General Conditions and the Supplementary Conditions apply to work of this division.
- B. Section 26 05 34 - Provisions For Communication, Security & Safety Systems.

1.5 CODES, STANDARDS, AND THEIR ABBREVIATIONS

- A. General:
1. Perform all work in strict accordance with the requirements and recommendations stated in the codes and standards except when requirements are exceeded by the contract documents.
 2. In addition to the requirements outlined in other sections of the specifications the following standards are imposed as applicable to the work in each instance:
 - a. OSHA Safety and Health Regulations for Construction.
 - b. NFPA No. 70 National Electrical Code.
 - c. NESC National Electrical Safety Code, ANSI Standard C2.
 - d. NEIS National Electrical Installation Standards.
 - e. Local Codes and Ordinances.
- B. Where local codes or practices exceed or conflict with the NEC, it shall be the Contractor's responsibility to perform the work in accordance with the local code prevailing and local interpretations thereof. Any such additional work shall be performed at no additional cost to the Owner.
- C. Materials and components shall be UL listed and labeled by Underwriters Laboratories, Inc. for the intended use under the latest appropriate testing standard.
- D. The Contractor shall obtain all permits required to commence work. Upon completion of the Work, the Contractor shall obtain and deliver to the Owner's Representative a Certificate of Inspection and Approval from the State Board of Fire Underwriters, the City of Little Elm, Texas, and other authorities having jurisdiction. The Contractor shall pay required permit fees.

1.6 LIST OF ASSOCIATIONS AND STANDARDS:

ADA:	Americans with Disabilities Act.
ANSI:	American National Standards Institute, 1430 Broadway; New York, NY 10018.
ASTM:	American Society for Testing and Materials, 1916 Race Street; Philadelphia, PA 19103.
BICSI:	(RCDD5 Standards), 8610 Hidden River Parkway, Tampa, FL 33637
CBM:	Certified Ballast Manufacturers Association, 2116 Keith Building; Cleveland, Ohio 44115.
IEEE:	Institute of Electrical and Electronics Engineers, 345 East 47th Street; New York, NY 10017.
ICEA:	Insulated Cable Engineers Association, P.O. Box P, South Yarmouth, MA 02664.
NEC:	National Electrical Code; NFPA No. 70.

NECA: National Electrical Contractors Association, Inc., 7315 Wisconsin Ave.;
Washington, DC 20014.
NEMA: National Electrical Manufacturers Association, 155 East 44th Street; New York,
NY 10017.
NESC: National Electrical Safety Code, ANSI Standard C2.
NFPA: National Fire Protection Association, 60 Batterymarch Street; Boston, MA
02110.
OSHA: Occupational Safety and Health Administration, US Department of Labor;
Washington, DC 20402.
TAS: Texas Accessibility Standards (TAS) Article 9102.
UL: Underwriters Laboratories, Inc., 333 Pfingsten Road; Northbrook, IL 60062.

- A. Nothing in the Contract Documents shall be construed to permit work not conforming to these codes.
- B. When two or more codes or standards are applicable to the same work, then the stricter code or standard shall govern.
- C. The date of the code or standard is that in effect on the date of issue stated on the contract documents, except when a particular publication date is specified.
- D. The Contractor shall comply with all State, Federal, NFPA, local codes and ordinances that may alter any part of the plans or specifications. The Contractor shall bear all costs for correcting any deficiencies due to non-compliance.
- E. Where local codes and ordinances are not in writing or on record but local precedence have been set, the Owner shall pay for any additional resulting cost.

1.7 DEFINITIONS

- A. Approval: It is understood that approval must be obtained from the Architect in writing before proceeding with the proposed work. Approval by the Architect of any changes, submitted by the Contractor, will be considered as general only to aid the Contractor in expediting his work.
- B. The Builder: The primary contractor engaged to oversee the construction project. They may be technically described as a Construction Manager, General Contractor, Managing Construction Contractor, et cetera.
- C. The Contractor: The Contractor engaged to execute the work included a particular section only, although he may be technically described as a Subcontractor to the Builder. If the Contractor, engaged to execute said work, employs Sub-Contractors to perform various portions of the work included under a particular Section, they shall be held responsible for the execution of this work, in full conformity with Contract Document requirements. The Contractor shall cooperate at all times and shall be responsible for the satisfactory cooperation of his Subcontractors with the other Contractors on the job so that all of the various sections and phases of work may be properly coordinated without unnecessary delays or damage.
- D. The Electrical Contractor: The Electrical Contractor shall be engaged to execute the work included Division 26 only.
- E. PDF file or .pdf: The filename extension associated with "Portable Document Format" files, which are multi-platform computer files in the ISO 32000-1:2008 open standard format developed and licensed by Adobe Systems. These files are a digital electronic representation of text, documents, images, and technical drawings in a font and color-accurate fixed-layout format that is platform and display resolution independent. PDF files can be electronically transmitted, viewed, or printed with various free PDF reader application programs, and may allow markups/comments with various PDF editing application programs.

- F. Provide: Defined as requiring both the furnishing and installation of the item or facility indicated, complete in all respects and ready for operation unless otherwise specifically noted.

1.8 SCHEDULE OF VALUES, APPLICATION FOR PAYMENT

- A. The Contractor shall in accordance with the General Provisions of the Contract, including General and Supplementary Conditions, and Division 1, complete a Schedule of Values and Applications for Payment. When a portion of this work separately funded, including donations or E-Rate, the contractor shall accommodate this in the Schedule of Values and Applications for Payment. For E-Rate eligible portions of this work, the contractor will be required to participate in the E-Rate program, comply with all E-Rate regulations, and provide billing as needed. The contractor shall coordinate with the Owner to file Form 471 or latter edition and/or other forms as may be required.

1.9 WARRANTY

- A. The Contractor shall warranty his work against defective materials and workmanship for a period of one year from date of acceptance of the job.
- B. Neither the final payment nor any provisions in Contract Documents shall relieve the Contractor of the responsibility for faulty materials or workmanship.
- C. He shall remedy any defects due thereto, and pay for any damage to other work resulting there from, which shall appear within a period of one year from date of substantial completion.
- D. The Owner shall give notice of observed defects with reasonable promptness.
- E. This Warranty shall not be construed to include the normal maintenance of the various components of the system covered by these specifications.

1.10 SITE VISIT

- A. Before submitting a proposal, each proposed contractor shall examine all plans and specifications relating to the work, shall visit the site of the project, and become fully informed of the extent and character of the work required, including all required utilities.
- B. No consideration will be granted for any alleged misunderstanding of the materials to be furnished or the amount of work to be done, it being fully understood that the tender of a proposal carries with it the agreement to all items and conditions referred to herein, or indicated on the accompanying plans or required by nature of the site of which may be fairly implied as essential to the execution and completion of any and all parts of the work.

1.11 SUBMITTALS

- A. Submittal procedures shall be per Division 1 - General Requirements.
- B. Provide a complete submittal for each section as specified.
- C. Submit complete submittal package within 30 calendar days after award of this work for approval. Equipment is not to be ordered without approval. Partial submittals are not acceptable for review. Each submittal shall include a dated transmittal.
- D. A submittal may be electronically transmitted in PDF file format (preferred) or paper copies may be provided in quantities indicated in Division 1. Paper copies shall be organized including index tabs in a 3-ring black binder of sufficient size.
- E. Each Product data submittal shall include:
 - 1. A cover sheet with the name and location of the project, the name, address, and

- telephone number of the Contractor, and the name, address, and telephone number of the submitting sub-contractor. Include on or after the cover sheet sufficient space for review stamps.
2. An indication of any deviations from Contract Document requirements, including variations and limitations. Show any revisions to equipment layout required by use of selected equipment.
 3. A product data index and complete equipment list including for each product submitted for approval the manufactures name and part number, including options and selections.
 4. Cut-sheets or catalog data illustrating the physical appearance, size, function, compatibility, standards compliance, and other relevant characteristics of each product on the equipment list. Indicate by prominent notation (an arrow, circle, or other means) on each sheet the exact product and options being submitted.
 5. Submit design data, when the scope of work requires, including calculations, schematics, risers, sequences, or other data.
 6. When the contract requires extended product warranties, submit a sample of warranty language.
 7. Any resubmittal shall include a complete revised equipment list and any product data that is revised.
- F. Submit shop or coordination drawings, when specified or the required for the scope of work, which include information that will allow to the Contractor to coordinate interdisciplinary work and when necessary guide the manufacturer or fabricator in producing the product. Shop or coordination drawings shall be specifically prepared to illustrate the submitted portion of work, this may require diagrams, schedules, details, and accurate to scale equipment and device layouts prepared using a CAD or BIM engineering drawing program.
- G. The Engineer's review of submittals is only for confirmation of adherence to design of project and does not relieve the Contractor of final responsibility for furnishing all materials required for a complete working system and in complying with the Contract Documents in all respects.

1.12 PROJECT RECORD DOCUMENTS

- A. The Contractor shall keep a set of plans on the job, noting daily all changes made in connection with the final installation including exact dimensioned locations of all new and uncovered existing utility piping outside the building.
- B. Upon submitting his request for final payment, he shall turn over to the Architect/Engineer, for subsequent transmittal to the Owner revised plans showing "as installed" work.
- C. In addition to the above, the Contractor shall accumulate during the jobs progress the following data in PDF file format (preferred) or paper copies to be turned over to the Architect/Engineer for checking and subsequent delivery to the Owner:
1. All warranties, guarantees, and manufacturer's directions on equipment and material covered by the Contract.
 2. PDF file or paper copies of all Shop Drawing prints and CAD or BIM engineering drawing program files.
 3. Any software programs, data/programming files, passwords, special interface cables, or keys that may be needed to maintain or access equipment.
 4. Set of operating instructions. Operating instructions shall also include recommended maintenance and seasonal changeover procedures.
 5. Any and all other data and/or plans required during construction.
 6. Repair parts lists of all major items and equipment including name, address, and telephone number of local supplier or agent.
 7. The first page, or pages, shall have the names, addresses, and telephone numbers of the following:
 - a. Builder and all Contractors.
 - b. Major Equipment Suppliers

- c. Submit communication systems warranties.

1.13 TRAINING

- A. Upon completion of the work and at a time designated by the Architect, provide formal training sessions for the Owner's operating personnel to include location, operation, and maintenance of all Electronic Safety Systems equipment and systems.
- B. See other sections for time requirements.

1.14 PLANS AND SPECIFICATIONS

- A. The intent of the project drawings is to establish the types of systems and functions, but not to set forth each item essential to the functioning of the system.
- B. Electrical drawings are generally diagrammatic and show approximate location and extent of work.
- C. Install the work complete including minor details necessary to perform the function indicated. Provide Electronic Safety Systems (including all hook-ups) complete in every respect and ready to operate.
- D. If clarification is needed, consult the Architect/Engineer.
- E. Review pertinent drawings and adjust the work to conditions shown. Where discrepancies occur between drawings, specifications, and actual field conditions, immediately notify the Architect/Engineer for his interpretation.
- F. The Architect/Engineer reserves the right to make any reasonable change in the location of any part of this work without additional cost to the Owner.

1.15 PRODUCT SUBSTITUTIONS:

- A. Descriptions and details, acceptable manufacturers' names listed, and specific manufacturer and model number items indicated in the plans and specifications shall establish a standard of quality, function, and design. Manufacturers and model numbers listed "no exceptions" shall not be substituted without specific notice in an addendum. Otherwise, where a specific manufacturer's product is indicated, products of other manufacturers listed as acceptable may be submitted for approval based on the substitute product being, in the opinion of the Engineer, of equivalent or better quality than that of the product specified.
- B. Proposed contractors wishing to propose systems which differ in manufacturer, features, functions, or operating characteristics from those outlined in these specifications must do so in writing to the specifying authority at least ten (10) days prior to the proposal opening.
- C. For manufacturers equipment or models other than that specified, the proposed contractor shall supply proof that such substitute equipment equals or exceeds the features, functions, performance, and quality of the specified equipment. Proposals must include detailed information showing all deviations from the system as specified and include relevant technical and cost data. This shall include a complete description of the proposed substitution, drawings, catalog cuts, performance data, test data, or any other data or information necessary for evaluation.
- D. The Engineer will consider all such submittals and the Architect will issue an addendum listing items that the Engineer considers acceptable. Only such items as specified or approved as acceptable will be installed on this project.

- E. Substitute products for which the proposed contractor does not obtain prior approval will not be considered acceptable for this project. Final approval of the alternate system shall be based on the decision of the Owner and Architect. Prior approval to make a proposal for this project does not automatically ensure the system will be an acceptable equivalent.
- F. The Contractors' proposal represents that the contract proposal price is based solely upon the materials, equipment, and labor described in the Contract Proposal Documents (including addenda, if any) and that he contemplates no substitutions or extras.
- G. The manufacturer of the proposed substitute unit shall provide samples for evaluation, when required, at no charge and non-returnable.
- H. Requests for substitution are understood to mean that the Contractor:
 - 1. Has personally investigated the proposed substitution and determined that it is equivalent or superior in all respects to that specified.
 - 2. Will provide the same guarantee for the substitution that he would for that specified.
 - 3. Will, at no cost to the Owner, replace the substitute item with the specified product if the substitute item fails to perform satisfactorily.
 - 4. After Award of the Contract, substitutions will be considered only under one or more of the following circumstances:
 - a. The substitution is required for compliance with subsequent interpretations of code or insurance requirements.
 - b. The specified product is unavailable through no fault of the Contractor.
 - c. The manufacturer refuses to warranty the specified products as required.
 - d. Subsequent information indicates that the specified product is unable to perform properly or to fit in the designated space.
 - e. In the Engineer's sole judgment, the substitution would be in the Owner's best interest.
 - f. Revisions to the electrical system caused by substitutions shall be under the supervision of the Engineer, at a standard hourly rate charged by the Engineer. Charges from the Engineer, Architect, and Electrical Contractor shall be paid by the Contractor originating the changes.

1.16 FUTURE USE CABLING

- A. When cabling is installed for future use, it shall be identified with a tag of sufficient durability to withstand the environment involved.
- B. Locations and Existing Conditions:
 - 1. Location and condition of any existing equipment or services, when shown, have been obtained from substantially reliable sources, are shown as a general guide only, without guarantees as to accuracy.
 - 2. The Contractor will examine the site, verify all requirements, service points, and availability of all services required to complete this project. No consideration will be granted for any alleged misunderstanding of the materials and labor to be provided as necessitated by nature of the site including those items that may be fairly implied as essential to the execution and completion of any and all parts of this project.

1.17 PROTECTION OF EQUIPMENT AND MATERIALS

- A. The Contractor shall take such precautions as may be necessary to protect his apparatus from damage.
- B. This shall include the creation of all required temporary shelters to protect any apparatus above the floor of the construction and the covering of apparatus in the completed building with tarpaulins or other protective covering.

- C. Failure to comply with the above to the satisfaction of the Owner's inspector will be sufficient cause for the rejection of the equipment in question and its complete replacement by the Contractor.

1.18 FINAL OBSERVATION

- A. It shall be the duty of the Contractor to make a careful observation trip of the entire project, assuring themselves that the work on the project is ready for final acceptance before calling upon the Architect/Engineer to make a final observation.
- B. To avoid delay of final acceptance of the work, the Contractor shall have all necessary bonds, warranties, receipts, affidavits, et cetera, called for in the various articles of these specifications, prepared and signed in advance, together with a letter of transmittal, listing each paper included, and shall deliver the same to the Architect/Engineer at or before the time of said final observation. The Contractor is cautioned to check over each bond, receipt, et cetera, before preparing for submission to verify that the terms check with the requirements of the specifications.
- C. The following and other provision of Division 1 General Conditions will be required at time of final completion:
 - 1. Final clean up completed.
 - 2. All systems are fully operational, all material and devices installed.
 - 3. As built (as installed) drawings and operations manuals.

1.19 PROHIBITED MATERIALS

- A. No new asbestos, lead, or materials containing these substances shall be permitted in this project. The Contractor shall consult the Architect concerning these materials if their presence is suspected. All work in or around existing asbestos or lead materials is at the sole risk of the Contractor and his personnel.

1.20 CUTTING AND PATCHING

- A. Notify the Builder sufficiently ahead of construction of any floors, walls, ceiling, roof, et cetera, of any openings that will be required for his work.
- B. The Contractor shall see that all sleeves required for his work are set at proper times to avoid delay of the job.
- C. All necessary cutting of walls, floors, partitions, ceilings, et cetera, as required for the proper installation of the work under this Contract shall be done at the Subcontractor or at the Subcontractor's expense in a neat and workmanlike manner, and as approved by the Architect/Engineer.
- D. Patching of openings and/or alterations shall be provided by the Electronic Safety Systems Subcontractor or at the Subcontractor's expense in an approved manner.
- E. No joists, beams, girders, or columns shall be cut by any Contractor without first obtaining written permission of the Architect/Engineer.
- F. All openings in firewalls and floors shall be completely sealed after installation for a completely airtight installation. Sealing material shall be non-combustible and UL approved. The installed sealing assembly shall not cause the fire rating of the penetrated structure to be decreased.
- G. All openings in exterior walls shall be sealed watertight.
- H. Seal voids around conduits penetrating fire-rated assemblies and partitions using fire stopping

materials and methods in accordance with NFPA and local codes.

1.21 MANUFACTURERS' INSTRUCTIONS

- A. All equipment and devices shall be installed in accordance with the drawings and specifications, manufacturer's instructions, and applicable codes.
- B. Where specifications call for installation of a product to be in accordance with manufacturer's instructions and/or where manufacturer's instructions are required for installation of a product, it shall be the contractor's responsibility to obtain the necessary applicable manufacturer's instructions and install the product in accordance with the manufacturer's instructions.
- C. It shall be the Contractor's responsibility to install all equipment, materials, and devices shown on the plans and as called out in these specifications even if manufacturer's instructions are absolutely unattainable.

1.22 INSTALLATION

- A. Cooperation with trades of adjacent, related or affected materials or operations, and or trades performing continuations of this work under subsequent contracts are considered a part of this work. In order to effect timely and accurate placing of work and to bring together, in the proper and correct sequence, the work of such trades, including work provided under a Division 1 allowance.
- B. The Electronic Safety Contractor shall coordinate installation of the systems with the Builder, Electrical, Mechanical, and Plumbing Contractors to ensure a complete working system for the Owner.
- C. Where required for accessibility all conduit and boxes for all Electronic Safety Systems shall be provided by the Electrical contractor as specified, including systems in Division 28, any and all allowances shall be included. Normally low voltage wiring shall run open and supported in accessible attic space. All low voltage wiring in exposed areas such as gyms, stages, shops, and field houses shall be enclosed in conduit. Coordinate with, and verify with Division 26 to provide required conduit and boxes at locations and heights as required.
- D. Conduit, innerduct, track, or raceway shall conceal and protect wiring in exposed areas, within walls, through in- accessible areas, floors, chases, under slab, crawlspaces, or underground.
- E. All conduit, duct, track, and raceway runs shall be spaced apart to allow for maintenance, such as the installation of couplings, without disturbing adjacent pathways.
- F. All work must be performed by workers skilled in their trade. The installation must be complete whether the work is concealed or exposed.
- G. Provide stainless screw/bolt hardware wherever stainless devices are used and in potentially wet areas.
- H. Coordinate the actual locations of devices and outlets and equipment with building features and mechanical equipment as indicated on architectural, structural, and mechanical drawings. Review with the Architect any proposed changes in outlet or equipment location. Relocation of devices, before installation, of up to 3 feet from the position indicated, may be directed without additional cost. Remove and relocate outlets placed in an unsuitable location when so requested by the Architect.

1.23 ADDITIONAL MATERIALS: INCLUDE IN THE BASE CONTRACT PROPOSAL

- A. All costs to provide 10 additional fire alarm signals including all cable and devices as directed

by the Architect. Conduit and standard back boxes by Division 26 Electrical Contractor.

PART 2 – PRODUCTS

A. Not Applicable

PART 3 – EXECUTION

A. Not Applicable

END OF SECTION

SECTION 28 05 44 – FIRST RESPONDER ANTENNA SYSTEM

PART 1 – GENERAL

1.1 SCOPE OF WORK

- A. Design, furnish, install, and test a complete and operating in-building Emergency Responder Radio Antenna System/Distributed Antenna System ['system' or 'DAS'] to provide complete coverage for the public safety agencies as required by the local fire department, other agencies and the authority having jurisdiction [AHJ]. The system will support only Emergency Responder and Public Safety Land Mobile Radios ['LMR']. The system shall not support District Radio, Cellular, and/or Wi-Fi Signals.
- B. System design shall comply with International Fire Code (IFC) 510.4 and 510.5.
- C. Provide design compliant with local public service agency, fire department, local hospital district, law enforcement agencies and local authority having jurisdiction (AHJ).
- D. The system shall not support the distribution of the campus wireless network, cell phone systems or campus radio antenna system (CRAS).
- E. System shall provide coverage for at least 95% of all areas of the facility including elevators, stairwells and throughout all floors.
- F. System shall provide amplification of VHF, UHF, 700-900 Mhz, IP rating of 2 GHz.
- G. Minimum signal strength of -95 dBm throughout coverage area.
- H. System shall be able to support analog and digital communication systems simultaneously.
- I. Contractor to provide wiring riser diagram and detailed product listing as part of project submittal.
- J. All 120v. and conduit requirements for the operation of the system shall be coordinated with the project electrical contractor and electrical design. All power serving system shall be fed from emergency power. System shall be provided with two independent 120v. power sources (primary and secondary).
- K. System batteries shall be provided for system to provide a full 24 hours of operation.
- L. Overall design and pricing should be based upon a "worst case scenario" that the entire building needs antenna coverage throughout.
- M. Testing of the building to determine signal strength and coverage should be scheduled once the building structure, walls and roof have been built to determine overall antenna system needs.
- N. Main riser trunk from roof mounted antenna to headend equipment shall be either installed in 2 hour fire rated cable system or cabling routed through a 2 hour fire rated enclosure/shaft.
- O. Interface to building fire alarm system to provide supervisory operation to notify building fire alarm panel should antenna system malfunction.
- P. Provide supervised monitoring panel at administrative area to indicate status of power, trouble signals, antenna failure or low system battery.
- Q. Antenna system shall be installed in central location on roof of main building structure or where reception is best. Avoid visibility of the antenna from the parking lot if possible.
- R. Properly support all system cabling throughout building with dedicated cable supports at 5'-0" on center minimum. Do not share supports with other low voltage systems.
- S. Entire system shall be grounded per NFPA 70 NEC requirements.

1.2 WORK INCLUDES

- A. Drawings and general provisions of the Contract including General and Supplementary Conditions and Division 1 apply to this Section.
- B. Provide all equipment, materials, labor, supervision and services necessary for or incidental to the installation of a complete Emergency Responder Radio Antenna System. The purpose is to extend and amplify the Emergency Responder and Public Safety Land Mobile Radio

FIRST RESPONDER ANTENNA SYSTEM

signals to a strength of 95% in all areas of the facility including elevators, stairwells and all floors.

- C. It shall be the responsibility of the Emergency Responder Radio Antenna System contractor to obtain all required permits, approvals and certifications from the authorities having jurisdiction.
- D. All fees associated with the licensing shall be paid by the Contractor.
- E. Testing of the system shall conform to the testing requirements as described in the International Fire Code [IFC] Section 510.5.3.
- F. All testing must be done on frequencies authorized by the FCC and in use by local agencies as directed by the Authority Having Jurisdiction [AHJ].
- G. Final acceptance and approval shall be required from the local AHJ.
- H. It shall be the responsibility of the Electrical Contractor to provide and install all conduit systems, standard electrical boxes, and operating power for the building access systems as outlined on the project drawings. This Contractor shall coordinate all system requirements with and provide special back boxes to the Electrical Contractor prior to installation of conduit. The BDA head end shall be hardwired to electrical power and on emergency power where possible.
- I. The Electrical Contractor shall provide 120-volt power as required through separate dedicated branch circuits, maximum 20 amperes each. Each such circuit shall be labeled at the power distribution panel as EMERGENCY RESPONDER RADIO SYSTEM. The location of all circuit breakers serving the Emergency Responder Radio Coverage System shall be posted in the control unit cabinets. Each cabinet and all surge protection devices shall be grounded securely to the building grounding system.
- J. Provide all testing, documentation, training, and warranty service contract as outlined in these specifications.
- K. Section shall include:
 - 1. Bi-Directional Amplifiers [BDA's]
 - 2. Distributed Antenna System
 - 3. Coaxial Cables
 - 4. Splitters and Directional Couplers
 - 5. Battery Back-Up System
 - 6. All other equipment and components necessary for a complete and functioning Emergency Responder Radio Antenna System.
- L. Specification Compliance: A letter shall be provided stating, by section and subsection, that the intercom system installer complies with the ENTIRE specification section. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.
- M. Contractor shall connect all back-up batteries per manufacturer's instructions.

1.3 SYSTEM PRICING, PHASING AND AWARD

- A. Proposed Contractor shall provide a proposal based on separate pricing for each of the following steps:

FIRST RESPONDER ANTENNA SYSTEM

28 05 00 - 2

1. Outdoor Testing of the Facility – This price shall include verifying the outdoor signal strength at the facility's location.
 2. Full Testing, in accordance with IFC Section 510 Grid Testing – This price shall include verification of signal strength throughout the entire facility.
 3. Emergency Responder Radio Antenna System Materials and Installation Pricing – This price shall include a full system design and installation, including costs for design, components, materials, labor and testing. This price shall be a "Worst-Case Scenario" situation, as though the entire facility must require coverage.
- B. The project must be budgeted as a complete set of processes, thus the reason for having all pricing, in a "Worst-Case Scenario" prior to performing any work. This pricing will provide a budget before the work begins.
- C. The award of this work will be made in phases, in accordance with the three (3) afore mentioned steps.
1. Phase I award authorizes step #1. Once step one is completed, results are to be provided to the General Contractor, Architect, and Engineer for review. Following this review, step two may be delayed, pending adjustment to the donor signal. If donor signal strength at the facility does not meet IFC Section 510 requirements, the AHJ must be consulted, prior to moving to step two. If the donor signal strength is adequate to meet IFC Section 510 requirements, authorization for step two will be given.
 2. The Phase II award authorizes step #2. Testing of the facility to determine signal strength status and to provide a base for a full system design. After testing, a final revised proposal for a full system design, installation and final testing shall be issued to the General Contractor for review. No further work is authorized until award of Phase III is granted.
 3. Phase III award authorizes step #3. Design, installation and final testing of the Emergency Responder Radio Antenna System. Provide design and final acceptance testing documents per Section 1.8.

1.4 MANUFACTURERS

- A. Subject to compliance with requirements, available integrators offering products that may be incorporated in the work include, but are not limited to:
1. Commscope
 2. Farenhyt
 3. Axell Wireless
 4. Tessco
 5. Times Microwave
 6. Gamewell-FCI
 7. Notifier
 8. SOLiD Technologies – Alliance Corporation
 9. Simplex
 10. Westell
 11. Other manufacturers upon approval.
- B. Headend cabinet shall be NEMA 4 rated weatherproof enclosure.
- C. The AC power cable to the antenna amplifier shall be hardwired. Any non-hardwired antenna amplifiers shall not be accepted.

1.5 RELATED SECTIONS

- A. Section 26 05 34 - Provisions for Communication, Security & Safety Systems.

B. Section 28 05 00 - General Electronic Safety and Security System Requirements.

C. Section 28 46 21 – Fire Detection and Alarm System

1.6 CODES AND REGULATIONS

- A. Perform all work in strict accordance with the requirements and recommendations stated in the codes and standards except when requirements are exceeded by the contract documents.
- B. The equipment, materials, and installation shall confirm to the latest version of all applicable codes, standards and regulations of authorities having jurisdiction including the following:
 - 1. NFPA 1 – The National Fire Code (including Annex O from 2009)
 - 2. NFPA 70 – The National Electrical Code
 - 3. NFPA 72 – National Fire Alarm Code
 - 4. NFPA 1221 – Standard for the Installation, Maintenance and Use of Emergency Services Communication Systems
 - 5. UL 2524 - 1st Edition In-building 2-Way Emergency Radio Communication Enhancement Systems
 - 6. FCC 47 CFR Private Land Mobile Radio
 - 7. FCC 47 90.219-2007 Services-Use of Signal Boosters
 - 8. ICC 2009 International Fire Code, Code and Commentary
 - 9. ADA “Americans with Disabilities Act”
 - 10. FCC’s OET 65 Standards “Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields”
 - 11. FCC Rules Part 22, Part 90, and Part 101

1.7 DEFINITIONS

- A. Attenuation: The reduction in signal power, expressed in decibels, as a result of coupling, heat loss, or transmission distance in a cable or in air.
- B. Bi-Directional Amplifier [BDA]: A device used to amplify band-selective or multi-band RF signals in the uplink, to the base station for enhanced signals and improved coverage. Also known as a signal booster.
- C. Coupled Bonding Conductor [CBC]: a bonding conductor placed on the outside of any technology cable. Used to suppress transient noise.
- D. Delivered Audio Quality Definitions [DAQ]: The universal standard often cited in system design, specifications, and testing reports for ERRC and DAS.
 - 1. DAQ 1: Unusable, speech present but not intelligible.
 - 2. DAQ 2: Understandable with considerable effort. Frequent repetition required due to noise and/or distortion.
 - 3. DAQ 3: Speech understandable with slight effort. Occasional repetition required due to noise and/or distortion.
 - 4. DAQ 3.5: Speech understandable with repetition only rarely required. Some noise and/or distortion
 - 5. DAQ 4: Speech easily understood. Occasional noise and/or distortion.
 - 6. DAQ 4.5: Speech easily understood. Infrequent noise and/or distortion.
 - 7. Speech easily understood.
- E. Distributed Antenna System [DAS]: A network of service antennas connected at intervals along shielded coaxial transmission lines and all connected to head-end electronics amplifying the signals to be distributed. Often refers to a system that includes both the passive distribution system and the active amplifying electronics.

FIRST RESPONDER ANTENNA SYSTEM

28 05 00 - 4

- F. Directional Coupler: A component which directs a small portion of downstream RF energy to a port which can be connected to an antenna or another branch of distribution cabling, and also serves as a combiner of upstream energy between the tap port and through the connection port.
- G. Donor Antenna: The antenna, usually mounted on the outside of a structure where a DAS is installed, which picks up signals over-the-air from a donor source.
- H. Donor Source: The repeater, transceiver, cell site, or other radio site that produces signals which a DAS will relay and distribute.
- I. Emergency Responder Radio Antenna System [ERRAS]: A two-way radio communication system installed to assure the effective operation and coverage of radio communications systems for fire, emergency medical services, and/or law enforcement agencies within a building or structure. The system is not designed for use with District LMR, Cellular Services, or Wi-Fi Services.
- J. Federal Communications Commission [FCC]: federal agency responsible for implementing and enforcing America's communications laws and regulations.
- K. OET 65 Standards: The FCC's Bulletin that provides Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields.
- L. Public Safety and/or First Responder: agencies which are charged with the responsibility of responding to emergency situations. These include, but are not limited to, law enforcement, fire departments, and emergency medical services.
- M. Reflected Power: Power which is reflected back along a transmission line as a result of discontinuities in line impedance caused at connectors or close proximity of metallic objects.
- N. Radio Frequency [RF]: Energy from electromagnetic waves, or alternating currents that produce electromagnetic waves, in the spectrum of radio frequencies (30 kHz to 300GHz)
- O. Signal Booster: See BDA
- P. Splitter: A passive component that has a single input port and two or more output ports, effectively splitting the signal equally amongst the output ports. It also serves to combine upstream signals from the "output" ports into composite signals at the "input" port.

1.8 SUBMITTALS

- A. Submittal procedures: See Section 28 05 00.
- B. Submit a complete submittal package within 30 calendar days, for approval, after award of this work. Equipment is not to be ordered without approval. Partial submittals are not acceptable for review. Each submittal shall include a dated transmittal.
- C. Submittal may be electronically transmitted in PDF file format (preferred) or paper copies may be provided in quantities indicated in Division 1. Paper copies shall be organized including index tabs in a 3-ring black binder of sufficient size.
- D. Quality Assurance Submittal:
 - 1. Letter from manufacturer stating that the Contractor is an Authorized Factory Distributor for the area where the project is located.
 - 2. The Contractor and Manufacturer shall supply sufficient information to indicate that the

FIRST RESPONDER ANTENNA SYSTEM

- proposed system is based on the latest hardware, software technology and products comply with specified requirements and FCC Regulations.
3. The system described in the submittals shall be certified by an FCC Licensed Designer and installation shall be supervised by an FCC Licensed Project or Installation Manager.
- E. Product Data Submittal including special boxes, cable and other material as requested by the Architect/Engineer including:
1. A cover sheet with the name and location of the project, the name, address and telephone number of the Contractor and the name, address and telephone number of the submitting sub-contractor. Include on or after the cover sheet sufficient space for review stamps.
 2. Copies of FCC Licenses for both the Designer and Project or Installation Manger.
 3. An indication of any deviations from Contract Document requirements, including variations and limitations. Show any revisions to equipment layout required by use of selected equipment.
 4. A product data index and complete equipment list including for each product submitted for approval the manufacturers name and part number including options and selections.
 5. Cut-sheets or catalog data illustrating the physical appearance, size, function, compatibility, standards compliance and other relevant characteristics of each product on the equipment list. Indicate by prominent notation (an arrow, circle or other means) on each sheet the exact product and options being submitted for approval.
 6. Submit design data when the scope of work requires, including passband curves for both uplink and downlink for all bands, calculations, schematics, risers, sequences or other data.
 7. Any resubmittal shall include a complete revised equipment list and any product data that is revised.
 8. Any rejected submittals must be corrected and resubmitted to the AHJ and Architect/Engineers within 10 days of receipt of the rejected material.
- F. Submit shop drawings locating all components of the system, indicating circuit routing, cable type, and gauge. Shop or coordination drawings shall include information that will allow to the Contractor to coordinate interdisciplinary work and when necessary guide the manufacturer or fabricator in producing the product. Shop or coordination drawings shall be specifically prepared to illustrate the submitted portion of work, this may require diagrams, schedules, details, risers, floor plans and accurate to scale, (minimum of 1/8" = 1'-0"), equipment and device layouts prepared using a CAD or BIM engineering drawing program.
- G. Testing
1. Submit all field test records of the radio systems. These shall include, but not be limited to:
 - a. Preconstruction Tests – Tests performed with the AHJ prior to construction of the new facility to verify that the municipality has signal coverage in that area.
 - b. Mid-Construction Tests – Tests performed with the AHJ during construction, once walls have been constructed and the exterior roof is installed.
 - c. Final Testing – Tests performed in conforming with IFC Section 510.5.3 and Section 510.6. This testing is to be signed off by the AHJ. Engineers shall also be present for the final testing process.
 2. All testing records shall be submitted with O&M information and close out documents.
 - a. Provide one (1) digital copy of all close out documents
 - b. Provide three (3) copies of closeout documents bound in a 3-Ring binder with dividers and table of contents.

1.9 QUALIFICATIONS OF A PROPOSED CONTRACTOR

- A. Contractor shall have at least 5 years of experience installing, servicing and supporting building radio antenna communication systems and factory authorized representative of

FIRST RESPONDER ANTENNA SYSTEM

system.

- B. Proposed contractors who do not currently possess the necessary qualifications, trained and experienced personnel, financial capacity, and meet the other requirements herein described will be disqualified.
- C. The proposed contractor, as a business entity, shall be an authorized distributor and designated representative of the emergency responder radio coverage system manufacturer, with full warranty privileges, and shall have been actively engaged in the business of selling, installing, and servicing emergency responder radio coverage systems for a period of at least 5 years.
- D. Recently formed companies are acceptable only if specific pre-approval is requested, and granted by the Architect/ Engineer, based on experience of key personnel, current and completed projects, and all licensing requirements are met 10 working days prior to the contract proposal date.
- E. The Contractor shall employ factory trained technicians capable of supporting the maintenance of the system. No contract employees are allowed unless they have been to the factory service school within the last 18 months. A certificate of this training shall be provided with the Contractors submittal.
- F. The contractor shall employ full time local technicians and installers. The manufacturer shall maintain a full-time factory employed service staff for product support and service.
- G. The proposed Contractor shall have an office within 150-miles of the job site, staffed with trained technicians who are qualified and licensed to supervise the installation, to be responsible that the system is installed as submitted, to conduct system start up and perform a 100 percent operational audit of all installed devices, to instruct the Owners representatives in the proper operation of the system, and to provide service throughout the warranty period.
- H. All testing shall be conducted, documented and signed by a person in possession of an FCC General Radio Telephone Operators License and be a full-time employee of contractor.
- I. The proposed contractor shall be fully experienced in the design and installation of the type of system herein specified and shall furnish with the contract proposal an itemized list of the installations of the type specified herein. The list shall include the name of the project, date of completion, the amount of the contract, the name, and telephone number of a qualified person to contact for reference. This list must contain at least two (2) projects within a 150-mile radius of the school district to allow school administration officials to visit the job site for review of the system installation and service. Each reference project listed must utilize equipment by the same manufacturer as the proposed system.
- J. The Proposed Contractor shall not have any grievances or complaints of record regarding workmanship, code compliance, or service response. A Proposed Contractor that has any prior finding(s) of a code or license violation or has any litigation in process concerning the installation of a system is unacceptable.
- K. The ability of a proposed Contractor to obtain plans and provide a performance bond shall not be regarded as the sole qualification of the Contractors' competency and responsibility to meet the requirements and obligations of the contract.
- L. The Builder shall be satisfied that a proposed Contractor meets all the requirements expressed herein before including the Contractor's proposal in the project.
- M. The Owner may investigate, as they deem necessary to determine the ability of the proposed

FIRST RESPONDER ANTENNA SYSTEM

Contractor to perform the work. The proposed Contractor shall furnish to the Owner with any information or data requested for this purpose.

- N. The Owner reserves the right to reject any contract proposal if the evidence submitted, or their investigation, fails to indicate that the Contractor is qualified to fulfill of any part of the contract or to complete the work contemplated therein.
- O. The Owner reserves the right to reject the proposal of any Contractor who has previously failed to perform properly, or complete on time, contracts of a similar nature.

PART 2 – PRODUCTS

2.1 GENERAL

- A. The system shall conform to the requirements as identified in IFC Section 510.4 and Section 510.5. Testing records are required to confirm performance of the system.
- B. Compatibility: The equipment, including but not limited to repeaters, transmitters, receivers, signal boosters, cabling, fiber distributed antenna systems, etc., shall not interfere with the existing communication systems utilized by the Public Safety and First Responder agencies.
- C. Power Supplies: At least two (2) independent and reliable power supplies shall be provided: one primary and one secondary. The primary power source shall be supplied from a dedicated 20-ampere branch circuit and comply with 4.4.1.4 of NFPA 72. The secondary power source shall be a dedicated battery back-up, capable of operating the in-building system for at least 24 hours at 100% operation. The battery system shall automatically charge in the presence of external power input. The battery system shall be contained in one NEMA 4 type enclosure. Monitoring the integrity of the power supplies shall be in accordance with 4.4.7.3 of NFPA 72.
- D. Survivability
 - 1. Fire Performance: All main risers or trunks of the antenna system shall be installed with resistance to attack from fire using one of the following methods:
 - a. A 2-hour fire rated cable or cable system
 - b. Routing the cable through a 2-hour fire rated enclosure(s) or shaft(s).
 - 2. Cabinet: The signal booster and all associated equipment shall be housed in a single NEMA 4 certified, painted steel weather tight box. The cabinet shall be large enough to dissipate internal heat without venting from inside of the cabinet to outside atmosphere. Equipment installed on the roof of structures shall be rated for the expected extreme temperature and weather associated with rooftop installation.
 - 3. Rooftop Installations shall require a Pitch Pocket for proper weather-tight roof penetrations.
 - 4. Passive equipment: Passbands shall be VHF, UHF, and 700-900 MHz, IP rating of 2GHz.

2.2 SYSTEM COMPONENTS

- A. Signal Strength
 - 1. Downlink: A minimum signal strength of -95dBm shall be provided throughout the coverage area.
 - 2. Uplink: A minimum signal strength of -95 dBm shall be received at the local municipality from the coverage area.
 - 3. A donor antenna must maintain isolation from the distributed antenna system. The donor antenna signal level shall be a minimum of 15 dB above the distributed antenna system under all operating conditions.
- B. Permissible Systems
 - 1. Buildings and structures shall be equipped with an FCC Certified Class B Bi-Directional

- VHF, UHF, and 700-900 MHz amplifier(s) as needed.
2. The distributed antenna system may utilize a radiating cable, fixed antennas, or a combination of both.
- C. Supported Frequencies: The system shall support VHF, UHF, and 700-900 MHz as required for local public safety and first responder bands as utilized by the local municipality.
 - D. Reject Filters: Notch filter sections shall be incorporated as necessary.
 - E. Band Migration Capability: The signal booster shall include re-tunable or replaceable filters to accommodate rapid and economic passband changes in the event of mandatory FCC changes with the NPSPAC band. The use of non-adjustable and non-replaceable RF input and output filters is prohibited.
 - F. Output Level Control: An automatic output leveling circuit shall be included for both passbands with a minimum dynamic range of 60 dB, less any gain reduction setting, to maintain FCC out of band and spurious emission compliance.
 - G. Degraded Performance in Emergencies: The system shall be designed to allow degraded performance in adverse conditions, such as abnormally high temperatures resulting from nearby fires, extreme voltage fluctuations and/or other abnormal conditions that may occur during an emergency. Circuits that intentionally disable the signal booster in such situations (i.e. under/over voltage, over/under current, over/under temperature, etc.) shall not be implemented as the standard mode for public safety applications.
 - H. Mode of Operation: The system shall be normally powered on and shall continuously provide passing of frequencies within the Public Safety and First Responder bands.
 - I. All in-building radio systems shall be compatible with both analog and digital communications simultaneously at the time of installation.

2.3 SYSTEM MONITORING

- A. The distributed antenna system shall include connections to the fire alarm system to monitor the operational integrity of the signal booster, power supplies and annunciate malfunctions on the fire alarm system. Coordinate and provide this integration, as part of this system, with the fire alarm system contractor that is authorized to service the facility's fire alarm system. The integration of the DAS with the fire alarm system shall comply with Chapter 10 of NFPA 72.
- B. A sign shall be located at the fire alarm panel with the name and telephone number of the local municipality indicating that they shall be notified of any failures that extend past the 2-hour time limit.
- C. A dedicated supervised monitoring panel shall be provided within the emergency command center or other location as designated by AHJ to annunciate the status of all signal booster locations. The monitoring panel shall provide visual and labeled indication of the following for each signal booster:
 1. Normal AC power
 2. Signal booster trouble
 3. Antenna Failure
 4. Loss of normal AC power
 5. Failure of battery charger
 6. Low battery capacity

2.4 CABLE ROUTING, INSTALLATION, AND SUPPORT

- A. System wiring, and equipment installation shall be in accordance with good engineering practices. Wiring shall meet all state and local electrical code requirements.
- B. Wires and cables shall enter each equipment enclosure, console, cabinet or rack in such a manner that all doors or access panels can be opened and closed without removal or disruption of the cables.
- C. Cable pathways, conduit, and cable support systems shall be complete with bushings, deburred, cleaned, and secure prior to installation of cable.
- D. Before energizing the system check all cables for correct connections and test for short circuits, ground faults, continuity, and insulation.
- E. In all exposed areas such as mechanical rooms, parking garages, stairwells, etc., cable shall be fully enclosed in conduit.
- F. Do not attach any supports to joist bridging or other lightweight members. The support system shall provide a protective pathway to eliminate stress that could damage the cabling.
- G. Mount all equipment firmly in place such that vibration or jarring will not interfere with system operation. Route cable in a professional, neat, and orderly installation.
- H. The cable shall not be crushed, deformed, skinned, crimped, twisted, or formed into tight radius bends that could compromise the integrity of the cabling.
- I. Cable must not be fastened to electrical conduits, mechanical ductwork or piping, sprinkler pipes, or routed to obstruct access to hatches, doors, utility access panels, or service work areas. Do not route cables through fire doors, ventilation shafts, grates, or parallel for more than four-feet with line voltage electrical conductors. System cables shall not be run loose on ceiling grid or ceiling tiles.
- J. Provide for adequate ventilation to all equipment housings and take precautions to prevent electromagnetic or electrostatic hum.
- K. All conduit, duct, track, and raceway runs shall be spaced apart to allow for maintenance, such as the installation of couplings, without disturbing adjacent pathways.
- L. Each cable run shall be free of splices. No terminations, splices, or equipment will be installed in or above ceilings.
- M. Do not route any communication cable within two feet of any light fixture, HVAC unit, service access area, electric panel, or any device containing a motor or transformer.
- N. System cable will not be installed in the same conduit, duct, or track with line voltage electrical cable.
- O. Any pulling compounds utilized must be approved by the cable manufacturer and shall not degrade the strength or electrical characteristics of the cable.

PART 3 EXECUTION

3.1 COORDINATION

- A. Contractors shall coordinate with an FCC licensed engineering firm regularly employed in the business of designing and implementing Emergency Responder Radio Antenna Systems for

FIRST RESPONDER ANTENNA SYSTEM

emergency responders.

B. Electrical Work:

- a. Proposed Contractor is required to provide for and coordinate with Electrical Contractor for any, and all required electrical work, including but not limited to, circuiting, conduits, back boxes, and more. These expenses will not be included in the electrical contractor primary bid.

3.2 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver materials to job site in OEM's original unopened containers, clearly labeled with the OEM's name and equipment model and serial identification numbers.
- B. Store and protect equipment in a conditioned space until installation.

3.3 SYSTEMS INSTALLATION

- A. Coaxial antenna cabling shall not be installed in the same conduit, raceway, or cable trays used for other systems.
- B. All equipment shall be connected according to the OEM's specifications to insure correct installation and system performance.
- C. Coordinate all roof penetrations with General Contractor and/or Roofing Contractor.

3.4 GROUNDING

- A. Ground cable shields and equipment per Manufacturer's requirements.
- B. Antenna mast shall be grounded per NFPA 70 NEC requirements and antenna manufacturer's requirements. Provide grounding blocks and surge protection for outside coaxial cabling. Bond the antenna mast to the existing lightning protection system.

3.5 TESTING, WARRANTY SERVICE

- A. A factory trained representative of the manufacturer shall supervise the final connections and testing of the system and it shall be subject to the final acceptance of the Architect/Engineer and Owner. All testing shall meet the testing standards set forth in IFC Section 510.
- B. This contractor will thoroughly test all components of the systems and devices proposed herein to assure equipment specifications are met. This contractor will start up, test, and debug systems to ensure that all aspects of the system are working, documented, and reporting properly.
- C. This Contractor shall make a thorough inspection and test of the complete installed Emergency Responder Radio Antenna System including all components and controls to ensure the following:
 1. Complete and functional system.
 2. Installed in accordance with manufacturer's instructions.
 3. Verify proper operation and processing of signals.
 4. Verify that units and controls are properly labeled, and interconnecting wires and terminals are identified.
 5. Rectify deficiencies indicated by tests and completely re-test work affected by such deficiencies at Contractor's expense.
- D. A final System Acceptance Test shall be performed in the presence of a designated Owner representative and the AHJ. In the event that a system does not pass or only partially passes the Acceptance Test, the Project Manager will file a discrepancy report. Corrected items will

be re-tested via a punch list to ensure that they comply with the system requirements.

- E. This Contractor shall provide a warranty of the installed system against defects in material or workmanship for a period of one (1) year from the date of substantial completion. Any equipment, cabling or wiring shown to be defective shall be replaced, repaired, or adjusted free of charge. All labor and materials shall be provided at no expense to the Owner. All equipment will carry a one-year warranty or manufacturer's warranty whichever is greater.
- F. Immediately prior to the end of the warranty period, the system shall be inspected and certified for the following year at no additional cost to the Owner.

3.6 DRAWINGS, MANUALS, AND TRAINING

- A. As-built drawings and operating and maintenance manuals may be electronically transmitted in PDF file format (preferred) or paper copies may be provided in quantities indicated in Division 1. Paper copies shall be organized including index tabs in a 3-ring black binder of sufficient size.
- B. Upon completion of the installation, and prior to final inspection, the Contractor shall furnish as-built drawings.
- C. In addition, the contractor shall furnish complete operating and maintenance manuals listing the manufacturer's name(s), including technical data sheets. Manuals shall include wiring diagrams to indicate internal wiring for each device and the interconnections between the items of equipment. Provide a clear and concise description of operation that gives, in detail, the information required to properly operate the equipment and system. Provide a parts list with manufacturer and model number for commonly replaced parts. Include complete instructions for the inspection, testing, and maintenance of the system. Include copies of all calculation sheets used to configure the system.
- D. Formal on-site training sessions shall be conducted by the Emergency Responder Radio Antenna System contractor. It shall be the responsibility of the Contractor to coordinate time and location of training sessions with the Owner. Provide documented general instruction as follows:
 - 1. Provide instruction to the maintenance personnel to include the location, inspection, normal maintenance, testing, and operation of all system components. Provide a minimum of four (4) hours—two 2-hour sessions separated by a minimum of two weeks.
 - 2. Provide instruction to designated personnel on the functions and operation of the system provided including capabilities, limitations, and the meaning of status messages. State the proper procedure for testing, routine maintenance, and request for service. Provide detailed instruction on the operation of the system. Provide a minimum of four (4) hours—two 2-hour sessions separated by a minimum of two weeks.

SECTION 28 13 00 - ACCESS CONTROL SYSTEM

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 RELATED WORK

- A. Division 08 – Door Hardware Sections.
- B. Division 26 – Electrical Sections.
- C. Division 28 – Low Voltage Sections:
 - 1. This contractor to be responsible for the access controls system.

1.3 SUMMARY

- A. The Contractor shall furnish and install a complete Cloud-based access control system as specified herein. The system shall include, but not be limited to, all control equipment, power supplies, power circuits, signal initiating and signaling devices, conduit, wire, network cabling, fittings, and all other accessories required to provide a complete and operable system.
- B. Security system devices indicated are for reference and coordination purposes only. The installing contractor shall design and provide a complete system, meeting the requirement of specification, The Contractor shall provide all security system devices required for complete system perimeter coverage acceptable to all governing authorities, Architect and Owner.
- C. Additional Responsibilities of the Access control contractor are as follows:
 - 1. Input all Access Control Doors, Door Position switches, Door Release buttons, Keypads and all other devices into SMS and Mapping Feature.
 - 2. The mapping feature shall be programmed for complete monitoring of all devices, as well as complete functionality of Doors. Features shall include but shall not be limited to
 - a. Lock
 - b. Unlock
 - c. Lockdown
 - d. Position
 - e. Alarm for Propped Door
 - f. Alarm for Forced Door
 - 3. Package and return all unused door hardware installation components. All components that are turned over to the owner must be inventoried by integrator.
- D. Contractor shall integrate the Access Control system with the Video Surveillance system that in the event of a door open, the camera covering that door shall record the event as long as motion is being made in the view and for 5 seconds after motion ceases.
- E. Contractor shall provide all permits, licenses and system certifications as required by Authority Having Jurisdiction.

- F. Prior to construction, the contractor shall perform a test of all existing Access Control system devices and cabling. Should any faulty devices or cabling be found, contractor shall provide a list of faulty equipment and provide to the Architect and Owner. Contractor shall provide pricing to repair / replace any faulty device / cabling

1.4 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate with Owner or Owner's representative regarding network configuration and estimated bandwidth utilization prior to performing network connections.
- B. Pre-Construction Meeting:
- a. The successful Contractor shall attend a mandatory pre-construction meeting with the project's consultant and individuals deemed necessary by the Owner's representative prior to the start of the work. No work shall begin prior to this meeting.

1.5 CODES AND STANDARDS

- A. The system shall comply with the applicable Codes and Standards as follows:
1. National Fire Protection Association Standards:
 - a. NFPA 70 National Electric Code.
 - b. NFPA 72 National Fire Alarm Code.
 - c. NFPA 101 Life Safety Code.
 2. Local & State Building Codes.
 3. Requirements of Local Authorities having Jurisdiction.
 4. Underwriters Laboratory Requirements and Listings for use in Security Alarm Systems.
 5. Requirements of American Disabilities Act (Public law 101-336).
 6. Accessibility Standards.
 7. State Fire Marshall.

1.6 QUALITY ASSURANCE

- A. Contractor Qualifications:
1. The installing contractor shall be the authorized dealer/integrator of the project's specified Avigilon Access Control System to sell, install, and service product and all related equipment.
 2. The installation contractor shall have represented the access control manufacturer's product for at least five years.
 3. The installation contractor shall be licensed by the State of Texas as a security services contractor to design, sell, install, and service security alarm systems.
 3. The installation contractor shall provide 24-hour, 365 day per year emergency service with factory trained service technicians.
 4. The installation contractor shall have personnel on their staff that have been actively engaged in the business of designing, selling, installing, and servicing security alarm systems for at least five (5) years.
 5. The installer must be in good standing by the manufacturer before the bid date.
 6. The Installer must be capable of providing references that will attest to successful completion of projects of similar scope as the work noted in this section.
 7. All Contractors must submit to the owner prior to starting any work the factory training certificates for all personnel that will be working on the access control system. No person is allowed to work on the system without proper manufacturer's certification.
 8. The proposing contractor for this system and the installing contractor for this

- system shall be of the same organization.
9. Contractor must be a current integrator of solution in the closest major metropolitan area marketplace, have a permanent office located within 120 miles of the project, and be able to include information on current support staff to be able to service this client.
 10. Supplier Certifications: Provide products from a supplier in compliance with the following:
 - A. National Defense Authorization Act for Fiscal Year 2019.
 - B. SOC 2 Type 1 and Type 2.

1.7 SUBMITTALS

- A. The installing contractor and/or equipment supplier shall provide complete and detailed shop drawings and include:
 1. Control panel wiring and interconnection schematics for all devices
 2. Complete point to point wiring diagrams.
 3. Riser diagrams.
 4. Complete floor plan drawings locating all system devices.
 5. Factory data sheets on each piece of equipment proposed. Pertinent information is to be highlighted. All non-pertinent information is to be removed or crossed out.
 6. Complete system bill of material.
 7. Specification Compliance: A letter shall be provided stating, by section and subsection, that the Access Control installer complies with the ENTIRE specification section. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.
- B. Product Data: Manufacturer's product information and data sheets for each product specified in this section, including:
 1. Substrate preparation instructions and recommendations.
 2. Installation means and methods.
 3. Recommendations and requirements for proper storage and handling.
- C. All submittal data will be in bound form with Contractor's name, supplier's name, project name, and state security license number adequately identified.

PART 2 – PRODUCTS

2.1 SUMMARY

- A. Cloud-based access control basic functionality, including an online administrator portal for managing dashboards, cameras, users, sites, security devices, reports, third-party software integrations, rules, alerts, alarms, and account profiles.
 1. All on-prem hardware talks outbound to the cloud host.
- B. Connect All Access Control Panels to the Owners Network. All cables shall be terminated on Patch Panel and labeled. All cables installed shall use only products required in the Structured Cabling Specification. All cables installed must carry the full manufactures warranty.

2.2 MANUFACTURERS

A. Basis of Design Manufacturer: **Avigilon Alta Access**

1. Address: 500 W Monroe Street, Ste 4400, Chicago, IL 60661, USA.
2. Phone: +1 (888) 281-5182
3. Website: www.motorolasolutions.com

2.3 CLOUD-BASED ACCESS CONTROL HARDWARE & INTEGRATIONS

- A. Provide all necessary hardware/controller/software/licenses required to operate and manage system effectively for the locations indicated on the drawings.
- B. Each access-controlled portal shall be equipped with:
1. One (1) HID Signo Reader
 2. Door Position Sensor – All door contacts must be DPDT.
 3. Motion Request-to-Exit – (only if REX is not integrated into the door hardware)
 4. Electrified door hardware to be provided and installed by others. Lock power to door hardware shall be provided by the ACS integrator and centralized at MDFs and IDFs. ACS Integrator shall provide cabling and connections between the door hardware and the Access Control System.
 5. Access Control Portals shall not exceed 500' distance from the associated control panel.
- C. Provide door contacts on all exterior doors, regardless of whether they have a card reader. All door contacts shall be located on each individual door and report back to the access control panel on the door's status. The contractor is responsible for providing all door modules or input modules to be able to provide the status of any exterior door on campus.
- D. Panel Hardware: **Basis of Design in BOLD**
1. Avigilon Access Control Core Controller – P/N: OP-CR-ACC
 2. Avigilon Access Single Door Controller – P/N: OP-CR-SDC
 3. **Mercury MP Series Intelligent Controller - P/N: AC-MER-CONT-MP1502**
 4. **Mercury MR52 Reader Interface Panel - P/N: AC-MER-CON-MR52-S3B**
 5. **Mercury MR16IN Multi-Device Interface Panel - P/N: AC-MER-CON-MR16IN**
 6. **Mercury MR16OUT Multi-Device Interface Panel - P/N: AC-MER-CON-MR16OUT**
- E. Avigilon Access Control Controller
1. Avigilon Access Control Core Controller
 - a. P/N: OP-CR-ACC
 2. Compliance: UL 2043, FCC, IC, CE, RCM
 3. Communications:
 - a. Encryption: Communications to the access control cloud service shall be encrypted via TLS 1.2.
 - b. Connection to access control cloud service: Ethernet or Wi-Fi.
 - c. USB:
 - 1) Two 2.0 ports for expansion.
 - 2) Two 3.0 ports for expansion.
 4. Power: 12-24 VDC
 5. Capacity:
 - a. Up to 8 Entries
 - 1) 2 Avigilon 4-Port Expansion Boards
 - b. Up to 12 Entries
 - 1) 1 Avigilon 4-Port Expansion Board and 1 Avigilon 8-Port Expansion Board

- c. Up to 16 Entries
 - 1) 2 Avigilon 8-Port Expansion Boards
- F. Avigilon Access Single Door Controller - (Only to be used on portable building applications when shown on drawings)
 - 1. Openpath Single Door Controller
 - a. P/N: OP-CR-SDC
 - 2. Compliance: UL 2043, FCC, IC, CE, RCM
 - 3. Communications:
 - a. Encryption: Communications to the access control cloud service shall be encrypted via TLS 1.2.
 - b. Connection to access control cloud service: Ethernet or Wi-Fi.
 - c. Connection to credential reader: Bi-directional, four conductors, RS-485.
 - 4. Power: 12-24 V dc via 12V, 24V, PoE, or PoE+ supply.
 - 5. Capacity:
 - a. Credential Readers: Up to two.
 - b. Wiegand Readers: Up to two.
 - c. Relays: Two configurable wet 12/24 Vdc or dry.
 - d. Inputs: Up to four.
 - e. USB: Two ports for expansion.
- G. Approved third-party controller manufacturer: Mercury.
 - 1. **Basis of Design product: Mercury MP Series Intelligent Controller.**
 - a. **P/N: AC-MER-CONT-MP1502**
 - 2. Access Control:
 - a. Supports total of 1 RS-485 I/O protocol.
 - b. Activation/deactivation.
 - c. If/Then rule capabilities.
 - d. Anti-pass back support.
 - e. Nested, area, hard, soft and timed forgiveness.
 - f. Up to 264 inputs and 260 outputs.
 - 3. Door Control:
 - a. Natively supports up to 4 readers and 2 openings.
 - b. Support for up to 16 additional RS-485 expansion modules; max 32 entries.
 - 4. Power:
 - a. Primary Power:
 - 1) 12-24 VDC +/- 10%, 500 mA (reader and USB ports not included).
 - b. Reader Port:
 - 1) 600 mA maximum (add 600 mA to primary power current).
 - c. Micro USB Port:
 - 1) 5 VDC, 500 mA maximum (add 270 mA to primary power current).
 - d. Battery:
 - 1) Memory/Clock Backup: Super Capacitor (10 days). 3-volt Lithium, type BR2330 or CR2330 slot available for additional capacity (CR2330 battery not included).
 - e. Micro SD Card:
 - 1) Format: microSD or microSDHC; 2GB to 8GB.
 - f. Host Communication:
 - 1) Ethernet: 10-BaseT/100Base-TX and USB port (2.0) with optional adapter: pluggable model USB2-OTGE100.
 - g. Serial I/O Device:
 - 1) 2-wire RS-485, 2,400 to 115,200 bps, asynchronous, half-duplex, 1 start bit, 8 data bits, and 1 stop bit.
 - h. Inputs:
 - 1) 8 unsupervised/supervised, standard EOL: 1k/1k ohm, 1%, ¼ watt.

- 2) 2 unsupervised dedicated for cabinet tamper and UPS fault monitoring.
 - i. Output Relays:
 - 1) 4 relays, Form C; NO 5 A @ 30 VDC resistive; NC 3 A @ 30 VDC resistive.
 - 5. Reader Interface
 - a. Reader Power:
 - 1) 12-24 VDC +/- 10% regulated, 600 mA maximum.
 - b. Data Inputs:
 - 1) TTL compatible or 2-wire RS-485.
 - c. RS-485 Mode:
 - 1) 9,600 to 115,200 bps, asynchronous, half-duplex, 1 start bit, 8 data bits and 1 stop bit.
 - 2) Maximum cable length: 2000 ft (609.6m).
 - d. LED Output:
 - 1) TTL levels: high > 3 V; low < 0.5 V; 5 mA source/sink maximum.
 - e. Buzzer Output:
 - 1) Open collector, 12 VDC open circuit maximum, 40 mA sink maximum.
 - 6. Security and Network
 - a. IP connectivity via IPv4/v6.
 - b. Host communications protected by TLS 1.2/1.3 or AES-256/128.
 - c. Controller I/O expansion connection protected by AES.
 - d. Generate and load custom device and peer certificates in support of mutual TLS (mTLS).
 - e. Port-based network access control using IEEE 802.1X
 - f. FIPS 140-3 user of OpenSSL (in process).
 - 7. Cable Requirements
 - a. Power and Relays:
 - 1) 1 twisted pair, 18 to 16 AWG.
 - b. Ethernet:
 - 1) Cat-6A
 - c. Reader TTL:
 - 1) 6-conductor, 18 AWG, 500 ft (152 m) maximum.
 - d. Reader RS-485:
 - 1) 1 twisted pair, shielded, 120 ohm impedance, 24 AWG, 2,000 ft (610 m) maximum.
 - e. I/O Devices:
 - 1) RS-485 1 twisted pair with drain wire and shield, 120 ohm impedance, 24 AWG, 4,000 ft (1,219 m) maximum.
 - f. Alarm Input:
 - 1) 1 twisted pair, 30 ohms maximum typically 22 AWG @ 1000 ft (304.8 m) maximum.
 - 8. Compliance and Warranty
 - a. Product Compliance:
 - 1) UL 294 Recognized, FCC Part 15 Class A, CE Compliant, RoHS (2011/65/EU&2015/863), EU REACH (1907/2006), California Proposition 65, NIST Certified Encryption (in process).
- H. Approved third-party dual-card reader board manufacturer: Mercury.
- 1. **Basis of Design product: Mercury Series 3 Serial I/O Dual-Card Reader Interface Panel. - P/N: AC-MER-CON-MR52-S3B**
 - 2. Power:
 - a. Primary Power:
 - 1) 12-24 VDC +/- 10%, 500 mA

- b. Host Communication:
 - 1) RS-485, 2-wire, 4000' (twisted pair with shield).
 - 3. Reader Ports (2 per board)
 - a. Reader Power:
 - 1) Pass-through or 12VDC regulated 300mA each reader.
 - b. Card/Keypad Data:
 - 1) OSDP, Clock/Data, Data-1/Data-0, or RS-485
 - c. Output Relay
 - 1) 4 relays, Form C Contacts rated at 2 A @ 30 VDC resistive
 - d. Input Relay
 - 1) 6 unsupervised/supervised, standard EOL: 1k/1k ohm, 1%, ¼ watt.
 - e. LED Output:
 - 1) One-wire bi-color LED or two-wire LED
 - f. Buzzer Output:
 - 1) Only with 'one-wire' LED
 - 4. AUX I/O
 - a. Inputs:
 - 1) 8 General Purpose: Programmable circuit type
 - 2) 2 Dedicated: Tamper and Power Monitor
 - b. Output Relays:
 - 1) 6 Form-C Relay:
 - (a) Normally open contact (NO): 5A @30VDC resistive.
 - (b) Normally closed contact (NC): 5A @30VDC resistive.
- I. Approved third-party input board manufacturer: Mercury.
 - 1. **Basis of Design product: Mercury Series 3 Serial I/O 16-Input Interface Panel.**
 - a. **P/N: AC-MER-CON-MR16IN**
 - 2. Compliance: UL 2043, FCC, IC, CE, RCM
 - 3. Communications:
 - a. RS-485, 2-wire, 4000' (twisted pair with shield)
 - 4. Power: 12-24 VDC
 - 5. Capacity:
 - a. Relays:
 - 1) Inputs:
 - (a) 16 General Purpose: Programmable circuit type
 - (b) 2 Dedicated: Tamper and Power Monitor
 - 2) Outputs:
 - (a) 2 Form-C Relay:
 - (1) Normally open contact (NO): 5A @30VDC resistive.
 - (2) Normally closed contact (NC): 5A @30VDC resistive.
- J. Approved third-party output board manufacturer: Mercury.
 - 1. **Basis of Design product: Mercury Series 3 Serial I/O 16-Output Interface Panel.**
 - a. **P/N: AC-MER-CON-MR16OUT**
 - 2. Compliance: UL 2043, FCC, IC, CE, RCM
 - 3. Communications:
 - a. RS-485, 2-wire, 4000' (twisted pair with shield)
 - 4. Power: 12-24 VDC
 - 5. Capacity:
 - a. Relays:
 - 1) Inputs:
 - (a) 2 Dedicated: Tamper and Power Monitor

- 2) Outputs:
 - (a) 16 Form-C Relay:
 - (1) Normally open contact (NO): 5A @30VDC resistive.
 - (2) Normally closed contact (NC): 5A @30VDC resistive.
- K. Credential Readers:
 - 1. **Basis-of-Design Product: HID Signo Readers**
 - a. **HID® Signo™ Reader 40 – Wall Switch Mount Application**
 - b. **HID® Signo™ Reader 20 – Mullion Mount Application**
 - c. Avigilon Video Intercom Reader Pro.- Video Intercom & Reader Application
 - 2. Mullion mount Card Readers are acceptable only for locations where wall mounted readers cannot be installed flush on wall
 - 3. Credential Reader Power: Powered using 12-24 V dc from its associated controller, including its standby power source, and shall not dissipate more than 5 W.
 - 4. Communications:
 - a. Encryption: Communications to the access control cloud service shall be encrypted via TLS 1.2.
 - b. Connection to controller: Bi-directional, four conductor, RS-485.
 - 5. Enclosure: Suitable for surface, semi-flush, mullion, pedestal, or weatherproof mounting. Mounting types shall additionally be suitable for installation in the following locations:
 - a. Indoors, controlled environment.
 - b. Indoors, uncontrolled environment.
 - c. Outdoors, with built-in heaters or other cold-weather equipment to extend the operating temperature range as needed for operation at the site.
 - 6. Display: LED indicator shall provide visible status indications and user prompts. Indicate power on or off, whether user passage requests have been accepted or rejected, and whether the door is locked or unlocked.
 - 7. Proximity Readers:
 - a. Passive-detection proximity card readers shall use a swept-frequency, RF field generator to read the resonant frequencies of tuned circuits laminated into compatible credential cards. The resonant frequencies read shall constitute a unique identification code number.
 - b. The card reader shall read proximity cards in a range from direct contact to at least 1.5 inches (40 mm) from the reader.
 - c. The card reader shall support low (125 kHz) and high (13.56 MHz) frequency cards and fobs.
 - d. The reader shall detect touch and hand waving and authenticate with the mobile credential via BLE, NFC, and/or geoproximity.
 - e. The reader shall support remote over-the-air (OTA) software updates.
 - f. The reader shall support remote OTA troubleshooting, including identification and restarting services.
 - g. The reader shall not store sensitive or encrypted data locally on the device.
 - h. The reader shall support adjustable Bluetooth range and geolocation detection.
 - i. The reader shall support onsite-only, multi-factor authentication unlock methods.
 - j. The reader shall trigger mobile credentials via beacons, and shall support any beacon format, including iBeacon.
 - k. Credential Technologies:
 - 1) Avigilon Alta (formerly Openpath) Mobile Credential.
 - 2) Avigilon Alta Cloud Key and Guest Pass.
 - 3) Avigilon Alta 13.56 MHz DESfire (EV1, EV2, and EV3) Credentials.
 - 4) Avigilon Alta 125 kHz LF Prox.

- L. Video Intercom Credential Reader:
1. Basis of Design
 - a. **Openpath Video Intercom Reader pro**
 2. Video Credential Reader Power:
 - a. Can be powered from its associated controller, including its standby power source, and shall not dissipate more than 7.8 W.
 - b. Can be powered using Power over Ethernet (PoE).
 3. Communications:
 - a. Encryption: Communications to the access control cloud service shall be encrypted via TLS 1.2.
 - b. Connection to controller: Over the cloud or via Wiegand input.
 4. Enclosure: Suitable for surface, semi-flush, mullion, pedestal, or weatherproof mounting. Mounting types shall additionally be suitable for installation in the following locations:
 - a. Indoors, controlled environment.
 - b. Indoors, uncontrolled environment.
 - c. Outdoors, with built-in heaters or other cold-weather equipment to extend the operating temperature range as needed for operation at the site.
 5. Display: LED indicator shall provide visible [and audible] status indications and user prompts. Indicate power on or off, whether user passage requests have been accepted or rejected, and whether the door is locked or unlocked.
 6. Camera: High resolution built-in camera shall record entry events.
 7. Proximity Readers:
 - a. Passive-detection proximity card readers shall use a swept-frequency, RF field generator to read the resonant frequencies of tuned circuits laminated into compatible credential cards. The resonant frequencies read shall constitute a unique identification code number.
 - b. The card reader shall read proximity cards in a range from direct contact to at least 1.2 inches (30 mm) from the reader.
 - c. The card reader shall support low (125 kHz) and high (13.56 MHz) frequency cards and fobs.
 - d. The reader shall detect touch and hand waving and authenticate with the mobile credential via BLE, NFC, and/or geoproximity.
 - e. The reader shall support remote over-the-air (OTA) software updates.
 - f. The reader shall support remote OTA troubleshooting, including identification and restarting services.
 - g. The reader shall support adjustable Bluetooth range and geolocation detection.
 - h. The reader shall support onsite-only, multi-factor authentication unlock methods.
 - i. The reader shall trigger mobile credentials via beacons, and shall support any beacon format, including iBeacon.
- M. Access Control Cards:
1. Card Size and Dimensional Stability: Credential cards shall be [2-1/8 by 3-3/8 inches (54 by 86 mm)] The credential card material shall be dimensionally stable so that an undamaged card with deformations resulting from normal use shall be readable by the card reader.
 2. **Provide 1,000 access cards for this project. Integrator will be responsible for providing a temporary badging station to print initial ID badges before providing them to the owner. All cards shall be ordered with sequential serial numbers and coordinated with the manufacturer. District uses Card Integrators for preprinted district cards/ID Badges**
 3. Card Material: Abrasion resistant, nonflammable, nontoxic, and impervious to solar radiation and effects of ultraviolet light.

- N. Door Contacts –
1. **All door contacts must be DPDT.** Provide a door contact for each exterior door, and other doors as located on plans. Door Contact shall always monitor door position. Program the system to shunt alarm on authenticated card read. Send system into full alarm during forced door. Send system into trouble for Propped door with messaging to designated user groups for all alarm types. At a pair of doors, contractor shall wire each door contact together as one common program point within the access control system.
 - a. Recessed – P/N: 1076D-G
 - b. Surface Mount/ Roof Hatch– P/N: GRI 4405-A
 - c. Roll-up Door – P/N: 2315A-L
- O. REX -Motion Request-to-Exit –
1. **Bosh DS160** (only if REX is not integrated into the door hardware)
- P. Door release button – **SDC - D15-2** - Concealed Remote Desk Switch - SPDT Push Switch - Momentary - 10 Amp @ 30VAC/DC
- Q. Lock down button –
1. At each campus building, contractor to provide **BLUE** push button for campus lockdown, model: **SS2 434 LD-EN** with custom label: **LOCKDOWN**. Pushbutton to be in front office administration area and be momentary pushbutton style. Once building lockdown is activated, the system shall remain in lockdown mode until authorized personnel use system software to place the system back in normal mode. Coordinate with local campus principal on final location of button prior to rough in
- R. Access Control System Enclosures: **Basis of Design: LifeSafety Power**
1. **Two-Door Enclosure:**
 - a. **AC-LSP-2DR-MER-LCK**
 2. **Four-Door Enclosure:**
 - a. **AC-LSP-4DR-MER-LCK**
 3. **Eight-Door Enclosure:**
 - a. **AC-LSP-8DR-MER-LCK**
 4. **Sixteen-Door Enclosure:**
 - a. **AC-LSP-16DR-MER-LCK**
 5. The number of overall enclosures shall be based upon providing 120% of current project requirements to allow for future growth at each headend location. The contractor shall provide and install a wall mounted enclosure for all Door Controllers/Gateways/Input Modules that shall be installed.
 6. Door power supplies are part of this unit and shall be provided to interface with electrified door hardware.
 7. Provide labeling on the face of panel for identification of panel as named in the access control software. Typical naming convention is 3-digit initials of campus – B(XXX) where X represents initials of building – ACP#
 8. Provide label on inside of access control panel to indicate electrical panel and circuit number of 120v. power serving panel.
 9. Provide dual local batteries for each panel where internal cards are being powered.
 10. Contractor to wire internal contact relay to indicate when power loss occurs to panel.
 11. Contractor to wire internal relay contact for door latch to indicate when access to the panel has occurred.
 12. Provide all back plates and mounting hardware required for complete system installation.
- S. Supported Camera Hardware:

Avigilon Ava cameras connected through Alta Aware user account.

2.4 CLOUD-BASED ACCESS CONTROL MOBILE APPLICATIONS

- A. Encryption: Support mobile credentials via a mobile app with end-to-end encryption to administrative portal.
- B. Mobile app shall run in the background on a device with minimal battery usage.
- C. Devices Supported: Mobile devices with Android and IOS operating systems, including Apple Watch.
- D. Mobile app security:
 - 1. Mobile credentials shall be assigned individually or as part of an identity provider integration.
 - 2. Mobile credential to utilize a revolving NSA Suite B cryptographic algorithm, with the private key to be generated on the mobile device and never to be shared, only to use public key pairing.
 - 3. All communication for access control to use TLS1.2+ encryption.
 - 4. Mobile credential authentication shall use triple communication pathway: From mobile credential to reader over BLE, to panel over LAN Wi-Fi, to cloud and panel over Wi-Fi and LTE.
 - 5. Mobile credentials to be authenticated via Bluetooth, NFC, and/or geoproximity.
- E. Functions Supported:
 - 1. Touch entry.
 - 2. Hand wave.
 - 3. App unlock.
 - 4. Auto proximity unlock.
 - 5. Last-to-leave locking, allowing users to lock an entrance regardless of schedule.
 - 6. 24-hour activity log.
 - 7. Send diagnostic feedback.
 - 8. Activate lockdown plan.
 - 9. Share guest access link.
 - 10. Mobile credentials shall support custom virtual identification badges.
 - 11. Call, email, and send audit logs to technical support from the mobile credential.
 - 12. Trigger and revert lockdown plans from the mobile credential.
 - 13. Detect nearby readers based on RSSI strength.
 - 14. Reprovision mobile credential on a new or different device.
 - 15. Touchless elevator access control.
 - 16. Favorite entries list.
 - 17. Adjustable Bluetooth range and geolocation detection per door.
 - 18. Two-factor authentication.
 - 19. Unlock requests while mobile app is in background and mobile device is turned on, but not unlocked.
 - 20. Admin app: Provision wireless locks, download audit logs, and update access.
 - 21. Third-party Allegion ENGAGE mobile app: Commission Schlage enrollment reader and wireless locks into ENGAGE site and view real-time battery status.
- F. Logging into the mobile app:
 - 1. Support passwordless login.
 - 2. Support logging in with a password

2.5 COMPONENTS

- A. Panel Licensing:
 - 1. The contractor shall provide all enterprise licensing for all the panels being added as part of the current project work scope.
 - 2. The licensing should be configured to allow the district to have direct contact with the manufacturer's technical support staff in lieu of having to contact the local integrator for support.

- B. API Licensing:
 - 1. Integrator to provide all API licensing required for this project.
- C. Security Management System Client Workstation:
 - 1. The SMS client interface shall be 100% web based for local users interfaced with username and password support via active directory interface. Client license count shall still be (5) concurrent licenses per elementary school, (8) per Junior High and (10) per High School.

PART 3 – EXECUTION

3.1 PREPARATION

- A. Prior to installation, ensure Access Control Hardware Appliance is capable of required Access Control Software Features and Integrations.

3.2 INSTALLATION

- A. Install system according to manufacturer's written instructions.
 - 1. Develop, install, and test software and databases for complete and proper operation of systems involved. Activate and install all software and accessory software licenses.
 - 2. Setup and program entire system so that no additional programming is required after Substantial Completion, including setup of available software features.
 - 3. Perform a full system backup at completion of initial programming and deliver configuration and transaction backups to Owner.
 - 4. Perform field software changes after the initial programming session to "fine tune" operating parameters and sequence of operations based on revisions to the Owner's operating requirements including the creation of time schedules, holidays, new card formats, etc. Create user hierarchy with access permissions. Set up notifications.
 - 5. Test equipment and configure system in accordance with instructions provided by manufacturer prior to installation.
- B. Ensure products are equipped with the latest and most up-to-date firmware and/or software by manufacturer.
- C. Review configurable features of device with Owner's Representative and establish a punch list for standard, device specific, location specific and access control software-specific configuration of device(s).
- D. Program and configure devices in accordance with the punch list so no additional programming is required for operation by user.
- E. Configure equipment requiring users to log on using a password with user/site-specific password/passwords.
- F. No system/product default passwords allowed
- G. No other wiring shall be run in the same conduit as access controls wiring.
- H. Any exposed conduit installed in public areas shall be painted to match the surrounding wall color.
- I. All conduit ends shall have a protective bushing to prevent cable damage. BUSHINGS MUST BE

INSTALLED PRIOR TO INSTALLING THE CABLE. CUTTING BUSHING TO INSTALL AROUND INSTALLED CABLES WILL NOT BE ACCEPTED.

3.3 WIRING

- A. The color code of all access control wiring shall be YELLOW in color. All access control cable shall be homerun from the card reader locations to the headend panel location typically located in local building MDF/IDF.)
 - 1. Approved Products: The following manufacturers or equivalent cable shall be acceptable. All cables shall be in a Yellow/composite construction, shielded, and must be yellow in color. NO EXCEPTIONS.
 - i. Access control, plenum, composite cable – 22/3PR_Card Reader, 18/4C_Lock power, 22/4_REX, 22/2_DC
 - 1. **Southwire P/N# - H91602**
 - 2. Belden is an approved alternative.
- B. Door Contact only doors.
 - 1. Yellow - 18 AWG, 4 conductor unshielded plenum rated cable constructed with stranded bare copper, polyvinylchloride insulation and an overall polyvinylchloride jacket for data communications/security applications manufactured in the USA and (UL) listed CL3P or CMP c(UL)us 75°C, FT-6.
- C. All cable shall bear the name of the approved manufacturer. NO PRIVATE LABELED CABLE WILL BE ACCEPTED
- D. Network Connection Cable: Provide a 4 pair Category 6A data cable from the Master Control Panels to the MDF/IDF network rack. Category 6A cable shall be YELLOW in color.
- E. The wire scheme and conductor quantity shall be as required by the device manufacturer's specifications. Contractor to provide and install shielded cable as required.
- F. All wiring shall be in accordance with the National Electrical Code, Local Codes, and article 760 of NFPA Standard 70. All wiring sizes shall conform to recommendations of the equipment manufacturer, and as indicated on the engineered shop drawings.
- G. All wire shall be UL Listed CL2 for limited energy (300V) applications and shall be installed in conduit. Limited energy MPP wire may be run open in return air ceiling plenums provided such wire is UL Listed for such applications and is of the low smoke producing fluorocarbon type and complies with NEC Article 760 if so approved by the local authority having jurisdiction.
- H. No AC wiring or any other wiring shall be run in the same conduit as security alarm wiring
- I. All wire shall be installed in an approved conduit/raceway system (except where permitted by NEC and the local authority having jurisdiction). Maximum conduit "fill" shall not exceed 40% per NEC.
- J. All vertical wiring and all main trunk/riser wiring shall be installed in a complete raceway/conduit system. All riser boxes shall be adequately sized for the number of conductors transversing the respective box as well as the number of terminations required.
- K. All 120v Power shall be furnished by the Division 26 contractor. COORDINATE THE EXACT LOCATION WITH THE ELECTRICAL CONTRACTOR PRIOR TO THE ROUGH-IN.
- L. All Security Conduit as required for a complete installation of this system shall be furnished by the contractor as part of their scope of work. Conduit shall be minimum of 3/4 inch.

- M. Conduit shall be painted to match surrounding area where installed exposed to public view.
- N. Coordination with the Division 26 contractor is the responsibility of the Security Contractor to ensure all conduit is in place for a complete installation.
- O. All systems shall be connected to a dedicated 120VAC circuit and to an emergency power source if available.
- P. All plenum wiring is to be installed parallel and perpendicular to the building structure. Install wiring tight up against structure for protection. Cable shall be bundled on a maximum of 2'-6" and secured to the structure at a maximum of 5' on center. Bundling and support shall be with plenum rated cable ties.
- Q. Systems utilizing open wiring techniques with low smoke plenum cable shall provide conduit in all inaccessible locations, inside concealed walls, all mechanical/electrical rooms, or other areas where wiring might be exposed, to public view, or subject to physical damage.

3.4 CABLE PATHWAYS

- A. Cable Support:
 - 1. All wire not installed inside conduit, or a designated cable tray system shall be installed in a dedicated cable support system for the entire run of each cable. Including, but not limited to service loops.
 - 2. The approved cable support system shall be attached directly to the building steel at a serviceable height. In the event that the building steel is not within 5' of the finished ceiling, the contractor shall provide a dedicated threaded rod extending within 5' of the finished ceiling and mount the j-hook support hook to the treaded rod.
 - 3. **Supports:** Nonconductive Plenum Rated Polypropylene J-hook cable support shall be installed at a maximum of 5' on center.
 - 4. **All cables installed shall be attached to the J-hook support system with plenum-rated Velcro, and a plenum-rated Velcro tie shall be installed between each Polypropylene J-hook cable support to keep wires neatly bundled throughout the entire run. Tie wraps will only be allowed inside the control panels as required to manage the wires within each panel type.**
 - 5. ABSOLUTELY NO CABLE, NOT INSTALLED IN CONDUIT, WILL BE ALLOWED TO BE ATTACHED DIRECTLY TO THE BUILDING'S STEEL OR SUPPORTED IN ANY OTHER METHOD THAN THAT STATED ABOVE.
 - 6. IT IS THE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO COORDINATE WITH ALL OTHER TRADES ON THE PROJECT TO ENSURE THAT THE PATHWAY OF THIS SYSTEM DOES NOT INTERFERE WITH THE INSTALLATION OF THE OTHER TRADES AND TO PREVENT THE INSTALLED PRODUCT OF OTHER TRADES FROM PUTTING STRAIN ON THE INSTALLED WIRING.

3.5 TESTING

- A. Security contractor is responsible for inputting all database information for initial installation and configuration of system for users that will be using the system at the

campus or administration building. Contractor shall coordinate names and locations of authorization on system with Owner once system is ready for demonstration.

- B. Submit a written test report from an authorized representative of the equipment manufacturer that the system has been 100% tested and approved. Final test shall be witnessed by Owner, Engineer, and performed by the equipment supplier. Final test report must be received and acknowledged by the Owner prior to substantial completion.
- C. Provide instructions as to proper use and operation of the system, for the Owner's designated personnel.

3.5 CLOSEOUT SUBMITTALS

- A. Supply licensing and registration information for all software, hardware, firmware, operational, and administrative licenses.
- B. Supply network configuration backup files, restoration application and instructions
- D. System Support Resources:
 - 1. Submit a list of available manufacturers providing fee based professional services available to the Contractor or Owner, including but not limited to the following:
 - i. Training
 - ii. Installation
 - iii. Commissioning
 - iv. Remote diagnostics and integration with 3rd party software and hardware systems.
- E. Complete floor plan drawings locating all system devices and point to point wiring diagrams.

3.6 CLOSEOUT ACTIVITIES

- A. Demonstration:
 - 1. Demonstrate administration and operation of access control system.
 - 2. Demonstrate how an authorized user can log in and make changes to configuration of card holders, door access, and run reports.
 - 3. Demonstrate how to operate functionality configured for this project as defined by configuration punch list.
- B. Fine Tuning:
 - 1. Perform field software changes after initial programming session to "fine tune" operating parameters and sequence of operations based on any revisions to Owner's operating requirements.
- C. License Assignment:
 - 1. Register software, hardware, firmware, operational or administrative licenses necessary for to operate or administer devices to Owner including the end user license agreement (EULA).
 - 2. Deliver to Owner's Representative proof of license registration from product manufacturer.
- D. Device Configuration Backup:
 - 1. Open path primarily uses the us-west-2 (Oregon) and us-east-1 (N. Virginia) AWS regions, with core customer data and daily backups managed in Amazon Aurora and encrypted and stored in multiple regions.
 - 2. Event and user data can be CSV exported via the Avigilon Alta Control Center, or via the open API.

3.6 WARRANTY

- A. Entire system shall be warranted against defects in materials and workmanship for a period of one (1) year from the date of substantial completion.
- B. Submit confirmation and details of manufacturer's warranty, extended warranty, and replacement policies.

3.7 SOFTWARE

- A. Provide two electronic copies of the final programming and program software to the Owner's Security Supervisor after final approval.

END OF SECTION 28 13 00

SECTION 28 16 00 – INTRUSION DETECTION SYSTEM

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED WORK

- A. All Division 26 at relates to this section.

1.2 WORK INCLUDED

- A. The system shall include intrusion detection at every access point of the buildings, including but not limited to doors, roof hatches, windows and interior space motion detection. Card reader access interface must also be provided at locations noted.
 - 1. The Control System shall be the product of a single manufacturer.
 - 2. The system shall be portioned into 2 zones (kitchen and main building).
 - 3. Tag all conductors or cables at each end.
 - 4. Installation of security panels.
 - 5. Interconnection of security panels.
 - 6. Installation of new security devices.
 - 7. Full coverage of all windows, doors, roof hatches.
 - 8. Preconstruction meeting with Owner's personnel, installing technician and project superintendent.
- B. The contractor shall connect this location to the district monitoring station as designated by the owner.
- C. Contractor shall integrate the Intrusion Detection system with the Access Control system and the Video Surveillance system. Provide all cabling, connectors and Bosch interface devices as required. Coordinate with other trades. Provide all licenses required.
- D. Contractor shall connect all back-up batteries per manufacturer's instructions.
- E. Contractor shall use a step-bit drill bit to install flush mount door contacts. Do not use a hole saw.

1.3 CODES AND STANDARDS

The system shall comply with the applicable Codes and Standards as follows:

- A. National Fire Protection Association Standards:
 - 1. NFPA 70 National Electric Code
 - 2. NFPA 72 National Fire Alarm Code
 - 3. NFPA 101 Life Safety Code
- B. Local & State Building Codes
- C. Requirements of Local Authorities having Jurisdiction
- D. Underwriters Laboratory Requirements and Listings for use in Security Alarm Systems.
- E. Requirements of American Disabilities Act (Public law 101-336).
- F. Texas Accessibility Standards (T.A.S.)

- G. State Fire Marshall.
- H. Texas Insurance Code.

1.4 QUALITY ASSURANCE

- A. Contractor Qualifications:
 - 1. The installing contractor shall be the authorized representative of the Intrusion Detection system to sell, install, and service the proposed manufacturer's equipment. The installing contractor shall have represented the Intrusion Detection system manufacturer's product for at least two years.
 - 3. The installing contractor shall be licensed by the State of Texas as a security services contractor to design, sell, install, and service security alarm systems and access control system.
 - 4. The installing contractor shall provide 24-hour, 365 day per year emergency service with factory trained service technicians.
 - 5. The installing contractor shall have personnel on their staff that has been actively engaged in the business of designing, selling, installing, and servicing security alarm systems for at least ten (10) years.
 - 6. All Contractors must submit to the owner prior to starting any work the factory training certificates for all personnel that will be working on the Bosch System. No person is allowed to work on the Bosch system without proper manufacturer's certification.
 - 7. Contractor shall have at least 5 years of experience installing, servicing and supporting Bosch Radionics Systems and have a local office within 75 miles of project site.

1.5 SUBMITTALS

- A. The installing contractor and/or equipment supplier shall provide complete and detailed shop drawings and include:
 - 1. Control panel wiring and interconnection schematics.
 - 2. Complete point to point wiring diagrams.
 - 3. Riser diagrams.
 - 4. Complete floor plan drawings locating all system devices.
 - 5. Factory data sheets on each piece of equipment proposed.
 - 6. Detailed system operational description. Any specification differences and deviations shall be clearly noted and marked.
 - 7. Complete system bill of material.
 - 8. Line by line specification review stating compliance or deviation.
- B. All submittal data will be in bound form with Contractor's name, supplier's name, project name, and state security license number adequately identified.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS AND INSTALLERS

- A. BOSCH Security.

2.2 CONTROL COMMUNICATOR (Panel)

- A. The control communicator shall be Bosch model number B9512G with latest firmware upgrade. The unit shall be UL listed for commercial burglar alarm application and shall be FM approved.

1. The Intrusion Detection system shall be capable of being utilized as a combination Intrusion and Fire system per code. Fully integrated intrusion, access and fire functions allow users to interface with one system instead of three separate systems.
 2. Integrated Telephone Line Interface with programmable options for signaling and supervision.
 3. Conettix IP based communication option provides high-speed, secure alarm transport and control.
 4. 32 programmable areas with perimeter and interior partitioning.
 5. 8 on-board, class B hardwired points with expansion capability for a total of 246 wired or wireless points.
 6. Compatibility with touch-screen color LCD, vacuum fluorescent, ATM style LCD or LED style Alarm Command Centers.
 7. Local or remote programming, test, and diagnostic capability via a computer running the Remote Programming Software (RPS).
 8. The system shall support the use of an Apple iOS device for control. Functions to include arming, disarming, control of outputs, lock, unlock, cycle and secure access doors.
 9. Integrated real time clock, calendar, test timer and programmable scheduling capability for relay control and automatic execution of system functions based on a time / event.
 10. Provide 1.4 amps of power for standby operation and 2 amps of alarm power, both rated at 12 VDC.
 11. 2 wet-contact relay outputs and 1 Auxiliary wet-contact relay output with expansion capability for up to an additional 128 dry-contact relay outputs.
 12. Integrated battery charger with reverse hook up protection, battery supervision and battery deep discharge protection.
Supervision of peripheral devices and communications interface(s).
- B. Programmable features shall include:
1. Independently control zones through an independent zone control keypad.
 2. Two telephone number dial up for primary and secondary remote receivers.
 3. Automatic test reports.
 4. Selective zone shunting.
 5. Custom text on the associated command centers.
- C. Zone Expansion - Expanded to 246 individually annunciated points of protection through the addition of a two-wire multiplex zone expansion system (ZONEX). Points of protection are annunciated with custom text at the D1255B Alpha Command Center and they can be reported to a Bosch Connettix D6600 Receiver/Gateway.
- D. User Pass Codes – Nine Hundred ninety-nine (999) user pass codes shall be available to identify the user when arming/disarming the system.
- E. Protective Circuits shall consist of zones designed for fire and/or panic (holdup, duress, or emergency) and/or burglary and/or supervisory. Each zone represents a protective circuit and shall accommodate normally opened and closed devices with end-of-line resistor supervision. Each of the 246 points are programmable as to whether they are controlled versus 24 hours; interior versus perimeter; instant versus delayed; silent versus audible (and if audible, pulsed or steady); and local or reporting.
1. Additional programmable parameters for each point include the ability to suppress trouble or restoral reports, designate it as a priority zone (system cannot be armed if this point is off-normal), report two separate telephone numbers and provide for automatic shunting of points from the system in the event that the detection device malfunctions and creates numerous false alarms.
 2. Each POPIT shall accommodate normally opened and normally closed devices with

3. end-of-line resistor supervisor.
Minimum total points, 248.
- F. Entry/exit delays shall be independently programmable from 10 to 150 seconds. A pre-warn audible shall be coincident with the entry delay.
- G. Programming of all system functions shall be achievable at system site or remotely via the use of the dial-up telephone network. Minimum programmable functions shall include:
 1. User pass codes, entry/exit delay times, master zone personality, day/date/time, telephone numbers, point of protection text labels, and bell time.
 2. A programmable system pass code shall be used to prevent unauthorized remote programming attempts.
 3. Remote programming capability shall be automatic or require user enabling at the discretion of the user.
- H. Remote control via the use of the dial-up telephone and owners local area network shall include:
 1. System arming.
 2. Reset of audible signals.
 3. Activation/deactivation of relay contacts.
 4. Interrogation of battery.
 5. Zone and armed status.
 6. Enable/disable of reporting functions and removing reporting devices for servicing while the remainder of the system is operative.
- I. Recognitions shall include UL for central station fire and/or burglary, local burglary and/or fire; FM for fire, California Fire Marshal for fire; and NYBSA for fire.
- J. Miscellaneous built-in features shall include:
 1. Real-time clock.
 2. Interrogator.
 3. Auto-answer modem.
 4. Phone line monitor.
 5. Loop start/ground start telephone interface.
 6. Auto bell test.
 7. Lug-in terminal strips, and user-controlled zone bypass.
- K. Command center (arm/disarm keypad) shall be microprocessor-based, UL listed, with built in: Model B930 ATM Style Alphanumeric Keypad (SDI2)
 1. Provide clear, polycarbonate cover at each location.
- L. Modules and Accessories
 1. ZONEX (Zone Expansion D8125, D8126)
 2. D8132 Battery charger module
 3. D8103 Universal enclosure
 4. D8129 Octo-Relay module - provides eight form "C" dry contact relay outputs for a variety of programmable responses to alarm, trouble and other system conditions. They shall be automatically operated through schedules.
 5. Auxiliary power supplies as required for powering of motion detectors.
 6. DX4020 Network Interface module 1ea required.
 7. D928 Dual Phone Line switcher.
- M. Contractor shall provide the following devices for attic stock for the Intrusion Detection System that is installed. Contractor shall confirm and Coordinate manufacturer and model number of equipment installed:

1. 1 qty. Bosch Intrusion panel – model B9512G
2. 1 qty. Bosch Command Center (KP) – model B930

2.3 FIELD DEVICES

- A. Ceiling mounted, 360-degree dual technology, infrared sensors/microwave motion sensors. Model DS9370
 1. Bracket for direct mounting to standard 3-1/2" and 4" electrical backboxes.
 2. All units to have areas of coverage, which would cause false alarm signals to be generated, masked out and adjusted to reduce false signals.
 3. Contractor to provide a dedicated POPIT for each motion detector on the project.
- B. Wall mounted, high performance, TriTech PIR/Microwave sensor, Model DS970.
 1. Low Profile Bracket for directional mounting to standard 3-1/2" and 4" electrical backboxes.
 2. All units to have areas of coverage, which would cause false alarm signals to be generated, masked out and adjusted to reduce false signals.
 3. Provide in gymnasiums/cafeteria wall mounted areas. Provide protective wire cover in gymnasium areas.
 4. Contractor to provide a dedicated POPIT for each motion detector on the project.
- C. Magnetic Door/Hatch Contacts
 1. Door contacts shall be provided by Access Control Contractor. Div 28 13 00

2.4 WIRING

- A. All wiring shall be per the manufacture's specifications. All cable shall be shielded as required.
- B. All 120v Power shall be furnished by the Division 26 contractor.
- C. All Security Conduit as show on the drawings shall be furnished by the Division 26 contractor as part of there scope of work.
- D. Coordination with the Division 26 contractor is the responsibility of the Security Contractor to ensure all conduit is in place for a complete installation.
- E. All systems shall be connected to an emergency power source as available.
- F. Color code of all security intrusion detection system and access control wiring shall be purple in color.

Approved Products:

 1. 18/2 unshielded:
Belden #6300UE 0071000
Tappan Wire & Cable, Inc. #P40020.122
 2. 18/4 unshielded:
Belden #6302UE 0071000
Tappan Wire & Cable, Inc. #P41387.28
 3. Provide 18/6 cable as required: Belden or Tappan.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. All wiring shall be in accordance with the National Electrical Code, Local Codes, and article 760 of NFPA Standard 70. All wiring sizes shall conform to recommendations of the equipment manufacturer, and as indicated on the engineered shop drawings.
- B. All wire shall be UL Listed CL2 for limited energy (300V) applications and shall be installed in conduit. Limited energy MPP wire may be run open in return air ceiling plenums provided such wire is UL Listed for such applications and is of the low smoke producing fluorocarbon type and complies with NEC Article 760 if so approved by the local authority having jurisdiction.
- C. No AC wiring or any other wiring shall be run in the same conduit as security alarm wiring.
- D. All wire shall be installed in an approved conduit/raceway system (except where permitted by NEC and the local authority having jurisdiction). Maximum conduit "fill" shall not exceed 40% per NEC.
- E. Minimum conduit size shall be 3/4" EMT. Install conduit per engineered shop drawings.
- F. Systems utilizing open wiring techniques with low smoke plenum cable shall provide conduit in all inaccessible locations, inside concealed walls, all mechanical/electrical rooms, or other areas where wiring might be exposed or subject to damage.
- G. All vertical wiring and all main trunk/riser wiring shall be installed in a complete raceway/conduit system. All riser boxes shall be adequately sized for the number of conductors transversing the respective box as well as the number of terminations required.
- H. Telephone Cable: Provide a 4 pair Category 5E telephone cable from the Master Control Panel to the Telephone Equipment Room.
- I. Each motion sensor is to be connected into a dedicated POPIT module for point identification.
- J. Each set of magnetic door contacts that protect one room are to be connected through one POPIT module for point identification of that room.
- K. Magnetic door contacts protecting separate hallways or entry areas to be connected into separate POPIT modules for separate identification.
- L. **Provide and install (1) dedicate POPIT for each new device installed on the project. Including, but not limited to glass break detectors.**
- M. All POPIT Modules shall be installed inside a 4"x4" junction box with a cover. Junction box shall be mounted on the wall nearest to the device the POPIT Module is associated with and the module shall be mounted to the mounted to the back box at each location.
- N. Integrate the security system to the remote monitoring station. Provide all hardware and cabling as required. Coordinate with Owner for approved remote monitoring service.
- O. All popits on project shall be mounted above ceiling in easily accessible area. All popit modules are required to be located on as-built drawings delivered to owner at completion of project.
- P. All keypads and sirens shall have dedicated wiring homeruns from each keypad or siren back to panel. Do not daisy chain keypads or sirens.

- Q. Contractor shall install communication wire from freezer/cooler control panels to burglar alarm panel to notify panel should freezer/cooler encounter high temperature condition. Coordinate programming and final terminations with Owner.

3.2 CABLE PATHWAYS

A. Cable Support:

1. All wire not installed inside conduit or a designated cable tray system shall be installed in a dedicated cable support system for the entire run of each cable. Including, but not limited to service loops.
 - a. Approved Cable Support Product:
PANDUIT® Corporation J-MOD™ modular support system (sized appropriately for the number of wires being installed. Reference the manufacturer's specifications for the suggested maximum cables per support size.)
2. The approved cable support system shall be attached directly to the building steel at a serviceable height. In the event that the building steel is not 5' of the finished ceiling, the contractor shall provide a dedicated threaded rod extending within 5' of the finished ceiling and mount the J-MOD™ support hook to the treaded rod.
3. J-MOD™ cable support shall be installed at a maximum of 5' on center.
4. All cable installed shall be attached to the J-MOD™ support system with plenum rated Velcro and a plenum rated Velcro tie shall be installed between each J-MOD™ cable support to keep wires neatly bundled throughout the entire run. Tiewraps will only be allowed to be used inside the fire alarm panels as required to manage the wires within each type of panel.
5. **ABSOLUTELY NO CABLE, NOT INSTALLED IN CONDUIT, WILL BE ALLOWED TO BE ATTACHED DIRECTLY TO THE BUILDING'S STEEL OR SUPPORTED IN ANY OTHER METHOD THAN THAT STATED ABOVE.**
6. **IT IS THE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO COORDINATE WITH ALL OTHER TRADES ON THE PROJECT TO INSURE THAT THE PATHWAY OF THIS SYSTEM DOES NOT INTERFERE WITH THE INSTALLATION OF THE OTHER TRADES AND TO PREVENT THE INSTALLED PRODUCT OF OTHER TRADES FROM PUTTING STRAIN ON THE INSTALLED WIRING.**

B. Conduit / Raceway:

1. All wire shall be installed in an approved conduit/raceway system (except where permitted by NEC and the local authority having jurisdiction). Maximum conduit "fill" shall not exceed 40% per NEC.
2. Conduit and raceway system shall be installed as specified under the general electrical section of the specifications, and per NEC.
3. Minimum conduit size shall be 3/4" EMT. Install conduit per engineered shop drawings.
4. Systems utilizing open wiring techniques with low smoke plenum cable shall provide conduit in all inaccessible locations, inside concealed walls, all mechanical/electrical rooms, or other areas where wiring might be exposed or subject to damage.

3.3 SYSTEM OPERATION

- A. When an alarm condition is detected by any of the alarm initiating devices, the following functions shall occur:
1. The system keypad's interior audible device shall sound until silenced by using proper security code or after system time out.
 2. A custom system alarm message shall be displayed on the LCD display. This

display will show the alarm device location in plain English. Location and partition custom messages shall be field programmable.

3. The remote signaling tie connection shall be activated at the Owner's approved central security monitoring location and/or other Owner designated location.
4. Printer shall provide printed copy of events recorded in logger. Install adjacent to security panel.

3.4 SYSTEM ZONING AND PARTITIONING

- A. The system shall employ intelligent initiating devices and interface devices capable of being recognized and enunciated at the main system keypad and devices partition keypad.
- B. All zoning/device locations shall be field programmable.
- C. Input control zones include but are not limited to the following:
 1. Elementary and Junior High Schools
 - a. Kitchen
 - b. Main school areas

3.5 TESTING

- A. Submit a written test report from an authorized representative of the equipment manufacturer that the system has been 100% tested and approved. Final test shall be witnessed by Owner, Engineer, Electrical Contractor and performed by the equipment supplier. Final test report must be received and acknowledged by the Owner prior to substantial completion.
- B. Provide instruction as to proper use and operation of system, for the Owner's designated personnel.

3.6 WARRANTY

- A. Entire system shall be warranted against defects in materials and workmanship for a period of one (1) year from the date of substantial completion.

3.7 SOFTWARE

- A. Provide two electronic copies of the final programming and program software to the Owner's Security Supervisor after final approval.

END OF SECTION

SECTION 28 23 00 - VIDEO SURVEILLANCE SYSTEM

PART 1 – GENERAL

1.1 DESCRIPTION OF WORK

- A. This section identifies the requirements, technical design, and specifications of a cloud-hosted video surveillance system consisting of cloud-connected cameras and sensors for Huffman ISD located in Huffman, Texas ("Owner"). The video surveillance system as specified is an industry-standard and includes network video recorder(s)/server(s), software, licenses, cameras, mounts, cabling and video system programming as specified.
- B. Provide a complete and tested fully networked IP based digital video surveillance system including cameras, cabling, digital image storage, integration and accessibility with Owner's Local/Wide Area Network (LAN/WAN), Internet accessibility thru remote view application software and simultaneous user access capability. The installation shall comply with applicable codes and standards in effect at the job site and as indicated in the Specifications and Drawings.
- C. The system shall be Non-Proprietary in nature and be available through multiple distribution channels in the Houston Marketplace. System that are manufactured and installed by a factory office and are not available through multiple distribution channels will not be accepted.
- D. Provide all electronic hardware and coordinate with the building's LAN/WAN. The contractor shall coordinate with other system vendors, where appropriate, to facilitate equipment installation, scheduling, protection of equipment and access to the project site to provide the Owner a substantially complete project in a timely manner. HISD will assign computer names, and all IP addresses for each system.
- E. Provide all licensing and software required for a turnkey installation for all devices shown on the drawings and within this specification.
- F. The contractor shall integrate the Video Surveillance system with the Access Control system. Coordinate with other trades. Provide all licenses required.
- G. It is the Contractor's responsibility to review this specification and associated project specifications and drawings in their entirety, prior to bidding on the project. By bidding on this project, the contractor acknowledges that they have read and fully understand these specifications, with no exceptions. The contractor shall review the drawings, specifications, and existing conditions prior to bidding on the project. Any discrepancies shall be brought to the attention of the architect/Design Consultant via request for information (RFI) in writing for evaluation and or clarification. If these items are not brought to the attention of the architect/Design Consultant the more costly or difficult manner, and the better quality or greater quantity of work shall be provided by the contractor in accordance with the architect's/Design Consultant's interpretation at no additional cost to the owner. Contractor shall verify the installation methodology of each device location prior to proceeding with installation. Potential obstructions or mounting conflicts due to changing conditions shall be identified via written RFI for approval with the Owner / Architect / Design Consultant.
- H. Contractor shall furnish and install all materials, equipment, and labor necessary to provide a complete and functional turn-key Video Surveillance system regardless of any items not listed or described in this specification or associated drawings.

1.2 QUALITY ASSURANCE

- A. Installer Qualifications:
 - 1. The Video Surveillance System Installer shall be licensed and shall meet all applicable regulations. The Contractor shall be a firm normally employed in the installation of Digital Video Surveillance Equipment.
 - 2. The contractor shall be certified by the manufacturer in all aspects of design, installation and testing of the products described herein. Each contractor shall furnish with their proposal a letter from the manufacturer indicating they are a dealer in good standing.
 - 3. The contractor must be certified by the manufacturer of the products, adhere to the engineering, installation and testing procedures and utilize the authorized manufacturer components and distribution channels.
 - 4. The contractor shall be experienced in all aspects of this work and shall be required to demonstrate direct experience on recent systems of similar type and size. The contractor shall own and maintain tools and equipment necessary for successful installation and testing of video surveillance distribution systems and have personnel who are adequately trained in the use of such tools and equipment.
 - 5. The installing contractor must have a permanent office within a 75-mile radius of the project site and be an approved dealer/integrator of the proposed system, in the nearest major metropolitan area.
 - 6. The proposing contractor and the installing contractor must be the same company.
 - 7. A resume of qualifications shall be submitted with the Contractor's proposal indicating the following:
 - a. A list of five recently completed projects using the product proposed of similar type and size with contact names and telephone numbers for each.
 - b. A list of test equipment proposed for use in verifying the installed integrity of metallic cable systems on this project.
 - c. A technical resume of experience for the contractor's Project Manager and on-site installation supervisor who shall be assigned to this project.
 - d. A list of technical product training attended by the contractor's personnel that shall install the video surveillance system shall be submitted.
 - e. Any subcontractor who shall assist the video surveillance contractor in performance of this work shall have the same training and certification as the video surveillance contractor.
- B. The Owner's representative reserves the right to reject all or a portion of the work performed, either on technical or aesthetic grounds.
- A. The Drawings, Specifications, General Conditions, Supplementary General Conditions, and other requirements of Division 01 apply to the work specified in Division 28 and shall be complied with in every respect. The Contractor shall examine all the items which make up the Contract Documents and shall coordinate them with the work on the project.

1.3 REGULATORY REQUIREMENTS

- A. Standards: All work shall be performed in accordance with the latest revisions of the following standards and codes:
 - 1. Local Building Code
 - 2. Local Electrical Code
 - 3. NEC National Electrical Code
- B. Other references:
 - 1. TIA/EIA-568-A - Commercial Building Telecommunications Wiring Standard

2. EIA/TIA-569 - Commercial Building Standard for Telecommunications Pathways and Spaces.
 3. TIA/EIA-606 - The Administration Standard for the Telecommunications Infrastructure of Commercial Buildings
 4. TIA/EIA-607 - Commercial Building Grounding and Bonding Requirements for Telecommunications
 5. TIA/EIA TSB 67 - Transmission Performance Specification for Field Testing of Unshielded Twisted-Pair Cabling Systems.
 6. ISO/IEC 11801 - Generic Cabling Standard
 7. EN 50173 - Generic Cabling Standards for Customer Premises
- C. Governing Codes and Conflicts:
1. If the requirements of these specifications or the Project Drawings exceed those of the governing codes and regulations, then the requirements of these specifications and the Drawings shall govern. However, nothing in the Drawings or Specifications shall be construed to permit work not conforming to all governing codes, regulations, and manufacturer installation requirements.

1.4 SUBMITTALS

- A. The video surveillance system installer shall furnish the following in a single consolidated submittal:
1. Permits: The Contractor shall obtain all required permits and provide copies to the Owner/Architect/Engineer
 2. Product Literature: Complete manufacturer's product literature for all electronics, cable, cable supports, cable labels, outlet devices, and other products to be used in the installation. In addition, whenever substitutions for recommended products are made, samples (when requested by the Owner/Architect/Engineer) and the manufacturer's supporting documentation demonstrating compatibility with other related products shall be included.
 3. Testing: Proposed Contractor test result forms, a list of instrumentation to be used for systems testing.
 4. Specification Compliance: A letter shall be provided stating, by section and subsection, that the intercom system installer complies with the ENTIRE specification section. If the installer intends to deviate from any portion of the specifications, a detailed explanation of the reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.
- B. Certifications/Licensing: The contractor shall submit all of the following certifications/licensing, and all must contain dates which are valid from the date of proposal and not expired any sooner than 12 months after substantial completion of the project.
1. State Licenses as applicable to this system
 2. Manufacturer's Authorized Dealer Certification
 3. Manufacture Installer Training Certificate (required for at least 25% of all installers on site.)
- C. Shop Drawings: Submit the following items, for Owner review and approval:
1. Proposed cable routing and power circuit grouping plan.
 2. In addition to the above listed items, the submitted drawings shall show the following:
 - a. Location of wall penetrations (all penetrations shall be sleeved and contain protective bushings at both ends)
 - b. Location of sleeved wall pass-thru
 - c. Size of sleeve at each location installed

- d. Quantity of cable passing through each sleeve
 - 3. Conformance: For items which are being provided exactly as specified, provide a letter stating the item description and model number, and that it is being provided as specified.
 - 4. Drawing Compliance: A letter shall be provided stating that the Access Control system installer complies with the ENTIRE project drawing, including all general, keyed, and notes to contractor. If the installer intends to deviate from any portion of the specifications, a detailed explanation of the reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.
- D. Closeout Submittals
- 1. Final payment of the contractor will not be authorized until the complete documentation specified herein is delivered to the owner. 10% retainage of the entire project will be withheld until receipt of this information.
 - 2. Two (2) copies of the following documents shall be delivered to the building owner's representative at the time of system acceptance. The close out submittals shall include:
 - a. Inspection and Test Reports: During the course of the Project, the Contractor shall maintain an adequate inspection system to ensure that the materials supplied, and the work performed, conform to contract requirements. The Contractor shall provide written documentation that indicates that materials acceptance testing was conducted as specified. The Contractor shall also provide documentation which indicates that all cable termination testing was completed and that all irregularities were corrected prior to job completion.
 - b. Include the Name, address and telephone number of the authorized factory representative with a 24-hour emergency service number.
 - c. The manual shall also include the Manufacturer's data sheets and installation manuals/instructions for all equipment installed a list of recommended spare parts.
 - d. Generic or typical owner's instruction and operation manual shall not be acceptable to fulfill this requirement.
 - e. An up-to-date record ("as-built") set of approved shop drawing prints that have been revised to show each and every change made to the security camera system from the original approved shop drawings. Drawings shall consist of a scaled plan of each building showing the placement of each individual item of the Security Camera System equipment as well as raceway size and routing, junction boxes, and conductor size, quantity, and color in each raceway.
 - f. As-built Drawings shall include cable pathways, camera locations with correct labeling and MDF/IDF locations. The as-built drawings shall be prepared using AutoCAD 2019 or later. Provide the Owner with electronic versions of the as-builts on 2 qty. 8MB thumb drives.
 - g. All drawings must reflect point to point wiring, device address and programmed characteristics as verified in the presence of the engineer and/or the end user unless device addressing is electronically generated, and automatically graphically self-documented by the system.
 - h. A hard copy printout of the system software database and an electronic version (on disk or CD) of the system program and database with all required passwords, as installed at the time of acceptance by the owner.
 - i. A copy of the manufacturer's warranty on the installed system.
 - j. Any keys to cabinets and/or equipment and special maintenance tools required to repair, maintain, or service the system.

- k. Operating and Maintenance Instructions for all devices within the system. These instructions shall reflect any changes made during the course of construction, and shall be provided to the Owner, for their use, in a three-ring binder labeled with the project name and description. (4 copies)
- l. Upon completion of the work and at a time designated by the Architect or owner, provide formal training sessions for the Owner's operating personnel to include location, operation, and maintenance of all included systems and equipment. The minimum amount of training time shall be at least 4 hours.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

- A. The following sections specifically list the acceptable equipment types and items for this project.
- B. All software, hardware, and equipment (from the date of RFP) shall be tested, currently available and commercially off the shelf product. (COTS).
- C. All wiring, equipment, and installation materials shall be Commercial Grade, new, and of the highest quality to meet or exceed the performance and features of the equipment and devices specified herein.
- D. All devices shall be installed with the manufacturer recommended mounts and accessories as necessary for the installation locations type as scheduled.
- E. Unless otherwise stated, all software and licensing shall be for the most current, up to date version of the system provided. For existing systems, Contractor shall obtain written verification of the Owner's most current software version and notify via RFI the Architect / Design Consultant / Owner if implementation of the most current software / license version will require an upgrade to the Owner's existing system.
- F. Architect / Design Consultant / Owner will have final determination of acceptability of all proposed equipment and must approve submitted equipment prior to purchase or installation.
- G. In the event a manufacturer's specified product or part number has changed or is no longer available, Contractor shall submit a formal RFI for an appropriate substitute.
- H. In the event of a discrepancy between the specifications and the drawings, the greater quantity and/or better quality will be furnished at no additional cost to the owner.
- I. Labels on all cabling, materials, and equipment must indicate a nationally recognized testing laboratory.
- J. The contractor shall review all products specified and required for this project to determine if there are any lead times for any products that may cause any delay. The contractor shall clearly identify any concerns with lead times in writing to the Architect / Design Consultant / Owner. If the Contractor does not identify any concerns with products having long lead times, it will be understood there are no long lead time issues, and the Contractor will have all products on-site when needed to complete the job as per the project schedule.
- K. Any quantities listed are for reference only, contractor is responsible for furnishing materials as required to provide a fully functional turkey system. Where quantities are not noted, Contractor shall refer to drawings and schedules to determine exact quantities.
- L. Video Surveillance System Cabling
 - 1. By Division 27 10 00
 - 2. Pathway Cable Support installed by others
- M. Surge Protection
 - 1. Provide surge suppression for any exterior cameras connecting back into central network system.
- N. Camera updated to latest stable release of firmware.
- O. Configure IP Address with provided static IP, Subnet and Gateway. (Provided by HISD)
- P. Each camera to have a unique password. (Provided by HISD)
- Q. The contractor shall connect all back-up batteries per manufacturer's instructions.

- R. The contractor shall provide new acoustic ceiling tiles that match existing ceiling tiles where existing cameras have been removed.
- S. Coordinate with Owner regarding camera network configuration and estimated bandwidth utilization prior to connection of cameras to Owner's network.
- T. Labeling
 - 1. Permanent Labels for Copper Cables
 - 2. Panduit Self-Laminating Labels
 - 3. Or approved equal.
- U. Fire Stop
 - 1. STI Spec Seal
 - 2. 3M Products
 - 3. Or approved equal.

2.2 SYSTEM REQUIREMENTS

- A. The video surveillance system shall be a cloud-hosted video management system (VMS), including network-based cloud-connected cameras with native onboard storage.
- B. **All videos shall be stored for a minimum of 30 days unless directed otherwise by the owner.** The contractor shall ensure that adequate storage / server capacity and quantity is provided to accommodate the number of camera views for each campus to retain 30 days of storage. 72 hours centralized storage at the district NOC and the remaining storage shall be cloud based to achieve a full 30 days minimum of storage.

2.3 MANUFACTURERS

- A. Basis of Design: Avigilon Alta Video
 - 1. Address: 500 W Monroe Street, Ste 4400, Chicago, IL 60661, USA.
 - 2. Phone: +1 (888) 281-5182
 - 3. Website: www.motorolasolutions.com
- B. Manufacturer List:
 - 1. Motorola Solutions, Inc
- C. Source Restrictions: Supplier to provide a fully integrated cloud-hosted surveillance system consisting of fixed position and movable network cameras and the following components obtained from a single source and provided by a single manufacturer:
 - 1. Cloud-Hosted Video Management System
 - 2. Cloud Connected Video Surveillance Cameras
 - 3. Cloud Connector Appliance for non-cloud cameras
 - 4. Video Surveillance Sensors

2.4 CLOUD HOSTED VIDEO MANAGEMENT SOFTWARE SYSTEM

- A. Basis of Design Product: Avigilon Alta Aware.
- B. General: Provide Cloud-Hosted Video Management software that allows the following functionality:
 - 1. VMS Software that is fully hosted in the cloud.
 - 2. Provides access to the following camera types:
 - a. Cloud Connected Cameras
 - b. Cameras record locally and send to the cloud on a defined schedule.
 - c. Third Party Cameras connected to a Cloud Connector Appliance.
 - 3. The VMS shall include a simplified layout, intuitive controls, and customizable features that support multi-person interactions and include the following:
 - a. Video analytics from all connected cameras to identify objects and events, based on pre-determined rules and unusual activity detection.

- b. Instant notification and alarms via text/email.
 - c. Allows monitoring of live and recorded video over wireless IP networks from Apple or Android mobile devices.
 - d. Support up to 16 total camera views within a single layout, and concurrently run multiple instances of VMS in separate tabs within same web browser without logging user out.
 - e. Enables viewing access control events directly in a camera view.
 - f. Enabling of people counting, vehicle counting, intrusion detection, and forensic investigation.
 - g. Employing AI to self-learn, enabling progressively more accurate analytic results over time.
- C. System: Provide a scalable cloud-hosted VMS solution with the following capabilities:
- 1. Compression types supported: H.265, H.264, MJPEG, JPEG2000
 - 2. The VMS shall support IP cameras and encoders from third party manufacturers in addition to their own products.
 - 3. The VMS shall discover IP cameras and encoders automatically.
 - 4. Camera capacity:
 - a. Per server: 16-200
 - b. Per site: unlimited
 - 5. The VMS shall provide dynamic stream selection.

2.5 VIDEO MANAGEMENT SOFTWARE FUNCTIONALITY

- A. General: Provide a cloud-hosted VMS application that can be logged into from any web-browser (Chrome, Microsoft Edge, etc.) with a username and password.
- 1. The VMS shall also support two factor authentication via an authenticator app (such as Google Authenticator or Microsoft Authenticator) and allow the system administrator to enable corporate account single-sign on for the deployment.
- B. Dashboard: Provide an intuitive dashboard upon user login that displays tools based on user access level. Dashboard shall display the following:
- 1. Video view
 - 2. Map view
 - 3. Devices
 - 4. Search
 - 5. Rules
 - 6. Appliances
 - 7. Users
 - 8. Alarms
 - 9. Counts
 - 10. Saved Clips
- C. Video View: Provide an intuitive interface where user can choose their layout from a pre-defined number of tiles that can display up to 16 camera streams at one time.
- 1. User shall be able to populate each view by selecting and dragging individual cameras, camera groups, or all cameras associated to a site.
 - 2. Each individual viewing tile shall be able to switch between live or recorded video.
 - 3. Video View interface shall support automatic rotation configuration, and the ability to set up custom rotations. Once rotation is set, VMS shall automatically display Analytic or high priority rule triggers automatically within the Video view pane.
 - 4. Video View shall be capable of enabling additional information as graphic layers within each tile and showing the following:
 - 5. Timeline
 - 6. Vehicle Bounding Boxes
 - 7. People Bounding Boxes

8. Object Counts
9. Access Control Information
10. Cloud Storage Usage
11. License Plate Data
12. Sound Equalizer
13. Audio Levels
- D. Map View: Support mapping of physical locations of cameras and other devices throughout VMS.
 1. Provide maps with the ability to do the following:
 - a. Upload site maps to view
 - b. Add single and room walls within site map
 - c. Add cameras and other devices onto map by dragging to representative position
 - d. Set camera fields of view
 - e. Link site maps and additional information markers
 - f. Display object types and counting for vehicles and people
 - g. Add integrated access control points
 - h. Remotely unlock access control points
 - i. Enable heatmap information
 2. Map view shall display and track different object types as they move through linked cameras in real time.
 - a. User shall be able to click on person or vehicle icons to view video stream from selected camera.
- E. Devices Tool: VMS shall provide a centralized device administration tool capable of displaying all connected cameras, access control points, sensors, and IP speakers at all sites in one location.
 1. From the Device Tool the user shall be able to do the following:
 - a. Search for cameras and other devices (access control points, sensors, etc.) visible to VMS.
 - b. An advanced search feature can be enabled to filter results based on user selected category.
 - c. Edit the information for existing cameras and devices.
 - d. Add new cameras and devices into VMS.
 - e. Show/hide a thumbnail view for each camera.
 - f. Set up configuration profiles that can define resolution, recording mode and retention policy.
 - g. Set up anomaly detection settings for cameras.
 - h. Define credentials to be applied to cameras used in VMS.
 - i. Define device groups to use when assigning cameras.
 - j. Show the devices tool in full-screen mode.
 - k. Enable audio announcements.

2.6 VIDEO MANAGEMENT FORENSIC SEARCH FUNCTIONALITY

- A. The VMS shall facilitate forensic or other investigation by provisioning the following search functions:
 1. Similarity
 2. Physical characteristics
 3. Event
 4. Individual image
 5. Timeline with embedded thumbnail images
 6. All video
- B. Face Searching (extra license)
 1. Ability to search to look for video footage of a specific face via uploaded image.

- C. Searching must allow for the sharing of results via a secured cloud link.
 - 1. Sharing an unlimited amount of external video links from multiple cameras that include password encryption.

2.7 VIDEO MANAGEMENT CYBER SECURITY FUNCTIONALITY

- A. Cloud
 - 1. Cloud connectivity will only be possible through HTTPS (port 443).
 - 2. All connections to the cloud shall be outbound and require no ports be opened for inbound communication to support the VMS application.
 - 3. Each cloud deployment shall be a fully independent instance, fully isolated and protected from other deployments.
 - 4. Users shall have full control over the system maintenance window.
- B. Streaming
 - 1. Video streaming shall be controlled via RTSP operating over TLS.
 - 2. SRTP shall be used to provide encryption, message authentication and integrity of the streaming video.
 - 3. The cloud system shall be architected so that latency and bandwidth consumption are minimized, as is the involvement of the Manufacturer-operated cloud.
- C. Encryption
 - 1. Video shall be encrypted using AES.
 - 2. All recordings and metadata shall be encrypted at rest in both the cloud and the camera.
- D. Tampering detection shall be provided through the digital watermarking of video.

2.8 3RD PARTY INTEGRATIONS

- A. Access Control
 - 1. Alta Access (formerly OpenPath)
- B. Identity Providers
 - 1. Azure-AD
 - 2. Google
 - 3. OKTA
 - 4. ADFS

2.9 MOBILE APPLICATION

- A. VMS must have an available mobile app for both Apple App Store and Google Play Store.
- B. Mobile application must offer the following features:
 - 1. Remote viewing of live and recorded video.
 - 2. Remote access to audio recording.
 - 3. Access to alarms on mobile.
 - 4. Ability to add cameras to Cloud VMS via QR code on mobile app.
 - 5. Ability to do similarity searching.

2.10 CAMERAS

- A. Acceptable Manufacturers
 - 1. Avigilon Alta
 - 2. ONVIF Cameras connected to Avigilon Alta Cloud Connector
- B. Performance Requirements for all camera types:
 - 1. Provide a five (5) year Avigilon Alta Aware Cloud Subscription License per camera.

2. Camera firmware updates for cloud-connected cameras shall be automatically managed from the cloud.
3. The camera shall have factory-installed certificates, backed by a Trusted Platform Module (TPM 2.0) and unique encryption keys.
4. The camera shall have no default passwords.
5. Access authentication shall be mandatory.
6. Encryption: via HTTPS and TLS.
7. Connectivity: 802.3ab 10/100/1000 BASE-TX Gigabit Ethernet
8. Protocols supported:
 - a. Security: Transport Layer Security (TLS)
9. Local SD storage
 - a. Up to 2x Micro SD, SDXC UHS-1 card
 - b. 30 days onboard storage
10. Warranty: up to 10 years with Alta Aware license, 3 years without.

C. Camera Types:

1. CLOUD-HOSTED DOME CAMERA (ON-PREMISE & CLOUD-NATIVE)

(Type 1 on Drawings)

Interior Model Number – 5.0C-H6SL-D1-IR

Exterior Model Number – 5.0C-H6SL-DO1-IR

- a. The Cloud-Hosted Dome Camera shall be the Avigilon Alta H6SL Dome Camera. The camera shall be an indoor/outdoor network dome camera with 5 MP image resolution, equipped with Artificial Intelligence (AI) and audio analytics, and with the option for wide angle or telephoto lenses.
- b. Image Sensor:
 - 1) Size: 1/2.8" progressive scan CMOS
 - 2) Resolution: 5 MP
 - 3) Aspect Ratio:
 - a) 5 MP: 4:3
- c. Dynamic Range:
 - 1) 5 MP: HDR Off: 83 dB; HDR On: 130 dB
- d. Maximum Streaming Resolutions:
 - 1) 5 MP: 2592 x 1944 pixels
- e. Lens:
 - 1) 3.4 – 10.5 mm
 - a) Maximum IR illumination range: with high power 850 nm LEDs
 - (1) 5 MP:
 - (2) 30 m (100') full tele
 - (3) 20 m (65') full wide
 - b) Minimum illumination:
 - (1) 5 MP:
 - (2) With IR: 0 lux in monochrome mode
 - (3) Without IR: 0.01 lux in color mode
 - (4) 0.005 lux in monochrome mode
 - c) Horizontal Field of View:
 - (1) 5 MP: 95° - 28°
 - d) Vertical Field of View:
 - (1) 5 MP: 69° - 21°
 - (2) Max Aperture: f/1.6

- f. Video:
 - 1) Compression type: H.264, MJPEG
 - 2) Electronic Shutter Control: Automatic
 - 3) Day/Night Control: Automatic
 - 4) Flicker Control: 50-60 Hz
 - 5) Iris Control: P-Iris
 - 6) White Balance: Automatic
 - 7) Image Rotation: 0°, 90°, 180°, 270° including Corridor Mode
 - 8) Privacy Zones: up to 64 zones
- g. Network:
 - 1) Type: 100 BASE-TX
 - 2) Cabling Type: minimum Cat-5
 - 3) Connector: RJ-45
 - 4) ONVIF: Profile S, T, G, M compliant
 - 5) Protocols: IPv6, IPv4, HTTP, HTTPS, SOAP, DNS, NTP, RTSP, RTCP, RTP, TCP, UDP, IGMP, ICMP, DHCP, ARP, HSTS
 - 6) Streaming Protocols: WebRTC, RTP/RTSP/UDP, RTP/RTSP/TCP, RTP/RTSP/HTTP/TCP, RTP/RTSP/HTTPS/TCP
 - 7) VMS Platform Compatibility: Avigilon Alta Aware, Avigilon Unity/ACC, 3rd-party VMS (must run Unity firmware)
- h. Auxiliary I/O:
 - 1) Audio Compression Method: G.711 PCM 8kHz, Opus
 - 2) Audio Input/Output: Line Level I/O
 - 3) External I/O Terminals: Alarm In/Alarm Out
- i. Mechanical:
 - 1) Dimensions: D x H
 - a) Surface Mount: 156 mm x 116 mm (6.1" x 4.6")
 - b) In-Ceiling Mount: 174 mm x 165 mm (6.9" x 6.5")
 - c) Pendant Mount: 156 mm x 116 mm (6.1" x 4.6")
 - 2) Weight:
 - a) Surface Mount: 0.81 kg (1.78 lbs)
 - b) In-Ceiling Mount: 0.81 kg (1.76 lbs)
 - c) Pendant Mount: 1.07 kg (2.35 lbs)
 - 3) Construction Material:
 - (1) Dome Bubble, Body & Housing: polycarbonate
 - 4) Finish: plastic, injection molded, Pantone 427C.
- j. Electrical
 - 1) Power Source: PoE IEEE 802.3af Class 3 compliant, 12 VDC Aux
 - 2) IR Illuminator:
 - a) Turns off if temperature is 60°C (140°F) or higher.
 - b) Will operate at 50% power if the temperature is between 40°C (104°F) and 52°C (117°F).
 - c) Hysteresis: 2°C (3.6°F).
 - 3) RTC Battery Backup: 3V manganese lithium.
 - 4) PoE: 10 W max (8 W with no IR or IR disabled).
 - 5) Memory: 1 GB RAM, 512 MB flash
- k. Environmental:
 - 1) Operating Temperature:
 - a) Indoor Dome: -10°C - 60°C (-14°F - 140°F)
 - b) Outdoor Dome: -40°C - 60°C (-40°F - 140°F)
 - 2) Storage Temperature:

- a) Indoor Dome: -10°C - 70°C (-14°F - 158°F)
- b) Outdoor Dome: -10°C - 70°C (14°F - 158°F)
- 3) Humidity: 0 – 95% non-condensing
- I. Analytic Rules Supported:
 - 1) Objects in Area
 - 2) Object Loitering
 - 3) Objects Crossing Line
 - 4) Object Counting
 - 5) Object Line Crossing Counting
 - 6) License Plate Detection
 - 7) Audio
 - a) Glass Break
 - b) Loud Noise
 - c) Gun Shot
 - d) Screaming
 - e) Smoke Alarm
 - f) Car Alarm
 - g) Ultrasound Panic Alarm
 - h) Dog Barking
 - i) Tire Screeching

2. CLOUD-HOSTED 360° CAMERA

(Type 2 on Drawings)

Interior Model Number – 360-W-30

- a. The Cloud-Hosted 360° camera shall be the cloud-native Avigilon Ava 360 Camera. The camera shall be an indoor/outdoor network dome camera with up to 12 MP (9 MP effective) image resolution, equipped with Artificial Intelligence (AI) and audio analytics, and with the option for built-in retention for cloud operation.
- b. Image Sensor:
 - 1) Size: 1/2.3"
 - 2) Resolution: 12 MP, 9 MP effective
- c. Lens:
 - 1) Fixed Focus
 - 2) Aperture: f/2.0
 - 3) Focal Length: 0.5 - infinite
 - 4) Field of view: >180°
 - 5) Automatic Night Mode
 - 6) IR cut filter
 - 7) IR Range: 20m
 - 8) 850 nm IR LED
- d. Video:
 - 1) Compression type: H.264, MJPEG
 - 2) Maximum resolution: up to 3008 x 3008 pixels
 - 3) Frame rate: up to 30 fps
 - 4) Dynamic range: multi-exposure line-based HDR
 - 5) The camera shall provide AI-based video analytics to include people and vehicle presence.
- e. Cloud:
 - 1) All upgrades shall be automatically managed from the cloud.

- f. Electrical:
 - 1) Power Input: IEEE 802.at PoE+, Type 2
 - 2) Power Consumption:
 - a) Typical: 5 W
 - b) Without heater: 13 W
 - c) With heater: 23 W
- g. Mechanical and Environmental:
 - 1) Construction material: Aluminum; thermo-plastic bubble.
 - 2) Finish options: white, black.
 - 3) Impact resistance: IK10
 - 4) Dimensions (D x H): 152 mm x 152 mm x 77 mm (6.0" x 6.0" x 3.0").
 - 5) Weight: 1.1kg (2.4 lbs)
- h. Temperature:
 - 1) Operating: -40°C to 50°C (-40°F to 122°F).
 - 2) Storage: -40°C to 60°C (-40°F to 140°F).
- i. Ingress protection: IP66
- j. Mounting Box Options:
 - 1) Octagon
 - 2) 4" square
 - 3) Single or double gang
 - 4) EU ceiling or outlet box
- k. Mounting Options:
 - 1) Pendant mounting cap in white, black.
 - 2) Wall arm mount in white, black.
 - 3) Pendant head in white.
 - 4) Pendant pipe, 40 cm ((15.75") in white.
 - 5) Pole bracket in white, black.
 - 6) Corner bracket in white, black.
 - 7) Conduit adapter, 20 mm (3/4") in white, black.
- l. Storage:
 - 1) microSD
 - 2) SDXC UHS-1 card

3. CLOUD-HOSTED BULLET CAMERA (ON-PREMISE & CLOUD-NATIVE)

3.4 - 10.5mm Lens – 5.0C-H6SL-BO1-IR (Type 3 on Drawings)

10.9 - 29mm Lens – 5.0C-H6SL-BO2-IR (Type 4 on Drawings)

- a. The Cloud-Hosted Bullet Camera shall be the Avigilon Alta H6SL Bullet Camera. The camera shall be an indoor/outdoor network bullet camera with 5 MP image resolution, equipped with Artificial Intelligence (AI) and audio analytics, and with the option for wide angle or telephoto lenses.
- b. Image Sensor:
 - 1) Size: 1/2.8" progressive scan CMOS
 - 2) Resolution: 5 MP
- c. Aspect Ratio:
 - 1) 5 MP: 4:3
- d. Dynamic Range:
 - 1) 5 MP: HDR Off: 83 dB; HDR On: 130 dB
- e. Maximum Streaming Resolutions:
 - 1) 5 MP: 2592 x 1944 pixels
- f. Lens:
 - 1) 3.4 – 10.5 mm

- a) Maximum IR illumination range: with high power 850 nm LEDs
 - (1) 5 MP:
 - (2) 40 m (131') full tele
 - (3) 20 m (65') full wide
- b) Minimum illumination:
 - (1) 5 MP:
 - (2) With IR: 0 lux in monochrome mode
 - (3) Without IR: 0.04 lux in color mode
 - (4) 0.02 lux in monochrome mode
- c) Horizontal Field of View:
 - (1) 5 MP: 95° - 28°
- d) Vertical Field of View:
 - (1) 5 MP: 69° - 21°
 - (2) Max Aperture: f/1.6
- 2) 10.9 – 29 mm
 - a) Maximum IR illumination range: with high power 850 nm LEDs
 - (1) 5 MP:
 - (2) 70 m (230') full tele
 - (3) 30 m (100') full wide
 - b) Minimum illumination:
 - (1) 5 MP:
 - (2) With IR: 0 lux in monochrome mode
 - (3) Without IR: 0.04 lux in color mode
 - (4) 0.02 lux in monochrome mode
 - c) Horizontal Field of View:
 - (1) 5 MP: 28° - 10°
 - d) Vertical Field of View:
 - (1) 5 MP: 21° - 7°
 - (2) Max Aperture: f/1.6
- g. Video:
 - 1) Compression type: H.264, MJPEG
 - 2) Electronic Shutter Control: Automatic
 - 3) Day/Night Control: Automatic
 - 4) Flicker Control: 50-60 Hz
 - 5) Iris Control: P-Iris
 - 6) White Balance: Automatic
 - 7) Image Rotation: 0°, 90°, 180°, 270° including Corridor Mode
 - 8) Privacy Zones: up to 64 zones
- h. Network:
 - 1) Type: 100 BASE-TX
 - 2) Cabling Type: 6A
 - 3) Connector: RJ-45
 - 4) ONVIF: Profile S, T, G, M compliant
 - 5) Protocols: IPv6, IPv4, HTTP, HTTPS, SOAP, DNS, NTP, RTSP, RTCP, RTP, TCP, UDP, IGMP, ICMP, DHCP, ARP, HSTS
 - 6) Streaming Protocols: WebRTC, RTP/RTSP/UDP, RTP/RTSP/TCP, RTP/RTSP/HTTP/TCP, RTP/RTSP/HTTPS/TCP
 - 7) VMS Platform Compatibility: Avigilon Alta Aware, Avigilon Unity/ACC, 3rd-party VMS (must run Unity firmware)
- i. Auxiliary I/O:
 - 1) Audio Compression Method: G.711 PCM 8kHz, Opus
 - 2) Audio Input/Output: Line Level I/O

- 3) External I/O Terminals: Alarm In/Alarm Out
 - j. Mechanical:
 - 1) Dimensions (with junction box): 296 mm x 126 mm x 106 mm (11.7" x 5.0" x 4.2")
 - 2) Weight:
 - a) Without junction box: 1.31 kg (2.88 lbs)
 - b) With junction box: 1.78 kg (3.92 lbs)
 - 3) Construction Material:
 - a) Dome Bubble: polycarbonate
 - b) Body: aluminum
 - c) Housing: aluminum
 - d) Finish: powder coat, Pantone 427C.
 - k. Electrical
 - 1) Power Source: PoE IEEE 802.3af Class 3 compliant, 12 VDC Aux
 - 2) IR Illuminator: turns off if temperature is 60°C (140°F) or higher.
 - 3) RTC Battery Backup: 3V manganese lithium.
 - 4) PoE: 13 W max
 - 5) Memory: 1 GB RAM, 512 MB flash
 - l. Environmental:
 - 1) Temperature:
 - a) Operating: -40°C - 60°C (-40°F - 140°F)
 - b) Storage: -10°C - 70°C (14°F - 158°F)
 - m. Humidity: 0 – 95% non-condensing
4. H5A DUAL HEAD CAMERA (Requires Cloud Connector)

(Type 5 on Drawings)

Model Number – 10.0C-H5DH-DO1-IR

- a. The Cloud-Hosted Dual Head Camera shall be the Avigilon Alta H5A Dual Head Camera. The camera shall be an indoor network dual head camera with 5 MP image resolution, equipped with Artificial Intelligence (AI) and audio analytics, and with the option for wide angle or telephoto lenses.
- b. Image Sensor:
 - 1) Size: 1/2.7" progressive scan CMOS
 - 2) Resolution: 5 MP
 - 3) Aspect Ratio:
 - a) 5 MP: 4:3
- c. Dynamic Range:
 - 1) 5 MP: HDR Off: 82 dB; HDR On: 120 dB
- d. Maximum Streaming Resolutions:
 - 1) 5 MP: 5184 x 1944 pixels
- e. Lens:
 - 1) 3.4 – 7.0 mm
 - a) Maximum IR illumination range: with high power 850 nm LEDs
 - (1) 5 MP:
 - (2) 30 m (98') full tele
 - (3) 15 m (49') full wide
 - b) Minimum illumination:
 - (1) 5 MP:
 - (2) With IR: 0 lux
 - (3) Without IR: 0.01 lux in color mode

- (4) 0.005 lux in monochrome mode
 - c) Horizontal Field of View:
 - (1) 5 MP: 43° - 91°
 - d) Vertical Field of View:
 - (1) 5 MP: 32° - 67°
- f. Video:
 - 1) Compression type: H.264, MJPEG
 - 2) Electronic Shutter Control: Automatic
 - 3) Day/Night Control: Automatic
 - 4) Flicker Control: 50-60 Hz
 - 5) Iris Control: N/A
 - 6) White Balance: Automatic
 - 7) Privacy Zones: up to 64 zones
- g. Network:
 - 1) Type: 100 BASE-TX
 - 2) Cabling Type: minimum Cat-5
 - 3) Connector: RJ-45
 - 4) ONVIF: Profile S, T, G, M compliant
 - 5) Protocols: IPv6, IPv4, HTTP, HTTPS, SOAP, DNS, NTP, RTSP, RTCP, RTP, TCP, UDP, IGMP, ICMP, DHCP, ARP, HSTS
 - 6) Streaming Protocols: WebRTC, RTP/RTSP/UDP, RTP/RTSP/TCP, RTP/RTSP/HTTP/TCP, RTP/RTSP/HTTPS/TCP
 - 7) VMS Platform Compatibility: Avigilon Alta Aware, Avigilon Unity/ACC, 3rd-party VMS (must run Unity firmware)
- h. Auxiliary I/O:
 - 1) Audio Compression Method: G.711 PCM 8kHz, Opus
 - 2) Audio Input/Output: Line Level I/O
 - 3) External I/O Terminals: Alarm In/Alarm Out
- i. Mechanical:
 - 1) Dimensions: D x H
 - a) Surface Mount: 218 mm x 118 mm (8.6" x 4.6")
 - b) In-Ceiling Mount: 237 mm x 137 mm (9.3" x 5.4")
 - c) Pendant Mount: 230 mm x 129 mm (6.1" x 4.6")
 - 2) Weight:
 - a) Surface Mount: 1.25 kg (2.75 lbs)
 - b) In-Ceiling Mount: 2.33 kg (5.13 lbs)
 - c) Pendant Mount: 1.67 kg (3.67 lbs)
 - 3) Construction Material:
 - a) Dual Head Dome Bubble, Body & Housing: Aluminum
 - 4) Finish: Cast, powder coated close to RAL9002
- j. Electrical
 - 1) Power Source: PoE IEEE 802.3af Class 3 compliant, 12 VDC Aux
 - 2) IR Illuminator:
 - a) Turns off if temperature is 60°C (140°F) or higher.
 - b) Will operate at 50% power if the temperature is between 40°C (104°F) and 52°C (117°F).
 - c) Hysteresis: 2°C (3.6°F).
 - 3) RTC Battery Backup: 3V manganese lithium.
 - 4) PoE: 10 W max (8 W with no IR or IR disabled).
 - 5) Memory: 1 GB RAM, 512 MB flash
- k. Environmental:
 - 1) Operating Temperature:

- a) Indoor Dome: -10°C - 60°C (-14°F - 140°F)
- b) Outdoor Dome: -40°C - 60°C (-40°F - 140°F)
- 2) Storage Temperature:
 - a) Indoor Dome: -10°C - 70°C (-14°F - 158°F)
 - b) Outdoor Dome: -10°C - 70°C (14°F - 158°F)
- 3) Humidity: 0 – 95% non-condensing
- I. Analytic Rules Supported:
 - 1) Objects in Area
 - 2) Object Loitering
 - 3) Objects Crossing Line
 - 4) Object Counting
 - 5) Object Line Crossing Counting

5. CLOUD-HOSTED MULTISENSOR CAMERA

Three Image Sensors – 15C-H5A-3MH-30 (Type 6 on Drawings)

Four Image Sensors – 20C-H5A-4MH-30 (Type 7 on Drawings)

- a. The Cloud-Hosted Multisensor Camera shall be the Avigilon Alta H5A Multisensor Camera. The camera shall be an indoor/outdoor multisensor IP camera with up to four sensors, equipped with Artificial Intelligence (AI) and audio analytics, and options for wide angle or telephoto lenses.
- b. Image Sensor:
 - 1) Size: 1/2.8" CMOS
 - 2) Active Pixels (H x V):
 - a) 5.0 MP: 2592 (H) x 1944 (V) 4:3
- c. 3 x Image Sensors Max Resolution:
 - 1) 5.0 MP: 7776 x 1944 (4:3)
- d. 4 x Image Sensors Max Resolution:
 - 1) 5.0 MP: 10368 x 1944 (4:3)
- e. IR Illumination - optional (high power 850 nm LEDs): 30 m (98') max distance at 0 lux when camera is mounted at 4 m (13') off the ground.
- f. Minimum Illumination:
 - 1) 5.0 MP:
 - 2) 0.020 lux (f/1.5) in color mode
 - 3) 0.018 lux (f/1.5) in monochrome mode
 - 4) 0 lux with optional IR illuminator
- g. Dynamic Range:
 - 1) HDR On: 120 dB, true HDR, dual exposure
 - 2) HDR Off: 80 dB
- h. 3D Noise Reduction Filter Supported
- i. Maximum Frame Rate (60 Hz / 50 Hz):
 - 1) 5.0 MP: 24 fps / 25 fps
- j. Image Control:
 - 1) Compression type: H.264, Motion JPEG
 - 2) Electronic Shutter Control: Automatic
 - 3) Day/Night Control: Automatic
 - 4) Flicker Control: 60 Hz / 50 Hz
 - 5) White Balance: Automatic
 - 6) Privacy Zones: up to 64 zones
- k. Lens (per image sensor):
 - 1) Focal Length: 3.3 - 5.7 mm

- 2) Field of view:
 - a) Horizontal:
 - (1) 5.0 MP: 53° - 99° (4:3)
 - b) Vertical:
 - (1) 5.0 MP: 39° - 69° (4:3)
- 3) Aperture Range: f/1.5 - f/1.9
- 4) Control: Fixed Iris, Remote Focus and Zoom
- l. Video:
 - 1) Compression type: H.264 and MJPEG
 - 2) Dynamic range:
 - a) HDR On: dual-exposure 120 dB true HDR
 - b) HDR Off: 80 dB
 - 3) The camera shall provide AI-based video analytics to include people and vehicle presence.
 - a) Small and medium vehicles (sedans, SUV, pickup truck).
 - b) Large vehicles (bus, truck).
 - c) Two-wheel vehicles (bicycle, motorcycle).
 - d) Unclassified vehicles.
 - e) Person
 - f) Color of clothing and vehicles.
 - g) Face (US only based on location).
- m. Network:
 - 1) Type: Gigabit ethernet, 100BASE-TX, 1000BASE-TX
 - 2) Cabling Type: minimum Cat-5E
 - 3) Connector: RJ-45
 - 4) ONVIF: Profile S, T, G and M compliant
 - 5) Protocols: IPv4, HTTP, HTTPS, SOAP, DNS, NTP, RTSP, RTCP, RTP, TCP, UDP, IGMPv3, ICMP, DHCP, HSTS
 - 6) Streaming Protocols: WebRTC, RTP/RTSP/UDP, RTP/RTSP/TCP, RTP/RTSP/HTTP/TCP, RTP/RTSP/HTTPS/TCP
 - 7) VMS Platform Compatibility: Avigilon Alta Aware, Avigilon Unity/ACC, 3rd-party VMS (must run Unity firmware)
- n. Auxiliary I/O:
 - 1) Audio Compression Method: G.711 PCM 8kHz, Opus
 - 2) Audio Input/Output: Line Level I/O
 - 3) External I/O Terminals: Alarm In/Alarm Out
- o. Electrical
 - 1) Power Consumption:
 - a) In-Ceiling:
 - (1) 26 W with 24 VDC
 - (2) 37 VA with 24 VAC
 - (3) 25.5 W with IEEE 802.3at Type 2 (PoE+)
 - b) Surface Mount:
 - (1) With IR:
 - 52 W with 24 VDC
 - 74 VA with 24 VAC
 - 51 W with high-power PoE (PoE++)
 - (2) Without IR:
 - 26 W with 24 VDC
 - 37 VA with 24 VAC
 - 25.5 W with IEEE 802.3at Type 2 (PoE+)
 - c) Pendant Mount:

- (1) With IR:
 - 52 W with 24 VDC
 - 74 VA with 24 VAC
 - 51 W with high-power PoE (PoE++)
- (2) Without IR:
 - 26 W with 24 VDC
 - 37 VA with 24 VAC
 - 25.5 W with IEEE 802.3at Type 2 (PoE+)
- 2) External Power: 24 VDC +/- 10%; 24 VAC rms +/- 10%, 50 or 60 Hz
- 3) PoE:
 - a) In-Ceiling Mount:
 - (1) 30 W IEEE 802.3at Type 2 (PoE+)
 - b) Surface Mount:
 - (1) With IR: 60 W (PoE++): IEEE 802.3bt Type 3, Cisco UPoE or legacy high-power PoE.
 - (2) Without IR or with Up to 35% IR power: 30 W IEEE 802.3at Type 2 (PoE+)
- 4) Redundant Power: Seamless failover between PoE and Aux and back without interruption in camera operation.
- p. Mechanical:
 - 1) Dimensions: D x H
 - a) Surface Mount: 304 mm x 114 mm (11.95" x 4.48")
 - (1) In-Ceiling Mount:
 - (2) Overall: 298 mm x 161 mm (11.75" x 6.33)
 - (3) Below Mounting Surface: 298 mm x 64 mm (11.75" x 2.52")
 - b) Pendant Mount:
 - (1) With Wall Arm: 385 mm x 262 mm x 299 mm (15.15" x 10.3" x 11.77")
 - (2) With NPT Adapter: 299 mm x 248 mm (11.77" x 9.76")
 - 2) Weight:
 - a) Surface Mount:
 - (1) Mount: 950 g (2.1 lbs)
 - (2) Bezel: 1250 g (2.8 lbs)
 - (3) Camera Module (4 lenses): 1590 g (3.5 lbs)
 - (4) Optional IR Illuminator Ring: 670 g (1.5 lbs)
 - b) In-Ceiling Mount:
 - (1) Mount: 1100 g (2.4 lbs)
 - (2) Bezel: 490 g (1.1 lbs)
 - (3) Camera Module (4 lenses): 1590 g (3.5 lbs)
 - c) Pendant Mount:
 - (1) With Wall Arm: 1190 g (2.6 lbs)
 - (2) With NPT Adapter: 470 g (1.04 lbs)
 - (3) Pendant: 1680 g (3.7 lbs)
 - (4) Bezel: 1250 g (2.8 lbs)
 - (5) Camera Module (4 lenses): 1590 g (3.5 lbs)
 - (6) Optional IR Illuminator Ring: 670 g (1.5 lbs)
 - 3) Body Construction Material:
 - a) In-Ceiling: Aluminum, plastic dome trim
 - b) Surface Mount: Aluminum
 - c) Pendant Mount: Aluminum
 - 4) Finish:
 - a) In-Ceiling Mount: plastic, injection molded, Pantone 427C.
 - b) Surface Mount: Cast, Anodized and Powder Coated, Pantone 427C.

- c) Pendant Mount: Cast, Anodized and Powder Coated, Pantone 427C.
- q. Environmental:
 - 1) Operating Temperature:
 - a) In-Ceiling Mount: -10°C - 50°C (14°F - 122°F)
 - b) Surface Mount: -40°C - 60°C (-40°F - 140°F)
 - c) Pendant Mount: -40°C - 60°C (-40°F - 140°F)
 - 2) Storage Temperature:
 - a) In-Ceiling Mount: -30°C - 70°C (-22°F - 158°F)
 - b) Surface Mount: -30°C - 70°C (-22°F - 158°F)
 - c) Pendant Mount: -30°C - 70°C (-22°F - 158°F)
 - 3) Humidity: 0 – 95% non-condensing
- r. IR Illuminator:
 - 1) In-Ceiling: N/A
 - 2) Surface Mount & Pendant Mount:
 - a) IR power will operate at 100% if the temperature is between -40°C - 44°C (-40°F - 111°F).
 - b) IR power will reduce to 60% if the temperature is between 44°C - 53°C (111°F - 127°F).
 - c) IR power will turn off if temperature is 53°C (127°F) or higher
 - d) Hysteresis: 6°C (10.8°F).
 - e) For 25.5 W PoE+, IR power will operate at only 35% and will turn off if the temperature is below -26°C (-15°F).
- s. Analytic Rules Supported:
 - 1) Objects in Area
 - 2) Object Loitering
 - 3) Objects Crossing Line
 - 4) Object Counting
 - 5) Object Line Crossing Counting
 - 6) License Plate Detection
 - 7) Audio
 - a) Glass Break
 - b) Loud Noise
 - c) Gun Shot
 - d) Screaming
 - e) Smoke Alarm
 - f) Car Alarm
 - g) Ultrasound Panic Alarm
 - h) Dog Barking
 - i) Tire Screeching

6. CLOUD-HOSTED PAN-TILT-ZOOM CAMERA

(Type 8 on Drawings)

In-Ceiling Model Number – 4.0C-H6A-PTZ-DC30-30

Pendant Model Number – 4.0C-H6A-PTZ-DP30-30

- a. The Cloud-Hosted Pan-Tilt-Zoom Camera shall be the Avigilon Alta H6A PTZ Camera. The camera shall be an indoor/outdoor IP pan-tilt-zoom camera with 360-degree views and up to 30X zoom. The PTZ camera shall be available in 2 MP or 4 MP image resolution, equipped with Artificial Intelligence (AI) and audio analytics, and options for wide angle or telephoto lenses.
- b. Image Sensor:
 - 1) Size: 1/1.8" progressive scan CMOS

- 2) Active Pixels (H x V):
 - a) 4 MP: 2560 (H) x 1140 (V)
- 3) Aspect Ratio: 16:9
- 4) Dynamic Range:
 - a) HDR On: up to 122 dB, dual exposure
 - b) HDR Off: 80 dB
- 5) Maximum Frame Rate:
 - a) 4 MP: (50 Hz/60 Hz) 25 fps/30 fps
- 6) Streaming Resolutions:
 - a) Maximum:
 - (1) 4 MP: 2560 x 1440
 - b) High:
 - (1) 4 MP: 1920 x 1080
 - c) Medium:
 - (1) 4 MP: 1280 x 720
 - d) Low:
 - (1) 4 MP: 640 x 360
- c. Image Control:
 - 1) Compression Type: H.264
 - 2) Electronic Shutter Control: Automatic
 - 3) Day/Night Control: Automatic, Manual
 - 4) Flicker Control: ON/OFF
 - 5) Iris Control: Automatic
 - 6) White Balance: Automatic
 - 7) Pan/Tilt Presets: 300 configurable
- d. Lens:
 - 1) Focal Length: 6.5 mm to 162.5 mm, f/1.6 – f/4.8
 - 2) Angle of View:
 - a) Wide (H x V): 58.1 x 34.8
 - b) Tele (H x V): 2.3 x 1.4
 - 3) Zoom: 30X Enhanced Optical
 - 4) Lens Control: Remote Zoom and Focus, Autofocus, Auto Iris
- e. Network:
 - 1) Type: 100BASE-TX, 1000BASE-T with Auto MDI/MDI-X speed
 - 2) Cabling Type: minimum Cat-5e
 - 3) Connector: RJ-45
 - 4) ONVIF: Profile S, T, G and M compliant
 - 5) Security: Password protection, HTTPS encryption
 - 6) Protocols: IPv6, IPv4, HTTP, HTTPS, SOAP, DNS, NTP, RTSP, RTCP, RTP, TCP, UDP, IGMP, ICMP, DHCP, ARP, HSTS
 - 7) Streaming Protocols: WebRTC, RTP/RTSP/UDP, RTP/RTSP/TCP, RTP/RTSP/HTTP/TCP, RTP/RTSP/HTTPS/TCP
 - 8) Secure Boot: Yes
 - 9) VMS Platform Compatibility: Avigilon Alta Aware, Avigilon Unity/ACC, 3rd-party VMS (must run Unity firmware)
- f. Auxiliary I/O:
 - 1) Audio Input/Output: Full Duplex Line Level input and output
 - 2) Audio Compression Method: G.711 PCM 8 kHz, Opus
 - 3) External I/O Terminals:
 - a) 3x Alarm In (3.5VDC/3.5mA MAX)
 - b) 1x NO Relay Out (32VDC/150mA MAX)
 - c) 1x Digital Out (13VDC/140mA MAX)

- d) 1x 12VDC source (11~13VDC/140mA MAX)
- g. Mechanical:
 - 1) Dimensions (L x W x H):
 - a) In-Ceiling Mount:
 - (1) Camera Only: 263 mm x 225 mm x 225 mm (10.4" x 8.8" x 8.8")
 - b) Pendant Mount:
 - (1) Camera Only: 302 mm x 242 mm x 242 mm (11.9" x 9.5" x 9.5")
 - 2) Weight:
 - a) In-Ceiling Mount:
 - (1) Camera Only: 3.45 kg (7.60 lbs)
 - b) Pendant Mount:
 - (1) Camera Only: 4.15 kg (9.13 lbs)
 - 3) Maximum Ceiling Thickness:
 - a) In-Ceiling Mount: 44.5 mm (1.75")
 - 4) Construction Material:
 - a) Dome Bubble: polycarbonate
 - b) Body: polycarbonate and aluminum
 - 5) Finish: Plastic injection mold close to RAL9002 and Black; Powdercoat Gray, AKZO Nobel JP301H; Sand Grain Texture with Satin Sheen
 - 6) Pan Range: 360° continuous
 - 7) Tilt Range: +/- 95° (190° total)
 - 8) Pan Speed:
 - a) 0.05-500°/sec w/IEEE 802.3at Type2, Class 4
 - b) 0.05-750°/sec w/IEEE 802.3bt Type 3, Class 6
 - c) 0.05-900°/sec w/IEEE 802.3bt Type 4, Class 8
 - 9) Tilt Speed:
 - a) 0.05-160°/sec w/ IEEE 802.3at Type 2, Class 4
 - b) 0.05-250°/sec w/ IEEE 802.3bt Type 3, Class 6
 - c) 0.05-300°/sec w/ IEEE 802.3bt Type 4, Class 8
 - 10) Preset Accuracy: 0.1°
- h. Electrical:
 - 1) Power Source:
 - a) In-Ceiling Mount: IEEE 802.3at Type 2, Class 4 compliant
 - b) Pendant Mount:
 - (1) IEEE 802.3at Type 2, Class 4 compliant
 - (2) IEEE 802.3bt Type 3, Class 6 compliant
 - (3) IEEE 802.3bt Type 4, Class 8 compliant
 - 2) PoE Power Consumption:
 - a) In-Ceiling Mount: 25W maximum
 - b) Pendant Mount: 70W maximum
 - 3) Power Source, Aux: Aux 24VDC/VAC +/- 10%
 - 4) AUX Power Consumption:
 - a) In-Ceiling Mount: 35W (DC source), 55VA (AC source) maximum
 - b) Pendant Mount: 70W (DC source), 85VA (AC source) maximum
 - 5) RTC Backup Battery: 3V manganese lithium
 - 6) Auxiliary Power Connector: 2-pin screw terminal removable plug
 - 7) Memory: 4GB RAM, 4GB Flash
- i. Environmental:
 - 1) Operating Temperature:
 - a) In-Ceiling Mount: -10°C to 50°C (14°F to 122°F)
 - b) Pendant Mount:
 - (1) -10°C to 60°C (14°F to 140°F), w/ IEEE 802.3at Type 2, Class 4

- (2) -40°C to 60°C (-40°F to 140°F), w/ IEEE 802.3bt Type 3, Class 6
- (3) -51°C to 60°C (-59.8°F to 140°F), w/ IEEE 802.3bt Type 4, Class 8
- 2) Boot Temperature:
 - a) In-Ceiling Mount: -10°C to 50°C (14°F to 122°F)
 - b) Pendant Mount:
 - (1) -10°C to 60°C (14°F to 140°F), w/ IEEE 802.3at Type 2, Class 4
 - (2) -25°C to 60°C (-13°F to 140°F), w/ IEEE 802.3bt Type 3, Class 6
 - (3) -40°C to 60°C (-40°F to 140°F), w/ IEEE 802.3bt Type 4, Class 8
- 3) Absolute Maximum Temperature: 74°C (165°F) per NEMA TS2 (Temp.)
- 4) Storage Temperature: -10°C to 70°C (14°F to 158°F)
- 5) Operating Humidity:
 - a) In-Ceiling Mount: 10 – 90% non-condensing
 - b) Pendant Mount: 10 – 100%
- j. Analytic Rules Supported:
 - 1) Appearance: Rule triggered when an object of the selected type and attributes appears.
 - 2) Loitering: Rule triggered when an object of the selected type and attributes loiters for the selected period of time.
 - 3) Counting: Rule triggered when the count of objects of the selected type either exceeds or is less than the selected threshold.
 - 4) Sound: Rule triggered when sounds of specified types is detected (requires compatible microphone and additional license for listening/recording of audio).
 - a) Supported Sound Events:
 - b) Glass Break
 - c) Loud Noise
 - d) Gun Shot
 - e) Screaming
 - f) Smoke Alarm
 - g) Car Alarm
 - h) Ultrasound Panic Alarm
 - i) Dog Barking
 - j) Tire Screeching
- k. Analytic Features:
 - 1) Object Detection: works with any view
 - 2) Appearance Search: works with any view
 - 3) Loitering Rules: any view
 - 4) Object Counting: any view
 - 5) Audio Analytics, Streaming and Recording: connect external microphone to audio line in
 - 6) Line Crossing: home position only
 - 7) Image Health: home position only
 - 8) License Plate Recognition: not currently supported
 - 9) Area of Interest: not currently supported
 - 10) Auto Tracking: not currently supported
 - 11) Privacy masks: not currently supported
 - 12) Anomaly Detection: not applicable

7. AVIGILON ALTA CLOUD CONNECTOR

a. **A2000 – P/N: APP-2000-80-BT**

- 1) A2000 is a 2U rack-mounted unit with 12 hard disks
- 2) Up to 100 cameras supported
- 3) Nvidia Quadro RTX GPU

- 4) SATA storage up to 192TB (raw), 160TB (net)
- 5) Flexible network options
- 6) 5-year warranty

PART 3 - EXECUTION

3.1 EXECUTION - GENERAL REQUIREMENTS

- A. Contractor shall comply with the requirements of local Authority Having Jurisdiction (AHJ), State of Texas, the National Fire Protection Association (NFPA), and the National Electrical Code (NEC). If the Contractor identifies any item in the plans or specifications that will not strictly comply with the laws, ordinances, and rules, the matter shall be referred to the Architect / Design Consultant for direction before proceeding with that part of the work.
- B. Contractor shall meet the specifications and standards from the latest NFPA and NEC publications. In the event of any conflicts between Standards and Codes the more stringent shall take precedence.
- C. The Contractor shall install the materials in accordance with these specifications and the manufacturer's installation guidelines. Equipment and materials installed by the Contractor shall be free of defects and damage.
- D. No deviations from the plans, details or specifications shall be made without full consent in writing of the Architect / Design Consultant. The Contractor shall have written approval from the Architect / Design Consultant for any additional work beyond the Contract Documents prior to beginning such work.
- E. Prior to execution, Contractor shall verify no changes in software, licensing or hardware versions have occurred since the bidding of the project. In the event of any changes, Contractor shall verify system compatibilities with their proposed design and notify via RFI the Architect / Design Consultant / Owner if the newest version(s) will require any upgrades / additional costs to the existing system(s).
- F. In the event site conditions do not allow the contractor to follow the execution requirements specified herein or in the provided details, the Contractor shall submit via RFI an alternative means and methods that is approved in writing by the Architect / Design Consultant / Owner.
- G. The Contractor shall obtain written permission from the Architect / Design Consultant / Owner before proceeding with any work that would necessitate cutting into or through any part of the building structure such as, but not limited to: girders, beams, floors, walls, roofs, and/or ceilings.
- H. If the Contractor does not obtain written approval from the Architect / Design Consultant / Owner prior to proceeding with the work, the contractor shall not be reimbursed for the work.
- I. Contractor shall notify the Architect / Design Consultant / Owner a minimum of (1) weeks prior to beginning work and will participate in a pre-construction meeting with the Architect / Design Consultant / Owner to perform a walkthrough, review the scope of work, schedule, and escalation procedures.
- J. The Contractor shall maintain a work area free of debris, trash, empty cable reels, scrap cable, etc., and dispose of such items on a daily basis and return the site to the original state of cleanliness. The Contractor shall not use Owner's facilities for the disposal of excess or scrap materials.
- K. The contractor shall be responsible for the repair of any damage caused by the contractor during the installation.
- L. The contractor shall test all cables prior to and post installation. By failing to perform this testing operation, the Contractor shall accept the cable as compliant and assume all liability for the replacement of the cable at no cost to the Owner should it be found defective at a later date.
- M. Contractor shall maintain a set of working specifications, design drawings, schedules, and record drawings to be always kept on site and shall update the record drawings with any changes on a weekly basis. Record drawings shall be made available for inspection at the request of the Architect / Design Consultant / Owner.
- N. Equipment and materials shall be consistent throughout the installation. Where multiple units of the same type of equipment and materials are required, these units shall be a standard

- product with the same manufacturer and model number.
- O. Equipment and materials shall be delivered and stored in accordance with the manufacturer's guidelines at the Contractor's expense.
 - P. The contractor shall make all stored equipment and materials available for inspection at the request of the Architect / Design Consultant / Owner.
 - Q. All equipment and material used in the installation shall be approved by the manufacturer for the environment in which it is being installed.
 - R. All devices shall be installed flush, plumb, and (where required) centered on the wall, ceiling tile or structure for which it is being installed, unless otherwise noted.
 - S. Devices installed in public spaces shall be mounted and secured using tamper- proof security fasteners unless otherwise noted.
 - T. Cables shall be properly supported in accordance with industry standards at all times. Improperly supported cables shall be corrected by the Contractor at no cost to the Owner.
 - U. Contractor shall be responsible to properly protect information outlets from damage by other trades during construction.
 - V. Cables shall be routed at 90-degree angles to the building structure. At no time shall a diagonal pull be installed.
 - W. The Contractor shall not install cables in conduits or sleeves without nylon bushings. Cables installed through conduits or sleeves without nylon bushings shall be removed and replaced at no cost to the Owner.
 - X. The manufacturer and contractor shall take positive measures to prevent the introduction of cybersecurity threats to the Owners technology infrastructure. These measures shall include but are not limited to:
 - 1. The contractor shall scan contractor owned equipment for cyber threats such as viruses, malware, ransomware, etc., prior to connecting the contractor owned devices to the Owners network.
 - 2. Ensure all technicians installing or configuring equipment are trained on the prevention of introduction of cyber threats to electronics, i.e., servers, and other associated equipment.
 - 3. All project documents shall be properly securely stored behind encryption and password protection to avoid unauthorized distribution of documents.
 - Y. All security system cabling shall be yellow in color.
 - Z. All security system cabling shall be plenum rated.
 - 1. All security system cabling shall be installed following the same pathway and support requirements as Division 27 Communications.

3.2 COORDINATION REQUIREMENTS

- A. The Contractor is responsible for the coordination of the following items and their respective disciplines included but not limited to.
- B. Coordinate with the Architect to ensure that:
 - 1. Adequate conduit is provided and that equipment backboxes are adequate for system installation.
 - 2. Adequate communication infrastructure and power has been provided and properly located for the security system equipment.
 - 3. Finishes and colors of all equipment visibly installed in public areas. Submit all finish and graphics for all equipment to the Architect for approval prior to installation.
 - 4. Camera views are not obstructed by landscaping, awnings, or any other obstacles.
 - 5. Mounting techniques are in compliance with construction techniques.
 - 6. Camera location and field of views are adequate and meets Owner's expectations.
- C. Coordinate with the Division 26 contractor for the following:
 - 1. Power requirements, conduit sizes/pathways, sleeves, back boxes, grounding, and bonding requirements of security devices in the following locations:
 - a. Interior of the building

- b. Exterior of the building
 - c. Pole, pedestals, canopies, awnings, building architectural surface, etc.
 - d. Special conditions (clean room, hazardous areas, roof top mounted devices, etc.).
 - e. License Plate Recognition (LPR) exact camera placement requirements.
- 2. Coordinate location and termination of earth ground for all device specified herein as required per manufacturer installation requirements.
- D. Coordinate with the Division 27 contractor for the following:
 - 1. Installation and power requirements of network infrastructure associated to the specified system.
 - 2. Associated patch cable lengths and quantities required for the specified system.
 - 3. Location, power, and backup requirements for rack mount equipment.
 - 4. Mounting and installation of injectors, midspans, extenders, surge protectors, etc.
- E. The Contractor is responsible for coordinating all VMS programming requirements with the Owner / Architect / Design Consultant.
- F. The Contractor shall coordinate with the Owner prior to installation for the following:
 - 1. Network IP addressing for networked system equipment, servers, and devices.
 - 2. Device labeling scheme
 - 3. Firmware/software updates
 - 4. Client workstations requirements and locations
 - 5. Location of rack mount equipment.
 - 6. Locations, type, programming, configuration, and Owner's final expectations for any Contractor Furnished Contractor Installed (CFCI) equipment and devices.
 - 7. Uninterruptible Power Supply (UPS) requirements.
 - 8. Painting of exposed, publicly visible conduit pathways
 - 9. Camera Views (Owner's Written Acceptance Required)

3.3 SYSTEM REQUIREMENTS

- A. General
 - 1. The Video Surveillance System (VSS) shall consist of server(s), software, licensing, workstations, cameras, power source, grounding/bonding, Video Surveillance cabling, and all other peripheral components as indicated on the drawing and specified herein.
 - 2. Any devices associated with the installation shall have the latest firmware updates/downloads via Owner approved secure link from the system software and/or remotely from the manufacturer.
 - 3. All Video Surveillance software, equipment and system requirements shall be installed per their respective Manufacturer Installation Guidelines.
- B. VMS System Programming
 - 1. **All** programming and configuration of the Video Surveillance Systems shall be accomplished by the Security Contractor.
 - a. The Security Contractor is responsible for all Video Surveillance System (VSS) programming to ensure the installed field devices, cameras, servers, workstations, media converters, etc., are communicating to the head-end equipment.
 - 2. System Configuration:
 - a. Camera recording and display configurations shall be arranged during the provisioning phase, based on coordination with Owner and the specifications.
 - b. Contractor shall coordinate with Owner to determine the required pre-programmed surveillance and event-initiated configurations.
 - 3. Graphical User Interface (GUI) Environment

- a. General
 - 1) Security Contractor shall create and provide maps for each site and building, and for each floor of the building where VSS devices are provided.
 - 2) The VSS client shall display color graphic maps, menus and real-time information regarding system configuration, camera location and status, in graphical format, as required by Owner and described herein. Contractor shall research icon usage and use same icons through the system.
 - a) Map Database: Contractor shall research (with Owner), design, develop and provide site and building maps described herein in complete operating condition including graphic representations, icons, alarm and control interfaces.
 - b) Individual Site Plans: Individual site plan maps shall include the entire site perimeter showing buildings, vehicle and foot traffic features and street frontage. Individual site plans may contain multiple buildings. Large-scale maps shall have dynamic zoom or designated "hot spot" areas to allow the capability to zoom into an area down to 1/8" scale. Site plans shall have icons for exterior mounted devices and entry/exit portals.
 - c) Building Maps: Building Maps shall include the building footprint and surrounding areas, ground floor plan, a floor stacking plan (elevation) and stairwell risers. Building plans shall have icons for exterior mounted devices and entry/exit portals.
 - d) Floor Plan Maps: Floor plan maps shall include rooms, corridors, elevators, door and room designations (number and usage), penetrable wall points, column supports, location of access control equipment and any other details necessary to clearly and completely depict the secured environment.
 - 3) Device Icons:
 - a) Individual site plans, building plans, and floor plan maps shall show text and icons for devices monitored and/or controlled by the DVMS.
 - b) The maps shall include active icons for video cameras allowing distinction between types, whose individual selection shall be supported via the GUI using the integration schemes described in the specifications.
- C. VSS Connectivity
 - 1. Owner Provided Network: Owner shall provide the network infrastructure for security systems, including backbone cabling, routers, network switches, and miscellaneous devices necessary to support and protect the security systems.
 - 2. The Contractor shall coordinate with the IT department and provide IT with detailed network requirements including but not limited to
 - a. Location and quantity of ports needed by network appliances
 - b. Bandwidth and throughput requirements at key locations
 - c. Coordinate IP and MAC addresses required by network appliances
 - d. Other information as necessary to establish communications and security protection for security systems and devices
 - 3. VSS Network: Base Servers, Network Video Recorders, and Client Workstations shall reside on Owners' Local Area (LAN) and/or Wide Area Network (WAN) to allow global activity and shared data interchange.
 - 4. Coordinate with the District's IT department to determine adequate network "firewalls" to maintain the security of VSS controls and information while connected to shared computer networks and transmission media.
 - 5. Surveillance Cameras
 - a. The Contractor shall have all on-site equipment, and personnel necessary to install, program, and troubleshoot devices during and after installation.
 - b. Unless otherwise stated, all cameras shall receive power through Power over

- Ethernet. The contractor is responsible for ensuring the power output of the network switch will meet the power requirements of the cameras to be installed. Any additional power will be the responsibility of the contractor to provide.
- c. The Contractor shall energize and commission equipment in accordance with manufacturer's instructions and guidelines. All installed cameras, mounts, accessories, and fasteners shall be properly rated for the environmental conditions in which they will be installed. The contractor is responsible for sealing and making watertight all exterior penetrations and equipment.
 - d. The Contractor is responsible for all the configuration of camera settings, IP address settings, recording settings, presets, naming conventions, etc. unless otherwise noted.
 - e. Default admin account usernames and passwords shall be reconfigured prior to connecting to the Owner's network. New admin accounts and passwords shall be Owner Provided. Account passwords and settings shall be held in confidence by the Contractor and secured throughout the duration of the project to prevent unauthorized access.
 - f. As part of initial installation, Contractor is responsible for focusing and aiming the camera in the direction as indicated in the drawings. Unless otherwise stated, camera lenses shall provide the maximum field of view coverage to the area to provide a usable, level, clear image, pending Owner's final approval. Contractor shall plan for a minimum of one additional trip to make final adjustments of camera field of views.
6. Surge Protection / Lightning Arrestors
- a. Protect all exterior or interior devices, control, power, signal cables and conductors that are power surges. Each surge protector shall be UL Listed.
 - b. Unless otherwise noted, surge protection devices shall be installed at both the edge and head end of the cabling run.
 - c. Surge devices shall be installed as close as possible to the equipment they are protecting.
 - d. Surge Protection shall be properly installed in an accessible ceiling or enclosure space to allow for cable removal during troubleshooting.
 - e. Include surge protection device locations on as-builts and shop drawings.
 - f. Provide protection against spikes, surges, noise, and other line problems for all system equipment and components.
 - g. Proper ground surge protection devices per the manufacturer installation requirements.
- D. Video Surveillance Cabling
- 1. Unless otherwise noted, all data cabling from end to end to support the Video Surveillance System and all related IP devices shall be provided, installed, and maintained by Div. 27 10 00/ the Owner.
 - a. Alternative communications means and methods shall be provided by Division 27/28 where applicable, including but not limited to:
 - 1) PoE over Fiber
- E. Device Labeling
- 1. Unless otherwise, all installed devices shall be labeled. Contractor shall verify device numbering scheme and Owner's current naming convention standard in writing in advance via RFI prior to generating any labels.
 - 2. Unless otherwise stated, all labels shall be machine printed and adhered to the device in a location that is visible and legible to the naked eye.
 - 3. All labeling in the field shall match the same labeling scheme in the closeout documents.
 - 4. Refer to Div. 27 specifications for data network device cabling requirements.
- F. Grounding and Bonding
- 1. All grounding and bonding shall be performed by a licensed electrical contractor to ensure the electrical integrity of the low voltage system and devices specified herein per federal / state / local codes and standards.

2. Contractor shall notify the Architect / Owner / Design Consultant via written RFI of any site conditions or installations that will require additional coordination.
 3. The contractor shall ensure proper grounding of shielded or non-shielded cabling and devices conform to the specified devices manufacturer's installation guidelines.
 4. Division 28 Contractor is responsible for coordinating with the Division 26 Contractor for grounding and bonding security devices per applicable codes and standards.
- G. Conduit, Boxes and Raceways (For Reference Only - By Division 26)
1. Install all conduit necessary for a complete installation but not limited to: in finished areas, in concealed areas, in chases, in furring's, in concrete slabs and/or above suspended ceilings. No exposed conduit shall be installed within public areas.
 2. Conduit shall be carefully installed, properly and adequately supported as required to comply with the requirements outlined herein and as required by the NEC to provide a neat, industry-standard installation. Horizontal conduit runs shall be supported by clamps, pipe straps, special brackets, or heavy iron tie, tied to the black iron structural members supporting the ceiling. Fastening of conduit to masonry walls, floor or partitions require malleable pipe clips with screws and suitable expansion sleeves.
 3. All conduits shall be cut accurately to measurements established at the building and shall be installed without springing or forcing.
 4. All required inserts shall be drilled-in and all openings required through concrete or masonry shall be saw cut or core drilled with tools specifically designed for this purpose.
 5. Swab out and remove all burrs from conduit before any wires are pulled.
 6. Lay out and install conduit runs to avoid proximity to hot pipes. In no case shall a conduit be run within 75 mm of such pipes, except where crossings are unavoidable and then the conduit shall be kept at least 25 mm from the covering of the pipe crossed.
 7. Provide fire stops where conduits penetrate fire rated walls and/or floors.
 8. All conduit installation, whether run exposed or concealed, shall be approved prior to installation by the Architect.

3.4 TESTING REQUIREMENTS

- A. The Contractor shall perform a burn-in of the system that is in accordance with the manufacturer's installation guidelines.
1. All devices shall be powered up and tested in a phased approach in a controlled testing environment on or off premise (to be coordinated with the Owner).
 2. Update firmware with most up to date version (to be coordinated with the Owner).
- B. Contractor shall conduct a five (5) day burn in test. Each system hardware device shall remain operational during the burn-in test for a minimum of eight (8) hours without failure.
1. Contractor shall provide successful burn-in results in writing to the Architect / Design Consultant prior to final acceptance.
- C. Security Contractor shall conduct a complete QA/QC test of the entire system and provide a written report of the test results (Punchlist). The tests shall include, but not limited to:
1. Hardware
 2. Software
 3. Network Connectivity
 4. Device Power
 5. Configure system device settings
 6. Setting camera views (aim & focus)
 7. Archiving of video footage
- D. It is the responsibility of the Contractor to verify that all devices, equipment, software, interfaces, sub-system interfaces and integrations are fully functional and operational.
- E. The contractor shall rectify all issues discovered during the QA/QC process and shall document these corrections via a Contractor provided punch-list.
1. At a minimum, the punch-list shall contain:
 - a. Date of the item identified

- b. Description of the discrepancy with photographs, as necessary.
 - c. Date the item was rectified
- F. All QA/QC items shall be corrected, and an electronic report surrendered to the Architect / Design Consultant prior to calling for Substantial Completion.

3.5 TRAINING REQUIREMENTS

- A. Training outline with Owner sign off specific to the vertical market served.
- B. Provide (4) hours of training for two (2) persons on each system.
- C. The Contractor shall closely coordinate with the Owner to establish a training syllabus and schedule. Submit a comprehensive training curriculum to the Owner once all preliminary coordination is complete. The Owner will revise and comment on the curriculum as required.
- D. Contractor training shall be conducted onsite/virtually. Training shall be conducted by a Factory Certified trainer from the Manufacturer.
- E. Operator training shall be structured to provide the appropriate users the information required for them to be able to perform the following tasks:
 - 1. All operating procedures
 - 2. System configuration
 - 3. Camera Configuration
 - 4. Rules Configuration
 - 5. Alarm acknowledgement, alarm response logging, and map graphics functionality
 - 6. Manipulation of cameras and presets.
 - 7. Archiving Recorded Video
- F. Administrative training shall include, but not be limited to the following:
 - 1. All operating system procedures, configuration variables and graphic user interface (GUI)
 - 2. Report generation
- G. Record, label, and catalog all training on DVD and "user's manual" written specifically for the Owner personnel onsite, for daily routine operations of the systems. Provide the DVD and user's manual to the Owner for future in-house training sessions and / or reviews. Furnish all temporary equipment necessary for recording all training sessions. Maintain accurate and up-to-date time sheets of all training sessions.
- H. The Owner reserves the right to use any excess training hours, not used by the time of system completion, for future training as requested until the total number of training hours has been completed.

3.6 FIELD OBSERVATIONS

- A. A minimum of ten business days in advance, Contractor shall notify the Design Consultant and Owner as to the readiness for a Field Observation for the following at a minimum but not limited to:
 - 1. Rough-In Observation – after conduits have been installed, but before walls have been installed.
 - 2. Above Ceiling Observation – after cabling has been installed, but before ceilings have been installed.
 - 3. Final Site Observation – a minimum of two weeks before Substantial Completion.
- B. During Design Consultant's Final Site Observation of the installed systems, provide a minimum of one factory-trained/certified technician on the operation of all installed systems for up to (1) 8-hour day to assist with Design Consultant's functional testing.
- C. Non-Conforming Work (Punch-List)
 - 1. After receipt of written notice of deficiencies (Punch-List), Contractor shall correct all defective work within ten business days. If the work has been identified to be corrected by the Architect/Design Consultant, the Contractor shall remediate it in conformance with the contract documents at no cost to the Owner.

3.7 SUBSTANTIAL COMPLETION

- A. It is the responsibility of the Contractor to ensure that all punch list items are 100% complete. The Contractor shall complete an internal Quality Assurance / Quality Control inspection, make all corrections, document the deficiencies and corrections prior to requesting for any further inspections with the Architect / Owner / Design Consultant.
- B. Prior to any Substantial Completion, the Contractor shall submit a minimum two sets of preliminary (first draft) Record Drawings (As-Built) to the Architect/Design Consultant. The preliminary Record Drawings are to be used by the Architect/Design Consultant to conduct the system substantial completion inspection.
- C. The Contractor shall notify the General Contractor / Architect / Design Consultant that all the items noted above have been completed and the installation is ready for inspection.
- D. The Architect / Design Consultant shall schedule an inspection of the installation with the General Contractor and the Installing Contractor(s) present.
- E. The Substantial Completion Inspection shall consist of the following:
 - 1. The Project Manager/Superintendent and Installation Technician shall be on site with all tools, materials, and equipment ready to resolve any minor issues identified.
 - 2. The Design Consultant or designated representative shall visually inspect the installation in accordance with the official design documents.
 - a. The Contractor shall be prepared to remove and reinstall (minimum 10%) randomly selected security devices to inspect the mounting, cabling, terminations, connectors, labeling, tampers.
 - 3. Punch list items shall be identified and documented in a provided punch list with a date and description of the issue found, and a date the discrepancy was addressed and the resolution.
- F. Provide all personnel, equipment, and supplies necessary to perform all site testing. All video surveillance cameras shall be pointed and aimed in the views as shown in the drawings and using best practices. Contractor shall provide a minimum two employees to verify all cameras have been pointed and aimed to achieve Owner final approval. A manufacturer's representative may be present on site to answer any questions that may be beyond the technical capability of the Contractor's employees, if the Contractor so elects or by specific request of the Architect or Owner, at no charge to the Architect or Owner.
- G. The Contractor shall coordinate with the Architect/Design Consultant on security related construction clean-up and patch work requirements. Security equipment closets and similar areas should be free of accumulation of waste materials or rubbish caused by operations under the Contract. At completion of the Work, remove all waste materials, rubbish, the Contractor's and its subcontractors' tools, construction equipment, machinery, and all surplus materials.
- H. At their discretion, if the Design Consultant or their designated representative deems the site not ready for inspection/observation, the inspection will be cancelled. The Contractor(s) shall immediately address all issues identified, and shall reschedule the inspection in a timely manner so as not to affect the overall construction schedule.
- I. Adjustments and Documentation: energizing and testing the systems, make adjustments and document the setting of controls, configurations, as applicable. Tabulate all data along with an inventory of test equipment, a description of testing conditions and a list of test personnel.
- J. Test Documentation: Create and provide complete test reports documenting the results of the each performed on each device, control panel, power supply, and other elements of the system. Copies of preliminary test data shall accompany copies of performance testing data as part of the Operating and Maintenance submittal.

3.8 PROJECT CLOSEOUT DOCUMENTATION

- A. As-Built Drawings
 - 1. Drawings shall be provided to the Architect / Owner / Design Consultant at the time of substantial completion. Final payment will not be recommended until drawings are received and approved by the Architect / Owner / Design Consultant.
 - 2. Unless otherwise requested, Contractor shall provide digital copies of close-out documents and deliver to the Architect / Owner / Design Consultant electronically.

3. As-Built drawings shall be produced in AutoCAD/Revit in the most current or compatible version and provided electronically in .dwg and/or .pdf format.
 4. Drawings shall be provided in the original size as issued by the Architect/Design Consultant.
 5. Drawings shall retain the formatting and title block of the original drawings as issued by the Architect/Design Consultant.
 6. Provide a conformed set of Drawings as related to the project, depicting the condition of the Video Surveillance system as installed to include but not limited to:
 - a. ASI, PR, and Addendum items installed throughout the duration of the project.
 7. Provide a hard copy of the conformed set of drawings to be physically stored at the end of the project in a designated Video Surveillance System enclosure. Coordinate with Owner for final storage location.
 8. Drawings shall be provided utilizing the original scale and shall include the exact dimensions and locations of the following not limited to:
 - a. Video Surveillance System Riser / Signal Flow Diagrams
 - b. Video Surveillance System Backboard Layouts
 - 1) To include Video Surveillance boards, power supplies, pathways, etc.
 - c. Sleeves, Backbone Cabling and Communication pathways
 - d. Video Surveillance System device locations and labeling scheme.
 9. **As-builts shall include each MAC Address clearly labeled next to each IP device it is associated with, IE. each camera and intelligent controller.**
- B. Operation & Maintenance Manuals
1. Unless otherwise noted, provide O&M manuals electronically to Owner to include all drawings, product datasheets, hardware manuals as related to the project.
 2. Coordinate with the Owner for provisioning of physical storage devices (Hardcopy, Flash Drive, CD/DVDs)
- C. Manufacturer's Product Warranty
1. Certificate of product warranty shall be provided to the Architect / Owner / Design Consultant at the time of final system acceptance. Final payment will not be recommended until this certificate of product warranty is received and approved by the Architect/Design Consultant.
 2. The manufacturer of the solution shall furnish a product warranty as per the specifications starting at final system acceptance.
 3. One original and two copies of the Manufacturer's product warranty shall be provided.
- D. Contactor's Statement of Warranty
1. Statement of warranty shall be provided to the Architect/Design Consultant at the time of substantial completion. Final payment will not be recommended until statement of warranty is received and approved by the Architect/Design Consultant.
 2. Contractor shall furnish a minimum of a one (1) year warranty on all materials, labor and workmanship starting at final system acceptance.
 3. One original and two copies of Contractor's warranty terms and conditions to include contact information (i.e., Contractor name, Point of Contact, address, phone number and email address) and start and end date for warranty call outs.

END OF SECTION 28 23 00

SECTION 28 31 00 – FIRE DETECTION AND NOTIFICATION SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 RELATED WORK

- A. 26 05 00 – Grounding and Bonding
- B. 26 05 29 – Electrical Hangers and Supports
- C. 26 05 33 – Raceway and Boxes

1.3 DESCRIPTION

- A. This section of the specifications includes the furnishing, installation, connection and testing of microprocessor controlled, intelligent reporting fire alarm equipment required to form a complete, operative, coordinated networked system. It shall include, but not be limited to, alarm initiating devices, alarm notification appliances, Voice Evacuation Fire Alarm Control Panel (FACP), Voice Evacuation devices, auxiliary control devices, annunciators, Ethernet and/or digital alarm communications to central stations and wiring as shown on the drawings, specified herein, and per the manufacturer's requirements.
- B. The fire alarm system shall comply with requirements of NFPA Standard No. 72 for Local Protected Premises Signaling Systems except as modified and supplemented by this specification. The system field wiring shall be supervised either electrically or by software-directed polling of field devices.
 - 1. The Secondary Power Source of the fire alarm control panel will be capable of providing at least 24 hours of backup power with the ability to sustain 5 minutes in alarm at the end of the backup period
- C. The fire alarm system shall be manufactured by an ISO 9001 certified company and meet the requirements of BS EN9001: ANSI/ASQC Q9001-1994.
- D. The FACP and peripheral devices shall be manufactured or supplied 100% by a single U.S. manufacturer (or division thereof).
- E. The installing company shall employ NICET (minimum Level II Fire Alarm Technology) technicians on site to guide the final check-out and to ensure the systems integrity.
- F. The FACP shall meet requirements of UL ANSI 864 Ninth Edition

1.4 SCOPE

- A. An intelligent, microprocessor-controlled, fire alarm detection system shall be designed, furnished, and installed in accordance to the project specifications and drawings.
- B. Contractor shall provide a new FACP **with voice evacuation**. Provide voice evacuation speakers in locations in order to provide code required dB levels during an alarm event.
- C. All devices shall be fully addressable utilizing all final room graphic names and numbers.
- D. Any devices installed in high ceiling areas shall have programming reference on device that can be read from floor level.
- E. Contractor shall connect all back-up batteries per manufacturer's instructions.

F. Basic Performance:

1. Initiation Device Circuits (IDC) shall be wired Class B (NFPA Style B) as part of an addressable device connected by the SLC Circuit.
2. Notification Appliance Circuits (NAC) shall be wired Class B (NFPA Style Y) as part of an addressable device connected by the SLC Circuit. Cable shall be Belden 6341PC 18 AWG 2 Pair, CMP Plenum Cable, Individually Shielded or equivalent.
3. All circuits shall be power-limited, per UL864 requirements.
4. A single ground fault or open circuit on the system Signaling Line Circuit shall not cause system malfunction, loss of operating power or the ability to report an alarm.
5. Alarm signals arriving at the main FACP shall not be lost following a primary power failure or outage of any kind until the alarm signal is processed and recorded.

G. Basic System Functional Operation

When a fire alarm condition is detected and reported by one of the system's initiating devices, the following functions shall immediately occur:

1. The system Alarm LED on the FACP shall flash.
2. A local sounder with the control panel shall sound.
3. A backlit 80-character LCD display on the FACP shall indicate all information associated with the fire alarm condition, including the type of alarm point and its location within the protected premises.
4. In response to a fire alarm condition, the system will process all control programming and activate all system outputs (alarm notification appliances and/or relays) associated with the point(s) in alarm. Additionally, the system shall send events to a central alarm supervising station via either dial-up over PSTN or Internet or Intranet via PSDN or virtual private network.
5. If there are any discrepancies between the drawings and specification or among themselves, the contractor shall request clarification prior to providing pricing for the scope of work. If a request is not issued and a response not provided via a posted addendum, the contractor shall provide pricing for the most costly scenario and obtain clarification during the course of the project.

1.5 GENERAL REQUIREMENTS

- A. All fire alarm system designs shall meet local, state and municipal codes.
- B. Main fire alarm control panel to be located in building technology headend room (MDF). Do not install in mechanical or electrical rooms.
- C. Local annunciator panel with microphone to be located in front administration area.
- D. Do not install panel battery cabinet above ceiling. Shall be installed at standard height for servicing without ladder.
- E. Review location of all fire alarm pull stations with owner prior to final design submission to AHJ.

- F. Provide all cabling and devices to integrate with the First Responder Antenna System (FRAS / ERRC-BDA) on all projects.
- G. Provide switch bank allowing end user to enable and disable service groups.
- H. Fire alarm system shall be able to be tested during school hours. Coordinate with CISD Maintenance and Police Department for any system tests.
- I. Fire alarm contractor responsible for adding points for FRAS / ERRC-BDA system.
- J. Provide protective covers on all fire alarm devices installed in gyms.
- K. System shall conform to NFPA 72 and NFPA 101

1.6 CODES AND STANDARDS

- A. The system shall comply with the applicable Codes and Standards as follows:
 - 1. National electric Code Article 760
 - 2. UL1971 Visual Signaling Appliances
 - 3. ANSI 117.1 Visual Devices
- B. National Fire Protection Association Standards:
 - No. 13 Sprinkler Systems
 - No. 70 National Electric Code (NEC)
 - No. 72 National Fire Alarm Code
 - No. 101 Life Safety Code
 - No. 38 Manually Actuated Signaling Boxes
 - No. 217 Smoke Detectors, Single and Multiple Stations
 - No. 228 Door Closers—Holders for Fire Protective Signaling Systems
 - No. 268 Smoke Detectors for Fire Protective Signaling Systems
 - No. 268A Smoke Detectors for Duct Applications
 - No. 346 Waterflow Indicators for Fire Protective Signaling Systems
 - No. 464 Audible Signaling Appliances
 - No. 521 Heat Detectors for Fire Protective Signaling Systems
 - No. 864 Control Units for Fire Protective Signaling Systems
 - No. 1481 Power Supplies for Fire Protective Signaling Systems
 - No. 1610 Central Station Burglar Alarm Units
 - No. 1638 Visual Signaling Appliances
 - No. 1971 Visual Signaling Appliances
 - No. 2017 General-Purpose Signaling Devices and Systems
- C. Local & State Building Codes
- D. Requirements of Local Authorities having Jurisdiction
- E. Underwriters Laboratories Inc. (UL) - USA:
 - No. 38 Manually Actuated Signaling Boxes
 - No. 50 Cabinets and Boxes
 - No. 864 Control Units for Fire Protective Signaling Systems
 - No. 268 Smoke Detectors for Fire Protective Signaling Systems
 - No. 268A Smoke Detectors for Duct Applications
 - No. 346 Waterflow Indicators for Fire Protective Signaling Systems
 - No. 464 Audible Signaling Appliances
 - No. 521 Heat Detectors for Fire Protective Signaling Systems

No. 1971 Visual Notification Appliances

CAN/ULC S524-01 Standard for Installation of Fire Alarm Systems

1. The FACP shall be ANSI 864, 9th Edition Listed. Systems listed to ANSI 864, 8th edition (or previous revisions) shall not be accepted.
- F. The system and its components shall be Underwriters Laboratories, Inc. listed under the appropriate UL testing standard as listed herein for fire alarm applications and the installation shall be in compliance with the UL listing.
- G. All requirements of the Authority Having Jurisdiction (AHJ).
- H. American's with Disabilities Act (ADA)

1.7 SYSTEM DESCRIPTION

- A. Multiprocessor-Based:
 1. The system shall be of multiprocessor design to allow maximum flexibility of capabilities and operation.
- B. Field Programmable:
 1. The system shall be capable of being front-panel programmed or by Field Configuration Program (FCP) allowing programming to be downloaded via computer from any node on the network.
- C. RS-232C Serial Output:
 1. A supervised RS-232C serial port shall be provided to operate remote printers and/or video terminals, accept downloaded program from the computer, or provide an 80-column readout of alarms, troubles, location descriptions, time, and date.
 2. Communication shall be via standard ASCII code operating at a 9600-baud rate.
- D. Control-by-Event (CBE) Program:
 1. Operation of a manual station or automatic activation of any smoke sensor, heat sensor, or waterflow device shall activate system control-by-event program to cause:
 - a. All notification appliances to sound in continuous pattern and strobes to flash.
 - b. Shut down all air-handling units as specified herein.
 - c. "SYSTEM ALARM" LED shall flash and panel sounder shall pulse.
 - d. Indicate on the 80-character alphanumeric panel display a description of the specific analog/addressable device in alarm. The display shall be of the liquid crystal type (LCD), clearly visible in the dark or in poor light conditions.
 - e. Close all magnetically held doors automatically.
 - f. Energize programmed solenoids for activating sprinkler or extinguishing systems.
 - g. Perform additional function as specified herein or as indicated on the Drawings.
 - h. Notify the Fire Department.
- E. General System Operation:
 1. When an alarm occurs, the control panel as well as any other control panel in the

same region, or any control panel programmed as a global annunciator shall indicate an alarm condition until manually reset.

2. The alarm may be acknowledged by pressing the "ALARM ACKNOWLEDGE" switch.
3. This shall silence the panel sounder and change the "ALARM" LED from flashing to steadily lit.
4. All notification appliances may be silenced by operating the "SIGNAL SILENCE" switch on any panel in the same region or from any panel programmed as a global annunciator.
5. This shall steadily light the "SYSTEM SILENCED" LED.
6. If a subsequent alarm is activated, notification appliances shall "resound" until again silenced.
7. Once silenced, all notification appliances may be restored by operating the "SIGNAL SILENCE" switch.
8. Waterflow zones shall be non-silenceable.

F. Alarm Verification:

1. Smoke sensor alarm verification shall be a standard option, while allowing any dry contact device, such as manual stations and heat detectors, to create an immediate alarm.
2. This feature shall allow smoke sensors that are installed in environments prone to nuisance or unwanted alarms to operate according to following sequence:
 - a. Smoke Sensor Alarm: At time = 0.
 - b. Pre-alarm Window: 15 seconds. A distinctive pre-alarm indication shall be displayed.
 - c. Reset: 5 seconds. Occurs at end of pre-alarm window.
 - d. Alarm Verification Window: 90 seconds. The system shall respond to a second alarm from the same smoke sensor as the system alarm.
 - e. System Ready: No alarm verification.
 - f. The verification sequence is suspended once the system alarm is activated.

G. Alarm Signals:

1. All alarm signals shall be automatically latched or "locked in" at the control panel until the operated device is returned to normal and the control panel is manually reset.
2. When used for waterflow, the "SIGNAL SILENCE" switch shall be bypassed.

H. Electrically Supervised:

1. Each signaling line circuit and notification appliance circuit shall be electrically supervised for opens, shorts, and ground faults.
2. Occurrence of a fault shall activate system trouble circuitry, but shall not interfere with proper operation of a circuit that does not have a fault condition.
3. The yellow "SYSTEM TROUBLE" LED shall light and the system audible sounder shall steadily sound when trouble is detected in the system. Failure of power, opens, or short circuits on notification appliance or signaling line circuits, disarrangement in system wiring, failure of microprocessor or identification module, or system ground faults shall activate this trouble circuit.

4. The trouble signal may be acknowledged by operating the "ALARM ACKNOWLEDGE" switch. This shall silence the sounder. If subsequent trouble conditions occur, trouble circuitry shall resound.
 5. During alarm, all trouble signals shall be suppressed with exception of lighting the yellow "SYSTEM TROUBLE" LED.
- I. Drift Compensation, Analog Smoke Sensors:
1. System software shall automatically adjust each analog smoke sensor approximately once each week for changes in sensitivity due to effects of component aging or environment (i.e.: dust).
 2. Each sensor shall maintain its actual sensitivity under adverse conditions to respond to actual alarm conditions, while ignoring factors that generally contribute to nuisance alarms.
 3. System trouble circuitry shall activate, display "DIRTY DETECTOR" and "VERY DIRTY DETECTOR" indications and identify the individual unit that has been compensated beyond its acceptable limits.
- J. Analog Smoke Sensor Test:
1. System software shall automatically test each analog smoke sensor a minimum of 3 times daily.
 2. Test shall be a recognized functional test of each ionization chamber (analog ionization sensors) and photocell (analog photoelectronic sensors) as required annually by NFPA 72.
 3. Failure of a sensor shall activate system trouble circuitry, display a "Test Failed" indication, and identify the individual unit.
- K. Dual-Mode Walk Test:
1. The control unit shall provide a Dual-Mode Zoned Walk Test Program that shall enable an individual to test the Alarm/Supervision status of each sensor or module connected to system.
 2. During walk test, the control unit shall automatically reset after an alarm condition enabling the technician to continue testing the system without requiring a return to control panel.
 3. During an Audible walk test, placing a device in alarm shall cause 4 pulses on the notification appliance circuits. Operation of a supervisory switch shall cause 3 pulses, while removal or disconnection of an initiating device shall cause 2 pulses. All tests shall be recorded by the printer for reference.
 4. The silent walk test shall record all tests by printer for reference, while not activating notification appliance circuit(s).
- L. Printed Circuit Boards, Control Panel Components:
1. The control unit shall be housed in a steel cabinet.
 2. All groups of circuits or common equipment shall be clearly marked.
 3. The control unit shall be red in color and shall include the following features:
 - a. A solid-state power transfer circuit that shall switch to standby power automatically and instantaneously if normal power fails or falls below 15 percent of normal ("brown out" conditions). This circuit shall allow batteries to be effectively "floated" on the operating system to avoid upsetting normal microprocessor operation and minimize resultant

nuisance troubles and/or alarms. This circuit shall be physically isolated from the power supply to facilitate service.

- b. Ground fault detector to detect positive or negative grounds on signaling line circuits, notification appliance circuits, and power circuits. Ground fault indication shall occur on display and general trouble devices shall operate as specified herein, but shall not cause alarm.
- c. Lightning protection shall be a standard feature of the fire alarm control panel and shall be incorporated in the power supply circuit, common control circuits, and notification appliance circuits. Systems that require an optional module to provide this protection shall not be considered equal.
- d. Individual overcurrent protection shall be provided for the following: smoke detector (resettable) power, main power supply, battery standby power, and auxiliary (non-resettable) output.
- e. Common reset and lamp test switch, labeled "SYSTEM RESET/LAMP TEST" shall be provided on panel.

M. City Connection:

- 1. The fire alarm system shall be connected via Digital Alarm Communicator Transmitter (DACT) over telephone lines to a central station or remote station.
- 2. The fire alarm system shall be equipped with a Cellular Dialer to connect to a central station or remote station.
- 3. The panel shall contain a disconnect switch to allow testing of the system without notifying the fire department.

N. Remote Station Option:

- 1. The fire department shall be consulted as to the authorized remote station serving the municipality.
- 2. The fire alarm system shall transmit both alarm and trouble signals with the alarm having priority over the trouble signal.
- 3. The contractor shall be responsible for installation charges, while the owner shall be responsible for line lease charges.

O. Central Station Option:

- 1. The fire alarm control panel shall provide an integral Digital Alarm Communicator Transmitter (DACT) for signaling to a Central Station. The DACT shall contain a "Dialer-Runaway" feature preventing unnecessary transmissions as the result of intermittent faults in the system and shall be Carrier Access Code (CAC) compliant, accepting up to 20-digit central station telephone numbers.
- 2. The fire department shall be consulted as to the authorized central station companies serving the municipality.
- 3. The fire alarm system shall transmit both alarm and trouble signals with the alarm having priority over the trouble signal.
- 4. The contractor shall be responsible for installation charges, while the owner shall be responsible for line lease charges.

1.8 CONTRACTOR QUALIFICATIONS

- A. The installing contractor shall be the authorized representative of the Fire Alarm Manufacturer to sell, install, and service the proposed manufacturer's equipment. The installing contractor shall have represented the fire alarm manufacturer's product for at least three years.
- B. The installing contractor shall be licensed by the State Fire Marshall to sell, install, and service fire alarm systems as required by Article 5.43-2 of the Texas Insurance Code.
- C. The installing contractor shall have on his staff an installation technician licensed by the State Fire Marshall's office for such purpose and under whose supervision installation, final connections, and check out will take place as required by the Texas Insurance Code.
- D. The installing contractor or equipment supplier shall have on staff a minimum of two (2) certified NICET Level III state licensed fire alarm planning superintendents under whose supervision system design shall take place. In lieu of an alarm planning superintendent, the contractor may provide design supervision by a registered professional engineer.
- E. The installing contractor shall provide 24 hour, 365 days per year emergency service with factory trained, state licensed service technicians.
- F. The installing contractor must have a permanent office within a 100 mile radius of the project site and be a approved dealer/integrator, of the proposed system, in the nearest major metropolitan area.
- G. The installing contractor shall have been actively engaged in the business of selling, installing, and servicing fire alarm systems in the surrounding area for at least ten (10) years.
- H. All individuals installing the fire alarm system must be employees of the certified installer and at least 25% of the installing staff shall have undergone a training class given by the manufacturer. Current certification indicating the successful completion of the training course shall be available upon request at the project and submitted in the contractor's product submittals.
- I. The proposing contractor and the installing contractor must be the same company. No subcontractor to the proposing fire alarm system contractor will be allowed for any portion of the fire alarm system scope of work.
- J. Acceptable manufacturers:
 - 1. The system specified shall be that of Edwards EST.
 - 2. No other manufacturers shall be accepted.

1.9 ACCEPTABLE MANUFACTURER

- A. All fire alarm system devices and equipment shall be manufactured by Edwards Systems Technology, EST. No other manufacturers will be accepted.
- B. All equipment, materials, accessories, devices, etc. covered by the specifications and/or noted on the contract drawings shall be new and unused and be U.L. listed for their intended use.
- C. All equipment provided shall be available for purchase from at least two authorized distributors within the service area.

1.10 SUBMITTALS

- A. The installing contractor and/or equipment supplier shall provide complete and detailed shop drawings and include:

FIRE DETECTION AND NOTIFICATION SYSTEM

1. Control panel wiring and interconnection schematics.
 2. Complete point to point wiring diagrams.
 3. Complete floor plan drawings locating all system devices.
 4. Factory data sheets on each piece of equipment proposed.
 5. Detailed system operational description.
 6. Complete system bill of material.
 7. Location of wall penetrations (all penetrations shall be sleeved and contain protective bushings at both ends)
 8. Location of sleeved wall pass-thru
 9. Size of sleeve at each location installed
 10. Quantity of cable passing through each sleeve
- B. All submittal data will be in bound form with contractor's name, supplier's name, project name, and state fire alarm license number adequately identified.
- C. Only basic equipment devices have been shown on the contract drawings. Specific wiring between equipment/devices may not be shown. It is the contractor's responsibility to submit for approval the COMPLETE ENGINEERED system configuration and layout showing all devices, wiring, conduit, and locations along with other required information as specified herein to provide a complete operational system as specified.
- D. Specification Compliance: A letter shall be provided stating, by section and subsection, that the fire alarm system installer complies with the ENTIRE specification section. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.
- E. Drawing Compliance: A letter shall be provided stating that the fire alarm system installer complies with the ENTIRE project drawing, including all general, keyed, and notes to contractor. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.
- F. Certifications/Licensing: The contractor shall submit all of the following certifications/licensing and the all must contain dates which are valid from the date of proposal and not expirer any sooner than 12 months after substantial completion of the project.
1. State Fire Alarm License
 2. Manufacturer's Authorized Dealer Certification
 3. NICET Level III certification (1 for each required)
 4. Manufacture Installer Training Certificate (required for at least 25% of all installers on site.)
- G. Fire Alarm Close Out requirements
- a. Service and maintain fire alarm system for one year from the date of project substantial completion. Clean and adjust equipment as per manufacturer recommendations. Provide scheduled maintenance tasks to keep system warranty in effect.
 - b. Provide documentation of all preventive maintenance and service calls.
 - c. Provide training to CISD personnel at completion of project.
 - d. Provide fire alarm close out documents and fire alarm panel programming to CISD Life Safety Dept.

- e. Provide backup copy of panel programming to CISD Maintenance.
- f. Perform annual test (NFPA 72 Fig 7-5.2.2 testing and inspection form) during final month of warranty period to certify complete operating system.
- g. Provide one (1) Allen resetting wrench or key per pull station installed.
- h. Provide six (6) keys of each type of device.
- i. Provide three (3) detectors of each type installed on project for attic stock.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver materials to the site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.
- B. Storage: Store materials in a clean, dry area indoors in accordance with the manufacturer's instructions.
- C. Handling: Protect materials from damage during handling and installation.

1.12 INTERFACING

- A. Coordinate the Work of this section with the Work of other sections for purpose of interfacing to building systems as required on the Drawings, including but not limited to, elevator interface, HVAC interface, and security system interface.

1.13 COORDINATION

- A. It shall be the responsibility of the installing contractor to coordinate all requirements surrounding installation of the fire alarm system with **ALL** other trades.

PART 2- PRODUCTS

2.1 MANUFACTURER

- A. The specified and approved equipment manufacturer is Edwards Systems Technology (EST).
- B. All Fire Alarm Systems shall be manufactured one manufacturer.
- C. The district reserves the right to reject or deny the use of any product or service provider if they do not meet our standards for product or installation methods. We also reserve the right to reject any installer based on past performance in the district or with other school districts in the nearest, major metropolitan area.
- D. The Following Panels will be used for this project's applications.
 - 1. Edwards EST4, voice evacuation system.

2.2 GENERAL

- A. All equipment furnished for this project shall be new and unused. All equipment, materials, accessories, devices, and other facilities covered by this specification or noted on contract drawings and installation specifications shall be the best suited for the intended use and shall be the product of a single manufacturer.

2.3 SYSTEM OVERVIEW:

- A. The Fire Alarm / Life Safety System shall be a microprocessor based system designed specifically for smoke and fire detection applications. The Fire Alarm / Life Safety System shall be UL listed under Standards 864 (*Control Units for Fire-Protective Signaling Systems*) under category UOJZ.

2.4 PANEL COMPONENTS AND FUNCTIONS

- A. General
1. The control panel shall be a multi-processor based system designed specifically for fire and releasing system applications. The control panel shall be listed and approved for the application standard(s) as listed under the General section.
 2. The control panel shall include all required hardware, software and system programming to provide a complete and operational system. The control panel shall assure that life safety takes precedence among all panel activities.
 3. The control panel shall include the following capacities:
 - a. Support up to 1000 analog/addressable points plus 48 conventional circuits.
 - b. Support up to 8 fully supervised remote annunciators.
 - c. Support digital dialer (DACT) with multiple communication protocols
 - d. Support up to 1000 chronological events.
 4. The control panel shall include the following features:
 - a. Provide electronic addressing of analog/addressable devices.
 - b. Provide an operator interface display that shall include functions required to annunciate, command and control system functions.
 - c. Provide an internal audible signal with different programmable patterns to distinguish between alarm, supervisory, trouble and monitor conditions.
 - d. Provide a discreet system control switch provided for reset, alarm silence, panel silence, drill switch, up/down/right/left switches, status switch and help switch.
 - e. Provide system reports.
 - f. Provide an authorized operator with the ability to operate or modify system functions like system time, date, passwords, holiday dates, restart the system and clear control panel event history file.
 - g. Provide an authorized operator to perform test functions within the installed system.
 - h. All system programming and history shall be permanently stored in non-volatile memory to ensure that no programming or history is lost. Systems which store initial programming or field programming changes in battery backed memory will not be accepted.
 5. Supervision of system components, wiring, initiating devices and software shall be provided by the control panel. Failure or fault of system component or wiring shall be indicated by type and location on the LCD display.
 6. Software and processor operation shall be independently monitored for failure. The system shall provide fail-safe operation, with a backup level of system operation.
 7. A compare utility shall identify programming and device changes on the system.
- B. Operators' Interface:
1. A Liquid Crystal Display (LCD) shall provide the means to inform the system operator with detailed information about the off-normal status of the installed Fire Alarm / Life Safety System. The LCD shall automatically respond to the status of the system, and shall display that status in 224-character front panel display.
 2. The following status functions shall be annunciated by the LCD Display:

- a. When the Fire Alarm / Life Safety System is in the "Normal" Mode, the panel shall display: current date and time, a two-line custom system title, and a summary total of system events.
 - b. With the Fire Alarm / Life Safety System is in the off-normal mode, the LCD display shall automatically reconfigure into three logical areas.
 - c. Panel Status Area - The LCD shall show the system time, the number of active points, and disabled points in the system.
 - d. Event Area - The LCD shall show the first two active events of the highest priority
 - e. Type Status Area - The LCD shall show the total number of active events in the system, by the following event types: "Alarm Events", "Supervisory Events", "Active Trouble Events", and "Active Monitor Events".
- C. Addressable Device Controller:
1. A 100% digital loop controller shall be provided in the Fire Alarm / Life Safety System panel to interface with the intelligent microprocessor-based detectors and modules.
 2. It shall be possible to connect the loop controller to the detectors and modules using any wiring material or method complying with Chapter 3 of the National Electrical Code without the need for special shielding, twisted wire, or conduits. The loop controller shall be capable of supporting Class A (Style 7) or Class B (Style 4) circuits without the need for additional hardware modules. It shall be possible to wire multiple branch circuits (T-Taps) from Class B Circuits (Style 4).
 3. The loop controller shall be capable of setting the address of all Intelligent microprocessor-based devices connected to it electronically, without the need to set switches at any of the individual devices.
 4. The loop controller shall provide a minimum of 6 types of supervision for each smoke detector on the circuit:
 - a. Device location
 - b. Unexpected device add/Delete
 - c. Missing device address
 - d. Changes in the physical wiring of the circuit
 - e. Changes in device settings
 - f. Device maintenance alert
 5. The loop controller shall determine the electrical location of each connected detector and module. The location and type of each connected device shall be mapped and stored in memory in the loop controller. It shall be possible to access and display this map.
 6. It shall be possible to obtain a mapping report of all devices connected to the loop controller for confirmation of "as-built" wiring. The mapping report shall show the electrical relationship of all connected devices, including T-Taps, device types, and the panel addresses of devices on the circuit. The loop controller shall be capable of reporting any additional device addresses, which may have been added to the circuit, and/or changes that may have been made to the wiring in the data circuit. A specific trouble shall be reported for any and all off-normal non-alarm condition.
 7. The loop controller shall notify the system when any connected smoke detector reports a "routine maintenance required" signal to the system.
- D. Notification Appliance Circuits:
1. Provide as indicated on the plans, supervised hard-wired Notification Appliance Circuits (NAC) for the control of 24Vdc notification appliances. Each NAC shall operate as Class B (Style Y) power limited circuit.
 2. NAC's shall be capable of providing steady, 20bps, 120bps or temporal rate outputs.

3. Provide Notification Appliance Circuits to accommodate all new and existing devices and/or circuits.
- E. Power Supply
1. Each system power supply shall be a minimum of 6 amps @ 24 vdc.
 2. Upon failure of normal (AC) power, the affected portion(s) of the system shall automatically switch over to secondary power without losing any alarm, trouble or operator acknowledgment signals.
 3. Each system power supply shall be annunciated individually as a shall annunciate as a trouble signal, identifying the inoperable power supply(ies).
 4. All standby batteries shall be continuously monitored by the system. Low battery and disconnection of battery power supply conditions shall immediately annunciate as a trouble signal, identifying the deficient batteries.
 5. All system power supplies shall be capable of recharging their associated batteries, from a fully discharged condition to a capacity sufficient to allow the system to perform consistent with the requirements of this section, in 48 hours maximum.
- F. Dialer (Digital Alarm Communicator Transmitter – DACT)
1. The system shall provide an off premise communications module capable of transmitting system events to multiple primary and secondary central monitoring station monitoring station receivers.
 2. The system module shall provide multiple monitoring station receiver formats capable of transmitting up to 8 subscribers.
 3. The system shall be capable of transmitting point information via Contact ID or SIA 4/2 protocols.
 4. The Dialer shall be capable of communications with an E24 monitoring company. Provide programming, verification and testing with owner's service using actual account number.
 5. The system shall be equipped with a Cellular Dialer for wireless cellular communications.
- G. System Reports
1. The system shall provide the operator with system reports that give detailed description of the status of system parameters for corrective action, or for preventative maintenance programs. The system shall provide these reports via the main LCD, and shall be capable of being printed on the system printer.
 2. The system shall provide a report that gives a sensitivity listing of all detectors that have less than 80% environmental compensation remaining. The system shall provide a report that provides a sensitivity (% Obscuration per foot) listing of any particular detector.
 3. The system shall provide a report that gives a listing of the sensitivity of all of the detectors on the system, or any given analog/addressable device circuit.
 4. The system shall provide a report that gives a chronological listing of up to the last 1000 system events.
 5. The system shall provide a listing of all of the firmware revision listings for all of the installed components in the system.

2.5 LIFE SAFETY SYSTEM PROGRAMMABLE OPERATIONS:

- A. The routing of all system annunciation and control parameters shall be configurable to any or all remote annunciators on the system manually, or automatically as a function of the time of day or date.

- B. The system printer, if required, shall be configurable to display any combination or all of the following functions: Alarm, Supervisory, Trouble, and Monitor events.
- C. Each remote annunciator connected to the panel shall be configurable to show the status of any combination or of Alarm, Supervisory, Trouble, Monitor functions pertaining to any point in the system.
- D. Each point in the system shall be labeled with up to a 36 character custom message.
- E. System shall have the capability to provide logical "Counting AND" Groups and "Matrix Groups. Each matrix group shall be programmable by radius and activation number.
- F. System shall have the ability to define Service Groups. A Service group shall consist of any addressable field device and shall not be defined or limited by the physical layout of the Fire Alarm / Life Safety System, or its application to the protected premises. The system shall include the ability to define an alternate set of device commands which may be used in combination with the system test command and service groups for the testing of the connected intelligent microprocessor based devices.
- G. The system shall include Time Control functions that have the ability to control any system output or system operational sequence as a function of the month, day of week, date, hour, minute, or holiday.
- H. The system shall support software defined Logical Zone Groups which may group any input from any initiating device circuit, in order to control a system output or function, or initiate any system operational sequence. A device or IDC may be a member of one Zone.
- I. The system shall have the ability to download data from the intelligent devices to a PC while the system is on-line and operational in the protected premises. The downloaded data may then be analyzed in a diagnostic program supplied by the system manufacturer.
- J. All final panel programming shall be configured as per final room number designation as identified by actual building room numbers, not architectural room numbers listed on construction set. **It is the contractor's responsibility to acquire the correct building room numbers.**

2.6 FIELD MOUNTED SYSTEM COMPONENTS:

- A. Analytical Microprocessor-based Detectors - General:
 - 1. System shall use Analytical Microprocessor-based Detectors that are capable of full digital communications with the Fire Alarm / Life Safety System using both broadcast and polling communications protocols. Each detector shall be capable of performing independent advanced fire detection algorithms. The fire detection algorithm shall measure sensor signal dimensions, time patterns, and combine different fire parameters to increase reliability and distinguish real fire conditions from unwanted nuisance alarms caused by environmental events. Signal patterns that are not typical of fires shall be eliminated by digital filters and shall not cause a system alarm condition. Devices not capable of combining different fire parameters or employing digital filters will not be acceptable.
 - 2. Each detector shall have an integral microprocessor capable of making alarm decisions based on fire parameter information stored in the detector's memory. Detectors not capable of making independent alarm decisions are not acceptable.

3. Each detector shall have a separate means of locally displaying system communication and detector alarm status. A different LED indication for alarm and trouble shall be provided (devices in which the LED does not flash in supervisory mode are not acceptable).
 4. Each detector shall be capable of identifying diagnostic codes to be used for system maintenance. All diagnostic codes shall be stored in the detector. Each smoke detector shall be capable of transmitting pre-alarm, alarm, and maintenance signals to the Fire Alarm Control Panel via the Loop Controller.
 5. Each detector microprocessor shall contain an environmental compensation algorithm, which identifies and sets ambient "Environmental Thresholds" continually and periodically. In this manner, the environmental impact of temperature, humidity, environmental contaminants as well as detector aging shall be automatically monitored and adjusted for. This process shall employ digital compensation techniques to adapt the detector to both long term and short term changes in the environment in which they are installed. The microprocessor shall monitor this environmental compensation value and alert the system operator when the detector approaches 80% and 100% of the allowable environmental compensation value. Differential sensing algorithms shall maintain a constant differential between selected detector sensitivity and the derived base line sensitivity that the detector has sensed in its environment. The base line sensitivity information shall be automatically and periodically updated and permanently stored in the detector.
 6. Each detector shall be capable of automatic electronic addressing and/or custom addressing, without the use of DIP or rotary switches, and shall mount on a common base to allow the simple replacement of one detector type with another detector type. The addressing of the detectors shall not depend on the electrical position of the detector in the circuit.
 7. If devices require DIP or rotary switches for addressing, every device shall be physically removed and verified during final checkout with engineer to confirm devices are located and programmed correctly. All switch addressed devices and their bases must be labeled with engraved plastic labels to identify device address and intended location. Labels shall have a red background with white letters, letters shall be a minimum of 1/4" in height.
- B. Detectors - Photoelectric Smoke Detector, (Duct Detector Use)
1. Photoelectric detector shall utilize a light scattering type photoelectric smoke sensor to detect visible particulates produced by combustion. The integral microprocessor shall dynamically examine values from the sensor and initiate a system alarm based on the analysis of data. Detector shall continually monitor any changes in sensitivity due to the environmental affects of dirt, smoke, temperature, aging and humidity. Information shall be stored in the detector's memory and shall be transferred to the electronic loop controller for retrieval using a laptop PC or the Intelligent Detector Program/Service Tool designed by the manufacturer specifically for the purpose.
 2. The fire alarm contractor is responsible for reviewing the mechanical drawings for locations of all ductwork to identify where duct smoke detectors are required to be installed.
 3. The alarm set point shall be field selectable to any of five sensitivity settings ranging from 1.0% to 3.5% smoke obscuration per foot. The photo detector shall be suitable for operation in the following environment:
 - a. Temperature: 32°F to 120°F (0°C to 49°C)
 - b. Humidity: 0-93% RH, non-condensing
 - c. Elevation: no limit
- C. Duct Detector Housing:

1. The Analytical Microprocessor-based photoelectric smoke detector shall be readily adaptable for use in air duct smoke detection applications, using a housing that mounts to the outside of the duct. When used for duct smoke detection, the smoke detectors will not forfeit any of the system functionality that they have when used as area smoke detectors.
 2. The duct smoke detection housing shall allow the detector to sample and compensate for, variations in duct air velocity between 300 and 4,000 feet per minute.
 3. Remote alarm LEDs and Remote Test Stations shall be supported by the duct smoke detector and provided where indicated.
 4. All detectors used in duct applications shall be located in accordance with NFPA 72 recommendations.
 5. Contractor shall be responsible for repairing the duct work in areas where new devices do not fit the existing locations.
- D. Detectors - Fixed Temperature/Rate of Rise Heat Detector
1. Heat Detector shall have a solid state heat sensor, and shall transmit an alarm at a fixed temperature of 135° F (57°C) or due to a temperature Rate of Rise of 15°F/minute (9°C/minute). The detector shall continually monitor the temperature of the air in its surroundings to minimize thermal lag to the time required to process an alarm.
 2. The heat detector shall be rated for ceiling installation at 70 ft (21.3m) centers and be suitable for wall mount applications.
 3. Detectors - Fixed Temperature Heat Detector,
 4. Heat detector shall have a solid-state heat sensor, and shall transmit an alarm at a fixed temperature of 135° F (57°C). Detector shall continually monitor the temperature of the air in its surroundings to minimize thermal lag to the time required to process an alarm.
 5. Heat detector shall be rated for ceiling installation at 70 ft (21.3m) centers and be suitable for wall mount applications.
 6. Detectors - Mounting Bases
 7. Mounting base will not contain any electronics, shall support all Microprocessor-based Smoke detector types detailed in this specification, and have the following minimum requirements:
 - a. Removal of the respective detector shall not affect electronic loop communications with other detectors on that loop.
 - b. Field Wiring Connections shall be made to the room side of the base, so that wiring connections can be made or disconnected by the contractor without the need to remove the mounting base from the electrical box.
 - c. Bases will have the option of external LED operation, Relay base or data line isolator base.
 - d. Relay bases shall mount in a standard electrical box described above and provide Form "C" contacts rated at 1 amp @ 30VDC and listed for "pilot duty".

2.7 MICROPROCESSOR-BASED INTELLIGENT MODULES – GENERAL

- A. Fire Alarm / Life Safety System shall incorporate microprocessor-based addressable modules for the monitoring and control of system Input and Output functions over a 2 wire electronic communications loop, using both broadcast and serial polling protocols. All modules shall display communications and alarm status via LED indicators.
- B. The function of each connected module shall be determined by the module type, and shall be defined in the system software through the application of a personality code.

Simply changing the associated personality code may change module operation at any time.

- C. All addressing of the Microprocessor-based Addressable Modules shall be done electronically, and the electrical location of each module shall be automatically reported to the Fire Alarm Control Panel, where it may be downloaded into a PC, or printed out. The addressing of the modules will not be dependent on their electrical location on the circuit.
- D. All Microprocessor-based Addressable Modules shall have a visual means to confirm communications with the panel, and a visual means to confirm the alarm status of the modules.
- E. All field wiring to the Microprocessor-based Addressable Modules shall be supervised for opens and ground faults and shall be location identified to the module of incidence.
- F. Diagnostic circuitry, and their associated indicators, with reviewable Trouble Codes, shall be integral to the Microprocessor-based Addressable Modules to assist in troubleshooting system faults.
- G. The module shall be suitable for operation in the following environment:
 - 1. Temperature: 32°F to 120°F (0°C to 49°C)
 - 2. Humidity: 0-93% RH, non-condensing
- H. Single Input Module:
 - 1. Microprocessor-based Addressable Modules shall be used to provide one (1) supervised Class B (style B) input circuit capable of latching operation for use with contact devices, non-damped Waterflow Switches, non-latching supervisory sprinkler switches.
- I. Dual Input Module:
 - 1. Microprocessor-based Addressable Modules shall be used to provide two (2) independent supervised Class B (style B) input circuits capable of operating with two (2) contact devices. Both of the input circuits shall be terminated to, and operated from, the same microprocessor-based addressable module. The Initiating Device Circuit connected to the module shall be fully supervised for open circuits and ground faults.
 - 2. Modules shall report the operation of Waterflow Switches. The modules shall have an automatic delay of 15 seconds before reporting the Waterflow alarm condition to the Fire Alarm Control Panel. Module shall monitor sprinkler supervisory switches. The module shall automatically report the supervisory function to the Fire Alarm Control Panel each time the associated dry contact closes. Refer to project sprinkler drawings for sprinkler riser locations and quantities.
- J. Single Riser Signal Module:
 - 1. The Microprocessor-based Addressable Single Input Signal Module shall provide one (1) supervised Class B (style Y) Notification Appliance Circuit capable of a controlling 2A of polarized 24 VDC Notification Appliances.
- K. Control Relay Module:
 - 1. Microprocessor-based Addressable Control Relay Modules shall provide one form "C" dry relay contact rated at 2 amps @ 24 Vdc or 0.5 amps at 120 VAC to, control external appliances or equipment processes. The control relay module

shall be rated for pilot duty applications and releasing systems service. The position of the relay contact shall be confirmed by the system firmware.

- L. Microprocessor-Based Addressable Manual Pull Stations
 - 1. Fire Alarm / Life Safety System shall incorporate microprocessor-based addressable Manual Pull Stations connected over a 2 wire electronic communications loop, using both broadcast and serial polling protocols. All Manual Pull Stations shall display communications and alarm status via integral LED's.
 - 2. All addressing of the Microprocessor-based Addressable Manual Pull Stations shall be done electronically, and the electrical location of each station shall be automatically reported to the Fire Alarm Control Panel, where it may be downloaded into a PC, or printed out. The addressing of the Manual Pull Station will not be dependent on their electrical location on the circuit.
 - 3. All field wiring to the Microprocessor-based Addressable Manual Pull Stations shall be supervised for opens and ground faults. All ground faults shall be location identified to the module of incidence.
 - 4. Diagnostic circuitry, and their associated indicators, with reviewable Trouble Codes, shall be integral to the Microprocessor-based Addressable Manual Pull Stations to assist in troubleshooting system faults, including ground faults on the device.
 - 5. Manual Fire Alarm stations shall be double action and shall be supplied with a Safety Technology International, Inc., STI-1100 Stopper II protective cover with self-contained horn.

2.8 FIRE ALARM NOTIFICATION APPLIANCES - GENERAL REQUIREMENTS

- A. All appliances which are supplied for the requirements of this specification shall be UL Listed for Fire Protective Service, and shall be capable of providing the "Equivalent Facilitation" which is allowed under the Americans with Disabilities Act Accessibilities Guidelines (ADA(AG)), and shall be UL 1971 Listed.
- B. All appliances shall be of the same manufacturer as the Fire Alarm Control Panel specified to insure absolute compatibility between the appliances and the control panels, and to insure that the application of the appliances are done in accordance with the single manufacturer's instructions.
- C. Any appliances that do not meet the above requirements, and are submitted for use must show written proof of their compatibility for the purpose intended. Such proof shall be in the form of documentation from all manufacturers that clearly states that their equipment (as submitted) is 100% compatible with each other for the purpose intended. All strobes shall be provided with lens markings oriented for wall mounting. It shall be possible to replace the lens of any installed strobe in order to facilitate the replacement of a broken lens, or to change the orientation of the lens markings. Removal of an installed strobe to facilitate the changing of a lens will not be acceptable.
- D. All appliances installed in gymnasiums shall be equipped with a wire-guard protective cover. American Wire Guards brand, or equivalent.
- E. Speaker/Strobes
 - 1. Provide low profile white wall mount horn/strobes at the locations shown on the drawings. The Speaker/Strobe shall provide an audible output of 90 dBA at 10 ft. when measured in reverberation room per UL-464. Strobes shall provide synchronized flash outputs. The strobe output shall be determined as required by its specific location and application from a family of 15cd, 30cd, 60cd, 75cd. &

FIRE DETECTION AND NOTIFICATION SYSTEM

110cd devices. The horn shall have a selectable steady or synchronized temporal output. In and Out screw terminals shall be provided for wiring. Low profile horn/strobes shall mount in a North American 1-gang box.

- F. Strobes
 - 1. Provide low profile ceiling mounted white strobes at the locations shown on the drawings. In and out screw terminals shall be provided for wiring. Strobes shall provide synchronized flash outputs. Strobe output shall be determined as required by its specific location and application from a family of 15cd, 30cd, 60cd, 75cd, or 110cd devices. Low profile strobes shall mount in a North American 1-gang box.
- F. Remote LCD Annunciators:
 - 1. Remote LCD annunciators shall have the full ability and duplicate all functions of the main user interface located on the control panel. This includes the ability to control all system functions and duplicate panel annunciation.
 - 2. Annunciator shall also include the ability to support programmable switches and or LED's as required for special functions with out the need to add additional wires or cabinets.

2.9 ADDITIONAL EQUIPMENT

- A. Contractor shall include in their pricing, the cost to furnish and install the following additional equipment. These devices shall be used to fulfill any changes request issued until the list is depleted. Upon the completion of the project, all remaining material shall be delivered to the project for owner stock. No devices shall be used without documentation and written authorization from the project's technology consultant. Contractor shall obtain a signed transmittal of additional equipment to the owner at the end of the project. The signed transmittal shall be included in the contractor's closeout documents.
- B. Additional Equipment List:
 - 1. (15) Ceiling Mounted Audiovisual Strobes
 - 2. (15) Ceiling Mounted Visual Strobes
 - 3. (5) Manual Pull Stations
 - 4. (5) Stopper II tamper deterrent covers
 - 5. (3) Duct Detectors with sample tube and LED notification device
 - 6. (20) Ceiling Mounted, Photoelectric Smoke Detectors with base
 - 7. (10) Ceiling Mounted, Fixed Temperature, Heat detectors with base
 - 8. (8) Sets of keys to the FACP front locking panel

PART 3 - EXECUTION

3.1 INSTALLATION

- A. The complete system shall be installed by one (1) contractor and the installing contractor must be a certified dealer of the specified system. **NO SUBCONTRACTORS, TO THE AWARDED PROPOSING CONTRACTOR, WILL BE ALLOWED TO INSTALL ANY PORTION OF THIS SYSTEM.** Including, but not limited to:
 - 1. Wiring
 - 2. Field device installation
 - 3. System programming
 - 4. FACP installation
 - 5. Remote power supply installation

- B. The installing contractor shall install the network fire alarm system in as instructed by the manufacturer's instructions.
- C. Installation shall be in accordance with the NEC, NFPA 72, local and state codes, as shown on the drawings, and as recommended by the major equipment manufacturer.
- D. All fire detection and alarm system devices, control panels and remote annunciators shall be flush mounted when located in finished areas and may be surface mounted when located in unfinished areas.
- E. Manual pull stations shall be suitable for surface mounting or semi flush mounting as shown on the plans, and shall be installed not less than 42 inches (1067 mm), nor more than 48 inches (122 mm) above the finished floor.
- F. Smoke detectors shall be properly protected throughout construction.
- G. Wiring:
 - 1. **ALL WIRE ASSOCIATED WITH THE FIRE ALARM SYSTEM SHALL BE NEW AND RED IN COLOR ON THE ENTIRE PROJECT. NO EXCEPTIONS.**
 - 2. All wiring shall be in accordance with NFPA 72, the National Electrical Code, Local Codes, and article 760 of NFPA Standard 70. All wiring sizes shall conform to recommendations of the equipment manufacturer, and as indicated on the engineered shop drawings.
 - 3. All wire shall be U.L. Listed FPL for limited energy (300V) and fire alarm applications and shall be installed in conduit. Limited energy FPLP or MPP wire may be run open in return air ceiling plenums provided such wire is U.L. Listed for such applications and is of the low smoke producing fluorocarbon type and complies with NEC Article 760 if so approved by the local authority having jurisdiction.
 - 4. No A.C. wiring or any other wiring shall be run in the same conduit as fire alarm wiring.
 - 5. Wiring used for the multiplex communication circuit (SLC) shall be twisted and support a minimum wiring distance of 10,000 feet when sized at 12 AWG. The design of the system shall permit use of IDC and NAC wiring in the same conduit with the SLC communication circuit. Shielded wire shall not be required.
 - 6. All field wiring (with exception of external communications Ethernet) shall be electrically supervised for open circuit and ground fault.
 - 7. Minimum wire sizes shall be as follows:
 - a. Initiating Zones: 18 AWG
 - b. Indicating Zones: 14 AWG
 - c. Relay Control Circuits: 18 AWG
 - 5. The fire alarm control panel shall be capable of T-tapping NFPA Style 4 (Class B) Signaling Line Circuits (SLCs). Systems which do not allow or have restrictions in, for example, the amount of T-taps, length of T-taps etc., is not acceptable.
 - 6. Contractor shall ensure that all exterior horn locations will be installed in a weatherproof enclosure and sealed watertight. It is the contractor's responsibility that the conduit and box be installed in a manner that allows the device to be securely installed at all exterior locations and provide waterproofing as required to protect device and wiring.
 - 7. Fire alarm system dialer shall be installed in accessible location near main fire alarm panel. Dialer shall be installed in its own panel box. Dialer shall be a Notifier 411 series. Dialer shall be powered from 24vdc source from the Notifier panel.
 - 8. Contractor shall provide a service loop located above each device installed on the entire project. The service loop shall be a minimum of 5'.
 - 9. Contractor shall provide a service loop located above each type of panel installed. The service loop shall be a minimum of 10', but shall have enough

- length to allow for the panel to be relocated to any wall within the room that panel is located in.
10. All service loops shall be installed in the accessible ceiling that is nearest to each device and panel. No service loops shall be installed in open spaces or non accessible spaces.
- H. Terminal Boxes, Junction Boxes and Cabinets:
All boxes and cabinets shall be UL listed for their use and purpose.
- I. The fire alarm control panel shall be connected to a separate dedicated branch circuit, maximum 20 amperes. This circuit shall be labeled at the main power distribution panel as FIRE ALARM. Fire alarm control panel primary power wiring shall be 12 AWG. The control panel cabinet shall be grounded securely to either a cold water pipe or grounding rod. The control panel enclosure shall feature a quick removal chassis to facilitate rapid replacement of the FACP electronics.
- J. Cable Support:
1. All wire not installed inside conduit shall be installed in a dedicated cable support system for the entire run of each cable. Including, but not limited to service loops.
- a. Approved Cable Support Product:
PANDUIT® Corporation J-MOD™ modular support system
1. The approved cable support system shall be attached directly to the building steel at a serviceable height. In the event that the building steel is not 5' of the finished ceiling, the contractor shall provide a dedicated threaded rod extending within 5' of the finished ceiling and mount support hook to the treaded rod.
2. cable support shall be installed at a maximum of 5' on center.
3. All cable installed shall be attached to the support system with plenum rated Velcro and a plenum rated Velcro tie shall be installed between each cable support to keep wires neatly bundled throughout the entire run. Tiewraps will only be allowed to be used inside the fire alarm panels as required to manage the wires within each type of panel.
4. **ABSOLUTELY NO CABLE, NOT INSTALLED IN CONDUIT, WILL BE ALLOWED TO BE ATTACHED DIRECTLY TO THE BUILDING'S STEEL OR SUPPORTED IN ANY OTHER METHOD THAN THAT STATED ABOVE.**
5. **IT IS THE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO COORDINATE WITH ALL OTHER TRADES ON THE PROJECT TO INSURE THAT THE PATHWAY OF THIS SYSTEM DOES NOT INTERFERE WITH THE INSTALLATION OF THE OTHER TRADES AND TO PREVENT THE INSTALLED PRODUCT OF OTHER TRADES FROM PUTTING STRAIN ON THE INSTALLED WIRING.**
- K. Conduit / Raceway:
1. All wire shall be installed in an approved conduit/raceway system (except where permitted by NEC and the local authority having jurisdiction). Maximum conduit "fill" shall not exceed 40% per NEC.
2. Conduit and raceway system shall be installed as specified under the general electrical section of the specifications, and per NEC, local, and state requirements.
3. Minimum conduit size shall be 3/4" (19.1 mm). Install conduit per engineered shop drawings.
4. Systems utilizing open wiring techniques with low smoke plenum cable shall provide conduit in all inaccessible locations, inside concealed walls, all mechanical/electrical rooms, or other areas where wiring might be exposed or

subject to damage.

5. All vertical wiring and all main trunk/riser wiring shall be installed in a complete raceway/conduit system. All riser boxes shall be adequately sized for the number of conductors transversing the respective box as well as the number of terminations required.
6. Cable must be separated from any open conductors of power, or Class 1 circuits, and shall not be placed in any conduit, junction box or raceway containing these conductors, per NEC Article 760-29.
7. Wiring for 24 volt DC control, alarm notification, emergency communication and similar power-limited auxiliary functions may be run in the same conduit as initiating and signaling line circuits. All circuits shall be provided with transient suppression devices and the system shall be designed to permit simultaneous operation of all circuits without interference or loss of signals.
8. Conduit shall not enter the fire alarm control panel or any other remotely mounted control panel equipment or back boxes, except where conduit entry is specified by the FACP manufacturer.
9. All wiring associated with smoke control system shall be installed in conduit per current adopted codes regardless of voltages or ratings.

3.2 TEST AND REPORTS

A. Test:

1. The service of a state licensed, factory trained NICET level II technician shall be provided to technically supervise and participate during all of the adjustments and tests for the system. Upon completion of the acceptance tests, the owner and/or his representatives shall be instructed in the proper operation of the system.
2. All testing shall be in accordance with NFPA 72, Chapter 10.
3. Before energizing the cables and wires, check for correct connections and test for short circuits, ground faults, continuity, and insulation.
4. Close each sprinkler system flow valve and verify proper supervisory alarm at the FACP.
5. Verify activation of all water flow switches.
6. Open initiating device circuits and verify that the trouble signal actuates.
7. Open and short signaling line circuits and verify that the trouble signal actuates.
8. Open and short notification appliance circuits and verify that trouble signal actuates.
9. Ground all circuits and verify response of trouble signals.
10. Check presence and audibility of tone at all alarm notification devices.
11. Check installation, supervision, and operation of all intelligent smoke detectors using the walk test.
12. Each of the alarm conditions that the system is required to detect should be introduced on the system. Verify the proper receipt and the proper processing of the signal at the FACP and the correct activation of the control points.
13. When the system is equipped with optional features, the manufacturer's manual shall be consulted to determine the proper testing procedures. This is intended to address such items as verifying controls performed by individually addressed or grouped devices, sensitivity monitoring, verification functionality and similar.
14. The installing contractor shall functionally test each and every device in the entire system for proper operation and response. In addition, each circuit in the system shall be fully tested for wiring supervision. Any items found not properly installed or non-functioning shall be replaced or repaired and retested.
15. The installing contractor shall provide a complete written report on the functional test of the entire system. A copy of the test report shall be provided with maintenance manuals. The test report shall be signed and dated by the licensed

fire alarm superintendent responsible for supervising the final system test and checkout.

B. Final Inspection:

1. The installing contractor's state licensed, factory trained NICET level II technician shall test the entire system in the presence of the local authorities having jurisdiction. The contractor shall be responsible for making any changes, adjustments, or corrections as may be required by the local authorities.

C. Closeouts:

1. It is the intent of these specifications and of the architect/engineer that a continued program of system maintenance be continued by the owner in compliance with NFPA Standard 72H. It is mandatory that the installing contractor provide such services and make available these services to the owner upon completion of the project.
2. As part of the closeout documents, fire alarm contractor will provide owner with AutoCAD asbuilt drawings indicating locations of devices, routing of wiring, and panel information. All room numbers indicated on final close out documents and all panel settings shall be listed by actual building room numbers and not by room number indicated on construction documents. CAD files shall be AutoCAD 2017 or later. Provide the owner with one Mylar plot of each drawing and two blue line prints of each drawing.
3. Provide the owner with electronic versions of the as-built CD's.
4. Locate next to building FACP and fire alarm annunciator panel
5. A building graphic shall be provided mounted in aluminum-extruded frame with plexi-glass front. Graphic shall locate all fire alarm devices, power supplies, and FACP.
6. State FML-005 certificate shall also be framed and mounted near the fire alarm panel. Fire alarm panel shall have white FM required installation sticker attached to it.
7. Graphic shall include actual room numbers posted as part of the building graphics package, include as part of substantial completion requirement.

3.3 WARRANTY

- A. The fire alarm system, including labor and material, shall be free from defects in workmanship and materials, under normal use and service, for a period of one year from the date of acceptance or beneficial occupancy, whichever shall occur first. Any equipment or workmanship shown to be defective shall be repaired, replaced or adjusted during normal working hours at no cost to the owner.
- B. The equipment manufacturer shall be represented by a local service organization and the name of such shall be furnished to the Owner, Architect, and Engineer.

3.4 FUNCTIONS

A. Alarm System Automatic Functions:

1. Upon the operation on any sprinkler flow switch, manual pull station, or detector:
 - a. Signal the Fire Alarm Control Panel. Identify the addressable point at the Fire Alarm Control Panel and the remote fire alarm annunciator.
 - b. Sound a distinctive evacuation signal throughout the entire building.
 - c. Simultaneously activate all flashing visual alarm assemblies associated with audible indicators.
 - d. Shut down all mechanical equipment rated 2000 cfm or greater that circulate air for that floor. This equipment shall include, but shall not be limited to, air handling units, ventilation fans, fan powered boxes, and

FIRE DETECTION AND NOTIFICATION SYSTEM

- side pocket boxes. Coordinate with Division 15 Specification Section Air Conditioning Controls as required for passive smoke control.
- e. Close all smoke control dampers. Provide control relay within three (3) feet of each damper or power supply for motor drives or fail-safe dampers. When fail-safe smoke dampers are powered in parallel from a common power circuit then fire alarm relay may be provided to interrupt common power circuit; separate relay not necessary at every such damper. Install supervised fire alarm wiring from relay to fire alarm control panel. Resetting fire alarm system shall include opening smoke control dampers.
 - f. Activate and automatic telephone dialer and alarm contact closure for use with approved central station monitoring service. Owner provides NFPA 71 central station connection and maintains that service.
 - g. Release all fire and smoke control doors on hold-open devices so that doors may close.
 - h. Kitchen:
 - 1) Operation of any kitchen hood fire suppression system shall initiate the alarm building fire alarm control panel. Building fire alarm system shall sound alarm over appropriate notification appliance circuits as required by NFPA 72 sect. 3-8.8.1. Comply with NFPA 96 Standard for Commercial Cooking Operations, sect. 7-3.1.4. Actuation of a dry chemical shall cause building fire alarm per NFPA 17 sect. 3-7.4. Actuation of a wet chemical system shall cause building fire alarm per NFPA 17 sect. 3-2.1.5
 - i. Sprinkler System:
 - 1) Operation of any sprinkler system water flow switch shall activate the sprinkler alarm bell.
 - j. All alarm signals shall continue sounding and annunciator(s) shall remain lighted until the alarm acknowledged switch is depressed. The alarm signals shall then stop, but the annunciator shall remain lighted until the system is reset.
 - k. Acknowledging of any alarm signal shall interfere with the re-activating of the alarm signals upon an alarm from another zone.
 - l. Alarm Verification:
 - 1) Provide UL listed alarm verification feature.
 - 2) Alarm verification shall be per addressable, open area smoke detector. Alarm verification shall be field programmable on an individual detector basis. Global or dydte, alarm verification will be unacceptable.
 - 3) If an alarm condition is detected by an automatic smoke detector programmed for ALARM VERIFICATION, an alarm verification sequence shall be initiated. Upon receipt of the initial alarm condition, start the verification sequence as prescribed by UL 864. The system shall rest the alarmed zone/device within the UL prescribed window of 60 seconds maximum. If the alarm condition does not confirm within 60 seconds of the reset signal, the programmed alarm outputs shall be canceled and the system returned to the normal mode. If the alarm condition re-occurs within the designated verification cycle or a non-verified device or zone activates, the programmed events listed above shall immediately occur for the confirmed alarm condition.
 - 4) Alarm verification shall not be used for any spaces programmed to required two smoke detectors to initiate an alarm response (ex. elevator lobbies), per NFPA 72-1993 Sect. 3-8.2.5.

3.5 WALK TEST

- A. Notify Owner, Architect and Engineer when system is 100 percent operational. Schedule walk-through of the entire facility and verify that each initiating and each indicating device is operating properly.
- B. Provide report at conclusion of walk through certifying all fire alarm devices are working.
- C. Walk test shall include a representative from owner maintenance department.
- D. Walk test to show in a printed report all AHU shutdown, Sprinkler Tamper Report, Sprinkler Flow switch, strobes/horns, and smoke detectors. Report shall list all devices by approximate location to rooms, and device number. All duct detectors shall include flow differential at the detector as measured by a manometer. Manometer reading shall match manufacturer's specification for duct detector used.

3.6 SOFTWARE

- A. Installer shall provide a backup copy of the installed program database on CD media and 8GB thumb drive upon completion of the project.
- B. Provide the current version of system software, for the panel provided, on CD and 8GB thumb drive.
- C. Install additional CDs and 8GB thumb drives containing the installed program database, framed under plastic at the FACP and each annunciator panel.

END OF SECTION 28 31 00

28 49 00 – PERSONAL VAPORIZER DETECTION SYSTEM

PART 1 GENERAL

1.01 SYSTEM DESCRIPTION

A. General Requirements

1. The specified unit shall be of manufacturer's official product line, designed for commercial and/or industrial 24/7/365 use.
2. The specified unit shall be based upon standard components and proven technology using open and published protocols.

B. Sustainability

1. The specified unit shall be manufactured in accordance with ISO 9001.
2. The specified unit shall be compliant with the EU directives 2011/65/EU (CE).
3. The specified unit shall be compliant with the EU regulation 1907/2006 (REACH).
4. The specified unit shall be Halogen-free in accordance with IEC 61249-2-21.

1.02 CERTIFICATIONS AND STANDARDS

A. General abbreviations and acronyms

1. AES: Advanced Encryption Standard
2. API: Application Programming Interface
3. AQI: Air Quality Index
4. Aspect ratio: A ratio of width to height in images
5. BACnet: Building Automation and Control (BAC) Network
6. Bit Rate: The number of bits/time unit sent over a network
7. Bonjour: Enables automatic discovery of computers, devices, and services on IP networks.
8. DHCP: Dynamic Host Configuration Protocol
9. DNS: Domain Name System
10. FPS: Frames per Second
11. FTP: File Transfer Protocol
12. IEEE 802.1x: Authentication framework for network devices
13. HTTP: HyperText Transfer Protocol
14. HTTPS: Hypertext Transfer Protocol Secure
15. IAQ: Indoor Air Quality
16. IP: Internet Protocol
17. ISO: International Standards Organization
18. LAN: Local Area Network
19. LED: Light Emitting Diode
20. MPEG: Moving Picture Experts Group
21. MJPEG: Motion JPEG (M-JPEG or MJPEG) is a video compression format in which each video frame or interlaced field of a digital video sequence is compressed separately as a JPEG image.
22. Multicast: Communication between a single sender and multiple receivers on a network
23. NTP: Network Time Protocol

24. PoE: Power over Ethernet (IEEE 802.3af Class 3 Compliance, 80 mA) standard for providing power over network cable
 25. QoS: Quality of Service
 26. RTSP: Real Time Streaming Protocol
 27. SMTP: Simple Mail Transfer Protocol
 28. SNMP: Simple Network Management Protocol
 29. SSL: Secure Sockets Layer
 30. TCP: Transmission Control Protocol
 31. TLS: Transport Layer Security
 32. Unicast: Communication between a single sender and single receiver on a network
- B. The specified unit shall carry the following EMC approvals:
1. EN 55024:2010
 2. FCC 47 CFR Part 15 - Subpart B Class A
 3. EN 55032:2012 + AC:2013
 4. ICES-003 ISSUE 6:2016
- C. The specified unit shall meet the following product safety standards:
1. IEC / EN / CE / WEEE / UL 60950-1 / CUL 60950-1
- D. The specified unit shall meet the following standards
1. Networking:
 - a. IEEE 802.3af Class 3 Compliance, 125 mA)
 - b. IEEE 802.1X (Authentication)
 - c. IPv4 (RFC 791)
 - d. IPv6 (RFC 2460)
 - e. WiFi
 2. Mechanical Environment:
 - a. IEC/EN 62262
 - b. Vandal Resistance with at least an IK-10 rating

1.03 QUALITY ASSURANCE

- A. All installation, configuration, setup, program and related work shall be performed by electronic technicians thoroughly trained by the manufacturer in the installation and service of the equipment provided.
- B. The contractor or designated sub-contractor shall submit credentials of completed manufacturer certification, as proof of the knowledge.
- C. The specified unit shall be manufactured in accordance with ISO9001.

1.04 WARRANTY

- A. The manufacturer shall provide warranty for (1) one year and optional extended warranty for the sensor for a total period of three years.

PART 2 PRODUCTS

2.01 GENERAL

- A. Sensor shall be IP-based and comply with established network standards.
- B. Sensors shall be powered by the switch utilizing the network cable. Power injectors (midspans) shall be provided by the contractor when required for proper operation.
- C. Sensors shall be fully supported by an open and published API (Application Programmers Interface), which shall provide necessary information for integration of functionality into third party applications.

2.02 SENSOR SCHEDULE

- A. Sensors listed below shall be supplied by a single manufacturer.
- B. The sensor manufacturer and model numbers will be as follows:
 - 1. Halo 3C Smart Sensor (model # HALO-V3.00C)

2.03 SENSORS

- A. Interior mounted Smart Sensor
 - 1. Provide sensors in gang restrooms for all secondary campuses.
 - a. Contractor shall provide and install all mounting hardware for ceiling installation.
 - 2. The sensor shall meet or exceed the following design specifications:
 - a. Each sensor is connected from device back to nearest MDF/IDF closet via Category 6 data cabling back to campus network switch.
 - b. The sensor shall operate on an open source; Linux-based platform and include a built-in web server.
 - c. The sensor shall provide local database storage utilizing internal memory.
 - d. The sensor shall be manufactured with an IP30-rated, IK10 impact-resistant, polycarbonate casing.
 - e. The sensor certified to operate in plenum space.
 - 3. The sensor shall meet or exceed the following performance specifications:
 - a. Detection and measurement of
 - 1. Particulates Size 1 μm particulates $\mu\text{g}/\text{m}^3$
 - 2. Particulates Size 2.5 μm particulates $\mu\text{g}/\text{m}^3$
 - 3. Particulates Size 10 μm particulates $\mu\text{g}/\text{m}^3$
 - 4. Carbon Dioxide Equivalents
 - 5. Total Volatile Organic Compounds
 - 6. Carbon Monoxide
 - 7. Ammonia
 - 8. Temperature/Humidity
 - 9. Barometric Pressure
 - 10. Light Level
 - 11. Sound Levels
 - 12. Tamper
 - 13. Vape
 - 14. Vape THC

15. Spoken Keyword
16. Gunshot
17. Aggression
18. Masking / Spray Paint
19. Indoor Air Quality, AQI: Air Quality Index
- b. Scheduling
 1. Shall have day and time selection for notification of detection.
 2. Shall have the scheduling be adjustable separately for each detection type.
- c. Audio microphones
 1. Shall have (2) two microphones
 2. Sensor shall perform audio analysis only
 3. Sensor shall not record live audio stream
- d. LED Indicator Light
 1. The sensor shall have a multi-color LED indicator.
- e. Speaker
 1. The sensor shall have a speaker.
- f. Encoding of Data Screen
 1. The sensor shall support the following video encoding algorithms:
 - a. Motion JPEG encoding of 1 frame per second.
- g. Video Transmission
 1. The sensor shall allow for video to be transported over:
 - a. HTTP (Unicast)
 - b. HTTPS
 - c. RTSP
- h. User Interface
 1. Web server
 - a. The sensor shall contain a built-in web server making video and configuration available to multiple clients in a standard operating system and browser environment using HTTP and HTTPS, without the need for additional software.
- i. IP addresses
 1. The sensor shall support both fixed IP addresses and dynamically assigned IP addresses provided by a Dynamic Host Control Protocol (DHCP) server.
 2. The sensor shall allow for automatic detection of the sensor based on UPnP and Bonjour when using a PC with an operating system supporting this feature.
 3. The sensor shall provide support for IPv4.
 4. The sensor shall provide support for IPv6.
- j. Event functionality
 1. The sensor shall be equipped with an integrated event functionality, which can be triggered by:
 - a. Sensor tampering
 - b. Manual Trigger/Virtual Inputs
 - c. Event threshold met
 2. Response to triggers shall include:
 - a. Relays Outputs
 1. (2) Two relay outputs

2. Normally Open or Closed
3. Rated at 48VDC at 1 amp
- b. Status Light
- c. Speaker
 1. Pre-Recorded Files
 2. Programmable
- d. Send notification, using HTTP, HTTPS, TCP, RTSP, or Email
- e. Send images, using FTP, HTTP, HTTPS, RTSP, network share or email
- f. Identification in data logs
- k. Protocol
 1. The sensor shall incorporate support for at least IPv4/v6, HTTP, HTTPS, SSL/TLS, TCP, ICMP, SMTP, DHCP, UPnP, ARP, DNS, NTP, RTSP, Bonjour.
 2. The SMTP implementation shall include support for SMTP authentication.
- l. Security
 1. The sensor shall be in compliance with California's law for IoT device cyber security, California Civil Code Section 1798.91.04.
 2. The sensor shall restrict access to the built-in web server by usernames and passwords at two different levels.
 3. The sensor shall have minimum user-name and password criteria requirements.
- m. Configurability
 1. Network system configuration and sequence of operation shall be programmed by Owner once system is installed.
 2. The sensor shall permit configuration of Event thresholds, time requirements, filters, and combinational Events. Built in test functions shall be provided.
 3. The sensor shall permit configuration live viewing elements, live viewing style/colors, and live viewing ranges
 4. Sensor shall permit configuration of Actions including lighting patterns and colors, audible alerts, relay outputs, Email alerts, SMS alerts, and TCP/IP socket alerts.
 5. Sensor shall permit configuration of user accounts, network parameters, SMTP connection parameters with built in test function.
- n. API support
 1. The sensor shall be fully supported by an API (Application Programmers Interface), which shall provide necessary information for integration of functionality into third party applications.
- o. Installation and maintenance
 1. The sensor shall provide built-in means which allows the assignment of IP addresses, upgrade of firmware and backup of the sensor' configuration without use of external software.
 2. The sensor shall be supplied with Windows-based management software which allows the assignment of IP addresses, upgrade of firmware and backup of the sensor' configuration.
 3. Sensor shall provide means to restore configuration with selection of desired sections of configuration to be restored.
 4. The sensor shall allow updates of the software (firmware) over the network, using FTP, HTTP, or HTTPS.
 5. Sensor shall provide logging and means to download daily files of Events, System States, and System Operation.

6. The sensor shall accept external time synchronization from an NTP (Network Time Protocol) server.
 7. The sensor shall store all customer-specific settings in a non-volatile memory that shall not be lost during power cuts or soft reset.
 8. Sensor shall provide a built-in complete system test that can be performed at any time.
- p. Hardware interfaces
1. Network interface
 - a. The sensor shall be equipped with one 10BASE-T/100BASE-TX Fast Ethernet-port using a shielded RJ45 connector and shall support auto negotiation of network speed (100 MBit/s and 10 MBit/s) and transfer mode (full and half duplex).
- q. Enclosure
1. The sensor shall:
 - a. Be manufactured with an IP30-rated, IK10 impact-resistant, polycarbonate casing.
 - b. Secure the outer cover with anti-tamper TORX screws
 - c. Be provided with self-locking mounting features for installation in materials up to $\frac{3}{4}$ " (19MM) in thickness.
- r. Power
1. Power over Ethernet IEEE 802.3af
- s. Environmental
1. Operate in a temperature range of 0 °C to +50 °C (+32 °F to 122 °F).
 2. Operate in a humidity range of 0–90% RH (non-condensing).

PART 3 EXECUTION

3.01 INSTALLATION

- A. The Contractors or subcontractors' main resources within the project shall carry proper professional certification or training issued by the manufacturer.
- B. The Contractor shall carefully follow instructions in documentation provided by the manufacturer to ensure all steps have been taken to provide a reliable, easy-to-operate system.
- C. All equipment shall be tested and configured in accordance with instructions provided by the manufacturer prior to installation.
- D. All firmware found in products shall be the latest and most up to date provided by the manufacturer.
- E. All equipment requiring users to log on using a password shall be configured with individually unique password/passwords. No system/product default passwords shall be allowed.
- F. A proper installation shall meet NEC (National Electrical Code – US only) per the guidelines of that year's revision. When properly installed equipment meets Low Voltage, Class 2 classification of the NEC.

END OF SECTION

SECTION #31 10 00 – SITE CLEARING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. All applicable provisions of the Bidding and Contract Requirements, and Division 1 - General Requirements shall govern the work under this section.

1.2 WORK INCLUDED

- A. This Section includes the following:
 - 1. Clearing and grubbing.
 - 2. Stripping and stockpiling topsoil.
 - 3. Temporary erosion and sedimentation control measures.
- B. Related Sections include the following:
 - 1. Division 32 Section "Chain Link Fences and Gates" for temporary construction fencing.

1.3 MATERIAL OWNERSHIP

- A. Except for stripped topsoil or other materials indicated to remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.4 PROJECT CONDITIONS

- A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.
 - 1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
 - 2. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.
 - 3. Do not proceed with work on adjoining property until directed by Engineer.
- B. Utility Locator Service: Notify utility locator service for area where Project is located before site clearing.
- C. Do not commence site clearing operations until temporary erosion and sedimentation control measures are in place.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEMPORARY EROSION AND SEDIMENTATION CONTROL

- A. Provide temporary erosion and sedimentation control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to sediment and erosion control Drawings.
- B. Inspect, repair, and maintain erosion and sedimentation control measures during construction until permanent vegetation has been established.
- C. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

3.2 TREE PROTECTION

- A. Reference 015639 "Tree and Plant Protection".

3.3 UTILITIES

- A. Locate, identify, disconnect, and seal or cap off utilities indicated to be removed.
 - 1. Arrange with utility companies to shut off indicated utilities.

- B. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
 - 1. Notify Engineer and Owner not less than two days in advance of proposed utility interruptions.
 - 2. Do not proceed with utility interruptions without Owner's written permission.
- C. Excavate for and remove underground utilities indicated to be removed.

3.4 CLEARING AND GRUBBING

- A. Remove obstructions, trees, shrubs, grass, and other vegetation to permit installation of new construction.
 - 1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
 - 2. Cut minor roots and branches of trees indicated to remain in a clean and careful manner where such roots and branches obstruct installation of new construction.
 - 3. Grind stumps and remove roots, obstructions, and debris extending to a depth of 18 inches (450 mm) below exposed subgrade.
 - 4. Use only hand methods for grubbing within tree protection zone.
- B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.
 - 1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches (200 mm), and compact each layer to a density equal to adjacent original ground.

3.5 TOPSOIL STRIPPING

- A. Remove sod and grass before stripping topsoil.
- B. Strip topsoil to whatever depths are encountered in a manner to prevent intermingling with underlying subsoil or other waste materials.
 - 1. Remove subsoil and nonsoil materials from topsoil, including trash, debris, weeds, roots, and other waste materials.
- C. Stockpile topsoil materials away from edge of excavations without intermixing with subsoil. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 - 1. Limit height of topsoil stockpiles to 72 inches (1800 mm).
 - 2. Do not stockpile topsoil within tree protection zones.
 - 3. Dispose of excess topsoil as specified for waste material disposal.
 - 4. Select subparagraph above or below.
 - 5. Stockpile surplus topsoil to allow for respreading deeper topsoil.

3.6 SITE IMPROVEMENTS

- A. Remove existing above- and below-grade improvements as indicated and as necessary to facilitate new construction.
- B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.
 - 1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut length of existing pavement to remain before removing existing pavement. Saw-cut faces vertically.
 - 2. Paint cut ends of steel reinforcement in concrete to remain to prevent corrosion.

3.7 DISPOSAL

- A. Disposal: Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property.

1. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials and transport them to recycling facilities.

END OF SECTION #31 10 00

SECTION 31 13 13.13 - WASTE MATERIAL DISPOSAL

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 SCOPE

- A. Waste material disposal consists of disposal of trees, brush, vegetation, rubbish and other objectionable matter from operations such as clearing and grubbing, demolition, excavation, concrete placement and grading. Unless otherwise specified, the Contractor is responsible for removal and disposal of waste material.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Specific products are not required. Use equipment and materials necessary to properly complete disposal of waste materials.

PART 3 - EXECUTION

3.1 DISPOSAL AREA

- A. Items noted on plans to be "removed" or "disposed" will be taken completely off the site.
- B. Concrete wash-out will become property of Contractor to be disposed of with other waste materials.

3.2 COMPACTION AND GRADING

- A. Level off waste material to an elevation 12 inches below final grade. Place excess topsoil on waste material in a layer not less than 12 inches thick and compact to the density of the surrounding area.

END OF SECTION 31 13 13.13

SECTION #31 20 00 – EARTH MOVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. All applicable provisions of the Bidding and Contract Requirements, and Division 1 - General Requirements shall govern the work under this section.

1.2 WORK INCLUDED

- A. This Section includes the following:
 - 1. Subgrade course for pavements.
 - 2. Base material for asphalt paving.
- B. All earthwork to be performed and materials used shall be in accordance with the Geotechnical Engineering Report. In the event of a discrepancy between the above-referenced standards, the plans, and/or any portion of this specification section, the order of precedence will be the above-referenced report, the City Design Standards, and then these specifications. The Contractor shall contact the engineer in the event of a discrepancy.

1.3 DEFINITIONS

- A. Backfill: Soil material or controlled low-strength material used to fill an excavation.
 - 1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
 - 2. Final Backfill: Backfill placed over initial backfill to fill a trench.
- B. Base Material: Course placed between the subgrade asphaltic concrete paving.
- C. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.
- D. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.
 - 1. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by Engineer. Authorized additional excavation and replacement material will be paid for according to Contract provisions for changes in the Work.
- E. Fill: Soil materials used to raise existing grades.
- F. Subgrade: Surface or elevation remaining after completing excavation, or top surface of a fill or backfill immediately below base material.

1.4 SUBMITTALS

- A. Material Test Reports: From a qualified testing agency indicating and interpreting test results for compliance of the following with requirements indicated:
 - 1. Classification according to ASTM D 2487 of each borrow soil material proposed for fill and backfill.
 - 2. Laboratory compaction curve according to ASTM D 698 for each borrow soil material proposed for fill and backfill.

1.5 PROJECT CONDITIONS

- A. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted in writing by Owner and then only after arranging to provide temporary utility services according to requirements indicated.
 - 1. Notify Owner not less than two days in advance of proposed utility interruptions.

2. Do not proceed with utility interruptions without Owner's written permission.
 3. Contact utility-locator service for area where Project is located before excavating.
- B. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies to shut off services if lines are active.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

- A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.
- B. Satisfactory Soils: On-site soils are suitable for use as fill within the pavement areas, provided they are free from organics and debris. Select fill must be used for grade adjustments in the helipad area.
- C. Unsatisfactory Soils: Materials, which do not comply with the requirements for acceptable material or which, cannot be compacted to the specified or indicated density.
- D. Subgrade: Stabilize the subgrade to materials as specified by Texas Department of Transportation. The subgrade material should be compacted to at least 98 percent of the modified Proctor maximum dry density (AASHTO T-180).
- E. Base Material: The limerock base course should have a minimum Limerock Bearing Ratio (LBR) of 100 and should be compacted to 98 percent of the modified Proctor maximum dry density (AASHTO T-180).
- F. Select Fill: USCS Classification CL and/or SC, with a Plasticity Index between 10 and 20.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earthwork operations.
- B. Provide protective insulating materials to protect subgrades and foundation soils against freezing temperatures or frost.

3.2 DEWATERING

- A. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.
- B. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.
 1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

3.3 EXCAVATION, GENERAL

- A. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.

1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials.

3.4 EXCAVATION FOR WALKS AND PAVEMENTS

- A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.5 EXCAVATION FOR UTILITY TRENCHES

- A. Excavate trenches to indicated gradients, lines, depths, and elevations.
- B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches (300 mm) higher than top of pipe or conduit, unless otherwise indicated.
- C. Trench Bottoms: Excavate trenches 4 inches (100 mm) deeper than bottom of pipe elevation to allow for bedding course. Hand excavate for bell of pipe.
 1. Excavate trenches 6 inches (150 mm) deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

3.6 SUBGRADE INSPECTION

- A. Notify Testing Agency when excavations have reached required subgrade.
- B. If Testing Agency determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.
 1. Proof-roll subgrade below pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph (5 km/h).
 2. Proof-roll with a loaded 10-wheel, tandem-axle dump truck weighing not less than 20 tons.
 3. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Engineer, and replace with compacted backfill or fill as directed.
- C. Authorized additional excavation and replacement material will be paid for according to Contract provisions for changes in the Work.
- D. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Engineer, without additional compensation.

3.7 STORAGE OF SOIL MATERIALS

- A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

3.8 BACKFILL

- A. Place all backfill in strict accordance to Geotechnical Report for this project.
- B. Place and compact backfill in excavations promptly, but not before completing the following:
 1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
 2. Surveying locations of underground utilities for Record Documents.
 3. Testing and inspecting underground utilities.

4. Removing concrete formwork.
 5. Removing trash and debris.
 6. Removing temporary shoring and bracing, and sheeting.
 7. Installing permanent or temporary horizontal bracing on horizontally supported walls.
- C. Place backfill on subgrades free of mud, frost, snow, or ice.

3.9 SOIL FILL

- A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.
- B. Place and compact fill material in layers to required elevations as follows:
1. Under grass and planted areas, use satisfactory soil material.
 2. Under walks and pavements, use satisfactory soil material.
- C. Place soil fill on subgrades free of mud, frost, snow, or ice.

3.10 SOIL MOISTURE CONTROL

- A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.
1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.
 2. Remove and replace, or scarify and air dry otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

3.11 COMPACTION OF SOIL BACKFILLS AND FILLS

- A. All compaction in strict accordance with Geotechnical recommendations.
- B. Place backfill and fill soil materials in layers not more than 8 inches (200 mm) in loose depth for material compacted by heavy compaction equipment.
- C. Place backfill and fill soil materials evenly on all sides of structures to required elevations, and uniformly along the full length of each structure.
- D. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D 698:
1. Under pavements, scarify and recompact existing subgrade and each layer of backfill or fill soil material at 95 percent. Refer to Geotechnical Report for thickness.
 2. Under walkways, scarify and recompact top 6 inches (150 mm) below subgrade and compact each layer of backfill or fill soil material at 95 percent.
 3. Under lawn or unpaved areas, scarify and recompact top 6 inches (150 mm) below subgrade and compact each layer of backfill or fill soil material at 95 percent.
 4. For utility trenches, compact each layer of initial and final backfill soil material at 95 percent.

3.12 GRADING

- A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.
1. Provide a smooth transition between adjacent existing grades and new grades.
 2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

3.13 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent geotechnical engineering testing agency to perform field quality-control testing.
- B. Testing agency will test compaction of soils in place according to ASTM D 1556, ASTM D 2167, ASTM D 2922, and ASTM D 2937, as applicable. Tests will be performed at the following locations and frequencies:
 - 1. Paved Areas: At subgrade and at each compacted fill and backfill layer, at least 1 test for every 2000 sq. ft. (186 sq. m) or less of paved area, as indicated in Geotechnical Report, but in no case fewer than 3 tests.
 - 2. Trench Backfill: At each compacted initial and final backfill layer, at least 1 test for each 150 feet (46 m) or less of trench length, but no fewer than 2 tests.
- C. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil to depth required; re-compact and retest until specified compaction is obtained.

3.14 PROTECTION

- A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
- B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
 - 1. Scarify or remove and replace soil material to depth as directed by Engineer; reshape and recompact.
- C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
 - 1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.15 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property.

END OF SECTION #31 20 00

SECTION 31 22 15 - FINISH GRADING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes
 - 1. Machinery restrictions.
 - 2. Excavation, filling and backfilling of on site material.
 - 3. Subgrade preparation and spreading of topsoil.
 - 4. Finished grading.
 - 5. Prevention of excessive weed growth in lawns.
 - 6. Drainage.
- B. Related Sections
 - 1. Landscape Rough Grade – Section 31 22 14
 - 2. Lawns and Grasses - Section 32 92 00
 - 3. Planting - Section 32 93 00

1.2 GENERAL PROVISIONS

- A. Finished grading shall be defined as placing and grading of additional soil that will be required to bring the grade to the required grades for lawns, shrub and groundcover beds.
- B. Additional fill materials shall generally be defined as topsoil as specified herein unless otherwise specified.
- C. Where practicable and as directed, the use of heavy machinery shall be kept to a minimum.
- D. Refer to Section 32 93 00 for finish grading of shrub and groundcover beds.

1.3 INFORMATIONAL SUBMITTALS

- A. Soil analysis of all on site topsoil to be used for finished grading and planting media prior to stock piling. Soil tests/analysis to be submitted to Landscape Architect along with any planned amendments to meet requirements.

PART 2 - PRODUCTS

2.1 FILL

- A. General Qualifications: Fill shall be a clean, dry soil of a loamy character, well drained and well graded with a plasticity index not to exceed 20 or fall below 8. Fill material shall contain no oils, alkalies, acids, rubbish or other deleterious materials. The pH shall be similar to the approved topsoil.

2.2 TOPSOIL

- A. Topsoil material that will be required for finish grading operations shall conform to the requirements included within this Section and shall come from on site stockpiles.
- B. General Qualifications for Topsoil:
"On-Site" Topsoil shall be considered as material conforming to the following minimum criteria:
 - 1. Natural, friable, loamy soil, typical of local topsoil which produces heavy vegetative growth, free from subsoil, weeds, sods, stiff clay, stones larger than 1", toxic substances, debris, or other substances which may be harmful to plant growth. Do not deliver in muddy condition.
 - 2. Acidity/Alkalinity: pH 6.0 to pH 7.5.
- C. Grading Analysis: 2" sieve, 100% minimum passing. Number 4 sieve, 90% minimum passing. Number 10 sieve, 80% minimum passing.
 - 1. Sand, Silt, and Clay Content (from ASSHTO M146):
 - a. Sand 20 - 45%
 - b. Silt 20 - 40%
 - c. Clay 10 -15%
 - 2. All topsoil shall be free from all herbicides and insecticides which might adversely affect subsequent growth of turf or plantings or which might otherwise contain materials toxic to humans and pets.
- D. Non-Conforming Material: The Contractor shall not be permitted to use on-site material which does not conform to the above minimum criteria for fine grade operations. At the discretion of the Owner's representative, such material can either be amended to meet the minimum requirements or shall be removed from the site and replaced with suitable material as specified herein.
- E. It shall be the Contractor's responsibility to verify that the existing topsoil conforms to these specifications. Topsoil determined to be non-conforming subsequent to the award of a contract shall not be means for extra compensation unless otherwise provided for herein.
- F. Soil Analysis: These samples shall be submitted to an accredited and approved soils laboratory at Contractor's cost. Submit results of soil analysis to the Owner for review. The soil analysis shall include recommendations for amendments to the soil to produce optimum plant growth from the variety of plants and grasses proposed. These amendments shall be made at the Contractor's expense and shall be included in the bid.

2.3 SAND

- A. Shall be Bank Sand. Sample shall be submitted for approval. Sand shall be used for minor finish grade corrections and shall not be permitted for grading purposes if the depth exceeds 1/2" to achieve the finished grade.

PART 3 - EXECUTION

3.1 WORKMANSHIP

- A. Work shall be performed by personnel trained and experienced in this work and shall be done under the direction of a superintendent on Contractor's staff.

3.2 PREPARATION OF SUBGRADE AND SPREADING OF TOPSOIL

- A. The subgrade soil when at optimum soil moisture shall be loosened to a depth of 4" by disking or tilling and then graded to remove all ridges and depressions so that it will be everywhere parallel to the proposed finished grade. All stones over 1 1/2" in any dimensions, sticks, rubbish and other extraneous matter shall be removed during this operation. If soil clumps over 2" in diameter remain, then make additional passes with a harrow or other approved equipment to reduce below the 2" size. No heavy objects except rollers shall be moved over lawn areas after the subgrade soil has been prepared before topsoil is spread.
- B. After the subgrade soil has been prepared, topsoil from the stockpile areas and imported topsoil shall be spread evenly therein to depth of 4" by an approved method. No topsoil shall be spread in a frozen or muddy condition. Areas to receive topsoil are defined as follows:
 - 1. "On-Site Topsoil" – Areas to receive grass (sod, hydroseed, native seeding).
- C. On all grass areas, the finished surface of the topsoil shall conform to the finished grade and shall be free from hollows or other inequalities, stones, sticks and other extraneous matter.
- D. Imported planting soil shall be used to "cap" the repurposed topsoil and eliminate the germination of any dormant seed.

3.3 FINISH GRADING

- A. In areas to receive lawns, this Contractor shall till, disc, or otherwise scarify the soil to a depth of 4" removing all clods, stones, and related material 1" or larger.
- B. This Contractor shall be responsible for minor adjustments to the finished subgrade if such treatment is required in the opinion of the Owner's representative.
- C. The Contractor may use machinery acceptable to the Owner's representative to complete most of the work to re-establishing finished grade.
- D. Hand-rake the surface, removing all clods and undesirable material greater than 1/2" from ground surface. Fill all low spots and cut irregularities to the acceptance of the Owner's representative. Roll the entire surface evenly with a 200 pound water ballast roller or other means acceptable.
- E. During the finished grading operations, all swales and additional swales that may be required to drain areas where there are existing plant materials, shall be finished. In general, all grade adjustments shall be made so there are no areas that will have standing water.
- F. To prevent excessive weed growth in the lawn areas, the Contractor should be prepared to immediately install the sod or seeding upon the completed and acceptable finished grade.
- G. Prior to installation of grass or groundcovers, contact Landscape Architect to inspect and approve finish grade.

END OF SECTION 31 22 15

SECTION 31 23 00 - CONSTRUCTION OF UNDERGROUND UTILITIES

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 – GENERAL

1.1 SUMMARY

- A. This Section shall govern for all excavation required for the construction of sewers, sewer structures, pipe culverts, appurtenances and connections and for the backfilling around completed sewers to the level of the original ground, all in conformity with the locations, lines and grades shown on the plans or as given by the Engineer and in accordance with these specifications. This Section shall also govern for any necessary pumping or bailing and drainage and all sheathing and bracing of trench walls. Also governed by this Section are the cutting and restoration of pavement and base courses, the furnishing and placing of cement stabilized backfill, the hauling and disposing of surplus materials and the bridging of trenches and other provisions for maintenance of traffic or access as provided herein.

1.2 QUALITY ASSURANCE

- A. The Testing Laboratory's representative will determine the moisture density relationship in accordance with ASTM D698 on material secured from the trench excavation. Samples secured from the cement stabilized sand supplier shall be blended with Portland cement in accordance with Section 31 23 23.16 - Cement Stabilized Sand Bedding and Backfill, and the moisture density relationship will be determined in accordance with ASTM D558.
- B. The Testing Laboratory's representative will determine the in-place density in accordance with ASTM Methods D2922 or D1556. The minimum level of testing will consist of at least one test for each 200 linear feet of trench per lift of backfill.
- C. At the completion of the project, all on site storm and sanitary sewer lines shall be cleaned out using a hydraulic jet machine in the presence of the owner and engineer. After hydro-jetting storm and sanitary sewer lines, all segments shall be video tape recorded and tapes shall be furnished to the owner.

1.3 REQUIRED INSPECTIONS

- A. The contractor is solely responsible for meeting with all inspecting authorities having jurisdiction over the project (to include, but not limited to: Water District, City, County, State and Federal) prior to construction. All required inspections shall be coordinated by the contractor prior to installation of the WORK. All WORK found to be deficient by the inspector(s) and WORK installed prior to notification of inspector(s) shall be removed and replaced at the contractor's sole expense.

PART 2 – PRODUCTS

2.1 CONNECTIONS TO BUILDING GRAVITY SEWERS

- A. Connections to building gravity sewers, to include roof drains and sanitary sewer connections shall be made with SCH 40 X SDR adapter couplings.
- B. Fernco couplers are not allowed.

PART 3 – EXECUTION

3.1 EXCAVATION & TRENCH PREPARATION

- A. Excavate trench to the alignment and depth required. Brace the trench and drain, as required, so that the work may be accomplished safely and efficiently. If necessary, install a dewatering system to provide a dry trench bottom. Pumps shall discharge into natural drainage channels or to drains. Shoring for excavations and trenches shall meet the requirements of the latest edition of OSHA Regulation 1926, Subpart P.
- B. For pipes less than 30 inches in diameter, the minimum width of the trench shall be the width of the outside barrel of the pipe plus 24 inches, the maximum width of the trench shall be the width of the outside barrel of the pipe plus 36 inches. For pipe 30 inches and larger, the minimum trench width shall be the width of the outside barrel of the pipe plus 32 inches, and the maximum width of the trench shall be the width of the outside barrel of the pipe plus 36 inches.
- C. Side sloping or benching of the trench, where permitted, will begin at one foot above the top of the pipe and will not encroach upon private property or endanger existing or future structures or underground utilities. Depth of trench, without sheathing or bracing shall comply with OSHA Regulation 1926.650.
- D. The full width of the trench shall be excavated to a depth below the invert elevation of the pipe so as to permit placing the bedding material specified on the attached drawings below the outside bottom of the pipe. Any additional depth excavated by the Contractor shall be replaced with an equal depth of cement-stabilized sand. The cost of this additional material, in place shall be at the expense of the Contractor.
- E. Where necessary, excavations shall have sheathing and bracing to prevent caving. At these locations, increase the trench width as required and leave the sheathing in place until the pipe has been laid and the backfill compacted to a depth of 2 feet over the pipe. All sheathing and bracing shall be designed to the requirements of OSHA Standard 1926, Subpart P (latest edition).
- F. Sewers shall not be constructed, or sewer pipe laid in the presence of water. All water shall be removed from the excavation sufficiently prior to the sewer placing operation to ensure a dry, firm bed on which to place the sewer and shall be maintained in such unwatered condition until all concrete and mortar is set. Removal of water may be accomplished by bailing, pumping or by a well-point system as conditions warrant. There will be no separate pay for well pointing without the prior approval of the Engineer. Contractor shall include in base proposal all costs associated with de-watering, well pointing, stabilizing, etc. necessary to install all underground utilities.
- G. In the event that the excavation cannot be dewatered to the point where the pipe subgrade is free of mud, excessive wet soil, sand silt or clay with water, a seal slab shall be used in the bottom of the excavation. Such seal slab shall consist of a lean concrete mixture. The seal slab shall be a Class "D", 5 sacks of cement per cubic yard with a minimum compressive strength of 1,750 P.S.I. at 7 days and 2,500 P.S.I. at 28 days. A precast seal slab may be used, provided that the joints of the seal slab do not occur at the joint of the pipe. Contractor shall have an option of using a three-day cylinder break test at no expense to the Owner.
- H. For unstable conditions requiring outside forms, seals, sheathing, and bracing, or where groundwater is encountered, any additional excavation in width and backfill required shall be done at the Contractor's expense. Portable trench boxes may be used in lieu of sheathing upon approval in writing by the Engineer. The trench box must be in accordance with OSHA Regulation 1926.650 (latest edition).
- I. Use of the trench box does not relieve the Contractor of any liability for damages to person or property. When a trench box is moved, the jointed pipe or in-place backfill shall not be disturbed.

- J. All materials from excavation operations not required for backfilling, if considered suitable shall be placed in embankments or wasted, in accordance with Section 31 20 00 - Earthwork. All material not suitable for use in embankments will be declared surplus by the Engineer and shall become the responsibility of the Contractor to dispose of as he wishes. Such surplus material shall be promptly removed from the work following the completion of the portion of the sewer involved. No separate payment shall be made for disposal of this surplus material.
- K. Unless otherwise specifically approved, Contractor shall use ladder or wheel-type trench-digging machinery, except where hand methods must be employed to avoid damage to existing structures above or below ground, or where hand excavation is indicated.
- L. Engineer may limit the amount of trench opened or partially opened at any time in advance of the completed pipe laying operation and the amount of trench left unfilled. Open no more than 500 feet of trench at any one time.

3.2 PIPE LAYING

- A. No pipe shall be laid in water or when the trench conditions or weather is unsuitable for such work, unless specifically approved by the Engineer.
- B. Non-pressure concrete pipe shall be laid with the ends abutting and true to line and grade. Fit and lay the pipe to form a smooth and uniform invert. Laying of pipe shall commence at the lowest point, so that the spigot ends point in the direction of flow. Lay cast iron pipe on firm earthen foundation with bell ends facing the direction of laying.
- C. All other types of pipe shall be laid in accordance with the applicable provisions of this specification, in accordance with the Special Provisions preceding this Subsection, or with the manufacturer's recommendations.
- D. Cut cast iron pipe with wheel-type cutters or cold chisel. Flame cutting of cast iron pipe is not allowed. Make cuts in a neat and workmanlike manner without damage to pipe and so as to leave a smooth end at right angles to axis of pipe. Field cutting of Polyvinyl Chloride shall be in accordance with the pipe manufacturer's recommendations.
- E. Minor deflections may be obtained in pipe joints. Contractor must obtain approval when the degree of deflection is necessary to deflect from a straight line. Where necessary to make major deflections in concrete pipe, use sections of pipe with beveled ends for deflections not greater than five degrees. For deflections greater than five degrees, use fabricated fittings for concrete pressure pipe and use cast iron fittings for cast iron pipe.
- F. When the pipe laying operation is halted, seal the open end of the pipe with a temporary plug. Plug is to remain in place until the pipe laying operation re-commences. Standard plugs shall be inserted into bells of all dead-end pipe.
- G. All underground pipe shall have a 12-gauge metallic tracer wire running the full length of the pipe. Tracer wire shall be taped to the pipe at intervals not to exceed 15-feet using duct tape and terminate at each end above ground in a 2" PVC riser.
- H. Pipe shall be installed with the labels facing upward.
- I. At the completion of the project, all on site storm and sanitary sewer lines shall be cleaned out using a hydraulic jet machine in the presence of the owner and engineer. After hydro-jetting storm and sanitary sewer lines, contractor shall run video-camera through pipes and video-record each line segment in order to document proper installation.

3.3 BACKFILLING

- A. As soon as practicable after completion of laying and jointing of pipe, backfill the trench. Not more than 200 feet of the trench shall be left open after laying the pipe.
- B. Trenches shall be backfilled in accordance with drawing details and notes. Backfill material selected from sewer trench excavation, or obtained from other sources, shall be free from stones, which will interfere with compaction and free of large lumps, which will not break down readily under compaction. Do not use material excavated in large lumps which will not break down or which cannot be spread in loose layers. Material excavated by trenching machine will generally be suitable for use as backfill. Cement stabilized sand shall be in accordance with Section 31 23 23.16 - Cement Stabilized Sand Bedding and Backfill.
- C. When placing backfill in the trench simultaneously on both sides of the pipe for the full width of the trench, moisten if necessary and tamp in approximately 6-inch layers, thoroughly compacting under and on each side of the pipe to provide solid backing against the external surface of the pipe. Walking or working on the completed pipeline, except as necessary in tamping or backfilling shall not be permitted until the trench has been backfilled to at least 12-inches over the top of the pipe.

3.4 RESTORATION OF SURFACES

- A. Replace or repair sidewalks, driveway culverts, inlets, curbing, gutters, shrubbery, trees, fences, sod and other like obstructions removed or disturbed, to the condition equivalent to that existing prior to commencement of this work. Use concrete having a compressive strength of not less than 3,000 psi in 28 days for the replacement of curbing, gutters, inlets and sidewalks.
- B. Use reasonable care in the removal and replacement of shrubbery and trees designated to be replaced at original locations. Where at all possible, ditch alignment will be such as to minimize this work. The restoration of asphalt-topped flexible base and concrete streets shall be as specified under other items of the specifications.

3.5 CLEAN-UP

- A. The Contractor shall remove from the site of the work and from public and private property temporary structures, rubbish, and waste materials, including excess excavated materials. The Contractor is responsible for disposing of all surplus earth. The pipe laying operation shall be temporarily suspended if the clean-up is falling behind as determined by the Engineer or Owner.

3.6 MEASUREMENT & PAYMENT

- A. No separate measurement or payment will be made for materials and labor performed under this section. Include all costs in the lump sum price.

END OF SECTION 31 23 00

SECTION 31 23 16.16 - STRUCTURAL EXCAVATION AND BACKFILL

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 – GENERAL

1.1 SCOPE

- A. This section describes the excavation for all structures except pipe sewers, the backfilling around completed structures and the disposal of all excess excavated material. All operations required for the proper completion of the excavation work, including sheeting, shoring and bracing, dewatering of excavations and compaction of backfill are included under this section.

1.2 PROTECTION

- A. Before the start of earthwork operations, adequately protect existing structures, utilities, trees and shrubs and other permanent objects. Costs resulting from damage to permanent facilities due to negligence or lack of adequate protection will be charged to the Contractor. The Contractor will also be charged for damage to facilities scheduled for later removal or demolition if the damage sufficiently impairs proper operation to the extent that temporary replacement or repair is required.

1.3 PAYMENT

- A. No separate payment will be made for work performed under this section. Include the cost of such work in the bid form and specified in other sections of this work.

1.4 BLASTING

- A. Blasting will not be permitted.

PART 2 - PRODUCTS

2.1 REGULAR BACKFILL

- A. Where no other backfill is specified, use suitable soils from the excavation as backfill material.

2.2 SAND BACKFILL

- A. Where sand backfill is specified, use reasonably clean bank sand from an approved source. The sand must be free from large lumps of clay, rubbish, organic matter or other deleterious substances. Not more than 12 percent by weight shall pass the 200-mesh sieve and the plasticity index shall not exceed 4.0. This backfill shall be placed a minimum of 18 inches wide around all below-grade structures.

2.3 FILTER MATERIAL BACKFILL

- A. Where shown, use a mixture of concrete gravel and concrete sand. Proportion the mixture with two parts gravel to one-part sand by volume. Gravel and sand shall meet requirements of ASTM C 33. The maximum size of acceptable gravel is 1-1/2 inches.

2.4 CEMENT STABILIZED BACKFILL

- A. Prepare a mixture of sand, cement and water.

- B. Use washed river sand free from large clay lumps or unacceptable amounts of other foreign materials. The sand must not be darker than the standard color when subjected to a color test in accordance with ASTM C 40.
- C. Required gradation of sand:
- | Screen Size | Percent Retained |
|-----------------|--------------------------|
| 3/8-inch screen | 0 percent |
| 1/4-inch screen | 0 percent - 5 percent |
| 20 mesh screen | 15 percent - 50 percent |
| 100 mesh screen | 80 percent - 100 percent |
- D. Use Type I cement conforming to ASTM C 150.
- E. Mix in a pug mill using not less than 1-1/2 sacks of cement per cubic yard (unless otherwise specified) of mixture with sufficient water to hydrate the cement.

PART 3 - EXECUTION

3.1 EXCAVATION

- A. Excavation work shall be unclassified and includes removal of all types of materials encountered without exception. Make excavations to lines and grades indicated on drawings. Complete excavations within the tolerances specified. Perform all work in conformity with the rules and regulations of the Federal Occupational Safety and Health Act.
1. **Shoring, Bracing, Dewatering:** Provide shoring, bracing and dewatering of excavations required to properly and safely complete the work as shown. Construct shoring and bracing to prevent the excavation from extending beyond specified or indicated limits and to protect workmen. Keep excavations dewatered by drainage, pumps or well points as necessary while work is in progress. Dewatering methods are subject to approval. Remove shoring, bracing and sheathing as excavations are backfilled in a manner to prevent injurious caving.
 2. **Pipe Trenches:** Excavate by open cut methods. Make and maintain the sides of the trench as nearly vertical as practical. Provide shoring to maintain the sides of the trench in a vertical position and to protect workmen. Complete and shape the trench to provide free working space and to permit thorough tamping of backfill around the pipe. Grade trench bottoms accurately to provide uniform bearing on firm soil along the entire length of each pipe section. Remove rubbish, rock or debris encountered at grade to at least 6 inches below the bottom of the pipe. Reshape and compact the trench bottom. Working space measured from the outside of the pipe to the side of the trench must be at least 6 inches but not more than 24 inches. Provide bell holes where required for making proper connections at joints.
- B. Structures Other than Pipes:
1. Wherever practicable cut all footing excavations to neat lines with a tolerance of minus 1 inch or plus 3 inches and place concrete to bear against earth sides. Cut all excavations a sufficient distance from walls, shafts or similar elements of structures to allow for placing and removing forms and for inspection. Make all excavations at a minimum slope of 1:1 with 3 feet cut outside of footing lines or wall lines except as shown or specifically authorized.
 2. Carry all excavations to the elevations shown and to deeper levels as directed when suitable foundation soils are not encountered at plan depth. Remove all pockets of soft or otherwise unstable soils and replace with concrete or with suitable well compacted soil as directed.
 3. Fill all unauthorized excessive excavation with concrete at no change in the contract sum.

4. Protect all open excavations from rainfall or excessive drying. Provide pumps and other equipment as required to keep excavations reasonably free of water at all times and completely free of water during placement of concrete.
5. Do not remove the last 4-inch depth of excavation for slabs or footing until reinforcing steel and concrete are ready to be placed.
6. For footings founded on rock, hard shale or similar material, remove all loose material. Clean and cut to a firm surface either level, stepped or serrated as directed. Clean out seams and fill with concrete at the time footing concrete is placed.

3.2 BACKFILL

- A. Complete backfill to the surface of natural ground or to the lines and grade shown on drawings. Except where special materials are requested, use suitable soils from the excavation as backfill material. Do not use peat or other organic matter, silt, muck, debris or similar materials. Deposit backfill in uniform layers and compact each layer as specified.
 1. Backfill at Structures: Place backfill as promptly as practicable after completion of each structure or portion of a structure. Do not, however, place backfill against concrete walls or similar structures until concrete has been cured at least seven days. Remove concrete forms before starting to backfill and remove shoring and bracing as the work progresses. Take care to prevent any wedging action of backfill against the structure. Step cut or serrate the slopes bounding the excavation as required to prevent wedging.
 2. Backfilling of Pipe Trenches:
 - a. Refer to appropriate paragraphs of SECTION 31 23 00 – CONSTRUCTION OF UNDERGROUND UTILITIES.
 3. Compaction of Backfill:
 - a. Refer to appropriate paragraphs of SECTION 31 23 00 – CONSTRUCTION OF UNDERGROUND UTILITIES.

3.3 DISPOSAL OF EXCESS MATERIAL

- A. Dispose of excess or unsuitable material from the excavation off the job site.

END OF SECTION 31 23 16.16

SECTION 31 23 23.13 - BANK SAND BACKFILL

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 – GENERAL

1.1 SUMMARY

- A. This Section shall consist of the furnishing, placing, manipulation, compacting and completing in-place, Bank Sand as a bedding and backfill material for water and sewer lines, as construction fill for certain excavation areas, as construction fill for ruts, holes and other similar conditions; as a fill material for project clean-up and as directed by the Engineer. Bank sand shall be in accordance with these specifications and in conformity with the lines, grades and cross-sections shown on the plans and as directed by the Engineer.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. Bank sand is to be free of organic matter, foreign material, clay balls, sticks, foreign objects and other objectionable material. Bank sand shall have a plasticity index less than three (3) and shall meet the following gradation: 100 percent passing a 3/8-inch sieve, 5 to 30 percent passing a No. 200 sieve. Prior to use, Contractor shall identify the source of the proposed bank sand for testing.

PART 3 - EXECUTION

3.1 CONSTRUCTION

- A. After the water line, sewer line or other similar construction item, such as a trench, has been excavated and brought to grade, bank sand shall be furnished, placed, compacted complete in-place, either as bedding or backfill material, as shown on the plans, described in these specifications or as directed by the Engineer. After the trench or excavation has been brought to grade, the bank sand shall be placed and compacted as a bedding material, the construction item shall be placed and joined properly around and over that construction item as required and as shown on the plans, described in the specifications or directed by the Engineer. Bank sand shall be placed in layers not exceeding 8-inches. It shall be compacted with mechanical vibratory tamps to maximum dry density in accordance with ASTM Method D698 at a moisture content ranging from optimum to three percentage points above optimum. Water flooding will not be permitted.

3.2 TESTING

- A. The Testing Laboratory's representative will determine the moisture density relationship for each material proposed for use as backfill, in accordance with ASTM Method D698. In place density will be determined in accordance with ASTM Methods D2922 or D1556, and with each type of construction. For walls and trenches, determine the in-place density for each 200 feet of wall or trench, for each lift of fill placed.

3.3 MEASUREMENT

- A. No separate measurement or payment will be made for materials and labor performed under this section. Include all costs in the lump sum price.

END OF SECTION 31 23 23.13

SECTION 31 31 16 - TERMITE CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

- A. Furnishing and applying both pre-construction and post-construction subterranean termite control treatment as described herein on the Project.

1.3 COORDINATION

- A. Each offeror shall be responsible for determining during the proposal period the extent that any addenda issued during the proposal period may affect this Section of the Specifications.
- B. Reference instructions to offerors for requirements regarding substitutions of materials and products.
- C. Where conflicts occur between the Drawings and Specifications, between different drawings, between portions of this Section of the Specifications, or between different sections of the specifications, the more stringent requirements and the greater quantity shall apply.
- D. Contractor shall notify Structural Pest Control Board (SPCB) prior to application of termite treatment at the site as required by law.
- E. Comply with all federal, state, and local requirements and authorities having jurisdiction.

1.4 QUALITY ASSURANCE

- A. Applicator shall be bonded and licensed with all applicable authorities.
- B. Products and application techniques shall meet all requirements of federal, state, and local regulations regardless of products and techniques specified herein.

1.5 SUBMITTALS

- A. Product Data:
 - 1. Manufacturer's printed literature describing products and detailed application requirements.
 - a. Document that product is currently allowed by the Environmental Protection Agency (EPA), the State of Texas, and all applicable county and local authorities for use under building slabs.
 - 2. Material Safety Data Sheet (MSDS).
- B. Samples:
 - a. Of proposed written warranty.
- C. Certification:
 - 1. After the completion of Work under this Section, submit as part of the Close Out Documents, manufacturer's affidavit from the the Pest control Company stating that "The building has received a complete treatment for the prevention of subterranean termites, and that treatment is in accordance with rules and laws established by the Florida Department of Agriculture and Consumer Services."
 - 2. After completion of Work under this Section, submit manufacturer's signed affidavit, verifying specification compliance of the chemicals, their proportions, and application.
 - 3. Contractor shall certify that pesticide used on project does not contain the chemical or have any ingredient known as "Dursban".

1.6 WARRANTY

- A. Provide written warranty against defects in materials and application for a period of five (5) years after application.
- B. Defects shall include, but not be limited to the following:
 - 1. Evidence of activity by subterranean type termites.
 - 2. Damage of building materials due to subterranean termites.
- C. During the warranty period the applicator shall, at his own expense provide additional termite treatment as required to prevent termite activity. Repair or replace building materials damaged by subterranean termite activity during the warranty period at no expense to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Termidor 80 WG Termiticide/Insecticide (EPA Reg. No. 7969-209) as manufactured by BASF Corporation, Florham Park, NJ; (973) 245-6000 or comparable product approved by Architect with minimum five (5) years of experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions in order to be considered.

2.2 MATERIALS

- A. Dry powder containing 80% active ingredient and is conveniently package in water-soluble packages (paks).
- B. Finished dilution: 0.125%.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Inspect building earth fill and foundation excavation for readiness and to ensure that soils are not too wet for proper application of treatment.
- B. Post conspicuous warning signs indicating date(s) and time(s) of application and notify contractors working in area of such date(s) and time(s).

3.2 MIXING

- A. Mixing shall be in accordance with manufacturer's printed instructions.

3.3 APPLICATION

- A. Do not apply while school is in session.
- B. Apply to ensure a continuous chemical barrier.
- C. Pre-Construction Treatment:
 - 1. Apply an overall treatment to the entire surface of soil or other substrate to be covered by the slab, including areas to be under carports, porches, basement floor, and entrance platforms in accordance with manufacturer's printed instructions and recommended application rates.
 - 2. Apply along inside of foundation walls, and around plumbing, bath traps, utility services, and other features that penetrate the slab in accordance with manufacturer's printed instructions and recommended application rates.
 - 3. Apply at crawl spaces, at hollow block foundations or voids in masonry resting on the footing, and at plenums in accordance with manufacturer's printed instructions and recommended application rates.
- D. Post-Construction Treatment:
 - 1. Apply a treatment under the slab, including attached porches, carports, entrance platforms, garages and similar slab structures in accordance with manufacturer's printed instructions and recommended application rates. Drill all holes spaced in a manner to

allow for application of a continuous chemical barrier. Plug and fill all drill holes in occupied areas or where visually exposed with a suitable sealant recommended by manufacturer.

2. Apply at existing cracks and cold, construction and expansion joints and around bath traps, plumbing and utility services which penetrate the slab in accordance with manufacturer's printed instructions and recommended application rates.
3. Apply at crawl spaces in accordance with manufacturer's printed instructions and recommended application rates.
4. At perimeter grade beams, trench along beams or use rodding as recommended by the manufacturer. The final treatment of the exterior beam will be performed within 30 days of notification of completion of landscaping or one (1) year from the date of completion of construction.
5. Allow for drying after application, in accordance with manufacturer's instructions, before placing vapor barrier and beginning concrete placement or other construction activities.
6. All treatment applications must be in compliance with all federal, state, and local laws and regulations with regard to mixing, applying, and disposing of debris and waste.

END OF SECTION 31 31 16

This page intentionally left blank

SECTION 31 32 13.19 - LIME STABILIZED SUBGRADE

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 – GENERAL

1.1 SUMMARY

- A. This item shall consist of treating the subgrade, by the pulverizing, addition of lime, mixing and compacting the mixed material to the required depth and density, and in the amounts shown on the plans.
- B. This item applies to natural ground, embankment, base or sub-base and shall be constructed to the sections, lines and grades shown on the plans. The subgrade shall be stabilized with lime to a depth of at least 6-inches in the amount recommended by a materials engineering laboratory. The P.I. shall be determined by ASTM Method D4318.

1.2 QUALITY ASSURANCE

- A. The Testing Laboratory's representative will determine the Moisture-Density Relationships in accordance with ASTM Method D698 on material secured from the roadway after stabilization with lime, for each type of material encountered.
- B. The Testing Laboratory's representative will determine the in-place density in accordance with ASTM Method D2922 or D1556. The minimum level of testing will consist of at least three tests for each 1,000 feet per lane of roadway or 4,000 square feet (500 square yards) of embankment.

1.3 MEASUREMENT AND PAYMENT

- A. No separate measurement or payment will be made for materials and labor performed under this section. Include all costs in the lump sum price.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. Lime for stabilization shall be classified as Type A- Hydrated Lime, or Type B- Commercial Lime Slurry, conforming to the requirements of Section 31 32 13.20 - Hydrated Lime and Lime Slurry.

2.2 EQUIPMENT

- A. The machinery, tools and equipment necessary for proper execution of the work shall be on the project and approved by the Engineer prior to the beginning of construction operations. All machinery, tools and equipment used shall be maintained in a satisfactory and workmanlike manner.

PART 3 – EXECUTION

3.1 CONSTRUCTION METHODS

- A. It is the primary requirement of this specification to secure a completed course of treated material containing a uniform lime soil mixture free from loose or segregated areas, of uniform density and moisture content, well bound for its full depth and with a smooth surface suitable for placing

subsequent courses. It shall be the responsibility of the Contractor to regulate the sequence of his work, to use the proper amount of lime, maintain the work and rework the courses as necessary to meet the above requirements.

- B. The subgrade shall be constructed and shaped to conform to the typical sections, lines and grades as shown on the plans or as established by the Engineer. The subgrade shall be firm and able to support, without displacement, the construction equipment at the density herein specified. Any wet or unstable materials below the secondary grade shall be corrected, as directed by the Engineer, by scarifying, adding lime, and compacting, or other methods until satisfactory stability is obtained. The cost of the repair of the secondary subgrade and any materials below the secondary subgrade is incidental to this Section.
- C. The Contractor shall be required to proof-roll the subgrade, as directed by the Engineer, before using the pulverizing machine and correct any soft areas that this rolling may reveal.
- D. Lime shall be spread only on that area where the first mixing operations can be completed during the same working day. The application and mixing of lime with the material shall be accomplished by the methods hereinafter described as "Dry Placing" or "Slurry Placing". When Type A, Hydrated Lime, is specified, the Contractor may use either method, unless otherwise noted on the plans.
- E. When dry placing, the lime shall be spread by an approved spreader or by bag distribution at the rates shown on the Bid Sheet, or as directed by the Engineer.
- F. The lime shall be distributed at a uniform rate and in such a manner as to reduce the scattering of lime by wind to a minimum. Lime shall not be applied when wind conditions, in the opinion of the Engineer, are such that blowing lime becomes objectionable to traffic or adjacent property owners. A motor grader shall not be used to spread the lime.
- G. The material shall be sprinkled as directed by the Engineer, until the proper moisture content has been secured. Where Type A, hydrated lime is specified and slurry placement is used, the Type A hydrate shall be mixed with water to form a slurry of the solids content designated by the Engineer. A minimum of two mixing passes will be required.
- H. Where Type B, commercial lime slurry is to be used, it shall be of the minimum solids and purity for the applicable grade being used. The distribution of lime shall be at the rates shown on the proposal form, or as directed by the Engineer. Proper application shall be attained by successive passes over a measured section of the roadway, until the proper moisture and lime content has been secured. The distributor truck shall be equipped with an agitator, which will keep the lime and water in a uniform mixture.
- I. The material and lime shall be thoroughly mixed by approved road mixers or other approved equipment, and the mixing continued until, in the opinion of the Engineer, a homogenous friable mixture of material and lime is obtained, such that when all non-slaking aggregates retained on the 3/4-inch sieve are removed, the remainder of the material shall meet the following requirements when tested in accordance with ASTM Method C136, from samples procured from the roadway.

TABLE I

Minimum Passing 1 3/4" sieve	100 Percent
Minimum Passing 3/4" sieve	85 Percent

- J. If gradation is achieved on the first mixing, no additional mixing is required.
- K. The soil lime mixture shall be sprinkled during the mixing operation as directed by the Engineer to provide optimum moisture in the mixing. The subgrade shall be stabilized to a minimum depth of 6-inches and compacted to a minimum of 95-percent of standard proctor density (ASTM D698) at a moisture content of optimum to 3-percent above optimum.

LIME STABILIZED SUBGRADE

- L. During the interval of time between application and mixing, hydrated lime that has been exposed to the open air for a period of 6-hours, or more, or has had excessive loss due to washing or blowing will not be accepted for payment.
- M. Compaction of the mixture shall begin immediately after final mixing unless approval has been obtained from the Engineer not to do so. The material shall be aerated and/or sprinkled as necessary, to provide the optimum moisture content. Compaction shall begin at the bottom and shall continue until the entire depth of mixture is uniformly compacted.
- N. The material and lime shall be thoroughly mixed by approved road mixers or other approved equipment and the mixing continued until, in the opinion of the Engineer, a homogenous, friable mixture of material and lime is obtained, free from all clods or lumps. Materials containing plastic clays or other materials which will not readily mix with lime shall be mixed as thoroughly as possible at the time of lime application, brought up to the proper moisture content and left to cure 48 to 96, hours as directed by the Engineer. During the curing period the material shall be kept moist as directed.
- O. If a second mixing is required, the material shall be given a final mixing, using approved methods. If the soil binder-lime mixture contains clods, they shall be reduced in size by raking, blading, discing, harrowing, scarifying, or the use of other approved pulverization methods, so that all non-slaking material retained on the 3/4-inch sieve is removed and the remainder of the material shall meet the gradation requirements outlined by Table I. After the second mixing has been completed, the material shall be allowed to cure for a minimum of 3 days, unless otherwise directed by the Engineer.
- P. The material shall be sprinkled and rolled, as directed by the Engineer. All irregularities, depressions or weak spots which develop shall be corrected immediately by scarifying the areas affected, adding or removing material as required and reshaping and re-compacting by sprinkling and rolling. The surface of the course shall be maintained and cured for a minimum of 3 days, prior to placing a base or surface course or until traffic is allowed to travel thereon.
- Q. In addition to the requirements specified for density, the full depth of the material shown on the plans shall be compacted to the extent necessary to remain firm and stable under construction equipment. After each section is completed, tests as necessary will be made by the Engineer. If the material fails to meet the density requirements, it shall be reworked as necessary to meet these requirements. Throughout this entire operation, the shape of the course shall be maintained by blading and the surface upon completion shall be smooth and in conformity with the typical section shown on the plans and to the established lines and grades. Should the material, due to any reason or cause, lose the required stability, density and finish before the next course is placed or the work is accepted, it shall be reprocessed and refinished at the expense of the Contractor.

3.2 FINISHING

- A. After the final course of the lime treated subgrade has been compacted, it shall be brought to the required lines and grades in accordance with the typical sections. The completed section shall then be finished by rolling as directed with a pneumatic tire or other suitable roller sufficiently light to prevent hair cracking. The completed section shall be moist, or emulsion cured until covered by base material, unless otherwise directed by the Engineer. If the plans provide for the treated material to be sealed or covered by other courses of material, such seal or course shall be applied within 14 days after final mixing and compaction is completed, unless otherwise directed by the Engineer.

END OF SECTION 31 32 13.19

SECTION #31 32 13 – SOIL MIXING STABILIZATION

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. All applicable provisions of the Bidding and Contract Requirements, and Division 1 - General Requirements shall govern the work under this section.
- B. This Section includes soil mixing stabilization and specialties outside the building, including the following:
 - 1. Excavation, treatment, and backfilling of subgrade for lime stabilization.
- C. All soil mixing stabilization to be performed and materials used shall be in accordance with the Geotechnical Engineering Report. In the event of a discrepancy between the above-referenced report and any portion of this specification section, the above-referenced report will govern. The Contractor shall contact the Engineer in the event of a discrepancy.

1.2 REFERENCE STANDARDS

- A. American Society for Testing Materials (ASTM) latest edition
 - 1. C150 Portland Cement
 - 2. C618 Fly Ash and Raw or Calcined Natural Pozzolan for use as a Mineral Admixture in Portland Cement Concrete
 - 3. C 977 Quicklime and Hydrated Lime for Soil Stabilization
 - 4. D 1633 Compressive Strength of Molded Soil-Cement Cylinders
- B. American Association of State Highway and Transportation Officials (AASHTO) latest edition
 - 1. M 216 Lime for Soil Stabilization
- C. National Lime Association (NLA)
 - 1. Bulletin 326 Lime Stabilization Construction Manual
- D. Texas Department of Transportation Standards
 - 1. TXDOT Item 260 Lime Treatment (Road Mixed)
 - 2. TXDOT Item 265 Fly Ash or Lime – Fly Ash Treatment (Road Mixed)

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Do not install mixed materials in wind in excess of 10 mph or when temperature is below 40 degrees Fahrenheit.

1.4 QUALITY ASSURANCE

- A. Perform work in accordance with state and local standards in conjunction with requirements specified herein.

1.5 SUBMITTALS

- A. Submit 30-pound sample of each material to be used at the site in airtight containers to the independent testing laboratory or submit gradation and certification of material that is to be used to the independent testing laboratory for review.
- B. Submit name of each materials supplier and specific type and source of each material. Change in source requires approval of Owner.
- C. Submit mix design and materials mix ratio that will achieve specified requirements of state and local agencies for soil stabilization.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. Hydrated Lime: TXDOT Item 260

2.2 EQUIPMENT

- A. Perform operations using suitable, well maintained equipment capable of excavating subsoil, mixing and placing materials, wetting, consolidating, and compacting of material.

PART 3 – EXECUTION

3.1 PREPARATION

- A. Obtain approval from the independent testing laboratory of mix design before proceeding with placement.
- B. Start stabilization only when weather and soil conditions are favorable for successful application of proposed material.
- C. Proofroll subgrade to identify areas in need of stabilization in accordance with Section 312000.

3.2 EXCAVATION

- A. Excavate subsoil to depth sufficient to accommodate soil stabilization.
- B. Remove lumped subsoil, boulders, and rock that interfere with achieving uniform subsoil conditions.
- C. Notify Construction Manager of unexpected subsurface conditions. Discontinue affected work in area until notified to resume work.
- D. Correct areas over-excavated in accordance with Section 31 20 00.
- E. Remove excess excavated material from site.

3.3 SOIL TREATMENT AND BACKFILLING

- A. Lime Stabilized Subgrade: Where indicated on Construction Drawings or as required after continual failure, treat prepared subgrade with hydrated lime in accordance with state highway department specifications (TXDOT Item 260).
 - 1. A minimum of 48 hours of tempering time shall be provided before final mixing.
 - 2. Subgrade soils shall be treated with lime at a rate of 6 to 8 percent lime, by dry weight.
- B. Subsoil shall be in accordance with Section 31 20 00.
- C. Maintain optimum moisture of mixed materials to attain required stabilization and compaction.
- D. Finish subgrade surface in accordance with Section 31 20 00.
- E. Remove surplus mix materials from site at no additional cost to the Owner.

3.4 CURING

- A. Immediately following compaction of mix, seal top surface with curing seal.
- B. Do not permit traffic for 72 hours after sealing top surface.

3.5 FIELD QUALITY CONTROL

- A. Compression test and analysis of hardened fill material will be performed in accordance with Section 02300.
- B. If tests indicate work does not meet specified requirements, remove work, replace and retest, at no cost to owner.

END OF SECTION #31 32 13

SECTION 31 41 00 - TRENCH SAFETY SYSTEM

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 – GENERAL

1.1 SUMMARY

- A. This item is for furnishing all labor and materials for installation and maintenance of a trench safety system.
- B. For any trench excavation in materials other than solid rock, greater than five (5) feet in depth, or where shown on the plans, the contractor shall provide a trench safety system. This trench safety system shall be in accordance with the appropriate requirements established in the Occupational Safety and Health Administration (OSHA), Safety and Health Regulations, Part 1926, Subpart P - "Excavations, Trenching and Shoring" (latest edition).

1.2 MEASUREMENT

- A. Measurement of the "Trench Safety System" for gravity pipelines and boxes and for pressure pipelines shall be made by the linear foot of trench measured along the centerline of the trench.

1.3 PAYMENT

- A. No separate measurement or payment will be made for materials and labor performed under this section. Include all costs in the lump sum price.

PART 2 – PRODUCTS

Not Used

PART 3 – EXECUTION

Not Used

END OF SECTION 31 41 00

SECTION 31 50 00 - EXCAVATION SUPPORT AND PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes temporary excavation support and protection systems.
- B. Related Sections:
 - 1. Section 013200 "Construction Progress Documentation" for recording preexisting conditions and excavation support and protection system progress.
 - 2. Section 015000 "Temporary Facilities and Controls" for temporary utilities and support facilities.
 - 3. Section 312000 "Earth Moving"
 - 4. Section 312319 "Dewatering" for dewatering system for excavations.

1.3 PERFORMANCE REQUIREMENTS

- A. Design, furnish, install, monitor, and maintain excavation support and protection system capable of supporting excavation sidewalls and of resisting soil and hydrostatic pressure and superimposed and construction loads.
 - 1. Delegated Design: Design excavation support and protection system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - 2. Prevent surface water from entering excavations by grading, dikes, or other means.
 - 3. Install excavation support and protection systems without damaging existing buildings, structures, and site improvements adjacent to excavation.
 - 4. Monitor vibrations, settlements, and movements.

1.4 SUBMITTALS

- A. Shop Drawings: For excavation support and protection system.
- B. Delegated-Design Submittal: For excavation support and protection system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- C. Other Informational Submittals:
 - 1. Photographs or Videotape: Show existing conditions of adjacent construction and site improvements that might be misconstrued as damage caused by the absence of, the installation of, or the performance of excavation support and protection systems. Submit before Work begins.
 - 2. Record Drawings: Identifying and locating capped utilities and other subsurface structural, electrical, or mechanical conditions.
 - a. Note locations and capping depth of wells and well points.

1.5 PROJECT CONDITIONS

- A. Interruption of Existing Utilities: Do not interrupt any utility serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:
 - 1. Notify all impacted parties including Owner no fewer than five (5) days in advance of proposed interruption of utility.
 - 2. Do not proceed with interruption of utility without Owner's written permission.
- B. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by geotechnical engineer. Owner will not be responsible for interpretations or conclusions drawn from the data.
 - 1. Make additional test borings and conduct other exploratory operations necessary for excavation support and protection.
 - 2. The geotechnical report is referenced elsewhere in the Project Manual.
- C. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Identify benchmarks and record existing elevations.
 - 1. During installation of excavation support and protection systems, regularly resurvey benchmarks, maintaining an accurate log of surveyed elevations and positions for comparison with original elevations and positions. Promptly notify Architect if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Delete this article if Contractor selects temporary excavation support and protection. Revise materials if prescribing excavation support and protection system requirements.
- B. General: Provide materials that are either new or in serviceable condition.
- C. Structural Steel: ASTM A 36/A 36M, ASTM A 690/A 690M, or ASTM A 992/A 992M.
- D. Steel Sheet Piling: ASTM A 328/A 328M, ASTM A 572/A 572M, or ASTM A 690/A 690M; with continuous interlocks.
 - 1. Corners: Site-fabricated mechanical interlock or roll-formed corner shape with continuous interlock.
- E. Wood Lagging: Lumber, mixed hardwood, nominal rough thickness of size and strength required for application.
- F. Cast-in-Place Concrete: ACI 301, of compressive strength required for application.
- G. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.
- H. Tiebacks: Steel bars, ASTM A 722/A 722M.
- I. Tiebacks: Steel strand, ASTM A 416/A 416M.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.
 - 1. Shore, support, and protect utilities encountered.
- B. Install excavation support and protection systems to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.
 - 1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.
- C. Locate excavation support and protection systems clear of permanent construction so that forming and finishing of concrete surfaces are not impeded.
- D. Monitor excavation support and protection systems daily during excavation progress and for as long as excavation remains open. Promptly correct bulges, breakage, or other evidence of movement to ensure that excavation support and protection systems remain stable.
- E. Promptly repair damages to adjacent facilities caused by installing excavation support and protection systems.

3.2 SOLDIER PILES AND LAGGING

- A. Install steel soldier piles before starting excavation. Extend soldier piles below excavation grade level to depths adequate to prevent lateral movement. Space soldier piles at regular intervals not to exceed allowable flexural strength of wood lagging. Accurately align exposed faces of flanges to vary not more than 2 inches from a horizontal line and not more than 1:120 out of vertical alignment.
- B. Install wood lagging within flanges of soldier piles as excavation proceeds. Trim excavation as required to install lagging. Fill voids behind lagging with soil, and compact.
- C. Install wales horizontally at locations indicated on Drawings and secure to soldier piles.

3.3 SHEET PILING

- A. Before starting excavation, install one-piece sheet piling lengths and tightly interlock to form a continuous barrier. Accurately place the piling, using templates and guide frames unless otherwise recommended in writing by the sheet piling manufacturer. Limit vertical offset of adjacent sheet piling to 60 inches (1500 mm). Accurately align exposed faces of sheet piling to vary not more than 2 inches (50 mm) from a horizontal line and not more than 1:120 out of vertical alignment. Cut tops of sheet piling to uniform elevation at top of excavation.

3.4 TIEBACKS

- A. Tiebacks: Drill, install, grout, and tension tiebacks. Test load-carrying capacity of each tieback and replace and retest deficient tiebacks.
 - 1. Test loading shall be observed by a qualified professional engineer responsible for design of excavation support and protection system.

2. Maintain tiebacks in place until permanent construction is able to withstand lateral soil and hydrostatic pressures.

3.5 BRACING

- A. Bracing: Locate bracing to clear columns, floor framing construction, and other permanent work. If necessary to move brace, install new bracing before removing original brace.
 1. Do not place bracing where it will be cast into or included in permanent concrete work unless otherwise approved by Architect.
 2. Install internal bracing, if required, to prevent spreading or distortion of braced frames.
 3. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.6 REMOVAL AND REPAIRS

- A. Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and bear soil and hydrostatic pressures. Remove in stages to avoid disturbing underlying soils or damaging structures, pavements, facilities, and utilities.
 1. Remove excavation support and protection systems to a minimum depth of 48 inches (1200 mm) below overlaying construction and abandon remainder.
 2. Fill voids immediately with approved backfill compacted to density specified in Section 312000 "Earth Moving."
 3. Repair or replace, as approved by Architect, adjacent work damaged or displaced by removing excavation support and protection systems.
- B. Leave excavation support and protection systems permanently in place.

END OF SECTION 31 50 00

SECTION #31 50 00 – EXCAVATION SUPPORT AND PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes temporary excavation support and protection systems.
- B. Related Requirements:
 - 1. Section 013233 "Photographic Documentation" for recording preexisting conditions and excavation support and protection system progress.
 - 2. Section 312000 "Earth Moving" for excavating and backfilling and for controlling surface-water runoff and ponding.
 - 3. Section 312319 "Dewatering" for dewatering excavations.

1.3 PREINSTALLATION MEETINGS

- A. Pre-installation Conference: Conduct conference at Project site.
 - 1. Review geotechnical report.
 - 2. Review existing utilities and subsurface conditions.
 - 3. Review coordination for interruption, shutoff, capping, and continuation of utility services.
 - 4. Review proposed excavations.
 - 5. Review proposed equipment.
 - 6. Review monitoring of excavation support and protection system.
 - 7. Review coordination with waterproofing.
 - 8. Review abandonment or removal of excavation support and protection system.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, performance properties, and dimensions of individual components and profiles, and calculations for excavation support and protection system.
- B. Shop Drawings: For excavation support and protection system, prepared by or under the supervision of a qualified professional engineer.
 - 1. Include plans, elevations, sections, and details.
 - 2. Show arrangement, locations, and details of soldier piles, piling, lagging, tiebacks, bracing, and other components of excavation support and protection system according to engineering design.
 - 3. Indicate type and location of waterproofing.
 - 4. Include a written plan for excavation support and protection, including sequence of construction of support and protection coordinated with progress of excavation.

1.5 INFORMATIONAL SUBMITTALS

- A. Contractor Calculations: For excavation support and protection system. Include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- B. Existing Conditions: Using photographs, show existing conditions of adjacent construction and site improvements that might be misconstrued as damage caused by inadequate performance of excavation support and protection systems. Submit before Work begins.
- C. Record Drawings: Identify locations and depths of capped utilities, abandoned-in-place support and protection systems, and other subsurface structural, electrical, or mechanical conditions.

1.6 FIELD CONDITIONS

- A. Interruption of Existing Utilities: Do not interrupt any utility serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:
 - 1. Notify Owner no fewer than two days in advance of proposed interruption of utility.
 - 2. Do not proceed with interruption of utility without Owner's written permission.
- B. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of a geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by a geotechnical engineer. Owner is not responsible for interpretations or conclusions drawn from the data.
- C. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks and record existing elevations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Provide, monitor, and maintain excavation support and protection system capable of supporting excavation sidewalls and of resisting earth and hydrostatic pressures and superimposed and construction loads.
 - 1. Contractor Design: Design excavation support and protection system, including comprehensive engineering analysis by a qualified professional engineer.
 - 2. Prevent surface water from entering excavations by grading, dikes, or other means.
 - 3. Install excavation support and protection systems without damaging existing buildings, structures, and site improvements adjacent to excavation.
 - 4. Continuously monitor vibrations, settlements, and movements to ensure stability of excavations and constructed slopes and to ensure that damage to permanent structures is prevented.

2.2 MATERIALS

- A. General: Provide materials that are either new or in serviceable condition.
- B. Structural Steel: ASTM A 36/A 36M, ASTM A 690/A 690M, or ASTM A 992/A 992M.
- C. Steel Sheet Piling: ASTM A 328/A 328M, ASTM A 572/A 572M, or ASTM A 690/A 690M; with continuous interlocks.
 - 1. Corners: [Site-fabricated mechanical interlock] [Roll-formed corner shape with continuous interlock].
- D. Wood Lagging: Lumber, mixed hardwood, nominal rough thickness of size and strength required for application.
- E. Shotcrete: Comply with Section 033713 "Shotcrete" for shotcrete materials and mixes, reinforcement, and shotcrete application.
- F. Cast-in-Place Concrete: ACI 301, of compressive strength required for application.
- G. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.
- H. Tiebacks: Steel bars, ASTM A 722/A 722M.
- I. Tiebacks: Steel strand, ASTM A 416/A 416M.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.
 - 1. Shore, support, and protect utilities encountered.
- B. Install excavation support and protection systems to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.
 - 1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.
- C. Locate excavation support and protection systems clear of permanent construction so that construction and finishing of other work is not impeded.

3.2 SOLDIER PILES AND LAGGING

- A. Install steel soldier piles before starting excavation. Extend soldier piles below excavation grade level to depths adequate to prevent lateral movement. Space soldier piles at regular intervals not to exceed allowable flexural strength of wood lagging. Accurately align exposed faces of flanges to vary not more than 2 inches from a horizontal line and not more than 1:120 out of vertical alignment.
- B. Install wood lagging within flanges of soldier piles as excavation proceeds. Trim excavation as required to install lagging. Fill voids behind lagging with soil, and compact.
- C. Install wales horizontally at locations indicated on Drawings and secure to soldier piles.

3.3 SHEET PILING

- A. Before starting excavation, install one-piece sheet piling lengths and tightly interlock vertical edges to form a continuous barrier.
- B. Accurately place the piling, using templates and guide frames unless otherwise recommended in writing by the sheet piling manufacturer. Limit vertical offset of adjacent sheet piling to 60 inches. Accurately align exposed faces of sheet piling to vary not more than 2 inches from a horizontal line and not more than 1:120 out of vertical alignment.
- C. Cut tops of sheet piling to uniform elevation at top of excavation.

3.4 TIEBACKS

- A. Drill, install, grout, and tension tiebacks.
- B. Test load-carrying capacity of each tieback and replace and retest deficient tiebacks.
 - 1. Have test loading observed by a qualified professional engineer responsible for design of excavation support and protection system.
- C. Maintain tiebacks in place until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.5 BRACING

- A. Bracing: Locate bracing to clear columns, floor framing construction, and other permanent work. If necessary to move brace, install new bracing before removing original brace.
 - 1. Do not place bracing where it will be cast into or included in permanent concrete work unless otherwise approved by Architect.
 - 2. Install internal bracing if required to prevent spreading or distortion of braced frames.

3. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.6 FIELD QUALITY CONTROL

- A. Survey-Work Benchmarks: Resurvey benchmarks as required during installation of excavation support and protection systems, excavation progress, and for as long as excavation remains open. Maintain an accurate log of surveyed elevations and positions for comparison with original elevations and positions. Promptly notify Architect if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.
- B. Promptly correct detected bulges, breakage, or other evidence of movement to ensure that excavation support and protection system remains stable.
- C. Promptly repair damages to adjacent facilities caused by installation or faulty performance of excavation support and protection systems.

3.7 REMOVAL AND REPAIRS

- A. Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and earth and hydrostatic pressures. Remove in stages to avoid disturbing underlying soils and rock or damaging structures, pavements, facilities, and utilities.
 1. Remove excavation support and protection systems to a minimum depth of 48 inches below overlying construction and abandon remainder.
 2. Fill voids immediately with approved backfill compacted to density specified in Section 312000 "Earth Moving."
 3. Repair or replace, as approved by Architect, adjacent work damaged or displaced by removing excavation support and protection systems.
- B. Leave excavation support and protection systems permanently in place.

END OF SECTION #31 50 00

SECTION 31 63 29 - DRILLED CONCRETE PIERS AND SHAFTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Dry-installed drilled piers.

1.3 UNIT PRICES

- A. Unit prices are included in Section 01 22 00 "Unit Prices."
- B. Drilled Piers: Actual net volume of drilled piers in place and approved. Actual length, shaft diameter, and bell diameter if applicable, may vary, to coincide with elevations where satisfactory bearing strata are encountered. These dimensions may also vary with actual bearing value of bearing strata determined by an independent testing and inspecting agency. Adjustments will be made on net variation of total quantities, based on design dimensions for shafts and bells.
 - 1. Base bids on indicated number of drilled piers and, for each pier, the design length from top elevation to bottom of shaft, extended through the bell, if applicable, and the diameter of shaft and bell.
 - 2. Unit prices include labor, materials, tools, equipment, and incidentals required for excavation, trimming, shoring, casings, dewatering, reinforcement, concrete fill, testing and inspecting, and other items for complete drilled-pier installation.
- C. Trial Drilled Pier: Unit price as indicated for drilled pier, including backfilling.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
 - 1. Indicate amounts of mixing water to be withheld for later addition at Project site.
- C. Shop Drawings: For concrete reinforcement detailing fabricating, bending, supporting, and placing.
- D. Material Certificates: For the following, from manufacturer:
 - 1. Cementitious materials.
 - 2. Admixtures.
 - 3. Steel reinforcement and accessories.
- E. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements:
- F. Field quality-control reports.

- G. Other Informational Submittals:
 - 1. Record drawings.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer that has specialized in drilled-pier work.
- B. Testing Agency Qualifications: Qualified according to ASTM C 1077, ASTM D 3740, and ASTM E 329 for testing indicated.
- C. Drilled-Pier Standard: Comply with ACI 336.1 unless modified in this Section.

1.6 PROJECT CONDITIONS

- A. Existing Utilities: Locate existing underground utilities before excavating drilled piers. If utilities are to remain in place, provide protection from damage during drilled-pier operations.
 - 1. Should uncharted or incorrectly charted piping or other utilities be encountered during excavation, adapt drilling procedure if necessary to prevent damage to utilities. Cooperate with Owner and utility companies in keeping services and facilities in operation without interruption. Repair damaged utilities to satisfaction of utility owner.
- B. Interruption of Existing Utilities: Do not interrupt any utility to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:
 - 1. Notify all affected parties including Owner no fewer than five (5) days in advance of proposed interruption of utility.
 - 2. Do not proceed with interruption of utility without Owner's written permission.
- C. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by geotechnical engineer. Owner will not be responsible for interpretations or conclusions drawn from this data.
 - 1. Make additional test borings and conduct other exploratory operations necessary for drilled piers.
 - 2. The geotechnical report is referenced elsewhere in the Project Manual.
- D. Survey Work: Engage a qualified land surveyor or professional engineer to perform surveys, layouts, and measurements for drilled piers. Before excavating, lay out each drilled pier to lines and levels required. Record actual measurements of each drilled pier's location, shaft diameter, bottom and top elevations, deviations from specified tolerances, and other specified data.
 - 1. Record and maintain information pertinent to each drilled pier and cooperate with Owner's testing and inspecting agency to provide data for required reports.

PART 2 - PRODUCTS

2.1 STEEL REINFORCEMENT

- A. Refer Section 03 20 00.

2.2 CONCRETE MATERIALS

- A. Refer Section 03 30 00 and Structural General Notes.

2.3 STEEL CASINGS

- A. Steel Pipe Casings: ASTM A 283, Grade C, or ASTM A 36, carbon-steel plate, with joints full-penetration welded according to AWS D1.1.
- B. Corrugated-Steel Pipe Casings: ASTM A 929, steel sheet, zinc coated.

2.4 CONCRETE MIXTURES

- A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.
- B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than Portland cement according to ACI 301 limits as if concrete were exposed to deicing chemicals.
- C. Proportion normal-weight concrete mixture as follows:
 - 1. As indicated in Structural General Notes.

2.5 FABRICATING REINFORCEMENT

- A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.6 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94, and furnish batch ticket information.
 - 1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, vibration, and other hazards created by drilled-pier operations.

3.2 EXCAVATION

- A. Unclassified Excavation: Excavate to bearing elevations regardless of character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions.
 - 1. Obstructions: Unclassified excavation may include removal of unanticipated boulders, concrete, masonry, or other subsurface obstructions. No changes in the Contract Sum or the Contract Time will be authorized for removal of obstructions.
 - 2. Obstructions: Unclassified excavated materials may include removal of unanticipated boulders, concrete, masonry, or other subsurface obstructions. Payment for removing obstructions that cannot be removed by conventional augers fitted with soil or rock teeth, drilling buckets, or underreaming tools attached to drilling equipment of size, power, torque, and downthrust necessary for the Work will be according to Contract provisions for changes in the Work.
- B. Prevent surface water from entering excavated shafts. Conduct water to site drainage facilities.

- C. Excavate shafts for drilled piers to indicated elevations. Remove loose material from bottom of excavation.
 - 1. Excavate bottom of drilled piers to level plane within 1:12 tolerance.
 - 2. Remove water from excavated shafts before concreting.
- D. Notify and allow testing and inspecting agency to test and inspect bottom of excavation. If unsuitable bearing stratum is encountered, make adjustments to drilled piers as determined by Architect.
 - 1. Do not excavate shafts deeper than elevations indicated unless approved by Architect.
 - 2. Payment for additional authorized excavation will be according to Contract provisions for changes in the Work.
- E. Excavate shafts for closely spaced drilled piers and for drilled piers occurring in fragile or sand strata only after adjacent drilled piers are filled with concrete and allowed to set.
- F. Temporary Casings: Install watertight steel casings of sufficient length and thickness to prevent water seepage into shaft; to withstand compressive, displacement, and withdrawal stresses; and to maintain stability of shaft walls.
 - 1. Remove temporary casings, maintained in plumb position, during concrete placement and before initial set of concrete.
- G. Bells: Excavate bells for drilled piers to shape, base thickness, and slope angle indicated. Excavate bottom of bells to level plane and remove loose material before placing concrete.
- H. Tolerances: Construct drilled piers to remain within ACI 336.1 tolerances.
 - 1. If location or out-of-plumb tolerances are exceeded, provide corrective construction. Submit design and construction proposals to Architect for review before proceeding.

3.3 STEEL REINFORCEMENT

- A. Comply with recommendations in CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
- B. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy bond with concrete.
- C. Fabricate and install reinforcing cages symmetrically about axis of shafts in a single unit.
- D. Accurately position, support, and secure reinforcement against displacement during concreting. Maintain minimum cover over reinforcement.
- E. Use templates to set anchor bolts, leveling plates, and other accessories furnished in work of other Sections. Provide blocking and holding devices to maintain required position during final concrete placement.
- F. Protect exposed ends of extended reinforcement, dowels, or anchor bolts from mechanical damage and exposure to weather.

3.4 CONCRETE PLACEMENT

- A. Place concrete in continuous operation and without segregation immediately after inspection and approval of shaft by Owner's independent testing and inspecting agency.
 - 1. Construct a construction joint if concrete placement is delayed more than one hour. Level top surface of concrete. Before placing remainder of concrete, clean surface laitance, roughen, and slush concrete with commercial bonding agent or with sand-cement grout mixed at ratio of 1:1.
- B. Dry Method: Place concrete to fall vertically down the center of drilled pier without striking sides of shaft or steel reinforcement.

1. Where concrete cannot be directed down shaft without striking reinforcement, place concrete with chutes, tremies, or pumps.
 2. Vibrate top 60 inches of concrete.
- C. Coordinate withdrawal of temporary casings with concrete placement to maintain at least a 60-inch head of concrete above bottom of casing.
1. Vibrate top 60 inches of concrete after withdrawal of temporary casing.
- D. Screed concrete at cutoff elevation level and apply scoured, rough finish. Where cutoff elevation is above the ground elevation, form top section above grade and extend shaft to required elevation.
- E. Protect concrete work, according to ACI 301, from frost, freezing, or low temperatures that could cause physical damage or reduced strength.
1. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 2. Do not use calcium chloride, salt, or other mineral-containing antifreeze agents or chemical accelerators.
- F. If hot-weather conditions exist that would seriously impair quality and strength of concrete, place concrete according to ACI 301 to maintain delivered temperature of concrete at no more than 90 deg F.

3.5 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
1. Drilled piers.
 2. Excavation.
 3. Concrete.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- C. Drilled-Pier Tests and Inspections: For each drilled pier, before concrete placement.
1. Soil Testing: Bottom elevations, bearing capacities, and lengths of drilled piers indicated have been estimated from available soil data. Actual elevations and drilled-pier lengths and bearing capacities will be determined by testing and inspecting agency. Final evaluations and approval of data will be determined by Architect.
- D. Concrete Tests and Inspections: ASTM C 172 except modified for slump to comply with ASTM C 94.
1. Slump: ASTM C 143; one test at point of placement for each compressive-strength test but no fewer than one test for each concrete load.
 2. Concrete Temperature: ASTM C 1064; 1 test hourly when air temperature is 40 deg F and below and 80 deg F and above, and 1 test for each set of compressive-strength specimens.
 3. Compression Test Specimens: ASTM C 31; one set of four standard 6-inch x 12-inch cylinders for each compressive-strength test unless otherwise indicated. Mold and store cylinders for laboratory-cured test specimens unless field-cured test specimens are required.

4. Compressive-Strength Tests: ASTM C 39; one set for each drilled pier but not more than one set for each truck load. One specimen will be tested at 7 days, 2 specimens will be tested at 28 days, and 1 specimen will be retained in reserve for later testing if required.
 5. If frequency of testing will provide fewer than five strength tests for a given class of concrete, testing will be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
 6. If strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
 7. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
 8. Report test results in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. List Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests in reports of compressive-strength tests.
 9. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
 10. Additional Tests: Testing and inspecting agency will make additional tests of concrete if test results indicate that slump, compressive strengths, or other requirements have not been met, as directed by Architect.
 - a. Continuous coring of drilled piers may be required, at Contractor's expense, if temporary casings have not been withdrawn within specified time limits or if observations of placement operations indicate deficient concrete quality, presence of voids, segregation, or other possible defects.
 11. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
 12. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.
- E. An excavation, concrete, or a drilled pier will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports for each drilled pier as follows:
1. Actual top and bottom elevations.
 2. Actual drilled-pier diameter at top, bottom, and bell.
 3. Top of rock elevation.
 4. Description of soil materials.
 5. Description, location, and dimensions of obstructions.
 6. Final top centerline location and deviations from requirements.
 7. Variation of shaft from plumb.
 8. Shaft excavating method.
 9. Design and tested bearing capacity of bottom.
 10. Levelness of bottom and adequacy of cleanout.
 11. Ground-water conditions and water-infiltration rate, depth, and pumping.
 12. Description, purpose, length, wall thickness, diameter, tip, and top and bottom elevations of temporary or permanent casings. Include anchorage and sealing methods used and condition and weather tightness of splices if any.
 13. Description of soil or water movement, sidewall stability, loss of ground, and means of control.
 14. Bell dimensions and variations from original design.
 15. Date and time of starting and completing excavation.

16. Inspection report.
17. Condition of reinforcing steel and splices.
18. Position of reinforcing steel.
19. Concrete placing method, including elevation of consolidation and delays.
20. Elevation of concrete during removal of casings.
21. Locations of construction joints.
22. Concrete volume.
23. Concrete testing results.
24. Remarks, unusual conditions encountered, and deviations from requirements.

3.6 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property.

END OF SECTION 31 63 29

SECTION #32 13 13 - CONCRETE PAVING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. All applicable provisions of the Bidding and Contract Requirements, and Division 1 – General Requirements shall govern the work under this section.

1.2 WORK INCLUDED

- A. This Section includes exterior cement concrete pavement for driveways, parking lots, curbs and gutters, and walkways.
- B. All concrete paving to be performed and materials to be used shall be in accordance with the Geotechnical Engineering Report and the applicable requirements in the American Concrete Institute's Manual of Concrete Practice. In the event of a discrepancy between the above-referenced report and any portion of this specification section, the above-referenced report will govern. The Contractor shall contact the Engineer in the event of a discrepancy.

1.3 SUBMITTALS

- A. Mix Design: Submit one (1) copy of the Mix design prepared by the batch plant servicing the Project.

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Manufacturer of ready-mixed concrete products who complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1.5 PROJECT CONDITIONS

- A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

PART 2 – PRODUCTS

2.1 FORMS

- A. Form Materials: construction grade wood or metal, or other approved panel-type materials to provide full-depth, continuous, straight, smooth exposed surfaces.
- B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

2.2 STEEL REINFORCEMENT

- A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60.
- B. Joint Dowel Bars: Plain steel bars, ASTM A 615/A 615M, Grade 60. Cut bars true to length with ends square and free of burrs.
- C. Tie Bars: ASTM A 615/A 615M, Grade 60.
- D. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete.

2.3 CONCRETE MATERIALS

- A. Cementitious Material: Portland Cement: ASTM C 150, Type II

- B. Normal-Weight Aggregates: ASTM C 33, Class 4S coarse aggregate, uniformly graded. Provide aggregates from a single source.
 - 1. Maximum Coarse-Aggregate Size 3/4 inch (19 mm) nominal.
 - 2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
- C. Water: ASTM C 94/C 94M.
- D. Air-Entraining Admixture: ASTM C 260.
- E. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.
 - 1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 - 2. Retarding Admixture: ASTM C 494/C 494M, Type B.
 - 3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 - 4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 - 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 - 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

2.4 CURING MATERIALS

- A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) dry.
- B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
- C. Water: Potable.

2.5 RELATED MATERIALS

- A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber

2.6 PAVEMENT MARKINGS

- A. Pavement-Marking Paint: Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, with drying time of less than 45 minutes.

2.7 WHEEL STOPS

- A. Wheel Stops: Precast, air-entrained concrete, 2500-psi minimum compressive strength, 4-1/2 inches high by 10 inches wide by 72 inches long. Provide chamfered corners and holes for anchoring to substrate.
 - 1. Dowels: Galvanized steel, 3/4-inch (19-mm) diameter, 18-inch (254-mm) minimum length.

2.8 CONCRETE MIXTURES

- A. Prepare design mixtures, proportioned according to ACI 301, for each type and strength of normal-weight concrete determined by either laboratory trial mixes or field experience.
- B. Proportion mixtures to provide normal-weight concrete with the following properties:
 - 2. Compressive Strength (28 Days): 3,500 psi
 - 3. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.50
 - 4. Slump Limit: 4 inches
- C. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:
 - 1. Air Content: do not exceed 2 percent
- D. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.
 - 1. Use water-reducing admixture in concrete, as required, for placement and workability.
 - 2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.
- B. Proof-roll prepared subbase surface below concrete pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding.
 - 1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph.
 - 2. Proof-roll with a 20-ton pneumatic roller or similar equipment, such as a fully loaded dump truck.
 - 3. Subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch require correction according to requirements in Division 31 Section "Earth Moving."
Proceed with concrete pavement operations only after nonconforming conditions have been corrected and subgrade is ready to receive pavement.

3.2 PREPARATION

- A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

- A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides for pavement to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.
- B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 STEEL REINFORCEMENT

- A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
- B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.
- C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

3.5 JOINTS

- A. General: Form construction, isolation, and contraction joints and tool edgings true to line with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline, unless otherwise indicated.
 - 1. When joining existing pavement, place transverse joints to align with previously placed joints, unless otherwise indicated.
- B. Construction Joints: Set construction joints at side and end terminations of pavement and at locations where pavement operations are stopped for more than one-half hour unless pavement terminates at isolation joints.
 - 1. Continue steel reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of pavement strips, unless otherwise indicated.
 - 2. Provide tie bars at sides of pavement strips where indicated.
 - 3. Butt Joints: Use epoxy bonding adhesive at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
 - 4. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt-coat one-half of dowel length to prevent concrete bonding to one side of joint.
- C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.
 - 1. Extend joint fillers full width and depth of joint.
 - 2. Terminate joint filler not less than 1/2 inch (13 mm) or more than 1 inch (25 mm) below finished surface if joint sealant is indicated.

3. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
4. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
5. Protect top edge of joint filler during concrete placement with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.
- D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows to match jointing of existing adjacent concrete pavement:
 1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- (3-mm-) wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.
 2. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.
- E. Edging: Tool edges of pavement, gutters, curbs, and joints in concrete after initial floating with an edging tool to a 3/8-inch (10-mm) radius. Repeat tooling of edges after applying surface finishes. Eliminate tool marks on concrete surfaces.
- F. Joint sealants: Joints shall be sealed with approved exterior pavement joint sealants and shall be installed in accordance with manufacturer's recommendations.

3.6 PAVEMENT MARKING

- A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Engineer.
- B. Allow concrete pavement to cure for 28 days and be dry before starting pavement marking.
- C. Sweep and clean surface to eliminate loose material and dust.
- D. Apply paint with mechanical equipment to produce pavement markings of dimensions indicated with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils (0.4 mm).

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:
 1. Testing Frequency: Obtain at least 1 composite sample for each 100 cu. yd. (76 cu. m) or fraction thereof of each concrete mix placed each day.
 2. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
 3. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mix. Perform additional tests when concrete consistency appears to change.
 4. Air Content: ASTM C 231, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mix.
 5. Concrete Temperature: ASTM C 1064; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when 80 deg F (27 deg C) and above, and one test for each composite sample.
 6. Compression Test Specimens: ASTM C 31/C 31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
 7. Compressive-Strength Tests: ASTM C 39/C 39M; test 1 specimen at 7 days and 2 specimens at 28 days.

- a. A compressive-strength test shall be the average compressive strength from 2 specimens obtained from same composite sample and tested at 28 days.
- C. Strength of each concrete mix will be satisfactory if average of any 3 consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).
- D. Test results shall be reported in writing to Engineer, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
- E. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Engineer but will not be used as sole basis for approval or rejection of concrete.
- F. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Engineer.
- G. Remove and replace concrete pavement where test results indicate that it does not comply with specified requirements.
- H. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

END OF SECTION #32 13 13

SECTION #32 13 14 – CONCRETE SIDEWALK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. All applicable provisions of the Bidding and Contract Requirements, and Division 1 – General Requirements shall govern the work under this Section.

1.2 WORK INCLUDED

- A. The work specified in this Section consists of the construction of concrete sidewalk in accordance with these Specifications and in conformity with the lines, grades, dimensions and notes shown on the plans.

1.3 RELATED WORK

- A. Section 024119 – Selective Demolition
- B. Division 31 – Earthwork

PART 2 - PRODUCTS

2.1 CONCRETE

- A. Concrete shall be Class A Concrete unless otherwise shown on the plans.

2.2 FORMS

- A. Forms for this work shall be made of either wood or metal and shall have a depth equal to the plan dimensions for the depth of concrete being deposited against them. They shall be straight, free from warp or bends, and of sufficient strength when staked, to resist the lateral pressure of the concrete without displacement from lines and grade. Forms shall be cleaned each time they are used and shall be oiled prior to placing the concrete.

2.3 SUBGRADE AND GRADING

- A. Excavation shall be made to the required depth, and the foundation material upon which the sidewalk is to be set shall be compacted to a firm, even surface, true to grade and cross-section, and shall be moist at the time that the concrete is placed.

2.4 JOINTS

- A. Expansion joints between the sidewalk and the curb, and at all other locations indicated on the plans, shall be 1/4-inch wide, formed with a preformed joint filler. Preformed joint filler shall meet the requirements of AASHTO M153 or AASHTO M213.
- B. Contraction joints may be of the open type or may be sawed. Open type contraction joints shall be formed by staking a metal bulkhead in place and depositing the concrete on both sides. After the concrete has set sufficiently to preserve the width and shape of the joint, the bulkhead shall be removed. After the sidewalk has been finished over the joint, the slot shall be edged with a tool having a 1/2-inch radius.

If the CONTRACTOR elects to saw the contraction joints, a slot approximately 1/8-inch-wide and not less than 1-1/2 inches deep shall be cut with a concrete saw after the concrete has set, and within the following periods of time:

Contraction joints shall be constructed at not more than twenty (20) foot intervals, and shall be in place within twelve (12) hours after finishing.

PART 3 - EXECUTION

3.1 PLACING

- A. The concrete shall be placed in the forms to the required depth and shall be vibrated and spaded until mortar entirely covers its surface.

3.2 FINISHING

- A. Screeding: The concrete shall be struck-off by means of a wood or metal screed, used perpendicular to the forms, and floated in order to obtain the required grade and remove surplus water and laitance.
- B. Surface requirements: The concrete shall be given a broom finish. The surface variations shall not be more than 1/4 inch under a ten-foot straightedge, nor more than 1/8 inch on a five-foot transverse section. The exposed edge of the slab shall be carefully finished with an edging tool having a radius of 1-1/2 inch.

3.3 CURING

- A. The concrete shall be continuously cured for a period of at least 72 hours. Curing shall be commenced after finishing has been completed and as soon as the concrete has hardened sufficiently, to permit application of the curing material without marring the surface.
- B. Wet burlap, white-pigmented curing compound, waterproof paper or polyethylene sheets may be used for the curing.

END OF SECTION #32 13 14

SECTION #32 13 73 – CONCRETE PAVING JOINT SEALANTS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. All applicable provisions of the Bidding and Contract Requirements, and Division 1 – General Requirements shall govern the work under this section.

1.2 WORK INCLUDED

- A. This Section includes the following:
 - 1. Expansion and contraction joints within cement concrete pavement.
 - 2. Joints between cement concrete and asphalt pavement.

1.3 SUBMITTALS

- A. Product Data: For each joint-sealant product indicated. In the event of a discrepancy between this specification section and the City Design Criteria, the City's Design Criteria shall govern. The Contractor shall notify the Engineer in the event of a discrepancy.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- B. Source Limitations: Obtain each type of joint sealant through one source from a single manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration date, pot life, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle materials to comply with manufacturer's written instructions to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

1.6 PROJECT CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
 - 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (4.4 deg C).
 - 2. When joint substrates are wet or covered with frost.
 - 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 - 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 – PRODUCTS

2.1 MATERIALS, GENERAL

- A. Compatibility: Provide joint sealants, backing materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer based on testing and field experience.

2.2 COLD-APPLIED JOINT SEALANTS

- A. Type NS Silicone Sealant for Concrete: Single-component, low-modulus, neutral-curing, nonsag silicone sealant complying with ASTM D 5893 for Type NS.
 - 1. Available Products:
 - a. Crafc0 Inc.; RoadSaver Silicone.
 - b. Dow Corning Corporation; 888.

- B. Type SL Silicone Sealant for Concrete and Asphalt: Single-component, low-modulus, neutral-curing, self-leveling silicone sealant complying with ASTM D 5893 for Type SL.

1. Available Products:

- a. Crafcro Inc.; RoadSaver Silicone SL.
- b. Dow Corning Corporation; 890-SL.

2.3 HOT-APPLIED JOINT SEALANTS

- A. Elastomeric Sealant for Concrete: Single-component formulation complying with ASTM D 3406.

1. Available Products:

- a. Crafcro Inc.; Superseal 444/777.
- b. Meadows, W. R., Inc.; Poly-Jet 3406.

- B. Sealant for Concrete and Asphalt: Single-component formulation complying with ASTM D 3405.

1. Available Products:

- a. Koch Materials Company; Product No. 9005.
- b. Koch Materials Company; Product No. 9030.
- c. Meadows, W. R., Inc.; Sealtight Hi-Spec.
- d. Approved equals.

2.4 JOINT-SEALANT BACKER MATERIALS

- A. General: Provide joint-sealant backer materials that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by joint-sealant manufacturer based on field experience and laboratory testing.
- B. Round Backer Rods for Cold- and Hot-Applied Sealants: ASTM D 5249, Type 1, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.
- C. Backer Strips for Cold- and Hot-Applied Sealants: ASTM D 5249; Type 2; of thickness and width required to control sealant depth, prevent bottom-side adhesion of sealant, and fill remainder of joint opening under sealant.
- D. Round Backer Rods for Cold-Applied Sealants: ASTM D 5249, Type 3, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.

2.5 PRIMERS

- A. Primers: Product recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions.
 - 1. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3.3 INSTALLATION OF JOINT SEALANTS

- A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.
- B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- C. Install backer materials of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 - 1. Do not leave gaps between ends of backer materials.
 - 2. Do not stretch, twist, puncture, or tear backer materials.
 - 3. Remove absorbent backer materials that have become wet before sealant application and replace them with dry materials.
- D. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
 - 1. Place sealants so they directly contact and fully wet joint substrates.
 - 2. Completely fill recesses provided for each joint configuration.
 - 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- E. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
 - 1. Remove excess sealants from surfaces adjacent to joint.
 - 2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.
- F. Provide joint configuration to comply with joint-sealant manufacturer's written instructions, unless otherwise indicated.
- G. Provide recessed joint configuration for silicone sealants of recess depth and at locations indicated.

3.4 CLEANING

- A. Clean off excess sealants or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved by manufacturers of joint sealants and of products in which joints occur.

3.5 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately and replace with joint sealant so installations with repaired areas are indistinguishable from the original work.

END OF SECTION #32 13 73

SECTION 32 31 13 - CHAIN LINK FENCES AND GATES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Posts, rails, and frames.
 - 2. Wire fabric.
 - 3. Concrete.
 - 4. Manual gates with related hardware.
 - 5. Automatic gate operators.
 - 6. Accessories.
- B. Related Sections:
 - 1. Section 03 30 00 - Cast-in-Place Concrete: Concrete anchorage for posts.
 - 2. Section 08 71 00 - Door Hardware: Gate locking device.

1.3 REFERENCE STANDARDS

- A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.
- B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.
- C. ASTM A392 - Standard Specification for Zinc-Coated Steel Chain-Link Fence Fabric; 2011a (Reapproved 2022).
- D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.
- E. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.
- F. ASTM F567 - Standard Practice for Installation of Chain-Link Fence; 2023.
- G. ASTM F1043 - Standard Specification for Strength and Protective Coatings on Steel Industrial Fence Framework; 2018 (Reapproved 2022).
- H. ASTM F1083 - Standard Specification for Pipe, Steel, Hot-Dipped Zinc-Coated (Galvanized) Welded, for Fence Structures; 2018 (Reapproved 2022).
- I. ASTM F2200 - Standard Specification for Automated Vehicular Gate Construction; 2020.
- J. BHMA A156.3 - Exit Devices; 2020.
- K. CLFMI CLF-FIG0111 - Field Inspection Guide; 2014.
- L. CLFMI CLF-PM0610 - Product Manual; 2017.
- M. CLFMI CLF-SFR0111 - Security Fencing Recommendations; 2014.
- N. CLFMI WLG 2445 - Wind Load Guide for the Selection of Line Post and Line Post Spacing; 2023.
- O. FS RR-F-191/1D - Fencing, Wire and Post Metal (Chain-Link Fence Fabric); 1990.
- P. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum); 2020.
- Q. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

- R. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations; Current Edition, Including All Revisions.
- S. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations; Current Edition, Including All Revisions.
- T. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems; Current Edition, Including All Revisions.

1.4 SUBMITTALS

- A. Refer to Section 01 33 00 - Submittal Procedures, for submittal procedures.
- B. Product Data: Provide data on fabric, posts, accessories, fittings and hardware.
- C. Design Calculations: For high wind load areas, provide calculations for fence fabric and accessory selection as well as line post spacing and foundation details. See CLFMI WLG 2445 for line post and spacing guidance.
- D. Shop Drawings: Indicate plan layout, spacing of components, post foundation dimensions, hardware anchorage, and schedule of components. Refer to CLFMI CLF-SFR0111 for planning and design recommendations.
- E. Samples: Submit two samples of fence fabric, slat infill, 4 inches by 4 inch in size illustrating construction and colored finish.
- F. Manufacturer's Installation Instructions: Indicate installation requirements.
- G. Project Record Documents: Accurately record actual locations of property perimeter posts relative to property lines.
- H. Field Inspection Records: Provide installation inspection records that include post settings, framework, fabric, barbed wire, fittings and accessories, gates, and workmanship.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.
- B. Fence Installer: Company with demonstrated successful experience installing similar projects and products, with not less than five years of documented experience.

1.6 WARRANTY

- A. Refer to Section 01 77 00 - Closeout Procedures, for additional warranty requirements.
- B. Correct defective Work within a five year period after Date of Substantial Completion.
- C. Provide five year manufacturer warranty.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers listed whose products meet or exceed the specifications are approved for use in the Work. Other manufacturers must have a minimum of five (5) years' experience manufacturing products meeting or exceeding the specifications and comply with Division 01 requirements regarding substitutions to be considered.
 - 1. Chain Link Fences and Gates:
 - a. Master-Halco, Inc: www.masterhalco.com/#sle.
 - b. Merchants Metals: www.merchantsmetals.com/#sle.
 - c. American Fence and Supply Co.
 - d. Anchor Fence.
 - 2. Automatic Gate Operators:
 - a. Tymetal Corp; : www.tymetal.com/#sle.
- B. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.

2.2 COMPONENTS

- A. Line Posts: 1.9 inch (48 mm) diameter.
- B. Curved Line Posts: 1.9 inch (48 mm) diameter formed with a 55 degree angle in the direction of the climber.
- C. Corner and Terminal Posts: 2.38 inch (60 mm) diameter.
- D. Curved Corner and Terminal Posts: 2.38 inch (60 mm) diameter formed with a 55 degree angle in the direction of the climber.
- E. Gate Posts: 3-1/2 inch (89 mm) diameter.
- F. Curved Gate Posts: 3-1/2 inch (89 mm) diameter formed with a 55 degree angle in the direction of the climber.
- G. Top and Brace Rail: 1.66 inch (42 mm) diameter, plain end, sleeve coupled.
- H. Bottom Rail: 1.66 inch (42 mm) diameter, plain end, sleeve coupled.
- I. Gate Frame: 1.66 inch (42 mm) diameter for welded fabrication.
- J. Fabric with Pre-Inserted Slats: 2 inch (51 mm) diamond mesh interwoven wire, 6 gauge, 0.1920 inch (4.9 mm) thick, top selvage knuckle end closed, bottom selvage knuckle end closed.
 - 1. Privacy Slats: Vinyl, woven into fabric.
 - a. Visual Barrier: 95 percent.
 - b. Slat Color: Black,
 - 2. Products:
 - a. Noodle Link Plus as manufactured by Privacy Link.
 - 3. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.
- K. Tension Wire: 6 gauge, 0.1920 inch (4.9 mm) thick steel, single strand.
- L. Tie Wire: Aluminum alloy steel wire.

2.3 MATERIALS

- A. Posts, Rails, and Frames:
 - 1. ASTM A1011/A1011M, Designation SS; hot-rolled steel strip, cold formed to pipe configuration, longitudinally welded construction, minimum yield strength of 50 ksi (345 MPa); zinc coating complying with ASTM F1043 and ASTM F1083.
 - 2. Formed from hot-dipped galvanized steel sheet, ASTM A653/A653M, HSLAS, Grade 50, with G90 (Z275) zinc coating.
 - 3. Line Posts: Type I round in accordance with FS RR-F-191/1D.
 - 4. Terminal, Corner, Rail, Brace, and Gate Posts: Type I round in accordance with FS RR-F-191/1D.
- B. Wire Fabric:
 - 1. ASTM A392 zinc coated steel chain link fabric.
 - 2. Comply with CLFMI CLF-PM0610.
- C. Concrete:
 - 1. Type specified in Section 03 30 00 - Cast-in-Place Concrete.

2.4 MANUAL GATES AND RELATED HARDWARE

- A. Hardware for Single Swinging Gates: 180 degree hinges, 2 for gates up to 60 inches (1,525 mm) high, 3 for taller gates; fork latch with gravity drop and padlock hasp; keeper to hold gate in fully open position.
- B. Hardware for Double Swinging Gates: 180 degree hinges, 2 for gates up to 60 inches (1,525 mm) high, 3 for taller gates; drop bolt on inactive leaf engaging socket stop set in concrete, active leaf latched to inactive leaf preventing raising of drop bolt, padlock hasp; keepers to hold gate in fully open position.

- C. Hinges: Finished to match fence components.
 - 1. Brackets: Round.
 - 2. Mounting: Center.
 - 3. Closing: Manual.
 - 4. Products:
 - a. D&D Technologies USA, Inc: www.ddtech.com/#sle.
 - 5. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.
- D. Latches: Finished to match fence components.
 - 1. Brackets: Round.
 - 2. Locking: Magnetic.
 - 3. Products:
 - a. D&D Technologies USA, Inc: www.ddtech.com/#sle.
 - 4. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.

2.5 AUTOMATIC GATE OPERATORS

- A. Swinging Gates: Pre-wired, pedestal mounted gate operator for horizontal swinging gates, per ASTM F2200 and UL 325.
 - 1. Class: Class II
 - 2. Operating type: Swing arm.
 - 3. Control Functions: Open, pause, and close.
 - 4. Maximum Open/Close Time: 10 seconds.
 - 5. Access: Card.
 - 6. Maximum Gate Weight: 500 pounds (187 kilograms).
 - 7. Horsepower Rating: Suitable for connected load.
 - 8. Entrapment Protection Devices: Provide sensing devices and safety mechanisms complying with UL 325.
 - 9. Enclosures: Comply with NEMA 250, and list and label as complying with UL 50 and UL 50E.
 - a. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
 - b. Finish for Painted Steel Enclosures: Manufacturer's standard, factory applied grey unless otherwise indicated.
- B. Sliding Gates: Pre-wired, pedestal mounted gate operator for horizontal sliding gates, per ASTM F2200 and UL 325.
 - 1. Class: Class II.
 - 2. Operating type: Drive belt.
 - 3. Control Functions: Open, Pause, Close.
 - 4. Maximum Open/Close Time: 10 seconds.
 - 5. Access: Card.
 - 6. Maximum Gate Weight: 500 pounds (187 kilograms).
 - 7. Horsepower Rating: Suitable for connected load.
 - 8. Entrapment Protection Devices: Provide sensing devices and safety mechanisms complying with UL 325.
 - 9. Enclosures: Comply with NEMA 250, and list and label as complying with UL 50 and UL 50E.
 - a. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
 - b. Finish for Painted Steel Enclosures: Manufacturer's standard, factory applied grey unless otherwise indicated.

2.6 LIGHT-DUTY ARCHITECTURAL HARDWARE

- A. Exit Devices: Aluminum, 36 inches (914 mm) wide.

1. Performance Criteria: Comply with BHMA A156.3, Grade 1.
2. Provide strike of type recommended by manufacturer for application indicated.
3. Aluminum Finish: 628.
4. Products:
 - a. DAC Industries, Inc; Detex Exit Bar: www.dacindustries.com/#sle.
- B. Mechanical Latches: Steel latch, with mounting bracket for a nominal 1-5/8 inches (41 mm) diameter pipe post frame.
 1. Auto-Latches: Push-rod, self-latching, padlockable assembly.
 - a. Swing Direction: Both ways.
 - b. Mounting to Gate Frame: U-bolts.
 - c. Locking: Padlockable from either side.
 2. Single-Point Latches for Two-Leaf Gates: Pivoting double latch and strike assembly.
 - a. Adjustment Range: Designed for gaps of 2-1/2 to 6 inches (64 to 152 mm) between gate leaf frames.
 - b. Mounting to Gate Frame: U-bolts.
 - c. Locking: Padlockable from either side.
 3. Finish: Galvanized.
 4. Products:
 - a. DAC Industries, Inc; Commercial Strong Arm: www.dacindustries.com/#sle.
 5. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.
- C. Roller Assembly: Steel chassis assembly with permanently-lubricated and sealed roller bearings.
 1. Weight Rating: 1,000 pound (454 kg).
 2. Shaft: 1 inch (25.4 mm) diameter hardened steel shaft.
 3. Roller: Polymer casting, secured to shaft with nylon locknut.
 4. Protective Cover: Manufacturer's standard UV-inhibited molded polyethylene casting.
 - a. Color: Gray.
 5. Mounting to Round Fence Post: U-bolts.
 6. Finish: Galvanized.
 7. Products:
 - a. DAC Industries, Inc; Stealth Cantilever Roller: www.dacindustries.com/#sle.
 8. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.
- D. Hinge Set: Self-closing, for top and bottom support of swinging gate.
 1. Swing Direction: One way.
 2. Mounting to Round Fence Post and Gate Frame: Integral clamp.
 3. Finish: Galvanized.
 4. Products:
 - a. DAC Industries, Inc; Residential Self-closing Hinge Sets: www.dacindustries.com/#sle.
 5. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.

2.7 ACCESSORIES

- A. Caps: Cast steel galvanized; sized to post diameter, set screw retainer.
- B. Fittings: Sleeves, bands, clips, rail ends, tension bars, fasteners and fittings; steel.
- C. Privacy Slats: Aluminum strips, sized to fit fabric weave.
 1. Products:
 - a. PrivacyLink; Noodle Link Plus.: www.eprivacylink.com/#sle.
 2. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.

2.8 FINISHES

- A. Components (Other than Fabric): Galvanized in accordance with ASTM A123/A123M, at 1.7 ounces per square foot (530 g/sq m).
- B. Fabric: Vinyl coated over coating of 1.8 ounces per square foot galvanizing (over coating of 550 g/sq m galvanizing).
- C. Hardware: Hot-dip galvanized to weight required by ASTM A153/A153M.
- D. Accessories: Same finish as framing.
- E. Color(s): To be selected by Architect from manufacturer's standard range.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Verify that areas are clear of obstructions or debris.
- B. Preinstallation Testing: Test areas for ledge.

3.2 PREPARATION

- A. Removal: Obstructions or debris.

3.3 INSTALLATION

- A. Install framework, fabric, accessories and gates in accordance with ASTM F567.
- B. Place fabric on outside of posts and rails.
- C. Set intermediate posts plumb, in concrete footings with top of footing 2 inches above finish grade. Slope top of concrete for water runoff.
- D. Brace each gate and corner post to adjacent line post with horizontal center brace rail. Install brace rail one bay from end and gate posts.
- E. Install center brace rail on corner gate leaves.
- F. Do not stretch fabric until concrete foundation has cured 28 days.
- G. Stretch fabric between terminal posts or at intervals of 100 feet (30 m) maximum, whichever is less.
- H. Fasten fabric to top rail, line posts, braces, and bottom tension wire with tie wire at maximum 15 inches (380 mm) on centers.
- I. Attach fabric to end, corner, and gate posts with tension bars and tension bar clips.
- J. Do not attach the hinged side of gate to building wall; provide gate posts.
- K. Provide concrete center drop to footing depth and drop rod retainers at center of double gate openings.
- L. Install gate locking device specified in Section 08 71 00 - Door Hardware.
- M. Peen all bolts upon installation.
- N. Perform three random field inspections confirming proper installation.
- O. Install operator in accordance with manufacturer's instructions and in accordance with NFPA 70.

3.4 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm).
- B. Maximum Offset From True Position: 1 inch (25 mm).
- C. Do not infringe on adjacent property lines.

3.5 FIELD QUALITY CONTROL

- A. Refer to Section 01 40 00 - Quality Requirements, for additional requirements.
- B. Layout: Verify that fence installation markings are accurate to design, paying attention to gate locations, underground utilities, and property lines.
- C. Post Settings: Randomly inspect three locations against design for:
 - 1. Hole diameter.
 - 2. Hole depth.
 - 3. Hole spacing.
- D. Fence Height: Randomly measure fence height at three locations or at areas that appear out of compliance with design.
- E. Gates: Inspect for level, plumb, and alignment.
- F. Workmanship: Verify neat installation free of defects. See CLFMI CLF-FIG0111 for field inspection guidance.

3.6 CLEANING

- A. Leave immediate work area neat at end of each work day.
- B. Clean jobsite of excess materials; scatter excess material from post hole excavations uniformly away from posts. Remove excess material if required.
- C. Clean fence with mild household detergent and clean water rinse well.
- D. Refer to Section 01 74 19 - Construction Waste Management and Disposal for additional requirements.

3.7 CLOSEOUT ACTIVITIES

- A. Refer to Section 01 77 00 - Closeout Procedures, for closeout submittals.
- B. Refer to Section 01 79 00 - Demonstration and Training, for additional requirements.
- C. Demonstrate proper operation of equipment to Owner's designated representative.

END OF SECTION 32 31 13

This page intentionally left blank

SECTION 32 31 16 – WELDED WIRE FENCES AND GATES

PART 1 GENERAL

1.01 SCOPE OF WORK

Work described in this section includes materials, equipment, labor costs, including shipping of fences, gates and accessories.

1.02 RELATED WORK (Sections to consult)

- A. Division 03 – Concrete
- B. Division 04 – Masonry
- C. Division 31 – Earthwork
- D. Division 32 – Exterior Improvements

1.03 REFERENCES

ASTM STANDARDS: American Society for Testing and Materials

A121 - 19	Standard Specification for Metallic-Coated Carbon Steel Barbed Wire
A123 / A123M - 17	Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products
A153 / A153M - 16a	Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware
A500 / A500M - 18	Standard Specification for Cold Formed Welded and Seamless Carbon Steel Structural Tubing in Round Shapes.
A505 - 16	Standard Specification for Steel, Sheet and Strip, Alloy, Hot-Rolled and Cold-Rolled, General Requirements
A513/A513M - 19	Standard Specification for Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing
A641/A641M - 09a (2014)	Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.
A653/A653M - 19	Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
A659/A659M - 18	Standard Specification for Commercial Steel (CS), Sheet and Strip, Carbon (0.16 Maximum to 0.25 Maximum Percent), Hot-Rolled
A787/A787M - 15a	Standard Specification for Electric-Resistance-Welded Metallic-Coated Carbon Steel Mechanical Tubing
A853 - 24 (2017)	Standard Specification for Steel Wire, Carbon, for General Use
A1008 / A1008M - 18	Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable
A1064 / A1064M - 18a	Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete
B6 - 18	Standard Specification for Zinc

1.04 SUBMITTALS

- A. Product Data: Material descriptions, dimension of individual components and profiles, and finishes for the following:
 - 1. Fence, gate posts, brackets, rails and fittings.
 - 2. Gates and hardware.
- B. Shop Drawings: In accordance to Section 01 33 00 with six (6) copies:
 - 1. Show locations of fence, each gate, posts, rails, and details of gate swing direction, or other operation, hardware, and accessories.
 - 2. Indicate materials, dimensions, sizes, weights, and finishes of components.
 - 3. Include plans, elevations, sections, gate swing direction and other required installation and operational clearances, and details of post anchorage, attachment and bracing.
 - 4. Installation recommendations and instructions by manufacturer describing all details for a typical fence and gates.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed installations of fences and gates similar in material, design, and extent to those indicated for this project and whose work has resulted in construction with a record of successful in-service performance.
- B. Source Limitations for Fences and Gates: Obtain each color, grade, finish, type, and variety of components for fences and gates from one source with resources to provide fences and gates of consistent quality in appearance and physical properties.

1.07 PROJECT CONDITIONS

- A. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
 - 1. Notify local utility making services before beginning work.
 - 2. Unless otherwise indicated in the general provisions of the contract, notify the Architect no less than two (2) days in advance of proposed utility interruptions.
 - 3. Do not proceed with utility interruptions without Architect's written permission.
- B. Field Measurements: Verify layout information for fences and gates shown on drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

PART 2 PRODUCTS

2.01 MANUFACTURER

OMEGA II FENCE SYSTEMS™

A division of Metaltech - Omega Inc.
1735, St-Elzéar west
Laval (Quebec), Canada
H7L 3N6

Web site: www.omegatwo.com

2.02 COATINGS

- A. Zinc coating:
 - 1. Wire meshes are coated with 0.5 oz/ft² (150 g/m²) zinc in conformity with ASTM A641 Class 1.
 - 2. Square fence posts, swing gate frame and posts:
 - a. Thickness of 11GA (0.120 in or 3.0 mm) or less: Zinc coated (pre-galvanized process) with a minimum of 0.9 oz/ft² (275 g/m²) as per ASTM A653 Grade 90.
 - b. Thickness over 1/8 in (3.2 mm): Coated with a minimum of 2.3 oz/ft² (705 g/m²) zinc (hot-dip galvanizing) in conformity with ASTM A123 Grade 100.
- B. Polyester Coating:

Polyester coating to be minimum 4 mils applied by an electrostatic process. Coating shall cover all surfaces of the wire and post sections. Coating shall be capable of withstanding the following tests:

 - 1. Mechanical adhesion test as per ASTM D3359 - Method B.
 - 2. Shock resistance tests as per ASTM D2794.
 - 3. Salt spray testing with a minimum of 1 000 hours without red rust appearance, as per ASTM B117.
 - 4. Humidity resistance in a weather meter chamber as per ASTM D2247.
 - 5. Exposure to ultraviolet light with exposure of 1 000 hours using apparatus Type E and 63°C as per ASTM D1499.
- C. Polyester Surface Coating Colors:
 - 1. Standard Coating: Black, RAL 9004 (30% Gloss).

2.03 MATERIALS

2.03.1 MODEL "ELITE" FENCE AND ACCESSORIES

A. Panel Height:

1. 4-foot-high nominal panels: 48-7/16 in (1 230 mm).
2. 6-foot-high nominal panels: 72-7/16 in (1 830 mm).
3. 8-foot-high nominal panels: 96-7/16 in (2 430 mm).
4. Multiple of stacked panels.

B. Model "ELITE" – Steel Mesh Fence Panels:

1. 98-5/8 in (2505 mm) wide, welded by one vertical wire of 6 gauge (0.192 in or 4.9 mm) placed between two horizontal wires of 4 gauge (0.225 in or 5.72 mm) to form rectangles 1-15/16 x 7-7/8 in (50.0 x 200.0 mm).
2. Cold rolled annealed wire made of AISI Grade 1018 steel with tensile strength of at least 75 000 psi (515 Mpa) in accordance with ASTM A853.
3. One end of the vertical wires of the panel shall extend 1 in (25.4 mm) from the last or the first horizontal wire to create a spiked top or bottom depending on installed position. The other end is cut flush.
4. Panel camber may not exceed 0.094 in (2.5 mm).

C. Square Posts:

Cold rolled 1008 grade steel to meet ASTM A500 and ASTM A787 and the following maximum horizontal loads, length as required for installation type:

The length of the posts is minimum 36 in (914 mm) more than the actual height of the fence for installation in the ground depending on local land code requirements (frost line).

1. Installation
 - a. In ground, post length as required for local frost line requirements
2. Post Size

Post Size	Gauge	Maximum horizontal load
2 in x 2 in (50.8 mm x 50.8 mm)	11 (3.0 mm)	289 pounds (1 286 N)
3 in x 3 in (76.2 mm x 76.2 mm)	11 (3.0 mm)	691 pounds (3 074 N)

D. Post Brackets:

1. Universal Collar Bracket Kit: Universal bracket for standard use on line or end posts. Includes the following: 14 gauge (1.9 mm) steel collar and wire retaining plate 1/4 in x 1 in (6.4 mm x 25.4 mm), nut, washer and carriage bolt 5/16 in x 1-1/4 in (7.9 mm x 31.8 mm), all galvanized steel.
 - a. For 90° turn, use the same bracket
 - b. For different angles, used the "Universal collar angle brackets".
 - c. For 4-foot-high nominal panels: Provide 6 brackets per panel.
 - d. For 6-foot-high nominal panels: Provide 6 brackets per panel.
 - e. For 8-foot-high nominal panels: Provide 8 brackets per panel.

E. Post caps:

1. Aluminum alloy: For dimension posts 2 in x 2 in (50.8 mm x 50.8 mm), 3 in x 3 in (76.2 mm x 76.2 mm) and 4 in x 4 in (101.6 mm x 101.6 mm).
2. Galvanized steel: For larger dimensions.

2.03.2 SINGLE / DOUBLE SWING GATES

1. Single swing.

B. Gate Frames:

1. Two (2) 16 gauge (1.6 mm) 1-1/2 in x 1-1/2 in (38.1 mm x 38.1 mm) horizontal tubes and two (2) 11 gauge (3.0 mm) 2 in x 2 in (50.8 mm x 50.8 mm) vertical tubes, welded at intersections to create a rigid frame, in accordance with ASTM F900.

C. Gate Posts:

Cold rolled from 1008 grade steel to meet ASTM A500 and ASTM A787. Posts are to include cap and SPF-W Kit for adjacent panel mounting. Length as required for installation type:

1. Installation:
 - a. In ground, post length as required for local frost line requirements

Opening Dimension	Post Size
3 ft to 7 ft	3 in x 3 in (76.2 mm x 76.2 mm) 11 gauge (3.0 mm)
> 7 ft to 9 ft	4 in x 4 in (101.6 mm x 101.6 mm) 11 gauge (3.0 mm)
> 9 ft to 19 ft	6 in x 6 in (152.4 mm x 152.4 mm) 3/16 in (4.8 mm)

D. Gate Hardware:

1. Standard Hardware: Hot-dip galvanized steel in conformity with ASTM F900, sized to assure proper gate operation. Non-moving parts shall be powder coated.
 - a. Hinge: Structurally designed to support all gates without deformation during opening and closing.
 - b. Latch: Clamp-on gravity system that is self latching. Includes the following:
 - Self-locking Device: With padlock eyes as an integral part of latch.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for a verified survey of property lines and legal boundaries, site clearing, earthwork, pavement work, and other conditions affecting performance.
- B. Do not begin installation before final grading is completed, unless otherwise permitted by Architect.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 ft (152.5 m) or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

3.03 IN-GROUND CONCRETE INSTALLATION

- A. Install fencing on established boundary lines inside property line
- B. Post Excavation: Drill or hand-excavate holes for posts to diameters and spacing indicated, in firm, undisturbed or compacted soil.
- C. Post Setting: Set posts in concrete footing. Protect portion of posts above ground from concrete splatter. Place concrete around posts and consolidation. Using mechanical devices to set posts is not permitted. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during placement and finishing operations until concrete is sufficiently cured.
 1. Dimensions and Profile: As indicated on Drawings.
 2. Space line posts uniformly at center to center.
 3. Exposed Concrete Footings: Extend concrete 2 in (50.8 mm) above grade. Smooth and shape to shed water.

4. Concealed Concrete Footings: Stop footings [2 in (50.8 mm) <Insert dimension> below grade [as indicated on Drawings] to allow covering with surface material.
5. Posts Set into Concrete in Sleeves: Use steel pipe sleeves pre-set and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with [non shrink, non-metallic grout,] [anchoring cement,] mixed and placed to comply with anchoring material manufacturer's written instructions, and finished sloped to drain water away from post.
6. Posts Set into Concrete in Voids: Form or core drill holes not less than 5 in (125 mm) deep and 3/4 in (19.1 mm) larger than OD of post. Clean holes of loose material, insert posts, and fill granular space between post and concrete with [non-shrink, non-metallic grout,] [anchoring cement,] mixed and placed to comply with anchoring material manufacturer's written instructions, and finished sloped to drain water away from post.
7. Flange Post Installation: Bolt mounting plates attached to each post to slab or structure as indicated, using expansion bolts.

3.04 FENCE INSTALLATION – Model “ELITE”

- A. Install the fence along the specified layout according to the drawings. The fence panel shall be installed to maintain a clear minimum distance of 1-1/4 in (31.8 mm) and a maximum distance of 2 in (50.8 mm) from the ground surface. Holes for posts shall be at least 8 in (200 mm) in diameter and at least 42 in (1 070 mm) deep.
- B. Posts shall be adequately supported within the concrete forms to maintain the required positioning and prescribed level until concrete has set. All necessary anchors and posts shall be at a minimum depth of 36 in (914 mm) into the ground.
- C. Square Post Installation: Once the concrete is set, the fence sections are fastened to the posts with the desired bracket type.
 - a. Universal Collar Bracket Kit: Brackets slot allows for adjustments of $\pm 1\text{-}1/2$ in (38.1 mm) on each side. Always install the brackets flush with horizontal wire of the panel (no gap).

Post Size	Post Spacing C/C
2 in x 2 in (50.8 mm x 50.8 mm)	103-5/8 in (2 631 mm)
3 in x 3 in (76.2 mm x 76.2 mm)	104-5/8 in (2 657 mm)

- D. For the fence to follow slopes, it is required to step the fence sections. The Universal bracket on square posts can be slid along the post at the desired height and should always be install flush with horizontal wire (no gap). When faced with a steep slope, it will be necessary to order longer posts and panels cut in half as to keep the gap under the panel to a minimum.
- E. Upon cutting or trimming a post or a wire mesh section, apply a zinc rich primer to the exposed ends and finish with the matching touch-up paint supplied by the manufacturer.
- F. Panels must be installed as instructed by client:
 1. Spikes pointed up or down for safety

3.05 CAST-IN-PLACE CONCRETE

- A. General: Comply with ACI 301 for cast-in-place concrete.
- B. Materials: Portland cement complying with ASTM C150 <Insert type if required>, aggregates complying with ASTM C33, and potable water [for ready-mixed concrete complying with ASTM C94]. [Measure, batch, and mix Project-site-mixed concrete according to ASTM C94.]
- C. Concrete Mixture: Normal-weight concrete with not less than 3 000 psi (20.7 Mpa) compressive strength (28 days), 3 in (76.2 mm) slump, and contain “coarse aggregate” of a minimum diameter of 1/5 in (5.1 mm) to a maximum of 3/4 in (19.1 mm) maximum size aggregate. A 5% to 7% air entrained or according to recommendation of section 03 00 00.

3.06 GROUT AND ANCHORING CEMENT

- A. Non-shrink, Non-metallic Grout: Premixed, factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C1107. Provide grout, recommended in writing by manufacturer, for exterior applications.
- B. Erosion-Resistant Anchoring Cement: Factory-packaged, non-shrink, non-staining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended in writing by manufacturer for exterior applications.

3.07 GATE INSTALLATION AND ADJUSTMENT

- A. Install gate posts in accordance with manufacturer's instructions.
- B. Concrete Set Gate Posts: Drill holes in firm, undisturbed or compacted soil. Holes shall have a diameter 4 times greater than outside dimension of post, and depths approximately 6 in (150 mm) deeper than frost level. Excavate deeper as required for adequate support in soft and loose soils, and for posts with heavy lateral loads. Set post bottom 36 in (914 mm) below surface when in firm, undisturbed soil. Place concrete around posts in a continuous pour, tamp for consolidation. Trowel finish around post and slope to direct water away from posts. Check each post for vertical and top alignment and maintain in position during placement and finishing operations.
- C. Install gates perfectly horizontal and levelled (at junction), plumb, and secure for full opening without interference.
- D. Attach hardware so to have the nuts inside the property thus making the assembly tamper-proof which will prevent unauthorized removal. Install ground-set items in concrete for anchorage.
- E. Adjust hardware for smooth operation and lubricate where necessary to operate smoothly, easily, and quietly, free from binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

3.08 MAINTENANCE

- A. Inspection
 - 1. A thorough visual inspection shall be done annually.
 - 2. This inspection must include overall verification of physical condition.
- B. Moveable parts shall be adjusted, if needed, every five (5) years, unless project requires additional inspections.
- C. In areas of extreme winter conditions, entire installation must be free of excessive ice and snow accumulation.

32 31 19 - DECORATIVE METAL FENCES AND GATES

Part 1 – GENERAL

1.01 SCOPE OF WORK

Work described in this section includes materials, equipment, labor costs, including shipping of fences, gates and accessories.

1.02 RELATED WORK (Sections to consult)

- A. Division 03 – Concrete
- B. Division 04 – Masonry
- C. Division 31 – Earthwork
- D. Division 32 – Exterior Improvements
- E. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.04 SUBMITTALS

- A. Product Data: Material descriptions, dimension of individual components and profiles, and finishes for the following:
 - 1. Fence, gate posts, brackets, rails and fittings.
 - 2. Gates and hardware.
- B. Shop Drawings: In accordance to Section 01 33 00 with six (6) copies:
 - 1. Show locations of fence, each gate, posts, rails, and details of gate swing direction, or other operation, hardware, and accessories.
 - 2. Indicate materials, dimensions, sizes, weights, and finishes of components.
 - 3. Include plans, elevations, sections, gate swing direction and other required installation and operational clearances, and details of post anchorage, attachment, and bracing.
 - 4. Installation recommendations and instructions by manufacturer describing all details for a typical fence and gates.

1.05 SUBSTITUTION OF PRODUCTS

To enable all tenders to be judged equitably, they shall be based on the specified products in this document and shown on the drawings:

- A. The proposal for any substitute products must be attached to their tender separately, identifying the substitution product by its trade name along with any savings it may represent.
- B. Following the opening of the tender, only the substitutions proposed by the lowest bidder of the specified products will be considered.
- C. All substitutions approval requests shall be accompanied by manufacturing drawings and specifications, and they meet all specifications for design, size gauge of metal parts and fabrication.
- D. Each substitution sample must be presented to the owner/consultant within seven days following the opening of tenders. After this time, the bidder will be required to supply the original specified product.
- E. The owner/consultant reserves the right to grant or deny approval for proposed substitutions without prejudice to this right and the decision shall be final.
- F. Fencing products must be entirely interchangeable, if applicable, with already installed material.
- G. The above conditions apply to this section independently of any other clauses on the subject found in this document.

1.06 QUALITY ASSURANCE

- A. Installer Qualifications: An experienced installer who has completed installations of fences and gates similar in material, design, and extent to those indicated for this project and whose work has resulted in construction with a record of successful in-service performance.
- B. Source Limitations for Fences and Gates: Obtain each color, grade, finish, type, and variety of components for fences and gates from one source with resources to provide fences and gates of consistent quality in appearance and physical properties.

1.07 PROJECT CONDITIONS

- A. Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:
1. Notify local utility making services before beginning work.
 2. Unless otherwise indicated in the general provisions of the contract, notify the Architect no less than two (2) days in advance of proposed utility interruptions.
 3. Do not proceed with utility interruptions without Architect's written permission.
- B. Field Measurements: Verify layout information for fences and gates shown on drawings in relation to property survey and existing structures. Verify dimensions by field measurements.

Part 2 – PRODUCTS

2.01 MANUFACTURER

OMEGA II FENCE SYSTEMS™

A division of Metaltech - Omega Inc.
1735, St-Elzéar west
Laval (Quebec), Canada
H7L 3N6

Tel: 800-836-6342 / 450-686-9600
Fax: 450-681-5318
Email: customerservice@omegatwo.com
Web site: www.omegafence.com

- A. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00 - Product Requirement:
1. All substitution approval requests shall be accompanied by manufacturing drawings and specifications, and they shall meet all specifications for design, size, gauge of metal parts, and fabrication.

2.02 COATINGS

- A. Zinc coating:
1. Square fence posts, swing gate frame and posts:
 - a. Thickness of 11GA (0.120 in or 3.0 mm) or less: Zinc coated (pre-galvanized process) with a minimum of 0.9 oz/ft² (275 g/m²) as per ASTM A653 Grade 90.
 - b. Thickness over 1/8 in (3.2 mm): Coated with a minimum of 2.3 oz/ft² (705 g/m²) zinc (hot-dip galvanizing) in conformity with ASTM A123 Grade 100.
 2. Flat posts are coated with a minimum of 2.3 oz/ft² (705 g/m²) zinc (hot-dip galvanizing) in conformity with ASTM A123 Grade 100.
- B. Polyester Coating:
- Polyester coating to be minimum 4 mils applied by an electrostatic process. Coating shall cover all surfaces of the wire and post sections. Coating shall be capable of withstanding the following tests:
1. Mechanical adhesion test as per ASTM D3359 - Method B.
 2. Shock resistance tests as per ASTM D2794.
 3. Salt spray testing with a minimum of 1 000 hours without red rust appearance, as per ASTM B117.
 4. Humidity resistance in a weather meter chamber as per ASTM D2247.
 5. Exposure to ultraviolet light with exposure of 1 000 hours using apparatus Type E and 63°C as per ASTM D1499.
- C. Polyester Surface Coating Colors:
1. Standard Coating: Reference L2.00 for color. Color to be selected from Omega's Standard RAL catalog.

2.03 MATERIALS

2.03.1 MODEL "OMEGA UNIK" FENCE AND ACCESSORIES

A. Panel Nominal Dimensions:

1. Vertical panels of 6 ft H. x 4 ft W.: 67-3/4 in x 44 in (1 721 mm x 1 118 mm)
2. Vertical panels of 8 ft H. x 4 ft W.: 91-3/4 in x 44 in (2 330 mm x 1 118 mm)
3. Horizontal panels of 4 ft H. x 6 ft W.: 43-3/4 in x 68 in (1 111 mm x 1 727 mm)
4. Horizontal panels of 4 ft H. x 8 ft W.: 43-3/4 in x 92 in (1 111 mm x 2 337 mm)
5. Custom

B. Perforated Panels:

1. Made of 5052-H32 aluminium sheet, 1/8 in (3.2 mm) thick.
2. 2 in (50.8 mm) folds are typically made on all four (4) sides of the panel.
3. 1 in (25.4 mm) buffer is reserved on the circumference of the panel (after folds) before the beginning of extruding the selected design.
4. It is possible to stack two (2) vertical panels to double the fence height. The panels are joined together with hexagonal screws and tamper-proof nuts.
5. Rectangular holes of 1/2 in x 3/8 in (12.7 mm x 9.5 mm) are made on panel folded sides to attach itself to posts or other panels if needed,

C. Square Posts:

Posts are made of cold-formed AISI 1008 steel to meet ASTM A500 and ASTM A787 and the following maximum horizontal loads, length as required for installation type:

The length of the posts is minimum 36 in (914 mm) more than the actual height of the fence for in-ground installation, depending on local land code requirements (frost line).

1. Installation
 - a. In-ground, post length as required for local frost line requirements.
 - b. Surface mounted, flanged.
2. Post Size:
 - a. 2 in x 2 in (50.8 mm x 50.8 mm) x 11 gauge (0.12 in or 3.0 mm)

E. Post Brackets:

1. **Standard Bolt System:** For installation on flat posts with panels in straight line. Includes the following: 5/16 in (7.9 mm) tamper-proof nut and carriage bolt, all stainless steel.
 - a. For vertical panels: 3 bolts per post
 - b. For horizontal panels: 2 bolts per post
 - c. For stacked horizontal panels: 2 bolts per post and 3 additional bolts per set of stacked panels
 - d. Custom for non-standard panel sizes

F. Post caps:

1. Aluminum alloy: For dimension posts 2 in x 2 in (50.8 mm x 50.8 mm), 3 in x 3 in (76.2 mm x 76.2 mm) and 4 in x 4 in (101.6 mm x 101.6 mm).
2. Galvanized steel: For larger dimensions.

G. Polyester powder coating: (See article 2.02B).

H. Concrete: (See article 3.05B)

2.03.2 SINGLE / DOUBLE SWING GATES

A. Configuration:

1. Single swing.

B. Gate Frame:

1. Two (2) horizontal tubes and two (2) vertical tubes, all 2 in x 2 in (50.8 mm x 50.8 mm) 16 gauge (1.6 mm) square tubes, welded at intersections to create a rigid frame, in accordance with ASTM F900.
2. Two (2) 16 gauge (1.6 mm) 2 in x 2 in (50.8 mm x 50.8 mm) horizontal tubes and two (2) 11 gauge (3.0 mm) 2 in x 2 in (50.8 mm x 50.8 mm) vertical tubes, welded at intersections to create a rigid frame, in accordance with ASTM F900.

C. Gate Posts:

Cold rolled from 1008 grade steel to meet ASTM A500 and ASTM A787. Posts are to include cap and are fixed to the door frame using two (2) hinges. Length as required for installation type:

1. Installation:
 - a. In-ground, post length as required for local frost line requirements.
2. Post Size:

Opening Dimension	Post Size
3 ft to 8 ft	3 in x 3 in (76.2 mm x 76.2 mm) 11 gauge (3.0 mm)
> 8 ft to 10 ft	4 in x 4 in (101.6 mm x 101.6 mm) 11 gauge (3.0 mm)
> 10 ft to 19 ft	6 in x 6 in (152.4 mm x 152.4 mm) x 3/16 in (4.8 mm)

D. Gate Hardware:

1. Standard Hardware:
 - a. Hinge: Structurally designed to support all gates without deformation during opening and closing. Allows a 180° rotation during both opening and closing.
 - b. Latch: Keyed Lock system that is self latching and equipped with a mechanism to lock the barrier. The latch allows the gate to be opened and closed from both sides.
 - Barrier support: this support is installed when the barrier measures 1524 mm (5 ft) and more. The gate support is used to hold and support the gate in the fully open position.
2. Additional Hardware for Double Gates:
 - a. Drop bar: Secure one gate in closed position, with stop pipe to engage the center drop rod.
3. Optional Hardware:
 - a. Panic Bar and Plate: (Dorex 8500). For quick exit during an emergency. [Replace Standard Latch]
 - b. Kick Plate: Solid plate added to both sides of the gate.
 - c. Other: [Insert brand and model of optional hardware required]

E. Polyester Coating: (See article 2.02B)

F. Concrete: (See article 3.05)

2.03.3 CANTILEVER GATES

Omega II cantilever gates shall be fabricated in accordance with ASTM F1184 Class 2 as well as F2200 when gate is automated. Gate frame members are all made of aluminum extrusions 6061-T6 following ASTM B221. Each gate frame consists of a top track, a bottom track, vertical uprights and diagonal braces. Components shall be welded together forming a rigid one-piece frame integrating the top and bottom track. Vertical uprights shall be positioned on the gate frame, up to approximately 8 ft (2 438 mm) apart and dividing the opening section of the frame into equal sections as well as the tail section, each opening section will be reinforced with one (1) diagonal brace and each tail section will be cross braced using two (2) diagonal braces.

Each gate has an overall length equal to 1.5x its single opening (opening and overhang). An additional distance equal to the gate single opening length must be kept unobstructed to one side of the single cantilevered gate for opening functionality (also applies to double slide gates). Therefore, an entire distance equal to 2.5x the gate single opening is required in total for each gate to allow opening and closing functionality.

A. Gate Posts: Gate posts shall be 4 in (101.6 mm) hot-dipped galvanized steel square sections. Pipe shall have a minimum 1.8 oz/ft² (549 g/m²) zinc coating meeting ASTM F1234. The steel shall meet requirements of ASTM A500, Grade B with a minimum yield strength of 40 000 psi (276 MPa). The length of the posts is minimum 36 in (914 mm) more than the actual height of the fence for installation in the ground depending on local land code requirements (frost line). Double track are to be used with operators on larger gates.

1. Single cantilevered gate:
 - a. Single track: 1 latch post and 2 support posts.
 - b. Double track: 1 latch post and 4 support posts.

Gate single opening	Overhang length	Overall length
4 ft (1 219 mm)	2 ft (609 mm)	6 ft (1 828 mm)
8 ft (2 438 mm)	4 ft (1 219 mm)	12 ft (3 657 mm)
16 ft (4 876 mm)	8 ft (2 438 mm)	24 ft (7 315 mm)
24 ft (7 315 mm)	12 ft (3 657 mm)	36 ft (10 972 mm)

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for a verified survey of property lines and legal boundaries, site clearing, earthwork, pavement work, and other conditions affecting performance.
- B. Do not begin installation before final grading is completed, unless otherwise permitted by Architect.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 ft (152.5 m) or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

3.03 IN-GROUND CONCRETE INSTALLATION

- A. Install fencing on established boundary lines inside property line.
- B. Post Excavation: Drill or hand-excavate holes for posts to diameters and spacing indicated, in firm, undisturbed or compacted soil.
- C. Post Setting: Set posts in concrete footing. Protect portion of posts above ground from concrete splatter. Place concrete around posts and consolidation. Using mechanical devices to set posts is not permitted. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during placement and finishing operations until concrete is sufficiently cured.
 1. Dimensions and Profile: As indicated on Drawings.
 2. Space line posts uniformly at center to center.
 3. Exposed Concrete Footings: Extend concrete 2 in (50.8 mm) above grade. Smooth and shape to shed water.
 4. Concealed Concrete Footings: Stop footings [2 in (50.8 mm) <Insert dimension> below grade [as indicated on Drawings] to allow covering with surface material.
 5. Posts Set into Concrete in Sleeves: Use steel pipe sleeves pre-set and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with [non shrink, non-metallic grout,] [anchoring cement,] mixed and placed to comply with anchoring material manufacturer's written instructions, and finished sloped to drain water away from post.
 6. Posts Set into Concrete in Voids: Form or core drill holes not less than 5 in (125 mm) deep and 3/4 in (19.1 mm) larger than OD of post. Clean holes of loose material, insert posts, and fill granular space between post and concrete with [non-shrink, non-metallic grout,] [anchoring cement,] mixed and placed to comply with anchoring material manufacturer's written instructions, and finished sloped to drain water away from post.
 7. Flange Post Installation: Bolt mounting plates attached to each post to slab or structure as indicated, using expansion bolts.

3.04 FENCE INSTALLATION – Model “OMEGA UNIK”

- A. Install the fence along the specified layout according to the drawings. The fence panel shall be installed to maintain a clear distance of 2 in (50.8 mm) from the ground surface. Footing for posts shall be at least 8 in (200 mm) in diameter and at least 42 in (1 070 mm) deep.
- B. Posts shall be adequately supported within the concrete forms to maintain the required positioning and prescribed level until concrete has set. All necessary anchors and posts shall be at a minimum depth of 36 in (914 mm) in the ground.

Post Size	Nominal Panel Width	Post Spacing C/C
2 in x 2 in (50.8 mm x 50.8 mm)	4 ft (Vertical Panel)	46 in (1 168 mm)
	6 ft (Horizontal Panel)	70 in (1 778 mm)
	8 ft (Horizontal Panel)	94 in (2 387 mm)
3 in x 3 in (76.2 mm x 76.2 mm)	4 ft (Vertical Panel)	47 in (1 194 mm)
	6 ft (Horizontal Panel)	71 in (1 803 mm)
	8 ft (Horizontal Panel)	95 in (2 413 mm)

- D. For the fence installed in slopes, it is necessary to order longer posts and/or adjust panels height and/or modify the positioning holes in the folds panels to keep a constant gap between the panel and the ground. Consult the manufacturer to obtain a personalized solution for a sloped site.
- E. Upon cutting or trimming a post, apply a zinc rich primer to the exposed ends and finish with the matching touch-up paint supplied by the manufacturer.

3.05 CAST-IN-PLACE CONCRETE

- A. General: Comply with ACI 301 for cast-in-place concrete.
- B. Materials: Portland cement complying with ASTM C150 <Insert type if required>, aggregates complying with ASTM C33, and potable water [for ready-mixed concrete complying with ASTM C94]. [Measure, batch, and mix Project-site-mixed concrete according to ASTM C94.]
- C. Concrete Mixture: Normal-weight concrete with not less than 3 000 psi (20.7 Mpa) compressive strength (28 days), 3 in (76.2 mm) slump, and contain "coarse aggregate" of a minimum diameter of 1/5 in (5.1 mm) to a maximum of 3/4 in (19.1 mm) maximum size aggregate. A 5% to 7% air entrained or according to recommendation of section 03 00 00.
- D. Materials: Dry-packaged concrete mix complying with ASTM C387 for normal-weight concrete mixed with potable water according to manufacturer's written instructions.

3.06 GROUT AND ANCHORING CEMENT

- A. Non-shrink, Non-metallic Grout: Premixed, factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C1107. Provide grout, recommended in writing by manufacturer, for exterior applications.
- B. Erosion-Resistant Anchoring Cement: Factory-packaged, non-shrink, non-staining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended in writing by manufacturer for exterior applications.

3.07 GATE INSTALLATION AND ADJUSTMENT

- A. Install gate posts in accordance with manufacturer's instructions.
- B. Concrete Set Gate Posts: Drill holes in firm, undisturbed or compacted soil. Holes shall have a diameter 4 times greater than outside dimension of post, and depths approximately 6 in (150 mm) deeper than frost level. Excavate deeper as required for adequate support in soft and loose soils, and for posts with heavy lateral loads. Set post bottom 36 in (914 mm) below surface when in firm, undisturbed soil. Place concrete around posts in a continuous pour, tamp for consolidation. Trowel finish around post and slope to direct water away from posts. Check each post for vertical and top alignment and maintain in position during placement and finishing operations.

- C. Install gates perfectly horizontal and levelled (at junction), plumb, and secure for full opening without interference.
- D. Attach hardware so to have the tamper-proof nuts inside the property, which will prevent unauthorized removal. Install ground-set items in concrete for anchorage.
- E. Adjust hardware for smooth operation and lubricate where necessary to operate smoothly, easily, and quietly, free from binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

3.13 SITE CLEANING

Clean and adjust soil disturbed during work. Get of all surplus and waste materials and replace damaged turf in accordance with directives of Engineer and Consultant.

3.14 MAINTENANCE

- A. Inspection
 - 1. A thorough visual inspection shall be done annually.
 - 2. This inspection must include overall verification of physical condition.
- B. Moveable parts shall be adjusted, if needed, every five (5) years, unless project requires additional inspections.
- C. In areas of extreme winter conditions, entire installation must be free of excessive ice and snow accumulation.

SECTION 32 91 00 - SOIL PREPARATION

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Furnish components of the planting mediums.
 - 2. Testing and/or certifications of components
 - 3. Mixing of planting mediums.
 - 4. Transporting mediums as required.
 - 5. Weed Control
- B. Related Sections:
 - 1. Finish Grading - Section 31 22 15
 - 2. Sprinkler Irrigation System - Section 32 84 00
 - 3. Lawns and Grasses - Section 32 92 00
 - 4. Planting - Section 32 93 00

1.2 QUALITY ASSURANCE

- A. Certificates of Inspection: Certificates of inspection required for transportation shall accompany invoice for each shipment of materials. File copies of certificates with Landscape Architect after acceptance of material.
- B. Testing:
 - 1. Chemical and Physical - All soil components shall be tested by one of the following testing laboratories for conformity to the specifications:

Texas Plant and Soil Lab
5115 West Monte Cristo
Edinburg, Texas 78539
(956) 383-0739

A&L Plains Agricultural Laboratories, Inc.
302 34th Street
Lubbock, Texas 79404
(806) 763-4278

Soil and Plant Laboratory, Incorporated
Post Office Box 153
Santa Clara, California 95052
(408) 243-0330
 - 2. Biological:

Soil Food Web, Inc.
1128 NE 2nd Street Suite 120
Corvallis, Oregon 97330
www.soilfoodweb.com
(541) 752-5066
 - 3. If herbicide contamination is suspected, then a radish/rye-grass growth trial must be performed.

4. For delivered material, test one grab sample for each fifty (100) cubic yards of bulk material delivered to the site.
5. Testing will be at the expense of Contractor.
6. Deviations greater than plus or minus twenty (20%) percent from control data may be grounds for rejection of mixes tested. Non-conforming materials shall not be used. Materials which do not conform to standards specified herein shall be removed from the site.

1.3 SUBMITTALS:

- A. Furnish copies of manufacturers literature, certifications, sources, samples, or laboratory analytical data for the following items:
1. Existing soil testing data
 2. Organic Amendments and Fertilizers
 3. Planting Soil
 4. Topsoil.
 5. Sand.
 6. Native Mulch (composted).
 7. Compost.
 8. Herbicides
 9. Pre-Emergent Herbicides

PART 2 PRODUCTS

2.1 PLANTING SOIL:

- A. Grading:

Sieve Size	Percent Passing Sieve
25.4 mm (1")	95-100
9.51 mm (3/8")	85-100
53 Micron (270 mesh)	10- 30

- B. Chemistry - Suitability Considerations:

1. Salinity: Saturation Extract Conductivity (ECe x 103 @ 25 degrees C.) less than 2.2 mmhos/cm.
2. Sodium: Sodium Absorption Ratio (SAR) less than 9.0.
3. Boron: Saturation Extract Concentration less than 2.0 ppm.
4. Reaction: pH of Saturated Paste: 6 - 7.5.

- C. Pests:

The population of any single species of plant pathogenic nematode: Fewer than 500 per pint of soil (confirm by biological testing).

- D. Fertility Considerations:

Soil to contain sufficient quantities of available nitrogen, phosphorus, potassium, calcium, and magnesium to support normal plant growth. In the event of nutrient inadequacies, provisions shall be made to add required materials to overcome inadequacies prior to planting.

- E. Source of above shall be approved and conformity of material shall be laboratory verified for each 100 cubic yards of material delivered to the site.

F. Percentage of Organic Matter: Min. 4-8%

- G. Physical Soil Parameters
1. Clay: 5-25%
 2. Silt: 25-50%
 3. Sand: 25-50%

2.2 ON SITE MATERIAL:

- A. Specified backfill mixes shall consist of on site material generally conforming to the requirements in this specification.
- B. Test on site topsoil from designated stockpile area or borrow site for conformity to this specification. Submit test to Landscape Architect for verification and alteration of components.

2.3 WOOD RESIDUALS:

- A. Source:
Shall be non-composted and/or stockpiled, and not have been chemically treated or dyed.

- B. Physical Properties - Grading:

U.S. Sieve Dry Weight Percent Passing

3/8"	100
1/4"	90 - 100
No. 8	70 - 100
No. 35	0 - 30

- C. Organic Content by Ash Analysis:

90 - 100 Percent Dry Weight

- D. Chemistry Range:

1. Saturation Extract Conductivity (ECc) Nil - 3.5
2. Reaction (pH) 6-8

- E. Salinity: Maximum saturation extract conductivity 3.5 millimhos per cm @ 25 degrees centigrade.

2.4 SAND:

- A. Physical Properties - Grading:

U.S. Sieve Percent Passing

No. 4	100
No. 10	95 - 100
No. 18	90 - 100
No. 35	65 - 100
No. 60	0 - 50

No. 140 0 - 20
No. 270 0 - 7

- B. Chemistry: Range:
1. Saturation Extract Conductivity (ECc) Nil - 3.0
 2. Sodium Absorption Ratio (SAR) Nil - 6.0
 3. Boron - ppm in saturation extract solution Nil - 3.0
 4. Reaction (pH) 6.0 - 7.5
 5. Available calcium - sodium acetate extractable - ppm dry weight Nil – 4000
 6. Soluble-Salt Content: 1 to 2dS/m measured by electrical conductivity
 - 7.

- C. Coarse Sand – concrete sand

2.5 **COMPOST:**

Made from recycled natural materials screened to 1" minus (for soil additive). On the Solvita compost maturity test score, must score a value of 5 or higher for tilling into the soil and be a minimum of 6 months old and fully composted. Supplied by Nature's Way Resources, Inc., Conroe, Texas or approved equal.

- A. Chemical components:
1. pH - 6.0-8.0
 2. Nitrogen – 30 ppm or higher
 3. Phosphorus – 150 ppm or higher
 4. Potassium – 400 ppm or higher
 5. Calcium – 3000 ppm or higher
 6. Magnesium – 250 ppm or higher
 7. Salinity – 2500 ppm or lower
 8. Zinc – 6 ppm or higher
 9. Iron – 25 ppm or higher
 10. Manganese – 16 ppm or higher
 11. Copper – 0.4-2.0 ppm
 12. Sodium – 1000 ppm or less
 13. Sulfur – 25 ppm or higher
 14. Boron – 2 ppm or higher
- B. Biological components:
1. Bacteria – minimum of 150 micrograms per gram of soil of total bacteria
 2. Fungus – minimum of 150 micrograms per gram of soil of total fungus
 3. Protozoa
 - a. flagellates – 10,000 units per gram of soil
 - b. amoebae – 10,000 units per gram of soil
 - c. ciliates – 20 units per gram of soil

2.6 **CHEMICAL ADDITIVES (OR EQUIVELANTS):**

The following soil components listed may have a particular application specified within this Section. Some of the soil components included shall be applied at rates determined by the soil tests called for under other paragraphs of this Section or as a result of soil tests. Some of the components may not be required by the soils tests. All additives shall be the slow release type.

- A. Ground Limestone: Agricultural limestone containing not less than eighty five (85%) percent of total carbonates, ground to such fineness that fifty (50%) percent will pass a 100 mesh sieve and ninety (90%) percent will pass a 20 mesh sieve.
- B. Dolomite Lime: Agricultural grade mineral soil conditioner containing thirty five (35%) percent minimum magnesium carbonate and forty nine (49%) percent minimum calcium carbonate, 100 percent passing #65 sieve. Kaiser Dolomite 65 AG or approved equal.
- C. Gypsum: Agricultural grade product containing eighty (80%) percent minimum calcium sulphate.
- D. Iron Sulphate (Ferric or Ferrous): Shall contain thirty (30%) to thirty five (35%) percent iron, thirty five (35%) to forty (40%) percent sulphur and be supplied by a commercial fertilizer supplier.
- E. Sulphate of Potash: Agricultural grade containing fifty (50%) percent to fifty three (53%) percent of water soluble potash.
- F. Single Superphosphate: Commercial product containing nineteen (19%) to twenty (20%) percent available phosphoric acid.
- G. Ammonium Sulphate: Commercial product containing approximately twenty one (21%) percent ammonia.
- H. Calcium Nitrate: Agricultural grade containing fifteen and one-half (15 1/2%) percent Nitrogen.
- I. I.B.D.U. (Iso Butyldiene Diurea): Commercial product containing thirty one (31%) percent Nitrogen.
- J. Soil Sulphur: Agricultural grade sulphur containing a minimum of ninety six (96%) percent sulphur.
- K. Iron Chelate Micronutrient: Sequestrene - 330 Fe; 0-0-0; ten (10%) percent Fe; Ciba-Geigy Company.

2.7 FERTILIZERS AND NUTRIENT AMENDMENTS: all 100% organic

- A. Fertilizer: MicroLife organic fertilizer as supplied by San Jacinto Environmental Supplies, Houston, Texas or approved equal.
- B. Minor and Trace Elements: Humates Plus 0-0-4 as supplied by San Jacinto Environmental Supplies, Houston, Texas or Green Sand as supplied by Nature's Way Resources, Inc. or approved equals.

PART 3 EXECUTION

PLANTING

3.1 LAWN AND NATIVE SEED AREAS – Hydromulch and Sod

- A. After finish grade approval and before laying sod or spreading seed apply:
 - 1. 2" layer of compost uniformly across area
 - 2. 20# of MicroLife 6-2-4 fertilizer per 1,000 sq. ft.
 - 3. 10# of MicroLife humates plus 0-0-4 trace elements per 1,000 sq. ft.

4. After laying sod or spreading seed, foliar spray the entire area with 8oz of MicroLife Super Seaweed mixed with a gal of water. Each gallon of mix to cover 1,000 sq. ft.
- B. Disk or till into the soil to a depth of 2"-4" until the amendments are fully incorporated before seeding and/or planting (See Section 32 92 00).

3.2 SHADED GROUNDCOVER AREAS

- A. After finish grade approval apply:
1. 1" layer of Compost uniformly across area
 2. 3" (in) Planting Soil
 3. 40# of MicroLife ultimate 8-4-6 fertilizer per 1,000 sq. ft.
 4. 10# of MicroLife humates plus 0-0-4 trace elements per 1,000 sq. ft.
- B. Disk or till into the soil to a depth of 4" until the amendments are fully incorporated before groundcover planting (See Section 32 92 00).

3.3 TREE PLANTING AREAS (Within Tree Excavation Pit)

- A. After finish grade approval before mulching apply:
1. Backfill with a 50/50 blend of existing topsoil and Planting Soil
 2. For every 15 gal. tree size, add 6 oz. MicroLife Ultimate 8-4-6
 3. 3 oz of JRM Mycorrhizal Tree Transplant
 4. 2 oz of MicroLife Super Seaweed mixed with a gal. of water. Use 2 gal. of mixed solution per 15-gal. tree size

3.4 SUNNY GROUNDCOVER AND PERENNIAL AREAS

- A. After finish grade approval apply:
1. 4"(in) Planting Soil
 2. 40# of MicroLife ultimate 8-4-6 fertilizer per 1,000 sq. ft.
 3. 10# of MicroGro Granular per 1,000 sq. ft.
 4. 2 oz of MicroLife Maximum Bloom 3-8-3 mixed with a gal. of water as a new plant/root stimulator. Water soak the area sufficiently to get uniform saturation.
- B. Disk or till into the soil to a depth of 6" until the amendments are fully incorporated before planting (See Section 32 93 00).

3.5 SHRUB PLANTING

- A. After finish grade approval before mulching apply:
1. 4"(in) Planting Soil
 2. 40# of MicroLife ultimate 8-4-6 fertilizer per 1,000 sq. ft.
- B. Disk or till into the soil to a depth of 6" until the amendments are fully incorporated before planting (See Section 32 93 00).

3.6 EXISTING TREES (12"+ cal.)

- A. Once a year treatment
1. 2 gal. of MicroLife Bio-Matrix 7-1-3
 2. 6 oz of JRM Mycorrhizal Injectables per 100 gal. of water

WEED CONTROL/TREATMENT

- A. All site locations to receive planting where weeds exist, shall be treated with post-emergent herbicide.
 - 1. Repeat treatment as required to ensure that no weeds are present at the beginning of work on the landscape planting of the Project.
- B. Weeds shall not be present at the date of inspection for Substantial Completion of the Project and at the conclusion of the maintenance and establishment period following acceptance of the Contractor's work.
- C. Post-emergent weed treatment includes:
 - 1. Removal of weeds and other undesirable ground cover vegetation in turf/grass and planting areas shall be accomplished a minimum of 14 days prior to soil preparation for planting operations.
 - 2. Care shall be taken not to affect existing trees, shrubs, and plants on and near the site.
- D. Pre-Emergent Herbicide treatment:
 - 1. Apply per manufacturers distribution rate prior to mulching and directly after mulching.
 - 2. Snapshot, Princep or Specticle are approved Pre-Emergents. Contractor to submit product for approval.

END OF SECTION 32 91 00

SECTION 32 92 00 - LAWNS AND GRASSES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes
 - 1. Hydromulch Seeding and Soil Supplements
 - 2. Dry Application Seeding.
 - 3. Solid Sod Installation
- B. Related Sections
 - 1. Finish Grading - Section 31 2215
 - 2. Planting - Section 32 9300
 - 3. Landscape Maintenance - Section 32 9400

1.2 QUALITY ASSURANCE

- A. Source:
 - 1. Seed: The Owner's representative shall be furnished a signed copy of statement from vendor, certifying that each container of seed delivered is labeled in accordance with the Federal Seed Act and is at least equal to requirements previously specified. Seed analysis shall be furnished prior to commencement of planting operations. Each lot of seed may be resampled and retested in accordance with latest Rules and Regulations under the Federal Seed Act at the discretion of the Owner's representative. If these tests reveal the seed to be below the specified pure live seed content, the Contractor shall be required to plant additional seed to compensate for the deficiency at no additional cost to the Owner. The State Seed Laboratory will conduct the seed retests. Allowance will be made for the actual pure live seed content of the specified grasses in determining the actual planting rate.
- B. Inspections:
 - 1. Make written request for inspection after seeding operations have been completed. Such inspection is for the purpose of establishing the Maintenance Period.
 - 2. Submit written requests for inspections to the Owner's representative at least 7 days prior to anticipated inspection date.

1.3 SUBMITTALS

- A. Furnish required copies of manufacturers literature, certifications, or laboratory analytical data for the following items:
 - 1. Seed source. (Certification)
 - 2. Fiber mulch. (Laboratory analytical data)
 - 3. Tank mix fertilizer. (Certification or laboratory analytical data)
 - 4. Topdress fertilizer. (Certification)

1.4 MAINTENANCE BY THE CONTRACTOR (refer to section 32 94 00)

1.5 FINAL ACCEPTANCE

- A. Work under this Section will be accepted by Owner's representative upon satisfactory completion of all work, but exclusive of re-application under the Guarantee Period. Final Acceptance of lawn or prairie establishment shall be as follows:
 - 1. For Sod: Complete lush cover with no brown sections or cracks showing. Sod shall have established to the extent that satisfactory capillary action between the sod and soil has been established.

2. For Lawn Seed: 95% uniform coverage of grass in excess of 1" height. No bare spots of greater than 2 square feet will be accepted.
3. For Native Seed: 90% coverage of plants in excess of 6" height. No bare spots greater than 2 square feet will be accepted.
4. The Owner's representative and/or Owner shall interpret the above. Upon Final Acceptance, the Owner will assume the responsibility for maintenance of the work.
5. If the seeding season for Native Grass Mix is missed due to the wrong season for proper germination and grow-in, the contractor is required to return to the project site and apply seed the following appropriate season at no additional cost to the owner. **Native seed shall be installed March-June.**

PART 2 - PRODUCTS

2.1 SEED

- A. All seed used shall be labeled in accordance with U.S. Department of Agriculture Rules and Regulations under the Federal Seed Act. All seed shall be furnished in sealed standard containers unless exception is granted in writing by the Owner's representative. Seed which has become wet, moldy, or otherwise damaged in transit or in storage will not be acceptable.
- B. The minimum percentage by weight of pure live seed in each lot of seed shall be as follows and seed shall be planted at the rate per acre indicated under pure live seed required per acre.

Kind of Seed	Minimum % Pure Live Seed Required	Pounds Pure Live Seed Required Per Acre
COMMON BERMUDA	95	20

Note: % Pure Live Seed = % Purity X % Germination

- C. Weed seed shall not exceed 10% by weight of the total of pure live seed and other material in the mixture. Johnson grass, nut grass, or other noxious weed seed will not be allowed.
- D. If Native American Seed Mixes seeding seasons are missed the contractor will be required to seed Perennial Rye at a rate of 15 pounds per acre and return the following season to install the specified grass at no cost to the owner.

2.2 FERTILIZER FOR TANK MIX

- A. MicroLife Multi-Purpose 6-2-4, pelleted, uniform in composition, free-flowing, and suitable for application with approved equipment. The fertilizer shall be delivered to the site in bags or other convenient containers, each fully labeled, conforming to the applicable state fertilizer laws, and bearing the name or trademark and warranty of the producer.

2.3 WOOD CELLULOSE FIBER MULCH

- A. Wood Cellulose fiber mulch, for use with the hydraulic application of grass seed and fertilizer, shall consist of specially prepared wood cellulose fiber. It shall be processed in such a manner that it will not contain germination or growth inhibiting factors. It shall be dyed an appropriate color to allow visual metering of its application. The wood cellulose fibers shall have the property of becoming evenly dispersed and suspended when agitated in water. When sprayed uniformly on the surface of the soil, the fibers shall form a blotter-like groundcover which readily absorbs water and allows infiltration to the underlying soil. Weight specifications from suppliers for all applications shall refer only to air dry weight of the fiber, a standard equivalent to 18% moisture. The mulch material shall be supplied in packages having a gross weight not in excess of 100 pounds and be marked by the manufacturer to show the dry weight content.

Suppliers shall be prepared to certify that laboratory and field testing of their product has been accomplished and that it meets all of the foregoing requirements.

2.4 WATER

- A. Drinkable, directly from local utility supply.

2.5 SLURRY MIX COMPONENTS PER ACRE

- A. Wood Cellulose Fiber Mulch 2,000 pounds
- B. Grass Seed (as specified)
- C. Fertilizer (13-13-13) 800 pounds

2.6 SOD

- A. One year old sod, ref. planting schedule for sod selection. Sod shall be dense with the grass having been mowed at 1" height before lifting from field. All grown on fumigated soil. Sod shall be in vigorous condition, dark green in color, free of disease and harmful insects. Do not stack for more than 24 between time of cutting and time of delivery. Owner's representative reserves the right to reject any sod deemed unacceptable for installation.

2.7 TOPDRESS FERTILIZER

- A. (Delayed Application) Complete fertilizer, 50% of the nitrogen shall be derived from natural organic sources or urea-form. Available phosphoric acid shall be from superphosphate, bone, or tankage. Potash shall be derived from muriate of potash containing 60% potash. Apply at rate to achieve 1.5 # N/1000sf.
 - 1. 16% Nitrogen
 - 2. 6% Phosphoric Acid
 - 3. 8% Potash

2.8 TOPDRESS MIX

- A. Topdressing under existing trees shall be:
 - 1. 2/3 Cubic Yard Planting Soil-Ref. 32 9100
 - 2. 1/3 Cubic Yard Sand-Ref. 32 9100

PART 3 - EXECUTION

3.1 HYDROMULCH SEEDING OF BERMUDA GRASS AND PRAIRIE SEED ON PREPARED FINISHED GRADE

- A. Bed Preparation:
 - 1. Ref. Soil Preparation 32 91 00
 - 2. Rake or Harrow 3"-4" deep
- B. Hydroseeding:
 - 1. Immediately after the finished grade has been approved, begin hydroseeding operation to reduce excessive weed growth.
- C. Perimeter Sodding:
 - 1. Install two courses of sod at perimeter of area to receive hydroseeding. Install in compliance with requirements of "SODDING ON PREPARED FINISHED GRADE" requirements below.

- D. Special Mulching Equipment and Procedures:
1. Hydraulic equipment used for the application of fertilizer, seed, and slurry of prepared wood fiber mulch shall have a built-in agitation system with an operating capacity sufficient to agitate, suspend, and homogeneously mix a slurry containing up to 40 pounds of fiber plus a combined total of 70 pounds of fertilizer solids for each one 100 gallons of water. The slurry distribution lines shall be large enough to prevent stoppage. The discharge line shall be equipped with a set of hydraulic spray nozzles, which provide even distribution of the slurry on the slopes to be seeded. The slurry tank shall have a minimum capacity of 800 gallons and shall be mounted on a traveling unit which may be either self-propelled or drawn with a separate unit which will place the slurry tank and spray nozzles within sufficient proximity to the areas to be seeded so as to provide uniform distribution without waste. The Owner's representative may authorize equipment with smaller tank capacity provided that the equipment has the necessary agitation system and sufficient pump capacity to spray the slurry in a uniform coat.
- E. Mixing:
1. Care shall be taken that the slurry preparation takes place on the site of the work. The slurry preparation should begin by adding water to the tank when the engine is at half throttle. When the water level has reached the height of the agitator shaft, good re-circulation shall be established and seed shall be added. Fertilizer shall then be added, followed by wood pulp mulch. The wood pulp mulch shall only be added to the mixture after the seed and when the tank is at least one-third filled with water. The engine throttle shall be opened to full speed when the tank is half filled with water. All the wood pulp mulch shall be added by the time the tank is two-thirds to three-fourths full. Spraying shall commence immediately when the tank is full. The operator shall spray the area with a uniform, visible coat by using the green color of the wood pulp as a guide.
- F. Application:
1. Obtain approval of hydromulch area preparation from the Owner's representative prior to application.
 2. Operators of hydromulching equipment shall be thoroughly experienced in this type of application. Apply specified slurry mix in a motion to form a uniform mat at specified rate.
 3. Keep hydromulch within areas designated and keep from contact with other plant material.
 4. Slurry mixture which has not been applied within 4 hours of mixing shall not be used and shall be removed from the site.
 5. After application, do not operate equipment over the covered area.
 6. Immediately after application, thoroughly wash off any plant material, planting areas, or paved areas not intended to receive slurry mix. Keep all paved and planting areas clean during maintenance operations.
 7. Refer also to the maintenance portion of this Section.
- G. Unseeded Areas: Reseed unplanted areas with the specified grasses at no additional cost to the Owner.

3.2 DRY APPLICATION SEEDING FOR NATIVE GRASS/BERMUDA GRASS MIXES

- A. Seed Bed Preparation:
1. Ref. Soil Preparation 32 91 00
 2. Rake or Harrow 3"-4" deep
- B. Seeding:
1. Plant seed with a broadcast seeder or a Culti-packer seeder. Plant grass seed no deeper than ¼ inch and the distance between rows 12 inches or less. Distribute seed evenly.

2. Roll the planted seedbed with a Culti-packer immediately after seeding and prior to applying mulch cover.
 3. Seed may be broadcast by hand for small areas or areas inaccessible to seeding equipment, as approved by the Engineer. Areas seeded by hand shall be rolled or lightly compacted, if possible.
- C. Mulching:
1. Spread straw or hay mulch on seeded areas with a slope steeper than 8H:1V immediately after application of seed.
 2. Apply straw or hay mulch at a rate per acre of 2000lbs., to create a uniform mat of coverage a minimum of ½ inch thick to protect the seedbed.
 3. Secure straw or hay mulch with hydromulch or other approved methods.
 - a. Apply a hydromulch, consisting of a homogeneous aqueous mixture of recycled paper fiber, water and tackifier or soil stabilizer, to achieve a rate of 1,000 pounds of paper fiber mulch per acre over the straw mulch. Apply guar gum tackifier at a minimum rate of 50 pounds (dry weight) per acre.
 - b. Application rate for other tackifier or soil stabilizer compounds shall be in accordance with the manufacturer's recommendations and approved by the Engineer.

3.3 SODDING ON PREPARED FINISHED GRADE

- A. Bed Preparation:
1. Ref. Soil Preparation 32 91 00
 2. Immediately after the finished grade has been approved, begin sodding operations to reduce excessive weed growth. If sod bed is dry immediately prior to sod installation, dampen surface with a fine mist of water.
- B. Installation:
1. Lay sod so that adjacent strips butt tightly with no spaces between strips. Lay sod on mounds and slopes with strips parallel to contours. Stagger joints. Sodded areas shall be flush with adjoining seeded areas. At walks and pavements lay one strip of sod parallel to pavement and make cuts at this strip. At back of curb there shall be a double sod strip totaling 36" so that it can be maintained with a 36" wide mower deck.
 2. Tamp and roll sod thoroughly to make contact with sod bed.
 3. Peg sod on slopes three to one or steeper with pegs driven through sod into soil until pegs are flush with turf. Space pegs 18" on center. Pegs shall be 1" square by 6" pine or 6" lengths of lath.
 4. Water sod thoroughly immediately after fertilizing.
 5. Roll sod with 200 lb ballast roller immediately after sod has been installed and watered.

3.4 CLEAN UP

- A. Keep all areas of work clean, neat, and orderly at all times. Keep all paved areas clean during lawn installation operations. Clean up and remove all deleterious materials and debris from the entire work area prior to Final Acceptance to the satisfaction of Owner's representative.

3.5 INSPECTIONS

- A. Make written request for inspection prior to seeding and after areas have been seeded and sodded.
- B. Submit requests for inspections to Owner's representative at least 2 days prior to anticipated inspection date.

END OF SECTION 32 92 00

SECTION 32 93 00 - PLANTING

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Plants.
 - 2. Tree stabilization.
 - 3. Tree-watering devices.
 - 4. Landscape edgings.
 - 5. Landscape mulches and gravels
- B. Related Requirements:
 - 1. Section 32 9200 "Lawns and Grasses" for turf (lawn) and meadow planting, hydroseeding, and erosion-control materials.
 - 2. Section 32 9100 "Soil Preparation"

1.2 COORDINATION

- A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.
 - 1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
 - 2. Plant Photographs: Include color photographs in digital format of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.
 - 3. Irrigation inspection tube and cap materials.
 - 4. Fertilizer tablets for tree installation
- B. Samples for Verification: For each of the following:
 - 1. Mulch: 1-quart volume of mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
 - 2. Planting Soil Mix: 1-quart volume of mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample

shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.

3. Weed Control Barrier: 12 by 12 inches.
4. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.
5. Tree Staking Materials and Accessories: post, hose, and webbing (sample of each)

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.
 1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
 2. Experience: Three years' experience in landscape installation in addition to requirements in Section 01 4000 "Quality Requirements."
 3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
 4. Personnel Certifications: Installer's field supervisor shall have certification in one of the following categories from the Professional Landcare Network:
 - a. Landscape Industry Certified Technician - Exterior.
 - b. Landscape Industry Certified Interior.
 - c. Landscape Industry Certified Horticultural Technician.
 5. Pesticide Applicator: State licensed, commercial.
- B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.
 1. Selection of plants shall be made by Architect, who tags plants at their place of growth before they are prepared for transplanting.
- C. Plant Material Observation: Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.
 1. Notify Architect of sources of planting materials seven days in advance of delivery to site.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
- B. Bulk Materials:
 1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.

2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 3. Accompany each delivery of bulk materials with appropriate certificates.
- C. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.
- D. Handle planting stock by root ball.
- E. Store bulbs, corms, and tubers in a dry place at 60 to 65 deg F until planting.
- F. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.
1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.
- G. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.
- H. Deliver plants after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.
1. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
 2. Do not remove container-grown stock from containers before time of planting.
 3. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.6 FIELD CONDITIONS

- A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.
- B. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.7 WARRANTY

- A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.
1. Failures include, but are not limited to, the following:
 - a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.
 2. Warranty Periods: From date of Substantial Completion.
 - a. Trees: 1 year.
 - b. Shrubs, Vines, Ornamental Grasses, Ground Covers, Biennials, Perennials, and Other Plants: 1 year
 - c. Sod: 1 year
 - d. Annuals: Three months.
 3. Include the following remedial actions as a minimum:
 - a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
 - b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
 - c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.
 - d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

- A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.
1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch in diameter; or with stem girdling roots are unacceptable.
- B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.
- C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.

- D. Annuals: Provide healthy, disease-free plants of species and variety shown or listed, with well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery.

2.2 FERTILIZERS

- A. Trees: Ref 32 9100 "Soil Preparation" for fertilizer selection
- B. Shrub, groundcover, annuals and perennials: MicroLife all organic fertilizer as supplied by San Jacinto Environmental (713) 957-0909. Apply at mfg. max. recommended rates. Ref. Section 32 9100- "Soil Preparation"

2.3 MULCHES

- A. Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:
 - 1. Type: Hardwood mulch
 - 2. Grind: 1.5"x2"max, Double Ground
 - 3. Color: Natural (Brown)
 - 4. Depth: 1.5" min 3.5" maximum
- B. Compost: Ref 32 9100 "Soil Preparation"

2.4 WEED-CONTROL BARRIERS

- A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.
- B. Miriafi 140 NL as manufactured by Nicolon Mirafi Group, Pendergrass, GA, (888) 795-0808 or approved equal.

2.5 PESTICIDES

- A. General: Pesticide registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.
- B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer. Cross reference with 32 9100-Soil Preparation
- C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.6 TREE-STABILIZATION MATERIALS

A. Stakes and Guys:

Contractor shall use staking materials necessary to meet requirements of specifications, subject to approval:

1. Tree Stakes: 7' & 8' long steel T-post weighing 1.33 pounds per foot.
2. Paint for Stakes: Pittsburgh Paint No. 515-5 Stonehenge Greige.
3. Tie Webbing: Tree Tie Webbing by AM Leonard-Green
4. Rootball Fixing Sub Surface Anchors: Platipus Anchors RF2P 3-Leg

2.7 LANDSCAPE EDGINGS

A. Steel Edging: Ref. Materials Schedule

2.8 MISCELLANEOUS PRODUCTS

- A. Root Barrier: Black, molded, modular panels manufactured with 50 percent recycled polyethylene plastic with ultraviolet inhibitors, 85 mils thick, with vertical root deflecting ribs protruding 3/4 inch out from panel, and each panel 24 inches wide.
- B. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.
- C. Burlap: Non-synthetic, biodegradable.
- D. Planter Drainage Gravel: Washed, sound crushed stone or gravel complying with ASTM D 448 for Size No. 8.
- E. Planter Filter Fabric: Nonwoven geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.
- F. Mycorrhizal Fungi: Dry, granular inoculants containing at least 5300 spores per lb of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb of ectomycorrhizal fungi, 33 percent hydrogel, and a maximum of 5.5 percent inert material.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive plants for compliance with requirements and conditions affecting installation and performance.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
 2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
 3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
 4. Uniformly moisten excessively dry soil that is not workable, and which is too dusty.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

3.2 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.
- B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.
- C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.
- D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.
- E. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.
1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.
- F. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

3.3 PLANTING AREA ESTABLISHMENT

- A. Loosen subgrade of planting areas to a minimum depth of 8 inches. Remove stones larger than 1 inch in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.
1. Apply fertilizer directly to subgrade before loosening.
 2. Thoroughly blend planting soil off-site before spreading.
 - a. Delay mixing fertilizer with planting soil if planting will not proceed within a few days.

- b. Mix lime with dry soil before mixing fertilizer.
- 3. Spread planting soil to a depth indicated on the Drawings.
 - a. Spread approximately one-half the thickness of planting soil over loosened subgrade. Mix thoroughly into top 2 inches of subgrade. Spread remainder of planting soil.
- B. Finish Grading: Grade planting areas to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.
- C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.
- D. Application of Mycorrhizal Fungi: At time directed by Architect, broadcast dry product uniformly over prepared soil at maximum application rate recommended by manufacturer.

3.4 EXCAVATION FOR TREES AND SHRUBS

- A. Planting Pits and Trenches: Excavate circular planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are not acceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
 - 1. Excavate at least 12 inches wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
 - 2. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
 - 3. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
 - 4. Maintain required angles of repose of adjacent materials as shown on the Drawings. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
 - 5. Maintain supervision of excavations during working hours.
 - 6. Keep excavations covered or otherwise protected when unattended by Installer's personnel.
 - 7. If drain tile is shown on Drawings or required under planting areas, excavate to top of porous backfill over tile.
- B. Follow Soil Preparation Execution. Ref. 03 9100
- C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.
 - 1. Hardpan Layer: Drill 6-inch- diameter holes, 24 inches apart, into free-draining strata or to a depth of 10 feet, whichever is less, and backfill with free-draining material.
- D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.
- E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

- A. Before planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.
- B. Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.
- C. Set balled and burlapped stock plumb and in center of planting pit or trench with root flare 2 inches above adjacent finish grades.
 - 1. Use Blended Planting Soil for backfill. Follow Soil Preparation Specification. Ref. 329100
 - 2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
 - 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 - 4. Follow Soil Preparation Specification. Ref. 039100 for fertilization.
 - 5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- D. Set balled and potted, and container-grown stock plumb and in center of planting pit or trench with root flare 2 inches above adjacent finish grades.
 - 1. Use Blended Planting Soil for backfill. Follow Soil Preparation Specification. Ref. 329100
 - 2. Carefully remove root ball from container without damaging root ball or plant.
 - 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 - 4. Follow Soil Preparation Specification. Ref. 039100 for fertilization.
 - 5. Continue backfilling process. Water again after placing and tamping final layer of soil.

3.6 TREE, SHRUB, AND VINE PRUNING

- A. Remove only dead, dying, or broken branches. Do not prune for shape.
- B. Prune, thin, and shape trees, shrubs, and vines as directed by Architect.
- C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.
- D. Do not apply pruning paint to wounds.

3.7 TREE STAKING

- A. Staking of trees is to be used by the Contractor, who will be responsible for material remaining plumb and straight for all given conditions through the guarantee period. Tree support shall be done as outlined on the following tables.
- B. Staking shall be completed immediately after planting. Plants shall stand plumb after staking.
- C. Stake all trees in accordance with the following table:

Tree	Stakes	Stake Size
15-45 Gal. and B&B under 3"	2	6 ft Post
65 Gal. and B&B 3"& larger	3	7 ft Post
- D. Locate first stake on prevailing windward side of tree and as close to the main trunk as is practical, avoiding root injury. Stakes shall be driven at least 18" into firm ground.
- E. Tie tree to stake using approved tree tie. Tie shall be located midway within tree crown or at a location approximately 2/3 of the overall height of the tree. Locate tie just above major side branch in order to deter slippage of tie.
- F. Locate second stake opposite first. Secure with one tie opposite upper tie at first stake.
- G. Auxiliary stem stakes shipped with trees shall be secured as above after shipping.

3.8 ROOT-BARRIER INSTALLATION

- A. Install root barrier where trees are planted within 60 inches of paving or other hardscape elements, such as walls, curbs, and walkways unless otherwise shown on Drawings. Deep Root 24-2 or approved eq.
- B. Align root barrier vertically and run it linearly along and adjacent to the paving or other hardscape elements to be protected from invasive roots.
- C. Install root barrier continuously for a distance of 60 inches in each direction from the tree trunk, for a total distance of 10 feet per tree. If trees are spaced closer, use a single continuous piece of root barrier.
 - 1. Position top of root barrier flush with finish grade.
 - 2. Overlap root barrier a minimum of 12 inches at joints.
 - 3. Do not distort or bend root barrier during construction activities.
 - 4. Do not install root barrier surrounding the root ball of tree.

3.9 GROUND COVER AND PERRENIAL PLANTING

- A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on the Drawings
- B. Use planting soil for backfill. Follow soil preparation execution. Re. 329100
- C. Dig holes large enough to allow spreading of roots.

- D. For rooted cutting plants supplied in flats, plant each in a manner that will minimally disturb the root system but to a depth not less than two nodes.
- E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.
- F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.
- G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.10 PLANTING AREA MULCHING

- A. Mulch backfilled surfaces of planting areas and other areas indicated.
 - 1. Trees and Tree-like Shrubs in Turf Areas: As indicated on the Drawings or 3" depth
 - 2. Organic Mulch in Planting Areas: As indicated on the Drawings or 3" depth
 - 3. Mineral Mulch in Planting Areas: As indicated on the Drawings

3.11 PLANT MAINTENANCE

- A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings. Spray or treat as required to keep trees and shrubs free of insects and disease.
- B. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.
- C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.
- D. Reference the Maintenance Specification 329400 for further information.

3.12 PESTICIDE APPLICATION

- A. Apply pesticides and other chemical products and biological control agents in accordance with authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.
- B. Pre-Emergent Herbicides (Selective and Non-Selective): Apply to tree, shrub, and ground-cover areas in accordance with manufacturer's written recommendations. Do not apply to seeded areas. Ref. 32 9100-Soil Preparation for clarifications.
- C. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations. Ref. 32 9100-Soil Preparation for clarifications.

3.13 CLEANUP AND PROTECTION

- A. During planting, keep adjacent paving and construction clean and work area in an orderly condition.
- B. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.
- C. After installation and before Substantial Completion remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

3.14 DISPOSAL

- A. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

END OF SECTION 32 93 00

SECTION 32 94 00 - LANDSCAPE GROUNDS MAINTENANCE FOR NINETY (90) DAYS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS: The Drawings, Division 0 and Division 1 apply to work under this Section.

1.2 SCOPE OF WORK:

A. Work included in Base Bid:

1. Monitoring adjustment and minor repair of the landscape irrigation system.
2. Mowing, edging and trimming of lawn areas.
3. Mowing of Love Grass and Native Grass Plantings
3. Pruning and trimming of plant materials.
4. Weed, cultivating and cleaning of planting beds, turf areas, and Native grass areas..
5. General site clean up; removal of trash and products of maintenance.
6. Applications of fertilizers, ant control, insecticides and herbicides.
7. Pruning and trimming of trees.
8. Mulching trees, shrubs, groundcovers and seasonal color.
9. Extra services as needed.

B. Work Not Included in Base Bid: (Extra Service)

1. Street cleaning - other than that required as a result of maintenance operations.
2. Replacement of plant material - other than that required under the one year warranty requirement.
3. Compost amendment application
4. Aerating lawn areas.
5. Overseeding with cool-season grasses.
6. Application of pre/post emergents.
7. Additional clean-up and/or plant material replacement relating to natural weather events including hurricanes, tornadoes, severe thunderstorms, major rain events causing flooding, freezing temperatures, ice/ice storms, extended periods of draught and snow.

1.3 EXTRA SERVICES:

The intent of the ninety day maintenance period is to provide a comprehensive maintenance program to include all required services, except those services specifically excluded, to perform the work for the stated time period.

1. All services not included in the list of Base Bid items shall be considered 'extra services' and will be charged for separately according to the nature of the item of work. The consent and authorization of the Owner's representative or their authorized representative must be obtained prior to the performance or installation of such "extra services" items and prior to purchase of any chargeable materials.
2. Such work may include replacement of dead plant materials other than what is already covered under the warranty period, major repairs of irrigation system, by-products of vandalism or other contracts or other site related work.

3. Application of pre/post emergents.
4. Authorized extra services work must be summarized weekly and submitted with receipts to the Owner's representative.
5. The Owner's representative is not bound by the specifications or contract to utilize the landscape maintenance contractor in the performance of "extra services" work.
6. The landscape maintenance contractor shall coordinate his activities with other contractors on the site so as to not hinder the performance of any work.
6. Authorized charges for extra work will be paid per the General Conditions of the Contract.

1.4 SUBSTITUTIONS:

- A. Specific reference to manufacturer's names and products specified in this Section are used as standards, but this implies no right to substitute other material or methods without written approval of the Owner's representative. Such permission must be secured without additional cost to Owner's representative.
- B. Installation of any approved substitution is Contractor's responsibility. Any changes required for installation of any approved substitution must be made to the satisfaction of and without additional cost to Owner's representative.

1.5 INTENT OF THE MAINTENANCE PROGRAM:

It is the intent of the maintenance program is to provide the Owner's representative with a project site that is attractive in appearance and keep all plant materials and lawns in a healthy and vigorous condition.

1.6 THE CONTRACT:

This Maintenance Contract is a period ninety days. The Contract can be terminated with cause.

1.7 CONTRACTORS PERFORMANCE:

The Contractor shall perform all work required once per week or as often as necessary to fulfill the spirit and intent of the Contract. The workmen shall be dressed in company uniforms and all required PPE (Personal Protective Equipment), and neat in appearance, perform their work in a professional manner, keep noise to a minimum and stage their work from a location on the site out of the way of the mainstream of the users. In general, the Contractor's presence on the site shall be as inconspicuous as possible.

1.8 COMMENCEMENT OF THE MAINTENANCE PERIOD:

This maintenance period shall become effective at the date of Substantial Completion.

1.9 NEGLECT AND VANDALISM:

1. Turf, shrubs, trees or plants that are damaged or killed due to contractors operations, negligence or chemicals shall be replaced at no expense to the Owner's representative. If plant damage or death is caused by conditions beyond the contractor's control, replacement shall be at the Owner's representative's expense.
2. Sprinklers or structures that are damaged due to the contractor's operations must be replaced by the contractor promptly. Likewise, damage to the irrigation system by others shall be corrected immediately by the contractor, at the Owner's representative's expense.
3. All water damage, either natural or man-made, resulting from contractor's neglect shall be corrected at the contractor's expense.
4. All damage to or thefts of landscaping and irrigation installations not caused or allowed by the contractor shall be corrected by the contractor at the Owner's expense upon receipt of written authorization to proceed.

1.12 EMERGENCIES:

1. The Contractor shall answer emergency or complaint calls within twelve (12) hours and corrective action shall be complete within twenty-four (24) hours.
2. The Contractor shall answer emergency calls regarding the Landscape Irrigation system failure or need of repair, and take corrective action within eight (8) hours. Such work, unless caused due to neglect on the part of the Landscape Maintenance Contractor, shall be considered "Extra Services".

1.13 JOB CONDITIONS:

- A. Contractor shall be familiar with all site conditions.

1.14 RESTRICTIONS:

- A. Do not use growth regulators or growth retardants or any chemicals that will have adverse effects on the organic fertilizers and soil conditioners utilized for this project.

PART 2 - PRODUCTS AND MACHINERY

2.1 MATERIALS:

Materials listed under this Section are expressly requested for use and does not prohibit or restrict the Contractor from providing other materials not listed in order to complete the work required herein.

1. Pre-Emergence Weed Control: Shall be Surflan A.S., Atrazine 4L or approved equal.
2. Post-Emergence Weed Control: Shall be Trimec Lawn Weed Killer, Sedge Hammer, Vantage, Image or approved equal.
3. Sufactant: Spreader Sticker shall be used with both pre and post emergence herbicides.
3. Herbicide: Shall be "Round Up", by Monsanto, St. Louis, Missouri.

4. Insecticide: Shall be "Astro Insecticide" as manufactured by FMC Corporation, Agricultural Products Group, 1735 Market Street, Philadelphia, PA 19103 (800.321.1362) or approved equal.
5. Fire Ant Control: Ortho Orthene Fire Ant Killer.
6. Compost: Made from recycled natural materials screened to 1" minus (for soil additive). On the Solvita compost maturity test score, must score a value of 5 or higher for tilling into the soil and be a minimum of 6 months old and fully composted. Supplied by Nature's Way Resources, Inc., Conroe, Texas or approved equal.
7. Fertilizer: FERTILIZERS AND NUTRIENT AMENDMENTS:
 - A. Fertilizer: MicroLife Hybrid 20-0-5, MicroLife Ultimate 6-2-4, and MicroLife Humates Plus 0-0-4 as supplied by San Jacinto Environmental Supplies, Houston, Texas or other approved equal supplier.
 - B. Contractor shall keep all empty bags with certificates intact and submit them to the Owner's representative.
 1. Submission of empty fertilizer bags is required to verify operation has been performed as specified.
 - C. Humate Soil Conditioner: Vigoro modified humate, Earthgreen Menefee Humate, Humate International AG 16-35 or approved equal.
 - D. Aerated Compost Tea: Natures Own or approved equal.
8. Tree Deep Feeding Fertilizer: Shall be Aerated Compost Tea with mycorrhizal fungi manufactured by Natures Own, MicroGrow or approved equal
9. Fungicide: Shall be "Systemic Fungicide" with Benomyl by Greenlight Products, San Antonio, Texas 78217, and/or Cleary Chemical 3336 WP "Turf and Ornamental Fungicide.
10. Fertilizer for annuals/perennials:

Nelson ColorStar Plus 19-13-6 with Fungicide

Foliar spray Maximum Blooms 3-8-3 Organic liquid color fertilizer
11. Soil Drenching Material: Shall be "Sub Due 2E", by the Agricultural Division of Ciba-Geigy Corporation, Greensboro, North Carolina 27409.
12. Mulch: Shall be equal to that already in use at the site. Shredded hardwood bark for groundcover areas.
13. Tree Stakes and Guys: Shall match those in use at the site.

2.2 MACHINERY:

Machinery requirements listed under this Section are not intended to be restrictions of specific manufacturers or models unless so stated. Specific mention of manufacturers is intended as a guide to illustrate the final product of maintenance operations desired.

1. Lawn Mowers: Shall be of the rotary type in good working order, finely tuned to protect the lawn from excessive exhaust fumes. Blades shall be sharp to reduce shredding of the cut grass blades.
2. Lawn Edgers: Shall be of a rigid or flexible blade type that will produce a fine clean edge where lawns meet walkways, pavements or curbs.
3. Fertilizer Spreaders: Cyclone type spreader or equal. No visible underlapping of applications will be permitted.
4. Deep Root Feeder: Shall be the Ross type by Ross Daniels, Incorporated, Des Moines, Iowa 50265.
5. Pruning Tools: Shall be maintained in good working order, cutting edges shall be sharp. Disinfect all tools when used for the removal of diseased limbs.

PART 3 - EXECUTION

3.1 LANDSCAPE IRRIGATION SYSTEM:

The Contractor shall monitor and program the automatic controlling devices to proceed optimum moisture levels in all planted areas.

1. Irrigation cycles shall be set to take place prior to sunrise (usually 4:00 - 5:00 am) unless otherwise instructed by the Owner's representative, except during visits of grounds maintenance personnel; during such visits the irrigation system may be operated as desired by those personnel.
2. Do not program controllers operating on the same water meter to water during the same time period so as to prevent over-draft of water meters. Do not switch controller to "off" at any time, except as required for testing and for maintenance operations.
3. Complete sprinkler system servicing shall be performed as required to maintain sprinklers in correct operating condition, including all required labor. Monitor and inspect sprinklers once a month or upon request of the Owner's representative. This check shall include visual "inspection" of all accessible components of the irrigation system including but not limited to controllers, remote control valves, quick couplers and heads.
4. Adjust sprinklers to avoid damage to automobiles, signs and also adjust heads to keep water off the street and sidewalks. Make repairs and alterations to the sprinkling system and water lines. All sprinklers repairs such as cleaning of heads or breaks caused by the Contractor shall be the Contractor's responsibility.
5. Minor repairs: Contractor shall make necessary repairs under \$300.00 without Owner's representative's approval to maintain operation of the system.
6. Replacement materials throughout the system shall be as specified in Section 02810.

3.2 TREES MAINTENANCE:

- A. Contractor shall maintain staking and guying of trees at all times and shall be responsible for any damage to trees or plant materials caused by chafing or breakage of foliage or limbs coming in contact with stakes or ties. Replace broken plant stakes and ties and bent stakes as needed. If ties are too tight, they must be replaced or adjusted. If stakes are not needed, remove.
- B. Trees that may require guys, stakes or special care during the winter winds and rains shall receive the required care prior to the time of rains and high winds to insure that no damage results to the plant material.
- C. All suckers shall be continually removed from trees.

3.3 SEASONAL AND PERENNIAL FLOWERS:

- A. The maintenance contractor shall continually maintain seasonal flower beds in all contract areas.
- B. Complete weeding, trimming, edging, and cultivation of all flower beds as required to keep the beds free of weeds, to promote growth and maintain neat, orderly appearance. As flowers cover open soil, cultivating shall be discontinued.
- C. Maintenance shall include:
 - 1. Pinching of blooms and pruning of dead or damaged foliage.
 - 2. Fertilize in alternate months with organic fertilizer. (RE: PART 2)
 - 3. Apply supplemental organic fertilizer to keep each type of seasonal flower performing at its optimum level.
 - 4. Spraying or dusting for disease or insect control as a preventive or corrective measure.
 - 5. Seasonal Color Change out: seasonal color change out after the initial planting (Extra Service) by the installing contractor.
- D. Fertilizer for annuals/perennials: Add ColorStar Plus 19-13-6 with Fungicide at the manufacturers recommended rate and feeding schedule. Foliar spray Maximum Blooms 3-8-3 Organic liquid color fertilizer (6 ounces per 1000 sq ft) & Garlic Oil (1 ounce per 1000 sq ft) mixed together with water and sprayed every 30 days.

3.4 HEDGE MAINTENANCE:

- A. Edge, weed, fertilize and cultivate all hedge beds in accordance with Schedule.
- B. Pruning of shrubs should create a uniformly dense plant, trapezoid in shape. Height as approved by Owner's representative. Selectively thin and tip back annually. Prune to enhance natural branching effect of plants. Do not change shape of shrubs by pruning.

3.5 GROUND COVER BEDS:

- A. Complete weeding, trimming, edging, and cultivating of all groundcover as required to keep the beds free of weeds, to promote growth and maintain neat, orderly appearance. As groundcovers cover open soil, cultivating shall be discontinued.
- B. Groundcover beds bordering on paved surfaces must be edged as needed to retain a neat edge. Do not trim vertically so as to expose stems and thatch.
- C. Fertilize all groundcovers with complete commercial fertilizer four times per year. (Extra Service)
- D. Replant all damaged or thin areas in groundcover beds at direction of the Owner's representative, at proper spacing.
- E. Slopes of 2:1 ratio, or steeper, shall not be cultivated due to erosion nuisance, unless otherwise instructed to cultivate by the Owner's representative.

3.6 TURF MAINTENANCE:

- A. Mowing: During periods of mild weather, mow at one and one-half (1 1/2") inches but during hot weather, the cut should be not lower than two (2") inches from the soil. Regular weekly mowing is required. Never scalp the lawn or cut more than one half the existing top growth in one mowing. Remove or catch the clippings, never allowing clippings to remain on lawn surface more than four (4) hours.

Allow grass to grow up to but not over sprinkler heads. Trim grass around heads with a circular sprinkler head trimmer. DO NOT USE LINE TRIM AROUND SPRINKLER HEADS.

- B. Watering: Provide a regular, deep watering program. The established turf should not be kept wet but should dry out somewhat between waterings. A twice weekly watering is good under regular conditions, but if it is hot or windy, water more often. In very hot weather, a fast watering with fine spray will cool the turf zone and can supplement the regular, deeper watering program. In shaded areas caused by trees or shrubs, water more frequently because of the competition for soil moisture. If lawn wilts (shows grey-brown) water more frequently.

- C. Lawn Fertilizer: Analysis based upon soil sample.

March 1	MicroLife Hybird 20-0-5 applied at manufacturer's maximum recommended rate.
May 25	MicroLife Humates Plus 0-0-4 at manufacturer's maximum recommended rate.
July 18	Same as the March application.
October 11	MicroLife (6-2-4) at manufacturer's maximum recommended rate.

- D. Weed Control: Contractor shall use extreme care in the use of chemicals for weed control. Before such applications are made, the turf should be well established and in a vigorous condition. Broadleaf weeds such as malva, dandelion and plantain can be controlled with

applications of selective and recommended herbicides. Always follow label directions fully and carefully; wash sprayer carefully after using herbicides.

- E. Insects: Control insects with regular applications of commercial insecticides at the manufacturer's recommended rate. Spray for insects once a month from mid-spring through summer as a preventative measure.
- F. Diseases: When they first appear, spray for diseases with an approved commercial fungicide strictly according to the manufacturer's recommendations.

3.7 NATIVE GRASSES MAINTENANCE

- A. Native grass mixes – Twice annually on or about June 1st and January 1st
- B. Above grasses shall be mowed to a 6" height.

3.8 CONTROL OF NOXIOUS WEEDS (Johnson Grass, Nut Grass, Poison Ivy, and other Noxious Weeds.)

- A. Noxious weeds shall be killed by using "Round Up" or other spray as approved by Owner's representative. Spray only foliage of grass to be eradicated, as this spray will kill any plant that it contacts.
- B. Irrigation to sprayed area should remain "off" for a period of three days following spray application. Repeat spray as required to kill completely.
- C. Apply pre/post-emergent weed killer as per manufacturer's recommendation as required by the "Schedule" and approved by Client prior to application.
- C. Weeds 30" or taller shall be removed/eradicated in Native Grass zones.

3.9 USE OF HERBICIDES, INSECTICIDES, AND STERILANTS:

- A. The Contractor is hereby granted permission to use such herbicides, insecticides, and sterilants as it may find necessary and advantageous in its grounds maintenance activities. Herbicides, insecticides, and sterilants, must be used responsibly and in conformance with Federal, State, and Local laws and regulations. The Contractor assumes all liability for damage and/or injury resulting from accident or misuse of these products and/or equipment. The Owner's representative retains the right to prohibit the use of any herbicide, insecticide, and sterilant that he may judge to be undesirable for any reason.
- B. Products leaving an undesirable residue or odor (i.e., weed oil) shall not be used.
- C. The Owner's representative shall be notified prior to application and advised of any danger associated with the use of these products (i.e., to avoid personal contact with sprayed areas, etc.).
- D. Apply insecticides as needed to protect all plant materials from damage. The insect control program shall include slugs and snails and advance preventive spraying for twig borers. The Contractor shall be responsible for the choosing of chemicals and insecticides he uses and shall be accountable for any misuse of same.

- E. Apply the proper fungicide, herbicide and pesticides for the control of pests, weeds and plant diseases or treat cuts on exposed surfaces of trees or shrubs for disease and pest control on turf, plants and trees.

3.10 GENERAL CLEAN UP:

- A. The Contractor shall dispose of all waste materials or refuse from his operations legally off the property except where agreement is reached with the Owner's representative.
- B. All plant growth shall be prevented in any cracks in walks or within paved areas.
- C. Leaves, papers, grass clippings or other debris shall be removed at least weekly or at each visit from all areas.
- D. Trash receptacles shall be checked regularly and emptied, and trash removed from the site frequently enough so that trash never overflows the receptacles. Trash receptacles shall be lined with black plastic bags which shall be emptied and removed from the site daily.

PART 4 - SCHEDULE

4.1 SCHEDULE:

The Schedule as included herein shall govern the work. Should the Contractor require an alteration of the Schedule, contact the Owner's representative.

JANUARY: WEEKS 1, 2, 3, 4

TURF

The turf shall be watered as needed. Turf shall be raked during the latter part of the month, to remove thatch. Mow turf for the first time in week 4.

TREES, SHRUBS, AND VINES

Trees shall be pruned except flowering trees and flowering shrubs which shall be pruned after flowering. Do not change shape of tree, prune to enhance shape. Pre-emergent herbicides shall be applied if approved by Client. Weed beds as required.

FEBRUARY: WEEKS 1, 2, 3, 4

TURF

The turf shall be watered as needed. Turf shall be raked during the latter part of the month, to remove thatch. Mow turf weeks 2 and 4.

TREES, SHRUBS, AND VINES

Continue pruning trees. Apply tree fertilizer to established trees. Deep root feeding is method to use during this period. Iron and other elements shall be applied if needed. Fertilize acid loving plants as called out under "Material Used". Do not fertilize flowering shrubs until blooming is completed.

MARCH: WEEKS 1,2

TURF

Turf shall be mowed in week two. Mowing shall not remove more than one-quarter (1/4") inch off existing height. First application of fertilizer (Microlife Hybrid 20-0-5) shall be applied at manufacturer's maximum recommended rate. Water thoroughly after applying fertilizer. Mow first; then fertilize.

TREES, SHRUBS, AND VINES

Check Plants for adequate watering to prevent any winter damage. Water if necessary. Prune dead wood as required. Continue to weed beds.

Mulch shall be placed in all beds, a two (2") inch to three (3") inch layer over existing mulch if mulch is not adequate. Dead vines should be removed. Flowering plants should be fertilized only after blooming.

MARCH: WEEKS 3, 4

TURF

Mow as required; still only one-quarter (1/4") inch off existing growth. Water as required. Weed control should be continued. Replace any winter damaged sod at this time.

TREES, SHRUBS, AND VINES

Inspect evergreens for insects and diseases, spray as required. Spray for borers. Continue to weed beds. Fertilize trees and flowering shrubs if they have buds. Application should be 10-8-4 at a rate of ten (10) pounds per 1,000 square feet. Acid loving plants should be given special attention as called out in "Material Used".

APRIL: WEEKS 1, 2, 3, 4

TURF

Mowing should be continued; begin cutting one and one-half (1 1/2") inches to two (2") inches above grade. Water as required.

TREES, SHRUBS, AND VINES

Flowering plants should be through flowering and ready to be pruned and fertilized, if not already completed. Prune remaining dead wood from trees, shrubs, and vines, retaining natural shape. Continually remove all suckers on base of trees.

MAY: WEEKS 1, 2

TURF

Mowing shall continue once a week. During this period, it is important to note the soil moisture. Grasses may have been actively growing for about two and one-half (2 1/2) months, and need to be watered thoroughly.

TREES, SHRUBS, AND VINES

Inspect evergreens for mites and borers and spray as required. Inspect plants for scale insects and spray as required. Inspect flowering trees for powdery mildew and apply fungicide as required. Apply herbicide to shrub beds as required, using the same materials as in early spring. Weed beds as required. Water established trees at a rate of two (2") inches per week.

MAY: WEEKS 3, 4

TURF

Mow as required. Second application of fertilizer (Microlife Humates 0-0-4) shall be applied at manufacturer's maximum recommended rate. Water thoroughly after applying fertilizer. Mow first; then fertilize. Particular attention shall be directed to the amount of water applied to turf.

TREES, SHRUBS, AND VINES

Continue to check plants for pests and control as required. Water any established plants as needed. Pruning shall cease until Fall. Apply fertilizer to acid loving plants again.

JUNE: WEEKS 1, 2, 3, 4

Mulching trees, shrubs, groundcovers and seasonal color.

NATIVE GRASSES

Native grasses and love grass shall be mowed.

TURF

Mowing shall continue once per week. As the temperature rises, the mower should be raised one-half (1/2") inch to one (1") inch higher to maintain a good thick stand of grass. Inspect lawn for disease and inspect pests; apply fungicide only if necessary. Be alert for brown patch, Bermuda decline and chinch bugs in Bermuda sod. Watch Bermuda for bare spots and underwatered areas.

TREES, SHRUBS, AND VINES

Maintain adequate moisture for newly planted trees, shrubs, and vines. Water any established plants as needed. Do not fertilize any wood plants until cooler weather. Continue to check plants for pests and control as required. Weed beds as required.

JULY: WEEKS 1, 2, 3, 4

TURF

Mow weekly, maintain previous months height. Avoid watering in the middle of the day. Check turf for disease again, especially chinch bugs. Third application of fertilizer (Microlife Hybrid 20-0-5) should be applied at manufacturer's maximum recommended rate. Apply recommended controls as necessary.

TREES, SHRUBS, AND VINES

Maintain adequate moisture for newly planted trees, shrubs, and vines. Water any established plants as needed. Do not fertilize any woody plants until cooler weather. Continue to check plants for pests and control as required. Weed beds as required.

AUGUST: WEEKS 1, 2, 3, 4

TURF

Mow weekly. Continue to irrigate as needed to keep turf from being stressed by lack of water. Inspect lawn for diseases. Apply necessary chemicals if needed; use caution.

TREES, SHRUBS, AND VINES

Continue to check trees, shrubs, and vines for adequate moisture around rootballs. No pruning shall be done during this period. Check all trees, shrubs, and vines for possible disease and insects, spray if necessary. Second application of fertilizer should be spread at manufacturer's maximum recommended rate.

SEPTEMBER: WEEKS 1, 2

TURF

Mow weekly. At this time lower mower to one and one-quarter (1 1/4") inches to one and one-half (1 1/2") inches. Irrigate as needed.

TREES, SHRUBS, AND VINES

Maintain adequate moisture for newly planted trees, shrubs, and vines. Water any established plants as needed. Root feed trees again. Acid type fertilizer and iron should be applied to trees, shrubs, and vines.

SEPTEMBER: WEEKS 3, 4

TURF

Mow weekly. Watch turf for diseases, apply chemicals as required.

TREES, SHRUBS, AND VINES

Maintain adequate soil moisture for all trees, shrubs, and vines. Prune only if necessary. Continue to check for any pests or disease, apply chemicals as required.

OCTOBER: WEEKS 1, 2, 3, 4

TURF

Mow weeks 1, 2 and 4. Watering can be reduced at this time. Continue to check for diseases. Fourth application of fertilizer (MicroLife 6-2-4) shall be applied at manufacturer's maximum recommended rate. Mow first; then fertilize. Water thoroughly after applying fertilizer. Turf should be thick and healthy for winter months. Overseed with annual rye grass at the rate of four (4) pounds per 1,000 square feet (only if requested by the Owner).

TREES, SHRUBS, AND VINES

Check trees for proper fertilization. Apply necessary elements, if inadequate. Pruning can be started lightly at this time. Weed beds as required. A two (2") inch layer of mulch shall be added on top of existing mulch.

NOVEMBER: WEEKS 1, 2, 3, 4

TURF

Mow weeks 2 and 4. Water less at this time.

TREES, SHRUBS, AND VINES

Examine plants for pests and spray as required. Do not use pesticides unless necessary. Weed beds as required.

DECEMBER: WEEKS 1, 2, 3, 4

NATIVE GRASSES

Native grasses and love grass shall be mowed.

TURF

Last mowing shall be performed during first 2nd week of month. Rake leaves as required.

TREES, SHRUBS, AND VINES

Remove leaves from beds. Weed beds as required. Check plants for diseases, spray as required.

END OF SECTION 32 94 00

SECTION 32 94 43 - TREE GRATES

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Cast metal tree grates.
 - 2. Metal frames and accessories.

1.2 DEFINITIONS

- A. ADA: Americans with Disabilities Act.

1.3 REFERENCE STANDARDS

- A. General: Use most current standard, unless otherwise indicated by specific date.
- B. ASTM International:
 - 1. ASTM A36 - Standard Specification for Carbon Structural Steel.
 - 2. ASTM A48 - Standard Specification for Grey Iron Castings.
 - 3. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - 4. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
 - 5. ASTM A536 - Standard Specification for Ductile Iron Castings
 - 6. ASTM B26 - Standard Specification for Aluminum-Alloy Sand Castings.
 - 7. ASTM B584 - Standard Specification for Copper Alloy Sand Castings for General Applications.
 - 8. ASTM E303 - Standard Test Method for Measuring Surface Frictional Properties Using the British Pendulum Tester
- C. American Welding Society:
 - 1. AWS D1.1 - Structural Welding Code - Steel.
 - 2. AWS D1.2 - Structural Welding Code - Aluminum.
 - 3. AWS D1.6 - Structural Welding Code - Stainless Steel.
- D. California Department of Health Services:
 - 1. CA/DHS/EHLB/R-174 - Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers, including 2004 Addenda.
- E. SSPC: The Society for Protective Coatings:
 - 1. SSPC - Steel Structures Painting Manual.
 - 2. SSPC SP 10 - Near-White Blast Cleaning.

F. Military Standardization Documents:

1. MIL A-8625 - Anodic Coatings for Aluminum and Aluminum Alloys.
2. MIL PRF-24712A - Coatings, Powder.

1.4 COORDINATION

A. Coordinate Work of this Section with:

1. Placement of frames.
2. Size of cast-in-place curb and pavement openings.
3. Placement of in-ground light fixtures.
4. Plant irrigation systems and controls.

1.5 SUBMITTALS

A. Product Data: Indicate compliance with applicable Reference Standards.

B. Shop Drawings: Indicate details of each type and size of grate, component supports, anchorages, openings, perimeter construction details, and tolerances.

1. Where custom design or layout has been furnished by the Design Professional, submit CAD file, in addition to other Drawings, to indicate compliance with design intent.
2. Where intent of Design Professional cannot be met due to size, material, or casting limitations, clearly indicate exceptions on Submittal documents.

C. Samples: Submit [two] 2 cast metal samples, 12 by 12 inch in size, illustrating finish, color, and texture.

1.6 QUALIFICATIONS

A. Welders and Welding Procedures: AWS D.1 qualified within previous 12 months for employed weld types.

1.7 WARRANTY

A. Provide manufacturer's standard one-year 1-year warranty on products and assemblies.

1.8 EXISTING CONDITIONS

A. Field Measurements: Verify field measurements of existing trees or obstructions affecting tree grates prior to fabrication. Indicate field measurements provided by General Contractor or other parties on Shop Drawings

PART 2 - PRODUCTS

2.1 PERFORMANCE AND DESIGN CRITERIA

- A. General: Conform to local code(s) as indicated on Drawings for applicable loads.
 - 1. Except where required by Authority Having Jurisdiction (AHJ), provide tree grates for pedestrian live load only, 100 lbs./sq. ft.

2.2 TREE GRATES

- A. Manufacturers:
 - 1. Urban Accessories, Contact Spruce&Gander @ 760.690.4083
 - 2. Substitutions: Section 016000 - Product Requirements.

2.3 SUSTAINABILITY CHARACTERISTICS

- A. Material and Resource Characteristics:
 - 1. Recycled Content Materials: Furnish materials with minimum of 80 percent recycled metal content.
- B. Indoor Environmental Quality Characteristics:
 - 1. Paints and Coatings: Maximum volatile organic compound content according to product and testing requirements of CA/DHS/EHLB/R-174.

2.4 GRATE MATERIALS

- A. Cast Iron: ASTM A48, CL 30 or better.
- B. Cast Ductile Iron: ASTM A536; alloy 65-45-12
- C. Cast Aluminum: ASTM B26; alloy #535, marine grade.
- D. Cast Bronze: ASTM B584 silicone bronze alloy C87500.

2.5 TREE GRATES

- A. Size: As indicated on Drawings.
- B. Basis of Design Pattern: To be Selected
- C. Number of Sections per Set: As indicated on Drawings.
- D. Tree Opening: As indicated on Drawings.
 - 1. Expanded Tree Opening: Fabricate round openings with break-out rings to allow tree growth up to 4-inches.

- E. Accessory Openings: Number and locations as indicated on Drawings.
- F. Frames:
 - 1. Mild Steel: ASTM A36, raw/unfinished.
 - 2. Welding Materials: AWS D1.1, type as required for materials being welded.
 - 3. Not required.

2.6 FABRICATION

- A. Fabricate tree grates to accommodate design loads and to sizes indicated.
- B. Fabricate support framing for openings as required. Coordinate locations with fixtures, controls, and penetrations as indicated on Drawings.
- C. Fabricate grates to comply with ADA for maximum opening size, offset of surfaces, and slip resistance. Grates shall have a minimum slip resistance (Pendulum Test Value) of 5.5 or better, per ASTM E303.
 - 1. Provide grates with enhanced heel-proof design, with no opening wider than 1/4-inch.
- D. Removable Panels: With vandal-resistant fastening hardware, recessed finger lift rings and handles.

2.7 GRATE FINISHES

- A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.
- B. Cast Iron:
 - 1. Baked-on oil finish.

2.8 ACCESSORIES

- A. Vandal Resistant Bolts: Stainless steel, 1/4 x 20 fasteners; minimum 2 per casting. Prefabricate frames with fasteners where shown on Shop Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that overall opening sizes and dimensional tolerances are acceptable.
- B. Verify that fixtures placed by other trades are completed, and that openings and penetrations are accurately positioned.
- C. Verify that planting and irrigation work is complete, including removal of excess soil material and trash from tree grate opening.

3.2 INSTALLATION

- A. For cast-in-place frames, furnish to entity responsible for adjacent curbs or pavements.
- B. Ensure trees are planted with top of root ball 6 inches below bottom of support framing to mitigate root ball heaving of grate as tree grows.
- C. For field-anchored frames, anchor by expansion bolts to prepared openings using anchors of type and number recommended by manufacturer.
- D. Ensure that top of frame and tree grate is no greater than 1/8-inch higher or lower than adjacent pavement surfaces.
- E. Place tree grates securely in prepared openings, with no warping or slippage.
- F. Secure where indicated, or as needed to prevent movement. Allow for maintenance removal.

3.3 TOLERANCES

- A. Maximum Space Between Adjacent Sections: 1/4-inch.
- B. Maximum Variation from Top Surface Plane of Adjacent Sections: 1/8-inch.

3.4 PROTECTION AND CLEANING

- A. Protect completed tree grates until time of Substantial Completion.
- B. Clean damaged coatings according to manufacturer recommendations.
- C. After frames are installed, but prior to grate installation, keep soil around trees clear from debris, runoff, or anything that will inhibit proper development and growth of the tree.

END OF SECTION 32 94 43

SECTION #33 05 00 – COMMON WORK RESULTS FOR UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Piping joining materials.
 - 2. Transition fittings.
 - 3. Dielectric fittings.
 - 4. Sleeves.
 - 5. Identification devices.
 - 6. Grout.
 - 7. Flowable fill.
 - 8. Piped utility demolition.
 - 9. Piping system common requirements.
 - 10. Equipment installation common requirements.
 - 11. Painting.
 - 12. Concrete bases.
 - 13. Metal supports and anchorages.

1.3 DEFINITIONS

- A. Exposed Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions.
- B. Concealed Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- C. ABS: Acrylonitrile-butadiene-styrene plastic.
- D. CPVC: Chlorinated polyvinyl chloride plastic.
- E. PE: Polyethylene plastic.
- F. PVC: Polyvinyl chloride plastic.

1.4 ACTION SUBMITTALS

- A. Product Data: For the following:
 - 1. Dielectric fittings.
 - 2. Identification devices.

1.5 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

1.6 QUALITY ASSURANCE

- A. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Steel Piping Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

- C. Comply with ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.8 COORDINATION

- A. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- B. Coordinate installation of identifying devices after completing covering and painting if devices are applied to surfaces.
- C. Coordinate size and location of concrete bases.

PART 2 - PRODUCTS

2.1 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness, unless otherwise indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
 - 2. AWWA C110, rubber, flat face, 1/8-inch-thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- G. Solvent Cements for Joining Plastic Piping:
 - 1. ABS Piping: ASTM D 2235.
 - 2. CPVC Piping: ASTM F 493.
 - 3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
 - 4. PVC to ABS Piping Transition: ASTM D 3138.
 - 5. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

2.2 TRANSITION FITTINGS

- A. Transition Fittings, General: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
- B. Transition Couplings NPS 1-1/2 (DN 40) and Smaller:
 - 1. Underground Piping: Manufactured piping coupling or specified piping system fitting.
 - 2. Aboveground Piping: Specified piping system fitting.
- C. AWWA Transition Couplings NPS 2 (DN 50) and Larger:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 2. Manufacturers: Subject to compliance with requirements.
 3. Description: AWWA C219, metal sleeve-type coupling for underground pressure piping.
- D. Plastic-to-Metal Transition Fittings:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 2. Manufacturers: Subject to compliance with requirements.
 3. Description: PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint or threaded end.
- E. Plastic-to-Metal Transition Unions:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 2. Manufacturers: Subject to compliance with requirements.
 3. Description: MSS SP-107, PVC four-part union. Include brass or stainless-steel threaded end, solvent-cement-joint or threaded plastic end, rubber O-ring, and union nut.
- F. Flexible Transition Couplings for Underground Nonpressure Drainage Piping:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 2. Manufacturers: Subject to compliance with requirements.
 3. Description: ASTM C 1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.

2.3 DIELECTRIC FITTINGS

- A. Dielectric Fittings, General: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.
- B. Dielectric Unions:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 2. Manufacturers: Subject to compliance with requirements.
 3. Description: Factory fabricated, union, NPS 2 (DN 50) and smaller.
 - a. Pressure Rating: 150 psig minimum at 180 deg F.
 - b. End Connections: Solder-joint copper alloy and threaded ferrous; threaded ferrous.
- C. Dielectric Flanges:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 2. Manufacturers: Subject to compliance with requirements.
 3. Description: Factory-fabricated, bolted, companion-flange assembly, NPS 2-1/2 to NPS 4 (DN 65 to DN 100) and larger.
 - a. Pressure Rating: 150 psig minimum.

- b. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Kits:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 2. Manufacturers: Subject to compliance with requirements.
 - 3. Description: Nonconducting materials for field assembly of companion flanges, NPS 2-1/2 (DN 65) and larger.
 - a. Pressure Rating: 150 psig minimum.
 - b. Gasket: Neoprene or phenolic.
 - c. Bolt Sleeves: Phenolic or polyethylene.
 - d. Washers: Phenolic with steel backing washers.
- E. Dielectric Couplings:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 2. Manufacturers: Subject to compliance with requirements.
 - 3. Description: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining, NPS 3 (DN 80) and smaller.
 - a. Pressure Rating: 300 psig at 225 deg F.
 - b. End Connections: Threaded.
- F. Dielectric Nipples:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 2. Manufacturers: Subject to compliance with requirements.
 - 3. Description: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining.
 - a. Pressure Rating: [300 psig (2070 kPa) at 225 deg F (107 deg C)] <Insert pressure and temperature>.
 - b. End Connections: Threaded or grooved.

2.4 SLEEVES

- A. Mechanical sleeve seals for pipe penetrations are specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
- B. Galvanized-Steel Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- C. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized, plain ends.
- D. Cast-Iron Sleeves: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- E. Molded PVC Sleeves: Permanent, with nailing flange for attaching to wooden forms.
- F. PVC Pipe Sleeves: ASTM D 1785, Schedule 40.
- G. Molded PE Sleeves: Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.5 IDENTIFICATION DEVICES

- A. General: Products specified are for applications referenced in other utilities Sections. If more than single type is specified for listed applications, selection is Installer's option.

- B. Equipment Nameplates: Metal permanently fastened to equipment with data engraved or stamped.
 - 1. Data: Manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliances, and essential data.
 - 2. Location: Accessible and visible.
- C. Stencils: Standard stencils prepared with letter sizes complying with recommendations in ASME A13.1. Minimum letter height is 1-1/4 inches for ducts, and 3/4 inch for access door signs and similar operational instructions.
 - 1. Material: Fiberboard, Brass.
 - 2. Stencil Paint: Exterior, oil-based, alkyd-gloss black enamel, unless otherwise indicated. Paint may be in pressurized spray-can form.
 - 3. Identification Paint: Exterior, oil-based, alkyd enamel in colors according to ASME A13.1, unless otherwise indicated.
- D. Snap-on Plastic Pipe Markers: Manufacturer's standard preprinted, semirigid, snap-on type. Include color-coding according to ASME A13.1, unless otherwise indicated.
- E. Pressure-Sensitive Pipe Markers: Manufacturer's standard preprinted, color-coded, pressure-sensitive-vinyl type with permanent adhesive.
- F. Pipes with OD, Including Insulation, Less Than 6 Inches: Full-band pipe markers, extending 360 degrees around pipe at each location.
- G. Pipes with OD, Including Insulation, 6 Inches and Larger: Either full-band or strip-type pipe markers, at least three times letter height and of length required for label.
- H. Lettering: Manufacturer's standard preprinted captions as selected by Architect.
- I. Lettering: Use piping system terms indicated and abbreviate only as necessary for each application length.
 - 1. Arrows: Either integrally with piping system service lettering to accommodate both directions of flow, or as separate unit on each pipe marker to indicate direction of flow.
- J. Plastic Tape: Manufacturer's standard color-coded, pressure-sensitive, self-adhesive vinyl tape, at least 3 mils thick.
 - 1. Width: 1-1/2 inches on pipes with OD, including insulation, less than 6 inches; 2-1/2 inches for larger pipes.
 - 2. Color: Comply with ASME A13.1, unless otherwise indicated.
- K. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch sequenced numbers. Include 5/32-inch hole for fastener.
 - 1. Material: 0.032-inch- thick, [polished brass] [or] [aluminum].
 - 2. Material: 0.0375-inch- thick stainless steel.
 - 3. Material: 3/32-inch- thick plastic laminate with 2 black surfaces and a white inner layer.
 - 4. Material: Valve manufacturer's standard solid plastic.
 - 5. Size: 1-1/2 inches in diameter, unless otherwise indicated.
 - 6. Shape: As indicated for each piping system.
- L. Valve Tag Fasteners: Brass, wire-link or beaded chain; or brass S-hooks.
- M. Engraved Plastic-Laminate Signs: ASTM D 709, Type I, cellulose, paper-base, phenolic-resin-laminate engraving stock; Grade ES-2, black surface, black phenolic core, with white melamine subcore, unless otherwise indicated. Fabricate in sizes required for message. Provide holes for mechanical fastening.
 - 1. Engraving: Engraver's standard letter style, of sizes and with terms to match equipment identification.
 - 2. Thickness: 1/16 inch unless otherwise indicated.

3. Thickness: 1/16 inch, for units up to 20 sq. in. or 8 inches in length, and 1/8 inch for larger units.
4. Fasteners: Self-tapping, stainless-steel screws or contact-type permanent adhesive.
- N. Plastic Equipment Markers: Manufacturer's standard laminated plastic, in the following color codes:
 1. Green: Cooling equipment and components.
 2. Yellow: Heating equipment and components.
 3. Brown: Energy reclamation equipment and components.
 4. Blue: Equipment and components that do not meet criteria above.
 5. Hazardous Equipment: Use colors and designs recommended by ASME A13.1.
 6. Terminology: Match schedules as closely as possible. Include the following:
 - a. Name and plan number.
 - b. Equipment service.
 - c. Design capacity.
 - d. Other design parameters such as pressure drop, entering and leaving conditions, and speed.
 7. Size: 2-1/2 by 4 inches for control devices, dampers, and valves; 4-1/2 by 6 inches for equipment.
- O. Plasticized Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with mat finish suitable for writing.
 1. Size: 3-1/4 by 5-5/8 inches.
 2. Fasteners: Brass grommets and wire.
 3. Nomenclature: Large-size primary caption such as DANGER, CAUTION, or DO NOT OPERATE.
- P. Lettering and Graphics: Coordinate names, abbreviations, and other designations used in piped utility identification with corresponding designations indicated. Use numbers, letters, and terms indicated for proper identification, operation, and maintenance of piped utility systems and equipment.
 1. Multiple Systems: Identify individual system number and service if multiple systems of same name are indicated.

2.6 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 1. Characteristics: Post hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 2. Design Mix: 5000-psi, 28-day compressive strength.
 3. Packaging: Premixed and factory packaged.

2.7 FLOWABLE FILL

- A. Description: Low-strength-concrete, flowable-slurry mix.
 1. Cement: ASTM C 150, Type I, portland.
 2. Density: 115- to 145-lb/cu. ft.
 3. Aggregates: ASTM C 33, natural sand, fine and crushed gravel or stone, coarse.
 4. Aggregates: ASTM C 33, natural sand, fine.
 5. Admixture: ASTM C 618, fly-ash mineral.
 6. Water: Comply with ASTM C 94/C 94M.
 7. Strength: 100 to 200 psig at 28 days.

PART 3 - EXECUTION

3.1 PIPED UTILITY DEMOLITION

- A. Refer to Section 024119 "Selective Demolition" for general demolition requirements and procedures.
- B. Disconnect, demolish, and remove piped utility systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - 2. Piping to Be Abandoned in Place: Drain piping. Fill abandoned piping with flowable fill, and cap or plug piping with same or compatible piping material.
 - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make operational.
 - 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.
- C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.2 DIELECTRIC FITTING APPLICATIONS

- A. Dry Piping Systems: Connect piping of dissimilar metals with the following:
 - 1. NPS 2 and Smaller: Dielectric unions.
 - 2. NPS 2-1/2 to NPS 12: Dielectric flanges.
- B. Wet Piping Systems: Connect piping of dissimilar metals with the following:
 - 1. NPS 2 and Smaller: Dielectric.
 - 2. NPS 2-1/2 to NPS 4: Dielectric nipples.
 - 3. NPS 2-1/2 to NPS 8: Dielectric nipples.
 - 4. NPS 10 and NPS 12: Dielectric flange kits.

3.3 PIPING INSTALLATION

- A. Install piping according to the following requirements and utilities Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on the Coordination Drawings.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping to permit valve servicing.
- E. Install piping at indicated slopes.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Select system components with pressure rating equal to or greater than system operating pressure.
- I. Sleeves are not required for core-drilled holes.
- J. Permanent sleeves are not required for holes formed by removable PE sleeves.

- K. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.
 - 1. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of equipment areas or other wet areas [2 inches above finished floor level.
 - 2. Install sleeves in new walls and slabs as new walls and slabs are constructed.
 - a. PVC or Steel Pipe Sleeves: For pipes smaller than NPS 6.
 - b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.
- L. Verify final equipment locations for roughing-in.
- M. Refer to equipment specifications in other Sections for roughing-in requirements.

3.4 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and utilities Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- E. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- F. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- G. Grooved Joints: Assemble joints with grooved-end pipe coupling with coupling housing, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.
- H. Soldered Joints: Apply ASTM B 813 water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy (0.20 percent maximum lead content) complying with ASTM B 32.
- I. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- J. Pressure-Sealed Joints: Assemble joints for plain-end copper tube and mechanical pressure seal fitting with proprietary crimping tool to according to fitting manufacturer's written instructions.
- K. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - 1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 appendixes.
 - 3. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
 - 4. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.

5. PVC Nonpressure Piping: Join according to ASTM D 2855.
6. PVC to ABS Nonpressure Transition Fittings: Join according to ASTM D 3138 Appendix.
- L. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D 3139.
- M. Plastic Nonpressure Piping Gasketed Joints: Join according to ASTM D 3212.
- N. Plastic Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
 1. Plain-End PE Pipe and Fittings: Use butt fusion.
 2. Plain-End PE Pipe and Socket Fittings: Use socket fusion.
- O. Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.5 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
 1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
 2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
 3. Install dielectric fittings at connections of dissimilar metal pipes.

3.6 EQUIPMENT INSTALLATION

- A. Install equipment level and plumb, unless otherwise indicated.
- B. Install equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference with other installations. Extend grease fittings to an accessible location.
- C. Install equipment to allow right of way to piping systems installed at required slope.

3.7 PAINTING

- A. Painting of piped utility systems, equipment, and components is specified in Section 099113 "Exterior Painting," Section 099123 "Interior Painting," and Section 099600 "High-Performance Coatings."
- B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.8 IDENTIFICATION

- A. Piping Systems: Install pipe markers on each system. Include arrows showing normal direction of flow.
 1. Stenciled Markers: According to ASME A13.1.
 2. Plastic markers, with application systems. Install on insulation segment if required for hot noninsulated piping.
 3. Locate pipe markers on exposed piping according to the following:
 4. Near each valve and control device.
 5. Near each branch, excluding short takeoffs for equipment and terminal units. Mark each pipe at branch if flow pattern is not obvious.
 6. Near locations where pipes pass through walls or floors or enter inaccessible enclosures.
 7. At manholes and similar access points that permit view of concealed piping.
 8. Near major equipment items and other points of origination and termination.
- B. Equipment: Install engraved plastic-laminate sign or equipment marker on or near each major item of equipment.
 1. Lettering Size: Minimum 1/4-inch-high for name of unit if viewing distance is less than 24 inches, 1/2-inch-high for distances up to 72 inches, and proportionately larger lettering

for greater distances. Provide secondary lettering two-thirds to three-fourths of size of principal lettering.

2. Text of Signs: Provide name of identified unit. Include text to distinguish among multiple units, inform user of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.
- C. Adjusting: Relocate identifying devices that become visually blocked by work of this or other Divisions.

3.9 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of base.
 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 7. Use 3000-psi, 28-day compressive-strength concrete and reinforcement.

3.10 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Section 055000 "Metal Fabrications" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor piped utility materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

3.11 GROUTING

- A. Mix and install grout for equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

END OF SECTION #33 05 00

SECTION 33 11 00 - WATER DISTRIBUTION SYSTEM (PVC)

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION

- A. These specifications shall govern the furnishing and placing of water distribution lines, fittings, valves, fire hydrants, and other appurtenances. The pipe and accessories shall be installed in accordance with the requirements of these specifications at the locations and depths indicated on the plans, and shall be of the classes, sizes and dimensions shown thereon. The installation of pipe shall include all joints, connections to new or existing pipes, and installation of all fittings, valves, fire hydrants, and appurtenances.

1.2 GENERAL

- A. Piping for water mains shall be of the type and materials specified herein, at the Contractor's option, unless otherwise indicated on the drawings or in this section. The pipe and accessories shall be new and unused. The interior of the pipe shall be thoroughly cleaned of foreign matters before being lowered into the trench and shall be kept clean during laying operations by plugging or other approved method. The full length of each section of pipe shall rest solidly upon the pipe bed, with recesses excavated to accommodate bells and joints. Any pipe that has the grade or joint disturbed after laying shall be taken up and re-laid. Pipe shall not be laid in water, or when trench or weather are unsuitable for the work. Water shall be kept out of the trench until the jointing is complete. When work is not in progress, open ends of pipe and fittings shall be securely closed so that no trench water, earth or other substance will enter the pipes or fittings. Any section of pipe found to be defective before or after laying shall be replaced with sound pipe without additional expense to the Owner.

1.3 SUBMITTALS

- A. Submit product data and shop drawings for ALL items to be installed.
- B. Refer to Section 01 33 00 for submittal procedures.

1.4 WATER LINE - SANITARY SEWER LINE CROSSINGS

- A. The water pipe shall not be laid closer horizontally than 9 feet in all directions and parallel lines must be installed in separate trenches. Where the nine-foot separation distance cannot be achieved, the following shall apply. The sewer line need not be disturbed where the water line shall be installed parallel to an existing sewer line that shows no evidence of leakage and the water line is installed above the sewer line a minimum of two feet vertically and four feet horizontally. Should excavation for the water line produce evidence that the sewer is leaking, the sewer line shall be replaced as described in SECTION 33 33 13 - SANITARY SEWER LINES. The sewer line shall not be disturbed where a new water line is to cross over (by two feet or more) existing sewer lines showing no evidence of leakage.

1.5 METHOD OF MEASUREMENT AND PAYMENT

- A. No separate measurement or payment will be made for materials and labor performed under this section. Include all costs in the lump sum price.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. All pipe shall be new and made in the United States. All plastic pipe must also bear the National Sanitation Foundation Seal of Approval (NSF-PW) and have an ASTM design pressure rating of at least 150 psi or a standard dimension ratio of 26 or less. Water Distribution Lines must be installed in accordance with the manufacturer's instructions. All water Line materials and appurtenances shall comply with Section 290.44(b) of the Texas Natural Resource Conservation Commission Rules and Regulations for Public Water Systems regarding lead banned from piping and joints.

2.2 POLYVINYL CHLORIDE (PVC) PIPE

- A. Requirements for unplasticized polyvinyl chloride (PVC) pipe with bell joints which are integral to the pipe and are well thickened so that standard dimension ratios are maintained or exceeded.
- B. Plastic pipe in 4" and larger sizes shall conform to all requirements of AWWA C900 - DR 18, Class 150.
- C. Plastic pipe in 2", 2 1/2" and 3" sizes shall conform to all requirements of ASTM D 2241 for PVC pipe and be pressure rated at 200 psi with a standard dimension ratio (SDR) of 21 for Class 200 for both barrel and bell dimensions.
- D. Plastic pipe in sizes smaller than 2" shall conform to all requirements of Schedule 40 and have Schedule 80 fittings.

2.3 COPPER TUBING

- A. All 3/4", 1", 1-1/2" and 2" copper tubes for underground service shall Be Type "K" soft annealed with the proper bending temper. All 3/4" And 1" tubes shall be furnished in coils, each containing 60 feet; FLAT coils are preferred. Other diameters of tubes shall be furnished in straight lengths of 20 feet.

2.4 BRASS FITTINGS

- A. All brass fittings shall conform to ASTM Specifications B-62- 52 And shall be those manufactured by the Mueller Company or preapproved equivalent.

2.5 FITTINGS

- A. All fittings shall be cast iron or ductile iron and shall conform to the latest edition of AWWA Specifications.
- B. All ductile iron fittings shall be coated outside with a bituminous coating of either coal tar or asphalt. The inside coating shall be a cement-mortar lining in accordance with AWWA Specification.
- C. All fittings shall be new and made in the United States.
- D. All ductile iron fittings shall be approved by Underwriters Laboratories and shall be accepted by the State Fire Insurance Commission for use in city water distribution systems without penalty.
- E. Rubber gaskets for these fittings shall be manufactured in accordance with AWWA specifications.

2.6 GATE VALVES

- A. All gate valves shall be designed for a cold hydrostatic working pressure of 175 pounds per square inch for valves with diameters of 3-12 inches, inclusive with shop test of 300 pounds per square inch and a working pressure of 150 pounds per square inch for valves with diameters of 16-48 inches, inclusive with shop test to 300 pounds per square inch. All gate valves shall conform to the requirements of AWWA C500-86 Specification. Valves will be equipped with O-ring stem seals.
- B. Gate valves shall be iron body, *resilient seated*, non-rising stem conforming to the requirements of AWWA C509-87 and shall open counter-clockwise. Tapping valves shall be flanged to fit a tapping sleeve on one side and shall be mechanical joint on the other side, with provisions for attaching a standard tapping machine. Gate Valves, fourteen (14) inches and smaller, shall be designed for vertical installation; gate valves, sixteen (16) inches and larger, shall be designed for operation with the stem horizontal or vertical as shown on the plans. Horizontal valves shall be provided with enclosed lubricated bevel gears, bronze gate roller and tracks, bypass valve, and two (2) inch operating nuts on main and bypass valves. Vertically mounted valves sixteen (16) inches and larger shall be designed for operation with the stem vertical and shall be provided with enclosed lubricated spur gears, bypass valve and two (2) inch operating nuts on main and bypass valves. Valves in two (2) inch cast iron screw joint pipe may be two and one-half (2-1/2) inches brass, non-rising stem, wedge disc with thread hubs. Gate valves shall be Mueller, Stockham, M & H or a preapproved equivalent.
- C. Unless otherwise specified, all gate valves shall be installed complete with valve box.

2.7 FIRE HYDRANTS

- A. Fire hydrants shall be Mueller Super Centurion or an approved equivalent.
- B. Each hydrant shall be factory tested to a hydrostatic pressure of 300 psi with valve in both the open and closed positions. The direction of opening nut shall be counterclockwise and shall be cast on the head of the hydrant. Hose nozzles shall be bronze or non-corrosive metal and threads shall be national standard. The main valve opening shall be either five and one-fourth (5-1/4) inches in diameter or six and one-fourth caps shall be provided with gaskets. Bury length shall be three and one-half (3-1/2) feet unless otherwise noted on the plans. Hydrants shall be provided with "dry top" which prevents stem threads from contacting water, and "break-off" type barrel and stem.
- C. Hydrants shall be painted with shop coating in accordance with AWWA C502 specification. Final coats of paint will be applied by Contractor in accordance with fire department requirements.
- D. Contractor shall verify and make nozzle threads consistent with local fire department.

2.8 AIR VALVES

- A. Air valves shall be of the type indicated on the plans. The assembly shall not leak nor shall the valve stick under service conditions.

2.9 CORPORATION COCKS

- A. Corporation cocks shall be of the size specified on the plans. Inlet threads shall be Mueller thread or approved equal. Outlet threads shall be one size larger than listed cock size. Corporation cocks shall be Mueller, H-15000 or a preapproved equivalent.

2.10 VALVE BOXES

- A. Valve boxes shall be cast iron, adjustable height with cover marked "water". Valve boxes shall be Alamo Iron Works #813-30 or a preapproved equivalent.

2.11 WATER METERS

- A. Water meters shall conform to the requirements of AWWA C700, latest revision and shall be of the displacement type. Case shall be bronze, and the register shall be sealed. Accuracy shall be at least 100% plus or minus 1.5% of actual through put. Maximum operating pressure shall be 150 psi. Unless noted otherwise, meters shall be as manufactured by Sensus Technologies, Inc. or a preapproved equivalent.
- B. Boxes for water meters shall be of a key-lock type.

PART 3 - EXECUTION

3.1 CONSTRUCTION METHODS

- A. Unless otherwise specified, the provisions of this section shall conform to AWWA C600-64 specifications.

3.2 LAYING AND JOINTING

- A. Pipe, fittings, valves, and hydrants shall be carefully handled to avoid damage. While they are suspended over the trench, before lowering, they shall be inspected for defects and rung with a light hammer to detect cracks. To ensure proper seating for the spigot and against the shoulders of the bell, each joint shall be lightly swung against the last joint laid before unhooking the sling. Joints of small diameter pipe, installed by hand, shall be properly seated by using an iron bar or other suitable lever to force the spigot end against the shoulders of the bell of the last previously laid joint. Before any pipe is laid, all dirt shall be removed from the inside, and all lumps, blisters, excess tar coat, dirt, oil, grease, and moisture shall be removed from inside the bell and from outside the spigot end. All pipe shall be laid and maintained to the lines and grades shown on the plans or as established on the ground by the Engineer. Wherever it is necessary to deflect pipe from a straight line, the degree of deflection at each joint shall not exceed the maximum deflection recommended by the manufacturers of the pipe being laid. Bell ends shall face the direction of laying. After pipe is laid, care shall be taken to avoid the entrance of dirt, water or other substances by the use of tight bulkheads or plugs.
- B. Gasket material shall be kept in clean containers and shall not be allowed to come in contact with the ground. Gasket material which has become contaminated or dirty shall be destroyed.
- C. Mechanical joints shall be installed in accordance with the manufacturer's recommendations.
- D. Unless otherwise shown, valves shall be located on the extension of street property line. Every valve, including bypass valves, shall be provided with a valve box. The valve box shall not transmit shock or stress to the valve and shall be centered and plumb over the operating nut, with the cover flush with the pavement surface or such other level as directed.
- E. Hydrants shall be located as shown on the Plans and in a manner that will provide complete accessibility and will prevent damage from vehicles. All hydrants shall stand plumb and shall have their pumper connections at right angles to the street. When placed immediately behind the curb, the hydrant barrel shall be set so that no portion of the steamer or hose connection cap will be less than six (6) inches from the gutter face of the curb.
- F. Minimum cover on water lines shall be forty-eight (48) inches unless otherwise specified, but in no case shall the top of any water line be less than 24 inches below the finished ground surface.

3.3 EXCAVATION

- A. All excavations are to be by the open-trench method, unless the Engineer orders that certain sections of the mains are to be laid in tunnels or bored.
- B. The minimum width of the bottom of the trench shall be such that there will be six inches space on each side between the pipe and the walls of the trench. The width of the trench at the surface is not to be less than at the bottom.
- C. When excavating machinery is being used, the same shall cut the trench to a grade slightly higher than the bury indicated by the proposal and the trench shall then be fine graded.
- D. The trench must always be opened and excavated to the finished grade for a distance of at least 50 feet in advance of the last made-up joint. Water mains into which the mains under construction are to be connected must be located well in advance of such connection to allow for possible adjustment of alignment and/or grade.
- E. Bell holes must be excavated in advance of placing the pipe. Materials used shall be placed at locations so as not to interfere unnecessarily with the use of the streets by the public, and not more than two streets intersections shall be closed at any time. The street surface along the line of the trench must be kept free of surplus spoil.
- F. The expense of restoring the original condition of improved property in connection with grass, shrubs or any other improvements must be borne by the Contractor. All trees adjacent to the trench must be protected and the trees on public or private property must not be cut unless permission, in writing, is granted.

3.4 BEDDING

- A. Sand bedding shall be as shown on the Plans with a minimum compacted depth of six inches.

3.5 ROCK EXCAVATION

- A. No rock is anticipated, and no extra compensation will be allowed for rock excavation.

3.6 JACKING, BORING & TUNNELING

- A. This item shall govern for the furnishing and installation of pipe by the methods of jacking, boring or tunneling as shown on the Plans and in conformity with this Specification.
- B. Pipe shall be of the size, type, and class specified on the Plans, or other types as may be specified by the Engineer or designated on the Plans.
- C. Jacking: If the grade of the pipe at the jacking end is below the ground surface, suitable pits or trenches shall be excavated for the purpose of conducting the jacking operations and for placing end joints of the pipe. Wherever end trenches are cut in the sides of the embankment or beyond it, such work shall be sheeted securely and braced in a manner satisfactory to the Engineer to prevent earth caving.
- D. Where pipe is required to be installed under railroad embankments or under highways, streets, or other facilities by jacking or boring methods, construction shall be made in such a manner that will not interfere with the operation of the railroad, street, highway, or other facility, and shall not weaken or damage any embankment or structure. During construction operations, barricades and lights to safeguard traffic and pedestrians shall be furnished and maintained, as directed by the Engineer, until such time as the backfill has been completed and then shall be removed from the site.

- E. Heavy duty jacks suitable for forcing the pipe through the embankment shall be provided. In operating jacks, even pressure shall be applied to all jacks used. A suitable jacking head, usually of timber, and suitable bracing between jacks and jacking head shall be provided so that pressure will be applied to the pipe uniformly around the ring of the pipe. A suitable jacking frame or back stop shall be provided. The pipe to be jacked shall be set on guides, properly braced together, to support the section of the pipe and to direct it in the proper line and grade. The whole jacking assembly shall be placed so as to line up with the direction and grade of the pipe. In general, embankment material shall be excavated just ahead of the pipe and material removed through the pipe, and the pipe forced through the embankment with jacks, into the space thus provided.
- F. The Contractor shall furnish for the Engineer's approval, a plan showing his proposed method of handling, including the design for the jacking head, jacking support of back stop, arrangement and position of jacks, pipe guides, etc., complete in assembled position. The approval of this plan by the Engineer will not relieve the Contractor from his responsibility to obtain the specified results.
- G. The excavation for the underside of the pipe, for at least one-third of the circumference of the pipe, shall conform to the contour and grade of the pipe. A clearance of not more than two inches (2") may be provided for the upper half of the pipe. This clearance is to be tapered off to zero at the point where the excavation conforms to the contour of the pipe. The distance that the excavation shall extend beyond the end of the pipe depends on the character of the material, but it shall not exceed two feet (2') in any case. This distance shall be decreased on instructions from the Engineer, if the character of the material being excavated makes it desirable to keep the advance excavation closer to the end of the pipe.
- H. The pipe, preferably, shall be jacked from the low or downstream end. Lateral or vertical variation in the final position of the pipe from the line and grade established by the Engineer will be permitted only to the extent of one inch (1") in 10 feet, provided that such variation shall be regular and only in one direction and that the final grade of flow line shall be in the direction indicated on the plans. If the Contractor desires, he may use a cutting edge of steel plate around the head end of the pipe extending a short distance beyond the end of the pipe with inside angles or lugs to keep the cutting edge from slipping back onto pipe.
- I. When jacking of pipe is once begun, the operation shall be carried on without interruption, insofar as practicable, to prevent the pipe from becoming firmly set in the embankment.
- J. Any pipe damaged in jacking operations shall be removed and replaced by the Contractor at his entire expense.
- K. The pits or trenches excavated to facilitate jacking operations shall be backfilled immediately after the jacking of the pipe has been completed.
- L. Boring: The boring shall proceed from a pit provided for the boring equipment and workmen. Excavation for pits and installation of shoring shall be as outlined above under "Jacking". The location of the pit shall meet the approval of the Engineer. The holes are to be bored mechanically. The boring shall be done using a pilot hole. By this method approximately a two-inch (2") pilot hole shall be bored the entire length of the crossing and shall be checked for line and grade on the opposite end of the bore from the work pit.
- M. This pilot hole shall serve as the centerline of the larger diameter hole to be bored. Excavated material will be placed near the top of the working pit and disposed of as required. The use of water or other fluids in connection with the boring operation will be permitted only to the extent to lubricate cuttings. Jetting will not be permitted.
- N. In unconsolidated soil formations a gel-forming colloidal drilling fluid consisting of at least 10% of high grade carefully processed bentonite may be used to consolidate cuttings of the bit, seal the walls of the hole, and furnish lubrication for subsequent removal of cuttings and installation of the

pipe immediately thereafter.

- O. Allowable variation from line and grade shall be as specified under "Jacking". Overcutting in excess of one inch (1") shall be remedied by pressure grouting the entire length of the installation.
- P. Tunneling: Where the characteristics of the soil or the size of the proposed pipe would make the use of tunneling more satisfactory than jacking or boring, or where called for on the Plans, a tunneling method may be used.
- Q. The excavation for pits and the installation of shoring shall be as outlined above under "Jacking".
- R. The lining of the tunnel shall be of steel of sufficient strength to support the overburden. The Contractor shall submit his proposed liner method to the Engineer for review. Review by the Engineer shall not relieve the Contractor of the responsibility for the adequacy of the liner method.
- S. The space between the liner plate and the limits of excavation shall be pressure-grouted or mud-jacked.
- T. Access holes for pouring concrete shall be spaced at maximum intervals of ten feet.
- U. If corrugated galvanized metal pipe is used, joints may be made by field bolting or by connecting bands, whichever is feasible.
- V. Clean-up: Contractor's equipment, surplus material and surplus earth shall be removed from the job following the final test of mains and all street surfaces replaced before the final estimate will be approved.
- W. The Owner shall have the right to make connections with and operate all or any part of the main when, in the opinion of the Engineer, such connection does not in any way interfere with the progress of the work, but it is understood that by making such use or connections the Owner does not accept the sewer or waive his right to object to any defect found therein, until the same has been finally inspected by the Engineer and found to be in accordance with the specifications.

3.7 CROSSING STATE HIGHWAYS AND RAILROADS

- A. When water lines cross highways, railroads, or town streets under the jurisdiction of the TxDOT or other public body or corporation, the Contractor shall secure permission from the controlling authority before installing such lines.

3.8 WET CONNECTIONS

- A. Wet connections are defined as connections made to a line in the existing system by interrupting water service. They shall be made at such points as are shown on the plans or as designated by the Engineer. The method and the equipment to be used shall be submitted to the Engineer for approval before any work is done.
- B. Any time that the interruption of water service in the existing system is necessary because of operations under this contract, the Contractor shall notify the City Water Superintendent forty-eight (48) hours in advance. The Contractor will not operate any valve in the existing water system.

3.9 LOWERING OF EXISTING MAINS

- A. When a main is to be lowered in order to conform with new construction, the initial excavation shall be done in such a manner as to permit the mains to rest on several dirt benches, or wooden blocks if soil conditions are unsatisfactory for the benches. The pipe shall then be supported by ropes, cables or chains to overhead supports; the dirt benches or wooden block removed, and the pipe

slowly and evenly lowered into position. After the mains have been lowered, each damaged joint must be re-tightened as directed by the Engineer.

3.10 REMOVING PIPE

- A. Salvageable joint materials from each joint of the pipe must be removed and reclaimed for the Owner and all corporation cocks disconnected and the holes plugged with plugs furnished by the Owner before the pipe is raised from its original position. After raising the pipe from the trench, it shall be pulled apart at the joints and all foreign material removed from the bells and spigots.
- B. All removed materials are to remain the property of the Owner and shall be hauled to the Owner's storage yard.
- C. The unit bid prices for removing mains shall include the removal, the cleaning of exterior and connection surface and hauling to designated storage yards, of all fittings, valves, flushing valves, and other appurtenances.

3.11 TRENCH BACKFILL

- A. All trench backfill above pipe embedment shall conform to the following requirements:
- B. Tamped backfill placed in six-inch (6") layers and compacted to 95% density will be required for the full depth of the trench beneath pavement, surfacing, driveways, curbs, gutters, walks, or other surface construction or structures as well as beneath street, road, or highway shoulders.
- C. In areas other than that described above, backfill shall be placed and tamped in six inch (6") layers until one foot above top of the pipe, then the balance of the backfill shall be placed in twelve inch (12") layers with Compaction approximately equal to that of the adjacent undisturbed material. To compensate for settlement below surface grade backfill material shall be added as necessary and compacted.

3.12 SURPLUS EARTH

- A. Any surplus excavated material shall be disposed of as directed by the Engineer. If the Engineer notifies the Contractor that the Owner does not have use for this material, it shall become the property of the Contractor to dispose of as he wishes without injury to the Owner or any individual.

3.13 STREET SURFACES

- A. In all streets the surface of the trenches after being refilled, dried and settled, shall be finished in the most workmanlike manner without needless delay and shall in every respect be equal in quality, character, material and workmanship to the street improvements existing over the line of the trench immediately prior to making the excavation. The expense of restoring the streets must be included in the price bid per linear foot for mains, except as otherwise provided herein.
- B. All concrete paving, road gravel, and road shell ordered placed on streets will be paid for at the unit price bid.
- C. On gravel, shell and asphalt surfaced streets, the trench shall be filled as otherwise specified up to within eight inches of the surface of the street. The trench shall then be filled with gravel or shell, as ordered by the Engineer, to a point approximately one (1) inch higher than the street level. After all other work is completed and before the job is finally accepted, the Contractor shall go back and place such additional gravel or shell as is ordered by the Engineer. No extra payment for road gravel or stabilized shell.
- D. On concrete streets the trenches shall be filled as otherwise specified within six (6) inches of the

surface of the street, and then filled with road gravel or shell to a point approximately one (1) inch higher than the street level. After all other work is completed, the Contractor shall go back and remove sufficient shell and install six (6) inches of concrete as ordered by the Engineer. The concrete used shall be paid for at the unit price bid in the proposal schedules.

- E. On asphalt surfaced streets, the gravel or shell base shall be placed as stated above. At such time as directed by the Engineer, the gravel or shell base shall be leveled smooth approximately one (1) inch below the existing asphalt surface. The new asphalt pavement shall then be placed and rolled or tamped to a smooth and even surface.

3.14 CROSSINGS TO BE KEPT OPEN

- A. At such street crossings and other intermediate points as may be designated by the Engineer, the trenches shall be bridged in such proper and secure manner as to prevent any serious interruption of travel upon the roadway and sidewalks, the cost thereof to be borne by the Contractor.
- B. Clean Up: Contractors equipment, surplus material and surplus earth shall be removed from the job following the final test of mains and all street surfaces replaced before the final estimate will be approved.
- C. Laying Pipe: In general, the bottom of the trench shall be shaped to give full support to the lower quarter of each pipe. If the foundation is rock or other hard material, a bed of sand or suitable earth shall be placed upon the subgrade and well compacted. The thickness of the bed shall be not less than two (2) inches nor more than six (6) inches. If the foundation is of such material or if conditions are such that the pipe cannot be otherwise properly supported or if the load on the pipe so requires, a concrete cradle as hereinafter specified shall be provided. In all cases water shall be kept out of the trench until the masonry or jointing material has sufficiently hardened. The pipe shall be laid to grade shown on the plans or as directed by the Engineer. Each pipe shall be inspected for defects prior to being lowered into the trench and shall be carefully cleaned in both bell and spigot. Pipe laying shall proceed up-grade with spigot ends pointing in direction of flow. Pipes shall be laid so that each pipe shall rest upon the full length of its barrel with holes excavated to accommodate bells. Except by special permission, no pipe shall be laid except in the presence of an inspector. Any defective pipe laid or any pipe which has had its grade of joint disturbed after laying shall be taken up and replaced.
- D. Before joining the inside of the bells and outside of the spigots shall be dry and clean. The joint shall be made as recommended by the manufacturer of the joint material. Water shall not be allowed in the trenches while the pipes are being laid. The Contractor shall not open up more trenches than the available pumping facilities are able to de-water, to the satisfaction of the Engineer. Bells shall be entirely free of water when joints are made, regardless of the type of joint, and no water shall be allowed to rise over the joint until it has set.

3.15 HOUSE CONNECTIONS

- A. House connections to main pipe shall be made by tapping the main and installed corporation cock of the size designated. The corporation cock shall be screwed securely into position. The copper service, polyethylene or butylene pipe shall be connected to the corporation cock and laid in accordance with the specifications contained herein for laying pipe.

3.16 INSTALLING WATER METERS AND METER BOXES

- A. Water Meters: The ground shall be excavated to such depth that the top of the box is flush with normal ground level. The tail piece of the meter shall be inserted into the service lines as near to the curb cock as possible, or directly into the curb cock. The meter shall then be set in such position that the bottom of the meter is at least two (2) inches above ground. The house side of the meter shall then be connected to the service line running to the house. It is essential that the meters shall

be set plumb and in line with the service line and all connections made in a neat and workmanlike manner.

- B. Meter Boxes: The meter box shall be set on firm ground so that the top of the meter box is flush with the ground surface, and the box is level and plumb. Ground shall be carefully backfilled and tamped around the meter box to leave a neat appearance.

3.17 SETTING FIRE HYDRANTS

- A. Fire hydrants shall be set where shown on the plans or ordered by the Engineer.
- B. Excavate underneath the drain outlet of each fire hydrant a space twelve (12) inches square and six (6) inches deep and fill with gravel. Place the gravel up around bottom of the flushing hydrant not less than three (3) inches above the drain outlet. Not less than two (2) cubic feet of gravel shall be placed around each flushing hydrant. The gravel shall be carefully covered with a layer of one ply roofing paper before trench around the hydrant is refilled. All hydrants shall be carefully blocked and placed to prevent expansion of stub line from water pressure. See plan sheet for blocking details.

3.18 STERILIZATION OF PIPELINES

- A. Unless otherwise specified, sterilization of new water lines shall be done in accordance with AWWA C651-86 specification.
- B. The contractor shall furnish all labor equipment, and materials necessary for the sterilization of the new pipelines, which shall be sterilized before being tested and placed in service. The lines shall be sterilized by the application of a chlorinating agent. The chlorinating agent may be liquid chlorine, liquid chlorine gas-water mixture, or a calcium hypochlorite solution, which shall be fed into the lines through a suitable solution-feed device or other methods approved by Engineer. The chlorinating agent shall be applied at or near the point from which the line is being filled, and through a corporation stop or other approved connection inserted in the horizontal axis of the newly laid pipe. The water being used to fill the line shall be controlled to flow into the section to be sterilized very slowly, and the rate of water entering the pipe that the chlorine dose applied to the water entering the line shall be a minimum of 50 ppm of chlorine residual of not less than twenty five (25) ppm after twenty-four (24) hours standing in the pipe. At the end of the retention period, all treated water shall be thoroughly flushed from the lines until the replacement water in the lines shall have a chlorine residual of not more than 0.4 parts per million.
- C. Solvent cemented or welded joint pipes shall be sterilized using a sterilizing agent other than liquid chlorine and/or calcium hydrochloride.
- D. Where no suitable outlet is available for flushing dead ends, the Contractor shall furnish and install outlet valves of sufficient size to adequately flush the new mains at the locations designated by the Engineer, for which payment shall be made at the unit price bid for the size valve installed. After the lines are sterilized and flushed and tested as specified above, samples of water shall be taken from the mains for bacteriological tests. If the samples fail to meet the health departments standard requirements, the disinfection process as outlined above shall be repeated and continued until the tests show results that meet the health departments requirements.

3.19 HYDROSTATIC TEST

- A. The Contractor shall provide all necessary equipment and shall perform all work required in connection with the tests. All pressure pipe installations shall be tested for leakage in the presence of the Engineer. The Engineer shall be given a minimum of 24 hours' notice for each and every test. Tests that are not performed in the presence of the Engineer will not be accepted.

- B. The test pressure shall be 1.5 times the maximum force main design pressure or 150 pounds per square inch gauge, whichever is greater. The test shall be held for a period of four (4) hours. The new system shall be tested in sections between valves. The length of test sections shall not exceed 2,000 feet unless authorized by the Engineer. Each test section shall be slowly filled with water, care taken to expel all air from the pipe. If necessary, the pipes shall be tapped at high points to vent the air. There will be no extra charge to the Owner for venting.
- C. At the end of the test period, the amount of leakage shall be determined by the quantity of water that must be supplied into the pipe, or any valved section thereof, to maintain pressure within five pounds per square inch of the specified test pressure, after the air in the pipe has been expelled. The maximum allowable leakage shall be calculated using the following formula.
 - 1. $L = SD((P)^{1/2})/133,200$, where L = leakage in gal/hr
 - 2. S = length of pipe in feet
 - 3. D = inside diameter of pipe in inches
 - 4. P = pressure in pounds per square inch
- D. If the quantity of leakage exceeds the maximum amount calculated, the failed section will be rejected and not accepted until it meets the above requirements.
- E. Upon completion of all sterilization and testing, the Contractor shall provide personnel to open all valves and operate all hydrants, as directed, in the presence of a representative of the Engineer.

END OF SECTION 33 11 00

SECTION 33 11 00.15 - DUCTILE IRON PIPE AND FITTINGS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Ductile iron pipe and fittings for water lines, wastewater force mains, gravity sanitary sewers, and storm sewers.

1.02 RELATED SECTIONS

- A. Section 01270 – Measurement and Payment
- B. Section 01330 – Submittal Procedures
- C. Section 02105 – Chemical Sampling and Analysis
- D. Section 02511 – Water Lines
- E. Section 02515 – Hydrostatic Testing of Pipelines
- F. Section 02531 – Gravity Sanitary Sewers
- G. Section 02532 – Sanitary Sewer Force Mains
- H. Section 02553 – Point Repairs and Obstruction Removals
- I. Section 02631 – Storm Sewers
- J. Section 16640 – Cathodic Protection for Pipelines

1.03 MEASUREMENT AND PAYMENT

- A. Unit Prices.
 - 1. No separate payment will be made for ductile iron pipe and fittings under this Section, with the exception of extra fittings in place. Include cost in unit prices for work as specified in the following Sections, as applicable:
 - a. Section 02511 - Water lines
 - b. Section 02531 - Gravity Sanitary Sewers
 - c. Section 02532 - Sanitary Sewer Force Mains
 - d. Section 02631 - Storm Sewers

2. Refer to Section 01270 - Measurement and Payment for unit price procedures.

- B. Extra Ductile Iron Compact Fittings in Place shall be for additional fittings required to complete job. This is not to exclude extension of pipe across driveway or intersection for purpose of terminating line in more advantageous position. This determination shall be at discretion of Project Manager. This bid item includes additional fittings as may be necessary to complete job in conformance with intent of Drawings.

1.05 SUBMITTALS

- A. Conform to requirements of Section 01330 - Submittal Procedures.
- B. For pipes 16 inches and greater submit shop drawings signed and sealed by Professional Engineer registered in State of Texas showing the following:
 - 1. Manufacturer's pipe design calculations.

2. Provide lay schedule of pictorial nature indicating alignment and grade, laying dimensions, fitting, flange, and special details, with plan view of each pipe segment sketched, detailing pipe invert elevations, horizontal bends, restrained joints, and other critical features. Indicate station numbers for pipe and fittings corresponding to Drawings. Do not start production of pipe and fittings prior to review and approval by Project Manager. Provide final approved lay schedule on CD-ROM in Adobe portable document format (*.PDF).
 3. Calculations and limits of thrust restraint shall be based on AWWA M41 or DIPRA Thrust Restraint for Ductile Iron Pipe, latest edition.
 4. Class and length of joint.
- C. Submit manufacturer's certifications that ductile iron pipe and fittings meet provisions of this Section and have been hydrostatically tested at factory and meet requirements of ANSI A 21.51.
- D. Submit certifications that pipe joints have been tested and meet requirements of ANSI A 21.11.
- E. Submit affidavit of compliance in accordance with ANSI A21.16 for fittings with fusion bonded epoxy coatings or linings.

PART 2 PRODUCTS

2.01 DUCTILE IRON PIPE

- A. Ductile Iron Pipe Barrels: Shall conform to AWWA C115, C150 and C151 and bear mark of Underwriters' Laboratories approval. Provide minimum thickness Class 52 for sanitary sewers. Unless otherwise shown on Drawings, use a minimum Pressure Class 250 for water lines less than or equal to 20-inch diameter. For 24-inch and larger, design for project specific hydraulics as per AWWA C150. Use minimum Pressure Class 350 for water lines in casing or trenchless construction and for flanged pipe.
- B. Provide pipe sections in standard lengths, not less than 18 feet long, except for special fittings and closure sections as indicated on shop drawings.
- C. For 24-inch and larger water lines, furnish and install cathodic protection in accordance with Section 16640 - Cathodic Protection for Pipelines
- D. For sanitary sewer lines, modify pipe for cathodic protection in accordance with Section 16640 - Cathodic Protection for Pipelines. In lieu of furnishing ductile iron pipe with cathodic protection system, furnish ductile iron pipe with polyethylene encasement, provided the following criteria is met:
1. Provide minimum thickness class.

2. Provide polyethylene encasement material and installation in accordance with AWWA C105, and backfill as specified. Minimum of two complete wraps of 8-mil-thick polyethylene.
 3. Use polyethylene encasement for open cut installations only. For augered sections or sections installed inside a casing, provide coating in accordance with paragraph 2.05 D.1.
 4. Adhere to other requirements specified herein (e.g., insulation kits, etc.).
- E. For use of pressure class pipe for water lines, design pipe and fittings to withstand most critical simultaneous application of external loads and internal pressures. Base design on minimum of AASHTO HL-93 loading, AREMA E-80 loads and depths of bury as indicated on Drawings. Design pipes with Marston's earth loads for a transition width trench for zero to 16 feet of cover. Use Marston's earth loads for a trench width of O.D. (of pipe) + 4 feet for pipe greater than 16 feet of cover. Use Marston's equations for a trench condition in both open-cut and tunnel applications. Design for most critical groundwater level condition. Pipe design conditions:
1. Working pressure = 150 psi.
 2. Hydrostatic field test pressure = 150 psi.
 3. Maximum pressure due to surge = 225 psi.
 4. Minimum Pressure due to surge = -10 psi.
 5. Design tensile stress due to surge or hydrostatic test pressure: No greater than 50% minimum yield.
 6. Design bending stress due to combined earth loads and surge or hydrostatic test pressure: No greater than 48,000 psi.
 7. Unit weight of fill 2' 120 pcf.
 8. Deflection lag factor (DI) = 1.2.
 9. Bedding constant (K) = 0.1.
 10. Moment coefficient = 0.16.
 11. Fully saturated soil conditions $h_w = h = \text{depth of cover above top of pipe}$.
- F. Hydrostatic Test of Pipe: AWWA C 151, Section 5.2.1, at point of manufacture. Hold test for a minimum 2 minutes for thorough inspection of pipe. Repair or reject pipe revealing leaks or cracks.

- G. Pipe Manufacturer for large diameter water lines: Minimum of 5 years of successful pipe installations in continuous service. Manufacturer must maintain on site or in plant enough fittings to satisfy the following requirements:

Line Diameter	Required Bends*
20 and 24 inches	Four 45° bends per 5,000 LF of water line
> 24 inches	Four 22.5° bends per 10,000 LF of water line
*Based on total length of contract (minimum of four). Any combination of bends may be substituted at manufacturer's option (i.e. two 22.5° bends are equivalent to one 45° bend) and will be counted as one fitting.	

Manufacturer or supplier must be capable of delivering bends to job site within 12 hours of notification. Use fittings at direction of Project Manager where unforeseen obstacles are encountered during construction. These fittings are in addition to any fittings called out in construction documents and must be available at all times.

- H. Provide flange adapter with insulating kit as required when connecting new piping to existing piping and piping of different materials, unless otherwise approved by Project Manager.
- I. Clearly mark pipe section to show location and thickness/pressure class color coded.
- J. No welding will be permitted on Ductile Iron Pipe except at restrained joint spigots or fittings as per ANSW/AWS D11.2. No field welding is allowed.

2.02 JOINTS

- A. Joint Types: ANSI A 21.11 push-on; ANSI A 21.11 mechanical joint; or ANSI A 21.16 flanged end. Provide push-on joints unless otherwise indicated on the Drawings or required by these specifications.
1. For sanitary sewer lines with bolted joints, conform to requirements of AWWA C111; provide minimum 304 stainless steel for restraint joints.
 2. For water lines with bolted joints, conform to requirements of AWWA C111; provide Denso or approved equal petrolatum based tape coating system for exposed portion of nuts and bolts.
- B. Where required by Drawings, provide approved restrained joints for buried service. Refer to City's List of Approval Products for approved joint restraint mechanisms.
- C. Threaded or grooved-type joints which reduce pipe wall thickness below minimum required are not acceptable.

- D. Provide for restrained joints designed to meet test pressures required under Section 02515 - Hydrostatic Testing of Pipelines or Section 02532 - Sanitary Sewer Force Mains, as applicable. Provide restrained joints for test pressure or maximum surge pressure as specified, whichever is greater for water lines. Do not use passive resistance of soil in determining minimum restraint lengths.
- E. Electrical Bond Wires: Bond Wires; use stranded, copper cable furnished with high molecular weight polyethylene insulation (HMWPE). Use wire gauge (AWG) as shown on Drawings.
- F. Make curves and bends by deflecting joints. Do not exceed maximum deflection recommended by pipe manufacturer for pipe joints or restraint joints. Submit details of other methods of providing curves and bends for consideration by Project Manager. When other methods are deemed satisfactory, install at no additional cost to City.

2.03 GASKETS

- A. Furnish, when no contaminant is identified, plain rubber (SBR) gasket material in accordance with ANSI A21.11 or ASTM F 477; for flanged joints 1/8-inch-thick gasket in accordance with ANSI A 21.15.
- B. For pipes to be installed in potentially contaminated areas, see Specification Section 02105 – Chemical Sampling and Analysis.
- C. For Pipes to be installed in any other contaminated areas, use gaskets as recommended by the Pipe Manufacturer, Engineer of the Record and approved by City Engineer prior to installation.

2.04 FITTINGS

- A. Use fittings of same size as pipe. Reducers are not permitted to facilitate an off-size fitting. Reducing bushings are also prohibited. Make reductions in piping size by reducing fittings. Line and coat fittings as specified for pipe they connect to.
- B. Push-on Fittings: ANSI A 21.10; ductile iron ANSI A 21.11 joints, gaskets, and lubricants; pressure rated at 250 psig.
- C. Flanged Fittings: ANSI 21.10; ductile iron ANSI A 21.11 joints, gaskets, and lubricants; pressure rated at 250 psig.
- D. Mechanical Joint Fittings: ANSI A 21.11; pressure rated at 250 psi.
- E. Ductile Iron Compact Fittings: Shall conform to AWWA C153 and shall be:
 - 1. Fusion bonded epoxy lined or
 - 2. Cement mortar lined.

- F. For tangential flanged outlets shown on Drawings, substitute with a tee with an equivalent sized outlet unless otherwise approved by Project Manager.

2.05 COATINGS AND LININGS

- A. Water line Interiors: ANSI A21.4, cement lined with seal coat; ANSI A 21.16 fusion bonded epoxy coating for interior; comply with NSF 61.
- B. Sanitary Sewer and Force Main Interiors:
 - 1. Preparation: Commercial blast cleaning conforming to SSPC-SP6.
 - 2. Liner thickness: Nominal 40 mils, for pipe barrel interior; minimum 6 to 10 mils at gasket groove and outside spigot end to 6-inches back from end.
 - 3. Testing: ASTM G 62, Method B for voids and holidays; provide written certification.
 - 4. Acceptable Lining Materials:
 - a. Provide approved virgin polyethylene conforming to ASTM D 1248, with inert fillers and carbon black to resist ultraviolet degradation during storage; heat bonded to interior surface of pipe and fittings.
 - b. Ceramic Epoxy – Protecto 401 or approved equal.
- C. Sanitary Sewer Point Repair Pipe: For pipes which will be lined with high density polyethylene liner pipe or cured-in-place liner, provide cement-lined with seal coat in accordance with ANSI A 21.4. For pipes which will not be provided with named liner, provide pipe as specified in Paragraph 2.05B, Sanitary Sewer and Force Main Interiors.
- D. Exterior:
 - 1. Encasement requirement for water lines.
 - a. Open cut construction method: Provide double wrap polyethylene encasement in accordance with AWWA C105.
 - b. Auger or casing construction method:
 - (1) Double wrap with polyethylene encasement in accordance with AWWA C105. Place circumferential wraps of tape or plastic tie straps at two-foot intervals along the barrel of the pipe, and thoroughly seal each end of the polyethylene tube.
 - 2. Sanitary Sewers: Prime coat and outside asphaltic coating conforming to ANSI A21.10, ANSI A21.15, or ANSI A21.51 for pipe and fittings in open cut excavation and in casings.

- E. For buried sanitary sewer pipes not cathodically protected, provide polyethylene wrap unless otherwise specified or shown. Conform to requirements of AWWA C105.
- F. For flanged joints in buried service, provide petrolatum wrapping system, Denso, or equal, for the complete joint and alloy steel fasteners. Alternatively, sanitary sewer lines may use bolts made of Type 304 stainless steel.
- G. Pipe to be installed in potentially contaminated areas shall have coatings and linings recommended by the manufacturer for maximum resistance to the contaminants identified in the Phase II Environmental Site Assessment Report. If no alternative coating is specified for water lines, provide polyethylene wrap in potentially contaminated areas.

2.06 MANUFACTURERS

- A. Use pre-approved manufacturers listed in City of Houston approved products.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Conform to installation requirements of Sections 02511 - Water Lines, 02531 - Gravity Sanitary Sewers, 02532 - Sanitary Sewer Force Mains 02631 - Storm Sewers and 02553 - Point Repairs and Obstruction Removal, except as modified in this Section.
- B. Install in accordance with AWWA C 600 and manufacturer's recommendations.
- C. Install double wrap polyethylene encasement in conformance with requirement of AWWA C105.
- D. Holiday Testing.
 - 1. Fusion Bonded Epoxy: Conform to requirements for new fittings in ANSI A 21.16.
- E. Provide electrical continuity bonding across buried mechanical and push-on joint assemblies, except where insulating flanges are required by Drawings.
 - 1. Provide minimum number of bond wires shown on Drawings. Remove one inch of HMWPE insulation from each of bond wire prior to attaching.
 - 2. Secure wire onto pipe using approved Thermite Welding procedures.
 - 3. Coat bare metal and weld metal after weld is secure. Use coal-tar compound or other compatible coating. For polyurethane coated pipe, use compatible polyurethane coating.

4. Visually inspect Thermite Weld connections for electrical continuity, strength and suitable coating prior to backfilling or placing pipe in augered hole or casing.
- 3.02 FIELD REPAIR OF COATINGS
 - A. Fusion Bonded Epoxy: Conform to requirements for new fittings in ANSI A 21.16.

END OF SECTION 33 11 00.15

SECTION #33 41 00 – STORM UTILITY DRAINAGE PIPING

PART 1 – GENERAL

1.1 SUMMARY

- A. This Section includes gravity-flow, nonpressure storm drainage outside the building, with the following components:
 - 1. Site storm sewer drainage piping, fittings, accessories and bedding.
 - 2. Catch basins, paved area drains, site surface drains and stormwater detention facilities.
 - 3. Connection of building storm water drainage system.
 - 4. Precast concrete, Cast-in-place concrete manholes.
- B. All public work to be performed and materials to be used within the street right-of-way, shall be in accordance with the City of Conroe Design Standards. In the event of a discrepancy between the above-referenced standards, the plans, and/or any portion of this specification section, the order of precedence will be the plans, the City Design Standards, and then these specifications. The Contractor shall contact the engineer in the event of a discrepancy.

1.2 DEFINITIONS

- A. PVC: Polyvinyl chloride plastic.
- B. HDPE: High density polyethylene.
- C. RCP: Reinforced concrete pipe

1.3 PERFORMANCE REQUIREMENTS

- A. Gravity-Flow, Non-pressure, Drainage-Piping Pressure Rating: 10-foot head of water (30 kPa). Pipe joints shall be at least silttight, unless otherwise indicated.

1.4 SUBMITTALS

- A. Product Data: For the following:
 - 1. Pipe materials, fittings and accessories.
 - 2. Drains.
- B. Shop Drawings: For the following:
 - 1. Manholes: Include plans, elevations, sections, details, and frames and covers. Catch Basins and Stormwater Inlets. Include plans, elevations, sections, details, and frames, covers, and grates.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Do not store plastic manholes, pipe, and fittings in direct sunlight.
- B. Protect pipe, pipe fittings, and seals from dirt and damage.
- C. Handle manholes according to manufacturer's written rigging instructions.
- D. Handle catch basins and stormwater inlets according to manufacturer's written rigging instructions.

1.6 PROJECT CONDITIONS

- A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
 - 1. Notify Engineer and Owner no fewer than two days in advance of proposed interruption of service.

PART 2 – PRODUCTS

2.1 PVC PIPE AND FITTINGS

- A. PVC Sewer Pipe and Fittings; NPS 6" to 12" ASTM D 3034, SDR 26, with bell-and-spigot ends for gasketed joints with ASTM F 477, elastomeric seals.

2.2 CONCRETE PIPE AND FITTINGS

- A. Reinforced-Concrete Sewer Pipe and Fittings: ASTM C 76 (ASTM C 76M), with groove and tongue ends and gasketed joints with ASTM C 443 (ASTM C 443M), rubber gaskets.
 - 1. Class III, Wall B.

2.3 HDPE PIPE AND FITTINGS

- A. Pipe shall have a smooth interior and exterior corrugations.
 - 1. 4-through 10-inch (100 to 250 mm) shall meet AASHTO M252m, Type S.
 - 2. 12- through 60-inch (300 to 1500 mm) shall meet AASHTO M294, Type S or ASTM F2306.
- B. Pipe shall be joined with joints meeting the requirements of AASHTO M252, AASHTO M294, or ASTM F2306.
- C. 4-through 60-inch (100 to 1500mm) shall be watertight according to the requirements of ASTM D3212. Gaskets shall be made of polyisoprene meeting the requirements of ASTM F477. Gaskets shall be installed by the pipe manufacturer and covered with a removable, protective wrap to ensure the gasket is free from debris. A joint lubricant available from the manufacturer shall be used on the gasket and bell during assembly.
- D. 12- through 60-inch (300 to 1500 mm) diameters shall have a reinforced bell with a bell tolerance device. The bell tolerance shall be installed by the manufacturer.
- E. Fittings shall conform to AASHTO M252, AASHTO M294, or ASTM F2306.
- F. To assure watertightness, field performance verification may be accomplished by testing in accordance with ASTM C969. Appropriate safety precautions must be used when field-testing any pipe material.
- G. Installation shall be in accordance with ASTM D2321 and manufacturer's published installation guidelines, with the exception that minimum cover in trafficked areas for 4- through 48-inch (100 to 1200 mm) diameters shall be one foot. (0.3 m) and for 60-inch (1500 mm) diameters, the minimum cover shall be 2 ft. (0.6 m) in single run applications.

2.4 NONPRESSURE-TYPE PIPE COUPLINGS

- A. Comply with ASTM C 1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined, and corrosion-resistant-metal tension band and tightening mechanism on each end.
- B. Sleeve Materials:
 - 1. For Concrete Pipes: ASTM C 443 (ASTM C 443M), rubber.
 - 2. For Cast-Iron Soil Pipes: ASTM C 564, rubber.
 - 3. For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
 - 4. For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.

2.5 CLEANOUTS AND PLUGS

- A. Installation shall be in accordance with the details and at locations shown on the drawings.
- B. All cleanouts shall have a 2' x 2' x 6" thick concrete apron.

2.6 MANHOLES

- A. Standard Precast Concrete Manholes: ASTM C 478 (ASTM C 478M), precast, reinforced concrete, of depth indicated, with provision for sealant joints.
 - 1. Diameter: 48 inches (1200 mm) minimum, unless otherwise indicated.
 - 2. Ballast: Increase thickness of precast concrete sections or add concrete to base section, as required to prevent flotation.

3. Base Section: 6-inch (150-mm) minimum thickness for floor slab and 4-inch (102-mm) minimum thickness for walls and base riser section, and having separate base slab or base section with integral floor.
 4. Riser Sections: 4-inch (102-mm) minimum thickness, and lengths to provide depth indicated.
 5. Top Section: Eccentric-cone type unless concentric-cone or flat-slab-top type is indicated. Top of cone of size that matches grade rings.
 6. Joint Sealant: ASTM C 990 (ASTM C 990M), bitumen or butyl rubber.
 7. Steps: Individual FRP steps or FRP ladder, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
 8. Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, to match diameter of manhole frame and cover.
 9. Manhole Frames and Covers: Ferrous; 28-inch ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch- (102-mm-) minimum width flange and 30-inch-diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "STORM SEWER."
 - a. Material: ASTM A 536, Grade 60-40-18 ductile iron, unless otherwise indicated.
- B. Cast-in-Place Concrete Manholes: Construct of reinforced-concrete bottom, walls, and top; designed according to ASTM C 890 for A-16 (ASSHTO HS20-44), heavy-traffic, structural loading; of depth, shape, dimensions, and appurtenances indicated.
1. Ballast: Increase thickness of concrete, as required to prevent flotation.
 2. Resilient Pipe Connectors: ASTM C 923 (ASTM C 923M), cast or fitted into manhole walls, for each pipe connection.
 3. Steps: Individual FRP steps or FRP ladder, wide enough to allow worker to place both feet on 1 step and designed to prevent lateral slippage off of step. Cast or anchor steps into sidewalls at 12- to 16-inch (300- to 400-mm) intervals. Omit steps if total depth from floor of manhole to finished grade is less than 60 inches (1500 mm).
 4. Adjusting Rings: Interlocking rings with level or sloped edge in thickness and diameter matching manhole frame and cover. Include sealant recommended by ring manufacturer.
 5. Grade Rings: Reinforced-concrete rings, 6- to 9-inch (150- to 225-mm) total thickness, to match diameter of manhole frame and cover.
 6. Manhole Frames and Covers: Ferrous; 28-inch ID by 7- to 9-inch (175- to 225-mm) riser with 4-inch- (102-mm-) minimum width flange and 30-inch-diameter cover. Include indented top design with lettering cast into cover, using wording equivalent to "STORM SEWER."
 - a. Material: ASTM A 536, Grade 60-40-18 ductile iron, unless otherwise indicated.
 - b. Protective Coating: Foundry-applied, SSPC-Paint 16, coal-tar, epoxy-polyamide paint; 10-mil (0.26-mm) minimum thickness applied to all surfaces, unless otherwise indicated.

2.7 CONCRETE

- A. General: Cast-in-place concrete according to ACI 318/318R, ACI 350R, and the following:
1. Cement: ASTM C 150, Type II.
 2. Fine Aggregate: ASTM C 33, sand.
 3. Coarse Aggregate: ASTM C 33, crushed gravel.
 4. Water: Potable.
- B. Portland Cement Design Mix: 4000 psi (27.6 MPa) minimum, with 0.45 maximum water-cementitious materials ratio.
1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.

2. Reinforcement Bars: ASTM A 615/A 615M, Grade 60 (420 MPa), deformed steel.
- C. Ballast and Pipe Supports: Portland cement design mix, 3000 psi (20.7 MPa) minimum, with 0.58 maximum water-cementitious materials ratio.
 1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
 2. Reinforcement Bars: ASTM A 615/A 615M, Grade 60 (420 MPa), deformed steel.

2.8 CATCH BASINS

- A. Installation shall be in accordance with the details and at locations shown on the drawings.

2.9 STORMWATER INLETS

- A. Curb Inlets: Made with vertical curb opening, of materials and dimensions according to the details and at locations shown on plans.
- B. Frames and Grates: Heavy-duty frames and grates according to the details and at locations shown on plans.

PART 3 – EXECUTION

3.1 EARTHWORK

- A. Excavation, trenching, and backfilling are specified in Division 31 Section "Earth Moving."

3.2 PIPING APPLICATIONS

- A. Pipe couplings and special pipe fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.
 1. Use nonpressure-type flexible couplings where required to join gravity-flow, nonpressure sewer piping, unless otherwise indicated.
 - a. Unshielded flexible couplings for same or minor difference OD pipes.
 - b. Unshielded, increaser/reducer-pattern, flexible or rigid couplings for pipes with different OD.
 - c. Ring-type flexible couplings for piping of different sizes where annular space between smaller piping's OD and larger piping's ID permits installation.
- B. Special Pipe Fittings: Use for pipe expansion and deflection. Pipe couplings and special pipe fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.
- C. Gravity-Flow, Nonpressure Sewer Piping: As shown on plans.

3.3 PIPING INSTALLATION

- A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take design considerations into account. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.
- B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements.
- C. Install manholes for changes in direction unless fittings are indicated. Use fittings for branch connections unless direct tap into existing sewer is indicated.
- D. Install proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.
- E. Tunneling: Install pipe under streets or other obstructions that cannot be disturbed by tunneling, jacking, or a combination of both.
- F. Install gravity-flow, nonpressure drainage piping according to the following:

1. Install piping NPS 6 (DN 150) and larger with restrained joints at tee fittings and at changes in direction. Use corrosion-resistant rods, pipe or fitting manufacturer's proprietary restraint system, or cast-in-place concrete supports or anchors.
2. Install piping with 36-inch (915-mm) minimum cover.
3. Install PVC sewer piping according to ASTM D 2321 and ASTM F 1668.
4. Install reinforced-concrete sewer piping according to ASTM C 1479 and ACPA's "Concrete Pipe Installation Manual."
 - a. Install HDPE pipe according to ASTM D2321.

3.4 PIPE JOINT CONSTRUCTION

- A. Where specific joint construction is not indicated, follow piping manufacturer's written instructions.
- B. Join gravity-flow, nonpressure drainage piping according to the following:
 1. Join PVC sewer piping according to ASTM D 2321 and ASTM D 3034 for elastomeric-seal joints or ASTM D 3034 for elastomeric gasket joints.
 2. Join reinforced-concrete sewer piping according to ACPA's "Concrete Pipe Installation Manual" for rubber-gasket joints.
 3. Join dissimilar pipe materials with nonpressure-type flexible or rigid couplings.
- C. Join dissimilar pipe materials with pressure-type couplings.

3.5 CLEANOUT INSTALLATION

- A. Install cleanouts and riser extension from sewer pipe to cleanout at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe.
 1. Use heavy-duty, top-loading classification cleanouts in vehicle-traffic service areas.
 2. Use extra-heavy-duty, top-loading classification cleanouts in firelane areas.
- B. Set cleanout frames and covers in earth in cast-in-place concrete block, 24 by 24 by 6 inches deep. Set with tops 1 inch (25 mm) above surrounding earth grade.
- C. Set cleanout frames and covers in concrete pavement with tops flush with pavement surface.

3.6 DRAIN INSTALLATION

- A. Install type of drains in locations indicated.
 1. Use heavy-duty, top-loading classification drains in vehicle-traffic service areas.
 2. Use extra-heavy-duty, top-loading classification drains in roads areas.
- B. Embed drains in 4-inch (102-mm) minimum depth of concrete around bottom and sides.
- C. Fasten grates to drains if indicated.
- D. Set drain frames and covers with tops flush with pavement surface.
- E. Assemble trench sections with flanged joints.
- F. Embed trench sections in 4-inch (102-mm) minimum concrete around bottom and sides.

3.7 MANHOLE INSTALLATION

- A. General: Install manholes, complete with appurtenances and accessories indicated.
- B. Install precast concrete manhole sections according to ASTM C 891.
- C. Construct cast-in-place manholes as indicated.

3.8 CATCH BASIN INSTALLATION

- A. Construct catch basins to sizes and shapes indicated.
- B. Set frames and grates to elevations indicated.

3.9 STORMWATER INLET AND OUTLET INSTALLATION

- A. Construct inlet head walls, aprons, and sides of reinforced concrete, as indicated.

- B. Install outlets that spill onto grade, anchored with concrete, where indicated.
- C. Install outlets that spill onto grade, with flared end sections that match pipe, where indicated.
- D. Construct energy dissipaters at outlets, as indicated.

3.10 CONCRETE PLACEMENT

- A. Place cast-in-place concrete according to ACI 318/318R.

3.11 FIELD QUALITY CONTROL

- A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches (610 mm) of backfill is in place, and again at completion of Project.
 - 1. Submit separate reports for each system inspection.
 - 2. Defects requiring correction include the following:
 - a. Alignment: Less than full diameter of inside of pipe is visible between structures.
 - b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
 - c. Crushed, broken, cracked, or otherwise damaged piping.
 - d. Infiltration: Water leakage into piping.
 - e. Exfiltration: Water leakage from or around piping.
 - 3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
 - 4. Reinspect and repeat procedure until results are satisfactory.
- B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects.
 - 1. Do not enclose, cover, or put into service before inspection and approval.
 - 2. Test completed piping systems according to authorities having jurisdiction.
 - 3. Schedule tests and inspections by authorities having jurisdiction with at least 24 hours' advance notice.
 - 4. Submit separate report for each test.
- C. Replace leaking piping using new materials, and repeat testing until leakage is within allowances specified.

3.12 CLEANING

- A. Clean interior of piping of dirt and superfluous materials. Flush with potable water.

END OF SECTION #33 41 00

SECTION 40 05 00 - MECHANICAL GENERAL PROVISIONS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

PART 1 - GENERAL

1.01 SECTION INCLUDES

- A. Except as modified in this section, General Conditions, Supplementary Conditions, applicable provisions of Division 1, General Requirements, and other provisions and requirements of the contract documents apply to work of Division 15, Mechanical.
- B. Applicable provisions of this section apply to all sections of Division 15, Mechanical.

1.02 PAYMENT

- A. Payment for mechanical equipment will be according to the unit or lump sum price as provide on the Proposal form. If a specific piece of equipment has not been itemized on the Proposal, no separate payment will be made; include cost of such items under other appropriate areas of the work.

1.03 CONTRACT DRAWINGS

- A. Contract drawings are diagrammatic only, and do not give fully dimensioned locations of various elements of work. Determine exact locations from field measurements.

1.04 SPACE REQUIREMENTS

- A. Consider space limitations imposed by contiguous work in selection and location of equipment and material. Do not provide equipment or material which is not suitable in this respect.

1.05 SERVICE

- A. Perform all service work required during startup until final acceptance by the owner. Perform service regularly in conformance with the manufacturer's recommendations, and provide the owner with a written report.

1.06 NOISE AND VIBRATION

- A. Select equipment to operate with minimum noise and vibration. If objectionable noise or vibration is produced or transmitted to/or through the related structures by the equipment, piping, ducts, or other parts of work, rectify such conditions without cost to owner.
- B. As a condition of the manufacturer's warranty, the manufacturer shall provide a written document stating that he or his qualified authorized representative will provide quarterly (once per three month period) inspection of all components supplied for a period of 24 months (two years) from the date of final acceptance by the Engineer. Applicable equipment shall be outlined specifically in the respective section of Division 15. The inspection conducted by the manufacturer's authorized service technician shall include but not be limited to all moving parts, electrical components, wash water systems and stationary alignment of the units. The technician shall review operations and maintenance procedures and upon completion of the inspection, shall present to the owner, through the Engineer, a written report stating the condition of all individual operating components. This is to include but not be limited to alignment, lubrication and wear of all moving parts; electrical characteristics and condition of all motors, solenoids and other electrical devices; other comments relating to the general condition and operation of the equipment. Two (2) year extended inspection service.

1.07 ACCEPTABLE MANUFACTURERS

- A. Where two or more units of same type or class of equipment are required, provide units of single manufacturer. Manufacturer's names and catalog numbers specified under sections of

Division 15 are used to establish standards of design, performance, quality and serviceability and not to limit competition. Equipment of similar design, equal to that specified, will be acceptable based on pre-approval as outlined in the bid proposal.

1.08 SUBMITTALS

- A. Prior to award of the contract, and before orders are placed or shop drawings are submitted, submit a list of equipment and principal materials specified. Give names of manufacturers, catalog and model numbers, and such other supplementary information as necessary for identification.

1.09 SHOP DRAWINGS

- A. Shop drawing procedures are specified in Division 1, General Requirements. Items requiring shop drawings include:
 - 1. Equipment and Materials: All items of equipment and principal materials proposed for installation.
 - 2. Control Systems: Submit detailed control and electrical interlock diagrams showing control devices and wiring.
 - 3. Equipment Rooms: Submit shop drawings of mechanical equipment, rooms/enclosures and, where directed, other complex areas. Show actual equipment to be installed, with piping fully detailed to show clearances, headroom, pipe routing, valve positions, pipe hangers, insulation, and other pertinent information. Prepare drawings to a scale of at least 3/8-inch per foot.
 - 4. Piping/Ductwork: Submit piping shop drawings fully detailed, and indicating centerline elevation of all piping/ductwork above and below grade or finished floor line, and exact size and location of all framed, cast or masonry openings required. Prepare drawings to a scale of at least 1/4-inch per foot.

1.10 OPERATING AND MAINTENANCE INSTRUCTIONS

- A. Provide bound sets of complete and indexed Operations and Maintenance Manuals (multiple volumes if required). As a minimum, the information provided shall include operating and maintenance instructions, service manuals and instructions, and parts lists applicable to each item of equipment furnished. Delivery of these document sets shall be in a format as designated by the Engineer and is a condition of final acceptance. Operation and maintenance instructions should include all name plate data; design parameters, including field changes; safety procedures; and practical operations and maintenance of the equipment system. Provide only information that pertains to the specific equipment/equipment system supplied.
- B. Upon completion of work, and at a time designated by the engineer, provide services of a competent/certified representative of the contractor for a period of at least 2 days to instruct the owner's representative in the operation and maintenance of the entire equipment system with related components. Operations and Maintenance Manuals shall be complete and approved prior to training. Training shall be conducted from a written syllabus approved a minimum of 10 days prior to any training session.

1.11 OPERATING TESTS

- A. After all mechanical systems have been completed and put into operation, subject each system to an operating test under design conditions to insure proper sequence and operation throughout the range of operation. Make adjustments as required to insure proper functioning of all systems. Special tests on individual systems are specified under individual sections.

1.12 LUBRICATION

- A. Provide complete charge of the correct lubricant for each item of equipment requiring

lubrication. Lubricants shall be as tabulated in the Operations and Maintenance Manual.

1.13 REMOVAL OF EXISTING EQUIPMENT

- A. All existing mechanical equipment designated "to be removed" shall be disassembled only to the extent necessary to enable removing it from the existing structure. Said equipment shall become the property of the Contractor unless noted otherwise. Where indicated to be Owner retained equipment, then it shall be stacked in a specified location on site to be later salvaged by the Owner.

PART 2 - PRODUCTS

Not Used.

PART 3- EXECUTION

Not Used.

END OF SECTION 40 05 00

SECTION 40 05 05 – PLANT PIPING

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

PART 1 - GENERAL

1.01 SECTION INCLUDES

- A. This work includes furnishing all plant, labor, equipment and materials and performing of all operations required for proper completion, installation and fabrication of all pipe, fittings and accessories required to complete the work as shown on drawings and specified herein.
- B. Refer to other specification sections for additional requirements. Conflicting requirements in other sections shall not supersede the requirements of this section.

1.02 QUALITY ASSURANCE

- A. Provide highest quality workmanship and materials throughout. Furnish equipment manufactured by a manufacturer with at least five years of experience in the design and building of water and waste treatment equipment.

1.03 MISCELLANEOUS ITEMS

- A. Include all supplementary parts necessary to complete each item even though such work may not be definitely shown or specified.

1.04 STANDARD MANUFACTURED PRODUCTS

- A. Details and specifications, for which standard manufactured products are available, are representative guides for requirements of these items. Standard manufactured products conforming to these general requirements will be acceptable if details of construction and installation are approved by Engineer.

1.05 MEASUREMENT

- A. Make measurements any of previously installed construction before fabrication of connecting work, so that all work will fit properly.

1.06 PROJECT RECORD DOCUMENTS

- A. Upon completion of all work, furnish prints showing location and principal details and modifications of piping systems as built.

1.07 SHOP DRAWINGS

- A. Submit shop drawings, product data, and samples as specified in Division 1, General Requirements.

1.08 TRENCH SAFETY

- A. Provide trench safety per all local, state and federal requirements.

1.09 PAYMENT

- A. No separate payment will be made for work performed under this section. Include the cost of such work in the bid form and specified in other sections of this work.

PART 2 - PRODUCTS

2.01 PIPING

A. Ductile Iron Pipe:

1. Ductile iron pipe shall have a mortar lining and be thickness Class No. 150, for a Type 5 laying condition. For other than Type 5 laying pipe shall be designed in accordance with ANSI A21.51 Table 51.1. Where ductile iron pipe is to be buried provide eight (8) mil black virgin polyethylene film wrap as manufactured by Du Pont Alathor or U.S.I. Petrothene resins. Polyethylene shall be held in place with Polyken No. 900 plastic back adhesive tape:
 - a. Lap two (2) inches at each joint.
2. Use flanged joints and fittings for ductile iron pipe installed above ground. Use 304 SS bolts for flanged joints.
3. Use mechanical joints or boltless (push-on) gasketed joints made up strictly in accordance with manufacturer's recommendations for ductile iron pipe installed below ground.
4. Ductile iron flanges are to be furnished in accordance with ANSI A21.15. Flanges are to be ductile iron. All flanged pipe to be shop hydrostatically tested to 125 psi to insure leak-free joints.

B. Steel Pipe: Provide Standard Weight Schedule 40 pipe conforming to ANSI Standard Specification B 36.1. The pipe is to be hot dip galvanized after fabrication unless noted otherwise.

C. Polyvinyl Chloride Pipe (PVC):

1. All PVC chlorine solution pipe shall be Schedule 80 with solvent welded joints.
2. All PVC gravity sewer pipe shall be SDR 26 (ASTM D3334) pressure pipe.
3. All PVC pressure pipe 2" and larger shall be C-900 or C-905 (Class 150) where noted or approved by the Engineer. All fittings used with this piping system are to be mechanical joint, ductile iron with restraint couplings (Megalug 2000 or Stargrip 4000).
4. Smaller than 2" shall be Schedule 80 with solvent welded joints.

D. Concrete Pipe: Provide reinforced concrete pipe conforming to ASTM C76, Class III, with rubber-type gasket joints in accordance with ASTM C 443. Where concrete pipe is proposed for wastewater service (including lift stations), provide Ameron T-lock interior surface treatment or a protective coating as specified by "Concrete Surface Protection".

E. Corrugated Metal Pipe: Provide 14 gauge galvanized, asphalt coated corrugated metal pipe with 2-2/3" X 1/2" corrugations in accordance with AASTHO M 136 and M 190. Lengths to be as indicated on drawings, or as long as practicable.

2.02 FITTINGS

A. Use fittings of same size as pipe they serve. Reducers are not permitted to facilitate an off-size fitting. Reducing bushings are also prohibited. Reduction in piping size will be made by reducing fittings. Use galvanized fittings for galvanized pipe.

1. Flanged Fittings: Provide 150 pound flanged fittings, constructed of high quality gray-iron or ductile iron castings accurately machined and finished. Dimensions must conform to American Standard for Cast Iron Flanged Fittings. Use cast iron fittings meeting requirements of ANSI B-16.1, Class 125.
2. Mechanical Joint Fittings: Provide 150 pound mechanical joint fittings conforming to ANSI A-21.11 (AWWA C-110). Mechanical joint bolts shall be cathodic to the pipe.

3. Boltless Gasketed Fittings: Provide 150 pound boltless gasketed "O-ring" type fittings conforming to ANSI A-21.11 (AWWA C-110).
4. Threaded Fittings: Provide 150 pound, malleable iron, screwed fittings. Galvanize fittings as specified. Provide pipe with American Standard taper pipe threads.
5. Welded: Provide welded fittings conforming to physical and chemical requirements of ASTM specifications. Provide standard weight, forged steel, long radius pattern, butt welding type fittings with full thickness of metal sustained at all points. Use welding tees when pipes are of same size. Use weld-o-lets to tee a smaller pipe into a larger.
6. Copper: Use solder-type, wrought copper fittings meeting requirements of same material as pipe. Furnish high melting point solder of tin and lead, containing not less than 85 percent tin.
7. PVC: All solvent welded pipe fittings are to be Schedule 80.

2.03 COUPLINGS

- A. Use Dresser or Baker 316 SS Expansion Couplings unless otherwise specified. All components, mid-ring, followers and connecting hardware are to be 316 SS with the exception of nuts which are to be 400 series SS to prevent galling. Gaskets are to be EPDM (or as noted otherwise) for all service connections other than air which is to be Viton (FKM).

2.04 GASKETS

- A. Provide gaskets for all flanged, mechanical joint, or boltless (push-on) piping connections. Provide pipe manufacturer's recommended gaskets for wastewater service with minimum requirements of SBR on non-pressure lines (gravity hydraulics, less than 5 psig); EPDM on pressure lines (greater than 5 psig, force mains) or under structures; Viton (FKM) on all air service lines.
- B. Gaskets for flanged piping are to be full face. Mechanical Joint and Boltless (push-on) are to be tapered "O-ring" style, tyton gaskets.

PART 3 EXECUTION

3.01 EXCAVATION

A. EXCAVATION, TRENCHING AND BACKFILLING

1. Conform to applicable provisions of the section on earthwork in Division 2, Site Construction.
2. Bedding shall be as noted on plans or the following bedding schedule is to be used if nothing is indicated on the plans:
3. All piping under structures & pavement CL-"A-A"
4. Yard Piping:
PVC or ductile iron CL-"B"
5. Reinforced concrete pipe: CL-"A"
6. PVC pipe (Sch. 40 or 80): CL-"C"

"A" - 1.5 SACK/CY CEMENT STABILIZED SAND PLACED BEFORE PIPE IS LAID UP TO FLOW LINE OF PIPE OR ABOVE.

"B" - 1.5 SACK/CY CEMENT STABILIZED SAND, THOROUGHLY RODDED, AND PLACED AFTER PIPE IS LAID.

"C" - BANK SAND PLACED SAME DAY AS PIPE IS LAID.

"D" - CLASS IMA, OR BETTER SOIL AS SPECIFIED IN ASTM D2321.

Note: Class "A" Bedding used on all sewers 18" and larger, unless otherwise specified.

3.02 MANHOLES

- A. Construct manholes in accordance with applicable provisions of sections in Division 2, Site Construction.

3.03 JOINTING

- A. Flanged Joints: When bolting, take care to insure that there is no restraint on the opposite end of the pipe or the fitting which would prevent uniform gasket compression or which would cause unnecessary stress in the flanges. Leave one flange free to move in any direction while flange bolts are being tightened. Tighten bolts gradually and at a uniform rate, in such manner that gasket compression is uniform over the entire area of gasket.
 1. Take special care when attaching suction and discharge piping to pumping equipment. Insure that no stresses are transmitted to or imposed on the pump suction and discharge flanges by connected piping. Install and permanently support piping to provide accurate matching of bolt holes and uniform contact over the entire flange. In addition, leave pump connection piping free to move parallel to its longitudinal centerline while the bolts in pump connection flanges are tightened.
 2. Provide maximum flexibility and ease of alignment correction by taking advantage of the slack between the flange bolts and bolt holes for slight angular rotation of connecting flanges. Assemble pump connecting piping with gaskets in place, with only a portion of the flange bolts (no fewer than four per joint) installed. After final alignment and before final bolting, test pump connections for applied piping stresses by loosening flange bolts which, if piping is properly installed, should result in no movement of piping relative to the pump, or opening of the pump connection joints.
- B. Mechanical Joints: Carefully assemble mechanical joints in accordance with the manufacturer's recommendations. If seal is defective, disassemble the joint, thoroughly clean it, and reassemble the joint. Do not over tighten bolts to compensate for poor installation practice.
- C. Push-On Joints: Remove lumps, blisters, and excess coating from the exterior spigot and

interior bell surfaces. Wire brush such surfaces and wipe them clean and dry (free from oil and grease) before placing the spigot in the bell. Take every precaution to prevent foreign material from entering the pipe during installation. Do not place debris, tools, clothing, or other materials in the pipe. Observe and follow instructions and recommendations of the pipe manufacturer, relative to gasket installation and other jointing operations. Lubricate joint surfaces with heavy vegetable soap solution immediately before joint is completed. Suitably bevel each spigot end to facilitate assembly.

- D. Threaded Joints: Make threaded joints using suitable joint compound applied to male threads only. Thoroughly ream field cuts. Make connections carefully so that thread engagement will be secured. Machine cut threads to American National taper pipe thread sizes.
- E. Welded Joints: Make welded joints as recommended by standards of the American Welding Society. Insure complete penetration of deposited metal with base metal. The filler metal must be suitable for use with the base metal. The inside of fittings must be free from globules of weld metal which would restrict the flow or become loose. Do not use mitered joints.
- F. Solder Joints: Prior to making solder joints, cut the pipe square and ream the pipe to full diameter. Thoroughly clean the exterior of the pipe and the socket of the fitting. Polish to bright metal, free from oxidized metal. Apply a thin coat of suitable fluxing compound to both pipe and socket. Fit the parts together immediately. Heat the assembled joint only as required to cause solder to flow. Run joint full with a slight bead on the outside. Wipe to remove excess solder.
- G. Solvent Welding: All PVC joints are to be solvent welded using the manufacturer's recommended system and materials. Other coupling or jointing systems will be noted on plans.
 - 1. When pipe is cut make sure all cuts are perpendicular to the centerline of the pipe. Remove all burrs, chips, and fillings. Make sure pipe surface is clean and dry prior to priming.
 - 2. Do not make solvent welds when the ambient air temperature is less than 40 deg. F or greater than 90 deg. F; nor when the relative humidity is such as to cause a condition of misting or raining.

3.04 HANDLING

- A. Handle pipe, fittings, and accessories to insure their installation in a sound, undamaged condition. Use equipment, tools and methods to prevent damage in unloading, reloading, hauling, and laying pipe and fittings. When using hooks in pipe ends, be sure that the contact surfaces are broad and well padded.

3.05 CUTTING

- A. Cut cast iron pipe in a neat manner, without damage to the pipe. Make cuts smooth, straight, and at right angles to the pipe axis. Use mechanical pipe cutters of an approved type, except in locations where the use of mechanical cutters would be difficult or impracticable. In such locations, cut the pipe with diamond point chisels, saws, or other tools which will cut pipe without damaging impact or shock.

3.06 CLEANING

- A. Thoroughly clean the interior of the pipe and fittings of foreign matter before installation. Keep the interior clean until the work has been accepted.

3.07 INSPECTION

- A. During installation, while the pipe is suspended and hanging free, inspect each pipe and fitting for defects. Tap the pipe with a light hammer to detect cracks. Reject defective, damaged or unsound pipe and fittings and remove them from sight.

3.08 LAYING PIPE

- A. Protect the pipe from lateral displacement by means of pipe embedment material installed as specified in Division 2, Site Work, and as shown.
- B. Under no circumstances should pipe be laid in water. Do not lay pipe under unsuitable weather or trench conditions.
- C. Lay pipe with bell ends facing the direction of the laying except when making closures.

3.09 REACTION ANCHORAGE AND BLOCKING

- A. Install suitable reaction blocking, struts, anchors, clamps, joint harness or other adequate means for preventing movement of pipe caused by unbalanced internal liquid pressure. Pressure can be expected at unlugged tees, Y-branches, and bends deflecting 22-1/2 degrees or more which are installed in piping subjected to internal hydrostatic heads in excess of 15 feet in exposed, or 30 feet in buried piping.
- B. In trenches, fittings must be provided with concrete thrust blocking between the fitting and solid, undisturbed ground in each case, except where solid ground blocking support is not available. At tops of slopes, anchor vertical angle bends with concrete of sufficient weight to resist hydraulic thrust to which pipe will be subjected at maximum pressures. Install the concrete block and anchors so that joints between the pipe and the fittings are accessible for repair. The bearing area of the concrete reaction block against the ground or the trench bank shall be as shown or as directed by engineer in each case.
- C. In the event adequate support against undisturbed ground cannot be obtained, install metal harness anchorage facilities to provide necessary support. Should the lack of solid vertical excavation face be due to careless or otherwise improper trench excavation, no additional payment will be made for furnishing and installing metal harness anchorage in excess of contract value of concrete blocking replaced by such anchorages.
- D. Provide fittings in locations other than trenches, as shown or directed with reaction blocking, struts, anchorages, or other supports. This includes but is not limited to fittings installed in fills or other unstable ground, above grade, or exposed within structures.
- E. Adequately protect from corrosion steel, clamps, rods, bolts, and other metal accessories used in reaction anchorages or joint harness where subject to submergence or contact with earth or other fill material and not encased in concrete. Apply not less than two heavy coats of coal tar coating material to clean, dry metal surfaces. Allow the first coat to become dry and hard before the second coat is applied. Paint the metal surfaces exposed above grade or within structures in accordance with Division 9, Finishes.
- F. Substitution: In lieu of reaction anchorages and blocking for underground pipe and fittings, use push-on, locking type joints such as Lok-Tyton joints manufactured by United States Pipe and Foundry Company. Equip these joints with Lok-Tyton gaskets. Groove the pipe in strict accordance with the manufacturer's recommendations.

3.10 TESTING

A. GRAVITY SEWER LEAKAGE TEST

1. After backfilling and removing debris from each section of sewer line, conduct a line acceptance test under observation of an inspector. Test the sanitary sewer line in strict accordance with the following leakage test using low-pressure air. If the test results indicate an unacceptable installation, locate the source of leakage, correct the defect, and retest until the installation is proven satisfactory.
2. Minimum Requirements for Equipment:
 - a. Control Panel
 - b. Low-pressure air supply connected to control panel

- c. Pneumatic plugs: Of acceptable size for diameter of pipe to be tested; capable of withstanding internal test pressure without leaking or requiring external bracing.
 - d. Air hose from control panel to:
 - i. Air supply
 - ii. Pneumatic plugs
 - iii. Sealed line for pressurizing
 - iv. Sealed line for monitoring internal pressure
3. Testing Pneumatic Plugs: Test plugs before using in actual test installation. Place one length of pipe on ground and seal at both ends with pneumatic plugs to be checked. Pressurize plugs to 25 psig; then pressurize sealed pipe to 5 psig. The plugs are acceptable if they remain in place against the test pressure without external aids.
4. Compensation for Ground Water Pressure: Where ground water exists, install a capped piped nipple at the same time the sewer line is placed. Use a 1/2-inch capped pipe nipple approximately 20 inches long. Make the installation through the manhole wall on top of the sewer line where the line enters the manhole.
- a. Immediately before performing the line acceptance test, remove the pipe cap, clear the pipe nipple with air pressure, and connect a clear plastic tube to pipe nipple. Support the tube vertically and allow water to rise in the tube. After the water stops rising, measure the height in feet of water over the invert of the pipe. Divide this height by 2.3 feet/psi to determine the ground water pressure to be used in line testing.
5. Line Testing: After pneumatic plugs have been checked, place plugs in line at manholes or at the end of the line segment and inflate plugs to 25 psig. Introduce low-pressure air into sealed line until the internal air pressure reaches 4 psig greater than the ground water pressure. Allow at least 2 minutes for air pressure to stabilize. If at least 2.5 psig over ground water pressure is maintained disconnect the air hose from the control panel to the air supply and measure the time of the pressure drop between 3.5 and 2.5 above ground water pressure.
- a. The installation is acceptable if the air loss rate does not exceed 0.003 cfm per square foot of internal pipe surface with an average test pressure of 3.0 psig greater than ground water pressure. The line between manholes is within acceptable limits if the time for the 1 psig pressure drop is not less than the time listed below for pipe sizes indicated.

Pipe Diameter in Inches	Minutes Pressure is Maintained
6	3.0
8	4.0
10	5.0
12	5.5
15	7.5
18	8.5
21	10.0
24	11.5
27	13.0
30	14.5
36	17.0

END OF SECTION

SECTION 40 05 61 – GATES AND VALVES

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

PART 1 - GENERAL

1.01 SECTION INCLUDES

- A. This work includes furnishing all labor, equipment and materials and performing of all operations required for proper completion, installation and fabrication of all gates, valves, and accessories required to complete the work as shown on drawings and specified herein.
- B. This section provides for furnishing and installing gates and valves for a sewage treatment plant. Refer to related work specified in other sections to coordinate the complete installation.

1.02 QUALITY ASSURANCE

- A. Provide highest quality workmanship and materials throughout. Furnish equipment manufactured by a manufacturer with at least five years of experience in the design and building of water and waste treatment equipment.

1.03 MISCELLANEOUS ITEMS

- A. Include all supplementary parts necessary to complete each item even though such work may not be definitely shown or specified.

1.04 STANDARD MANUFACTURED PRODUCTS

- A. Details and specifications, for which standard manufactured products are available, are representative guides for requirements of these items. Standard manufactured products conforming to these general requirements will be acceptable if details of construction and installation are approved by Engineer.

1.05 MEASUREMENTS

- A. Make measurements of previously installed construction before fabrication of connecting work, so that all work will fit properly.

1.06 PROJECT RECORD DOCUMENT

- A. Upon completion of all work, furnish prints showing location and principal details and modifications of all systems as constructed.

1.07 SHOP DRAWINGS

- A. Submit shop drawings, product data, and samples as specified in Division 1, General Requirements.

1.08 PAYMENT

- A. No separate payment will be made for work performed under this section. Include the cost of such work in the bid form and as specified in other sections of this work.

PART 2 PRODUCTS

2.01 GATES

A. Sluice Gates

1. Gate Frame and Guide: Gate frame and guides shall be cast in one piece and shall be flat back. Size of openings shall be as noted on drawings. Back of frame shall be machined to a plane and drilled to mate anchor bolts. Guides shall be cast as an integral part of frame and be sufficiently long to retain at least one-half of vertical height of slide when it is in full opened position. Guides shall be capable of safely withstanding full thrust due to water pressure and wedging action. Guide grooves shall be accurately machined to provide free movement of slide tongues and to insure proper engagement of wedging devices. Pads shall be cast on guides, and machined and drilled for mounting of wedging devices. Provide gates with wall thimbles (where noted) of a size as indicated on drawings and as manufactured by Waterman, Rodney-Hunt, or preapproved equivalent.
2. Gate Slide: Gate slide shall be cast in one piece with vertical and horizontal ribs, pads for attaching wearing devices, a stem block pocket and a reinforced section around perimeter to provide for mounting of seating faces. Casting shall be of ample section to safely withstand to attach gate slide to stem; provide with a means of locking it to lowering stem after it is installed. Pads for mounting wedging devices shall be machined and drilled. A groove shall be cut in each pad to receive the mounting tongue on side wedge.
3. Seating Faces: All seating faces shall be machined bronze.
4. Wedging Devices: Provide each gate with sufficient adjustable wedging devices designed to wedge seating faces of slide against those on frame when gate is fully closed, to obtain a practical degree of water-tightness. Provide with positive means of locking. Individual parts of each wedging device shall be removable and replaceable without complete disassembly of gate or guide. Equip all gates with side wedging devices for seating head application and side, top and bottom wedges for unseating applications.

B. Fabricated Gates

1. Gate Frame: Provide a flat structural steel frame for wall mounting. The frame material shall be as indicated on the plans or where nothing is indicated, shall be 304 stainless steel, be wall mounted and have a minimum thickness of 1/4". The frame shall be drilled for anchor bolts and provide a smooth sliding surface and structural retention of the gate/disc. The indicated size of gate shall reference the size of opening with the frame mounted to allow the gate/disc to bridge and isolate the opening.
2. Gate/Disc: The gate/disc shall be fabricated as a one piece flat plate with stiffing ribs for reinforcement to withstand twice the calculated hydrostatic head conditions. The gate shall be of the same designated material as the frame with sealing material between the gate and frame providing hydrostatic isolation of the designated wall opening.
3. Fabricated Gates shall be as manufactured by Fontaine, Whipps or pre-approved equivalent.

C. Slide Gates

1. Furnish and install self-contained fabricated 304 stainless steel slide gates as indicated on the plans and as manufactured by Fontaine, Whipps or pre-approved equivalent.
2. The disc shall be a flat plate suitably reinforced to withstand the required head conditions. The frame shall consist of guide rails along the sides and extending above the wall to support a structural yoke. The frame length and seal gasket will be such to allow for an invert or bottom seal across a channel or wall openings isolating the operational cross-section. Alternatively, the gate may act as an adjustable weir with the gate retracting downward exposing more channel or wall opening cross-sectional area. The gate will be operated by a stainless steel rising stem attached to the disc and either passing through a right-angle gear operator with attached vertical operating hand-wheel. The gear operator shall have grease fittings for lubrication.

- D. Fasteners and Hardware: All anchor bolts, assembly bolts, screws, nuts, etc., shall be ample section to safely withstand forces created by operation of gate while subjected to maximum head. Provide quantity and size of fasteners recommended by manufacturer. All fasteners, anchor bolts and other connecting hardware shall be 304 stainless steel.

- E. Stem: Gates shall have a rising stem, unless otherwise noted. Stems/operating shafts shall be manufactured and machine threaded from 304 stainless steel from round bar stock. Stem diameter shall be adequate to safely withstand forces created during gate operation under unbalanced heads, with proper thread length for complete opening or operation of the gate. Gates shall operate with clockwise rotation of the rising stem. The stem shall be designed to transmit in compression a minimum of two times the rated output of the floor stand or bench stand with a 40-pound effort on the crank or hand-wheel. Full height, clear, polycarbonate covers are to be provided and be of sufficient structural strength and UV resistance to maintain their shape and integrity through the service life of the associated component.

- F. Floor Stands: Floor stands or bench stands shall be cast iron and operate the gates under the specified operating head with not greater than a 40-pound pull on the crank or hand-wheel. Floor stands shall be top of wall mounted approximately 36 inches high. Where stands are not mounted to the top of wall provide gusseted base mounting plates affixed to both top and side face of the wall.

- G. Painting of Floor Stands: Clean surfaces by sandblasting to base metal. Surfaces shall be dry and free of grease before painting. Provide protective coating in accordance with Division 9 - Finishes.

2.02 VALVES

A. Gate Valves:

1. Gate valves 1-3/4" and smaller: Provide 125-pound standard (200-pound WOG) bronze, double disc, rising stem gate valves with union bonnet and threaded connections, Stockham B-106 or preapproved equivalent.
2. Gate valves 2" and larger: Provide flanged ANSI Class 125, right hand close valves in accordance with AWWA C-500-61, Standard for Gate Valve for Ordinary Water Works Service, Mueller A-2480-6 or preapproved equivalent.

- B. Plug Valves: Valves shall be non-lubricated, full port plug valves with cast body semi-steel resilient plug face and have a welded nickel seat. Bushing and bearings are to be stainless steel with an adjustable stem packing gland. Above ground valves ten inches and larger

shall be worm gear operated. Equip buried valves with extended waterproof gear operators. Provide DeZurik, Pratt plug valves or preapproved equivalent.

C. Check Valves:

1. Hydraulic (Wastewater Service): Provide cast iron body, rubber faced disc, external weight and lever air cushion dispensing chamber, non-corrosive shaft rubber boot cover, ANSI Class 125 flanged end valves as manufactured by Golden Anderson, Pratt or preapproved equivalent.
2. Air Check Valves: Provide Technocheck or preapproved equivalent. Valves are to have an aluminum/bronze body and plate with Viton-A seals with 316 stainless steel spring and retaining pin.

D. Butterfly Air Control Valves: Provide high temperature (350°) air tight resilient seat either wafer or flanged body butterfly valves as manufactured by DeZurik, Pratt or preapproved equivalent. Lever operated 4-inch through 10-inch; enclosed worm gear operated 12-inch and larger.

E. Telescoping Valves: Supply telescoping valve assemblies of the size and travel length as indicated on the plans, consisting of a 304 stainless steel rack and pinion crank operator with locking device or a 304 stainless steel round rising operating stem. Operation shall be via an off-set or center mounted, fixed floor stand (see 2.01 Gates). The stainless steel stem or shaft shall be connected to either a seamless brass or 304 stainless steel valve/slip tube of minimum 1/8-inch wall thickness. The valve tube will have two V-notch weirs cut into the top at opposite sides, have a flanged tube seal, and have a minimum of 6" clearance between the tube and the bottom of the connecting bail. Telescoping valves to be as manufactured by Waterman, Trumbull, JMS, or preapproved equivalent.

F. Air and Vacuum Release Valves: Provide a sewage air and vacuum release valve as indicated on the plans. The valve shall have a two (2) inch inlet with a two (2) inch shut-off valve. Other accessories will include one (1) inch blow-off valve and a flexible back flushing hose with a quick disconnect coupling and a 1/2-inch shut-off valve. The air and vacuum valve shall be manufactured by Apco, Val-Matic, Golden Anderson, or preapproved equivalent.

G. Ball Valves: Provide full port bronze ball valves as manufactured by Stockham, Watts or pre-approved equivalent. Valves are to have glass reinforced durafill seats, hard chrome plated brass ball and bottom loaded pressure retaining stem. The valves are to have a minimum WOG pressure rating of 400 psi and a minimum operating temperature of 230 degrees C.

H. Backflow Preventer: Provide one anti-syphon, reduced pressure principle, backflow preventer as manufactured by Watts (Series 909), Febco (Series 825Y) or pre-approved equivalent. The unit is to have a bronze body with multiple rubber check valves. The check valve seats, shafts and flange bolts are to be 316 stainless steel. The relief valve is to be rubber with 316 stainless steel seats. The minimum valve operating conditions are to be 175 psi and 95 degrees C.

I. Knife Gate Valve: Provide a 316 stainless steel wafer bodied knife gate valve, as manufactured by DeZurik, Pratt or pre-approved equivalent. The valve is to have a beveled edge, 316 stainless steel gate with a 316 stainless steel stem and raised 316 stainless steel face seat. Provide a hand wheel actuator unless noted otherwise.

J. Electric Actuators: Provide electric valve and gate actuators as manufactured by EIM, Limitorque, Rotork, specified valve manufacturer's integral unit or pre-approved equivalent.

The actuator shall open and close valves within 30 seconds without strain, binding or motor overload. The motor should be of the extended duty type and shall operate on either 480V/3p or 120V/1p 60 HZ, as noted. Where 480V feeder power is supplied to the unit, provide all internal operating power, control power when not indicated otherwise, for a completely self-contained operating unit (both manual and automatic function). The enclosure shall be NEMA 4 and have a back shaft operating hand-wheel for manual operation. The unit shall have a minimum of two adjustable open and close, SPDT limit switches; additional switches are to be provided as required for proper unit function. When operating as a function of an analog or dc input signal the unit shall have infinite position settings proportional to the input signal. Also, the unit shall be potted for a like output signal indicating valve position.

PART 3 EXECUTION

3.01 INSTALLATION

- A. Install all items to be embedded in concrete by template when structure is poured. Oil and grease moving parts. Install all gates, valves, and accessories in accordance with manufacturer's printed instructions, in such manner as to insure a watertight fit, complete and ready for operation. Operate gates and valves through one cycle, i.e., "open, close, open" or "close, open, close" to assure they have been properly lubricated and adjusted. All gates shall be installed to open upward unless otherwise noted.

END OF SECTION

43 41 13.33 - GROUND STORAGE TANK

Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

NOTE: "Tank" & "Reservoir" used interchangeably

1.1 SECTION INCLUDES

- A. Design Criteria for liquid storage reservoir.
- B. Structural steel components for the liquid storage reservoir.
- C. Accessories for liquid storage reservoir.
- D. Coating materials and procedures for liquid storage reservoir.
- E. Erection materials and procedures for liquid storage reservoir.

1.2 RELATED SECTIONS

- A. Section 03300 Cast in Place Concrete
- B. Section 15051 Specialized Mechanical Materials and Methods for Process Piping
- C. Section 15150 Equipment Installation
- D. Section 09900 Coatings

1.3 REFERENCES

- A. AWWA D 103 Standards of the American Water Works Association
- B. ANSI
- C. ASTM
- D. SSPC
- E. NSF Additives Standard No. 61
- F. OSHA
- G. NFPA

1.4 SUBMITTALS

- A. Shop drawings covering tank, anchorage (if required), accessories, appurtenances and coatings shall be submitted.

1.5 QUALIFICATION/EXPERIENCE

- A. The tank manufacturer shall be a specialist in the design, fabrication with a minimum of (10) years documented experience and erection of factory coated bolted steel tanks. The manufacturer shall be a 3rd party quality certified, having an active ISO-9001 and API-Q1 registration.

1.6 DELIVERY, STORAGE AND HANDLING

- A. All plates, supports, members, and miscellaneous parts shall be packaged for shipment in such a manner to prevent abrasion or scratching of the finish coating.

1.7 WARRANTY

- A. The tank manufacturer shall warrant the tank against any defects in workmanship and materials for a period of one (1) year from date of shipment. In the event a defect should appear, it shall be reported in writing to the manufacturer during the warranty period.

PART 2 - PRODUCTS

2.1 WATER STORAGE TANK

A. Acceptable Manufacturers

1. CST Industries, Inc., Kansas City, MO
2. Superior Tank Company Inc, Rosenberg TX
3. Pre-Approved Equal

B. Bolted Tank Design Criteria

1. Type of Liquid - Water
2. Specific Gravity –
3. Seismic Zone – IBC 2006 to 2015
4. Wind – 150 MPH
5. Deck Live Load – 25 psf

C. Bolted Tank Structure

1. The materials, design, fabrication, and erection of the bolted steel tank shall conform to the Principles of Standard Specification 12B of the American Petroleum Institute, or to the manufacturer's specifications which are derived from engineering principles, industry experiences, and the aforementioned standards and specifications.

*****Vertical tank seams shall be staggered. Straight seam 4-corner joints are not acceptable.***

2. Standard shell height and diameter meeting requirements for the selected capacity.
3. Storage Capacity: 250,000 Gallons (Nominal)
4. Tank Diameter: 44'-6 ³/₄"
5. Tank Height: 24'-1 ¹/₂"
6. Steel
 - a. Hot Rolled Steel Sheets and Plates
 - 1) Hot Rolled Steel Sheets and Plates shall meet or exceed the requirements of ASTM A1011 Grade 40 with a minimum yield strength of 40,000 psi.
 - 2) Minimum thickness shall be 12 gauge (0.0972 in.)
 - b. Structural Shapes
 - 1) Structural shapes shall conform to ASTM A36 or ASTM A992.
 - 2) Other grades of carbon steel that meet or exceed these standards may be utilized.
7. Bolts/Nuts/Washers
 - a. Galvanized Bolts
 - 1) Galvanized bolts, nuts, washers used in tank joints shall be minimum 1/2" diameter and shall meet or exceed the requirements of API 12B or AWWA D103.

GROUND STORAGE TANK

- b. Encapsulated Bolts
 - 1) Encapsulated bolt heads shall be used for additional corrosion protection.
 - c. Anchor Bolts
 - 1) Anchor bolts shall meet or exceed the requirements of ASTM A36 or ASTM A325.
 - d. Other Bolts
 - 1) Other bolts shall meet or exceed the requirements of ASTM A307 or ASTM A325.
8. Gaskets
- a. All bolted connections shall incorporate an EPDM prefabricated gasket with a minimum width of 1-3/4".
 - b. A single piece double punched gasket shall be used at vertical seams which require two vertical rows of punching.
 - c. Field caulking will be allowed only when joining a discontinuous gasket section and at certain joint connections.
 - d. Neoprene backed steel washers shall be provided at all bolts in contact with the stored liquid.
 - e. Sealants may not be used in place of gasket material for vertical or horizontal seams.

D. Coating

- 1. All metal plates, supports, members, and miscellaneous parts, except bolts, certain accessories, and appurtenances, shall be factory coated in accordance with the provisions of these specifications.
- 2. Field coating, except for touch-up will not be permitted.
- 3. Surface Preparation
 - a. Tank parts are to be thoroughly washed (Alkaline at 130 deg F) and rinsed to remove grease, oil and foreign matter.
 - b. Parts are then to be immediately oven dried.
 - c. Parts are to be grit-blasted to SSPC-SP 10 (Near-White Blast Cleaning) to 1-2 mils profile.
 - d. All parts must be coated by Automated Powder Applicators on both sides within 15 minutes after blasting, and no further processing other than coating application shall be done.
- 4. Interior Coating
 - a. Thermally cured modified epoxy powder, Trico-Bond EP by CST Storage (includes underside of the steel floor)
 - b. First coat is to be a powder application of NSF approved modified epoxy Trico-Bond EP, 7.0 mils average dry film thickness.
 - c. Coating system to have 7.0 mils average dry film thickness.
- 5. Exterior Coating
 - a. Thermally cured modified epoxy powder, Trico-Bond EP and acrylic polyurethane by CST Storage
 - b. First coat is to be a powder application of modified epoxy Trico-Bond EP, 3.0 mils average dry film thickness.
 - c. Second coat of acrylic polyurethane, 1.5 mil average dry film thickness.
 - d. Coating system to have 4.5 mils average dry film thickness.
- 6. Curing
 - a. Baking ovens to be used after each coat

- b. Initial curing shall take place after powder is applied. A combination of IR boosters and convection ovens will be used to heat parts to approximately 300 deg. F to gel the powder (partial cross-linking).
 - c. Final curing shall take place after top coat is applied. A combination of IR boosters and convection ovens will be used to heat parts to approximately 350 deg. F for 5-6 minutes to finish curing powder and topcoat.
 - 7. Inspection
 - a. MEK rub test to verify proper curing of coating.
 - b. Wet sponge test to check for holidays.
 - c. Mill thickness test for uniform epoxy coverage.
 - 8. Preparation for Transport
 - a. Material to be marked or tagged with part number for ease of field assembly.
 - b. Tank materials to be placed in racks or on pallets to facilitate transportation to jobsite.
 - c. Touch-up paint with instructions for application by erection personnel.
- E. Appurtenances
- 1. The contractor shall furnish and install the appurtenances as shown in the contract drawings and as specified below. Unless otherwise noted, standard appurtenances shall be as follows:
 - 2. Hatch
 - a. The tank roof hatch shall have a curbed, upward opening 24" square.
 - b. The curb shall extend at least 4" above the roof surface.
 - c. The hatch cover shall be hinged and have provisions for locking.
 - d. The hatch cover lip shall extend 2" below the top of the 4" curb.
 - 3. Inlet and Outlet Connections
 - a. Inlet, outlet, and overflow connections shall conform to the sizes and locations specified on the contract drawings.
 - 4. Vent
 - a. A mushroom screened vent shall be furnished above maximum water level of sufficient size to accommodate normal inlet and outlet flow.
 - b. The overflow pipe shall not be considered to be a tank vent.
 - c. The vent shall be galvanized steel and so designed and constructed as to prevent the entrance of birds, animals, or insects.
 - 5. Flush Cleanout Door/Shell Manway (Optional)
 - a. The flush cleanout door shall measure 24" x 46" and be located as shown on the contract drawings.
 - b. The shell manway shall have a 24" opening complete with hinged cover, and shall be located as shown on the contract drawings. (Optional)
 - 6. Outside Ladder
 - a. An outside galvanized ladder, meeting OSHA specifications, shall be furnished at the location shown on the contract drawings.
 - 7. Guardrail and Toeboards
 - a. Galvanized guardrail with toeboard shall be furnished at the location(s) shown on the contract drawings.

PART 3 - EXECUTION

3.1 Installation

A. Erection

1. Field erection of factory coated bolted steel tanks shall be in strict accordance with the tank manufacturers recommendations.
2. Particular care shall be exercised in handling and bolting of the tank plates, supports, and members to avoid abrasion or scratching of the coating.
3. Touch-up coating shall be done in accordance with the tank manufacturer's recommendations where and as directed.

B. Testing

1. Following completion of erection and cleaning of the tank, the tank shall be tested for liquid tightness by filling the tank to its overflow elevation.
2. Any leaks disclosed by this test shall be corrected by the erection contractor in accordance with the tank manufacturer's recommendations.
3. The Owner shall provide clean water free of charge at the time of erection completion, for hydrostatically testing the tank.
4. Filling and emptying the tank shall be the responsibility of the Contractor.

END OF SECTION 43 41 13.33
