I. Factory installed Electric-Resistance Heating Coils (where scheduled): Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.

1. Provide 480v / 3ph / 60Hz 4W wye single point power connection.
2. Stage(s): Refer to schedule.
3. Access door interlocked non-fused disconnect switch.
4. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
5. Nickel chrome 80/20 heating elements.
6. Airflow switches for proof of airflow.
7. Fan interlock contacts.
8. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
9. Magnetic contactor for each step of control (for three-phase coils).

J. Factory-Mounted and Wired Controls: Electrical components mounted in control box with removable cover. Incorporate single-point electrical connection to power source for terminal units with electric heat.

1. Control Transformer (Required only for terminal units with electric heat): Factory mounted for control voltage. Coordinate equipment voltage requirement with electrical plans.

2. Wiring Terminations: Coordinate required wiring diagrams with Building Automation System controls subcontractor.

3. The following equipment items are to be furnished by Specification Section 23 09 23 - Direct-Digital Controls and installed by air terminal unit manufacturer.

   a. Auto temperature control card (DDC).
   b. 24-volt damper actuator.

4. The following equipment items are to be furnished and installed by the air terminal unit manufacturer:

   a. Volume Control Damper.
   b. Multi-point flow sensor.
   c. Controller enclosure.
   d. Power transformer; required only for terminal units with electric heat. (Coordinate voltage with electrical plans).

K. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.

L. Sound Ratings: Not to exceed 35 NC at one (1) inch static pressure. Sound performance shall be ARI certified.

1. Maximum discharge sound power level of 62 DB.
2. Maximum radiated sound power level of 70 DB.
3. DB level based on third octave band.

M. Temperature sensor provided, wired, and installed by Building Automation System Control Contractor: Refer to Section 23 09 23 – Direct Digital Controls.

N. For Sequence of Operation: Refer to Section 23 09 93.

2.2 DUAL-DUCT AIR TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Titus
2. Price
3. Nailor

B. Configuration: Two volume dampers inside unit casing with mixing attenuator section and control components inside a protective metal shroud.

C. Identification: Furnish each air terminal unit with identification label and airflow indicator. Include unit nominal airflow, maximum factory-set airflow and minimum factory-set airflow and coil type.

D. Casing: Minimum 22-gauge galvanized steel.

1. Casing Lining: Fiber free, 1/2-inch thick, engineered polyurethane foam, 1.5 lb. / cu. ft. insulation complying with NFPA 90A, UL 181 erosion requirements, UL 181 Mold Growth and Humidity, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84. Exposed fiberglass is not acceptable. The casing shall be designed for hanging by 10-gauge sheet metal hanger brackets for suspending unit with threaded rod.

2. Air Inlets: Round stub connections or oval connections for duct attachment.

3. Air Outlet: S-slip and drive connections.

4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.

5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

E. Volume Damper: Heavy gauge galvanized steel with peripheral gasket and self-lubricating bearings.

1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.

2. Damper Position: Normally open.

F. Velocity Sensors: Multi-point array, center-averaging differential pressure, with velocity sensors in cold- and hot-deck air inlets and air outlets. Sensors that deliver the differential pressure signal from one end of the sensor is not acceptable. Balancing taps and airflow calibration charts shall be provided for field airflow measurements.

G. Cooling and heating inlets shall have separate damper assemblies for complete pressure independent control of each airstream for variable or constant volume total discharge applications. Terminals with inlet dampers mechanically interconnected are not acceptable. The dampers shall be heavy gauge steel with solid shaft rotating in self-lubricating bearings. Nylon bearings are not acceptable. Shaft shall be clearly marked on the end to indicate damper position. Stickers or other removable markings are not acceptable. The damper shall incorporate a mechanical stop to prevent over-stroking and a synthetic seal to limit close-off leakage.

H. Actuators shall be capable of supplying at least 35 inches per pound of torque to the damper shaft and shall be mounted externally for service access.

I. Factory-Mounted and Wired Controls: Electrical components mounted in control box with removable cover.

1. Wiring Terminations: Coordinate required wiring diagrams with Building Automation System controls subcontractor.

2. The following equipment items are to be furnished by Specification Section 23 09 23 – Direct Digital Controls and installed by air terminal unit manufacturer.

   a. Auto temperature control card (DDC).
   b. 24-volt damper actuator.

3. The following equipment items are to be furnished and installed by the air terminal unit manufacturer:

   a. Volume Control Damper.
   b. Multi-point flow sensor.
   c. Controller enclosure.

J. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.

K. Sound Ratings: Not to exceed 35 NC at one (1) inch static pressure. Sound performance shall be ARI certified.

1. Maximum discharge sound power level of 62 DB.
2. Maximum radiated sound power level of 70 DB.
3. DB level based on third octave band.

L. Temperature sensor provided, wired, and installed by Building Automation System Control Contractor: Refer to Section 23 09 23 – Direct Digital Controls.

M. For Sequence of Operation: Refer to Section 23 09 93.

2.3 SERIES FAN-POWERED AIR TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Titus
2. Price
3. Nailor

B. Configuration: Volume-damper assembly and fan in series arrangement inside unit casing with control components inside a protective metal shroud for installation above a ceiling.

C. Identification: Furnish each air terminal unit with identification label and airflow indicator. Include unit nominal airflow, maximum factory-set airflow and minimum factory-set airflow and coil type.

D. Casing: Minimum 20-gauge galvanized steel.

1. Casing Lining: Fiber free, 1/2-inch thick, engineered polyurethane foam, 1.5 lb. / cu. ft. insulation complying with NFPA 90A, UL 181 erosion requirements, UL 181 Mold Growth and Humidity, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84. Exposed fiberglass is not acceptable. The casing shall be designed for hanging by 10-gauge sheet metal hanger brackets for suspending unit with threaded rod.

2. Air Inlets: Round stub connections or oval connections for duct attachment.

3. Air Outlet: S-slip and drive connections.

4. Access: Removable top and bottom access panels, which allows removal of fan assembly and servicing of terminal without disturbing duct connections; with airtight gasket and quarter-turn latches.

5. Fan: Forward-curved centrifugal; direct-drive.

6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

E. Volume Damper: Heavy gauge galvanized steel with flow-sensing ring and peripheral gasket and self-lubricating bearings.

1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
2. Damper Position: Normally open.

F. Velocity Sensors: Multi-point array, center-averaging differential pressure, with velocity sensors in cold- and hot-deck air inlets and air outlets. Sensors that deliver the differential pressure signal from one end of the sensor is not acceptable. Balancing taps and airflow calibration charts shall be provided for field airflow measurements.

G. Motor:

1. Type: General Electric electronically commutated motor (ECM), variable speed dc brushless. Motor shall be complete and operated by a single-phase integrated controller/inverter that operates the wound stator and senses rotor position to electronically commutate the stator. All motors shall be designed for synchronous rotation. Rotor shall be permanent magnet type with near zero rotor losses. Motor shall have built-in soft start and soft speed change ramps. Motor shall be able to be mounted with shaft in horizontal or vertical orientation. Motor shall be permanently lubricated with ball bearings. Motor shall be directly coupled to the blower. Motor shall maintain a minimum of 70 percent efficiency over its entire operating range. Provide a motor that is designed to overcome reverse rotation and not affect life expectancy.

2. Fan-Motor Assembly Isolation: Rubber isolators.

3. Enclosure: Totally enclosed, air over.

4. Enclosure Materials: Rolled Steel.

5. Motor Bearings: Permanently lubricated ball bearings.

6. Unusual Service Conditions:

7. Efficiency: Premium efficient.

8. NEMA Design: NEMA MG-1.

9. Service Factor: 1.15.

10. Motor Speed: Infinitely adjustable, factory provided and mounted PWM controller for adjustable fan speed control. PWM controller shall be field adjustable with standard screwdriver. Fan CFM shall be pre-set at factory as shown on plans.

11. Electrical Characteristics:

    a. Horsepower: Refer to detail
    b. Volts: 277
    c. Phase: Single.
    d. Hz: 60.

H. Construction Filters for induced air inlet: Minimum arrestance according to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.

1. Material: Pleated cotton-polyester media having 90 percent arrestance and minimum MERV 8.

2. Thickness: 1 inch.

I. Factory manufactured and mounted Induced air inlet and discharge air attenuator section: steel sheet outer casing, sound absorbing fill material with coating, and inner casing of perforated sheet metal (Provide where scheduled).

1. Lining: Adhesive attached, 3/4-inch thick, polyurethane foam insulation complying with UL 181 erosion requirements, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.

2. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

J. Factory installed hydronic heating coils (where scheduled): Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch, and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain valve.

K. Factory installed Electric-Resistance Heating Coils (where scheduled): Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.

1. Provide 277v/ 480v / 3ph / 60Hz 4W wye single point power connection, factory pre-wired for 277v/1ph/60Hz connection to fan.
2. Stage(s): Refer to schedule.
3. Access door interlocked disconnect switch.
4. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
5. Nickel chrome 80/20 heating elements.
6. Airflow switches for proof of airflow.
7. Fan interlock contacts.
8. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
9. Magnetic contactor for each step of control (for three-phase coils).

L. Factory-Mounted and Wired Controls: Electrical components mounted in control box with removable cover. Incorporate single-point electrical connection to power source.

1. Control Transformer: Factory mounted for control voltage. Coordinate equipment voltage requirement with electrical plans.

2. Wiring Terminations: Coordinate required wiring diagrams with Building Automation System controls subcontractor.
3. Disconnect Switch: Factory-mounted, non-fuse type in control panel.
4. The following equipment items are to be furnished by Specification Section 23 09 23 - Direct-Digital Controls and installed by air terminal unit manufacturer.

    a. Auto temperature control card (DDC).
    b. 24-volt damper actuator.

5. The following equipment items are to be furnished and installed by the air terminal unit manufacturer:

    a. Volume Control Damper.
    b. Multi-point flow sensor.
    c. Controller enclosure.
    d. Power transformer (Coordinate voltage with electrical plans).

M. Control Panel Enclosure: NEMA 250, Type 1, with access panel sealed from airflow and mounted on side of unit.

N. Sound Ratings: Not to exceed 35 NC at one (1) inch static pressure. Sound performance shall be ARI certified.

1. Maximum discharge sound power level of 62 DB.
2. Maximum radiated sound power level of 70 DB.
3. DB level based on third octave band.

O. Temperature sensor provided, wired, and installed by Building Automation System Control Contractor: Refer to Section 23 09 23 – Direct Digital Controls.

P. For Sequence of Operation: Refer to Section 23 09 93.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

B. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.

C. Install ceiling access doors or locate units above easily removable ceiling components.

3.2 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."

B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.

1. Where practical, install concrete inserts before placing concrete.

C. Hangers Exposed to View: Threaded rod and angle or channel supports.

D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.3 CONNECTIONS

A. Install piping adjacent to air terminal unit to allow service and maintenance.

B. Hot-Water Piping: In addition to requirements in Section 232113 "Hydronic Piping," connect heating coils to supply with shutoff valve, strainer, control valve, and union or flange; and to return with balancing valve and union or flange.

C. Connect ducts to air terminal units according to Section 233113 "Metal Ducts."

D. Coordinate duct installations and specialty arrangements with Drawings.

E. Make connections to air terminal units with flexible connectors complying with requirements in Section 233300 "Air Duct Accessories."

3.4 IDENTIFICATION

A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
Perform tests and inspections.

1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Air terminal unit will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
3. Verify that controls and control enclosure are accessible.
4. Verify that control connections are complete.
5. Verify that nameplate and identification tag are visible.

6. Verify that controls respond to inputs as specified.

3.7 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.

3.8 ADJUSTING

A. Reset volume with damper operator attached to assembly allowing flow range modulation from 100 percent of design flow to 0 percent full flow. Set units with heating coils for minimum 50 percent full flow.

END OF SECTION 23 36 00

SECTION 23 37 13 - DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes: Air devices.

1.3 REFERENCES

A. Air Movement and Control Association International, Inc.:

1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets.

C. Sheet Metal and Air Conditioning Contractors:

1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated, include the following:

1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static pressure drop, and noise ratings.

2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

B. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.

C. Test Reports: Rating of air outlet and inlet performance.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.5 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of air outlets and inlets.

1.6 QUALITY ASSURANCE

A. Test and rate diffuser, register, and grille performance in accordance with ASHRAE 70.

B. Test and rate louver performance in accordance with AMCA 500.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Air Devices shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

PART 2 - PRODUCTS

2.1 AIR DEVICES

A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:

1. Titus
2. Price
3. Nailor

B. Mounting:

1. Plaster Surfaces: Provide with plaster frames or plaster rings to make airtight seal against mounting surface.
2. "T" Bar Ceilings: Lay-in type.
3. Gyp Board and Wall surfaces: 1-1/2" overlap flange.

C. Fire rated diffusers for fire rated roof/ceiling assembly: Refer to diffuser schedule for fire rated assembly requirement.

1. UL classified fire rated ceiling diffuser assembly listed in The Underwriters Laboratories "Fire Resistance Directory".

2. Shall have a fire resistance rating of 3 hours.

3. Heavy Gauge Steel Diffusers shall be tested in accordance with UL 263 and must meet NFPA 90A requirements. Diffusers must be able to operate in (3) three-hour fire rated ceiling and must be installed in accordance with the installation instructions.

4. UL 555C Fire resistance rating: 3-hour ceiling radiation damper with fusible link assembly. Fire closure temperature of 165°F.

5. UL listed thermal blanket insulation and mineral fiber around entire diffuser.

6. Complete fire rated damper assembly with blanket shall be provided and submitted by/with Diffusers, Registers, and Grilles.

D. Source Quality Control

1. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

E. Accessories:

1. Square to round neck adapter.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify inlet and outlet locations.

B. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Verify ceiling and wall systems are ready for installation.

E. Refer to Architectural Code Information and Fire Rated Assemblies Drawing to verify if ceiling is fire rated. If ceiling is fire rated provide U.L. tested radiation damper with thermal blanket for all ceiling mounted supply and return air grilles.

3.2 INSTALLATION

A. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers

B. Install balancing dampers on duct take-off to diffusers, grilles, and registers, whether or not dampers are furnished as part of diffuser, grille, and register assembly. Refer to Section 23 33 00 – Air Duct Accessories.

C. Install diffusers, registers, and grilles level and plumb.

D. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure

drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

E. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

F. Paint visible portion of ductwork behind air outlets and inlets matte black. Refer to Section 09 91 00.

3.3 ADJUSTING

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Check location of outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

3.5 SCHEDULES:

A. Refer to Drawings.

END OF SECTION 23 37 13

SECTION 23 37 23 - HVAC GRAVITY VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Provide complete, fully operational fans where indicated on Drawings.

B. Section Includes:

1. Dryer vent roof cap
2. Roof mounted intake hood
3. Roof mounted relief hood

C. Related Sections:

1. Section 23 31 00 - HVAC Duct and Casings: Product requirements for hangers for placement by this section.

2. Section 23 33 00 - Air Duct Accessories: Product requirements for duct accessories for placement by this section.

3. Coordinate work in this Section with Division 7.

1.3 SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Shop Drawings: Indicate size and configuration of fan assembly, mountings, weights, ductwork, and accessory connections.

C. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics, and connection requirements.

D. Manufacturer's Installation Instructions: Submit fan manufacturer’s instructions.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

1.5 QUALITY ASSURANCE

A. Performance Ratings: Conform to AMCA 210 and bear AMCA Certified Rating Seal.

B. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.

C. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705 and UL 762 for kitchen exhaust.

D. Balance Quality: Conform to AMCA 204.

E. Energy Recovery Unit Wheel Energy Transfer Rating: Meet ARI 1060.

1.6 WARRANTY

A. Furnish one (1) year manufacturer's warranty. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up will not be acceptable.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Ventilators shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

PART 2 - PRODUCTS.

2.1 DRYER VENT ROOF CAP

A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.

1. Greenheck
2. Cook

B. Unit shall be a spun aluminum, roof mounted gravity ventilator.

C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The spun aluminum structural components shall be constructed of minimum 16-gauge marine alloy aluminum, bolted to a rigid aluminum support structure.

The aluminum base shall have continuously welded curb cap corners for maximum leak protection. The spun aluminum baffle shall have a rolled bead for added strength. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.

D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.

E. Accessories: Gravity actuated back-draft damper with adjustable counterweight.

2.2 ROOF MOUNTED INTAKE HOOD

A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.

1. Greenheck.
2. Cook.
3. Acme.

B. Unit shall be an aluminum roof mounted intake hood.

C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The aluminum hood shall be constructed of minimum 14-gauge marine alloy aluminum, bolted to a minimum 8-gauge aluminum support structure. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. Birdscreen constructed of 1/2" mesh shall be mounted across the intake opening. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.

D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.

E. Accessories:

1. Motorized damper in damper tray of roof curb. Actuator shall be low voltage for control wiring from DDC controller. Damper shall include integral end switch.

2.3 ROOF MOUNTED RELIEF HOOD

A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.

1. Greenheck.
2. Cook.
3. Acme.

B. Unit shall be an aluminum roof mounted relief hood.

C. Construction: The unit shall be of bolted and welded construction utilizing corrosion resistant fasteners. The aluminum hood shall be constructed of minimum 14-gauge marine alloy aluminum, bolted to a minimum 8-gauge aluminum support structure. The aluminum base shall have sealed curb cap corners by continuous weld or application of butyl tape to inside of the curb cap for maximum leak protection. Bird screen constructed

of 1/2" mesh shall be mounted across the intake opening. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transit tested packaging.

D. Roof Curb: 12-inch-high of 18-gauge galvanized steel construction with continuously welded seams, built-in cant strips, 1-1/2-inch insulation, damper tray, hinged curb adapter for access to dampers, and factory installed nailer strip. Coordinate installation with Division 7.

E. Accessories:

1. Gravity actuated back-draft damper with adjustable counterweight.
2. Motorized damper: actuator shall be low voltage for control wiring from DDC controllers. Damper shall include integral end switch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify roof curbs are installed, and dimensions are as shown on shop drawings.

3.2 INSTALLATION

A. Secure intake/relief hoods with cadmium plated steel lag screws to roof curb structure.

B. Install dampers in roof curb damper tray.

C. Provide hinged curb adapter to permit access to dampers and duct connection.

D. Install safety screen where inlet or outlet is exposed.

3.3 MANUFACTURER'S FIELD SERVICES

A. Furnish services of factory trained representative for minimum of one (1) day to start-up, calibrate controls, and instruct Owner on operation and maintenance.

3.4 CLEANING

A. Vacuum clean inside of fan cabinet.

3.5 DEMONSTRATION

A. Demonstrate fan operation and maintenance procedures.

3.6 PROTECTION OF FINISHED WORK

A. Do not operate until ductwork is clean, bearings are lubricated, and fan has been test run under observation.

END OF SECTION 23 37 23

SECTION 23 51 00 - BREECHINGS, CHIMNEYS, AND STACKS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Category IV Condensing Appliance double wall metal vents.

B. Related Sections:
1. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for hangers and supports for placement by this section.

1.3 REFERENCES

A. Underwriters Laboratories Inc.:
1. UL 103 - Factory-Built Chimneys for Residential Type and Building Heating Appliances.
2. UL 378 - Draft Equipment.
3. UL 441 - Gas Vents.
4. UL 641 - Type L Low-Temperature Venting Systems.
5. UL 959 - Medium Heat Appliance Factory Built Chimneys.

1.4 DESIGN REQUIREMENTS

A. Design refractory lined metal stacks for wind loading of 110 mph.

1.5 SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Flue pipe shall be provided and submitted by boiler sales representative submitting on project. Flue pipe shall not be submitted separately by a third party, sheet metal contractor, mechanical contractor, etc.; no exception. Flue piping shall be submitted concurrently, but separately, at the same time as boilers.

C. Manufacturer shall provide a ¼” = 1’-0” scaled drawing within submittal showing flue pipe routing in plan and elevation views. Drawing of flue routing must be provided with dimensions showing code required distances away from intake hoods, intake louvers, etc. Include dimensions from finished roof to top of flue. Flue gasses discharged must not recirculate back into building by winds or inadequate spacing between any building envelope intakes.

D. Product Data: Submit data indicating factory-built chimneys, including dimensional details of components and flue caps, dimensions and weights, electrical characteristics, and connection requirements.

E. Product Data: Submit data on draft fans and accessories including fan curves with specified operating point plotted, power, RPM, and electrical characteristics and connection requirements.

F. Manufacturer's Installation Instructions: Submit assembly, support details, and connection requirements.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.6 QUALITY ASSURANCE

A. All products furnished under this Section shall conform to the requirements of NFPA-211. Products shall be listed to UL-103 and shall carry the appropriate UL and cUL listing mark or label.

B. Flue pipe shall be provided and submitted by boiler manufacturer submitting on project.

1.7 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Maintain water integrity of roof during and after installation of chimney or vent.

PART 2 - PRODUCTS

2.1 CATEGORY IV CONDENSING APPLIANCE DOUBLE WALL METAL VENTS

A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:

1. Metal-Fab
2. Heat-Fab
3. Simpson Dura-Vent
4. Ampco

B. Fabrication: Inner pipe of sheet AL29-4C and outer pipe of 430 stainless steel, tested in compliance with UL 441.

C. All products furnished under this Section shall conform to the requirements of The National Fuel Gas Code, NFPA-54; and NFPA-211, the Standard for Positive Pressure Condensing Appliances. Products shall be listed to UL-441 and shall carry the appropriate UL or cUL listing mark or label.

D. The vent shall be of the double-wall, factory-built type for use with approved Category IV condensing appliances burning natural or LP gas, which produce flue gases exhausted at temperatures not exceeding 550º F.

E. The vent shall be constructed of an outer wall of 430 stainless steel, .018" thick for sizes 3" to 14" diameter, and .024" thick for sizes 16" to 30"diameter. The inner wall shall be constructed of AL29-4C, .035" thick for sizes 3" to 8" diameter and .048" thick for sizes 10" to 30" diameter. The vent shall include an integral, annular insulating air space, 1/4" thick for sizes 3" to 6" diameter and 1/2" thick for sizes 7" to 30" diameter.

F. Edges of inner and outer walls shall be sealed and joined according to manufacturer installation instructions.

G. All fittings, flashing, storm collar, cap, and appliance adapter required to install the vent shall be included.

H. Vent shall be tested and listed for a minimum clearance to combustibles of 1" for sizes 3" to 24" diameter and 2" for sizes 26" to 30" diameter.

I. Vent shall terminate as required by code.

J. Vent shall be installed in accordance with the vent manufacturer's installation instructions, UL listing and state or local codes.

K. Warranty: Furnish 1-year manufacturer warranty for manufactured units to begin at substantial completion.

L. Accessories, UL labeled:

1. Ventilated Roof Thimble: Consists of roof penetration, vent flashing with spacers and storm collar.

2. Stack Cap: Consists of conical rain shield with inverted cone for partial rain protection with low flow resistance.

3. Exterior pipe and fittings shall be constructed entirely of type 304 stainless steel.

M. Application: Category IV Condensing Gas Appliances.

PART 3 - EXEXCUTION

3.1 PREPARATION

A. Install concrete inserts for support of breeching, chimneys, and stacks in coordination with formwork.

3.2 INSTALLATION - GENERAL

A. Install in accordance with NFPA 54.

B. Install breeching with minimum of joints. Align accurately at connections, with internal surfaces smooth.

C. All double wall gas vents maintain UL listed minimum clearances from combustibles. Assemble pipe and accessories for complete installation.

D. Install vent dampers, locating close to draft hood collar, and secured to breeching.

E. Assemble and install stack sections in accordance with NFPA 82, industry practices, and in compliance with UL listing. Join sections with acid-resistant joint cement. Connect base section to foundation using anchor lugs.

F. Level and plumb chimney and stacks.

G. Clean breeching, chimneys, and stacks during installation, removing dust and debris.

H. Install slip joints allowing removal of appliances without removal or dismantling of breeching, breeching insulation, chimneys, or stacks.

I. Provide the appropriate and/or applicable chimney system continuous from appliances.

3.3 BOILER STACK

A. Installation shall conform to the manufacturer's installation instructions, UL listing and state or local codes.

B. Support system from building structure using rigid structural shapes for attachment of fixed point supports (Plate Support Assembly). Anchor supports to structure by welding to inserts, bolting, steel expansion anchors or concrete inserts. Size of structural shapes shall be in accordance with manufacturer's recommendations.

C. Protect incomplete installations by attaching temporary closures over open ends of sections.

D. Clean all system sections of dust and debris prior to final connection to appliances.

E. Maximum unsupported horizontal spacing shall be nine (9) feet between guides.

F. Maximum unsupported vertical spacing shall be 19 feet between guides.

G. Pipe to be routed to minimize flow resistance.

H. Provide double wall bellows joint between each support and for every three (3) inches of expected expansion.

I. Provide support at roof penetration to support free standing of exhaust above roof and to keep stack centered in ventilated thimble assembly.

J. Provide drain bucket at bottom of vertical stack, piped to nearest floor drain.

K. Provide ventilated thimble and storm collar at roof penetration.

L. Provide flip top fitting at stack termination or engine exhaust.

M. Provide stack cap on boiler stack termination.

END OF SECTION

EQUIPMENT SHALL BID AS AN ALTERNATE

SECTION 23 52 16 - CONDENSING BOILER

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Heating water boiler heat exchanger.
2. Boiler control panel.
3. Hot water boiler trim.
4. Natural gas fired burner.

B. Boiler shall be completely factory assembled and tested on a structural steel base and be ready for water, gas, and electric connections.

C. Boiler and all components shall be CSA certified.

1. ASME Section IV (Heating Boilers)
2. ANSI Z21.13 / CSA 4.9 (Gas Fired Low Pressure Boilers)
3. NFPA 54 (ANSI Z221.3)National Fuel Gas Code
4. ASME CSD-1 (Controls and Safety Devices)

D. Related Sections:

1. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for Vibration Isolators for placement by this section.

2. Section 23 11 23 - Gas Piping: Execution requirements for gas piping connections to boilers specified in this section.

3. Section 23 51 00 - Breechings, Chimneys, and Stacks: Execution requirements for breeching, chimney, and stack connections to boilers specified in this section.

4. Division 26 - Wiring Connections: Execution requirements for electric connections to boilers specified in this section.

1.3 REFERENCES

A. ASME Section IV (Heating Boilers)

B. ANSI Z21.13/CSA 4.9 (Gas Fired Low Pressure Boilers)

C. NFPA 54 (ANSI Z221.3) National Fuel Gas Code

D. ASME CSD-1 (Controls and Safety Devices)

EQUIPMENT SHALL BID AS AN ALTERNATE

1.4 SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Flue pipe as specified per 23 51 00 Breechings, Chimneys, and Stacks, shall be provided, and submitted by boiler sales representative submitting on project. Flue pipe shall not be submitted separately by a third party, sheet metal contractor, mechanical contractor, etc.; no exception. Flue piping shall be submitted concurrently, but separately, at the same time as boilers.

C. Product Data: Submit capacities and accessories included with boiler. Include general layout, dimensions, size and location of water, fuel, electric and vent connections, electrical characteristics, weight, and mounting loads.

D. Test Reports: Indicate boilers meet or exceed specified performance and efficiency. Submit results of combustion test.

E. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

G. Manufacturers Field Reports: Indicate condition of equipment after start-up including control settings and performance chart of control system.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data.

1.6 QUALITY ASSURANCE

A. Conform to ASME Section IV for construction of boilers. Provide boilers registered with National Board of Boiler and Pressure Vessel Inspectors.

B. Gas Train and Safety Controls: Industrial Risk Insurers.

C. Unit Certification: CSA certified.

D. Boilers shall comply with 2012 International Energy Conservation Code.

1.7 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Boilers shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water

migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

1.9 WARRANTY

A. The boiler manufacturer shall provide an entire boiler parts and labor warranty (including circulating pump) for a period of five (5) years. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start dates from shipment or startup will not be accepted.

B. Provide an extended parts warranty for the following:

1. Thermal shock: From years (6) six through (10) ten years from date of substantial completion.

C. In addition to entire parts and labor warranty, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, and any expenses related to service calls required to diagnose and correct warranty issues.

D. The manufacturer shall provide factory certificates for each boiler listing at a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.

E. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor or third party.

1.10 GENERAL

A. Each factory "packaged" boiler shall be complete with all components, accessories, and appurtenances necessary for a complete and operable boiler as hereinafter specified. Each unit shall be furnished factory assembled with required wiring and piping as a self-contained unit. Each unit shall be readily transported and ready for installation.

B. Each factory "packaged" boiler, including pressure vessel, trim, valve trains, burner, control system, and all related components, accessories and appurtenances as herein specified shall all be assembled and furnished by the boiler manufacturer. The boiler manufacturer shall provide unit responsibility for the engineering, coordination, workmanship, performance, warranties, and all field services for each factory "packaged" boiler as specified herein. The boiler manufacturer shall be fully responsible for all components assembled and furnished by him whether or not they are of his own manufacture.

PART 2 – PRODUCTS

2.1 CONDENSING WATER BOILERS

A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:

1. Refer to Specification 01 23 00 Alternates for acceptable manufacturers.

2. All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.

B. Boiler shall be fire-tube condensing type.

C. Each boiler shall be capable of operating continuously at rated capacity while maintaining a CSA certified efficiency of not less than 97 % on 500 MBH input boilers and less and not less than 97% on larger than 500 MBH input boilers. Each boiler shall be capable of operating with a minimum outlet water temperature of 68º F.

D. Boiler shall comply with ASME Section IV for 80 psig, max 200º F (100 psig on 1500 MBH and larger units).

E. Fuel shall be natural gas with an assumed higher heating value of 1,030 Btu/Cu Ft and an assumed specific gravity of 0.60 (relative to air). Natural gas shall be supplied at a pressure of no less than 3.5 in.wc. to the inlet gas valve. Maximum inlet gas pressure shall not exceed 14 in.wc.

2.2 BOILER DESIGN

A. Each hot water boiler shall consist of a stainless-steel or cast-iron primary only heat exchanger complete with trim, valve trains, burner, and boiler control system. The boiler manufacturer shall fully coordinate the boiler as to the interaction of its elements with the burner and the boiler control system in order to provide the required capacities, efficiencies, and performance as specified. Boilers requiring a secondary heat exchanger (economizer) to achieve condensing operation will not be permitted as well as copper-finned heat exchangers.

B. Each boiler heat exchanger shall be stainless-steel or cast iron, counter-flow design for maximum heat transfer with the multiple sections arranged in a reverse return configuration to assure balanced flow through each section.

C. Contractor must, when filling the system, verify that the pH level is maintained between 6.0 and 8.5.

EQUIPMENT SHALL BID AS AN ALTERNATE

D. All boiler pressure parts shall be constructed in accordance with the latest revision of the ASME Boiler and Pressure Vessel Code, Section IV, and shall be so stamped.

E. Boiler heat exchanger headers shall be fabricated steel and be completely removable for inspection. Seals shall be EPDM, rated for 400 deg F service. Push nipples or gaskets between the sections are not permitted.

F. Boiler shall be enclosed with a single wall outer casing. It shall be fabricated from minimum 16-gauge carbon steel. The front and top wall shall be secured in place with ¼ - 20 NC bolts (sheet metal screws are not acceptable). The complete outer casing shall be finished, inside and out, with a powder coat finish. The composite structure of the boiler combustion chamber, insulating air gap and outer casing shall be of such thickness and materials to assure an outer casing temperature of not more than 50^{o}F above ambient temperature when the boiler is operated at full rated load.

G. An observation port shall be located on the boiler to allow for observation of the burner flame.

H. Flue gas outlet shall be located on the rear of the boiler. Boiler to be certified for installation with Category IV venting (stack) as defined in NFPA 54 (ANSI Z221), latest edition. Contractor must provide venting (stack) certified for installation on a Category IV appliance.

2.3 BOILER TRIM

A. Each boiler shall be provided with all necessary trim. Boiler trim shall be as follows:

1. Safety relief valve shall be provided in compliance with the ASME code. Contractor to pipe to acceptable drain.

2. Water pressure-temperature gauge.

3. Primary low water flow fuel cutoff (probe type with manual reset).

4. Manual reset high limit water temperature controller.

5. Operating temperature control to control the sequential operation of the burner.

2.4 BOILER FUEL BURNING SYSTEM

A. The boiler manufacturer shall furnish each boiler with an integral, power type, straight gas, fully automatic fuel burner. The fuel burner shall be an assembly of gas burner, combustion air blower, valve train, and ignition system. The burner manufacturer shall fully coordinate the burner as to the interaction of its elements with the boiler heat exchanger and the boiler control system in order to provide the required capacities, efficiencies, and performance as specified.

B. Each burner shall be provided with an integral gas firing combustion head.

C. Each burner shall provide adequate turbulence and mixing to achieve proper combustion without producing smoke or producing combustibles in the flue gases.

D. Each boiler shall be provided with an integral variable speed power blower to premix combustion air and fuel within the blower. The combustion air blower shall have sufficient

capacity at the rated firing rate to provide air for stoichiometric combustion plus the necessary excess air. Static and total pressure capability shall comply with the requirements of the boiler. The blower shall be a maximum of 900 watts and operate at 6,000 RPM maximum without undue vibration and noise and shall be designed and constructed for exposure to temperatures normal to its location on the boiler. The operating fan speed will be tachometer sensed and be capable of being displayed at the LED display.

E. Each burner shall of the radial-fired (down-fired) type and constructed of steel with a stainless-steel inner and stainless-steel mesh outer screen.

F. Each boiler shall be provided with a “Full Modulating” firing control system whereby the firing rate is infinitely proportional at any firing rate between 20% and 100% as determined by the pulse width modulation input control signal. Both fuel input and air input must be sequenced in unison to the appropriate firing rate without the use of mechanical linkage.

G. The Microprocessor shall use a Proportional Integral Algorithm to determine the firing rate. The control must have the following capabilities:

1. Maintain single set point.

2. Reset the set point based on outdoor air temperature.

3. Boiler shutdown based on outdoor air temperature.

4. Internal dual set point program with an external switchover. (e.g. - night setback w/external clock, supplied by others)

5. Alarm relay for any manual reset alarm function.

6. Programmable Low Fire Delay to prevent short cycling based on a time and temperature factor for release to modulation.

7. LED Display showing current supply and return temperatures, current set points as well as differential set points. It must also display any fault codes whether automatically reset or manually reset.

8. Local Manual Operation.

9. Remote Control System (Building Management / Sequencer Control) - The boiler control shall be capable of accepting a 0 -10vdc remote external analog signal to control the firing rate.

10. Computer (PC) interface for programming and monitoring all functions.

2.5 MAIN GAS VALVE TRAIN

A. Each boiler shall be provided with an integral main gas valve train. The main gas valve trains shall be factory assembled, piped, and wired. Each gas valve train shall include at least the following:

EQUIPMENT SHALL BID AS AN ALTERNATE

1. Two (2) safety shutoff valves. Valves equipped with dual solenoids that can independently energized for leak testing.
2. Air – Gas ratio control (maximum inlet pressure 14 in.wc.)
3. One (1) low gas pressure switch (manual reset).
4. One (1) high gas pressure switch (manual reset).
5. Two (2) pressure test ports.

2.6 IGNITION SYSTEM

A. Each boiler shall be equipped for direct spark ignition.

2.7 COMBUSTION AIR CONTROL

A. Each boiler shall be provided with an integral combustion air control system. The combustion air system shall be factory assembled. Each combustion air control system shall include at least the following:

1. The primary control shall vary the speed of the blower based on load demand. The blower shall apply a varying negative pressure on the gas valve which will open or close to maintain zero pressure at the valve orifice, thereby increasing or decreasing the firing rate. Both the air and gas shall be premixed in the blower.

2. One (1) low airflow differential pressure switch to ensure that combustion air is supplied.

3. High exhaust back pressure switch

2.8 BURNER CONTROL SYSTEM

A. The control system shall be supplied with a 24 VAC transformer (120 VAC, single phase, 60 hertz primary). The 120/1/60 power supply to each boiler shall be protected by a 15 Amp circuit breaker located in the MCC (supplied by contractor).

B. The boiler shall include an electric spark ignition system. Main flame shall be monitored and controlled by flame rod (rectification) system.

C. Each boiler shall be provided with all necessary controls, all necessary programming sequences, and all safety interlocks. Each boiler control system shall be properly interlocked with all safeties.

D. Each boiler control system shall provide timed sequence pre-ignition air purge of boiler combustion chamber. The combustion airflow sensor shall monitor and prove the airflow purge.

2.9 BURNER CONTROL PANEL

A. The boiler manufacturer shall provide each boiler with an integral factory prewired control panel. The control panel shall contain at least the following components, all prewired to a numbered terminal strip:

1. One (1) burner "on-off" switch.

2. One (1) electronic combination temperature control, flame safeguard and system control.

EQUIPMENT SHALL BID AS AN ALTERNATE

3. Control circuit breaker, 5 amp

4. All necessary control switches, pushbuttons, relays, timers, terminal strips, etc.

5. LED Display Panel to adjust set points and control operating parameters. LED display to indicate burner sequence, all service codes (0-65), fan speed, boiler set point, and sensor values such as inlet, outlet, flue gas and outdoor air.

2.10 BUILDING AUTOMATION SYSTEM INTERFACE:

A. Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.

1. A BACnet communication interface card with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. Control features available, and monitoring points displayed locally at boiler control panel shall be available through building automation system.

2.11 FACTORY TESTING – HYDROSTATIC

A. Each factory "packaged" boiler shall be hydrostatically tested and bear the ASME “H” stamp.

2.12 FACTORY TESTING – FIRE TESTING

A. Each factory "packaged" boiler shall be fire tested. The boiler manufacturer shall perform this fire test under simulated operating conditions, with the boiler attached to a working chimney system and with water circulating through the boiler. The manufacturer shall provide a fire test report, including fuel and air settings and combustion test results permanently affixed to the boiler.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install boilers plumb and level, to plus or minus 1/16 inch over boiler base. Stacking of boilers is unacceptable.

B. Maintain manufacturers recommended and code minimum clearances around and over boilers.

C. Install boiler on concrete housekeeping pad, minimum four (4) inches high and six (6) inches larger than boiler base on each side. Refer to Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment.

D. Install boiler on vibration isolators in accordance with Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.

E. Connect natural gas piping in accordance with NFPA 54.

F. Connect natural gas piping to boiler, full size of boiler gas train inlet. Arrange piping with clearances and unions for burner removal and service.

EQUIPMENT SHALL BID AS AN ALTERNATE

G. Connect hot water piping to supply and return boiler connections.

H. Install the following piping accessories. Refer to Section 23 05 19 - Meters and Gages for HVAC Piping.

1. On supply:

a. Thermometer well for temperature controller.
b. Thermometer well and thermometer.
c. Well for control system temperature sensor.
d. Strainer.
e. Nipple and flow switch.
f. Pressure gage.
g. Shutoff valve.

2. On return:

a. Thermometer well and thermometer.
b. Well for control system temperature sensor.
c. Pressure gage.
d. Shutoff valve.
e. Balancing valve.

I. Install the following piping accessories on natural gas piping connections. Refer to Section 23 11 23 - Gas Piping.

1. Strainer.
2. Pressure gage.
3. Shutoff valve.
4. Check valve.
5. Pressure reducing valve.
6. Unions.

J. Install discharge piping from relief valves and drain valves to nearest floor drain.

K. Install boiler trim and accessories furnished loose for field mounting.

L. Install electrical devices furnished loose for field mounting.

M. Install control wiring between boiler control panel and field mounted control devices.

N. Connect flue to boiler outlet, full size of outlet.

O. Route each gas trim vent, separately, to the outdoors. Vent lines sizes shall be a minimum the equivalent size pipe connection. Provide union at each device to facilitate change-out and in the vertical to allow the burner door to swing open. Terminate vents a sufficient distance from air intakes, turn down and provide insect screen.

P. Contractor must, when filling the system, verify that the pH level is maintained between 6.0 and 8.5.

EQUIPMENT SHALL BID AS AN ALTERNATE

3.2 FIELD QUALITY CONTROL

A. Perform combustion test including boiler firing rate, over fire draft, gas flow rate, heat input, burner manifold gas pressure, percent carbon monoxide, percent NOx, percent oxygen, percent excess air, flue gas temperature at outlet, ambient temperature, net stack temperature, percent stack loss, percent combustion efficiency, and heat output. Perform test at minimum, mid-range, and high fire.

B. Arrange with local authorities having jurisdiction for inspection of boiler, piping, and for certificate of operation. Provide written certification from boiler manufacturer that installation is in compliance with manufacturer's written instructions.

C. Prior to boiler startup, Contractor to inform Owner to have boiler inspector inspect installation for proper installation and submit for State Operating Certificate.

3.3 BOILER INSPECTION REQUIREMENTS

A. All new boilers, regardless of new construction or renovation of existing systems, are required to receive inspection by a state boiler inspector or their assigned agent prior to any boiler being energized, no exceptions. A boiler requiring inspection is generally defined by the following characteristics.

1. Heat input exceeds 200,000 Btuh.
2. Nominal water-containing capacity exceeds 120 gallons.

B. As per Boiler Safety Administration Rules, 65.20, The Owner or operator are the only persons that can submit a request for inspection of a boiler by the state or their agent. The inspection agent has at least 30 days to schedule an inspection date with the Owner. During an emergency situation where a boiler is replaced due to mechanical failure of an existing boiler, the agent may grant approval to the Owner to allow startup before inspection but that is at the agent’s discretion.

C. The installing contractor is required to submit the following documents to the Owner before the Owner can submit for state inspection.

1. Contractor shall complete the attached Boiler Inspection Installation Report and notify the district HVAC department personnel in charge of maintaining all inspection certification documentation for the district.

2. Contractor shall submit all manufacturer’s cut sheets and product information on boiler being inspected.

3. Hydrostatic test results on boiler being inspected.

4. Contractor shall submit this information to the Owner in a timely manner so the inspection can be scheduled and performed prior to project completion.

D. As per the Health and Safety Code, Chapter 755, September 1, 2003.

1. Nuclear, high pressure or steam boilers must receive an annual certificate of inspection and an annual external inspection if they meet these characteristics.

a. Pressures exceeding 160 psi.
b. Temperatures exceeding 250 degrees Fahrenheit

EQUIPMENT SHALL BID AS AN ALTERNATE

2. Steam heating boilers and hot water heating boilers shall be inspected biennially (every two years) if they meet these characteristics:

   a. Pressures not exceeding 160 psi.
   b. Heat input exceeds 200,000 Btuh.
   c. Water temperature greater than 210 F but not greater than 250 degrees Fahrenheit
   d. Nominal water-containing capacity exceeds 120 gallons.

3. Hot water supply boilers shall be inspected triennially (every three years) if they meet these characteristics:

   a. Pressures not exceeding 160 psi.
   b. Heat input exceeds 200,000 Btuh.
   c. Water temperature not exceeding 210 degrees Fahrenheit; or Nominal water-containing capacity exceeds 120 gallons.

E. Inspection Responsibilities

1. Preparing the boiler for inspection is listed in the Boiler Safety Administrative Rules, Section 65.70.

   a. Water shall be drawn off and the boiler thoroughly washed.

   b. All manhole and hand hole plates, washout plugs, and plugs in the water column connections shall be removed as necessary for complete inspection. The furnace and combustion chambers shall be thoroughly cooled and cleaned.

   c. All grates and internally fired boilers shall be removed.

   d. Brickwork shall be removed as required by the inspector in order to determine the condition of the boiler, headers, furnace, supports or other parts.

   e. The pressure gage shall be removed for cleaning of the siphon and testing, if necessary.

   f. The low water cutoff device shall be dismantled, cleaned, and prepared for inspection.

   g. Before removing the manhole or hand hole covers and entering any part of the boiler connected to a common header with other boilers any leakage of steam or hot water shall be eliminated. The non-return and stop valves must be closed, tagged, and preferably padlocked, and drain valves between the two valves opened. The feed water valves must be closed, tagged, and preferably padlocked. After draining the boiler, the blowdown valves shall be closed and preferably padlocked. Blowdown lines, where practicable, shall be disconnected between pressure parts and valves. All vent and drain lines shall be opened.

   h. If the boiler is jacketed so that the seams of shells, drums or domes cannot be seen, enough of the jacketing, setting wall, or other form of casing or housing shall be removed to permit inspection to determine the

safety of the boiler, provided such information cannot be determined by other means.

2. For initial boiler inspection after installation:

   a. Once an inspection date has been established between the inspector and Owner, the boiler manufacturer's representative shall be available on-site for boiler inspection.

   b. The manufacturer's representative shall make the boiler available for inspection as per procedures listed above or tests as required by the inspector.

   c. The manufacturer's representative will be responsible to re-assemble boiler back to its original state and then schedule a startup test with the installing contractor and Owner. All product warranties shall begin once startup has been completed and unit is available for use as designed.

3. For annual boiler inspection:

   a. Once an inspection date has been established between the inspector and Owner, the Owner or their assigned contractor shall be available on-site for boiler inspection.

   b. The Owner or their assigned contractor shall make the boiler available for inspection as per procedures listed above or tests as required by the inspector.

   c. The Owner or their assigned contractor will be responsible to re-assemble boiler back to its original state and place the boiler in good working condition.

3.4 MANUFACTURER'S FIELD SERVICES

A. Start-up boilers according to manufacturer's start-up instructions and in presence of boiler manufacturer's representative and Owner's representative. Test controls and demonstrate compliance with requirements. Adjust burner for maximum burning efficiency. Replace damaged or malfunctioning controls and equipment.

3.5 CLEANING

A. Flush and clean boilers upon completion of installation, in accordance with manufacturer's start-up instructions.

3.6 DEMONSTRATION

A. Demonstrate operation and maintenance procedures.

B. Furnish services for manufacturer's technical representative for one (1) 8-hour day to instruct Owner's personnel in operation and maintenance of boilers. Schedule training with Owner, provide at least seven (7) days notice to Architect/Engineer of training date.

EQUIPMENT SHALL BID AS AN ALTERNATE

END OF SECTION 23 52 16

SECTION 23 55 33.16 - GAS-FIRED UNIT HEATERS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes gas-fired unit heaters.
B. Related Sections:

1. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for Vibration Isolators for placement by this section.

2. Section 23 11 23 - Gas Piping: Execution requirements for gas piping connections to boilers specified in this section.

3. Section 23 51 00 - Breechings, Chimneys, and Stacks: Execution requirements for breeching, chimney, and stack connections to boilers specified in this section.

4. Division 26 - Wiring Connections: Execution requirements for electric connections to boilers specified in this section.

1.3 ACTION SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Product Data: For each type of gas-fired duct heater indicated. Include rated capacities, operating characteristics, and accessories.

C. Shop Drawings: Include plans, elevations, sections, and details.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

2. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Warranty: Special warranty specified in this Section.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For gas-fired duct heaters to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.7 WARRANTY

A. Furnish a five (5) year manufacturer warranty. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start-up will not be acceptable.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Gas-fired unit heaters shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

1.9 EXTRA MATERIALS

A. Furnish two (2) throwaway filters for each unit.

PART 2 - PRODUCTS

2.1 GAS FIRED UNIT HEATERS

A. Manufacturers: Subject to compliance with scheduled efficiencies, capacities, and specification, provide products by the following manufacturers.

1. Reznor
2. Modine
3. Detroit Radiant Products Co. / Re-Verber-Ray Infrared
4. Sterling

B. Self-contained, packaged, factory assembled, pre-wired unit consisting of cabinet, supply fan, heat exchanger, burner, controls, and accessories:

1. Heating fuel: Natural gas fired.

2. Discharge Louvers: Individually adjustable horizontal louvers to match cabinet finish.

3. Downturn Nozzle: [30] [60] degree nozzle to match outlet and cabinet finish.

4. Gas Control: Two stage.

5. Ignition System: Electric direct ignition.

6. Control Voltage: 24-volt, 60 hertz.

\

7. Location: Suspended overhead.

C. Cabinet: 20-gauge galvanized steel, easily removed and secured access panels, insulated or double panel construction.

D. Supply Fan: Propeller type with direct drive.

E. Heat Exchanger: 20-gauge aluminized steel tubes with 18-gauge aluminized steel headers.

F. Gas Burner: Power-vented with non-corrosive air blower with permanently lubricated motor.

G. Gas Burner Safety Controls:

1. Thermocouple sensor: Prevents opening of gas valve until pilot flame is proven and stops gas flow on ignition failure.

2. Flame rollout switch: Installed on burner box and prevents operation.

3. Vent safety shutoff sensor: Temperature sensor installed on draft hood and prevents operation, manual reset.

4. Limit Control: Fixed stop at maximum permissible setting de-energizes burner on excessive bonnet temperature, automatic reset.

H. Controls:

1. Room Thermostat: Adjustable, low voltage, to control heater stages in sequence with delay between stages, and supply fan to maintain temperature setting. Include system selector switch (heat-off-cool) and fan control switch (auto-on).

2. Supply Fan Control: Energize either from discharge temperature independent of burner controls or with timed off delay and timed on delay. Furnish manual switch for continuous fan operation. Provide continuous low speed fan operation.

I. Performance:

1. Thermal efficiency rating at maximum and minimum rated capacity in accordance with ANSI Z83.8 and ASHRAE 90.1 and International Energy Conservation Code.

2. Provide equipment as scheduled on Drawings.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Install and connect gas-fired unit heaters and associated fuel and vent features and systems according to NFPA 54, applicable local codes and regulations, and manufacturer's written installation instructions.

B. Suspended Units: Suspend from substrate using chain hanger kits and building attachments.

1. Spring hangers are specified in Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment" and Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

C. Maintain manufacturers' recommended clearances to combustibles.

3.2 CONNECTIONS

A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems.

B. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

C. Install piping adjacent to gas-fired duct heaters to allow service and maintenance.

D. Connect natural gas piping in accordance with NFPA 54.

E. Connect natural gas piping to unit, full size of unit gas train inlet. Arrange piping with clearances for burner service.

F. Install the following piping accessories on natural gas piping connections. Refer to Section 23 11 23 - Gas Piping.

1. Strainer.
2. Pressure gage.
3. Shutoff valve.
4. Pressure reducing valve.

G. Vent Connections: Comply with Section 23 51 00 "Breechings, Chimneys, and Stacks."

H. Electrical Connections: Comply with applicable requirements in electrical Sections.

1. Install electrical devices furnished with heaters but not specified to be factory mounted.

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

B. Perform tests and inspections and prepare test reports.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

   1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

   2. Verify bearing lubrication.

   3. Verify proper motor rotation.

   4. Test Reports: Prepare a written report to record the following:

      a) Test procedures used.
      b) Test results that comply with requirements.
      c) Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

D. Remove and replace malfunctioning units and retest as specified above.

3.4 ADJUSTING

A. Adjust initial temperature set points.

B. Adjust burner and other unit components for optimum heating performance and efficiency.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain gas-fired radiant heaters.

END OF SECTION 23 55 33.16

SECTION 23 63 13 - AIR-COOLED REFRIGERANT CONDENSERS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes refrigerant condenser package, charge of refrigerant and oil, controls and control connections, refrigerant piping and connections, motor starters, electrical power connections.

B. Related Sections:

1. Section 23 05 48 – Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolation for placement by this section.

2. Section 23 00 - Refrigerant Piping: Execution requirements for connection to refrigerant piping specified by this section.

1.3 PERFORMANCE REQUIREMENTS

A. Performance Ratings: Energy Efficiency Rating (EER) and Coefficient of Performance (COP) not less than prescribed by ASHRAE 90.1 when used in combination with compressors and evaporator coils.

1.4 ACTION SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Provide line-by-line equipment schedule note review annotated to certify compliance or deviation.

C. Product Data: For each air-cooled refrigerant condenser. Include rated capacities, operating characteristics, furnished specialties, and accessories. Include equipment dimensions, weights, and structural loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Shop Drawings: For air-cooled refrigerant condensers. Include plans, elevations, sections, details, and attachments to other work.

a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

b. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Structural members to which air-cooled refrigerant condensers will be attached.
2. Liquid and vapor pipe sizes.
3. Refrigerant specialties.
4. Piping including connections, oil traps, and double risers.
5. Evaporators.

B. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For air-cooled refrigerant condensers to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Fabricate and label refrigeration system according to ASHRAE 15, "Safety Standard for Refrigeration Systems."

C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.8 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

C. Coordinate location of refrigerant piping and electrical rough-ins.

1.9 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience approved by manufacturer.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Equipment shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer’s protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic

materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

F. Protect units from physical damage. Leave factory covers in place until startup of machine.

1.11 WARRANTY

A. The manufacturer shall provide a full machine parts, labor, and refrigerant warranty for a period of one (1) year. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start date from shipment or start up will not be acceptable.

B. Provide an extended four (4) year FULL machine parts, labor, and refrigerant warranty for Air Cooled Condensing Units. All Air-Cooled Condensing Unit components to be included such as but not limited to refrigerant, compressors, fans, condenser coils, motors, and controller. In the event of failure, the manufacturer shall provide a new motor, compressor, fan, controller, etc. Local or field rebuilt motors, compressors, drive controllers etc. are not acceptable.

C. In addition to full machine parts, labor and refrigerant, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, refrigerant, oils, lubricants, belts, filters, insulation, and any expenses related to service calls required to diagnose and correct warranty issues.

D. The manufacturer shall provide factory certificates for each condensing unit listing as a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.

E. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.

PART 2 - PRODUCTS

2.1 AIR-COOLED REFRIGERANT CONDENSERS

A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:

1. Refer to Specification 01 23 00 Alternates for acceptable manufacturers.

2. All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.

B. Product Description:

1. Self-contained packaged, factory assembled, pre-wired unit, suitable for outdoor use consisting of casing, condensing coil and fans, compressors, and controls. Each unit shall consist of hermetic scroll compressor air-cooled condenser section.

2. Construction and Ratings: In accordance with ARI 210/240. Testing in accordance with ASHRAE 20.

3. Air-Cooled Refrigerant Condensing units shall be the same manufacturer as associated Air Handling Unit or Fan Coil Unit. Mismatched equipment is not acceptable.

2.2 UNIT IDENTIFACTION REQUIREMENTS

A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:

- Unit identification as indicated within Contract Documents.
- Serial Number.
- Model Number.
- Nominal tonnage.
- Motor Horsepower.
- Unit Power Supply: Volts / PH / Amps; MCA / MOCP
- Refrigerant type.
- Sales Order #.
- Date of unit manufactured.

2.3 HOUSING

A. House components in welded steel frame with galvanized steel panels with weather resistant, baked enamel finish.

B. Mount starters, disconnects, and controls in weatherproof panel with full opening access doors. Furnish mechanical interlock to disconnect power when door is opened.

C. Furnish removable access doors or panels with quick fasteners. Units over 25 tons shall be provided with piano hinges and quick fasteners.

D. Furnish welded steel floor mounting stand and duct collars at coil inlet and fan outlet.

2.4 CONDENSER COILS

A. Aluminum Microchannel in galvanized steel casing with equalizing-type vertical distributor.

B. Compressors:

1. Scroll type, hermetically sealed.
2. Minimum of 2 compressors.

3. Refrigerant shall be R-32 or R-454b.
4. All scroll compressors shall include Internal Pressure Relief as standard.
5. For each compressor provide starter, non recycling compressor overload, starter relay, and control power transformer or terminal for control power. Provide manual reset current overload protection.

C. Provide variable speed or digital scroll compressors on lead circuit to allow compressors to operate at low load conditions.

D. Unit shall be able to operate down to 10 degrees Fahrenheit ambient temperature as standard.

E. Coil Guard: louvered with lint screens.

F. Configuration: Two refrigeration circuits each with receiver.

2.5 REFRIGERANT CIRCUIT

A. Single Compressor: One refrigerant circuit with single compressor.

B. Multiple compressors: Provide with multiple refrigerant circuits. Minimum of two (2) circuits.

C. Furnish for each refrigerant circuit:

1. Liquid line solenoid valve.
2. Filter dryer (replaceable core type without refrigerant loss or removal).
3. Liquid line sight glass and moisture indicator.
4. Electronic expansion valve.
5. Charging valve.
6. Insulated suction line.
7. Discharge line check valve.
8. Compressor discharge service valve.
9. Condenser Pressure relief valve.
10. Suction and liquid line service valves.

2.6 FANS AND MOTORS

A. Vertical discharge direct driven propeller type condenser fans with fan guard on discharge, equipped with roller or ball bearings with grease fittings extended to outside of casing.

B. Weatherproof motors suitable for outdoor use, single phase permanent split capacitor or 3 phase, with permanent lubricated ball bearings and built-in current and thermal overload protection.

2.7 CONTROLS

A. Factory wired and mounted control panel, NEMA 3R, containing fan motor starters, fan cycling thermostats, head pressure controls, compressor interlock and control transformer.

B. Furnish controls to permit operation down to 10 degrees Fahrenheit ambient temperature.

C. Furnish thermostat to cycle fan motors in response to outdoor temperature.

D. Furnish head pressure switch to cycle fan motors in response to refrigerant condensing pressure.

E. Furnish solid state control to vary speed of one condenser fan motor in response to refrigerant condensing pressure.

F. Furnish electronic low ambient control consisting of mixing damper assembly, controlled to maintain constant refrigerant condensing pressure.

G. Furnish following safety controls arranged so that operating anyone will shut down machine:

1. High discharge pressure switch (manual reset).
2. Low suction pressure switch (automatic reset).
3. Oil pressure switch (manual reset).
4. Provide a timed off cycle.

2.8 CONDENSING UNIT PERFORMANCE

A. Provide equipment with capacity as scheduled on Drawings.

2.9 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Electrical Characteristics: Provide equipment with electrical characteristics as shown on Electrical Drawings.

B. Disconnect Switch: Coordinate with Division 26, Electrical.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with ASHRAE 15.

B. Install units level and plumb, firmly anchored in locations indicated; maintain manufacturer's recommended clearances.

C. Install refrigerant piping from unit to condensing unit. Install refrigerant specialties specified in Section 23 23 00 - Refrigerant Piping.

D. Install connection to electrical power wiring in accordance with Division 26.

3.2 INTERFACE WITH OTHER PRODUCTS

A. Install units on vibration isolators on 4” tall concrete housekeeping pad. Refer to 23 05 29 Hangers and Supports for HVAC Piping and Equipment and 23 05 48 Vibration and Seismic Controls for HVAC Piping and Equipment.

3.3 MANUFACTURER’S FIELD SERVICES

A. Furnish cooling season start-up and winter season shutdown service, for first year of operation. If initial start-up and testing takes place in winter and machines are to remain inoperative. Repeat start-up and testing operation at beginning of first cooling season.

3.4 DEMONSTRATION AND TRAINING

A. Demonstrate starting, maintenance, and operation of unit.

B. Demonstrate low ambient operation during winter testing or service specified above.

END OF SECTION 23 63 13

EQUIPMENT SHALL BID AS AN ALTERNATE

SECTION 23 64 27 - ROTARY-SCREW WATER CHILLERS AIR-COOLED

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Provide a complete operational Rotary-Screw Water Chiller.

B. Related Sections:

1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

2. Section 23 90 00 "Refrigerant Detection Monitoring System" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.

3. Section 23 05 48 Vibration and Seismic Controls for HVAC Piping and Equipment - Product requirements for Vibration Isolators for placement by this section.

4. Section 23 05 19 Meters and Gages for HVAC Piping: Product requirements for piping specialties for placement by this section.

1.3 DEFINITIONS

A. BAS: Building automation system.

B. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.

C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.

D. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and referenced to ARI standard rating conditions.

E. kW/Ton (kW/kW): The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons (kW) at any given set of rating conditions.

F. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and intended for operating conditions other than the ARI standard rating conditions.

EQUIPMENT SHALL BID AS AN ALTERNATE

1.4 REFERENCES

A. Air-Conditioning and Refrigeration Institute:

1. ARI 550/590 - Water Chilling Packages Using the Vapor Compression Cycle.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 15 - Safety Code for Mechanical Refrigeration.

2. ASHRAE 90.1 - Energy Efficient Design of New Buildings Except Low-Rise Residential Buildings.

D. Underwriters Laboratories Inc.:

1. UL 1995 - Heating and Cooling Equipment.

1.5 ACTION SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.

C. Shop Drawings: Indicate components, assembly, dimensions, weights, and loads, required clearances, and location and size of field connections. Indicate equipment, piping and connections, valves, strainers, and thermostatic valves required for complete system.

D. Product Data: Submit rated capacities, specialties and accessories, electrical requirements, and wiring diagrams.

E. Design Data: Indicate energy input versus cooling load output from 25 to 100 percent of full load at specified and minimum condenser water temperature.

F. Test Reports: Indicate results of factory performance test.

G. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.

H. Manufacturer's Certificate: Certify products meet or exceed specified requirements including components not produced by manufacturer.

I. Manufacturer’s Field Reports: Submit start-up report for each unit. Indicate results of leak test and refrigerant pressure test.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

EQUIPMENT SHALL BID AS AN ALTERNATE

1. Structural supports.

2. Piping roughing-in requirements.

3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.

4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.

B. Certificates: For certification required in "Quality Assurance" Article.

C. Source quality-control reports.

D. Startup service reports.

E. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit start-up instructions, maintenance data, parts lists, controls, and accessories. Include trouble- shooting guide.

1.8 QUALITY ASSURANCE

A. ARI Certification: Certify chiller according to ARI 550 certification program.

B. ARI Rating: Rate chiller performance according to requirements in ARI 550/590.

C. ASHRAE Compliance:

1. ASHRAE 15 for safety code for mechanical refrigeration.

2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.

D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

E. ASME Compliance: Fabricate and label chillers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1[, as applicable to chiller design]. For chillers charged with R-134a refrigerant, include an ASME U-stamp and nameplate certifying compliance.

F. Comply with NFPA 70.

G. Comply with requirements of UL and UL Canada and include label by a qualified testing agency showing compliance.

1.9 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.

B. If chiller is mounted on structural-steel support structure coordinate sizes, locations, and anchoring attachments of structural-steel support structures.

1.10 WARRANTY

A. The chiller manufacturer shall provide a full machine parts, labor, and refrigerant warranty for a period of one (1) year. Warranty shall begin from date of Certificate of Substantial Completion. Provide manufacturer's warranty certificates as described below. Warranty start dates from shipment or startup will not be accepted.

B. Provide an extended four (4) year FULL machine parts, labor, and refrigerant warranty for chillers. All chiller components to be included such as but not limited to refrigerant, compressors, motors, starters, variable frequency drives, condenser coils, evaporator coils, fans, controls, and gear assemblies (as applicable) etc. In the event of failure, the chiller manufacturer shall provide a new motor, compressor, drive assembly, etc. Local or field rebuilt motors, compressors, drive assemblies etc. are not acceptable.

C. In addition to full machine parts, labor and refrigerant, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, refrigerant, oils, lubricants, belts, filters, insulation, and any expenses related to service calls required to diagnose and correct warranty issues.

D. All components replaced through the warranty process shall be new and not used or re-built.

E. The manufacturer shall provide factory certificates for each chiller listing as a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.

F. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.

G. Provide quarterly inspections, four (4) per year, by factory direct technician. Provide the owner a minimum of one week's notice prior to inspection.

1.11 PREVENTATIVE MAINTENANCE SERVICE

A. Furnish service and maintenance of chillers for period of five (5) years from Date of Substantial Completion. Preventative Maintenance start dates from shipment or startup will not be accepted.

B. Include, on a quarterly basis, systematic examination, required adjustments, lubrication of unit and controls calibration. Repair or replace parts in accordance with manufacturer's operating and maintenance data. Use new parts produced by manufacturer of original equipment.

C. Perform work without removing units from service during building normal occupied hours. Off-line chiller work must be coordinated with Owner.

D. At no additional cost to owner provide emergency call back service at all hours during this maintenance period.

EQUIPMENT SHALL BID AS AN ALTERNATE

E. Maintain locally adequate stock of parts for replacement or emergency purposes. Have personnel available to ensure fulfillment of this maintenance service, without unreasonable loss of time.

F. All maintenance work shall be performed by factory direct service technician. Maintenance work shall not be performed by installing mechanical contractor.

G. Do not assign or transfer maintenance service to agent or subcontractor.

H. Provide 3 quarterly unit inspections per year.

I. Provide 1 annual unit inspection per year to include:

1. Provide oil analysis at year 1 and at year 4.

2. Condenser coil brushing each year (five total).

3. Provide evaporator tube eddy current testing at year 3.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Chillers shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer’s protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer’s original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

F. Protect units from physical damage. Leave factory covers in place until startup of machine.

EQUIPMENT SHALL BID AS AN ALTERNATE

PART 2 – PRODUCTS

2.1 ROTARY-SCREW WATER CHILLERS AIR-COOLED

A. Acceptable Manufacturers: Subject to compliance with specification and mechanical drawing requirements, provide products by one of the following:

1. Refer to Specification 01 23 00 Alternates for acceptable manufacturers.

2. All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.

B. Product Description: Factory assembled and tested, packaged air-cooled liquid chiller consisting of semi-hermetic rotary screw or hermetic scroll compressors, suction gas-cooled compressor motor, condenser coils, evaporator, refrigeration accessories and control cabinet with single point power connection.

2.2 UNIT IDENTIFACTION REQUIREMENTS

A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:

- Unit identification as indicated within Contract Documents.
- Serial Number.
- Model Number.
- Capacity (tonnage).
- Entering and leaving water temperature.
- Flow rate (GPM).
- Unit Power Supply: Volts / PH / Amps; MCA / MOCP
- Refrigerant type.
- Sales Order #.
- Date of unit manufactured.

2.3 SPECIAL PROJECT REQUIREMENTS

A. Manufacturer shall provide to the owner diagnostic software and associated licensing for 5 users. Software and licensing shall be valid for no less than 5 years from substantial completion.

2.4 COMPRESSORS

A. Rotary Screw Compressor:

1. Semi-hermetic rotary screw compressor with capacity control slide valve, rolling element bearings and differential refrigerant pressure oil pump and oil heater.

2. Direct drive, constant speed, suction gas-cooled, semi- hermetic motor.

3. Crankcase heater shall energize when compressor is not running.

4. Refrigerant used shall be **R-513A**.

5. Each compressor shall have an isolated refrigerant circuit piped such that burnout of one compressor shall not damage the other compressor(s). Compressors shall not be piped in parallel arrangement into one refrigerant circuit.

B. Lube oil system shall include filtration devices with proper valves for removal of filter without removal of refrigerant charge.

C. Ultra Low Sound Compressor Control: Chiller manufacturer shall provide the following attenuation package and meet scheduled maximum A-weighted sound pressure level rating of 70dBA at 30' from the condenser coil side of chiller per AHRI. Complete sound attenuation package shall be provided regardless of if scheduled dBA is met without.

1. Acceptable sound attenuation package manufacturer: BRD-Noise and Vibration Control Inc. (Factory attenuation packages only are not acceptable)

2. Complete Ultra-low sound package shall be manufactured by BRD – Noise and Vibration Control, Inc., Hushcore™ Product line, no exceptions.

Contact: Kristopher Gonzalez – (610) 881-4490

3. Provide ultra-low sound blanket on a minimum of 100% coverage of each compressor, suction line, discharge line and oil separator: no exceptions.

4. Removable Sound Covers shall be constructed with a Silicone-fiberglass cloth outer jacket, a loaded vinyl barrier septum, fiberglass needle mat (11 lbs./ft.^{3} density), and a Silicone-fiberglass cloth inner jacket. The covers shall be connected together by means of a cloth straps with "D" rings and Velcro™ fasteners. The inner and outer jackets shall protect against UV rays, oil, and water. Finished Surface Mass – 3 lbs. per sq. ft., to cover compressors and extended components for the specified chiller. Stainless steel wire tie fastening assemblies are not acceptable.

5. Provide detailed ultra-low sound acoustical data with submittal, no exceptions. Data shall include sound pressure rating across each octave band and A-weighted average for chiller as built with attenuation package.

2.5 EVAPORATOR VESSEL

A. Shell and tube type, seamless or welded steel construction with cast iron or fabricated steel, heads, seamless copper tubes or red brass tubes with integral fins, rolled or silver brazed into tube sheets. Furnish multiple refrigerant circuits on multiple compressor units. Include a minimum of two (2) circuits.

B. Design, test, and stamp refrigerant side for 220 psig working pressure and water side for 300 psig working pressure, in accordance with ASME Section VIII.

C. Furnish water boxes, with tapped drain and vent connections with flanged or mechanical joint connections arranged to permit inspection of tubes from either end without disturbing refrigerant.

D. Furnish refrigerant chambers with baffles to distribute entering liquid and separate liquid from leaving gas.

EQUIPMENT SHALL BID AS AN ALTERNATE

E. Insulate with 0.75-inch minimum thick, closed cell foam, vapor barrier insulation with a maximum K factor of 0.26. This insulation shall have a 3mm thick PE embossed film to provide additional damage resistance as well as be UV resistant. Provide electric resistance immersion heater with thermostat to protect evaporator from freezing down to -20º F. ambient. This heater shall be field powered separate from main unit power by the 120V control circuit connection.

F. Furnish water drain connection and thermometer wells for temperature controller and low temperature cutout.

2.6 CONDENSER COILS, FANS AND MOTORS

A. **Alternate Bid Coils**: Coils shall be microchannel and shall have a series of flat tubes containing a series of multiple, parallel flow microchannels layered between the refrigerant manifolds. Coils shall consist of a two-pass arrangement. Coil construction shall consist of aluminum alloys for fins, tubes, and manifolds in combination with a corrosion resistant coating. Tubes shall be cleaned, dehydrated, and sealed. 3. Assembled condenser coils shall be pressure tested at the coil factory at 660 psig and subsequently shall be leak tested at 145 psig ±5 psig and pressure tested at 350 psig at final unit assembly.

B. **Alternate Bid Coils**: Aluminum Fins mechanically bonded to seamless copper tubing. Furnish sub-cooling circuits as applicable. Air test under water to 425 psig, and vacuum dehydrate. Seal with holding charge of nitrogen or refrigerant.

C. If microchannel condenser coils are utilized the coils shall be provided with factory e-coating.

1. E-coated aluminum microchannel coil shall have a flexible epoxy polymer coating uniformly applied to all coil external surface areas without material bridging between fins or louvers. The coating process shall ensure complete coil encapsulation, including all exposed fin edges. E-coat shall have a thickness of 0.8 to 1.2 mil with topcoat having a uniform dry film thickness from 1.0 to 2.0 mil on all external coil surface areas including fin edges. E-coated coils shall have superior hardness characteristics of 2H per ASTM D3363-00 and cross hatch adhesion of 4B-5B per ASTM D3359-02. Impact resistance shall be up to 160 in./lb. (ASTM D2794-93). E-coated coil shall have superior impact resistance with no cracking, chipping, or peeling per NSF/ANSI 51-2002 Method 10.2. E-coated aluminum microchannel coils shall be capable of withstanding an 8000-hour salt spray test in accordance with the ASTM (American Society for Testing and Materials) (U.S.A.) B-117 Standard.

D. Louvered/Wire Panels: Factory installed louvered panels on external condenser coil faces, painted to match unit panels. Factory louvered panels around the base and ends of the machine to restrict unauthorized access.

E. Low Sound Fans: Reduced rpm, vertical direct driven propeller type condenser fans with fan guard on discharge. Fans shall have a minimum of 7 polymer blades with baffling. Metal blade fans are not acceptable.

F. Fan Motors: High efficiency 8-pole low RPM motor, direct drive fan connection, 3 phase power, insulation class “F”, current protected, Totally Enclosed Air-Over (TEAO) with double sealed, permanently lubricated ball bearings.

EQUIPMENT SHALL BID AS AN ALTERNATE

2.7 SOUND RATINGS

A. Noise Rating: Emitted A-Weighted Sound Pressure Level shall not exceed scheduled dBA at 30 feet from sides of the unit when measured according to ARI STANDARD 575.

B. Acoustic sound compressor blankets and Low Sound Fans shall be provided regardless of if scheduled dBA is met without.

2.8 REFRIGERANT CIRCUIT

A. Dual refrigerant circuits with one compressor per circuit.

B. Furnish for each refrigerant circuit:

1. Liquid line solenoid valve.
2. Filter dryer (replaceable core type without refrigerant loss or removal).
3. Liquid line sight glass and moisture indicator.
4. Electronic expansion valve.
5. Charging valve.
6. Insulated suction line.
7. Discharge line check valve.
8. Compressor discharge service valve.
9. Pressure relief device.
10. Oil separator.

2.9 CONTROLS

A. Factory mounted watertight steel control cabinet containing contactors, power and control wiring with factory wired single point power connection and non-fused disconnect switch with handle extending through face of cabinet. Control cabinet shall include microprocessor-based control system. System shall provide control of chiller operation and monitoring of chiller sensors, actuators, relays, and switches. Control panel shall include LCD display with keypad interface. Display messages shall be plain English. A coded two- or three-character display is unacceptable.

B. Control Panel shall be NEC409 and UL508A compliant (high short circuit current rating).

C. Chiller manufacturer shall provide a BACnet interface card (gateway) in control panel. Mounting, wiring, programming, and calibration of gateway shall be provided by chiller manufacturer. Chiller supplier shall provide BAS contractor with point list and programming information as needed.

1. A BACnet communication network interface card with building automation system shall enable building automation system operator to remotely control and monitor the chiller from an operator workstation. Control features available, and monitoring points displayed, locally at chiller control panel shall be available through building automation system.

D. Gateway shall include the following communication ports: One Ethernet port, one serial port configurable for EIA-232 or EIA-485 and one EIA-485 serial port.

E. Gateways that transfer data in proprietary language are not acceptable.

EQUIPMENT SHALL BID AS AN ALTERNATE

F. Gateway shall support open protocol communication for data sharing, alarm and event management, scheduling, trending and device and network management.

G. Furnish the following safety control with indicating lights arranged so machine is shut down and requires manual reset.

1. High condenser refrigerant pressure.
2. Low oil pressure.
3. High oil temperature.
4. High motor current.
5. High motor temperature.
6. Low refrigerant (evaporator) pressure.
7. High bearing temperature.

H. Furnish the following safety controls. Operating any one control shuts down machine:

1. Low chilled water temperature.

2. Chilled Water Integral flow switches within chiller. Flow proving switches shall be thermal dispersion type (IFM U 40100 or approved equal). Switches shall be U.L. listed, SPDT snap-acting, and pilot duty rated (125 VA minimum). Flow switch shall have relay output, wire break output and temperature output. Flow switch shall be redundant; control contractor to provide flow switch within piping.

3. Loss of an electrical phase.

I. Furnish manual machine off-auto switch on control panel and the following manual or menu driven software display.

1. Oil pump switch.
2. Machine selector switch to allow hand, off, or automatic operation.
3. Manual Set Point Adjustments:

    a. Leaving chilled water temperature.
    b. Current demand limit.

4. Status display:

    a. Chilled water flow proven.
    b. Cooling required.

        1. Unit running.
        2. Unit loading.
        3. Unit unloading.
        4. Manual reset required.
        5. Remote chilled water set point active.
        6. Remote current water set point active.

5. Set point and Temperature Display:

    a. Chilled water set point.
    b. Current limit set point.
    c. Entering evaporator water temperature.
    d. Leaving evaporator water temperature.

EQUIPMENT SHALL BID AS AN ALTERNATE

e. Entering condenser water temperature.
f. Leaving condenser water temperature.

6. Dial or Electronic Type Pressure Indicators.

a. Evaporator refrigerant pressure.
b. Condenser refrigerant pressure.
c. Low oil pressure (oil sump).
d. High oil pressure (oil supply).

J. Furnish the following operating controls:

1. Multi-step chilled water temperature controller to cycle compressor and activate capacity controls, with remote thermostat.

2. Five minute off timer prevents compressor from short cycling.

3. Periodic pump-out-timer to pump down on chilled water flow and high evaporator refrigerant pressure.

4. Provide low ambient control and high ambient options as required to ensure unit is capable of operation from 0°F to 115°F ambient.

5. Thermostat to cycle fan motors in response to outdoor ambient temperature.

6. Head pressure switch to cycle fan motors in response to refrigerant condensing pressure.

7. VFD control to vary speed of one at least one condenser fan motor in response to refrigerant condensing pressure.

8. Load limit thermostat to limit compressor loading on high return water temperature.

9. Three phase monitor to protect unit by stopping compressor on phase loss, phase reversal, phase unbalance, or under voltage.

10. Provide capacity control system capable of reducing unit capacity to 10% of full load. Compressor shall start in unloaded condition. Application of factory installed hot gas bypass on screw compressors shall be acceptable as required to meet specified minimum load. For scroll compressors, hot gas bypass must be provided and sized for minimum compressor loading on one circuit only. No exceptions.

11. Cycle counter and operating hour meter.

2.10 FACTORY MOUNTED VARIABLE FREQUENCY DRIVE (REQUIRED)

A. VFDs for each compressor shall have a DC link reactor.

B. All VFDs on the chiller (compressor motors and fans) shall be fully air-cooled and shall not require an additional glycol cooling system. If supplying a VFD glycol cooling system, the following must be provided in conjunction with and for the duration of the service/maintenance agreement specified in section 23 64 27 – 1.12.

EQUIPMENT SHALL BID AS AN ALTERNATE

1. Glycol solution replacement every 5 years.
2. Annual pH test.
3. Annual fluid level check.
4. Annual glycol condenser cleaning.

2.11 CHILLER PERFORMANCE

A. Minimum efficiency shall be per current local adopted IECC Supplement Table.

2.12 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Coordinate voltage with electrical drawings, ensure Overcurrent protective device size and type, and minimum circuit capacity are provided per unit manufacturer's published data.

B. Factory mounted non-fused molded case disconnect switch.

C. Single point power connection and grounding lug.

D. Provide integral 120V control power transformer.

E. Provide all 120V accessory branch circuits indicated on unit manufacturer's wiring diagram, including separate connection for oil heaters.

F. Power Factor:

1. Provide equipment with factory installed power factor correction capacitors as required to maintain a power factor of 95% at all load conditions.

2.13 FACTORY EDDY CURRENT TEST - REQUIRED

A. Prior to shipment to the jobsite the chiller manufacturer shall provide the necessary special test equipment and services of a factory trained technician to conduct an eddy current test of the evaporator tubes within the factory; field eddy current testing will not be acceptable. Submit final report to Owner and Engineer.

B. Four (4) copies of the eddy current test and their results shall be submitted to the Owner and Engineer for record keeping.

2.14 FACTORY CAPACITY TEST

A. The chiller manufacturer shall provide the necessary special test equipment and services of a factory trained technician to conduct various capacity tests prior to delivery to the project. Tests shall verify and certify that project equipment is in compliance with the Contract Documents.

B. Tests shall be conducted in accordance with AHRI Standard 550/590. The five (5) percent capacity allowance specified in the AHRI test standard shall not be applied.

C. Four (4) copies of the tests and their results shall be submitted to the Engineer for approval within five (5) calendar days from chiller test date. If test results do not demonstrate compliance with the Contract Documents, the project chillers will be tested with required correction procedures until compliance can be certified.

EQUIPMENT SHALL BID AS AN ALTERNATE

D. Conform to UL 1995 code for construction of chillers and furnish UL label.

E. Conform to ASME Section VIII for construction and testing of chillers.

2.15 PUMPOUT SYSTEM-IF REQUIRED

A. Provide service valves and connections for refrigerant pump-out to remote storage tank using portable condensing unit. Valves are not required if chiller is capable of pumping the entire refrigerant charge into condenser vessel for storage.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install chiller on concrete housekeeping pad minimum four (4) inches high and six (6) inches wider than chiller base on each side. Refer to Section 23 05 29 Hangers and Supports for HVAC Piping and Equipment.

B. Install units on vibration isolation. Refer to Section 23 05 48 Vibration and Seismic Controls for HVAC Piping and Equipment.

C. Maintain manufacturer's recommended clearances for service and maintenance.

D. Install chiller accessories furnished loose for field mounting.

E. Install electrical devices furnished loose for field mounting.

F. Install control wiring between chiller control panel and field mounted control devices.

G. Provide for connection of electrical wiring between starter and chiller control panel, oil pump, and purge unit. Refer to Division 26, Electrical.

H. Provide the following piping accessories on evaporator chilled water piping connections.

3.2 CONNECTIONS

A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems.

B. Comply with requirements for piping specified in Section 23 21 13 "Hydronic Piping" and Section 23 23 00 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

C. Install piping adjacent to chiller to allow service and maintenance. Piping shall be arranged for easy dismantling to permit tube cleaning. Locate shut-off valves to permit removal of piping for access.

D. Evaporator Fluid Connections: Connect to evaporator inlet with nipple and flow switch, shutoff valve, Y-strainer, flexible connector, thermometer well for temperature controller, thermometer well and thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with flow switch with DDC interface, shutoff valve, balancing valve, flexible connector, thermometer well and thermometer, thermometer well for temperature controller, plugged tee with shutoff valve and pressure gage, and drain connection with

valve. Make connections to chiller with a mechanical coupling manufactured by Victaulic. Refer to Sections 23 05 19 Meters and Gages for HVAC Piping and 23 21 13 Hydronic Piping.

E. Provide control wiring between chiller control panel and field mounted control devices.

F. Provide connection to electrical service.

3.3 STARTUP SERVICE

A. A factory direct authorized service representative shall perform startup service. Chiller startup shall not be performed by contractor.

1. Complete installation and startup checks according to manufacturer's written instructions.

2. Verify that refrigerant charge is sufficient, and chiller has been leak tested.

3. Verify that pumps are installed and functional.

4. Verify that thermometers and gages are installed.

5. Operate chiller for run-in period.

6. Check bearing lubrication and oil levels.

7. Verify that refrigerant pressure relief device is vented outside.

8. Verify proper motor rotation.

9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.

10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator and condenser.

11. Verify and record performance of chiller protection devices.

12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.

C. Prepare test and inspection startup reports.

3.4 FIELD QUALITY CONTROL

A. Furnish cooling season start-up, winter season shutdown service, for first year of operation. When initial start-up and testing takes place in winter and machines are to remain inoperative, repeat start-up and testing operation at beginning of first cooling season.

EQUIPMENT SHALL BID AS AN ALTERNATE

3.5 MANUFACTURER'S FIELD SERVICES

A. Manufacturer's representative shall certify in writing that installation is in compliance with manufacturer's recommendations.

B. Furnish services of factory trained representative for minimum three (3) days to leak test, refrigerant pressure test, and start-up, calibrate controls, and instruct Owner on operation and maintenance.

C. Oil Test: An oil sample shall be taken at start-up from each compressor. Sample will be used as a reference for all warranty oil tests. Oil samples shall be taken annually. The samples shall be tested using the Karl Fisher test method. If test indicates moister in oil, Contractor shall obtain factory recommended procedure to fix problem. Procedure shall be submitted to Engineer prior to any work being done. All labor and materials for corrective work shall be covered by manufacturer. Oil test shall be analyzed, and report submitted to engineer within 30 days of sample date. Oil samples shall be tasted by Analysts Services, Inc., or manufacturer provided testing services.

3.5 DEMONSTRATION AND TRAINING

A. Demonstrate system operations and verify specified performance. A functional test of the installed chiller control system shall be performed to demonstrate proper functioning of all interlocks and protective systems specified or otherwise required. This testing shall be conducted in the presence of the Owner's representative and the Engineer. The Contractor shall submit test procedure for approval by the Engineer prior to testing.

B. Coordinate testing with Testing and Balancing Contractor.

3.6 CLEANING

A. After completing system installation and testing, adjusting, and balancing and after completing startup service, clean chiller externally and internally to remove foreign material and construction dirt and dust. Clean condensing coils, condensing fans, frame, etc.

B. **Prior to building occupation, contractor shall clean condenser coils free from dirt and debris.**

END OF SECTION

EQUIPMENT SHALL BID AS AN ALTERNATE

SECTION 23 73 13 - MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes modular factory fabricated air-handling units and accessories.
B. Related Sections:

1. Section 23 05 00 - Common Work Results for HVAC.

2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.

3. Section 23 07 16 - HVAC Equipment Insulation: Product requirements for insulation for placement by this section.

4. Section 23 33 00 - Air Duct Accessories: Product requirements for flexible duct connections for placement by this section.

5. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Product requirements for electric motors for placement by this section.

6. Section 23 05 14 - Variable Frequency Controllers.

1.3 SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.

C. Provide Footprint Square Footage Discrepancy Chart in spreadsheet form. Clearly show the differences in height, length, and width between the submitted units and designed units per plans for each AHU with corresponding tag.

D. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements.

E. Product Data, Submit the following:

1. Published Literature: Indicate capacities, ratings, gages and finishes of materials, and electrical characteristics and connection requirements.

2. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.

EQUIPMENT SHALL BID AS AN ALTERNATE

3. Fans: Performance and fan curves with specified operating point plotted, power, RPM.

4. Sound Power Level Data: Fan outlet and casing radiation at rated capacity per ARI 260.

5. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring. Indicate factory installed and field installed wiring.

F. Manufacturer's Installation Instructions: Submit.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

C. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.

D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

F. Comply with NFPA 70.

1.6 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three (3) years experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Equipment shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

EQUIPMENT SHALL BID AS AN ALTERNATE

A. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

B. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

C. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

D. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

E. Protect units from physical damage. Leave factory covers in place until startup of machine.

1.8 WARRANTY

A. Furnish one (1) year manufacturer parts and labor warranty for air handling units. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up is not acceptable.

1.9 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor or "by others".

1. Filters: Furnish three (3) sets for each unit. One set during construction, a new set of filters for Test and Balancing services, and final new set at substantial completion. Filters shall be protected with polyester fabric at all times during construction.

1.10 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

EQUIPMENT SHALL BID AS AN ALTERNATE

PART 2 - PRODUCTS

2.1 MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS

A. Manufacturers: Subject to compliance with scheduled efficiencies, capacities, and specification, provide products by the following manufacturers.

1. **Refer to Specification 01 23 00 Alternates for acceptable manufacturers.**

2. **All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.**

B. All air handling units shall be of the same manufacturer and same model; mismatched manufacturer's will not be acceptable.

C. Configuration: Coordinate with project plans and schedules.

D. Performance Base: Sea level pressure or altitude.

E. Fabrication: Conform to AMCA 99 and ARI 430. Units shall be factory assembled and ship in one piece where possible. Shipping splits are acceptable provided manufacturer includes gaskets and bolts.

2.2 SPECIAL PROJECT REQUIREMENTS: CONSTRUCTION

A. In order to demonstrate energy compliance with 2015 IECC performance method; the project as specified and scheduled was energy modeled and complies. Alternate manufacturers are allowed but must not exceed maximum scheduled brake horsepower, efficiency, etc.

B. Air handling units shall be constructed to fit scheduled maximum dimensions including factory built mixing boxes and must maintain minimum specified access sections as scheduled and shown on plans. Rotating units to different orientations other than what is drawn on plans will be unacceptable. If potentially submitted equipment shall exceed any scheduled dimension, manufacturer shall provide performance data and dimensional data for consulting engineer to review and determine if proposed unit will fit within allotted space and maintain all required maintenance clearance. Equipment with deviations to dimensions shall be submitted 10 days prior to bid date for review.

C. Outside air / return air mixing boxes shall be factory fabricated with the same construction as the unit casing. Field supplied or installed mixing boxes are not acceptable. Dampers shall be factory installed on mixing box openings. Actuators shall be provided by the control's contractor. This applies to all the air handling units with energy recovery wheel and any unit with outside and return air ducted to the plenum.

2.3 UNIT IDENTIFACTION REQUIREMENTS

A. Furnish each unit with a durable, deep etched, .025" thick, factory installed aluminum identification plate, permanently mounted with the following information:

- Project name and address.
- Unit identification as indicated within Contract Documents.

EQUIPMENT SHALL BID AS AN ALTERNATE

- Serial Number.
- Model Number.
- CFM.
- Entering and leaving air temperature (DB/WB) (cooling and heating coil).
- Entering and leaving water temperature (cooling and heating coil).
- Cooling and heating coil flow rate (GPM).
- Fan Motor Horsepower.
- Blower est. ext. sp. (in. wg.).
- Unit Power Supply: Volts / PH / Amps; MCA / MOCP
- Sales Order #.
- Date of unit manufactured.

B. Custom label shall be provided by and installed at the factory. Label shall not be by a third party or contractor.

2.4 CASING

A. Base rail shall be a minimum of 14-gauge or heavier G-90 galvanized steel and shall be a minimum of six (6) inches in height. Base assembly shall be thermally broken and insulated with a minimum of 2" thick, R-13 closed-cell sprayed foam. Assemble multiple sections that are shipped loose with gaskets, caulk, and bolts per the manufacturer's installation instructions.

B. External Casing:

1. Galvanized Steel: 18-gauge G90 with expanded foam injected insulation.

C. Internal Casing:

1. Galvanized Steel: Solid 20-gauge G90. Provide 20-gauge perforated panels in fan section and discharge plenum.

D. Casing shall be supported by free-standing 16-gauge G90 structural frame with removable panels. Framing members shall have thermal break and injected with expanded foam insulation. Structural integrity of frame shall not be affected by removing panels. Top, bottom, and side panels shall be of one-piece double-wall construction, formed and reinforced to provide a rigid assembly. All panels shall be completely gasketed at factory with a minimum 1/4-inch-thick x 3/4 inch wide closed-cell neoprene. Top and side panels shall be easily removable for service.

E. Insulation: Expanded Foam.

1. 'K' (Ksi) factor at 75 degrees Fahrenheit: Maximum 0.154 Btuh inch / sq. ft. / degrees Fahrenheit.

2. Density: Two (2) inch thick, minimum 1-1/2 lbs. /cu ft. throughout the entire unit. One (1) inch thick casing panels in any section is unacceptable.

3. Insulation in perforated sections shall be coated on air side to prevent erosion into air stream. Uncoated insulation is unacceptable.

4. If air unit structural frame comes into contact with conditioned air, it shall be insulated with the same material throughout the rest of the unit.

EQUIPMENT SHALL BID AS AN ALTERNATE

F. Access Section: Minimum 24” access section with minimum 19” door clearance of double wall galvanized steel construction for flush mounting, with gasket, latch, and handle assembly, same thickness as casing. Access door frame shall be extruded aluminum; foam filled with a thermal break barrier and include a full perimeter gasket. All access doors shall match unit casing construction, include a thermal break. Provide access section between parallel coil sections, upstream of coil sections, upstream and downstream of the energy recovery wheels, in fan sections, filter sections, and mixing boxes.

G. Cooling Coil Drain Pan: Welded double wall, type 304 stainless steel IAQ pan with two (2) inch insulation and welded corners. Drain pans without welded corners are not acceptable. Cross break and pitch to drain connection. Cooling coils with a finned height greater than 48 inches shall have an intermediate stainless steel IAQ drain pan extending entire length of coil. Intermediate pan shall have a minimum of two drop tubes to main pan. Drain pans shall allow no standing water and comply with ASHRAE Standard 62. Drain pans must be accessible for cleaning.

H. Strength: Furnish structure to brace casings for suction pressure of five (5) inch wg, with maximum deflection of 1 in 200. Casing deflection shall not exceed a L/240 ratio when subject to an internal pressure of +/- 8-in wg and shall exhibit no permanent deformation at +/- 9-in wg. L is defined as the longest linear panel or cabinet length (measured to AHRI 1350 Cd Level 2).

2.5 FANS

A. Type: Refer to Air Handling Unit Schedule for fan type and drive type.

1. Supply Fans:

a. Direct drive plenum fans shall be single width single inlet type with backward inclined airfoil blades. Plenum fan wheel, airfoil blades and hub shall be constructed from aluminum.

2. Exhaust Fans (associated with energy recovery wheel section):

a. Direct drive plenum fans shall be single width single inlet type with backward inclined airfoil blades. Plenum fan wheel, airfoil blades and hub shall be constructed from aluminum

B. Fan shall be statically and dynamically balanced at the factory as a complete fan assembly.

C. The Fan wheels shall be keyed to shaft to prevent slipping.

D. Construction: AMCA Class II minimum.

E. Performance Ratings: Conform to AMCA 210 and label with AMCA Certified Rating Seal.

F. Sound Ratings: Tested to ARI 260 and label with Certified Sound Rating Seal.

G. Bearings: Provide permanently lubricated bearings.

EQUIPMENT SHALL BID AS AN ALTERNATE

H. Mounting: Locate fan and motor internally on welded or bolted steel base coated with corrosion resistant paint or rust-resistant G90 steel and factory-mounted motor on slide rails. Furnish access to motor, drive, and bearings through hinged access doors. Mount base on vibration isolators with 2” deflection.

I. Fan Modulation: Variable frequency drive.

J. Fan Motors: All motors shall be premium efficiency, NEMA MG-1Section 3, Inverter Duty. Refer to Specification 23 05 13 - Common Motor Requirements for HVAC Equipment for acceptable motor manufacturers.

K. Flexible Connection: Provide internal flexible connection between fan and air unit casing. Flexible connection between air unit casing and connecting duct shall not be provided when fan is internally isolated with flexible connection to casing.

2.6 BEARINGS AND DRIVES

A. Bearings:

1. Plenum fans shall have. Heavy duty pillow block style, self-aligning, regreasable roller type bearings selected for a minimum average life (L50) of 500,000 hours.

B. Shafts: Solid, hot rolled steel, ground and polished, with key-way, and protectively coated to prevent corrosion.

C. Motor Shaft Grounding Kit: For all AHU motors, a motor shaft grounding kit shall be provided. This shall be factory installed prior to shipment. If not available from the factory, the manufacturer is responsible for providing kits and field installation with no additional cost to owner or contractor.

D. Motor: Motor shall be non-overloading. Motor horsepower shall be sized at a point on fan curve resulting from 105 percent of design RPM at scheduled CFM with a reduction in static pressure of 0.5-inch wg. All fan motors shall be in accordance with Section 23 05 13 - Common Motor Requirements for HVAC Equipment

1. Motor Enclosure: Totally Enclosed Fan-Cooled (TEFC); ECM motors shall not be acceptable.

2. Provide (2) two forged motor lifting eyes and oversized conduit boxes with ground lugs.

3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified

2.7 COILS

A. Provide access doors upstream and downstream of coils. Enclose coils with headers and return bends fully contained within casing. Slide coils into casing through removable end panel with blank-offs and casing sealing grommets at connection penetrations. Coils shall

be supported by stainless steel coil support members maintaining a minimum of 1" separation between bottom of coil casing and drain pan.

B. Air Coils: Certify capacities, pressure drops, and selection procedures in accordance with ARI 410.

C. Water Heating Coils:

1. Headers: Cast iron, seamless copper tube, or prime coated steel pipe with brazed joints.

2. Configuration: Drainable, with threaded plugs for drain and vent; serpentine type with return bends on smaller sizes and return headers on larger sizes.

3. 18-inch access section between parallel coil faces.

4. Casing: Die formed channel frame of galvanized steel.

5. Tubes: 5/8-inch OD seamless copper, 0.020" thick, expanded into fins, brazed joints or 1/2-inch OD seamless copper, 0.025" thick, expanded into fins, brazed joints.

6. Fins: Aluminum, maximum of 11 fins per inch. Minimum fin thickness shall be 0.006" aluminum.

7. Coil supports shall be 12-gauge type galvanized steel.

D. Water Cooling Coils:

1. Headers: Cast iron, seamless copper tube, or prime coated steel pipe with brazed joints.

2. Configuration: Drainable, with threaded plugs for drain and vent; threaded plugs in return bends and in headers opposite each tube.

3. Coils shall be a maximum of ten (10) rows deep.

4. 18-inch access section between parallel coil faces.

5. Casing: Die formed channel frame of 16-gauge type 304 stainless steel.

6. Drain Pans: Extend 12 inches downstream of coil and for coil banks more than 48 inches high provide intermediate pan with down spouts.

7. Tubes: 5/8-inch OD seamless copper, 0.020" thick, expanded into fins, brazed joints or 1/2-inch OD seamless copper, 0.025" thick, expanded into fins, brazed joints.

8. Fins: Aluminum, maximum of 11 fins per inch. Minimum fin thickness shall be 0.006" aluminum.

9. Coil supports shall be 16-gauge type 304 stainless steel.

EQUIPMENT SHALL BID AS AN ALTERNATE

E. DX Cooling Coils:

1. Headers: Seamless copper tube with brazed joints.

2. Coils shall be a maximum of eight (8) rows deep.

3. 18-inch access section between parallel coil faces.

4. Casing: Die formed channel frame of 16-gauge type 304 stainless steel.

5. Drain Pans: Extend 12 inches downstream of coil and for coil banks more than 48 inches high provide intermediate pan with down spouts.

6. Tubes: 5/8-inch OD seamless copper, 0.020” thick, expanded into fins, brazed joints or 1/2-inch OD seamless copper, 0.025” thick, expanded into fins, brazed joints.

7. Fins: Aluminum, maximum of 11 fins per inch. Minimum fin thickness shall be 0.006” aluminum.

8. Coil supports shall be 16-gauge type 304 stainless steel.

F. Tube Velocities: Coil tube design velocity shall be between 2 feet and 5 feet per second and also maintain design water side temperature difference down to 30 percent flow through coil. Provide tubes that are enhanced internally if minimum initial design tube velocity cannot be obtained.

2.8 TOTAL ENERGY RECOVERY WHEEL UNIT

A. Manufacturers: Subject to compliance with scheduled efficiencies, capacities, and specification, provide products by the following manufacturers.

1. SEMCO
2. Innergytech

B. Provide energy recovery wheel where scheduled.

C. Casing construction shall be the same as the rest of the unit.

D. Total energy recovery wheel shall be installed by air unit manufacturer at the factory prior to shipment and shall be an integral component of the fully assembled unit. Loose or separate wheel sections shall not be acceptable.

E. Energy recovery wheel shall be constructed of corrugated media, with a desiccant intimately bound and uniformly and permanently dispersed throughout the matrix structure of the media. Rotors with desiccants coated bonded or synthesized onto the media are not acceptable due to delaminating or erosion of the desiccant material.

F. Media shall be resistant to corrosion resistance and resistance against attack from laboratory chemicals present in pharmaceutical, hospital, etc. environments as well as attack from external outdoor air conditions. Face flatness of the wheel shall be maximized in order to minimize wear on inner seal surfaces and to minimize cross leakage.

G. Rotor shall be constructed of alternating layers of flat and corrugated media.

EQUIPMENT SHALL BID AS AN ALTERNATE

H. Wheel layers should be uniform in construction forming uniform aperture sizes for airflow. Wheel construction shall be fluted or formed honeycomb geometry so as to eliminate internal wheel bypass. Wheel layers that can be separated or spread apart by airflow are unacceptable due to the possibility of channeling and performance degradation.

I. The minimum acceptable performance shall be as specified in the unit schedule.

J. Desiccant Material: The desiccant material shall be a molecular sieve, and specifically 3A molecular sieve to minimize cross contamination.

K. Wheel Media Support System: The wheel frames shall consist of evenly spaced steel spokes, galvanized steel outer band and rigid center hub. The wheel construction should allow for post fabrication wheel alignment.

L. Wheel Seals: The wheel seals shall be full contact nylon brush seals or equivalent. Seals should be easily adjustable.

M. Wheel cassette: Cassettes shall be fabricated of heavy duty reinforced galvanized steel or welded structural box tubing. Cassettes shall have a built-in adjustable purge section minimizing cross contamination of supply air as shown on unit schedule.

N. Bearings shall be inboard, zero maintenance, permanently sealed roller bearings, or alternatively, external flanged or pillow block bearings.

O. Drive systems shall consist of fractional horsepower AC drive motors with multi-link drive belts.

P. Face and bypass dampers shall be furnished as shown on unit schedule and drawings.

Q. The wheel shall be listed or recognized by UL or equivalent.

R. Energy Recovery Wheel shall be controlled via variable frequency drive (VFD). VFD shall support full economizer and frost protection modes. VFD shall be shipped loose for field installation by mechanical contractor and wired by electrical contractor. The VFD shall be wall mounted in a NEMA 1 enclosure, include an LCD display screen, and communicate to the BAS via BACnet MS/TP. BAS shall provide and install temperature sensors in all four airstreams. VFD serving wheel shall match the same VFD manufacturer for all other equipment (pumps, AHU's, Cooling Tower motors, etc.).

2.9 GERMICIDAL UVC EMITTERS (FUTURE INSTALLATION)

Provide adequate space in the cooling coil section to allow for UVC Emitter installation and wiring and allow for a minimum 18" access door. Maintain full service; UVC Emitters to be provided in future.

A. UVC Emitters shall be provided for each Air Handling Unit and manufactured by Steril-Aire, Inc. only. UVC lights, including but not limited to safety switches and non-fused service disconnects, shall be field installed by local Steril-Aire factory authorized representative and not by mechanical contractor. A separate 120v/1ph electrical connection shall be provided by the electrical contractor.

B. Provide UVC Emitter in the same section as cooling coil immediately downstream of cooling coils and over drain pans; lights shall provide full coverage of cooling coils and

drain pan. The UVC emitter shall be mounted inside the air handler casing a minimum of 12” downstream of cooling coil.

C. UVC Emitter and fixture shall be factory assembled and tested. Unit shall consist of housing, power source, reflector, emitter sockets, emitter, door safety switches and unit mounted disconnect for separate 120v / 1ph / 60 Hz power supply. Unit shall be constructed to withstand HVAC environments and shall be UL and CSA listed for damp locations.

Housing shall be constructed of hospital grade stainless steel and equipped with ½”conduit openings on each end to facilitate conduit nipple coupling fixture to fixture and wiring to power. Incorporate all components into one integral assembly that maximizes serviceability. Unit shall be designed to be mounted inside the air stream and downstream of the cooling coil.

The power source shall be a Class P2, rapid start type with a power factor of 0.99 and an efficiency of not less than 89%. Unit voltage shall be 120 and designed to maximize photon production, radiance, and reliability in cold or moving air streams of 35°-170°F. 100% RD and at any velocity and shall include RF and EMI suppression and Smart System – “End of Lamp Life” protection.

Reflector shall be constructed of heavy gauge aluminum alloy with a minimum 86% reflectance at 254 nm.

Sockets shall be medium bi-pin, double click safety, and twist lock type. They are constructed of a UVC resistant polycarbonate.

Emitter tube shall be high output, hot cathode, T5 diameter, medium bi-pin type that produces broadband UVC of 250 – 260 nm. Each tube shall produce the specified output at any airflow velocity and air temperature of 35°-170°F and produce no ozone or other secondary contamination.

Independent testing: When tested in accordance with the general provisions of IES Lighting Handbook, 1981 Application volume, output per 1” arc length is not less than 10μW/cm² at 1 meter in a 400-fpm airstream of 45° F.

2.10 AIR FILTRATION

A. Filter Box: Section with filter guides, access doors as shown on plans, for side loading with gaskets and blank-off plates.

B. Filter Frames: Pad holding frames shall be permanent metal frames designed to contain replaceable filter media pads. Frames shall be constructed of 22-gauge, galvanized steel U channel cell sides, expanded metal support grid, 9-gauge hinged retainer gate, sized to fit in standard universal holding frames, and accept maximum 2” thick media. Acceptable manufacturers: AAF or pre-approved equal.

C. Replaceable Filter Media: MERV 11 or greater rating in accordance with ASHREA Test Standard 52.2-2007.

D. High-Capacity Angle Filter: Two (2) inch extended area filters. Air quantities as scheduled; clean pressure drop of 0.10 inches wg; dirty pressure drop of 0.75 inches wg.

E. Filter Area: Max velocity of 350 FPM.

EQUIPMENT SHALL BID AS AN ALTERNATE

F. Provide list of each air handling unit with associated filter sizes to owner at substantial completion.

2.11 CONTROLS

A. Controls: Refer to Section 23 09 23 - Direct-Digital Control System for HVAC.

2.12 CAPACITY

A. Performance: Provide equipment as scheduled on Drawings.

2.13 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Provide equipment with electrical characteristics as shown on Electrical Drawings.

B. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Requirements for motors.

C. Section 23 05 14 - Variable Frequency Controllers: Requirements for drives.

D. Combination Starter-Disconnect Switch: Provided by Division 26.

E. Junction Box: Factory provided, mounted, and wired junction boxes on each fan section. J-box shall allow electrical contractor to connect power to device without penetrating through cabinet. Field installed J-boxes will not be acceptable; it shall be the complete responsibility of the manufacturer to install. Units shall be shipped with J-boxes pre-wired and mounted. Within equipment submittal the manufacturer shall show J-box location on plan view dimensional drawing.

F. Motor Overload Panel: For units with more than one fan, and to allow for a connection to a single variable frequency drive, provide a factory mounted and wired motor overload panel. Panel shall be UL listed, NEMA 1 enclosure with IECC manual starters with rotary type operators and auxiliary contacts.

G. All starters shall be equipped with integral phase-failure relay (automatic resetting type) to shut down motor upon loss of an electrical phase.

2.14 SOURCE QUALITY CONTROL

A. Fan Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Fans shall bear AMCA-certified sound ratings seal.

B. Fan Performance Rating: Factory test fan performance for airflow, pressure, power, air density, rotation speed, and efficiency. Rate performance according to AMCA 210, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating."

C. Water Coils: Factory tested to 300 psig according to ARI 410 and ASHRAE 33.

D. Refrigerant Coils: Factory tested to 450 psig according to ARI 410 and ASHRAE 33.

EQUIPMENT SHALL BID AS AN ALTERNATE

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with ARI 430.

B. The mechanical rooms shall be kept broom clean prior to starting any mechanical equipment to minimize dust in the system.

C. Install assembled units with internal vibration isolators. Internally isolated fans shall be provided with resilient mountings and flexible electrical leads. Install restraining snubbers as required. Adjust snubbers to prevent tension in flexible connectors when fan is operating. Refer to Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.

D. Equipment Mounting: Install air-handling units on concrete bases using elastomeric pads. Secure units to anchor bolts installed in concrete bases. Comply with requirements for concrete bases; Comply with requirements for vibration isolation devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

E. Contractor to provide fixed sheaves required for final air balance as dictated by Test and Balance Contractor.

F. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.

G. Insulate coil headers located outside airflow as specified for piping. Refer to Section 23 07 19 - HVAC Piping Insulation.

H. Provide trapped condensation drain line routed to the nearest floor drain. Refer to detail on Drawings and Section 23 21 13 - Hydronic Piping.

I. Installation of Hot Water Heating and/or Chilled Water Coil:

1. Make connections to coils with unions. Position unions to permit coil removal.

2. Connect water supply to leaving airside of coil (counter flow arrangement).

3. Locate water supply at bottom of supply header and return water connection at top.

4. Install water coils to allow draining and install drain connection at low points.

5. Install the following piping accessories on piping connections. Refer to Section 23 21 13 - Hydronic Piping.

a. On supply: (refer to coil connection details)

1) Thermometer well and thermometer.
2) Well for control system temperature sensor.
3) Shutoff valve.
4) Pressure gage.
5) Strainer

EQUIPMENT SHALL BID AS AN ALTERNATE

b. On return: (refer to coil connection details)

1) Air vent.
2) Thermometer well and thermometer.
3) Well for control system temperature sensor.
4) Pressure gage.
5) Modulating control valve (by BAS).
6) Victaulic / TA 78K (combination balancing / shut-off globe valve with memory stop and pressure / temperature ports).
7) Shutoff valve (provided by mechanical contractor in addition to balancing valve).

6. Install valves and piping specialties in accordance with details as indicated on Drawings.

7. Install manual air vents at high points complete with shutoff valve. Refer to Section 23 21 13 - Hydronic Piping.

8. Install floor support stands at piping drops to air unit coil connections. Air unit coil shall not carry any suspended piping load.

J. Air unit manufacturer representative shall remove vibration isolation shipping blocks prior to start-up and ensure that fan base is free floating, and isolators are not short-circuited during operation.

3.2 CONNECTIONS

A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

B. Comply with requirements for piping specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

C. Install piping adjacent to air-handling unit to allow service and maintenance.

D. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.

E. Refrigerant Piping: Comply with applicable requirements in Section 23 23 00 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

F. Coordinate duct installations and specialty arrangements with schematics on Drawings and with requirements specified in Section 23 31 13 "Metal Ducts" and Section 23 33 00 "Air Duct Accessories."

G. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 23 33 00 "Air Duct Accessories."

EQUIPMENT SHALL BID AS AN ALTERNATE

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks.

2. Charge refrigerant coils with refrigerant and test for leaks.

3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3.4 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

2. Verify that shipping, blocking, and bracing are removed.

3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.

4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.

5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.

6. Verify that zone dampers fully open and close for each zone.

7. Verify that outdoor- and return-air mixing dampers open and close and maintain minimum outdoor-air setting.

8. Comb coil fins for parallel orientation.

9. Verify that proper thermal-overload protection is installed for electric coils.

10. Install new, clean filters.

EQUIPMENT SHALL BID AS AN ALTERNATE

11. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

B. Starting procedures for air-handling units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

3.5 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.6 CLEANING

A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units externally and internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, comb coils, drain pans, and filter housings, and install new, clean filters.

3.7 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

3.8 PROTECTION OF FINISHED WORK

A. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

B. All air units shall remain in manufacturer’s protective shipping wrap during construction. Air unit casing openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

END OF SECTION 23 73 13

SECTION 23 74 33 - PACKAGED, 100% OUTDOOR, HEATING AND COOLING KITCHEN HOOD MAKEUP-AIR UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. This section includes packaged heating and cooling units capable of supplying up to 100 percent outdoor air.

1. Integral Indirect Gas-fired heating.
2. Integral, temperature controls.
3. Roof curbs.

1.2 SEISMIC DESIGN

A. Should the project be located within a seismic zone requiring special provisions for support and restraint of equipment, components, and piping. Refer to state or local codes for Seismic, Wind, Flood Load Design for additional requirements.

1.3 WIND LOAD DESIGN

A. Refer to state or local codes for Seismic, Wind, Flood Load Design for additional requirements.

B. Miami Dade rated up to ±150psf per TAS 201, 202 & 203 paired with 20” curb or shorter.

1.4 ACTION SUBMITTALS

A. Product Data: Include manufacturer's technical data for each unit, including rated capacities, dimensions, required clearances, characteristics, furnished specialties, and accessories.

B. Provide line-by-line specification review annotated to certify compliance or deviation.

C. Shop Drawings:

1. Include plans, elevations, sections, and attachment details.

2. Include details of equipment assemblies. Indicate dimensions, weights, loads, and required clearances, method of field assembly, components, and location and size of each field connection.

3. Prepare the following by or under the supervision of a qualified professional engineer:

a. Mounting Details: For securing and flashing roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
b. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Roof-curb mounting details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Structural members to which RTUs will be attached.
2. Roof openings
3. Roof curbs and flashing.

B. Required roof penetrations for ducts, pipes, and electrical raceways, including size and location of each penetration.

C. Startup service reports.

D. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For units to include in emergency, operation, and maintenance manuals.

1.7 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor.

1. Filters: One (1) set for each unit.

1.8 QUALITY ASSURANCE

A. Entire unit shall be ETL Certified per ANSI Z83.4 or ANSI Z83.18 and bear an ETL mark.

B. Indirect gas-fired heaters shall be ETL Certified as a component of the unit.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.9 WARRANTY

A. The manufacturer shall provide a full machine parts and labor warranty for a period of one (1) year. **Warranty shall begin from date of Certificate of Substantial Completion** and not by shipment date. Provide a sample of manufacturer's warranty certificates as described below within equipment submittal. Warranty start dates from shipment or startup will not be accepted.

B. The manufacturer shall provide factory certificates for each Unit listing at a minimum the model, serial number, and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.

C. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing mechanical contractor.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Units shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting

installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

F. Protect units from physical damage. Leave factory covers in place until startup of machine.

PART 2 - PRODUCTS

2.1 GENERAL

A. Supply single zone one piece packaged units that are complete as per the following specification, deliver all capacities scheduled, and conform to design indicated herein. Alternate layouts or dimensional changes will not be accepted.

2.2 MANUFACTURERS

A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide the following:

1. Captiveaire.

B. Configuration: Coordinate with project plans and schedules.

C. Performance Base: Sea level pressure or altitude.

D. Fabrication: Conform to AMCA 99 and ARI 430. Units shall be factory assembled and ship in one piece where possible. Shipping splits are acceptable provided manufacturer includes gaskets and bolts and performs final unit inspection.

2.3 CABINET

A. Cabinets shall be constructed of minimum 24-gauge. Sizes 2, 3, or 4 cabinets shall be 20-gauge G-90 galvanized steel riveted together via structural pop-rivets. All metal shall be CNC bent for precise assembly.

1. Rigging Provisions: The unit shall have a structural base constructed of minimum 18-gauge in cabinet size 1 and 14-gauge in cabinet sizes 2, 3 & 4 G-90 galvanized steel, and include full sized fork pockets and lifting points on all four sides.

2. Roof Construction: The lids shall be fabricated by forming a double-standing, self-locking seam that requires no additional support. Roof shall be pitched to allow for proper drainage.

3. Exterior Wall Construction: All exterior walls shall consist of a double wall, G-90 galvanized steel construction. Cabinet size 1 shall be insulated with 1-inch thick, R4.3 fiber glass duct board insulation. Cabinet sizes 2, 3 & 4 shall be insulated with 2-inch thick, R13 closed cell foam.

4. Service Access Doors: All door jambs shall be gasketed around their perimeter, and allow for doors to be mounted via removable, spring actuated, stainless steel hinges with stainless steel rivets, and self-compressing latches. Each compartment shall have removable access panels to allow for ease of service and maintainability. Electrical cabinet access doors shall have a door hold installed to prop doors open. All doors shall have stainless steel latches which are pad lockable. Electrical cabinet doors shall be outfitted with schematic/manual pouches formed into the door, along with wiring diagram attached to the indoor of the door from the factory.

B. Entire interior and exterior casing shall be constructed of minimum G90 galvanized steel. Unit shall have undergone a salt spray corrosion test as per ASTM B 117.

C. Entire unit shall be Miami-Dade wind rated up to ±150psf per TAS 201, 202 & 203 on any units utilizing a 20” or shorter factory provided roof curb.

D. **Unit shall be factory painted with enamel paint. Color: Tan Enamel coating.**

2.4 AIRFLOW CONFIGURATIONS

A. Discharge: Unit shall be configurable for Down (vertical) discharge through the unit's base.

B. Return: Unit shall also be configurable for No Return, down (vertical) Return through the unit’s base.

C. Intake Airflow: Unit configuration shall be through use of a fresh/outdoor and return air damper.

1. Damper: Shall exceed AMCA Class 1A standard for low leakage. Damper assembly shall be a single assembly and outfitted with an integral bird screen and louver/gutter system to divert any drainage through the base of the unit – intake air hood not required.

2. Actuator: A single direct drive damper actuator shall be used with spring return to ensure that the outdoor air section closes when not powered.

2.5 SUPPLY AIR BLOWER AND MOTOR

A. All supply fans shall be direct drive (belt-drive not acceptable) variable speed plenum fans.

B. Blower Motor: Motor shall be a premium efficiency motor available as:

1. Totally Enclosed Fan Cooled (TEFC) motor driven by a Variable Frequency Drive.

C. Fans to be selected at or near efficiency peak. (Submit fan curves).

D. Blower and motor assembly shall be dynamically balanced. The entire blower and motor assembly shall be mounted on rubber vibration isolators. Wheels balanced as per AMCA 204-96, Balance Quality and Vibration Levels for fans.

E. Unit equipped with total CFM monitoring to measure airflow across supply discharge.

2.6 REFRIGERATION SYSTEM

A. Unit shall utilize a variable speed inverter duty scroll compressor with the following features:

1. Modulation: Compressor shall be capable of compressor speed modulation from 15%-100% on 5, 6, 7.5, 8, 10, & 12.5 Ton units. Compressor shall be capable of compressor speed modulation from 25%-100% on 15, 20, 22, 25, 30, 40, and 50 Ton units.

2. Refrigerant: Unit shall be factory charged with **R-454B** refrigerant.

3. Vibration Isolation: Compressor as well as blower assembly shall each be mounted on rubber vibration isolators to reduce transmission of vibration to the building structure.

4. Internal Overload Protection: Compressor shall include internal thermal overload production to protect against excessive motor temperatures.

5. Crankcase Heater: Compressor shall include a crankcase heater to protect against liquid flood-back and elimination of oil foaming on startup. The crankcase heater must remain powered when the compressor is not in operation.

6. Oil Management: Unit shall utilize both passive and active oil return management using Oil Level Sensor and scheduled oil boosts.

7. Monitored Envelope: Unit shall monitor all critical refrigeration points to ensure compressor does not operate outside of safe operating envelope.

8. Throttling Logic: Unit shall allow for high head pressure monitoring throttle mode for high ambient operation, and low suction pressure throttle mode for low capacity operation or any conditions resulting in low suction pressure.

9. Pump-Down: Active pump-down mode with discharge line check valve to protect against liquid migration into compressor during idle times.

B. The unit shall be outfitted with the following:

1. Indoor Coil: Indoor coil shall be a high efficiency 4-10 row coil design with aluminum fins mechanically bonded to copper tubes. Coil is staggered to increase turbulence, reduce the coil bypass factor, and ultimately increase the time the air stays within the coil. Includes two probe sensors to read average coil face temperature.

2. Electronic Expansion Valve: Each refrigeration circuit will be outfitted with an electronic expansion valve metering device which can be throttled from 0-100% open to allow for precise superheat control.

3. Indoor Coil Drain Pan: The indoor coil shall be outfitted with a sloped stainless steel drain pan. This pan shall be insulated along the entire base to prevent condensation and outfitted with a safety overflow switch which will automatically shut down cooling operation prior to water overflowing the drain pan in the event of a drain clog. The entire drain pan shall be 20 GA Stainless Steel construction and wrap beneath the entire coil with flashing on entering side of coil to ensure capture of all condensate. Drain pan discharge pipe shall also be stainless steel construction. Drain pan shall be pitched to exceed ASHRAE 62.1 standard.

4. Base of the condensing coil cabinet shall be pitched away from the unit as a safety to ensure all draining exits away from the curb.

5. Hot Gas Reheat Coil: The unit shall include a copper tube and aluminum fin hot gas reheat coil mounted downstream of the indoor coil. This coil shall be controlled via fully modulating hot gas reheat valve to provide precise reheat temperature control. This coil shall include the addition of an evaporative coil leaving condition sensor to maintain a coil dew point. This also prevents operation of a dehumidification call when intake dew point conditions are found to be below space dew point conditions, preventing wasted energy.

6. Outdoor (Condenser) Coil: Outdoor coil shall be a high efficiency coil design with aluminum fins mechanically bonded to copper tubes. The coil shall be downward sloped to protect coil from hail damage. Optional hail guards may also be outfitted to the outdoor coil for added protection from hail bouncing off the unit's roof up the coil.

7. Outdoor Fans: The outdoor coil shall have a vertical discharge outfitted with quiet, efficient, fully modulating Electronically Commutated Motor (ECM) condensing fans. These fans shall modulate to maintain a temperature differential between outside air and the outdoor coil.

C. To help mitigate any long-term potential for leaks or hardware failures, the unit shall be outfitted with the following protection measures:

1. Suction line accumulator for added protection against liquid entering suction line of compressor.

2. Bi-flow, low pressure drop, filter drier.

3. Electronic Expansion Valve (EEV) for precise superheat control. EEV shall open partially allowing system pressure equalization prior to activation of the compressor.

4. On optional heat pump units, use of a single 3-way reheat valve to prevent obstructions due to valve failure.

5. Protective rubber sleeves installed on all distribution lines of indoor coil to prevent wear from rubbing.

6. All refrigeration ports shall be short-stub assembly and any access port with a transducer or switch is mounted vertically to mitigate risk of bent/cracked stub joints.

7. Refrigeration circuit shall be mechanically CNC pre-bent tubing wherever possible with minimal brazed joints to minimize points for potential refrigeration leaks.

8. Factory tested for leaks via high pressure nitrogen decay and helium tracer gas testing.

9. Suction line temperature sensor failure detection.

10. Preventative failure alerts through a manufacturer provided, cloud based, cellular remote monitoring system.

11. A2L refrigerant leak detectors are paired with custom logic to mitigate the risk of fire in the event of a detected leak.

2.7 HEATING SYSTEM

A. The gas burner shall be an indirect-fired, push-through type, using natural gas or liquid propane gas. The inlet-supply pressure to the unit for natural gas must be 7” w.c. minimum. For liquid propane gas, the minimum must be 11" w.c.

B. Burner shall be a tubular in-shot fired design capable of using natural or LP type gas. Each burner ignition shall be of the direct-spark design with remote flame sensing at inlet of the last firing tube of the gas manifold.

C. Direct-sparking sequence shall last through the complete duration of the trial for ignition period for guaranteed light-off. Burner shall always be lit at maximum gas flow and combustion airflow for guaranteed light-off. Each burner ignition module shall have LED indicators for troubleshooting and a set of exposed prongs for testing flame indication signal.

D. All furnaces shall be controlled by an electronic Vernier-type fully modulating control system capable of achieving 81% combustion efficiency over the entire gas firing range of the unit.

E. Each furnace shall have:

1. A minimum turndown ratio of 6:1 for natural gas and 5:1 for LP gas while maintaining a constant 81% efficiency (90% for high efficiency furnace option). No cold air bypass of the heat exchanger.

2. Each furnace heat exchanger shall be a bent-tube style design made entirely of stainless steel.

3. Stainless steel Quick Seal Connection for gas connection.

4. Manifold and Input gas pressure gauges.

5. Factory piped condensate drain to exterior of cabinet.

6. A combustion flue to be installed on adjacent side as combustion intake with integrated high velocity wind cap.

7. A blocked vent safety airflow switch with high temperature silicone tubing operating off of absolute pressure measured inside of the power-vent blower housing.

8. A high temperature auto-recycling limit with a maximum non-adjustable set point.

9. A manual reset high temperature flame roll out switch with a non-adjustable set point.

10. Each furnace compartment shall have a removable post and panel that allows the furnace to be easily removed for service and maintainability.

11. A power-vent assembly for exhausting flue gases with a PSC or ECM type motor that is securely mounted and easily accessible/removable for service.

12. A 0-10” w.c. gas pressure gauge installed on the gas manifold.

F. Each electric heater shall have:

1. SCR electric inserts for side or down discharge supply.

2. Electric coils are controlled using SCR controls. SCR is a time proportioning type controller that modulates the heater and supplies the exact amount of power to match the heat demand with a 10:1 turndown per stage with full modulation between minimum turndown and max output.

2.8 FILTERS

A. The filter rack shall be designed to handle a maximum 2” thick high efficiency MERV 13 replaceable filter. Filters replaceable through side access, hinged access door.

B. Replaceable Filter Media: As indicated above MERV 13 or greater rating in accordance with ASHRAE Test Standard 52.2.

C. High-Capacity Filter: Two (2) inch extended area filters. Air quantities as scheduled; clean pressure drop of 0.10 inches w.g; dirty pressure drop of 0.75 inches w.g.

D. Filter Area: Max velocity of 350 FPM.

E. Acceptable manufacturer: American Air Filter or prior approved equal.

2.9 ELECTRICAL

A. All controls shall be pre-wired and housed in an insulated electrical cabinet within the unit to protect against risk of condensation.

B. Units shall be provided with single point electrical connection or separate electrical heat connection.

C. Unit shall be provided with a door safety switch that de-energizes the supply fan when the door is opened.

D. Unit shall be provided with a factory mounted averaging supply air temperature sensor to allow for accurate discharge temperature readings within unit when a downstream sensor is not installed. Field mounted and wired discharge air sensors will not be accepted.

E. Unit shall be provided with a factory mounted averaging intake air temperature sensor to allow for accurate intake temperature reading regardless of how the OA/RA dampers are positioned.

F. The electrical cabinet shall be outfitted with the following:

1. LED electrical cabinet service light with automatic activation upon door switch.

2. Color wiring schematics, laminated to the interior wall of the cabinet doors.

3. Factory mounted disconnect with unit bottom knockouts.

4. A LED backlit, LCD Human-Machine Interface (HMI) shall be mounted within the unit's control cabinet to allow for all set points configuration and refrigeration system monitoring at the unit.

5. Up to 4 additional space mounted HMIs available. Additional HMIs shall allow for full programming capabilities and are outfitted with integral temperature and humidity sensors. Additional HMIs shall be capable of being individually averaged for space temperature/humidity readings. All HMIs shall be wired using standard CAT5/6 cables.

6. Factory provided and mounted 120V, 15A unit powered or unpowered convenience outlet.

G. All sensors shall be wired back to the main control board that continuously monitors all critical components and makes decisions based on pre-determined logic to accurately control the following:

1. PID logic to control heater modulation ensuring precise discharge/space temperature control.

2. PID logic to control compressor speed to provide precise control over evaporative coil temperatures, leaving dew point, and discharge/space temperatures.

3. PID logic for Outdoor fan modulation to maintain an optimal outdoor coil temperature.

4. PID logic for Electronic Expansion Valve (EEV) position to maintain a precise superheat temperature

5. PID logic for Modulating Reheat valve to limit supply air temperature and relative humidity based off of space or discharge conditions.

2.10 CONTROLS

A. Refer to Sequences of Operation within Controls specification.

B. BAS Interface: Completely integrated microprocessor based Direct Digital Control (DDC) system to control all functions including space temperature, leaving air temperature, space humidity, scheduling, monitoring, unit safety protection, including compressor minimum run and minimum off times and diagnostics. The system shall be provided with all required temperature sensors, pressure sensors, controller, and keypad/display operator interface. All microprocessor boards, hardware and software shall be factory provided and installed to enable the BAS to monitor, control, and display unit status and alarms.

C. Unit shall be completely factory wired with necessary controls and contactor pressure lugs or terminal block for power wiring. Units shall provide an external location for mounting a fused disconnect device. 24-volt electromechanical control circuit shall include control transformer and contactor pressure lugs for power wiring. Unit shall have single point power entry as standard.

1. Unit controller shall be capable of controlling all features and options of the unit.

2. Controller shall be capable of standalone operation with unit configuration, setpoint adjustment, sensor status viewing, unit alarm viewing, and occupancy scheduling available without dependence on a building management system.

3. Controller shall have an onboard clock and calendar functions that allow for occupancy scheduling.

4. Controller shall include non-volatile memory to retain all programmed values, without the use of an external battery, in the event of a power failure.

2.11 ROOF CURB (PROVIDED BY RTU MANUFACTURER AND NOT "BY OTHERS"):

A. Roof Curb shall be constructed of G90 galvanized steel and designed to mate with the down flow (confirm arrangement with plans) supply openings and provide support and a watertight seal. The roof curb design shall allow field-fabricated rectangular supply ductwork to be connected directly to the curb. Curb design shall comply with NRCA requirements. Curbs shall be shipped fully welded and insulated and include wood nailer strips.

B. **Curbs shall be rated for a minimum of 155 mph and certified by structural engineer upon submittal. Certification shall be provided within submittal for approval.**

C. Comply with requirements in "The NRCA Roofing Manual."

D. Match roof curb to roof slope to provide level surface for RTU mounting.

E. Provide curb having vertical members insulated with a minimum thermal resistance (R-value) of 6.0 BTU/hr-ft2-°F or greater.

F. Provide curb with continuous insulation between unit base and roof curb. All walls are to be insulated with 2" fiberglass insulation; floor to be insulated with 1" fiberglass insulation.

G. Curb height shall be a minimum of 14".

H. All curbs shall be provided with minimum 12-gauge wind clips.

I. Roof Curb for Horizontal Airflow (where scheduled) - Horizontal openings in curb shall be custom designed for return and/or discharge for horizontal air handling. Opening size and location shall be indicated on drawings and/or schedule.

J. Provide wood nailing strip to which roofer may nail roof flashing.

K. Ship roof curb loose for field installation prior to unit placement.

L. **Curb shall be factory painted with enamel paint. Color: Tan Enamel coating.**

2.12 VARIABLE FREQUENCY DRIVES

A. Provide Variable Frequency Drive for the compressor as part of the AC unit. VFD shall be furnished and installed to meet the performance set forth in the schedule and as specified under another section of this work.

1. Accessories to be furnished and mounted by the drive manufacturer and contained in a single enclosure. (The use of more than one enclosure is not acceptable).

B. Provide Variable Frequency Drive for speed control on all non-ECM direct drive supply fans.

C. All VFDs shall provide the following inherent protections:

1. Phase protection.
2. Brownout protection.
3. Overload/Overheat protection.
4. Soft starts to protect bearings/hardware.
5. Low & High voltage & over-torque protections.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for piping, ducts, and electrical systems to verify actual locations of connections before equipment installation.

C. Examine roof curbs and equipment supports for suitable conditions where units will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's rigging and installation instructions for unloading units and moving to final locations.

B. Curb Support: Install roof curb on roof structure according to "The NRCA Roofing Manual."

1. Install and secure units on curbs and coordinate roof penetrations and flashing with roof construction.
2. Coordinate size, installation, and structural capacity of roof curbs, equipment supports, and roof penetrations.
3. Coordinate size, location, and installation of unit manufacturer's roof curbs and equipment supports with roof Installer.

C. Duct-mounted sensors furnished by equipment manufacturer for field installation. Building Automation Systems Contractor shall provide and Install control wiring and make final connections to control devices and unit control panel.

D. Comply with requirements for gas-fired furnace installation in NFPA 54, "National Fuel Gas Code."

E. Install separate devices furnished by manufacturer and not factory installed.

F. Install new filters at completion of equipment installation and before testing, adjusting, and balancing.

3.3 CONNECTIONS

A. Coordinate installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems.

B. Where installing piping adjacent to units, allow space for service and maintenance.

C. Gas Piping Connections:

1. Comply with requirements in Section 23 11 23 “Natural-Gas Piping."

2. Connect gas piping to furnace, full size of gas train inlet, and connect with union, pressure regulator, and shutoff valve with sufficient clearance for burner removal and service.

3. Install AGA-approved flexible connectors.

D. Coordinate duct installation requirements with schematics on Drawings and with requirements specified for duct systems.

E. Duct Connections:

1. Comply with requirements in Section 23 31 13 "Metal Ducts."

2. Drawings indicate the general arrangement of ducts.

3. Connect ducts to units with flexible duct connectors. Comply with requirements for flexible duct connectors in Section 23 33 00 "Air Duct Accessories."

F. Electrical Connections: Comply with requirements for power wiring, switches, and motor controls in electrical Sections.

1. Install electrical devices furnished by unit manufacturer but not factory mounted.

3.4 STARTUP SERVICE

A. A factory-authorized service representative shall perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

2. Inspect units for visible damage to furnace combustion chamber.

3. Perform the following operations for both minimum and maximum firing and adjust burner for peak efficiency:

a. Measure gas pressure at manifold.

b. Measure combustion-air temperature at inlet to combustion chamber.

c. Measure flue-gas temperature at furnace discharge.

d. Perform flue-gas analysis. Measure and record flue-gas carbon dioxide and oxygen concentration.

e. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.

4. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:

a. High-limit heat exchanger.

b. Alarms.

B. After startup, change filters, verify bearing lubrication, and adjust belt tension.

C. Remove and replace components that do not properly operate and repeat startup procedures as specified above.

D. Prepare written report of the results of startup services.

3.5 ADJUSTING

A. Adjust initial temperature set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.6 DEMONSTRATION

A. A factory-authorized service representative shall train Owner's maintenance personnel to adjust, operate, and maintain units.

3.7 COMPLETION AND CLEANUP

B. Contractor shall comb and vacuum clean coils, inside and outside of unit cabinet prior to start-up.

C. Install temporary filters during construction and start-up period. Replace with specified filters at Substantial Completion.

3.8 PROTECTION OF FINISHED WORK

A. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation

END OF SECTION 23 74 33

SECTION 23 81 26 - DUCTLESS MINI-SPLIT-SYSTEM AIR-CONDITIONERS

PART I -GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 GENERAL REQUIREMENTS

A. Indoor, wall or ceiling mounted, direct-expansion fan coils are matched with cooling only outdoor unit.

B. Outdoor air-cooled split system compressor sections suitable for on-the-ground, rooftop, wall hung or balcony mounting. Units shall consist of a rotary compressor, an air-cooled coil, propeller-type draw-through outdoor fan, metering device(s), and control box. Units shall discharge air horizontally as shown on the contract drawings. Units shall function as the outdoor component of an air-to-air cooling only or heat pump system (refer to schedule).

C. Indoor unit shall be rated per ARI Standards 210/240 and listed in the ARI directory as a matched system.

D. A factory provided and installed BACnet communication interface card with building automation system shall enable building automation system operator to remotely control and monitor the system from an operator workstation. Control features available, and monitoring points displayed, locally at fan coil controller shall be available through building automation system.

E. Outdoor unit construction shall comply with ANSI/ASHRAE 15, latest revision, and with the NEC. Units shall be evaluated in accordance with UL standard 1995. Units shall be listed in the CEC directory. Unit cabinet shall be capable of withstanding 500-hour salt spray test per Federal Test Standard No. 141 (method 6061). Air-cooled condenser coils shall be leak tested at 573 psig.

F. Provide equipment with electrical characteristics as shown on the Electrical Drawings.

1.3 MANUFACTURERS

A. Acceptable Manufacturers: Subject to compliance with plans and specification, provide one of the following:

1. Carrier
2. JCI.
3. LG.
4. Mitsubishi.

1.4 SUBMITTAL:

A. Submit in form similar to the schedule on the Drawings. Show all data listed in schedule, electrical characteristics and accessories being provided.

B. Provide line-by-line specification review annotated to certify compliance or deviation.

C. General: Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedures.

D. Product Data: Submit product data, including manufacturer's product sheet for specified products.

1.5 WARRANTY

A. One (1) year on unit parts other than compressor/motor assembly. Warranty shall begin from date of Certificate of Substantial Completion.

B. Five (5) years on compressor/motor assembly. Warranty shall begin from date of Certificate of Substantial Completion.

C. One (1) year on refrigerant and oil. Warranty shall begin from date of Certificate of Substantial Completion.

PART 2 –PRODUCTS

2.1 UNIT CABINET:

A. Indoor unit cabinet discharge and inlet grilles shall be attractively styled, high-impact polystyrene. Cabinet shall be fully insulated for improved thermal and acoustic performance.

B. Outdoor unit cabinet shall be constructed of galvanized steel, bonderized and coated with a baked-enamel finish on inside and outside. Unit access panels shall be removable with minimal screws and shall provide full access to the compressor, fan, and control components. Outdoor compartment shall be isolated and have an acoustic lining to assure quiet operation.

C. Indoor and outdoor unit shall be of the same manufacturer.

2.2 COMPRESSOR

A. Compressor shall be fully hermetic rotary type. Compressor shall be equipped with oil system, operating oil charge, and motor. Internal overloads shall protect the compressor from over-temperature and over-current. Motor shall be NEMA rated class F, suitable for operation in a refrigerant atmosphere. Compressor assembly shall be installed on rubber vibration isolators.

2.3 COIL

A. Evaporator coil shall be copper tube with aluminum fins and galvanized steel tube sheets. Fins shall be bonded to the tubes by mechanical expansion. A drip pan under the coil shall have a drain connection for hose attachment to remove condensate. Condensate pan shall have internal trap.

B. Condenser coil shall be constructed of aluminum fins mechanically bonded to seamless copper tubes, which are cleaned, dehydrated, and sealed.

2.4 FANS

A. Fan shall be tangential direct-drive blower type with air intake at the top of the unit and discharge at the bottom front. Automatic, motor-driven vertical air sweep shall be provided standard. Air sweep operation shall be user selectable. The vertical sweep may be adjusted (using the remote control) and the horizontal air direction may be set

manually.

2.5 AIR FILTERS

A. Unit shall have filter track with factory-supplied cleanable filters.

2.6 BUILDING AUTOMATION SYSTEM INTERFACE:

A. Controls shall consist of a microprocessor-based control system which shall control space temperature, determine optimum fan speed, and run self-diagnostics. The temperature control range shall be from 62° F to 84°F.

B. The unit shall have integral controls provided by unit manufacturer to perform input functions necessary to operate the system. Factory installed hardware and software to enable building automation system to monitor, control, and display status and alarms.

1. A factory provided and installed BACnet communication interface card with building automation system shall enable building automation system operator to remotely control and monitor the system from an operator workstation. Control features available, and monitoring points displayed locally at fan coil controller shall be available through building automation system.

2. The unit shall be compatible with interfacing with connection to BACnet networks or interfacing with connection to BMS system.

C. The unit shall have the following functions as a minimum:

1. An automatic restart after power failure at the same operating conditions as at failure.

2. A timer function to provide a minimum 24-hour timer cycle for system Auto Start/Stop.

3. Temperature-sensing controls shall sense return air temperature.

4. Indoor coil freeze protection.

5. Wireless infrared remote control to enter set points and operating conditions.

6. Automatic air sweep control to provide on or off activation of air sweep louvers.

7. Dehumidification mode shall provide increased latent removal capability by modulating system operation and set point temperature.

8. Fan-only operation to provide room air circulation when no cooling is required.

9. Diagnostics shall provide continuous checks of unit operation and warn of possible malfunctions. Error messages shall be displayed at the unit.

10. Fan speed control shall be user-selectable: high, medium, low, or microprocessor controlled automatic operation during all operating modes.

11. Automatic heating-to-cooling changeover in heat pump mode. Control shall include dead band to prevent rapid mode cycling between heating and cooling.

12. Indoor coil high temperature protection shall be provided to detect excessive indoor discharge temperature when unit is in heat pump mode.

PART 3 -EXECUTION

3.1 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.

1. Leak Test: After installation, fill water coils with water and test coils and connections for leaks. Repair leaks and retest until no leaks exist.

2. Charge refrigerant coils with refrigerant and test for leaks. Repair leaks and retest until no leaks exist.

3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new units, and retest.

3.2 STARTUP SERVICE

A. Refer to Section 23 05 93 Testing, Adjusting, and Balancing for HVAC.

3.3 CLEANING

A. Clean units internally, on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils entering air face.

B. After completing system installation and testing, adjusting, and balancing fan coil and air-distribution systems clean filter housings and install new filters.

3.4 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fan coil units.

END OF SECTION 23 81 26

SECTION 23 82 19 - FAN COIL UNITS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes factory fabricated fan coil units and accessories.

B. Related Sections:

1. Section 23 05 00 - Common Work Results for HVAC.

2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.

3. Section 23 07 16 - HVAC Equipment Insulation: Product requirements for insulation for placement by this section.

4. Section 23 33 00 - Air Duct Accessories: Product requirements for flexible duct connections for placement by this section.

5. Section 23 05 13 - Common Motor Requirements for HVAC Equipment: Product requirements for electric motors for placement by this section.

6. Section 23 05 14 - Variable Frequency Controllers.

1.3 SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Provide line-by-line schedule notes review annotated to certify compliance or deviation.

C. Provide Footprint Square footage Discrepancy Chart in spreadsheet form. Clearly show the differences in height, length, and width between the submitted units and designed units per plans for each FCU with corresponding tag.

D. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements.

E. Product Data, Submit the following:

1. Published Literature: Indicate capacities, ratings, gages and finishes of materials, and electrical characteristics and connection requirements.

2. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.

3. Fans: Performance and fan curves with specified operating point plotted, power, RPM.

4. Sound Power Level Data: Fan outlet and casing radiation at rated capacity per ARI 260.

5. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring. Indicate factory installed and field installed wiring.

F. Manufacturer's Installation Instructions: Submit.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.

C. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.

D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

F. Comply with NFPA 70.

1.6 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum three (3) years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Units shall be factory wrapped by the manufacturer prior to shipment to prevent damage due to weather and road debris during transportation and thereafter while in storage awaiting installation. Protection of the complete unit from rusting and water migration must be handled as best suits the circumstances. Store in a place protected from construction traffic and weather.

B. All equipment shall remain in manufacturer's protective shipping wrap during construction. Openings must remain protected and covered during construction. If

protective wrap has been damaged, the contractor shall provide additional protective wrap as directed by engineer.

C. Contractor shall adequately protect equipment from damage after delivery to the project. Equipment shall be completely covered and secured with heavy tarpaulins, drop cloths or other protective coverings as required to protect from inclement weather, moisture, chemicals, construction traffic, plaster, paint, mortar and/or dirt. Do not cover with plastic materials and trap condensate and cause corrosion. Protective covering is in addition to the manufacturer's original factory packaging. Original factory packaging shall not be deemed as acceptable protection of equipment.

D. Do not deliver equipment to the project site until progress of construction has reached the stage where equipment is actually needed or until building is closed in enough to protect the equipment from weather. Equipment allowed to stand in the weather will be rejected, and the contractor is obligated to furnish new equipment of like kind at no additional cost to the Owner. Limit shipment of bulk and multi-use materials to quantities needed for immediate installation.

E. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.

F. Protect units from physical damage. Leave factory covers in place until startup of machine.

1.8 WARRANTY

A. Furnish one (1) year manufacturer parts and labor warranty for air handling units. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start up is not acceptable.

1.9 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Spare materials shall be provided by equipment manufacturer and not by the installing mechanical contractor or "by others".

1. Filters: Furnish three (3) sets for each unit. One set during construction, a new set of filters for Test and Balancing services, and final new set at substantial completion. Filters shall be protected with polyester fabric at all times during construction.

1.10 COORDINATION

A. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

PART 2 – PRODUCTS

2.2 FAN COIL UNITS

A. Manufacturers: Subject to compliance with plans and specification, provide one of the following:

1. Refer to Specification 01 23 00 Alternates for acceptable manufacturers.

2. All materials and labor costs to coordinate, receive, install and start-up the equipment per this specification for a complete and operational system shall be included in the Contractor's Base Bid.

2.3 MANUFACTURED UNITS

A. Fan coil units shall be factory assembled and consist of fans, motor and drive assembly, coils, filters, stainless-steel condensate pans and accessories.

2.4 CABINET

A. Materials: Formed single-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections gasketed.

1. Outside Casing: 18 gauge, galvanized steel (G90).

2. Utility Lugs: For lifting unit and fastening to permanent structure, 8 gauge, galvanized steel (G90).

B. Cabinet Insulation: Comply with NFPA 90A or NFPA 90B.

1. Materials: Closed cell foam insulation.

2. Thickness: 1 inch.

3. Density: 1 ½ pounds per cubic foot.

4. Thermal Conductivity (k-Value): 0.26 at 75 deg F mean temperature.

5. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50, when tested according to ASTM C 411.

C. Access Panels: Same materials and finishes as cabinet complete with threaded bolted fasteners, and gaskets. Inspection and access panels shall be sized and located to allow periodic maintenance and inspections and include hinged access with lift and turn fasteners on both sides of unit. Provide access panels in the following locations:

1. Fan Section: Double wall hinged access doors.

2. Coil Section: Inspection panel.

3. Filter Section: Hinged access doors to allow periodic removal and installation of filters.

D. Condensate Drain Pans: Formed sections of stainless-steel sheet complying with requirements in ASHRAE 62. Fabricate pans with slopes in two planes to collect condensate from cooling coils (including coil piping connections and return bends) when units are operating at maximum catalogued face velocity across cooling coil.

1. Double-Wall Construction: Fill space between walls with 1 inch, 1 ½ pound fiber glass insulation.

2. Drain Connections: Main and auxiliary on same side of fan. Provide auxiliary drain pan connection under unit above ceiling.

3. Float Switch: Provide a factory installed and wired drain pan float switch.

2.5 FAN SECTION

A. Fan-Section Construction: Direct drive centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor drive assembly, and support structure and equipped with formed-steel channel base for integral mounting of fan, motor, and casing panels. Mount fan with interior torsion flex mount and exterior spring vibration isolation.

B. Centrifugal Fan Housings: Formed- and reinforced-steel panels to make curved scroll housings with shaped cutoff, spun-metal inlet bell, and access panels or doors to allow entry to internal parts and components.

1. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.

2. Horizontal Flanged Split Housing: Bolted construction.

3. Drive Frame: Rail mounted, heavy gauge steel to allow frame to slide for easy belt tensioning.

C. Fan Assemblies: Statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower.

D. Forward-Curved Fan Wheels: Galvanized-steel and/or aluminum/painted steel construction with inlet flange, back plate, and shallow blades with inlet and tip curved forward in direction of airflow and mechanically secured to flange and back plate; cast-steel hub swaged to back plate and fastened to shaft with set screws.

E. Coatings (exterior only): Baked Enamel

F. Shafts: Statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.

1. Turned, ground, and polished Stainless steel with keyway. Ship with a protective coating of lubricating oil.

2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

G. Pre lubricated and Sealed Shaft Bearings: Bearings shall be ball bearing type (no sleeve bearings allowed), permanently lubricated and sealed for life.

H. Fan-Section Source Quality Control:

1. Factory test fan performance for flow rate, pressure, power, air density, rotation speed, and efficiency. Establish ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

I. Inlet/outlet duct collars. Galvanized collars at each inlet and outlet of the unit. Flexible duct connection isolating discharge of scroll from discharge of fan.

2.6 MOTORS

A. General: Comply with requirements in Section 23 05 13 Common Motor Requirements for HVAC Equipment and Division 26. Matched with fan load.

B. Maximum Ambient Temperature Rating: 120 degrees F (50 degrees C).

C. Premium efficiency Electronically Commutated (ECM) with thermal overload protection wired to exterior junction box.

1. Motor size 1/2 HP and 1 HP shall have integrated control module with thermal overload protection. Motor size 1-1/2 HP and 3 HP shall have remote mounted control with thermal overload protection. Motor control module is mounted in cabinet interior.

2. Motors shall be factory wired to unit control box with quick connect electrical plugs.

3. Motors shall be RPM controlled, UL Recognized, or equivalent, continuous duty rated.

4. Motor service access shall be on same side as coil connections.

2.7 COILS

A. Coil Sections: Common or individual, insulated, galvanized-steel casings for heating and cooling coils. Design and construct to facilitate removal and replacement of coil for maintenance and to ensure full airflow through coils.

B. Water Coils: Self-draining coil fabricated according to ARI 410.

1. Piping Connections: Sweat

2. Tubes: Copper, 0.016 inch tube thickness

3. Fins: Aluminum, 10 fins per inch

4. Fin and Tube Joint: Mechanical bond

5. Headers: Seamless copper tube with brazed joints

6. Frames: Galvanized-steel channel frame.

a. Working-Pressure Ratings: 250 psig, 300 deg F.

7. Source Quality Control: Test to 500 psig underwater (2000 psig ultimate strength).

C. Refrigerant Coils: Coil designed for use with R-454B refrigerant, fabricated according to ARI 410, connected with soldered fittings.

1. Capacity Reduction: Circuit for Double control.

2. Tubes: Copper

3. Fins: Aluminum 10 fins per inch.

4. Fin and Tube Joint: Mechanical bond.

5. Suction and Distributor: Seamless copper tube with brazed joints.

6. Frames: 16 gauge, galvanized-steel channel frame.

7. Ratings: Design tested and rated in accordance to UL (UL recognized).

   a. Working-Pressure Rating: 250 psig.

8. Source Quality Control: 500 psig underwater (2000 psig ultimate strength).

D.

2.8 FILTER SECTION

A. Filters: Comply with NFPA 90A.

B. Filter Section: Provide maximum 2” thick filter holding frames arranged for vertical orientations, with hinged access panels on both sides of unit. Filters shall be removable from both sides.

C. Extended-Surface, Disposable Panel Filters: Factory-fabricated, dry, extended-surface filters with holding frames.

1. Media: Fibrous material formed into deep-V-shaped.
2. Media and Media-Grid Frame: Nonflammable cardboard.

D. Replaceable Filter Media: MERV 11 or greater rating in accordance with ASHRAE Test Standard 52.2-2007.

2.9 ELECTRICAL

A. Fan motor shall be wired to an external electrical. Include a motor control board, motor circuit fusing, 24V control circuit transformer, and terminal strip for connection of field wiring.

B. For Constant Air Volume Fan Systems: Provide a dial potentiometer for manual airflow adjustment during test and balancing.

C. For Variable Air Volume Fan Systems: Provide a 0-10VDC input for BAS fan speed control.

D. Provide a single point power connection with factory installed and wired non-fused disconnect switch with lock-out-tag-out ready feature.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Install in accordance with ARI 430.

B. Install assembled units with internal vibration isolators. Internally isolated fans shall be provided with resilient mountings and flexible electrical leads. Install restraining snubbers as required. Adjust snubbers to prevent tension in flexible connectors when fan is operating. Refer to Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment.

C. Contractor to provide fixed sheaves required for final air balance as dictated by Test and Balance Contractor.

D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.

E. Insulate coil headers located outside airflow as specified for piping. Refer to Section 23 07 19 - HVAC Piping Insulation.

F. Provide trapped condensation drain line routed to the nearest floor drain. Refer to detail on Drawings and Section 23 21 13 - Hydronic Piping.

G. Installation of Hot Water Heating and/or Chilled Water Coil:

1. Make connections to coils with unions. Position unions to permit coil removal.

2. Connect water supply to leaving airside of coil (counter flow arrangement).

3. Locate water supply at bottom of supply header and return water connection at top.

4. Install water coils to allow draining and install drain connection at low points.

5. Install the following piping accessories on piping connections. Refer to Section 23 05 19 – Meters and Gages for HVAC Piping.

   On supply: (refer to coil connection details)

   1. Thermometer well and thermometer.
   2. Well for control system temperature sensor.
   3. Shutoff valve.
   4. Pressure gage.
   5. Y-Strainer

   On return: (refer to coil connection details)

   1. Victaulic / TA 78K (combination balancing / shut-off globe valve with memory stop and pressure / temperature ports).
   2. Air vent.
   3. Thermometer well and thermometer.
   4. Well for control system temperature sensor.
   5. Pressure gage.
   6. Modulating control valve (furnished and installed by BAS).
   7. Shutoff valve.

6. Install valves and piping specialties in accordance with details as indicated on Drawings.

7. Install manual air vents at high points complete with shutoff valve. Refer to Section 23 21 13 - Hydronic Piping.

8. Install floor support stands at piping drops to air unit coil connections. Air unit coil shall not carry any suspended piping load.

H. Fan coil unit manufacturer representative shall remove vibration isolation shipping blocks prior to start-up and ensure that fan base is free floating, and isolators are not short circuited during operation.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to machine to allow service and maintenance.

C. Connect piping to low profile fan coil units mounted on vibration isolators with flexible connectors.

D. Connect condensate drain pans, to drainage piping. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

E. Hot- and Chilled-Water Piping: Comply with applicable requirements in Section 23 21 13 Hydronic Piping. Connect to supply and return coil tappings with shutoff or balancing valve and union or flange at each connection.

F. Condensate Piping: Comply with applicable requirements in Section 23 21 13 Hydronic Piping. Connect to supply and return coil tappings with shutoff valve and union or flange at each connection.

G. Refrigerant Piping: Comply with applicable requirements in Section 23 23 00 Refrigerant Piping. Connect to supply and return coil tappings with shutoff valve and union or flange at each connection.

H. Duct installation and connection requirements are specified in Section 23 31 00 HVAC Duct and Casings.

I. Electrical: Comply with applicable requirements in Division 26 Sections for power wiring, switches, and motor controls.

J. Ground equipment according to Division 26.

K. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

1. Leak Test: After installation, fill water coils with water, and test coils and connections for leaks.

2. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3.4 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

2. Verify that shipping, blocking, and bracing are removed.

3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.

4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.

5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.

6. Verify that zone dampers fully open and close for each zone.

7. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.

8. Comb coil fins for parallel orientation.

9. Verify that proper thermal-overload protection is installed for electric coils.

10. Install new, clean filters.

B. Starting procedures for air-handling units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.

2. Measure and record motor electrical values for voltage and amperage.

3. Manually operate dampers from fully closed to fully open position and record fan performance.

3.5 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.6 CLEANING

A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units externally and internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, comb coils, drain pans, and filter housings, and install new, clean filters.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fan coil units.

3.8 PROTECTION OF FINISHED WORK

B. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

END OF SECTION 23 82 19

SECTION 23 82 39.19 - ELECTRIC UNIT HEATERS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Electric Unit Heaters.

B. Related Sections:

1. Section 23 05 29 - Hangers and Supports for HVAC Piping and Equipment: Product requirements for hangers for placement by this section.

2. Section 23 05 48 - Vibration and Seismic Controls for HVAC Piping and Equipment: Product requirements for vibration isolators for placement by this section.

1.3 REFERENCES

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 90.1 - Energy Efficient Design of New Buildings Except Low-Rise Residential Buildings.

2. ASHRAE 103 - Methods of Testing for Annual Fuel Utilization Efficiency of Residential Central Furnaces and Boilers.

B. Underwriters Laboratories Inc.:

1. Units to be UL Listed.

1.4 ACTION SUBMITTALS

A. Provide line-by-line specification review annotated to certify compliance or deviation.

B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Plans, elevations, sections, and details.

2. Location and size of each field connection.

3. Details of anchorages and attachments to structure and to supported equipment.

4. Equipment schedules to include rated capacities, operating characteristics, furnished specialties, and accessories.

5. Location and arrangement of integral controls.

6. Wiring Diagrams: Power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Suspended ceiling components.

2. Structural members to which unit heaters will be attached.

3. Method of attaching hangers to building structure.

4. Size and location of initial access modules for acoustical tile.

5. Items penetrating finished ceiling, including the following:

6. Lighting fixtures.

a. Air outlets and inlets.
b. Speakers.
c. Sprinklers.
d. Access panels.

7. Perimeter moldings for exposed or partially exposed cabinets.

1.6 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of thermostats or other products not mounted on unit.

B. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listing.

1.7 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

C. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.8 DELIVERY, STORAGE, AND HANDLING

A. Accept heaters and controls on site in factory packaging. Inspect for damage.

1.9 WARRANTY

A. Furnish a five (5) year manufacturer warranty. Warranty shall begin from date of Certificate of Substantial Completion. Warranty start date from shipment or start-up will not be acceptable.

PART 2 - PRODUCTS

2.1 ELECTRIC UNIT HEATERS

A. Manufacturers: Subject to compliance with scheduled capacities and specification, provide products by the following manufacturers.

1. Chromalox
2. Markel
3. Modine
4. Reznor
5. Trane

B. Self-contained, packaged, factory assembled, pre-wired unit consisting of cabinet, supply fan, heat exchanger, controls, and accessories complying with ARI 440:

1. Discharge Louvers: Individually adjustable horizontal and vertical louvers to match cabinet finish.

2. Control Voltage: 24-volt, 60 hertz

3. Wall mounted adjustable thermostat.

4. Location: Suspended overhead.

5. Comply with UL 2021.

C. Cabinet: 18-gauge steel with baked enamel finish, easily removed and secured access panels, insulated or double panel construction.

D. Supply Fan: Propeller type with direct drive, dynamically balanced and mounted with rubber vibration insulators.

E. Heat Exchanger: High mass, all steel tubular finned type, copper brazed elements.

F. Controls: Wall mounted Thermostat with fan switch.

G. Motor: Totally enclosed industrial rated. Motor on units to 20KW shall utilize sealed bearings. Motor on units larger than 20KW shall be 2-speed, permanent capacitor-type, continuous duty.

H. Wiring:

1. Sub-divided circuits with individual fuse protection

2. Internal 24V control transformer.

3. Heavy duty magnetic contactors.

4. Thermal cutouts on control circuit with automatic reset.

5. Low voltage thermostatic kit with fan switch.

6. Factory wired disconnect switch.

7. Performance: Provide equipment as scheduled on Drawings.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in for electrical connections to verify actual locations before unit heater installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install cabinet unit heaters to comply with NFPA 90A.

B. Install unit heaters level and plumb.

C. Suspend cabinet unit heaters from structure with elastomeric hangers. Refer to Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

D. Install wall-mounting thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

E. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.3 CONNECTIONS

A. Comply with safety requirements in UL 1995.

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

2. Operate electric heating elements through each stage to verify proper operation and electrical connections.

3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

B. Remove and replace malfunctioning units and retest as specified above.

3.5 ADJUSTING

A. Adjust initial temperature set points.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain cabinet unit heaters.

END OF SECTION 23 82 39.19

SECTION 26 05 00 - COMMON WORK RESULTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUBSTITUTIONS OF PRODUCTS

A. The products described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution. The materials and equipment named in, and the procedures covered by these specifications have been selected as a standard because of quality, particular suitability or record of satisfactory performance. It is not intended to preclude the use of equal or better materials or equipment provided that same meets the requirements of the particular project and is approved in an Addendum as a substitution prior to the submission of proposals.

B. No substitution will be considered prior to receipt of proposals unless written request for approval has been received by the Architect and Engineer at a minimum of seven (7) business days prior to the date for receipt of proposals. Each such request shall include a specification line by line review annotated to certify compliance, the name of the manufacturer and model, material or equipment for which it is to be substituted and a complete description of the proposed substitute including dimensional drawings, cutsheets, performance and test data and any other information necessary for an evaluation. The Engineers decision of approval or disapproval of a proposed substitution shall be final.

C. If the Engineer approves any proposed substitution prior to receipt of proposals, such approval will be set forth in an Addendum. Offerors shall not rely upon approvals made in any other manner.

D. The Engineer and Owner reserve the right to disapprove the use of any manufacturer who in their judgment is unsuitable for use on the Project and that decision will be final.

E. Availability of specified items:

1. Verify prior to submittal of Proposal that all specified items will be available in time for installation during orderly and timely progress of the work.

2. In the event specified items will not be so available, notify the Architect / Engineer prior to receipt of Proposals. Submit Request for Substitutions in accordance with this section.

3. The request will not be considered if the product or method cannot be provided as a result of the Contractor’s failure to pursue the work promptly or coordinate activities properly.

4. Costs of delays because of non-availability of specified items, when such delays could have been avoided by the Contractor, will be back-charged as necessary and shall not be borne by the Owner.

F. A request constitutes a representation that Offeror:

1. Has investigated proposed product and determined that it meets or exceeds quality level of specified product.

2. Will provide same warranty for Substitution as for specified product, except when inability to provide specified Warranty is reason for request for substitution as described above.

3. Will coordinate installation and make changes to other Work which may be required for the Work to be complete with no additional cost to Owner.

4. Waives claims for additional costs or time extension which may subsequently become apparent.

5. Will reimburse the Owner and pay for all costs, including Architect/Engineer's redesign and evaluation costs resulting from the use of the proposed substitution, or for review or redesign services associated with re-approval by authorities having jurisdiction.

G. **No substitutions will be considered after the Award of Contract.**

1.3 SUMMARY

A. Provide all work for electrical systems required in the project to be properly installed, tested and performing their intended function.

1.4 QUALITY ASSURANCE

A. Perform all work in accordance with the latest edition of the national electrical code, and local codes.

B. All electrical materials and distribution, and utilization equipment shall be UL Listed.

C. All equipment and materials shall be new and unused and of United States Domestic manufacture unless approved otherwise by engineer or owner.

D. Eliminate any abnormal sources of noise that are considered by the architect not to be an inherent part of the electrical systems as designed.

1.5 COORDINATION WITH OTHER TRADES

A. Coordinate the work of this division with all other divisions to ensure that all components of the electrical system will be installed at the proper time and fit the available space.

B. Locate and size all openings in work of other trades required for the proper installation of the electrical system components.

C. Make all electrical connections to all equipment furnished by this division and any other division.

D. Make all electrical connections from all 120 volt and greater dampers and switches to associated exhaust fan(s) furnished by any other division.

1.6 DRAWINGS

A. The drawings are schematic in nature, but show the various components of the systems approximately to scale and attempt to indicate how they are to be integrated with other parts of the building. Determine exact locations by review of equipment manufacturer's data, by job site measurements, by checking the requirements of other trades, and by reviewing all Contract Documents. The size of the electrical equipment indicated on the Drawings may be based on the dimensions of a particular manufacturer. While other listed manufacturers will be acceptable, it is the responsibility of the Contractor to determine if the equipment that Contractor proposes to furnish will fit in the space. The drawings are not intended to show exact locations of conduit and wire, or to indicate all wire terminators, connectors, conduit fittings, boxes or supports, but rather to indicate distribution, circuitry, and control.

B. The Electrical Drawings are necessarily diagrammatic in character and cannot show every connection in detail or conduit in its exact location. These details are subject to the requirements of ordinances and also structural and architectural conditions. The Contractor shall carefully investigate structural and finish conditions and shall coordinate the separate trades in order to avoid interference between the various phases of work. Work shall be laid out so that it will be concealed in furred chases and suspended ceilings, etc., in finished portions of the building, unless specifically noted to be exposed. ***In all open-to-structure spaces, including those with ceiling clouds of any size, all wiring less than 120V shall be installed in conduit***. Work shall be installed to avoid crippling of structural members. All exposed work shall be installed parallel or perpendicular to the lines of the building unless otherwise noted.

C. When the mechanical and electrical Drawings do not give exact details as to the elevation of pipe, conduit and ducts, physically arrange the systems to fit in the space available at the elevations intended with the proper grades for the functioning of the system involved. Exposed conduit is generally intended to be installed true and square to the building construction, and located as high as possible against the structure in a neat and workmanlike manner. The Drawings do not show all required offsets and their location details. Work shall be concealed in all finished areas.

1.7 SUBMITTALS

A. Specification Review:
   1. Include a paragraph-by-paragraph written specification review for each product listed requiring a submittal. Denote any proposed deviations from specifications.

1.8 EXISTING CONDITIONS

A. Do all work required to maintain electrical services to the Owner occupied portions of the building during construction.

B. No connection to existing services or utilities shall be made without Owner's knowledge and permission. All such connections shall be planned and scheduled to minimize the length of service interruption required. Request for shutdown shall be made to Owner at least two (2) weeks in advance and shall be accompanied by detailed written schedule of activities during shutdown and list of materials required for connection and renewal of service. It shall be understood that all such service interruptions shall be made at the Owner's convenience, not the Contractor's. No increase in contract amount will be

allowed for reasons of premium time, inefficiency of operations or other considerations not calculated in original bid.

C. All items removed shall be stored on-site. Schedule a review of the items with the Owner. Remove from site all items the Owner does not choose to keep. Deliver Owner designated items to Owner's storage facility.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.

B. Protect from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original packaging.

C. Do not deliver items to project before time of installation. Limit shipment of bulk and multiple-use materials to quantities needed for immediate installation.

PART 2 - PRODUCTS

A. Provide allowance in bid for twenty-five 20A/1p circuits of 100 feet in length from source for miscellaneous needs during the course of construction. Include one duplex receptacle per circuit, all associated labor and all necessary accessories (conductor, conduit, supports, etc.) required for proper installation.

B. Provide allowance in bid for twenty-five light switching circuit drops of twenty feet in length for miscellaneous needs during construction. Include one 277V light switch per circuit, all associated labor and all necessary accessories (conductor, conduit, supports, etc.) required for proper installation.

C. Provide allowance in bid for ten additional exit signs for miscellaneous needs during construction. Include circuiting, all associated labor and all necessary accessories required for proper installation.

PART 3 - EXECUTION

3.1 EXISTING WORK

A. Disconnect electrical systems in walls, floors, and ceilings scheduled for removal.

B. Provide temporary wiring and connections to maintain existing systems in service during construction.

C. When performing work on energized equipment or circuits, use personnel experienced and trained in similar operations.

D. Remove, relocate, and extend existing installations to accommodate new construction.

E. Repair adjacent construction and finishes damaged during demolition and extension work.

3.2 OWNER INSTRUCTION

A. Provide on-site Owner training for all new equipment.

B. Use Operation and Maintenance manuals and actual equipment installed as basis for instruction.

C. At conclusion of on-site training program have Owner personnel sign written certification they have completed training and understand equipment operation. Include copy of training certificates in final Operation and Maintenance manual submission.

END OF SECTION 26 05 00

SECTION 26 05 19 - LOW VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Provide a complete system of building wire and cable to all electrical loads.

1.3 SYSTEM DESCRIPTION

A. Product Requirements: Provide products as follows:
   1. Provide stranded conductors for all wiring.
   2. Conductor not smaller than 12 AWG for power and lighting circuits.
   3. Conductor not smaller than 16 AWG for control circuits.
   4. 10 AWG conductors for 20 ampere, 120 volt branch circuits longer than 75 feet
   5. 10 AWG conductors for 20 ampere, 277 volt branch circuits longer than 200 feet.
   6. Copper.

B. Wiring Methods: Provide the following wiring methods:
   1. Concealed Dry Interior Locations: Use only Type THHN/THWN-2 insulation, in raceway.

C. Branch Circuit Conductors: No branch circuit conductors are allowed in any slab or under slab on grade unless specifically indicated on drawings.

1.4 COORDINATION

A. Where wire and cable destination is indicated and routing is not shown, determine routing and lengths required.

PART 2 - PRODUCTS

2.1 BUILDING WIRE

A. Manufacturers:
   1. Southwire
   2. Republic
   3. Alan
   4. Encore

B. Product Description: Single conductor insulated wire.

C. Conductor: Copper.

D. Insulation: NFPA 70; Type THHN/THWN-2 insulation for feeders and branch circuits.

2.2 TYPE AC CABLE

A. Manufacturers:
   1. AFC
   2. Southwire

B. Product Description: A fabricated assembly of insulated conductors in a flexible metallic enclosure.

C. Comply with NEC 320.

D. Support, provide separate support to structure for all Type AC cable, spacing not exceeding three (3) feet and at each junction box.

E. Provide an insulated green grounding conductor in all Type AC cable.

F. Acceptable Use: Install, at Contractor's option, only for service to light fixtures above accessible ceilings, limit length to six (6) feet whips from accessible junction box to light fixtures.

G. Provide insulated throat fittings at all terminations of Type AC cable.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify interior of building has been protected from weather.

B. Verify mechanical work likely to damage wire and cable has been completed.

C. Verify raceway installation is complete and supported.

3.2 EXISTING WORK

A. Remove exposed abandoned wire and cable, including abandoned wire and cable above accessible ceiling finishes. Patch surfaces where removed cables pass through building finishes.

B. Disconnect abandoned circuits and remove circuit wire and cable. Remove abandoned boxes when wire and cable servicing boxes is abandoned and removed. Install blank cover for abandoned boxes not removed.

C. Provide access to existing wiring connections remaining active and requiring access. Modify installation or install access panel.

D. Extend existing circuits using materials and methods compatible with existing electrical installations, or as specified.

3.3 INSTALLATION

A. Route wire and cable to meet Project conditions.

B. Neatly train and lace wiring inside boxes, equipment, and panelboards.

C. Identify and color code wire. Identify each conductor with its circuit number or other designation indicated.

D. Special Techniques - Wiring Connections:
1. Clean conductor surfaces before installing lugs and connectors.
2. Make splices, taps, and terminations to carry full ampacity of conductors with no perceptible temperature rise.
   a. MDF/IDF room branch circuits: All branch circuits shall be dedicated and unspliced. Provide dedicated branch circuit 20 or 30 amperes, #10 and or #12 wire, unspliced from wiring device all the way back to the overcurrent device. Do not share ground with any other circuit.
   b. Computer branch circuits: All branch circuits shall be dedicated. Provide dedicated branch circuit 20 amperes, #10 and or #12 wire from wiring devices all the way back to the overcurrent device. Do not share neutral with any other circuit.
   c. Kitchen branch circuits: All branch circuits for 125 volt, single phase, 15 and 20 ampere receptacles shall be dedicated. Provide dedicated branch circuit 20 amperes, #10 and or #12 wire from wiring devices all the way back to the overcurrent device. Do not share neutral or ground with any other circuit.
3. Tape uninsulated conductors and connectors with electrical tape to 150 percent of insulation rating of conductor.
4. Install split bolt connectors for copper conductor splices and taps, 6 AWG and larger.
5. Install solderless pressure connectors with insulating covers for copper conductor splices and taps, 8 AWG and smaller.
6. Install insulated spring wire connectors with plastic caps for copper conductor splices and taps, 10 AWG and smaller.

3.4 WIRE COLOR

A. COLOR CODES FOR CONDUCTORS FOR BRANCH CIRCUITS AND FEEDERS

	Wire Sizes #10 and Smaller: Use Continuous Color Coded Insulation (Note 01)				**Wire Sizes #6 and Smaller: Use Continuous Color Coded Insulation (Note 02)**	
System/Phase	**A**	**B**	**C**	**N**	**G**	**IG**
120/208	Black	Red	Blue	White	Green	Green/Yellow Stripe
120/240	Black	Orange	Blue	White w/color stripe (Note 03)	Green	Green/Yellow Stripe
277/480	Brown	Purple	Yellow	Gray	Green	Green/Yellow Stripe

Table Notes:

1. Wire size #8 and larger, black conductors with color marking tape at each termination and where accessible; colors as noted above.

2. Wire sizes #4 and larger, black conductor with green marking tape at each termination and where accessible.
3. Provide white (no stripe) insulation when 120/208V system is not present at this installation.

B. Neutral Conductors: White. When two or more neutrals are located in one conduit, individually identify each with proper circuit number and provide color coding at each junction box containing more than one neutral.

C. Branch Circuit Conductors: Install three or four wire home runs with each phase uniquely color coded.

D. Feeder Circuit Conductors: Uniquely color code each phase.

E. Ground Conductors:
For 6 AWG and smaller: Green.
For 4 AWG and larger: Identify with green tape at both ends and visible points including junction boxes.

3.5 GROUPING OF CIRCUITS

A. Limit the number of current carrying conductors per conduit to 6. Neutrals serving computer receptacle branch circuits shall be counted as current carrying. Grounds shall not be counted.

B. Grouping of different voltages is not allowed.

C. Provide metal box sizes per NEC Table 314.16 (A).

D. Provide conduit per NEC Annex C.

E. Neutrals serving branch circuits shall not be shared. Provide dedicated neutral per circuit.

3.6 POWER LIMITED CIRCUIT INSTALLATION

A. Provide a complete system of raceway and covered junction boxes for all power limited circuits installed exposes in finished spaces and spaces without a ceiling.

B. Provide raceway for all power limited circuit wiring within wall cavities and above sheet rock, plaster and other “hard” (non-lay-in) ceiling types of construction.

C. Labeling: Provide label on all junction boxes.
1. Provide permanent labeling with indelible black marker, in neat, legible print indicating the system wiring name.

END OF SECTION 26 05 19

SECTION 26 05 26 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Provide a continuous low-impedance grounding system for the entire electrical wiring system.

1.3 REFERENCES

A. Institute of Electrical and Electronics Engineers:
   1. IEEE 142 - Recommended Practice for Grounding of Industrial and Commercial Power Systems.
   2. IEEE 1100 - Recommended Practice for Powering and Grounding Electronic Equipment.

B. NFPA 70 - National Electrical Code.

1.4 SYSTEM DESCRIPTION

A. Grounding systems use the following elements as grounding electrodes:
   1. Metal underground water pipe.
   2. Metal building frame.
   3. Concrete-encased electrode.
   4. Rod electrode.
   5. Plate electrode.

1.5 SUBMITTALS

A. Product Data: Submit data on grounding electrodes and connections.

1.6 QUALITY ASSURANCE

A. Provide grounding materials conforming to requirements of NEC, IEEE 142, and UL labeled.

1.7 MADE ELECTRODE INSPECTION

A. Convene prior to cover up of work of this section.

B. Coordinate inspection of made electrode, exothermic welds and test well installation.

PART 2 PRODUCTS

2.1 ROD ELECTRODES

A. Manufacturers:
1. Apache Grounding/Erico Inc.
2. Copperweld, Inc.
3. Erico, Inc.
4. O-Z Gedney Co.
5. Thomas & Betts
6. VFC

B. Product Description:
1. Material: Copper-clad steel
2. Diameter: 3/4 inch
3. Length: ten (10) feet

2.2 WIRE

A. Material: Stranded copper.

B. Foundation Electrodes: #2 AWG.

C. Grounding Electrode Conductor: Copper conductor bare.

D. Bonding Conductor: Copper conductor bare.

2.3 MECHANICAL CONNECTORS

A. Manufacturers:
1. Apache Grounding/Erico Inc.
2. Copperweld, Inc.
3. Erico, Inc.
4. ILSCO Corporation
5. O-Z Gedney Co.
6. Thomas & Betts, Electrical
7. VFC

B. UL Listed for grounding applications.

C. Provide “ACORN” style ground clamp only for all driven ground rods unless noted to be exothermic connected in this specification. UL listed for connecting ground conductor to a driven ground rod.

D. Description: Brass connectors, suitable for grounding and bonding applications, in configurations required for particular installation.

2.4 EXOTHERMIC CONNECTIONS

A. Manufacturers:
1. Cadweld by Erico, Inc.

B. Product Description: Exothermic materials, accessories, and tools for preparing and making permanent field connections between grounding system components.

2.5 GROUNDING BUSSES

A. When indicated, provide copper ground busses on walls in areas where special grounding needs will arise. Bus shall consist of copper bar as follows:
1. Ground bar cross section of nominal four (4) inches by 1/4 inch; 24 inches length.
2. Drill to accommodate NEMA Pattern D 2-hole compression lugs for ground wires to be installed. Leave remainder of bar for future drilling by owner.
3. Copper compression lugs to connect conductors to the bar. Lugs shall be 2-hole type for double bolting to ground bar.
4. Install all bolts for compression with top and bottom steel washers plus a Belleville spring washer between top washer and bolt head.
5. Grounding electrode conductor(s) shall be fusion-welded on buss (and not lugged on).
6. Mounting Free air, no enclosure required. Install Harger WBKT-1 brackets to mount bar to wall. Isolate copper bar from mounting brackets with Harger 4200-Seriess two (2) inch insulators.
7. Fasten clear pexiglass cover on standoff bolts over ground bar. Engrave cover "GROUND BUS". Cover by Harger Lightning Protection, Inc., or approved equal.
8. Ground bar assembly shall be Harger Lightning Protection, Inc. GBI Series (800-842-7437, www.harger.com), Erico, Inc. (800-248-9353) or approved equal.

2.6 DRIVEN ELECTRODE ACCESS WELL AND COVER

A. Eight (12) inch diameter concrete pipe with belled end.

B. 24 inches long or longer to reach ground and set flush in grade.

C. Provide cast iron cover with "GROUND" embossed on top.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Verify final backfill and compaction has been completed before driving rod electrodes.

3.2 PREPARATION

A. Remove paint, rust, mill oils, and surface contaminants at connection points.

3.3 EXISTING WORK

A. Modify existing grounding system to maintain continuity to accommodate renovations.

B. Extend existing grounding system using materials and methods compatible with existing electrical installations.

3.4 INSTALLATION

A. Install in accordance with NEC Article 250. Properly bond the system neutral to the system grounding electrode conductor at the main service entrance equipment. Route the grounding electrode conductor to, and bond to, the grounding electrode system. All other neutral busses, bars, etc. on the service voltage system shall be isolated from ground. This system shall be the solid grounded type.

B. Bond all ground electrodes together to form the grounding electrode system including metal underground water pipe, metal frame of the building or structure, concrete encased electrodes, ground ring, rod and pipe electrodes and plate electrodes.

C. Install grounding and bonding conductors concealed from view.

D. Install grounding electrode conductor and connect to reinforcing steel in foundation footing.

E. Install a green equipment grounding conductor in all feeders and branch circuits, minimum size per NEC Table 250.122.

F. Transformers: Ground as a separately derived source.
1. Where transformer secondary includes a neutral, the neutral shall be bonded to the equipment enclosure and connected to the system ground conductor.
2. Size bonding jumper per NEC Table 250.66.
3. Grounding conductor shall be in raceway and shall be bonded to nearest available point of interior metal water piping system.

G. Bond together reinforcing steel and metal accessories in pool and fountain structures.

H. Concrete-Encased Electrode (NEC 250-52):
1. Concrete-encased electrode is also known as the "Ufer ground". Concrete footings or foundation that are in direct contact with the earth and located at the building periphery shall be made available for use as electrodes. Designated footings shall be used for grounding purposes. Unless other wise noted on drawings, designated footings are the perimeter building corners plus perimeter footings approximately on 100 feet centers between corners.

I. Made Electrode:
1. Triple Ground Rod: Provide a building ground rod and bond it to the electrode system. The building ground rod shall consist of three ground rods, arranged in an equilateral triangular pattern located at least five (5) feet outside an exterior building wall or as otherwise directed. Space 15 feet apart and drive into the earth to a point two (2) feet below finished grade to top of rods. Grounding electrode conductor shall form a continuous loop around rods, and conductor shall be properly bonded to each rod by a fusion weld similar to "Cadweld".
2. Extend grounding electrode conductor from this ground rod(s) to the grounded service conductor (neutral) in the building main switchboard at an accessible point on the ground bus per NEC 250-24.
3. Install grounding electrode conductor of 3/0 Copper.

J. Main Bonding Jumper: Shall be sized in accordance with Section 250-66, if not indicated on the drawings, and installed within the same enclosure as the point of bonding of the system neutral service entrance.

K. Grounding Busses:

1. Provide a copper bus bar where indicated on Drawings. Provide grounding electrode conductor and connection to the grounding electrode system. AWG No. 2 minimum.
2. Provide in each IDF and MDF room.
3. Provide at each CATV / MATV head-end mounting board.
4. Provide at each building communications rack.
5. Provide at each sound reinforcement equipment rack.

L. Water Pipe Electrode: A ten (10) foot minimum length of electrically continuous underground metal water pipe. Bond around insulating joints or sections, insulating pipe, and water meters to make pipe electrically continuous.

M. Metal Building Frame NEC 250-52.
1. The structural steel or other metal frame of the building. Effectively ground the steel structural columns to the ground ring electrode.
2. Cadweld AWG #2 bare copper cable to base of steel column. Route bonding jumper down through column blockout in building floor slab, excavate under grade beam, and extend out to the ground ring. Cadweld jumper (also called "stinger") or install Burndy Hyground™ Type YGHP-C hydraulic compression connector onto ground ring. Install a ground rod at each point where a stinger from a building steel column lands on the ground ring.

N. Fuel Gas Piping:
1. Each above ground portion of a gas piping system upstream from the equipment shutoff valve shall be made electrical continuos and bonded to the building grounding electrode system, as required in NFPA 54, National Fuel Gas Code.
2. Gas piping shall not be used as a grounding electrode.

O. Engine Generator Neutral:
1. Ground the generator neutral as a separately derived system per NEC 250-20(d).
2. Sign: Provide a sign at the service entrance equipment indicating type and location of on-site generator.

P. Outdoor Lighting Poles:
1. All metallic outdoor poles and luminaries on metallic or non-metallic lighting poles shall be grounded by bonding in an approved manner to the circuit grounding conductor. In addition to this, bond pole to a #8 bare copper wire which shall also be bonded to a ground rod. Install the ground rod adjacent to the pole base with the top driven at least two (2) feet below grade.

3.5 OTHER GROUNDING SYSTEMS:

A. General Check the drawings for special grounding system or grounding requirements.

B. Telephone and data equipment grounding connections:
1. Bond each telephone and data equipment ground (buss type or grounding conductor type) at each telephone terminal board and data rack back to the service entrance grounding electrode system with a bare #6awg ground wire.

C. Other Buildings Served From Common Service:
1. The main building service is the source for electric service to several out buildings on site.
2. Isolate neutral bus from ground at each out-building main panel.
3. Provide an equipment grounding conductor in feeder to each out-building main panel.

4. Provide a local building ground rod at each out-building. Bond at least one building column footing to the ground rod.
5. Bond grounding conductor of building main feeder to grounding electrode system established at the particular building.

3.6 EQUIPMENT GROUNDING SYSTEM

A. General: Make a firm bond between all enclosures, equipment and metallic raceway system. Grounding conductors shall be continuous from origin to termination and properly bonded with lugs at both ends. The metallic raceway systems shall be made up properly to form a grounding path that has an impedance back to the main system ground that is as low as can be practically obtained.

B. Over 250 Volts: Provide locknuts and/or listed fittings per NEC 250-97 for bonding of metal raceways in all circuits of over 250 Volts to ground. In case of oversized, concentric or eccentric knockouts, comply with NEC 250-92(B). The use of snap-in, wedge-type, or pivot-type connectors is prohibited.

3.7 FIELD QUALITY CONTROL

A. Grounding Tests:
1. Test the electrical system after installation is complete. Inspect and test for stray currents, unintended ground shorts, and proper physical condition of grounding system. Correct any deficiencies and re-test to verify satisfactory installation.
2. Provide written test report to document all findings, test values, work done and certification of grounding system.
3. Use true-RMS meters for all voltage and current measurements.
4. Test telecommunications grounding riser to verify continuity.
5. Check all isolated ground receptacles for correct polarity.
6. Test all sub panels of separately derives systems to verify subpanel neutral is isolated from ground.
7. Test theater isolated power system for the sound reinforcement system to verify isolation of ground system from other building systems.
8. Verify continuity and isolation of audio system ground bus and grounding riser.
9. Perform ground resistance and continuity testing in accordance with IEEE 142.
10. When improper grounding is found on receptacle, check receptacles in entire project and correct. Perform retest.

3.8 TEST WELLS

A. Install test well for designated outdoor driven ground rods. Set tops of well flush with finished grade. Provide mechanical connector for ground rod inside test well so that rod can be disconnected from ground ring or other grounding electrode system for testing.
1. Designated Ground Rods:
   a. One (1) at triple ground rod for High School Main Switchboard Electrical Room.
   b. One (1) at each generator.

END OF SECTION 26 05 26

SECTION 26 05 29 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Conduit supports.
2. Formed steel channel.
3. Spring steel clips.
4. Sleeves.
5. Mechanical sleeve seals.
6. Firestopping relating to electrical work.
7. Firestopping accessories.
8. Equipment bases and supports.

1.3 REFERENCES

A. Underwriters Laboratories Inc.:
1. UL 263 - Fire Tests of Building Construction and Materials.
2. UL 723 - Tests for Surface Burning Characteristics of Building Materials.
3. UL 1479 - Fire Tests of Through-Penetration Firestops.
4. UL - Fire Resistance Directory.

1.4 DEFINITIONS

A. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.5 PERFORMANCE REQUIREMENTS

A. Firestopping: Conform to Building Code and UL for fire resistance ratings and surface burning characteristics.

1.6 SUBMITTALS

A. Product Data:
1. Hangers and Supports: Submit manufacturers catalog data including load capacity.

1.7 QUALITY ASSURANCE

A. Perform Work in accordance with the Building Code.

PART 2 - PRODUCTS

2.1 CONDUIT SUPPORTS

A. Manufacturers:
1. Allied Tube & Conduit Corp.
2. Electroline Manufacturing Company
3. O-Z Gedney Co.
4. Appleton

B. Hanger Rods: Threaded high tensile strength galvanized carbon steel with free running threads.

C. Beam Clamps: Malleable Iron, with tapered hole in base and back to accept either bolt or hanger rod. Set screw: hardened steel.

D. Conduit clamps for trapeze hangers: Galvanized steel, notched to fit trapeze with single bolt to tighten.

E. Conduit clamps - general purpose: One hole malleable iron for surface mounted conduits.

F. Cable Ties: High strength nylon temperature rated to 185 degrees F. Self locking.

2.2 FORMED STEEL CHANNEL

A. Manufacturers:
1. Allied Tube & Conduit Corp.
2. B-Line Systems
3. Midland Ross Corporation, Electrical Products Division
4. Unistrut Corp.

B. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

2.3 SLEEVES

A. Sleeves for raceway Through Non-fire Rated Floors: 18 gage galvanized steel.

B. Sleeves for raceway Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage galvanized steel.

C. Sleeves for raceway Through Fire Rated and Fire Resistive Floors and Walls, and Fire Proofing: Prefabricated fire rated sleeves including seals, UL Listed.

D. Fire-stopping Insulation: Glass fiber type, non-combustible.

2.4 SPRING STEEL CLIPS

A. Product Description: Mounting clamp, and screw.

2.5 MECHANICAL SLEEVE SEALS

A. Manufacturers:
1. Thunderline Link-Seal, Inc.
2. NMP Corporation

B. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.6 FIRESTOPPING

A. Manufacturers:
1. Dow Corning Corp.
2. Fire Trak Corp.
3. Hilti Corp.
4. International Protective Coating Corp.
5. 3M fire Protection Products .
6. Specified Technology, Inc.

B. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.
1. Silicone Firestopping Elastomeric Firestopping: Multiple component silicone elastomeric compound and compatible silicone sealant.
2. Foam Firestopping Compounds: Multiple component foam compound.
3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
4. Fiber Stuffing and Sealant Firestopping: Composite of mineral or ceramic fiber stuffing insulation with silicone elastomer for smoke stopping.
5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
7. Firestop Pillows: Formed mineral fiber pillows.

2.7 FIRESTOPPING ACCESSORIES

A. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.

B. General:
1. Furnish UL Listed products.
2. Select products with rating not less than rating of wall or floor being penetrated.

C. Non-Rated Surfaces:
1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where conduit is exposed.
2. For exterior wall openings below grade, furnish modular mechanical type seal consisting of interlocking synthetic rubber links shaped to continuously fill annular space between conduit and cored opening or water-stop type wall sleeve.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify openings are ready to receive sleeves.

B. Verify openings are ready to receive firestopping.

3.2 INSTALLATION - HANGERS AND SUPPORTS

A. Anchors and Fasteners:
   1. Concrete Structural Elements: Provide precast inserts, expansion anchors, powder actuated anchors or preset inserts as required.
   2. Steel Structural Elements: Provide beam clamps, spring steel clips, steel ramset fasteners or welded fasteners as required.
   3. Concrete Surfaces: Provide self-drilling anchors and expansion anchors as required.
   4. Hollow Masonry, Plaster, and Gypsum Board Partitions: Provide toggle bolts or hollow wall fasteners as required.
   5. Solid Masonry Walls: Provide expansion anchors or preset inserts as required.
   6. Sheet Metal: Provide sheet metal screws.
   7. Wood Elements: Provide wood screws.

B. Inserts:
   1. Install inserts for placement in concrete forms.
   2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
   3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over four (4) inches.
   4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
   5. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

C. Install conduit and raceway support and spacing in accordance with NEC.

D. Do not fasten supports to suspended ceiling support system, pipes, ducts, mechanical equipment, or conduit.

E. Install multiple conduit runs on common hangers.

F. Supports:
   1. Fabricate supports from structural steel or formed steel channel. Install hexagon head bolts to present neat appearance with adequate strength and rigidity. Install spring lock washers under nuts.
   2. Install surface mounted cabinets and panelboards with minimum of four anchors.
   3. In wet and damp locations install steel channel supports to stand cabinets and panelboards one (1) inch off wall.
   4. Support vertical conduit at every floor.

3.3 INSTALLATION - FIRESTOPPING

A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping, ductwork, conduit and other items, requiring firestopping.

B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.

C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating.

D. Compress fibered material to maximum 40 percent of its uncompressed size.

E. Place intumescent coating in sufficient coats to achieve rating required.

F. Remove dam material after firestopping material has cured.

G. Fire Rated Surface:
1. Seal opening at all rated floors and walls as follows:
a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
c. Pack void with backing material.
d. Seal ends of sleeve with UL Listed fire resistive silicone compound to meet fire rating of structure penetrated.
2. Where cable tray, bus, or conduit, penetrates fire rated surface, install firestopping product ins accordance with manufacturer's instructions.

H. Non-Rated Surfaces:
1. Seal opening through non-fire rated floors and walls as follows:
a. Install sleeve through opening and extending beyond minimum of one (1) inch on both sides of building element.
b. Size sleeve allowing minimum of one (1) inch void between sleeve and building element.
c. Install type of firestopping material recommended by manufacturer.
2. Install escutcheons where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
3. Exterior wall openings below grade: Assemble rubber links of mechanical seal to size of conduit and tighten in place, in accordance with manufacturer's instructions.

3.4 INSTALLATION - SLEEVES

A. Exterior watertight entries: Provide mechanical sleeve seals.

B. Interior conduit penetrations not required to be watertight: Sleeve and fill with silicon foam.

C. Set sleeves in position in forms. Provide reinforcing around sleeves.

D. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.

E. Extend sleeves through floors and walls one (1) inch above finished floor level. Caulk sleeves.

END OF SECTION 26 05 29

SECTION 26 05 33 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.1 SUMMARY

A. Section includes conduit and tubing, wireways, outlet boxes, pull and junction boxes, and

1.2 REFERENCES

A. American National Standards Institute:
   1. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
   2. ANSI C80.3 - Specification for Electrical Metallic Tubing, Zinc Coated.
   3. ANSI C80.5 - Aluminum Rigid Conduit - (ARC).

B. National Electrical Manufacturers Association:
   1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
   2. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
   3. NEMA OS 1 - Sheet Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
   4. NEMA OS 2 - Nonmetallic Outlet Boxes, Device Boxes, Covers, and Box Supports.
   5. NEMA RN 1 - Polyvinyl Chloride (PVC) Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit.
   6. NEMA TC 2 - Electrical Polyvinyl Chloride (PVC) Tubing and Conduit.
   7. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.

1.3 SYSTEM DESCRIPTION

A. Raceway and boxes located as indicated on Drawings, and at other locations required for splices, taps, wire pulling, equipment connections, and compliance with regulatory requirements. Raceway and boxes are shown in approximate locations unless dimensioned. Provide raceway to complete wiring system.

B. Wet and Damp Locations: Provide rigid steel conduit. Provide cast metal junction and pull boxes. Provide flush mounting outlet box in finished areas.

C. Concealed Dry Locations: Provide rigid steel intermediate metal conduit on electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.

D. Exposed Dry Locations: Provide rigid steel conduit, intermediate metal conduit or electrical metallic tubing. Provide sheet-metal boxes. Provide flush mounting outlet box in finished areas. Provide hinged enclosure for large pull boxes.

E. In Slab or Under Slab on Grade: No branch circuit raceway is allowed in any slab or under slab on grade unless specifically indicated on drawings.

1.4 DESIGN REQUIREMENTS

A. Minimum Raceway Size: 3/4 inch.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect conduit from corrosion and entrance of debris by storing above grade. Provide appropriate covering.

B. Protect PVC conduit from sunlight.

1.6 COORDINATION

A. Coordinate installation of outlet boxes and raceway for equipment connected under other Divisions.

B. Coordinate installation of conduit for control wiring in mechanical rooms and in inaccessible locations such as walls and hard ceilings.

C. Coordinate installation of conduit for all other low-voltage systems in inaccessible locations and all other locations required by drawings or specifications for those systems.

D. Coordinate mounting heights, orientation and locations of outlets mounted above counters, benches, and backsplashes. Refer to Architectural elevations and equipment specifications and coordinate device locations prior to electrical rough-in.

PART 2 - PRODUCTS

2.1 METAL CONDUIT

A. Manufacturers:
1. Carlon Electrical Products
2. Hubbell Wiring Devices
3. Thomas & Betts Corp
4. Walker Systems Inc.
5. The Wiremold Co.
6. Multi Cell
7. O-Z Gedney
8. Raco.
9. or approved equal.

B. Rigid Steel Conduit: ANSI C80.1.

C. Intermediate Metal Conduit (IMC): Rigid steel.

D. Fittings and Conduit Bodies: NEMA FB 1; material to match conduit

E. Electrical Metal Tubing (EMT): All EMT fittings shall be steel not die-cast metal. All conduit stub-ups above ceiling for low voltage and data to be provided with insulating bushing.

F. Flexible Metal Conduit (Flex): Conduit fittings shall be steel. Provide plastic anti-short bushing for all flex fittings. Comply with NEC 348.

G. Liquidtight Flexible Metal Conduit: Shall be same as flexible metal conduit specified above except Article 350 in NEC.

H. PVC-Coated Rigid Steel Conduit: Galvanized rigid steel with additional external coating for 40 mil polyvinyl chloride jacket (PVC). Conforming to UL Standard 6. ANSI C80.1 and NEMA Standard No. RN.1.
   1. Manufacturer:
      a. Ocal Inc.
      b. Perma Cote Industries
      c. Rob-Roy Industries
      d. or Approved equal.

I. PVC-Rigid Nonmetallic Conduit: PVC and fittings that are listed per the UL Standards. Comply with NEMA Standard TC-2.

J. Nonmetallic Multi Duct: Provide nonmetallic multi duct that is UL Listed.
   1. Type: four (4) inches schedule 40 PVC outer duct, four 1.25 inch ducts of ribbed polyethylene. Duct shall have six (6) inch deep end bell on one end, spigot on the other end.
   2. Multi Duct shall have gaskets to seal the inside and outside walls of the inner duct.

2.2 ENCLOSURES

A. Pull Boxes, Junction Boxes, Cabinets, and Wireways: Provide pull boxes, junction boxes, wireways, and cabinets wherever necessary for proper installation of various electrical systems according to the National Electrical Code and where indicated on the Drawings.

B. Minimum Size: That size shown on the drawings, as required for the specific function, or as required by the National Electrical Code, whichever is larger.

C. Construction:
   1. Indoors in Dry Areas and Not Buried in Slab: Code gage steel - NEMA 1 construction - sides formed and welded, screw covers unless indicated hinged cover or door on drawings. Hinged doors shall be similar to panelboard doors with the same type locking device. Knockouts shall be factory made or formed O-Z Gedney Type PB or approved equal.
   2. Outdoors or Indoors in Wet Areas and Not Buried in Slab: Same as specified above for indoor except provide NEMA 3R (designated by 3R or RT) unless indicated or specified to be NEMA 4 (designated by 4 or WP) or other type rating.
   3. Indoors Buried in Slab: Watertight, galvanized cast iron in floors on or below grade, otherwise concrete tight stamped steel.
   4. Outdoors Buried in Earth: Watertight, Polymer concrete similar to Hubbell Power System, Inc. “Quazite” or precast concrete type manufactured by Brooks Product, Inc brand for Oldcastle Precast, Inc. Precast box shall have appropriate structural rating for intended use. Install on a level poured concrete base to provide a solid bearing surface. Provide a bolted cast iron traffic cover with foundry-cast marking "Electrical", "Communications" or "Telephone" as applies. Top of enclosure shall be one (1) inch above finished grade in earth. Top of enclosure shall be flush with finished pavement.

2.2 WIREWAY

A. Manufacturers: Same as Metal Conduit.

B. Product Description: General purpose.

C. Size: As determined by Contractor in accordance with NEC 376.

D. Cover: Screw cover.

E. Connector: Slip-in.
F. Fittings: Lay-in type.

G. Finish: Rust inhibiting primer coating with gray enamel finish.

2.3 OUTLET BOXES

A. Manufacturers: Same as Metal Conduit.

B. Sheet Metal Outlet Boxes: NEMA OS 1, galvanized steel.
1. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported; furnish 1/2 inch male fixture studs where required.
2. Concrete Ceiling Boxes: Concrete type.

C. Cast Boxes: NEMA FB 1, Type FD, cast feralloy. Furnish gasketed cover by box manufacturer.

D. Wall Plates: As specified in Section 26 27 26.

2.4 FLOOR BOXES

A. UL listed for wet application, watertight cast-iron, scrub-shield compliant.

B. NEMA OS-1, sheet steel outlet boxes, device boxes, covers, and box supports.
1. Floor: Fully adjustable before and after pour.
2. UL Listed for wet application when installed into concrete, stone, tile or floor without carpet cover. Provide carpet flange where installed in carpet.
3. Provide watertight, cast iron on floors at or below grade, and provide concrete tight stamped steel on all upper floors.
4. Multi Gang Floor Box: Fully adjustable watertight cast iron gang floor boxes where shown on Drawings. Provide with removable partition and provide conduit openings in boxes as required. Install power circuits in separate raceway from data, telephone or other signal.

C. Manufacturers:
1. Appleton
2. Carlon
3. Crouse-Hinds
4. Hubbell
5. FSR
6. Wiremold/Legrand

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify outlet locations and routing and termination locations of raceway prior to rough-in.

3.2 EXISTING WORK

A. Remove exposed abandoned raceway, including abandoned raceway above accessible ceiling finishes. Cut raceway flush with walls and floors, and patch surfaces.

B. Remove concealed abandoned raceway to its source.

C. Disconnect abandoned outlets and remove devices. Remove abandoned outlets when raceway is abandoned and removed. Install blank cover for abandoned outlets not removed.

D. Maintain access to existing boxes and other installations remaining active and requiring access. Modify installation or provide access panel.

E. Extend existing raceway and box installations using materials and methods compatible with existing electrical installations, or as specified.

F. Clean and repair existing raceway and boxes to remain or to be reinstalled.

3.3 INSTALLATION - RACEWAY

A. Ground and bond raceway and boxes in accordance with Section 26 05 26.

B. Fasten raceway and box supports to structure and finishes in accordance with Section 26 25 29.

C. Identify raceway and boxes in accordance with Section 26 05 53.

D. Arrange raceway and boxes to maintain headroom and present neat appearance.

E. Raceway routing is shown in approximate locations unless dimensioned. Route to complete wiring system.

F. Arrange raceway supports to prevent misalignment during wiring installation.

G. Support raceway using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.

H. Group related raceway; support using conduit rack. Construct rack using steel channel specified in Section 26 05 29.

I. Do not support raceway with wire or perforated pipe straps. Remove wire used for temporary supports

J. Do not attach raceway to ceiling support wires or other piping systems.

K. Construct wireway supports from steel channel specified in Section 26 25 29.

L. Route exposed raceway parallel and perpendicular to walls.

M. Route raceway installed above accessible ceilings parallel and perpendicular to walls.

N. Maximum Size Conduit in Slab Above Grade: 3/4 inch.

O. Maintain clearance between raceway and piping for maintenance purposes.

P. Maintain 12 inch clearance between raceway and surfaces with temperatures exceeding 104 degrees Fahrenheit.

Q. Cut conduit square using saw or pipe cutter; de-burr cut ends.

R. Bring conduit to shoulder of fittings; fasten securely.

S. Join nonmetallic conduit using cement as recommended by manufacturer. Wipe nonmetallic conduit dry and clean before joining. Apply full even coat of cement to entire area inserted in fitting. Allow joint to cure for minimum 20 minutes.

T. Install conduit hubs or sealing locknuts to fasten conduit to sheet metal boxes in damp and wet locations and to cast boxes. DO NOT route conduit through the top of any outdoor disconnects, panels, etc. conduits must be routed through side or bottom only.

U. Install no more than equivalent of three 90 degree bends between boxes. Install conduit bodies to make sharp changes in direction, as around beams. Install hydraulic one-shot bender to fabricate factory elbows for bends in metal conduit larger than two (2) inch size.

V. Avoid moisture traps; install junction box with drain fitting at low points in conduit system.

W. Install fittings to accommodate expansion and deflection where raceway crosses expansion joints.

X. Install suitable pull string or cord in each empty raceway except sleeves and nipples.

Y. Install suitable caps to protect installed conduit against entrance of dirt and moisture.

Z. Surface Raceway: Install flat-head screws, clips, and straps to fasten raceway channel to surfaces; mount plumb and level. Install insulating bushings and inserts at connections to outlets and corner fittings.

AA. Close ends and unused openings in wireway.

BB. Provide tracer wire on all underground raceway outside building slab on grade.

3.4 RACEWAY TYPES

A. The following raceway types are to be used in the following locations:
   1. Under Slab on Grade: Schedule 40 PVC.
   2. Outdoor Locations, Above Grade: Rigid galvanized steel.
   3. Wet and Damp Locations: Rigid galvanized steel.
   4. Exposed or Concealed Dry Locations, Indoors: EMT, IMC, or rigid galvanized steel.
   5. Underground:
      a. All underground electrical wire in schedule 40 PVC or rigid galvanized steel, 208 volts or greater shall be encased in red concrete two (2) inches thick on all sides. Encasement not required under building slabs, parking lots or other paved surfaces. Red dye may not be applied to the top of the concrete.
      b. All underground electrical wire in schedule 40 PVC or rigid galvanized steel, 120 volts or less shall have red warning tape 6” above raceway.
   6. Transformers and Motors: 24 inch flexible metal conduit to equipment.
   7. Kitchens and outdoor motor and transformer connections: Liquidtight flexible metal conduit for all exposed raceway.

8. Cooling Towers: PVC coated rigid galvanized steel within 50 feet of tower.

3.5 INSTALLATION - BOXES

A. Install wall mounted boxes at elevations to accommodate mounting heights as indicated on Drawings and as approved by the Architect.

B. Adjust box location up to ten (10) feet prior to rough-in to accommodate intended purpose.

C. Orient boxes to accommodate wiring devices oriented as specified in Section 126 27 26.

D. Install pull boxes and junction boxes above accessible ceilings and in unfinished areas only.

E. In Accessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches from ceiling access panel or from removable recessed luminaire.

F. Do not fasten boxes to ceiling support wires or other piping systems.

G. Support boxes independently of conduit. Provide rigid support to structure for all junction boxes. Mount junction boxes within 18” of finished ceilings to facilitate future access. Locate junction boxes to allow ready access to junction box covers without removing any equipment.

H. All outdoor boxes shall be UL listed for wet location service.

I. Provide rigid support to structure for all junction boxes.

J. Provide rigid support to structure for all conduit within 3 feet of each junction box and a maximum spacing of 10 feet.

K. Install junction boxes above ceilings in readily accessible with no obstructions, locate within 18 inches of finished ceiling to facilitate easy access.

L. For all flexible whips to light fixtures provide wire support at mid-length of whip to structure above with UL listed conduit support clip.

M. Provide outlet boxes to meet depth requirement of Architectural walls. Refer to Architectural Spec Section 09250 and 10611 for wall partitions.

3.6 ADJUSTING

A. Install knockout closures in unused openings in boxes.

3.7 CLEANING

A. Clean interior of boxes to remove dust, debris, and other material.

B. Clean exposed surfaces and restore finish.

3.8 INSTALLATION - FLOOR BOXES

A. Use cast floor boxes for installation in slab on grade.

B. Set floor boxes level.

C. Install boxes and fittings to preserve fire resistant rating of slabs and other elements, using materials and methods specified in Section 26 05 29.

3.9 ADJUSTING

A. Adjust floor box flush with finish material.

3.10 CLEANING

A. Clean interior of boxes to remove dust, debris, and other material.

3.11 ABOVE CEILING JUNCTION BOXES

A. Labeling: Provide label on all above ceiling junction boxes.
   1. Provide permanent labeling with indelible black marker, in neat, legible print indicating the panelboard name, branch circuit number(s) and voltage of conductors within the junction box. Junction boxes used for emergency power circuits to be painted red.

B. Color Code: All Electrical junction boxes above ceiling shall be colored as follows.
   1. Yellow for 277V lighting
   2. Blue for 120V regular power
   3. Green for 120V computer power
   4. Brown for 277/480V equipment
   5. Red for emergency power

END OF SECTION 26 05 33

SECTION 26 05 53 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Nameplates.
   2. Underground Warning Tape.
   3. Lockout Devices.

1.3 QUALITY ASSURANCE

A. Manufacturers: Firms regularly engaged in manufacture of electrical identification, of types and sizes required, whose products have been in satisfactory use in similar service for not less than 5 years.

B. Codes and standards: Comply with the following:
   1. National Electrical Code, NFPA No. 70.
   2. NEMA standards applicable to the product provided.
   3. UL standards applicable to the product provided.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to the following:
   1. Panduit Corp.
   2. American Labelmark Co.
   3. Markal Corp.
   4. Calpico, Inc.
   5. Ideal Industries, Inc.

2.2 NAMEPLATES

A. Product Description: Laminated three-layer plastic with engraved black letters on light contrasting background color.

B. Emergency Power panels and Equipment: Laminated three-layer plastic with engraved white letters on **RED** background.

C. Letter Size:
   1. 1/4 inch high letters for identifying individual equipment and loads.

D. Minimum nameplate thickness: 1/8 inch.

2.3 UNDERGROUND WARNING TAPE

A. Description: four (4) inch wide plastic tape, colored red with suitable warning legend describing buried electrical lines.

PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

3.2 INSTALLATION

A. Install identifying devices after completion of painting.

B. Nameplate Installation:
1. Install nameplate parallel to equipment lines.
2. Install nameplate for each electrical distribution and control equipment enclosure with corrosive-resistant mechanical fasteners, or adhesive.
3. Install nameplates for each control panel and major control components located outside panel with corrosive-resistant mechanical fasteners, or adhesive.
4. Secure nameplate to equipment front using screws, rivets, or adhesive.
5. Secure nameplate to inside surface of door on recessed panelboard in finished locations.
6. Install nameplates for the following:
    a. Switchboards
    b. Panelboards
    c. Transformers
    d. Service Disconnects
        1) Enclosed Switches
    e. Motor Control Centers
    f. Stand-alone Motor Controllers
    g. Generators
    h. Contactors

C. Underground Warning Tape Installation:
1. Install underground warning tape along length of each underground conduit, raceway, or cable six (6) to eight (8) inches below finished grade, directly above buried conduit, raceway, or cable. Where multiple lines installed in a common trench or concrete envelope, do not exceed an overall width of 16 inches; install a single line marker.
2. Install line marker for underground wiring, both direct buried and in raceway.

D. Printed Panelboard Directory:
1. Provide framed, typed circuit schedules with explicit description and identification of items controlled by each individual breaker for that panel, switchboard, or motor control center.
2. Panelboard directory shall include a legend indicating insulation color corresponding each phase and voltage in the building electrical system.
3. Copy in Owner’s Manual.

3.3 ABOVE CEILING JUNCTION BOXES

A. Labeling: Provide label on all above ceiling junction boxes.
   1. Provide permanent labeling with indelible black marker, in neat, legible print indicating the panelboard name, branch circuit number(s) and voltage of conductors within the junction box.

3.4 ARC FLASH WARNING LABEL

A. Switchboards, panel boards and motor control centers requiring examination, adjustments, servicing or maintenance while energized shall be field marked to warn persons of arc flash hazards. Marking shall be located so as to be clearly visible to qualified persons before servicing or maintenance.

END OF SECTION 26 05 53

SECTION 26 05 73.19 - ARC-FLASH HAZARD ANALYSIS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes a computer-based, arc-flash study to determine the arc-flash hazard boundary distance and the incident energy to which personnel could be exposed during work on or near energized electrical equipment.

1.3 DEFINITIONS

A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

B. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.

C. Power System Analysis Software Developer: An entity that commercially develops, maintains, and distributes computer software used for power system studies.

D. Power Systems Analysis Specialist: Professional engineer in charge of performing the study and documenting recommendations, licensed in the state where Project is located.

E. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.

F. SCCR: Short-circuit current rating.

G. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

H. Single-Line Diagram: See "One-Line Diagram."

1.4 ACTION SUBMITTALS

A. Product Data: Submit information regarding computer software program to be used for studies.

B. Study Submittals: Submit the following submittals after the approval of system protective devices submittals. Submittals [**shall**] [**may**] be in digital form:

1. Arc-flash study report; signed, dated, and sealed by Power Systems Analysis Specialist.
2. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Architect for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
3. Exported data from computer-based, one-line diagram detailing the system data used for the arc-flash calculations, provided in .csv or Microsoft Excel format.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data:
   1. For Power Systems Analysis Software Developer.
   2. For Power System Analysis Specialist.

B. Product Certificates: For arc-flash hazard analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

1.6 CLOSEOUT SUBMITTALS

A. Arc-Flash Hazard Analysis:
   1. Provide final arc-flash hazard analysis report in hard copy and digital format.
   2. Provide digital file containing electrical system model in a format consistent with power system analysis software used to perform study.
   3. Provide library files for power system analysis software used to perform study.

1.7 QUALITY ASSURANCE

A. Study shall be performed using commercially developed and distributed software designed specifically for power system analysis.

B. Software algorithms shall comply with requirements of standards and guides specified in this Section.

C. Manual calculations are unacceptable.

D. Power System Analysis Software Qualifications: An entity that owns and markets computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
   1. Computer program shall be designed to perform arc-flash analysis.

E. Power Systems Analysis Specialist Qualifications: Professional or qualified engineer in charge of performing the arc-flash study, analyzing the arc-flash results, and documenting recommendations, licensed in the state where Project is located. All elements of the study shall be performed under the direct supervision and control of this professional or qualified engineer.

F. Arc-Flash Study Certification: Arc-Flash Study Report shall be signed and sealed by Power Systems Analysis Specialist.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide software developed and sold by EasyPower software with ANSI ShortCircuit, ArcFlash, PowerProtector, Scenario Manager, SmartDuty and SmartBreaker or comparable product by one of the following:
   1. CGI CYME.
   2. Power Analytics, Corporation.
   3. <**Insert manufacturer's name**>.

B. Software must provide results consistent with the requirements of the latest versions of IEEE 1584 and NFPA 70E.

C. Software capable of creation and storage of unlimited number of operating scenarios. All scenarios stored in the same project model file. System changes made to the base case automatically propagated to each operating scenario.

2.2 ARC-FLASH STUDY REPORT CONTENT

A. Executive summary of study findings.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.

C. One-line diagram, indicating the following:
   1. Protective device designations, locations, and ampere ratings.
   2. Conductor types, sizes, and lengths.
   3. Transformer kilovolt ampere (kVA) and voltage ratings.
   4. Motor and generator ratings.
   5. Switchgear, switchboard, motor-control center, and panelboard designations.
   6. Utility sources.

D. Study Input Data: As described in "Power System Data" Article.

E. Equipment Duty Report: As specified in Section 260573.13 "Short-Circuit Studies."

F. Data on all protective devices; manufacturers, types, sizes and adjustable settings that were used for the arc-flash calculations.

G. List of protective devices found to be inoperable or with signs of impending failure. These devices must be clearly listed and excluded from use in determination of the arc time.

H. Equipment Duty Study: Report to verify that all protective devices have adequate short-circuit ratings to interrupt the calculated maximum short-circuit current.

I. Arc-Flash Study Calculations and Output Reports:
   1. Arcing fault magnitude.
   2. Protective device clearing time.
   3. Duration of arc.
   4. Arc-flash boundary.
   5. Restricted approach boundary.
   6. Limited approach boundary.

7. Working distance.
8. Incident energy.

J. Arc-Flash Study input data, scenario descriptions, and arc-flash calculations including a definition of terms and guide for interpretation of the arc-flash hazard report. Study input data must be provided in electronic form as .csv or Excel files.

2.3 ARC-FLASH WARNING LABELS

A. Provide a weatherproof, self-adhesive equipment label for each location requiring arc-flash hazard identification.
1. Minimum Size: 6 inches (150 mm) wide by 4 inches (100 mm) high.
2. Sample label submitted for review prior to printing of actual labels.

B. Content: Orange header with the wording, "WARNING, ARC-FLASH HAZARD, Arc-Flash and Shock Risk Assessment, Appropriate PPE Required." and the following information taken directly from the arc-flash hazard analysis:
1. Equipment ID.
2. Nominal voltage.
3. Protection boundaries.
   a. Arc-flash boundary.
   b. Restricted approach boundary.
   c. Limited approach boundary.
4. Available incident energy.
5. Working distance.
6. Engineering report number, revision number, and issue date.

C. Completely machine printed, no field-applied markings.

D. Compliance: NFPA 70E.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine Project electrical equipment submittals. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study. The report shall clearly state any assumptions that were necessary to complete the analysis.

3.2 ARC-FLASH HAZARD ANALYSIS

A. Comply with the latest versions of NFPA 70E for the arc-flash hazard analysis study.

B. Study all operating scenarios to determine the maximum incident energy at each location.

C. Submit proposed arc-flash analysis scenarios for review prior to performing arc-flash calculations. Arc-flash hazard analysis report shall indicate which scenario created the maximum arc-flash energy for each location. All arc-flash calculations must be performed in accordance with the procedures and recommendations contained in the latest version of IEEE 1584. Calculate the arc-flash hazard boundary and incident energy at all

locations in electrical distribution system where personnel could service or examine equipment while energized.

D. Include all three-phase medium- and low-voltage equipment locations.

E. Calculate the limited and restricted approach boundaries for each location.

F. Incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources or fault current that changes with time during the fault. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators shall be decremented based on the recommendations in IEEE 399 and ANSI C37 where applicable.

G. Arc-flash energy shall generally be reported for the maximum of line or load side of a circuit breaker. However, arc-flash computation shall be performed and reported for both line and load side of a circuit breaker as follows:
   1. When the circuit breaker is in a separate enclosure.
   2. When the line terminals of the circuit breaker are separate from the work location.

H. Base arc-flash calculations on the time-current curve or operating time of the fastest upstream device using the predicted arcing current through that device. For medium-voltage circuit breakers, the breaker interrupting time must be automatically added to the relay operating time. Based on the recommendations in IEEE 1584 and sound engineering judgment, a maximum arc time of two seconds can be applied for situations where the protective device operating time is found to exceed two seconds.

3.3 POWER SYSTEM DATA

A. Obtain all data necessary for conduct of the arc-flash hazard analysis.
   1. Verify completeness of data supplied on one-line diagram on Drawings. Call any discrepancies or missing information to Owner's attention.
   2. For new equipment, use characteristics from approved submittals under provisions of action submittals and information submittals for this Project.
   3. For existing equipment, whether or not relocated, obtain required electrical distribution system data by field investigation and surveys conducted by qualified technicians and engineers.

B. Electrical Survey Data: Gather and tabulate the following input data to support study. Comply with recommendations in IEEE 1584 and NFPA 70E as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under the direct supervision and control of the engineer in charge of performing the study, and shall be by the engineer. Data shall include, but are not limited to, the following:
   1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
   2. Obtain electrical power utility impedance or available short-circuit current at each service.
   3. Short-circuit current at each system bus (three phase and line to ground).
   4. Voltage level at each bus.
   5. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio if available, tap settings, and phase shift.

6. For reactors, provide manufacturer and model designation, voltage rating and impedance.
7. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, short-circuit rating, continuous current rating, and settings for all adjustable settings.
8. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
9. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
10. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.
11. Motor horsepower.
12. Low-voltage conductor sizes, lengths, number, conductor material, and conduit material.
13. Medium-voltage conductor sizes, lengths, conductor material, conductor construction and metallic shield performance parameters, and conduit material.

3.4 LABELING

A. Apply [**one**]arc-flash label on the front cover [**of each section of the equipment**] [**and on side or rear covers with accessible live parts and hinged doors or removable plates**] for each equipment included in the study. Base arc-flash label data on highest values calculated at each location.

B. Each piece of equipment listed below shall have an arc-flash label applied to it:
1. Motor-control center.
2. Low-voltage switchboard.
3. Switchgear.
4. Medium-voltage switch.
5. Low voltage transformers.
6. Panelboard.
7. Safety switch.
8. Fused disconnect switch.
9. Enclosed circuit breaker.
10. Adjustable frequency drive.
11. Control panel.
12. <**Insert any other equipment that could be serviced or examined while energized**>.

3.5 APPLICATION OF WARNING LABELS

A. Install arc-flash warning labels under the direct supervision and control of Power System Analysis Specialist.

3.6 DEMONSTRATION

A. Engage Power Systems Analysis Specialist to train Owner's maintenance personnel in potential arc-flash hazards associated with working on energized equipment and the interpretation of arc-flash warning labels.

END OF SECTION 26 05 73.19

SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 DESCRIPTION

A. The requirements of this Section apply to all sections of Division 26.

B. This project will have selected building systems commissioned. The complete list of equipment and systems to be commissioned is specified in Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS. The commissioning process, which the Contractor is responsible to execute, is defined in Section 01 91 00 GENERAL COMMISSIONING REQUIRMENTS. A Commissioning Agent (CxA) appointed by the owner will manage the commissioning process.

1.3 RELATED WORK

A. Section 01 00 00 GENERAL REQUIREMENTS.

B. Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS.

1.4 SUMMARY

A. This Section includes requirements for commissioning the Facility electrical systems, related subsystems and related equipment. This Section supplements the general requirements specified in Section 01 91 00 General Commissioning Requirements.

B. Refer to Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS for more details regarding processes and procedures as well as roles and responsibilities for all Commissioning Team members.

1.5 DEFINITIONS

A. Refer to Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS for definitions.

1.6 COMMISSIONED SYSTEMS

A. Commissioning of a system or systems specified in Division 26 is part of the construction process. Documentation and testing of these systems, as well as training of the OWNER’s Operation and Maintenance personnel in accordance with the requirements of Section 01 91 00 and of Division 26, is required in cooperation with the OWNER and the Commissioning Agent.

B. The Facility electrical systems commissioning will include the systems listed in Section 01 91 00 General Commissioning Requirements:

1.7 SUBMITTALS

A. The commissioning process requires review of selected Submittals that pertain to the systems to be commissioned. The Commissioning Agent will provide a list of submittals that will be reviewed by the Commissioning Agent. This list will be reviewed and approved by the OWNER prior to forwarding to the Contractor. Refer to Section 01 33 23 SHOP DRAWINGS, PRODUCT DATA, and SAMPLES for further details.

B. The commissioning process requires Submittal review simultaneously with engineering review. Specific submittal requirements related to the commissioning process are specified in Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.1 CONSTRUCTION INSPECTIONS

A. Commissioning of Electrical systems will require inspection of individual elements of the electrical systems construction throughout the construction period. The Contractor shall coordinate with the Commissioning Agent in accordance with Section 01 91 00 and the Commissioning plan to schedule electrical systems inspections as required to support the Commissioning Process.

3.2 PRE-FUNCTIONAL CHECKLISTS

A. The Contractor shall complete Pre-Functional Checklists to verify systems, subsystems, and equipment installation is complete and systems are ready for Systems Functional Performance Testing. The Commissioning Agent will prepare Pre-Functional Checklists to be used to document equipment installation. The Contractor shall complete the checklists. Completed checklists shall be submitted to the OWNER and to the Commissioning Agent for review. The Commissioning Agent may spot check a sample of completed checklists. If the Commissioning Agent determines that the information provided on the checklist is not accurate, the Commissioning Agent will return the marked-up checklist to the Contractor for correction and resubmission. If the Commissioning Agent determines that a significant number of completed checklists for similar equipment are not accurate, the Commissioning Agent will select a broader sample of checklists for review. If the Commissioning Agent determines that a significant number of the broader sample of checklists is also inaccurate, all the checklists for the type of equipment will be returned to the Contractor for correction and resubmission. Refer to SECTION 01 91 00 GENERAL COMMISSIONING REQUIREMENTS for submittal requirements for Pre-Functional Checklists, Equipment Startup Reports, and other commissioning documents.

3.3 CONTRACTORS TESTS

A. Contractor tests as required by other sections of Division 26 shall be scheduled and documented in accordance with Section 01 00 00 GENERAL REQUIREMENTS. All testing shall be incorporated into the project schedule. Contractor shall provide no less than 7 calendar days' notice of testing. The Commissioning Agent will witness selected Contractor tests at the sole discretion of the Commissioning Agent. Contractor tests shall be completed prior to scheduling Systems Functional Performance Testing.

3.4 SYSTEMS FUNCTIONAL PERFORMANCE TESTING

A. The Commissioning Process includes Systems Functional Performance Testing that is intended to test systems functional performance under steady state conditions, to test system reaction to changes in operating conditions, and system performance under emergency conditions. The Commissioning Agent will prepare detailed Systems Functional Performance Test procedures for review and approval by the Engineer. The Contractor shall review and comment on the tests prior to approval. The Contractor shall provide the required labor, materials, and test equipment identified in the test procedure to perform the tests. The Commissioning Agent will witness and document the testing. The Contractor shall sign the test reports to verify tests were performed. See Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS, for additional details.

3.4 TRAINING OF OWNER PERSONNEL

A. Training of the OWNER operation and maintenance personnel is required in cooperation with the Resident Engineer and Commissioning Agent. Provide competent, factory authorized personnel to provide instruction to operation and maintenance personnel concerning the location, operation, and troubleshooting of the installed systems. Contractor shall submit training agendas and trainer resumes in accordance with the requirements of Section 01 91 00. The instruction shall be scheduled in coordination with the OWNER Resident Engineer after submission and approval of formal training plans. Refer to Section 01 91 00 GENERAL COMMISSIONING REQUIREMENTS and Division 26 Sections for additional Contractor training requirements.

END OF SECTION 26 08 00

SECTION 26 09 23 - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes enclosed contactors for lighting and general purposes. Provide complete systems using contactors, relays, photocells, time clocks, or digital time switches, where required, all properly mounted in enclosures.

1.3 SUBMITTALS

A. Product Data: Submit dimensions, size, voltage ratings and current ratings.

B. Short circuit current rating (SCCR) of equipment.

C. U.L. Label.

D. Electrical characteristics of equipment.

E. Enclosure metal gauge and finish.

1.4 CLOSEOUT SUBMITTALS

A. Provide manuals as described in Section 26 05 00.

PART 2 - PRODUCTS

2.1 GENERAL PURPOSE CONTACTORS

A. General: Provide contactors and relays with ratings as indicated or as required to operate the installed load at the applied voltage using the applied contact voltage. Contactor shall be rated for making and breaking motor or other inductive loads.

B. Manufacturers:
1. ASCO
2. Square D
3. GE

C. Enclosure: Provide a NEMA 1 enclosure for all contactors located indoors. Provide NEMA 4X for those located outdoors and in wet areas.

D. Lighting Contactors:
1. Mechanically held, electrically operated.
2. ASCO 918 or approved equal.
3. Provide ASCO Accessory 47 for two-wire control of contactor. Provide time switch and photocell to control contactor.

4. Some lighting contactors may be designated for control by Division 23 Building Automation System (BAS). Provide contactor and ASCO solid-state Accessory 47 for two-wire control of contactor. Division 23 shall provide all BAS control wiring. BAS provides all time-of-day ON/OFF scheduling.
5. Three-phase Contactors: When lighting contactors are indicated to control an entire panel or sub-panel, provide ASCO 920 or approved equal. Include two-wire control relay ASCO Accessory 47.
6. Parking Lot, Exterior Lighting and Sport Lighting Contactors: Provide 3-phase, 3-pole ASCO 920 contactors as indicated on Drawings. Include two-wire control relay ASCO Accessory 47. Also provide solid state control module and housing with Hand-off-Auto selector switch. All contactors that control any branch circuit that serves any lighting fixtures or entire panels that feed outdoor lighting shall be provided with the HOA control feature.

E. SCCR: Contactor shall have short circuit current rating established by actual testing with specific overcurrent protection device. SCCR shall be UL-listed.

2.2 PHOTO-ELECTRIC CONTROLS:

A. Description:
1. General: Photo-electric control shall switch load ON at dusk and OFF at dawn.
2. Housing: Photocell shall be enclosed in a weatherproof, corrosion resistant housing. The housing shall have a 1/2 inch I.P.S. nipple with a locking washer.
3. Element: Light sensing element shall be Cadmium-Sulfide cell hermetically sealed against moisture. Minimum time delay before change-of-state shall be 15 seconds. If the photo-electric control fails, the load shall switch ON (fail-safe ON).
4. Adjustment: The housing shall have an adjustable slide shield to vary the ambient light reaching the CdS cell. The slide shield shall not override the control; that is, the ON/OFF function shall occur even when the shield is at either extreme of the adjustment range. Adjustment shall be made by hand without tools.
5. Temperature: The photocell shall be suitable for operation in an ambient temperature range of -30 degrees Fahrenheit to + 140 degrees Fahrenheit.
6. Voltage: The photocell shall be suitable for use at voltage equal to the load voltage (120, 208, 277).
7. Capacity: Photocell shall be SPST rated for a minimum of 1800 Volt-Amps resistive or inductive load.
8. Leads: Photocell shall have minimum six (6) inch wire leads with wet location insulation. Leads shall be color coded Red/Load, Black/Line and White/Neutral.
9. Listing: Photocell shall be listed by Underwriters Laboratories.

B. Manufacturer: Intermatic, Paragon, Precision, Tork.

2.3 TIME CLOCKS:

A. Manufacturer:
1. Grasslin
2. Intermatic
3. Paragon
4. Precision
5. Tork

B. General: Provide time clocks similar to Intermatic Series T 1900 or Tork B8000 Series. Provide wiring to photocells, contactors, relays or other control points as required.

C. Contacts: Rated for 20 amps minimum at 277 volts. Provide 1, 2, 3 or 4 pole, single or double throw, maintained or momentary contact, as required based on the time clock function and the number of branch circuits controlled. Contacts shall be horse power rated when motors are switched.

D. Dial: Provide 24-hour dial with 15 minute intervals minimum. Dial shall permit at least 48 ON/OFF cycles per day via 96 adjustable tabs. Dial shall include a skip-a-day wheel and two day-omitting pins. Provide extra trippers and day-omitting pins if required.

E. Special Dials: Provide special dial where indicated on drawings or in these specifications. Provide astronomic dial for time clock controlling outdoor lighting.

F. Timing Motor: Provide heavy duty synchronous timing motor, self-starting and permanently lubricated. Motor shall be permanent magnet type for high torque and operate through and ambient temperature range of - 30 degrees Fahrenheit to + 130 degrees Fahrenheit. Motor cover shall have a viewing window to check for rotation of gears. Motor voltage shall be 120, 208, 240 or 277 volts as required.

G. Reserve Power: Provide a spring driven reserve power drive to operate time clock for at least ten (10) hours after a power failure.

H. Manual Bypass:
1. Time clock shall include a manual ON/OFF bypass switch capable of overriding time schedule without disturbing trippers or timing sequence.
2. Time clock shall be installed with a pilot-light SPST toggle switch mounted in a separate, adjacent single-gang box. Switch shall be labelled "Bypass" and shall function to turn ON circuit(s) controlled by the time clock. Switch shall be flush or surface mounted to match time clock housing.

I. Terminals: Time clock shall have a terminal block with screws for line, load, and grounding connections with up to AWG #8 wire. Provide a removable dead-front terminal cover within the time clock case. Timing motor shall have separate, unswitched terminals.

J. Enclosure: Provide a NEMA 1 enclosure with hasp suitable for padlock and side-hinge door for all clocks located indoors. Enclosure shall have 1/2 inch and 3/4 inch knockouts in bottom and sides. Provide NEMA 4X for those located outdoors and in wet areas.

K. Nametag: Provide a nametag for each time clock stating load controlled; see Section 26 05 53, Electrical Identification.

L. Listing: All time clocks shall be listed by Underwriters Laboratories and C.S.A.

M. Manuals: Provide three sets, each consisting of operating instructions and one-line diagrams.

****
Specifier's Note: Edit for each Job.
****

2.4 DIGITAL TIME SWITCHES:

A. Recessed in wall: WattStopper TS-400 or approved equal.

1. The digital time switch shall be programmable to turn lights off after a preset time.

2. Time switch shall be a completely self-contained control system that replaces the standard toggle switch. It shall have a ground wire and ground strap for safety. Switching mechanism shall be a latching air gap relay.

3. Zero Crossing Circuitry shall be used to increase the relay life, protect from the effects of inrush current, and increase the switch's longevity.
4. Time switch shall be compatible with all electronic ballasts, motor loads, compact fluorescent and inductive loads. Triac and other harmonic generating devices shall not be allowed.
5. Time switch shall operate at universal voltages of 100-300 VAC; 50/60 Hz.
6. Time switch shall have no minimum load requirement and shall be capable of controlling 0 to 800 watt incandescent, fluorescent @ 100/120 VAC, 50/60 Hz; 0 to 1200 watts fluorescent @ 230/277 VAC, 50/60 Hz; 1/6 hp @ 125 VAC.
7. Time scroll feature shall allow manual overriding of the preset time-out period. Selecting time scroll UP shall allow time-out period to scroll up throughout the timer possibilities to the maximum. Time scroll DN (down) shall allow time-out period to scroll down to minimum.
8. Time switch shall have the option for a one second light flash warning at five minutes before the timer runs out and twice when the countdown reaches one minute (when used to control lighting loads).
9. Time switch shall have the option for a beep warning that shall sound every five seconds once the time switch countdown reaches one minute.
10. Time switch shall have manual feature for timer reset where pressing the ON/OFF switch for more than 2 seconds resets the timer to the programmed time-out period.
11. Time switch shall have an electroluminescent backlit Liquid Crystal Display that shows the timer's countdown.
12. Time switch shall fit behind a decorator style faceplate. The calibration switch for setting time-out, time scroll, one second light flash, and beep warning shall be concealed to prevent tampering of adjustments and hardware.
13. Time-out period shall be adjustable in increments of 5 minutes from 5 minutes to 1 hour, and in increments of 15 minutes from 1 hour to 12 hours.
14. Time switch shall be capable of operating as an ON/OFF switch.
15. For ease of installation and cleaner wiring, the switch shall utilize terminal style wiring.
16. The time switch shall not protrude more than 1/8" from the wall and should blend in aesthetically.
17. For safety, the time switch shall have a 100% OFF override switch with no leakage current to the load.
18. For safety, in the event there is an open circuit in the AC line such as a ballast or lamp failure, the time switch shall automatically switch to OFF mode.
19. To ensure quality and reliability, time switch shall be manufactured by an ISO 9002 certified manufacturing facility and shall have a defect rate of less than 1/3 of 1%.
20. Time switch shall have 5 year warranty and shall be UL and CUL listed.

2.5 OCCUPANCY SENSORS:

A. Ceiling Sensors: Require power packs
   1. UT-3000-3- Low voltage ultrasonic ceiling mounted with 2000 square foot coverage. Typical for large restroom.
      DT-300- Low Voltage dual technology ceiling mounted with isolated contact. Typical for classrooms.
   2. WT-2250/2255- Typical corridor sensor- Low voltage ultrasonic ceiling mounted with 10' by 90' coverage pattern

B. Wall Switch Sensors:

DSW-301- Line voltage dual technology wall switch sensor for 1 circuit. Typical for large office or conference room.
DW-100-24- Low voltage dual technology wall switch sensor. Requires Power Pack
DSW-302- Line voltage dual technology wall switch sensor for 2 circuits
DW-311 – Line voltage dual technology wall switch sensor with 0-10V dimming

1. Wall switch sensors shall be capable of detection of occupancy at desktop level up to 300 square feet, and gross motion up to 1000 square feet.
2. Wall switch sensors shall accommodate loads from 0 to 800 watts at 120 volts; 0 to 1200 watts at 277 volts and shall have 180˚ coverage capability.
3. Wall switch products shall utilize Zero Crossing Circuitry which increases relay life, protects from the effects of inrush current, and increases sensor's longevity.
4. Wall switch sensors shall have no leakage current to load, in manual or in Auto/Off mode for safety purposes and shall have voltage drop protection.
5. Where specified, wall switch sensors shall provide a field selectable option to convert sensor operation from automatic-ON to manual-ON.
6. Where specified, vandal resistant wall switch sensors shall utilize a hard lens with a minimum 1.0mm thickness. Products utilizing a soft lens will not be considered.

C. Power and Auxiliary Packs:

1. BZ-150- Power pack for use with low voltage sensors when using a manual on function. 225ma

D. High Ceiling Applications

1. HB-350B*LENS Low Voltage PIR sensor
2. L1 Lens- 20' x 60' coverage pattern when mounted at 40'
3. L3 Lens- 40' diameter coverage pattern when mounted at 40'
4. L4 Lens- 60' diameter coverage pattern when mounted at 60'

E. Passive infrared sensors:

1. Passive infrared sensors shall utilize Pulse Count Processing and Detection Signature Processing to respond only to those signals caused by human motion.
2. Passive infrared sensors shall provide high immunity to false triggering from RFI (hand-held radios) and EMI (electrical noise on the line).
3. Passive infrared sensors shall have a multiple segmented Fresnel lens, in a multiple-tier configuration, with grooves-in to eliminate dust and residue build-up.
4. Where specified, passive infrared ultrasonic and dual technology sensors shall offer daylighting footcandle adjustment control and be able to accommodate dual level lighting.

F. Dual technology sensors:

1. Dual technology sensors shall be wall mounted, corner mounted or ceiling mounted in such a way as to minimize coverage in unwanted areas.
2. Dual technology sensors shall consist of passive infrared and ultrasonic technologies for occupancy detection. Products that react to noise or ambient sound shall not be considered.

G. Ultrasonic sensors:

1. Ultrasonic sensors shall utilize Advanced Signal Processing to adjust the detection threshold dynamically to compensate for constantly changing levels of activity and air flow throughout controlled space.
2. Ultrasonic operating frequency shall be crystal controlled at 25 kHz within ± 0.005% tolerance, 32 kHz within ± 0.002% tolerance, or 40 kHz ± 0.002%

tolerance to assure reliable performance and eliminate sensor cross-talk. Sensors using multiple frequencies are not acceptable.

H. All sensors shall be capable of operating normally with electronic ballasts, PL lamp systems and rated motor loads.

I. Coverage of sensors shall remain constant after sensitivity control has been set. No automatic reduction shall occur in coverage due to the cycling of air conditioner or heating fans.

J. When specified, sensors shall utilize SmartSet™ technology for automatically adjustable time delay and sensitivity settings.

K. All sensors shall have readily accessible, user adjustable settings for time delay and sensitivity. Settings shall be located on the sensor (not the control unit) and shall be recessed to limit tampering.

L. In the event of failure, a bypass manual override shall be provided on each sensor. When bypass is utilized, lighting shall remain on constantly or control shall divert to a wall switch until sensor is replaced. This control shall be recessed to prevent tampering.

M. All sensors shall provide an LED as a visual means of indication at all times to verify that motion is being detected during both testing and normal operation.

N. Where specified, sensor shall have an internal additional isolated relay with Normally Open, Normally Closed and Common outputs for use with HVAC control, Data Logging and other control options. Sensors utilizing separate components or specially modified units to achieve this function are not acceptable.

O. All sensors shall have UL rated, 94V-0 plastic enclosures.

P. All occupancy sensors shall be set to maximum 30 minute time delay.

Q. Provide minimum 5% spare sensors for owner stock of each type of occupancy sensor.

****
Specifier's Note: Edit for each Job.
****

2.6 DAYLIGHT HARVESTING – Wattstopper LightSaver® LS-301 Daylighting Sensor

A. The photosensor shall be a self-contained, ceiling-mounted daylighting control device that detects changes in light levels and raises or lowers electrical lighting in response.

B. The photosensor shall be a low voltage device, powered by 24 VDC voltage supplied by a power pack.

C. The photocell shall have an extremely linear response with greater than 1% accuracy over the sensed range.

D. The photosensor shall be capable of controlling up to 50 standard 0-10VDC electronic dimming ballasts.

E. The photosensor shall utilize an internal photocell that measures only in the visible

spectrum and has a response curve that closely matches the photopic curve. The photocell shall not measure energy in either the ultraviolet or infrared spectrums. The photocell shall have a sensitivity of less than 5% for any wavelengths less than 400 nanometers or greater than 700 nanometers.

F. The photosensor shall provide dimming over the full range from .2 VDC to 10 VDC. When maximum dimming is required, a .2 volt output is supplied to the ballast; when full output lighting is required, a 10 volt output is supplied to the ballast.

G. The photosensor shall use a sliding setpoint algorithm. The photosensor shall maintain the desired task level illuminance for current daylight contribution based on two setpoints, a night setpoint and a day setpoint.

H. All setup adjustments shall be made remotely from the photosensor by means of a wireless, infrared handheld remote. All setup adjustments shall be done from the ground with no ladders required after the initial installation has been completed.

I. The photosensor shall be controllable by a compatible handheld remote that allows an occupant to adjust the light level to their preference while enabling the automatic dimming to continue to achieve the adjusted setpoint. Any adjustment made with the handheld remote shall be easily canceled by pressing one button on the remote.

J. The photosensor shall have a control range of 20-60 footcandles.

K. The photosensor shall not protrude more than 0.75 inches from the ceiling and should blend in aesthetically.

L. To ensure quality and reliability, photosensor shall be manufactured by an ISO 9002 certified manufacturing facility and shall have a defect rate of less than 1/3 of 1%.

M. The photosensor shall have a standard five year warranty.

2.7 SPORTS LIGHTING CONTROL STATION

****
Specifier's Note: Edit for each Job.
****

A. General: Provide pushbuttons for manual override of programmable relays designated to control the power contactors for the outdoor sports lighting at each field. Arrange pushbuttons into a single enclosure for each field.

B. Enclosure: Enclosure shall be NEMA 4X stainless steel or polycarbonate with gasketing for outdoor wet locations.

C. Pushbutton: Similar to Square D Class 9001-Type B, Type BW245, NEMA 4, momentary contact, RED/ON and GREEN/OFF pushbuttons with collar guard.

D. Wiring: From each pushbutton in the Sports Lighting Control Station, provide low voltage wiring to the programmable relay cabinet.

E. Control: BAS schedules all power contactors for outdoor sports lighting via the programmable relay system. Each sports field shall have a programmable relay assigned to the contactors for the sports lighting of that field. BAS will program automatic schedules

for the sports lighting as required. User shall be able to override automatic schedule from BAS with manual ON/OFF signals from the pushbutton Lighting Control Stations. Pushbutton signals relay cabinet, similar to a classroom light switch, and relay causes the lighting contactors to change state (OFF to ON, ON to OFF).

F. Engraving: Provide engraved lamacore plate above each pushbutton describing the lighting it will control. Example: TENNIS COURTS; FOOTBALL-EAST POLES, FOOTBALL-WEST POLES, BASEBALL, SOFTBALL.

G. Relays: For each pushbutton control, provide a relay in the local relay cabinet nearest the sports lighting contactors. Wire relay to the control circuits of the associated sports lighting contactors. Program BAS for both automatic scheduling of the sports lighting and to accept manual override from pushbutton Sports Lighting Control Stations.

PART 3 - EXECUTION

3.1 PHOTO-ELECTRIC CONTROL MOUNTING:

A. Provide photo-electric control on roof of building. When more than one building is constructed on site, install photo control on each roof. Aim true North and locate in places where ambient night lighting will not cause interference. Wire down to respective contactors in each building.

3.2 TIME CLOCK PROGRAMMING:

A. Install time clock and photocell for ON by photocell at dusk, OFF by time clock at midnight, then ON by time clock at 5:00 a.m. and OFF by photocell at dawn. Program time clock ON/OFF times to other time(s) when indicated on Drawings.

3.3 INSTALLATION

A. Install enclosed contactors (as indicated on Drawings), in accordance with NECA "Standard of Installation".

B. Install engraved nameplates. Refer to Section 26 05 53 for requirements.

C. Install contactor and relays in Electrical / Mechanical Rooms unless otherwise noted.

END OF SECTION 26 09 23

SECTION 26 09 43 - DISTRIBUTED DIGITAL LIGHTING CONTROL SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Distributed Digital Lighting Control System: System includes
   1. Digital Lighting and Plug Load Controls
   2. Relay Panels
   3. Emergency Lighting Control.

1.2 RELATED SECTIONS

A. Section 27 05 39 - Surface Raceways for Communications Systems

B. Section 26 50 00 - Lighting.

C. Section 26 52 00 - Emergency Lighting.

D. Section 25 55 00 - Integrated Automation Control of HVAC- Integrated Automation, Building integrator shall provide integration of the lighting control system occupancy sensors with Building Automation Systems.

1.3 REFERENCES

A. NFPA 70 - National Electrical Code; National Fire Protection Association.

B. NEMA - National Electrical Manufacturers Association

C. FCC emission standards

D. UL - Underwriters Laboratories, Inc. Listings

E. UL 2043 - Standard for Fire Test for Heat and Visible Smoke Release for Discrete Products Installed in Air-Handling Spaces.

F. UL 20 - General Use Switches, Plug Load Controls

G. UL 924 - Standard for Emergency Lighting and Power Equipment

H. ULC - Underwriter Laboratories of Canada Listings

1.4 DESIGN / PERFORMANCE REQUIREMENTS

A. Lighting Control System shall accommodate the square-footage coverage requirements for each area controlled, utilizing room controllers, plug load controllers, digital occupancy sensors, switches, daylighting sensors and accessories that suit the required lighting and electrical system parameters.

B. System shall conform to requirements of NFPA 70.

C. System shall comply with FCC emission standards specified in part 15, sub-part J for commercial and residential application.

D. System shall be listed under UL sections 916 and/or 508.

1.5 SUBMITTALS

A. Submit under provisions of Section 01 30 00 - Administrative Requirements.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Catalog sheets and specifications.
   2. Ratings, configurations, standard wiring diagrams, dimensions, colors, service condition requirements, and installed features.
   3. Storage and handling requirements and recommendations.
   4. Installation instructions.

C. Shop Drawings: Wiring diagrams for the various components of the System specified including:
   1. Composite wiring and/or schematic diagram of each control circuit as proposed to be installed.
   2. Show location of all devices, including at minimum sensors, load controllers, and switches/dimmers for each area on reflected ceiling plans.
   3. Provide room/area details including products and sequence of operation for each room or area. Illustrate typical acceptable room/area connection topologies.
   4. Network riser diagram including floor and building level details. Include network cable specification. Illustrate points of connection to integrated systems. Coordinate integration with mechanical and/or other trades.

D. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

E. Closeout Submittals:
   1. Project Record Documents: Record actual installed locations and settings for lighting control devices.
   2. Operation and Maintenance Manual:
      a. Include approved Shop Drawings and Product Data.
      b. Include Sequence of Operation, identifying operation for each room or space.
      c. Include manufacturer's maintenance information.
      d. Operation and Maintenance Data: Include detailed information on device programming and setup.
      e. Include startup and test reports.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing of centralized and distributed lighting control systems with a minimum of 10 years documented experience.

B. System Components: Demonstrate that individual components have undergone quality control and testing prior to shipping.

1.7 PRE-INSTALLATION MEETINGS

A. Convene minimum two weeks prior to commencing Work of this section. Meeting to be attended by Contractor, Architect, system installer, factory authorized manufacturer's representative, and representative of all trades related to the system installation.

B. Review installation procedures and coordination required with related Work and the following:
   1. Confirm the location and mounting of all devices, with special attention to placement of switches, dimmers, and any sensors.
   2. Review the specifications for low voltage control wiring and termination.
   3. Discuss the functionality and configuration of all products, including sequences of operation, per design requirements.
   4. Discuss requirements for integration with other trades

C. Inspect and make notes of job conditions prior to installation:
   1. Record minutes of the conference and provide copies to all parties present.

2. Identify all outstanding issues in writing designating the responsible party for follow-up action and the timetable for completion.
3. Installation shall not begin until all outstanding issues are resolved to the satisfaction of the Architect.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store products in a clean, dry space in original manufacturer's packaging in accordance with manufacturer's written instructions until ready for installation

1.9 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Do not install equipment until following conditions can be maintained in spaces to receive equipment:
1. Ambient temperature: 32 to 104 degrees F (0 to 40 degrees C).
2. Relative humidity: Maximum 90 percent, non-condensing.

1.10 WARRANTY

A. Products Warranty: Manufacturer shall provide a 5 year limited warranty on products within this installation, except where otherwise noted, and consisting of a one for one device replacement.

1.11 MAINTENANCE

A. Spare Parts:
1. Provide 5% spares of each product listed below to be used for maintenance. Electrical Contractor shall deliver items to Owner within 30 days of substantial completion.
a. Room Controllers
b. Occupancy Sensors
c. Emergency Bypass controllers
d. Low voltage switches
e. Daylighting harvesting photocells

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Approved Manufacturer: WattStopper (basis of design), Acuity

B. Substitutions must meet performance requirements of this section 26 09 43.

C. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00 - Product Requirements.

2.2 DISTRIBUTED DIGITAL LIGHTING CONTROL SYSTEM

A. System General: Provide a Distributed Lighting Control System complete with all necessary enclosures, wiring, and system components to ensure a complete and properly functioning system as indicated on the Drawings and specified herein. If a conflict is identified, between

the Drawing and this Specification, contact the Architect for clarification prior to proceeding.

1. Daylit Areas: Provide daylight-responsive automatic control in all spaces (conditioned or unconditioned) where daylight contribution is available as defined by relevant local building energy code:
    a. All luminaires within code-defined daylight zones shall be controlled separately from luminaires outside of daylit zones.
    b. Daytime setpoints for total ambient illumination (combined daylight and electric light) levels that initiate dimming shall be programmed in compliance with relevant local building energy codes.
    c. Multiple-level switched daylight harvesting controls may be utilized for areas marked on drawings.
    d. Provide smooth and continuous daylight dimming for areas marked on drawings. Daylighting control system may be designed to turn off electric lighting when daylight is at or above required lighting levels, only if system functions to turn lamps back on at dimmed level, rather than turning full-on prior to dimming.

B. Equipment Required: Lighting Control and Automation system as defined under this section covers the following equipment.
1. Digital Lighting Management (DLM) local network: Free topology, plug-in wiring system (Cat 5e) for power and data to room devices.
2. Digital Room Controllers and Plug Load Controllers: Self-configuring, digitally addressable one, two or three relay plenum-rated controllers for on/off control. Selected models include 0-10 volt or line voltage forward phase control dimming outputs and integral current monitoring capabilities.
3. Digital Occupancy Sensors: Self-configuring, digitally addressable, calibrated occupancy sensors with two-way active infrared (IR) communications.
4. Digital Switches: Self-configuring, digitally addressable pushbutton on/off, dimming, and scene switches with two-way active infrared (IR) communications.
5. Digital Daylighting Sensors: Single-zone closed loop, multi-zone open loop and single-zone dual-loop daylighting sensors with two-way active infrared (IR) communications for daylight harvesting using switching, bi-level, tri-level or dimming control.
6. Configuration Tools: Handheld remote for room configuration and relay panel programming provides two way infrared (IR) communications to digital devices and allows complete configuration and reconfiguration of the device / room from up to 30 feet away.
7. Programming and Configuration Software: Optional PC-native application capable of accessing DLM control parameters within a room, for the local network, via a USB adapter.
8. Digital Lighting Management Relay Panel and Zone Controller: Provides up to 8, 24, or 48 mechanically latching relays. Relays include a manual override and a single push-on connector for easy installation or removal from the panel. Panel accepts program changes from handheld configuration tool for date and time, location, holidays, event scheduling, button binding and group programming. Provides BACnet MS/TP-native digital networked communication between other lighting relay panels and/or building automation system (BAS).
9. Emergency Lighting Control Unit (ELCU): Allows a standard lighting control device to control emergency lighting in conjunction with normal lighting in any area within a building

C. Local Network LMRJ-Series: DLM local network is a free topology lighting control physical connection and communication protocol designed to control a small area of a building.
1. Features of the DLM local network include:
    a. Plug n' Go automatic configuration and binding of occupancy sensors, switches and lighting loads to the most energy-efficient sequence of operation based upon the device attached.

b. Simple replacement of any device in the local DLM network with a standard off the shelf unit without requiring significant commissioning, configuration or setup.
c. Push n' Learn configuration to change the automatic configuration, including binding and load parameters without tools, using only the buttons on the digital devices in the local network.
d. Two-way infrared communications for control by handheld remotes, and configuration by a handheld tool including adjusting load parameters, sensor configuration and binding, within a line of sight of up to 30 feet from a sensor, wall switch or IR receiver.

2. Digital room devices connect to the local network using pre-terminated Cat 5e cables with RJ-45 connectors, which provide both data and power to room devices. Systems that utilize RJ-45 patch cords but do not provide serial communication data from individual end devices are not acceptable.
3. If manufacturer's pre-terminated Cat5e cables are not used for the installation each cable must be individually tested and observed by authorized service representative following installation.

2.3 DIGITAL LOAD CONTROLLERS (ROOM, PLUG LOAD AND FIXTURE CONTROLLERS)

A. Digital Load Controllers: Digital controllers for lighting zones, fixtures and/or plug loads automatically bind room loads to the connected control devices in the space without commissioning or the use of any tools. Provide controllers to match the room lighting and plug load control requirements. Controllers are simple to install, and do not have dip switches/potentiometers, or require special configuration for standard Plug n' Go applications. Control units include the following features
1. Automatic room configuration to the most energy-efficient sequence of operation based upon the devices in the room.
2. Simple replacement using the default automatic configuration capabilities, a room controller may be replaced with an off-the-shelf device.
3. Multiple room controllers connected together in a local network must automatically arbitrate with each other, without requiring any configuration or setup, so that individual load numbers are assigned starting with load 1 to a maximum of 64, assigned based on each controller's device ID's from highest to lowest.
4. Device Status LEDs to indicate:
   a. Data transmission
   b. Device has power
   c. Status for each load
   d. Configuration status
5. Quick installation features including:
   a. Standard junction box mounting
   b. Quick low voltage connections using standard RJ-45 patch cable
6. Based on individual configuration, each load shall be capable of the following behavior on power up following the loss of normal power:
   a. Turn on to 100 percent
   b. Turn off
   c. Turn on to last level
7. Each load be configurable to operate in the following sequences based on occupancy:
   a. Auto-on/Auto-off (Follow on and off)
   b. Manual-on/Auto-off (Follow off only)
8. Polarity of each load output shall be reversible, via digital configuration, so that on is off and off is on.
9. BACnet object information shall be available for the following objects:
   a. Load status
   b. Schedule state, normal or after-hours
   c. Demand Response enable and disable

d. Room occupancy status
e. Total room lighting and plug loads watts
f. Electrical current
g. Total watts per controller
h. Total room watts/sq ft.
i. Force on/off all loads

10. UL 2043 plenum rated
11. Manual override and LED indication for each load
12. Zero cross circuitry for each load
13. All digital parameter data programmed into an individual room controller or plug load controller shall be retained in non-volatile FLASH memory within the controller itself. Memory shall have an expected life of no less than 10 years.
14. Dimming Room Controllers shall share the following features:
    a. Each load shall have an independently configurable preset on level for Normal Hours and After Hours events to allow different dimmed levels to be established at the start of both Normal Hours and After Hours events.
    b. Fade rates for dimming loads shall be specific to bound switch buttons, and the load shall maintain a default value for any bound buttons that do not specify a unique value.
    c. The following dimming attributes may be changed or selected using a wireless configuration tool:
        1) Establish preset level for each load from 0-100 percent
        2) Set high and low trim for each load
        3) Initiate lamp burn in for each load of either 0, 12 or 100 hours
    d. Override button for each load provides the following functions:
        1) Press and release for on/off control
        2) Press and hold for dimming control
    e. Each dimming output channel shall have an independently configurable minimum and maximum calibration trim level to set the dimming range to match the true dynamic range of the connected ballast or driver. LED level indicators on bound dimming switches shall utilize this new maximum and minimum trim.
    f. Each dimming output channel shall have an independently configurable minimum and maximum trim level to set the dynamic range of the output within the new 0-100 percent dimming range defined by the minimum and maximum calibration trim.
    g. Calibration and trim levels must be set per output channel. Devices that set calibration or trim levels per controller (as opposed to per load) are not acceptable.
    h. All configuration shall be digital. Devices that set calibration or trim levels per output channel via trim pots or dip-switches are not acceptable.

B. On/Off Room Controllers and Plug Load Controllers shall include:
1. Dual voltage (120/277 VAC, 60 Hz) capable rated for 20A total load
2. One or two relay configuration
3. Simple 150 mA switching power supply (Only 4 100 series devices on a Cat 5e local network)
4. Three RJ-45 DLM local network ports with integral strain relief and dust cover
5. WattStopper product numbers: LMRC-101, LMRC-102, LMPL-101, LMPL-111-20M

C. On/Off/0-10V Dimming KO Mount Room Controllers shall include:
1. Dual voltage (120/277 VAC, 60 Hz) capable rated for 10A total load
2. Optional real time current and voltage monitoring (with - M Monitoring option).
3. One or two relays configurations
4. Smart 150 mA switching power supply
5. Two RJ-45 DLM local network ports. Provide molded strain relief ring
6. One dimming output per relay

a. 0-10V Dimming - Where indicated, one 0-10 volt analog output per relay for control of compatible ballasts and LED drivers. The 0-10 volt output shall automatically open upon loss of power to the Room Controller to assure full light output from the controlled lighting

7. Units capable of providing both Class 1 or Class 2 wiring for the 0-10V output
8. WattStopper product numbers: LMRC-111, LMRC-111-M, LMRC-112, or LMRC-112-M.

2.4 DIGITAL WALL OR CEILING MOUNTED OCCUPANCY SENSOR

A. Digital Occupancy Sensors features shall include the following:
   1. Digital calibration and pushbutton configuration for the following variables:
      a. Sensitivity, 0-100 percent in 10 percent increments
      b. Time delay, 1-30 minutes in 1 minute increments
      c. Test mode, Five second time delay
      d. Detection technology, PIR, Ultrasonic or Dual Technology activation and/or re-activation.
      e. Walk-through mode
   2. Load parameters including Auto/Manual-ON, blink warning, and daylight enable/disable when photosensors are included in the DLM local network.
   3. Programmable control functionality including:
      a. Each sensor may be programmed to control specific loads within a local network.
      b. Sensor shall be capable of activating one of 16 user-definable lighting scenes.
      c. Adjustable retrigger time period for manual-on loads. Load will retrigger (turn on) automatically within a configurable period of time (default 10 seconds) after turning off.
      d. On dual technology sensors, independently configurable trigger modes are available for both Normal (NH) and After Hours (AH) time periods. The retrigger mode can be programmed to use the following technologies:
      e. Ultrasonic and Passive Infrared
      f. Ultrasonic or Passive Infrared
      g. Ultrasonic only
      h. Passive Infrared only
      i. Independently configurable sensitivity settings for passive infrared and ultrasonic technologies (on dual technology sensors) for both Normal (NH) and After Hour (AH) time periods.
   4. One or two RJ-45 port(s) for connection to DLM local network.
   5. Two-way infrared (IR) transceiver to allow remote programming through handheld commissioning tool and control by remote personal controls.
   6. Device Status LEDs, which may be disabled for selected applications, including:
      a. PIR detection
      b. Ultrasonic detection
      c. Configuration mode
      d. Load binding
   7. Assignment of occupancy sensor to a specific load within the room without wiring or special tools.
   8. Manual override of controlled loads.
   9. All digital parameter data programmed into an individual occupancy sensor shall be retained in non-volatile FLASH memory within the sensor itself. Memory shall have an expected life of no less than 10 years.

B. Units shall not have any dip switches or potentiometers for field settings

C. Multiple occupancy sensors may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required.

D. WattStopper product numbers: LMPX, LMDX, LMPC, LMUC, LMDC

2.5 Wired Low Voltage Isolated Relay Interface:

1. Module provides a single Form C contact relay rated for 24VAC or VDC.
2. Relay module will provide a contact closure on the Normally Open side of the relay (and contact open on the Normally Closed side) while any occupancy sensor on the local Cat 5e IRB network is in the occupied mode. This function is non-programmable and works automatically using the unit's internal circuitry.
3. LED on the device to provide status of the relay
4. This device is ideally suited to connect to HVAC inputs in the space that are looking for a dry contact whenever the space is occupied to enhance their specific sequence of operation.
5. Wattstopper product number LMRL-100

2.6 DIGITAL WALL SWITCHES

A. Low voltage momentary pushbutton switches in multiple button configurations. Wall switches shall include the following features:
   1. Two-way infrared (IR) transceiver for use with personal and configuration remote controls.
   2. Removable buttons for field replacement with engraved buttons and/or alternate color buttons. Button replacement may be completed without removing the switch from the wall.
   3. Configuration LED on each switch that blinks to indicate data transmission.
   4. Load/Scene Status LED on each switch button with the following characteristics:
      a. Bi-level LED
      b. Dim locator level indicates power to switch
      c. Bright status level indicates that load or scene is active
      d. Dimming switches shall include seven bi-level LEDs to indicate load levels using 14 steps.
   5. Programmable control functionality including:
      a. Button priority may be configured to any BACnet priority level, from 1-16, corresponding to networked operation allowing local actions to utilize life safety priority
      b. Scene patterns may be saved to any button other than dimming rockers. Once set, buttons may be digitally locked to prevent overwriting of the preset levels.
   6. All digital parameter data programmed into an individual wall switch shall be retained in non-volatile FLASH memory within the wall switch itself. Memory shall have an expected life of no less than 10 years.

B. Two RJ-45 ports for connection to DLM local network.

C. Multiple digital wall switches may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration shall be required to achieve multi-way switching.

D. Load and Scene button function may be reconfigured for individual buttons from Load to Scene, and vice versa.
   1. Individual button function may be configured to Toggle, On only or Off only.
   2. Individual scenes may be locked to prevent unauthorized change.
   3. Fade Up and Fade Down times for individual scenes may be adjusted from 0 seconds to 18 hours.
   4. Ramp rate may be adjusted for each dimmer switch.
   5. Switch buttons may be bound to any load on any load controller or relay panel and are not load type dependent; each button may be bound to multiple loads.

6. WattStopper product numbers: LMSW-210, LMSW-211, LMSW-220, LMSW-222, LMSW-241, LMSW-250. Available in white, light almond, ivory, grey, red and black; compatible with wall plates with decorator opening.

2.7 DIGITAL DAYLIGHTING SENSORS

A. Digital daylighting sensors shall work with load controllers and relay panels to provide automatic switching, bi-level, or tri-level or dimming daylight harvesting capabilities for any load type connected to the controller or panel. Daylighting sensors shall be interchangeable without the need for rewiring.
   1. Closed loop sensors measure the ambient light in the space and control a single lighting zone.
   2. Open loop sensors measure incoming daylight in the space, and are capable of controlling up to three lighting zones.
   3. Dual loop sensors measure both ambient and incoming daylight in the space to insure that proper light levels are maintained as changes to reflective materials are made in a single zone

B. Digital daylighting sensors shall include the following features:
   1. Sensor's internal photodiode shall only measure lightwaves within the visible spectrum. The photodiode's spectral response curve shall closely match the entire photopic curve. Photodiode shall not measure energy in either the ultraviolet or infrared spectrums. Photocell shall have a sensitivity of less than 5 percent for any wavelengths less than 400 nanometers or greater than 700 nanometers.
   2. Sensor light level range shall be from 1-6,553 foot-candles (fc).
   3. Capability of ON/OFF, bi-level or tri-level switching, or dimming, for each controlled zone, depending on the selection of load controller(s) and load binding to controller(s).
   4. For switching daylight harvesting, the photosensor shall provide a field-selectable deadband, or a separation, between the "ON Setpoint" and the "OFF Setpoint" that will prevent the lights from cycling excessively after they turn off.
   5. For dimming daylight harvesting, the photosensor shall provide the option, when the daylight contribution is sufficient, of turning lights off or dimming lights to a field-selectable minimum level.
   6. Photosensors shall have a digital, independently configurable fade rate for both increasing and decreasing light level in units of percent per second.
   7. Photosensors shall provide adjustable cut-off time. Cut-off time is defined by the number of selected minutes the load is at the minimum output before the load turns off. Selectable range between 0-240 minutes including option to never cut-off.
   8. Integral infrared (IR) transceiver for configuration and/or commissioning with a handheld configuration tool, to transmit detected light level to wireless configuration tool, and for communication with personal remote controls.
   9. Configuration LED status light on device that blinks to indicate data transmission.
   10. Status LED indicates test mode, override mode and load binding.
   11. Recessed switch on device to turn controlled load(s) ON and OFF.
   12. BACnet object information shall be available for the following daylighting sensor objects, based on the specific photocell's settings:
      a. Light level
      b. Day and night setpoints
      c. Off time delay
      d. On and off setpoints
      e. Up to three zone setpoints
      f. Operating mode - on/off, bi-level, tri-level or dimming
   13. One RJ-45 port for connection to DLM local network.
   14. A choice of accessories to accommodate multiple mounting methods and building materials. Photosensors may be mounted on a ceiling tile, skylight light well, suspended lighting fixture or backbox. Standard tube photosensors accommodate

mounting materials from 0-0.62 inch thick (LMLS-400, LMLS-500). Extended tube photosensors accommodate mounting materials from 0.62 to 1.25 inches thick (LMLS-400-L, LMLS-500-L). Mounting brackets are compatible with J boxes (LMLS-MB1) and wall mounting (LMLS-MB2). LMLS-600 photosensor to be mounted on included bracket below skylight well.

15. Any load or group of loads in the room can be assigned to a daylighting zone
16. Each load within a daylighting zone can be individually enabled or disabled for discrete control (load independence).
17. All digital parameter data programmed into a photosensor shall be retained in non-volatile FLASH memory within the photosensor itself. Memory shall have an expected life of no less than 10 years.

C. Closed loop digital photosensors shall include the following additional features:
   1. An internal photodiode that measures light in a 100-degree angle, cutting off the unwanted light from bright sources outside of this cone.
   2. Automatic self-calibration, initiated from the photosensor, a wireless configuration tool or a PC with appropriate software.
   3. Automatically establishes application-specific setpoints following self-calibration. For switching operation, an adequate deadband between the ON and OFF setpoints shall prevent the lights from cycling; for dimming operation a sliding setpoint control algorithm with separate Day and Night setpoints shall prevent abrupt ramping of loads.
   4. WattStopper Product Number: LMLS-400.

D. Open loop digital photosensors shall include the following additional features:
   1. An internal photodiode that measures light in a 60-degree angle (cutting off the unwanted light from the interior of the room).
   2. Automatically establishes application-specific setpoints following manual calibration using a wireless configuration tool or a PC with appropriate software. For switching operation, an adequate deadband between the ON and OFF setpoints for each zone shall prevent the lights from cycling; for dimming operation, a proportional control algorithm shall maintain the design lighting level in each zone.
   3. Each of the three discrete daylight zones can include any non overlapping group of loads in the room.
   4. WattStopper Product Number: LMLS-500.

2.8 DIGITAL PARTITION CONTROLS

A. Partition controls shall enable automatic coordination of lighting controls in flexible spaces with up to four moveable walls by reconfiguring the connected digital switches and occupancy sensors.

B. Infrared partition sensor to detect state of movable partitions shall automatically alter functionality of switches and sensors in a room .
   1. Operates on Class 2 power supplied by DLM local network.
   2. Includes 24VDC output and four input terminals for maintained third party contract closure inputs.
   3. Input max. sink/source current: 1-5mA
   4. Logic input signal voltage High: > 18VDC
   5. Logic input signal voltage Low: < 2VDC
   6. Four status LEDs under hinged cover indicate if walls are open or closed; supports LMPS-104 as remote status indicator.
   7. Two RJ-45 ports for connection to DLM local network.
   8. WattStopper part number: PARTITION-SENSOR; LMIN-104

2.9 HANDHELD CONFIGURATION TOOLS

A. Provide a wireless configuration tool to facilitate customization of DLM local networks using two-way infrared communications, and/or PC software that connects to each local network via a USB interface.

B. Features and functionality of the wireless configuration tool shall include but not be limited to:
   1. Two-way infrared (IR) communication with DLM IR-enabled devices within a range of approximately 30 feet.
   2. High visibility organic LED (OLED) display, pushbutton user interface and menu-driven operation.
   3. Must be able to read and modify parameters for load controllers and relay panels, occupancy sensors, wall switches, daylighting sensors, network bridges, and identify DLM devices by type and serial number.
   4. Save up to eight occupancy sensor setting profiles, and apply profiles to selected sensors.
   5. Temporarily adjust light level of any load(s) on the local network, and incorporate those levels in scene setting. Set room mode for testing of Normal Hours (NH) and After Hours (AH) parameter settings.
   6. Adjust or fine-tune daylighting settings established during auto-configuration, and input light level data to complete configuration of open loop daylighting controls.
   7. Set room mode for testing of Normal Hours (NH) and After Hours (AH) parameter settings.
   8. Verify status of building level network devices.

C. WattStopper Product Numbers: Handheld LMCT-100

2.10 LMCP LIGHTING CONTROL PANELS AND LMZC ZONE CONTROLLER

A. Hardware: Provide LMCP lighting control panels in the locations and capacities as indicated on the Drawing and schedules. Each panel shall be of modular construction and consist of the following components:
   1. Enclosure/Tub shall be NEMA 1, sized to accept an interior with 1 - 8 relays, 1 - 24 relays and 6 four-pole contactors, or 1 - 48 relays and 6 four-pole contactors.
   2. Cover shall be configured for surface or flush wall mounting of the panel as indicated on the plans. LMCP panel cover shall have a hinged and lockable door with restricted access to line voltage section of the panel.
   3. Interior assembly shall be supplied as a factory assembled component specifically designed and listed for field installation. Interior construction shall provide total isolation of high voltage (Class 1) wiring from low voltage (Class 2) wiring within the assembled panel. Interior assembly shall include intelligence boards, power supply, DIN rails for mounting optional Class 2 control devices, and individually replaceable latching type relays. Panel interiors shall include the following features:
      a. Removable, plug-in terminal blocks with connections for all low voltage terminations.
      b. Individual terminal block, override pushbutton, and LED status light for each relay.
      c. Direct wired switch inputs associated with each relay shall support 2-wire momentary switches only.
      d. Digital inputs (four RJ-45 jacks) shall support 1-, 2-, 3-, 4-, and 8-button digital switches; digital IO modules capable of receiving 0-5V or 0-10V analog photocell inputs; digital IO modules capable of receiving momentary or maintained contact closure inputs or analog sensor inputs; digital daylighting sensors; and digital occupancy sensors. Inputs are divided into two separate digital networks, each capable of supplying 250mA to connected devices.
      e. True relay state shall be indicated by the on-board LED and shall be available

to external control devices and systems via BACnet.

f. Automatically sequenced operation of relays to reduce impact on the electrical distribution system when large loads are controlled simultaneously.

g. Group and pattern control of relays shall be provided through a simple keypad interface from a handheld IR programmer. Any set of relays can be associated with a group for direct on/off control or pattern (scene) control via a simple programming sequence using the relay override pushbuttons and LED displays for groups 1-8 or a handheld IR programmer for groups 1-99.

h. Relay group status for shall be provided through LED indicators for groups 1-8 and via BACnet for groups 1-99. A solid LED indicates that the last group action called for an ON state and relays in the group are on or in a mixed state.

4. Single-pole latching relays with modular plug-in design. Relays shall provide the following ratings and features:
   a. Electrical:
      1) 30 amp ballast at 277V
      2) 20 amp ballast at 347V
      3) 20amp tungsten at 120V
      4) 30 amp resistive at 347V
      5) 1.5 HP motor at 120V
      6) 14,000 amp short circuit current rating (SCCR) at 347V
      7) Relays shall be specifically UL 20 listed for control of plug-loads
   b. Mechanical:
      1) Replaceable, 1/2 inch KO mounting with removable Class 2 wire harness.
      2) Actuator on relay housing provides manual override and visual status indication, accessible from Class 2 section of panel.
      3) Dual line and load terminals each support two #14 - #12 solid or stranded conductors.
      4) Tested to 300,000 mechanical on/off cycles.
5. Isolated low voltage contacts provide for true relay status feedback and pilot light indication.
6. Power supply shall be a multi-voltage transformer assembly with rated power to supply all electronics, occupancy sensors, switches, pilot lights, and photocells as necessary to meet the project requirements. Power supply to have internal over-current protection with automatic reset and metal oxide varistor protection.
7. Where indicated, lighting control panels designated for control of emergency lighting shall be provided with factory installed provision for automatic bypass of relays controlling emergency circuits upon loss of normal power. Panels shall be properly listed and labeled for use on emergency lighting circuits and shall meet the requirements of UL924 and NFPA 70 - Article 700.
8. Integral system clock shall provide scheduling capabilities for panel-only projects without DLM segment networks or BAS control.
   a. Each panel shall include digital clock capability able to issue system wide automation commands to up to 11 other panels for a total of 12 networked lighting control panels. Clock shall provide capability for up to 254 independent schedule events per panel for each of the ninety-nine system wide channel groups.
   b. Clock capability of each panel shall support the time-based energy saving requirements of applicable local energy codes.
   c. Clock module shall provide astronomic capabilities, time delays, blink warning, daylight savings, and holiday functions and will include a battery back up for clock function and program retention in non-volatile FLASH memory. Clocks that require multiple events to meet local code lighting shut off requirements shall not be allowed.
   d. Clock capability of each panel shall operate on a basis of ON/OFF or Normal Hours/After Hours messages to automation groups that implement pre-

configured control scenarios. Scenarios shall include:
1) Scheduled ON / OFF
2) Manual ON / Scheduled OFF
3) Astro ON / OFF (or Photo ON / OFF)
4) Astro and Schedule ON / OFF (or Photo and Schedule ON / OFF)

e. User interface shall be a portable IR handheld remote control capable of programming any panel in the system (LMCT-100)
f. Clock capability of each panel shall employ non-volatile memory and shall retain user programming and time for a minimum of 10 years.
g. Schedules programmed into the clock of any one panel shall be capable of executing panel local schedule or Dark/Light (photocell or Astro) events for that panel in the event that global network communication is lost. Lighting control panels that are not capable of executing events independently of the global network shall not be acceptable.

9. Lighting control panel can operate as a stand-alone system, or can support schedule, group, and photocell control functions, as configured in a Segment Manager controller, via a segment network connection.
10. Lighting control panel shall support digital communications to facilitate the extension of control to include interoperation with building automation systems and other intelligent field devices. Digital communications shall be RS485 MS/TP-based using the BACnet protocol.
    a. Panel shall have provision for an individual BACnet device ID and shall support the full 222 range (0 - 4,193,304). The device ID description property shall be writable via the network to allow unique identification of the lighting control panel on the network.
    b. Panel shall support MS/TP MAC addresses in the range of 0 - 127 and baud rates of 9600k, 38400k, 76800k, and 115.2k bits per second.
    c. Lighting control relays shall be controllable as binary output objects in the instance range of 1 - 64. The state of each relay shall be readable and writable by the BAS via the object present value property.
    d. Lighting control relays shall report their true on/off state as binary input objects in the instance range of 1 - 64.
    e. The 99 group Normal Hours/After Hours control objects associated with the panel shall be represented by binary value objects in the instance range of 201 - 299. The occupancy state of each channel group shall be readable and writable by the BAS via the object present value property. Commanding 1 to a channel group will put all relays associated with the channel into the normal hours mode. Commanding 0 or NULL shall put the relays into the after hours mode.
    f. Setup and commissioning of panel shall not require manufacturer-specific software or a computer. All configuration of the lighting control panel shall be performed using standard BACnet objects or via the handheld IR programming remote. Provide BACnet objects for panel setup and control as follows:
        1) Binary output objects in the instance range of 1 - 64 (one per relay) for on/off control of relays.
        2) Binary value objects in the instance range of 1 - 99 (one per channel) for normal hours/after hours schedule control.
        3) Binary input objects in the instance range of 1 - 64 (one per relay) for reading true on/off state of the relays.
        4) Analog value objects in the instance range of 101 - 199 (one per channel group) shall assign a blink warn time value to each channel. A value of 5 shall activate the blink warn feature for the channel and set a 5-minute grace-time period. A value of 250 shall activate the sweep feature for the channel and enable the use of sweep type automatic wall switches.
    g. Description property for all objects shall be writable via the network and shall be saved in non-volatile memory within the panel.

h. BO and BV 1 - 99 objects shall support BACnet priority array with a relinquish default of off and after hours respectively. Prioritized writes to the channel BV objects shall propagate prioritized control to each member relay in a way analogous to the BACnet Channel object described in addendum aa. (http://www.bacnet.org/Addenda/Add-135-2010aa.pdf)
i. Panel-aggregate control of relay Force Off at priority 2 shall be available via a single BV5 object. Force On at priority 1 shall be available via a single BV4 object.
j. Lockout of all digital switch buttons connected to a given panel shall be command-able via a single BV2 object. The lock status of any connected switch station shall be represented as BV101-196.

11. In addition to the LMCP Relay Panels, an LMZC Zone Controller panel shall be available for zero-relay applications. The panel is designed for applications where LMFC-011 Fixture Controllers or other distributed load controllers are used to switch and/or dim the controlled loads. Key similarities to and differences from the LMCP panel design shall include:
    a. Use the same intelligence board as the LMCP relay panel.
    b. Shall not include relay driver boards or relays.
    c. Have a removable interior section to facilitate installation, and a Tub/Cover. Cover is for surface mounting applications only.
    d. Tub shall have two interior KOs to allow installation of LMPB-100 Power Boosters. Each installed Power Booster can provide an additional 150 mA for either of the two available DLM local networks provided by the LMZC.
    e. All programming and networking (whether DLM Local Network and/or Segment Network) capabilities in the LMZC Zone Controller shall be similar to capabilities for LMCP relay panels, except for functions designed for panel-mounted HDR relays.
12. To aid in project start up, if LMFC Fixture Controllers are connected to an LMZC Zone Controller, Plug n' Go automatic configuration will establish a unique sequence of operation so that all LMFC-controlled fixtures will turn on to 50 percent output when any digital occupancy sensor detects motion.
13. WattStopper Product Number: Relay Panels: LMCP8, LMCP24 or LMCP48, Zone Controller: LMZC-301.

B. User Interface: Each lighting control panel system shall be supplied with one handheld configuration tool. As a remote programming interface the configuration tool shall allow setup, configuration, and diagnostics of the panel without the need for software or connection of a computer. User interface shall have the following panel-specific functions as a minimum:
    1. Set network parameters including panel device ID, MS/TP MAC address, baud rate and max master range.
    2. Relay Group creation of up to 99 groups. Group creation shall result in programming of all seven key relay parameters for member relays. The seven parameters are as follows: After-hours Override Time Delay, Normal Hours Override Time Delay, Action on Transition to Normal Hours, Action on Transition to After Hours, Sensor Action During Normal Hours, Sensor Action During After Hours, Blink-Warn Time for After Hours.
    3. Program up to 254 separate scheduled events. Events shall occur on seven day intervals with each day selectable as active or inactive, and shall be configurable as to whether the event is active on holidays. Holidays are also defined through the User Interface.
    4. Program up to 32 separate Dark/Light events. Events shall have a selectable source as either calculated Astro with delay, or a digital IO module with an integral 0-5V or 0-10V analog photocell. Dark/Light events shall occur on seven day intervals with each day selectable as active or inactive, and shall be configurable as to whether the event is active on holidays.

5. Button binding of digital switches to groups shall be accessible via the handheld IR remote and accomplished from the digital switch station.
6. Programming of panel location information shall be accomplished by the handheld IR remote and include at a minimum LAT, LON, DST zone, and an approximate city/state location.
7. WattStopper Product Number: LMCT-100

2.11 PROGRAMMING, CONFIGURATION AND DOCUMENTATION SOFTWARE

A. PC-native application for optional programming of detailed technician-level parameter information for all DLM products, including all parameters not accessible via BACnet and the handled IR configuration tool. Software must be capable of accessing room-level parameter information locally within the room when connected via the optional LMCI-100 USB programming adapter.

B. Additional parameters exposed through this method include but are not limited to:
1. Occupancy sensor detection LED disable for performance and other aesthetic spaces where blinking LEDs present a distraction.
2. Six occupancy sensor action behaviors for each controlled load, separately configurable for normal hours and after hours modes. Modes include: No Action, Follow Off Only, Follow On Only, Follow On and Off, Follow On Only with Override Time Delay, Follow Off Only with Blink Warn Grace Time, Follow On and Off with Blink Warn Grace Time.
3. Separate fade time adjustments per load for both normal and after hours from 0 - 4 hours.
4. Configurable occupancy sensor re-trigger grace period from 0 - 4 minutes separate for both normal hours and after hours.
5. Separate normal hours and after hours per-load button mode with modes including: Do nothing, on only, off only, on and off.
6. Load control polarity reversal so that on events turn loads off and vice versa.
7. Per-load DR (demand response) shed level in units of percent.
8. Load output pulse mode in increments of 1second.
9. Fade trip point for each load for normal hours and after hours that establishes the dimmer command level at which a switched load closes its relay to allow for staggered On of switched loads in response to a dimmer.

C. Generation of reports at the whole file, partial file, or room level. Reports include but are not limited to:
1. Device list report: All devices in a project listed by type.
2. Load binding report: All load controller bindings showing interaction with sensors, switches, and daylighting.
3. BACnet points report: Per room Device ID report of the valid BACnet points for a given site's BOM.
4. Room summary report: Device manifest for each room, aggregated by common BOM, showing basic sequence of operations.
5. Device parameter report: Per-room lists of all configured parameters accessible via hand held IR programmer for use with O&M documentation.
6. Scene report: All project scene pattern values not left at defaults (i.e. 1 = all loads 100 percent, 2 = all loads 75 percent, 3 = all loads 50 percent, 4 = all loads 25 percent, 5-16 = same as scene 1).
7. Occupancy sensor report: Basic settings including time delay and sensitivities for all occupancy sensors.

D. Network-wide programming of parameter data in a spreadsheet-like programming environment including but not limited to the following operations:
1. Set, copy/paste an entire project site of sensor time delays.
2. Set, copy/paste an entire project site of sensor sensitivity settings.

3. Search based on room name and text labels.
4. Filter by product type (i.e. LMRC-212) to allow parameter set by product.
5. Filter by parameter value to search for product with specific configurations.

E. WattStopper Product Number: LMCS-100, LMCI-100

2.12 EMERGENCY LIGHTING CONTROL DEVICES

A. Emergency Lighting Control Unit - A UL 924 listed device that monitors a switched circuit providing normal lighting to an area. The unit provides normal ON/OFF control of emergency lighting along with the normal lighting. Upon normal power failure the emergency lighting circuit will close, forcing the emergency lighting ON until normal power is restored. Features include:
1. 120/277 volts, 50/60 Hz, 20 amp ballast rating
2. Push to test button
3. Auxiliary contact for remote test or fire alarm system interface

B. WattStopper Product Numbers: ELCU-100, ELCU-200.

C. Generator Transfer Device – For areas noted on plans that require a UL1008 device, provide Bodine GTD20A device.

PART 3 EXECUTION

3.1 PREPARATION

A. Do not begin installation until measurements have been verified and work areas have been properly prepared.

B. If preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Verify that required pre-installation meeting specified in Part 1 of this specification has been completed, recorded meeting minutes have been distributed and all outstanding issues noted have been resolved prior to the start of installation.

3.2 INSTALLATION

A. Install system in accordance with the approved system shop drawings and manufacturer's instructions.

B. Install all room/area devices using manufacturer's factory-tested Cat 5e cable with pre-terminated RJ-45 connectors.
1. If pre-terminated cable is not used for room/area wiring, each field-terminated cable shall be tested following installation and testing results submitted to the Manufacturer's Representative for approval prior to proceeding with the Work.
2. If fixtures have internal DLM Control Modules, ensure that they are also connected with Cat 5e cable.
3. Low voltage wiring topology must comply with manufacturer's specifications.
4. Document all device locations and wiring on as built drawings.

C. All line voltage connections shall be tagged to indicate circuit and switched legs.

D. Test all devices to ensure proper communication.

E. Calibrate all sensor time delays and sensitivity to guarantee proper detection of occupants and energy savings. Adjust time delay so that controlled area remains lighted while occupied.

F. Provide written or computer-generated documentation on the configuration of the system including room by room description including:
   1. Sensor parameters, time delays, sensitivities, and daylighting setpoints.
   2. Sequence of operation, (e.g. manual ON, Auto OFF. etc.)
   3. Load Parameters (e.g. blink warning, etc.)

G. Post start-up tuning - Adjust sensor time delays and sensitivities to meet the Owner's requirements 30 days from beneficial occupancy. Provide a detailed report to the Architect / Owner of post start-up activity.

H. Tighten all panel Class I conductors from both circuit breaker and to loads to torque ratings as marked on enclosure UL label.

I. All Class II cabling shall enter enclosures from within low-voltage wiring areas and shall remain within those areas. No Class I conductors shall enter a low-voltage area.

J. Run separate neutrals for any phase dimmed branch load circuit. Different types of dimming loads shall have separate neutral.

K. Verify all non-panel-based lighting loads to be free from short circuits prior to connection to room controllers.

3.3 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing. Notify Architect and Manufacturer in writing a minimum of 3 weeks prior to system start-up and testing.

B. Tests and Inspections: Manufacturer's service representative shall perform the following inspections and prepare reports.
   1. Verify Class I and II wiring connections are terminated properly by validating system performance.
   2. Set IP addresses and other network settings of system front end hardware per facilities IT instructions.
   3. Verify / complete task programming for all switches, dimmers, time clocks, and sensors.
   4. Verify that the control of each space complies with the Sequence of Operation.
   5. Correct any system issues and retest..

C. Provide a report in table format with drawings, or using a software file that can be opened in the manufacturer's system software including each room or space that has lighting control installed. Indicate the following:
   1. Date of test or inspection.
   2. Loads per space, or Fixture Address identification.
   3. Quantity and Type of each device installed
   4. Reports providing each device's settings.

3.4 FACTORY COMMISSIONING

A. Upon completion of the installation, the system shall be commissioned by the manufacturer's factory authorized representative who will verify a complete fully functional system.

B. The factory commissioning shall include the following services. Programming of all button stations, configuration of all occupancy sensors and photocells. Verification of a complete and working system including MSTP network status. Provide written or computer-generated

documentation on the commissioning of the system including room by room description including:

1. Sensor parameters, time delays, sensitivities, and daylighting setpoints.
2. Sequence of operation, (e.g. manual ON, Auto OFF. etc.)
3. Load Parameters (e.g. blink warning, etc.)

C. The electrical contractor shall request factory commissioning by submitting a startup request form at least (4) weeks before startup is required.

D. Electrical contractor must schedule lighting control factory start-up to begin at least 60 days prior to substantial completion deadline.

E. Lighting control technician shall issue daily reports notifying of the project status, open issues, challenges, etc. at the end of each day he/ she is onsite commissioning the system. Reports shall be sent directly to EC, GC and Engineer.

F. At the completion of the first visit of the lighting control technician, all parties shall meet onsite to walk the project and evaluate any open issues. At this meeting the schedule for owner training shall be determined.

G. The electrical contractor shall provide at least (1) journeyman electrician, familiar with the installation of the system, dedicated to assisting the factory start-up technician for the entire duration of the commissioning process.

H. Upon completion of the system commissioning the factory-authorized technician shall provide the proper training to the owner's personnel on the adjustment and maintenance of the system.

I. Re-commissioning – After 90 days from occupancy the factory authorized representative and electrical contractor shall re-calibrate all sensor time delays and sensitivities to meet the Owner’s Project Requirements. Provide a detailed report to the Architect / Owner of re-commissioning activity

J. Owner operation memo- Lighting control manufacturer shall prepare an operational memo for owner to distribute informing building occupants of the operation of their lighting control system. Memo shall explain the following but not limited to: auto on/ vs manual on, occupancy sensors, daylight harvesting, plug load control, after hours time delays.

END OF SECTION 26 09 43

SECTION 26 09 43 – NETWORKED DIGITAL LIGHTING CONTROLS
(THIS SPECIFICATION SECTION SHALL BE PRICED AS AN ALTERNATE)

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Digital Occupancy and Daylighting Sensor Control
2. Emergency Lighting Control

B. Related Section
1. Section [260926 – Lighting Control Panel Boards:] Lighting panels (switching) controlled by Digital Network Lighting Control System.
2. Section [260936 – Modular Dimming Controls:] Digital Lighting Management
3. Section [262726 - Wiring Devices:] Receptacles
4. Section [265113 – Interior Lighting Fixtures, Lamps, and Ballasts:] Fluorescent electronic dimming ballasts.
5. Section [25000 – Integrated Automation] Building integrator shall provide integration of the lighting control system with Building Automation Systems.
6. Drawings and general provision of the Contact, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section
7. Electrical Sections, including wiring devices, apply to the work of this Section.

C. Control Intent – Control Intent includes, but is not limited to:
1. Defaults and initial calibration settings for such items as time delay, sensitivity, fade rates, etc.
2. Initial sensor and switching zones
3. Initial time switch settings
4. Task lighting and receptacle controls
5. Emergency Lighting control

1.4 SYSTEM DESCRIPTION & OPERATION

A. The Lighting Control and Automation system as defined under this section covers the following equipment:
   1. Digital Room Controllers – Self-configuring, digitally addressable one, two or three relays controllers with **integral current thyristor**, 0-10 volt control for ballasts.
   2. Digital Occupancy Sensors – Self-configuring, digitally addressable and calibrated occupancy sensors with LCD display and two-way active infrared (IR) communications.
   3. Digital Switches – Self-configuring, digitally addressable pushbutton switches, dimmers, and scene switches with two-way active infrared (IR) communications.
   4. Digital Photosensors – Single-zone closed loop and multi-zone open loop daylighting sensors with two-way active infrared (IR) communications can provide switching or dimming control for daylight harvesting.
   5. Configuration Tools – Handheld remote for room configuration provides two way infrared (IR) communications to digital devices and allows complete configuration and reconfiguration of the device / room from up to 30 feet away. Unit to have Organic LED display, simple pushbutton interface, and allow send and receive of room variables and store of occupancy sensor settings. Computer software also customizes room settings.
   6. Handheld remotes for personal control – One-button dimming, two-button on/off, or five-button scene remotes provide control using infrared communications. Remote may be configured in the field to control selected loads or scenes without special tools.
   7. Digital Lighting Management (DLM) local network – Free topology, plug-in wiring system (Cat 5e) for power and data to room devices.
   8. Network Bridge – provides BACnet MS/TP-compliant digital networked communication between rooms, panels and the Segment Manager or building automation system (BAS).
   9. Segment Manager – provides web browser-based user interface for system control, scheduling, power monitoring, room device parameter administration and reporting.
   10. Emergency Lighting Control Unit (ELCU) – allows a standard lighting control device to control emergency lighting in conjunction with normal lighting in any area within a building

1.5 SUBMITTALS

A. Submittals Package: Submit the shop drawings, and the product data specified below at the same time as a package.

B. Shop Drawings:
   1. Composite wiring and/or schematic diagram of each control circuit as proposed to be installed (standard diagrams will not be accepted).
   2. Scale drawing for each area showing exact location of each sensor, room controller, and digital switch.

C. Product Data: Catalog sheets, specifications and installation instructions.

D. Include data for each device which:
   1. Indicates where sensor is proposed to be installed.
   2. Prove that the sensor is suitable for the proposed application.

1.6 QUALITY ASSURANCE

A. Manufacturer: Minimum [10] years' experience in manufacture of lighting controls. Provide list of (5) projects that have been complete for more than (1) year within 100 miles of new project location.

1.7 PROJECT CONDITIONS

A. Do not install equipment until following conditions can be maintained in spaces to receive equipment:
   1. Ambient temperature: 0° to 40° C (32° to 104° F).
   2. Relative humidity: Maximum 90 percent, non-condensing.

1.8 WARRANTY

A. Provide a five year complete manufacturer's warranty on all products to be free of manufacturers' defects.

1.9 MAINTENANCE

A. Spare Parts:
   1. Provide 5% spares of each product listed below to be used for maintenance. Electrical Contractor shall deliver items to Owner within 30 days of substantial completion.
      a. Room Controllers
      b. Occupancy Sensors
      c. Emergency Bypass controllers
      d. Low voltage switches
      e. Daylighting harvesting photocells

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer:
   1. WattStopper (basis of design)
   2. Acuity

2.2 SINGLE / DUAL RELAY WALL SWITCH OCCUPANCY SENSORS

A. Type PW: Manual-ON, Automatic-OFF passive infrared (PIR) wall switch occupancy sensor Furnish the Company's model which suits the electrical system parameters, and accommodates the square-foot coverage and wattage requirement for each area (and type of lighting) controlled; WattStopper PW-100, PW-200, PW-103, PW-203, PW-301, PW-302, WS-301.

B. Type UW: Manual-ON, Automatic-OFF ultrasonic wall switch occupancy sensor with Furnish the Company's model which suits the electrical system parameters, and accommodates the square-foot coverage and wattage requirement for each area (and type of lighting) controlled; WattStopper UW-100, UW-200.

C. Type DW: Manual-ON, Automatic-OFF dual technology (passive infrared and ultrasonic) wall switch occupancy sensor Furnish the Company's model which suits the electrical system parameters, and accommodates the square-foot coverage and wattage requirement for each

area (and type of lighting) controlled; WattStopper DW-100, DW-200, DW-103, DW-203, DW-311, DSW-100, DSW-200, DW-103, DW-203, DSW-301, DSW-302.

2.3 DIGITAL WALL OR CEILING MOUNTED OCCUPANCY SENSOR SYSTEM

A. Wall or ceiling mounted (to suit installation) passive infrared (PIR), ultrasonic or dual technology digital (passive infrared and ultrasonic) occupancy sensor. Furnish the Company's system which accommodates the square-foot coverage requirements for each area controlled, utilizing room controllers, digital occupancy sensors and accessories which suit the lighting and electrical system parameters. Passive infrared only sensors shall not be used for classroom applications.

B. Digital Occupancy Sensors shall provide graphic LCD display for digital calibration and electronic documentation. Features include the following:
   1. Digital calibration and pushbutton programming for the following variables:
      a. Sensitivity – 0-100% in 10% increments
      b. Time delay – 1-30 minutes in 1 minute increments
      c. Test mode – Five second time delay
      d. Detection technology – PIR, Ultrasonic or Dual Technology activation and/or re-activation.
      e. Walk-through mode
      f. Load parameters including Auto/Manual-ON, blink warning, and daylight enable/disable when photosensors are included in the DLM local network.
   2. One or two RJ-45 port(s) for connection to DLM local network.
   3. Two-way infrared (IR) transceiver to allow remote programming through handheld commissioning tool and control by remote personal controls.
   4. Device Status LEDs including:
      a. PIR Detection
      b. Ultrasonic detection
      c. Configuration mode
      d. Load binding
   5. Assignment of occupancy sensor to a specific load within the room without wiring or special tools.
   6. Manual override of controlled loads.

C. Units shall not have any dip switches or potentiometers for field settings.

D. Multiple occupancy sensors may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required.

E. All devices shall be hard wired. No wireless devices shall be permitted.

F. WattStopper product numbers: LMPX, LMDX, LMPC, LMUC, LMDC

2.4 DIGITAL WALL SWITCHES

A. Low voltage momentary pushbutton switches in multiple button configuration; available in white, light almond, ivory, grey, red and black; compatible with wall plates with decorator opening. Wall switches shall include the following features:
   1. Two-way infrared (IR) transceiver for use with personal and configuration remote controls.
   2. Removable buttons for field replacement with engraved buttors and/or alternate color buttons. Button replacement may be completed without removing the switch from the wall.
   3. Red configuration LED on each switch that blinks to indicate data transmission.
   4. Blue Load/Scene Status LED on each switch button with the following characteristics:

a. Bi-level LED
b. Dim locator level indicates power to switch
c. Bright status level indicates that load or scene is active

5. Dimming switches shall include seven bi-level LEDs to indicate load levels using 14 steps.

B. Two RJ-45 ports for connection to DLM local network.

C. Multiple digital wall switches may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required to achieve multi-way switching.

D. The following switch attributes may be changed or selected using a wireless configuration tool:
1. Load and Scene button function may be reconfigured for individual buttons (from Load to Scene, and vice versa).
2. Individual button function may be configured to Toggle, On only or Off only.
3. Individual scenes may be locked to prevent unauthorized change.
4. Fade Up and Fade Down times for individual scenes may be adjusted from 0 seconds to 18 hours.
5. Ramp rate may be adjusted for each dimmer switch.
6. Switch buttons may be bound to any load on a room controller and are not load type dependant; each button may be bound to multiple loads.

E. WattStopper product numbers: LMSW-210, LMSW-211, LMSW-220, LMSW-222, LMSW-241, LMSW-250

2.5 ROOM CONTROLLERS

A. Room Controllers automatically bind the room loads to the connected devices in the space without commissioning or the use of any tools. Room Controllers shall be provided to match the room lighting load and control requirements. The controllers will be simple to install and will not have, dip switches, potentiometers or require special configuration. The control units will include the following features:
1. Automatic room configuration to the most energy-efficient sequence of operation based upon the devices in the room.
2. Simple replacement – Using the default automatic configuration capabilities, a room controller may be replaced with an off-the-shelf unit without requiring any configuration or setup.
3. Device Status LEDs to indicate:
a. Data transmission
b. Device has power
c. Status for each load
d. Configuration status
4. Quick installation features including:
a. Standard junction box mounting
b. Quick low voltage connections using standard RJ-45 patch cable
5. Plenum rated UL 2043
6. Manual override and LED indication for each load
7. Dual voltage (120/277 VAC, 60 Hz)
8. Zero cross circuitry for each load.

B. On/Off/Dimming enhanced Room Controllers shall include:
1. Real time current monitoring
2. One, two or three relay configuration
3. Efficient 250 mA switching power supply
4. Four RJ-45 DLM local network ports.

5. One 0-10 volt analog output per relay for control of compatible ballasts and LED drivers.
2. The following dimming attributes may be changed or selected using a wireless configuration tool:
   a. Establish preset level for each load from 0-100%
   b. Set high and low trim for each load
   c. Set lamp burn in time for each load up to 100 hours
6. WattStopper product numbers: LMRC-111, LMRC-112, LMRC-211, LRMC-212, LRMC-213

2.6 DIGITAL PHOTOSENSORS

A. Digital photosensors work with room controllers to provide automatic switching or dimming daylight harvesting capabilities for any load type connected to a room controller. Closed loop photosensors measure the ambient light in the space and control a single lighting zone. Open loop photosensors measure incoming daylight in the space, and are capable of controlling up to three lighting zones. Photosensors shall be interchangeable without the need for rewiring.

B. Digital photosensors include the following features:
1. An internal photodiode that measures only within the visible spectrum, and has a response curve that closely matches the photopic curve. The photodiode shall not measure energy in either the ultraviolet or infrared spectrums. The photocell shall have a sensitivity of less than 5% for any wavelengths less than 400 nanometers or greater than 700 nanometers.
2. Sensor light level range shall be from 1-10,000 footcandles (fc).
3. The capability of switching one-third, one-half or all lighting ON and OFF, or raising or lowering lighting levels, for each controlled zone, depending on the selection of room controller(s) and load binding to room controller(s).
4. For switching daylight harvesting, the photosensor shall provide a deadband or a separation between the “ON Setpoint” and the “OFF Setpoint” that will prevent the lights from cycling after they turn off.
5. For dimming daylight harvesting, the photosensor shall provide the option, when the daylight contribution is sufficient, of turning lights off or dimming lights to a user-selectable minimum level.
6. Optional programmable wall switch override to allow occupants to reduce lighting level to increase energy savings or, if permitted by system administrator, raise and lower lighting levels for a selected period of time or cycle of occupancy.
7. Infrared (IR) transceiver for configuration and/or commissioning with a handheld configuration tool, to transmit detected light level to wireless configuration tool, and for communication with personal remote controls.
8. Red configuration LED that blinks to indicate data transmission.
9. Blue status LED indicates test mode, override mode and load binding.
10. Recessed switch to turn controlled load(s) ON and OFF.
11. One RJ-45 port for connection to DLM local network.
12. An adjustable head and a mounting bracket to accommodate multiple mounting methods and building materials. The photosensor may be mounted on a ceiling tile, skylight light well, suspended lighting fixture or backbox.

C. Closed loop digital photosensors include the following additional features:
1. An internal photodiode that measures light in a 100 degree angle, cutting off the unwanted light from bright sources outside of this cone.
2. Automatic self-calibration, initiated from the photosensor, a wireless configuration tool or a PC with appropriate software.
3. Automatically establishes setpoints following self-calibration.

4. A sliding setpoint control algorithm for dimming daylight harvesting with a “Day Setpoint” and the “Night Setpoint” to prevent the lights from cycling.
5. WattStopper Product Number: LMLS-400.

D. Open loop digital photosensors include the following additional features:
1. An internal photodiode that measures light in a 60 degree angle cutting off the unwanted light from the interior of the room.
2. Automatically establishes setpoints following calibration using a wireless configuration tool or a PC with appropriate software.
3. A proportional control algorithm for dimming daylight harvesting with a “Setpoint” to be maintained during operation.
4. WattStopper Product Number: LMLS-500.

2.7 EMERGENCY LIGHTING

A. Emergency Lighting Control Unit – A UL 924 listed device that monitors a switched circuit providing normal lighting to an area. The unit provides normal ON/OFF control of emergency lighting along with the normal lighting. Upon normal power failure the emergency lighting circuit will close, forcing the emergency lighting ON until normal power is restored. Features include:
1. 120/277 volts, 50/60 Hz., 20 amp ballast rating
2. Push to test button
3. Auxiliary contact for remote test or fire alarm system interface

B. WattStopper Product Numbers: ELCU-100, ELCU-200.

C. Generator Transfer Device – For corridors and other areas noted on plans that require a UL1008 device, provide Bodine GTD20A device.

2.8 ROOM NETWORK (DLM Local Network)

A. The DLM local network is a free topology lighting control physical connection and communication protocol designed to control a small area of a building. Digital room devices connect to the network using CAT 5e cables with RJ-45 connectors which provide both data and power to room devices. Features of the DLM local network include:
1. Plug n’ Go automatic configuration and binding of occupancy sensors, switches and lighting loads to the most energy-efficient sequence of operation based upon the device attached.
2. Simple replacement of any device in the network with a standard off the shelf unit without requiring commissioning, configuration or setup.
3. Push n’ Learn configuration to change the automatic configuration, including binding and load parameters without tools, using only the buttons on the digital devices in the local network.
4. Two-way infrared communications for control by handheld remotes, and configuration by a handheld tool including adjusting load parameters, sensor configuration and binding, within a line of sight of up to 30 feet from a sensor, wall switch or IR receiver.

2.09 LIGHTING CONTROL PANELS

A. Provide lighting control panels in the locations and capacities as indicated on the plans and schedules. Each panel shall be of modular construction and consist of the following components:
1. Enclosure/Tub shall be NEMA 1, sized to accept an interior with 1 – 8 relays, 1 – 24 relays and 6 four-pole contactors, or 1 – 48 relays and 6 four-pole contactors.

2. Cover shall be configured for surface or flush wall mounting of the panel as indicated on the plans. The panel cover shall have a hinged and lockable door with restricted access to line voltage section of the panel.
3. Interior assembly shall be supplied as a factory assembled component specifically designed and listed for field installation. The interior construction shall provide total isolation of high voltage (Class 1) wiring from low voltage (Class 2) wiring within the assembled panel. The interior assembly shall include intelligence boards, power supply, DIN rails for mounting optional Class 2 control devices, and individually replaceable latching type relays. The panel interiors shall include the following features:
    a. Removable, plug-in terminal blocks with screwless connections for all low voltage terminations.
    b. Individual terminal block, override pushbutton, and LED status light for each relay.
    c. Direct wired switch inputs associated with each relay and group channel shall support two-wire, momentary or maintained contact switches.
    d. Digital inputs (four RJ-45 jacks) shall support 1-, 2-, 3-, 4-, and 8-button digital switches, digital IO modules capable of receiving 0-5V or 0-10V analog photocell inputs, digital IO modules capable of receiving momentary or maintained contact closure inputs, digital photocell modules, and digital occupancy sensors.
    e. True relay state shall be indicated by the on-board LED and shall be available to external control devices and systems via BACnet.
    f. Automatically sequenced operation of relays to reduce impact on the electrical distribution system when large loads are controlled simultaneously.
    g. Group, channel, and pattern control of relays shall be provided through a simple keypad interface from a handheld IR programmer. Any group of relays can be associated with a channel for direct on/off control or pattern (scene) control via a simple programming sequence using the relay and channel override pushbuttons and LED displays for channels 1-9 or a handheld IR programmer for channels 1-99.
    h. Relay group status for each channel shall be provided through red LED indicators for groups 1-9 and via BACnet for groups 1-99. Solid red indicates that the last group action called for an ON state and relays in the group are on or in a mixed state.
    i. Single-pole latching relays with modular plug-in design. Relays shall provide the following ratings and features:
        1) Electrical:
            (a) 30 amp ballast at 277V
            (b) 20 amp ballast at 347V
            (c) 20 amp tungsten at 120V
            (d) 30 amp resistive at 347V
            (e) 1.5 HP motor at 120V
            (f) 14,000 amp short circuit current rating (SCCR) at 347V
            (g) Relays shall be specifically UL listed for control of plug loads
        2) Mechanical:
            (a) Individually replaceable, ½" KO mounting with removable Class 2 wire harness.
            (b) Actuator on relay housing provides manual override and visual status indication, accessible from Class 2 section of panel.
            (c) Dual line and load terminals each support two #14 – #12 solid or stranded conductors.
            (d) Tested to 300,000 mechanical on/off cycles.
        3) Isolated low voltage contacts provide for true relay status feedback and pilot light indication.

4. Power supply shall be a multi-voltage transformer assembly with rated power to supply all electronics, occupancy sensors, switches, pilot lights, and photocells as necessary to meet the project requirements. Power supply to have internal over-current protection with automatic reset and metal oxide varistor protection.

5. Lighting control panels shall be WattStopper model LMCP8, LMCP24 or LMCP48 as shown on the plans.

2.10 BACnet® BASED DIGITAL COMMUNICATIONS

A. The lighting control panel shall support digital communications to facilitate the extension of control to include interoperation with building automation systems and other intelligent field devices. Digital communications shall be RS485 master/slave token passing-based using the BACnet® protocol.
   1. The panel shall have provision for an individual BACnet device ID. The device ID description property shall be writable via the network to allow unique identification of the lighting control panel on the network.
   2. The panel shall support MS/TP MAC addresses in the range of 0 – 127 and baud rates of 9600k, 38400k, 76800k, and 115.2k bits per second.
   3. Lighting control relays shall be controllable as binary output objects in the instance range of 1 – 64. The state of each relay shall be readable and writable by the BAS via the object present value property.
   4. Lighting control relays shall report their true on/off state as binary input objects in the instance range of 1 – 64.
   5. The 99 channel groups associated with the panel shall be represented by binary value objects in the instance range of 201 – 299. The occupancy state of each channel group shall be readable and writable by the BAS via the object present value property. Commanding 1 to a channel group will put all relays associated with the channel into the normal hours mode. Commanding 0 or NULL shall put the relays into the after hours mode.
   6. Setup and commissioning of the panel shall not require manufacturer-specific software or a computer. All configuration of the lighting control panel shall be performed using standard BACnet objects or via the handheld IR programming remote. Provide BACnet objects for panel setup and control as follows:
      a. Binary output objects in the instance range of 1 – 64 (one per relay) for on/off control of relays.
      b. Binary value objects in the instance range of 1 – 99 (one per channel) for normal hours/after hours schedule control.
      c. Binary input objects in the instance range of 1 – 64 (one per relay) for reading true on/off state of the relays.
      d. Analog value objects in the instance range of 1 – 64 (one per relay) shall assign relays to channel groups in the range of 1 – 99.
      e. Analog value objects in the instance range of 101 – 199 (one per channel group) shall assign a blink warn time value to each channel. A value of 5 shall activate the blink warn feature for the channel and set a 5-minute gracetime period. A value of 250 shall activate the sweep feature for the channel and enable the use of sweep type automatic wall switches.
      f. Analog value objects in the instance range of 201 – 299 (one per channel) shall assign an after hours time delay value to the channel in the range of 1 – 240 minutes.
      g. Multi-state value objects in the instance range of 1 – 99 (one per channel) shall provide the state of the relays assigned to the channel. Valid states shall be ALL ON, MIXED, BLINK, and ALL OFF.
   7. The description property for all objects shall be writable via the network and shall be saved in non-volatile memory within the panel.

8. The BO and BV 1 – 99 objects shall support BACnet priority array with a relinquish default of off and after hours respectively. Prioritized writes to the channel BV objects shall propagate prioritized control to each member relay in a way analogous to the BACnet Channel object described in addendum aa. (http://www.bacnet.org/Addenda/Add-135-2010aa.pdf)
9. Panel-aggregate control of relay Force Off at priority 2 shall be available via a single BV5 object. Force On at priority 1 shall be available via a single BV4 object.
10. Lockout of all digital switch buttons connected to a given panel shall be command-able via a single BV2 object. The lock status of any connected switch station shall be represented as BV101-196.
11. Lighting control accessory devices connected to the panel shall be represented via BACnet objects including but not limited to the following:
    a. Digital occupancy sensor detection states shall be readable as BI objects ranging from BI1-96.
    b. Digital occupancy sensor configuration parameters shall each be accessible as BACnet objects when applicable to a given product.
        (1) Occupancy sensor time delay in minutes shall be writeable via AV101-196.
        (2) Occupancy sensor passive infrared (PIR) sensitivity percentage shall be writeable via AV201-296.
        (3) Occupancy sensor ultrasonic (US) sensitivity percentage shall be writeable via AV301-396.
    c. Digital switch buttons shall be readable and writeable as BI objects ranging from BI101 – 9608.
    d. Digital daylight sensors foot-candle readings shall be readable as follows:
        (1) Analog 0-5V/0-10V sensors connected to a digital input module shall be represented as AI1-96.
        (2) Digital closed loop sensors shall be represented as AI4001-4096.
        (3) Digital open loop sensors shall be represented as AI5001-5096.
        (4) Digital dual loop sensors shall be represented as follows:
            (a) The upward facing open loop sensor shall be represented as AI6001-6096.
            (b) The downward facing closed loop sensor shall be represented as AI6101-6196.
    e. Digital daylight sensor configuration shall be exposed as BACnet objects as follows:
        (1) Digital closed loop sensors shall be represented as follows:
            (a) Daylight Sensor Day Setpoint (ftcd) AV4201-4296.
            (b) Daylight Sensor Night Setpoint (ftcd) AV4301-4396.
            (c) Daylight Sensor Off Setpoint Delay (minutes) AV4401-4496.
            (d) Daylight Sensor On Setpoint (ftcd) AV4501-4596.
            (e) Daylight Sensor Off Setpoint (ftcd) AV4601-4696.

2.11 USER INTERFACE

A. Each lighting control panel system shall be supplied with at least (1) handheld IR remote programming interface consisting of a keypad and associated OLED display screen. The user interface shall allow setup, configuration, and diagnostics of the panel without the need for software or connection of a computer. The user interface shall have the following functions as a minimum:
1. Set network parameters including panel device ID, MS/TP MAC address, baud rate and max master range.
2. Relay Group creation of up to 99 groups. Group creation shall result in programming of all seven key relay parameters for member relays. The seven parameters are as follows: After-hours Override Time Delay, Normal Hours Override Time Delay, Action on Transition to Normal Hours, Action on Transition to After Hours, Sensor Action During Normal Hours, Sensor Action During After Hours, Blink-Warn Time for After Hours.

3. Program up to 254 separate scheduled events. Events shall occur on seven day intervals with each day selectable as active or inactive, and shall be configurable as to whether the event is active on holidays. Holidays are also defined through the User Interface.
4. Program up to 32 separate Dark/Light events. Events shall have a selectable source as either calculated Astro with delay, or a digital IO module with an integral 0-5V or 0-10V analog photocell. Dark/Light events shall occur on seven day intervals with each day selectable as active or inactive, and shall be configurable as to whether the event is active on holidays.
5. Button binding of digital switches to groups shall be accessible via the handheld IR remote and accomplished from the digital switch station.
6. Programming of panel location information shall be accomplished by the handheld IR remote and include at a minimum LAT, LON, DST zone, and an approximate city/state location.
7. An additional handheld IR remote may optionally be specified to be permanently mounted to the panel interior via a retractable anti-theft lanyard to allow for convenient programming of the panel while assuring that the handheld programmer is always present at that panel. An unlimited number of handheld IR remotes may also be purchased for facilities staff as seen fit by the end user's representative.

2.12 CONFIGURATIONS TOOLS

A. A configuration tool facilitates optional customization of DLM local networks, and is used to set up open loop daylighting sensors. A wireless configuration tool features infrared communications, while PC software connects to each local network via a USB interface.

B. Features and functionality of the wireless configuration tool shall include:
   1. Two-way infrared (IR) communication with DLM IR-enabled devices within a range of approximately 30 feet.
   2. High visibility organic LED (OLED) display, pushbutton user interface and menu-driven operation.
   3. Read, modify and send parameters for occupancy sensors, daylighting sensors, room controllers and buttons on digital wall switches.
   4. Save up to nine occupancy sensor setting profiles, and apply profiles to selected sensors.
   5. Temporarily adjust light level of any load(s) on the local network, and incorporate those levels in scene setting.
   6. Adjust or fine-tune daylighting settings established during auto-commissioning, and input light level data to complete commissioning of open loop daylighting controls.

C. WattStopper Product Numbers: LMCT-100, LMCI-100/LMCS-100

2.13 NETWORK BRIDGE

A. The network bridge connects a DLM local network to a BACnet-compliant network for communication between rooms, panels and a segment manager or BAS. Each local network shall include a network bridge component to provide a connection to the local network room devices. The network bridge shall use industry standard BACnet MS/TP network communication. Closed or proprietary network communication shall not be acceptable.

   1. The network bridge may be incorporated directly into the room controller hardware (LMRC-3xx Room Controllers) or be provided as a separate module connected on the local network through an available RJ-45 port.
   2. Provide Plug n' Go operation to automatically discover all room devices connected to the local network and make all device parameters visible to the segment manager via

the segment network. No commissioning shall be required for set up of the network bridge on the local network.

3. The network bridge shall automatically create standard BACnet objects for selected room device parameters to allow any BACnet-compliant BAS to include lighting control and power monitoring features as provided by the DLM room devices on each local network. Standard BACnet objects shall be provided as follows:
   a. Read/write the normal or after hours schedule state for the room
   b. Read the detection state of the occupancy sensor
   c. Read/write the On/Off state of loads
   d. Read/write the dimmed light level of loads
   e. Read the button states of switches
   f. Read total current in amps, and total power in watts through the room controller
   g. Read/write occupancy sensor time delay, PIR sensitivity and ultrasonic sensitivity settings
   h. Activate a preset scene for the room
   i. Read/write daylight sensor fade time and say and night setpoints
   j. Read the current light level, in footcandles, from interior and exterior photosensors and photocells
   k. Set daylight sensor operating mode
   l. Read/write wall switch lock status
4. WattStopper product numbers: LMBC-300

2.14 SEGMENT MANAGER

A. The Digital Lighting Management system shall include at least one segment manager to manage network communication. It shall serve up a graphical user interface via a standard web browser. Each segment manager shall have support for one, two or three segment networks as required and allow for control of a maximum of 40 local networks (rooms) and/or lighting control panels per segment network.

B. Operational features of the Segment Manager shall include the following:
   1. Connection to PC or LAN via standard Ethernet TCP/IP.
   2. Easy to learn and use graphical user interface, compatible with Internet Explorer 8, or equal browser.
   3. Log in security capable of restricting some users to view-only or other limited operations.
   4. Automatic discovery of all DLM devices on the segment network(s). Commissioning beyond activation of the discovery function shall not be required.
   5. After discovery, all rooms and panels shall be presented in a standard navigation tree format. Selecting a device from the tree will allow the device settings and operational parameters to be viewed and changed by the user.
   6. Ability to view and modify room device operational parameters. It shall be possible to set device parameters independently for normal hours and after hours operation.
   7. Ability to set up schedules for rooms and panels. Schedules shall automatically set controlled zones or areas to either a normal hours or after hours mode of operation.
   8. Ability to group rooms and loads for common control by schedules, switches or network commands.
   9. Ability to monitor connected load current and display power consumption for areas equipped with room controllers incorporating the integral current monitoring feature.
   10. Provide seamless integration with the BAS via BACnet IP. Provide export table with available parameters.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Contractor shall provide to the manufacturer all quantities for system including but not limited to relays, room controllers, relay panels, plug load controllers, switches, sensors and wire lengths and configurations for both network and device cable at least 1 week before bid.

B. When using wire for connections other than the DLM local network (Cat 5e with RJ-45 connectors), provide detailed point to point wiring diagrams for every termination. Provide wire specifications and wire colors to simplify contactor termination requirements

C. All MSTP network and Cat 5e low voltage wiring must have “WattStopper” printed on the wire jacket. Any cable substitutions shall be removed and replaced at the contractor’s expense.

D. All MSTP network terminations shall utilize wire ferrules for terminations and MSTP network manufacturer’s instructions. Any network deficiencies shall be repaired at the contractor’s expense.

E. Electrical contractor must provide a detailed as-built plan in CAD showing MSTP network cable routing and network bridge serial numbers to the manufacturer at least 3 weeks prior to factory commissioning Install the work of this Section in accordance with manufacturer’s printed instructions unless otherwise indicated.

F. Electrical contractor shall be responsible for scheduling the following onsite coordination meetings through the duration of the project. Attendance shall be required for the GC, EC, representative from MEP firm, BAS Integrator and lighting control rep.

1. Pre-Installation- After submittals have been approved and material has arrived onsite and before installation of any devices begins. Review lighting control layout plans, required as-built information and MSTP Terminations.
2. Pre-Factory startup- Electrical contractor must have all lighting control devices installed, wired and tested at least 90 days prior to substantial completion deadline. At this coordination meeting the electrical contractor shall walk the site with attendees and go room by room to ensure they are ready for factory technician to start the system programming. Electrical contractor shall have his as built documentation of the system completed for this meeting.
3. Move in- 30 days prior to owner move in all parties shall meet onsite to review completed system. At this time all installation and factory programming shall be completed.

3.2 FACTORY COMMISSIONING

A. Upon completion of the installation, the system shall be commissioned by the manufacturer's factory authorized representative who will verify a complete fully functional system.

B. The factory commissioning shall include the following services. Programming of all button stations, configuration of all occupancy sensors and photocells. Verification of a complete and working system including MSTP network status. Provide written or computer-generated documentation on the commissioning of the system including room by room description including:

1. Sensor parameters, time delays, sensitivities, and daylighting setpoints.
2. Sequence of operation, (e.g. manual ON, Auto OFF. etc.)
3. Load Parameters (e.g. blink warning, etc.)

C. The electrical contractor shall request factory commissioning by submitting a startup request form at least (4) weeks before startup is required.

D. Electrical contractor must schedule lighting control factory start-up to begin at **least 60 days prior to substantial completion deadline.**

E. Lighting control technician shall issue daily reports notifying of the project status, open issues, challenges, etc. at the end of each day he/ she is onsite commissioning the system. Reports shall be sent directly to EC, GC and Engineer.

F. At the completion of the first visit of the lighting control technician, all parties shall meet onsite to walk the project and evaluate any open issues. At this meeting the schedule for owner training shall be determined.

G. The electrical contractor shall provide at least (1) journeyman electrician, familiar with the installation of the system, dedicated to assisting the factory start-up technician for the entire duration of the commissioning process.

H. Upon completion of the system commissioning the factory-authorized technician shall provide the proper training to the owner's personnel on the adjustment and maintenance of the system.

I. Re-commissioning – After 90 days from occupancy the factory authorized representative and electrical contractor shall re-calibrate all sensor time delays and sensitivities to meet the Owner’s Project Requirements. Provide a detailed report to the Architect / Owner of re-commissioning activity

J. Owner operation memo- Lighting control manufacturer shall prepare an operational memo for owner to distribute informing building occupants of the operation of their lighting control system. Memo shall explain the following but not limited to: auto on/ vs manual on, occupancy sensors, daylight harvesting, plug load control, after hours time delays.

END OF SECTION 26 09 43

SECTION 26 20 00 - ELECTRICAL DISTRIBUTION EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Conditions of the Contract Documents and Division 1 - General Requirements as applicable, apply to this Section.

1.2 SUMMARY

A. Provide all electrical distribution and motor control equipment and accessories required to distribute electrical power to all motors, outlets and systems requiring power.

1.3 QUALITY ASSURANCE

A. New: Provide all new equipment.

B. Single Manufacturer: All equipment of each type shall be the product of one manufacturer.

C. UL: Equipment shall be UL listed. Service entrance equipment shall bear UL Service Entrance label.

D. NEC: Equipment and installation shall comply with the National Electrical Code.

E. Wet Locations: Equipment and enclosures installed outdoors and in wet locations shall be approved for the purpose.

F. IEEE: Institute of Electrical and Electronics Engineers Standard 1015-1997 (Blue Book) Recommended Practice for Applying Low-Voltage Circuit Breakers Used in Industrial and Commercial Power Systems.

1.4 LABELING

A. Nameplates and labeling shall be provided in accordance with Section 26 05 53. All feeders shall be labeled at the feeder device.

1.5 FINISHES

A. All equipment shall have a factory applied gray finish applied over a rust inhibiting treatment. Any items which have the finish marred shall be touched up or refinished to a new condition before final acceptance. This shall include, but shall not be limited to, sanding and properly removing rust or other contaminants and completely repainting equipment if damage is extensive. Overall acceptance is subject to approval of the Engineer.

1.6 SUBMITTALS

A. Provide complete product data for each equipment type. Provide electric service studies when required.

B. Submittal shall include written recommendation from manufacturer of settings for all electronic trip adjustment setting on all equipment furnished with adjustable trip settings. Contractor is responsible for adjusting all electronic trip settings per manufacturer recommendations.

C. Electrical connections to all equipment furnished by any other division shall be coordinated with final approved equipment submittals from other divisions including but not limited to circuit breaker sizes, conduit sizes, wire sizes, fuse sizes, disconnect switch sizes and starter sizes that differ from those shown on the drawings prior to submitting Electrical Distribution Equipment submittal.

1.7 SHORT CIRCUIT CURRENT RATINGS

A. General: All switchboards and panelboards shall be fully rated and marked with a maximum short circuit current rating. The equipment manufacturer shall have verified this rating with high-amperage testing. All short circuit current ratings are expressed as amperes RMS symmetrical at the applied voltage unless otherwise noted. All equipment shall withstand the specified level of fault current. All overcurrent devices shall interrupt the specified level of fault current.

1.8 ELECTRIC SERVICE STUDIES

A. Standard: Submit studies in accordance with ANSI/IEEE Standard 242 Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems.

B. Submit one-line diagram for each electrical service. Key all equipment and components on diagram to items in the studies.

C. Provide a short-circuit current analysis for each main switchboard. Short-circuit analysis shall calculate short-circuit levels at service transformer secondary, switchboard main breaker, each feeder breaker and all levels of downstream distribution equipment. Assume infinite source bus.

D. Provide a time-current coordination study for each main switchboard. Coordination study shall compare the operating levels and times of the protective devices to the withstand levels and times that the equipment can sustain without damage or failure. Determine electronic trip unit settings necessary to achieve optimal selective coordination between 480 volt main service circuit breaker and first level of feeder distribution devices. Determine setting for all adjustments of trip units of all electronic circuit breakers that are linked by zone-selective-interlocking. Furnish time-current curves for the two (or more) levels of distribution protected with electronic trips, plus the first additional distribution level served from the switchboard feeder. Show a separate composite plot for each feeder breaker trip rating with the main breaker. Plot composite time-current curves on log-log background. Add a typical frame size of downstream molded-case circuit breaker to each switchboard feeder composite plot.

E. Contractor shall make all adjustments to circuit breakers per electric service study and provide written documentation that all adjustments have been made.

1.9 OWNER'S INSTRUCTION

A. Provide a four hour period of instruction to the Owner's designated personnel upon completion of the main switchboards installation. Instruction shall include a functional training session on digital metering system operation and system test procedures. Demonstrate the transfer of metered values to the Building Automation System. Review manufacturer’s recommended switchboard maintenance. The Operations and Maintenance Manual shall be complete and on-site at the time of Owner instruction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Unless indicated otherwise, all equipment in this section shall be provided from a single manufacturer. The product designations listed are to establish a level of quality. Acceptable manufacturers are,
   1. Square D
   2. Siemens
   3. G.E.
   4. Eaton

2.2 ENCLOSED SWITCHES

A. General: Provide heavy duty enclosed switches similar to Square D Class 3100 Type HD.

B. Switch Interior:
   1. All switches shall have switch blades which are visible when the switch is OFF and the cover is open.
   2. Lugs shall be front removable and UL Listed for 75 degrees Celsius conductors.
   3. All current carrying parts shall be plated to resist corrosion.
   4. Switches shall have removable arc suppressors to facilitate easy access to line side lugs.
   5. Switches shall have provisions for a field installable electrical interlock.

C. Switch Mechanism:
   1. Switch operating mechanism shall be quick-make, quick-break such that, during normal operation of the switch, the operation of the contacts shall not be capable of being restrained by the operating handle after the closing or opening action of the contacts has started.
   2. The operating handle shall be an integral part of the box, not the cover.
   3. Provisions for padlocking the switch in the OFF position with at least three padlocks shall be provided.
   4. The handle position shall travel at least 90 degrees between OFF and ON positions to clearly distinguish and indicate handle position.
   5. All switches shall have a dual cover interlock mechanism to prevent unintentional opening of the switch cover when the switch is ON and prevent turning the switch ON when the cover is open. The cover interlock mechanism shall have an externally operated override but the override shall not permanently disable the interlock mechanism. The tool used to override the cover interlock mechanism shall not be required to enter the enclosure in order to override the interlock.

D. Switch Enclosures:
   1. Switch covers shall be attached with welded pin-type hinges.
   2. The enclosure shall be finished with gray baked enamel paint which is electrodeposited on cleaned, phosphate pre-treated steel.
   3. The enclosure shall have ON and OFF markings stamped into the cover.
   4. The operating handle shall be provided with a dual colored, red/black position indication,
   5. All switches shall have provisions to accept up to three (3) 3/8 inch hasp padlocks to lock the operating handle in the OFF position.
   6. Tangential knockouts shall be provided to facilitate ease of conduit entry.

E. Switch Ratings:
   1. Switches shall be horsepower rated for ac and/or dc as indicated on the plans.
   2. The UL Listed short circuit current rating of the switches shall be 200,000 rms

symmetrical amperes when used with or protected by Class J fuses.
3. Non-Fusible: 10,000 rms symmetrical amps.

F. Fuse Clips: NEMA FU 1, Class J fuses.

2.3 SINGLE CIRCUIT BREAKERS WITH ENCLOSURES

A. Product Description: Enclosed, molded-case circuit breaker conforming to NEMA AB 1, suitable for use as service entrance equipment where applied.

B. Circuit Breakers: Molded case, quick make, quick break, trip free, common thermal magnetic trip.

C. Ratings: Continuous current, poles as required, 480 volt system breaker shall interrupt short circuits up to 14,000 rms amps symmetrical; on 120/208 - 240 volt system, 10,000 amp rms symmetrical.

D. Enclosure: NEMA AB 1, to meet conditions. Fabricate enclosure from steel finished with manufacturer's standard gray enamel.
1. Interior Dry Locations: Type 1.
2. Exterior Locations: Type 3R.

E. Nameplate: Provide a nameplate showing load served.

2.4 FRACTIONAL HORSEPOWER MANUAL MOTOR CONTROLLER

A. Square D - Class 2510 Type F.
1. Description: NEMA ICS 2, ac general-purpose Class A manually operated, full-voltage controller for fractional horsepower induction motors, with thermal overload unit, red pilot light and toggle operator.
2. Enclosures: ANSI / NEMA ICS 6, Type as indicated.

2.5 MAGNETIC MOTOR CONTROLLERS

A. Square D - Class 8536 Type S.
1. Description: NEMA ICS 2, ac general-purpose Class A magnetic controller for induction motors rated in horsepower.
2. Coil Operating Voltage: Provide as required to interface with controls system, including control power transformer.
3. Coil: Be of encapsulated type.
4. Poles: as indicated.
5. Size: as indicated.
6. Contacts: Totally enclosed, double-break, silver-cadmium-oxide power contacts. Contact inspection and replacement shall be possible without disturbing line or load wiring.
7. Wiring: Straight-through wiring with all terminals clearly marked.
8. Overload Relay: NEMA ICS.
   a. Solid State: Trip current rating will be established by selection of overload relay and shall be adjustable (3 to 1 current range). The overload shall be self-powered. Provide phase loss, phase unbalance protection, permanent tamper guard, Trip Class 10 or 20 and a mechanical test function.
   b. Outputs: Units shall be designed for addition of either a normally open or normally closed auxiliary contact and shall be field convertible. Provide one (1) set of N.O. and N.C. contacts in each starter.

c. Reset: Unit shall include both manual reset and remote reset using an external module.
d. Select overload current setting based on the motor nameplate data of the actual motor to be protected. All standard NEMA sizes may be used for the overload relay, including Size 00.

9. Enclosure: ANSI / NEMA ICS 6, Type 1, 3R or 4X.
10. Control Power Transformers: 120 volt secondary. VA minimum, in each motor starter. Provide fused primary and secondary.
11. Provide red LED running pilot light and H-O-A switch.

2.6 MAGNETIC MOTOR CONTROLLERS - TWO - SPEED

A. Square D - Class 8810 Type S.
1. Description: Include integral time delay transition between FAST and SLOW speeds. Starters shall be electrically and mechanically interlocked to prohibit both starters being energized simultaneously.
2. Coil operating voltage: Provide as required to interface with controls system, including control power transformer.
3. Coil: Be of encapsulated type.
4. Poles: as indicated.
5. Size: as indicated.
6. Contacts: Totally enclosed, double-break, silver-cadmium-oxide power contacts.
7. Contact inspection and replacement shall be possible without disturbing line or load wiring.
8. Wiring: Straight-through wiring with all terminals clearly marked.
9. Overload Relay: NEMA ICS.
a. Solid State; Trip current rating will be established by selection of overload relay and shall be adjustable (3 to 1 current range). The overload shall be self-powered. Provide phase loss, phase unbalance protection, permanent tamper guard, Trip Class 10 or 20 and a mechanical test function.
b. Outputs: Units shall be designed for addition of either a normally open or normally closed auxiliary contact and shall be field convertible. Provide one (1) set of N.O. and N.C. contacts in each starter.
c. Reset: Unit shall include both manual reset and remote reset using an external module.
d. Select overload current setting based on the motor nameplate data of the actual motor to be protected. All standard NEMA sizes may be used for the overload relay, including Size 00.
10. Enclosure: ANSI / NEMA ICS 6, Type 1, 3R or 4X.
11. Two speed motor controllers shall be designed for type of motor winding specified in Division 23 Mechanical Specifications, Drawings, or Equipment Schedule. Coordinate with Division 23 prior to submittal.
12. Provide red-high, amber-low running pilot lights and H-O-L-A switch.
13. Provide two speed motor controllers for all two speed motors specified in Division 23 Mechanical Specifications, Drawings, or Equipment Schedule. Coordinate with Division 23 prior to submittal.

2.7 COMBINATION DISCONNECT / MOTOR STARTERS

A. Square D - Class 8538 Type S (Fusible or no fuse, as shown on plans).
1. Description: Combine magnetic motor controllers with fusible switch disconnect in common enclosure. Switch shall have a color coded externally operated handle. Operating handle shall give positive visual indication of ON/OFF with red and black color-coding.

2. Fusible Switch Assemblies: NEMA KS 1, enclosed knife switch with externally operable handle. Fuse clips: Designed to accommodate Class J fuses and visible blades. Operating handle shall give positive visual indication of ON/OFF with color-coded operating handle.
3. Magnetic Motor Controllers: Refer to paragraph(s) specifying magnetic motor controllers for requirements.

2.8 FUSES (600 VOLTS AND BELOW)

A. Manufacturers:
1. Bussmann.
2. Little Fuse
3. Ferraz Shawmut

B. Dimensions and Performance: NEMA FU 1, Class as specified or as indicated on Drawings.

C. Voltage: Rating suitable for circuit phase-to-phase voltage.

D. Class J (Time Delay) Fuses
1. Dimensions and Performance: NEMA FU 1.
2. Voltage: Rating suitable for circuit phase-to-phase voltage.
3. Dual-element, time delay ten (10) seconds (minimum) at 500 percent rated current.

E. Spares: Spare fuses shall be provided in the amount of ten (10) percent of each type and size installed. Replacement for fuses and limiters blown during construction shall not count as spares.

2.9 TWO-WINDING TRANSFORMERS

A. Product Description: Provide transformers in accordance with the following standards, where applicable:
1. Underwriter's Laboratory 1561, Standard for Safety for Dry-Type General Purpose and Power Transformers
2. Underwriter's Laboratory 506, Standard for Safety for Specialty Transformers
3. NEMA ST 20, Dry Type Transformers for General Applications
4. NEMA 250, Enclosures for Electrical Equipment (1000 V Max)
5. ANSI / IEEE C57.12.91, Standard Test Code for Dry-Type Distribution and Power Transformers
6. U.S. Department of Energy 10 CFR Part 431 Energy Conservation Program: Energy Conservation Standards for Distribution Transformers; Final Rule, dated April 18, 2013. These efficiency standards shall take effect January 1, 2016. All transformers covered in the scope of this document and this specification, manufactured after December 31, 2015, shall be compliant with the new standard.

B. Ratings as indicated on Drawing.

C. Primary Voltage: 480 volts, 3 phase or as indicated on plans.

D. Secondary Voltage: 208Y/120 volts, 3 phase or as indicated on plans.

E. Insulation system and average winding temperature rise 150 degrees Celsius over 40 degrees Celsius ambient.

F. Winding Taps:
1. 2 at 2.5 percent above rated voltage.

2. 4 at 2.5 percent below rated voltage.

G. Sound Levels: NEMA ST 20. Noise levels shall not exceed NEMA and ANSI Standards.

H. Basic Impulse Level: 10 kV for transformers less than 300 kVA.

I. Ground core and coil assembly to enclosure by means of visible flexible copper grounding strap.

J. Mounting:
1. 1-15 kVA: Suitable for wall mounting.
2. 16-75 kVA: Suitable for floor mounting.
3. Larger than 75 kVA: Suitable for floor mounting.

K. Coil Conductors: Continuous copper windings with terminations brazed or welded.

L. Enclosure: NEMA ST 20, Type 1 or Type 3R ventilated. Furnish lifting eyes or brackets.

M. Isolate core and coil from enclosure using vibration-absorbing mounts.

N. Nameplate: Include transformer connection data and overload capacity based on rated allowable temperature rise.

2.10 TRANSFORMERS FOR NONLINEAR LOADS

A. Nonlinear load transformer shall be as specified for two winding transformers except as modified by this Section.

B. Product Description: NEMA ST 20, factory-assembled, air cooled dry type transformers, designed to supply nonlinear load, UL K-9 rated.

C. Primary Voltage: 480 volts, 3 phase.

D. Secondary Voltage: 208Y/120 volts, 3 phase.

E. Insulation and temperature rise: Class 220 insulation system with 115 degrees Celsius average winding temperature rise over 40 degrees Celsius ambient.

F. Coil Conductors: Continuous copper windings with terminations brazed or welded. Individually insulate secondary conductors and arrange to minimize hysteresis and eddy current losses at harmonic frequencies. Size secondary neutral conductor at 1.73 times the phase conductor ampacity.

G. Enclosure: NEMA ST 20, Type 1 or Type 3R ventilated. Furnish lifting eyes or brackets.

H. Isolate core and coil from enclosure using vibration-absorbing mounts.

I. Nameplate: Include transformer connection data and overload capacity based on rated allowable temperature rise.

2.11 DISTRIBUTION PANELBOARDS

A. Manufacturers: Square D I- Line, Class 2110.

B. Product Description: NEMA PB 1, circuit breaker type panelboard.

C. Panelboard Bus: copper current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard.

D. Continuous current rating shall be sufficient to protect wiring and equipment served.
1. Panels 400A and smaller, 35,000 amperes rms symmetrical.
2. Panels greater than 400A: 65,000 amperes rms symmetrical.

E. Molded Case Circuit Breakers: NEMA AB 1, circuit breakers with integral thermal and instantaneous magnetic trip in each pole. Furnish circuit breakers UL listed as Type HACR for air conditioning equipment branch circuits.

F. Main Circuit Breaker:
1. When distribution panel has main circuit breaker, provide molded case circuit breaker with electronic trip unit. Current sensing to be true-rms.
2. Main breaker shall have minimum interrupting rating of 65,000 amperes rms symmetrical at applied voltage.
3. Electronic trip shall be Square D micrologic with adjustable long-time, short-time and instantaneous pick-up set points.

G. Cabinet Front: Safety dead front type. Conform to NEMA 1; NEMA 3R if located outdoors. All panelboards located in kitchen areas shall be flush mount with NEMA 4X Stainless Steel enclosures.

2.12 BRANCH CIRCUIT PANELBOARDS

A. Manufacturers: Square D Type NQ for 208/120V, type NF for 480/277V.

B. Product Description: NEMA PB1, circuit breaker type, lighting and appliance branch circuit panelboard.

C. Panelboard Bus: Copper current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard;

D. For non-linear load applications subject to harmonics furnish 173 percent rated, plated copper, solid neutral.

E. Minimum Integrated Short Circuit Rating: 10,000 amperes rms symmetrical for 208-240/120 volt panelboards; 22,000 amperes rms symmetrical for 480 volt panelboards.

F. Molded Case Circuit Breakers: NEMA AB 1, bolt-on type thermal magnetic trip circuit breakers, with common trip handle for all poles, listed as Type SWD for lighting circuits, Type HACR for air conditioning equipment circuits, Class A ground fault interrupter circuit breakers as indicated on Drawings. Do not use tandem circuit breakers.

G. Enclosure: NEMA PB 1, Type 1 or Type 3R. All panelboards located in kitchen areas shall be flush mount with NEMA 4X Stainless Steel enclosures.

H. Cabinet Front: Safety dead front type with concealed trim clamps, concealed hinge, metal directory frame, and flush lock keyed alike. Finish in manufacturer's standard gray enamel.

I. Provide ground-fault circuit breaker for each heat trace branch circuit.

J. Panelboards indicated to have thru-feed lugs shall be furnished with thru-feed lugs in all sections of panelboard.

2.14 MAIN SWITCHBOARDS:

A. General: Provide universal building–type switchboards fabricated in accordance with NEMA Standard PB–2, UL Standard 891, and bearing a UL Service Entrance Label. Switchboard characteristics are 480/277 volts, 3 phase, 4 wire. Main connection and unit-mounted branch connections shall be from the rear. Group mounted branch connections shall be from the front or the rear. The entire switchboard assembly shall be similar to Square D Type QED-2.

B. Structure:
1. The switchboard shall be freestanding and have front and rear alignment. Provide rear access to main device(s) and all unit-mount branch devices (2000A and less can be front access only). Provide front or rear access to group-mounted devices. Formed up steel channels bolted together to form a rigid structure to which formed up fronts, side sheets, and rear covers are bolted. Galvanized 1–1/2" x 3" mounting channels on bottom, rear, left, and right sides to close all openings at the bottom. Arrange for easy addition of future cubicles at end. Provide pull box, fabricated with unit at factory, on top of switchboard if required for proper entrances and exits of feeders.
2. When “SPACE” is indicated on one-line diagram, provide full bussing extension to serve that space and all overcurrent device mounting hardware for the given frame size.

C. Installation: Freestanding, level and bolted to a four (4) inch concrete pad.

D. Instrumentation:
1. General: Monitor the incoming line with a Square D PM 5563 meter with BACnet IP communication port protocol.
Meter shall have digital display adjustable to select phase. Monitor with an ammeter any feeder devices indicated on the Drawings.
2. Wiring Lugs: Provide ring lugs for all wiring terminations of potential transformers (PTs), current transformers (CTs) and current sensors. Fork lugs are not acceptable. Ring lugs are intended to minimize the chance of leads pulling apart and creating an open circuit. (Zero current reading).

E. Phase, Neutral and Ground Bussing: Silver plated 98% conductivity copper sized to comply with NEMA Temperature Rise Standard. In addition, copper bus shall be sized on the basis of a maximum temperature rise of 65 degree C. The vertical bussing per cubicle shall be sized not less than the sum of all devices, including spare spaces, to be served from that cubicle. **The vertical bus shall be a minimum of 2000 amperes and shall be full height**. Bus supports, connections, and joints shall be bolted with SAE Grade 5 medium carbon steel bolts employing Belleville washers. Provide complete bussing, mounting provisions for circuit protective devices and space screw cover wherever the drawings indicate space only. Arrange and drill bussing for **future full capacity extension**. Provide a full length ground bus, with minimum ampacity of 1/3 phase bus ampacity. Provide full–size neutral rated at 100 percent of phase bus.

F. Terminations: Provide proper incoming line lugs to accommodate cable shown on plans.

G. Short Circuit Ratings:
1. Switchboard assembly of protective devices, together with the bussing and bracing, shall be fully-rated to withstand and interrupt short circuits on a system capable of delivering up to 100,000 amps RMS symmetrical at nominal system voltage.

H. Provisions for Auto Power Factor Controller (APFC):
1. Provide a circuit breaker with adjustable electronic tripping to protect and disconnect the automatic power factor controller.
2. Set amp trip at minimum 150 percent of ampacity for the actual KVAR installed.
3. Provide buss CTs on main incoming buss for use by the remote auto pf controller. These CTs shall be separate and in addition to all other CTs required for switchboard metering. Install a shorting terminal block on CT until the auto pf controller is installed at the job site.
4. Refer to Section 26 35 33 for additional requirements of auto pf controller.

I. Protective Devices:
1. Switchboard Main Breaker:
a. Stationary mounted, manually operated, 100 percent rated molded case circuit breakers with electronic tripping system and stored energy closing mechanisms. The electronic tripping system shall be similar to Square D Micrologic Full Function Trip unit. Main breakers shall be Square D NW 3000-4000), 100KA ampere frame size.
b. The breaker shall be UL Listed for continuous duty at 100% of the current rating.
c. Minimum interrupting rating of 100,000 amperes rms symmetrical at 480/277 Volts.
d. Local trip indicators: overload, short circuit and ground fault.
e. Electronic sensing systems shall be true-RMS sensing and not susceptible to adverse harmonic current effects.
f. Adjustments:
1) The electronic trip unit shall have LSIG Trip functions.
2. Feeder Devices:
a. Breakers 700 Amps and Larger:
1) Branch feeder breakers 700 amp and larger shall be molded case circuit breakers rated 100% with electronic trip units, similar to Square D [NW 3000-4000A 100%, [RL (1600-2500A 100kaic 100%, PL (700-1200A 100kaic 100%)
2) Interrupting rating shall be at least 100,000) amperes rms symmetrical at 480/277 Volts.
3) The electronic trip unit shall have LSI trip functions.
4) The breaker shall be UL Listed for continuous duty at 100% of the current rating.
b. Breakers 600 amps and smaller shall be type L (600A and 400A frame), J (250A frame), and H (150A frame) molded circuit breakers, AIC rating to match main breaker.
c. The breaker shall be UL Listed for continuous duty at 100% of the current rating

J. Transient Voltage Surge Suppressor (TVSS):
1. General: Provide a Square D Class 1310 240kA surge current rated mounted in the switchboard mounted above the main circuit breaker compartment.

K. Lightning and Overvoltage Surge Arrester:
1. General: Provide a Square D SDSA3650 lightning and overvoltage surge arrester inside the switchboard housing, connected between the service entrance bussing and the ground bus.

2. Description: Device shall be a heavy duty, three–phase, zinc metal oxide varistor (MOV), secondary class arrester rated for 650 volts and U.L. listed in Category (OWHX) of the Electrical Construction Materials Directory (Green Book). Device shall comply with ANSI/IEEE C62.11-1987 Standard for Metal Oxide Surge Arresters for AC Power Circuits.
3. Installation shall comply with NEC Article 280. Provide fusing if required by installation instructions from arrester manufacturer.

L. Identification:
1. General: Identify each device and meter with a nameplate showing load served. Refer to Article on LABELING in Section 26 05 00.
2. Master Nameplate: Provide a master nameplate on face of boards similar to following, with correct data shown:

Main Switchboard_____
480/277 Volts, 3 Phase, 4 Wire, 60 Hertz
Main Bus:___amps. braced for___ RMS sym. amps.
Date Installed:

M. Submittal: Include at least the following:
1. Manufacturer and Model Numbers
2. Dimensions
3. Cable Termination Provisions
4. Current Ratings
5. Voltage Ratings
6. Short Circuit Ratings
7. Protective Device Ratings
8. Electronic metering system
9. Surge Arrester
10. Unit Elevation
11. Bussing Schematic, Sizes and Statement of Conductor and Plating Materials
12. Original Manufacturer Brochure and Specifications
13. Coordination drawing using dimensions of actual switchboard submitted. Show board footprint, proper clearances, and other equipment in same room.

N. Testing: Test all devices and systems to assure proper operation.

2.15 SERVICE ENTRANCE CABLE TAP BOX (CTB):

A. Cable Tap Box:
1. General: Provide weatherproof, freestanding phase collection and cable tap box. Fabricate in strict accordance with Electric Utility requirements. Line side connection from building pad-mounted transformer shall be through underground conduit and wire, load side connections to the building main switchboard(s) shall be weatherproof outdoor busway.
2. Structure: Formed up steel channels bolted together to form a rigid structure to which formed-up fronts, side sheets, and rear covers are bolted. Front and rear doors shall be hinged. Galvanized 1-1/2 inch x 4inches mounting channels on bottom, rear left, and right sides to close all side openings at the bottom. Interior framing shall be galvanized steel 1-5/8" rigid channel or approved equal system. Enclosure shall be tamper proof and outdoor weatherproof.
3. Installation: Freestanding and level on an outdoor concrete pad. Provide anchor bolts. Pad shall be outside all Electric Utility easements. Stub up conduits for

Electric Utility service lateral and customer-side service entrance conduits. All underground conduit to/from CTB shall be concrete-encased.

4. Bussing: Insulated bussing, silver plated 98 percent conductivity copper. Bussing shall be sized in accordance with UL and NEMA Standards. In addition, size copper bus for not more than 1000 Amperes per cubic inch current density. Provide 3 phase, 4 wire, (100 percent neutral) bussing. Install with rigid supports to meet fault current rating.
5. Fault Current Rating: Bussing and bracing shall safely and without failure withstand short circuits on a system capable of delivering up to 100,000 amperes rms symmetrical at nominal system voltage. Install rope tie as required after cable installation to maintain bracing for short circuit current rating.

B. Electric Utility Requirements:
1. Prior to fabrication, submit three (3) prints of proposed cable tap box (CTB) to the representative designated by the Electric Utility. Submit prints only after shop drawings have been submitted and review cycle is complete with the Architect. Allow at least eight weeks time for review by Electric Utility prior to desired date of new service cut-in. Allow additional time for Architect/Engineer review prior to submittal to Electric Utility.
2. Cable tap box enclosure shall be tamper proof and weatherproof. Entire cabinet shall be tamper-resistant.
3. Form roof with cross-kink to force water to run off the cabinet.
4. Paint Finish Color: Match color of Electric Utility padmount transformer. Minimum finish shall be prime coat plus at least 6 mils of finish coat paint in two (2) applications.
5. Provide full-height doors on both utility side and customer side. Each door shall be hinged and have a vault-style handle with padlocking provisions. Electric Utility will install its padlock. Provide weatherproof padlock on customer door and give Owner ten (10) copies of key.
6. Fabricate CTB with two separate compartments; one side for Electric Utility connections and the opposite side for Customer connections. Compartments shall be separated with an insulating barrier. Size cabinet to maintain necessary wire bending radius in Electric Utility and Customer compartments.
7. All insulating barriers shall be one (1) inch black phenolic resin, NEMA Grade N-1 or XX, or phenolite (Grade GPO-3).
8. Each bus bar shall be copper, minimum 1/4 inch x 4 inches. Drill and tap for six (6) sets of 2-hole compression lugs per bus bar on Electric Utility side or other configuration stipulated by E.U. Lowest edge of all bus bars shall be 36 inches above top of concrete foundation. All bus bar dimensions, quantities, bracing and exact layout shall be per approved details from the Electric Utility for this specific job site. Parallel sufficient bus bars to achieve ampacity shown on Electrical Drawings for both Electric Utility and Customer side of CTB. Drill and tap for 2-hole NEMA D-tang compression lugs for termination of Customer cables.
9. Install CTB level and bolted to a concrete foundation. Locate outside work space clearance and easements associated with Electric Utility padmount transformer and primary ductbank.
10. Cable Termination: Terminate all cables with NEMA-pattern, two-hole, compression lugs.

C. Submittal to A/E: Include at least the following:
1. Manufacturer and Model Numbers
2. Dimensions: plan, elevations, bus bars.
3. Cable Termination Provisions
4. Current Rating
5. Voltage Rating
6. Short Circuit Withstand Rating

7. Bussing Sizes, Layout and Statement of Conductor and Plating Materials
8. Certify weatherproof cabinet construction. Certify paint finish type and thickness.
9. Coordination Drawing showing cable tap box, Electric Utility padmount transformer with required work space clearances, meter location, and underground conduit entrances.
10. After A/E shop drawing cycle is complete, submit three complete copies to Electric Utility.

2.16 SEQUENCING PANELBOARD FOR THEATER SOUND REINFORCEMENT SYSTEM:

A. Features:
1. Supply all ac circuits for audio/visual equipment in the high school theater A/V room from time sequence panelboard capable of being remote controlled from multiple locations.
2. 41 sequenced circuits per panelboard.
3. A means of visual operator feedback shall provide an indication of the progress of the power turn-on and turn-off sequence at each control point.
4. Sequencing shall have an adjustable time delay between the low level equipment circuits and the power amplifier circuits.
5. The sequencing system shall be capable of shedding the load within three (3) seconds after a power failuer and re-sequencing when power resumes without operator intervention.
6. Provide one LynTec Cat. No. SS-2 Sequencer Switch Set with every 41-circuit panelboard.
7. Provide one LynTec Cat. No. SS-2PL Remote Locking Switch Plate with every 41-circuit panelboard.
8. Provide for each sequencing panelboard a LynTec Model No. SLC 341-41 filled with MB-Motorized Breakers, 3 phase, 4 wire, 208Y/120 Volt 225 Amp Main Breaker panel or approved equal.
9. Acceptable Manufacturer: LynTec Inc., 8401 Melrose, Lenexa, KS 66214-1647; telephone 800-724-4047, fax 888-722-4157, www.lyntec.com or email info@lyntec.com .

B. Cabinet: Safety dead front type; box made of Code gage galvanized steel; minimum gutter space 4" on all sides but not less than NEC requirements; door with flush type latch. Enclosure shall conform to NEMA 1.

C. Circuit Breakers:
1. General: Provide a breaker for each audio branch circuit to protect wiring and equipment served.
2. Description: Each breaker shall have motor drive for individual breaker remote control. Breakers shall be quick make, quick break, trip free, thermal magnetic trip. Automatic trip shall be indicated by the handle at the midpoint position. Multiple pole breakers shall have common trip.

D. Short Circuit Ratings: 120/208 volt systems 10,000 amperes RMS symmetrical.

E. Phase, Neutral and Ground Bussing: Silver or tin plated 98 percent conductivity copper sized in accordance with NEMA Temperature Rise Standards and installed completely throughout panel for installation of future breakers where schedule shows space only. Provide an equipment grounding bus bonded to the panel cabinet. Ground bus shall have a terminal screw for every breaker in the panel.

F. Termination: Provide proper incoming line lugs. Size lugs to accommodate wire which is to be installed.

G. Surge Protective Device: Install a Transient Voltage Surge Suppressor (TVSS) on the sequencing panelboard. TVSS shall be Current Technology TransGuard TG60 Series or Liebert Interceptor Model 111 Series.

H. Nameplate: Nameplate on front face showing panel name and voltage. Coordinate to give same name as shown on Drawings.

I. Directory: Complete at end of job, typewritten, contained in frame on the inside of the panel door. Frame shall have a protective plastic shield. Label every breaker to match directory.

2.17 ELEVATOR SHUNT TRIP DISCONNECT

A. Provide Bussman Power Module Switch PS Series; amperage size and operating voltage shall match elevator branch circuit indicated on drawings.

B. Provide control power transformer, fire alarm system interface relay, key-to-test switch, mechanical interlock auxiliary contact for hydraulic elevators with automatic recall.

C. Interconnect with local heat detectors to provide elevator shutdown prior to the discharge of fire protection water in elevator machine room.

2.18 ROOF MOUNTED PEDESTALS

A. Roof Utility Pedestal with 20 Amp GFCI/Weatherproof receptacle - Provide MAPA Products utility roof pedestal #MPX-20G: 36/12.

B. Roof Pedestal with Non-Fused Disconnect Switch and 20 Amp GFCI/Weatherproof receptacle - Provide MAPA Products roof pedestal #MDP – (XX). See plans for disconnect sizes.

PART 3 - EXECUTION

3.1 MOUNTING:

A. General: All equipment shall be securely fastened in place.

B. Locations: In all cases mounting locations shall comply with the requirements of the National Electrical Code. This shall include providing suitable working clearances.

C. Concrete Pads:
1. Provide concrete in accordance with the Division of the Specifications for that product.
2. Indoor concrete pads shall consist of a four (4) inch pad with beveled edges extending two (2) inches beyond the perimeter of supported equipment. Switchboards, motor control centers, transformers greater than 15 KVA, and engine generators shall be installed on a pad. Refer to the drawings and the specifications for each piece of equipment to determine what other equipment shall be mounted on a pad.
3. All equipment, ground mounted outdoors, shall be mounted on a pad. Outdoor pads shall be minimum of one foot thick reinforced with #4 rebar one (1) foot on center each way. Size outdoor pads with at least four (4) feet working clearance in front of equipment and one (1) foot on all sides. Provide anchor bolts for pad-mounted equipment. Refer to Detail on drawings.

D. Wall Mounted Equipment: Wall mounted equipment shall be suitably positioned on the wall. Equipment mounted on exterior basement wall shall have unistrut channels between the wall

and the equipment to prevent condensation problems. Where wall mounted equipment is specified, but a convenient wall not available, a suitable unistrut mounting stanchion anchored in concrete shall be provided. In lieu of this stanchion, small devices may be mounted on to the equipment served if approved by the equipment manufacturer.

E. Motor rated disconnects: Install disconnects in a vertical orientation with off in the down position.

3.2 DELIVERY, STORAGE AND HANDLING:

A. General:
1. Store all types of electrical power distribution equipment in a clean, heated building affording appropriate physical protection. Control access to prevent unauthorized tampering with the equipment. However, equipment may be stored in other inside or outside environments under approved conditions.
2. Inspect equipment when received at Project site for shipping damage. Report as required by freight carrier to recover repair or replacement costs from the freight carrier in the event damage was sustained.
3. Covers are required unless indoor, ventilated storage conditions exist. Canvas tarpaulins or the equivalent are preferred over other coverings because they provide better humidity control and enclosure scuff protection. Where exposed to moisture, covers shall be waterproof.
4. The manufacturer's shipping skids shall be left on the equipment to provide structural support until the equipment is set in final resting place.
5. Refer to Section 26 05 00 for additional requirements. Contractor shall furnish new equipment to replace any equipment that is exposed to weather or subjected to other deleterious effects of construction.

B. Approved Conditions for Equipment Storage:
1. General: Where storage conditions specified above are not available, indoor or outdoor storage shall comply with the following.
2. Switchboards, Motor Control and Other General Distribution and Utilization Equipment:
a. Store metal-enclosed equipment in the upright position. Provide good ventilation of the shelter and protection from dirt, moisture and physical damage.
b. Space heaters furnished with the equipment shall be connected to a continuous source of power of the proper rating. Where space heaters are supplied from auxiliary power transformers, care shall be taken that low-voltage heater circuits are properly isolated before power source connection to prevent inadvertent energizing of the auxiliary transformer and associated high-voltage primary wiring.
c. Ambient conditions may allow condensation inside waterproof covers. If condensation is occurring, temporary heaters or lamp banks shall be provided of sufficient wattage to prevent condensation.
d. Contractor shall ensure that equipment stored in shipping cases receives adequate ventilation to avoid mildew and prevent condensation.

C. Transformer
1. Indoor storage shall be provided for all transformers.

3.3 GROUND FAULT PROTECTION OF EQUIPMENT:

A. General: Provide for system performance testing as required by the National Electrical Code. Provide each ground fault relay, sensing device or ground fault protection system with instructions and a test form. The form shall be retained by those in charge of the building's

electrical installation and be available to the authority having jurisdiction. The instruction content shall be as required by UL.

3.4 TRANSFORMER VIBRATION ISOLATION:

A. Floor Mounted Transformers: Install on concrete housekeeping pad with Mason Industries Type WM Neoprene Waffle pad, or equal. Provide Type WM isolation for elevated rack installation.

B. Wall Mounted Transformers: Install Mason Industries Type WM Neoprene Waffle pad between the wall brackets and the wall.

C. Suspended Transformers: Install Mason Industries PC30 Pre-compressed spring hanger with neoprene isolator.

D. Floor Mounted Transformers Greater than 150 kVA: Install on Mason Industries, Inc, or equal, unhoused spring isolators with acoustical pad bonded to bottom. Isolators shall be undamped free-standing spring isolators sized for a minimum of two (2) inches of static deflection. The spring outside diameter shall be no less than 80 percent of the spring operating height. The spring shall have remaining travel to solid of no less than 50 percent of the static deflection. Provide a 1/4 inch neoprene friction pad bonded to the spring base. Bolt each vibration isolator unit to concrete pad, and bolt transformers to the vibration isolator units, using the leveling bolts and nuts provided with the unit.

3.5 TRANSFORMER VENTILATION:

A. Transformers with ventilating openings shall be installed so that the ventilating openings are not blocked by walls or other obstructions. The required clearances shall be clearly marked on the transformer.

3.6 POWER SHUT OFF UNDER KITCHEN HOODS:

A. NFPA:
1. Comply with NFPA 96 Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations. The operation of any extinguishing system shall automatically shut off all sources of fuel and heat to all equipment requiring protection by that extinguishing system.
2. Comply with NFPA 17, Standard for Dry Chemical Extinguishing Systems.
3. Comply with NFPA 17A, Standard for Wet Chemical Extinguishing Systems.

B. Shunt Trip: All electrical sources located under the ventilating equipment (cooking equipment hood) shall be shut off upon the operation of a wet chemical or water fire extinguishing system. Provide shunt trip accessory on each circuit breaker serving an electrical appliance under the hood. Install control wiring between shunt trips and the hood extinguishing system. Coordinate all wiring with supplier of hood fire suppression system for proper selection of shunt trip coil voltage, momentary or maintained-contact closure to activate shunt trip and inter-connections. Operation of a hood extinguishing system shall automatically shunt trip all associated circuit breakers.

C. Fire Alarm System: The operation of any extinguishing system shall automatically signal the building fire alarm system. Refer to Section 26 05 53 for additional fire alarm system requirements.

3.7 LABELING:

A. Nametag: Provide a nametag for each piece of distribution equipment; see Section 26 05 53, Electrical Identification.

END OF SECTION 26 20 00

SECTION 26 27 26 - WIRING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes wall switches; wall dimmers; receptacles; device plates and box covers. All devices shall be installed in outlet boxes of required size and volume.

1.3 REFERENCES

A. National Electrical Manufacturers Association: Wiring devices shall comply with NEMA Standards WD-1 and WD-6.

B. Wet Locations: Wiring devices and their enclosures installed outdoors and in wet locations shall be approved for that purpose.

C. Minimum Raceway Size: 3/4 inch.

1.4 SUBMITTALS

A. Submit manufactures product data for all wiring devices, indicate intended color and coverplate.

PART 2 - PRODUCTS

2.1 GENERAL

A. All devices shall be suitable for use intended, and have voltage and current ratings adequate for loads being served.

2.2 WALL SWITCHES

A. Single Pole Switch, Toggle Style:
   1. Leviton 1221 Series, 20A, 120/277V.

B. Double Pole Switch, Toggle Style:
   1. Leviton 1222 or 3032 Series, 20A or 30A, 120/277V.

C. Three-way Switch, Toggle Style:
   1. Leviton 1223 Series, 20A, 120/277V.

D. Four-way Switch, Toggle Style:
   1. Leviton 1224 Series, 20A, 120/277V.

E. Indicator Switch, Toggle Style:
   1. Leviton 1201 Series, 20A, 120/277V. Switch illuminated when load is on.

F. Locator Switch, Toggle Style:
   1. Leviton 1221 Series, 20A, 120/277V. Switch illuminated when load is off.

G. Digital Time Switch:
   1. Wattstopper TS-400 digital time switch with optional visual warning to flash lights at 5 minutes and 1 minute prior to time-out.

H. Key lock switches:
   1. Provide key lock switches for corridor lighting and other locations indicated on electrical drawings.
   2. 20 Amp rated.
   3. 120/277 Volt ac rated.
   4. Key-lock mechanism can only be turned ON or OFF with key.
   5. Single pole: Leviton 1221-2KL or approved equal.
   6. 3-Way: Leviton 1223-2kl or approved equal.
   7. 4-Way: Leviton 1224-2kl or approved equal.
   8. Provide 302 stainless steel wall plate for each switch.
   9. Provide 2 keys on ring for each switch.
   10. Include a brass tag on every key switch ring. Engrave tag; Example: “Hall East Lights”.
   11. Key all switches alike to match the owners standard key. Coordinate with school District for key match.

I. Color: As selected by Architect.

2.3 MOTOR RATED SWITCHES

A. Provide where a switch is indicated as a local disconnect for all mechanical and plumbing equipment.

B. Leviton MMS Series.

2.4 WALL DIMMERS

A. Manufacturers:
   1. Lutron Nova "T" Series.

B. Product Description: Semiconductor dimmer for incandescent lamps with ON-OFF switch.

C. Body and Handle: Linear slide handle, color as selected by Architect.

D. Voltage: 120 volts.

2.5 RECEPTACLES

A. Single Convenience Receptacle:
   1. Leviton 5362A Series, 20A/125V.

B. Duplex Convenience Receptacle:
   1. Leviton 5362 Series, 20A/125V, respectively.

C. GFCI Receptacle:
   1. Leviton 7899 Series, 20A/125V.

2. Provide GFCI receptacles for all receptacles on 120v circuits installed in kitchens, bathrooms and outdoors (including rooftops).

D. Isolated Ground Duplex Receptacle:
1. Leviton 5362-IG, 20A/125V.

E. Duplex Tamper Resistant Receptacle/ USB Charger
1. Leviton T5832. Duplex 20A/125V receptacle with two 3.6A, 5VDC, 2.0 Type A USB Chargers.

F. Provide 20 amp receptacle for single-receptacle branch circuits.

G. For locations where a quadruplex or fourplex is required, provide 2-duplex receptacles under common coverplate.

H. Color: As selected by Architect.

2.6 WALL PLATES

A. Type 302 Stainless Steel with matching mounting screws.

2.7 MANUFACTURERS

A. Each type of wiring device shall be furnished by one (1) manufacturer. The following will be acceptable providing the project specifications:
1. Leviton
2. Pass & Seymour
3. Hubbell / Bryant
4. Cooper

PART 3 - EXECUTION

3.1 EXISTING WORK

A. Disconnect abandoned circuits and remove raceway, wire, and cable. Remove abandoned boxes when connecting wire and cable is abandoned and removed. Install blank cover for remaining abandoned boxes.

B. Maintain access to existing boxes and wiring connections remaining active and requiring access.

C. Extend existing circuits using materials and methods compatible with existing electrical installations, or as specified.

3.2 INSTALLATION

A. Route raceway and cable to meet Project conditions.

B. Set wall mounted boxes at elevations to accommodate mounting heights indicated.

C. Adjust box location up to ten (10) feet prior to rough-in when required to accommodate intended purpose.

D. Do not install flush mounting box back-to-back in walls; install boxes with minimum 24 inches separation.

E. Install devices plumb and level.

3.3 MOUNTING HEIGHTS

A. As indicated on Drawings or if not indicated in accordance with the Architects instructions. All other telephone, Data, TV, etc. outlets shall be same as receptacle.

3.4 GANGED SWITCHES

A. Install permanent barrier between all 277 Volt light switches ganged into one outlet box.

B. Where multiple switches are grouped on one location, install switches under a one piece, multi-gang cover plate.

C. Other telephone, data, TV, etc. outlets shall be same as receptacle.

3.5 GFCI

A. Provide ground-fault circuit-interrupter type receptacles for all 15 and 20 amp receptacles shown on drawings in bathrooms, kitchens, mechanical rooms and outdoors.

END OF SECTION 26 27 26

SECTION 26 32 13 - EMERGENCY GENERATORS

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Provide an emergency power system for emergency egress lighting, fire alarm system, emergency elevator operation, and other emergency power loads required.

B. Provide all labor, materials, and equipment as necessary to complete all work as indicated on
the drawings, and as specified herein.

C. Products supplied but not installed under this section. Products shall be turned over to the
Owner.
1. Emergency generator system equipment as follows:
   a. Complete set of all special tools required to operate and service the equipment as recommended by the manufacturer for field maintenance.
   b. One oil filter replaceable element.
   c. One air filter replaceable element.

D. Related Sections:
1. Division 1 - General Requirements
2. Applicable sections of Division 16 - Electrical
3. For emergency generators: Fuel gas piping, exhaust gas piping, flexible pipe connections, cooling air duct work, assembling generator accessories.

E. Power Source: Provide an on-site engine-generator set to generate power for distribution to emergency and standby loads by the emergency power distribution system. Engine-generator set shall be constructed of all-new components.

F. Transfer: Power to emergency loads shall be automatically transferred from normal utility power to the emergency engine generator upon loss of normal power. Transfer and assumption of load shall occur in ten (10) seconds or less. Loads shall be automatically retransferred upon restoration of normal source.

G. Distribution System: Distribution equipment devices, and circuits shall be provided as required to distribute power to emergency loads.

1.3 REFERENCES

A. Emergency generators shall be in accordance with the latest applicable standards as recommended by, SAE, IEEE, and ANSI/NEMA MG-1 Motors and Generators.

1.4 SUBMITTALS

A. Shop Drawings:
1. Emergency generator systems including:
   a. Engine-generator set and foundation requirements.
   b. Auxiliary and remote equipment.
   c. Make of engine, number of cylinders, compression ratio, bore and stroke, cylinder displacement, and speed.
   d. Make of generator, electrical rating, number and type of bearings, and exciter type.
2. Plan and elevation views with overall and interconnection point dimensions, fuel consumption rate curves at various loads, ventilation and combustion air requirements,
and electrical diagrams including schematic and interconnection diagrams.
3. Product data showing dimensions, weights, ratings, interconnection points, and internal
wiring diagrams for engine, generator, control panel, battery, battery rack, battery charger, exhaust silencer and vibration isolators.
4. Installation instructions.
5. Name, location and phone number of nearest authorized distributor/service facility.
6. Sequence of Operation - Manufacturer shall prepare a detailed, typewritten sequence of operation and submit as part of the approval documents. Final approved sequence of operation shall be permanently encapsulated in plastic laminate and permanently attached to the equipment. Format shall be 8½" x 11" or 11" x 17" as appropriate.
7. Include schematic one-line diagram with appropriate symbols and nomenclature properly referenced to text.

B. Product Data:
1. Specification Review: A complete item by item, line by line specification review.
2. Output current Amperes and electrical kW rating of engine-generator set.
3. Brake horsepower rating of engine.
4. Fuel consumption at 100 percent, 75 percent and 50 percent load.
5. Cooling requirements.
6. Sound level (dBA measured on longitudinal and perpendicular axis at ten (10) feet).
7. Manufacturer's technical data for generator, governor, voltage regulator, and battery charger. Governor submittal shall also identify method of overspeed protection to be furnished.
8. Generator sub-transient reactance Xd", per unit
9. Generator short circuit current, three-phase amperes.
10. Generator voltage waveform distortion, measured at Full Load, line-neutral, both total harmonic distortion (THD) and maxim single harmonic order THD.
11. Generator output circuit breaker(s), including proof or UL listing.
12. Transfer Switch: Show complete data showing compliance. Include continuous and withstand current ratings of all contacts.

C. Manuals and Test Data
1. Operation and Maintenance Manuals for all major components including instructions for normal operation, routine maintenance requirements, service manuals for generator, engine, oil sampling and analysis for engine wear, and emergency maintenance procedures.

1.5 QUALITY ASSURANCE

A. Authority Having Jurisdiction:
   1. General: The system shall comply with all applicable Codes and Ordinances as interpreted and enforced by the local authority having jurisdiction.

B. National Electrical Code: The system shall comply with NFPA 70, National Electrical Code, including: 1) Article 445, 2) 700.

C. NFPA:
   1. General: Comply with applicable requirements of NFPA Standards, including the following:
      a. NFPA 37: Standard for Installation and Use of Stationary Combustion Engines and Gas Turbines.
      b. NFPA 101: Life Safety Code.
      c. NFPA 110: Standard for Emergency and Standby Power Systems.
         1) Type ten (10) seconds.
         2) Natural gas utility pipeline
         3) Category B (engine-generator set).
         4) Level 1
      d. NFPA 54: National Fuel Gas Code.

D. UL:
   1. General: Comply with applicable requirements of UL Standards, including the following.
      a. UL 1008: Automatic Transfer Switches, Fourth Edition or later.
      b. ANSI / NEMA: Comply with applicable requirements of ANSI / NEMA MG 1, "Motors and Generators", and MG 2, "Safety and Use of Electric Motors and Generators".
      c. IEEE: Comply with applicable portions of IEEE Std 446-1987, "IEEE Recommended Practice for Emergency and Standby Power Systems for Industrial and Commercial Applications" (Orange Book)

E. EPA:
   1. General: Comply with all applicable EPA requirements.

1.6 OWNER'S INSTRUCTIONS

A. Provide a four (4) hour period of instruction to the Owner's designated personnel upon completion of the system installation. Run engine-generator set and review remote annunciator panel for typical readings. Explain operation of generator remote stop switch. Demonstrate complete transfer sequence of utility-generator-utility. Operations & Maintenance Manual shall be complete and on-site for use during Owner's Instruction.

1.7 WARRANTY

A. Furnish full parts and labor warranty to cover the entire engine generator package and automatic transfer switch including all accessories, components, controls, batteries, etc. for five years. Warranty shall begin from date of Certificate of Substantial Completion. Provide a sample of manufacturer’s warranty certificates within equipment submittal. Warranty start dates from shipment or start up will not be accepted.

B. In addition to full parts, labor, the Standard and Extended warranty shall include miscellaneous materials, travel time, incidental expenses, normal freight/shipping, oils, lubricants, belts, filters, etc. and any expenses related to service calls required to diagnose and correct warranty issues. No purchase order number shall be required by

the owner for service calls within warranty period. Purchase order number can be issued after problem is determined not to be a warranty issue.

C. The manufacturer shall provide factory certificates for each Generator and associated Automatic Transfer Switch listing at a minimum the model, serial number and warranty information as specified above. Payment to contractor may be held if warranty certificates are not provided in a timely manner.

D. All warranty work shall be performed by factory direct service technician. Warranty work shall not be performed by installing contractor.

1.8 MAINTENANCE

A. Furnish one set of tools required for preventative maintenance of each engine generator system. Package tools in adequately sized metal tool box.

B. Provide two spare sets of each oil, and air filter element required for each engine generator system.

PART 2 - PRODUCTS

2.1 GENERAL INFORMATION

A. Furnish and install new [natural gas] [diesel] engine driven electric generating unit, factory assembled single unit generator set, with continuous output voltage of 480Y/277, 3 phase, 4 wire, at 0.8 power factor, 60 hertz, grounded neutral service, fully rated for operation at the job site altitude at an ambient temperature range of 120 degrees Fahrenheit maximum to -0 degrees Fahrenheit minimum, all mounted on a common steel base suitable for mounting on a concrete foundation pad, complete with a derangement panel and all accessories as specified and required for normal operation in standby service.

B. Acceptable Manufacturers:
1. Caterpillar
2. Cummins/Onan
3. Kohler

C. Manual and Automatic Start - Unattended Operation
1. Manual start shall be done by operating the “start” button on the generator or selecting "manual” on the manual-off-automatic selector switch on the automatic transfer switch.
2. Automatic start shall be done by the automatic transfer switch when the manual-off-automatic selector switch on the automatic transfer switch is in the “automatic” position.

D. Voltage and frequency regulation.
1. Engine/generator shall deliver rated output (kVA) at rated frequency and power factor, at not more than two (2) percent above or below rated voltage.
2. Voltage regulation shall be plus or minus two (2) percent for any constant load between no load and rated load. Random voltage variation shall not exceed ± 1 percent for any constant load. Voltage recovery to 100 percent normal output shall take no longer than two seconds after single step application of 100 percent rated load.
3. Frequency regulation shall be isochronous from steady state no load to steady state rated load. Random frequency variation with any steady load from no load to full load shall not exceed plus or minus 1.8 hertz. Frequency adjustable from 57 hertz to 63 hertz (± 5 percent)

4. The engine-generator set shall be capable of single step load pick up of 100 percent nameplate kW and power factor, less applicable derating factors, with the engine-generator set at operating temperature.

E. The alternator shall produce a clean AC voltage waveform, with not more than five (5) percent total harmonic distortion at full linear load, when measured from line to neutral, and with not more than three (3) percent in any single harmonic.

F. Furnish all necessary electrical connections, transfer switch, control panel, relays, etc., for installation of new generator set.

G. Generator and engine shall be mounted on vibration isolating supports capable of 95 percent isolation to minimize vibration of the remainder of the skid-mounted equipment and transmission of vibration to the supporting pad.

H. Generator shall be fully enclosed or suitably guarded to prevent exposure to all parts which operate at extremely high temperatures, electrically energized, or rotating. All noncurrent carrying parts shall be grounded.

I. Thoroughly clean all equipment, and prime and finish paint with manufacturer's standard paint finish.

J. Outdoor Weather-Protective Housing: Factory-assembled to generator set base and radiator cowling. Housing shall provide ample airflow for generator set operation and exclude entry of moisture into interior components. The housing shall have hinged side-access doors and rear control door. All doors shall be lockable. All sheet metal shall be primed for corrosion protection and finish painted with the manufacturer’s standard color.

2.2 ENGINE

A. Engine shall be standby power rated, multi-cylinder, spark ignited four stroke cycle, liquid cooled, internal combustion engine for use with natural gas fuel, industrial type, designed for full rated power output at 1800 rpm, 60 hertz. The engine shall be arranged for direct connection to the alternating current generator.

B. Governor shall be electronic isochronous type no load to full load, with recovery to steady state within 2 seconds following sudden load changes. Random frequency variation shall not exceed ±0.25% of its mean value for constant loads from no load to full load. Governor shall be provided with means for manual operation and adjustment.

C. Lubrication system.
1. Full pressure type with engine driven positive displacement sump pump,
2. Full flow strainer,
3. Full flow filter,
4. Pressure relief and automatic bypass valves,
5. Crankcase ventilator with filter and connection for outside venting,
6. Bayonet type oil level indicating pressure gauges on the upstream and downstream side of the strainer and filter,
7. Drain connection,
8. Oil cooler,
9. Low oil pressure safety shutoff device,
10. Provide water shutoff valves and drain on the oil cooler to facilitate draining water without draining the complete engine cooling system.
11. Provide a radiator coolant level sight glass.

D. Cooling system.

1. Pressure type, with radiator, blower type fan,
2. Engine driven circulating pump,
3. Radiator cap incorporating a pressure-vacuum valve,
4. Thermostat in conjunction with a radiator bypass,
5. Drain connection,
6. High coolant temperature safety device,
7. Fan shall be sized to maintain safe engine temperature in ambient temperature of 120 degrees Fahrenheit,
8. Provide gaskets and packing in the cooling system which are unaffected by ethylene glycol base coolant,
9. Provide a 50% ethylene glycol antifreeze solution for the coolant,
10. Radiators shall be provided with a duct adapter flange permitting the attachment of air discharge duct for directing discharge air through the wall,
11. Radiator and Air Intake/Discharge System Flow Restriction requirement shall be no less than 0.5 inches of water.

E. Provide thermal circulation type engine jacket water heater with integral thermostatic control, sized to maintain minimum coolant temperature of 49 degrees Celsius down to an ambient temperature or 0 degrees Celsius. The heater shall be disconnected whenever the engine starts by an oil pressure switch mounted on engine. Connect heater to 120 volt normal power panel as indicated on Drawings. Install tag at connection on generator to identify power panel and circuit number.

F. Air intake system shall be complete with a dry type filter, and high frequency filter-type silencer for reducing the sound level at the intake to a point acceptable for residential use.

G. Air shutoff for emergency shutdown.

H. Engine exhaust system shall be complete with stainless steel critical type silencer capable of reducing ambient exhaust noise level to 60 dBA when measured 50 feet from the engine under full engine load and clear weather. Silencer shall be supported independently of the engine. Flexible exhaust connection shall be provided from the engine exhaust manifold to the silencer. An exhaust condensation trap with manual drain valve shall be provided to prevent condensation from entering the engine. Furnish and install a steel rain cap at the exhaust stack outlet. Rain cap shall have a high-temp paint finish.

I. Standard SAE nuts, bolts, and studs.

J. Standard NPT or SAE tubing and fittings.

K. Gas Train for Natural Gas Fuel System:
1. General: Provide all fuel system components necessary to allow the generator system to operate under continuous emergency full load. Gas regulator train assembly shall be designed for engine manufacturer's recommended gas pressure from a nominal five (5) pound per-square-inch natural gas service. Install components furnished with engine.
2. Engine-mounted carburetor.
3. Fuel gas pressure regulators with vibration isolating, flexible fuel line joint on gas-supply side.
4. Solenoid valve that automatically shuts off flow of gas if the engine stops for any reason. Install this valve on gas-supply side of gas pressure regulator.
5. Gas pressure gauge with analog display of ounces-per-square-inch to monitor gas supply pressure. Install this gauge in gas train inside the generator set housing.

6. Gas line service regulator with atmospheric vent.
7. Dry filter for vapor withdrawal.
8. Manual shut-off valve.
9. Gas surge tank or other components as may be recommended by engine supplier.
10. Gas fuel line for Emergency Power System shall be connected ahead of the main gas shutoff valve for the building with a separate, dedicated shutoff valve. Mark both generator gas valve and building gas valve with permanent signs to indicate that there is another valve, per NFPA 110, sect. 5-9.7.

2.3 GENERATOR

A. Generator shall be alternating current, three phase, four pole, reconnectible brushless revolving field synchronous type with brushless exciter directly connected to the generator field windings without slip rings or commutators.

B. Generator shall have a single prelubricated sealed bearing, direct connected to the engine, by means of a flexible disc coupling for self-alignment and air cooled by a direct drive centrifugal blower fan.

C. Insulation shall be minimum Class F in a self-ventilated enclosure. Temperature rise shall be 130 degrees Celsius max over ANSI 40 degrees Celsius ambient for standby service.

D. Bring out all leads from each winding to a generator main lead terminal box adequate in size for making up all connections and grounding the neutral to the generator set supporting frame.

E. Voltage regulation shall include True RMS 3 phase sensing, generator-mounted volts per Hertz exciter-regulator to match engine and generator characteristics. Include manual controls to adjust voltage output plus or minus 5 percent of nominal voltage level.

F. The generator shall have the necessary excitation control circuitry to prevent the loss of excitation on fault conditions allowing quick return to full voltage and power to normal and faulted circuits.

G. Furnish NEMA 1 output terminal and outgoing cable termination compartment integral with the engine-generator frame.

H. Output Breakers: Provide output molded case circuit breakers of adequate capacity and rating. Provide output breaker for each output circuit running from generator. Breaker shall be UL Listed 100 percent rated for continuous operation at full ampacity. Provide cable extensions and enclosure required to integrally mount output circuit breaker inside outdoor generator housing. Enclosure shall comply with NEC 404-3.

I. Housing Alternator shall have an open drip-proof construction.

2.4 VOLTAGE REGULATION

A. Static type, three phase, mounted either on the generator control panel or combined with the exciter. Voltage shall have "manual-automatic" switch and be adjustable +/- 10 percent under all operating conditions.

2.5 ELECTRIC STARTING SYSTEM

A. Engine starting system shall be a 12 volt or 24 volt DC system depending on size of engine/generator, consisting of a heavy duty electric cranking motor(s) with drive

mechanism, heavy duty batteries with metal frame or box, engine driven alternator, battery charger, and transistorized voltage regulator.

B. Cranking motor shall be capable of starting the engine five times in rapid succession without overheating the motor and at sufficient speed for starting in low ambient temperatures.

C. Storage batteries shall be lead acid type of voltage and capacity as determined by the engine manufacturer, with sufficient capacity to start the generator set five times consecutively in rapid succession. Provide all battery cables and connections. Provide hydrometer.

D. Battery charger shall be an automatic, self-protected, self-regulated, dual rate rectifier type of a capacity determined by the engine manufacturer and sufficient to automatically recharge the batteries quickly according to the requirements governed by battery discharge duty, and suitable for 120 volt, single phase, 60 hertz input service from a remote receptacle panel.

2.6 ENGINE-GENERATOR CONTROL PANEL

A. Control panel shall be engine generator frame mounted in NEMA 1 enclosure, totally front accessible. Control panel shall be completely factory pre-wired. All external connections shall be wired out to terminal blocks for field wiring. Control panel shall be complete with all engine and generator controls and indicators. Include front hinged double doors with latches and provision for padlock.

B. Control panel shall provide a contact closure to initiate operation of the ventilation system. Wire out to terminal block. Contact shall be field wired by manufacturer as indicated on the Drawings.

C. Control panel shall include the following fully identified by means of permanent nameplates:

1. Control
   a. Output voltage adjustment.
   b. Cranking limiter relay.
   c. Overspeed shutdown.
   d. Low oil pressure shutdown.
   e. High coolant temperature shutdown.
   f. Remote Alarm Contacts: Pre-wired SPST contacts to terminal strip for remote indication of all alarm functions.
   g. Battery operated service light to illuminate panel during power outage conditions.
   h. Manual-off-auto engine start switch.
2. Visual monitoring
   a. Frequency Meter: 45-65 Hz range, 3½ inch (89 mm) dial.
   b. AC Output Voltmeter: 3½ inch dial, two (2) percent accuracy, with phase selector switch (phase-to-phase and phase-to-ground).
   c. AC Output Ammeter: 3½ inch dial, two (2) percent accuracy, with phase selector switch and 3 current transformers.
   d. Push-to-test indicator lamps, one for each:
      1) Engine run
      2) Low oil pressure
      3) High water temperature
      4) Overspeed and overcrank
      5) Overspeed shutdown
      6) Failure to crank
      7) Failure to establish voltage or frequency.

8) Failure to reach rated voltage at transfer switch in ten (10) seconds

e. Engine running time meter.
f. Electrical oil pressure gauge.
g. Electrical water temperature gauge.
h. Mechanical fuel pressure gauge.
i. Radiator sight glass.
j. DC voltmeter and ammeter.

3. Audible monitoring
   a. Low oil pressure alarm condition.
   b. High coolant temperature alarm.
   c. Failure to crank.
   d. Failure to establish voltage or frequency.
   e. Failure to reach rated voltage at transfer switch in ten (10) seconds.

D. Battery charging system including alternator and solid state regulator.

E. Remote Annunciator NFPA 110: Provide a remote annunciator to meet the requirements of NFPA 110, Level 1. The annunciator shall provide remote annunciation of all points stated above and shall incorporate ring-back capability so that after silencing the initial alarm, any subsequent alarms will sound the horn. Locate annunciator in the Administration Area per owner's instruction.

2.7 WEATHER PROTECTIVE ENCLOSURE

A. Standard Enclosure:
   1. Steel weather protective enclosure with 14 gauge sheet metal and a minimum ambient capability of 43 degrees Celsius (110 degrees Fahrenheit). Shall have removable, and / or hinged doors and removable end panels to allow easy routine maintenance. All hinges and latches shall be rust resistant and doors shall be equipped with rubber seals. A lockable service access cover shall be provided for easy access to the radiator fill cap. The enclosure shall be painted utilizing electrostatically applied powder baked paint.

2.8 AUTOMATIC TRANSFER SWITCHES

A. Furnish and install automatic transfer switches (ATS) with four (4) poles, amperage, voltage, withstand and close-on ratings as shown on the plans. Each automatic transfer shall consist of an inherently double throw power transfer switch mechanism and a microprocessor controller to provide automatic operation. All transfer switches and controllers shall be the products of the same manufacturer.

B. Acceptable Manufacturers:
   1. ASCO
   2. Russ Electric
   3. Zenith
   4. Kohler
   5. Cummins/Onan

C. Mechanically Held Transfer Switch
   1. The transfer switch shall be electrically operated and mechanically held. The electrical operator shall be a momentarily energized, single-solenoid mechanism. Main operators which include overcurrent disconnect devices, linear motors or gears shall not be acceptable. The switch shall be mechanically interlocked to ensure only two possible positions, normal or emergency.

2. All transfer switch sizes shall use only one type of main operator for ease of maintenance and commonality of parts.
3. The switch shall be positively locked and unaffected by momentary outages, so that contact pressure is maintained at a constant value and contact temperature rise is minimized for maximum reliability and operating life.
4. All main contacts shall be silver composition. Switches rated 600 amperes and above shall have segmented, blow-on construction for high withstand and close-on capability and be protected by separate arcing contacts.
5. Inspection of all contacts shall be possible from the front of the switch without disassembly of operating linkages and without disconnection of power conductors. All stationary and moveable contacts shall be replaceable without removing power conductors and/or bus bars.
6. Designs utilizing components of molded-case circuit breakers, contactors, or parts thereof, which are not intended for continuous duty, repetitive switching or transfer between two active power sources are not acceptable.

D. Microprocessor Controller
1. The controller's sensing and logic shall be provided by a single built-in microprocessor for maximum reliability, minimum maintenance, and the ability to communicate serially through an optional serial communication module.
2. A single controller shall provide twelve selectable nominal voltages for maximum application flexibility and minimal spare part requirements. Voltage sensing shall be true RMS type and shall be accurate to ± 1 percent of nominal voltage. Frequency sensing shall be accurate to ± 0.2 percent. The panel shall be capable of operating over a temperature range of -20 to +60 degrees Celsius and storage from -55 to +85 degrees Celsius.
3. The controller shall be connected to the transfer switch by an interconnecting wiring harness. The harness shall include a keyed disconnect plug to enable the controller to be disconnected from the transfer switch for routine maintenance. Sensing and control logic shall be provided on multi-layer printed circuit boards. Interfacing relays shall be industrial grade plug-in type with dust covers. The panel shall be enclosed with a protective cover and be mounted separately from the transfer switch unit for safety and ease of maintenance. The protective cover shall include a built-in pocket for storage of the operator’s manuals.
4. All customer connections shall be wired to a common terminal block to simplify field-wiring connections.
5. The controller shall meet or exceed the requirements for Electromagnetic Compatibility (EMC) as follows:
   a. EN 55011:1991 Emission standard - Group 1, Class A
   b. EN 50082-2:1995 Generic immunity standard, from which:
      1) EN 61000-4-2:1995 Electrostatic discharge (ESD) immunity
      2) ENV 50140:1993 Radiated Electro-Magnetic field immunity
      3) EN 61000-4-4:1995 Electrical fast transient (EFT) immunity
      4) EN 61000-4-5:1995 Surge transient immunity
      5) EN 61000-4-6:1996 Conducted Radio-Frequency field immunity
   c. IEEE472 (ANSI C37.90A) Ring Wave Test.

E. Enclosure
1. The ATS shall be furnished in a Type 3RX enclosure unless otherwise shown on the plans.

F. Controller Display and Keypad
1. A four line, 20 character LCD display and keypad shall be an integral part of the controller for viewing all available data and setting desired operational parameters. Operational parameters shall also be available for viewing and limited control through the serial communications input port. The following parameters shall only be adjustable via DIP switches on the controller:
   a. Nominal line voltage and frequency
   b. Single or three phase sensing
   c. Operating parameter protection
   d. Transfer operating mode configuration
      (Open transition, Closed transition, or Delayed transition)

   All instructions and controller settings shall be easily accessible, readable and accomplished without the use of codes, calculations, or instruction manuals.

G. Voltage, Frequency and Phase Rotation Sensing
1. Voltage and frequency on both the normal and emergency sources (as noted below) shall be continuously monitored, with the following pickup, dropout, and trip setting capabilities (values shown as % of nominal unless otherwise specified):

Parameter	Sources	Dropout / Trip	Pickup / Reset
Undervoltage	N&E,3ϕ	70 to 98%	85 to 100%
Overvoltage	N&E,3ϕ	102 to 115%	2% below trip
Underfrequency	N&E	85 to 98%	90 to 100%
Overfrequency	N&E	102 to 110%	2% below trip
Voltage unbalance	N&E	5 to 20%	1% below dropout

2. Repetitive accuracy of all settings shall be within ± 0.5% over an operating temperature range of -20°C to 60°C.
3. Voltage and frequency settings shall be field adjustable in 1% increments either locally with the display and keypad or remotely via serial communications port access.
4. The controller shall be capable (when activated by the keypad or through the serial port) of sensing the phase rotation of both the normal and emergency sources. The source shall be considered unacceptable if the phase rotation is not the preferred rotation selected (ABC or CBA).
5. Source status screens shall be provided for both normal & emergency to provide digital readout of voltage on all 3 phases, frequency, and phase rotation.

H. Time Delays
1. An adjustable time delay of 0 to 6 seconds shall be provided to override momentary normal source outages and delay all transfer and engine starting signals.
2. A time delay shall be provided on transfer to emergency, adjustable from 0 to 60 minutes, for controlled timing of transfer of loads to emergency.
3. Two time delay modes (which are independently adjustable) shall be provided on re-transfer to normal. One time delay shall be for actual normal power failures and the other for the test mode function. The time delays shall be adjustable

from 0 to 60 minutes. Time delay shall be automatically bypassed if the emergency source fails and the normal source is acceptable.

4. A time delay shall be provided on shut down of engine generator for cool down, adjustable from 0 to 60 minutes.
5. A time delay activated output signal shall also be provided to drive an external relay(s) for selective load disconnect control. The controller shall have the ability to activate an adjustable 0 to 5 minute time delay in any of the following modes:
   a. Prior to transfer only.
   b. Prior to and after transfer.
   c. Normal to emergency only.
   d. Emergency to normal only.
   e. Normal to emergency and emergency to normal.
   f. All transfer conditions or only when both sources are available.

I. Additional Features
1. A three position momentary-type test switch shall be provided for the test / automatic / reset modes. The test position will simulate a normal source failure. The reset position shall bypass the time delays on either transfer to emergency or retransfer to normal.
2. A SPDT contact, rated 5 amps at 30 VDC, shall be provided for a low-voltage engine start signal. The start signal shall prevent dry cranking of the engine by requiring the generator set to reach proper output, and run for the duration of the cool down setting, regardless of whether the normal source restores before the load is transferred.
3. Auxiliary contacts, rated 10 amps, 250 VAC shall be provided consisting of one contact, closed when the ATS is connected to the normal source and one contact closed, when the ATS is connected to the emergency source.
4. LED indicating lights (16 mm industrial grade, type 12) shall be provided; one to indicate when the ATS is connected to the normal source (green) and one to indicate when the ATS is connected to the emergency source (red).
5. LED indicating lights (16 mm industrial grade, type 12) shall be provided and energized by controller outputs. The lights shall provide true source availability of the normal and emergency sources, as determined by the voltage sensing trip and reset settings for each source.
   a. The following features shall be built-in to the controller, but capable of being activated through keypad programming or the serial port only when required by the user:
      1) Provide the ability to select “commit/no commit to transfer” to determine whether the load should be transferred to the emergency generator if the normal source restores before the generator is ready to accept the load.
      2) Terminals shall be provided for a remote contact which opens to signal the ATS to transfer to emergency and for remote contacts which open to inhibit transfer to emergency and/or retransfer to normal. Both of these inhibit signals can be activated through the keypad or serial port.
      3) An Inphase monitor shall be provided in the controller. The monitor shall control transfer so that motor load inrush currents do not exceed normal starting currents, and shall not require external control of power sources. The inphase monitor shall be specifically designed for and be the product of the ATS manufacturer. The inphase monitor shall be equal to ASCO Feature 27.

J. Engine Exerciser: The controller shall provide an internal engine exerciser. The engine exerciser shall allow the user to program up to seven different exercise routines. For each routine, the user shall be able to:
1. Enable or disable the routine.
2. Enable or disable transfer of the load during routine.
3. Set the start time,
   - time of day
   - day of week
   - week of month (1st, 2nd, 3rd, 4th, alternate or every)
4. Set the duration of the run.
   At the end of the specified duration the switch shall transfer the load back to normal and run the generator for the specified cool down period. A 10-year life battery that supplies power to the real time clock in the event of a power loss will maintain all time and date information.

K. Withstand and Close-On Ratings
1. The ATS shall be rated to close on and withstand the available RMS symmetrical short circuit current at the ATS terminals with the type of overcurrent protection shown on the plans.
2. The ATS shall be UL listed in accordance with UL 1008 and be labeled in accordance with that standard's 1½ and 3 cycle, long-time ratings. ATSs which are not tested and labeled with 1½ and 3 cycle (any breaker) ratings and have series, or specific breaker ratings only, are not acceptable.

L. Tests and Certification
1. The complete ATS shall be factory tested to ensure proper operation of the individual components and correct overall sequence of operation and to ensure that the operating transfer time, voltage, frequency and time delay settings are in compliance with the specification requirements.

M. Service Representation
1. The ATS manufacturer shall maintain a national service organization of company-employed personnel located throughout the contiguous United States. The service center's personnel must be factory trained and must be on call 24 hours a day, 365 days a year.

2.10 AUTOMATIC TRANSFER SWITCHES WITH BYPASS SWITCH

A. Automatic transfer switch with bypass switch shall conform to all requirements of Section 2.9 Automatic Transfer Switch subsections B. to M.

B. A two-way bypass-isolation switch shall provide manual bypass of the load to either source and permit isolation of the automatic transfer switch from all source and load power conductors. All main contacts shall be manually driven.

C. Power interconnections shall be silver-plated copper bus bar. The only field installed power connections shall be at the service and load terminals of the bypass-isolation switch. All control inter-wiring shall be provided with disconnect plugs.

D. Separate bypass and isolation handles shall be utilized to provide clear distinction between the functions. Handles shall be permanently affixed and operable without opening the enclosure door. Designs requiring insertion of loose operating handles or opening of the enclosure door to operate are not acceptable.

E. Bypass to the load-carrying source shall be accomplished with no interruption of power to the load (make before break contacts). Designs which disconnect the load when bypassing are not acceptable. The bypass handle shall have three operating modes: "Bypass to Normal," "Automatic," and "Bypass to Emergency." The operating speed of the bypass contacts shall be the same as the associated transfer switch and shall be independent of the speed at which the manual handle is operated. In the "Automatic" mode, the bypass contacts shall be out of the power circuit so that they will not be subjected to fault currents to which the system may be subjected.

F. The isolation handle shall provide three operating modes: "Closed," "Test," and "Open." The "Test" mode shall permit testing of the entire emergency power system, including the automatic transfer switches with no interruption of power to the load. The "Open" mode shall completely isolate the automatic transfer switch from all source and load power conductors. When in the "Open" mode, it shall be possible to completely withdraw the automatic transfer switch for inspection or maintenance to conform to code requirements without removal of power conductors or the use of any tools.

G. When the isolation switch is in the "Test" or "Open" mode, the bypass switch shall function as a manual transfer switch. G. Designs requiring operation of key interlocks for bypass isolation or ATS which cannot be completely withdrawn when isolated are not acceptable.

2.11 MANUAL TRANSFER SWITCH WITH DOCKING

A. Furnish and install a transfer switch equipped with a means to connect a load bank to the generator and a temporary generator to the associated ATS, male cam-style inlet connectors, female cam-style outlet connectors, power distribution blocks and grounding terminals, all housed within a padlockable enclosure. An interlock means shall be provided that shall prevent the simultaneous connection of both the temporary and permanent generator to the associated ATS.

B. Acceptable Manufacturers:
   1. ASCO
   2. Russ Electric
   3. Zenith
   4. Kohler
   5. Cummins/Onan
   6. ESL Power Systems

C. Enclosure
   1. The MTS shall be furnished in a Type 3RX enclosure unless otherwise shown on the plans.

D. Cam-style male connectors (inlets) and cam-style female connectors (outlets) shall be UL Listed single-pole separable type and rated 400 amps at 600VAC. All cam-style connectors shall be color coded. Cam-style connectors shall be provided for each phase and for ground, and shall also be provided for neutral. Each of the phase cam-style connectors and the neutral cam-style connectors within the enclosure shall be factory-wired to a molded case circuit breaker. The ground cam-style male connectors shall be bonded to the enclosure, and a ground lug shall be provided for connection of the facility ground conductor. None of the cam-style connectors shall be accessible unless all (3) molded case circuit breakers are in the “OFF” position and the main access door is open.

E. A power distribution block shall be provided for load-side field wiring. The power distribution block shall be factory wired to the molded case circuit breakers.

F. Molded case circuit breakers if used shall be UL Listed 4-pole and the short circuit interrupt rating shall be a minimum of 35kAIC at 480VAC (wall mount units) or 50kAIC at 480VAC (pad mount units).

G. An auxiliary contact shall be provided in the circuit breaker controlling the connection from the Permanent Generator to the ATS and shall be factory wired to terminal blocks within the enclosure. The auxiliary contact is provided in compliance with NEC 2017 700.3 (F)(5) which requires a means to activate an annunciator circuit.

PART 3 - EXECUTION

3.1 GENERAL

A. Provide all work required for a complete system, including complete system testing and checkout. The installation of this system shall comply with the directions and recommendations of authorized factory representatives.

3.2 EMERGENCY DISTRIBUTION SYSTEM

A. All boxes, and enclosures (including transfer switches, generators, and power panels) for emergency circuits shall be permanently marked so they will be readily identified as a component of an emergency circuit or system. Emergency circuits shall be specially marked and shall be run in raceway separate from normal powered circuits. All distribution equipment shall be specifically indicated "EMERGENCY" on the equipment nametag. Color code for emergency markings and all nametags shall be RED.

3.3 COMMISSIONING SERVICE

A. A final inspection and an initial startup of the system shall be rendered by the authorized factory representatives.

B. A letter of certification written by the authorized factory representatives, which states that the system is properly installed and does properly function as recommended by the factory and as described in this specification, shall be submitted to the Architect for his approval.

C. A test run shall be performed by the authorized factory representative in the presence of the Owner, Architect and Engineer; the time of this test run shall be mutually agreed upon by all persons concerned. This test run may, but is not required to, coincide with other testing requirements described in this section.

3.4 INSTALLATION

A. General: Provide all labor required for a complete installation.
B. Mounting: Anchor on a four (4) inch concrete pad with bolts and elasto-rib vibration isolators. Pad shall extend a minimum of 18 inches from each side of the generator set skid.

3.5 CONSUMABLES

A. Refuel during testing as required. After all tests have been performed, fuel tanks shall be filled before system is accepted by Owner. Check oil, coolant, batteries, filters and other consumables. Top off and replace as necessary to leave engine-generator set at full capacity for all consumables.

3.6 TESTING

A. Factory Testing: The engine generator shall be tested at the factory, demonstrating its performance at full rated load. A certified copy of the test report shall accompany the unit to the field and shall be made available to the building official and copied to the Architect and Engineer.

B. Field Testing: Conduct tests of the system as required by NEC Article 700 in the presence of the Owner, Architect, Engineer, and Code Authority having jurisdiction. The engine generator set shall demonstrate the actual sequencing of all load onto the generation unit and shall carry the building emergency loads, including any elevator(s), for a minimum period of two (2) hours. Contractor shall insure that all emergency loads are operational before scheduling this test. Test times shall be mutually agreed upon by all persons concerned.

3.7 SYSTEM GROUNDING

A. The emergency power system generator output shall be grounded as a separately derived system according to the requirements of the Section titled GROUNDING. Bond the generator neutral to the generator ground.

3.8 SIGNS

A. Refer to Section 16075, Electrical Identification for Sign Requirements.

B. Service Entrance: A sign shall be placed at the normal power service entrance indicating location of the emergency power engine-generator set.

C. Generator: Provide a sign arranged to be prominent and legible at the set control panel. Sign shall be an OSHA orange WARNING sign plus text. Sign text shall be "Warning - This equipment starts automatically. Disconnect all sources of supply and load before servicing", or similar approved text.

D. Fuel Tank: Provide a "Caution - No Smoking" sign on the housing. Sign shall be an OSHA yellow caution sign with text and graphic no-smoking symbol. Provide sign per NFPA 110 Sect. 5.9.7 at both generator gas shut-off valve and building gas shut-off valve to indicate that there is another valve.

3.9 REMOTE WIRING

A. General: Provide raceway, wiring and control cables from generator control panel to remote points. Underground conduits may be direct buried without concrete encasement if a red plastic warning tape is installed above each conduit.

B. Remote Points:
1. Engine-Generator Remote Panel
2. Automatic Transfer Switches
3. Automatic Battery Charger. Provide dc wiring from remote charger to battery rack at engine-generator set. Size wire for maximum 2 percent dc voltage drop at full load.

4. Generator control power 120V branch circuit.
5. Engine water jacket heater branch circuit.
6. Outdoor generator housing: battery rack warming jacket 120V branch circuit.
7. Outdoor generator housing: generator strip heater 120V branch circuit. One circuit may serve both jacket heater and generator heater if total load including voltage drop is less than 80% circuit ampacity.
8. Elevator Controllers; (Signals shall be taken from ATS).
9. Building Automation System (BAS); (BAS wires to the ATS).
10. Building Security System
11. Emergency Lighting Automatic Transfer Switches

3.10 EMERGENCY LIGHTING AUTOMATIC TRANSFER SWITCHES

A. Provide automatic slave transfer switches where indicated on the drawings for transfer of dimmer branch circuits utilized for emergency lighting.

END OF SECTION 26 32 13

SECTION 26 43 00 - SURGE PROTECTION DEVICES (SPDs) FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Section 16400 – Surge Protection Devices, individually mounted and switchboard mounted. Switchboards: Surge Protection Device integrated in switchboards.

1.3 REFERENCES

A. IEEE C62.41.1, IEEE Guide on the Surge Environment in Low-Voltage (1000 V and Less) AC Power Circuits,

B. IEEE C62.41.2, IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits,

C. IEEE C62.45, IEEE Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage (1000 V and Less) AC Power Circuits.

D. National Electrical Code: Article 285

E. UL 1283 - Electromagnetic Interference Filters

F. UL 1449, Third Edition, effective September 29, 2009 – Surge Protection Devices

1.4 SUBMITTALS

A. Product Data: Submit capacity, dimensions, weights, details, and wiring configuration.

B. Submittals shall include UL 1449 4th Edition Listing documentation verifiable by visiting www.UL.com, clicking “Certifications” link, searching using UL Category Code: VZCA and VZCA2:
   1. Short Circuit Current Rating (SCCR)
   2. Voltage Protection Ratings (VPRs) for all modes
   3. Maximum Continuous Operating Voltage rating (MCOV)
   4. I-nominal rating (I-n)
   5. SPD shall be UL listed and labeled as Type 1 or Type 4 intended for Type 1 or Type 2 applications.

C. Upon request, an unencapsulated but complete SPD formally known as TVSS shall be presented for visual inspection.

D. Minimum of ten (10) year warranty Manufacturer's Installation Instructions: Submit installation instructions and connection requirements.

1.5 QUALITY ASSURANCE

A. List individual units under UL 1449 (Forth Addition) and UL 1283.

B. Single manufacturer: All equipment of each type shall be the product of one manufacturer.

C. SPD shall comply with NEC Article 285 and shall be permanently marked with the short-circuit current rating of the device.

D. Manufacturer Qualifications: Engage a firm with at least 5 years experience in manufacturing transient voltage surge suppressors.

E. Manufacturer shall be ISO 9001 or 9002 certified.

F. The manufacturer of this equipment shall have produced similar electrical equipment for a minimum period of ten (10) years. When requested by the Engineer, an acceptable list of installations with similar equipment shall be provided demonstrating compliance with this requirement.

G. The SPD shall be compliant with the Restriction of Hazardous Substances (RoHS) Directive 2002/95/EC.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept equipment on site in factory packaging. Inspect for damage.

B. Protect equipment from damage by providing temporary covers until construction is complete in adjacent space.

C. Handle and store equipment in accordance with manufacturer's Installation and Maintenance Manuals. One (1) copy of this document to be provided with the equipment at time of shipment.

PART 2 - PRODUCTS

2.1 SURGE PROTECTION DEVICES (SPDs)

A. Manufacturers:
1. Current Technology
2. Southern Tier Technology
3. Siemens
4. Square D
5. GE

B. Product Description: Surge protection devices for protection of AC electrical circuits.

C. Unit Operating Voltage: As indicated on Drawings.

D. Construction:
1. Finish: Factory finish of baked enamel.
2. Balanced Suppression Platform: Equally distribute surge current to Metal Oxide Varistor (MOV) components to ensure equal stressing and maximum

performance. Furnish surge suppression platform with computer matched +/1% MOV for equal load share.

3. Internal Connections: Hardwired with connections using low impedance conductors and compression fittings.
4. Safety and Diagnostic Monitoring: Equipped with standard overcurrent protection:
   a. Continuous monitoring of fusing system.
   b. Monitor individual MOV's (including neutral to ground). Capable of identifying open circuit failures not monitored by conventional fusing systems.
   c. Monitor for overheating in each mode due to thermal runaway.
   d. Furnish green and red solid state indicator light on each phase. Absence of green light and presence of red light indicates which phases have been damaged. Fault detection activates flashing trouble light. Units not capable of detecting open circuit damage, thermal conditions, and over current will not be accepted.
5. Labeling: Permanently affix UL 1449 (Forth Addition) suppression voltage ratings and CSA to unit.

E. Types:
1. Switchboards; locate as integral part of switchboard, coordinate mounting with switchboard manufacturer.
2. Panelboards; locate as stand-alone. Component in housing adjacent to protected panelboard. Install less than 10ft from the panel with minimum bends in the wire.

F. Protection Modes: For Wye configured system, furnish device with directly connected suppression elements between line-neutral (L-N), line-ground (L-G), and neutral-ground (N-G). For Delta configured system, furnish device with suppression elements between line to line (L-L) and line to ground (L-G).

G. Swithboards:
1. The SPD shall be UL 1449 labeled as Type 1 or as Type 4 intended for Type 1 or Type 2 applications.
2. SPD shall meet or exceed the following criteria:
   a. Maximum 7-Mode surge current capability shall be 300kA per phase.
   b. UL 1449 – 4th Edition Revision; effective September 29, 2009, Voltage Protection Ratings shall not exceed the following:

VOLTAGE	L-N	L-G	N-G	L-L	MCOV
208Y/120	700V	700V	700V	1200V	150V
480Y/277	1200V	1200V	1200V	2000V	320V

3. UL 1449 Listed Maximum Continuous Operating Voltage (MCOV) (verifiable at UL.com):

System Voltage	Allowable System Voltage Fluctuation (%)	MCOV
208Y/120	25%	150V
480Y/347	15%	320V

4. SPD shall incorporate a UL 1283 listed EMI/RFI filter with minimum attenuation of - 50dB at 100 kHz.
5. Suppression components shall have redundant protection designed to share surge currents.
6. SPD shall include a serviceable, replaceable module.
7. SPD shall be equipped with the following diagnostics:

a. Visual LED diagnostics including a minimum of one green LED indicator per phase, and one red service LED.
b. Audible alarm with on/off silence function and diagnostic test function (excluding branch).
c. Form C dry contacts one normally open (NO) and one normally closed (NC) for remote status monitoring.
d. Surge Counter

No other test equipment shall be required for SPD monitoring or testing before or after installation.

8. SPD shall have a response time no greater than 1/2 nanosecond.
9. SPD shall have a 10 year warranty.

H. Distribution and Lighting Panelboards:

1. Listing requirements: SPD shall bear the UL Mark and shall be Listed to most recent editions of UL/ANSI 1449 and UL 1283. “Manufactured in accordance with” is not equivalent to UL listing and does not meet the intent of this specification.
2. Listing requirements: SPD and performance parameters shall be posted at www.UL.com under Category Code: VZCA. Products or parameters without posting at UL.com shall not be approved. (To access UL Category Code click on Certifications in the left menu bar of UL’s home page. Type “VZCA” into the Category Code search box and click Search.)
3. SPD shall be UL 1449 labeled with 200kA Short Circuit Current Rating (SCCR). Fuse ratings shall not be considered in lieu of demonstrated withstand testing of SPD, per NEC 285.6.
4. SPD shall be UL 1449 labeled as Type 1 intended for use without need for external or supplemental overcurrent controls. Every suppression component of every mode, including N-G, shall be protected by internal overcurrent and thermal overtemperature controls. SPDs relying upon external or supplementary installed safety disconnectors do not meet the intent of this specification.
5. SPD shall be UL 1449 labeled with 20kA I-nominal (I-n) (verifiable at UL.com) for compliance to UL 96A Lightning Protection Master Label and NFPA 780.
6. Standard 7 Mode Protection paths: SPD shall provide surge current paths for all modes of protection: L-N, L-G, L-L, and N-G for Wye systems; L-L, L-G in Delta and impedance grounded Wye systems
7. If a dedicated breaker for the SPD is not provided in the switchboard, the service entrance SPD shall include an integral UL Recognized disconnect switch. A dedicated breaker shall serve as a means of disconnect for distribution SPD’s.
8. SPD shall meet or exceed the following criteria:
9. Minimum surge current capability (single pulse rated) per phase shall be:
   a. Distribution applications:
      1) Southern Tier Technologies T45XXXX050AWAJ2C with Maximum surge current capability of 100kA per phase

10. UL 1449 Listed Voltage Protection Ratings (VPRs) shall not exceed the following:

VOLTAGE	L-N	L-G	N-G
208Y/120V	700V	700V	700V
480Y/277V	1500V	1500V	1500V

UL 1449 Listed Maximum Continuous Operating Voltage (MCOV) (verifiable at UL.com):

System Voltage	Allowable System Voltage Fluctuation (%)	MCOV
208Y/120	25%	150V

480Y/277V	20%	320V

11. SPD shall include a serviceable, replaceable module (excluding Distribution). (Deletable note: Delete or adjust as appropriate.)
12. Service Entrance ul Type 2 devices SPD shall have UL 1283 EMI/RFI filtering with minimum attenuation of -50dB at 100kHz.
13. SPD shall have a warranty for a period of ten (10) years, incorporating unlimited replacements of suppressor parts if they are destroyed by transients during the warranty period.
14. SPDs shall be equipped with the following diagnostics:
    a. Visual LED diagnostics including a minimum of one green LED indicator per phase, and one red service LED.
    b. Audible alarm with on/off silence function and diagnostic test function (excluding branch).
    c. Form C dry contacts one normally open (NO) and one normally closed (NC) for remote status monitoring.
    d. Surge Counter

No other test equipment shall be required for SPD monitoring or testing before or after

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify mounting area is ready for equipment.

B. Verify circuit rough-ins are at correct location.

3.2 INSTALLATION

A. Install in accordance with IEEE 1100.

B. Install service entrance suppressors in switchboard.

C. Install suppressors for panelboards adjacent to panel.

D. Install surge counter in face of switchboard.

E. Include surge counter for stand-alone SPD.

F. Install with maximum conductor length of 24 inches. Install suppressor with internal fusing.

G. Provide 30 amp, 3 pole circuit breaker in panelboards to feed SPD.

END OF SECTION 26 43 00

SECTION 26 50 00 - LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes interior luminaires, lamps, ballasts, and accessories. Provide all luminaries complete with all new lamps, completely wired, controlled, and securely attached to supports.

1.3 SUBMITTALS

A. Product Data: Submit dimensions, ratings, and performance data.

B. Photometric data for each luminaire, lamp and ballast. Include indications of all options and accessories as well as finish color.

C. Specification Review: A complete item by item, line by line specification review.

1.4 QUALITY ASSURANCE

A. Regulatory Requirements:
1. Provide luminaires listed by U.L.
2. Luminaires installed in outdoor areas unprotected from weather to be U.L. Listed for wet locations.
3. Insulated ceilings: Luminaires installed into insulated ceilings shall be U.L. Listed Type IC.

B. Certification: Certify that fixtures submittal have trim compatible with ceilings being installed.

C. Concrete for outdoor lighting poles foundations shall be provided per Section 03 30 00 - Concrete.

1.5 EXTRA MATERIALS

A. Attic stock for light fixtures and LED drivers: Attic stock shall be boxed in OEM sealed packaging and boxes and clearly labeled for contents. Large quantiles of the same item boxes may be palletized and shrink wrapped, and clearly labeled on the outside of the shrink wrap, stored as directed by LCISD.

B. Exterior light fixtures and parking lot pole mounted light fixtures: For each light fixture type, furnish two percent, a minimum of two to a maximum of 25 complete light fixture assemblies and a quantity of 50 individual component LED drivers and LED chip arrays.

C. Interior light fixtures: For each light fixture type, furnish two percent, a minimum of two to a maximum 25 of complete light fixture assemblies and quantity of 50 individual component LED drivers.

D. Exit light fixtures: For each exit light fixture type, furnish a minimum of two and a maximum of 10-percent of complete light fixture assemblies and also the same quantity of individual component LED drivers. Provide complete installation of intended attic stock exit signs as directed by the AHJ for certificate of occupancy or otherwise directed by the Architect/Engineer. Attic stock exit signs not required to be installed shall remain the property of LCISD as boxed attic stock.

PART 2 PRODUCTS

2.1 LUMINAIRES

A. Acceptable Manufacture: Provide per Fixture Schedule on drawings.

1. Approved equal: Contractor may submit luminaires from other manufacturers. Contractor shall provide a full set of submittals per paragraph 1.2 of this specification section for Engineer and Architects approval. Contractor must have approved submittals stamped and dated from the Engineer and Architect minimum 10 days prior to bid.

B. Product Description: Complete luminaire assemblies, with features, options, and accessories as scheduled.

C. All luminares shall be new and of specification grade.

D. Manufacturer nomenclature in fixture schedule or otherwise described on the Drawings is given only to show the general fixture series. Contractor shall provide fixture with all required accessories and mounting frame type.

E. Wire guard at fixtures in mechanical, electrical, and high abuse areas.

2.2 LED LUMINAIRES

A. Quality Assurance
1. DOE Lighting Facts certified.

B. LED Specifications
1. Lumen maintenance of the LEDs has been tested in accordance with IESNA LM-80-08 reporting methodology.
2. CRI:>82 minimum (general); >90 healthcare and retail.
3. SDCM: <2.5 in linear pendants and linear recessed; <3.5 in discrete recessed.
4. R9: .0 (general office/school environments); >50 in healthcare and retail environments.
5. Outdoor luminaires to be rated at a minimum of 40^0 C.

C. Lumen Maintenance
1. Minimum L70 at 50K hours based on TM-21 Addendum A Lifetime report at an ambient temperature of 25^0 C, outdoors at an ambient temperature of 40^0 C.

D. Thermal Testing
1. ISTM testing in accordance to UL 1598-2008.

E. Driver
1. 0-10V enabled.
2. Output Class 2 rated.
3. Dimming range: 5-100%.
4. Constant current.
5. THD @ max load: <20%.
6. Power factor: >0.95
7. Environment protection rating: UL Damp and dry.
8. Approbations: certified to UL8750, UL1310, UL935, CSA-C22.2 No. 250.13-12, CSA 22.2 No. 223.
9. ROHS Compliant

F. Fixture photoetry
1. Conducted by a NVLAP accredited testing lab with IESNA LM 79-08.
2. System flux measured in delivered lumens.

G. Warranty
1. 5 year total system warranty.

2.3 EMERGENCY BATTERY PACKS

A. Provide Emergi-Lite FPSIU series, or approved equal, battery pack for fluorescent fixtures designated to have emergency battery back-up.

B. Fixture shall include lighted push button test switch installed in visible, accessible location adjacent to fixture.

C. Provide unswitched alternating current power source per manufacturer's instructions.

D. Provide connection to local switch where indicated on drawings, connect such that fixture can be controlled on/off from local switch without discharge of battery.

E. For fixtures designated to have emergency battery pack and be on a contactor controlled circuit, provide unswitched alternating current source ahead of contactor and wiring as required to allow automatic on/off control from the contactor without discharge of battery and local on/off switching where indicated.

F. Battery pack shall provide 1100 lumen output for 90 minutes per 2'x4' light fixture.

G. Provide integral battery pack for all exit signs where emergency generator power is not available. Battery pack shall provide minimum of 90 minutes output.

2.4 EMERGENCY LIGHTING AUTOMATIC TRANSFER SWITCHES

A. Provide automatic transfer switch on all lighting fixtures shown to be on emergency.

2.5 DOWNLIGHT FIXTURES

A. Provide recessed light fixtures with trim rings compatible with the ceiling material where fixture is to be installed.

2.6 EXIT SIGNS

A. Exit signs shall meet visibility requirements and be listed per UL 924 " Emergency Lighting and Power Equipment". Also shall meet Federal, State and Local Codes.

B. Chevron Directional Indicator: Provide Chevron per NFPA 101 Section 5-10.4.1.2.

C. Product Description:
   1. LED Exit Sign:
      a. Provide exit sign with Light Emitting Diodes (LED) illuminance source. Cover LED with diffuser.

D. Housing: Diecast aluminum with stencil face and matte white paint finish.

E. Input Voltage: 120/277 volt, dual input voltage.

F. EPA Energy Star Label.

G. Wire Guards: Install wire guard on all exit signs installed in gyms, lockers rooms, and athletic wing.

2.7 OUTDOOR LUMINAIRE POLE ASSEMBLIES

A. Outdoor Pole assemblies shall consist of a pole base, pole, luminaire or group and lighting circuit wiring.

B. Diesel Standard: 2000 (IBC) International Building Code. Section 1609 requires wind forces on structure to be determined by the provisions of ASCE 7.

C. Minimum Wind Speed: 120 miles per hour.

D. Metal poles shall comply with NEC 410-15(b).

E. Pole Material: Steel.

F. Pole Shape: Round tapered.

G. Pole finish shall match luminaires along mounting arms and bolt covers. Provide polyester powder coat finish on pole and luminaire, 3 mil thick.

H. Pole accessories to include handhole and cover, full matching anchor bolt cover, anchor bolt kit, template, washers and leveling nuts.

PART 3 - EXECUTION

3.1 EXISTING WORK

A. Disconnect and remove abandoned luminaires, lamps, poles and accessories.

B. Extend existing luminaire installation using materials and methods compatible with existing installation, or as specified.

C. Clean and repair existing luminaires to remain or to be reinstalled.

3.2 INSTALLATION

A. General: All luminaires shall have proper supports.

B. Install suspended luminaires using pendants supported from swivel hangers.

C. Locate recessed ceiling luminaires as indicated on Drawings.

D. Install surface mounted ceiling luminaires plumb and adjust to align with building lines and with each other. Secure to prevent movement.

E. Chain Hung: Unless otherwise indicated all fluorescent fixtures in Mechanical, Electrical and Elevator Equipment Rooms shall be chain hung. Verify exact mounting height with Architect before installing fixtures. Provide pendant hangers when equipment room has fire-resistive ceiling.

F. Suspended Ceilings:
1. Provide means of support for luminaires per NEC 410-36. T-bar clips shall be installed on the luminaire and shall be field secured to the inverted ceiling tees so that the luminaire is securely fastened to the ceiling system framing members.
2. Ceiling tiles shall not bear the weight of luminaires. Surface mount luminaires, recessed downlights, light track, exit signs, etc. shall be supported by proper frames or other attachment to main ceiling system grid or building structure above ceiling.
3. Luminaires shall be centered in ceiling tile.
4. Luminaire shall have flange or trim ring for closure of ceiling cutout or opening.
5. Fire-rated Ceiling Assembly: For Luminaires to be flush-mounted into a fire-rated ceiling or surface mounted to a fire-rated ceiling, install with independent, secure support. Raceway, cable assemblies, boxes and fittings located above a fire-rated floor/ceiling or roof ceiling assembly shall not be secured to, or supported by, the ceiling assembly including the ceiling support wires. Provide an independent means of secure support. Independent support wires shall be distinguishable by color, tagging, or other effective means from those that are part of the fire-rated design.

G. Verify weights and recommended mounting methods of all luminaires with manufacturers. Furnish and install supports. Luminaires weighing more than 30 pounds shall be supported independently of the outlet box.

3.3 LOCATIONS

A. Luminaires shown on the Electrical Drawings represent general arrangements only. Refer to Architectural Drawings and to Architect on jobsite for more exact locations. Coordinate location with all other trades before installation. Coordinate all light fixtures in Mechanical Rooms with the final installed piping and ductwork layouts. Adjust fixture mounting height and location if required so that light output is not obstructed by piping and ductwork.

3.4 FIRE INTEGRITY OF CEILING PENETRATIONS

A. Where ceiling is part of a fire-rated assembly, maintain integrity of that assembly with methods given in Section Electrical Hangers and Supports. Obtain ceiling system UL Fire Resistance Directory Design Number from Architectural Drawings.

3.5 AIMING AND ADJUSTMENT

A. General: All adjustable lighting units shall be aimed, focused, and locked by the Contractor under the supervision of the Architect/Owner. All aiming and adjusting shall be carried out after the entire installation is complete.

CLEANING

A. Lens: Clean lenses of all luminaires after space is finished and prior to project acceptance.

B. Louvers: Remove plastic bag from parabolic louver luminaires after space is finished and prior to project acceptance. Do not remove bags until luminaires have been cleared by the air-balance subcontractor.

3.6 OUTDOOR LUMINAIRE POLES

A. Pole Base: Do not grout space between pole base plate and top of concrete pole foundation. Leave open to allow water to drain and for pole to breathe. If grout is recommended by pole manufacture in space between pole base plate and top of concrete pole foundation, provide grout with drain hole through grouting.

B. Pole Delivery: Unwrap pole upon delivery to job site, unless otherwise instructed by pole manufacturer. Wrapped poles exposed to weather that show wrapper striping or other deterioration of finish shall be replaced at Contractor expense. Replacement shall be new pole or pole refinished at pole factory.

C. Installation:
1. Poles shall be erected only with luminaire(s) or equivalent damping device, unless otherwise instructed by pole or luminaire manufacturer. Poles installed without luminaires are subject to increased modes of vibration.
2. Do not level pole with shims; leveling nuts above and below pole baseplate provide flexible adjustment and long-term holding of pole position.
3. Provide anchor bolts and pole manufacturer's bolt template prior to concrete formwork for pole bases.
4. Minimum wire size for circuit tap inside pole shall be AWG #12.
5. Install pole base cover. Cover shall rest on top of concrete pole foundation and completely conceal air space under pole base plate.

D. Fusing:
1. Install fuse holder and fuses as noted in pole base detail on Drawings.
2. All ballast-controlled luminaires shall be protected by Bussmann Fuses FNQ with Holders HEB (1-pole) or (2-pole) HEX. Fuse(s) and holder shall be mounted inside pole at handhole. Size of fuse to be recommended by the luminaire manufacturer.

3.7 RFI

A. Provide flexible braided metal electrical bonding strap from grounded housing to door frame of all fluorescent parabolic fixtures in designated rooms. Bonding strap shall be braided conductor designed for field installation to either long door side.

END OF SECTION 26 50 00

SECTION 27 00 00 - BASIC MATERIALS AND METHODS

PART 1 – GENERAL

1.01 RELATED WORK

A. The entire drawing and specification package apply to the work specified in the telecommunications sections of the specifications and shall be complied with in every respect. The Contract Documents are comprised of the drawings and specifications. The Contractor shall examine these Contract Documents, and coordinate required work indicated in each.

1.02 SCOPE OF WORK

A. The work covered by the specifications includes furnishing materials, labor, transportation, tools, permits, fees, utilities, and incidentals necessary for the complete installation of work required in the Contract Drawings.

B. It is the intent of the Contract Documents to provide an extension of the existing installed systems interfaced with new systems, complete in every respect.

C. The Contractor shall be responsible for coordination and proper relation of his work to the building structure and to the work of all trades. The Contractor shall visit the premises and thoroughly familiarize himself with the existing site conditions, details of the work and the working conditions, and verify dimensions in the field. The Contractor shall advise the Engineer of any discrepancy prior to bidding. The submission of bids shall be deemed evidence of the Contractor's site visit; coordination of existing conditions and include consideration for existing conditions.

D. Provide line-by-line specification review for each Division 27 section annotated to certify compliance or deviation.

1.03 DRAWINGS AND SPECIFICATIONS

A. The drawings and these specifications are complementary to each other, and what is required by one shall be as binding as if required by both.

B. If variations or departures from the drawings are deemed necessary by the Contractor, details of such departures and the reasons therefore shall be submitted to the Engineer for review. No departures shall be made without prior written acceptance of the Engineer.

C. Should the drawings or specifications disagree in themselves or with their counterpart, the better quality or greater quantity of work or materials shall be estimated upon, and unless otherwise directed by the Engineer in writing, shall be performed or furnished. In case the specifications should not fully agree with the Schedules, the latter shall govern. Figures indicated on drawings govern scale measurements and large scale details govern small scale drawings.

D. Items specifically mentioned in the specifications but not shown on the drawings and/or items shown on the drawings but not specifically mentioned in the specifications shall be installed by the Contractor under the appropriate section of work as if they were both specified and shown.

1.04 CODES AND STANDARDS

A. All work shall comply with the applicable articles of the National Electrical Code, the National Electrical Safety Code, the National Fire Codes (published by National Fire Protection Association), and City Codes and Ordinances, as well as any other authorities that may have lawful jurisdiction pertaining to the work specified. None of the terms or provisions of this specification shall be construed as waiving any of the rules, regulations, or requirements of these authorities.

B. Contractor is responsible for knowledge and application of current versions of all applicable standards and codes. In cases where listed standards and codes have been updated, Contractor shall adhere to the most recent revisions, including all relevant changes or addenda at the time of installation.

C. ANSI/TIA:

1. ANSI/TIA-526-7-A (July 2015) Measurement of Optical Power Loss of Installed Single-Mode Fiber Cable Plant
2. TIA-526.2-A (July 2015) Effective Transmitter Output Power Coupled into Single-Mode Fiber Optic Cable - Adoption of IEC 61280-1-1 ed. 2 Part 1-1: Test Procedures for General Communication Subsystems – Transmitter Output Optical Power Measurement for Single-Mode Optical Fiber Cable
3. ANSI/TIA-4994 (March 2015) Standard for Sustainable Information Communications Technology
4. ANSI/TIA-526-14-C (April 2015) Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant
5. ANSI/TIA-568.0-D (September 2015) Generic B (supersedes TIA-568-C.0 and TIA-568-C-1)
6. ANSI/TIA-568.1-D (September 2015) Commercial Building Telecommunications Infrastructure Standard (supersedes ANSI/TIA-C.1)ANSI/TIA-568.2-D (September 2018) Balanced Twisted-Pair Telecommunications Cabling and Components Standard
7. ANSI/TIA-568.3-D (June 2016) Optical Fiber Cabling Components Standard
8. ANSI/TIA-568.4-D (August 2020) Broadband Coaxial Cabling Components Standard
9. ANSI/TIA-569-E (May 2019) Telecommunications Pathways and Spaces
10. ANSI/TIA-598-D (July 2014) Optical Fiber Cable Color Coding
11. ANSI/TIA-570-C (August 2012) Residential Telecommunications Infrastructure Standard
12. ANSI/TIA-606-C (June 2017) Administration Standard for Telecommunications Infrastructure
13. ANSI/TIA-607-D (July 2019) Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises
14. ANSI/TIA-758-B (March 2012) Customer-Owned Outside Plant Telecommunication Infrastructure Standard
15. ANSI/TIA-862-B (February 2016) Structured Cabling Infrastructure Standard for Intelligent Building Systems
16. ANSI/TIA-942-B (July 2017) Telecommunications Infrastructure Standard for Data Centers
17. ANSI/TIA-1005-A (May 2012) Telecommunications Infrastructure Standard for Industrial Premises
18. ANSI/TIA-1005-A-1 (January 2015) Telecommunications Infrastructure Standard for Industrial Premises, Addendum 1- M12-8 X-Coding Connector - Addendum to TIA-1005-A
19. ANSI/TIA-1183 (August 2012) Measurement Methods and Test Fixtures for Balun-Less Measurements of Balanced Components and Systems
20. ANSI/TIA-1183-1 (January 2016) Measurement Methods and Test Fixtures for Balun-Less Measurements of Balanced Components and Systems, Extending Frequency Capabilities to 2 GHz - Addendum to TIA-1183

21. TIA-1152 (November 2016) Requirements for Field Test Instruments and Measurements for Balanced Twisted-Pair Cabling
22. TIA-1179-A (September 2017) Healthcare Facility Telecommunications Infrastructure Standard
23. ANSI/TIA-4966 (May 2014) Telecommunications Infrastructure Standard for Educational Facilities
24. TIA-455-104-B (February 2016) FOTP 104- Fiber Optic Cable Cyclic Flexing Test (supersedes TIA-455-104-A)
25. TIA/EIA-455-25-D (February 2016) FOTP-25 Impact Testing of Optical Fiber Cables
26. TIA-604-18 (November 2015) FOCIS 18 Fiber Optic Connector Intermateability Standard – Type MPO-16
27. TIA-604-5-E (November 2015) FOCIS 5 Fiber Optic Connector Intermateability Standard- Type MPO
28. TIA-5017 (March 2016) Telecommunications Physical Network Security Standard
29. TIA-TSB-155-A (Reaffirmed 10-6-2014) Guidelines for the Assessment and Mitigation of Installed Category 6 Cabling to Support 10GBASE-T
30. TSB-184 (July 2009) Guidelines for Supporting Power Delivery Over Balanced Twisted-Pair Cabling
31. TSB-4979 (August 2013) Practical Considerations for Implementation of Multimode Launch Conditions in the Field
32. TSB-190 (June 2011) Guidelines on Shared Pathways and Shared Sheaths
33. TIA-TSB-162-A (November 2013) Telecommunications Cabling Guidelines for Wireless Access Points
34. TSB-5018 (July 2016) Structured Cabling Infrastructure Guidelines to support Distributed Antenna Systems
35. TIA-492AAAE (June 2016) Detail Specification for 50-µm Core Diameter/125-µm Cladding Diameter Class 1a Graded-Index Multimode Optical Fibers with Laser-Optimized Bandwidth Characteristics Specified for Wavelength Division Multiplexing
36. TIA-492AAAB-A (November 2009) Detail specification for 50-µm core diameter/125-µm cladding diameter class Ia graded-index multimode optical fibers
37. TIA-455-243 (March 2010) FOTP-243 Polarization-mode Dispersion Measurement for Installed Single-mode Optical Fibers by Wavelength-scanning OTDR and States-of-Polarization Analysis
38. TSB-172-A (February 2013) Higher Data Rate Multimode Fiber Transmission Techniques

F. National Electric Codes
1. National Electrical Safety Code (NESC) (IEEE C2-2012)
2. NFPA 70-2020, National Electrical Code© (NEC©)
3. ANSI/IEEE C2-207, National Electrical Safety Code®
4. National Electrical Code (NEC) (NFPA 70)
5. NFPA 72 National Fire Alarm and Signaling Code

G. ASHRAE
1. ASHRAE Standard 90.4P, Energy Standard for Data Centers and Telecommunications Buildings

H. OSHA Standards and Regulations – all applicable

I. Local Codes and Standards – all applicable

J. Anywhere cabling standards conflict with one another or with electrical or safety codes, Contractor shall defer to the NEC and any applicable local codes or ordinances, or default to the most stringent requirements listed by either.

K. Knowledge and execution of applicable standards and codes is the sole responsibility of the

Contractor.

L. Any violations of applicable standards or codes committed by the Contractor shall be remedied at the Contractor's expense.

M. In any instance where these Specifications call for materials for construction of a better quality or larger size than required by the codes, the provisions of these Specifications shall take precedence. The codes shall govern in case of direct conflict between the Codes and the Drawings.

1.05 EXISTING UTILITIES

A. The Contract Documents reflect the general location and routing for all telecommunications services known to exist on this project.

1.06 BUILDING CONSTRUCTION AND LAYOUT OF WORK

A. General: It shall be the responsibility of the Contractor to consult the Engineering Drawings and Details so as to thoroughly familiarize himself with the type and quality of construction to be provided on this project.

B. The drawings are diagrammatic in nature and do not show every connection in detail or every line or conduit in its exact location. These details are subject to the requirements of all codes and ordinances as well as all structural and architectural conditions. The Contractor shall carefully investigate structural and finish conditions and shall coordinate the separate trades in order to avoid interference between the various phases of work. Work shall be laid out so that it will be concealed in furred chases unless specifically noted or indicated to be exposed. Work shall be installed to avoid crippling of structural members; therefore, inserts to accommodate conduit hangers shall be set before concrete is poured, and proper openings through floors, walls, beams, etc. shall be provided as hereinafter specified or as otherwise indicated or required before concrete is poured. All work shall be run parallel or perpendicular to the lines of the building unless otherwise noted.

C. The approximate location of equipment items is indicated on the drawings. Exact locations are to be determined by coordination of dimensions from approved equipment submittals and site-verified field measurements and will in all cases be subject to the approval of the Engineer. The Engineer reserves the right to make any reasonable changes in the indicated locations prior to installation for no additional cost.

D. In areas of existing special ceiling construction the removal and restoration must be carefully planned such that the existing condition of the ceilings is maintained. It may be necessary for the Contractor to procure a Subcontractor familiar with this work to achieve this requirement.

PART 2 – PRODUCTS

2.01 GENERAL MATERIALS AND EQUIPMENT REQUIREMENTS

A. Materials, in general, shall conform to the National Electrical Code requirements and shall be listed, inspected, and approved by the Underwriters Laboratories and shall bear the UL label where labeling service is available. The label or listing of the Underwriters Laboratories, Inc. will be accepted as evidence that the materials or equipment conform to the applicable standards of that agency. In lieu of this listing, the Contractor may

submit a statement from a nationally recognized, adequately equipped testing agency, indicating that the items have been tested in accordance with required procedures, and that the materials and equipment comply with all Contract requirements.

2.02 STANDARD PRODUCTS

A. Materials and equipment shall be the standard catalog products of manufacturers regularly engaged in the manufacture of products conforming to these specifications, and shall essentially duplicate materials and equipment that have been in satisfactory use at least two (2) years prior to bid opening. Where custom or special items are required, these shall be fully described using drawings, material lists, etc., which fully describe in detail the item proposed for use on this project.

2.03 MANUFACTURER'S INSTRUCTIONS

A. The Contractor is responsible for furnishing the proper telecommunications equipment and/or material and for seeing it is installed as intended by the manufacturer. The Contractor shall, wherever necessary, request advice and supervisory assistance from equipment manufacturers as required for the proper installation, operation, or start-up. The Contractor shall notify the Engineer in writing of any conflict between the Contract Documents and the manufacturer's recommendations and shall obtain from the Engineer instructions/direction before proceeding with the work. The Contractor shall pay for all costs resulting from deficiencies created by installation not in accordance with the manufacturer's recommendations or the instructions of the Engineer.

2.04 RUST PREVENTION

A. Metallic materials shall be protected against corrosion. Exposed metallic parts of equipment exposed to the elements shall be given a rust inhibiting treatment and standard finish by the manufacturer. Components such as boxes, bodies, fittings, guards, and miscellaneous parts shall be protected in accordance with the ASTM A123 or A153, except where other equivalent protective treatment is specifically approved in writing.

2.05 STORAGE AT SITE

A. The Contractor shall not receive material or equipment at the job site until ready for installation or until there is suitable space provided to properly protect equipment from rust, weather, humidity, dust, or physical damage.

2.06 CONDITION OF MATERIALS

A. All materials required for the installation of the telecommunications systems shall be new and unused. Any material or equipment damaged in transit from the factory, during delivery to premises, while in storage on premises, while being erected and installed, or while being tested, until time of final acceptance, shall be replaced by this Contractor without extra cost to Owner.

2.07 NAMEPLATES

A. Factory assembled components and equipment shall be provided with embossed nameplates, securely attached to the equipment with rivets or screws. Nameplates will have information required to specifically identify the equipment in the future such as the manufacturer's name, address, catalog number, serial number, etc. All data on nameplates shall be legible at the time of final inspection.

PART 3 – EXECUTION

3.01 ACCEPTABLE MANUFACTURERS

A. The specifications contain the names of manufacturers which are considered acceptable based on the quality of the product.

B. Where acceptable manufacturers are listed, only products of those manufacturers may be provided. Additionally, the product must meet all the detailed requirements of the specifications.

C. If no manufacturer's name is mentioned, the Contractor shall provide equipment and material which meet the specifications.

D. The drawings represent the manufacturer's equipment scheduled. The listing of acceptable manufacturers in the specifications is not intended to imply that equipment of these other manufacturers will fit in the space provided or have the same electrical, structural or other requirements as the equipment scheduled. The Contractor must ensure that the equipment provided will meet all project requirements prior to submitting data on that equipment.

3.02 SPACE AND EQUIPMENT ARRANGEMENT

A. Equipment and components shall be installed in a manner to permit access to parts requiring service. Telecommunications equipment shall be installed in such a manner as to allow removal for service without disassembly of adjacent equipment.

B. Large equipment or apparatus which is to be installed in the building, and which is too large to permit access through stairways, doorways, or shafts shall be brought to the job and placed in the space before the enclosing structure is completed. Following placement in the space, such apparatus shall be thoroughly protected from damage.

C. Equipment shall have working clearances as required by applicable codes and standards.

3.03 SUBMITTAL AND REVIEW OF MATERIALS

A. After the Contract is awarded, but prior to proceeding with the Work, the Contractor shall obtain, check, certify, and submit complete Shop Drawings and Brochures from Manufacturers, Suppliers, Vendors, etc., for all materials and equipment specified herein. Submit Shop Drawings and Brochures in sufficient time so as not to impede the progress of work. Three weeks will be required for the processing of Shop Drawings and Brochures in the Engineer's office, exclusive of transmittal time. This time shall be considered by the Contractor when scheduling submittal data. After the Contract is awarded, the Contractor will advise the Engineer in writing of the schedule for submission of shop drawings and product data and the persons authorized to sign submittal data on behalf of the Company.

B. The Engineer's review of Shop Drawings and Brochures shall not relieve the Contractor of the responsibility for dimensions, errors that may be contained therein, or deviations from Contract Document requirements. It shall be clearly understood that the Engineer's noting some errors but overlooking others does not grant the Contractor permission to proceed in error. Regardless of any information contained in the Shop Drawings, the requirements of the Contract Documents shall govern and are not waived or superseded in any way by the submittal data review.

C. Before submission of Shop Drawings and Brochures, the Contractor shall certify that each Shop Drawing and each item of material or equipment complies with the Contract Documents for this Project. Such certification shall be made by the Owner, a Partner, a Corporate Officer of the Contractor, or by a person duly authorized to sign for the Contractor. Unless so certified, Shop Drawings and/or Brochures will be returned for resubmittal. Certifications shall be in the form of rubber stamp impressions or typed letter which states:

I hereby certify that this Shop Drawing and/or brochure and the equipment and material shown on this Shop Drawing and/or Brochure complies in all aspects (except as noted*) with the requirements of the Contract Documents for this Project. I further certify that all data shown herein as to performance, dimensions, construction, materials, and other pertinent items are true and correct.

Name of Contractor_____

Signed_____

Position_____

Date_____

*Refer to exception requirements herein.

D. Each Shop Drawing shall indicate in the lower right hand corner and each Brochure shall indicate on the front cover the following: Title of the Sheet or Brochure; name and location of the building; names of the Engineer, Contractor, Manufacturer, Supplier, Vendor, etc., the date of submittal; and the date of each correction and revision. So far as is practical, each Shop Drawing and/or Brochure shall bear a cross-reference note to the sheet number or numbers of the Contract Drawings and Specifications showing the same work. Shop Drawings and Brochures shall be prepared as follows:

1. Shop Drawings: Drawings shall be newly prepared and not reproduced from the Contract Documents, drawn to a scale that can be easily read and shall contain sufficient plans, elevations, sections, and isometrics to describe clearly the items in question. Drawings shall be prepared by a draftsman skilled in this type of work. All equipment layouts and similar Shop Drawings shall be drawn to at least 1/4-inch = 1'-0" scale.

2. All Shop Drawings shall indicate the equipment actually purchased. The elevation, location, support points, load imposed on the structure at support and anchor points, shall be indicated. All beam penetrations and slab penetrations shall be indicated and sized and shall be coordinated. All Design Drawing space allocations shall be maintained, such as ceiling height, chase walls, equipment room size, etc., unless proper written authorization is required from the Engineer to change them. All associated equipment shall be coordinated and clearly shown on the Shop Drawings.

3. Brochures: Brochures submitted to the Engineer shall be published by the Manufacturers and shall contain complete and detailed engineering and dimensional information to show that the equipment will fit into the allotted space.

4. Brochures submitted shall contain only information which is relevant to the particular equipment or materials to be furnished. Do not submit catalogs that describe several different items other than those items to be used unless all irrelevant information is marked out or relevant information is clearly marked.

E. The submittal format shall follow the Specifications format with a submittal required for each required section. The submittal shall be contained in a three-ring hard back binder. Copies of each submittal shall be three-hole punched and arranged (or folded if required) for the Engineer's filing convenience. Provide one copy of updated TABLE OF CONTENTS and progressive-tabbed index sheets also for the Engineer's filing convenience.

F. Submittal data for each section must be complete. Partial submittals will not be reviewed. To the greatest extent possible all sections shall be submitted with the first submission. No more than three additional submissions will be allowed to complete the submittal package.

G. Unless a greater number is indicated within Division One of these specifications, submit six (6) copies of all Brochures for review. Submit one (1) reproducible and one (1) blueprint of shop drawings for review. Comments will be made on the reproducible to facilitate copying.

H. Any submittal that is disapproved must be resubmitted within two (2) weeks following notification of such disapproval. If no satisfactory material is submitted within the two-week period, the Engineer reserves the right to require the Contractor to furnish items exactly as described in the Contract Documents.

I. No allowances will be made for submittals which are not made in a timely fashion or which are turned down because they do not meet the specifications. Should delivery problems arise due to the above, affecting the completion time of the project, the Contractor will furnish and install acceptable alternates until the proper materials arrive and then replace the alternate materials with the approved materials, all at no cost to the Owner. If the Contractor is not able to furnish an acceptable alternate until the proper materials arrive, he will assume all costs for furnishing and installing all alternates as directed by the Engineer and/or will pay a suitable penalty for the inconvenience experienced by the Owner. This penalty will be set by the Owner based on the particular circumstances.

3.04 SUPERVISION

A. A competent certified foreman or superintendent, approved by the Engineer, shall be maintained at the project site to receive instructions and to act for the Contractor. Once this superintendent has been approved, no change shall be made without approval of the Owner or his authorized representative. The Owner and his authorized representative shall have the right to observe the work at any time. The Contractor shall have a representative present when his work is being observed, and he shall give assistance as required.

3.05 CUTTING AND PATCHING

A. Where it is necessary to cut through walls, floors, or ceilings to permit installation of work under this section of the Contract, or to repair any defects that may appear, up to the expiration of guarantee period, such cutting shall be done under the supervision of the Engineer. The Contractor shall not be permitted to cut or modify any structural members without the written permission of the Engineer.

B. Patching of all openings and repairing of any damage to the work of other trades occasioned by cutting operations, or occasioned by the failure of any part of work installed under this Contract, shall be performed by the trade whose work is involved, and shall be paid for by the Contractor.

C. Openings cut through exterior walls or roofs shall be provided with suitable covers to protect the property or materials involved. Openings cut through walls below grade shall be properly

protected to prevent entrance of water or other foreign elements. Openings cut between fire zones or plenums shall be sealed to maintain the fire integrity of the wall or floor. Conduits and cable tray through plenum wall shall be sealed using materials complying with UL 1479, NEC 300-21, and NEC 800-3(C), and shall be UL classified.

3.06 HOISTING, SCAFFOLDING, AND TRANSPORTATION

A. Provide hoisting and scaffolding facilities as required to set materials and equipment in place.

3.07 CLEANING

A. The Contractor shall at all times keep the premises free from accumulations of waste material or rubbish. Debris shall be removed from the site and from any street or alley adjacent to the site.

B. At completion of the project, the Contractor shall remove all tools, scaffolding, and surplus materials. Contractor shall leave the area "broom clean". Before final acceptance, vacuum all panels, cabinets, racks and other equipment enclosures. Wipe clean all fixture lenses and reflectors, all panelboard and switchboard interior and exterior surfaces, being careful to remove all stray paint, construction materials, dust, and particles. Touch-up all marred surfaces to restore existing conditions to those provided by the manufacturer.

3.08 CONDUIT SLEEVES

A. Where conduits pass through walls or floors not on fill, galvanized sheet metal sleeves shall be provided and shall be sealed to prevent air and noise transmission. In walls, they shall be flush with each finished surface. In pipe chases, they shall extend 1-1/2 inches above floor slab and be cemented in a water tight manner. Size of these sleeves shall be at least 1/2 inch greater than outside diameter of the conduit.

B. For conduits passing through outside walls, provide and install galvanized steel sleeves having an inside diameter at least 4 inches greater than the outside diameter of contained conduit. Where these occur in walls having a waterproof coating applied, the sleeves shall have welded flanges to build into waterproofing. When conduits are installed, the annular space between pipe and sleeve shall be effectively sealed, using shredded lead hammered in place or an approved mastic sealer.

C. Pipe and duct sleeves, pitch pockets, and flashings compatible with the roofing installation shall be provided for roof penetrations.

3.09 GROUNDING

A. Ground buses shall be provided in each Telecommunications room by Division 16 Contractor unless noted on Contract Drawings.

B. Telecommunications grounding system shall be a single point grounding from the building entrance electrical ground to each Telecommunications room. This Grounding system shall be provided by Division 16 Contractor unless notes on Contract Drawings.

C. All Conduit systems, cabinets' racks, cable trays, protector blocks, SCTP patch panels and/or miscellaneous equipment, etc. shall be grounded by being connected to the common telecommunications grounding system. The conductors shall be a # 6awg solid with a green jacket

3.10 RECEDENCE OF WORK

1. This Contract includes many different systems furnished and installed by different trades. All trades shall coordinate their work with that of all other trades so that it may be installed in the most direct and workmanlike manner without hindering or handicapping other trades.

3.11 RECORD DRAWINGS

A. The Contractor shall keep a set of Drawings on the job, noting daily all changes made in these Drawings in connection with the final installation, including exact dimensioned locations of all new and uncovered existing active and inactive utilities outside the building, and shall turn over a clean, neatly marked set of mylar reproducible Drawings showing "as-installed" work to the Engineer for delivery to the Owner. All underground utilities, services, and systems shall be accurately located by the Contractor and dimensioned on the "as-installed" Drawings.

3.12 OPERATING AND MAINTENANCE MANUAL

A. The Contractor shall furnish indexed operating and maintenance manuals with complete technical data for each system, piece of equipment, and material installed under this Contract.

B. Two (2) copies of the manual, bound in hardback binders or an approved equivalent, shall be provided. One copy shall be completed and delivered to the Engineer prior to the time that system and equipment tests are performed. The second copy shall be delivered prior to final acceptance.
   1. Provide one (1) operation and Maintenance manual for each building. Provide one (1) as-built floor plan and one CD for each building.

C. The manual shall include the following information
   1. Manufacturer's installation instructions.
   2. Manufacturer's local representative and/or distributor's name and address.
   3. Manufacturer's operating and maintenance instructions.
   4. Manufacturer's internal wiring diagrams.
   5. Contractor's installation wiring diagrams.
   6. Replacement part number listings and descriptions.
   7. Framed operating instructions, when required, in individual Specification sections.
   8. Warranties and guarantees.
   9. Provide an approved submittal at the front of each section.

D. The manuals shall be identified on the cover as "Operating and Maintenance Manual" with additional cover display of the name and location of project, the Owner, the Engineers, the General Contractor, and the Subcontractors installing equipment represented in the brochure.

E. The manual shall have a Table of Contents and shall be grouped in sections according to the sections of Division 27. Each section shall have a copy of the pages of the Specifications covered within the section. Sections shall be organized as follows:
   1. Each section in the manual shall identify the grouping of all literature required for the system or equipment included.
   2. The contents of each section shall be arranged in the following sequence: First, the approved engineering submittals with complete performance and technical data; second, the manufacturer's installation brochure; third, the manufacturer's operating and maintenance brochure; fourth, the manufacturer's installation wiring diagram;

fifth, the Contractor's field wiring diagram, if different; and sixth, the manufacturer's brochure listing replacement part numbers and description.

3. Provide a final section entitled, "Warranties and Guarantees", for all equipment, etc.

3.13 EXISTING FACILITIES

1. The Contractor shall be responsible for loss or damage to the existing facilities and shall be responsible for repairing or replacing such loss or damage. The Contractor shall send proper notices and receive written permission from the Owner to enter existing areas. Before beginning work in existing areas, the Contractor shall make necessary arrangements and perform other services required for the care, protection, and in-service maintenance of all electrical, communication, plumbing, heating, air condition, and ventilating services for new and existing facilities. The Contractor shall erect temporary barricades with necessary safety devices to protect personnel from injury, removing all such temporary protection upon completion of the work.

2. The Contractor shall provide temporary or new services to existing facilities as required to maintain their proper operation when normal services are disrupted as a result of the work being accomplished under this project.

3. Where existing construction is removed to provide working and extension access to existing utilities, the Contractor shall remove doors, piping, conduit, outlet boxes, wiring, light fixtures, air condition ductwork, and equipment, etc. to provide this access and shall reinstall same upon completion of work.

4. Where partitions, walls, floors, or ceilings of existing construction are indicated to be removed, the Contractor shall remove and reinstall in locations approved by the Engineer all devices required for the operation of the electrical systems installed in the existing construction. This is to include, but is not limited to, temperature control system devices, electrical switches, relays, fixtures, piping, conduit, etc.

3.14 DEMOLITION AND RELOCATION

1. The Contractor shall modify, remove, and relocate all materials and items so indicated on the drawings or required by the installation of new facilities. All removals and/or dismantling shall be conducted in a manner as to produce maximum salvage. Salvage materials shall remain as directed by the Owner. Materials and items scheduled for relocation and which are damaged during dismantling or reassembly operations shall be repaired and restored to the approval of the Owner. The Contractor may substitute new materials and items of like design and quality in lieu of materials and items to be relocated, if approved by the Owner.

2. All items scheduled for relocation and/or reuse shall be inspected by the Contractor and the Owner or his authorized representative. A written report of the condition of each item shall be made and provided to the Engineer. Where items scheduled for relocation and/or reuse are considered unsuitable for reuse, the Contractor shall so notify the Engineer and await reinstallation instructions before proceeding with removal. Items damaged in reinstallation shall be repaired or replaced by the Contractor as directed by the Owner at not additional cost to the Owner or the Engineer.

3. All items which are to be relocated shall be carefully removed in reverse to original assembly or placement and protected until relocated. The Contractor shall clean, repair, and provide all new materials, fittings, and appurtenances required to complete the relocation and to restore the items to good operative order. All relocations shall be performed by workmen skilled in the work ad in accordance with standard practice of the trades involved.

4. Service lines and wiring to items to be removed, salvaged, or relocated shall be removed to

points as indicated on the drawings, specified, or acceptable to the Owner. Service lines and wiring not scheduled for reuse shall be removed to the points at which reuse is to be continued or service is to remain. Such services shall be sealed, capped, or otherwise tied off or connections into the existing facilities in such a manner as to result in minimum interruption of services to adjacent occupied areas. Services to existing areas or facilities which must remain in operation during the construction period shall not be interrupted without prior specific written approval of the Engineer.

3.15 OUTAGES

1. Outages of services as required by the project will be permitted, but only at a time approved by the Owner. The Contractor shall notify the Owner in writing two (2) weeks in advance of the requested outage in order to schedule required outages. No outages shall be taken unless written approval has first been received from the Owner. The time allowed for outages will not be during normal working hours unless otherwise approved by the Owner. All costs of outages, including overtime charges, shall be included in the Contract amount.

END OF SECTION

SECTION 27 10 00 - STRUCTURED CABLING SYSTEM

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Summary of Work:
1. Provide a complete and tested cable distribution system for data interconnections (Local Area Network). The data distribution system shall include fully terminated unshielded twisted pair cables, fiber optic cabling, raceways, conduit, UTP termination devices, data communications outlets, fiber enclosures, patch panels, patch cables, network racks, and other incidental and miscellaneous premises wiring system hardware as required for a complete and usable system. The installation shall comply with all applicable codes and standards in effect at the job site and as indicated in the Drawings and Specifications.

1.2 QUALITY ASSURANCE

A. Acceptable manufacturers:
1. The equipment/products described herein, and furnished per these specifications shall be the product of one manufacturer. All references to model numbers and other detailed descriptive data are intended to establish standards of design performance, and quality, as required.
2. Acceptable product manufacturers shall provide a complete category 6 solution as manufactured by **Panduit only**. No other manufacturers will be allowed.
3. Provide CAT6A cabling, connectors, patch cables, etc. for all video surveillance cameras and wireless access points. One CAT6A cable per device.

B. Installer Qualifications:
1. The Data Cable System Installer shall be licensed and shall meet all applicable regulations of the State of Texas and Department of Labor insofar as they apply to this type of system. The proposer shall be a firm normally employed in the low voltage and data cabling industry and shall provide a reference list of ten (10) large-scale projects and contact names confirming successful Category 6 premises wiring system installations.
2. All Data Cable Systems installation shall be performed by a (BICSI) Certified - Registered Telecommunications Technician or under the direct supervision of a (BICSI) Certified - Registered Communications Distribution Designer (RCDD).
3. All Data Cable Systems installation shall be performed by a factory/manufacturer certified installer.
4. The proposing contractor and the installing contractor must be the same company. No subcontractor to the proposing SCS contractor will be allowed for any portion of the SCS scope of work.

C. Pre-Construction Meeting:
1. The successful Contractor shall attend a mandatory pre-construction meeting with individuals deemed necessary by the Owner’s representative prior to the start of the work.

D. Acceptance:
1. The Owner’s representative reserves the right to reject all or a portion of the work performed, either on technical or aesthetic grounds.

E. Warranty:

1. The selected system installer shall be a certified installing contractor of product and hold current certification. Contractor shall be shall provide an end-to-end performance warranty of no less than 20 years. The warranty shall be the maximum provided by the manufacturer. The proposer shall provide current certification documentation. The performance warranty shall be issued by the manufacturer and shall warrant that ALL Category 6 cable links have been tested bi-directionally (end to end) using a Level 2 tester, per TSB-67, and that all test results conform to the most current TIA/EIA-568-A and/or TSB-67 Link values.
2. The warranty will also cover multimode fiber optic cabling. Performance testing shall be conducted in accordance with ANSI/EIA/TIA-526-14 Standard, method B.
3. The warranty will stipulate that all products used in this installation meet the prescribed mechanical and transmission specifications for such products as described in ISO/IEC 11801, ANSI/TIA/EIA-568-A, or EN 50173. Quality and workmanship evaluation shall be solely by the Owner/Designer and designated representatives.

1.3 REGULATORY REQUIREMENTS

A. Standards: All work shall be performed in accordance with the latest revisions of the following standards and codes:
1. Latest Local Codes and Amendments
2. 2015 National Electrical Code

B. Other References:
1. TIA/EIA-568-A Commercial Building Telecommunications Wiring Standard
2. EIA/TIA-569 Commercial Building Standard for Telecommunication Pathways and Spaces.
3. TIA/EIA-606 The Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
4. TIA/EIA-607 Commercial Building Grounding and Bonding Requirements for Telecommunications.
5. EIA/TIA 455-A Standard Test Procedure for Fiber Optic Fibers, Cables, Transducers, Sensors, Connecting and Terminating Devices and Other Fiber Optic Components.
6. TIA/EIA TSB 67 Transmission Performance Specification for Field Testing of Unshielded Twisted-Pair Cabling Systems.
7. TIA/EIA TSB 72 Centralized Optical Fiber Cabling Guidelines
8. ISO/IEC 11801 Generic Cabling Standard
9. EN 50173 Generic Cabling Standards for Customer Premises
10. ANSI/EIA/TIA 526-14 Optical Power Loss Measurements of Installed Multimode Fiber Cable Plan.

C. Governing Codes and Conflicts:
1. If the requirements of these specifications or the Project Drawings exceed those of the governing codes and regulations, then the requirements of these specifications and the Drawings shall govern. However, nothing in the Drawings or Specifications shall be construed to permit work not conforming to all governing codes and regulations.

1.4 ABBREVIATIONS

A. The following abbreviations are used in this document:

DC	Direct Current
IDF	Intermediate Distribution Frame
MDF	Main Distribution Frame
PBX	Private Branch Exchange

UTP Unshielded Twisted Pair

1.5 SUBMITTALS

A. Project Initiation:
1. Within fourteen (14) days of Notice to Proceed, the data network system installer shall furnish the following in a single consolidated submittal:
   a. Permits: The Contractor shall obtain all required permits and provide copies to the Owner/Architect/Engineer.
   b. Product Literature: Complete manufacturer's product literature for all cable, patch panels, cross-connect blocks, cable supports, cable labels, outlet devices, and other products to be used in the installation. In addition, whenever substitutions for recommended products are made, samples (when requested by the Owner/Designer) and the manufacturer's supporting documentation demonstrating compatibility with other related products shall be included.
   c. Construction Schedule: A time-scaled Construction Schedule, using PERT/CPM, indicating general project deadlines and specific dates relating to the installation of the cable distribution system.
   d. Testing: Proposed Contractor Category 6 UTP cable test result forms, fiber optic cable test result forms and a list of instrumentation to be used for systems testing.

B. Shop Drawings:
1. Submit the following items, for Owner review and approval, within twenty-eight (28) days of notice to proceed:
   a. Proposed circuit routing and circuit grouping plan prepared by a BICSI certified RCDD (Registered Communications Distribution Designer). The RCDD certification must be current.
   b. Conformance: For items which are being provided exactly as specified, provide a letter stating the item description and model number, and that it is being provided as specified. For items which are not as specified, provide standard manufacturer's cut sheets or other descriptive information and a written description detailing the reason for the substitution.
   c. Provide RCDD certification

C. Project Completion:
1. As a condition for project acceptance, the Contractor shall submit the following for review and approval:
   a. Samples: Complete manufacturer's product literature and samples (if requested) for all pre-approved substitutions to the recommended products made during the course of the Project.
   b. Inspection and Test Reports: During the course of the project, the Contractor shall maintain an adequate inspection system to insure that the materials supplied and the work performed conform to Contract requirements. The contractor shall provide written documentation that indicates that materials acceptance testing was conducted as specified. The Contractor shall also provide documentation, which indicates that all cable termination testing was completed and that all irregularities were corrected prior to job completion.
   c. Operating and Maintenance Instructions: Operating and maintenance instructions for all devices within the system. These instructions shall reflect any changes made during the course of construction, and shall be provided to the Owner for their use in a three-ring binder labeled with the project name and description (4 copies).
   d. As-Built Drawings: As-built drawings will include cable pathways, data outlet locations with correct labeling and MDF location. The as-built

drawings will be prepared using AutoCAD version 13 or later. Provide the Owner with one mylar plot of each drawing and two blue line prints of each drawing. Provide the Owner with electronic versions of the as-builts on 2 qty. 8MB thumb drives.

PART 2 - PRODUCTS

2.1 GENERAL

A. Installation: The cabling shall be installed per requirements of the manufacturer and the Project Documents utilizing materials meeting all applicable TIA/EIA standards. The Contractor is responsible for providing all incidental and/or miscellaneous hardware not explicitly specified below as required for a complete and operational system.

B. Materials: Materials shall be as listed or shall be approved equivalent products of other manufacturers meeting the intent and quality level of the TIA/EIA specifications. All approved equivalent products will be published by addendum ten days prior to proposal for Architect/Engineer to review.

C. Testing: All installed cabling shall be tested 100% good after installation by the Contractor.

D. Ratings: All products shall be new and brought to the job site in the original manufacturer's packaging. Electrical components (including innerduct) shall bear the Underwriter's Laboratories label. All communications cable shall bear flammability testing ratings as follows:
CM Communications Cable
CMP Plenum Rated Communications Cable
CMR Riser-Rated Communications Cable

E. Initial Cable Inspection: The Contractor shall inspect all cable prior to installation to verify that it is identified properly on the reel identification label, that it is of the proper gauge, containing the correct number of pairs, etc. Note any buckling of the jacket that would indicate possible problems. Damaged cable or any other components failing to meet specifications shall not be used in the installation.

F. Cable Lubricants: Lubricants specifically designed for installing communications cable may be used to reduce pulling tension as necessary when pulling cable into conduit.
1. Approved Products
a. Twisted-pair cable: Dyna-Blue
American Polywater

G. Fire Wall Sealant: Any penetration through firewalls (including those in sleeves) will be resealed with an Underwriter Laboratories (UL) approved sealant.
1. Approved Products
a. 3M or
b. Pre-approved equal

2.2 DATA CLOSET (MDF/IDF) CATEGORY 6 TERMINATION HARDWARE

A. Equipment Racks/Cabinets:
1. All locations that require Two post rack shall use – Chatsworth #55053-703
2. For all locations that require Two-post racks The contractor shall Provide and install (2) Chatsworth Double sided Cable managers. (1) for each side Chatsworth #35521-703
3. All locations that require a wall mounted Cabinet shall use – Chatsworth 12419-748, 30 in. deep rack, with the exception of the Athletic Field Press Boxes.

4. All three Athletic Field Press Boxes shall be equipped with a Mier BW-RACK-8-ACE, 12RU 800 BTU Air-Conditioned wall mount rack.
   a. Install rack on wall at 80” A.F.F. TO THE BOTTOM OF THE RACK.
5. Provide plywood backing to support cabinet and paint to match wall color.

B. Distribution Rack Grounding

All Racks shall be grounded using stranded #6 AWG insulated copper conductor. Connect to service entrance grounding electrode. Provide all required bonding materials and hardware and bond to building grounding electrode subsystem at building electrical service entrance.

1. Approved Products – Ground Terminal Block
   Chatsworth Products, Inc. (CPI) #08009-001
2. Approved Products – Wall Mount Bus Bar (one pre MDF/IDF location)
   Chatsworth Products, Inc. (CPI) #10622-010

C. Fiber Optic Patch Panels

Provide (4) duplex fiber patch cords for each run installed. Verify Connection types with the owner prior to purchase

1. Approved Products:
   a. Patch Panels
      1. Panduit model #FRME1 for 1RU enclosures
      2. Panduit model #FRME2 for 2RU enclosures

The enclosures used shall provide termination panels for LC type connectors and be of sufficient size and capacity to terminate 110% of the fiber count of the inside of outside fiber optic cables. Patch panels must be 19” rack mountable. Provide all termination accessories, fiber patch cords, enclosures and test for a complete fiber optic distribution system.

D. Modular Patch Panels: The Category 6 data station cable shall be terminated on a modular patch panels with rear mounted faceplates. Patch panels shall be 19-inch rack mountable. Workstation patch panels shall terminate all workstation communications outlets. Furnish units that adhere to the performance requirements TIA/EIA-568A standards.

1. Approved Products:
2.
   b. Patch Panels
      1. Panduit 24 Port #CPP24FMWBLY Mini-Com Flush Mount Modular Patch Panels
      2. Panduit 48 Port #CPP48FMWBLY Mini-Com Flush Mount Modular Patch Panels
   c. Provide cable support bars at the back of all patch panels to provide additional support at rear of rack and panels.
   d. Provide category 6 Jack Modules to terminate 110% of the total cable to each communications closet.

E. Power Strip: A power strip shall be installed horizontally at the back of each data rack.

1. Approved Products
   a. Chatsworth Products, Inc. (CPI) #12816-702

F. Cable Management Panels: Provide cable management panels as required for horizontal and vertical cable management. Provide vertical wire management on ends and in between all racks on entire project.

1. Approved Products

a. Horizontal – Panduit NCMHF1 (1-1/2”) NCMHF2 (3”)
b. Vertical – Panduit PRV8 with PRD8 double hinge doors

G. Network Rack Patch Cables: Cabling Contractor shall provide owner with one (1) Category 6 patch cable for each data drop on entire project. These cables will provide connectivity from the front of the network patch panels to the network equipment provided by owner upon move-in. The patch cables are to be terminated properly with RJ-45 connections on each end with the proper pin-out assignments per project configuration.
1. Approved Products:
All patch cords shall be manufactured by Panduit.

Headend patch cable colors shall be:
DATA / NETWORK – WHITE
INTERCOM / FRONTROW – BLUE
SECURITY / IP CAMERAS – GREEN
ACCESS POINTS / WAPs – RED
HVAC / BAS – PINK

a. Contractor to provide patch cables for each system as indicated above
1) Provide 1’ patch cables for MDF / IDF racks 100%

F. Category 3 cabling:
1. General Cable #2131505, 25 pair CAT3 cable.

2.3 CABLE ROUTING/PATHWAY

A. Cable Support System: Cable saddles, bridal rings or J-Hooks shall be used to route all exposed cables (cable not in conduit or cable tray) in open access environments as well as in communications closets.
1. Approved Products
a. Chatsworth Products Inc. (CPI) or
b. ComDangles

2.4 STATION WIRING

A. Wire: The data and voice wire provided for all outlets shall be (Category 6) unshielded twisted pair, four-pair, 24 AWG solid copper conductor, meeting the intent and quality level of the TIA/EIA-568-A Commercial Building Wiring Standard. Refer to floor plan and data outlet legend for number of active data ports to specified faceplates.
1. Approved Products: For all voice and data connections:

All wiring on the project shall be plenum-rated, Category 6, blue in color
Approved Manufacturers
1. Panduit TX6000, Model #PUP6004BU-UY

B. Testing: The Category 6 four-pair UTP cable must be UL Performance Level tested. Each 1000 foot spool must be individually tested with test results affixed to the spool.
1. For video surveillance cameras and wireless access points, provide Category 6A, blue in color: Panduit, Model #PUP6XHD04BU-G

C. Rating: Cable installed in conduit shall be non-plenum rated. Cable not installed in conduit shall be plenum rated if installed in plenum ceiling space, non plenum rated otherwise.

2.5 STATION HARDWARE

A. Flush Mount Jacks: Flush mount jacks shall be high quality Category 6 RJ45 modular jacks with circuit board construction and IDC style or 110-style wire, T568B terminations. Jacks shall meet EIA/TIA TSB40 recommendations for Category 6 connecting hardware.

1. Approved Products:
   a. Data Inserts
      1. Panduit TX6 Category 6 Jack Module, #CJ688TGxx.
      2. See 2.2. G. 1. above to match module color to patch cable color for each application.
   b. Wireless Access Point Inserts
      1. Provide Tile Bridge with box to install AP outlet flush with ceiling.
      2. Provide a biscuit with terminated cable for each Access Point, installed above ceiling.
   c. IP Camera Inserts
      1. Panduit Category 6A Jack Module, Green in color. #CJ6X88TGGR
      2. Provide (1) CAT6A cable for each IP Camera.
   d. Wireless Access Point Inserts
      3. Panduit Category 6A Jack Module, Red in color. #CJ6X88TGRD
      4. Provide Tile Bridge with box to install AP outlet flush with ceiling.
      5. Provide (1) CAT6A cable for each Access Point.

2. All blank inserts shall be gray in color

B. Faceplates: Faceplates shall be a 4-port, flush mounted, 110 style, stainless steel in color for RJ45 outlets at all locations.

1. Approved Products:
   a. 4-Port Single Gang,
      1. Panduit Product Code #CFP4S

   b. Provide wall mounted handset faceplates where applicable for wall mounted phone. Refer to floor plan for locations.
   c. Mounting Straps (where applicable)

C. Workstation Patch Cables: Cabling Contractor shall provide owner with one (1) Category 6 patch cable for each data drop on entire project. Each cable will be factory terminated with RJ45 connections on each end with appropriate pin-out assignments per project configuration.

1. Approved Products:
   All Patch Cords to be manufactured by Panduit.

   a. Cat 6 Patch Cable BLUE in color
      1) All patch cables shall match the installed structured cabling system.
   b. Contractor to provide patch cables for each system as indicated:
      2) 100% - 10’

2.6 FIBER OPTIC PRODUCTS

1. Approved Products:
   a. 12 strand, single-mode indoor/outdoor, plenum rated with armored jacket,. Terminate with Panduit pre-polished LC style connectors.
   Approved Part Numbers
      1. Panduit #FSGP912Y

b. 24 strand, single-mode, indoor/outdoor stranded tube cable, riser (OFNR), 250um Fibers. Terminate with Panduit pre-polished LC style connectors
Approved Part Numbers
1. Panduit #FSNR924Y

PART 3 - EXECUTION

3.1 GENERAL

A. Fire Wall Penetrations: The contractor shall avoid penetration of fire-rated walls and floors wherever possible. Where penetrations are necessary, they shall be sleeved with metallic conduit and resealed with an Underwriter Laboratories (UL) approved sealant. Contractor shall also seal all floor, ceiling and wall penetrations in fire or smoke barriers and in the wiring closet.

B. Allowable Cable Bend Radius And Pull Tension: In general, communications cable cannot tolerate sharp bends or excessive pull tension during installation. Refer to the cable manufacturers allowable bend radius and pull tension data for the maximum allowable limits.

C. Cable Lubricants: After installation, exposed cable and other surfaces must be cleaned free of lubricant residue.

D. Pull Strings: Provide pull strings in all new conduits, including all conduits with cable installed as part of this contract. Pull test is not to exceed 200 pounds. Data and video cables can be pulled together with pull strings.

E. Conduit Fill: Conduit fill shall not exceed 40%.

F. Damage:
1. The Contractor shall replace or rework cables showing evidence of improper handling including stretches, kinks, short radius bends, over-tightened bindings, loosely twisted and over-twisted pairs at terminals and cable sheath removed too far (over 1-1/2 inches).
2. The Contractor shall replace any damaged ceiling tiles that are broken during cable installation.

G. Clean Up:
All clean up activity related to work performed will be the responsibility of the Contractor and must be completed daily before leaving the facility.

3.2 DOCUMENTATION

A. Labels
Coordinate all labeling schemes at headend and on cable with owner prior to permanently installing and testing outlets.

The Contractor will label all outlets using permanent/legible typed or machine engraved labels approved by the Owner (no handwritten labels permitted). Label patch panels in the wiring closet to match those on the corresponding data outlets. The font shall be at least on-eighth inch (1/8”) in height, block. All labels shall correspond to as-builts and to final test reports.

The following nomenclature should be used when labeling all ports:

All cables being served by MDF closet shall begin with ‘MC’ all IDF served cables shall begin

with 'IC#' (# designated IDF closet number).

Next identification shall note what # data port on patch panel (1 thru 48).

Example:

Outlet from 23rd port of the third patch panel from top of rack located at IDF-2
IC2-P3-23

Outlet from the 5th port of the second patch panel from the top of rack located at MDF
MC-B2-05

B. Floor Plan: A floor plan clearly labeled with all outlet jack numbers shall be included in the as-built plans.

C. Cables: All cables shall be labeled at both ends. This includes but not limited to horizontal voice and data cabling, copper backbone tie cables, and fiber optic cables.

D. Fiber Optics: Fiber optic strands shall be labeled at both ends on the fiber distribution panel.

E. Equipment racks: Equipment racks shall bear at least one indicating label indicated MDF or IDF. If rack is installed in IDF, label shall include IDF #.

F. Spreadsheet:
A laminated, detailed spreadsheet indicating port # and which room outlet it serves shall be mounted to the rack in each communications closet.

3.3 EQUIPMENT RACK CONFIGURATION

A. Equipment Racks: Equipment racks shall be assembled and mounted in locations shown on the Drawings and as detailed. Each rack shall be securely mounted to the floor and braced to the wall with cable tray in accordance with the manufacturer's instructions and recommendations. Racks shall be mounted such that the side rails are plumb with vertical cable management panels. Racks to be located such that future expansion can occur without relocating existing racks. Racks shall be grounded in accordance with NEC requirements.

B. Wire Management Components: Horizontal cable management panels shall be installed directly above and below each patch panel, also 2 per each 48 port patch panel should be left at site to accommodate the switch gear when they are installed. Vertical cable management panels shall be installed on each side of the rack. In instances where more than one rack is installed in a single location, vertical cable management shall be installed between the racks and on either side.

C. Cable Placement: Cable installation in the Wiring Closet must conform to the Project Drawings. All cabling shall be routed so as to avoid interference with any other service or system, operation, or maintenance location. Avoid crossing area horizontally just above or below any riser conduit. Lay and dress cables to allow other cables to enter the conduit/riser without difficulty at a later time by maintaining a working distance from these openings.

D. Cable Routing: Cable shall be routed as close as possible to the ceiling, floor or corners to ensure that adequate wall or backboard space is available for current and future equipment. All cable runs within the Wiring Closet shall be horizontal or vertical within the constraints of minimum cable bending radii. Minimum bend radius shall be observed. Cables shall not be tie-wrapped to electrical conduit or other equipment.

E. Installation: All incoming cables shall be routed on the cable tray and neatly dressed down to the patch panels.

F. Hardware: Provide rack and jack panel hardware as required for all data station wiring.

3.4 STATION WIRING INSTALLATION

A. General:
1. Cabling between wiring closet and workstation locations shall be made as individual home runs. No intermediate punch down blocks or splices may be installed or utilized between the wiring closet and the communications outlet at the workstation location.
2. All cable must be handled with care during installation so as not to change performance specifications. Factory twists of each individual pair must be maintained up to the connection points at both ends of the cable. There shall never be more than one and one-half inches of unsheathed Category 6 UTP cable at either the wiring closet or the workstation termination locations.

B. Exposed Cable:
1. All cabling shall be installed inside walls or ceiling spaces whenever possible. Exposed station cable will only be run where indicated on the Drawings.
2. Additional exposed cable runs will require Owner approval, and will only be allowed when no other options exist.

C. Placement: All cabling and associated hardware shall be placed so as to make efficient use of available space. All cabling and associated hardware shall be placed so as not to impair the Owner's efficient use of their full capacity.

D. Cable Routes:
1. All cabling placed in ceiling areas must be in conduit, cable tray or J-Hooks. Cable supports shall be permanently anchored to building structure or substrates. Provide attachment hardware and anchors designed for the structure to which attached and that are suitably sized to carry the weight of the cables to be supported. Do not route cable through webbing of structural steel. Cabling must be supported in dedicated supports intended to support cabling as described in this section.
2. Attaching cable to pipes or other mechanical items is not permitted. Use J-Hooks for up to 15 cables (Chatsworth hooks with appropriate brackets). All runs of sixteen (16) or more cables, provide cable rings on 36-inch maximum centers to hang cable. Communications cable shall be rerouted so as to provide a minimum of 18 inches spacing from light fixtures, sources of heat, power feeder conduits and EMI sources. Cabling shall not be attached to ceiling. Grid support wires. Cable runs shall be parallel or perpendicular to building structure. Multiple cables to be bundled together every 6 feet.

3.5 STATION HARDWARE

A. Flush Mount Jacks: Flush mount jacks shall be mounted in a faceplate with backbox.

B. Placement: Where possible, the communications outlet shall be located so that its centerline is 18 inches above floor level or 12 inches above permanent bench surfaces. Outlets shall not be mounted on temporary, movable, or removable surfaces, doors, or access hatches.

C. RJ-45 Jack Pin Assignments:
1. Pin connections for data station cable outlets and patch panels shall match EIA/TIA 568 modular jack wiring recommendation T568B.
2. Pin connections at data jack panels shall match pin connections at outlets (straight

through wiring).

3.6 CABLE TESTING REQUIREMENTS

A. Notification: The Owner and Engineer shall be notified one week prior to any testing so that the testing may be witnessed.

B. Inspection: Before requesting a final inspection, the Contractor shall perform a series of end-to-end installation performance tests. The Contractor shall submit for approval a proposal describing the test procedures, test result forms and timetable for all copper and fiber optic cabling.

C. Procedures: Trained personnel shall perform all testing. Acceptance of the test procedures discussed below is predicated on the Contractor's use of the recommended products and adherence to the inspection requirements and practices set forth. Acceptance of the completed installation will be evaluated in the context of each of these factors.

D. Errors: When errors are found, the source of each shall be determined, corrected and the cable retested. All defective components shall be replaced and retested. Re-test results must be provided on Owner approved forms and witnessed by Owner.

E. Twisted Pair Cable Testing:
   1. At a minimum, the Contractor shall test all station drop cable pairs from Data Closet termination patch panels to outlet device RJ45 jacks. Category 6 products shall be tested for compliance to ANSI/TIA/EIA 568A and ISO/IES 11801 for a Category 6 rated installation. Test equipment used shall meet TIA/EIA TSB-67, Level II accuracy. Further, the contractor shall have a copy of TSB-67 in their possession and be familiar with its contents.
   2. Each wire/pair shall be tested at both ends for the following:
      a. Wire map (pin to pin connectivity)
      b. Length (in feet)
      c. Attenuation
      d. Near end cross talk (NEXT)
      e. Power Sum
   3. Test equipment shall provide an electronic and printed record of these tests.
   4. Test results for each Category 6 four-pair UTP cable must be submitted with identification to match labels on all patch panel ports and RJ45 jacks and must match as-builts associated with that cable.

F. Testing: Once installed the cabling will be tested for continuity, shorts and grounds.
   1. Cabling:
      a. Continuity – 100% continuity testing is required and will be tested from the MDF/IDF location to each classroom drop. A checklist of each cable and test performed on that cable will be submitted once the testing has been completed.
      b. Shorts – No cable shorts will be permitted on the system. If a short is detected, the connector or cable will be repaired or replaced.
      c. Grounds – No direct ground on the center conductor of the AVDN cables are permitted.
   2. System:
      a. Continuity – As tested in the above testing requirements.
      b. Power Readings – A power reading will be required at each drop of each of the cabling systems. A +3 dB to a +7 dB is required at each drop with a common feed signal of + 15 dB into the head end amplifier. These measurements to be taken with an approved field strength meter of know

calibration. Test measurements to be performed at low channel, mid-band channel, and high channel to determine cable slope.

c. Signal Quality – A standard receiver, typical of those used in the system, shall randomly be connected to 10% of the outlets across the system and tuned to a reference channel of known quality. No visible indication of co-channel interference, noise, ghosting, or beat interference may be observed.

d. Carrier to Noise – Carrier to Noise shall be measured at random outlets representing an average cross section of the drops with an approved field strength meter by the following process. With normal operating levels the field set shall be tuned to each channels visual carrier and the level recorded. The input signal to the head end amplifier shall be removed and the input of the amplifier terminated with a short. Each channel shall be re-measured and the noise levels recorded. The Carrier to Noise measurement is the difference of the two figures.

e. Documentation of Results – All recorded measurements are to be tabulated and included in the systems documentation manual for reference during maintenance of the system.

3.7 INSPECTION

A. General: Conformance to the installation practices covered above are to be verified when completed. In some cases, the Owner/Designer may inspect before acceptance.

END OF SECTION

SECTION 27 10 00 - STRUCTURED CABLING SYSTEM

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION

A. Summary of Work:
1. Provide a complete and tested cable distribution system for data interconnections (Local Area Network). The data distribution system shall include fully terminated unshielded twisted pair cables, fiber optic cabling, raceways, conduit, UTP termination devices, data communications outlets, fiber enclosures, patch panels, patch cables, network racks, and other incidental and miscellaneous premises wiring system hardware as required for a complete and usable system. The installation shall comply with all applicable codes and standards in effect at the job site and as indicated in the Drawings and Specifications.

1.2 QUALITY ASSURANCE

A. Acceptable manufacturers:
1. The equipment/products described herein, and furnished per these specifications shall be the product of one manufacturer. All references to model numbers and other detailed descriptive data are intended to establish standards of design performance, and quality, as required.
2. Acceptable product manufacturers shall provide a complete category 6 solution as manufactured by **Panduit only**. No other manufacturers will be allowed.
3. Provide CAT6A cabling, connectors, patch cables, etc. for all video surveillance cameras and wireless access points. One CAT6A cable per device.

B. Installer Qualifications:
1. The Data Cable System Installer shall be licensed and shall meet all applicable regulations of the State of Texas and Department of Labor insofar as they apply to this type of system. The proposer shall be a firm normally employed in the low voltage and data cabling industry and shall provide a reference list of ten (10) large-scale projects and contact names confirming successful Category 6 premises wiring system installations.
2. All Data Cable Systems installation shall be performed by a (BICSI) Certified - Registered Telecommunications Technician or under the direct supervision of a (BICSI) Certified - Registered Communications Distribution Designer (RCDD).
3. All Data Cable Systems installation shall be performed by a factory/manufacturer certified installer.
4. The proposing contractor and the installing contractor must be the same company. No subcontractor to the proposing SCS contractor will be allowed for any portion of the SCS scope of work.

C. Pre-Construction Meeting:
1. The successful Contractor shall attend a mandatory pre-construction meeting with individuals deemed necessary by the Owner’s representative prior to the start of the work.

D. Acceptance:
1. The Owner’s representative reserves the right to reject all or a portion of the work performed, either on technical or aesthetic grounds.

E. Warranty:

1. The selected system installer shall be a certified installing contractor of product and hold current certification. Contractor shall be shall provide an end-to-end performance warranty of no less than 20 years. The warranty shall be the maximum provided by the manufacturer. The proposer shall provide current certification documentation. The performance warranty shall be issued by the manufacturer and shall warrant that ALL Category 6 cable links have been tested bi-directionally (end to end) using a Level 2 tester, per TSB-67, and that all test results conform to the most current TIA/EIA-568-A and/or TSB-67 Link values.
2. The warranty will also cover multimode fiber optic cabling. Performance testing shall be conducted in accordance with ANSI/EIA/TIA-526-14 Standard, method B.
3. The warranty will stipulate that all products used in this installation meet the prescribed mechanical and transmission specifications for such products as described in ISO/IEC 11801, ANSI/TIA/EIA-568-A, or EN 50173. Quality and workmanship evaluation shall be solely by the Owner/Designer and designated representatives.

1.3 REGULATORY REQUIREMENTS

A. Standards: All work shall be performed in accordance with the latest revisions of the following standards and codes:
1. Latest Local Codes and Amendments
2. 2015 National Electrical Code

B. Other References:
1. TIA/EIA-568-A Commercial Building Telecommunications Wiring Standard
2. EIA/TIA-569 Commercial Building Standard for Telecommunication Pathways and Spaces.
3. TIA/EIA-606 The Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
4. TIA/EIA-607 Commercial Building Grounding and Bonding Requirements for Telecommunications.
5. EIA/TIA 455-A Standard Test Procedure for Fiber Optic Fibers, Cables, Transducers, Sensors, Connecting and Terminating Devices and Other Fiber Optic Components.
6. TIA/EIA TSB 67 Transmission Performance Specification for Field Testing of Unshielded Twisted-Pair Cabling Systems.
7. TIA/EIA TSB 72 Centralized Optical Fiber Cabling Guidelines
8. ISO/IEC 11801 Generic Cabling Standard
9. EN 50173 Generic Cabling Standards for Customer Premises
10. ANSI/EIA/TIA 526-14 Optical Power Loss Measurements of Installed Multimode Fiber Cable Plan.

C. Governing Codes and Conflicts:
1. If the requirements of these specifications or the Project Drawings exceed those of the governing codes and regulations, then the requirements of these specifications and the Drawings shall govern. However, nothing in the Drawings or Specifications shall be construed to permit work not conforming to all governing codes and regulations.

1.4 ABBREVIATIONS

A. The following abbreviations are used in this document:

DC	Direct Current
IDF	Intermediate Distribution Frame
MDF	Main Distribution Frame
PBX	Private Branch Exchange

UTP Unshielded Twisted Pair

1.5 SUBMITTALS

A. Project Initiation:
1. Within fourteen (14) days of Notice to Proceed, the data network system installer shall furnish the following in a single consolidated submittal:
   a. Permits: The Contractor shall obtain all required permits and provide copies to the Owner/Architect/Engineer.
   b. Product Literature: Complete manufacturer's product literature for all cable, patch panels, cross-connect blocks, cable supports, cable labels, outlet devices, and other products to be used in the installation. In addition, whenever substitutions for recommended products are made, samples (when requested by the Owner/Designer) and the manufacturer's supporting documentation demonstrating compatibility with other related products shall be included.
   c. Construction Schedule: A time-scaled Construction Schedule, using PERT/CPM, indicating general project deadlines and specific dates relating to the installation of the cable distribution system.
   d. Testing: Proposed Contractor Category 6 UTP cable test result forms, fiber optic cable test result forms and a list of instrumentation to be used for systems testing.

B. Shop Drawings:
1. Submit the following items, for Owner review and approval, within twenty-eight (28) days of notice to proceed:
   a. Proposed circuit routing and circuit grouping plan prepared by a BICSI certified RCDD (Registered Communications Distribution Designer). The RCDD certification must be current.
   b. Conformance: For items which are being provided exactly as specified, provide a letter stating the item description and model number, and that it is being provided as specified. For items which are not as specified, provide standard manufacturer's cut sheets or other descriptive information and a written description detailing the reason for the substitution.
   c. Provide RCDD certification

C. Project Completion:
1. As a condition for project acceptance, the Contractor shall submit the following for review and approval:
   a. Samples: Complete manufacturer's product literature and samples (if requested) for all pre-approved substitutions to the recommended products made during the course of the Project.
   b. Inspection and Test Reports: During the course of the project, the Contractor shall maintain an adequate inspection system to insure that the materials supplied and the work performed conform to Contract requirements. The contractor shall provide written documentation that indicates that materials acceptance testing was conducted as specified. The Contractor shall also provide documentation, which indicates that all cable termination testing was completed and that all irregularities were corrected prior to job completion.
   c. Operating and Maintenance Instructions: Operating and maintenance instructions for all devices within the system. These instructions shall reflect any changes made during the course of construction, and shall be provided to the Owner for their use in a three-ring binder labeled with the project name and description (4 copies).
   d. As-Built Drawings: As-built drawings will include cable pathways, data outlet locations with correct labeling and MDF location. The as-built

drawings will be prepared using AutoCAD version 13 or later. Provide the Owner with one mylar plot of each drawing and two blue line prints of each drawing. Provide the Owner with electronic versions of the as-builts on 2 qty. 8MB thumb drives.

PART 2 - PRODUCTS

2.1 GENERAL

A. Installation: The cabling shall be installed per requirements of the manufacturer and the Project Documents utilizing materials meeting all applicable TIA/EIA standards. The Contractor is responsible for providing all incidental and/or miscellaneous hardware not explicitly specified below as required for a complete and operational system.

B. Materials: Materials shall be as listed or shall be approved equivalent products of other manufacturers meeting the intent and quality level of the TIA/EIA specifications. All approved equivalent products will be published by addendum ten days prior to proposal for Architect/Engineer to review.

C. Testing: All installed cabling shall be tested 100% good after installation by the Contractor.

D. Ratings: All products shall be new and brought to the job site in the original manufacturer's packaging. Electrical components (including innerduct) shall bear the Underwriter's Laboratories label. All communications cable shall bear flammability testing ratings as follows:
CM Communications Cable
CMP Plenum Rated Communications Cable
CMR Riser-Rated Communications Cable

E. Initial Cable Inspection: The Contractor shall inspect all cable prior to installation to verify that it is identified properly on the reel identification label, that it is of the proper gauge, containing the correct number of pairs, etc. Note any buckling of the jacket that would indicate possible problems. Damaged cable or any other components failing to meet specifications shall not be used in the installation.

F. Cable Lubricants: Lubricants specifically designed for installing communications cable may be used to reduce pulling tension as necessary when pulling cable into conduit.
1. Approved Products
a. Twisted-pair cable: Dyna-Blue
American Polywater

G. Fire Wall Sealant: Any penetration through firewalls (including those in sleeves) will be resealed with an Underwriter Laboratories (UL) approved sealant.
1. Approved Products
a. 3M or
b. Pre-approved equal

2.2 DATA CLOSET (MDF/IDF) CATEGORY 6 TERMINATION HARDWARE

A. Equipment Racks/Cabinets:
1. All locations that require Two post rack shall use – Chatsworth #55053-703
2. For all locations that require Two-post racks The contractor shall Provide and install (2) Chatsworth Double sided Cable managers. (1) for each side Chatsworth #35521-703
3. All locations that require a wall mounted Cabinet shall use – Chatsworth 12419-748, 30 in. deep rack, with the exception of the Athletic Field Press Boxes.

4. All three Athletic Field Press Boxes shall be equipped with a Mier BW-RACK-8-ACE, 12RU 800 BTU Air-Conditioned wall mount rack.
   a. Install rack on wall at 80” A.F.F. TO THE BOTTOM OF THE RACK.
5. Provide plywood backing to support cabinet and paint to match wall color.

B. Distribution Rack Grounding

All Racks shall be grounded using stranded #6 AWG insulated copper conductor. Connect to service entrance grounding electrode. Provide all required bonding materials and hardware and bond to building grounding electrode subsystem at building electrical service entrance.

1. Approved Products – Ground Terminal Block
   Chatsworth Products, Inc. (CPI) #08009-001
2. Approved Products – Wall Mount Bus Bar (one pre MDF/IDF location)
   Chatsworth Products, Inc. (CPI) #10622-010

C. Fiber Optic Patch Panels

Provide (4) duplex fiber patch cords for each run installed. Verify Connection types with the owner prior to purchase

1. Approved Products:
   a. Patch Panels
      1. Panduit model #FRME1 for 1RU enclosures
      2. Panduit model #FRME2 for 2RU enclosures

The enclosures used shall provide termination panels for LC type connectors and be of sufficient size and capacity to terminate 110% of the fiber count of the inside of outside fiber optic cables. Patch panels must be 19” rack mountable. Provide all termination accessories, fiber patch cords, enclosures and test for a complete fiber optic distribution system.

D. Modular Patch Panels: The Category 6 data station cable shall be terminated on a modular patch panels with rear mounted faceplates. Patch panels shall be 19-inch rack mountable. Workstation patch panels shall terminate all workstation communications outlets. Furnish units that adhere to the performance requirements TIA/EIA-568A standards.

1. Approved Products:
2.
   b. Patch Panels
      1. Panduit 24 Port #CPP24FMWBLY Mini-Com Flush Mount Modular Patch Panels
      2. Panduit 48 Port #CPP48FMWBLY Mini-Com Flush Mount Modular Patch Panels
   c. Provide cable support bars at the back of all patch panels to provide additional support at rear of rack and panels.
   d. Provide category 6 Jack Modules to terminate 110% of the total cable to each communications closet.

E. Power Strip: A power strip shall be installed horizontally at the back of each data rack.

1. Approved Products
   a. Chatsworth Products, Inc. (CPI) #12816-702

F. Cable Management Panels: Provide cable management panels as required for horizontal and vertical cable management. Provide vertical wire management on ends and in between all racks on entire project.

1. Approved Products

a. Horizontal – Panduit NCMHF1 (1-1/2") NCMHF2 (3")
b. Vertical – Panduit PRV8 with PRD8 double hinge doors

G. Network Rack Patch Cables: Cabling Contractor shall provide owner with one (1) Category 6 patch cable for each data drop on entire project. These cables will provide connectivity from the front of the network patch panels to the network equipment provided by owner upon move-in. The patch cables are to be terminated properly with RJ-45 connections on each end with the proper pin-out assignments per project configuration.
1. Approved Products:
All patch cords shall be manufactured by Panduit.

Headend patch cable colors shall be:
DATA / NETWORK – WHITE
INTERCOM / FRONTROW – BLUE
SECURITY / IP CAMERAS – GREEN
ACCESS POINTS / WAPs – RED
HVAC / BAS – PINK

a. Contractor to provide patch cables for each system as indicated above
1) Provide 1' patch cables for MDF / IDF racks 100%

H. Category 3 cabling:
1. General Cable #2131505, 25 pair CAT3 cable.

I. Site Plan Camera Equipment: IP Camera Contractor shall provide CommScope PFP-PX-S2 power supply. Equip power supply with two PFP-PX-8M distribution models, one PFP-PX-A1 Alarm Card, one PFP-SPS-C1 Controller and one PFP-SPS-1600M, installed in MDF A113.
1. Fiber patch panel – Model # - EPX-1U-PNL-ENC, installed in MDF
2. Fiber cassette qty of 3 - Model # 760221747
3. Surge protector qty of 7 – Model # DTK-2MHLP48B
4. Surge protector base qty of 2- Model # DTK-4MB
5. Hybrid Fiber/Copper cable – Model # PFC-SO2012
6. POE extender qty of 13- Model # PFU-P-C-O-060-01
a. Installed at each camera mounted at lighting pole.
b. Extender will need to be grounded
c. Terminate fiber in extender
7. Qty 13 Cat6 OSP F/UTP patch cord, 7ft – Model # C011152-01F007
8. SFP qty of 13- Model # TN-GLC-LX-SM-RGD at PoE Extenders, qty 13 at MDFA113

2.3 CABLE ROUTING/PATHWAY

A. Cable Support System: Cable saddles, bridal rings or J-Hooks shall be used to route all exposed cables (cable not in conduit or cable tray) in open access environments as well as in communications closets.
1. Approved Products
a. Chatsworth Products Inc. (CPI) or
b. ComDangles

2.4 STATION WIRING

A. Wire: The data and voice wire provided for all outlets shall be (Category 6) unshielded twisted pair, four-pair, 24 AWG solid copper conductor, meeting the intent and quality level of the TIA/EIA-568-A Commercial Building Wiring Standard. Refer to floor plan and data outlet legend for number of active data ports to specified faceplates.
1. Approved Products: For all voice and data connections:

All wiring on the project shall be plenum-rated, Category 6, blue in color
Approved Manufacturers
1. Panduit TX6000, Model #PUP6004BU-UY

B. Testing: The Category 6 four-pair UTP cable must be UL Performance Level tested. Each 1000 foot spool must be individually tested with test results affixed to the spool.
1. For video surveillance cameras and wireless access points, provide Category 6A, blue in color: Panduit, Model #PUP6XHD04BU-G

C. Rating: Cable installed in conduit shall be non-plenum rated. Cable not installed in conduit shall be plenum rated if installed in plenum ceiling space, non plenum rated otherwise.

2.5 STATION HARDWARE

A. Flush Mount Jacks: Flush mount jacks shall be high quality Category 6 RJ45 modular jacks with circuit board construction and IDC style or 110-style wire, T568B terminations. Jacks shall meet EIA/TIA TSB40 recommendations for Category 6 connecting hardware.

1. Approved Products:
   a. Data Inserts
      1. Panduit TX6 Category 6 Jack Module, #CJ688TGxx.
      2. See 2.2. G. 1. above to match module color to patch cable color for each application.
   b. Wireless Access Point Inserts
      1. Provide Tile Bridge with box to install AP outlet flush with ceiling.
      2. Provide a biscuit with terminated cable for each Access Point, installed above ceiling.
   c. IP Camera Inserts
      1. Panduit Category 6A Jack Module, Green in color. #CJ6X88TGGR
      2. Provide (1) CAT6A cable for each IP Camera.
   d. Wireless Access Point Inserts
      3. Panduit Category 6A Jack Module, Red in color. #CJ6X88TGRD
      4. Provide Tile Bridge with box to install AP outlet flush with ceiling.
      5. Provide (1) CAT6A cable for each Access Point.

2. All blank inserts shall be gray in color

B. Faceplates: Faceplates shall be a 4-port, flush mounted, 110 style, stainless steel in color for RJ45 outlets at all locations.

1. Approved Products:
   a. 4-Port Single Gang,
      1. Panduit Product Code #CFP4S

   b. Provide wall mounted handset faceplates where applicable for wall mounted phone. Refer to floor plan for locations.
   c. Mounting Straps (where applicable)

C. Workstation Patch Cables: Cabling Contractor shall provide owner with one (1) Category 6 patch cable for each data drop on entire project. Each cable will be factory terminated with

RJ45 connections on each end with appropriate pin-out assignments per project configuration.

1. Approved Products:
All Patch Cords to be manufactured by Panduit.

a. Cat 6 Patch Cable BLUE in color
1) All patch cables shall match the installed structured cabling system.
b. Contractor to provide patch cables for each system as indicated:
2) 100% - 10’

2.6 FIBER OPTIC PRODUCTS

1. Approved Products:
a. 12 strand, single-mode indoor/outdoor, plenum rated with armored jacket,. Terminate with Panduit pre-polished LC style connectors.
Approved Part Numbers
1. Panduit #FSGP912Y

b. 24 strand, single-mode, indoor/outdoor stranded tube cable, riser (OFNR), 250um Fibers. Terminate with Panduit pre-polished LC style connectors
Approved Part Numbers
1. Panduit #FSNR924Y

PART 3 - EXECUTION

3.1 GENERAL

A. Fire Wall Penetrations: The contractor shall avoid penetration of fire-rated walls and floors wherever possible. Where penetrations are necessary, they shall be sleeved with metallic conduit and resealed with an Underwriter Laboratories (UL) approved sealant. Contractor shall also seal all floor, ceiling and wall penetrations in fire or smoke barriers and in the wiring closet.

B. Allowable Cable Bend Radius And Pull Tension: In general, communications cable cannot tolerate sharp bends or excessive pull tension during installation. Refer to the cable manufacturers allowable bend radius and pull tension data for the maximum allowable limits.

C. Cable Lubricants: After installation, exposed cable and other surfaces must be cleaned free of lubricant residue.

D. Pull Strings: Provide pull strings in all new conduits, including all conduits with cable installed as part of this contract. Pull test is not to exceed 200 pounds. Data and video cables can be pulled together with pull strings.

E. Conduit Fill: Conduit fill shall not exceed 40%.

F. Damage:
1. The Contractor shall replace or rework cables showing evidence of improper handling including stretches, kinks, short radius bends, over-tightened bindings, loosely twisted and over-twisted pairs at terminals and cable sheath removed too far (over 1-1/2 inches).
2. The Contractor shall replace any damaged ceiling tiles that are broken during cable installation.

G. Clean Up:
All clean up activity related to work performed will be the responsibility of the Contractor and must be completed daily before leaving the facility.

3.2 DOCUMENTATION

A. Labels
Coordinate all labeling schemes at headend and on cable with owner prior to permanently installing and testing outlets.

The Contractor will label all outlets using permanent/legible typed or machine engraved labels approved by the Owner (no handwritten labels permitted). Label patch panels in the wiring closet to match those on the corresponding data outlets. The font shall be at least on-eighth inch (1/8") in height, block. All labels shall correspond to as-builts and to final test reports.

The following nomenclature should be used when labeling all ports:

All cables being served by MDF closet shall begin with 'MC' all IDF served cables shall begin with 'IC#' (# designated IDF closet number).

Next identification shall note what # data port on patch panel (1 thru 48).

Example:

Outlet from 23rd port of the third patch panel from top of rack located at IDF-2
IC2-P3-23

Outlet from the 5th port of the second patch panel from the top of rack located at MDF
MC-B2-05

B. Floor Plan: A floor plan clearly labeled with all outlet jack numbers shall be included in the as-built plans.

C. Cables: All cables shall be labeled at both ends. This includes but not limited to horizontal voice and data cabling, copper backbone tie cables, and fiber optic cables.

D. Fiber Optics: Fiber optic strands shall be labeled at both ends on the fiber distribution panel.

E. Equipment racks: Equipment racks shall bear at least one indicating label indicated MDF or IDF. If rack is installed in IDF, label shall include IDF #.

F. Spreadsheet:
A laminated, detailed spreadsheet indicating port # and which room outlet it serves shall be mounted to the rack in each communications closet.

3.3 EQUIPMENT RACK CONFIGURATION

A. Equipment Racks: Equipment racks shall be assembled and mounted in locations shown on the Drawings and as detailed. Each rack shall be securely mounted to the floor and braced to the wall with cable tray in accordance with the manufacturer's instructions and recommendations. Racks shall be mounted such that the side rails are plumb with vertical cable management panels. Racks to be located such that future expansion can occur without relocating existing racks. Racks shall be grounded in accordance with NEC requirements.

B. Wire Management Components: Horizontal cable management panels shall be installed directly above and below each patch panel, also 2 per each 48 port patch panel should be left at site to accommodate the switch gear when they are installed. Vertical cable management panels shall be installed on each side of the rack. In instances where more than one rack is installed in a single location, vertical cable management shall be installed between the racks and on either side.

C. Cable Placement: Cable installation in the Wiring Closet must conform to the Project Drawings. All cabling shall be routed so as to avoid interference with any other service or system, operation, or maintenance location. Avoid crossing area horizontally just above or below any riser conduit. Lay and dress cables to allow other cables to enter the conduit/riser without difficulty at a later time by maintaining a working distance from these openings.

D. Cable Routing: Cable shall be routed as close as possible to the ceiling, floor or corners to ensure that adequate wall or backboard space is available for current and future equipment. All cable runs within the Wiring Closet shall be horizontal or vertical within the constraints of minimum cable bending radii. Minimum bend radius shall be observed. Cables shall not be tie-wrapped to electrical conduit or other equipment.

E. Installation: All incoming cables shall be routed on the cable tray and neatly dressed down to the patch panels.

F. Hardware: Provide rack and jack panel hardware as required for all data station wiring.

3.4 STATION WIRING INSTALLATION

A. General:
1. Cabling between wiring closet and workstation locations shall be made as individual home runs. No intermediate punch down blocks or splices may be installed or utilized between the wiring closet and the communications outlet at the workstation location.
2. All cable must be handled with care during installation so as not to change performance specifications. Factory twists of each individual pair must be maintained up to the connection points at both ends of the cable. There shall never be more than one and one-half inches of unsheathed Category 6 UTP cable at either the wiring closet or the workstation termination locations.

B. Exposed Cable:
1. All cabling shall be installed inside walls or ceiling spaces whenever possible. Exposed station cable will only be run where indicated on the Drawings.
2. Additional exposed cable runs will require Owner approval, and will only be allowed when no other options exist.

C. Placement: All cabling and associated hardware shall be placed so as to make efficient use of available space. All cabling and associated hardware shall be placed so as not to impair the Owner’s efficient use of their full capacity.

D. Cable Routes:
1. All cabling placed in ceiling areas must be in conduit, cable tray or J-Hooks. Cable supports shall be permanently anchored to building structure or substrates. Provide attachment hardware and anchors designed for the structure to which attached and that are suitably sized to carry the weight of the cables to be supported. Do not route cable through webbing of structural steel. Cabling must be supported in dedicated supports intended to support cabling as described in this section.
2. Attaching cable to pipes or other mechanical items is not permitted. Use J-Hooks

for up to 15 cables (Chatsworth hooks with appropriate brackets). All runs of sixteen (16) or more cables, provide cable rings on 36-inch maximum centers to hang cable. Communications cable shall be rerouted so as to provide a minimum of 18 inches spacing from light fixtures, sources of heat, power feeder conduits and EMI sources. Cabling shall not be attached to ceiling. Grid support wires. Cable runs shall be parallel or perpendicular to building structure. Multiple cables to be bundled together every 6 feet.

3.5 STATION HARDWARE

A. Flush Mount Jacks: Flush mount jacks shall be mounted in a faceplate with backbox.

B. Placement: Where possible, the communications outlet shall be located so that its centerline is 18 inches above floor level or 12 inches above permanent bench surfaces. Outlets shall not be mounted on temporary, movable, or removable surfaces, doors, or access hatches.

C. RJ-45 Jack Pin Assignments:
1. Pin connections for data station cable outlets and patch panels shall match EIA/TIA 568 modular jack wiring recommendation T568B.
2. Pin connections at data jack panels shall match pin connections at outlets (straight through wiring).

3.6 CABLE TESTING REQUIREMENTS

A. Notification: The Owner and Engineer shall be notified one week prior to any testing so that the testing may be witnessed.

B. Inspection: Before requesting a final inspection, the Contractor shall perform a series of end-to-end installation performance tests. The Contractor shall submit for approval a proposal describing the test procedures, test result forms and timetable for all copper and fiber optic cabling.

C. Procedures: Trained personnel shall perform all testing. Acceptance of the test procedures discussed below is predicated on the Contractor’s use of the recommended products and adherence to the inspection requirements and practices set forth. Acceptance of the completed installation will be evaluated in the context of each of these factors.

D. Errors: When errors are found, the source of each shall be determined, corrected and the cable retested. All defective components shall be replaced and retested. Re-test results must be provided on Owner approved forms and witnessed by Owner.

E. Twisted Pair Cable Testing:
1. At a minimum, the Contractor shall test all station drop cable pairs from Data Closet termination patch panels to outlet device RJ45 jacks. Category 6 products shall be tested for compliance to ANSI/TIA/EIA 568A and ISO/IES 11801 for a Category 6 rated installation. Test equipment used shall meet TIA/EIA TSB-67, Level II accuracy. Further, the contractor shall have a copy of TSB-67 in their possession and be familiar with its contents.
2. Each wire/pair shall be tested at both ends for the following:
   a. Wire map (pin to pin connectivity)
   b. Length (in feet)
   c. Attenuation
   d. Near end cross talk (NEXT)
   e. Power Sum
3. Test equipment shall provide an electronic and printed record of these tests.
4. Test results for each Category 6 four-pair UTP cable must be submitted with

identification to match labels on all patch panel ports and RJ45 jacks and must match as-builts associated with that cable.

F. Testing: Once installed the cabling will be tested for continuity, shorts and grounds.
   1. Cabling:
      a. Continuity – 100% continuity testing is required and will be tested from the MDF/IDF location to each classroom drop. A checklist of each cable and test performed on that cable will be submitted once the testing has been completed.
      b. Shorts – No cable shorts will be permitted on the system. If a short is detected, the connector or cable will be repaired or replaced.
      c. Grounds – No direct ground on the center conductor of the AVDN cables are permitted.
   2. System:
      a. Continuity – As tested in the above testing requirements.
      b. Power Readings – A power reading will be required at each drop of each of the cabling systems. A +3 dB to a +7 dB is required at each drop with a common feed signal of + 15 dB into the head end amplifier. These measurements to be taken with an approved field strength meter of know calibration. Test measurements to be performed at low channel, mid-band channel, and high channel to determine cable slope.
      c. Signal Quality – A standard receiver, typical of those used in the system, shall randomly be connected to 10% of the outlets across the system and tuned to a reference channel of known quality. No visible indication of co-channel interference, noise, ghosting, or beat interference may be observed.
      d. Carrier to Noise – Carrier to Noise shall be measured at random outlets representing an average cross section of the drops with an approved field strength meter by the following process. With normal operating levels the field set shall be tuned to each channels visual carrier and the level recorded. The input signal to the head end amplifier shall be removed and the input of the amplifier terminated with a short. Each channel shall be re-measured and the noise levels recorded. The Carrier to Noise measurement is the difference of the two figures.
      e. Documentation of Results – All recorded measurements are to be tabulated and included in the systems documentation manual for reference during maintenance of the system.

3.7 INSPECTION

A. General: Conformance to the installation practices covered above are to be verified when completed. In some cases, the Owner/Designer may inspect before acceptance.

END OF SECTION

SECTION 27 41 16 - INTEGRATED AUDIO-VIDEO SYSTEMS AND EQUIPMENT

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED WORK

A. All Division 26 at it relates to this scope of work.
B. Section 27 00 00
C. Section 27 10 00
D. Section 27 31 00

1.2 DESCRIPTION

A. Summary of Work:
   1. Provide a complete and tested classroom presentation system. The presentation system shall include, but not be limited to the following:
      a. Contractor shall provide and install all audiovisual faceplates, transmission media infrastructure, and a patch cables required to connect each presentation device to the associate input device
      b. Proposing contractor must coordinate with project construction schedule and existing technology system contractor to provide complete turn-key solution to owner.
   2. The installation shall comply with all applicable codes and standards in effect at the job site and as indicated in the Drawings and Specifications.
   3. Reference project drawings for locations, quantities, and coordination with other trades.

1.3 QUALITY ASSURANCE

A. Contractors who do not currently possess the necessary qualifications, trained and experienced personnel, financial capacity, and meet the other requirements herein describe will be disqualified.

B. The Contractor, as a business entity, shall be an authorized distributor and designated representative of the equipment manufacturer, with full warranty privileges. The proposed contractor shall have been actively engaged in the business of selling, installing, and servicing commercial building commercial communication systems for a period of at least 5 years.

C. Recently formed companies are acceptable only if specific pre-approval is requested, and granted by the Architect/Engineer, based on experience of key personnel, current and completed projects, and all licensing requirements are met 10 working days prior to the contract proposal date.

D. The Contractor shall have an office within 150-miles of the job site, staffed with trained technicians who are qualified and licensed to supervise the installation, to be responsible that the system is installed as submitted, to conduct system start up and perform a 100 percent operational audit of all installed devices, to instruct the Owners representatives in the proper operation of the system, and to provide service throughout the warranty period. The contractor shall be capable of dispatching technicians to repair a system within six hours of a service request.

E. The Contractor shall be fully experienced in the design and installation of the type of system herein specified, and shall furnish with the contract proposal an itemized list of the installations of the type specified herein. The list shall include the name of the project, date of completion, the

amount of the contract, the name, and telephone number of a qualified person to contact for reference. This list must contain at least two (2) projects within a 150- mile radius of the school district to allow school administration officials to visit the job site for review of the system installation and service. Each reference project listed must utilize equipment by the same manufacturer as the proposed system.

F. The Contractor shall employ factory-trained technicians capable of supporting the maintenance of the system. No contract employees are allowed unless they have been to the factory service school within the last 18 months. A certificate of this training shall be provided with the contractors' submittal.

G. The Contractor shall not have any grievances or complaints of record regarding workmanship, code compliance, or service response. A Proposed Contractor that has any prior finding(s) of a code violation or has any litigation in process concerning the installation of a communication system is unacceptable.

H. Any discrepancy in quantity or part numbers between the drawings and the bid specifications shall be brought to the attention of the Consultant for clarification during the bidding period. No allowance shall be made to the Contractor by reason of failure to have brought said discrepancies to the attention of the Consultant prior to award of contract.

I. The Contractor shall provide all necessary patch cables, riser/plenum cabling and connectors interconnecting all equipment and all required A/V and network equipment to provide for fully functional systems. In addition, all cabling raceway, support systems, sleeves and any other materials required to properly install and support cabling systems.

J. The ability of the Contractor to obtain plans and provide a performance bond shall not be regarded as the sole qualification of the Contractors' competency and responsibility to meet the requirements and obligations of the contract.

K. The Builder shall be satisfied that a proposed Contractor meets all the requirements expressed herein before including the Contractor's proposal in the project.

L. The Owner may investigate, as they deem necessary to determine the ability of the proposed Contractor to perform the work. The proposed Contractor shall furnish to the Owner with any information or data requested for this purpose.

M. The Owner reserves the right to reject any contract proposal if the evidence submitted, or their investigation, fails to indicate that the Contractor is qualified to fulfill of any part of the contract or to complete the work contemplated therein.

N. The Owner reserves the right to reject the proposal of any Contractor who has previously failed to perform properly, or complete on time, contracts of a similar nature.

O. Pre-Construction Meeting:

1. The successful Contractor shall attend mandatory pre-construction meetings with individuals deemed necessary by the Owner's representative prior to the start of the work.
2. The contractor shall provide a mock-up of the complete classroom projector system to include all products listed in Part 2 of this specification.
3. All proposing contractors must have ability to demonstrate a/v system being proposed and provide owner with completely installed system to evaluate performance and operation.

P. Acceptance:

1. The Owner's representative reserves the right to reject all or a portion of the work performed, either on technical or aesthetic grounds.

1.4 REGULATORY REQUIREMENTS

A. Standards: All work shall be performed in accordance with the latest revisions of the following standards and codes:
   1. Latest Local Codes and Amendments
   2. 2015 National Electrical Code

B. Other References:
   1. TIA/EIA-568-A Commercial Building Telecommunications Wiring Standard
   2. EIA/TIA-569 Commercial Building Standard for Telecommunication Pathways and Spaces.
   3. TIA/EIA-606 The Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
   4. TIA/EIA-607 Commercial Building Grounding and Bonding Requirements for Telecommunications.
   5. EIA/TIA 455-A Standard Test Procedure for Fiber Optic Fibers, Cables, Transducers, Sensors, Connecting and Terminating Devices and Other Fiber Optic Components.
   6. TIA/EIA TSB 67 Transmission Performance Specification for Field Testing of Unshielded Twisted-Pair Cabling Systems.
   7. TIA/EIA TSB 72 Centralized Optical Fiber Cabling Guidelines
   8. ISO/IEC 1180 Generic Cabling Standard
   9. EN 50173 Generic Cabling Standards for Customer Premises
   10. ANSI/EIA/TIA 526-14 Optical Power Loss Measurements of Installed Multimode Fiber Cable Plan.

C. Governing Codes and Conflicts:
   1. If the requirements of these specifications or the Project Drawings exceed those of the governing codes and regulations, then the requirements of these specifications and the Drawings shall govern. However, nothing in the Drawings or Specifications shall be construed to permit work not conforming to all governing codes and regulations.

1.5 ABBREVIATIONS

A. The following abbreviations are used in this document:

FR	FrontRow Trio/Elevate ceiling mount enclosure
PS	Presentation Station
CP	FrontRow Trio/Elevate system control panel

1.6 SUBMITTALS

A. Project Initiation:
   1. Within fourteen (14) days of Notice to Proceed, the data network system installer shall furnish the following in a single consolidated submittal:
      a. Permits: The Contractor shall obtain all required permits and provide copies to the Owner/Architect/Engineer.
      b. Product Literature: Complete manufacturer's product literature for all cable, patch panels, cross-connect blocks, cable supports, cable labels, outlet devices, and other products to be used in the installation. In addition, whenever substitutions for recommended products are made, samples (when requested by the Owner/Designer) and the manufacturer's supporting documentation demonstrating compatibility

with other related products shall be included. The submittal shall have some type of distinguishing marker or pointer to indicated what specific product is to be provided

c. **Product Bill of Materials that includes make, model and quantity of all equipment and materials being provided by the contractor.**

d. Construction Schedule: A time-scaled Construction Schedule, using PERT/CPM, indicating general project deadlines and specific dates relating to the installation of the cable distribution system.

e. Specification Compliance: A letter shall be provided stating, by section and subsection, that the Audio-Video installer complies with the ENTIRE specification section. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE PROJECT'S TECHNOLOGY CONSULTANT.

f. Certifications: The contractor shall submit all of the following certifications and the certifications must contain dates which are valid from the date of proposal and not expirer any sooner than 12 months after substantial completion of the project.

1) Installer Certification: This certification shall show successful completion of system training and must be held by at least 25% of the, on-site, staff and be made available at the site if requested by the owner, architect, and/or project's technology consultant.

B. Shop Drawings:

1. Submit the following items, for Owner review and approval, within twenty-eight (28) days of notice to proceed:

a. Floor plans indicating proposed cable routing and cable grouping plan prepared by a qualified system designer. The credentials of the designer must be accepted the project's technology consultant prior to submitting a system design.

b. In addition to the cable routing, the submitted drawings shall indicate the following, even if the following is expected to be provided by the project's electrical or general contractor:

1) Location of wall penetrations (all penetrations shall be sleeved and contain protective bushings at both ends)
2) Location of sleeved wall pass-thru
3) Size of sleeve at each location installed
4) Quantity of cable passing through each sleeve
5) **Location of all A/V devices including but not limited to displays, speakers, enclosures, input/output plates, and control panels in each room**
6) Conduit routing, size, quantity, and stub-up locations for all floor mounted outlets.
7) **One-line schematics of each system and/or system type.**

c. Drawing Compliance: A letter shall be provided stating that the Audio-Video installer complies with the ENTIRE project drawing, including all general, keyed, and notes to contractor. If the installer intends to deviate from any portion of the specifications, a detailed explanation of reason in which the installer would like to deviate shall be provided in addition to the specification compliance letter. NO DEVIATIONS SHALL BE ACCEPTABLE UNTIL THEY HAVE BEEN ACCEPTED BY THE OWNER.

C. Close-out Procedures:

1. Two (2) copies of the following documents shall be delivered to the building owner's representative at the time of system acceptance. The close out submittals shall include:
   a. Inspection and Test Reports: During the course of the Project, the Contractor shall maintain an adequate inspection system to ensure that the materials supplied and the work performed, conform to contract requirements. The Contractor shall provide written documentation that indicates that materials acceptance testing was conducted as specified. The Contractor shall also provide documentation, which indicates that all cable termination testing was completed and that all irregularities were corrected prior to job completion.
   b. Provide complete test reports for all cabling and devices that comprise system as outlined in this document.
   c. Include the Name, address and telephone of the authorized factory representative with a 24-hour emergency service number.
   d. The manual shall also include Manufacturer’s data sheets and installation manuals/instructions for all equipment installed, a list of recommended spare parts.
   e. Generic or typical owner’s instruction and operation manual shall not be acceptable to fulfill this requirement.
   f. An up-to-date record (“as-built”) set of approved shop drawing prints that have been revised to show each and every change made to the structure cabling system from the original approved shop drawings. Drawings shall consist of a scaled plan of each building showing the placement of each individual item of the Audio-Video system equipment as well as raceway size and routing, junction boxes, and conductor size, quantity, and color in each raceway.
   g. As-built Drawings shall include cable pathways, and device locations with correct labeling. The as-built drawings shall be prepared using AutoCAD 2021 or later. Provide the Owner with electronic versions of the as-builts on 2 quantity 8GB thumb drive media.
   h. All drawings must reflect point to point wiring, device address and programmed characteristics as verified in the presence of the engineer and/or the end user unless device addressing is electronically generated, and automatically graphically self-documented by the system.
   i. A copy of the manufacturer’s warranty on the installed system.
   j. 5 sets of keys to cabinets and/or equipment and special maintenance tools required to repair, maintain, or service the system.
   k. Operating and Maintenance Instructions for all devices within the system. These instructions shall reflect any changes made during the course of construction, and shall be provided to the Owner, for their use, in a three-ring binder labeled with the project name and description. (4 copies)
   l. Quick-start Guide for each system written with the assumption that the intended reader is technically inexperienced and unfamiliar with the facility. Quick-start Guide shall be provided in hard-copy format and in pdf format on an 8GB thumbdrive with the close-out documentation.
   m. Upon completion of the work and at a time designated by the Architect or owner, provide formal training sessions for the Owner’s operating personnel to include location, operation, and maintenance of all included systems and equipment. Minimum amount of training time shall be at least 8 hours in four 2-hour sessions.
   n. Contractor shall video record training sessions and include videos in close-out documentation in DVD format.

PART 2 - PRODUCTS

2.1 GENERAL

ALL PRODUCTS LISTED IN THIS SECTION SHALL BE PROVIDED AND INSTALLED BY THE CONTRACTOR.

A. Installation: The cabling shall be installed per requirements of the manufacturer and the Project Documents utilizing materials meeting all applicable EIA/BICSI standards. The Contractor is responsible for providing all incidental and/or miscellaneous hardware not explicitly specified below as required for a complete and operational system.

B. Materials: Materials shall be as listed or shall be approved equivalent products of other manufacturers meeting the intent and quality level of the EIA/BICSI specifications. All approved equivalent products will be published by addendum ten days prior to proposal for Architect/Engineer to review.

C. Testing: All installed cabling shall be tested 100% good after installation by the Contractor.

D. Ratings: All products shall be new and brought to the job site in the original manufacturer's packaging. Electrical components (including innerduct) shall bear the Underwriter's Laboratories label. All communications cable shall bear flammability testing ratings as follows:
CM Communications Cable
CMP Plenum Rated Communications Cable
CMR Riser-Rated Communications Cable

E. Initial Cable Inspection: The Contractor shall inspect all cable prior to installation to verify that it is identified properly on the reel identification label, that it is of the proper gauge, containing the correct number of pairs, etc. Note any buckling of the jacket that would indicate possible problems. Damaged cable or any other components failing to meet specifications shall not be used in the installation.

F. Cable Lubricants: Lubricants specifically designed for installing communications cable may be used to reduce pulling tension as necessary when pulling cable into conduit.
1. Approved Products
a. Twisted-pair cable: Dyna-Blue
American Polywater

G. Fire Wall Sealant: Any penetration through firewalls (including those in sleeves) will be resealed with an Underwriter Laboratories (UL) approved sealant.
1. Approved Products
i. Wiremold Flamestopper - #FS4R-RED
ii. Precut 4" conduit - #FSPCC4758

2.1 ADDITIONAL PARTS

A. Provide all materials listed in this specification section to furnish the media infrastructure from input component to output component, to furnish all classroom presentation system locations identified in drawings. Any change orders issued during the course of this project shall pull materials from this additional stock until the stock is depleted. In the event that that such stock is remaining upon the completion of the project, the contractor shall deliver the excess to the owner for attic stock.

2.2 CABLE ROUTING/PATHWAY

A. Cable Support System: All audio-video cabling shall be installed and supported using a Caddy Cable Cat or Arlington Loop cable support system at 4'-0" intervals unless installed in conduit. Do not exceed manufacture recommendation for the quantity of cables supported in an individual support.
B. All cable bundles shall be grouped together using plenum rated Velcro for the entire run above and below the ceilings.

2.3 INTEGRATED FLAT PANEL MONITOR (indicated as 'SMBD' on drawings)

A. Provide SMART Board MX275 with IQ in each Classroom and Conference Room. Provide 5-year warranty.
B. Provide SMART Board MX286 with IQ in each Fine Arts Classroom, Music Rooms, LGI, Computer Labs, Science Labs, Library and all other non-Classroom / Conference Room space. Provide 5-year warranty.
C. Provide 1 qty. Balance Box 400 height adjustable mount for each wall mount display.
D. Quantity as shown on drawings.
E. Provide 1 qty. Peerless SR598 Panel Cart with Peerless ACC-LA laptop arm in locations shown on drawings.
F. Provide all software required and interminable licences for each display. All software and licenses shall be the explicit property of Lamar Consolidated Independent School District.

2.4 LCD DISPLAYS (indicated as 'LCD' on drawings)

A. Provide Samsung QN90F Neo QLED 4K. 55", 75" and 95" display or approved equal
B. Provide ChiefMFG #TS525TU, Large Dual Swing Arm Mount.

2.5 CLASSROOM AUDIO / VIDEO SYSTEM

A. Provide all software necessary to access full functionality of the system. All devices shall be licensed to the Owner without further chargers or recurring license fees
B. The System is to include all equipment, cabling, materials, labor, and training as required to install and test a complete operating System as described herein.
C. Contractor shall follow installation instructions provided by the manufacturer. Installation drawings shall show the location and general arrangement of equipment, electrical systems, and related items. They shall be followed as closely as elements of the construction will permit.
D. Contractor shall examine the installation drawings and verify the conditions governing the work on the job site. Contractor shall arrange accordingly, providing such fittings, horizontal cable raceways, conduits, junction boxes and accessories as may be required to meet such conditions.
E. Deviations from the installation drawings, except for minor changes in routing and other such incidental changes that do not affect the functioning or serviceability of the Systems, shall not be made without the written approval of the Engineer.

2.6 MANUFACTURER

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products of FrontRow Calypso LLC, 1609 Corporate Circle, Petaluma, CA 94954, Phone +1 707 227 0735, www.gofrontrow.com. The parts numbers in numeral 2.5 below correspond to the kit order number, which includes cables and accessories that are necessary to meet the performance criteria. Substitution request to follow procedure setup in General Conditions and to be approved by the Owner Representative 15 days prior to Bid date.

2.7 CLASSROOM AV SYSTEM COMPONENTS

A. **CEILING APPLICATION.** In classrooms with Drop Ceiling Tiles, the AV equipment must be housed in a 2’ X 2’ lockable, lab certified plenum-rated enclosure. The basis of design is FrontRow #1000-00206 ezRoom Voice Trio (ELEVATE) with Classlight, CM900, TB14, ELEVATE MIC RECEIVER, POE-X, TP-LINK, CM-BT, which consists of the following system components:

1. 1000-00206 ezRoom Voice Trio (ELEVATE) with Classlight, CM900, TB14, ELEVATE MIC RECEIVER, POE-X, TP-LINK, CM-BT in a 2x2ft plenum rated ceiling enclosure. Designed for drop ceilings, includes mounting hardware.
2. 1000-00183 Action! Teacher Microphone (ELEVATE)
3. 1000-00199 FlipCharger (ELEVATE)
4. CB-2050 Keypad and Rotary Control Panel Kit (Control; Cable)Decora® style dual-gang rotary volume control + keypad control panel with 8 customizable keys.
5. 1010-00088 Preinstalled CMBT Bluetooth Receiver (CM900/ELEVATE).
6. 1000-00153950CS Ceiling Sensor Kit (Sensor; Cable)
7. 6414-00028 Audio Cable; 3.5mm male - 3.5mm male; plenum-rated; 15m/50FT
8. 1000-00192 Bravo! Student Microphone (ELEVATE)
9. 6416-00137 Active Optical HDMI Cable.
10. 6414-00139 HDMI Pass-Through EDID Emulator.
11. 6414-00027 USB Cable; built-in repeater.
12. 2 qty. 6414-00028 3.5mm Audio Cable

B. **WALL APPLICATION**. In classrooms with open ceilings or hard-lid ceilings, the AV equipment must be housed in a wall surface enclosure. The basis of design is 1000-00230 ezRoom Voice & Alert WallCore (ELEVATE) with Classlight, CM900, TB14, ELEVATE MIC RECEIVER, POE-X, TP-LINK, CM-BT. with the following system components:

1. 1000-00230 ezRoom Voice & Alert WallCore (ELEVATE) with Classlight, CM900, TB14, ELEVATE MIC RECEIVER, POE-X, TP-LINK, CM-BT in a deep wall mount enclosure with dual gang opening for FrontRow control option.
2. 1000-00183 Action! Teacher Microphone (ELEVATE)
3. 1000-00199 FlipCharger (ELEVATE)
4. 1010-00088 Preinstalled CMBT Bluetooth Receiver (CM900/ELEVATE).
5. 202-05-001-00 WALL, Speakers, Pair, Unit Assemblies; with 6436-00021 Speaker Cables (2-pack)
6. 6414-00028 Audio Cable; 3.5mm male - 3.5mm male; plenum-rated; 15m/50FT
7. CB-2050 Keypad and Rotary Control Panel Kit (Control; Cable)Decora® style dual-gang rotary volume control + keypad control panel with 8 customizable keys.
8. 1000-00192 Bravo! Student Microphone (ELEVATE)
9. 1010-00088 Preinstalled CMBT Bluetooth Receiver (CM900/ELEVATE).
10. 6416-00137 Active Optical HDMI Cable.
11. 6414-00139 HDMI Pass-Through EDID Emulator.
12. 6414-00027 USB Cable; built-in repeater.
13. 2 qty. 6414-00028 3.5mm Audio Cable

C. Provide for each room equipped with a FrontRow system:

1. ‘HDMI’ and / or ‘PS’ Outlet. All cabling shall be routed and connect to ‘CMP’ and / or ‘SMBD’ and / or 'LCD' device.
    a. (1) C2G # 39873 wall plate with the following connectors:
        i. 3.5 mm audio jack pass-through. Label “INPUT”
        ii. HDMI type A pass-through. Label “HDMI”
        iii. USB type B pass-through. Label “USB”
    b. (1) RDL # D-MJPT, 3.5mm decora pass through panel.
        i. Label panel, “OUTPUT”.

c. (1) HDE 50' USB 2.0 Type A Male to A Female Extension Cable with Active Repeater (50 FT).
d. HDMI OPTICAL FRONTROW #6414-00052 (‘HDMI’ / ‘PS’ Outlet to WMP or LCD)
e. Or approved equivalent
f. Label the RDL device using the manufacturer provided labeling system as indicated on their website.
g. Label other faceplates with a vinyl adhesive machine printed label, black lettering with white background.

2. 'WMP' and 'LCD' Outlet.
   a. (1) single gang decora brush plate (white).

3. Provide for each classroom for instructor's media source connectivity:
   a. (1) Liberty #RVHDRAD15FT, 15’ 4K HDMI cable with 90 degree connector
   b. (2) C2G # 40414, 3.5mm M/M stereo audio cable, 12’ long.
   c. (1) installer Parts 15 ft USB 2.0 High Speed Cable -- A-Male to A-Male – Black
   d. Or approved equivalent

PART 3 - EXECUTION

3.1 GENERAL

A. Contractor is required to properly mount projector and connect all ceiling video/audio cables to projector component inputs.

B. Contractor is required to thoroughly test and verify operation of all projector inputs and video modes prior to project completion.

C. Contractor is required to focus and adjust projector to properly project image on viewing surface (screen or multimedia board depending on location).

D. Contractor shall provide owner with written verification test process and results once all projectors have been installed, tested, and placed in final condition.

E. Damage:
   1. The Contractor shall replace or rework cables showing evidence of improper handling including stretches, kinks, short radius bends, over-tightened bindings, loosely twisted and over-twisted pairs at terminals and cable sheath removed too far (over 1/4 inches).

F. The Contractor shall replace any damaged ceiling tiles that are broken during cable installation.

G. Clean Up:
   1. All clean up activity related to work performed will be the responsibility of the Contractor and must be completed daily before leaving the facility.

3.2 DOCUMENTATION

A. Contractor shall provide owner with detailed serial number listing and associated graphical room number designation equipment was installed. Contractor shall use actual graphical package room numbers not architectural plan numbers from construction set.

3.3 STATION WIRING INSTALLATION

A. General:
   1. All cable must be handled with care during installation so as not to change performance specifications. Factory twists of each individual pair must be maintained up to the connection points at both ends of the cable. There shall never be more than one and one-half inches of unsheathed enhanced Category 6 UTP cable at either the wiring closet or the workstation termination locations.

B. Exposed Cable:
   1. All cabling shall be installed inside walls or ceiling spaces whenever possible. Exposed station cable will only be run where indicated on the Drawings.
      Additional exposed cable runs will require Owner approval, and will only be allowed when no other options exist.

C. Placement: All cabling and associated hardware shall be placed so as to make efficient use of available space. All cabling and associated hardware shall be placed so as not to impair the Owner's efficient use of their full capacity.

D. Cable Routes:
   1. All cabling placed in ceiling areas must be in conduit, cable tray or Caddy Cable Cat or Arlington Loop cable support. Cable supports shall be permanently anchored to building structure or substrates. Provide attachment hardware and anchors designed for the structure to which attached and that are suitably sized to carry the weight of the cables to be supported. Do not route cable through webbing of structural steel. Cabling must be supported in dedicated supports intended to support cabling as described in this section. Contractor shall adhere to the manufacturer's suggested fill ratio for each size cable support installed.

   2. Attaching cable to pipes or other mechanical items is not permitted. Communications cable shall be rerouted so as to provide a minimum of 18 inches spacing from light fixtures, sources of heat, power feeder conduits and EMI sources. Cabling shall not be attached to ceiling. Grid support wires. Cable runs shall be routed down the corridors; parallel or perpendicular to building structure. Multiple cables to be bundled together at and between each cable support installed.

   3. Contractor shall be responsible for coordinating with other trades on the project so that the installed cable pathway does not interfere with the installation of other systems to insure that mechanical ducts, pipes, conduits, or any other above ceiling systems are not putting unnecessary stress on any portion of the install audio-video cabling.

3.4 STATION HARDWARE

A. Flush Mount Jacks: Flush mount jacks shall be mounted in a faceplate with back box.

B. Placement: As shown on drawings.

3.5 TESTING, CERTIFICATION, WARRANTY, SERVICE

A. A factory trained service technician shall supervise the final connections and testing of the system and it shall be subject to the final acceptance of the Architect, Engineer, and local authorities. Testing shall ensure the following:
   1. Before energizing the cables and wires, check for correct connections and test for short-circuits, ground faults, continuity, and insulation.
   2. Complete and functional system.
   3. Installed in accordance with manufacturer's instructions.

4. Upon completion of the testing, the manufacturer or his representative shall issue to the Owner a letter of certification attesting to the fact that he has tested and adjusted the system, that all components are properly installed and free of defects, and that the system is in compliance with this specification.

B. The contractor shall provide a warranty for the installed system. The warranty shall be against defects in material or workmanship for a period of one (1) year from the date of substantial completion. Any equipment or wiring shown to be defective shall be replaced, repaired, or adjusted free of charge. All labor and materials shall be provided at no expense to the Owner. All equipment will carry a one year warranty or manufacturer's warranty whichever is greater.

C. The system manufacturer shall maintain engineering and service departments capable of rendering advice regarding installation and final adjustment of the system.

3.6 DRAWINGS, MANUALS AND TRAINING

A. In addition, the contractor shall furnish complete operating and maintenance manuals listing the manufacturer's name(s), including technical data sheets. Manuals shall include wiring diagrams to indicate internal wiring for each device and the interconnections between the items of equipment. Provide a clear and concise description of operation that gives, in detail, the information required to properly operate the equipment and system. Provide a parts list with manufacturer and model number for commonly replaced parts. Include complete instructions for the inspection, testing, and maintenance of the system. Include copies of all programming sheets used to configure the system.

B. The Contractor shall conduct formal on-site training sessions. Provide documented general instruction as follows:
   1. Provide instruction to District personnel to include the location, inspection, maintenance, testing, and operation of all system components. Provide a minimum of four (8) hours -- four 2-hour sessions separated by a minimum of two weeks.
   2. Provide instruction to designated personnel on the functions and operation of the intercom and master clock system including emergency and service request procedures. Provide a minimum of four (4) hours--two 2-hour sessions separated by a minimum of two weeks.

END OF SECTION

SECTION 27 51 24 – SCHOOL COMMUNICATION SYSTEM

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. The requirements of the General Conditions, Supplementary Conditions, Division 1, and Drawings apply to all Work herein.
B. The basis of system components, without total numbers, are based on the quote # ES317962, from Boxlight Inc. this baseline quote does not reflect the total amount of each component. Contractors will be required to do final component counts based on the plans provided and apply that amount accordingly.

1.02 SCOPE

A. General: Furnish and install a FrontRow™ Conductor integrated communications / clock and bell system with all equipment, accessories, cabling, devices, and materials in accordance with the project specifications and drawings to ensure a fully operational and intelligible intercom, master clock, secondary clock, and class change time tone communication system of the highest quality.

B. It shall be the responsibility of the Electrical contractor to provide and install all conduit systems, standard electrical boxes, and operating power for the communication system as outlined on the project drawings.

C. The Intercom Communication System Contractor (Contractor) shall coordinate all system requirements.

D. Equipment specified herein is designed to provide specific functional and operational characteristics. It is the responsibility of the Intercom System Contractor to provide all features and functions as outlined in these specifications.

E. The contractor shall provide one (1) analog terminal adapter CMP-500 to the building telephone system via a dedicated line. This will provide transparent access from the telephone system to the paging system. In addition, the telephone interface shall support a security code if desired. The telephone interface shall recognize valid DTMF tones as logical paging zone settings.

F. Provide testing, as described in Part 3, for all requirements to be performed with all cable runs and wiring devices in place.

G. Provide a service contract and warranty as outlined in Part 3 of these specifications.

H. Provide all documentation and training as outlined in these specifications.

1.03 RELATED SECTIONS

A. Section 26 05 34 - Provisions for Communication, Security & Safety Systems.
B. Section 27 00 00 – Basic Materials and Methods
C. Section 27 10 00 – Technical Cabling System
D. Section 28 16 00 – Intrusion Detection System

1.04 CODES AND REGULATIONS

A. NFPA 70, National Electrical Code.
B. NFPA 101, Code for Safety to Life from Fire in Buildings and Structures.
C. UL 50, Enclosures for Electrical Equipment.
D. FCC Rules, Part 76.

E. All applicable parts will be FCC Class B approved.
F. Americans with Disabilities Act.
G. Texas Accessibility Standards.
H. International Building Codes (IBC).
I. Local and State Building Codes.
J. All requirements of the local Authority Having Jurisdiction (AHJ).

1.05 CONTRACTOR QUALFICATIONS

A. Contractors who do not currently possess the necessary qualifications, trained and experienced personnel, financial capacity, and meet the other requirements described will be disqualified.

B. The Contractor, as a business entity, shall be an authorized distributor and designated representative of the equipment manufacturer, with full warranty privileges. The proposed contractor shall have been actively engaged in the business of selling, installing, and servicing commercial building commercial communication systems for a period of at least 5 years.

C. Recently formed companies are acceptable only if specific pre-approval is requested, and granted by the Architect/Engineer, based on experience of key personnel, current and completed projects, and all licensing requirements are met 10 working days prior to the contract proposal date.

D. The Contractor shall have an office within 150-miles of the job site, staffed with trained technicians who are qualified and licensed to supervise the installation, to be responsible that the system is installed as submitted, to conduct system start up and perform a 100 percent operational audit of all installed devices, to instruct the Owners representatives in the proper operation of the system, and to provide service throughout the warranty period. The contractor shall be capable of dispatching technicians to repair a system within six hours of a service request.

E. The Contractor shall be fully experienced in the design and installation of the type of system herein specified and shall furnish with the contract proposal an itemized list of the installations of the type specified herein. The list shall include the name of the project, date of completion, the amount of the contract, the name, and telephone number of a qualified person to contact for reference. This list must contain at least two (2) projects within a 150- mile radius of the school district to allow school administration officials to visit the job site for review of the system installation and service. Each reference project listed must utilize equipment by the same manufacturer as the proposed system.

F. The Contractor shall employ factory-trained technicians capable of supporting the maintenance of the system. No contract employees are allowed unless they have been to the factory service school within the last 18 months. A certificate for this training shall be provided with the contractors' submittal.

G. The Contractor shall not have any grievances or complaints of record regarding workmanship, code compliance, or service response. A Proposed Contractor that has any prior finding(s) of a code violation or has any litigation in process concerning the installation of a communication system is unacceptable.

H. Any discrepancy in quantity or part numbers between the drawings and the bid specifications shall be brought to the attention of the Consultant for clarification during the bidding period. No allowance shall be made to the Contractor because of failure to have brought said discrepancies to the attention of the Consultant prior to award of contract.

I. The Contractor shall provide all necessary patch cables, riser/plenum cabling and connectors interconnecting all equipment to provide for fully functional systems. In addition, all cabling raceways, support systems, sleeves and any other materials required to properly install and support cabling systems.

J. The ability of the Contractor to obtain plans and provide a performance bond shall not be regarded as the sole qualification of the Contractors' competency and responsibility to meet the requirements and obligations of the contract.

K. The Builder shall be satisfied that a proposed Contractor meets all the requirements expressed herein before including the Contractor's proposal in the project.

L. The Owner may investigate, as they deem necessary to determine the ability of the proposed Contractor to perform the work. The proposed Contractor shall furnish to the Owner with any information or data requested for this purpose.

M. The Owner reserves the right to reject any contract proposal if the evidence submitted, or their investigation, fails to indicate that the Contractor is qualified to fulfil any part of the contract or to complete the work contemplated therein.

N. The Owner reserves the right to reject the proposal of any Contractor who has previously failed to perform properly, or complete on time, contracts of a similar nature.

PART 2 – PRODUCTS

2.01 GENERAL

A. All basic equipment for which there are Underwriters' Laboratories' Standard requirements shall be listed by Underwriters' Laboratories and be so labeled, or shall conform to their requirements, in which case, certified statements to the effect shall be furnished by the manufacturer with a copy of an examination report by a recognized laboratory acceptable to the Local Authority Having Jurisdiction.

B. All equipment and components shall be installed in strict compliance with manufacturers' recommendations and the requirements of the components UL listing. Consult the manufacturer's installation manuals for all wiring diagrams, schematics, electrical requirements, cable types, and physical equipment sizes, etc., before beginning system installation.

C. All data keeping hardware, firmware, and software provided shall be fully compliant with the calendar year designated in four-digit date format. Any time equations must function normally, leap year, and daylight savings time must be supported.

D. All basic equipment shall be new and shall be the latest product of a manufacturer of an established reputation and experience of quality electronic equipment. Model numbers indicate current equipment types; if later models exist, the Contractor shall provide those. The manufacturer shall have supplied a similar apparatus to comparable installations rendering satisfactory service for at least three (3) years.

E. It is the responsibility of the Intercom Communication System Contractor 1 to provide all features and functions as outlined in these specifications. The intercom shall accept standard DTMF signals from the building telephone system through an analog telephony interface #CMP-500.

F. All like devices shall be of the same manufacturer and model number.

G. Only equipment devices have been shown on the contract drawings. Specific wiring between equipment has not been shown.

H. All equipment shall be attached to walls and ceiling/floor assemblies and shall be held firmly in place (e.g., speakers shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load with a 5:1 Safety Factor.

I. The installation shall be subject to approval, inspection, and test of the Architect/Engineer.

2.02 ACCEPTABLE MANUFACTURES

A. Descriptions and details, acceptable manufacturers' names listed, and specific manufacturer and model number items indicated in the plans and specifications shall establish a standard of quality, function, and design. Manufacturers and model numbers listed "no exceptions" shall not be substituted without specific notice in an addendum. Otherwise, where a specific manufacturer's product is indicated, products of other manufacturers listed as acceptable may be submitted for approval based on the substitute product being, in the opinion of the Engineer, of equivalent or better quality than that of the product specified.

B. Proposed contractors wishing to propose any product substitution must do so in writing to the specifying authority at least ten (10) days prior to the proposal opening.

C. For manufacturers equipment or models other than that specified, the proposed contractor shall supply proof that such substitute equipment equals or exceeds the features, functions, performance, and quality of the specified equipment. Proposals must include detailed information showing all deviations from the system as specified

D. Substitute products for which the proposed contractor does not obtain prior approval will not be considered acceptable for this project. Final approval of alternate products shall be based on the decision of the Owner and Architect. Prior approval to make a proposal for this project does not automatically ensure products will be an acceptable equivalent.

E. It is the responsibility of the Contractor to provide all features and functions as outlined in these specifications. The functions and features specified are vital to the operation of this facility; therefore, inclusion in the list of acceptable manufacturers does not release the contractor from strict compliance with the requirements of this specification.

F. The model numbers used shall constitute the quality and performance of the equipment to be furnished. The **Conductor School Communication and Safety System by FrontRow, 1690 Corporate Circle, Petaluma, California** is acceptable basis of design; any other proposed manufactures must be pre-approved.

2.03 RELATED WORK - NETWORK CONNECTIVITY

A. Refer to Section 27 10 00 for all Ethernet network drop connections. All Ethernet cabling and jacks used to connect to the building network shall be provided as indicated on the plans under Section 27 10 00. All system devices provided in this section, which require an Ethernet network connection shall be coordinated with this contractor.

B. All system devices provided in this section that require a network connection shall be coordinated with the District IT department to be assigned TCP/IP configuration settings including a static IP address, domain, gateway, and subnet mask.

C. The intercom system will require streaming devices/server in a single Class C subnet 255.255.255.0 attached to the server primary network port.

D. The contractor shall implement all device network configuration and device programming required to provide a complete and functional system under this specification including any special connecting network jumpers and all other types of cabling, and interconnect wires and cables required.

2.04 INTERCOM AND PUBLIC ADDRESS OPERATION

A. Common zone paging speakers shall serve all corridors, passageways, offices, cafeteria, library, gymnasium, public spaces, exterior, etc.
   1. Interior spaces shall be equipped with intercom ceiling speaker(s) Quam-Nichols Company SYSTEM 5 speaker tapped at 1.25 watts. All corridor speakers shall be on the same zone and tapped at 5 watts. Separate corridor speaker in groups in order to not exceed the wattage rating of the amplifier.
   2. Gymnasium speakers shall be Quam-Nichols Company SYSTEM 1 speaker tapped at 5 watts.
   3. Rooms shown on the drawings with a volume control shall be equipped with a Lowell 25LVC-DW (white). Connect volume control in-line with amplifier source cable to allow for control of the volume of local speaker(s).
   4. Exterior speakers shall be UL listed, flush mounted waterproof type paging speakers for voice and tones with matching transformer. Quantity as shown on plans. Provide AtlasIED APF-15T with 193-8-6 back box and VP161-APF Baffle.
   5. Zone Gymnasium speakers separately.
   6. Zone exterior speakers separately.
   7. Provide and install (1) Ashly NE8250 amplifier for all speakers in section 2.04. A., with the exception of classroom speakers. Connect (1) Front Row CM-800 per amplifier channel in use: 1) Interior Common Areas including corridors, Library and Cafeteria, 2) Gymnasium, 3) Exterior, and program separate zone outputs to appropriate equipment as required.
   8. For each classroom, the Contractor shall furnish and install a complete, networkable, scalable AV control and presentation System.
   9. In classrooms with Acoustical Ceiling Tile, the AV equipment must be housed in a 2’ X 2’ lockable, lab certified plenum-rated enclosure. The basis of design **is FrontRow # 1000-00206 ezRoom Voice & Alert Trio (Elevate),** (by 27 41 16 contractor).
   10. For classrooms with hard or open ceilings, a surface Wallcore enclosure must be provided. The basis of design is **FrontRow # 1000-00231 ezRoom Voice & Alert WallCore Control (Elevate),** (by 27 41 16 contractor).
   11. Software: All software necessary to access full functionality of the system shall be licensed to the Owner without further chargers or recurring license fees
   12. The System is to include all equipment, cabling, materials, labor, and training as required to install and test a complete and operating System as described herein.
   13. The contractor shall follow the installation instructions provided by the manufacturer. Installation drawings shall show the location and general arrangement of equipment, electrical systems, and related items. They shall be followed as closely as elements of the construction will permit.
   14. The contractor shall examine the installation drawings and verify the conditions governing the work on the job site. The contractor shall arrange accordingly, providing such fittings, horizontal cable raceways, conduits, junction boxes and accessories as may be required to meet such conditions.
   15. Deviations from the installation drawings, except for minor changes in routing and other such incidental changes that do not affect the functioning or serviceability of the Systems, shall not be made without the written approval of the Engineer.

   16. 1.7 ACTION SUBMITTALS
   17. Product Data: For each type of product required, demonstrating compliance with requirements. Shop Drawings: Indicate the following: Schematic diagram of controlled circuits. Circuits and emergency circuits with capacity and phase, control zones, load type and voltage per circuit.
   18. NOTE: Local A/V systems shall be connected via analog interface (by Local Sound Contractor) to the FrontRow™ Conductor system for the purpose of reinforcing Conductor broadcast audio using a CM-800.

B. All speakers: classroom, office, corridor, exterior, gymnasium, cafeteria, and common areas shall broadcast announcements as zoned. Speakers shall produce clear human voice reproduction at 10 dBA over ambient noise levels minimum (i.e. corridors at class change) but never less than 65 dBA or more than 110 dBA throughout all areas that are typically occupied.

C. Provide as indicated on plans an Intercom Administrative Station #FR-ADMIN to provide the following functions:
   1. Identify incoming calls by their designated classroom numbers. Alert calls shall initiate a distinctive audible alert and visual indication.
   2. Provide facilities for answering calls registered in the display by a single "response" screen button.
   3. Provide the capability to broadcast all-call or zoned paging announcements over all interior, exterior, and corridor speakers. Zone announcements to exterior speakers separately.
   4. The system shall provide facilities for calling a staff (classroom) station by selecting the classroom or other location name from the graphical user interface.
   5. The central microprocessor control equipment shall be of modular design, 1 expandable to 250 stations. All programming shall be accomplished from the graphical user interface. The system shall be equipped with diagnostics logging capability.
   6. The system shall provide the capability of assigning speaker locations to any one or more software programmable zones for zone paging. The number of zones allowed shall not be limited.
   7. Systems amplifiers shall be capable of providing sufficient power for emergency paging of all speakers with a 30 percent reserved capacity for future expansion.
   8. System central control equipment shall be Underwriters Laboratory listed under Commercial Audio Systems and Accessories UL 813 and installed in a 19" rack mount cabinet and located where shown on the drawings or as directed by the Architect.
   9. **Provide an Uninterruptible Power Supply (UPS): Eaton 5PX2000RTNG2 for the #FR-ADMIN.**
   10. The work described by this section includes the furnishing of all components, materials, equipment, installation and technical labor and the performance of all operations necessary for the complete installation of an Intercom - Clock System in operating condition as indicated on the drawings and/or specified herein including:
      a. Licenses, permits as may be applicable
      b. Provision of submittal information
      c. Installation in accordance with contract documents, manufacturers' recommendations and applicable codes
      d. Configuration of control and signal software including custom programming if required Testing and adjustments, including documentation thereof
      e. Provision of manuals
      f. Maintenance and warranty services
   11. **PRIOR TO THE FRONTROW SOFTWARE BEING INSTALLED, THE CONTRACTOR SHALL PROVIDE THE FR ADMIN DEVICES TO THE DISTRICT FOR THE IT DEPARTMENT TO IMAGE.**

2.05 RACK / ENCLOSURE

A. Provide and install (1) Chatsworth CUBE-It PLUS Wall Mounted rack # 13492-772
   1. 72” high, 24” deep, 40RU with metal door, black.
   2. Install at location shown on drawings.
   3. Provide with rack, (1) SurgeX SX-1115-RT, rack mounted power distribution / surge protection.

2.06 AUDIO PROGRAM SOURCE

A. Provide (1) Denon DN300Z AM/FM, Bluetooth, Tuner/CD or approved equivalent to connect via dual RCA to 3.5 mm patch cable and dual XLR to 3.5 mm to the Master CM900 network controller.
    1. Provide RDL STD-600 for balanced stereo connection to Master CM900.

2.07 TELEPHONE SYSTEM INTERFACE FUNCTIONS

A. The functions described below are accomplished through the connection of the paging system to a Universal Telephone Interface (kit # CMP-500) to the building telephone system through a dedicated land line to allow telephone to access to this port.

B. In order for these functions to operate, the Owner must provide a dedicated telephone line.

C. Any system telephone shall be able to page on an all-call, and zone basis to any of the programmed paging zones.

D. Any administrative system telephone shall be able to initiate an emergency announcement to all locations. Emergency announcements override all other programs.

E. Any system telephone shall be able to initiate emergency evacuation voice announcements and/or pre-recorded emergency tones and signals.

2.08 MASTER CLOCK SYSTEM

A. The master clock system shall include an easy-to-use web-based interface that allows for configuration via the Internet or LAN/WAN and Internet NTP / UTC World Time Clock Synchronization.

B. Clocks shall be placed as shown on drawings – Sapling #SAP-4BS-12R-0-A1 (12” round, black plastic case, standard 12 hour face).
    1. **Dual face clock:** (2) Sapling #SAP-4BS-12R-0-A1 with (1) Sapling SAH-4BD-12R-0 double mount.

C. Internet UTC World Time Clock Synchronization: Provide World Time Clock Synchronization for the master clock system. Contractor must program Conductor’s time source to the same internet UTC.

D. Provide one (1) PoE yellow CAT6A UTP to each clock (for power and time signal) from Owner provided PoE network switches at MDF/IDF’s.

E. Load Sapling clock software on FrontRow Admin Station computer/display for clock control.

2.09 INTERCOM SYSTEM HEADEND EQUIPMENT

A. Mount all equipment, except portable equipment, firmly in place. Permanently mark all cables and install in a professional, neat, and orderly installation. All wiring and cables will be securely fastened and routed using Velcro strips and/or wire ties. Provide for adequate ventilation in all equipment racks and take precautions to prevent electromagnetic or electrostatic hum. Insert test results in the owner's manual.

B. Provide the components necessary to provide a complete integrated system performing to the above specifications. FrontRow Conductor IP Intercom System as herein listed.

C. The intercom system shall contain all internal components to allow connection of 30% spare intercom circuits. Equipment list, quantities as required, shall consist of but not be limited to:

1. FrontRow DRS5000 Rack Mount Server (1RU) running:
    a. FrontRow Conductor software database
    b. FrontRow Maestro asset management software
    c. FrontRow Encore software management
    d. FrontRow Time Sync Software

D. FrontRow CMP-500 Universal Telephone Interface

E. FrontRow CM-800 Audio Decoder

F. Inputs and Balanced/Unbalanced Output

G. Uninterruptible power supply (included with #FR-ADMN)

The parts described above for the FrontRow Admin Station are classified in the following kits:

1. #FR-ADMIN: Includes complete office station for Conductor communications. It consists of all-in-one touch PC with preloaded software; CM900 master controller; CB65 microphone; UPS battery backup; wireless keyboard & mouse; mousepad; printed user guide; one audio to USB adapter.

2. #DRS-5000: 1U Linux based server with power supply. It includes license for Maestro network management software; Encore licensing and updating service; FrontRow control panel Timesync service and one Flashback USB drive.

2.10 FAST ETHERNET POE SWITCHES FOR INTERCOM ANNOUNCEMENT AND AUDIO INTERFACE/AMPLIFIER NETWORK CONNECTIVITY

A. A classroom POE extractor 1010-00005 is required to ensure that the paging/intercom system stays active during a power outage. For non-classroom paging areas the network switch must provide a minimum POE standard of 802.3af for each 1010-00005 device. In addition, all relevant network switches, routers, etc. must be supported by a local UPS.

2.11 ADMINISTRATOR STATION

A. Provide all equipment necessary for the correct performance of the FrontRow head end system #FR-ADMIN.

2.12 INTERCOM ANNOUNCEMENT AUDIO INTERFACES/AMPLIFIERS:

A. Offices, corridors, and common areas – Provide per section 2.04. above as required.

2.13 CABLE

A. The Contractor shall provide and install new and unused ASTM bare solid copper conductor wire per ANSI/NEMA codes. Follow the manufacturer's instructions. All wire shall be UL listed for communication and control circuits.

B. All cables shall have a label on both ends utilizing self-laminating, nylon or vinyl printed labels. Handwritten labels are not acceptable.
    1. Brady or equivalent.

C. Each call button shall be wired with Category 6 cable.
    1. Plenum cable shall be used where required.

D. Each speaker cable shall be NEC type CMR, West Penn Wire No. 225, 16 AWG, two (2) conductors. Equivalent by Belden, Carol, or Comtran.
    1. Plenum cable shall be used where required.

2.14 CABLE TIES

A. Nylon cable ties shall be furnished and installed to attach wire bundles to supports and for appropriate wire management as required.
    1. Nylon wire tie, 3.9”, miniature - Panduit PLT1M-C or equivalent.
    2. Nylon wire tie, 5.6”, miniature - Panduit PLT1.5M-C or equivalent.
    3. Nylon wire tie, 11.4”, intermediate - Panduit PLT3I-C or equivalent.
    4. Nylon wire tie, 14.6”, intermediate - Panduit PLT4I-C or equivalent.

2.15 CABLE ROUTING, INSTALLATION, AND SUPPORT

A. System wiring and equipment installation shall be in accordance with good engineering practices as established by the NEC and TIA/EIA. Wiring shall meet all state and local electrical code requirements.

B. Cable pathways, conduit, and cable support systems shall be complete with bushings, deburred, cleaned, and secure prior to installation of cable.

C. All wiring shall be tested free from opens, grounds, or shorts. All communication cables shall be supported from the building structure and bundled. Do not attach any support to joist bridging or other lightweight members.

D. The support system shall provide a protective pathway to eliminate stress that could damage the cabling. The cable shall not be crushed, deformed, skinned, crimped, twisted, or formed into tight radius bends that could compromise the integrity of the cabling.

E. In all open exposed areas such as gymnasiums, shops, field houses, janitors’ closets, or mechanical / electrical rooms, all the communication cable shall be fully enclosed in conduit.

F. Communication cables shall be run in trays from wall boxes to accessible areas above finished ceilings. Conduit shall be required only within walls and concealed spaces to provide access.

G. Provide bushings to protect the cable from damage for conduit ends, box openings, and passage through metal studs.

H. Communication cables shall be run in bundles above accessible ceilings and supported by building structure. Cabling shall be loosely bundled with cable ties randomly spaced at 30 to 48 inches on center, cable ties shall not be tight enough to deform cabling and shall not be used to support the cabling.

I. Communication cable must not be fastened to electrical conduits, mechanical ductwork/piping; sprinkler pipes, or routed to obstruct access to hatches, doors, utility access panels, or service work areas. Do not route cables through fire doors, ventilation shafts, grates, or parallel for more than four feet with line voltage electrical conductors. Communication cables shall not be run loose on ceiling grid or ceiling tiles.

J. Support shall be provided by mounting appropriate fasteners that may be loaded with multiple cables. Provided that the weight load is carried by the support rod or wire, the support assembly may attach to the ceiling grid for lateral stabilization. The required support wires for the ceiling grid or light fixtures shall not be utilized. Any fastener attached to the ceiling grid shall not interfere with inserting

or removing ceiling tiles. The cable pathway of support must be positioned at least 12 inches above the ceiling grid.

K. All cabling shall be placed regarding the environment, EMI/RFI interference, and its effect on communication signal transmission.

L. Do not route any data communication cable within two feet of any light fixture, HVAC unit, service access area, electric panel, or any device containing a motor or transformer.

M. Communication cable will not be installed in the same conduit, raceway, tray, duct, or track with line voltage electrical cable without a metallic barrier meeting NEC requirement.

N. Maximum cable pulling tension should not exceed 25 lb./ft. or manufactures recommendation, whichever is less.

O. Any pulling compounds utilized must be approved by the cable manufacturer and shall not degrade the strength or electrical characteristics of the cable.

P. No terminations or splices shall be installed in or above ceilings.

Q. Cable bends shall not be tighter that the manufacturers' suggested bend radius.

R. Mount all equipment firmly in place such that vibration or jarring will not activate an alarm, supervisory, or trouble signal. Route cable in a professional, neat, and orderly installation.

S. All cables shall have a label on both ends utilizing self-laminating, nylon or vinyl printed labels. Handwritten labels are not acceptable.
   1. Brady or equivalent.

T. Each cable run shall include a five-foot service loop with wire tie located in the ceiling above the control unit panel. This is to allow for future re-termination or repair.

U. Provide for adequate ventilation to all equipment racks and take precautions to prevent electromagnetic or electrostatic hum.

V. All conduit, ducts, track, and raceways shall be supported from the structure at industry standard intervals for the size specified, utilizing proper anchoring devices. Cable fill may not exceed the manufacturers' instructions for each type of support.

W. Devices mounted on a drop ceiling shall feature a backbox fitted with a support hanger (Caddy #512 or #512A for deep boxes), or equivalent with independent drop wires to support the weight of the device.

2.16 TERMINATION PRACTICES

A. Strip back only as much cable jacket as required to terminate.

B. Preserve wire twists as closely as possible to point of termination (0.5" maximum) to keep signal impairment to a minimum.

C. Avoid twisting cable jacket during installation.

2.17 BUSHINGS

A. Provide a plastic snap in bushing at each box opening, passage through a metal stud, and at the end of all open conduit stubs or sleeves prior to cable installation to protect the cabling from damage:
    1. Box openings - Thomas & Betts Knockout Bushing Series 3210, or equivalent.
    2. Metal stud passage - Thomas & Betts Twist It Bushing Catalog Number SB1216-SC or equivalent.
    3. Conduit ends - Thomas & Betts Anti-Short Bushing Series 390 or Tite-Bite Combination couplings Series 442, or equivalent.

2.18 J-HOOKS

A. Attachments for cabling support shall be spaced at approximately 48 to 60 inches on center. The cable bundle shall not be allowed to sag more than 12 inches mid-span between attachments. Attachments shall be sized as follows:
    1. Single cables or bundles up to four cables may be supported directly by the building structure.
    2. Bundles up to 1/2" dia. (Ten 1/4" cables) 2" bridle ring, Caddy #4BRT32 or equivalent.
    3. Bundles up to 3/4" dia. (Sixteen 1/4" cables) 3/4" J-Hook, Caddy #CAT12 or equivalent.
    4. Bundles up to 1-5/16" dia. (Fifty 1/4" cables) 1-5/16" J-Hook, Caddy #CAT21 or equivalent.
    5. Bundles up to 2" dia. (Eighty 1/4" cables) 2" J-Hook, 1 Caddy #CAT32 or equivalent.
    6. Split bundles greater than 2" dia. or provide cable tray.

B. Do not mix different signal strength cables on the same J-Hook (i.e. intercom with telephone/data cable). Multiple J-Hooks can be placed on the same attachment point, up to the rated weight load of the attachment device.

2.19 SURGE AND AMPERAGE PROTECTION

A. Electrical surge protection shall be provided for all service entrance connections and on each copper pair that connects one building to another (i.e. any other portion of a building complex not under one continuous roof) at both exit points to prevent damage to equipment.

2.20 FIRE STOPPING, DRAFT/NOISE STOPPING, PENETRATIONS, AND CORING

A. UL Listed fire stopping methods that match the fire rating of the wall or floor being penetrated are to be used at all fire barrier penetrations. Seal the interior of the conduit sleeve around the cables and around the outside of the sleeve on each side of the penetration with firestop caulk or putty, install according to the manufacturers' instructions.

B. All penetrations through fire rated walls or floors shall feature a suitable length of metal conduit. Hole diameter shall not exceed ½" larger than the conduit or sleeve to be installed. The hole shall be neatly cut, not oversized or irregular. Do not share wall/floor penetrations with ductwork, piping, line voltage electrical conduits, etc.

C. All gypsum board or plaster penetrations shall be tool cut using an appropriate hole saw / mandrel or manufactured assembly.

D. Draft/Noise Stopping - All penetrations through non-rated walls shall include draft/noise stopping to minimize the transfer of air and sound between enclosed areas. This shall include but not limited to:
    1. Neatly cutting all non-rated wall penetrations with a 1" maximum clearance. All gypsum board or plaster penetrations shall be tool cut using an appropriate hole saw / mandrel or manufactured assembly. The hole shall be neatly cut and not oversized or irregular. Do not share wall penetrations with other types of ductwork, piping, line voltage electrical conduits, communications cabling, etc.
    2. Provide and install non-combustible mineral wool, fiberglass, cellulose insulation, caulk, and/or sealant as required. Seal the interior of conduit sleeves around the cables and around the outside of the sleeve on each side of the penetration with caulk or putty, install materials

according to the manufacturers' instructions.

E. The Contractor shall make every effort to coordinate with the building Architect, Engineer, Builder, and Electrical Contractor to have sleeves placed in new construction so that later coring or drilling of building structural members will not be required. The Contractor must consult with the building Architect, Engineer, and Builder prior to drilling, coring, or sawing of any wall, floor, etc. All penetrations shall be done at approved, appropriate, locations.

F. Upon approval, the Contractor shall be required to supply all labor, equipment, tools, and materials to create any additional penetrations, and shall provide the sleeve, temporary and final fire stopping. Special care shall be taken not to stress, overheat, or penetrate any building support member. Coring shall be made with equipment appropriate for the dry penetration of concrete and block materials. Under no circumstances shall penetration be made utilizing chisel or percussion type equipment. Concrete, block, or plaster cores shall be made by dry saw/core methods only.

PART 3 - EXECUTION

3.01 OCCUPANCY ADJUSTMENTS

A. On-Site Assistance: Engage a factory-authorized service representative to provide on-site assistance in adjusting sound levels, resetting transformer taps, and adjusting controls to meet occupancy conditions. Provide up to three on-site assistance visits within one year of Substantial Completion.

3.02 TESTING, CERTIFICATION, WARRANTY, SERVICE

A. A factory trained service technician shall supervise the final connections and testing of the system and it shall be subject to the final acceptance of the Architect, Engineer, and local authorities. Testing shall ensure the following:
   1. Before energizing the cables and wires, check for correct connections and test for short-circuits, ground faults, continuity, and insulation.
   2. Complete and functional system.
   3. Installed in accordance with manufacturer's instructions.
   4. Upon completion of the testing, the manufacturer or his representative shall issue to the Owner a letter of certification attesting to the fact that he has tested and adjusted the system, that all components are properly installed and free of defects, and that the system is in compliance with this specification.

B. The contractor shall provide a warranty and service contract for the installed system. The warranty shall be against defects in material or workmanship for a period of one (1) year from the date of substantial completion. Any equipment or wiring shown to be defective shall be replaced, repaired, or adjusted free of charge. All labor and materials shall be provided at no expense to the Owner. All equipment will carry a one-year warranty or manufacturer's warranty whichever is greater.

C. The service contract shall provide a minimum of the following:
   1. Diagnostics of the system should a problem occur.
   2. Reprogramming - Desired changes to class of service of any device or to the bell schedule. The Intercom Communications System Contractor will provide this service with an unlimited number or frequency of the changes.
   3. The Communication Systems Contractor will provide service software upgrades to the system that becomes effective during the period of the service contract.

D. The contractor shall make available a service contract offering continuing factory authorized service of this system after the initial warranty period. This contract shall automatically renew each year at the owner's discretion. The contractor will provide the cost of renewal 1 to the owner thirty (30) days prior to the expiration of the contract after the first year.

E. The system manufacturer shall maintain engineering and service departments capable of rendering advice regarding installation and final adjustment of the system.

3.03 DRAWINGS, MANUALS AND TRAINING

A. In addition, the contractor shall furnish complete operating and maintenance manuals listing the manufacturer's name(s), including technical data sheets. Manuals shall include wiring diagrams to indicate internal wiring for each device and the interconnections between the items of equipment. Provide a clear and concise description of operation that gives, in detail, the information required to properly operate the equipment and system. Provide a parts list with manufacturer and model number for commonly replaced parts. Include complete instructions for the inspection, testing, and maintenance of the system. Include copies of all programming sheets used to configure the system.

B. The Contractor shall conduct formal on-site training sessions. Provide documented general instruction as follows:
   1. Provide instruction to District personnel to include the location, inspection, maintenance, testing, and operation of all system components. Provide a minimum of four (8) hours -- four 2-hour sessions separated by a minimum of two weeks.
   2. Provide instructions to designated personnel on the functions and operation of the intercom and master clock system including emergency and service request procedures. Provide a minimum of four (4) hours--two 2-hour sessions separated by a minimum of two weeks.

END OF SECTION

SECTION 27 51 23.80 – LOCAL SOUND REINFORCING SYSTEMS

PART 1 – GENERAL

1.1 GENERAL REQUIREMENTS

A. Provide all materials, equipment, transportation and labor to achieve complete and fully functional systems as shown or intended on drawings and in bid specifications.

B. All applicable equipment shall bear the UL label. All work shall be executed in accordance with the National Electric Code (NEC), the Occupational Safety and Health Act (OSHA) and all applicable State and Local codes, ordinances and regulations.

C. The Contractor's installation team shall have at least one member possessing a NICET Level II, CTS-I or C-EST certification; additionally, at least one audio DSP programmer certified in HiQnet Audio Architect, Symetrix, Biamp Tisera, QSC Q-SYS or Dante.

D. Contractor shall have been in the commercial AVL (Audio, Video, Lighting) installation industry for at least five years. Contractor shall have installed at least five systems of this type and comparable scale in educational facilities within the State of Texas. Contractor shall provide a list of successfully completed projects including completion dates within the past two years from the bid date of this project.

E. Should the local sound systems include Crestron or AMX hardware which requires programming, the Contractor shall provide a Certified Crestron Programmer or an AMX Certified Expert (ACE) Programmer to program, upload and debug the third party control systems.

F. Should the local sound systems include managed network devices, the Contractor shall provide one person on the installation team with valid certification in one of the following: Harman HCNA/P, CompTIA Network+, Cisco CCNA or Cisco CCNP. Provide valid certification credentials in the submittal documentation.

G. Any discrepancy in quantity or part numbers between the drawings and the bid specifications shall be brought to the attention of the Consultant for clarification during the bidding period. No allowance shall be made to the Contractor by reason of failure to have brought said discrepancies to the attention of the Consultant prior to award of contract. Should discrepancies be discovered, the greater in quality and quantity shown shall be provided.

H. Systems to be installed in the following areas:

1. As listed below.

1.2 REGULATORY REQUIREMENTS

A. Standards: All work shall be performed in accordance with the latest revisions of the following standards and codes:
1. Latest Local Codes and Amendments
2. 2015 National Electrical Code

B. Other References:
1. TIA/EIA-568-A – Commercial Building Telecommunications Wiring Standard
2. EIA/TIA-569 – Commercial Building Standard for Telecommunication Pathways and Spaces.

3. TIA/EIA-606 – The Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
4. TIA/EIA-607 – Commercial Building Grounding and Bonding Requirements for Telecommunications.
5. EIA/TIA 455-A – Standard Test Procedure for Fiber Optic Fibers, Cables, Transducers, Sensors, Connecting and Terminating Devices and Other Fiber Optic Components.
6. TIA/EIA TSB 67 – Transmission Performance Specification for Field Testing of Unshielded Twisted-Pair Cabling Systems.
7. TIA/EIA TSB 72 – Centralized Optical Fiber Cabling Guidelines
8. ISO/IEC 1180 – Generic Cabling Standard
9. EN 50173 – Generic Cabling Standards for Customer Premises
10. ANSI/EIA/TIA 526-14 – Optical Power Loss Measurements of Installed Multimode Fiber Cable Plan.

C. Governing Codes and Conflicts:
   1. If the requirements of these specifications or the Project Drawings exceed those of the governing codes and regulations, then the requirements of these specifications and the Drawings shall govern. However, nothing in the Drawings or Specifications shall be construed to permit work not conforming to all governing codes and regulations.

1.3 ABBREVIATIONS

A. The following abbreviations are used in this document:

1.4 SUBMITTAL DOCUMENTATION

A. Submit shop drawings as specified in pdf format, ARCH E1 (30x42). Contractor shall be responsible for all costs associated with producing and submitting all required documentation.

B. Submit a room by room list of all equipment to be installed, in pdf format.

C. Submit Manufacturer's product data for all equipment with a table of contents, in pdf format.

D. Submit a line item compliance statement indicating that the products being submitted comply with the specified equipment and indicate which products deviate from the specifications.

E. Submit detailed drawings of all systems, minimum scale 1/8" = 1', in pdf format.

   1. Table of Contents.
   2. Rigging details. All hardware must meet or exceed a safety factor of 5:1. Detail the product manufacturer, part numbers and load capacity of all hardware to be used. **Contractor shall employ the services of a professional structural engineer licensed to practice in the State of Texas to verify load ratings of hanging components. Provide attachment details on Shop / Submittal Drawings reviewed by said engineer. Include stamped report of items reviewed by structural engineer with shop drawings submittal. Report shall include an itemization of items reviewed by the structural engineer and confirmation that proposed methods of suseending equipment as shown on the shop drawings conform with required safety factors.**

3. Floor Plans, Reflected Ceiling Plans and Section Elevations displaying loudspeaker locations and orientation, wall plate locations, rack locations, 120vAC receptacle locations and all other related device locations.
4. Comprehensive system schematics displaying detailed connections to all equipment. These shall display wire numbers, terminal block numbers, patch bay assignments and color coding.
5. Proposed construction details for any custom fabricated items; including interface panels, patch panels and wall plates. These shall display dimensions, materials, finishes, I/O connector labels and color selection.
6. Rack elevations displaying the locations of all equipment within each rack.
7. Riser diagrams displaying conduit requirements with pull boxes, outlet boxes, cable layouts, cable type part numbers and quantity of cables with part number in each conduit.
8. Electrical power requirements for the systems. Include diagrams for any remote control of electrical power displaying locations and elevations for all receptacles in detail sufficient to coordinate with the Electrical Contractor.
9. All submittal drawings not meeting the above criteria shall be deemed incomplete, shall not be reviewed and shall be returned for revision.

1.5 OPERATING AND MAINTENANCE MANUALS

A. Provide Operating and Maintenance Manuals as specified in Division 26 and Division One and deliver to the Owner.

B. Include:

1. Product Data.
   a. Manufacturer's data for each type of product conforming to the submission format specified herein. Include manufacturer's serial numbers within the list of product.
   b. For custom circuits or modifications, a description of the purpose, capabilities, and operation of each item.
   c. Each product's Owner Instruction Manual. Provide high quality copies where necessary, with all text legible and illustrations of equal resolution and sharpness as the original manual. Faxed copies or copies with portions of the information missing or smeared are not acceptable.
   d. Manufacturer's maintenance and care instructions.
   e. Separately bound list by manufacturer and model or part number of product incorporated within the systems arranged in alphanumeric order. Manufacturer's warranty statements bound separately where applicable.
2. A complete as-installed (As Built) equipment list, listed by room, identifying manufacturers' names, model numbers, serial numbers, quantities and locations of each item.
3. Complete and correct As Built systems schematics, floor plans, reflected ceiling plans, elevations, rack risers and I/O plate details. Include diagrams or charts displaying final settings of all control knobs in the system (mixers, equalizers, audio amplifiers, etc.).
4. Each individual system's program software / source code (audio, video, lighting and third party control) with final settings and pass codes and As Built AutoCAD files (2013 or newer) shall be saved onto two separate 8GB thumb drives and included in the close-out documentation. All software programs / source codes are the intellectual property of the Owner.
5. Quick-start Guide for each system written with the assumption that the intended reader is technically inexperienced and unfamiliar with the facility. The Quick-start Guide shall be laminated and affixed to the inside of the front door of the system rack with appropriate mounting hardware. One copy of each individual

system schematics printed in ARCH D (24x36) and laminated shall be delivered to the Owner.

6. Two hard copy, paper sets of the as-installed (As Built) drawings in ARCH E1. Drawing sets shall be individually bound.
7. In addition to the hard copy close-out documentation, all close-out documentation shall be included, in pdf format, on the, 8GB thumb drives.
8. Service & Maintenance Manual:
   a. Provide an original manufacturer's copy of the service manual on every piece of equipment for which the manufacturer offers a service manual. On equipment where there is no service manual, provide statement from company indicating manual is not available. Arrange manuals in the same order as the operations manual.
   b. Manufacturer's maintenance and care instructions.
   c. Maintenance Instructions, including maintenance phone numbers and hours; maintenance schedule; description of products recommended or provided for maintenance purposes, and instructions for the proper use of these products.
9. Organize documents into separate bindings containing data relevant to operation, maintenance and warranty.

1.6 WARRANTY AND SERVICE

A. The Contractor shall warrant all new equipment to be free of defects in materials and workmanship for not less than one year after the Substantial Completion date.

B. The systems are to be free of defects and deficiencies and are to conform to the drawings and specifications as to kind, quality, function and characteristics. The Contractor shall repair or replace defects which may occur in labor or materials within the warranty period without charge to the Owner.

C. Within the warranty period, respond to requests for service within 24 hours. Service calls to perform warranty work shall be made within 72 hours of request by the Owner. Temporary, equivalent replacement equipment shall be provided at no cost to the Owner when immediate on-site repairs cannot be made.

D. This warranty shall not void or replace individual manufacturer warranties which extend past this warranty period. This warranty shall not void any rights guaranteed the Owner by law.

E. The Contractor shall include in the close-out documentation a certificate of warranty which includes the start and end dates of the warranty and contact information, including name, telephone number and email, of individuals to perform warranty service.

F. This warranty shall not apply to existing Owner Furnished Equipment.

G. Additional warranties may be negotiated between the Contractor and the Owner at the Owner’s discretion.

1.7 SUMMARY OF WORK

A. The installation shall comply with all applicable codes and standards in effect at the job site and as indicated in the Drawings and Specifications.
   1. Reference project drawings for locations, quantities, and coordination with other trades.

B. All local sound racks shall have cabling installed and routed according to industry standard best practices. Contractor shall employ horizontal lacing rails in the rear of the rack for neat

and orderly cable routing. Use Velcro strips for cable bundling. ZIP TIES ARE NOT ACCEPTABLE.

C. Contractor shall perform an RF scan and shall provide results in pdf format with the close-out documentation. Contractor shall provide an RF coordination sheet, documenting all RF frequencies in use in each system, including in the High School buildings, to ensure there is no RF interference between systems. Coordinate with General Contractor and for access to High School building systems.

D. Contractor shall tune each system's DSP to provide a flat frequency response.

1. Tune and set dynamics on all inputs to provide the highest level of gain before feedback while providing intelligibility of all inputs.
2. Contractor shall perform a "rattle test" of all systems: Apply sine wave sweep signal to each loudspeaker system with a two minute sweep from 20Hz to 550Hz, to 10 - 15dB below full system output. Annotate issues discovered during sweep test. Correct issues resulting from the new system equipment and / or rigging hardware.

E. Contractor shall provide all required equipment and programming to provide a fire alarm override. All audio shall mute in all local sound systems during a fire alarm.

F. Contractor shall Coordinate with District IT department to provide internet access to each QSC QSYS core for QSYS Reflect Enterprise Manager.

G. Contractor shall Coordinate with District IT department to provide a VLAN for the AV system.

PART 2 – MATERIALS

A. All equipment shall be new and unused unless otherwise noted.

B. Contractor shall provide all necessary patch cables, riser/plenum cabling and connectors interconnecting all equipment to provide for fully functional systems. In addition, all cabling raceway, support systems, sleeves and any other materials required to properly install and support cabling systems.

C. All equipment quantities shall be as shown on drawings unless otherwise noted.

D. All materials are to be provided as specified. No substitutions shall be accepted without written request from the Contractor and written consent of the Consultant.

2.1 GYMNASIUM E100

A. AV NETWORDK PERIPHIALS AND I/O

1. 1 qty. QSC TSC-101-G3 – "TSC" - Touch screen controller panel UCI
   a. 1 qty. Honeywell CG512A1009 Large Thermostat Guard
   b. Provide 5 sets of keys
   c. Install in local sound rack.

2. 2 qty. WALL PLATE AUDIO - "WPA".
   a. QSC UNDX2IO+, Two (2) mic/line inputs, two (2) line outputs.
      i. ProCo double gang decora wall plate cover.
   b. Label plate Inputs "MIC 1 – MIC #".
   c. Label plate Outputs "OUT 1 – OUT #".

d. Cover up manufacturers factory IN/OUT labels.
e. Install plates, ascending in mic # from low to high from house left to house right.
f. Quantity and locations as shown on drawings.

3. 1 qty. BT WALL PLATE, - “BT”.
   a. 1 QSC UND610-BT – dante, bluetooth receiver with dual microphone, dual rca, 1/8” aux in and outputs.
   b. Cover up manufacturers factory IN/OUT labels.
   c. Install plates, ascending in mic # from low to high from house left to house right.
   d. Quantity as shown on drawings.

4. Provide all cables required to connect all devices for a fully functional system.
5. 1 qty. Netgear M4250-26G4F-PoE++ (GSM4230UP), 24x1G PoE++ 1,440W 2x1G and 4xSFP Managed Switch.
6. 4 qty. Netgear AGM731F, SFP Transceiver 1000BASE-SX module.
7. 1 qty. ComScope 760162800 | UNP-6A-DM-1U-24, 24 Port Cat6a Patch Panel

B. GRAPHICAL USER INTERFACE / TOUCH PANELS

1. Program QSC Audio System and UCI to allow for control of complete audio matrix routing, input selection, audio level control and mute for each audio input and other such controls as directed by the Owner. Coordinate with Owner and Consultant for final GUI functionality and layout. Coordinate with Owner for Logo to be displayed on splash screen. Provide a numeric (0-9) password page immediately after the splash page. Provide a simple way for Owner to change and store new password from the GUI with a press-and-hold hidden button to access password change page.

2. The first page “SYSTEM START UP” shall have the text, “PRESS ANYWHERE TO START SYSTEM”. The next page shall display a prompt requesting a passcode. Once the passcode is entered correctly, a System Start Up loading bar shall be visible. After the system has booted, the next page “HOME”, shall allow for the selection of auto mode, manual mode, media controls, and system shutdown.

3. The “AUTO MODE” page shall include a system mute button, master output volume control fader with buttons to allow the user to navigate back to the home page or a system shutdown page.

4. The “MANUAL MODE” page shall include a system mute button, channel fader volume controls, preamp controls and mutes for all available inputs with buttons to allow the user to navigate back to the home page or system shutdown page.

5. The “MEDIA CONTROLS” page shall provide transport controls for the CD player and Bluetooth reciever.

6. When system shutdown is selected, a prompt shall appear with the text “PLEASE CONFIRM SHUTDOWN”. The user will then select a button labeled “Yes” or “No”. If no is selected, the “HOME” page shall appear. If yes is selected, a system shutdown loading bar shall appear and all system inputs/outputs shall be muted and all associated amplifiers put in standby mode. Once the system shutdown sequence is complete, the “SYSTEM START UP” page shall be visible.

C. AUDIO AMPLIFERS

1. 2 qty. QSC CX-Q 8K4
   Program amplifier's DSP with data acquired during system tuning.
   Program each output channel with appropriate DSP settings to protect the speaker drivers from being over-driven and damaged.
2. 1 qty. QSC CX-Q 4K4
   Program amplifier's DSP with data acquired during system tuning.
   Program each output channel with appropriate DSP settings to protect the speaker drivers from being over-driven and damaged.
   a. Program each amplifier's DSP with data acquired during system tuning.
   a. Program each output channel with appropriate DSP settings to protect the speaker drivers from being over-driven and damaged.

D. WIRELESS MICROPHONES

1. 1 qty. Shure ULXD4Q-G50, QUAD channel digital wireless microphone receiver.
2. 4 qty. Shure ULXD2SM58-G50, wireless microphone handheld transmitter.
3. 4 qty. Shure ULXD1-G50, wireless microphone bodypack transmitter.
4. 4 qty. Shure SBC200, 2 bay charging station for wireless microphone transmitters.
5. 8 qty. Shure SB900B, rechargeable wireless microphone batteries.
6. 4 qty. Shure WA661, Mute Switch for wireless microphone bodypack transmitter.
7. 4 qty. Shure SM31FH, Fitness headset condenser microphone.
8. 1 qty. RF Venue DFINW, diversity remote antenna, white.
   a. Orient to achieve maximum coverage of Gymnasium.
   b. Provide Wire Guard to protect antenna from damage.
   c. Provide 1 qty. AtlasIED GN-13E. Reinforce device to ensure antenna is aimed properly.
   d. Provide 1 qty. Atlas Sound AD-12BE flange.

E. WIRED MICROPHONES

1. 4 qty. Shure SM58S.
2. 4 qty. K & M 26045-500-55 stackable mic stand.
3. 4 qty. K & M 211/2 mic stand boom arm.
4. 4 qty. Whirlwind MK425 XLR cable.

F. POWER DISTRIBUTION

1. 1 qty. Middle Atlantic PD-920R-SP, Rackmount Power, 9 Outlet, 20A with Series Surge Protection.
1. 1 qty. Middle Atlantic UPS-2200R, Rackmount Uninterruptible Power Supply 1650W.

G. LOCAL SOUND EQUIPMENT RACK

1. 1 qty. Middle Atlantic DWR 24-22PD.
   i. Move rack rails back 2" to allow the front door to close with devices installed.
2. 1 qty. Middle Atlantic VFD-24.
3. 1 qty. Middle Atlantic TD2LK – 2RU locking drawer.
   i. 1 qty. Middle Atlantic FI-2
4. 2 qty. Middle Atlantic RSH – Single RU Shelf
5. 1 qty. Middle Atlantic DWR-FK22 - fan kit.
6. Provide 5 extra front door keys to the Owner.
7. Populate all unused rack spaces with blank panels.
8. Install all rack mounted equipment with Middle Atlantic HTX, T20 Star Post,10-32 security-screws.

9. Building network devices shall be installed in the top spaces of the rack. Coordinate with Structured Cabling Contractor.

H. MEDIA PLAYER

1. 1 qty. Denon DN-700CB.

I. LOCAL SOUND SYSTEM SPEAKERS

1. 8 qty. QSC PL-DC12, WHITE.
    a. Terminate speakers in full range setting.
    b. Horizontal orientation.
    c. Aim speakers for evenly distributed and complete coverage of seating area.
2. 8 qty. QSC PL-DC12-YM, horizontal yoke mount, WHITE.
3. 2 qty. QSC PL-SUB15, WHITE.
4. Securely attach all speakers to building structure at a 5:1 safety factor.
    a. Contractor shall employ rigging attachment hardware rated SAE Grade 5 minimum.
    b. Attach 1 qty. safety cable to each speaker.
    c. Paint all rigging hardware to match ceiling color. Coordinate with Architect for paint manufacturer and code.

J. ASSISTED LISTENING SYSTEM

1. Provide (1) Listen Technologies LP 3CV 072 Assisted Listening System
    a. Provide (1) LA-124 antenna. Install at locations shown on drawings.
    b. Provide enough LR-200-072 Receivers to meet TAS and ADA standards as required by law.
    c. Provide with each additional LR-200-072 Receiver:
        i. 1 qty. LA-161 Ear Speaker.
        ii. 1 qty. LA-361 AA batteries.
        iii. 1 qty. LA-430 Earphone/Neck Loop Lanyard per four receivers.
    d. 8 qty. LA-361 AA batteries
    e. Coordinate with Architect for installation location of each LA-304 Signage Kit.

K. PLATES AND PANELS

1. All custom wall plates shall be manufactured by ProCo, RCI or Whirlwind.
    a. Anodized aluminum, BLACK with white lettering in 1/8” Sans Serif font.

L. OUTLETS / PLATES

1. ANTENNA PLATE, “W”.
    a. ProCo 2 gang anodized plate, black with 2 qty 50 Ohm BNC connectors and 1 qty. Atlas Sound AD-12BE.
    b. 1 qty. Atlas Sound GN-13E.
        i. Reinforce to maintain antenna aiming orientation.
    c. Quantity and locations as shown on drawings.
    d. Provide wire guard to protect from flying objects.
2. ASSISTED LISTENING ANTENNA PLATE, “H”.
    a. ProCo single gang antenna plate with 1 qty. 50 Ohm BNC connector.
    b. Quantity and locations as shown on drawings.
    c. Provide wire guard to protect from flying objects.

M. INTERCOM INTERFACE

1. 1 qty. RDL TX-70A Speaker Level Input Interface.
    a. Local Sound Contractor to provide and install necessary cabling to connect to Intercom system.
    b. Connect to Audio DSP. Duck Local Sound System during announcements and use local sound speakers to reinforce Intercom System.
    c. Coordinate with Building Intercom Contractor for integration of systems

N. ASSISTED LISTENING SYSTEM

1. 1 qty. LS-54-216 Assisted Listening System
2. 1 qty. LA-124 antenna. Install at locations shown on drawings.
3. Provide enough LR-4200-216 Receivers to meet TAS and ADA standards as required by law.
4. Provide with each additional LR-4200-216 Receiver:
    a. 1 qty. LA-401 Ear Speaker.
    b. 1 qty. LA-430 Earphone/Neck Loop Lanyard
5. Coordinate with Architect for installation location of each LA-304 Signage Kit.

2.2 CAFETERIA

A. EQUIPMENT RACK & ACCESSORIES

1. 1 qty. Middle Atlantic DWR 24-22PD.
    a. Move rack rails back 2” to allow the front door to close with devices installed.
2. 1 qty. Middle Atlantic VFD-24.
3. 1 qty. Middle Atlantic TD2LK – 2RU locking drawer.
    a. 1 qty. Middle Atlantic FI-2
4. 2 qty. Middle Atlantic RSH – Single RU Shelf
1. 1 qty. Middle Atlantic DWR-FK22 - fan kit.
2. Provide 5 extra front door keys to the Owner.
3. Populate all unused rack spaces with blank panels.
4. Install all rack mounted equipment with Middle Atlantic HTX, T20 Star Post,10-32 security-screws.
5. Building network devices shall be installed in the top spaces of the rack. Coordinate with Structured Cabling Contractor.
6. Installed in Chair Storage F103A.

B. WIRELESS MICROPHONES

1. 1 qty. Shure ULXD4D-G50, DUALchannel digital wireless microphone receiver.
    a. Install in associated AV rack.
2. 2 qty. Shure ULXD2SM58-G50, wireless microphone handheld transmitter.
3. 2 qty. Shure ULXD1-G50, wireless microphone bodypack transmitter.
4. 2 qty. Shure SBC200, 2 bay charging station for wireless microphone transmitters.
5. 4 qty. Shure SB900B, rechargeable wireless microphone batteries.
6. 2 qty. Shure WA661, Mute Switch for wireless microphone bodypack transmitter.
7. 2 qty. Shure SM31FH, Fitness headset condenser microphone.
8. 1 qty. RF Venue DFINW, diversity remote antenna, white.
    a. Orient to achieve maximum coverage of Gymnasium.
    b. Provide Wire Guard to protect antenna from damage.
    c. Provide 1 qty. AtlasIED GN-13E. Reinforce device to ensure antenna is aimed properly.

d. Provide 1 qty. Atlas Sound AD-12BE flange.

C. AMPLIFIERS

1. 1 qty. QSC CX-Q 4K4.
   a. Install in associated AV rack.
2. Program amplifier's DSP with data acquired during system tuning. Program each output channel with appropriate DSP settings to protect the speaker drivers from being over-driven and damaged.
   a. Program each amplifier's DSP with data acquired during system tuning.
3. Program each output channel with appropriate DSP settings to protect the speaker drivers from being over-driven and damaged.

D. NETWORK DEVICES AND CONTROL

1. 1 qty. QSC TSC-70-G3 – Touch screen controller panel UCI – "TSC'.
   a. 1 qty. Honeywell CG512A1009 Large Thermostat Guard
   b. Provide 5 sets of keys
   c. Install in local sound rack.
2. 1 qty. WALL PLATE AUDIO - "WPA". QSC UNDX2IO+, Two (2) mic/line inputs, two (2) line outputs.
      i. ProCo double gang decora wall plate cover.
      ii. Label plate Inputs "MIC 1 – MIC #".
   c. Label plate Outputs "OUT 1 – OUT #".
   d. Cover up manufacturers factory IN/OUT labels.
   e. Install plates, ascending in mic # from low to high from house left to house right.
   f. Quantity and locations as shown on drawings.
3. 1 qty. BT WALL PLATE, - "BT".
   a. QSC UND610-BT – dante, bluetooth receiver with dual microphone, dual rca, 1/8" aux in and outputs.
   b. Cover up manufacturers factory IN/OUT labels.
      1. Install plates, ascending in mic # from low to high from house left to house right.
   d. Quantity as shown on drawings.
4. Provide all cables required to connect all devices for a fully functional system.
5. 1 qty. Netgear M4250-26G4F-PoE++ (GSM4230UP), 24x1G PoE++ 1,440W 2x1G and 4xSFP Managed Switch.
6. 4 qty. Netgear AGM731F, SFP Transceiver 1000BASE-SX module.
7. 1 qty. ComScope 760162800 | UNP-6A-DM-1U-24, 24 Port Cat6a Patch Panel

E. CD PLAYER

1. 1 qty. Denon DN-700CB.

F. CEILING SPEAKERS

1. 19 qty. QSC AD-C821 ceiling speaker, tap at 100 watts.

G. GRAPHICAL USER INTERFACE / TOUCH PANELS

1. Program QSC Audio System and UCI to allow for control of complete audio matrix routing, input selection, audio level control and mute for each audio input and other such controls as directed by the Owner. Coordinate with Owner and Consultant for final GUI functionality and layout. Coordinate with Owner for Logo to be displayed on

splash screen. Provide a numeric (0-9) password page immediately after the splash page. Provide a simple way for Owner to change and store new password from the GUI with a press-and-hold hidden button to access password change page.

2. The first page “SYSTEM START UP” shall have the text, “PRESS ANYWHERE TO START SYSTEM”. The next page shall display a prompt requesting a passcode. Once the passcode is entered correctly, a System Start Up loading bar shall be visible. After the system has booted, the next page “HOME”, shall allow for the selection of auto mode, manual mode, media controls, and system shutdown.

3. The “AUTO MODE” page shall include a system mute button, master output volume control fader with buttons to allow the user to navigate back to the home page or a system shutdown page.

4. The “MANUAL MODE” page shall include a system mute button, channel fader volume controls, preamp controls and mutes for all available inputs with buttons to allow the user to navigate back to the home page or system shutdown page.

5. The “MEDIA CONTROLS” page shall provide transport controls for the CD player and Bluetooth reciever.

6. When system shutdown is selected, a prompt shall appear with the text “PLEASE CONFIRM SHUTDOWN”. The user will then select a button labeled “Yes” or “No”. If no is selected, the “HOME” page shall appear. If yes is selected, a system shutdown loading bar shall appear and all system inputs/outputs shall be muted and all associated amplifiers put in standby mode. Once the system shutdown sequence is complete, the “SYSTEM START UP” page shall be visible.

H. INTERCOM INTERFACE

1. 1 qty. RDL TX-70A Speaker Level Input Interface.
    a. Local Sound Contractor to provide and install necessary cabling to connect to Intercom system.
    b. Connect to Audio DSP. Duck Local Sound System during announcements and use local sound speakers to reinforce Intercom System.
    c. Coordinate with Building Intercom Contractor for integration of systems

I. ASSISTED LISTENING SYSTEM

1. 1 qty. LS-54-216 Assisted Listening System
2. 1 qty. LA-124 antenna. Install at locations shown on drawings.
3. Provide enough LR-4200-216 Receivers to meet TAS and ADA standards as required by law.
4. Provide with each additional LR-4200-216 Receiver:
    a. 1 qty. LA-401 Ear Speaker.
    b. 1 qty. LA-430 Earphone/Neck Loop Lanyard
5. Provide 1 qty. LA-124 antenna.
6. Coordinate with Architect for installation location of each LA-304 Signage Kit.

J. PLATES AND PANELS

1. All custom wall plates shall be manufactured by ProCo, RCI or Whirlwind.
    a. Anodized aluminum, BLACK with white lettering in 1/8” Sans Serif font.

K. OUTLETS / PLATES

1. ANTENNA PLATE, “W”.
    a. ProCo single gang anodized plate, black with 1 qty 50 Ohm BNC connectors and
    b. Quantity and locations as shown on drawings.
2. ASSISTED LISTENING ANTENNA PLATE, “H”.
    a. ProCo single gang antenna plate with 1 qty. 50 Ohm BNC connector.
    b. Quantity and locations as shown on drawings.

L . PROJECTION SCREEN

1. 1 qty. DaLite Tensioned Contour Electrol SKU# 70186L.
    a. 189” Diagonal Screen. 16:10 Aspect Ratio. Black housing. Dual-Vision – DA-TEX, rear projection screen material.
    b. Suspend from building structure behind front curtain teaser.

M. VIDEO PROJECTOR

1. 1 qty. Epson V11HA35920, EB-PU1006W – WUXGA, 6,000 lumens projector
    a. With Epson #V12H004M0F, ELPLW06 lens
    b. Verfiy proper focal length prior to installation
    c. Provide all required mounting hardware and adapters
        i. Manufacturer: Chief MFG

2.3 BAND HALL, AUXILIARY MUSIC, ORCHESTRA, CHOIR. (TYPICAL OF FOUR SYSTEMS).

A. AV NETWORK PERIPHIALS AND I/O

1. 1 qty. QSC TSC-101-G3 – Touch screen controller panel UCI - “TSC”.
2. 1 qty. WALL PLATE AUDIO - “WPA”.
    a. QSC UNDX2IO+, Two (2) mic/line inputs, two (2) line outputs.
        i. ProCo double gang decora wall plate cover.
    a. Label plate Inputs “MIC 1 – MIC 2”.
    b. Label plate Outputs “OUT 1 – OUT 2”.
    c. Cover up manufacturers factory IN/OUT labels.
    d. Install plates, ascending in mic # from low to high from house left to house right.
    e. Quantity and locations as shown on drawings.
3. BT WALL PLATE, “BT”.
    a. 1 qty. QSC UND610-BT – dante Bluetooth receiver with dual microphone, dual rca, 1/8” aux in and outputs.
    b. Quantity as shown on drawings.
4. 4 qty. QSC QIO-ML4i, Four (4) mic/line inputs audio expander.
    a. Inputs for recording mics in all performing arts rooms.
    b. Installed in IDF E114.
5. 2 qty. QSC QIO-L4o, Four (4) line output audio expander.
    a. Outputs to feed Listen Tech transmitters.
    b. Installed in IDF E114.

B. NETWORK MEDIA PLAYER/RECORDER

1. 1 qty. Denon DN900R - Network SD/USB Audio Recorder with Dante 2 x 2 Interface.

a. Installed in IDF E114.
b. Create custom UCI with transport controls.
C. End user shall be able to view and select tracks from recordings to playback from UCI.

2. 2 qty. SanDisk SDSDXXO-032G-ANCIN - 32GB Extreme PRO UHS-I SDHC Memory Card.

C. GRAPHICAL USER INTERFACE / TOUCH PANELS

1. Program QSC Audio System and UCI to allow for control of complete audio matrix routing, pre amp, input selection, audio level control and mute for each audio input and other such controls as directed by the Owner. Coordinate with Owner and Consultant for final UCI functionality and layout. Coordinate with Owner for Logo to be displayed on splash screen. Provide a numeric (0-9) password page immediately after the splash page. Provide a simple way for Owner to change and store new password from the GUI.

2. The first page “SYSTEM START UP” shall have the text, “PRESS ANYWHERE TO START SYSTEM”. The next page shall display a prompt requesting a passcode. Once the passcode is entered correctly, a System Start Up loading bar shall be visible. After the system has booted, the next page “HOME”, shall allow for the selection of auto mode, manual mode, media controls, and system shutdown.

3. The “AUTO MODE” page shall include a system mute button, master output volume control fader with buttons to allow the user to navigate back to the home page or a system shutdown page.

4. The “MANUAL MODE” page shall include a system mute button, channel fader volume controls, preamp controls and mutes for all available inputs with buttons to allow the user to navigate back to the home page or system shutdown page.

5. The “MEDIA CONTROLS” page shall provide transport controls for the Denon DN900R for recording and playback.

6. When system shutdown is selected, a prompt shall appear with the text “PLEASE CONFIRM SHUTDOWN”. The user will then select a button labeled “Yes” or “No”. If no is selected, the “HOME” page shall appear. If yes is selected, a system shutdown loading bar shall appear and all system inputs/outputs shall be muted and all associated amplifiers put in standby mode. Once the system shutdown sequence is complete, the “SYSTEM START UP” page shall be visible.

D. AUDIO AMPLIFIERS

1. 2 qty. QSC CX-Q 2K4
   a. Program amplifier’s DSP with data acquired during system tuning.
   b. Program each output channel with appropriate DSP settings to protect the speaker drivers from being over-driven and damaged.
   c. 1 qty. Amplifier for speakers in Band Hall D111 and Aux Music Room D113..
   d. 1 qty. Amplifier for speakers in Orchestra Room D105 and Choir Room D109.
   e. Install both amplifiers in IDF D107.

E. WIRED MICROPHONES

1. 2 qty. Shure SM58S.

2. 2 qty. K & M 26045-500-55 stackable mic stand.
3. 2 qty. K & M 211/2 mic stand boom arm.
4. 2 qty. Whirlwind MK425 XLR cable.

F. CEILING MICROPHONE

1. Shure VP88 – dual element condenser microphone.
    a. Ensure microphone is installed in appropriate orientation and safely secured.
    b. Quantities as shown on drawings.

G. LOCAL SOUND SYSTEM SPEAKERS

1. 2 qty. QSC AD-S12 Indoor/Outdoor speakers (Install and aim to maximize coverage of seating areas), white.

H. ASSISTED LISTENING SYSTEM

1. 1 qty. LS-54-216 Assisted Listening System
2. 1 qty. LA-124 antenna. Install at locations shown on drawings.
3. Provide enough LR-4200-216 Receivers to meet TAS and ADA standards as required by law.
4. Provide with each additional LR-4200-216 Receiver:
    c. 1 qty. LA-401 Ear Speaker.
    d. 1 qty. LA-430 Earphone/Neck Loop Lanyard
5. Coordinate with Architect for installation location of each LA-304 Signage Kit.
6. Install the LT-803-072-01 transmitters in IDF D107.

I. PLATES AND PANELS

1. All custom wall plates shall be manufactured by ProCo, RCI or Whirlwind.
    a. Anodized aluminum, BLACK with white lettering in 1/8” Sans Serif font.

J. OUTLETS / PLATES

1. ASSISTED LISTENING ANTENNA PLATE, “H”.
    a. ProCo single gang antenna plate with 1 qty. 50 Ohm BNC connector.
    b. Quantity and locations as shown on drawings.

K. POWER DISTRIBUTION

1. 1 qty. Middle Atlantic PD-920R-SP, Rackmount Power, 9 Outlet, 20A with Series Surge Protection. One for the single rack.
2. 1 qty. Middle Atlantic UPS-2200R, Rackmount Uninterruptible Power Supply 1650W. One for the single rack

L. LOCAL SOUND EQUIPMENT RACK (One rack for all four rooms) Installed in IDF D107.

1. 1 qty. Middle Atlantic DWR 35-26PD.
    i. Move rack rails back 2” to allow the front door to close with devices installed.
2. 1 qty. Middle Atlantic VFD-35
3. 1 qty. Middle Atlantic TD2LK – 2RU locking drawer.
    i. 1 qty. Middle Atlantic FI-2
4. 2 qty. Middle Atlantic RSH – Single RU Shelf
5. 1 qty. Middle Atlantic UQFP-4RT.

6. Provide 5 extra front door keys to the Owner.
7. Populate all unused rack spaces with blank panels.
8. Install all rack mounted equipment with Middle Atlantic HTX, T20 Star Post,10-32 security-screws.

2.4 LIBRARY A127

A. CONTROL

1. 1 qty. QSC TSC-50-G3 – Touch screen controller panel UCI for power control and HDMI source selection of smart board display. Volume control of local sound speakers.
    a. Coordinate with district IT for Vlan assignment and connectivity to Qsys Core 610.

2. 1 qty. Global Cache IP2SL iTach Serial Converter.
    a. Coordinate with district IT for Vlan assignment and connectivity to Qsys Core 610.

B. AUDIO AMPLIFIERS

1. 1 qty. QSC SPA-QF 60X4
    a. Installed behind display. Provide necessary mounting hardware.
    b. Program amplifier's DSP with data acquired during system tuning.
    c. Program each output channel with appropriate DSP settings to protect the speaker drivers from being over-driven and damaged.
    d. Configure outputs for Hi Impedance 70v bridged.
    e. Use the Flex channel(s) (Inputs) for video audio from display.

C. LOCAL SOUND SYSTEM LOUDSPEAKERS

1. 2 qty. QSC AD-S10T, white.
    a. Tap speakers at 50 watts.

2.5 AV NETWORK HEAD END – IDF D107

A. AV CONTROL AND PROCESSING SYSTEM

1. Coordinate with Owner's IT personnel to create a VLAN on the building network for the AV systems.
2. 2 qty. QSC Core 8 Flex Processor.
    a. Configured for redundancy.
    b. Lan A for Qlan/Dante, Lan B for internet access.
    c. Coordinate with District IT department to provide internet access and AV VLAN.
3. 2 qty. QSC QIO-24F, Eight (8) mic/line level inputs, eight (8) software-definable Flex channels and eight (8) line level outputs
4. 1 qty. QSC QIO-CK redundancy cable kit
5. Partition Sensor to audio combine/uncombine Cafeteria and gym system. Legrand Partition Sensor

B. AUDIO VIDEO NETWORK

1. 1 qty. Netgear M4250-40G8XF-PoE+ (GSM4248PX), 40x1G PoE+ 960W and 8xSFP+ Managed Switch.
2. 1 qty. ComScope 760162800 | UNP-6A-DM-1U-24, 24 Port Cat6a Patch Panel.
3. LAG network on fiber ports between AV switches in GYN STORE F110C and STAGE D108 rack.

B. EQUIPMENT RACK AND ACCESSORIES

1. 1 qty. Middle Atlantic SR28-46-32, Wide SR Series Large Pivoting Rack.
2. 1 qty. Middle Atlantic VFD-46, 46 RU Vented Front Door for SR Racks.
3. 1 qty. Middle Atlantic DWRSR-138FT-K-EU, 138 CFM Fan Kit for SR and DWR Racks.
4. 2 qty. Middle Atlantic PD-920R-SP, Rackmount Power, 9 Outlet, 20A with Series Surge Protection.
5. 2 qty. Middle Atlantic UPS-2200R, Rackmount Uninterruptible Power Supply 1650W.
6. 1 qty. Middle Atlantic Products SS, 1RU Heavy duty sliding shelf.

C. AV SYSTEM SCHEDULING

1. Contractor shall program the QSYS control system to automatically shut down system every day at midnight 12am CST and recall a default configuration. This includes muting audio source inputs and setting to default level (ceiling mic inputs should always be unmuted and set at nominal level), putting all amplifiers in standby, projectors lamped off, lifts, shades and projector screens raised, video walls and displays put into standby.

D. AV SYSTEM ADMINISTRATOR MONITORING AND CONTROL

1. The contractor shall program a password protected UCI for the district systems administrator to access from a district computer with QSYS UCI Viewer.
2. This UCI shall provide all system diagnostics including but not limited to, system wide device health, network audio metering, ptz camera feeds, network video streams per room, display, projector and projector lift status; with the ability to control each rooms UCI remotely, per campus.
3. The contractor shall provide the district with QSYS Reflect Enterprise Manager professional tier services during the warranty period for all systems and peripherals.

2.6 FIRE ALARM OVERRIDE

A. Provide for Fire Alarm Override for each Local Sound system. Contractor shall provide all cabling, relays, mounting hardware and any other devices (Fire Alarm System devices by others) to provide a fully functioning Fire Alarm Override system. When Fire Alarm is active, each Local Sound System shall be muted. When Fire Alarm ceases, each Local Sound System shall automatically revert to normal operation.

2.7 SCHOOL INTERCOM PUBLIC ADDRESS OVERRIDE

A. Provide for School Intercom Public Address Override for each Local Sound System. Contractor shall provide and install (1) RDL TX-70A, 70v to Line level converter. Contractor shall provide, install and terminate cabling to nearest School Intercom speaker and shall integrate devices into local sound system. Provide DSP programming to duck Local Sound System to give priority to the School Intercom PA System. Coordinate with Building Intercom Contractor for integration of systems

2.8 CABLE ROUTING/PATHWAY

A. Cable Support System: All audio-video cabling shall be installed and supported using a cable support system at 4’-0” intervals unless installed in conduit. Do not exceed manufacture recommendation for the quantity of cables supported in an individual support.

B. All cable bundles shall be grouped together using plenum rated Velcro for the entire run above and below the ceilings.

2.9 AUDIO-VIDEO SYSTEM WIRING AND TERMINATING HARDWARE

A. Cabling:

1. Provide a complete audio/video cabling solution from back of eah faceplate to device I/O locations as designated on the contract drawings. Each cable provided shall be installed with a minimum of 10’ of excess slack above each outlet location. Contractor shall properly support and label all cabling at each outlet.

2. Contractor shall ensure all cabling requirements are met to provide fully functional A/V systems, specified cabling notwithstanding.

PART 3 – EXECUTION

3.1 WIRING AND INSTALLATION TECHNIQUES

A. Coordinate all work with all other trades to avoid causing delays in construction schedule. Contractor shall expedite the delivery of materials and provide additional labor as required to meet construction deadline.

B. Coordinate final connection of power and ground wiring to equipment racks by electrical contractor. Power and ground wiring shall terminate inside equipment racks on standard duplex outlets. Mount as to not interfere with internal equipment of the rack. Power shall be a dedicated circuit and not share with any other source. Ground per NEC with third wire (green) to panel ground lug at breaker supply panel.

C. All equipment and enclosures described in this specification section shall be plumb and square. All equipment except portable equipment shall be permanently attached to the structure and held firmly in place. Supports shall be adequate to support their loads with a safety factor of at least five.

D. Wiring and installation under this contract to meet NFPA, NEC, and local code requirements where applicable.

E. The process of equalizing and testing the Audio Sound System may necessitate moving and adjusting certain component parts (e.g., loudspeakers). This shall be done without claim for additional payment.

F. Take such precautions as are necessary to prevent and guard against electromagnetic and electrostatic hum. Separate all low level microphone and auxiliary inputs from speaker output conductors, data or other system wiring.

G. All wiring shall be labeled using vinyl wire labeling tags. Use Brady^{tm} model BMP21 or equal wire labeling printer. Label input, output and wireless wiring. Label electrical power beaker at electrical panel. Label location of room and power panel/breaker at equipment rack. Protect labels with clear heat shrink.

H. Label all mixer inputs with their respective input. Example: mixer input 1 – “Mic-1”, etc. Label to reflect name on engraved wall plate.

I. Solder all microphone connections using rosin core solder. Use temperature controlled soldering equipment. Microphone XLR connectors shall use standard wiring code as follows: pin 1 shield/ground, pin 2 positive, pin 3 negative.

J. Paint all back boxes and conduit prior to installation of wiring or connectors. Protect and do not paint any wiring or equipment rack cabinets.

K. Install equipment cabinet in a controlled temperature, dry and accessible area. Provide sufficient space to completely open the front and rear of the cabinet. Equipment not to be in general gym area where it can be damaged.

3.2 CABLING

A. General: Unless otherwise noted, provide the following cable types (or equivalent) for each application:

1. West Penn 454 #22 AWG twisted pair / shielded for Microphone and Line level signals.
2. West Penn C210 #10 AWG twisted pair for subwoofer / low frequency speakers.
3. West Penn 227 #12 AWG twisted pair for conventional, full range sound reinforcement speakers.
4. West Penn 226 #14 AWG twisted pair for 70v sound reinforcement speakers.
5. West Penn 810 RG-8 coax cable for analog RF signal lines.
6. West Penn 4246 CAT6 cable for Local Sound/Video Network and Dante digital audio devices.
7. West Penn 4246F F/UTP CAT6 for digital audio snake devices.
8. West Penn 4246AF F/UTP CAT6A cable for HDBaseT video devices.
9. Crestron CRESNET.
10. Corning 006TSP-T4180D20 multi-mode fiber optic cable for drop face plate connections.
    a. Provide Corning 95-050-99-X LC fiber connectors for multimode terminations.
11. Corning 006ESP-T4101D20 single-mode fiber optic cable for network switch interconnections.
    a. Provide Corning 95-200-99 LC fiber connectors for single mode terminations.
12. Provide plenum rated cable where required.

3.3 INSPECTIONS

A. General: Conformance to the installation practices covered above is to be verified when completed. In some cases, the Owner/ Designer may inspect before acceptance.

B. Ensure all systems are installed to provide uniform, balanced audio coverage throughout each intended listening area. Ensure there are no rattles, buzzes, hums, RF interference, electro-static interference, feedback or other audible audio anomalies while the systems are in operation.

C. Contractor shall use white / pink noise generator and audio spectrum analyzer to set overall frequency response and equalization. Ensure gain structure is properly set to prevent clipping on any device and to provide balanced system functionality. Provide proper limiter programming to prevent damage to all audio components. District Maintenance personnel to be on site during process.

D. Demonstrate the performance of each system and give instructions of proper operation and maintenance to the Owner. Provide a minimum of eight hours of training and basic system operating instructions for each system in not more than four hour sessions. Include a list of system training attendees in the Close-Out Documentation.

1. Contactor shall record each training session with a 720p, miminum, digital video recording device, with audible audio, in .MOV or .MP4 format and compile sessions

onto 128MB thumb drives (as many as required) (SanDisk, Kingston or PNY) and provide to Owner. Contractor shall title each video file with the room name of the system and date; e.g., “Dining Commons – August 15, 2019.”

2. Contractor shall provide an asbuilt QSYS designer file, Dante Controller preset, Shure wireless work bench inventory/RF coordination report and Netgear switch master configuration file supplied on a usb flash drive. In the event when systems are updated during service calls during the warranty period, the contractor shall furnish updated system files to the district.

END OF SECTION

SECTION 27 51 23.90 – RESCUE ASSISTANCE SIGNAL SYSTEM - AUDIO/VISUAL (AREA OF REFUGE)

PART 1 - GENERAL REQUIREMENTS

1.1 SUMMARY

A. Furnish, install, and wire all equipment associated with the installation of an Audio-Visual Rescue Assistance Signal System (Area of Refuge) to comply with ADA and NFPA requirements. This work shall include a main annunciator panel, remote call stations, power supply, outlet boxes, cables and wiring as shown on the drawings and as specified herein.

1.2 SUBMITTALS

A. Showing typical field wiring connections as well as single line floor plan indicating equipment locations as well as cable routings and quantities.

B. Product Data: Submit product data, including manufacturer's (Spec-Data) product sheet, for specified products.

C. Shop Drawings: Shop drawings shall indicate locations of all system components and required voltage requirements of main control unit.

1.3 INSTALLATION STANDARDS

A. The system shall be installed in accordance with the 2008 NEC, NFPA and ADA requirements.

B. The completed system shall be in compliance with state and local electrical codes.

C. All wiring shall test free from grounds and shorts.

1.4 SYSTEM OPERATIONS

A. Furnish, install and place into operation a Rescue Assistance System for this building as indicated on the drawings and as specified herein.

B. A common annunciator shall be provided in the first floor reception office to indicate light and tone signals from multiple remote call stations.

1. When the call station switch is activated, a red LED button illuminates and a one shot tone sounds.
2. When the alarm signal is acknowledged, the remote call station is signaled with a flashing light and tone.
3. Voice communication with the remote call can then be initiated from the annunciator.
4. Provide for off-site calling to the monitoring station per Harris County Fire Marshal Office (HCFMO).

PART 2 - PRODUCTS

2.1 RESCUE ASSISTANCE-VISUAL EQUIPMENT

A. Manufacturer: Cornell Communications, Inc.

2.2 COMPONETS

A. Equipment

1. This system shall consist of multiple remote call stations, which will share a common annunciator panel and optional access to a public telephone system for external alarm notification.

B. Annunciator (Control Station)

1. The annunciator panel shall be a CORNELL Model A4232/36, surface mounted at a normally attended area of the facility.
2. An alternate action switch with internal LED indicator shall be included for each zone.
   a. A yellow LED light on the zone switch shall illuminate and the alarm shall emit a repeating sound if the supervised wiring is faulted.
3. An audible alarm shall be mounted on the annunciator panel, which will emit a minimum sound level of 90 db at 30 cm when a remote station calls.
   a. Depressing the zone switch will answer a zone and open the intercom line to the zone.
4. The front panel shall have silk-screened zone designations and operating directions as well as zone designation strips.
5. The power supply shall be a 120 volt emergency battery backup, CORNELL model B-5243A or P-512243A.
6. Provide Cornell BB-45 back box.

C. Remote Call Stations

1. The Vandal Proof Call Station shall be Cornell Model 4201/V. The standard two gang mounting plate cm be flush mounted or wall mounted and incorporate heavy duty switches and speakers along with stainless steel plates and tamper-proof screw. The 4201/V shall contain water resistant switch and speaker for exterior applications.
2. The station shall have hands free voice communication with the annunciator.
3. The station shall have silk-screened operating instructions.
4. The station shall be flush wall mounted on a 2-gang stainless steel plate with a 42" maximum mounting height for forward reach, and a 54” maximum for side reach.

D. Rescue Assistance Signage

1. Where exit signage illumination is required at the area of rescue assistance stairwells, the installing contractor shall provide the Cornell Model SN-E42S, 120Vac lighted sign outside of each stairwell with rescue assistance. The sign shall be provided by this contractor and powered and installed by the electrical contractor. Also provide a Cornell Model SN-P42F 6" x 16", white PVC plastic with blue lettering sign inside of each stairwell with rescue assistance.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Compliance: Comply with manufacturer's product data, including product technical bulletins, product catalog installation instructions, and product carton instructions for installation.

3.2 INSTALLATION

A. Cabling Requirements

1. Wiring from the annunciator to the call station shall be 22-gauge, 2 conductor

shielded audio pair + 4 conductor unshielded.

2. Wiring from the annunciator to the power supply shall be 18-gauge, 2 conductor.
3. Verify cable types with the Rescue Assistance System Manufacturer.

3.3 FIELD QUALITY REQUIREMENTS

A. Site Tests (Post Installation Testing): Checkout final connections to the system shall be made by a factory technician authorized by the manufacturer of the products installed.

1. Factory authorized technicians shall demonstrate operation of the complete system and each major component to the staff.
2. System field wiring diagrams shall be provided to this subcontractor by the system prior to installation.

B. Inspection: Perform a complete functional test of the system upon completion of the installation and instruct the staff in the operation and maintenance of the system.

END OF SECTION

SECTION 28 05 00 - GENERAL ELECTRONIC SAFETY SYSTEMS REQUIREMENTS

PART 1 – GENERAL

1.1 WORK INCLUDES

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1, apply to this Section.

B. Furnishing of all required materials, equipment, tools, scaffolding, labor, and transportation necessary for the complete installation of the Electronic Safety Systems as shown on the drawings and as specified herein.

C. Coordinate wireway, raceway, power, and outlet requirements with the builder and the electrical contractor.

D. Cable pathways, conduit, boxes and cable support systems shall be complete with bushings, de-burred, cleaned, and secure prior to installation of cable.

E. The Electronic Safety Systems Contractor shall provide and install prior to cable installation plastic snap in bushings at each box opening, passage through a metal stud, and at the end of all open conduit stubs or sleeves to protect the cabling from damage.

F. Supply in a timely manner to the electrical contractor special backboxes for installation as required.

G. It is the intent of these specifications to provide complete installations although every item necessary may not be specifically mentioned or shown.

1.2 WORK TO BE INCLUDED BY THE ELECTRICAL CONTRACTOR IN BASE CONTRACT PROPOSAL

A. Provide utility services conduit as outlined on drawings as required.

B. All required conduit for accessibility to attic space.

C. Furnishing and installation of all required standard back boxes and conduit.

D. Installation of special back boxes supplied by Division 28 contractor(s).

E. Furnishing and installation of all floor boxes, surface raceways, and other wireways which are detailed or specified under Division 26.

F. Provide equipment-mounting boards as outlined on drawings.

G. Provide equipment grounding system, conductors, and bus bars and as outlined in Division 26.

H. Provide 120-volt power and hook-up to equipment provided in Division 28.

I. Coordination of requirements of Division 28 with the Builder.

1.3 WORK NOT INCLUDED

A. Contractors shall make no agreement that obligates the Owner to pay any company providing communications, monitoring, or other services. Contractors shall not make selection,

purchase, or installation of interconnect instruments/equipment to be used on this project.

1.4 RELATED SECTIONS

A. The conditions of the Division 0, Division 1, Division 26 requirements, and the contract requirements that include the General Conditions and the Supplementary Conditions apply to work of this division.

B. Section 26 05 34 - Provisions For Communication, Security & Safety Systems.

1.5 CODES, STANDARDS, AND THEIR ABBREVIATIONS

A. General:
   1. Perform all work in strict accordance with the requirements and recommendations stated in the codes and standards except when requirements are exceeded by the contract documents.
   2. In addition to the requirements outlined in other sections of the specifications the following standards are imposed as applicable to the work in each instance:
      a. OSHA Safety and Health Regulations for Construction.
      b. NFPA No. 70 National Electrical Code.
      c. NESC National Electrical Safety Code, ANSI Standard C2.
      d. NEiS National Electrical Installation Standards.
      e. Local Codes and Ordinances.

B. Where local codes or practices exceed or conflict with the NEC, it shall be the Contractor's responsibility to perform the work in accordance with the local code prevailing and local interpretations thereof. Any such additional work shall be performed at no additional cost to the Owner.

C. Materials and components shall be UL listed and labeled by Underwriters Laboratories, Inc. for the intended use under the latest appropriate testing standard.

D. The Contractor shall obtain all permits required to commence work. Upon completion of the Work, the Contractor shall obtain and deliver to the Owner's Representative a Certificate of Inspection and Approval from the State Board of Fire Underwriters and other authorities having jurisdiction. The Contractor shall pay required permit fees.

1.6 LIST OF ASSOCIATIONS AND STANDARDS:

ADA: Americans with Disabilities Act.
ANSI: American National Standards Institute, 1430 Broadway; New York, NY 10018.
ASTM: American Society for Testing and Materials, 1916 Race Street; Philadelphia, PA 19103.
BICSI: (RCDD5 Standards), 8610 Hidden River Parkway, Tampa, FL 33637
CBM: Certified Ballast Manufacturers Association, 2116 Keith Building; Cleveland, Ohio 44115.
IEEE: Institute of Electrical and Electronics Engineers, 345 East 47th Street; New York, NY 10017.
ICEA: Insulated Cable Engineers Association, P.O. Box P, South Yarmouth, MA 02664.
NEC: National Electrical Code; NFPA No. 70.
NECA: National Electrical Contractors Association, Inc., 7315 Wisconsin Ave.; Washington, DC 20014.
NEMA: National Electrical Manufacturers Association, 155 East 44th Street; New York, NY 10017.
NESC: National Electrical Safety Code, ANSI Standard C2.
NFPA: National Fire Protection Association, 60 Batterymarch Street; Boston, MA

02110.
OSHA: Occupational Safety and Health Administration, US Department of Labor; Washington, DC 20402.
TAS: Texas Accessibility Standards (TAS) Article 9102.
UL: Underwriters Laboratories, Inc., 333 Pfigsten Road; Northbrook, IL 60062.

A. Nothing in the Contract Documents shall be construed to permit work not conforming to these codes.

B. When two or more codes or standards are applicable to the same work, then the stricter code or standard shall govern.

C. The date of the code or standard is that in effect on the date of issue stated on the contract documents, except when a particular publication date is specified.

D. The Contractor shall comply with all State, Federal, NFPA, local codes and ordinances that may alter any part of the plans or specifications. The Contractor shall bear all costs for correcting any deficiencies due to non-compliance.

E. Where local codes and ordinances are not in writing or on record but local precedence have been set, the Owner shall pay for any additional resulting cost.

1.7 DEFINITIONS

A. Approval: It is understood that approval must be obtained from the Architect in writing before proceeding with the proposed work. Approval by the Architect of any changes, submitted by the Contractor, will be considered as general only to aid the Contractor in expediting his work.

B. The Builder: The primary contractor engaged to oversee the construction project. They may be technically described as a Construction Manager, General Contractor, Managing Construction Contractor, et cetera.

C. The Contractor: The Contractor engaged to execute the work included a particular section only, although he may be technically described as a Subcontractor to the Builder. If the Contractor, engaged to execute said work, employs Sub-Contractors to perform various portions of the work included under a particular Section, they shall be held responsible for the execution of this work, in full conformity with Contract Document requirements. The Contractor shall cooperate at all times and shall be responsible for the satisfactory cooperation of his Subcontractors with the other Contractors on the job so that all of the various sections and phases of work may be properly coordinated without unnecessary delays or damage.

D. The Electrical Contractor: The Electrical Contractor shall be engaged to execute the work included Division 26 only.

E. PDF file or .pdf: The filename extension associated with “Portable Document Format” files, which are multi-platform computer files in the ISO 32000-1:2008 open standard format developed and licensed by Adobe Systems. These files are a digital electronic representation of text, documents, images, and technical drawings in a font and color-accurate fixed-layout format that is platform and display resolution independent. PDF files can be electronically transmitted, viewed, or printed with various free PDF reader application programs, and may allow markups/comments with various PDF editing application programs.

F. Provide: Defined as requiring both the furnishing and installation of the item or facility indicated, complete in all respects and ready for operation unless otherwise specifically noted.

1.8 SCHEDULE OF VALUES, APPLICATION FOR PAYMENT

A. The Contractor shall in accordance with the General Provisions of the Contract, including

General and Supplementary Conditions, and Division 1, complete a Schedule of Values and Applications for Payment. When a portion of this work separately funded, including donations or E-Rate, the contractor shall accommodate this in the Schedule of Values and Applications for Payment. For E-Rate eligible portions of this work, the contractor will be required to participate in the E-Rate program, comply with all E-Rate regulations, and provide billing as needed. The contractor shall coordinate with the Owner to file Form 471 or latter edition and/or other forms as may be required.

1.9 WARRANTY

A. The Contractor shall warranty his work against defective materials and workmanship for a period of one year from date of acceptance of the job.

B. Neither the final payment nor any provisions in Contract Documents shall relieve the Contractor of the responsibility for faulty materials or workmanship.

C. He shall remedy any defects due thereto, and pay for any damage to other work resulting there from, which shall appear within a period of one year from date of substantial completion.

D. The Owner shall give notice of observed defects with reasonable promptness.

E. This Warranty shall not be construed to include the normal maintenance of the various components of the system covered by these specifications.

1.10 SITE VISIT

A. Before submitting a proposal, each proposed contractor shall examine all plans and specifications relating to the work, shall visit the site of the project, and become fully informed of the extent and character of the work required, including all required utilities.

B. No consideration will be granted for any alleged misunderstanding of the materials to be furnished or the amount of work to be done, it being fully understood that the tender of a proposal carries with it the agreement to all items and conditions referred to herein, or indicated on the accompanying plans or required by nature of the site of which may be fairly implied as essential to the execution and completion of any and all parts of the work.

1.11 SUBMITTALS

A. Submittal procedures shall be per Division 1 - General Requirements.

B. Provide a complete submittal for each section as specified.

C. Submit complete submittal package within 30 calendar days after award of this work for approval. Equipment is not to be ordered without approval. Partial submittals are not acceptable for review. Each submittal shall include a dated transmittal.

D. A submittal may be electronically transmitted in PDF file format (preferred) or paper copies may be provided in quantities indicated in Division 1. Paper copies shall be organized including index tabs in a 3-ring black binder of sufficient size.

E. Each Product data submittal shall include:
   1. A cover sheet with the name and location of the project, the name, address, and telephone number of the Contractor, and the name, address, and telephone number of the submitting sub-contractor. Include on or after the cover sheet sufficient space for review stamps.
   2. An indication of any deviations from Contract Document requirements, including variations and limitations. Show any revisions to equipment layout required by use of selected equipment.

3. A product data index and complete equipment list including for each product submitted for approval the manufactures name and part number, including options and selections.
4. Cut-sheets or catalog data illustrating the physical appearance, size, function, compatibility, standards compliance, and other relevant characteristics of each product on the equipment list. Indicate by prominent notation (an arrow, circle, or other means) on each sheet the exact product and options being submitted.
5. Submit design data, when the scope of work requires, including calculations, schematics, risers, sequences, or other data.
6. When the contract requires extended product warranties, submit a sample of warranty language.
7. Any resubmittal shall include a complete revised equipment list and any product data that is revised.

F. Submit shop or coordination drawings, when specified or the required for the scope of work, which include information that will allow to the Contractor to coordinate interdisciplinary work and when necessary guide the manufacturer or fabricator in producing the product. Shop or coordination drawings shall be specifically prepared to illustrate the submitted portion of work, this may require diagrams, schedules, details, and accurate to scale equipment and device layouts prepared using a CAD or BIM engineering drawing program.

G. The Engineer's review of submittals is only for confirmation of adherence to design of project and does not relieve the Contractor of final responsibility for furnishing all materials required for a complete working system and in complying with the Contract Documents in all respects.

1.12 PROJECT RECORD DOCUMENTS

A. The Contractor shall keep a set of plans on the job, noting daily all changes made in connection with the final installation including exact dimensioned locations of all new and uncovered existing utility piping outside the building.

B. Upon submitting his request for final payment, he shall turn over to the Architect/Engineer, for subsequent transmittal to the Owner revised plans showing "as installed" work.

C. In addition to the above, the Contractor shall accumulate during the jobs progress the following data in PDF file format (preferred) or paper copies to be turned over to the Architect/Engineer for checking and subsequent delivery to the Owner:
1. All warranties, guarantees, and manufacturer's directions on equipment and material covered by the Contract.
2. PDF file or paper copies of all Shop Drawing prints and CAD or BIM engineering drawing program files.
3. Any software programs, data/programming files, passwords, special interface cables, or keys that may be needed to maintain or access equipment.
4. Set of operating instructions. Operating instructions shall also include recommended maintenance and seasonal changeover procedures.
5. Any and all other data and/or plans required during construction.
6. Repair parts lists of all major items and equipment including name, address, and telephone number of local supplier or agent.
7. The first page, or pages, shall have the names, addresses, and telephone numbers of the following:
    a. Builder and all Contractors.
    b. Major Equipment Suppliers
    c. Submit communication systems warranties.

1.13 TRAINING

A. Upon completion of the work and at a time designated by the Architect, provide formal training sessions for the Owner's operating personnel to include location, operation, and maintenance

of all Electronic Safety Systems equipment and systems.

B. See other sections for time requirements.

1.14 PLANS AND SPECIFICATIONS

A. The intent of the project drawings is to establish the types of systems and functions, but not to set forth each item essential to the functioning of the system.

B. Electrical drawings are generally diagrammatic and show approximate location and extent of work.

C. Install the work complete including minor details necessary to perform the function indicated. Provide Electronic Safety Systems (including all hook-ups) complete in every respect and ready to operate.

D. If clarification is needed, consult the Architect/Engineer.

E. Review pertinent drawings and adjust the work to conditions shown. Where discrepancies occur between drawings, specifications, and actual field conditions, immediately notify the Architect/Engineer for his interpretation.

F. The Architect/Engineer reserves the right to make any reasonable change in the location of any part of this work without additional cost to the Owner.

1.15 PRODUCT SUBSTITUTIONS:

A. Descriptions and details, acceptable manufacturers' names listed, and specific manufacturer and model number items indicated in the plans and specifications shall establish a standard of quality, function, and design. Manufacturers and model numbers listed "no exceptions" shall not be substituted without specific notice in an addendum. Otherwise, where a specific manufacturer's product is indicated, products of other manufacturers listed as acceptable may be submitted for approval based on the substitute product being, in the opinion of the Engineer, of equivalent or better quality than that of the product specified.

B. Proposed contractors wishing to propose systems which differ in manufacturer, features, functions, or operating characteristics from those outlined in these specifications must do so in writing to the specifying authority at least ten (10) days prior to the proposal opening.

C. For manufacturers equipment or models other than that specified, the proposed contractor shall supply proof that such substitute equipment equals or exceeds the features, functions, performance, and quality of the specified equipment. Proposals must include detailed information showing all deviations from the system as specified and include relevant technical and cost data. This shall include a complete description of the proposed substitution, drawings, catalog cuts, performance data, test data, or any other data or information necessary for evaluation.

D. The Engineer will consider all such submittals and the Architect will issue an addendum listing items that the Engineer considers acceptable. Only such items as specified or approved as acceptable will be installed on this project.

E. Substitute products for which the proposed contractor does not obtain prior approval will not be considered acceptable for this project. Final approval of the alternate system shall be based on the decision of the Owner and Architect. Prior approval to make a proposal for this project does not automatically ensure the system will be an acceptable equivalent.

F. The Contractors’ proposal represents that the contract proposal price is based solely upon the

materials, equipment, and labor described in the Contract Proposal Documents (including addenda, if any) and that he contemplates no substitutions or extras.

G. The manufacturer of the proposed substitute unit shall provide samples for evaluation, when required, at no charge and non-returnable.

H. Requests for substitution are understood to mean that the Contractor:
   1. Has personally investigated the proposed substitution and determined that it is equivalent or superior in all respects to that specified.
   2. Will provide the same guarantee for the substitution that he would for that specified.
   3. Will, at no cost to the Owner, replace the substitute item with the specified product if the substitute item fails to perform satisfactorily.
   4. After Award of the Contract, substitutions will be considered only under one or more of the following circumstances:
      a. The substitution is required for compliance with subsequent interpretations of code or insurance requirements.
      b. The specified product is unavailable through no fault of the Contractor.
      c. The manufacturer refuses to warranty the specified products as required.
      d. Subsequent information indicates that the specified product is unable to perform properly or to fit in the designated space.
      e. In the Engineer's sole judgment, the substitution would be in the Owner's best interest.
      f. Revisions to the electrical system caused by substitutions shall be under the supervision of the Engineer, at a standard hourly rate charged by the Engineer. Charges from the Engineer, Architect, and Electrical Contractor shall be paid by the Contractor originating the changes.

1.16 FUTURE USE CABLING

A. When cabling is installed for future use, it shall be identified with a tag of sufficient durability to withstand the environment involved.

B. Locations and Existing Conditions:
   1. Location and condition of any existing equipment or services, when shown, have been obtained from substantially reliable sources, are shown as a general guide only, without guarantees as to accuracy.
   2. The Contractor will examine the site, verify all requirements, service points, and availability of all services required to complete this project. No consideration will be granted for any alleged misunderstanding of the materials and labor to be provided as necessitated by nature of the site including those items that may be fairly implied as essential to the execution and completion of any and all parts of this project.

1.17 PROTECTION OF EQUIPMENT AND MATERIALS

A. The Contractor shall take such precautions as may be necessary to protect his apparatus from damage.

B. This shall include the creation of all required temporary shelters to protect any apparatus above the floor of the construction and the covering of apparatus in the completed building with tarpaulins or other protective covering.

C. Failure to comply with the above to the satisfaction of the Owner's inspector will be sufficient cause for the rejection of the equipment in question and its complete replacement by the Contractor.

1.18 FINAL OBSERVATION

A. It shall be the duty of the Contractor to make a careful observation trip of the entire project, assuring themselves that the work on the project is ready for final acceptance before calling upon the Architect/Engineer to make a final observation.

B. To avoid delay of final acceptance of the work, the Contractor shall have all necessary bonds, warranties, receipts, affidavits, et cetera, called for in the various articles of these specifications, prepared and signed in advance, together with a letter of transmittal, listing each paper included, and shall deliver the same to the Architect/Engineer at or before the time of said final observation. The Contractor is cautioned to check over each bond, receipt, et cetera, before preparing for submission to verify that the terms check with the requirements of the specifications.

C. The following and other provision of Division 1 General Conditions will be required at time of final completion:
   1. Final clean up completed.
   2. All systems are fully operational, all material and devices installed.
   3. As built (as installed) drawings and operations manuals.

1.19 PROHIBITED MATERIALS

A. No new asbestos, lead, or materials containing these substances shall be permitted in this project. The Contractor shall consult the Architect concerning these materials if their presence is suspected. All work in or around existing asbestos or lead materials is at the sole risk of the Contractor and his personnel.

1.20 CUTTING AND PATCHING

A. Notify the Builder sufficiently ahead of construction of any floors, walls, ceiling, roof, et cetera, of any openings that will be required for his work.

B. The Contractor shall see that all sleeves required for his work are set at proper times to avoid delay of the job.

C. All necessary cutting of walls, floors, partitions, ceilings, et cetera, as required for the proper installation of the work under this Contract shall be done at the Subcontractor or at the Subcontractor's expense in a neat and workmanlike manner, and as approved by the Architect/Engineer.

D. Patching of openings and/or alterations shall be provided by the Electronic Safety Systems Subcontractor or at the Subcontractor's expense in an approved manner.

E. No joists, beams, girders, or columns shall be cut by any Contractor without first obtaining written permission of the Architect/Engineer.

F. All openings in firewalls and floors shall be completely sealed after installation for a completely airtight installation. Sealing material shall be non-combustible and UL approved. The installed sealing assembly shall not cause the fire rating of the penetrated structure to be decreased.

G. All openings in exterior walls shall be sealed watertight.

H. Seal voids around conduits penetrating fire-rated assemblies and partitions using fire stopping materials and methods in accordance with NFPA and local codes.

1.21 MANUFACTURERS' INSTRUCTIONS

A. All equipment and devices shall be installed in accordance with the drawings and specifications, manufacturer's instructions, and applicable codes.

B. Where specifications call for installation of a product to be in accordance with manufacturer's instructions and/or where manufacturer's instructions are required for installation of a product, it shall be the contractor's responsibility to obtain the necessary applicable manufacturer's instructions and install the product in accordance with the manufacturer's instructions.

C. It shall be the Contractor's responsibility to install all equipment, materials, and devices shown on the plans and as called out in these specifications even if manufacturer's instructions are absolutely unattainable.

1.22 INSTALLATION

A. Cooperation with trades of adjacent, related or affected materials or operations, and or trades performing continuations of this work under subsequent contracts are considered a part of this work. In order to effect timely and accurate placing of work and to bring together, in the proper and correct sequence, the work of such trades, including work provided under a Division 1 allowance.

B. The Electronic Safety Contractor shall coordinate installation of the systems with the Builder, Electrical, Mechanical, and Plumbing Contractors to ensure a complete working system for the Owner.

C. Where required for accessibility all conduit and boxes for all Electronic Safety Systems shall be provided by the Electrical contractor as specified, including systems in Division 28, any and all allowances shall be included. Normally low voltage wiring shall run open and supported in accessible attic space. All low voltage wiring in exposed areas such as gyms, stages, shops, and field houses shall be enclosed in conduit. Coordinate with, and verify with Division 26 to provide required conduit and boxes at locations and heights as required.

D. Conduit, innerduct, track, or raceway shall conceal and protect wiring in exposed areas, within walls, through in- accessible areas, floors, chases, under slab, crawlspaces, or underground.

E. All conduit, duct, track, and raceway runs shall be spaced apart to allow for maintenance, such as the installation of couplings, without disturbing adjacent pathways.

F. All work must be performed by workers skilled in their trade. The installation must be complete whether the work is concealed or exposed.

G. Provide stainless screw/bolt hardware wherever stainless devices are used and in potentially wet areas.

H. Coordinate the actual locations of devices and outlets and equipment with building features and mechanical equipment as indicated on architectural, structural, and mechanical drawings. Review with the Architect any proposed changes in outlet or equipment location. Relocation of devices, before installation, of up to 3 feet from the position indicated, may be directed without additional cost. Remove and relocate outlets placed in an unsuitable location when so requested by the Architect.

1.23 ADDITIONAL MATERIALS: INCLUDE IN THE BASE CONTRACT PROPOSAL

A. All costs to provide 10 additional fire alarm signals including all cable and devices as directed by the Architect. Conduit and standard back boxes by Division 26 Electrical Contractor.

PART 2 – PRODUCTS

A. Not Applicable

PART 3 – EXECUTION

A. Not Applicable

END OF SECTION

SECTION 28 05 44 – BDA/DAS / EMERGENCY RESPONDER RADIO ANTENNA SYSTEM

PART 1 – GENERAL

1.1 SCOPE OF WORK

A. Design, furnish, install, and test a complete and operating in-building Emergency Responder Radio Antenna System/Distributed Antenna System [‘system’ or ‘DAS’] to provide complete coverage for the public safety agencies as required by the local fire department, other agencies and the authority having jurisdiction [AHJ]. The system will support only Emergency Responder and Public Safety Land Mobile Radios [‘LMR’]. The system shall not support District Radio, Cellular, and/or Wi-Fi Signals.

1.2 WORK INCLUDES

A. Contractor shall refer to architect’s allowance front end documents for BDA/DAS project allowance.

B. Drawings and general provisions of the Contract including General and Supplementary Conditions and Division 1 apply to this Section.

C. Provide all equipment, materials, labor, supervision and services necessary for or incidental to the installation of a complete Emergency Responder Radio Antenna System. The purpose is to extend and amplify the Emergency Responder and Public Safety Land Mobile Radio signals to a strength of 95% in all areas of the facility including elevators, stairwells and all floors.

D. It shall be the responsibility of the Emergency Responder Radio Antenna System contractor to obtain all required permits, approvals and certifications from the authorities having jurisdiction.

E. All fees associated with the licensing shall be paid by the Contractor.

F. Testing of the system shall conform to the testing requirements as described in the International Fire Code [IFC] Section 510.5.3.

G. All testing must be done on frequencies authorized by the FCC and in use by local agencies as directed by the Authority Having Jurisdiction [AHJ].

H. Final acceptance and approval shall be required from the local AHJ.

I. It shall be the responsibility of the Electrical Contractor to provide and install all conduit systems, standard electrical boxes, and operating power for the building access systems as outlined on the project drawings. This Contractor shall coordinate all system requirements with and provide special back boxes to the Electrical Contractor prior to installation of conduit.

J. The Electrical Contractor shall provide 120-volt power as required through separate dedicated branch circuits, maximum 20 amperes each. Each such circuit shall be labeled at the power distribution panel as EMERGENCY RESPONDER RADIO SYSTEM. The location of all circuit breakers serving the Emergency Responder Radio Coverage System shall be posted in the control unit cabinets. Each cabinet and all surge protection devices shall be grounded securely to the building grounding system.

K. Provide all testing, documentation, training, and warranty service contract as outlined in these specifications.

L. Section shall include:
1. Bi-Directional Amplifiers [BDA's]
2. Distributed Antenna System
3. Coaxial Cables
4. Splitters and Directional Couplers
5. Battery Back-Up System
6. All other equipment and components necessary for a complete and functioning Emergency Responder Radio Antenna System.

1.3 SYSTEM PRICING, PHASING AND AWARD

A. Proposed Contractor shall provide a proposal based on separate pricing for each of the following steps:
1. Outdoor Testing of the Facility – This price shall include verifying the outdoor signal strength at the facility's location.
2. Full Testing, in accordance with IFC Section 510 Grid Testing – This price shall include verification of signal strength throughout the entire facility.
3. Emergency Responder Radio Antenna System Materials and Installation Pricing – This price shall include a full system design and installation, including costs for design, components, materials, labor and testing. This price shall be a "Worst-Case Scenario" situation, as though the entire facility must require coverage.

B. The project must be budgeted as a complete set of processes, thus the reason for having all pricing, in a "Worst-Case Scenario" prior to performing any work. This pricing will provide a budget before the work begins.

C. The award of this work will be made in phases, in accordance with the three (3) afore mentioned steps.
1. Phase I award authorizes step #1. Once step one is completed, results are to be provided to the General Contractor, Architect, and Engineer for review. Following this review, step two may be delayed, pending adjustment to the donor signal. If donor signal strength at the facility does not meet IFC Section 510 requirements, the AHJ must be consulted, prior to moving to step two. If the donor signal strength is adequate to meet IFC Section 510 requirements, authorization for step two will be given.
2. The Phase II award authorizes step #2. Testing of the facility to determine signal strength status and to provide a base for a full system design. After testing, a final revised proposal for a full system design, installation and final testing shall be issued to the General Contractor for review. No further work is authorized until award of Phase III is granted.
3. Phase III award authorizes step #3. Design, installation and final testing of the Emergency Responder Radio Antenna System. Provide design and final acceptance testing documents per Section 1.8.

1.4 MANUFACTURERS

A. Subject to compliance with requirements, available integrators offering products that may be incorporated in the work include, but are not limited to:
1. Farenhyt
2. Axell Wireless
3. Tessco
4. Times Microwave
5. Gamewell-FCI
6. Notifier
7. SOLiD Technologies – Alliance Corporation
8. Other manufacturers upon approval.

1.5 RELATED SECTIONS

A. Section 28 05 00 - General Electronic Safety and Security System Requirements.

B. Section 28 31 00– Fire Detection and Alarm System

1.6 CODES AND REGULATIONS

A. Perform all work in strict accordance with the requirements and recommendations stated in the codes and standards except when requirements are exceeded by the contract documents.

B. The equipment, materials, and installation shall confirm to the latest version of all applicable codes, standards and regulations of authorities having jurisdiction including the following:
   1. NFPA 1 – The National Fire Code (including Annex O from 2009)
   2. NFPA 70 – The National Electrical Code
   3. NFPA 72 – National Fire Alarm Code
   4. NFPA 1221 – Standard for the Installation, Maintenance and Use of Emergency Services Communication Systems
   5. UL 2524 - 1st Edition In-building 2-Way Emergency Radio Communication Enhancement Systems
   6. FCC 47 CFR Private Land Mobile Radio
   7. FCC 47 90.219-2007 Services-Use of Signal Boosters
   8. ICC 2009 International Fire Code, Code and Commentary
   9. ADA “Americans with Disabilities Act”
   10. FCC’s OET 65 Standards “Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields”
   11. FCC Rules Part 22, Part 90, and Part 101

1.7 DEFINITIONS

A. Attenuation: The reduction in signal power, expressed in decibels, as a result of coupling, heat loss, or transmission distance in a cable or in air.

B. Bi-Directional Amplifier [BDA]: A device used to amplify band-selective or multi-band RF signals in the uplink, to the base station for enhanced signals and improved coverage. Also known as a signal booster.

C. Coupled Bonding Conductor [CBC]: a bonding conductor placed on the outside of any technology cable. Used to suppress transient noise.

D. Delivered Audio Quality Definitions [DAQ]: The universal standard often cited in system design, specifications, and testing reports for ERRC and DAS.
   1. DAQ 1: Unusable, speech present but not intelligible.
   2. DAQ 2: Understandable with considerable effort. Frequent repetition required due to noise and/or distortion.
   3. DAQ 3: Speech understandable with slight effort. Occasional repetition required due to noise and/or distortion.
   4. DAQ 3.5: Speech understandable with repetition only rarely required. Some noise and/or distortion
   5. DAQ 4: Speech easily understood. Occasional noise and/or distortion.
   6. DAQ 4.5: Speech easily understood. Infrequent noise and/or distortion.
   7. Speech easily understood.

E. Distributed Antenna System [DAS]: A network of service antennas connected at intervals along shielded coaxial transmission lines and all connected to head-end electronics amplifying the signals to be distributed. Often refers to a system that includes both the passive distribution system and the active amplifying electronics.

F. Directional Coupler: A component which directs a small portion of downstream RF energy to a port which can be connected to an antenna or another branch of distribution cabling, and also serves as a combiner of upstream energy between the tap port and through the connection port.

G. Donor Antenna: The antenna, usually mounted on the outside of a structure where a DAS is installed, which picks up signals over-the-air from a donor source.

H. Donor Source: The repeater, transceiver, cell site, or other radio site that produces signals which a DAS will relay and distribute.

I. Emergency Responder Radio Antenna System [ERRAS]: A two-way radio communication system installed to assure the effective operation and coverage of radio communications systems for fire, emergency medical services, and/or law enforcement agencies within a building or structure. The system is not designed for use with District LMR, Cellular Services, or Wi-Fi Services.

J. Federal Communications Commission [FCC]: federal agency responsible for implementing and enforcing America's communications laws and regulations.

K. OET 65 Standards: The FCC's Bulletin that provides Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields.

L. Public Safety and/or First Responder: agencies which are charged with the responsibility of responding to emergency situations. These include, but are not limited to, law enforcement, fire departments, and emergency medical services.

M. Reflected Power: Power which is reflected back along a transmission line as a result of discontinuities in line impedance caused at connectors or close proximity of metallic objects.

N. Radio Frequency [RF]: Energy from electromagnetic waves, or alternating currents that produce electromagnetic waves, in the spectrum of radio frequencies (30 kHz to 300GHz)

O. Signal Booster: See BDA

P. Splitter: A passive component that has a single input port and two or more output ports, effectively splitting the signal equally amongst the output ports. It also serves to combine upstream signals from the "output" ports into composite signals at the "input" port.

1.8 SUBMITTALS

A. Submittal procedures: See Section 28 05 00.

B. Submit a complete submittal package within 30 calendar days, for approval, after award of this work. Equipment is not to be ordered without approval. Partial submittals are not acceptable for review. Each submittal shall include a dated transmittal.

C. Submittal may be electronically transmitted in PDF file format (preferred) or paper copies may be provided in quantities indicated in Division 1. Paper copies shall be organized including index tabs in a 3-ring black binder of sufficient size.

D. Quality Assurance Submittal:
   1. Letter from manufacturer stating that the Contractor is an Authorized Factory Distributor for the area where the project is located.
   2. The Contractor and Manufacturer shall supply sufficient information to indicate that the proposed system is based on the latest hardware, software technology and products comply with specified requirements and FCC Regulations.
   3. The system described in the submittals shall be certified by an FCC Licensed Designer and installation shall be supervised by an FCC Licensed Project or Installation Manager.

E. Product Data Submittal including special boxes, cable and other material as requested by the Architect/Engineer including:
   1. A cover sheet with the name and location of the project, the name, address and telephone number of the Contractor and the name, address and telephone number of the submitting sub-contractor. Include on or after the cover sheet sufficient space for review stamps.
   2. Copies of FCC Licenses for both the Designer and Project or Installation Manger.
   3. An indication of any deviations from Contract Document requirements, including variations and limitations. Show any revisions to equipment layout required by use of selected equipment.
   4. A product data index and complete equipment list including for each product submitted for approval the manufacturers name and part number including options and selections.
   5. Cut-sheets or catalog data illustrating the physical appearance, size, function, compatibility, standards compliance and other relevant characteristics of each product on the equipment list. Indicate by prominent notation (an arrow, circle or other means) on each sheet the exact product and options being submitted for approval.
   6. Submit design data when the scope of work requires, including passband curves for both uplink and downlink for all bands, calculations, schematics, risers, sequences or other data.
   7. Any resubmittal shall include a complete revised equipment list and any product data that is revised.
   8. Any rejected submittals must be corrected and resubmitted to the AHJ and Architect/Engineers within 10 days of receipt of the rejected material.

F. Submit shop drawings locating all components of the system, indicating circuit routing, cable type, and gauge. Shop or coordination drawings shall include information that will allow to the Contractor to coordinate interdisciplinary work and when necessary guide the manufacturer or fabricator in producing the product. Shop or coordination drawings shall be specifically prepared to illustrate the submitted portion of work, this may require diagrams, schedules, details, risers, floor plans and accurate to scale, (minimum of 1/8” = 1’-0”), equipment and device layouts prepared using a CAD or BIM engineering drawing program.

G. Testing
   1. Submit all field test records of the radio systems. These shall include, but not be limited to:
      a. Preconstruction Tests – Tests performed with the AHJ prior to construction of the new facility to verify that the municipality has signal coverage in that area.
      b. Mid-Construction Tests – Tests performed with the AHJ during construction, once walls have been constructed and the exterior roof is installed.
      c. Final Testing – Tests performed in conforming with IFC Section 510.5.3 and Section 510.6. This testing is to be signed off by the AHJ. Engineers shall also be present for the final testing process.
   2. All testing records shall be submitted with O&M information and close out documents.
      a. Provide one (1) digital copy of all close out documents
      b. Provide three (3) copies of closeout documents bound in a 3-Ring binder with dividers and table of contents.

1.9 QUALIFICATIONS OF A PROPOSED CONTRACTOR

A. Proposed contractors who do not currently possess the necessary qualifications, trained and experienced personnel, financial capacity, and meet the other requirements herein described will be disqualified.

B. The proposed contractor, as a business entity, shall be an authorized distributor and designated representative of the emergency responder radio coverage system manufacturer, with full warranty privileges, and shall have been actively engaged in the business of selling, installing, and servicing emergency responder radio coverage systems for a period of at least 5 years.

C. Recently formed companies are acceptable only if specific pre-approval is requested, and granted by the Architect/ Engineer, based on experience of key personnel, current and completed projects, and all licensing requirements are met 10 working days prior to the contract proposal date.

D. The Contractor shall employ factory trained technicians capable of supporting the maintenance of the system. No contract employees are allowed unless they have been to the factory service school within the last 18 months. A certificate of this training shall be provided with the Contractors submittal.

E. The contractor shall employ full time local technicians and installers. The manufacturer shall maintain a full-time factory employed service staff for product support and service.

F. The proposed Contractor shall have an office within 150-miles of the job site, staffed with trained technicians who are qualified and licensed to supervise the installation, to be responsible that the system is installed as submitted, to conduct system start up and perform a 100 percent operational audit of all installed devices, to instruct the Owners representatives in the proper operation of the system, and to provide service throughout the warranty period.

G. All testing shall be conducted, documented and signed by a person in possession of an FCC General Radio Telephone Operators License and be a full-time employee of contractor.

H. The proposed contractor shall be fully experienced in the design and installation of the type of system herein specified and shall furnish with the contract proposal an itemized list of the installations of the type specified herein. The list shall include the name of the project, date of completion, the amount of the contract, the name, and telephone number of a qualified person to contact for reference. This list must contain at least two (2) projects within a 150-mile radius of the school district to allow school administration officials to visit the job site for review of the system installation and service. Each reference project listed must utilize equipment by the same manufacturer as the proposed system.

I. The Proposed Contractor shall not have any grievances or complaints of record regarding workmanship, code compliance, or service response. A Proposed Contractor that has any prior finding(s) of a code or license violation or has any litigation in process concerning the installation of a system is unacceptable.

J. The ability of a proposed Contractor to obtain plans and provide a performance bond shall not be regarded as the sole qualification of the Contractors' competency and responsibility to meet the requirements and obligations of the contract.

K. The Builder shall be satisfied that a proposed Contractor meets all the requirements expressed herein before including the Contractor's proposal in the project.

L. The Owner may investigate, as they deem necessary to determine the ability of the proposed Contractor to perform the work. The proposed Contractor shall furnish to the Owner with any information or data requested for this purpose.

M. The Owner reserves the right to reject any contract proposal if the evidence submitted, or their investigation, fails to indicate that the Contractor is qualified to fulfill of any part of the contract or to complete the work contemplated therein.

N. The Owner reserves the right to reject the proposal of any Contractor who has previously failed to perform properly, or complete on time, contracts of a similar nature.

PART 2 – PRODUCTS

2.1 GENERAL

A. The system shall conform to the requirements as identified in IFC Section 510.4 and Section 510.5. Testing records are required to confirm performance of the system.

B. Compatibility: The equipment, including but not limited to repeaters, transmitters, receivers, signal boosters, cabling, fiber distributed antenna systems, etc., shall not interfere with the existing communication systems utilized by the Public Safety and First Responder agencies.

C. Power Supplies: At least two (2) independent and reliable power supplies shall be provided: one primary and one secondary. The primary power source shall be supplied from a dedicated 20-ampere branch circuit and comply with 4.4.1.4 of NFPA 72. The secondary power source shall be a dedicated battery back-up, capable of operating the in-building system for at least 24 hours at 100% operation. The battery system shall automatically charge in the presence of external power input. The battery system shall be contained in one NEMA 4 type enclosure. Monitoring the integrity of the power supplies shall be in accordance with 4.4.7.3 of NFPA 72.

D. Survivability
   1. Fire Performance: All main risers or trunks of the antenna system shall be installed with resistance to attack from fire using one of the following methods:
      a. A 2-hour fire rated cable or cable system
      b. Routing the cable through a 2-hour fire rated enclosure(s) or shaft(s).
   2. Cabinet: The signal booster and all associated equipment shall be housed in a single NEMA 4 certified, painted steel weather tight box. The cabinet shall be large enough to dissipate internal heat without venting from inside of the cabinet to outside atmosphere. Equipment installed on the roof of structures shall be rated for the expected extreme temperature and weather associated with rooftop installation.
   3. Rooftop Installations shall require a Pitch Pocket for proper weather-tight roof penetrations.
   4. Passive equipment: Passbands shall be VHF, UHF, and 700-900 MHz, IP rating of 2GHz.

2.2 SYSTEM COMPONENTS

A. Signal Strength
   1. Downlink: A minimum signal strength of -95dBm shall be provided throughout the coverage area.
   2. Uplink: A minimum signal strength of -95 dBm shall be received at the local municipality from the coverage area.
   3. A donor antenna must maintain isolation from the distributed antenna system. The donor antenna signal level shall be a minimum of 15 dB above the distributed antenna system under all operating conditions.

B. Permissible Systems
   1. Buildings and structures shall be equipped with an FCC Certified Class B Bi-Directional VHF, UHF, and 700-900 MHz amplifier(s) as needed.
   2. The distributed antenna system may utilize a radiating cable, fixed antennas, or a combination of both.

C. Supported Frequencies: The system shall support VHF, UHF, and 700-900 MHz as required for local public safety and first responder bands as utilized by the local municipality.

D. Reject Filters: Notch filter sections shall be incorporated as necessary.

E. Band Migration Capability: The signal booster shall include re-tunable or replaceable filters to accommodate rapid and economic passband changes in the event of mandatory FCC changes with the NPSPAC band. The use of non-adjustable and non-replaceable RF input and output filters is prohibited.

F. Output Level Control: An automatic output leveling circuit shall be included for both passbands with a minimum dynamic range of 60 dB, less any gain reduction setting, to maintain FCC out of band and spurious emission compliance.

G. Degraded Performance in Emergencies: The system shall be designed to allow degraded performance in adverse conditions, such as abnormally high temperatures resulting from nearby fires, extreme voltage fluctuations and/or other abnormal conditions that may occur during an emergency. Circuits that intentionally disable the signal booster in such situations (i.e. under/over voltage, over/under current, over/under temperature, etc.) shall not be implemented as the standard mode for public safety applications.

H. Mode of Operation: The system shall be normally powered on and shall continuously provide passing of frequencies within the Public Safety and First Responder bands.

I. All in-building radio systems shall be compatible with both analog and digital communications simultaneously at the time of installation.

2.3 SYSTEM MONITORING

A. The distributed antenna system shall include connections to the fire alarm system to monitor the operational integrity of the signal booster, power supplies and annunciate malfunctions on the fire alarm system. Coordinate and provide this integration, as part of this system, with the fire alarm system contractor that is authorized to service the facility's fire alarm system. The integration of the DAS with the fire alarm system shall comply with Chapter 10 of NFPA 72.

B. A sign shall be located at the fire alarm panel with the name and telephone number of the local municipality indicating that they shall be notified of any failures that extend past the 2-hour time limit.

C. A dedicated supervised monitoring panel shall be provided within the emergency command center or other location as designated by AHJ to annunciate the status of all signal booster locations. The monitoring panel shall provide visual and labeled indication of the following for each signal booster:
   1. Normal AC power
   2. Signal booster trouble
   3. Antenna Failure
   4. Loss of normal AC power
   5. Failure of battery charger
   6. Low battery capacity

2.4 CABLE ROUTING, INSTALLATION, AND SUPPORT

A. System wiring, and equipment installation shall be in accordance with good engineering practices. Wiring shall meet all state and local electrical code requirements.

B. Wires and cables shall enter each equipment enclosure, console, cabinet or rack in such a manner that all doors or access panels can be opened and closed without removal or disruption of the cables.

C. Cable pathways, conduit, and cable support systems shall be complete with bushings, de-burred, cleaned, and secure prior to installation of cable.

D. Before energizing the system check all cables for correct connections and test for short circuits, ground faults, continuity, and insulation.

E. In all exposed areas such as mechanical rooms, parking garages, stairwells, etc., cable shall be fully enclosed in conduit.

F. Do not attach any supports to joist bridging or other lightweight members. The support system shall provide a protective pathway to eliminate stress that could damage the cabling.

G. Mount all equipment firmly in place such that vibration or jarring will not interfere with system operation. Route cable in a professional, neat, and orderly installation.

H. The cable shall not be crushed, deformed, skinned, crimped, twisted, or formed into tight radius bends that could compromise the integrity of the cabling.

I. Cable must not be fastened to electrical conduits, mechanical ductwork or piping, sprinkler pipes, or routed to obstruct access to hatches, doors, utility access panels, or service work areas. Do not route cables through fire doors, ventilation shafts, grates, or parallel for more than four-feet with line voltage electrical conductors. System cables shall not be run loose on ceiling grid or ceiling tiles.

J. Provide for adequate ventilation to all equipment housings and take precautions to prevent electromagnetic or electrostatic hum.

K. All conduit, duct, track, and raceway runs shall be spaced apart to allow for maintenance, such as the installation of couplings, without disturbing adjacent pathways.

L. Each cable run shall be free of splices. No terminations, splices, or equipment will be installed in or above ceilings.

M. Do not route any communication cable within two feet of any light fixture, HVAC unit, service access area, electric panel, or any device containing a motor or transformer.

N. System cable will not be installed in the same conduit, duct, or track with line voltage electrical cable.

O. Any pulling compounds utilized must be approved by the cable manufacturer and shall not degrade the strength or electrical characteristics of the cable.

PART 3 EXECUTION

3.1 COORDINATION

A. Contractors shall coordinate with an FCC licensed engineering firm regularly employed in the business of designing and implementing Emergency Responder Radio Antenna Systems for emergency responders.

B. Electrical Work:
   a. Proposed Contractor is required to provide for and coordinate with Electrical Contractor for any, and all required electrical work, including but not limited to, circuiting, conduits, back boxes, and more. These expenses will not be included in the electrical contractor primary bid.

3.2 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Delivery: Deliver materials to job site in OEM's original unopened containers, clearly labeled with the OEM's name and equipment model and serial identification numbers.
B. Store and protect equipment in a conditioned space until installation.

3.3 SYSTEMS INSTALLATION

A. Coaxial antenna cabling shall not be installed in the same conduit, raceway, or cable trays used for other systems.
B. All equipment shall be connected according to the OEM's specifications to insure correct installation and system performance.
C. Coordinate all roof penetrations with General Contractor and/or Roofing Contractor.

3.4 GROUNDING

A. Ground cable shields and equipment per Manufacturer's requirements.

B. Antenna mast shall be grounded per NFPA 70 NEC requirements and antenna manufacturer's requirements. Provide grounding blocks and surge protection for outside coaxial cabling. Bond the antenna mast to the existing lightning protection system.

3.5 TESTING, WARRANTY SERVICE

A. A factory trained representative of the manufacturer shall supervise the final connections and testing of the system and it shall be subject to the final acceptance of the Architect/Engineer and Owner. All testing shall meet the testing standards set forth in IFC Section 510.

B. This contractor will thoroughly test all components of the systems and devices proposed herein to assure equipment specifications are met. This contractor will start up, test, and debug systems to ensure that all aspects of the system are working, documented, and reporting properly.

C. This Contractor shall make a thorough inspection and test of the complete installed Emergency Responder Radio Antenna System including all components and controls to ensure the following:
   1. Complete and functional system.
   2. Installed in accordance with manufacturer's instructions.
   3. Verify proper operation and processing of signals.
   4. Verify that units and controls are properly labeled, and interconnecting wires and terminals are identified.
   5. Rectify deficiencies indicated by tests and completely re-test work affected by such deficiencies at Contractor's expense.

D. A final System Acceptance Test shall be performed in the presence of a designated Owner representative and the AHJ. In the event that a system does not pass or only partially passes

the Acceptance Test, the Project Manager will file a discrepancy report. Corrected items will be re-tested via a punch list to ensure that they comply with the system requirements.

E. This Contractor shall provide a warranty of the installed system against defects in material or workmanship for a period of one (1) year from the date of substantial completion. Any equipment, cabling or wiring shown to be defective shall be replaced, repaired, or adjusted free of charge. All labor and materials shall be provided at no expense to the Owner. All equipment will carry a one-year warranty or manufacturer's warranty whichever is greater.

F. Immediately prior to the end of the warranty period, the system shall be inspected and certified for the following year at no additional cost to the Owner.

3.6 DRAWINGS, MANUALS, AND TRAINING

A. As-built drawings and operating and maintenance manuals may be electronically transmitted in PDF file format (preferred) or paper copies may be provided in quantities indicated in Division 1. Paper copies shall be organized including index tabs in a 3-ring black binder of sufficient size.

B. Upon completion of the installation, and prior to final inspection, the Contractor shall furnish as-built drawings.

C. In addition, the contractor shall furnish complete operating and maintenance manuals listing the manufacturer's name(s), including technical data sheets. Manuals shall include wiring diagrams to indicate internal wiring for each device and the interconnections between the items of equipment. Provide a clear and concise description of operation that gives, in detail, the information required to properly operate the equipment and system. Provide a parts list with manufacturer and model number for commonly replaced parts. Include complete instructions for the inspection, testing, and maintenance of the system. Include copies of all calculation sheets used to configure the system.

D. Formal on-site training sessions shall be conducted by the Emergency Responder Radio Antenna System contractor. It shall be the responsibility of the Contractor to coordinate time and location of training sessions with the Owner. Provide documented general instruction as follows:
   1. Provide instruction to the maintenance personnel to include the location, inspection, normal maintenance, testing, and operation of all system components. Provide a minimum of four (4) hours—two 2-hour sessions separated by a minimum of two weeks.
   2. Provide instruction to designated personnel on the functions and operation of the system provided including capabilities, limitations, and the meaning of status messages. State the proper procedure for testing, routine maintenance, and request for service. Provide detailed instruction on the operation of the system. Provide a minimum of four (4) hours—two 2-hour sessions separated by a minimum of two weeks.

END OF SECTION

SECTION 28 13 00 – ACCESS CONTROL SYSTEM

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 RELATED WORK

Division 26 work as applicable
28 05 00 – General Electronic Safety Systems Requirements

1.2 WORK INCLUDED

A. The Contractor shall furnish and install a complete microprocessor based access control system as specified herein. The system shall include, but not be limited to, all control equipment, power supplies, power circuits, signal initiating and signaling devices, conduit, wire, fittings, and all other accessories required to provide a complete and operable system. **This scope of work shall be carried in an Allowance.**

B. Security system device locations are shown for coordination. The contractor shall coordinate exact location with the Owner and all other required trades prior to installation. The installing contractor shall design and provide a complete system, meeting the requirement of specification. The Contractor shall provide all security system devices required for complete system perimeter coverage acceptable to all governing authorities, Architect and Owner.

C. The system shall include Security Card reader access interfaces at all locations noted.

1. The Control System shall be the product of a single manufacturer.
2. Tag all conductors or cables at each end.
3. Installation of security panels in the building MDF. Additional panels shall be installed in IDF locations as required.
4. Installation of modules and cards.
5. Interconnection of security panels.
6. Installation of new security devices.
7. Integration with Intrusion Detection and Video Surveillance systems. Primary panel interface shall be the Access Control Panel.
8. Installation of all Card Reader, Door Contacts (DPDT), and other field devices.
9. Provide cabling and interconnection of electrified door hardware to the access control system.
10. Provide graphical layout of the floorplan with all systems included for ease of supervision.
11. Preconstruction meeting with Owner’s personnel, installing technician and project superintendent.

D. The contractor shall integrate the system with the video surveillance system and the intrusion detection system for monitoring and direct communication with the District’s monitoring company for all intrusion points. All intrusion points shall be included within the Open Options monitoring point group list for the intrusion detection system.

E. Contractor shall provide all permits, licenses and system certifications as required by Authority Having Jurisdiction.

1.3 CODES AND STANDARDS

The system shall comply with the applicable Codes and Standards as follows:

A. National Fire Protection Association Standards:
   1. NFPA 70 National Electric Code
   2. NFPA 72 National Fire Alarm Code
   3. NFPA 101 Life Safety Code

B. Local & State Building Codes

C. Requirements of Local Authorities having Jurisdiction

D. Underwriters Laboratory Requirements and Listings for use in Security Alarm Systems.

E. Requirements of American Disabilities Act (Public law 101-336).

F. Texas Accessibility Standards (T.A.S.)

G. State Fire Marshall.

H. Texas Insurance Code.

1.4 QUALITY ASSURANCE

A. Contractor Qualifications:
   1. The installing contractor shall be the authorized representative of the Access Control Manufacturer to sell, install, and service the proposed manufacturer's equipment. The installing contractor shall have represented the security alarm manufacturer's product for at least two years.

   2. Integrated Wiegand Output, Wireless, and IP-Enabled access control products are required to be supplied and installed only through designated ASSA ABLOY "Authorized Channel Partner" (ACP) and "Certified Integrator" (CI) accounts.

   3. Integrated Wiegand Output, Wireless, and IP-Enabled access control products are required to be supplied and installed only through designated ASSA ABLOY "Authorized Channel Partner" (ACP) and "Certified Integrator" (CI) accounts.
   3. The installing contractor shall be licensed by the State of Texas as a security services contractor to design, sell, install, and service security alarm systems.
   4. The installing contractor shall provide 24-hour, 365 day per year emergency service with factory trained service technicians.
   5. The installing contractor shall have personnel on their staff that has been actively engaged in the business of designing, selling, installing, and servicing security alarm systems for at least ten (10) years.
   6. All Contractors must submit to the owner prior to starting any work the factory training certificates for all personnel that will be working on the access control system. No person is allowed to work on the system without proper manufacturer's certification.
   7. The proposing contractor for this system and the installing contractor of this system shall be of the same organization. Absolutely no subcontracting of any portion of this system by the proposing contractor will be allowed.
   8. Contractor must be a current integrator of the specified solution in the closet major metropolitan area marketplace, have a permanent office located within 75 miles of the project, and be able to include information on current support staff to be able to service this client.

1.5 SUBMITTALS

A. The installing contractor and/or equipment supplier shall provide complete and detailed shop

drawings and include:

1. Control panel wiring and interconnection schematics.
2. Complete point to point wiring diagrams.
3. Riser diagrams.
4. Complete floor plan drawings locating all system devices.
5. Factory data sheets on each piece of equipment proposed.
6. Detailed system operational description. Any specification differences and deviations shall be clearly noted and marked.
7. Complete system bill of material.
8. **Line by line specification review stating compliance or deviation.**

B. All submittal data will be in bound form with Contractor's name, supplier's name, project name, and state security license number adequately identified.

1.6 ALTERNATE AND ALTERNATIVE PROPOSALS

A. None.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS AND INSTALLERS

A. **Open Options**
16650 Westgrove, Ste 150
Addison, TX 75001
855.818.7001
http://www.ooaccess.com

2.2 MAIN ACCESS CONTROL PANEL

A. Main access control panel: Open Options MS-ICS. Contractor shall provide sufficient number of controllers to monitor all card reader locations shown on plan plus two additional for future expansion of system.

B. Provide local communication port at each panel for local configuration of system with laptop.

C. Locate all main control panels in MDF room of building or alternate location provided by the Owner.

D. Provide all enclosures per manufacturer recommendations.

E. Provide and install door controllers in quantities as required to accommodate 110% of access control doors shown on drawings

F. **Final software configuration / programming of system integration will require owner / contractor consultation.**

G. Access Control Software shall be Open Options DNA Fusion with Open Options Open-dX personal data exchange. The Access Control System shall seamlessly integrate with the Video Management System.

2.3 FIELD DEVICES

A. Card Access Equipment
1. Card-Reader Power: Powered from its associated controller, including its standby

power source, and shall not dissipate more than 5 W.

2. Response Time: Card reader shall respond to passage requests by generating a signal that is sent to the controller. Response time shall be 800 ms or less, from the time the card reader finishes reading the credential card until a response signal is generated.

3. Enclosure: Suitable for surface, semi-flush, pedestal, or weatherproof mounting. Mounting types shall additionally be suitable for installation in the following locations:
   a. Indoors, controlled environment.
   b. Indoors, uncontrolled environment.
   c. Outdoors, with built-in heaters or other cold-weather equipment to extend the operating temperature range as needed for operation at the site.

4. Display: Digital visual indicator shall provide visible **[and audible]** status indications and user prompts. Indicate power on or off, whether user passage requests have been accepted or rejected, and whether the door is locked or unlocked.

5. Proximity Readers:
   a. Active-detection proximity card readers shall provide power to compatible credential cards through magnetic induction, and shall receive and decode
      a unique identification code number transmitted from the credential card.
   b. The card reader shall read proximity cards in a range from direct contact to at least 6 inches (150 mm) from the reader.
   c. **Card Readers shall be HID iClass SE R40 Seos cards and fobs (where applicable, confirm with owner prior to construction), and include Life Safety Power BDM.**
   d. Contractor shall provide 250 qty. HID proximity cards with HID iClass embedded chip for each school campus. Coordinate Card type with owner prior to purchase

6. Touch-Plate and Contactless Card Reader: The reader shall have "flash" download capability to accommodate card format changes. The card reader shall have capability of transmitting data to security control panel and shall comply with ISO/IEC 7816.

7. Credential Card Modification: Entry-control cards shall be able to be modified by lamination direct print process during the enrollment process without reduction of readability. The design of the credential cards shall allow for the addition of at least one slot or hole to accommodate the attachment of a clip for affixing the credential card to the badge holder used at the site.

8. Card Size and Dimensional Stability: Credential cards shall be 2-1/8 by 3-3/8 inches (54 by 86 mm). The credential card material shall be dimensionally stable so that an undamaged card with deformations resulting from normal use shall be readable by the card reader.

9. Card Material: Abrasion resistant, nonflammable, nontoxic, and impervious to solar radiation and effects of ultraviolet light.

10. Card Construction:
    a. Core and laminate or monolithic construction.
    b. Lettering, logos, and other markings shall be hot stamped into the credential material or direct printed.
    c. Furnish equipment for on-site assembly and lamination of credential cards.

11. ENROLLMENT CENTER

a. Equipment for enrolling personnel into, and removing personnel from, system database, using central-station equipment.

b. Enrollment equipment shall support encoding of credential cards including cryptographic and other internal security checks as required for system.

i. Allow only authorized entry-control enrollment personnel to access the enrollment equipment using passwords.
ii. Include enrollment-subsystem configuration controls and electronic diagnostic aids for subsystem setup and troubleshooting with the central station.
iii. Enrollment-station records printer shall meet requirements of the report printer.

c. Entry-Control Enrollment Software:

i. Shall include database management functions for the system, and shall allow an operator to change and modify the data entered in the system as needed.
ii. Software shall not have alarm response or acknowledgment functions as a programmable function.
iii. Multiple, password-protected access levels shall be provided at the enrollment station.
iv. Database management and modification functions shall require a higher operator-access level than personnel enrollment functions.
v. Software shall provide a means for disabling the enrollment station when it is unattended, to prevent unauthorized use.
vi. Software shall provide a method to enter personnel identifying information into the entry-control database files through enrollment stations to include a credential unit in use at the installation.
vii. In the case of personnel identity-verification subsystems, this data shall include biometric data.
viii. Software shall allow entry of this data into the system database files through the use of simple menu selections and data fields. The data field names shall be customized to suit user and site needs.
ix. Personnel identity-verification subsystems selected for use with the system shall fully support the enrollment function and shall be compatible with the entry-control database files.

d. System Capacity: Number of badges shall be limited only by hard disk space. Badge templates and images shall be in color, supporting the maximum color capability of Microsoft Windows.

e. Badge Configuration:

i. Software for badge template creation shall include a template consisting of background and predetermined locations of photographs, text objects and data fields for text, and bar-code and biometric information. Include automatic sizing of data fields placed on a badge to compensate for names, which may otherwise be too large to fit in the area designated.
ii. Allow different badge templates to be used for each department, tenant, or visitor.
iii. As a setup option, templates shall be automatically selected for the badge, based on the group to which the credential holder is assigned. Allow the operator to override the automatic template

selection and use a template chosen by the operator for creating a badge.

iv. Setup shall determine which graphics and credential-holder information will be displayed and where on the card it will be placed. All data in the security access system, such as name, code, group, access level, and any of the 99 user-defined fields, shall be selectable, with the ability to place them anywhere on the card.

v. System shall include an importing, filing, and recall system of stored images and shapes that can be placed on the badge.

vi. Allow multiple images on the same badge, including, but not limited to, bar codes, digital photos, and signatures. Support transparent backgrounds so that image is only surrounded by the intended background and not by its immediate background.

f. Photo Imaging: Integral to security access.

i. Import images from bitmap file formats, digital cameras, TWAIN cameras, or scanners. Allow image cropping and editing, WYSIWYG badge-building application, and badge print-preview and printing capabilities.

ii. System shall support multiple images stored for each credential holder, including signatures, portrait views, and profile views.

g. Text Objects: Badge configuration shall provide for creation of custom text as an object, allowing font selection, typing, scaling, and formatting of the text object. Formatting options shall include changing font, font size, text flow, and text alignment; bending or curving the text object into a circle or semicircle; applying 3-D effects; and applying predefined effects such as tilt, extrusion, or beveling. Text shall be placed and optionally automatically centered within any region of the badge layout.

h. Badges and Credential Cards:

i. Badges are credential cards that do not contain data to be read by card readers.

ii. Credential cards shall store uniquely coded data used by card readers as an identifier.

a. Magnetic-Stripe Cards: Comply with ISO/IEC 7810, ISO/IEC 7811-1, ISO/IEC 7811-2, ISO/IEC 7811-6, and ISO/IEC 7811-7. Use single-layer magnetic tape material that is coated with a plastic, slick protective coat and affixed to the back of the credential card near the top.

b. Wiegand Wire-Effect Cards: Ferromagnetic wires laminated into the credential card using binary digits specified for Wiegand readers to generate a unique credential card identification code.

c. Proximity Cards: Use proximity detection without physical contact with the reader for proper operation.

iii. Allow entry-control card to be modified by lamination or direct print process during the enrollment process for use as a picture and identification badge without reduction of readability. The design shall allow for the addition of at least one slot or hole to accommodate the attachment of a clip for affixing the credential card to the type of badge holder used at the site.

a. Card Size and Dimensional Stability: Standard size, 2-1/8 by 3-3/8 inches (54 by 86 mm); dimensionally stable so that an undamaged card with deformations resulting

from normal use shall be readable by the card reader.

b. Card Material: Abrasion resistant, nonflammable, and nontoxic; and impervious to solar radiation and effects of ultraviolet light.

c. Card Construction: Core and laminate or monolithic construction. Lettering, logos, and other markings shall be hot stamped into the credential material or direct printed.

i. Furnish equipment for on-site assembly and lamination of credential cards.

d. Card Durability and Maintainability: Designed and constructed to yield a useful lifetime of at least five years or 5000 insertions or swipes, whichever results in a longer period of time. Allow credential cards to be cleaned by wiping with a sponge or cloth wetted with soap and water.

i. Card-Making Equipment: Consisting of a workstation, video camera, video-imaging equipment, and a printer.

i. Camera: NTSC color standard, RGB video output, 470 lines minimum horizontal resolution, and automatic white balance with full rated output under illumination of 0.5 fc (5 lx).

ii. Video Imaging: Live-image capture software and hardware and a digital signature capture pad.

iii. Standard workstation, modified as follows:

a. Redundant workstation is not required.

b. Printer is not required.

c. UPS is not required.

d. Sound card is not required.

iv. Printer: Dye-sublimation resin thermal transfer, 300 dpi resolution, 16.7 million colors, accepting cards ranging in size from 2.1 by 3 inches to 2.6 by 3.7 inches (53 by 76 mm to 66 by 94 mm) and having card thickness ranging from 0.020 to 0.060 inch (0.5 to 1.5 mm). Printer shall have options for encoding magnetic stripe using tracks 1, 2, and 3. Throughput shall be not less than 60 seconds per card.

12. Provide Ethernet Network Interface to connect school to district-wide access control system. Connect to local area network.

13. Contractor shall provide all cabling and accessories required to provide complete access control access control solution and proper integration with building burglar alarm system for door contact shunting.

14. Provide all controllers as required to connect all card reader locations shown on plan plus 10% or two (2) additional, whichever is greater.

B. Additional Required Equipment, including but not limited to:

1. Open Options SSP-D2
2. Open Options RSC-1
3. Open Options RSC-2
4. Life Safety Power networked power supply #FPO150-B100 2D8PM8NL4E4M/P8-A, or approved Life Safety Power equivalent, and all required appurtenances to provide a fully functional system. Provide quantity as required to provide 8 hours of battery power.
5. Life Safety Power equivalent of Altronix Relay Part # RB1224 will be required for each door that is locally powered to transition the power back to the panel.

6. Power Supplies
    i. Life Safety Power 8-door PART# FPO150-B100C8D8PE6M
    ii. Life Safety Power 16-door PART# FPO150/250-2D8P2M8NL4E8M2
    iii. Or APPROVED Life Safety Power equivalent.
    iv. Contractor to Provide and Install Life Safety power supplies totaling enough doors for all access control doors on Issued construction Documents, plus 8 extra doors.

C. POWER OVER ETHERNET ACCESS CONTROL
D. IP Enabled Power-over-Ethernet (PoE) Integrated Card Reader Mortise Lock: IP enabled ANSI/BHMA A156.13 Grade 1 mortise lockset with integrated credential reader, request-to-exit, and door position signaling in one complete unit. Motor driven locking/unlocking control of the lever handle trim, 3/4" projection latchbolt, and optional 1" steel deadbolt. Lock is U.L listed and labeled for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override.
E. Completely intelligent and integrated locking unit with Ethernet power and communication connection capability directly from the locking unit back to the central system host server without additional access control interfaces or components (excluding PoE Endspan and Midspan devices) via an existing or newly installed IEEE 802.3af PoE enabled network.
F. Open architecture design supports wired integration with third party access control systems applications via software development kit (SDK). Real-time software accessible alarms for forced door, unknown card and door held open, with inside lever handle (request-to-exit), battery status, tampering, and door position (open/closed status) monitoring.
G. 2,400 users and 10,000 event transaction history (audit trail). Distributed intelligence allows stand alone operation in absence of network communication allowing for system operational redundancy.
H. Provide a network and lock configuration CD tool kit for initial lock setup and programming via a USB connection.
I. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.
J. Integrated reader supports the following credentials:
K. 125kHz proximity credentials: HID, AWID, Indala, and EM4102.
L. 13.56 MHz contactless credentials: HID iClass, HID iClass SE, HID iClass Seos, SIO on MIFARE Classic, SIO on MIFARE DESFire EV1, MIFARE Classic, DESfire EV1, NFC-enabled mobile phones, Bluetooth Smart-enabled mobile phones.
M. Communication between access control system and device is protected by AES 128 bit encryption via the SDK. Programmable for time zones, holidays, and automatic unlocking.
N. Power and communication from one Ethernet (CAT5e or higher) cable. Compliant with 802.3af Class 1 device specifications requiring 3.84 watts for Power over Ethernet.
O. Supports real-time system lockdown capabilities. Inside lever retracts latch bolt and deadbolt simultaneously.
P. High security mechanical key provides emergency override retraction of latchbolt without need for electronic activation.
Q. Ethernet system framework, network cabling, mounting boxes, PoE end-span/mid-span, electrical hard wiring, grounding, and connections are required for complete system functionality. All system components are by others and are specified elsewhere.
R. Power Requirement: PoE Class 2, maximum 7 watts.
S. Network Cabling Requirements: Cat5e or higher meeting or exceeding ANSI/TIA/EIA-568-C. 24 AWG Plenum rated.
T. Bonding and Grounding: Meet or exceed TIA-607-B requirements. Connect device ground cable to building electrical earth ground.
U. Network Surface Mount Box: Meet or exceed ANSI/TIA/EIA-568-C requirements. Cat5e or higher (RJ45).
V. Manufacturers:
W. Sargent Manufacturing (SA) – SN200 - 8200 Series. Provided by Division 8 (Security contractor shall coordinate with architect and owner prior to construction).
X. IP Enabled Power-over-Ethernet (PoE) Integrated Card Reader Exit Hardware: IP enabled, PoE

ANSI/BHMA A156.3 Grade 1 rim and mortise exit device hardware with integrated credential reader, touchbar monitoring, and request-to-exit signaling in one complete unit. Motor driven locking/unlocking control of the lever handle exit trim with 3/4" throw latch bolt. U.L listed and labeled for either panic or fire exit hardware for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override trim.

Y. Completely intelligent and integrated locking unit with Ethernet power and communication connection capability directly from the locking unit back to the central system host server without additional access control interfaces or components (excluding PoE Endspan and Midspan devices) via an existing or newly installed IEEE 802.3af PoE enabled network.

Z. Open architecture design supports wired integration with third party access control systems applications via software development kit (SDK). Real-time software accessible alarms for forced door, unknown card and door held open, with push rail (request-to-exit), battery status, tampering, and door position (open/closed status) monitoring.

AA. 2,400 users and 10,000 event transaction history (audit trail). Distributed intelligence allows stand alone operation in absence of network communication allowing for system operational redundancy.

BB. Provide a network and lock configuration CD tool kit for initial lock setup and programming via a USB connection.

CC. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.

DD. Integrated reader supports the following credentials:

EE. 125kHz proximity credentials: HID, AWID, Indala, and EM4102.

FF. 13.56 MHz contactless credentials: HID iClass, HID iClass SE, HID iClass Seos, SIO on MIFARE Classic, SIO on MIFARE DESFire EV1, MIFARE Classic, DESfire EV1, NFC-enabled mobile phones, Bluetooth Smart-enabled mobile phones.

GG. Communication between access control system and device is protected by AES 128 bit encryption via the SDK. Programmable for time zones, holidays, and automatic unlocking.

HH. Power and communication from one Ethernet (CAT5e or higher) cable. Compliant with 802.3af Class 1 device specifications requiring 3.84 watts for Power over Ethernet.

II. Supports real-time system lockdown capabilities

JJ. High security mechanical key provides emergency override retraction of latchbolt without need for electronic activation.

KK. Ethernet system framework, network cabling, mounting boxes, PoE end-span/mid-span, electrical hard wiring, grounding, and connections are required for complete system functionality. All system components are by others and are specified elsewhere.

LL. Power Requirement: PoE Class 2, maximum 7 watts.

MM. Network Cabling Requirements: Cat5e or higher meeting or exceeding ANSI/TIA/EIA-568-C. 24 AWG Plenum rated.

NN. Bonding and Grounding: Meet or exceed TIA-607-B requirements. Connect device ground cable to building electrical earth ground.

OO. Network Surface Mount Box: Meet or exceed ANSI/TIA/EIA-568-C requirements. Cat5e or higher (RJ45).

PP. Manufacturers:

QQ. Sargent Manufacturing (SA) – SN200 - 80 Series. **Provided by Division 8.**

RR.

2.4 CABLE

A. The contractor shall provide and install Belden Composite Cable for all locations.

B. Reader Cables shall be 6-conductor as manufactured by Belden, routed separately from the Electric Strikes or ELR cables

C. Electric Strikes and Electric Latch Retraction cables shall be 2-conductor as manufactured by Belden, if routed separately from the reader cables

D. Contractor shall provide all cabling, connectors and terminations required to connect door hardware to the access control system.

2.5 HARDWARE

Doors: COORDINATE EXACT LOCATIONS WITH ARCHITECT. Description: Ext - Alum - Pair - Rim/ SN200, EL - KRM - Closer/stop Provided by Division 8 – coordinate with architect prior to construction.

1	Access Control Rim Exit	LC 10 16 43 SN200-8878 BIPS B ETJ LC VK Keys GMK US32D SA
1	Cylinder	By 087100 US32D SA
1	Electric Power Transfer	CEPT-NW By 087100 S

Notes: Valid card read allows entry by trim. Remote release buttons if required are by security contractor. Upon loss of power doors will remain secure unless dogged by cylinder. Free egress at all times. All cylinders by Div8.

Set: 8.0 **Provided by Division 8.**
Doors: (Coordinate exact locations with architect).
Description: Int - Alum - Sgl - SN200 Lock - Closer

1	Electric Power Transfer	CEPT-NW By 08710 SU

Notes: Doors normally closed and secured, free egress at all times. Credential will allow access. All cylinders by Div8.

PART 3- EXECUTION

3.1 INSTALLATION

A. All wiring shall be in accordance with the National Electrical Code, Local Codes, and article 760 of NFPA Standard 70. All wiring sizes shall conform to recommendations of the equipment manufacturer, and as indicated on the engineered shop drawings.

B. All wire shall be UL Listed CL2 for limited energy (300V) applications and shall be installed in conduit. Limited energy MPP wire may be run open in return air ceiling plenums provided such wire is UL Listed for such applications and is of the low smoke producing fluorocarbon type and complies with NEC Article 760 if so approved by the local authority having jurisdiction.

C. No AC wiring or any other wiring shall be run in the same conduit as security alarm wiring.

D. All wire shall be installed in an approved conduit/raceway system (except where permitted by NEC and the local authority having jurisdiction). Maximum conduit "fill" shall not exceed 40% per NEC.

E. Minimum conduit size shall be 3/4" EMT. Install conduit per engineered shop drawings.

F. Systems utilizing open wiring techniques with low smoke plenum cable shall provide conduit in all inaccessible locations, inside concealed walls, all mechanical/electrical rooms, or other areas where wiring might be exposed or subject to damage.

G. All vertical wiring and all main trunk/riser wiring shall be installed in a complete raceway/conduit system. All riser boxes shall be adequately sized for the number of conductors transversing the respective box as well as the number of terminations required.

H. Network Connection Cable: Provide a 4 pair Category 6 data cable from the Master Control Panel to the MDF network rack. Category 6 cable shall be purple in color.

I. All plenum wiring is to be installed parallel and perpendicular to the building structure. Install wiring tight up against structure for protection. Cable shall be bundled on a maximum of 2'-6" and secured to the structure at a maximum of 5' on center. Bundling and support shall be with plenum rated cable ties.

J. Contractor is required to provide all mapping and software configuration required to operate system as per manufacturer's recommendations.

K. Integrated Wiegand access control products, campus locks, and IP enabled products are required to be installed through current members of the ASSA ABLOY "Certified Integrator" (CI) program.

3.2 CABLE PATHWAYS

A. Cable Support:
1. All wire not installed inside conduit or a designated cable tray system shall be installed in a dedicated cable support system for the entire run of each cable. Including, but not limited to service loops.
   a. Approved Cable Support Product:
      PANDUIT® Corporation J-MOD™ modular support system (sized appropriately for the number of wires being installed. Reference the manufacturer's specifications for the suggested maximum cables per support size.
2. The approved cable support system shall be attached directly to the building steel at a serviceable height. In the event that the building steel is not 5' of the finished ceiling, the contractor shall provide a dedicated threaded rod extending within 5' of the finished ceiling and mount the J-MOD™ support hook to the treaded rod.
3. J-MOD™ cable support shall be installed at a maximum of 5' on center.
4. All cable installed shall be attached to the J-MOD™ support system with plenum rated Velcro and a plenum rated Velcro tie shall be installed between each J-MOD™ cable support to keep wires neatly bundled throughout the entire run. Tiewraps will only be allowed to be used inside the control panels as required to manage the wires within each type of panel.
5. **ABSOLUTELY NO CABLE, NOT INSTALLED IN CONDUIT, WILL BE ALLOWED TO BE ATTACHED DIRECTLY TO THE BUILDING'S STEEL OR SUPPORTED IN ANY OTHER METHOD THAN THAT STATED ABOVE.**
6. **IT IS THE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO COORDINATE WITH ALL OTHER TRADES ON THE PROJECT TO INSURE THAT THE PATHWAY OF THIS SYSTEM DOES NOT INTERFERE WITH THE INSTALLATION OF THE OTHER TRADES AND TO PREVENT THE INSTALLED PRODUCT OF OTHER TRADES FROM PUTTING STRAIN ON THE INSTALLED WIRING.**

B. Conduit / Raceway:
1. All wire shall be installed in an approved conduit/raceway system (except where permitted by NEC and the local authority having jurisdiction). Maximum conduit "fill" shall not exceed 40% per NEC.
2. Conduit and raceway system shall be installed as specified under the general

electrical section of the specifications, and per NEC.

3. Minimum conduit size shall be 3/4" EMT. Install conduit per engineered shop drawings.
4. Systems utilizing open wiring techniques with low smoke plenum cable shall provide conduit in all inaccessible locations, inside concealed walls, all mechanical/electrical rooms, or other areas where wiring might be exposed or subject to damage.
5. All conduit ends shall have a protective bushing to prevent cable damage. BUSHINGS MUST BE INSTALLED PRIOR TO INSTALLING CABLE. CUTTING BUSHING TO INSTALL AROUND INSTALLED CABLES WILL NOT BE ACCEPTED.

3.3 TESTING

A. Submit a written test report from an authorized representative of the equipment manufacturer that the system has been 100% tested and approved. Final test shall be witnessed by Owner, Engineer, Electrical Contractor and performed by the equipment supplier. Final test report must be received and acknowledged by the Owner prior to substantial completion.

B. Provide instruction as to proper use and operation of system, for the Owner's designated personnel.

3.4 WARRANTY

A. Entire system shall be warranted against defects in materials and workmanship for a period of one (1) year from the date of substantial completion.

3.5 SOFTWARE

A. Provide two electronic copies of the final programming and program software to the Owner’s Security Supervisor after final approval.

END OF SECTION

SECTION 28 16 00 - INTRUSION DETECTION SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 RELATED WORK

26 05 00 – Grounding and Bonding
26 02 00 - Basic Materials and Methods
26 05 29 – Electrical Hangers and Supports
26 05 33 – Raceway and Boxes
28 00 00 – Basic Materials and Methods
28 13 00 - Access Control System
28 13 53.11 – IP Network Compatible Intercom
28 23 00 – IP Video Surveillance System

1.3 SECTION INCLUDES

A. Integrated Digital Alarm Communicator and Access Control System (DACS), including but not limited to the following:
   1. Control panel.
   2. Enclosures.
   3. Lock and key.
   4. Power Supplies.
   5. Accessories required to provide a complete DACS.
   6. System O and I manual.
   7. System programming.
   8. Batteries.
   9. Wiring.
   10. Conduits.

B. The Contractor shall be responsible for identifying requirements for permits from the local police department for the installation of the alarm system specified herein and shall assist the Owner in obtaining the relevant alarm permits.

1.4 SYSTEM DESCRIPTION

A. A functionally complete, integrated Digital Alarm Communicator System (DACS) per manufacturer's guidelines, codes and specification requirements.
   1. The DACS shall include a Control Panel with built-in Ethernet jack for event communication and remote services.
   2. The DACS shall include a Control Panel with an optional, supervised telephone line interface module.
   3. The DACS shall include recording and retention of event information in a dedicated event log.
   4. The DACS shall incorporate an integral real-time clock, calendar, and a test timer.
   5. The DACS shall incorporate battery charging capabilities with supervision of battery voltage and battery leads.
   6. The DACS shall accommodate a time / event-based scheduling system.
   7. The DACS shall be capable of supervision of peripheral devices and

communications interfaces.

8. The DACS shall accommodate configuration and operation of separate, independent areas.
9. The DACS shall accommodate hard-wired or wireless point expansion via eight-point interface modules and RF receivers.
10. The DACS shall accommodate addressable expansion utilizing a 2-wire bus.
11. The DACS incorporate removable terminal strips for wiring connection to facilitate simple service and replacement
12. The DACS shall have electrically supervised detection loops and power supplies with battery(s) maintenance. This supervision shall be programmable for the purposes of reporting this information to the DACR.
13. The DACS shall be capable of sending (manually or automatically) test and status reports to remote DACRs.
14. The DACS shall be able to accommodate test, diagnostics, and configuration programming functions locally or remotely via a portable programmer or a computer running the Remote Programming Software (RPS).
15. The DACS shall annunciate alarm, trouble, service reminders, and other relevant system status messages in custom English, Latin American Spanish, Portuguese and/or French Canadian text at the ACC.
16. DO NOT DEVIATE FROM THE FOLLOWING SYSTEM COMPONENTS:
    a. Provide one dry contact per partition for lighting controls relay at the main security panel location in the MDF. The Building Management Control System will monitor this contact.
    b. Include phone line access to remotely turn intrusion alarm "on" and "off."
    c. Provide motion detectors (mostly in corridors) and keypads in locations as shown on attached floor plan. Use the following motion detector setup reference:
        - Elementary Schools:
            - All exterior doors.
            - Long hallways at intersections.
            - 2 in cafeteria/gymnasiums.
            - 2 in library.
            - Stairwell landings at multi-level buildings.
        - Junior High Schools:
            - All exterior doors.
            - Long hallways at intersections.
            - 2 in cafeteria.
            - 2 in each gymnasium.
            - 2 in library.
            - Stairwell landings at multi-level buildings.
        - High Schools:
            - All exterior doors.
            - Long hallways at intersections.
            - 3 in main cafeteria.
            - 3 in 9th grade cafeteria.
            - 2 in each gymnasium.
            - 3 in library.
            - 4 in natatorium (not including main entrance vestibule).
            - Stairwell landings at multi-level buildings.
        - Attic stock per school:
            - D9127U Pop-it module – 10
            - B308 Octo-output – 2
            - B208 Octo-Input – 2
            - B942 Touch Screen Keypad - 2
            - B9512G Panel – 1

- D1640 Transformer – 1
- Sounders – 5
- Strobes – 5

d. Stand-alone system; not tied to the CCTV system.
e. In case of product failure after warranty or the need arises to expand the system in the future, system installed should allow for off the shelf motion detectors and other system components.
f. Power supply should not be in a continuous loop, where one failure could affect several intrusion alarm components.
g. No Wire Mold or exposed wiring in Public accessible areas.
h. Quality of Products (wiring and components) identified in the Specifications

17. The IDS will be integrated / tied to the access control system. Upon a valid read at a credentialing device, the access control system shall send a signal to the IDS to disarm. There shall be a separate “arming” card reader that will allow the system to be armed.

1.6 SUBMITTALS

A. Product Data: Manufacturer's data, user and installation manuals for all equipment and software programs including computer equipment and other equipment required for complete Digital Alarm including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
   4. Control panel wiring and interconnection schematics.
   5. Complete point to point wiring diagrams.
   6. Riser diagrams.
   7. Complete floor plan drawings locating all system devices.
   8. Factory data sheets on each piece of equipment proposed.
   9. Detailed system operational description. Any specification differences and deviations shall be clearly noted and marked.
   10. Complete system bill of material.
   11. Line by line specification review stating compliance or deviation.

B. Shop Drawings: Shop drawings shall provide details of proposed system and the work to be provided. Include point-to-point drawings of systems and wiring diagrams of individual devices.
   1. Detailed wiring diagrams and system description.
   2. System device locations on architectural floor plans.
   3. Full Schematic of system, including wiring information for all devices.

C. Documentation to be submitted by the Contractor upon completion of system installation:
   1. "As-builts": Upon completion of installation, the Contractor shall prepare "as- built" drawings of the system. These "As-builts" shall be delivered electronically (PDF) and as 30 inches by 42 inches (76 cm by 107 cm) format mylar reproducible drawings of each floor plan indicating exact device locations, panel terminations, cable routes and wire numbers as tagged and color-coded on the cable tag.
      a. Additionally, final point-to-point wiring diagrams of each type of device (on 30 inches by 42 inches (76 cm by 107 cm) format) shall be included in the "as-builts."
      b. "As-builts" shall be submitted to the Owner for approval prior to the system acceptance walk-through.
   2. Operation and maintenance manuals: Three sets of operating manuals shall be provided explaining the operation and maintenance of the system.
   3. Parts list.
   4. Maintenance required and maintenance schedule.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualification:
   1. The system shall be the standard product of one manufacturer, and the manufacturer shall have been in business manufacturing similar products for at least 5 years.
   2. Manufacturer's Quality System: Registered to ISO 9001:2000 Quality Standard.

B. Installer Qualification:
   1. Minimum of five years' experience installing access control, surveillance and security systems and devices.

2. After-sales support: The Contractor shall be a factory-authorized and trained dealer of the system and shall be factory-trained and certified to maintain/repair the system after system acceptance.

C. System Requirements:
1. All equipment, systems, and materials furnished and installed under this section shall be installed in accordance with the applicable standards of:
   a. National Codes: NEC, NFPA, BOCA, SBCCI, IBC, as applicable.
   b. Approvals and listings: UL, FM, ANSI SIA CP-01, CSFM, as applicable.
   c. Local Authorities Having Jurisdiction (AHJ).

D. Mock-Up: provide a mock-up for evaluation of installation techniques and application workmanship.
1. Finish system in areas designated by Architect.
2. Do not proceed with remaining work until workmanship and aesthetics are approved by Architect.
3. Remake mock-up area as required to produce acceptable work.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened, undamaged containers; and unharmed original identification labels.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Protect store materials from environmental and temperature conditions following manufacturer's instructions.

D. Handle and operate products and systems according to manufacturer's instructions.

1.9 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.10 WARRANTY

A. All components, parts, and assemblies supplied by the manufacturers and installed by the Contractor shall be warranted against defects in material and workmanship for a period of at least 12 months (parts and labor), commencing upon date of acceptance by Owner. A qualified factory-trained service representative shall provide warranty service.

B. Service/Maintenance:
1. System maintenance and repair of system or workmanship defects during the warranty period shall be provided by the Contractor free of charge (parts and labor).
2. Periodic testing of the system shall be carried out on a monthly or quarterly basis to ensure the integrity of the control panel, the sensing devices, and the telephone lines.
3. The installer shall correct any system defect within six hours of receipt of call from the Owner.
4. Extended service/maintenance agreements shall be offered by the Contractor for up to four years after the warranty expires. The agreement shall be renewable monthly, quarterly, or yearly.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: Bosch Security Systems, Inc.; 130 Perinton Parkway; Fairport, NY 14450. ASD. Toll Free Tel: 800-289-0096. Tel: 585-223-4060. Email: request info (presales.support@us.bosch.com). Web: www.boschsecurity.us.

B. Substitutions: Not permitted.

2.2 GENERAL DESCRIPTION

A. Control Panel and Features:

1. The DACS control panel shall be Bosch Security Systems, Inc. model B9512G comprising a fully integrated intrusion and residential fire control system. The control panel shall support the following:
   a. Optional Telephone Line Module, programmable for signaling and supervision.
   b. Integrated Conettix IP based communication provides high-speed, secure alarm transport and control.
   c. 32 programmable areas with perimeter and interior partitioning.
   d. 8 on-board, hardwired points with expansion capability for a total of 599 using a combination of wired or wireless points.
   e. Compatibility with Color Graphic Touch Screen, 2-line alpha numeric capacitive touch
   f. Local or remote programming, test, and diagnostic capability via a computer running the Remote Programming Software (RPS).
   g. The system shall include an integrated USB port for local programming and diagnostics using a computer running Remote Programming Software (RPS) and a male USB2.0 to male USB 2.0 cable with no additional hardware modules required.
   h. The system shall support the use of an Apple iOS device and/or Android device for control. Functions to include arming, disarming and control of outputs and access door, viewing of connected IP cameras. This application shall connect directly to the DACS using internet, Wi-Fi or cellular communications and shall not require a third party server of network operations center (noc).
   i. The DACS shall support up to thirty-two (32) custom functions allowing the installer to combine up to 6 functions into one command. These custom functions shall be operated by keypad command, point activation, key fob button, or programmable schedule
   j. The DACS shall support up to 32 keypad shortcuts which allow the installer to define which commands are available at each keypad.
   k. The system shall offer multiple language support that can be assigned per keypad. Languages supported must include English, Latin American Spanish, Portuguese and/or Canadian French.
   l. The DACS shall support flash firmware upgrades of systems firmware for the control panel and peripherals, allowing for future updates.
   m. Integrated real time clock, calendar, test timer and programmable scheduling capability for relay control and automatic execution of system functions based on a time / event.
   n. Provide 1.4 amps of power for standby operation and 2.0 amps of alarm power, both rated at 12 VDC.
   o. 3 configurable form ‘C’ wet or dry-contact relay outputs with expansion

capability for up to an additional 472 dry-contact relay outputs.

p. Integrated battery charger with reverse hook up protection, battery supervision and battery deep discharge protection.

q. Supervision of peripheral devices and communications interface(s).

B. Point Functionality and Expansion:

1. Each point in the system shall be programmable to provide the following type of response in the system:
   a. Always on (24 hour response).
   b. On when the system is Master Armed.
   c. Only on when the system is Perimeter Armed.
   d. Displays / Does Not Display at the ACC when the point is activated.
   e. Provides / Does Not Provide entry warning tone.
   f. Sounds / Does Not Sound audible alarm indication.
   g. The Point is bypassable / not bypassable.
   h. Alarm Verification with programmable verification time.
   i. Relay activation by Point.
   j. Provides / Does Not Provide "watch point" capability.
   k. Provides Swinger Bypass.
   l. Defers Bypass Report.
   m. Can return to the system after being force armed and then restoring.
   n. Can return to the system after being bypassed and then restoring.
   o. Keyswitch arming (maintained or momentary)
   p. Activate by Custom Function
   q. Activate following an output
2. The system shall support a programmable Monitor delay functionality for supervision of points during disarmed periods. These points may be programmed to ignore status from 1 to 60 minutes and will activate only if the point is off-normal for this time period.
3. The system shall support a programmable delay response functionality for supervision of points during armed or disarmed periods. These points may be programmed to ignore status from 1 to 60 minutes and will activate only if the point is off-normal for this time period.
4. The system shall support virtual points and outputs for customized programming of events
5. The DACS shall be capable of supporting "group zoning." Group zoning refers to the combining of points into a separately identifiable and separately annunciated (programmable text) areas.
6. The DACS shall be capable of allowing variable point response times via programming. Point response times shall be programmable over a range of 300 milliseconds to 4.5 seconds.
7. The DACS shall have the capability to expand up to 599 separately identifiable points, of which 8 are on-board and 472 are off-board wired, addressable or wireless points.
   a. The 8 on-board points shall be able to accommodate powered class B functionality using a powered loop interface module.
   b. Point Expansion Modules (Wired and Wireless) shall be able to be located remote to the main panel to a maximum distance of 1000 feet.
   c. Addressable modules shall be able to be located remote to the panel to a maximum of 500 feet.
8. The DACS shall have the capability to expand up to 99 separately identifiable points, of which 8 are on-board and 91 are off-board addressable points connected to multiplexed backbone trunks via wired modules and/or wireless receivers.
   a. The 8 on-board points shall be able to accommodate powered class B functionality using a powered loop interface module.

b. Point Expansion Modules (Wired and Wireless) shall be able to be located remote to the main panel to a maximum distance of 1000 feet.
c. Addressable modules shall be able to be located remote to the panel to a maximum of 500 feet.

C. Areas/Accounts:
1. The DACS shall support 32 independent areas. Each of the 32 areas shall have custom text associated with the armed state, disarmed state and point- off-normal state.
2. The DACS shall be capable of assigning 1 to 4 account identifiers to the areas depending on the distribution of areas per account.
3. The DACS shall be capable of assigning 1 to 2 account identifiers to the areas depending on the distribution of areas per account.
4. All of the areas must be capable of Master (All) and/or Perimeter (Part) arming (excluding predefined Interior protection).
5. The DACS shall be capable of logically grouping 1 or more points into an area, or conversely, dividing 2 or more points into two or more areas.
6. Any area shall be configurable to allow arming by specific users when a programmable number of devices are faulted or bypassed.
7. Areas shall be independently controlled by their corresponding ACC.
8. Area(s) shall accommodate assignment of independent account numbers to define annunciation, control, and reporting functions.
9. The DACS shall be capable of linking multiple areas to a shared area which may be automatically controlled (hallway or lobby).
10. The DACS shall accommodate conditional area arming dependent on the state of other areas (master or associate). Any area can be configured for perimeter and interior arming, not requiring a separate area for this function.

D. Output Relay Expansion: The DACS shall provide the capability for output relay expansion using relay expansion modules. Independent control of relay functions by area shall be possible through programming assignments.
1. The DACS shall be capable of activating 472 additional relay outputs for auxiliary functions based on its classifications (area vs. panel wide). Output Expansion Modules shall be able to be located remote to the main panel to a maximum distance of 1000 feet. 8 relays (Form C) are to be provided per octo-relay module
2. The DACS shall be capable of controlling relays and automatically executing system functions based on a time / event scheduling program. The program can be hour, day of week or day of month based.
3. Relays and other outputs may be programmed to follow up to 14 different area conditions or up to 12 panel conditions. Relays may also be programmed to follow individual points or groups of points.
4. The DACS shall support 5 different types of alarm output selections: Steady, Pulsed, California Standard, Temporal Code 3 and Temporal Code 4.

E. Scheduling: The DACS shall support scheduling capabilities with the following characteristics:
1. Arm / Disarm specific area(s) based on open/close windows.
2. Bypass / Unbypass point(s).
3. Activate / Deactivate relay(s).
4. Send test reports.
5. Up to 4 programmable holiday schedules of 366 days each (includes leap year). Based on the holiday settings, different time windows for open/close and other system functions can be executed.
6. Automatic adjustment of system clock for daylight savings time.

F. Alarm Keypads:
1. The DACS shall accommodate connection with up to 32 ACCs, each capable of displaying custom English, Latin American Spanish, Portuguese or Canadian French text on a liquid crystal display.
2. The Alarm Keypads shall accommodate viewing and configuration of system parameters including:
   a. Network Parameters:
      1) DHCP Enable/Disable for the selected network module.
      2) UPnP Enable/Disable for the selected network module.
      3) IP Address for the selected network module
      4) Subnet Mask for the selected network module.
      5) Default Gateway for the selected network module.
      6) Port Number for the selected network module - The module's port number shall range from 0 to 65,535.
      7) DNS Server Address for the selected module's DNS server IP address
      8) DNS Host Name for the selected module. The DNS host name shall contain up to 63 characters.
      9) AES Encryption Key Size – Enable/Disable encryption by selecting the AES encryption key size for the selected network module.
      10) AES Encryption Key String - The user shall be able to display, add and modify the AES encryption string based upon the key size previously configured for the selected network module.

   b. Point Parameters:
      1) Point Selection between one and the maximum number of points in the control panel.
      2) Point Registration to allow system response from a specific physical point on any one of the expansion modules; On-board or Point expansion modules (wired or wireless)
      3) Wireless points shall be able to be enrolled in the system via an auto enrollment feature.

   c. Event Routing Parameters to allow programming of up to 4 report routing groups as well as configuration of primary and secondary paths.

G. User Passcodes and Authority: Passcodes shall be programmable with authority levels to allow users to operate any or all areas.
1. Up to 2000 different passcodes shall be accommodated
2. Each passcode shall be 3 to 6 digits (variable) and be assigned a 32-character user name
3. User access to System features and functions shall be configurable based on 14 individually programmable levels of authority assigned to the user passcode. Additionally, the system shall have the capability to assign to the user passcode, a different authority level in each of the areas. A service passcode can be assigned to the servicing agent allowing the agent limited access to system functions. User-programmable / activated functions include:
   a. Arming the system: All areas, specific area(s) only, perimeter instant, perimeter delayed, perimeter partial, watch mode, and arming the system with a duress passcode.
   b. Disarming the system: All areas, specific area(s) only and disarming with a duress passcode.
   c. Viewing system status: Faulted points, event memory, bypassed points, area status and point status.
   d. Implementation functions: Bypass a point, un-bypass a point, reset sensors, silence bell, activating relays, initiating the remote Programming function

locally to allow programming the system from a remote location.

e. Testing the system: Local Walk test, Service Walk test, Fire test, send report to remote DACR to check the telephone link, and programming the time and date for the next test report transmission.
f. Change system parameters: ACC display brightness, system time and date, and add/delete/change passcodes.
g. Extend the closing time of the system.
h. Transmitting special alerts and activating audible and visible signals.
i. Executing multiple commands / ACC keystrokes from a single Menu / Command List item. This function shall be able to have a 32 character (alphanumeric) title to identify it on the ACC display.
j. Editing of time / event based scheduling program from the ACC.
k. The DACS shall also provide a "service menu" to implement functions such as viewing and printing the system log, displaying the system firmware revision number, and defaulting (toggling) text displays between custom and default text displays for troubleshooting.

4. The DACS shall allow users to change their own user passcode from the Alarm Keypad (ACC). Managers shall be capable of changing the user passcodes and authority assignments by area of other users from the ACC.
5. The DACS shall incorporate a programmable "Passcode Follows Scope" feature to allow users to arm or disarm only the area they are entering with one simple command or control all areas from one ACC.

H. Communication: The DACS shall be capable of reporting system events and supervisory reports including alarm, trouble, missing modules, restorals, system status, AC failure, battery status to primary and secondary off-site DACR's. The following features shall be supported.

1. The DACS shall be capable of communicating via dial-up analog telephone lines, over a LAN/WAN/Internet using a wired network interface module, or over a cellular network using a CDMA Cellular interface module.
   a. Bosch B9152G Cell Kit as a secondary backup to access panel.
2. The Bosch Modem4 communications format shall be utilized for optimum system performance. The Modem4 format provides the maximum data information to the receiver for alarms, troubles, restorals, bypasses, relay activation, opening/closings, and card access. The detailed information includes the point numbers with text, peripheral device numbers, user numbers with text, and area information. As an alternative format, Contact ID may be used although it will include less detailed information like point or user text.
3. The DACS shall be capable of sending text (SMS) messages to compatible devices without requiring that these message are sent to a monitoring center
4. The DACS shall have the capability of communicating with up to 8 different DACRs using up to 4 different phone numbers, up to 24-digits in length and/or 4 URL/IP addresses over a network.
5. The DACS shall report to a Commercial Central Station that is using a Bosch D6600 Receiver/Gateway or a Bosch D6100i Receiver using Modem4 as a preferred format or Contact ID as an alternate format.
6. The DACR shall provide the transmission information sent from the DACS that includes alarms, troubles, restorals, bypasses, relay activation, openings/closings, and card access. When using the ModemIIIa² format, the detailed information includes the point numbers with text, peripheral device numbers, user numbers with text, and area information.
7. The DACS reports shall be classified, by event, into eleven subcategories or "report groups." Each group represents similar types of events. Individual events within each group shall be selectively enabled or disabled for transmission. The eleven report groups shall be as follows:

a. Fire Reports.
b. Burglar Reports.
c. User Reports.
d. Test Reports.
e. Diagnostic Reports.
f. Relay Reports.
g. Auto Function Reports.
h. RPS Reports.
i. Point Reports.
j. User Change Reports.
k. Access Reports.

8. The DACS shall have the capability to verify the integrity of the remote communications path and switch to alternate paths when a communications failure occurs.
9. The DACS shall be capable of unattended mode of operation whereby programming and configuration updates are automatically transferred using the Remote Programming Software (RPS). These updates can initiate from either the control panel or the remote computer using RPS.

I. Network Communication: The DACS shall be capable of network communications over a LAN, WAN, Intranet, or the Internet. The system shall include supervision of the network communication utilizing configurable periodic heartbeats to the Digital Alarm Communications Receiver (DACR). The DACR shall provide notification of the loss of communications from a networked system after a programmable timeframe since the last communication. The notification options shall be programmable and include local annunciation or indication to automation software.

1. The network interface module shall be capable of supporting Dynamic Host Communication Protocol (DHCP) to obtain an IP Address.

2. The system shall support a method of authentication between the control panel and the receiver to ensure that the control panel has not been compromised or replaced.
3. The network interface modules shall be capable of supporting encryption using a minimum of 256-bit AES Encryption (Rijndael) certified by NIST (National Institute of Standards and Technology) utilizing the Cipher Block Chaining (CBC) method.
4. The network interface module shall support a 10/100BaseT connection to an Ethernet network.
5. The control panel shall be capable of network communication with a programmable poll time to send periodic heartbeats to the receiver, programmable ACK Wait time, and programmable retry time. In the situation where a communication path is unsuccessful, the control panel shall be capable of attempting backup communication through an available communication method to the same receiver or a backup receiver.
    a. The control panel shall have the ability to automatically adjust the heartbeat rate of a backup path that is using cellular to the heartbeat rate of the primary path in case of a primary path failure. Upon restoral of the primary path, the heartbeat rate of the backup path shall automatically restore to the original rate. This allows a system utilizing cellular communications to keep the wireless charges low.
    b. The network communication between the control panel and the receiver shall use Modem4 or Contact ID.
    c. The control panel shall be capable of two-way communication using a wired network interface module with a 10/100BaseT on a LAN/WAN/Internet configuration or with a cellular module on the Internet.

d. The control panel shall be capable of configuring the destination of the receiver using a URL or static IP Address.
e. The control panel shall be capable of using DNS to lookup the IP Address of the receiver when programmed with a URL.
f. The control panel shall support UPnP for automated Port Forward configuration in the router where the control panel is installed.
g. The control panel shall support AutoIP to enable the RPS software to connect to the control panel locally using an IP Direct connection.
h. The control panel shall support configuration of the IP parameters from the keypad eliminating the need for a PC to configure the IP device.
i. The control panel shall support network diagnostics from a keypad to allow local testing of network connectivity. The diagnostics should include, Ethernet cable connected, gateway configuration ok, DNS lookup operational, and external network connectivity (such as the Internet) operational.
j. The system shall be capable of meeting DCID 6/9 and UL 2050 standards.

J. Event Log: The DACS shall maintain a log of events indicating time, day, month, year type of event, account number, area number, user ID, point text, user text and primary/secondary event route. The system shall allow the following characteristics:
1. The DACS shall be capable of storing up to 10,000 events
2. The DACS shall support viewing of logs locally at the ACC and remotely via an upload to a remote central station computer running the RPS software.
3. The DACS shall provide notification via a report to the DACR when the event log reaches a programmable “percent full capacity". This allows retrieval of stored events via RPS to prevent any loss of event history.
4. Group, signal type and area can route events to specific receivers.
5. Each DACR shall be designated as a primary, backup, or duplicate destination for each report group. Assigning an event to multiple routing groups provides for duplicate destinations for the event. The transmission of grouped events allows the reporting of different types of information to different remote DACRs.

K. Testing, Diagnostic, and Programming Facilities: The DACS shall be capable of sending (manually or automatically) test and status reports to remote DACRs.
1. The DACS shall be capable of sending automatic tests daily, weekly or once every 28 days. Automatic test times shall be programmable to provide an offset of up to 24 hours from the current time.
2. Automatic test reports shall be programmable to be deferred by one test interval if any other report is transmitted in the current interval.
3. Automatic test reports and remote system access for diagnostics shall be supported via a remote central station computer with Remote Programming Software (RPS).
4. The DACS shall be programmable locally or remotely. Programming shall be accomplished via a Keypad or a computer with a remote programmer and diagnostic software package (RPS).
5. The DACS shall allow an on-site user to initiate remote programming while on-line with the servicing location. The remote programming device must provide a compare feature and allow for downloading either the stored program or the (un)modified program copied from the panel.
6. The DACS shall allow the local programming option to be disabled and must provide a method to program a panel while no one is on premises, when the panel shares a line with an answering machine.
7. The DACS shall accommodate IP Diagnostic to verify settings and operation of the network interface modules; Host name, MAC address, IPV4 address assignment.

The IP Connection test shall include; Link test to verify physical cable integrity, Ping test to verify gateway response, ping test to verify address on the internet.

8. Wireless point diagnostics shall include signal strength and device states of registered wireless points in the system.
9. The number of system testing and programming sessions shall be restricted via the use of program locking features and passwords. Passcode protection in excess of sixteen million combinations is required.
10. New modules support enhanced diagnostics through RPS

L. Miscellaneous Features: Programmable alarm output timer, 4 programmable entry delay times, exit delay programmable by area, individually programmable point of protection text, point bypassing, key switch arming capability with LED outputs, and fire verification.

M. False Alarm Reduction: The DACS shall comply with all ANSI SIA CP-01 2010 requirements for false alarm reduction

N. Ambush Detection: The DACS shall include an early ambush feature that requires that the user disarm, and then inspect the facility within a specified time period, before entering their passcode or a different authorized passcode again. If the user does not enter a passcode a second time, a duress event is generated. If the user does enter a passcode within the specified time period, the system disarms.

O. Two-man rule: The DACS shall include a programmable feature that requires 2 separate passcodes to be entered to disarm the system. After 1 passcode is entered, the system will prompt for a second passcode to be entered on the same ACC. Without the second passcode, the system shall not disarm.

P. Dual Authentication: The DACS shall support Dual Authentication by area. Areas programmed for Dual Authentication require activate of a card and a passcode to allow access to system functions, arm/disarm, or access control doors.

Q. Area Re-Arm: The System shall support programmable area re-arm time of 1 minute to 24 hour.

R. User-Programmable Features: The DACS shall provide a menu driven interface to provide a user-friendly command structure for programming / customizing the system to the operational criteria of the application. The DACS shall be capable of being operated via:

1. The Command Structure.
2. Menu / Command List.

2.3 SYSTEM INTERFACE REQUIREMENTS

A. Grounding: The Contractor shall properly earth ground the DACS to prevent electrostatic charges and other transient electrical surges from damaging the DACS panel.

B. Primary power: The Contractor shall provide a dedicated 120 VAC power circuit to the DACS system. This circuit shall be connected to the emergency power system. The 120 VAC is stepped down to power the DACS panel using a class two, plug-in transformer. This power circuit shall be properly rated to continuously power all points and functions indefinitely in full alarm condition.

C. Primary power supervision: When the primary power source fails, the system can be configured to report an "AC Fail" message to a commercial central station.

1. The message can also be programmed to "tag-along" with another message

transmitted to the central station.

2. The system will always display a loss of primary power on the ACC and may be configured to provide additional audible warning.
3. The transmission delay of this message is programmable from 5 seconds to 86 minutes with an optional 6 to 12 hour transmission delay

D. Secondary power (standby battery): The Contractor shall provide adequate battery power as defined by the relevant application criteria, (UL 864 and UL 985 for alarm installations or NFPA 72 chapters for fire applications). Appropriate battery chargers shall be provided consistent with the battery back-up capacity. The most current accepted version of NFPA 72 and any applicable local codes or AHJ requirements must be met accordingly.

E. Secondary power supervision: When the secondary power source experiences a 85 percent depletion of its standby capacity, the system can be configured to report a "Low Battery" message to a commercial central station. The system will always display a low battery condition on the ACC and may be configured to provide additional audible warning.

F. Telephone interface: The control panel in the DACS shall be equipped with an optional phone line monitor and shall interface with the phone lines via RJ-31X jacks for supervision of the telephone line connection.

1. The telephone line interface shall conform to FCC rules (Title 47 C.F.R. part 68).
2. When a telephone line is determined to be out of service by the DACS panel, the event will be annunciated locally on the ACC and transmitted to the central station over the alternate communications interface. The transmission delay of this message is programmable from ten to two-hundred forty seconds.

G. Ethernet Interface: The DACS shall include an integrated Ethernet interface module as the primary, or back-up means of communicating to a DACR.

1. Built-in IP-based alarm transport, programming, and control
2. The module shall accommodate 128 and 256-bit AES encryption using CBC (Cipher Block Chaining) mode.
3. 10BASE T or 100BASE T network connection
4. Full-duplex and half-duplex support

H. Cellular interface: The DACS may use a cellular radio module as the backup means of communicating to a DACR. Up to 4 IP Addresses shall be available for routing system events. The supervision time shall be programmable with a range of 5 to 65,535 seconds. The module shall accommodate 128 and 256-bit AES encryption using CBC (Cipher Block Chaining) mode.

I. Auxiliary function control interfaces: The DACS shall accommodate auxiliary functions such as activating bells, strobes, or lights and shall be accomplished using the optional application specific relay modules. These auxiliary interfaces shall be electrically isolated to avoid inter-system interferences or damage to the system.

J. Wiring: The contractor shall provide cables consistent with the manufacturer's recommendations. The following general guidelines shall be followed for wiring installation:

1. Wiring shall be appropriately color-coded with permanent wire markers. Copper conductors shall be used.
2. All signal cables provided under this contract shall be Class II, plenum-rated cable where required. Where subject to mechanical damage, wiring shall be enclosed in metal conduits or surface metallic raceway.

3. Data wires shall not be enclosed in conduit or raceways containing AC power wires.
4. Where EMI may interfere with the proper operation of the DACS circuits, twisted/shielded cable shall be used.

K. Environmental Conditions: The DACS shall be designed to meet the following environmental conditions:
1. The system shall be designed for a storage temperature of -10° C to 70°C (14° F to 158°F).
2. The system shall be designed for an operating temperature of 0° C to 50°C (32° F to 120°F).
3. The system shall be designed for normal operation in an 85% relative humidity environment.
4. The system shall meet or exceed the requirements of FCC rules Title 47 C.F.R. Part 15, Class B devices, and Part 68, IEC EMC directive

2.4 ACCESSORIES

A. System Accessories:
1. B520 Auxiliary Power Supply Module, 2A 12V
2. B208 SDI2 8-Input Expansion Module
3. B303 SDI2 8-Output Expansion Module
4. D122L Dual Battery Harness, 35” 12V
5. D1218 12V 18Ah Battery (minimum of 2)
6. D137 Accessory Mounting Bracket
7. D101 Enclosure Lock and Key Set (provide 5 sets of additional keys per enclosure)
8. D110 Tamper Switch (provide 1 for each security enclosure on the project, including power supplies)
9. D8108A Attack Resistant Enclosure
10. D804 Transformer Enclosure Kit (one for each, security associated, wall plug transformer on the entire project)

2.5 FIELD DEVICES

A. Keypads:
1. Keypad shall feature an illuminated touch screen and graphical interface. Each keypad shall have user adjustable options such as volume and brightness show system messages for all areas.
2. The touch screen display shall use icons, words, numbers, and symbols to show the status of the security system and for interacting with the security system. When several events occur, the keypad shall show each event in order of priority.
3. The keypad shall detect when a user approaches and automatically activate the display.
4. The keypad shall be white in color
   a. Approved Product
      1. Bosch Product No. B942 Touch Screen Keypad.

B. Motion Detectors:
1. Detector Requirements
   a. Detectors shall be a PIR/microwave detector unit incorporating range adaptive Doppler radar and PIR signals into an intelligent algorithm to provide accurate and reliable alarm decisions.
   b. Detectors shall be built with a sealed optic chamber to provide immunity to drafts, insects, and small animals.
   c. Detectors shall be designed to provide coverage in the event the microwave

subsystem fails.

d. A Multi-Point Anti-mask with Integrated Spray Detection system shall send a supervision trouble signal if a masking material is placed within 30 cm (1 ft.) of the detector.
e. Detectors shall contain light emitting diodes (LEDs) that adjust automatically to the surrounding light level. A blue LED indicates dual alarms and activates during a remote walk test. The walk test LED may be enabled or disabled from the control panel or locally at the detector via a DIP switch. A yellow LED shall indicate microwave alarms, and a red LED indicates PIR alarms.
f. Detectors shall provide a remote self-test function that initiates when the walk test input switches to its active state. The alarm relay and alarm LED activate for four seconds following a successful test. The trouble relay activates and the alarm LED flashes following a failed test.
g. Detectors shall provide input power supervision that activates the trouble relay and causes the LED to flash when the power is lower than 8 volts.
h. Each motion detector shall have an individually dedicated POPIT

2. Sensor Technology
   a. The detector shall incorporate sensor data fusion technology that uses an internal microprocessor to gather, analyze, and compare the data from five separate sensors to make the most intelligent alarm decisions. The data processed from the microprocessor shall be from two pyroelectric sensors, a Doppler microwave sensor, a room temperature sensor, and a light level sensor.
   b. The detector shall also incorporate tri-focus technology that uses three high-quality Fresnel lenses with three specific focal lengths to provide long-range, middle-range, and short-range coverage. The detector shall apply the three focal lengths to 86 detection zones which combine to produce 11 solid curtains of detection. The tri-focal optics technology shall include two pyroelectric sensors which deliver twice the standard optical gain.
   c. The detector shall provide active white light suppression capable of measuring the light intensity directed at the face of the unit, and use the data gathered by the sensors to eliminate false alarms caused by the bright light source. False alarms shall not be caused from bright light sources up to 10,000 lux.
   d. The detector shall provide dynamic temperature compensation that adjusts the PIR sensitivity to detect human body heat accurately to avoid false alarms and deliver consistent catch performance at all operating temperatures.
   e. The detector shall provide multi-point anti-mask with integrated spray detection, utilizing patented prism lenses and active infrared detection to provide industry-leading protection against all known forms of attack.

3. Approved Products
   a. Wall Mount Motion Detector: Bosch Product No. ISC-PDL1-WA18GB
   b. Wall Mount Curtain Motion Detector: Bosch Product No. ISC-PDL1-WAC30G
   c. Ceiling Mount Motion Detector: Bosch Product No. DS9370

C. Magnetic Door/Hatch Contacts:
   1. Recessed Steel Door Contacts: Interlogix Product No. 1076D-G Double Pole Double Throw
   2. Surface Mount Contacts (provide and roof hatches, gates, and any location requiring surface mounting): Bosch Product No. 2507AD-L Double Pole Double Throw
   3. Overhead Door Contacts Double Pole Double Throw: Sentrol Product no.

2317A or 2327A (coordinate correct contact with door channel)

4. Do not combine multiple doors onto a single POPIT. Each single and double door shall be on an individual POPIT.

D. Sounder/Strobe Annunciation Devices - Contractor shall add an in ceiling sounder, at each exterior door location and tie back to access control system. System shall be configured to activate sounder after door has been ajar for a given time period, configurable by system settings. Sounder shall silence after door is closed and door contact closure has been initiated. Install sounder in standard electrical back box no higher than 18" above ceiling. Route wiring from sounder back to access control system and required power supplies at headend location.
   1. Schneider Electric LED Unit - SQD-XVUC29
   2. Schneider Electric Sounder Unit - SQD-XVUC9S
   3. Schneider Electric Fixing Unit SQD-XVUZ0

E. Security RF Wireless
   1. Provide and install an RF Wireless System as shown on the project drawings. The Integrator shall conduct a wireless survey prior to deployment. The system shall consist of the following Gateways, Repeaters, and transmitters:
      a. Wireless Serial Receiver Kit consisting of an EN4200 serial receiver and a Bosch B802 interface board: Inovonics Product Number ENKIT- SDI2. Locate receiver at Intrusion Control Panel Location.
      b. High Power Repeater: Inovonics Product No. EN5040
      c. Pendant Transmitter: Inovonics Product No. EN1223S (quantity of 10)

F. Panic/Duress Buttons
   1. Wall Mount Buttons: STI Product No. UB-1
   2. Under Counter Buttons: USP Product No. HUB3B

G. Miscellaneous Devices:
   1. POPIT Modules with Tamper: Bosch Product No. D9127T

2.6 WIRING

A. All wiring shall be by the manufactures specifications. All cable shall be shielded as required.

B. All 120v Power shall be furnished by the Division 26 contractor.

C. All Security Conduit as show on the drawings shall be furnished by the division 26 contractor as part of their scope of work.

D. Coordination with the Division 26 contractor is the responsibility of the Security Contractor to ensure all conduit is in place for a complete installation.

E. All systems shall be connected to an emergency power source as available.

F. Color code of all security intrusion detection system and access control wiring shall be purple in color.
   Approved Products:
   1. 18/2 unshielded: Belden Product No. 6300UE or equivalent
   2. 18/2 shielded: Belden Product No. 6300FE or equivalent
   3. 18/4 unshielded: Belden Product No. 6302UE or equivalent
   4. 18/4 shielded: Belden Product No. 6302FE or equivalent

PART 3 EXECUTION

3.1 INSTALLATION

A. All wiring shall be in accordance with the National Electrical Code, Local Codes, and article 760 of NFPA Standard 70. All wiring sizes shall conform to recommendations of the equipment manufacturer, and as indicated on the engineered shop drawings

B. All wire shall be UL Listed CL2 for limited energy (300V) applications and shall be installed in conduit. Limited energy MPP wire maybe run open in return air ceiling plenums provided such wire is UL Listed for such applications and is of the low smoke producing fluorocarbon type and complies with NEC Article760 if so approved by the local authority having jurisdiction.

C. No AC wiring or any other wiring shall be run in the same conduit as security alarm wiring.

D. All wire shall be installed in an approved conduit/raceway system (except where permitted by NEC and the local authority having jurisdiction). Maximum conduit “fill” not to exceed 40% per NEC.

E. Minimum conduit size shall be 3/4" EMT. Install conduit per engineered shop drawings.

F. Systems utilizing open wiring techniques with low smoke plenum cable shall provide conduit in all inaccessible locations such as inside walls, all mechanical / electrical rooms, or other areas where wiring might be exposed or subject to Damage.

G. All vertical wiring and all main trunk / riser wiring shall be installed in a complete raceway / conduit system. All riser boxes shall be adequately sized for the number of conductors transversing the respective box as well as the number of terminations required.

H. Provide a Green 4 pair Comm scope Category 6a telephone cable from the Master Control Panel to the Telephone Equipment room.

I. 2 18-4 wires will be run from the panel to the prior designated future portable connection location and labeled in plain English on both ends. These spares are to be left above the ceiling.

J. Each set of magnetic door contacts or glassbreaks that protect one room are to be connected through one POPIT module for point identification of that room.

K. Magnetic door contacts protecting separate hallways or entries are to be connected into separate POPIT modules for separate identification.

L. Provide and install (1) dedicated POPIT for each device installed on the project including but, not limited to glass break detectors.

M. All POPIT Modules shall be installed inside a 4”x4” junction box with a cover to be mounted on the wall nearest to the device the POPIT Module is associated with. All boxes shall be labeled with the appropriate corresponding point contained within.

N. Integrate the security system to the remote monitoring station. Provide all hardware and cabling as required. Coordinate with Owner for approved remote monitoring service.

O. All POPIT modules on project shall be mounted above ceiling in easily accessible area.

P. All keypads, sirens and POPEX modules shall have dedicated homeruns from each

device to the master control panel. Do not daisy chain keypads or sirens. Chaining of modules is permitted if location serves multiple areas of coverage.

Q. All POPIT modules and power supplies are required to be located on as-built drawings delivered to owner at substantial completion of project.

R. Contractor shall install communication wire from freezer/cooler control panels to burglar alarm via POPIT module interface to notify panel should freezer/cooler encounter high temperature condition. Coordinate programming and final terminations with Owner.

S. All POPEX modules and power supplies shall be installed in IDF closets for that area of coverage with easy accessibility and a dedicated SDI2 homerun to the master control panel not to exceed 500ft.

T. All device power runs shall be fused and clearly labeled in plain English at each main power source.

3.2 EXAMINATION

A. Examine areas to receive devices and notify adverse conditions affecting installation or subsequent operation.

B. Do not begin installation until unacceptable conditions are corrected.

C. If preparation is the responsibility of another installer, notify architect of unsatisfactory preparation before proceeding.

D. Ensure selected location is secure and offers protection from accidental damage.

E. Location shall provide reasonable temperature and humidity conditions, free from sources of electrical and electromagnetic interference.

F. Ensure power source is protected against accidental shutoff.

G. Install all equipment and materials in accordance with the "current" recommendations of the manufacturer. The work shall also be in accordance with:
1. Installation criteria defined in these specifications and in the construction documents.
2. Factory Representative can be the Bosch Security Systems Inc. Security Dealer.
3. Approved submittals.
4. Applicable requirements of referenced standards.

H. The contractor shall provide the following services as part of the contract:
1. Supervision of sub-contractors.
2. Coordination of other contractors for system-related work (electrical contractor, finish hardware contractor, architect, and general contractor).
3. Attending site construction/coordination meetings.
4. Keeping updated construction drawings at the construction site.
5. Meeting construction deadlines per the construction schedule.

I. Programming of the system shall include the following tasks:
1. Programming system configuration parameters (hardware and software, zone/circuit numbers, communication parameters).
2. Programming operational parameters such as opening/closing reports and windows, system response text (custom English) displays of events, activation of relays that

drive auxiliary devices, and identifying types of zones/loops.

3. Programming passcodes according to the authorities and functions defined by the owner.
4. Other system programming tasks required by the owner. These additional programming requirements shall be coordinated between the owner and the contractor.
5. Operational Testing: The contractor shall perform thorough operational testing and verify that all system components are fully operational.
6. Hard-copy System Printout: The contractor shall submit a hard-copy system printout of all components tested and certify 100 percent operation indicating all devices/panels/units have passed the test criteria set forth by the manufacturer.
7. Acceptance Test Plan Form: An acceptance test plan form shall be prepared/provided by the contractor prior to the acceptance walk-through.
8. This form shall include separate sections for each device/panel/unit as well as a column indicating the manufacturer's performance allowance/margin, a column indicating the result of the testing performed by the contractor (pass/fail), and an empty column for recording findings during the walk- through.
9. Fire Alarm Systems shall comply with NFPA 72 Standards for inspection, testing, and maintenance.

J. The contractor shall certify completion in writing and schedule the commissioning walk-through. The contractor shall provide all the tools and personnel needed to conduct an efficient commissioning process.

3.3 FIELD QUALITY CONTROL

A. Installation contractor shall submit a written test report that the system has been 100 percent tested and approved. Final test shall be witnessed by the owner, engineer, electrical contractor, chief security officer, and performed by the installation contractor. Final test report shall be received and acknowledged by the owner prior to request for final payment.

B. Provide instruction to the owner's satisfaction with regard to proper use and operation of the system.

C. Determine and report all problems to the manufacturer's customer service department.

3.4 ADJUSTING

A. System maintenance and repair of system or workmanship defects during the warranty period shall be provided by the Contractor free of charge (parts and labor).

B. Periodic testing of the system shall be carried out on a monthly or quarterly basis to ensure the integrity of the control panel, the sensing devices, and the telephone lines.

C. The installer shall correct any system defect within six hours of receipt of call from the Owner.

3.5 DEMONSTRATION

A. Demonstrate at final inspection that surveillance system and devices functions properly.
   1. The Contractor upon completion of installation shall furnish training in the complete operation of the systems.

3.6 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before substantial completion.

END OF SECTION 28 16 00

SECTION 28 23 00 - IP SECURITY CAMERA SYSTEM

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK

A. Provide all required materials to expand the existing IP based digital video surveillance system. Contractor shall include cameras, cabling, digital image storage, integration and accessibility with Owner's Local/Wide Area Network (LAN/WAN), Internet accessibility thru remote view application software and simultaneous user access capability as required. Provide fully terminated unshielded twisted pair (UTP) cable, UTP terminations, racks, raceways, conduit, and other incidental and miscellaneous premises wiring system hardware as required for a complete and useable system. The installation shall comply with applicable codes and standards in effect at the job site and as indicated in the Specifications and Drawings. Reference technical cabling specifications for cabling requirements. **This scope of work shall be carried in an Allowance.**

B. Provide all electronic hardware and coordinate with the building's LAN/WAN. The contractor shall coordinate with other system vendors, where appropriate, to facilitate equipment installation, scheduling, protection of equipment and access to the project site in order to provide the Owner a substantially complete project in a timely manner.

C. Contractor must be a current integrator of solution in the nearest, major metropolitan marketplace and be able to include information on current support staff to be able to service this client.

D. Contractor is responsible for coordinating all electrical work required on this project for connection of servers, cameras, conduit, and power supplies. Contractor shall provide a complete turnkey solution to the owner and be responsible for the complete installation of a security camera system at each campus.

E. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO PROVIDE THE LICENSING AND REGISTRATION FOR ALL EQUIPMENT INSTALLED ON THIS PROJECT.

1.2 OVERVIEW:

A. Work to include installation of IP addressable video surveillance and provide the capability of connection to access monitoring control systems within the facility. Connection to the data network system is required. Coverage is to be interior as well as designated exterior areas indicated on the plans.

1.3 VIDEO SURVEILLANCE SYSTEM

A. The Building Surveillance System will be used to monitor selected interior and exterior areas at all times.

B. The system is used to visually monitor designated areas as indicated on the plans.

C. The following functional capabilities are considered essential for this Surveillance system.

i. Switch any assigned camera in the system to any monitor in the system.
ii. Provide partitioning of cameras and priority access
iii. Cameras equipped with environmental housings.
iv. Provide fused low voltage power for control of heater and blower.
v. Adjust and balance cameras via software from network accessed workstations.
vi. Minimum camera adjustments available:

- Iris
- Shutter
- Zoom
- Focus
- Gain
- Hue
- Backlight Compression
- Color Saturation
- Brightness
- Aperture
- Contrast

D. Enter and edit video information on-line and save them for future use.
E. View via multiple monitors at once.
F. Define the sequence for viewing camera(s) on each monitor.
G. Bypass cameras in the system during sequencing to a monitor.
H. Provide the capability to program alarms and associated incoming alarms with related outputs.
I. Bypass alarms in the system, either by position or time deactivation.
J. Provide time/date and alphanumeric camera titling.
K. Provide real time system status in the master controller.
L. Provide IP addresses coordinated with the districts telecommunications department.
M. Connect to the access control system to recall of presets.
N. Record alarmed and monitored camera viewing areas.
O. Cameras must be able to be set for motion detection modes.
P. Camera data cabling is already installed as part of base construction project and is not required for this project. Contractor is still required to install low voltage power supplies and low voltage power to enclosures as required for exterior cameras and housings.

1.4 DEVELOPMENT OF GRAPHICAL USER INTERFACE (GUI) AND SOFTWARE CONTROL:

A. Control and configuration must offer integration of components and operation into one complete system. Cameras and software components within the system must be from the same manufacturer unless otherwise noted.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:
1. The Video Surveillance System Installer shall be licensed and shall meet all applicable regulations. The Contractor shall be a firm normally employed in the low voltage and video cabling industry.
2. The contractor shall be certified by the manufacturing company in all aspects of design, installation and testing of the products described herein. Each contractor

shall furnish with their submittal a letter from the manufacture indicating they are a dealer in good standing.

3. The contractor must be certified by the manufacturer of the products, adhere to the engineering, installation and testing procedures and utilize the authorized manufacturer components and distribution channels.
4. The contractor shall be experienced in all aspects of this work and shall be required to demonstrate direct experience on recent systems of similar type and size. The contractor shall own and maintain tools and equipment necessary for successful installation and testing of video surveillance distribution systems and have personnel who are adequately trained in the use of such tools and equipment.
5. A resume of qualifications shall be submitted with the Contractor's proposal indicating the following:
   a. A list of five recently completed projects using the product proposed of similar type and size with contact names and telephone numbers for each.
   b. A list of test equipment proposed for use in verifying the installed integrity of metallic cable systems on this project.
   c. A technical resume of experience for the contractor's Project Manager and on-site installation supervisor who shall be assigned to this project.
   d. A list of technical product training attended by the contractor's personnel that shall install the video surveillance system shall be submitted.
   e. Any subcontractor who shall assist the video surveillance contractor in performance of this work shall have the same training and certification as the video surveillance contractor.

B. The Owner's representative reserves the right to reject all or a portion of the work performed, either on technical or aesthetic grounds.

1.6 REGULATORY REQUIREMENTS

A. Standards: All work shall be performed in accordance with the latest revisions of the following standards and codes:
1. Local Building Code
2. Local Electrical Code
3. NEC National Electrical Code

B. Other references:

1.	TIA/EIA-568-A -	Commercial Building Telecommunications Wiring Standard
2.	EIA/TIA-569 -	Commercial Building Standard for Telecommunications Pathways and Spaces.
3.	TIA/EIA-606 -	The Administration Standard for the Telecommunications Infrastructure of Commercial Buildings
4.	TIA/EIA-607 -	Commercial Building Grounding and Bonding Requirements for Telecommunications
5.	TIA/EIA TSB 67 -	Transmission Performance Specification for Field Testing of Unshielded Twisted-Pair Cabling Systems.
6.	ISO/IEC 11801 -	Generic Cabling Standard
7.	EN 50173 -	Generic Cabling Standards for Customer Premises

C. Governing Codes and Conflicts: If the requirements of these specifications or the Project Drawings exceed those of the governing codes, regulations, and manufacturer installation requirements, then the requirements of these specifications and the drawings shall govern. However, nothing in the drawings or specifications shall be construed to permit work not conforming to all governing codes, regulations, and manufacturer installation requirements.

1.7 SUBMITTALS

A. The video surveillance system installer shall furnish all CCTV system submittals in a single consolidated submittal

B. Shop Drawings: Submit the following items, for Owner review and approval:
1. Samples: Complete manufacturer's product literature and samples (if requested) for all pre-approved substitutions to the recommended products made during the course of the Project.
2. Permits: The Contractor shall obtain all required permits and provide copies to the Owner/Architect/Engineer
3. Product Literature: Complete manufacturer's product literature for all electronics, cable, cable supports, cable labels, outlet devices, and other products to be used in the installation. In addition, whenever substitutions for recommended products are made, samples (when requested by the Owner/Architect/Engineer) and the manufacturer's supporting documentation demonstrating compatibility with other related products shall be included.
4. Testing: Proposed Contractor test result forms, a list of instrumentation to be used for systems testing.
5. A complete point-to-point floor plan diagram indicating camera locations and all required cabling to connect systems.

C. Project Completion: As a condition for project acceptance, the Contractor shall submit the following for review and approval:
1. Inspection and Test Reports: During the course of the Project, the Contractor shall maintain an adequate inspection system to ensure that the materials supplied and the work performed, conform to contract requirements. The Contractor shall provide written documentation that indicates that materials acceptance testing was conducted as specified. The Contractor shall also provide documentation, which indicates that all cable termination testing was completed and that all irregularities were corrected prior to job completion.
2. Operating and Maintenance Instructions for all devices within the system. These instructions shall reflect any changes made during the course of construction, and shall be provided to the Owner, for their use, in a three-ring binder labeled with the project name and description. (4 copies)
3. All training sessions with district staff and training media shall be complete.
4. As-built Drawings shall include cable pathways, camera locations with correct labeling and MDF/IDF locations. The as-built drawings shall be prepared using AutoCad V. 13 or later. Provide the Owner with electronic versions of the as-builts on 2 qty. 8MB thumb drives.

PART 2 - PRODUCTS

2.1 GENERAL

A. The Contractor is responsible for providing all incidental and/or miscellaneous hardware not explicitly specified below as required for a complete and operational system.

B. Materials shall be as listed or shall be approved equivalent products of other manufacturers meeting the intent and quality level of the specifications. All approved equivalent products shall be published by addendum ten days prior to proposal for Architect/Engineer review.

C. All equipment and materials used shall be standard components, regularly manufactured, regularly utilized in the manufacturer's system.

D. All systems and components shall have been thoroughly tested and proven in actual use.

E. All systems and components shall be provided with the availability of a toll free 24-hour technical support phone number from the manufacturer. The phone number shall allow for immediate technical assistance for either the dealer/installer or the end user at no charge.

F. All systems and components shall be provided with an explicit manufacturer warranty.

2.2 CAMERAS

A. *Camera Environmental Housing Power Supply:*

1. Provided for powering of camera environmental housings.
2. Power supplies mounted in IDF or MDF.
3. Route cable from camera to nearest power supply unit.
4. PoE customer provided.
5. All gymnasium cameras shall be wall mounted unless otherwise noted. Provide clear, polycarbonate protective cover.
6. All exterior cameras shall be wall mounted unless otherwise noted.

2.3 ACCEPTABLE PRODUCT:

A. **Approved product: AXIS only. For any camera types EOL or discontinued, contractor must provide equivalent or better models along with an approved substitution document for owner's approval, prior to construction.**

1. Provide as shown on drawings.
2. Provide all requisite back boxes, mounting brackets, pendant kits, bracket wall accessories and IP51 rated drop ceiling kits.
    a. TYPE 1 – P3265-V - Interior 2MP single sensor camera
        i. Wall / Ceiling mount
        ii. Main entrance foyer*
        iii. Kitchen back door, etc.
    b. TYPE 2 – Q3819-PVE - Interior / Exterior 14 MP panoramic seamless 180° camera:
        i. Wall mount
        ii. Gymnasiums – minimum of two opposite each other, centrally located length of gymnasium.
        iii. Parking lot overview***
    c. TYPE 3 – P3737-PLE - Interior / Exterior 15 MP multi-sensor 360° camera
        i. Ceiling / Wall / Corner mount
        ii. Intersection of 3 or more corridors*
        iii. Library – 2 minimum*
        iv. Cafeteria – 3 minimum*
        v. Exterior walkways / Bus ramps
        vi. Exterior building corners***
        vii. Athletics press box – 2 minimum, FOV – Bleachers / rear of press box
        viii. Concessions stands – 2 minimum, FOV – General area and walkways**
    d. TYPE 4 – M4327-P - Interior 6MP single sensor 360° camera
        i. Ceiling mount
        ii. Install above Cafeteria POS
        iii. Kitchen Manager's Office, FOV - Safe
        iv. Stage (Elementary Schools only).
    e. TYPE 5 – P3267-LV - Interior 5MP single sensor camera with IR: P3267-LV
        i. Wall / Ceiling mount

ii. Stairwells**
iii. Short corridors, FOV – entry / exit doors

f. TYPE 6 – P4707-PLVE - Interior / Exterior 2x5MP dual-sensor with 360° IR
i. Ceiling / Wall mount*
ii. Admin Office
iii. Stariwells**
iv. Centrally located in long corridors
v. Corner of “L” shaped joining corridors
vi. Kitchen corridors

g. TYPE 7 – P3818-PVE - Interior / Exterior 13MP single sensor seamless 180° camera
i. Center of wall in large open areas***
ii. Bus ramps, viewing parking lots, mounted on canopies.

* - Subject to interior ceiling height (10’-12’ maximum installation height).
** - Subject to complexity of FOV
*** - 12’ minimum mounting height (subject to FOV of adjacent canopies)
FOV = Field Of View

B. Model numbers and manufacturers included in this specification are listed to establish a standard of product quality and the desired standards for District facilities. It is the responsibility of the installation contractor to coordinate with telecommunications cabling and district network providers for the correct cabling and hardware requirements of the equipment being provided.

2.4 BUILDING SURVEILLANCE OUTDOOR ENVIRONMENTAL CAMERA HOUSING:

A. Provide a weather resistant Nema 4X rated enclosure construction of aluminum bracket, acrylic and UV stable plastic.

B. Internal dimensions: accommodate camera, lens and serving cables.

C. Provide with thermostatic controlled blower and heater.

D. Provide UV protection rating UL flame rating of 94V0.

E. Provide weatherizing mounting as required for network cable entry and connection to maintain network 6 classification,

2.5 Video Management System:

A. The contractor shall provide programming and licenses to add all new cameras shown to the existing XProtect Milestone Enterprise video management System.

B. Provide Milestone XProtect Camera License for each camera installed.

C. Provide a one (1) year milestone software upgrade plan for cameras and base server.

2.6 DATA CLOSET (MDF/IDF) TERMINATION HARDWARE

A. Contractor will be responsible for coordinating with District technology department on acquiring any network configuration information such as IP numbers that will be required to connect servers to district network.

B. Contractor is responsible to provide network cabling connection, either fiber or category 6, to owner provided network equipment. This connection allows recording unit to be connected to owner’s local area network.

2.7 CABLE AND INSTALLATION

A. Contractor to provide all penetrations and all conduits as necessary for installation of CCTV installation.

B. All exterior penetrations require necessary weatherproofing to avoid moisture penetration.

C. All outdoor cable runs underground shall be rated for underground use.

D. Coordinate all power circuits required for the servers and camera power supplies.

E. Contractor shall not run any power cabling for any security equipment on rack tray system due to EMI considerations. Contractor shall provide individual cabling support for all low voltage power cabling.

F. All cabling for entire project shall be installed in conduit for the entire run. No exceptions.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Cable Pathway:
   1. In suspended ceiling and raised floor areas where duct, cable trays or conduit are not available, the Contractor shall bundle, in bundles of 25 cables or less, with cable ties snug, but not deforming the cable geometry. Cable bundles shall be supported via “J” hooks attached to the existing building structure and framework at a maximum of five (5) foot intervals. Plenum rated cable ties shall be used in all appropriate areas. The Contractor shall adhere to the manufacturer’s requirements for bending radius and pulling tension of all cables.
   2. Cables shall not be attached to lift out ceiling grid supports or laid directly on the ceiling grid.
   3. Cables shall not be attached to or supported by fire sprinkler heads or delivery systems or any environmental sensor located in the ceiling air space.

B. Fire Wall Penetrations: The Contractor shall avoid penetration of fire rated walls and floors wherever possible. Contractor shall also seal all floor, ceiling and wall penetrations in fire or smoke barriers and in the wiring closet.

C. Wall Penetrations: Where penetrations are necessary, they shall be sleeved with metallic conduit and resealed with an Underwriter Laboratories (UL) approved sealant.

D. Provide three sided pre-finished metal hood and seal to wall where conduit penetrates exterior wall.

E. Install new conduit on portable pipe supports – (low profile type), as manufactured by Portable Pipe Hangers or Advanced Support Products. Provide roof protection pads under each support. Coordinate location and routing with design engineer prior to rough-in or installation of system.

F. Do not install wall mounted cameras into metal fascia. Ensure they are mounted into brick, and sealed top and sides (not bottom)

3.2 EQUIPMENT RACK CONFIGURATION

Cable Placement: Cable installation in the wiring closet must conform to the Project Drawings. All cabling shall be routed so as to avoid interference with any other service or system, operation, or maintenance location. Avoid crossing areas horizontally just above or below any riser conduit. Lay and dress cables to allow other cables to enter the conduit/riser without difficulty at a later time by maintaining a working distance from these openings.

Cable shall be routed as closely as possible to the ceiling, floor or corners to ensure that adequate wall or backboard space is available for current and future equipment. All cable runs within the wiring closet shall be horizontal or vertical within the constraints of minimum cable bending radii. Minimum bend radius shall be observed. Cables shall not be tie-wrapped to electrical conduit or other equipment.

All incoming cables shall be routed on the cable tray and neatly dressed down to the patch panels.

3.3 WIRING INSTALLATION

A. General:
   1. Cabling between wiring closet and camera locations shall be made as individual home runs. No intermediate splices may be installed or utilized between the wiring closet and the camera location.
   2. All cable must be handled with care during installation so as not to change performance specifications.

B. Exposed Cable: All cabling shall be installed inside walls or ceiling spaces whenever possible. Exposed cable shall only be run where indicated on the Drawings. Additional exposed cable runs shall require Owner approval, and shall only be allowed when no other options exist. Cabling shall be installed concealed at all times, except in unfinished mechanical rooms or wiring closets where cable shall be installed exposed and located to avoid conflicts with pass-through cabling, etc. Tie wraps shall be used to provide a neat appearance. Provide “D” rings or the appropriate cable guides to dress the cable.

C. Placement: All cabling and associated hardware shall be placed so as to make efficient use of available space. All cabling and associated hardware shall be placed so as not to impair the Owner’s efficient use of their full capacity.

Cable Routes: All cabling placed in ceiling areas must be in conduit, cable tray, or J-Hooks. Cable supports shall be permanently anchored to building structure or substrates. Provide attachment hardware and anchors designed for the structure to which attached and that are suitably sized to carry the weight of the cables to be supported. Attaching cable to pipes or other mechanical items is not permitted. Use J-Hooks for up to 15 cables (Caddy CAT 21 or CAT 32 hooks with appropriate brackets). All runs of sixteen (16) or more cables, provide cable individually supported support loops on 5’ on center maximum centers to hang cable. Cable shall be routed so as to provide a minimum of 18” spacing from light fixtures, sources of heat, power feeder conduits and EMI sources. Cabling shall not be attached to ceiling grid support wires. Cable runs shall be parallel or perpendicular to building structure. Multiple cables to be banded together every 6 feet.

3.4 DOCUMENTATION

A. Labels: The Contractor shall label all outlets using permanent machine engraved labels approved by the Owner. Label patch panels in the wiring closet to match those on corresponding camera locations. The font shall be at least one-eighth inch (1/8”) in height, block. All labels shall correspond to as-builts and to final test reports.

D. Contractor shall ensure complete typed labeling of all cameras with numbers that correspond to locations on video server. Labeling system shall correspond to the Owner’s labeling system. Verify with Owner. Provide tags (black letters on white labels, plastic

coated) on all cables and outlets.

C. All cables shall be labeled at both ends with a machine label and all terminations shall be stenciled with a typed label for quick circuit identification. Labeling shall conform to TIA/EIA standard 606 and include interconnect cable identification numbers.

D. A floor plan, clearly labeled with all numbered camera locations, shall be included in the as-built plans.

3.5 CABLE TESTING - BY MANUFACTURER'S REQUIREMENTS

A. Notification: The Owner/Architect/Engineer shall be notified one week prior to any testing so that the testing may be witnessed.

B. Final Acceptance: Before requesting a final acceptance, the Contractor shall perform a series of end-to-end installation performance tests. The Contractor shall submit for approval a proposal describing the test procedures, test result forms and time table for all copper and fiber optic cabling.

C. Procedures: Trained personnel shall perform all testing. Acceptance of the test procedures discussed below is predicated on the Contractor's use of the recommended products and adherence to the inspection requirements and practices set forth. Acceptance of the completed installation shall be evaluated in the context of each of these factors.

D. Errors: When errors are found, the source of each error shall be determined, corrected and the cable retested. All defective components shall be replaced and retested. Retest results must be entered on the test results form. All corrections shall be made prior to final acceptance test.

3.6 INSPECTION

A. Conformance to the installation practices covered above are to be verified when completed. In some cases, the Owner/Architect/Engineer may observe before acceptance.

3.7 WARRANTY

A Guarantee and warrant all equipment provided for a period of **3 years** following date of substantial completion, or a period equal to the stated guaranty/warranty offered by the product manufacturer, whichever is the longest in duration.

B. All such warranties shall include all parts (Cameras, encoders, power supplies, housings, etc.).

C. Labor and all other costs as necessary to maintain the equipment in operating condition as intended by the product manufacturer after a period of 1 year shall be negotiated with the owner upon project completion.

END OF SECTION

28 31 00 - FIRE DETECTION AND ALARM SYSTEM

CONDITIONS OF THE CONTRACT AND DIVISION 1, as applicable, apply to this Section.

PART 1 GENERAL

1.1. DESCRIPTION:

A. This section of the specification includes the furnishing, installation, connection and testing of the microprocessor controlled, intelligent reporting fire alarm equipment required to form a complete, operative, coordinated system. It shall include, but not be limited to, alarm initiating devices, alarm notification appliances, Fire Alarm Control Panel (FACP), auxiliary control devices, annunciators, and wiring as shown on the drawings and specified herein.

B. The fire alarm system shall comply with requirements of NFPA Standard 72 for Protected Premises Signaling Systems except as modified and supplemented by this specification. The system shall be electrically supervised and monitor the integrity of all conductors.

C. The fire alarm system shall be manufactured by an ISO 9001 certified company and meet the requirements of BS EN9001: ANSI/ASQC Q9001-1994.

D. The FACP and peripheral devices shall be manufactured 100% by a single U.S. manufacturer (or division thereof).

E. The system and its components shall be Underwriters Laboratories, Inc. listed under the appropriate UL testing standard as listed herein for fire alarm applications and the installation shall be in compliance with the UL listing.

F. The installing company shall employ NICET (minimum Level II Fire Alarm Technology) technicians on site to guide the final checkout and to ensure the systems integrity.

G. The contractor shall field verify all existing device locations and remove them in their entirety including cable. No abandoned cable will be allowed. No cable shall be reused during the installation of the new devices.

H. The contractor shall field verify all AHU equipment and provide a Duct Detector for each unit over 2000 CFM. There is an approximate number of 20 Air handlers in the school that will require a duct detector to be installed. The contractor shall provide the devices and installation of these devices in the base proposal.

I. System shall have a minimum of two loops. Contractor shall not load any loop greater than 75% of its detector loading capacity to allow for future expansion.

J. The contractor shall provide and install new devices in the existing portable buildings. Refer to drawings for approximate portable building locations.

K. Only basic equipment devices have been shown on the contract drawings. Specific wiring between equipment/devices may not be shown. It is the contractor's responsibility to submit for approval the COMPLETE ENGINEERED system configuration and layout showing all devices, wiring, conduit, and locations along with other required information as specified herein to provide a complete operational system as specified.

L. The drawings show basic device placement to set design criteria. It is the installing contactors responsibility to provide a complete and functional system that meets all applicable codes. The contractor shall include additional devices as required to the design shown to ensure voice evacuation announcement volume levels are met as well as Visual device lumen outputs are reach acceptable levels.

1.2. SCOPE:

A. A new intelligent reporting, microprocessor controlled fire detection system shall be installed in accordance to the project specifications and drawings to provide a complete smoke detection and fire alarm notification including voice evacuation capabilities.

B. Basic Performance:

1. Alarm, trouble and supervisory signals from all intelligent reporting devices shall be encoded on NFPA Style 4 (Class B) Signaling Line Circuits (SLC).

2. Initiation Device Circuits (IDC) shall be wired Class A (NFPA Style D) as part of an addressable device connected by the SLC Circuit.

3. Notification Appliance Circuits (NAC) shall be wired Class A (NFPA Style Z) as part of an addressable device connected by the SLC Circuit.

4. On Style 6 or 7 (Class A) configurations a single ground fault or open circuit on the system Signaling Line Circuit shall not cause system malfunction, loss of operating power or the ability to report an alarm.
5. Alarm signals arriving at the FACP shall not be lost following a primary power failure (or outage) until the alarm signal is processed and recorded.
6. NAC speaker circuits shall be arranged such that there is a minimum of one speaker circuit per floor of the building or smoke zone whichever is greater.
7. Audio amplifiers and tone generating equipment shall be electrically supervised for normal and abnormal conditions.
8. NAC speaker circuits and control equipment shall be arranged such that loss of any one (1) speaker circuit will not cause the loss of any other speaker circuit in the system.
9. Two-way telephone communication circuits shall be supervised for open and short circuit conditions.

C. BASIC SYSTEM FUNCTIONAL OPERATION

When a fire alarm condition is detected and reported by one of the system initiating devices, the following functions shall immediately occur:

1. The system alarm LED on the system display shall flash.
2. A local piezo electric signal in the control panel shall sound.
3. A backlit LCD display shall indicate all information associated with the fire alarm condition, including the type of alarm point and its location within the protected premises.
4. Printing and history storage equipment shall log the information associated each new fire alarm control panel condition, along with time and date of occurrence.
5. All system output programs assigned via control-by-event interlock programming to be activated by the particular point in alarm shall be executed, and the associated system outputs (notification appliances and/or relays) shall be activated.

1.3. SUBMITTALS

A. General:

1. Two copies of all submittals shall be submitted to the Architect/Engineer for review.
2. All references to manufacturer's model numbers and other pertinent information herein is intended to establish minimum standards of performance, function and quality. Equivalent compatible UL-listed equipment from other manufacturers may be substituted for the specified equipment as long as the minimum standards are met.

3. For equipment other than that specified, the contractor shall supply proof that such substitute equipment equals or exceeds the features, functions, performance, and quality of the specified equipment.

B. Shop Drawings:

1. Sufficient information, clearly presented, shall be included to determine compliance with drawings and specifications.
2. Include manufacturer's name(s), model numbers, ratings, power requirements, equipment layout, device arrangement, complete wiring point-to-point diagrams, and conduit layouts.
3. Show annunciator layout, configurations, and terminations.

C. Manuals:

1. Submit simultaneously with the shop drawings, complete operating and maintenance manuals listing the manufacturer's name(s), including technical data sheets.
2. Wiring diagrams shall indicate internal wiring for each device and the interconnections between the items of equipment.
3. Provide a clear and concise description of operation that gives, in detail, the information required to properly operate the equipment and system.

D. Software Modifications

1. Provide the services of a factory trained and authorized technician to perform all system software modifications, upgrades or changes. Response time of the technician to the site shall not exceed 4 hours.
2. Provide all hardware, software, programming tools and documentation necessary to modify the fire alarm system on site. Modification includes addition and deletion of devices, circuits, zones and changes to system operation and custom label changes for devices or zones. The system structure and software shall place no limit on the type or extent of software modifications on-site.

E. Certifications:

Together with the shop drawing submittal, submit a certification from the major equipment manufacturer indicating that the proposed supervisor of the installation and the proposed performer of contract maintenance is an authorized representative of the major equipment manufacturer. Include names and addresses in the certification.

1.4. GUARANTY:

All work performed and all material and equipment furnished under this contract shall be free from

defects and shall remain so for a period of at least one (1) year from the date of acceptance. The full cost of maintenance, labor and materials required to correct any defect during this one year period shall be included in the submittal bid.

1.5. Contractor Qualifications:

A. The installing contractor shall be the authorized representative of the Fire Alarm Manufacturer to sell, install, and service the proposed manufacturer's equipment. The installing contractor shall have represented the fire alarm manufacturer's product for at least two years.

B. The installing contractor shall be licensed by the State Fire Marshall to sell, install, and service fire alarm systems as required by Article 5.43-2 of the Texas Insurance Code.

C. The installing contractor shall have on his staff an installation technician licensed by the State Fire Marshall's office for such purpose and under whose supervision installation, final connections, and check out will take place as required by the Texas Insurance Code.

D. The installing contractor or equipment supplier shall have on staff a minimum of two (2) certified NICET Level III state licensed fire alarm planning superintendents under whose supervision system design shall take place. In lieu of an alarm planning superintendent, the contractor may provide design supervision by a registered professional engineer.

E. The installing contractor shall provide 24 hour, 365 days per year emergency service with factory trained, state licensed service technicians.

F. **The installing contractor must have a permanent office within a 75 mile radius of the project site and be an approved dealer/integrator, of the proposed system, in the nearest major metropolitan area.**

G. The installing contractor shall have been actively engaged in the business of selling, installing, and servicing fire alarm systems in the surrounding area for at least ten (10) years.

H. All individuals installing the fire alarm system must be employees of the certified installer and at least 25% of the installing staff shall have undergone a training class given by the manufacturer. Current certification indicating the successful completion of the training course shall be available upon request at the project and submitted in the contractor's product submittals.

I. The proposing contractor and the installing contractor must be the same company. No subcontractor to the proposing fire alarm system contractor will be allowed for any portion of the fire alarm system scope of work.

1.6. Acceptable Manufacturer:

A. All fire alarm system devices and equipment shown are manufactured by Notifier to establish product requirements and quality. Acceptable manufacturers are as follows: Notifier, devices, etc. covered by the specifications and/or noted on the contract drawings shall be new and unused and be U.L. listed for their intended use.

B. All equipment provided shall be available for purchase from at least two authorized distributors within the service area.

1.7. APPLICABLE STANDARDS AND SPECIFICATIONS:

The specifications and standards listed below form a part of this specification. The system shall fully comply with the latest issue of these standards, if applicable.

A. National Fire Protection Association (NFPA) - USA:

No. 12	CO2 Extinguishing Systems (low and high)
No. 12B	Halon 1211 Extinguishing Systems
No. 13	Sprinkler Systems
No. 13A	Halon 1301 Extinguishing Systems
No. 15	Water Spray Systems
No. 16	Foam/Water Deluge and Spray Systems
No. 17	Dry Chemical Extinguishing Systems
No. 17A	Wet Chemical Extinguishing Systems
No. 2001	Clean Agent Extinguishing Systems
No. 72	National Fire Alarm Code
No. 101	Life Safety Code

B. Underwriters Laboratories Inc. (UL) - USA:

No. 268	Smoke Detectors for Fire Protective Signaling Systems
No. 864	Control Units for Fire Protective Signaling Systems
No. 268A	Smoke Detectors for Duct Applications
No. 521	Heat Detectors for Fire Protective Signaling Systems
No. 464	Audible Signaling Appliances
No. 38	Manually Actuated Signaling Boxes
No. 346	Waterflow Indicators for Fire Protective Signaling Systems
No. 1076	Control Units for Burglar Alarm Proprietary Protective Signaling Systems
No. 1971	Visual Notification Appliances
No. 217	217 Smoke Detectors, Single and Multiple Station
N0. 228	Door Closers - Holders for Fire Protective Signaling Systems
No. 1481	Power Supplies for Fire Protective Signaling Systems
No. 60951	Safety of Information Technology Equipment

C. Local and State Building Codes.

D. All requirements of the Authority Having Jurisdiction (AHJ).

1.8. APPROVALS:

A. The system shall have proper listing and/or approval from the following nationally recognized agencies:

UL	Underwriters Laboratories Inc
ULC	Underwriters Laboratories Canada

B. The fire alarm control panel shall meet UL Standard 864 Ninth Edition (Control Units) and UL Standard 1076 (Proprietary Burglar Alarm Systems).

PART 2.0 PRODUCTS

2.1. EQUIPMENT AND MATERIAL, GENERAL:

A. All equipment and components shall be new, and the manufacturer's current model. The materials, appliances, equipment and devices shall be tested and listed by a nationally recognized approvals agency for use as part of a protective signaling system, meeting the National Fire Alarm Code.

B. All equipment and components shall be installed in strict compliance with manufacturers' recommendations. Consult the manufacturer's installation manuals for all wiring diagrams, schematics, physical equipment sizes, etc., before beginning system installation.

C. All equipment shall be attached to walls and ceiling/floor assemblies and shall be held firmly in place (e.g., detectors shall not be supported solely by suspended ceilings). Fasteners and supports shall be adequate to support the required load.

2.2. CONDUIT AND WIRE:

A. Conduit:

1. Conduit shall be in accordance with The National Electrical Code (NEC), local and state requirements.
2. Where required, all wiring shall be installed in conduit or raceway. Conduit fill shall not exceed 40 percent of interior cross sectional area where three or more cables are contained within a single conduit.
3. Cable must be separated from any open conductors of power, or Class 1 circuits, and shall not be placed in any conduit, junction box or raceway containing these conductors, per NEC Article 760.
4. Wiring for 24 volt DC control, alarm notification, emergency communication and similar power-limited auxiliary functions may be run in the same conduit as initiating and signaling line circuits. All circuits shall be provided with transient suppression devices and the system shall be designed to permit simultaneous operation of all circuits without interference or loss of signals.
5. Conduit shall not enter the fire alarm control panel, or any other remotely mounted control panel equipment or backboxes, except where conduit entry is specified by the FACP manufacturer.
6. Conduit shall be 3/4-inch (19.1 mm) minimum.

B. Wire:

1. All fire alarm system wiring shall be new.
2. Wiring shall be in accordance with local, state and national codes (e.g., NEC Article 760) and as recommended by the manufacturer of the fire alarm system. Number and size of conductors shall be as recommended by the fire alarm system manufacturer, but not less than 18 AWG (1.02 mm) for Initiating Device Circuits, Signaling Line Circuits, and Notification Appliance Circuits.
3. All wire and cable shall be listed and/or approved by a recognized testing agency for use with a protective signaling system.
4. Wire and cable not installed in conduit shall have a fire resistance rating suitable for the installation as indicated in NFPA 70 (e.g., FPLR).
5. Wiring used for the multiplex communication circuit (SLC) shall be twisted and unshielded and support a minimum wiring distance of 12,500 feet. The design of the system shall permit use of IDC and NAC wiring in the same conduit with the SLC communication circuit.

6. All field wiring shall be electrically supervised for open circuit and ground fault.
7. The fire alarm control panel shall be capable of t-tapping Class B (NFPA Style 4) Signaling Line Circuits (SLCs). Systems that do not allow or have restrictions in, for example, the amount of t-taps, length of t-taps etc., are not acceptable.

C. Terminal Boxes, Junction Boxes and Cabinets:

All boxes and cabinets shall be UL listed for their use and purpose.

D. Initiating circuits shall be arranged to serve like categories (manual, smoke, waterflow). Mixed category circuitry shall not be permitted except on signaling line circuits connected to intelligent reporting devices.

E. The fire alarm control panel shall be connected to a separate dedicated branch circuit, maximum 20 amperes. This circuit shall be labeled at the main power distribution panel as FIRE ALARM. Fire alarm control panel primary power wiring shall be 12 AWG. The control panel cabinet shall be grounded securely to either a cold water pipe or grounding rod.

2.3. MAIN FIRE ALARM CONTROL PANEL OR NETWORK NODE:

A. Main FACP or network node shall be a NOTIFIER Model NFS2-3030 and shall contain a microprocessor based Central Processing Unit (CPU) and power supply in an economical space saving single board design. The CPU shall communicate with and control the following types of equipment used to make up the system: intelligent addressable smoke and thermal (heat) detectors, addressable modules, printer, annunciators, and other system controlled devices.

B. Operator Control

1. Acknowledge Switch:

   a. Activation of the control panel acknowledge switch in response to new alarms and/or troubles shall silence the local panel piezo electric signal and change the alarm and trouble LEDs from flashing mode to steady-ON mode. If multiple alarm or trouble conditions exist, depression of this switch shall advance the LCD display to the next alarm or trouble condition.
   b. Depression of the Acknowledge switch shall also silence all remote annunciator piezo sounders.

2. Alarm Silence Switch:
   Activation of the alarm silence switch shall cause all programmed alarm notification appliances and relays to return to the normal condition after an alarm condition. The selection of notification circuits and relays that are silenceable by this switch shall be fully field programmable within the confines of all applicable standards. The FACP software shall include silence inhibit and auto-silence timers.
3. Alarm Activate (Drill) Switch:
   The Alarm Activate switch shall activate all notification appliance circuits. The drill function shall latch until the panel is silenced or reset.
4. System Reset Switch:
   Activation of the System Reset switch shall cause all electronically-latched initiating devices, appliances or software zones, as well as all associated output devices and circuits, to return to their normal condition.
5. Lamp Test:
   The Lamp Test switch shall activate all local system LEDs, light each segment of the liquid

crystal display and display the panel software revision for service personal

C. System Capacity and General Operation

1. The control panel or each network node shall provide, or be capable of expansion to 636 intelligent/addressable devices.
2. The control panel or each network node shall include Form-C alarm, trouble, supervisory, and security relays rated at a minimum of 2.0 amps @ 30 VDC.
3. It shall also include four Class B (NFPA Style Y) or Class A (NFPA Style Z) programmable Notification Appliance Circuits
4. The Notification Appliance Circuits shall be programmable to Synchronize with System Sensor, Gentex and Wheelock Notification Appliances.
5. The system shall include a full featured operator interface control and annunciation panel that shall include a backlit Liquid Crystal Display (LCD), individual color coded system status LEDs, and an alphanumeric keypad with easy touch rubber keys for the field programming and control of the fire alarm system.
6. The system shall be programmable, configurable, and expandable in the field without the need for special tools, PROM programmers or PC based programmers. It shall not require replacement of memory ICs to facilitate programming changes.
7. The system shall allow the programming of any input to activate any output or group of outputs. Systems that have limited programming (such as general alarm), have complicated programming (such as a diode matrix), or require a laptop personal computer are not considered suitable substitutes.
   The FACP shall support up to 20 logic equations, including "and," "or," and "not," or time delay equations to be used for advanced programming. Logic equations shall require the use of a PC with a software utility designed for programming.
8. The FACP or each network node shall provide the following features:

   a. Drift compensation to extend detector accuracy over life. Drift compensation shall also include a smoothing feature, allowing transient noise signals to be filtered out.
   b. Detector sensitivity test, meeting requirements of NFPA 72.
   c. Maintenance alert, with two levels (maintenance alert/maintenance urgent), to warn of excessive smoke detector dirt or dust accumulation.
   d. Nine sensitivity levels for alarm, selected by detector. The alarm level range shall be .5 to 2.35 percent per foot for photoelectric detectors and 0.5 to 2.5 percent per foot for ionization detectors. The system shall also support sensitive advanced detection laser detectors with an alarm level range of .02 percent per foot to 2.0 percent per foot. The system shall also include up to nine levels of Prealarm, selected by detector, to indicate impending alarms to maintenance personnel.
   e. The ability to display or print system reports.
   f. Alarm verification, with counters and a trouble indication to alert maintenance personnel when a detector enters verification 20 times.
   g. PAS presignal, meeting NFPA 72 requirements.
   h. Rapid manual station reporting (under 3 seconds) and shall meet NFPA 72 requirements for activation of notification circuits within 10 seconds of initiating device activation.
   i. Periodic detector test, conducted automatically by the software.
   j. Self optimizing pre-alarm for advanced fire warning, which allows each detector to learn its particular environment and set its prealarm level to just above normal peaks.
   k. Cross zoning with the capability of counting: two detectors in alarm, two software zones in alarm, or one smoke detector and one thermal detector.
   l. Walk test, with a check for two detectors set to same address.
   m. Control-by-time for non-fire operations, with holiday schedules.

n. Day/night automatic adjustment of detector sensitivity.
o. Device blink control for sleeping areas.

9. The FACP shall be capable of coding main panel node notification circuits in March Time (120 PPM), Temporal (NFPA 72), and California Code. Panel notification circuits (NAC 1, 2, 3 and 4) shall also support Two-Stage operation, Canadian Dual Stage (3 minutes) and Canadian Dual Stage (5 minutes). Two stage operation shall allow 20 Pulses Per Minute (PPM) on alarm and 120 PPM after 5 minutes or when a second device activates. Canadian Dual stage is the same as Two-Stage except will only switch to second stage by activation of Drill Switch 3 or 5 minute timer. The panel shall also provide a coding option that will synchronize specific strobe lights designed to accept a specific "sync pulse."
10. Network Communication

a. The FACP shall be capable of communicating on a Local Area Network (LAN), a firmware package that utilizes a peer-to-peer, inherently regenerative communication format and protocol.

D. Central Microprocessor

1. The microprocessor shall be a state-of-the-art, high speed, 16-bit RISC device and it shall communicate with, monitor and control all external interfaces. It shall include an EPROM for system program storage, Flash memory for building-specific program storage, and a "watch dog" timer circuit to detect and report microprocessor failure.
2. The microprocessor shall contain and execute all control-by-event programs for specific action to be taken if an alarm condition is detected by the system. Control-by-event equations shall be held in non-volatile programmable memory, and shall not be lost even if system primary and secondary power failure occurs.
3. The microprocessor shall also provide a real-time clock for time annotation of system displays, printer, and history file. The time-of-day and date shall not be lost if system primary and secondary power supplies fail. The real time clock may also be used to control non-fire functions at programmed time-of-day, day-of-week, and day-of-year.
4. A special program check function shall be provided to detect common operator errors.
5. An auto-program (self-learn) function shall be provided to quickly install initial functions and make the system operational.
6. For flexibility and to ensure program validity, an optional Windows(TM) based program utility shall be available. This program shall be used to off-line program the system with batch upload/download, and have the ability to upgrade the manufacturers (FLASH) system code changes. This program shall also have a verification utility, which scans the program files, identifying possible errors. It shall also have the ability to compare old program files to new ones, identifying differences in the two files to allow complete testing of any system operating changes. This shall be in incompliance with the NFPA 72 requirements for testing after system modification.

E. System Display

1. The system shall support the following display mode options:

a. 80 character display option. The display shall include an 80-character backlit alphanumeric Liquid Crystal Display (LCD) and a full PC style QWERTY keypad.

2. The display shall provide all the controls and indicators used by the system operator:

a. The 80-character display shall include the following operator control switches:

ACKNOWLEDGE, ALARM SILENCE, ALARM ACTIVATE (drill), SYSTEM RESET, and LAMP TEST.

3. The display shall annunciate status information and custom alphanumeric labels for all intelligent detectors, addressable modules, internal panel circuits, and software zones.
4. The display shall also provide Light-Emitting Diodes.

    a. The 80-character display shall provide 12 Light-Emitting-Diodes (LEDs), that indicate the status of the following system parameters: AC POWER, FIRE ALARM, PREALARM WARNING, SECURITY ALARM, SUPERVISORY SIGNAL, SYSTEM TROUBLE, DISABLED POINTS, ALARM SILENCED, Controls Active, Pre-Discharge, Discharge and Abort.

5. The display shall have QWERTY type keypad.

    a. The 80-character display keypad shall be an easy to use QWERTY type keypad, similar to a PC keyboard. This shall be part of the standard system and have the capability to command all system functions, entry of any alphabetic or numeric information, and field programming. Two different password levels shall be provided to prevent unauthorized system control or programming.

6. The system shall support the display of battery charging current and voltage on the 80-character LCD display.

F. System Display

1. The system shall support the following display mode options:

    a. 640-character display option. The design of the CPU shall provide for a configuration with the 640 Character display mounted on the front of the CPU in place of the standard 80-character display.
    b. When configured with a 640-character display option the system shall support distributed digital audio amplifiers on the digital audio loop.

2. The display shall provide all the controls and indicators used by the system operator:

    a. The 640-character display shall include the following operator control switches: ACKNOWLEDGE, ALARM SILENCE, ALARM ACTIVATE (drill), SYSTEM RESET, and LAMP TEST.

3. The display shall annunciate status information and custom alphanumeric labels for all intelligent detectors, addressable modules, internal panel circuits, and software zones.
4. The 640-character display shall provide 11 Light-Emitting-Diodes (LEDs), that indicate the status of the following system parameters: AC POWER, FIRE ALARM, PREALARM WARNING, SECURITY ALARM, SUPERVISORY EVENT, SYSTEM TROUBLE, ALARM SILENCED, DISABLED POINTS, OTHER EVENTS, CPU FAILURE and Controls Active.
5. The display shall have QWERTY type keypad.

    a. The 640-character display shall use 10 "soft" keys for screen navigation or to accomplish dedicated programming functions. Full programming access shall require use of a laptop and the proper programming utility.

F. Signaling Line Circuits (SLC)

1. Each FACP or FACP network node shall support up to two SLCs. Each SLC interface shall provide power to and communicate with up to 159 intelligent detectors (ionization, photoelectric or thermal) and 159 intelligent modules (monitor or control) for a loop capacity of 318 devices. The addition of the optional second loop shall double the device capacity, supporting a total of 636 devices. Each SLC shall be capable of NFPA 72 Style 4, Style 6, or Style 7 (Class A or B) wiring.
2. CPU shall receive analog information from all intelligent detectors to be processed to determine whether normal, alarm, prealarm, or trouble conditions exist for each detector. The software shall automatically maintain the detector's desired sensitivity level by adjusting for the effects of environmental factors, including the accumulation of dust in each detector. The analog information shall also be used for automatic detector testing and for the automatic determination of detector maintenance requirements.

G. Serial Interfaces

1. The system shall include two serial EIA-232 interfaces. Each interface shall be a means of connecting UL Listed Information Technology Equipment (ITE) peripherals.

   b. One EIA-232 interface shall be used to connect an UL-Listed 80 column printer. Printers that are not UL-Listed are not considered acceptable substitutes.

   c. The EIA-485 interface may be used for network connection to a proprietary-receiving unit.

G. Digital Voice Command Center

1. The Digital Voice Command Center located with the FACP, shall contain all equipment required for all audio control, emergency telephone system control, signaling and supervisory functions. This shall include speaker zone indication and control, telephone circuit indication and control, digital voice units, microphone and main telephone handset. The DVC shall support up to 8 channels of voice when configured with Digital Audio Amplifiers and 4 channels of voice when employing the optional analog output card. Each DVC shall support up to 32 digital audio amplifiers.
2. Function: The Voice Command Center equipment shall perform the following functions:
   a. Operate as a supervised multi-channel emergency voice communication system.
   b. Operate as a two-way emergency telephone system control center.
   c. Audibly and visually annunciate the active or trouble condition of every speaker circuit and emergency telephone circuit.
   d. Audibly and visually annunciate any trouble condition for digital tone and voice units required for normal operation of the system.
   e. Provide all-call Emergency Paging activities through activation of a single control switch.
   f. As required, provide vectored paging control to specific audio zones via dedicated control switches.
   g. Provide a factory recorded "library" of voice messages and tones in standard WAV. File format, which may be edited and saved on a PC running a current Windows® operating system.
   h. Provide a software utility capable of off-line programming for the VCC operation and the audio message files. This utility shall support the creation of new programs as well as editing and saving existing program files. Uploading or downloading the VCC shall not inhibit the emergency operation of other nodes on the fire alarm network.
   i. Support an optional mode of operation with four analog audio outputs capable of being used with UL 864 fire-listed analog audio amplifiers and SCL controlled switching.

j. The Digital Voice Command shall be modular in construction, and shall be capable of being field programmable without requiring the return of any components to the manufacturer and without requiring use of any external computers or other programming equipment.
k. The Digital Voice Command and associated equipment shall be protected against unusually high voltage surges or line transients.

3. The emergency voice alarm communication system shall incorporate a Two-way emergency telephone communication system.
   a. Two-way emergency telephone communication circuits shall be supervised for open and short circuit conditions.
   b. Two-way emergency telephone (Fire Fighter Telephone) communication shall be supported between the Digital Voice Command Center and up to seven (7) remote Fire Fighter's Telephone locations simultaneously on a telephone riser.
   c. Means shall be provided to connect FFT voice communications to the speaker circuits in order to allow voice paging over the speaker circuit from a telephone handset.

H. Audio Amplifiers

1. The Audio Amplifiers will provide Audio Power (@25 Volt RMS or 70 RMS) for distribution to speaker circuits.
2. Multiple audio amplifiers may be mounted in a single enclosure, either to supply incremental audio power, or to function as an automatically switched backup amplifier(s).
3. The audio amplifier shall include an integral power supply, and shall provide built-in LED indicators for the following conditions:

- Earth Fault on DAP A (Digital Audio Port A)
- Earth Fault on DAP B (Digital Audio Port B)
- Audio Amplifier Failure Detected Trouble
- Active Alarm Bus input
- Audio Detected on Aux Input A
- Audio Detected on Aux Input B
- Audio Detected on Firefighter's Telephone Riser
- Receiving Audio from digital audio riser
- Short circuit on speaker circuit 1
- Short circuit on speaker circuit 2
- Short circuit on speaker circuit 3
- Short circuit on speaker circuit 4
- Data Transmitted on DAP A
- Data Received on DAP A
- Data Transmitted on DAP B
- Data Received on DAP B
- Board failure
- Active fiber optic media connection on port A (fiber optic media applications)
- Active fiber optic media connection on port B (fiber optic media applications)
- Power supply Earth Fault
- Power supply 5V present
- Power supply conditions - Brownout, High Battery, Low Battery, Charger Trouble

4. The audio amplifier shall provide the following built-in controls:

- Amplifier Address Selection Switches
- Signal Silence of communication loss annunciation Reset
- Level adjustment for background music

- Enable/Disable for Earth Fault detection on DAP A
- Enable/Disable for Earth Fault detection on DAP A
- Switch for 2-wire/4-wire FFT riser

5. Adjustment of the correct audio level for the amplifier shall not require any special tools or test equipment.
6. Includes audio input and amplified output supervision, back up input, and automatic switch over function, (if primary amplifier should fail).
7. System shall be capable of backing up digital amplifiers.
8. One-tone backup shall be provided by either a plug-in-amplifier card or a designated backup amplifier of identical model as the primary amplifier.
9. One designated backup amplifier shall be capable of backing up multiple primary amplifiers mounted in the same or adjacent cabinets.
10. Multi-channel operation from a single amplifier shall be supported by the addition of an optional plug-in amplifier card.

I. Audio Message Generator (Prerecorded Voice)/Speaker Control:

1. Each initiating zone or intelligent device shall interface with an emergency voice communication system capable of transmitting a prerecorded voice message to all speakers in the building.
2. Actuation of any alarm initiating device shall cause a prerecorded message to sound over the speakers. The message shall be repeated four (4) times. Pre- and post-message tones shall be supported.
3. A built-in microphone shall be provided to allow paging through speaker circuits.
4. System paging from emergency telephone circuits shall be supported.
5. The audio message generator shall have the following indicators and controls to allow for proper operator understanding and control:

   LED Indicators:
   - Lamp Test
   - Trouble
   - Off-Line Trouble
   - Microphone Trouble
   - Phone Trouble
   - Busy/Wait
   - Page Inhibited
   - Pre/Post Announcement Tone

J. Controls with associated LED Indicators:

1. Speaker Switches/Indicators

   a. The speaker circuit control switches/indicators shall include visual indication of active and trouble status for each speaker circuit in the system.
   b. The speaker circuit control panel shall include switches to manually activate or deactivate each speaker circuit in the system.

2. Emergency Two-Way Telephone Control Switches/Indicators

   a. The emergency telephone circuit control panel shall include visual indication of active and trouble status for each telephone circuit in the system.
   b. The telephone circuit control panel shall include switches to manually activate or

deactivate each telephone circuit in the system.

K. Enclosures:

1. The control panel shall be housed in a UL-listed cabinet suitable for surface or semi-flush mounting. The cabinet and front shall be corrosion protected, given a rust-resistant prime coat, and manufacturer's standard finish.
2. The back box and door shall be constructed of 0.060 steel with provisions for electrical conduit connections into the sides and top.
3. The door shall provide a key lock and shall include a glass or other transparent opening for viewing of all indicators. For convenience, the door may be site configured for either right or left hand hinging.

L. Power Supply:

1. A high tech off-line switching power supply shall be available for the fire alarm control panel or network node and provide 6.0 amps of available power for the control panel and peripheral devices.
2. Provisions will be made to allow the audio-visual power to be increased as required by adding modular expansion audio-visual power supplies.
3. Positive-Temperature-Coefficient (PTC) thermistors, circuit breakers, or other over-current protection shall be provided on all power outputs. The power supply shall provide an integral battery charger for use with batteries up to 55 AH or may be used with an external battery and charger system. Battery arrangement may be configured in the field.
4. The power supply shall continuously monitor all field wires for earth ground conditions, and shall have the following LED indicators:

   Ground Fault LED
   AC Power Fail LED
   NAC on LED (4)

5. The main power supply shall operate on 120 VAC, 60 Hz, and shall provide all necessary power for the FACP.
6. The main power supply shall provide a battery charger using dual-rate charging techniques for fast battery recharge and be capable of charging batteries up to 200 AH.
7. All circuits shall be power-limited, per UL864 requirements.

M. Auxiliary Field Power Supply - Addressable

1. The auxiliary addressable power supply is a remote 24 VDC power supply used to power Notification Devices and field devices that require regulated 24VDC power. The power supply shall also include and charge backup batteries.
2. The addressable power supply for the fire alarm system shall provide up a minimum of 6.0 amps of 24 volt DC regulated power for Notification Appliance Circuit (NAC) power or 5 amps of 24 volt DC general power. The power supply shall have an additional .5 amp of 24 VDC auxiliary power for use within the same cabinet as the power supply. It shall include an integral charger designed to charge 7.0 - 25.0 amp hour batteries.
3. The addressable power supply shall provide four individually addressable Notification Appliance Circuits that may be configured as two Class "A" and two Class "B" or four Class "B" only circuits. All circuits shall be power-limited per UL 864 requirements.
4. The addressable power supply shall provide built-in synchronization for certain Notification Appliances on each circuit without the need for additional synchronization modules. The power supply's output circuits shall be individually selected for synchronization. A single

addressable power supply shall be capable of supporting both synchronized and non-synchronized Notification Devices at the same time.

5. The addressable power supply shall operate on 120 or 240 VAC, 50/60 Hz.
6. The interface to the power supply from the Fire Alarm Control Panel (FACP) shall be via the Signaling Line Circuit (SLC) or other multiplexed means Power supplies that do not use an intelligent interface are not suitable substitutes. The required wiring from the FACP to the addressable power supply shall be a single unshielded twisted pair wire. Data on the SLC shall be transmitted between 24 VDC, 5 VDC and 0 VDC at approximately 3.33k baud.
7. The addressable power supply shall supervise for battery charging failure, AC power loss, power brownout, battery failure, NAC loss, and optional ground fault detection. In the event of a trouble condition, the addressable power supply shall report the incident and the applicable address to the FACP via the SLC.
8. The addressable power supply shall have an AC Power Loss Delay option. If this option is utilized and the addressable power supply experiences an AC power loss, reporting of the incident to the FACP will be delayed. A delay time of eight or sixteen hours shall be Dip-switch selected.
9. The addressable power supply shall have an option for Canadian Trouble Reporting and this option shall be Dip-switch selectable.
10. The addressable power supply mounts in either the FACP backbox or it's own dedicated surface mounted backbox with cover.
11. Each of the power supply's four output circuits shall be DIP-switch selected for Notification Appliance Circuit or General Purpose 24 VDC power. Any output circuit shall be able to provide up to 2.5 amps of 24 VDC power.
12. The addressable power supply's output circuits shall be individually supervised when they are selected to be either a Notification Appliance Circuit when wired Class "A" or by the use of and end-of-line resistor. When the power supply's output circuit is selected as General 24VDC power, the circuit shall be individually supervised when an end-of-line relay is used.
13. When selected for Notification Appliance Circuits, the output circuits shall be individually DIP-switch selectable for Steady, March Time, Dual Stage or Temporal.
14. When selected as a Notification Appliance Circuit, the output circuits of the addressable power supply shall have the option to be coded by the use of a universal zone coder.
15. The addressable power supply shall interface and synchronize with other power supplies of the same type. The required wiring to interface multiple addressable power supplies shall be a single unshielded, twisted pair wire.
16. An individual or multiple interfaced addressable power supplies shall have the option to use an external charger for battery charging. Interfaced power supplies shall have the option to share backup battery power.

N. Specific System Operations

1. Smoke Detector Sensitivity Adjust: A means shall be provided for adjusting the sensitivity of any or all addressable intelligent detectors in the system from the system keypad. Sensitivity range shall be within the allowed UL window and have a minimum of 9 levels.
2. Alarm Verification: Each of the intelligent addressable smoke detectors in the system may be independently selected and enabled to be an alarm verified detector. The alarm verification delay shall be programmable from 5 to 30 seconds and each detector shall be able to be selected for verification. The FACP shall keep a count of the number of times that each detector has entered the verification cycle. These counters may be displayed and reset by the proper operator commands.
3. Point Disable: Any addressable device or conventional circuit in the system may be enabled or disabled through the system keypad.
4. Point Read: The system shall be able to display or print the following point status diagnostic functions:

a. Device status
b. Device type
c. Custom device label
d. View analog detector values
e. Device zone assignments
f. All program parameters

5. System Status Reports: Upon command from an operator of the system, a status report will be generated and printed, listing all system status.
6. System History Recording and Reporting: The fire alarm control panel shall contain a history buffer that will be capable of storing up to 800 events. Up to 200 events shall be dedicated to alarm and the remaining events are general purpose. Systems that do not have dedicated alarm storage, where events are overridden by non-alarm type events, are not suitable substitutes. Each of these activations will be stored and time and date stamped with the actual time of the activation. The contents of the history buffer may be manually reviewed, one event at a time, or printed in its entirety. The history buffer shall use non-volatile memory. Systems that use volatile memory for history storage are not acceptable substitutes.
7. Automatic Detector Maintenance Alert: The fire alarm control panel shall automatically interrogate each intelligent detector and shall analyze the detector responses over a period of time. If any intelligent detector in the system responds with a reading that is above or below normal limits, then the system will enter the trouble mode, and the particular detector will be annunciated on the system display, and printed on the optional printer. This feature shall in no way inhibit the receipt of alarm conditions in the system, nor shall it require any special hardware, special tools or computer expertise to perform.
8. Pre-Alarm Function: The system shall provide two levels of pre-alarm warning to give advance notice of a possible fire situation. Both pre-alarm levels shall be fully field adjustable. The first level shall give an audible indication at the panel. The second level shall give an audible indication and may also activate control relays. The system shall also have the ability to activate local detector sounder bases at the pre-alarm level, to assist in avoiding nuisance alarms.
9. Software Zones: The FACP shall provide 100 software zones, 10 additional special function zones, 10 releasing zones, and 20 logic zones.
10. The fire alarm control panel shall include a walk test feature. It shall include the ability to test initiating device circuits and notification appliance circuits from the field without returning to the panel to reset the system. Operation shall be as follows:

    a. Alarming an initiating device shall activate programmed outputs, which are selected to participate in walk test, for 3 seconds.
    b. Introducing a trouble into the initiating device shall activate the programmed outputs for 8 seconds.
    c. All devices tested in walk test shall be recorded in the history buffer.

11. Waterflow Operation
    An alarm from a waterflow detection device shall activate the appropriate alarm message on the main panel display, turn on all programmed notification appliance circuits and shall not be affected by the signal silence switch.
12. Supervisory Operation
    An alarm from a supervisory device shall cause the appropriate indication on the system display, light a common supervisory LED, but will not cause the system to enter the trouble mode.
13. Signal Silence Operation

The FACP shall have the ability to program each output circuit (notification, relay, speaker etc) to deactivate upon depression of the signal silence switch.

14. Non-Alarm Input Operation
    Any addressable initiating device in the system may be used as a non-alarm input to monitor normally open contact type devices. Non-alarm functions are a lower priority than fire alarm initiating devices.
15. Combo Zone
    A special type code shall be available to allow waterflow and supervisory devices to share a common addressable module. Waterflow devices shall be wired in parallel, supervisory devices in series.

2.4. SYSTEM COMPONENTS:

A. Speakers:

1. All speakers shall operate on 25 VRMS or with field selectable output taps from 0.5 to 2.0 Watts.
2. Speakers in corridors and public spaces shall produce a nominal sound output of 84 dBA at 10 feet (3m).
3. Frequency response shall be a minimum of 400 HZ to 4000 HZ.
4. The back of each speaker shall be sealed to protect the speaker cone from damage and dust.

B. Audible/Visual Combination Devices:

1. Shall meet the applicable requirements of Section A listed above for audibility.
2. Shall meet the requirements of Section B listed above for visibility.

C. Strobe lights shall meet the requirements of the ADA, UL Standard 1971, be fully synchronized, and shall meet the following criteria:

1. The maximum pulse duration shall be 2/10 of one second
2. Strobe intensity shall meet the requirements of UL 1971.
3. The flash rate shall meet the requirements of UL 1971.

D. Manual Fire Alarm Stations

1. Manual fire alarm stations shall be non-code, non-breakglass type, equipped with key lock so that they may be tested without operating the handle.
2. Stations must be designed such that after an actual activation, they cannot be restored to normal except by key reset.
3. An operated station shall automatically condition itself so as to be visually detected, as operated, at a minimum distance of 100 feet (30.5 m) front or side.
4. Manual stations shall be constructed of high impact Lexan, with operating instructions provided on the cover. The word FIRE shall appear on the manual station in letters one half inch (12.7 mm) in size or larger.

E. Conventional Photoelectric Area Smoke Detectors

1. Added note- For all smoke detectors on this project, contractor shall provide notifier self test series detector, #fsp-951-selft in lieu of current smoke detector listed. Any new heat detectors shall also be changed to fsp-951t-selft. Provide all programming and mounting accessories required for

detector install. Contractor shall include all licensing and costs associated with the first year fire alarm inspection as part of their pricing. The first year shall begin upon project substantial completion.

a. Smoke detectors shall be intelligent addressable devices using photoelectric (light scattering) principal to measure smoke density. It shall connect via two wires to the Fire Alarm Control Unit signaling line circuit.

b. The detector shall comply with UL268 7th edition; operating at 24Vdc, nominal.

c. The self-test sensor shall generate a controlled amount of smoke into the chamber which will test the optics in response to a real smoke simulation.

d. The detector shall also measure the dilution of smoke within a set time frame to determine if there is masking that will prevent smoke from entering the chamber.

e. An alarm condition shall be generated upon smoke entering the chamber.

f. A trouble condition shall be generated if the testing chamber reveals it is being blocked.

F. Duct Smoke Detectors

Duct smoke detectors shall be a 24 VDC type with visual alarm and power indicators, and a reset switch. Each detector shall be installed upon the composite supply/return air ducts(s), with properly sized air sampling tubes.

G. Projected Beam Detectors

1. The projected beam type shall be a 4-wire 24 VDC device.
2. The detector shall be listed to UL 268 and shall consist of a separate transmitter and receiver capable of being powered separately or together.
3. The detector shall operate in either a short range (30' - 100') or long range (100' - 330') mode.
4. The temperature range of the device shall be -22 degrees F to 131 degrees F.
5. The detector shall feature a bank of four alignment LEDs on both the receiver and the transmitter that are used to ensure proper alignment of unit without special tools.
6. Beam detectors shall feature automatic gain control which will compensate for gradual signal deterioration from dirt accumulation on lenses.
7. The unit shall be both ceiling and wall mountable.
8. The detector shall have the ability to be tested using calibrated test filters or magnet activated remote test station.

H. Automatic Conventional Heat Detectors

1. Automatic heat detectors shall have a combination rate of rise and fixed temperature rated at 135 degrees Fahrenheit (57.2 Celsius) for areas where ambient temperatures do not exceed 100 degrees (37.7 Celsius), and 200 degrees (93.33 Celsius) for areas where the temperature does not exceed 150 degrees (65.5 Celsius).
2. Automatic heat detectors shall be a low profile, ceiling mount type with positive indication of activation.
3. The rate of rise element shall consist of an air chamber, a flexible metal diaphragm, and a factory calibrated, moisture-proof, trouble free vent, and shall operate when the rate of temperature rise exceeds 15 degrees F (9.4 degrees C) per minute.

4. The fixed temperature element shall consist of a fusible alloy retainer and actuator shaft.
5. Automatic heat detectors shall have a smooth ceiling rating of 2500 square feet (762 square meters).

I. Waterflow Indicator:

1. Waterflow Switches shall be an integral, mechanical, non-coded, non-accumulative retard type.
2. Waterflow Switches shall have an alarm transmission delay time which is conveniently adjustable from 0 to 60 seconds. Initial settings shall be 30-45 seconds.
3. All waterflow switches shall come from a single manufacturer and series.
4. Waterflow switches shall be provided and connected under this section but installed by the mechanical contractor.
5. Where possible, locate waterflow switches a minimum of one (1) foot from a fitting which changes the direction of the flow and a minimum of three (3) feet from a valve.

J. Sprinkler and Standpipe Valve Supervisory Switches:

1. Each sprinkler system water supply control valve riser, zone control valve, and standpipe system riser control valve shall be equipped with a supervisory switch. Standpipe hose valves, and test and drain valves shall not be equipped with supervisory switches.
2. PIV (post indicator valve) or main gate valves shall be equipped with a supervisory switch.
3. The switch shall be mounted so as not to interfere with the normal operation of the valve and adjusted to operate within two revolutions toward the closed position of the valve control, or when the stem has moved no more than one-fifth of the distance from its normal position.
4. The supervisory switch shall be contained in a weatherproof aluminum housing, which shall provide a 3/4 inch (19 mm) conduit entrance and incorporate the necessary facilities for attachment to the valves.
5. The switch housing shall be finished in red baked enamel.
6. The entire installed assembly shall be tamper proof and arranged to cause a switch operation if the housing cover is removed, or if the unit is removed from its mounting.
7. Valve supervisory switches shall be provided and connected under this section and installed by mechanical contractor.

    a. This unit shall provide for each zone: alarm indications, using a red alarm and yellow trouble long-life LEDs and control switches for the control of fire alarm control panel functions. The annunciator will also have an ON-LINE LED, local piezo electric signal, local acknowledge/lamp test switch, and custom slide-in zone/function identification labels.
    b. Switches shall be available for remote annunciation and control of output points in the system, system acknowledge, telephone zone select, speaker select, global signal silence, and global system reset within the confines of all applicable standards.

K. Alphanumeric LCD Type Annunciator:

1. The alphanumeric display annunciator shall be a supervised, remotely located back-lit LCD display containing a minimum of eighty (80) characters for alarm annunciation in clear English text.
2. The LCD annunciator shall display all alarm and trouble conditions in the system.
3. An audible indication of alarm shall be integral to the alphanumeric display.
4. The display shall be UL listed for fire alarm application.
5. It shall be possible to connect up to 32 LCD displays and be capable of wiring distances up to 6,000 feet from the control panel.

6. The annunciator shall connect to a separate, dedicated "terminal mode" EIA-485 interface. This is a two-wire loop connection and shall be capable of distances to 6,000 feet. Each terminal mode LCD display shall mimic the main control panel.
7. The system shall allow a minimum of 32 terminal mode LCD annunciators. Up to 10 LCD annunciators shall be capable of the following system functions: Acknowledge, Signal Silence and Reset, which shall be protected from unauthorized use by a key switch or password.
8. The LED annunciator shall offer an interface to a graphic style annunciator and provide each of the features listed above.

L. Fixed Emergency Telephone Handset

1. The telephone cabinet shall be painted red and clearly labeled as "Emergency Telephone." The cabinets shall be located where shown on drawings.
2. The handset cradle shall have a switch connection so that lifting the handset off of the cradle shall send a signal to the fire command center, which shall audibly and visually indicate its on-line (off-hook) condition.
3. On activating the remote phone, the phone earpiece shall sound a telephone ring signal until the master handset is lifted.
4. The two-way emergency telephone system shall support a minimum of seven (7) handsets on line without degradation of the signal.

M. Universal Digital Alarm Communicator Transmitter (UDACT). The UDACT is an interface for communicating digital information between a fire alarm control panel and an UL-Listed central station.

1. The UDACT shall be compact in size, mounting in a standard module position of the fire alarm control cabinet. Optionally, the UDACT shall have the ability for remote mounting, up to 6,000 feet from the fire alarm control panel. The wire connections between the UDACT and the control panel shall be supervised with one pair for power and one pair for multiplexed communication of overall system status. Systems that utilize relay contact closures are not acceptable.
2. The UDACT shall include connections for dual telephone lines (with voltage detect), per UL/NFPA/FCC requirements. It shall include the ability for split reporting of panel events up to three different telephone numbers.
3. The UDACT shall be completely field programmable from a built-in keypad and 4 character red, seven segment display.
4. The UDACT shall be capable of transmitting events in at least 15 different formats. This ensures compatibility with existing and future transmission formats.
5. Communication shall include vital system status such as:

    - Independent Zone (Alarm, trouble, non-alarm, supervisory)
    - Independent Addressable Device Status
    - AC (Mains) Power Loss
    - Low Battery and Earth Fault
    - System Off Normal
    - 12 and 24 Hour Test Signal
    - Abnormal Test Signal (per UL requirements)
    - EIA-485 Communications Failure
    - Phone Line Failure

6. The UDACT shall support independent zone/point reporting when used in the Contact ID format. In this format the UDACT shall support transmission of up to 2,040 points. This

enables the central station to have exact details concerning the origin of the fire or response emergency.

7. AN IP Communicator option shall be available to interface to the UDACT and be capable of transmitting signals over the internet/intranet to a compatible receiver.

N. Field Wiring Terminal Blocks

For ease of service all panel I/O wiring terminal blocks shall be removable, plug-in types and have sufficient capacity for #18 to #12 AWG wire. Terminal blocks that are permanently fixed are not acceptable.

O. Printer

1. The printer shall provide hard-copy printout of all changes in status of the system and shall time-stamp such printouts with the current time-of-day and date. The printer shall be standard carriage with 80-characters per line and shall use standard pin-feed paper. The printer shall be enclosed in a separate cabinet suitable for placement on a desktop or table. The printer shall communicate with the control panel using an interface complying with Electrical Industries Association standard EIA-232D. Power to the printer shall be 120 VAC @ 60 Hz.
2. The system shall have a strip printer capable of being mounted directly in the main FACP enclosure. Alarms shall be printed in easy-to-read RED, other messages, such as a trouble, shall be printed in BLACK. This printer shall receive power from the system power supply and shall operate via battery back-up if AC mains are lost. The strip printer shall be UL 864 listed.

N. Voice Evacuation Contol:

1. Provide Notifier DVC-EM connected to main FACP for voice evacuation system. Voice evac will be required throughout the building. Provide ET70-24MCW-FR for wall mounted Speaker Strobe locations and ET90-24MCC-FR for ceiling mounted locations. Provide amplifier quantities as required to achieve proper amplification.

2.1 FIELD DEVICES

A. Photoelectric Smoke Detector (FAPT-751):

1. Notifier Model FAPT-751 Intelligent multi criteria acclimating detector shall be provided where required. The intelligent multi criteria Acclimate detector shall be an addressable device that is designed to monitor a minimum of photoelectric and thermal technologies in a single sensing device. The design shall include the ability to adapt to its environment by utilizing a built-in microprocessor to determine it's environment and choose the appropriate sensing settings. The detector design shall allow a wide sensitivity window, no less than 1 to 4% per foot obscuration. This detector shall utilize advanced electronics that react to slow smoldering fires and thermal properties all within a single sensing device.
2. The microprocessor design shall be capable of selecting the appropriate sensitivity levels based on the environment type it is in (office, manufacturing, kitchen etc.) and then have the ability to automatically change the setting as the environment changes (as walls are moved or as the occupancy changes).
3. The intelligent multi criteria detection device shall include the ability to combine the signal of the thermal sensor with the signal of the photoelectric signal in an effort to react hastily in the event of a fire situation. It shall also include the inherent ability to distinguish between a fire condition and a false alarm condition by examining

the characteristics of the thermal and smoke sensing chambers and comparing them to a database of actual fire and deceptive phenomena.

B. Intelligent Duct Smoke Detector (FSD 751P):
1. Notifier Model FSD-751P Intelligent duct smoke detectors shall be provided where required. The smoke detector housing shall accommodate an intelligent photoelectric detector, that provides continuous analog monitoring and alarm verification from the panel.
2. When sufficient smoke is sensed, an alarm signal is initiated at the FACP, and appropriate action taken to shutdown air handling systems to help prevent the rapid distribution of toxic smoke and fire gases throughout the areas served by the duct system.

C. Intelligent Thermal Detectors:
1. Notifier Model FST-751R intelligent thermal detector shall be provided where required. Thermal detectors shall be intelligent addressable devices rated at 135 degrees Fahrenheit (58 degrees Celsius) and have a rate-of-rise element rated at 15 degrees F (9.4 degrees C) per minute. It shall connect via two wires to the fire alarm control panel signaling line circuit.
2. Notifier 302 series rate-anticipation thermal detector shall be provided where required . Thermal detectors shall be intelligent addressable devices rated at 135 degrees Fahrenheit (58 degrees Celsius) It shall connect via two wires to the fire alarm control panel signaling line circuit.

D. Addressable Manual Stations:
1. Notifier Model NBG-12LX manual stations shall be provided where required. The manual station shall provide address-setting means using rotary decimal switches. No binary coding shall be required.
2. Manual stations shall be designed for semi-flush mounting on standard electrical box. The station shall be constructed of hi-impact red molded Lexan with instructions for station operation in raised white letters. Stations shall be of the dual action type.
3. Install Stopper STI1100 series covers with horns on all manual pull stations.

E. Monitor Module:
1. Notifier Model FMM-101 addressable monitor module or approved equal shall be provided where required. Addressable monitor modules shall be provided to connect one supervised IDC zone of conventional alarm initiating devices (any N.O. dry contact device) to one of the fire alarm control panel SLCs.

F. Control and Relay Modules
1. Addressable Control Module FCM-1 or approved equal.
   a. Addressable control modules shall be provided to supervise and control the operation of one conventional NACs of compatible, 24 VDC powered, polarized audio/visual notification appliances.
   b. The control module NAC may be wired for Style Z or Style Y (Class A/B) with up to 1 amp of inductive A/V signal, or 2 amps of resistive A/V signal

operation.

c. Audio/visual power shall be provided by a separate supervised power circuit from the main fire alarm control panel or from a supervised UL listed remote power supply.
d. The control module shall be suitable for pilot duty applications and rated for a minimum of 0.6 amps at 30 VDC.
e. Addressable Relay Module FRM-1 or approved equal.
f. Addressable Relay Modules shall be available for HVAC control and other building functions. The relay shall be Form C and rated for a minimum of 2.0 Amps resistive or 1.0 Amps inductive. The relay coil shall be magnetically latched to reduce wiring connection requirements, and to insure that 100% of all auxiliary relay or NACs may be energized at the same time on the same pair of wires.

G. Remote LCD Alpha-Numeric Annunciators

1. Provide where indicated on the drawings, a Notifier LCD-80TM remote LCD alpha-numeric annunciator or approved equal to annunciate all system events and duplicate the displayed status at the main FACP. The annunciator shall be a backlit eighty-character LCD display and operate via the system RS485 or RS232 serial output terminal from the main FACP. The LCD display shall automatically illuminate upon receipt of an alarm or trouble condition. The illuminary source shall extinguish during normal/standby mode to conserve power. The unit shall operate from FACP 24VDC power and function during system power failure while the system resides on standby batteries. The remote LCD annunciator shall include:
   a. Integral time-date clock
   b. Time-date select switch
   c. Time-date/contrast adjust
   d. Display/step switch
   e. System reset
   f. System silence
   g. System acknowledge
   h. Integral trouble buzzer
2. Annunciator shall upon command display the first system alarm, last alarm, and system alarm count. The unit shall be equipped with an integral lamp test feature. The unit shall be flush mounted where shown.

H. High Intensity Audible Visual Signals:

1. High intensity visual signals shall be installed where required and as may be required by the Americans with Disabilities Act (Public Law 101-336).
2. High intensity visual alarms shall be xenon strobe type producing a minimum of 100 candela on a 24 VDC limited energy supervised circuit. Alarm devices shall be designed to be flush wall mounted. Signals shall operate in unison with audible alarm appliances. High intensity visual signals shall be of solid state low current design and listed to U.L. Standard 464. Alarm devices shall be integral with audible alarm appliances where appropriate.
3. Devices requiring programming onto an SLC circuit shall not be acceptable.
4. Wheelock, Gentex, or approved equal

I. High Intensity Visual Signals:

1. High intensity visual signals shall be installed as may be required by the Americans with Disabilities Act (Public Law 101-336).
2. High intensity visual alarms shall be xenon strobe type producing a minimum of 100 candela on a 24 VDC limited energy supervised circuit. Alarm devices shall be designed to be flush wall mounted. Signals shall operate in unison with audible alarm appliances. High intensity visual signals shall be of solid state low current design and listed to U.L. Standard 464. Alarm devices shall be integral with audible alarm appliances where appropriate.
3. High intensity visual alarms shall be xenon strobe type producing a minimum of 100 candela on a 24 VDC limited energy supervised circuit. Alarm devices shall be designed to be flush wall mounted. Signals shall operate in unison with audible alarm appliances. High intensity visual signals shall be of solid state low current design and listed to U.L. Standard 464. Alarm devices shall be integral with audible alarm appliances where appropriate.
4. Devices requiring programming onto an SLC circuit shall not be acceptable.
5. Wheelock, Gentex, or approved equal

J. Auxiliary AHU Relays:

1. Notifier/Air Products Model MR-101/CR relays or approved equal shall be provided for HVAC and AHU control and interface. Relays shall be heavy duty type and rated up to 10 amps at 24 VDC, 60 HZ. Relays shall be provided with NEMA I dust cover assembly and be provided with SPDT contacts as well as activated LED indicator. These relays shall be connected hot (fail safe) so that if the cable is broken, disconnected etc., the AHU will automatically shutdown.

G. Addressable Dry Contact Monitor Module

1. Addressable monitor modules shall be provided to connect one supervised IDC zone of conventional alarm initiating devices (any N.O. dry contact device) to one of the fire alarm control panel SLCs.
2. The IDC zone shall be suitable for Style D or Style B operation. An LED shall be provided that shall flash under normal conditions, indicating that the monitor module is operational and in regular communication with the control panel.
3. For difficult to reach areas, the monitor module shall be available in a miniature package and shall be no larger than 2-3/4 inch (70 mm) x 1-1/4 inch (31.7 mm) x 1/2 inch (12.7 mm). This version need not include Style D or an LED.

H. Two Wire Detector Monitor Module

1. Addressable monitor modules shall be provided to connect one supervised IDC zone of conventional 2-wire smoke detectors or alarm initiating devices (any N.O. dry contact device).
2. The IDC zone may be wired for Class A or B (Style D or Style B) operation. An LED shall be provided that shall flash under normal conditions, indicating that the monitor module is operational and in regular communication with the control panel.

I. Addressable Control Module

1. Addressable control modules shall be provided to supervise and control the operation of one

conventional NACs of compatible, 24 VDC powered, polarized audio/visual notification appliances.

2. The control module NAC may be wired for Style Z or Style Y (Class A/B) with a current rating of 2 Amps for Style Z and 3 Amps for Style Y. For speaker applications the module is rated for 50 watts at 25 or 70.7 Vrms.
3. Audio/visual power shall be provided by a separate supervised power circuit from the main fire alarm control panel or from a supervised UL listed remote power supply.

J. Addressable Relay Module

1. Addressable Relay Modules shall be available for HVAC control and other building functions. The module shall provide two form C relays rated at up to 3 Amps resistive and up to 2.0 Amps inductive. The relay coil shall be magnetically latched to reduce wiring connection requirements, and to insure that 100% of all auxiliary devices energize at the same time on the same pair of wires.
2. For multiple relay control a module shall be available that provides 6 programmable Form-C relays.

K. Addressable Releasing Control Module

1. An addressable FlashScan releasing module shall be available to supervise and control compatible releasing agent solenoids.
2. The module shall operate on a redundant protocol for added protection.
3. The module shall be configurable for Style Z or Style Y (Class A/B) and support one 24 volt or two 12 volt solenoids.

L. Isolator Module

1. Isolator modules shall be provided to automatically isolate wire-to-wire short circuits on an SLC Class A or Class B branch. The isolator module shall limit the number of modules or detectors that may be rendered inoperative by a short circuit fault on the SLC loop segment or branch. At least one isolator module shall be provided for each floor or protected zone of the building.
2. If a wire-to-wire short occurs, the isolator module shall automatically open-circuit (disconnect) the SLC. When the short circuit condition is corrected, the isolator module shall automatically reconnect the isolated section.
3. The isolator module shall not require address-setting, and its operations shall be totally automatic. It shall not be necessary to replace or reset an isolator module after its normal operation.
4. The isolator module shall provide a single LED that shall flash to indicate that the isolator is operational and shall illuminate steadily to indicate that a short circuit condition has been detected and isolated.

2.6. BATTERIES:

A. The battery shall have sufficient capacity to power the fire alarm system for not less than twenty-four hours plus 5 minutes of alarm upon a normal AC power failure.

B. The batteries are to be completely maintenance free. No liquids are required. Fluid level checks for refilling, spills, and leakage shall not be required.

C. If necessary to meet standby requirements, external battery and charger systems may be used.

PART 3.0 - EXECUTION

3.1. INSTALLATION:

A. Installation shall be in accordance with the NEC, NFPA 72, local and state codes, as shown on the drawings, and as recommended by the major equipment manufacturer.

B. All conduit, junction boxes, conduit supports and hangers shall be concealed in finished areas and may be exposed in unfinished areas. Smoke detectors shall not be installed prior to the system programming and test period. If construction is ongoing during this period, measures shall be taken to protect smoke detectors from contamination and physical damage.

C. All fire detection and alarm system devices, control panels and remote annunciators shall be flush mounted when located in finished areas and may be surface mounted when located in unfinished areas.

D. Manual fire alarm boxes shall be suitable for surface mounting or semi-flush mounting as shown on the plans, and shall be installed not less than 42 inches (1067 mm), nor more than 48 inches (122 mm) above the finished floor.

3.2. TEST:

The service of a competent, factory-trained engineer or technician authorized by the manufacturer of the fire alarm equipment shall be provided to technically supervise and participate during all of the adjustments and tests for the system. All testing shall be in accordance with NFPA 72, Chapter 7.

A. Before energizing the cables and wires, check for correct connections and test for short circuits, ground faults, continuity, and insulation.

B. Close each sprinkler system flow valve and verify proper supervisory alarm at the FACP.

C. Verify activation of all waterflow switches.

D. Open initiating device circuits and verify that the trouble signal actuates.

E. Open and short signaling line circuits and verify that the trouble signal actuates.

F. Open and short notification appliance circuits and verify that trouble signal actuates.

G. Ground all circuits and verify response of trouble signals.

H. Check presence and audibility of tone at all alarm notification devices.

I. Check installation, supervision, and operation of all intelligent smoke detectors using the walk test.

J. Each of the alarm conditions that the system is required to detect should be introduced on the system. Verify the proper receipt and the proper processing of the signal at the FACP and the correct activation of the control points.

K. When the system is equipped with optional features, the manufacturer's manual shall be consulted to determine the proper testing procedures. This is intended to address such items as verifying

controls performed by individually addressed or grouped devices, sensitivity monitoring, verification functionality and similar.

3.3. FINAL INSPECTION:

A. At the final inspection, a factory-trained representative of the manufacturer of the major equipment shall demonstrate that the system functions properly in every respect.

3.4. INSTRUCTION:

A. Provide a four hour period of instruction to the Owner's designated personnel upon completion of the system installation. Instruction shall include a functional training session on fire alarm control panel operation and system test procedures. Furnish instruction on peripheral device operation, including what are normal and alarm indications and resetting of each type of device. The Operations and Maintenance Manual shall be complete and on-site at the time of Owner instruction. Demonstrate that when fire alarm sounds, fire alarm system sends signal to mute the buildings' communication system and local sound reinforcement systems in the building.
B. Demonstrate the Fire Drill Pull Station.
C. Demonstrate each local voice evacuation panel.
D. Demonstrate that buildings' communications system properly cuts out upon initiation of fire alarm notification signals. Buildings' communication system shall remain capable of manual override so that staff can deliver emergency voice instructions over the buildings' communications system, even while fire alarm notification signals are still sounding.

3.5 WALK TEST

A. Notify Owner, Architect and Engineer when system is 100 percent operational. Schedule walk-through of the entire facility and verify that each initiating and each indicating device is operating properly.

B. Provide report at conclusion of walk through certifying all fire alarm devices are working.

3.6 ADDITIONAL DEVICES

A. Provide 10% spare devices to be used during the project all remaining devices shall be turned over to the owner at the completion of the project for spare devices.

END OF SECTION

SECTION 31 10 00 - SITE CLEARING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Protecting existing vegetation to remain.
2. Removing existing vegetation.
3. Clearing and grubbing.
4. Stripping and stockpiling topsoil.
5. Stripping and stockpiling rock.
6. Removing above- and below-grade site improvements.
7. Disconnecting, capping or sealing, and **abandoning site utilities in place**.
8. Temporary erosion and sedimentation control.

B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures.

2. Section 015639 “Temporary Tree and Plant Protection”

C. Related Requirements:

1. Section 01500 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures.

2. Section 015639 “Temporary Tree and Plant Protection”

3. Section 024119 “Selective Demo”

1.3 DEFINITIONS

A. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

B. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil," but in disturbed areas such as urban environments, the surface soil can be subsoil.

C. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil; the zone where plant roots grow.

D. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil; the zone where plant roots grow. Its appearance is generally friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects larger than 3 inches in diameter; and free of weeds, roots, toxic materials, or other nonsoil materials.

E. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction and indicated on Drawings.

F. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction and **according to requirements in Section 015639 "Temporary Tree and Plant Protection."** Ref. Tree protection plan and sheet for details.

G. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project Site

1.5 MATERIAL OWNERSHIP

A. Except for materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.6 INFORMATIONAL SUBMITTALS

A. Existing Conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.

1. Use sufficiently detailed photographs or video recordings.
2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plant designated to remain.

B. Topsoil stripping and stockpiling program.

C. Rock stockpiling program.

D. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.

E. Burning: Documentation of compliance with burning requirements and permitting of authorities having jurisdiction. Identify location(s) and conditions under which burning will be performed.

1.7 QUALITY ASSURANCE

A. Topsoil Stripping and Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.

B. Rock Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.

1.8 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed trafficways if required by Owner or authorities having jurisdiction.

B. Improvements on Adjoining Property: Authority for performing site clearing indicated on property adjoining Owner's property will be obtained by Owner before award of Contract.

1. Do not proceed with work on adjoining property until directed by Architect.

C. Salvageable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises.

D. Utility Locator Service: Notify **utility locator service** for area where Project is located before site clearing.

E. Do not commence site clearing operations until temporary erosion- and sedimentation-control measures are in place.

F. Tree- and Plant-Protection Zones: Protect according to requirements in Section 015639 "Temporary Tree and Plant Protection."

G. Soil Stripping, Handling, and Stockpiling: Perform only when the soil is dry or slightly moist.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Section 312000 "Earth Moving."

1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on-site.

B. Antirust Coating: Fast-curing, lead- and chromate-free, self-curing, universal modified-alkyd primer complying with surface-tolerant, anticorrosive metal primer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.

B. Verify that trees, shrubs, and other vegetation to remain or to be relocated have been flagged and that protection zones have been identified and enclosed according to requirements in Section 015639 "Temporary Tree and Plant Protection."

C. Protect existing site improvements to remain from damage during construction.

1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.2 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings and requirements of authorities having jurisdiction.

B. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

C. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation has been established.

D. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

3.3 TREE AND PLANT PROTECTION

A. Protect trees and plants remaining on-site according to requirements in Section 015639 "Temporary Tree and Plant Protection."

B. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations according to requirements in Section 015639 "Temporary Tree and Plant Protection."

3.4 EXISTING UTILITIES

A. Owner will arrange for disconnecting and sealing indicated utilities that serve existing structures before site clearing, when requested by Contractor.

1. Verify that utilities have been disconnected and capped before proceeding with site clearing.

B. Locate, identify, disconnect, and seal or cap utilities indicated to be removed **or abandoned in place**.

1. Arrange with utility companies to shut off indicated utilities.
2. Owner will arrange to shut off indicated utilities when requested by Contractor.

C. Locate, identify, and disconnect utilities indicated to be abandoned in place.

D. Interrupting Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others, unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify Architect not less than **two** days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without Architect's written permission.

E. Excavate for and remove underground utilities indicated to be removed.

F. Removal of underground utilities is included in earthwork sections; in applicable fire suppression, plumbing, HVAC, electrical, communications, electronic safety and security, and utilities sections; and in Section 024116 "Structure Demolition" and Section 024119 "Selective Demolition."

3.5 CLEARING AND GRUBBING

A. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.

1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
2. Grind down stumps and remove roots larger than 2 inches in diameter, obstructions, and debris to a depth of 18 inches below exposed subgrade.
3. Use only hand methods or air spade for grubbing within protection zones.
4. Chip removed tree branches and Dispose of off site.

B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.

1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches and compact each layer to a density equal to adjacent original ground.

3.6 TOPSOIL STRIPPING

A. Remove sod and grass before stripping topsoil.

B. Strip topsoil to depth **6 inches** in a manner to prevent intermingling with underlying subsoil or other waste materials.

1. Remove subsoil and nonsoil materials from topsoil, including clay lumps, gravel, and other objects larger than 2 inches in diameter; trash, debris, weeds, roots, and other waste materials.

C. Stockpile topsoil away from edge of excavations without intermixing with subsoil or other materials. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.

1. Limit height of topsoil stockpiles to **96 inches**.
2. Do not stockpile topsoil within protection zones.

3. Dispose of surplus topsoil. Surplus topsoil is that which exceeds quantity indicated to be stockpiled or reused.
4. Stockpile surplus topsoil to allow for respreading deeper topsoil.

3.7 STOCKPILING ROCK

A. Remove from **construction area** and stock pile naturally formed rocks that measure more than **2 foot** across in least dimension. Do not include excavated or crushed rock.

1. Separate or wash off non-rock materials from rocks, including soil, clay lumps, gravel, and other objects larger than 1 inches in diameter; trash, debris, weeds, roots, and other waste materials.

B. Stockpile rock **away from edge of excavations** without intermixing with other materials. Cover to prevent windblown debris from accumulating among rocks.

1. Limit height of rock stockpiles to **48 inches.**
2. Do not stockpile rock within protection zones.
3. Dispose of surplus rock. Surplus rock is that which exceeds quantity indicated to be stockpiled or reused.
4. Stockpile surplus rock to allow later use by the Owner.

3.8 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.

1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement to remain before removing adjacent existing pavement. Saw-cut faces vertically.
2. Paint cut ends of steel reinforcement in concrete to remain with two coats of antirust coating, following coating manufacturer's written instructions. Keep paint off surfaces that will remain exposed.

3.9 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property.

B. Burning tree, shrub, and other vegetation waste is permitted according to burning requirements and permitting of authorities having jurisdiction. Control such burning to produce the least smoke or air pollutants and minimum annoyance to surrounding properties. Burning of other waste and debris is prohibited.

C. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials and transport them to recycling facilities. Do not interfere with other Project work.

END OF SECTION 31 10 00

SECTION 31 11 00
CLEARING, GRADING, AND EARTHWORK

1. SCOPE:

This section includes the furnishing of all plant, labor, equipment, and materials, and the performance of all operations required to complete the earthwork and grading indicated on the drawings and herein specified, including in general the following: Clearing and grubbing, stripping, excavating, filling, preparation of subgrade, and finished grading of a roadway or drainage ditch in conformity with the line, continuous grade, and typical cross-sections shown on the plans.

2. PROTECTION:

Prior to any earthwork operations, existing utilities, facilities, and/or permanent objects shall be adequately protected. Any cost resulting from damage to the property of the owner due to negligence and/or lack of adequate protection shall be borne by the Contractor.

3. CLEARING AND GRUBBING:

3.1 Minimum Requirements: Clearing and grubbing shall consist of the removal and disposal of trees, stumps, brush, roots, vegetation, logs, rubbish, and other objectionable matter.

3.2 Construction Methods: The entire work area shall be cleared and grubbed of all trees, stumps, brush, logs, and rubbish, except that any curb, sidewalk, storm sewer or appurtenances, or concrete pavement to be constructed under this contract will not be removed. All stumps and roots shall be removed to a depth of two (2) feet below finished subgrade elevation over an area bounded by lines two (2) feet back of curbs. On all other areas, stumps and roots shall be removed to a depth of two (2) feet below the finished surface of the required cross-section.

3.3 Disposal: All cleared and grubbed materials shall become the property of the contractor and shall be removed from the site of the work or disposed of in a satisfactory manner.

4. STRIPPING:

4.1 Minimum Requirements: Stripping consists of the excavations, removal, and satisfactory disposal of all humus, vegetation, or other unsuitable material encountered in all areas which underlie compacted fill or pavement.

4.2 Disposal:

All materials from the stripping operation shall be removed from the site and disposed of by the contractor.

5. EXCAVATION:

After all stripping has been done, excavation of every description and of whatever substances encountered within the grading limits of the project shall be performed to the lines and grades indicated on the drawings. All suitable excavated material shall be transported to and placed in

the fill areas within the limits of the work as specified and as shown on the drawings. Where material encountered within the limits of the work is unsuitable, such materials shall be excavated below the grade shown on the drawings, and then replaced with suitable material. All excavated material which is not required for fill shall be known as "waste" and shall be satisfactorily disposed of by the contractor. All waste shall be disposed of outside the limits of the work. During construction, excavation and filling shall be performed in a manner and sequence that will provide drainage at all times.

6. GRADING:

Grading shall include all necessary scarifying, plowing, moving, and shaping of the earth to afford site drainage and bring the roadbed, slopes, and ditches to the grade line established on the plans and conforming to the typical cross-section shown on the plans.

All undesirable material shall first be removed from within the section to be graded and disposed of as directed by the Engineer.

All materials placed within the limits of the roadbed, under this item, shall be constructed in successive layers, for the full width of the roadbed and in such lengths as are suited to the sprinkling and compaction methods utilized. Prior to compaction, each layer shall not exceed six (6) inches in depth unless otherwise directed by the Engineer, and shall otherwise conform to the requirements of the governing specifications. Around and adjacent to structures, trees, and other obstructions, where it is impractical to do the required work with the equipment specified, such work shall be done by hand labor methods or other approved means.

7. EMBANKMENTS AND FILLS:

7.1 Preparation of Ground Surfaces: All vegetation such as stumps, roots, brush, heavy sods, heavy growth of grass, and all decayed vegetable matter, rubbish, and other unsuitable material within the area upon which fill is to be placed, shall be stripped or otherwise removed before the fill is started. In no case will such objectionable material be allowed to remain in or under the fill area. Sloped ground surfaces steeper than one vertical to four horizontal on which fill is to be placed, shall be plowed, stepped (benched), or broken up in such manner that the fill material will bond with the existing surface. Prepared surfaces shall be scarified and compacted to 95 percent density at optimum moisture content.

7.2 Formation of Embankments and Fills: Embankments shall be constructed at the locations and to lines and grades indicated on the drawings, within the limits of the work. Embankments shall be formed from earth free from roots or other organic material, trash, frozen material, and rock or stones having a maximum dimension greater than three (3) inches. Embankments shall be constructed in layers and compacted as indicated in the following paragraph or as required in the plans.

8. SUBGRADE PREPARATION:

8.1 General: The subgrade shall be constructed to the lines and grades and typical cross-sections indicated on the drawings and shall allow for the full thickness of the pavement section. In cut areas the subgrade shall be scarified to a depth of seven (7) inches below the surface of the finished subgrade and compacted to 95 percent of maximum density at optimum moisture as determined by AASHO T-99. Material which is not compactable

will be under-cut and replaced with acceptable material excavated within the limits of the project. Material will be deemed not compactable if the required compaction percentage cannot be attained by the use of 25 passes by compaction equipment. The removing and replacing of the unsuitable material will be measured and paid for as "extra excavation". No payment for extra excavation will be made for removing and replacing materials used in the formation of fills or embankments which will not compact to the required density. After compaction, the surface of the subgrade shall not show any deviation in excess of 1/10 foot when tested with a ten (10) foot straightedge applied both parallel to and at right angles to the centerline of the area. The elevation of the finished subgrade shall conform to the elevations shown on the drawings.

8.2 Protection of Subgrade: During construction the subgrade shall be kept shaped and drained. Ditches and drains along the subgrade shall be maintained in such a manner as to drain effectively at all times. When ruts of two (2) inches or more in depth occur in the subgrade, the subgrade shall be brought to grade, reshaped if required, and recompacted prior to placing of paving. The storage or stock-piling of materials on the subgrade will not be permitted. No pavements shall be placed until the subgrade has been properly prepared and in no case shall any pavements be placed in a muddy or soft subgrade.

9. COMPACTION:

9.1 General: Except as otherwise required, all fill shall be placed in uniform layers, dried or moistened as required to obtain approximate optimum moisture content, and rolled where practical to a density of at least 90 percent of maximum dry density at optimum moisture as determined by ASTM D698. Compaction equipment shall be as hereinafter specified. The maximum thickness of uniform layers (loose measurements) shall be as follows:

9.1.1 If the Contractor elects to use the pneumatic roller, the thickness of each uniform layer shall not exceed six (6) inches.

9.1.2 If the Contractor elects to use the tamping rollers, the thickness of each uniform layer shall not exceed six (6) inches.

9.1.3 In locations where it is impractical to use the roller equipment, mechanical hand tampers will be used and the thickness of each layer shall not exceed four (4) inches. The methods used to secure the optimum moisture content will be the Contractor's responsibility. The compacting equipment and the method of compaction shall be such that a uniform density will be obtained over the entire area and depth of material being compacted. All fill material deposited in place by means of scrapers, dump trucks, drag lines, or other similar equipment shall be thoroughly broken up before being spread into the uniform layers. Rolling shall start longitudinally at the low side and proceed toward the high side of sloped areas, by at least one-half (1/2) the width of the roller unit. Alternate trips of the roller shall be slightly different in length.

9.2 Compaction Equipment:

9.2.1 Pneumatic Tire Rollers: The pneumatic tire roller shall have a minimum compression of 325 pounds per inch width of pneumatic tire tread. The

roller shall consist of not less than nine pneumatic tire wheels, running on axles in such a manner that the rear group of tires will not follow in the tracks of the forward group, and mounted in a rigid frame and provided with a loading platform or body suitable for ballast loading. The wheel base of the roller (the distance between the front and rear axles) shall not be less than five feet nor more than ten feet. Rollers shall be maintained in good repair and operating condition.

9.2.2 Sheepsfoot Roller: The sheepsfoot roller or tamping roller shall have a unit weight on the contact feet of not less than 150 pounds per square inch. Tamping rollers shall consist of two metal rollers, drums, or shell of forty (40) inches, minimum diameter each not less than forty-two (42) inches in length and unit-mounted on a rigid frame in such a manner that each roller may oscillate independently of the other, and each roller, drum, or shell shall be surmounted by metal studs with tamping feet projecting not less than seven (7) inches from the surface and spaced not less than six (6) inches nor more than ten (10) inches measured diagonally center to center. The cross-sectional area of each tamping foot, measured perpendicularly to the axis of the stud, shall not be less than five (5) inches nor more than eight (8) square inches. The roller shall be supplemented with cleaning teeth to provide self cleaning.

The roller shall be so designed that by ballast loading, the load on each tamping foot may be varied uniformly from 125 to not less than 175 pounds per square inch of cross-sectional area. The load per tamping foot will be determined by dividing the total weight of the roller by the number of tamping feet in one row parallel to or approximately parallel to the axis of the roller. The compression to be provided at any time shall be directed by the Engineer. The tamping roller shall be drawn by suitable power equipment of adequate tractive effort. Roller shall be maintained in good repair and operating condition and shall be approved by the Engineer.

9.2.3 Mechanical Hand Tampers: Approved mechanical hand tampers shall be used in areas inaccessible to roller equipment. Methods of compaction shall be such that a uniform density is obtained throughout the entire area and depth of each layer.

10. FINISH GRADING:

Uniformly smooth grading of all areas indicated on the drawings to be graded shall be accomplished. The finished surface shall be not more than 0.15 feet above or below the established grade or approved cross-section. All ditches and gutters shall be finished so as to drain readily. Where existing grade is disturbed by the Contractor in areas not marked to be graded, the Contractor will regrade the disturbed area to its original grade at no additional expense to the Owner.

11. TESTS:

In the event the Engineer deems necessary to assure proper compaction of fill or roadway subgrade, the Engineer reserves the right to require Contractor to take cores and have it tested by

an independent qualified testing service. The laboratory will furnish written reports covering results of all tests and inspections made. Reports will be made promptly to the Engineer, Contractor, and Owner.

12. ADDITIONAL CLEARING, GRADING, AND EARTHWORK SPECIFICATIONS

Refer to the Geotechnical Report for more information on earthwork requirements including, but not limited to, site Preparation, grading and drainage of soils, wet weather and soft subgrade conditions, construction observation and testing.

END OF SECTION

SECTION 31 22 15 - FINISH GRADING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes
1. Machinery restrictions.
2. Excavation, filling and backfilling of on site material.
3. Subgrade preparation and spreading of topsoil.
4. Finished grading.
5. Prevention of excessive weed growth in lawns.
6. Drainage.

B. Related Sections
1. Landscape Rough Grade – Section 31 22 14
2. Lawns and Grasses - Section 32 92 00
3. Planting - Section 32 93 00

1.2 GENERAL PROVISIONS

A. Finished grading shall be defined as placing and grading of additional soil that will be required to bring the grade to the required grades for lawns, shrub and groundcover beds.

B. Additional fill materials shall generally be defined as topsoil as specified herein unless otherwise specified.

C. Where practicable and as directed, the use of heavy machinery shall be kept to a minimum.

D. Refer to Section 32 93 00 for finish grading of shrub and groundcover beds.

1.3 INFORMATIONAL SUBMITTALS

A. Soil analysis of all on site topsoil to be used for finished grading and planting media prior to stock piling. Soil tests/analysis to be submitted to Landscape Architect along with any planned amendments to meet requirements.

PART 2 - PRODUCTS

2.1 FILL

A. General Qualifications: Fill shall be a clean, dry soil of a loamy character, well drained and well graded with a plasticity index not to exceed 20 or fall below 8. Fill material shall contain no oils, alkalies, acids, rubbish or other deleterious materials. The pH shall be similar to the approved topsoil.

2.2 TOPSOIL

A. Topsoil material that will be required for finish grading operations shall conform to the requirements included within this Section and shall come from on site stockpiles.

B. General Qualifications for Topsoil:
"On-Site" Topsoil shall be considered as material conforming to the following minimum criteria:
1. Natural, friable, loamy soil, typical of local topsoil which produces heavy vegetative growth, free from subsoil, weeds, sods, stiff clay, stones larger than 1", toxic substances, debris, or other substances which may be harmful to plant growth. Do not deliver in muddy condition.
2. Acidity/Alkalinity: pH 6.0 to pH 7.5.

C. Grading Analysis: 2" sieve, 100% minimum passing. Number 4 sieve, 90% minimum passing. Number 10 sieve, 80%minimum passing.
1. Sand, Silt, and Clay Content (from ASSHTO M146):
   a. Sand 20 - 45%
   b. Silt 20 - 40%
   c. Clay 10 -15%
2. All topsoil shall be free from all herbicides and insecticides which might adversely affect subsequent growth of turf or plantings or which might otherwise contain materials toxic to humans and pets.

D. Non-Conforming Material: The Contractor shall not be permitted to use on-site material which does not conform to the above minimum criteria for fine grade operations. At the discretion of the Owner's representative, such material can either be amended to meet the minimum requirements or shall be removed from the site and replaced with suitable material as specified herein.

E. It shall be the Contractor's responsibility to verify that the existing topsoil conforms to these specifications. Topsoil determined to be non-conforming subsequent to the award of a contract shall not be means for extra compensation unless otherwise provided for herein.

F. Soil Analysis: The Contractor shall obtain an agricultural soil analysis of topsoil taken from four areas of the site. These samples shall be submitted to an accredited and approved soils laboratory at Contractor's cost. Submit results of soil analysis to the Owner for review. The soil analysis shall include recommendations for amendments to the soil to produce optimum plant growth from the variety of plants and grasses proposed. These amendments shall be made at the Contractor's expense and shall be included in the bid.

2.3 SAND

A. Shall be Bank Sand. Sample shall be submitted for approval. Sand shall be used for minor finish grade corrections and shall not be permitted for grading purposes if the depth exceeds 1/2" to achieve the finished grade.

PART 3 - EXECUTION

3.1 WORKMANSHIP

A. Work shall be performed by personnel trained and experienced in this work and shall be done under the direction of a superintendent on Contractor's staff.

3.2 PREPARATION OF SUBGRADE AND SPREADING OF TOPSOIL

A. The subgrade soil when at optimum soil moisture shall be loosened to a depth of 4" by disking or tilling and then graded to remove all ridges and depressions so that it will be everywhere parallel to the proposed finished grade. All stones over 1 1/2" in any dimensions, sticks, rubbish and other extraneous matter shall be removed during this operation. If soil clumps over 2” in diameter remain, then make additional passes with a harrow or other approved equipment to reduce below the 2” size. No heavy objects except rollers shall be moved over lawn areas after the subgrade soil has been prepared before topsoil is spread.

B. After the subgrade soil has been prepared, topsoil from the stockpile areas and imported topsoil shall be spread evenly therein to depth of 4" by an approved method. No topsoil shall be spread in a frozen or muddy condition. Areas to receive topsoil are defined as follows:
   1. “On-Site Topsoil” – Areas to receive grass (sod, hydroseed, native seeding).

C. On all grass areas, the finished surface of the topsoil shall conform to the finished grade and shall be free from hollows or other inequalities, stones, sticks and other extraneous matter.

D. Existing “Topsoil” will not be used for groundcover, perennial, or shrub areas to meet final grade. Imported planting soil shall be used to “cap” the repurposed topsoil and eliminate the germination of any dormant seed.

3.3 FINISH GRADING

A. In areas to receive lawns, this Contractor shall till, disc, or otherwise scarify the soil to a depth of 4” removing all clods, stones, and related material 1" or larger.

B. This Contractor shall be responsible for minor adjustments to the finished subgrade if such treatment is required in the opinion of the Owner’s representative.

C. The Contractor may use machinery acceptable to the Owner’s representative to complete most of the work to re-establishing finished grade.

D. Hand-rake the surface, removing all clods and undesirable material greater than 1/2" from ground surface. Fill all low spots and cut irregularities to the acceptance of the Owner’s representative. Roll the entire surface evenly with a 200 pound water ballast roller or other means acceptable.

E. During the finished grading operations, all swales and additional swales that may be required to drain areas where there are existing plant materials, shall be finished. In general, all grade adjustments shall be made so there are no areas that will have standing water.

F. To prevent excessive weed growth in the lawn areas, the Contractor should be prepared to immediately install the sod or seeding upon the completed and acceptable finished grade.

G. Prior to installation of grass or groundcovers, contact Landscape Architect to inspect and approve finish grade.

END OF SECTION 31 22 15

SECTION 31 23 00
EXCAVATION, TRENCHING, & BACKFILLING REQUIREMENTS

1. SCOPE:

This section covers excavation and trenching work and shall include the necessary clearing, grubbing, and preparation of the site; removal and disposal of all debris; excavation and trenching as required; the handling, storage, transportation, and disposal of all excavated material; all necessary sheeting, shoring, and protection work; preparation of sub-grades; pumping and dewatering as necessary or required; protection of adjacent property; backfilling; pipe embedment; surfacing and grading; and other appurtenant work.

2. GENERAL:

2.1 Rights-of-Way: The necessary rights-of-way for the work will be provided by the Owner. The Contractor shall confine his construction operations to the immediate vicinity of the location shown on the drawings and shall use due care in placing construction tools, equipment, excavated materials, and pipe line materials and supplies so as to cause the least possible damage to property and interference with traffic.

2.2 If it is necessary or desirable that the Contractor use or occupy land outside of the Owner's right-of-way, the Contractor shall obtain consent from and shall execute a written agreement with, the Owner and tenant of the land. The Contractor shall not enter for pipe delivery or occupy for any other purposes with men, tools, equipment, construction materials, or with materials excavated from the pipe trench, any private property outside the right-of-way without written permission from the Owner and tenant of the entered or occupied property.

2.3 Damage to Existing Property: The Contractor will be held responsible for any damage to existing structures, work, materials, or equipment because of his operations and shall repair or replace any damaged structures, work, materials, or equipment to the satisfaction of, and at no additional cost to, the Owner.

2.4 The Contractor shall protect all existing structures and all other existing property from damage and shall provide all bracing, shoring, or other work necessary for such protection.

2.5 Land for Construction Purposes: The Contractor will be permitted to use available space belonging to the Owner for construction purposes and for the storage of materials and equipment. The location and extent of the areas so used shall be as designated and approved by the Owner.

2.6 It shall be clearly understood that the responsibility for the protection and safekeeping of equipment and materials on or near the site will be wholly and entirely that of the Contractor and that no claim whatsoever shall be made against the Owner by reason of acts occurring upon said substances by employees or trespassers. It shall be further understood that should any occasion arise necessitating access to the sites occupied by these stored materials and equipment, the Contractor owning or responsible for the stored materials or equipment shall immediately move same. No materials or equipment may be placed upon the property of the Owner until the Owner has approved the proposed location contemplated by the Contractor to be used for storage.

2.7 Final Cleanup: Upon completion of the work and before acceptance and final payment, the Contractor shall remove rubbish, unused materials, and temporary structures from the limits of the project and restore all property both public and private that has been damaged during the prosecution of the work, and shall level and grade all portions of the work where the surface of the natural ground has been disturbed during construction and shall leave the site of the work in a neat and presentable condition, free from ruts or holes.

3. STRIPPING:

3.1 Minimum Requirements: Stripping shall consist of the excavation, removal, and satisfactory disposal of all humus, vegetation, or other unsuitable materials encountered with the top four (4) inches of soil in all areas which underlie foundations or slabs.

3.2 Disposal: Materials from the stripping operations shall be removed from the site or disposed of by the Contractor in a satisfactory manner.

4. CLASSIFICATION OF EXCAVATED MATERIALS:

No classification of excavated materials will be made. Excavation and trenching work shall include the removal and subsequent handling of all materials excavated or otherwise removed in performance of the contract work, regardless of the type, character, composition, or condition thereof.

5. BLASTING:

No blasting or other use of explosive for excavation will be permitted on the site of the work.

6. UNAUTHORIZED EXCAVATION:

Except where otherwise authorized, shown, or specified, all material excavated below the bottom of concrete footings, slabs on grade, and foundations shall be replaced, by and at the expense of the Contractor with concrete placed at the same time and monolithic with the concrete above.

7. REMOVAL OF WATER:

The Contractor shall provide and maintain adequate dewatering equipment to remove and dispose of all surface and ground water entering excavations, trenches, or other parts of the work. Each excavation shall be kept dry during subgrade preparation and continually thereafter until the structure to be built or the pipe to be installed therein is completed to the extent that no damage from hydrostatic pressure, flotation, or other causes will result.

7.1 All excavations for concrete structures or trenches which extend down to or below the static ground water elevations shall be dewatered by lowering and maintaining the ground water surface beneath such excavation to a distance of not less than twelve inches below the bottom of the excavation.

7.2 Surface water shall be diverted or otherwise prevented from entering excavated areas or trenches, to the greatest extent practicable without causing damage to adjacent property.

7.3 The Contractor will be held responsible for the condition of any pipe or conduit which he may use for drainage purposes, and all such pipes or conduits shall be left clean and free from sediment.

8. SHEETING AND SHORING:

Except where banks are cut back on a stable slope, excavation for structures and trenches shall be properly and substantially sheeted, braced, and shored as necessary to prevent caving or sliding, to provide protection for the workmen and the work, and to provide protection for existing structures and facilities. Sheeting, bracing, and shoring shall be designed and built to withstand all loads that might be caused by earth movement or pressure, and shall be rigid, maintaining shape and position under all circumstances.

9. STABILIZATION:

Trench bottoms and subgrades for concrete structures shall be firm, dense, and thoroughly compacted and consolidated and shall be free from mud and muck and shall be sufficiently stable to remain firm and intact under the feet of the workmen.

10. TRENCH EXCAVATIONS:

10.1 Mechanical Excavation: Mechanical equipment used for trench excavation shall be of a type, design, and construction, and shall be so operated, that the rough trench excavation bottom elevation can be controlled, that uniform trench widths and vertical side walls are obtained at least from an elevation six (6) inches above the top of the installed pipe to the bottom of the trench, and that the trench alignment is such that the pipe, when accurately laid to specified alignment clearance between the pipe and side walls of the trench. Undercutting of the trench side wall to obtain clearance will not be permitted.

10.2 Maintain all mechanical trenching equipment in good operating condition. Maintain and comply with safe operating procedures.

10.3 Artificial Foundations in Trenches: Whenever unstable material is encountered below subgrade, remove unstable material to a depth two feet below subgrade and replace with suitable material or install properly designed timber or concrete foundations, pipes, posts, or stringers as necessary to provide appropriate subgrade.

10.4 Bell Holes: Bell holes shall provide adequate clearance for the tools and methods used in installing the pipe. No part of any bell or coupling shall be in contact with the trench bottom or trench walls when the pipe is jointed.

11. PIPE EMBEDMENT:

The trench bottom shall be shaped to give uniform and continuous support to the bottom quadrant of the pipe between joints. Selected trench excavated materials shall be used for pipe embedment in accordance with detail on plans.

11.1 After each pipe has been graded, aligned, and placed in final position, and shoved home, sufficient pipe embedment material shall be deposited and compacted under and around each side of the pipe and back of the bell or end thereof to firmly hold and maintain the pipe in proper position and alignment during subsequent pipe jointing, embedment, and backfilling operations as indicated in detail shown on plans.

11.2 Embedment material shall be deposited and compacted uniformly and simultaneously on each side of the pipe to prevent lateral displacement of the pipe.

11.3 Tamped backfill materials shall be placed in uniform layers and shall have a moisture content which will ensure that the maximum density will be obtained with the compaction method used.

12. TRENCH BACKFILL:

Bank sand shall be placed and tamped in six inch layers until backfill is twelve inches above top of pipe, then the balance of the backfill consisting of native soil may be placed with one of the following methods:

12.1 Placement and Tamping in 12 Inch Layers: Compaction shall be approximately equal to that of adjacent undisturbed material.

12.2 Water Settled Earth Backfill: Where water settlement of earth backfill is permitted, water shall be applied in a manner which will provide effective settlement of the backfill with a minimum amount of water; in no case shall the trenches be permitted to overflow or water to be otherwise wasted. Settlement by water puddling shall not be done until after the trench has been backfilled to or above the ground surface.

Water shall be introduced into the bottom of the trench through a long pipe nozzle so the disturbance of any tamped material below will be held to an absolute minimum. Backfill material to compensate for settlement below surface grade shall be added as necessary and settled during puddling operations.

13. STRUCTURE BACKFILL:

Cement stabilized sand backfill shall be compacted in six inch layers to a density equal to at least 95 percent of maximum density as determined in accordance with ASTM D698 (Standard Proctor Density). All other backfill around structures shall be compacted in 12 inch layers to a density approximately equal to the adjacent undisturbed earth.

14. LINES, LEVELS, AND CLEARANCES:

Excavate to the lines and limits required for the installation of all work. In addition, provide sufficient clearance for proper execution of work such as forming, draining, and removing unsuitable material.

15. EXISTING UNDERGROUND CONDUIT AND PIPING:

When underground utility lines are encountered, immediately notify the Engineer and the proper authorities. Cooperate with the authorities to facilitate permanent protection, re-routing, and removal of such lines. If so directed, remove and cap or plug any such lines found to be abandoned or inactive.

16. SPECIAL REQUIREMENTS:

Fill all holes and depressions left by removal of trees, shrubs, improvements, etc. with approved fill and compact to 95% density.

17. PROTECTION:

Adequately protect newly graded areas to prevent washing.

18. BACKFILL MATERIALS:

Material for backfill other than cement stabilized sand backfill shall be composed of earth only and shall contain no wood, grass, roots, broken concrete, stones, trash, or debris of any kind. No tamped or otherwise mechanically compacted backfill shall be deposited or compacted in water. Cement stabilized sand backfill shall consist of clean, hard, durable, uncoated, grains of washed sand, free from all objectionable materials such as clay or organic matter.

19. DRAINAGE MAINTENANCE:

Trenches across roadways, driveways, or other trafficways adjacent to drainage ditches or water courses shall not be backfilled prior to the completion of backfilling of the trench on the upstream side of the trafficway, to prevent the impounding of water after the pipe has been laid. Backfilling shall be done so that the water will not accumulate in unfilled or partially filled trenches.

All material deposited in roadway ditches or other water courses crossed by the line of trench shall be removed immediately after backfilling is completed and the section, grade, and contours of ditches or water courses shall be restored to their original condition. Surface drainage shall not be obstructed longer than necessary.

20. DISPOSAL OF EXCESS EXCAVATED MATERIALS:

Except as otherwise permitted, all excess excavated materials shall be disposed on the site of the work.

Broken concrete and other debris encountered in the excavation work, and other similar waste materials shall be disposed of away from the site of the work.

The disposal of waste and excess excavated materials, including hauling, handling, leveling, and surfacing shall be a subsidiary obligation of the Contractor and no separate payment will be made therefor.

21. BACKFILL SETTLEMENT:

The Contractor shall be responsible for all settlement of backfill which may occur within a period of one year after the date of final completion of the contract under which the backfilling work was performed. The Contractor shall make, or cause to be made, all necessary backfill replacements, and repairs or replacement appurtenant thereto, within 30 days after notice by the Engineer or Owner.

END OF SECTION

SECTION 31 23 19
DEWATERING AND DRAINAGE OF EXCAVATION

1. GENERAL:

1.1 Scope:

This section provides for furnishing all labor, materials, equipment, power, and incidentals, and for performing all operations necessary to dewater, drain, and maintain excavations and foundation beds as described herein and as necessary for construction of structures and appurtenances. Included are construction, maintenance, and removal of cofferdams; installing, maintaining, operating, and removing well point systems and other approved devices for lowering water table within an excavation; removal of standing water, surface drainage and seepage from excavation or other work, and protecting work against rising waters and floods, and repair of any resulting damage.

1.2 Contractor's Responsibility:

Contractor shall assume sole responsibility for dewatering systems and for all loss or damage resulting from partial or complete failure of protective measures, except as otherwise provided in the General and Special Conditions.

1.3 Plans and Other Data to be Submitted:

Submit plans for review by the Engineer of proposed methods of dewatering, foundation drainage and diversion, in accordance with sound engineering practice.

1.3.1 Well Point System:

Show the well point system in clear detail, including the pump capacity, or other proposed method for lowering the water table within the areas where sewer pipe, concrete structures, compacted fill and backfill are to be constructed.

1.3.2 Equipment Supplier:

Name the supplier of well point or other foundation drainage equipment.

1.3.3 Review:

Do not start dewatering or other foundation drainage until construction plans and other data required in this paragraph are reviewed.

1.4 Related Work:

Excavation, trenching, and backfilling for utilities.
Structural excavation and backfill.

1.5 Measurement and Payment:

Measurement and payment will be by the linear foot of well point system, if used, parallel to the trench regardless of whether one or more "systems" are used. No separate

payment will be made for dewatering of trench or excavations due to rainfall.

2. PRODUCTS:

Select equipment and material desired.

3. EXECUTION:

3.1 Dewatering Excavations:

3.1.1 Installation and Maintenance:

Furnish, install, operate, and maintain all necessary pumping for dewatering and the various parts of the work and for maintaining free of water the foundations, trenches, and such other parts of the work as required for construction operations. Also, as required for inspections and safety, or for any reason determined by the Engineer to be desirable.

3.1.2 Procedure:

Continue dewatering in all required areas, until the concrete structure, the trench, or other structure, has been completed to the top of the slopes of the excavation, or to another designated level.

3.1.3 Drain Pipe:

Provide a uniform diameter for each pipe drain run constructed for dewatering. Remove the drain pipe when it has served its purpose. If removal of the pipe is impractical, provide grout connections at 50 foot intervals, and fill the pipe with clay grout or cement and sand grout when the pipe has served its purpose.

3.1.4 Removal of Cofferdam:

After completion of construction at the site, remove the cofferdams and dispose of the material.

3.1.5 Replacement of Disturbed Material:

Replace any excavation performed for convenience in the foundation beds with materials as impermeable as the original foundation material, and compacted to not less than 95% maximum density.

3.2 Drainage of Foundation Beds:

3.2.1 Procedure:

Dewater foundation beds for concrete structures by using well points or another approved method. Maintain the saturation line at least 2 feet below the lowest elevations where concrete is to be placed. Drain foundations in areas where concrete is to be placed before placing reinforcing steel. Keep foundation beds free from water for three (3) days after concrete is placed.

3.2.2 Alternatives:

Produce a downward seepage of water through the sandy materials in the foundation beds, promoting their compaction as the water table drops. Be prepared to demonstrate that the method proposed will produce the desired results. Be prepared to adopt other means of obtaining these effects if the proposed method fails.

3.3 Requirements for Well Points:

3.3.1 Installation and Acceptance:

Well points, where used, must be furnished, installed, and operated by a reputable contractor regularly engaged in this business, and approved. Submit the design of the well point system for review by the Engineer. Predrain by well point vacuum method.

3.3.2 Alternatives:

Well points may be omitted for portions of underdrains or other trenches only where auger borings and piezometers show that the soil is predrained by an exterior system.

3.4 Duration of Drainage:

3.4.1 Procedure:

In areas where concrete is to be placed, carry out the foundation drainage so that the required lowering of the water table will be affected prior to placing reinforcing steel. Keep foundation beds free from water to the same levels for three days after pouring concrete.

3.4.2 Operation:

Operate pumps to keep each underdrain system drained to the approximate level of the top of the lowest pipe of the system until the removal or flooding of cofferdams. Pipe manholes are provided for this purpose adjacent to the structures.

3.5 Cofferdam Requirements:

3.5.1 Procedure:

Provide a suitable cofferdam for each excavation where necessary to control water, so the foundation can be placed dry. Also provide a suitable cofferdam to prevent sliding and caving of walls of the excavation.

a. Where no ground or surface water is encountered, the cofferdam only need be sufficient to protect workmen and to avoid having cave-ins or slides extend beyond the limits of the excavation, as drawn.

b. Provide cofferdams with enough clearance for the construction and

removal of any required forms, for the inspection of their exteriors, and to permit pumping outside the forms.

3.5.2 Requirements:

Extend sheet piling cofferdams well below the bottom of footings. Brace the piling well and make as watertight as possible.

3.6 Flooding and Removal of Cofferdams:

3.6.1 Procedure:

Provide for admitting water gradually behind the cofferdam to equalize the water level on the two sides of the cofferdam before it is flooded or breached. Use this feature before the cofferdam is removed, and in the event of a flood that could overtop the cofferdam.

3.6.2 Requirements:

Do not breach cofferdams where the water level differential is more than 2 feet between the two sides of the cofferdam, unless the water depth on the high side is no more than 3 feet at the point of breaching.

3.7 Protection of Structures

3.7.1 Requirements:

Operate construction equipment over completed slabs or structures only with approval. Rubber tire equipment heavier than five (5) tons and crawlers heavier than seven (7) tons will require adequate load spreading by sand fill or other means.

3.8 Repair or Damage:

Assume full responsibility for all loss and damage due to flood, rising water, or seepage in any part of the work. Repair any damage to partially completed work from these or other causes, including the removal of slides, repair of foundation beds, and performance of any other work necessitated by failure or slippage of cofferdams or lack of adequate dewatering or drainage facilities.

END OF SECTION

SECTION 31 23 23.16
CEMENT STABILIZED SAND BACKFILL

1. GENERAL:

1.1. Scope: This section provides for the use of cement-stabilized sand as bedding material under sewer pipes, as backfill material around sewer pipes, manholes, inlets, and drainage structures, as required, and for backfill under pavement sections.

1.2. Related Work:

a. Storm Sewers
b. Sanitary Sewers
c. Excavation, Trenching, and Backfilling Requirements

1.3. Measurement and Payment: No separate payment for work performed under this item for bedding around pipe. Include cost of same in contract prices bid for which this work is a component. For special cement stabilized sand backfill under pavement sections, a separate bid item is provided in the bid proposal paid for by the linear foot of pipe.

2. PRODUCTS:

2.1. Materials:

2.1.1. Aggregate: Use washed sand from an approved source having a Plasticity Index of four (4) or less, and containing deleterious materials not exceeding the following requirements, by weight:

Material Removed by Decantation -	5.0%
Clay Lumps -	0.5%
Other deleterious substances such as coal, shale, coated grains of soft flaky particles -	2.0%

Graduation Requirements:

Retained on 3/8-inch screen -	0%
Retained on 1/4-inch screen -	0% - 5%
Retained on 20 mesh screen -	15% - 50%
Retained on 100 mesh screen -	80% - 100%

Color Test ASTM C-40 color not darker than standard color.

2.1.2. Portland Cement: Furnish Portland Cement to conform with ASTM C-150 Type I.

2.1.3. Water: Water shall be reasonably clean and free from injurious amounts of oil, acid, salt, organic matter, or other deleterious material.

2.2. Proportioning and Mixing: Use not less than one and one-half (1-1/2) sacks of cement per cubic yard of mixture. Use amount of water required to prove mix suitable for mechanical hand tamping and mix in mixer approved by the Engineer. Stamp batch tickets at plant with time of loading. Material not in place within one and one-half hour

after loading or has obtained an initial set will be rejected and removed from the site.

3. EXECUTION:

3.1.

a. Place cement-stabilized sand in a trench or excavation prepared for sewer pipe to the depth shown on the drawings.

b. After bedding material is in place, set pipes in position to grade.

c. Add additional cement-stabilized sand material around pipe, filling to at least the spring line of the pipe. Place cement-stabilized sand at optimum moisture content, and in layers not to exceed six inches (6"), measured loose.

d. Compact with mechanical hand tamps to at least 95% of AASHTO density, Test Method T-99.

3.2. Backfill Procedures:

a. Place cement-stabilized sand up to the top twelve inches (12") of sewer trenches under existing or future pavement. Use cement-stabilized sand as backfill material around manholes or sewer trenches that are within one foot (1') of pavement.

b. Place cement-stabilized sand at optimum moisture content in layers not to exceed twelve inches (12"), measured loose.

c. Compact with mechanical hand tamps to at least 95% of prescribed AASHTO Density, Test Method T-99.

d. Place cement-stabilized sand continuously a minimum of twelve inches (12") under and around all inlets and all structures as shown.

END OF SECTION

SECTION 31 31 16 - TERMITE CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. Furnishing and applying both pre-construction and post-construction subterranean termite control treatment as described herein on the Project.

1.3 COORDINATION

A. Each offeror shall be responsible for determining during the proposal period the extent that any addenda issued during the proposal period may affect this Section of the Specifications.

B. Reference instructions to offerors for requirements regarding substitutions of materials and products.

C. Where conflicts occur between the Drawings and Specifications, between different drawings, between portions of this Section of the Specifications, or between different sections of the specifications, the more stringent requirements and the greater quantity shall apply.

D. Contractor shall notify Structural Pest Control Board (SPCB) prior to application of termite treatment at the site as required by law.

E. Comply with all federal, state and local requirements and authorities having jurisdiction.
   1. QUALITY ASSURANCE

F. Applicator shall be bonded and licensed with all applicable authorities.

G. Products and application techniques shall meet all requirements of federal, state and local regulations regardless of products and techniques specified herein.
   1. SUBMITTALS

H. Product Data:
   1. Manufacturer’s printed literature describing products and detailed application requirements.
      a. Document that product is currently allowed by the Environmental Protection Agency (EPA), the State of Texas, and all applicable county and local authorities for use under building slabs.
   2. Material Safety Data Sheet (MSDS).

I. Samples:
      a. Of proposed written warranty.

J. Certification:
      a. After completion of Work under this Section, submit manufacturer’s signed affidavit, verifying specification compliance of the chemicals, their proportions, and application.
      b. Contractor shall certify that pesticide used on project does not contain the chemical or have any ingredient known as “Dursban”.
   2. WARRANTY

K. Provide written warranty against defects in materials and application for a period of five (5) years after application.

L. Defects shall include, but not be limited to the following:
   1. Evidence of activity by subterranean type termites.
   2. Damage of building materials due to subterranean termites.

M. During the warranty period the applicator shall, at his own expense provide additional termite treatment as required to prevent termite activity. Repair or replace building materials damaged by subterranean termite activity during the warranty period at no expense to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Termidor 80 WG Termitcide/Insecticide (EPA Reg. No. 7969-209) as manufactured by BASF Corporation, Florham Park, NJ; (973) 245-6000 or comparable product approved by Architect with minimum five (5) years of experience manufacturing products meeting or exceeding the specifications and comply with Division 1 requirements regarding substitutions in order to be considered.

1. MATERIALS
    a. Dry powder containing 80% active ingredient and is conveniently package in water-soluble packages (paks).
    b. Finished dilution: 0.125%.

PART 3 - EXECUTION

3.1 PREPARATION

A. Inspect building earth fill and foundation excavation for readiness and to ensure that soils are not too wet for proper application of treatment.

B. Post conspicuous warning signs indicating date(s) and time(s) of application and notify contractors working in area of such date(s) and time(s).

3.2 MIXING

A. Mixing shall be in accordance with manufacturer’s printed instructions.

3.3 APPLICATION

A. Do not apply while school is in session.

B. Apply to ensure a continuous chemical barrier.

C. Pre-Construction Treatment:
    a. Apply an overall treatment to the entire surface of soil or other substrate to be covered by the slab, including areas to be under carports, porches, basement floor, and entrance platforms in accordance with manufacturer’s printed instructions and recommended application rates.
    b. Apply along inside of foundation walls, and around plumbing, bath traps, utility services, and other features that penetrate the slab in accordance with manufacturer’s printed instructions and recommended application rates.
    c. Apply at crawl spaces, at hollow block foundations or voids in masonry resting on the footing, and at plenums in accordance with manufacturer’s printed instructions and recommended application rates.

D. Post-Construction Treatment:
    a. Apply a treatment under the slab, including attached porches, carports, entrance platforms, garages and similar slab structures in accordance with manufacturer’s printed instructions and recommended application rates. Drill all holes spaced in a manner to allow for application of a continuous chemical barrier. Plug and fill all drill holes in occupied areas or where visually exposed with a suitable sealant recommended by manufacturer.
    b. Apply at existing cracks and cold, construction and expansion joints and around bath traps, plumbing and utility services which penetrate the slab in accordance with manufacturer’s printed instructions and recommended application rates.
    c. Apply at crawl spaces in accordance with manufacturer’s printed instructions and recommended application rates.

E. At perimeter grade beams, trench along beams or use rodding as recommended by the manufacturer. The final treatment of the exterior beam will be performed within 30 days of notification of completion of landscaping or one (1) year from the date of completion of construction.

F. Allow for drying after application, in accordance with manufacturer's instructions, before placing vapor barrier and beginning concrete placement or other construction activities.

G. All treatment applications must be in compliance with all federal, state, and local laws and regulations with regard to mixing, applying, and disposing of debris and waste.

END OF SECTION 31 31 16

This page intentionally left blank

SECTION 313213.19
LIME STABILIZATION

1. GENERAL:

This item shall consist of treating the subgrade, existing sub-base or existing base by the pulverizing, addition of lime, mixing and compacting the mixed material to the required density. This item applies to natural ground, embankment, or existing pavement structure and shall be constructed as specified herein and in conformity with the typical sections, lines, and grades as shown on the plans or as established by the Engineer.

2. MATERIALS:

Hydrated lime or lime slurry.

2.1. Type A, Hydrated Lime: Shall consist of a dry powder obtained by treating quicklime with enough water to satisfy its chemical affinity for water under the conditions of its hydration. This material is to consist essentially of calcium hydroxide or a mixture of calcium hydroxide and a small allowable percentage of calcium oxide, magnesium oxide and magnesium hydroxide.

When sampled and tested according to prescribed Texas Highway Department procedure, hydrated lime shall conform to the following requirements as to chemical composition:

Hydrate Alkalinity, Percent By Weight Ca (CH) --	Min.	90.0%
Unhydrated Lime Content, Percent By Weight CaC --	Min.	5.0%
"Free Water" Content, Percent by Weight H_2O --	Min.	4.0%

The percent by weight of residue retained shall conform to the following requirements:

Residue Retained on a No. 6 (3360-Micron) Sieve --		0.0%
Residue Retained on a No. 10 (2000-Micron) Sieve --	Max.	1.0%
Residue Retained on a No. 30 (590-Micron) Sieve --	Max.	2.5%

Specifications for Type A applies specifically to the normal hydrate of lime made from "high calcium" type limestone. Hydrated lime for stabilization purposes shall be applied, as provided in the governing specifications, as a dry powder.

2.2. Type B, Commercial Lime Slurry: Pumpable suspension of solids in water. Water or liquid portion of slurry shall not contain dissolved material in sufficient quantity and/or nature injurious or objectionable for purpose intended. Solids portion of mixture when considered on basis of "solids content" shall consist principally of hydrated lime or quality and fineness sufficient to meet the following requirements as to chemical composition and residue.

2.2.1. Chemical Composition: The "solids content" of lime slurry shall have hydrate alkalinity $Ca(OH)_2$ of not less than 90 percent by weight.

2.2.2. Residue: Percent by weight or residue retained in "solids content" of lime slurry shall conform to the following requirements:

Residue Retained on a #6 (3360-Micron) Sieve --	Max.	0.0%
Residue Retained on a #10 (2000 Micron) Sieve --	Max.	1.0%
Residue Retained on a #30 (590 Micron) Sieve --	Max.	2.5%

2.2.3. Type B, Commercial Lime Slurry, shall conform to one of the following 2 grades:

a. Grade 1. "Dry Solids Contents" at least 31 percent by weight of slurry.

b. Grade 2. "Dry Solids Contents" at least 35 percent by weight of slurry.

3. EQUIPMENT:

3.1. Hydrated lime shall be stored in weatherproof (protected from dampness) containers, bins, and buildings until immediately before distribution.

3.2. Hydrated lime shall be weighed in:

a. Truck with approved scale.

b. Bags which are routinely checked for accuracy.

3.3. Applicate truck shall have approved agitator.

4. CONSTRUCTION METHODS:

4.1. Preparation: The roadbed shall be constructed and shaped to conform to the typical sections, lines, and grades as shown on the plans or as established by the Engineer. The material, either before or after lime is added, shall be excavated to the secondary grade (proposed bottom of lime treatment) and removed or windrowed to expose the secondary grade. Any wet or unstable materials below the secondary grade shall be corrected, as directed by the Engineer, by scarifying, adding lime, and compacting until it is of uniform stability.

If the Contractor elects to use a cutting and pulverizing machine that will remove the subgrade material accurately to the secondary grade and pulverize the material at the same time, he will not be required to expose the secondary grade nor windrow the material. However, the Contractor shall be required to roll the subgrade, as directed by the Engineer, before using the pulverizing machine and correct any soft areas that this rolling may reveal.

This method will be permitted only where a machine is provided which will insure that the material is cut uniformly to the proper depth and which has cutters that will plane the secondary grade to a smooth surface over the entire width of the cut. The machine shall be of such design that a visible indication is given at all times that the machine is cutting to the proper depth.

4.2. Application: Lime shall be spread only on that area where the first mixing operations can be completed during the same working day.

4.2.1. The lime shall be spread by an approved screw type spreader box or by bag distribution at the rates shown on the plans or as directed by the Engineer.

The lime shall be distributed at a uniform rate and in such manner as to reduce the scattering of lime by wind to a minimum. Lime shall not be applied when

wind conditions, in the opinion of the Engineer, are such that blowing lime becomes objectionable to traffic and adjacent property owners. A motor grader shall not be used to spread the lime.

The material shall be sprinkled as directed by the Engineer until the proper moisture content has been secured.

4.2.2. Slurry Placement: The lime shall be mixed with water in trucks with approved distributors and applied as a thin water suspension or slurry. Type B, Commercial Lime Slurry, shall be applied with a lime percentage not less than that applicable for the grade used. The distribution of lime at the rates shown on the plans or as directed by the Engineer shall be attained by successive passes over a measured section of roadway until the proper moisture and lime content has been secured. The distributor truck shall be equipped with an agitator which will keep the lime and water in a uniform mixture.

4.3. Mixing:

4.3.1. First - The lime and soil shall be thoroughly blended to required depth by pulverizer-type road mixer. After adding moisture, mixture shall be cured 1 to 3 days.

4.3.2. Final - The cured mixture shall again be pulverized. Clods or lumps shall be broken and firm particles returned by No. 4 sieve shall be removed. The remainder shall meet the following requirements:

Min. Passing 1-3/4" Sieve -	100%
Min. Passing No. 4 Sieve -	60%

4.4. Compaction:

4.4.1. Performed immediately after final mixing.

4.4.2. Optimum moisture content to be provided.

4.4.3. Beginning at bottom, compaction entire depth with tamping rollers.

4.4.4. Underlying subgrade material shall not be disturbed.

4.4.5. Weak spots shall be reworked.

4.4.6. Surface shall be smoothed.

5. FINISHING, CURING, AND PREPARATION FOR SURFACING:

After the final layer or course of the lime treated subgrade, sub-base, or base has been compacted, it shall be brought to the required lines and grades in accordance with the typical sections. The completed section shall then be finished by rolling as directed with a pneumatic or other suitable roller sufficiently light to prevent hair cracking. The completed section shall be moist-cured for a minimum of four (4) days before further courses are added or any traffic is permitted, unless otherwise directed by the Engineer. In cases where subgrade treatment or sub-base sets up sufficiently to prevent objectionable damage from traffic, such layers may be opened to traffic

two (2) days after compaction. If the plans provide for the treated material to be sealed or covered by other courses of material, such seal or course shall be applied within fourteen (14) days unless otherwise directed by the Engineer.

6. TESTS:

The Contractor will be required to have a "Standard Density Test" ASTM D-698-58T, test until 95% of maximum dry density at optimum moisture content is achieved by pneumatic-type rollers. The Contractor will be required to take core and have it tested by an independent qualified testing service every 500 square yards on the subgrade. The laboratory will furnish written reports covering results of all tests and inspections made. Reports will be made promptly to the Engineer, Contractor, and Owner.

7. MEASUREMENT:

Lime treatment of the subgrade, existing sub-base, and existing base shall be measured by the square yard to neat lines as shown on the typical sections.

END OF SECTION

SECTION 31 50 00 - EXCAVATION SUPPORT AND PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes temporary excavation support and protection systems.

B. Related Sections:
1. Section 013200 "Construction Progress Documentation" for recording preexisting conditions and excavation support and protection system progress.
2. Section 015000 "Temporary Facilities and Controls" for temporary utilities and support facilities.
3. Section 312000 "Earth Moving"
4. Section 312319 "Dewatering" for dewatering system for excavations.

1.3 PERFORMANCE REQUIREMENTS

A. Design, furnish, install, monitor, and maintain excavation support and protection system capable of supporting excavation sidewalls and of resisting soil and hydrostatic pressure and superimposed and construction loads.
1. Delegated Design: Design excavation support and protection system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
2. Prevent surface water from entering excavations by grading, dikes, or other means.
3. Install excavation support and protection systems without damaging existing buildings, structures, and site improvements adjacent to excavation.
4. Monitor vibrations, settlements, and movements.

1.4 SUBMITTALS

A. Shop Drawings: For excavation support and protection system.

B. Delegated-Design Submittal: For excavation support and protection system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Other Informational Submittals:
1. Photographs or Videotape: Show existing conditions of adjacent construction and site improvements that might be misconstrued as damage caused by the absence of, the installation of, or the performance of excavation support and protection systems. Submit before Work begins.
2. Record Drawings: Identifying and locating capped utilities and other subsurface structural, electrical, or mechanical conditions.
    a. Note locations and capping depth of wells and well points.

1.5 PROJECT CONDITIONS

A. Interruption of Existing Utilities: Do not interrupt any utility serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:
   1. Notify all impacted parties including Owner no fewer than five (5) days in advance of proposed interruption of utility.
   2. Do not proceed with interruption of utility without Owner's written permission.

B. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by geotechnical engineer. Owner will not be responsible for interpretations or conclusions drawn from the data.
   1. Make additional test borings and conduct other exploratory operations necessary for excavation support and protection.
   2. The geotechnical report is referenced elsewhere in the Project Manual.

C. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Identify benchmarks and record existing elevations.
   1. During installation of excavation support and protection systems, regularly resurvey benchmarks, maintaining an accurate log of surveyed elevations and positions for comparison with original elevations and positions. Promptly notify Architect if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Delete this article if Contractor selects temporary excavation support and protection. Revise materials if prescribing excavation support and protection system requirements.

B. General: Provide materials that are either new or in serviceable condition.

C. Structural Steel: ASTM A 36/A 36M, ASTM A 690/A 690M, or ASTM A 992/A 992M.

D. Steel Sheet Piling: ASTM A 328/A 328M, ASTM A 572/A 572M, or ASTM A 690/A 690M; with continuous interlocks.
   1. Corners: Site-fabricated mechanical interlock or roll-formed corner shape with continuous interlock.

E. Wood Lagging: Lumber, mixed hardwood, nominal rough thickness of size and strength required for application.

F. Cast-in-Place Concrete: ACI 301, of compressive strength required for application.

G. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.

H. Tiebacks: Steel bars, ASTM A 722/A 722M.

I. Tiebacks: Steel strand, ASTM A 416/A 416M.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.
   1. Shore, support, and protect utilities encountered.

B. Install excavation support and protection systems to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.
   1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.

C. Locate excavation support and protection systems clear of permanent construction so that forming and finishing of concrete surfaces are not impeded.

D. Monitor excavation support and protection systems daily during excavation progress and for as long as excavation remains open. Promptly correct bulges, breakage, or other evidence of movement to ensure that excavation support and protection systems remain stable.

E. Promptly repair damages to adjacent facilities caused by installing excavation support and protection systems.

3.2 SOLDIER PILES AND LAGGING

A. Install steel soldier piles before starting excavation. Extend soldier piles below excavation grade level to depths adequate to prevent lateral movement. Space soldier piles at regular intervals not to exceed allowable flexural strength of wood lagging. Accurately align exposed faces of flanges to vary not more than 2 inches from a horizontal line and not more than 1:120 out of vertical alignment.

B. Install wood lagging within flanges of soldier piles as excavation proceeds. Trim excavation as required to install lagging. Fill voids behind lagging with soil, and compact.

C. Install wales horizontally at locations indicated on Drawings and secure to soldier piles.

3.3 SHEET PILING

A. Before starting excavation, install one-piece sheet piling lengths and tightly interlock to form a continuous barrier. Accurately place the piling, using templates and guide frames unless otherwise recommended in writing by the sheet piling manufacturer. Limit vertical offset of adjacent sheet piling to 60 inches (1500 mm). Accurately align exposed faces of sheet piling to vary not more than 2 inches (50 mm) from a horizontal line and not more than 1:120 out of vertical alignment. Cut tops of sheet piling to uniform elevation at top of excavation.

3.4 TIEBACKS

A. Tiebacks: Drill, install, grout, and tension tiebacks. Test load-carrying capacity of each tieback and replace and retest deficient tiebacks.
   1. Test loading shall be observed by a qualified professional engineer responsible for design of excavation support and protection system.

2. Maintain tiebacks in place until permanent construction is able to withstand lateral soil and hydrostatic pressures.

3.5 BRACING

A. Bracing: Locate bracing to clear columns, floor framing construction, and other permanent work. If necessary to move brace, install new bracing before removing original brace.
   1. Do not place bracing where it will be cast into or included in permanent concrete work unless otherwise approved by Architect.
   2. Install internal bracing, if required, to prevent spreading or distortion of braced frames.
   3. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.6 REMOVAL AND REPAIRS

A. Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and bear soil and hydrostatic pressures. Remove in stages to avoid disturbing underlying soils or damaging structures, pavements, facilities, and utilities.
   1. Remove excavation support and protection systems to a minimum depth of 48 inches (1200 mm) below overlaying construction and abandon remainder.
   2. Fill voids immediately with approved backfill compacted to density specified in Section 312000 "Earth Moving."
   3. Repair or replace, as approved by Architect, adjacent work damaged or displaced by removing excavation support and protection systems.

B. Leave excavation support and protection systems permanently in place.

END OF SECTION 31 50 00

SECTION 31 63 29 - DRILLED CONCRETE PIERS AND SHAFTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Dry-installed drilled piers.

1.3 UNIT PRICES

A. Unit prices are included in Section 01 22 00 "Unit Prices."

B. Drilled Piers: Actual net volume of drilled piers in place and approved. Actual length, shaft diameter, and bell diameter if applicable, may vary, to coincide with elevations where satisfactory bearing strata are encountered. These dimensions may also vary with actual bearing value of bearing strata determined by an independent testing and inspecting agency. Adjustments will be made on net variation of total quantities, based on design dimensions for shafts and bells.
   1. Base bids on indicated number of drilled piers and, for each pier, the design length from top elevation to bottom of shaft, extended through the bell, if applicable, and the diameter of shaft and bell.
   2. Unit prices include labor, materials, tools, equipment, and incidentals required for excavation, trimming, shoring, casings, dewatering, reinforcement, concrete fill, testing and inspecting, and other items for complete drilled-pier installation.

C. Trial Drilled Pier: Unit price as indicated for drilled pier, including backfilling.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
   1. Indicate amounts of mixing water to be withheld for later addition at Project site.

C. Shop Drawings: For concrete reinforcement detailing fabricating, bending, supporting, and placing.

D. Material Certificates: For the following, from manufacturer:
   1. Cementitious materials.
   2. Admixtures.
   3. Steel reinforcement and accessories.

E. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements:

F. Field quality-control reports.

G. Other Informational Submittals:
   1. Record drawings.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer that has specialized in drilled-pier work.

B. Testing Agency Qualifications: Qualified according to ASTM C 1077, ASTM D 3740, and ASTM E 329 for testing indicated.

C. Drilled-Pier Standard: Comply with ACI 336.1 unless modified in this Section.

1.6 PROJECT CONDITIONS

A. Existing Utilities: Locate existing underground utilities before excavating drilled piers. If utilities are to remain in place, provide protection from damage during drilled-pier operations.
   1. Should uncharted or incorrectly charted piping or other utilities be encountered during excavation, adapt drilling procedure if necessary to prevent damage to utilities. Cooperate with Owner and utility companies in keeping services and facilities in operation without interruption. Repair damaged utilities to satisfaction of utility owner.

B. Interruption of Existing Utilities: Do not interrupt any utility to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:
   1. Notify all affected parties including Owner no fewer than five (5) days in advance of proposed interruption of utility.
   2. Do not proceed with interruption of utility without Owner's written permission.

C. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by geotechnical engineer. Owner will not be responsible for interpretations or conclusions drawn from this data.
   1. Make additional test borings and conduct other exploratory operations necessary for drilled piers.
   2. The geotechnical report is referenced elsewhere in the Project Manual.

D. Survey Work: Engage a qualified land surveyor or professional engineer to perform surveys, layouts, and measurements for drilled piers. Before excavating, lay out each drilled pier to lines and levels required. Record actual measurements of each drilled pier's location, shaft diameter, bottom and top elevations, deviations from specified tolerances, and other specified data.
   1. Record and maintain information pertinent to each drilled pier and cooperate with Owner's testing and inspecting agency to provide data for required reports.

PART 2 - PRODUCTS

2.1 STEEL REINFORCEMENT

A. Refer Section 03 20 00.

2.2 CONCRETE MATERIALS

A. Refer Section 03 30 00 and Structural General Notes.

2.3 STEEL CASINGS

A. Steel Pipe Casings: ASTM A 283, Grade C, or ASTM A 36, carbon-steel plate, with joints full-penetration welded according to AWS D1.1.

B. Corrugated-Steel Pipe Casings: ASTM A 929, steel sheet, zinc coated.

2.4 CONCRETE MIXTURES

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than Portland cement according to ACI 301 limits as if concrete were exposed to deicing chemicals.

C. Proportion normal-weight concrete mixture as follows:
   1. As indicated in Structural General Notes.

2.5 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.6 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94, and furnish batch ticket information.
   1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, vibration, and other hazards created by drilled-pier operations.

3.2 EXCAVATION

A. Unclassified Excavation: Excavate to bearing elevations regardless of character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions.
   1. Obstructions: Unclassified excavation may include removal of unanticipated boulders, concrete, masonry, or other subsurface obstructions. No changes in the Contract Sum or the Contract Time will be authorized for removal of obstructions.
   2. Obstructions: Unclassified excavated materials may include removal of unanticipated boulders, concrete, masonry, or other subsurface obstructions. Payment for removing obstructions that cannot be removed by conventional augers fitted with soil or rock teeth, drilling buckets, or underreaming tools attached to drilling equipment of size, power, torque, and downthrust necessary for the Work will be according to Contract provisions for changes in the Work.

B. Prevent surface water from entering excavated shafts. Conduct water to site drainage facilities.

C. Excavate shafts for drilled piers to indicated elevations. Remove loose material from bottom of excavation.
   1. Excavate bottom of drilled piers to level plane within 1:12 tolerance.
   2. Remove water from excavated shafts before concreting.

D. Notify and allow testing and inspecting agency to test and inspect bottom of excavation. If unsuitable bearing stratum is encountered, make adjustments to drilled piers as determined by Architect.
   1. Do not excavate shafts deeper than elevations indicated unless approved by Architect.
   2. Payment for additional authorized excavation will be according to Contract provisions for changes in the Work.

E. Excavate shafts for closely spaced drilled piers and for drilled piers occurring in fragile or sand strata only after adjacent drilled piers are filled with concrete and allowed to set.

F. Temporary Casings: Install watertight steel casings of sufficient length and thickness to prevent water seepage into shaft; to withstand compressive, displacement, and withdrawal stresses; and to maintain stability of shaft walls.
   1. Remove temporary casings, maintained in plumb position, during concrete placement and before initial set of concrete.

G. Bells: Excavate bells for drilled piers to shape, base thickness, and slope angle indicated. Excavate bottom of bells to level plane and remove loose material before placing concrete.

H. Tolerances: Construct drilled piers to remain within ACI 336.1 tolerances.
   1. If location or out-of-plumb tolerances are exceeded, provide corrective construction. Submit design and construction proposals to Architect for review before proceeding.

3.3 STEEL REINFORCEMENT

A. Comply with recommendations in CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy bond with concrete.

C. Fabricate and install reinforcing cages symmetrically about axis of shafts in a single unit.

D. Accurately position, support, and secure reinforcement against displacement during concreting. Maintain minimum cover over reinforcement.

E. Use templates to set anchor bolts, leveling plates, and other accessories furnished in work of other Sections. Provide blocking and holding devices to maintain required position during final concrete placement.

F. Protect exposed ends of extended reinforcement, dowels, or anchor bolts from mechanical damage and exposure to weather.

3.4 CONCRETE PLACEMENT

A. Place concrete in continuous operation and without segregation immediately after inspection and approval of shaft by Owner's independent testing and inspecting agency.
   1. Construct a construction joint if concrete placement is delayed more than one hour. Level top surface of concrete. Before placing remainder of concrete, clean surface

laitance, roughen, and slush concrete with commercial bonding agent or with sand-cement grout mixed at ratio of 1:1.

B. Dry Method: Place concrete to fall vertically down the center of drilled pier without striking sides of shaft or steel reinforcement.
   1. Where concrete cannot be directed down shaft without striking reinforcement, place concrete with chutes, tremies, or pumps.
   2. Vibrate top 60 inches of concrete.

C. Coordinate withdrawal of temporary casings with concrete placement to maintain at least a 60-inch head of concrete above bottom of casing.
   1. Vibrate top 60 inches of concrete after withdrawal of temporary casing.

D. Screed concrete at cutoff elevation level and apply scoured, rough finish. Where cutoff elevation is above the ground elevation, form top section above grade and extend shaft to required elevation.

E. Protect concrete work, according to ACI 301, from frost, freezing, or low temperatures that could cause physical damage or reduced strength.
   1. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
   2. Do not use calcium chloride, salt, or other mineral-containing antifreeze agents or chemical accelerators.

F. If hot-weather conditions exist that would seriously impair quality and strength of concrete, place concrete according to ACI 301 to maintain delivered temperature of concrete at no more than 90 deg F.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
   1. Drilled piers.
   2. Excavation.
   3. Concrete.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Drilled-Pier Tests and Inspections: For each drilled pier, before concrete placement.
   1. Soil Testing: Bottom elevations, bearing capacities, and lengths of drilled piers indicated have been estimated from available soil data. Actual elevations and drilled-pier lengths and bearing capacities will be determined by testing and inspecting agency. Final evaluations and approval of data will be determined by Architect.

D. Concrete Tests and Inspections: ASTM C 172 except modified for slump to comply with ASTM C 94.
   1. Slump: ASTM C 143; one test at point of placement for each compressive-strength test but no fewer than one test for each concrete load.
   2. Concrete Temperature: ASTM C 1064; 1 test hourly when air temperature is 40 deg F and below and 80 deg F and above, and 1 test for each set of compressive-strength specimens.
   3. Compression Test Specimens: ASTM C 31; one set of four standard 6-inch x 12-inch cylinders for each compressive-strength test unless otherwise indicated. Mold and store cylinders for laboratory-cured test specimens unless field-cured test specimens are required.

4. Compressive-Strength Tests: ASTM C 39; one set for each drilled pier but not more than one set for each truck load. One specimen will be tested at 7 days, 2 specimens will be tested at 28 days, and 1 specimen will be retained in reserve for later testing if required.
5. If frequency of testing will provide fewer than five strength tests for a given class of concrete, testing will be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
6. If strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
7. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
8. Report test results in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. List Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests in reports of compressive-strength tests.
9. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
10. Additional Tests: Testing and inspecting agency will make additional tests of concrete if test results indicate that slump, compressive strengths, or other requirements have not been met, as directed by Architect.
    a. Continuous coring of drilled piers may be required, at Contractor's expense, if temporary casings have not been withdrawn within specified time limits or if observations of placement operations indicate deficient concrete quality, presence of voids, segregation, or other possible defects.
11. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.
12. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

E. An excavation, concrete, or a drilled pier will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports for each drilled pier as follows:
1. Actual top and bottom elevations.
2. Actual drilled-pier diameter at top, bottom, and bell.
3. Top of rock elevation.
4. Description of soil materials.
5. Description, location, and dimensions of obstructions.
6. Final top centerline location and deviations from requirements.
7. Variation of shaft from plumb.
8. Shaft excavating method.
9. Design and tested bearing capacity of bottom.
10. Levelness of bottom and adequacy of cleanout.
11. Ground-water conditions and water-infiltration rate, depth, and pumping.
12. Description, purpose, length, wall thickness, diameter, tip, and top and bottom elevations of temporary or permanent casings. Include anchorage and sealing methods used and condition and weather tightness of splices if any.
13. Description of soil or water movement, sidewall stability, loss of ground, and means of control.
14. Bell dimensions and variations from original design.
15. Date and time of starting and completing excavation.

16. Inspection report.
17. Condition of reinforcing steel and splices.
18. Position of reinforcing steel.
19. Concrete placing method, including elevation of consolidation and delays.
20. Elevation of concrete during removal of casings.
21. Locations of construction joints.
22. Concrete volume.
23. Concrete testing results.
24. Remarks, unusual conditions encountered, and deviations from requirements.

3.6 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property.

END OF SECTION 31 63 29

SECTION 32 13 13
CONCRETE PAVEMENT

1. SCOPE:

This specification covers the construction of concrete pavement with or without reinforcement, with or without curbs, all as shown on the plans, on a prepared subgrade or other base material. The pavement shall be constructed in accordance with the dimensions, grades, and typical cross sections shown in the plans.

For LEED specific requirements, see section 2.15.

2. MATERIALS:

Materials shall conform to the following specifications or standards:

2.1 Cement: Cement of the type specified shall conform to requirements of the current ASTM Specifications for Portland Cement Type I, II, or III (Designation C-150), for Air Entraining Portland Cement Type IA, IIA, or IIIA (Designation C-175) or for Portland Slag Cement Type IS, or ISA (Designation C-205). Type I, IA, IS, or ISA shall be supplied unless Type II or IIA (Moderate Heat of Hydration) or Type III or III (High-Early Strength) are specified. Cement which for any reason has become partially set or which contains lumps of caked cement shall be rejected. Either packaged or bulk cement may be used.

2.2 Water: Water used in mixing or curing concrete shall be clean and free from injurious amounts of oil, acids, salt, alkali, or organic materials or other substances harmful to concrete. Water from public supplies or which is suitable for drinking is always satisfactory.

2.3 Air Entraining Agent: Air entraining admixtures shall conform to the requirements for the current ASTM Specifications for Air Entraining Admixtures for Concrete (Designation C-260).

2.4 Aggregate:

2.4.1 Coarse Aggregate: Coarse aggregate shall consist of crushed stone or gravel, and shall be clean, hard, and durable, free from excessive adherent coatings, free from salt and alkali, and when tested by standard laboratory methods, shall conform to the following requirements:

2.4.2 The maximum percentage of deleterious substances shall not exceed the following values by weight:

Removed by decantation	4%
Shale	0.25%
Clay Lumps	0.25%
Soft Fragments	3%
Other local deleterious substances, such as friable pieces	3%
The sum of the percentages of all above constituents shall not exceed	3%

2.4.3 Coarse aggregate shall have not more than 45 percent wear when tested according to AASHTO Designation T96.

2.4.4 Coarse aggregate shall conform to the grading requirements given below when tested on standard square-opening sieve, and shall be well graded within the limits specified. Aggregates of different classes shall not be mixed except on the written permission of the Engineer. Changes in the classes of aggregates being used while the work is in progress will be permitted upon due notice by the Contractor to the Engineer of his intentions and the fulfillment of the necessary requirements to comply with those specifications. Aggregates in which different size particles have become segregated due to improper stockpiling, improper handling, or for other reasons, shall, before being used, be mixed to conform to the grading requirements hereinafter specified, and shall be uniform.

Retained On:	
2-1/2" Sieve	0%
1-3/4" Sieve	0% to 20%
3/4" Sieve	25% to 65%
No. 4 Sieve	95% to 100%

2.4.5 Aggregates having different characteristics shall not be mixed either in piling or batching except by special permission from the Engineer. Aggregate shipped in dirty cars or containers or that becomes mixed with weeds, dirt, or foreign material, or that is not uniform, or the component parts of which have become segregated will be rejected. No aggregate shall be stored or dumped on the roadbed.

2.5 Fine Aggregate:

2.5.1 Fine aggregates shall consist of washed sand having clean, hard, durable, uncoated grains, free from soft or flaky particles or other injurious matter, shall be well graded from coarse to fine, and when tested by standard laboratory methods, shall meet the following requirements:

Retained On:	Percent by Weight:
3/8" Screen	0
1/4" Screen	0 - 5
20 Mesh Sieve	15 - 50
100 Mesh Sieve	85 - 100

Weight Removed by elutriation test not more than 2%.

2.5.2 When subjected to the color test for organic impurities, fine aggregate shall not show a color darker than the standard color.

2.5.3 Aggregates from different material sources, or aggregates from the same source having different grading or other physical characteristics, shall be stockpiled separately and batched independently. Aggregates shipped in dirty cars or containers, or that which becomes mixed with weeds, dirt, or other foreign material, or that which is not uniform, or the component part of which have become segregated, will be rejected. No aggregate shall be stored or dumped on

the roadbed.

2.6 Mineral Filler: The addition of stone dust and/or sand and/or crushed shell dust (oyster) of acceptable quality and cleanliness may be required as a mineral filler to improve the workability of plasticity of the concrete mixture, in amounts not to exceed 15% of the weight of the fine aggregate. When tested with standard laboratory sieves, the mineral filler shall meet the following requirements:

Passing 30 Mesh Sieve	5 - 100%
Passing 200 Mesh Sieve	50 - 100%

When a mineral filler is used, it must be batched and weighed separately.

2.7 Reinforcing Steel: Reinforcing steel, if specified, shall conform to the latest ASTM Specification, as follows:

Type	ASTM Designation
Bars and Rods	A-615, Grade 40
Steel Wire Fabric	A-185, Grade 60

Tie bars which are to be bent after one end is encased in concrete shall be structural grade.

2.8 Joints:

2.8.1 Expansion Joint Material: Filler board shall be of selected stock and of density and type of wood listed below:

a. Cypress: Clear all heart; maximum weight per cubic foot when oven dried to constant weight shall be 40 pounds.

b. Redwood: Clear all heart; maximum weight per cubic foot when oven dried to constant weight shall be 30 pounds.

2.9 Joint Sealing Compound: Sealing material shall be the hot-poured elastic type for filling all types of pavement joints and shall comply with ASTM Standard Specification D-6690, Type II or III, or as required by the Plans.

2.10 Premolded Joint Material: Premolded parting strips, when called for on the plans, shall be 3/16-inch-thick or more and of the width shown on the plans. They shall consist of strips which have been formed from layers of felt or shredded felt, cane, wood, or other suitable fibers securely bound together and uniformly impregnated with a suitable binder. They shall be of such character that they will not be permanently deformed by ordinary handling during hot weather or become hard and brittle in cold weather.

2.11 Load Transmission Devices: Load transmission devices shall be dowel type as shown on the plans and shall conform to ASTM Designation A-615, Grade 60.

2.12 Supports: Supports for reinforcing steel to be metal or plastic of approved shape and size. Space supports as directed.

2.13 Load Transfer Units: Provide polypropylene plastic, Greenstreak, Speed Load, Style No. PSD3/4X9LT or equal. Unit shall be securely attached to the expansion joint filler board.

2.14 Materials for Curing Concrete:

2.14.1 Burlap shall at time of use be in good condition, free from holes, dirt, clay, or any other substance which would have a deleterious effect upon concrete. Burlap shall be of such quality that it will absorb water readily when dipped or sprayed, and shall weigh not less than 7 ounces per square yard when clean and dry.

2.14.2 Waterproof paper for curing concrete shall conform to the current ASTM or AASHTO Specifications for Waterproof Paper for Curing Concrete (C-171 and M-139, respectively).

2.14.3 Membrane curing compounds shall be the white pigmented type and conform to the requirements for the current AASHTO Standard Specifications for Liquid Membrane-Forming Compounds for Curing Concrete (Designation M-148).

2.15 Solar Reflectance Index

2.15.1 Solar Reflectance index shall meet a minimum rating of 29 to meet LEED criteria (If applicable).

a. Emissivity (Emittance) shall have a rating between 0.85 and 0.95 as calculated according to ASTM E 408 or ASTM C1371
b. Reflectance shall have a minimum rating of 0.30 as calculated according to ASTM E903, ASTM E1918 or ASTM C 1549.

3. MIXING AND PLACING:

Scales used shall be accurate to within 1/2 of 1%. One sack of cement shall weight 94 pounds net.

3.1 Proportioning:

3.1.1 Contractor shall assume responsibility of design of concrete mixture. Furnish statement giving proportion of materials in mixes. Furnish commercial laboratory reports showing that proportions and materials selected will produce laboratory mixed concrete of specified quality and having strength of 10 percent higher than that specified.

3.1.2 Concrete mix shall be uniform and workable containing not less than 5-1/2 sacks of cement per cubic yard with not more than 6 gallons of water, net per sack of cement. Addition of mineral filler may be required as hereinafter provided to improve workability or elasticity of concrete.

3.1.3 Add air entraining agent to concrete to produce same effect as could be obtained by use of "Air Entrained Portland Cement", ASTM C-175-65. Use amount such as will effect entrainment of 3% to 5% of air by volume of concrete. Add material to batch in solution in portion of mixing water. Batch this solution by means of mechanical batcher capable of accurate measurement and in such

manner as will insure uniform distribution of agent throughout batch during specified mixing period.

3.1.4 Retardant required when temperature exceeds 85% F., proportion as recommended by manufacturer. Retardant shall be of the same brand as air entraining agent. Add material to batch in solution in portion of mixing water. Batch this solution by means of mechanical batcher capable of accurate measurement and in such manner as will insure uniform distribution of agent throughout batch during specified mixing period.

3.1.5 Amount of coarse aggregate (dry-loose volume): 85% per cubic foot of concrete, maximum.

3.1.6 Net amount of water: amount added at mixer, plus free water in aggregate and minus absorption of aggregate based on 30-minute absorption period. No water allowance will be made for evaporation after batching.

3.1.7 Concrete mix will be designed with intention of producing concrete which will, at age of 7 days, have flexural strength of 500 pounds per square inch, or a compressive strength at 28 days of 3500 psi.

3.1.8 Settlement of concrete shall be not less than 1-1/2 inch, nor more than 4 inches when gauged by Standard Slump Test.

3.2 Testing Concrete:

3.2.1 Laboratory Services: Owner will approve the commercial laboratory and payment for services shall be as outlined in the Special Conditions, normally paid for by the Contractor.

3.2.2 Duties: Laboratory will inspect and test materials entering concrete and design concrete mixes to meet specified strengths, uses, and finishes; analyze aggregate for quality, durability, grading, and free water content; take representative specimens of ingredients and mixes; make test beams and measure flexural strength of same; check moisture content of aggregates and control mix subject to approval.

3.2.3 Test Procedures: Laboratory will make tests in conformance with current standard test procedures of ASTM.

3.2.4 Test Reports: Laboratory will furnish written reports covering results of tests and inspections made. Reports will be made promptly to Engineer and Contractor.

3.2.5 a. Test Beams: Two beam specimens for flexural strength test will be made for each 500 square yards, or less, or pavement that is placed in one day. Beams shall be tested at age of 7 and 28 days. Loading shall be standard third point loading. Beams will be made, cured, and tested using applicable ASTM Standards for sampling and testing.

b. Test Cylinders: Four (4) concrete test cylinders will be made for each 500 square yards, or less, of pavement that is placed in one day. Cylinders shall be tested at age of 7 and 28 days. Cylinders will be made, cured, and tested

in accordance with ASTM Standard, current.

3.2.6 Yield: Yield test made in accordance with ASTM C 138-63, shall be made for purpose of determining cement content per cubic yard of concrete. If such cement content is found to be less than that specified per cubic yard, reduce batch weights until amount of cement per cubic yard of concrete conforms to requirements.

3.2.7 Core Samples: Concrete pavement will be core drilled at locations designated and at those locations pavement will be measured for thickness. Minimum of one core will be drilled for each 500 square yards of pavement. At age of 28 days, each core may be tested for compressive strength according to methods of the ASTM C-42. Twenty-eight-day compressive strength of each core tested shall not be less than 3500 pounds per square inch.

3.3 Equipment: Equipment necessary for mixing, laying, and finishing of concrete pavement shall be in first class working conditions and shall be inspected and approved before paving operations will be permitted.

3.3.1 Scales:

a. All materials shall be separately and accurately measured by weight, using standard weighing devices attached to a standard batching plant approved by the Engineer. A sack of cement packed by the manufacturer and weight 94 pounds shall be considered one cubic foot.

b. Scales shall be of the beam type or of the springless dial type. The beam shall be equipped with a springless dial indicator showing at least 100 pounds over or under the required weight. All scales or dial indicators shall be graduated in not more than 5-pound increments.

c. Scales not accurate to within a tolerance of four pounds per 1,000 pounds of net load in the hopper shall not be used.

3.3.2 Mixer:

a. Capacity of not less than 14-S mixer as rated by Mixer Manufacturer's Bureau of A.G.C. and speed regulator to hold mixer to its normal speed of revolution. Equip mixer with automatic attachment for satisfactorily timing mix and locking discharging device to prevent discharging of mixer until all materials have been mixed together for minimum time required. This attachment: operate independently of the drum and have bell in operation at all times, indicating completion of mixing time, that can be plainly heard 50 feet from mixer.

b. Equip mixer with water measuring device to measure water within one percent to total amount required. Construct measuring drum so that it will open to atmospheric pressure when measured amount of water is within same, and so placed and constructed that single batch of water can be discharged into calibrated tank or weighing device (for checking accuracy) attached to mixer, without seriously delaying paving operations. Check this

water measuring device daily.

3.3.3 Batch Trucks: Batch trucks for the transportation of measured materials from the batching plant to the mixer shall be tight and so covered as to prevent excessive evaporation of moisture or any loss of material.

3.3.4 Vibrators: Mechanically operated synchronized vibratory units mounted on a tamping bar to ride on the forms. Hand manipulated mechanical vibrators. Frequency of the vibratory units shall be to provide maximum consolidation of concrete without segregation of aggregate.

3.3.5 Machine Finisher: The transverse finishing machine shall be provided with two screeds accurately adjusted to the crown of the pavement, shall be power driven and mounted in substantial frame equipped to ride on the forms, and shall be so designed and operated as to strike off and consolidate the concrete. Finishing machine shall have rubber tires if it operates on concrete pavement.

3.3.6 Hand Finishing:

a. For hand finishing, provide strike template made of 4" x 10" lumber, at least 2 feet longer than width of pavement to be finished. Make strike template so it will leave sufficient amount of concrete above elevations required on finished surface to allow for tamping. Concrete pavement shall be consolidated by an approved mechanical vibratory unit, designed to vibrate the concrete internally. A vibratory member shall extend across the pavement practically to, but shall not come in contact with, the side forms, and shall be equipped with synchronized vibratory units.

b. Also provide longitudinal float with wood face of approved design, 14 feet in length, or approved type of mechanical longitudinal float with not less than 10 feet longitudinal float or screed. Provide two bridges for operation of longitudinal float, bridge for finishing expansion and dummy joint, and necessary edging and finishing tools to complete pavement slab as shown and specified.

3.3.7 Belting: Belt for finishing slab shall be canvas or canvas-rubber composition, 2 to 4 ply, not less than 8" nor more than 10" wide, and at least 2 feet longer than the width of pavement.

3.3.8 Subgrade Planer and Template:

a. Subgrade planer shall be provided, mounted on visible rollers riding on the forms, and having adjustable cutting blades which shall trim the subgrade to the exact section shown on the plans. The planer frame shall be heavy enough to remain on the forms at all times, and shall be of such strength and rigidity that, under a test made by changing the support from the wheels to center, shall not develop a deflection of more than 1/8 inch. Tractive power equipment used on the subgrade to pull the planer shall not be such as to produce ruts or indentations in the subgrade.

b. A template for checking the contour of the subgrade shall be provided and

operated by the Contractor. The template shall rest upon the side forms and shall be of such strength and rigidity that under a test made by changing the support to the center, it shall not show a deflection of more than 1/8 inch. It shall be provided with accurately adjustable rods projecting downward to the subgrade at 1 foot intervals, and these rods shall be adjusted to the required cross-section of the bottom of the slab when the template is resting upon the side forms.

3.3.9 Forms: Side forms for concrete pavements construction on lime stabilized subgrade shall be metal forms. Side forms for concrete pavements constructed on natural subgrades may be metal or wood. Metal forms shall be of approved shape and section. Wood forms shall be of 2x material. The preferred depth of the forms shall be equal to the required edge thickness of the pavement. Forms with depths greater or less than 1 inch of pavement thickness may be used. Metal forms with less depth than pavement thickness will be brought to the required depth by securely attaching wooden planks of approved section and size to the bottom of the form. Use form section at least 10 feet in length, and provide for staking in position with not less than three pins or stakes. Use forms of adequate strength to withstand machine loads without visible springing or settlement. Use forms free from warps, bends, and kinks, and sufficiently true to provide a straight edge on the concrete. The top of each form section, when tested with a straight edge, shall conform to the requirements specified for the surface of the completed pavement. Use flexible or curved forms of wood or metal of proper radius for curves of 100 feet radius or less.

a. For all private site work, wood forms are an acceptable substitute for metal forms.

3.4 General Construction Requirements:

3.4.1 Subgrade: The bottom on the excavation for the pavement or top shall conform to the lines, grade, and cross-sections shown on the plans.

All soft and yielding material and other portions of the subgrade shall be removed as directed and replaced with suitable material placed and compacted as specified herein.

The subgrade shall have uniform density and be compacted at or slightly above the optimum moisture content. In the absence of standard testing, a reasonable evaluation of moisture content may be made by squeezing a ball of damp soil in the hand. If the ball is so dry that it crumbles easily, additional water should be mixed into the soil. If it is so wet that free water comes to the surface when kneaded, the subgrade should be permitted to air out before final rolling. The subgrade shall be thoroughly compacted with suitable equipment.

All sewer trenches and structure excavation shall be backfilled to natural or finished grade as soon as conditions permit. All backfill shall be compacted with mechanical tampers in layers of not over 6 inches loose material. Vibratory compactors that are small enough to operate within the limited area are very satisfactory.

The subgrade shall be finished in an acceptable condition for at least one day's progress in advance of the pavement construction at all times.

Concrete shall not be placed upon a soft, spongy, or frozen subgrade or other subgrade, the stability of which is, in the opinion of the Engineer, unsuitable for the placement of concrete.

The subgrade shall be in a moist condition at the time the concrete is placed. It shall be thoroughly wetted a sufficient time in advance of the placing of the concrete to ensure that there will be no puddles or pockets or mud when the concrete is placed, but shall not be allowed to dry out before the concrete is placed.

Immediately prior to placing the concrete, the subgrade shall be tested for conformity with the cross-section shown on the plans by means of an approved template riding on the side forms. If necessary, material shall be removed or added, as required, to bring all portions of the subgrade to the correct elevation. It shall then be thoroughly compacted and again tested with the template. Concrete shall not be placed on any portion of the subgrade which has not been tested for correct elevation. The subgrade should also be cleared of any loose material which may have fallen on it.

3.4.2 Protection of Subgrade: The finished subgrade shall be maintained in a smooth and compacted condition until the concrete has been placed.

The mixer, ready-mix trucks, or other equipment shall not operate between the forms in the paving lane unless conditions of the job will not permit operation from the shoulder or outside the lane.

If it is necessary to operate trucks between the forms and the trucks cause rutting or displacement of the subgrade material, either lighter trucks shall be used or suitable runways shall be provided. The Contractor shall re-roll or hand tamp the subgrade to correct any ruts or other objectionable irregularities which may have been caused by the trucking of materials.

A berm shall be graded between the curb and sidewalk, or property line where there are no existing sidewalks, in a neat, workmanlike manner. All excess concrete and debris shall be removed from the excavation behind the curb line before backfilling.

3.4.3 Forms:

a. General: Forms shall be made of metal (wood is optional for private site work) and shall have a depth equal to or greater than the prescribed edge thickness of the pavement slab, except when the curb form is added after machine finishing. They shall have a base width of not less than eight (8) inches for all forms eight (8) inches or more in height. All side forms less than eight (8) inches in height shall have a base width of not less than six (6) inches. The minimum length of each section of form used shall be ten (10) feet. Each section of form shall be straight, free from bends or warps.

The maximum deviation of the top surface of any section shall not exceed one-eighth (1/8) inch, or the inside face not more than one-fourth (1/4) inch from a straight line. The method of connection between section shall be such that the joint thus formed shall be free from movement in any direction. Forms shall be of such cross-section and strength and so secured to resist the pressure of the concrete when placed, and the impact and vibration of any equipment which they support, without springing or settlement.

Each ten (10) feet length of form shall have at least three (3) form braces and pin sockets which shall be spaced at intervals of not more than five (5) feet having the end brace and socket not more than six (6) inches from the end of the form. Approved flexible forms shall be used for construction where the radius is 150 feet or less.

b. Setting Forms: The subgrade under the forms shall be compacted and cut to grade so that the form when set will be uniformly supported for its entire length at the specified elevation. Forms shall be joined neatly and in such a manner that the joints are free from play or movement in any direction. Forms shall be set, as herein specified, for at least one day's construction ahead of the actual placing of the concrete. The supply of forms shall be sufficient to permit their remaining in place for at least 12 hours after the concrete has been placed. All forms shall be cleaned and oiled each time they are used.

c. Grade and Alignment: The alignment and grade elevations of the forms shall be checked by the Contractor and the necessary corrections made by the Contractor immediately before placing the concrete. When any form has been disturbed, or any subgrade thereunder has become unstable, the form shall be reset and rechecked.

3.4.4 Placing Concrete: The concrete shall be mixed in quantities required for immediate use and shall be deposited on the subgrade to the required depth and width of the construction lane in successive batches and in a continuous operation without the use of intermediate forms or bulkheads. The concrete shall be placed as uniformly as possible in order to minimize the amount of additional spreading necessary. While being placed, the concrete shall be spaded or vibrated and compacted with suitable tools so that the formation of voids or honeycomb pockets is prevented. The concrete shall be especially well spaded or vibrated and tamped against the forms and along all joints. Care shall be taken in the distribution of the concrete to deposit a sufficient volume along the outside form lines so that the curb section can be consolidated and finished simultaneously with the slab.

No concrete shall be placed around manholes or other structures until they have been brought to the required grade and alignment.

3.4.5 Cold Weather Concreting: Except by specific written authorization, concreting shall cease when the descending air temperature in the shade and away from artificial heat falls below 45□ F. It shall not be resumed until the ascending air temperature in the shade and away from artificial heat rises to 45□ F.

3.4.6 Consolidating and Finishing:

a. General: The pavement shall be struck off and consolidated with a mechanical finishing machine or by hand-finishing methods. When a mechanical finishing machine is used, the concrete shall be struck off at such a height that after consolidation and final finishing it shall be at the exact elevation as shown on the plans.

A depth of at least 2 inches of concrete shall be carried in front of the strike-off screed for the full width of the slab, whenever the screed is being used to strike off the pavement. The finishing machine shall be provided with a screed which will consolidate the concrete by pressure. The concrete shall, through the use of this machine, be brought to a true and even surface, free from rock pockets, with the fewest possible number of passages of the machine. The edge of the screeds along the curb line may be notched out to allow for sufficient concrete to form the integral curb. Hand finishing tools shall be kept available for use in case the finishing machine breaks down.

When hand finishing is used, the pavement shall be struck off and consolidated, by a vibrating screed to the exact elevation as shown on the plans. When the forward motion of the vibrating screed is stopped, the vibrator shall be shut off; it shall not be allowed to idle on the concrete.

b. Longitudinal Floating: After the concrete has been struck off and consolidated, it shall be further smoothed by means of a longitudinal float. If a mechanical longitudinal float is not used, a longitudinal hand float shall be operated from foot bridges spanning the pavement and shall be worked with a wiping motion, parallel to the pavement centerline, and passing from one side of the pavement to the other. Movement ahead along the centerline of the pavement shall be in successive advances of not more than 1/2 of the length of the float. The float shall not be less than 12 feet in length and 6 inches in width and shall be properly stiffened and provided with handles at each end.

c. Scraping: After the passage of the longitudinal float, the pavement shall be scraped with a straightedge 10 feet long, equipped with a handle to permit it to be operated from the edge of the pavement. The straightedge shall be operated so that any excess water is removed from the surface of the pavement.

d. Straightedging: After the longitudinal floating and scraping have been completed and any excess water removed, but while the concrete is still plastic, the slab surface shall be tested for smoothness with a 10-foot straightedge swung from handles 3 feet longer than one-half the width of the slab. The straightedge shall be placed on the surface parallel to the centerline of the pavement and at not more than 5 feet intervals transversely. After each test, the straightedge shall be moved forward one-half its length and the operation repeated. When irregularities are discovered, they shall be corrected by adding or removing concrete. All disturbed placed shall be floated with a wooded float not less than 3 feet long and not less than 6 inches wide, and again straightedged. The pavement surface shall have no

depression in which water will stand.

The use of the long-handled wood floats shall be confined to a minimum. They may be used behind the longitudinal float to correct surface unevenness not taken care of by the longitudinal float, but shall not be used to float the entire surface of the pavement in lieu of or supplementing the use of the longitudinal float.

e. Edging: Before final finishing is completed and before the concrete has taken its initial set, the edges of the slab and curb shall be carefully finished with an edger of the radius shown on the plans.

f. Final Surface Finish: A burlap drag shall be used as the final finishing method. The drag shall be at least 3 feet in width and long enough to cover the entire pavement width. It shall be kept clean and saturated while in use. It shall be laid on the surface of the pavement and dragged forward in the direction in which the pavement is being laid. The curb shall have the same final finish as the pavement.

The final surface of the concrete pavement and curb shall have a uniform gritty texture free from excessive harshness and true to the grades and cross-section shown on the plans. The Engineer may require changes in the final finishing procedure as required to produce the desired final surface texture.

3.4.7 Curing:

a. General: Concrete shall be cured by protecting it against loss of moisture, rapid temperature change, and from rain, flowing water, and mechanical injury for a period of not less than 5 days from the beginning of the curing operation. Moist curing, water-proof paper, white polyethylene sheeting, liquid membrane compound or a combination thereof may be used for curing. Immediately after finishing operations have been completed, the entire surface of the newly laid concrete shall be covered by the curing medium which is applicable to local conditions and approved by the Engineer. The edge of concrete slabs exposed by the removal of forms shall be protected immediately to provide these surfaces with continuous curing treatment equal to the method selected for curing the slab surface and to prevent injury to pavement edges.

The use of a covering material which contains or becomes contaminated with sugar in any form, tannic acid, or any other substances considered detrimental to Portland Cement will not be permitted. The initial curing medium shall be effective and shall be applied so as to prevent checking, cracking, and the appearance of dry spots in the surface of the concrete. The Contractor shall have the equipment needed for adequate curing at hand and ready to install before actual concrete placement begins. In all cases in which the curing medium requires the use of water, the curing shall have prior right to all water supply. Failure to provide sufficient cover material of the type selected, failure to maintain saturation for the entire curing period in the most-curing methods, lack of water to adequately care for both curing and other requirements, or other failures to comply with curing requirements

shall be cause for immediate suspension of concreting operations.

b. Moist Curing: Moist curing shall be accomplished by covering of burlap, cotton mats, or other approved fabric mat, used singly or in combination.

Curing mats shall be thoroughly wet when applied and kept continuously wet and in intimate contact with the pavement surface for the duration of the moist curing period. Other fabric mats shall conform in design and shall provide a curing medium at least equal to cotton mats. Cotton mats, other fabric mats, and burlap strips shall be furnished in the widths or lengths, after shrinkage, required to cover the entire width and edges of the pavement lane. Mats or burlap shall be lapped at joints between adjacent sheets to prevent drying of this location. Moist curing when used as initial curing shall be contained for not less than 24 hours.

c. Waterproof Paper Curing: The surface of the concrete shall be wetted with a fine spray of water and then covered with the waterproof paper. The paper shall be in pieces large enough to cover the entire width and edges of the slab and shall be lapped not less than twelve (12) inches. Paper shall be adequately weighted to prevent displacement or billowing due to wind. Paper folded down over the side of the pavement edges shall be secured by a continuous bank of earth. Tears or holes appearing in the paper during the curing period shall be immediately repaired.

d. White Polyethylene Sheeting: White polyethylene shall meet the specifications previously mentioned.

e. Liquid Membrane Curing Compound: Pigmented liquid membrane curing compound shall meet the specifications under Paragraph 2.14.6. The curing compound must be applied to cover the surface specifications under previously mentioned paragraphs. The curing compound must be applied to cover the surface completely and uniformly at a rate which will achieve the performance requirement specified in AASHTO Specifications M-148. This method of curing shall be applied immediately behind the final finishing operation or after the initial curing when a combination of methods are used. Failure to provide complete and uniform coverage at the required rate will be cause for discontinuance of this method of curing and the substitution of one of the other approved methods. The compound shall be kept agitated to prevent the pigment from settling. Special care shall be taken to apply the curing compound to the pavement edges immediately after the forms have been removed.

3.4.8 Joints:

a. General: Longitudinal and transverse joints shall be constructed as shown on the plans.

Longitudinal joints are those joints parallel to the lane of construction. They may be either intermediate center joints or the construction joints between construction lanes.

Transverse joints shall be contraction joints or construction joints. Construction joints are put in transversely wherever construction operations require them.

Expansion joints may be either longitudinal or transverse. They are used only where specifically shown on the plans.

The edges of the pavement and those joints where such edging is shown on the plans shall be rounded with an edger having a radius of not larger than 1/8 inch. Transverse joints, except keyed and tied construction joints, shall be continuous across the entire paved area, including the curb.

b. Transverse Joints: Transverse joints shall be contraction, expansion, or construction joints. Contraction and expansion joints shall be placed as indicated on the plans and construction joints whenever construction may require them. They shall make a right angle with the centerline of the pavement and surface of the subgrade.

c. Transverse Expansion Joints: Expansion joints where shown on the plans shall conform to the specification previously mentioned. They shall extend the entire width of the pavement and from the subgrade to one (1) inch below the surface of the pavement. They shall be of the dimensions and spacing as shown on the plans. The filler shall be held accurately in place during the placing and finishing of the concrete by a bulkhead, a metal channel cap or other approved method.

Under no circumstances shall any concrete be left above the expansion material or across the joint at any point. Any concrete spanning the ends of the joint next to the forms shall be carefully cut away after the forms are removed.

Before the pavement is opened to traffic, the groove above the filler shall be cleaned and sealed with specified joint sealing material covered previously.

d. Transverse Contraction Joints: Transverse contraction joints shall be of the sawed, formed dummy groove or premolded strip type.

e. Transverse Sawed Contraction Joints: When transverse contraction joints are to be formed by sawing, care must be taken to saw the grooves soon after placing to prevent the formation of cracks due to contraction of the slab. All transverse joints shall be sawed at least 1/4 of the slab depth.

f. Transverse Formed Dummy Groove Joints: Transverse dummy groove joints shall be formed by a groove or cleft in the top of the slab of the dimensions shown on the plans. The groove made in the plastic concrete by a suitable tooling device, shall extend vertically downward 1/4 of the slab depth from the surface and shall be true to line.

g. Transverse Premolded Strip Joints: Transverse premolded strip joints shall be of the proper dimensions as shown on the plans. The premolded filler is placed in a vertical groove formed to receive it. The top of the filler should be flush with the pavement surface.

h. Transverse Construction Joints: Transverse construction joints of the type shown on the plans shall be placed whenever the placing of concrete is suspended for more than 30 minutes. A butt type joint with dowels shall be

used if the joint occurs at the location of a contraction joint. Keyed joints with tiebard are used if the joint occurs at any other location.

i. Dowels: If joints are to be equipped with dowels they shall be of the dimensions and at the spacing and location indicated on the plans. They shall be firmly supported in place, accurately aligned parallel to the pavement grade and the centerline of the pavement by means of a dowel support which will remain in the pavement and will insure that the dowels are not displaced during construction. One-half of each dowel shall be painted and greased and in expansion joints one end shall be equipped with a tight-fitting sleeve of the dimensions shown on the plans conforming to specifications previously mentioned.

j. Longitudinal Joints: Longitudinal joints shall be placed as shown on the plans. They shall be of the sawed, dummy groove, premolded strip, or the keyed construction type. Joints between construction lanes shall be the keyed construction type.

k. Longitudinal Center Joint: Longitudinal center joints shall be of the sawed, formed dummy groove or premolded strip type.

l. Sawed Longitudinal Center Joints: Sawed longitudinal center joints shall be sawed grooves made with a concrete saw after the concrete has hardened. The saw cut shall be at least 1/4 of the slab depth. The joint may be sawed at any time prior to the time the pavement is open to traffic. These joints are otherwise formed in the same manner as the transverse sawed joints previously mentioned.

m. Longitudinal Formed Dummy Groove Joints: Longitudinal dummy groove joints are formed in the same manner described for Transverse Premolded Strip Joints previously mentioned.

n. Longitudinal Premolded Strip Joint: Longitudinal premolded strip joints are formed in the same manner described for Transverse Premolded Strip Joints previously mentioned.

o. Longitudinal Premolded Strip Joint: Longitudinal construction joints (i.e., joints between construction lanes) shall be of the dimension shown on the plans. The key shall be constructed by placing a deformed metal plate against the form when the first lane adjacent to the joint is placed. This metal plate shall be removed with the form. When placing the second slab, care must be taken that no concrete is left to overhang the lip formed in the first slab by the edging tool.

p. Tiebars: Tiebars or tiebolts when shown on the plans shall be of deformed steel and of the dimensions and at the spacing specified. Tiebars shall be firmly supported by subgrade chairs or so installed as not to be displaced during construction operations.

q. Joint Sealer: After the curing period, all sawed and dummy groove joints in the pavement shall be cleaned and sealed with material meeting the requirements previously mentioned. All foreign material, joint sawing residue, dirt and curing membrane shall be removed. Joints shall be slightly underfilled (about 1/4") to prevent extrusion of sealer. Any excess material

should be removed from the pavement surface as soon after sealing as possible.

r. Integral Curb Joints: In the construction of transverse joints of concrete integral curb pavement, special care must be taken to see that all transverse joints extend continuously through the pavement and the curb.

3.4.9 Protection and Opening to Traffic: Street closure signs to be erected at least five (5) days prior to the work commencing. The Contractor shall protect the pavement against all damage prior to final acceptance of the work by the Owner. Traffic shall be excluded from the pavement by erecting and maintaining barricades and signs until the concrete is at least 7 days old, or for a longer period, if so directed by the Engineer. The pavement shall not be used at any time within this period for transporting or operating equipment. As a construction expedient, the subgrade planer, concrete finishing machine, and similar equipment may be permitted to ride upon the edges of previously constructed slabs provided the concrete is more than 72 hours old, and the equipment has rubber-tired wheels to run on the finished slab.

Mixer or ready-mix trucks shall not be permitted to operate from previously paved lanes until the pavement is at least seven days old or a flexural strength of 550 psi or 3000 psi is attained.

4. OPTIONAL CONSTRUCTION EQUIPMENT:

4.1 Slip-Form Paver: In lieu of the construction methods described in the preceding section of the specifications, the Contractor may use a slip-form paver. When the slip-form paver is used, all reference in the preceding sections of this specification referring to forms shall be deleted.

Slip-form pavers shall be equipped with vibratory and tamping bar assemblies which are effective over the full width of the pavement. The paver shall also have a metal float with a bulldozed front end for the full width of the pavement, except curbs, which will extrude the concrete under pressure.

Behind the float shall be a rubber belt, mechanically operated and with a lateral movement of 4 to 8 inches. The curb shall be formed by extrusion plates or mules mounted at the rear of the machine. The requirement for longitudinal floating shall be deleted.

4.2 Subgrade: The subgrade shall be brought to the proper grade and cross-sectioned by means of a properly designed and operated machine. The subgrade shall comply with applicable sections of this specification. If any traffic is allowed to use the prepared subgrade, some device, satisfactory to the Engineer, shall be provided for checking and correcting the subgrade immediately ahead of placing the concrete. The subgrade work, especially the path on which the tracks of the paver ride, must be done carefully and accurately as its degree of precision greatly affects the resulting smoothness of the pavement surface.

4.3 Placing: Concrete shall be of uniform slump and adequately supplied in front of the paver. The rate of progress shall be controlled so that the forward movement of the paver will be as nearly contiguous as practicable. If it is necessary to stop the forward movement of the paver, the vibrator and tamping elements shall also be stopped immediately. Care must be taken to see that a sufficient supply of concrete passes around

the float and the belt along the form line to form the integral curb where shown on the plans.

4.4 Final Finishing: Final finishing operations shall conform to the applicable sections of this specification.

END OF SECTION

SECTION 32 13 14 – PEDESTRIAN CONCRETE PAVING

PART 1 - GENERAL:

1.1 SUMMARY:

A. Section Includes:
1. Concrete bands, sidewalks, and pavements.
2. Sawcut jointing patterns
3. Expansion joints

7.	C330-77	Lightweight Aggregates for Structural Concrete.
8.	C494-79	Chemical Admixtures for Concrete.
9.	D1751-73	Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Non-extruding and resilient Bitumens Type).

1.3 QUALITY ASSURANCE:

A. Installer Qualifications: An experienced installer who has completed pavement work similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Manufacturer Qualifications: Manufacturer of ready-mixed concrete products complying with ASTM C 94 requirements for production facilities and equipment.

1. Manufacturer must be certified according to the National Ready Mix Concrete Association's Plant Certification Program.

C. Testing Laboratory Services

1. Perform all required tests and coordinate all efforts with the designated testing laboratory.

2. Cooperate with testing laboratories to permit proper testing and inspection procedures.

D. Source Limitations:

1. Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant and each aggregate from one source.

1.4 SUBMITTALS:

A. Forms: Submit Data with complete illustrations and/or descriptions for the following:

1. Inserts, anchors, sleeves and other embedded items.

2. Expansion joint fillers.

3. Vapor Barrier

B. Cast-In-Place Concrete:

1. Mix Designs:
   a. Mix Designs for each type of concrete

2. If mix designs are based upon field experience with materials to be used, submit substantiating data at time of submitting mix designs. If suitable field performance data cannot be provided, submit laboratory confirmatory test results upon each proposed mix design. Use only mix designs accepted in writing by Owner’s representative.

3. Product Data: Submit to Owner’s representative for each mix design:
   a. Certified mill reports on cements.
   b. Certified sieve analysis on aggregates.
   c. Cement manufacturer's name and brand name.
   d. Manufacturer's name and brand names of materials listed as products of more than one approved manufacturer.

4. Truck Delivery Tickets: Include on each ticket:
   a. Certification required by ASTM C94.
   b. Type and brand name of cement.
   c. Amount of cement, in pounds.

d. Total amount of water, in gallons.
e. Maximum size aggregate.

C. Shop Drawings: Submit six (6) copies of sub-slab shop drawings indicating expansion joint layout. Layout shall be submitted in conjunction with granite shop drawings. Expansion joints shall align accordingly.

D. Samples: Approved samples shall be the standards for finishes in concrete work.

1. Flatwork: Provide 5’ x 5’ samples of each mix and finish specified until approved by Landscape Architect. Samples shall be representative of the finish concrete and shall include, but not limited to; expansion joints, control joints, saw cut joints, patterning, finish, and color.

1.5 DELIVERY, STORAGE AND HANDLING:

A. Store new and reusable form lumber and form plywood under heavy waterproof coverings or where well protected from inclement weather.

B. Stack oiled form plywood on sticking to permit proper ventilation between uses.

C. Handle and store metal forms in such manner as to prevent damage by denting, warping, twisting and rusting.

D. Deliver reinforcing to site in easily handled bundles with identification tags securely wired into place. Store reinforcing to prevent damage and protect from corrosion and deformation.

1.6 PROJECT CONDITIONS:

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

1.7 GENERAL REQUIREMENTS:

A. All concrete work shall be true to line and grade as indicated on the drawings. The Contractor shall be responsible for proper drainage, without birdbaths, on all concrete paving surfaces. Any discrepancies or omissions on drawings, or conditions on the site, which prevent this Contractor from providing proper drainage shall be brought to the attention of the Owner’s representative in writing for correction or relief before work proceeds.

B. Surface Tolerance: Finished paving surfaces shall not vary more than 1/4" inch measured with a 10' metal straight edge, except at grade changes. No birdbaths or other surface irregularities will be permitted. Correct irregularities as directed.

1.8 ENVIRONMENTAL CONDITIONS:

A. Observe provisions of ACI-305 when ambient temperature is 90 degrees F. and greater.

B. Observe provisions of ACI-306 when ambient temperature is 40 degrees F. and less.

PART 2 – PRODUCTS

2.1 PORTLAND CEMENT:

A. Shall conform to current requirements of ASTM Designation C150, Type I or II cement.

2.2 COARSE AGGREGATE:

A. ASTM C - 33 ; 1”-3/8” limestone.

2.3 FINE AGGREGATE:

A. Sand shall be clean, hard and durable with uncoated grains free from injurious amounts of silt, loam clay or other deleterious matter, conforming to ASTM C33, grade in siize from coarse to fine with 95-100% by weight passing a $4 sieve, 45-70% passing a #16 sieve, 15-30% passing a #50 sieve and 3-8% passing a #100 sieve

2.4 WATER:

A. Provide clean, potable, concrete mixing water free from injurious amounts of salts, oils, acids, alkalis, organic materials or other deleterious matter.

2.5 AIR ENTRAINMENT:

A. Air-entraining admixture shall conform to ASTM C260.

2.6 WATER REDUCING AGENTS, RETARDERS, ACCELERATORS:

A. ASTM C494: Water reducing, normal setting admixture: Type A. Water reducing, retarding admixture: Type D.

2.7 VAPOR BARRIERS:

A. Vapor Barrier (Under all slabs) shall comply with ASTM E1745 Class A, maximum WVTR 0.008, minimum 15 mils thick. Include manufacturer's recommended adhesive or pressure-sensitive tape.

B. Granular Fill: Clean mixture of crushed stone or crushed or uncrushed gravel; ASTM D 448, Size 57, with 100 percent passing a 1-1/2-inch sieve and 0 to 5 percent passing a No. 8 sieve.

C. Fine-Graded Granular Material: Clean mixture of crushed stone, crushed gravel, and manufactured or natural sand; ASTM D 448, Size 10, with 100 percent passing a 3/8-inch sieve, 10 to 30 percent passing a No. 100 sieve, and at least 5 percent passing No. 200 sieve; complying with deleterious substance limits of ASTM C 33 for fine aggregates.

2.8 REINFORCING:

A. Reinforcing Bars: ASTM A615, Grade 60, deformed billet-steel, clean and free from rust, scale, or coating that will reduce bond.

B. Welded Wire Fabric: Not acceptable.

C. Cold Drawn Steel Wire: ASTM A82.

D. Bar Chairs: 16 gauge galvanized steel wire, with 3" x 3" base, or solid plastic of proper sizes and design to properly support and position reinforcing steel.

2.9 METAL DOWELS:

A. ASTM A36.

2.10 EXPANSION JOINT MATERIALS:

A. Premolded Joint Filler: To be "Sonoflex-F", a closed cell plastic joint filler, as manufactured by Sonneborn-Contech, Building Products Division, Contech, Incorporated, or approved equal.

B. Joint Sealant: To be "Sonolastic Sealant Two-Part" as manufactured by Sonneborn-Contech, Building Products Division, Contech, Incorporated, or approved equal. Color shall match adjacent concrete work.

C. ½” thick Asphalt saturated fiber expansion joint filler: Preformed with dowels as provided by Contractors Paving Supply in Stafford, Texas or approved equal.

D. Metal Screed Key joints: As indicated on the drawings as provided by Sheplers, Houston, Texas or approved equal

E. All expansion joint material shall be 1/2” thickness.

2.11 CURING MEMBRANE:

A. Submit a manufacturer of a spray on curing membrane to be used on all exposed concrete surfaces for approval. Conform to ASTM 309.
B. Select a fugitive color for above
C. In lieu of above, submit a plan for slow curing all concrete for approval by the Owner’s Representative

2.12 WOOD FORMS:

A. Form Lumber: Number 2 Southern pine or Number 2 Douglas Fir-Larch, surfaced four sides; true and straight members free from cupping, warping, loose knots, excessive checking and other structural defects.

B. Moldings and Chamfer Strips: "C-Select" or "Finish" Southern pine, straight, sound, and free of knots and other defects.

C. Used form materials may be reused provided that they are thoroughly cleaned and acceptable finishes can be produced.

2.13 METAL FORMS:

A. Heavy gauge steel of sufficient strength to prevent undue deflection, properly braced. Use only materials with smooth and regular contact surfaces, free from dents and irregularities that affect regularity and finish surface of concrete.

PART 3 - EXECUTION

3.1 DESIGN OF MIXES AND PROPORTIONING:

A. Proportioning and mixing of cement, aggregate, admixture and water to attain required plasticity and strength shall be in accordance with ACI-304.

B. Concrete Mixture: Concrete mixtures shall be designed by an approved commercial testing laboratory at no expense to the Owner, using approved materials furnished by the Contractor to obtain a minimum compressive strength of 4,000 pounds per square inch at 28 days of age and an air content by volume of 6% plus or minus 1.0 percent. The slump of the concrete shall be not more than 4".

3.2 SETTING FORMWORK:

A. Forms shall be constructed accurately to dimensions, plumb and true to line and grade. Forms shall be substantial, mortar tight and braced, and tied so as to maintain position and shape during placing of reinforcing and concrete. Wavy surfaces and bulged walls or slab surfaces resulting from settlement or springing of formwork will not be acceptable.

B. Do not re-use forms for exposed concrete surfaces. Coat all wood forms with form oil or release agent before pouring. Release agent shall be required on form surfaces where concrete is exposed to view in finished work.

C. Forms shall be constructed and assembled in such a manner that construction joints shall occur at approved locations.

D. Care shall be taken in all details of forming, setting, reinforcing, mixing and placing all concrete exposed in finish work to obtain smooth, even surfaces of dense concrete, and clean sharp inside and outside corners, except where tooled corners are indicated. Use of form oil will be required to prevent concrete from bonding to form.

E. Forms shall be carefully observed and checked for alignment and level as the work proceeds. All needed adjustment or additional bracing shall be done promptly.

F. Forms shall remain in place long enough to allow concrete to set properly and the Contractor shall assume all responsibility for removing same.

3.3 VAPOR BARRIER

A. Plastic Vapor Barriers: Place, protect, and repair vapor barriers according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 6 inches and seal with manufacturers recommended tape.

B. Granular Course: Cover vapor barrier with granular fill, moisten, and compact with mechanical equipment to elevation tolerances of plus 0 inch or minus 3/4 inch.

1. Place and compact a 1/2-inch- thick layer of fine-graded granular material over granular fill.

3.4 PLACING REINFORCEMENT:

A. Place all reinforcement as shown on drawings. Place accurately and securely fasten and support reinforcement to prevent displacement before or during pouring. Support bars and/or wire mesh with suitable reinforcing chairs.

B. Do not heat bars for bending or straightening. Do not tack weld bars.

C. Clean, bend and place reinforcement in accordance with current requirements of the ACI Manual of Concrete Practice.

D. Reinforcement Splices:

1. Reinforcing bars - 24 bar diameter minimum, except as otherwise noted.

3.5 PLACING CONCRETE:

A. Concrete shall be deposited so as to require as little rehandling as practicable. All placing equipment shall be clean and free from hardened concrete.

B. Placing shall be continuous between transverse joints or in individual sections of the work. Spade concrete thoroughly along forms and expansion joints, and work carefully into corners and around reinforcement. Tamp and screed to a dense mass.

C. Convey concrete from mixer to place of final deposit in one continuous operation and until entire unit being placed is complete. Maintain plasticity of concrete to flow readily into formwork and embed reinforcement without segregation of aggregates.

D. Use chutes of uniform shape and slope controlling concrete fall to not more than 3'.

E. Place no partially hardened, contaminated or retampered concrete.

3.9 FINISHES: (Ref. 03 35 10.2, 03 35 10.1, 03 35 19, for finishes not shown)

A. Medium broom Finish: Shall be obtained by drawing a medium bristled broom across a floated finish. Direction of brooming to be perpendicular to direction of walk or as otherwise shown on drawings.

3.10 JOINTS: (Reference Drawings for Locations of each type joint.)

A. Score Joints: Score joints shall be formed in the fresh concrete using a jointer to cut the groove so that a smooth uniform impression is obtained. All joints shall be struck before and after brooming/troweling. Contractor to fabricate special score joint tools as shown on plans.

B. Expansion Joints and Edging: Expansion joints shall be formed provided at the location and intervals as shown on the plans, and at all locations where concrete paving abuts buildings, curbs, or other structures. Approved joint material shall be placed with top edge 1/2" below the paved surface, and shall be securely held in place to prevent movement. Joint and other edges shall be formed in the fresh concrete using an edging tool to provide a smooth uniform impression. All edges shall be struck before and after brooming. After the curing period, expansion joints shall be carefully cleaned and filled with approved joint compound to 1/4" below paved surface in such a manner as to avoid spilling on paved surfaces or overflow from joint.

C. Saw Cut Joints: Sawing of joints shall be sawn as soon as the concrete will support the weight of the saw and the operator without marking or damaging the concrete. The saw cut shall be ¼” wide by ¼ the depth of the slab and shall have chamfered edges as detailed by using the Soff-Cut Ultra Early Entry system with ProEdge beveled blades or approved equal.

3.11 CURING AND PROTECTION AND PATCHING:

A. Protect concrete against frost, rapid drying and damage by rain and keep moist for at least 7 days after placing. Protect during this period by wet burlap, canvas covering (ASTM 171) or liquid curing compound. Curing by the use of saturated burlap. Sprinkler or membrane where approved shall commence immediately upon completion of finishing. Secure Owner's approval of proposed method. During this period, maintain concrete above 70 degrees F. for at least 3 days or above 50 degrees F. for at least 5 days. Concrete from which forms are removed within 7 days after pouring shall be sprayed during the curing period as frequently as drying conditions may require. Concrete covering shall be a type that will not stain or discolor finished concrete surfaces. Cure concrete in accordance with requirements of the current ACI Manual of Concrete Practice. Apply a spray on curing compound in accordance with manufacturer's recommendation and as specified herein where allowed.

B. Protect all concrete work against injury and defacement to walls and steps during subsequent construction operations, and until acceptance by the Owner.

C. PATCHING:

1. The use of "pavecrete" or other surfacing material will not be permitted.
2. Minor chips (2" X 2") or less which occasionally occur as a result of related construction activities may be patched using approved material.
3. The color and finish of all patches must exactly duplicate the surrounding pavement.
4. Remove any stains or spills on finished concrete work immediately.
5. Upon completion of the work clean all areas.
6. Remove any chalk lines used for sawcut joint layout

END OF SECTION 32 13 14

SECTION 32 41 16 - BRICK PAVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Clay Brick Pavers
2. Bedding and Polymeric Jointing Sand
3. Edge Restraints
4. Geotextiles

1.3 REFERENCES

A. American Society for Testing and Materials
1. ASTM C 33, Standard Specification for Concrete Aggregates
2. ASTM C 136, Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates
3. ASTM C 144, Standard Specification for Aggregate for Masonry Mortar.
4. ASTM C 902, Standard Specification for Pedestrian and Light Traffic Paving Brick.
5. ASTM C 1272, Standard Specification for Heavy Vehicular Paving Brick.
6. ASTM D 698, Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3)).
7. ASTM D 1557, Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3)).
8. ASTM D 2940, Standard Specification for Graded Aggregate Material for Bases or Subbases for Highways or Airports.

1.4 SUBMITTALS

A. In accordance with General Conditions of the Contract and Division 1 Submittal Procedures Section.

B. Clay Brick Pavers:
1. Submit manufacturer’s product literature, installation instructions, and material safety data sheets.
2. Submit sample units of each paver type representative of size, shape, color and finish, indicating color variation and texture range expected in finished installation. Color will be selected by Architect from manufacturer’s available color palette.
3. Submit test results from qualified independent testing laboratory indicating ASTM C 902 compliance, as applicable.
4. Submit manufacturer’s certification of conformance to ASTM standards.

C. Submit shop drawings and details: Indicate materials, thicknesses, sizes, finishes, shapes, edge restraints, perimeter conditions, expansion and control joints.
1. Indicate layout and pattern describing materials, expansion joints, geotextile location, layout and drain locations and installation details and methods.
2. Indicate relationships of paving joints to adjoining materials, fixtures and assemblies.

D. Bedding and Jointing Sand:

1. Submit sieve analysis results in accordance with ASTM C 136 for bedding sand.
2. Provide supplier name, source and type of sands used for bedding and jointing.
3. Provide color samples for jointing sand.

1.5 QUALITY ASSURANCE

A. Paving Installer Qualifications:
   1. Three years' experience with at least 100,000 square feet of sand set brick pavers installed.
   2. Successful completion of five brick paver installations similar in design, material and extent indicated on this project.

B. Mock-Ups:
   1. Install a 5 ft by 5 ft area of pavers on a prepared substrate including edge restraint to illustrate component application including pattern and edge details.
   2. When required, provide a separate mock-up for each paver type and bonding pattern.
   3. Use mock-up to determine pre-compaction bedding sand level, joint sizes, lines, laying pattern(s), and color and texture range.
   4. Do not start Work until [Architect] [Engineer] [Landscape Architect] [Owner] has approved mock-up.
   5. Approved mock-up is the standard by which appearance, workmanship, substrate preparation and material application will be judged.
   6. Document approved mock up with photographs or retain until completion of work.
   7. Approved field sample may be retained as part of finished work. Remove mock-up and dispose of materials when directed by Architect.

1.6 DELIVERY, STORAGE AND HANDLING

A. General:
   1. Deliver, store and handle in accordance with manufacturer's recommendations.

B. Delivery: Deliver materials in manufacturer's original, unopened, undamaged packaging with identification labels intact.
   1. Unload pavers with proper equipment, so no damage occurs to pavers.

C. Storage: Store materials so they are protected from contamination by foreign substances and excessive moisture.
   1. Store pavers to prevent damage and staining.
   2. Do not store bedding sand and jointing sand on compacted aggregate base course or in areas that channel water into the sand.
   3. Cover bedding sand and jointing sand with waterproof covering. Secure the covering in place.

1.7 PROJECT CONDITIONS

A. Environmental Requirements:
   1. Do not install sand or pavers during rain or snowfall.
   2. Do not install sand or pavers over frozen base course.
   3. Do not install frozen materials.
   4. Do not install pavers on frozen or saturated sand.

1.8 MAINTENANCE

A. Extra Materials:
   1. Furnish twenty additional pavers of each size and color to Owner for future maintenance and repair.

PART 2 - PRODUCTS

2.1 BRICK PAVERS

A. Approved Manufacturers:
   a. Pacific Clay
   b. Whitacre Greer
   c. Belden
   d. Upchurch Kimbro

B. Material Standard: In accordance with ASTM C 902, as applicable.

C. Classification: Specify weathering, traffic and application classifications.
   1. Specify Class: SX
   2. Specify Type: I
   3. Specify Application: PS

D. Dimensions: 4 x 8 x 2 ¼ & 8 x 8 x 2 ¼ as specified on drawings.

E. Color: To be selected by landscape architect from manufacturers full range of colors.

2.2 JOINTING AND BEDDING SAND

A. Approved Manufacturers:
   a. Alliance Gator Maxx Sand or approved equal.

B. Provide jointing sand and bedding sand as follows:
   1. Clean, well graded, sand free from soluble salts and other deleterious or foreign matter. Sand shall be natural silica sand or sand manufactured from crushed rock.
   2. Do not use screenings or stone dust for jointing sand or bedding sand.

B. Polymeric Joint Sand Material Requirements:
   a. Reference manufacturers specifications and installation instructions.

C. Bedding Sand Material Requirements:
   1. Comply with ASTM C 33 requirements for fine aggregate.
   2. Do not use mason’s sand, or sand conforming to ASTM C 144 for bedding sand.

2.03 EDGE RESTRAINTS

A. Furnish edge restraints.

B. Install edge restraints per manufacturer’s instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. General Contractor shall inspect and certify in writing to Installer that site conditions meet the following prior to bedding sand and paver installation:
   1. Remove organic, unstable or unconsolidated material from site.
   2. Verify conformance of subgrade preparation, compacted density and elevations to specified requirements.
   3. Verify geotextile placement in accordance with Project Drawings and specifications.
   4. Verify base course conformance to specified requirements. Do not use bedding sand to correct deficiencies in base course surface.
   5. Verify written density test results for soil subgrade and base course.
   6. Verify type, location and elevations of edge restraints, [concrete collars around] utility structures and drainage inlets.
   7. Verify that base course and geotextile fabric is ready to support sand, edge restraints, pavers and imposed loads.

B. Do not proceed with bedding sand or paver installation until satisfactory [subgrade soil and] base course conditions are verified by Contractor.

C. Verify that base course is dry and certified by General Contractor as meeting material, installation and grade specifications.

D. Field Measurements:
   1. Determine actual paver dimensions (including tolerances) and coordinate with dimensions for pavement areas indicated on Contract Drawings prior to any pavement installation. Adjust pavement area dimensions to eliminate unnecessary paver cutting.

3.2 PREPARATION

A. Edge Restraint Preparation:
   1. Install edge features and penetrations including curbs, planters, surrounds and bases prior to placing bedding sand layer.
   2. Install edge restraints as indicated on Project Drawings and in accordance with manufacturer’s recommendations.

B. Geotextile: Install geotextile where indicated on Contract Drawings. Lap ends and edges a minimum of 12 inches. (300 mm.)

3.3 INSTALLATION

A. Spread bedding sand evenly over base course and screed rails. Screed to 1 inch (25 mm) thickness.
   1. Do not spread bedding sand beyond area to be covered by pavers the same day.
   2. Prior to re-commencement of work remove, replace and re-screed bedding sand not covered with pavers the previous work day.
   3. Do not disturb screeded sand. Re-screed disturbed bedding sand.

B. Lay pavers in pattern(s) shown on Project Drawings.
   1. Lay full pavers first. Minimize the any sliver cuts where possible.
   2. Mix pavers from at least three cubes to produce uniform color blends.
   3. Place units by hand without using hammers.

C. Provide 1/16 inch to 3/16 inch (2 to 5 mm) wide joints between pavers.

D. Adjust pavers to form straight bond lines and appropriate joint widths. Maximum bond line variation shall be ± ½ inch (13 mm) over a 50 foot (15 m) string line.

E. Fill gaps at paved area edges with cut pavers.
   1. Cut pavers at edges as indicated on Contract Drawings with a double blade paver splitter or wet cut masonry or vacuum saw.
   2. Cut pavers shall be no smaller than one-third of a whole paver [except where pattern is to be maintained and smaller pieces are surrounded by a full paver and field paver border course]. Vehicular pavements shall have no pavers less than one-third size of the full paver.

F. Do not permit traffic, including construction equipment, on pavers before initial compaction and joint filling. Disturbed areas of pavers should be taken up, the sand re-screeded and pavers relaid.

G. Vibrate pavers into sand using a high frequency/low-amplitude plate compactor capable of 3,000 lbf to 5,000 lbf (13 to 22 kN) at a 75 to 100 Hz frequency. Protect pavers from chipping during compaction by using a plate compactor with a rubber matt, rubber rollers or other approved materials placed over pavers. Do not compact within 6 feet (2 m) of unrestrained edges. Remove cracked or damaged pavers and replace with new units.

H. After pavers are fully settled and free from movement simultaneously spread, sweep and compact dry jointing sand into joints until they are completely filled and sand no longer falls into joints.

I. Protect areas not covered with cut and compacted pavers with waterproof covering overnight.

J. Discontinue laying operations, align and compact pavers prior to work suspension when weather conditions are such that pavement performance may be compromised.

K. On laying operations recommencement, verify acceptable setting bed condition before further pavers are laid. If water has entered bedding sand, remove pavers and saturated bedding sand, install unsaturated sand replace and compact pavers.

L. Sweep excess sand from pavement when installation is complete.

N. Return to site over a period of up to one year to add sand to fill joints as needed.

O. Pavers to be engraved by Schlitzberger Monument Co. after installation.

3.4 FIELD QUALITY CONTROL

A. Finished pavement surface shall not deviate more than ± 3/8 inch (10 mm) from specified elevations.

B. Check final surface profile for conformance to Project Drawings.

C. Pavement surface elevation shall be flush with adjacent construction.

D. Maximum variation from a specified surface profile shall be ± 3/16 inch (5 mm) in 10 feet.

E. Height difference between adjacent pavers shall not exceed 1/8 inch (3 mm).

3.5 JOINT SAND STABILIZATION

A. Apply joint sand stabilization materials between brick pavers in accordance with manufacturer's written recommendations.
B. Sealers and treatments must be compatible with sealer applied during the manufacturing process. Test all products prior to use.

3.6 PROTECTION

A. After work in this Section is complete, General Contractor shall protect work from damage due to subsequent construction activity on site.

END OF SECITON 32 14 16

SECTION 32 15 40 - GRAVEL PAVING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Decomposed granite.
2. Limestone fines
3. Stabilizer binder

B. Related Sections:
1. Section 31 22 00: Grading.

C. Reference Standards:
1. ASTM C136 – Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates.
2. ASTM D448 – Standard Classification for Sizes of Aggregate for Road and Bridge Construction.

1.3 SUBMITTALS

A. Comply with Section 01 Shop Drawings: Submit plan layout of all decomposed granite surfacing areas and detail drawings showing the various components of the surfacing system, including subbase and edging.

B. Product Data - Manufacturer’s literature completely describing all components of the decomposed granite surfacing system, including:
1. Quarry of origin
2. Preparation instructions and recommendations.
3. Stabilizer binder brand information.
4. Installation methods and application procedures.

C. Samples for Verification - Submit samples of each of the following:
1. Two-pound sample of each type and color of decomposed granite surfacing material.
2. Edging material, each type not less than 12 inches long.

D. Certification:
1. Manufacturer and Installer Qualifications.

1.4 QUALITY ASSURANCE

A. Comply with Section 01 40 00: Quality Requirements.

B. Manufacturer: Company specializing in manufacturing Work of this Section with minimum 25 years documented experience.

C. Single Source Responsibility: Obtain each type of decomposed granite surfacing from single manufacturer.

D. Mock Up - Provide a mock-up for evaluation of surface preparation, installation techniques and quality of application:
1. Install a 4-feet x 4-feet minimum of decomposed granite surfacing, including stabilizer binder, subbase course and edging, at location approved by Landscape Architect.
2. Do not proceed with remaining work until installation of decomposed granite surfacing is approved by Landscape Architect.
3. Approved mock-up may remain as part of completed Work.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Comply with Section 01 60 00: Product Requirements.

B. Bagged Materials: Accept delivery of materials only in unopened and undamaged containers bearing the brand name and manufacturer's identification.

C. Bulk Materials - Each load of decomposed granite surfacing material arriving at the job site in bulk shall be accompanied by a delivery ticket containing the following minimum information:
1. Quarry of origin.
2. Amount, weight and type of material.
3. Brand name and manufacturer's identification.
4. Protect decomposed granite surface surfacing materials from contamination until ready for installation. Store under cover.

1.6 PROJECT CONDITIONS

A. Surfaces to receive decomposed granite surfacing shall be frost free and free of oil or any other foreign matter, which may impair the proper installation of the surfacing system.

B. Do not install decomposed granite surfacing when subbase course is muddy or saturated with standing water.

C. Perform work in dry weather when subgrade is sufficiently stable to be properly compacted.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURER

1. Manufacturer: Provide decomposed granite surfacing system and binder if used by the following:

A. The Ground-Up
1. The Ground-Up: (281) 970-003 Scott Bort (346) 314-9487 9945 Windfern Rd. Houston, TX 77064

B. Alamo Stone
1. Alamo Stone: (281) 240-4600 13020 S Kirkwood Rd, Stafford, TX. Sales@alamostone.com

C. Stabilizer® Binder
   1. Stabilizer Solutions: (800) 336-2468 33 South 28th St Phoenix, AZ
   2. Organic-Lock: (866) 636-8476Envirobond Products 6191-2100 Bloor St W. Toronto, Canada
   3. Patented, non-toxic, organic binder that is colorless and odorless concentrated powder that binds decomposed granite or crushed 3/8" or 1 /4" minus aggregate.
   4. Product to have 64% pre-consumer recycled content.

D. Requests for substitutions will be considered in accordance with provisions of Section 01 25 00: Substitution Procedures and Form.

2.2 DECOMPOSED GRANITE SURFACING MATERIALS

A. Recycled Content of Decomposed Granite or Crushed Stone Surfacing Materials: **10%**

B. Decomposed Granite and Crushed Stone Aggregate: Provide high quality materials consisting of sound, angular, durable stone particles, free from clay lumps, organic materials, frozen materials, or other deleterious substances.

C. Gradation - Manufacturer's standard mix of well-graded materials in accordance with ASTM C136. Blends of coarse sand and rock dust are not acceptable:

Standard Pathway Optimal Gradation		
Sieve	Sieve Size (mm)	Percent Passing
3/8"	9.51	100%
#4	4.76	80-100%
#8	2.36	65-90%
#16	1.18	40-60%
#30	0.6	25-55%
#50	0.3	15-35%
#100	0.149	10-20%
#200	0.074	7-15%

2.3 SUBBASE COURSE MATERIALS

1. 3/4" minus aggregate base class 2.

2.4 ACCESSORIES

A. Stabilizer Binder and decomposed granite shall always be blended dry. Mix uniformly and consistently throughout decomposed granite, per manufacturer's specifications.

B. Water: Clean and potable, free from contaminants that would be deleterious to the decomposed granite surfacing.

C. Steel Edging: Reference contract drawings for location, sizing, and manufacturer. Comply with Section 32 93 00.

D. Stakes: Reference contract drawings specified product and install per manufacturer specification.

E. Herbicide: Commercial chemical for weed control, registered by the EPA, and not classified as "restricted use" for locations and conditions of application. Application of the herbicide shall pose no short- or long-term health threats to the installer or the general public.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions under which Work of this Section will be performed. Notify Landscape Architect of unsatisfactory preparation before proceeding.

B. Correct conditions detrimental to timely and proper completion of Work.

C. Do not proceed until unsatisfactory conditions are corrected.

D. Lay out work prior to the commencement of installation.

3.2 PREPARATION

A. Excavation: Excavate to depth required so edges of decomposed granite surfacing will match adjacent grades and have a maximum cross-slope of 2 percent. Ensure edges and bottom of excavation are in a smooth and even line.

B. Subgrade Preparation: Plow, harrow and mix the entire surface of the in-place subgrade to a depth of at least 6-inches. After the material has been thoroughly mixed, the subgrade shall be brought to line and grade and compacted to 95% of the maximum laboratory dry density as determined by the Standard Proctor test.

C. Herbicide: Apply herbicide per manufacturer’s written instructions. Limit the application to the area to receive decomposed granite surfacing.

D. Subbase Course Preparation: Place the subbase coarse aggregate free from ridges, depressions, or hollows. Rake and compact to 95% Standard Proctor Density.

3.3 INSTALLATION

A. Steel Edging: Install edging flush with the top of the decomposed granite surfacing. Provide sufficient stakes to secure edging in place during and after decomposed granite surfacing material installation.

B. Subgrade - Proof-roll the subgrade with heavy pneumatic-tired equipment to locate unstable areas and to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades:
   1. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Landscape Architect, and replace with compacted backfill or fill as directed.
   2. The surface of the completed subgrade shall be bladed to a smooth and uniform texture.
   3. The finished subgrade shall be uniform and free from deleterious debris such as organic materials, nails, stones and loose soil.

C. Subbase: Install aggregate subbase to a compacted depth of 4 inches minimum for

pedestrian traffic, and 8 to 12-inches minimum for vehicular traffic in accordance with manufacturer's recommendations. Install the subbase in multiple 3 to 4-inch lifts, and compact to a minimum 95% density.

D. Compaction - Compact each lift of the subgrade, subbase and final finish decomposed granite surfacing materials with a one to three-ton roller or compactor. In small areas that are difficult to access with compaction equipment, hand tamping may be performed with multiple passes to achieve the required density:
   1. Lightly spray surface area following compaction. Do not disturb aggregate surface with spray action.

3.4 INSTALLATION OF DECOMPOSED GRANITE SURFACING

A. Thoroughly mix stabilizer binder and decomposed granite proportionally to manufacturer's specifications.

B. Spread decomposed granite surfacing material in 3 to 4-inch lifts. Spread the pathway mix evenly and smoothly before compacting. Allow for 20-25% compaction. Screed if possible.

C. Wet the mix to ensure water has penetrated the full depth of the decomposed granite surfacing material, and roll each lift to form a uniform, smooth surface with a cross slope of 2% maximum. Compact each lift to a minimum 95% density.

D. Grade and smooth to the required elevation; compact final lift with 1-3 ton drum roller or compactor.

E. Minimum Compacted Thickness:
   1. Pedestrian Paths: 3-inches.
   2. Vehicular Drives and Roadways: 4-inches.

F. Surface shall follow grades per plans. Remove crown, allow 1-2% cross pitch.

G. Completed surface shall be of consistent quality and shall not have depressions or humps greater than 1/4-inch in 10-feet.

3.5 INSTALLATION TOLERANCES

A. Decomposed Granite Surfacing Thickness - Allow for 20-25% compaction:
   1. Subbase Course: Plus or minus 1/2-inch.
   2. Surface Course: Plus 1/4-inch, no minus.

B. Decomposed Granite Surfacing Smoothness: Produce a surface smoothness within 1/4-inch tolerance when measured with a 10-foot straightedge.

C. Crowned Surfaces: Test with crowned template centered and at right angle to crown. Maximum allowed variance from template is 1/4-inch

3.6 CLEAN-UP AND PROTECTION

A. Thoroughly clean all areas where work has occurred. Remove from site excess material, debris and rubbish.

B. Take all precautions necessary to protect completed work until Substantial Completion of

project.

END OF SECTION 32 15 40

SECTION 32 16 13
CONCRETE CURBS AND GUTTERS AND VALLEY GUTTERS

1. SCOPE: This section of the specifications covers concrete curbs and gutters and valley gutters, complete.

2. MATERIALS AND CONSTRUCTION: All materials and construction methods shall be as specified in the specification entitled: "Excavation and Site Work," and in the specification "Concrete" with the following modifications:

2.1 Curbs and Gutters

2.1.1 General: All curbs and gutters shall be constructed of 3,500 psi concrete conforming to the specification "Concrete" and shall be of the thickness, width, and at the locations and elevations shown on the drawings.

2.1.2 Finish: Curb and gutter shall be finished true to line, grade, and cross-section, with the aid of a straight edge, steel trowel and steel "gooseneck". The straight edge is to be used on the face of the curb and in the gutter. The curb and gutter shall be worked with a steel trowel and "gooseneck" to give the work the appearance of a trowel finish, then edged and jointed.

2.1.3 Joints: Joints shall be provided where shown on the drawings, and as hereinafter specified. Edges of joints shall be rounded to a 1/8 inch radius with an edging tool.

a. Dummy Groove: Dummy groove joints shall be formed at 10 foot intervals in curbs and gutters. Dummy groove joints shall not be less than one inch in depth.

b. Expansion: Provide 3/4 inch premolded expansion joint filler in curbs and gutters at intervals not exceeding 60 feet and at edges abutting other concrete. The filler shall extend the full depth of the concrete but shall be held down 1/4 inch below the finish surface of the slab. All expansion joints shall be properly sealed with hot poured elastic bituminous sealer.

2.1.4 Reinforcing Steel: Curbs and gutters and valley gutters shall be reinforced as indicated. The reinforcing steel shall be accurately placed and adequately secured in position in the forms. It shall be maintained in place by approved concrete blocks or metal chairs or spacers. Where splicing is necessary, the bars shall be lapped at least 24 diameters, unless otherwise noted. No bar shall be spliced at points of maximum tension. The minimum thickness of protection concrete covering the reinforcing steel shall be as indicated on the drawings. If not shown on the drawings, the applicable requirements of ACI Building Code 318-63 shall govern. All reinforcing steel shall be inspected an approved by the Engineer before casting or depositing concrete.

2.1.5 It is the intention of the Engineer to show only the presence and approximate locations of existing driveways on the drawings. Their widths are variable. Whenever the presence of a driveway is indicated on the drawings or in locations designated by the Engineer, the vertical section of the curb and gutter shall be

omitted for a distance no longer than ten (10) feet. Variations from this distance must be approved by the Engineer. There will be no addition to or deduction from the unit price for curb and gutter due to the leaving out of this vertical portion of the curb. Where necessary, in the opinion of the Engineer or as shown on the plans to remove and replace a portion of an existing concrete driveway due to a conflict, either horizontal or vertical, between it and proposed new construction, that portions shall be removed along a neat, straight line formed by any method approved by the Engineer and replaced in a workmanlike manner between that line and the new construction. The new portion of driveway shall be equal in quality and appearance to that removed. The portion removed shall be disposed of by the Contractor at sites approved by the City.

2.2 Valley Gutters

2.2.1 All valley gutters shall be constructed of 3,500 psi concrete conforming to the specification entitled "Concrete" and shall be of the thickness, widths, lengths, locations, and elevations indicated on the drawings.

2.2.2 The edges of the valley gutters are to be formed on all sides in an approved manner except where they adjoin existing curbs and gutters. At these locations, premolded expansion joint material shall be placed against the edges of the existing curb and gutters and will serve at edge forms during construction.

2.2.3 Where necessary to remove existing asphalt surface and base in order to install valley gutters or elsewhere when directed by the Engineer, a jack hammer equipped with a flat blade shall be used to form a neat line where the new construction and existing pavement adjoin. There will be no separate compensation paid for removal and replacement of this asphalt surface and base and its cost will be included in the unit price for valley gutters or other pertinent items indicated in the Proposal.

2.3 Alteration or repairs of the existing valley gutters where shown shall be made as indicated in the drawings or directed by the Engineer. When completed, they shall conform as nearly as possible to the essential applicable requirements specified for new valley gutters.

END OF SECTION

SECTION 32 18 13 - SYNTHETIC GRASS SURFACING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes synthetic grass surfacing.

B. Related Requirements:

1. Section 32 91 13 Soil Preparation for preparation, compaction, and grading of granular base.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at the Edgeland Office.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For synthetic grass surfacing.

1. Include sections and details.
2. Show locations of seams and method of seaming.
3. Show layout of game lines, numbers, and letters. Indicate application method of each line and marking.
4. Show location and layout of team logo/graphics.

C. Samples: For each type of synthetic grass surfacing indicated.

1. Turf Fabric: 12 inches square.
2. Infill Material: 4 oz. of each type.
3. Shock-Attenuation Pad: 12 inches square.
4. Seam Sample: 24 inches square with seam centered in sample.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer

B. Product Test Reports: For each synthetic grass surfacing assembly.

C. 5 Year Bi-annual maintenance

D. Field quality-control reports.

E. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For synthetic grass surfacing, including maintenance cleaning instructions, to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents, if not covered by installation warranties.

1. Turf Fabric: Minimum of 100 sq. ft. for each type indicated.
2. Infill: Minimum of two bags of each type.

B. Installer to include bi-annual maintenance for 5 years. This maintenance will include but not be limited to:
1. Check for mold or mildew
2. Debris removal and brushing
3. Infill replenishment
4. Weed and moss prevention
5. Seam and edge repairs
6. Wear inspection
7. Deep clean

1.8 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Store materials in location and manner to allow installation of synthetic grass surfacing without excess disturbance of granular base.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace synthetic grass surfacing that fails in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration and excessive wear.
b. Deterioration from UV light.

c. Excessive loss of shock attenuation.
d. Seam separation, including game lines and markings.

2. Warranty Period: Limited Lifetime warranty.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Turf Fabric: Turf fabric tested according to the following methods, with additional test method conditions for each method according to ASTM F1551.

1. Tuft Bind: Not less than 8 lbf according to ASTM D1335.
2. Breaking Strength: Minimum 200 lbf in warp direction and minimum 200 lbf perpendicular to warp direction, according to ASTM D5034.

B. Permeability: 400 in./h of rainfall capacity according to ASTM F2898 or EN 15330-1.

2.2 SYNTHETIC GRASS SURFACING

A. Synthetic Grass Surfacing: Complete surfacing system, consisting of synthetic yarns bound to water-permeable backing and infill indicated, suitable for playgrounds.

1. SYNtipede 243 by SYNLAWN
2. Playground Grass by ForeverLawn
3. SYNTipede 321 by SYNLAWN

B. Turf Fabric: Woven turf fabric with multicolored fiber and UV resistance, complying with the following:

1. Yarn Fiber: polyethylene
2. Pile Weight: 80 oz./sq. yd. according to ASTM D5848.
3. Pile Height: 1-½" inches according to ASTM D5823.

C. Backing: Manufacturer's standard woven or nonwoven polypropylene primary backing with urethane-coated secondary backing; provide perforations or drainage channels sufficient to meet permeability indicated.

D. Infill: Manufacturer's standard organic infill.

1. Infill Proportions: Manufacturer's standard proportions

E. Seaming Method: Adhesive

2.3 MATERIALS

A. Contractor to use infill per manufacturer's specifications.

B. Seam Adhesive: One- or two-part urethane, recommended or approved by synthetic grass surfacing manufacturer, and suitable for ambient conditions at time of installation.

C. Seam Tape: Synthetic grass manufacturer's recommended seam tape, minimum 12 inches wide.

D. Seaming Cord: Seaming cord or thread, recommended by the synthetic grass surfacing manufacturer.

E. Shock-Attenuation Pad: Porous composite consisting of rubber granules bound with urethane adhesive, 2 inches thick; per manufacturer's recommendation to meet CPSI requirements within designated fall zones. Provide shock-attenuation pad with permeability sufficient to meet synthetic grass surfacing assembly permeability indicated. Contractor to coordinate fall zones with playground equipment manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine base and other conditions, with Installer present, for compliance with requirements for installation tolerances, permeability, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Avoid disturbance of base during installation of shock-attenuation pad and turf fabric.

B. Shock-Attenuation Pad Installation: Roll out pad and allow to relax a minimum of six hours prior to final fit and trim. Stagger head seams between adjacent rows. Fit seams snugly without stretching or forcing.

C. Roll out turf fabric and allow to relax at least four hours prior to seaming.

D. Provide seams flat and snug, with no gaps or fraying. Remove yarns that are trapped within seams. Attach turf fabric to perimeter restraint system as recommended by the manufacturer.

E. Repair loose seams and bubbles formed due to expansion of turf fabric prior to installation of infill.

F. Evenly broadcast and groom infill by machine in proportions and depth after settling as recommended by the manufacturer, and to meet indicated performance requirements. Rake fibers trapped by infill to surface.

G. Provide ½"(in) pile height system at high traffic zones. Typical at base of swings, slides, and other play elements. Confirm layout with landscape architect.

H. Ground all play elements below surface of turf with 8' grounding rod.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Manufacturer to perform tests and inspections.

B. Perform the following tests and inspections:

1. Permeability: 400 in./h per SY of rainfall capacity according to ASTM F2898 or EN 15330-1.
2. Shock Attenuation: Meeting minimum requirements at time of installation according to ASTM F1936.

3.4 DEMONSTRATION

A. Train Owner's maintenance personnel in proper maintenance procedures for synthetic grass surfacing.

END OF SECTION 32 18 13

SECTION 32 1816.13 – PLAYGROUND PROTECTIVE SURFACING.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes: Poured-in-Place Playground Surfacing System: Super-7 (when aromatic urethane for the top surface is specified) with a 7-year warranty & Extreme-10 (when aliphatic urethane for the top surface is specified) with a 10-year warranty.

B. Related Requirements:
1. Sections: Materials and Methods, Excavation, Asphalt Paving, Concrete Paving, Sub-Drainage, Storm Drainage, Fencing, Playground Equipment and Structures.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):
1. 1. ASTM D412 Standard Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elas-tomers-Tension.
2. 2. ASTM D624 Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers.
3. 3. ASTM D2047 Standard Test Method for Static Coefficient of Friction of Polish-Coated Floor Surfaces as Meas-ured by the James Machine.
4. 4. ASTM D2859 Standard Test Method for Flammability of Finished Textile Floor Covering Materials.
5. 5. ASTM E303 Standard Test Method for Measuring Surface Frictional Properties Using the British Pendulum Test-er.
6. 6. ASTM F1292 Standard Specification for Impact Attenuation of Surface Systems Under and Around Playground Equipment.
7. 7. ASTM F1951 Standard Specification for Determination of Accessibility of Surface Systems Under and Around Playground Equipment.

1.4 SYSTEM DESCRIPTION

A. Performance Requirements: Provide a 2-layer rubber-urethane playground surfacing system which has been designed, manufactured and installed to meet the following criteria:
1. Shock Attenuation (ASTM F1292):
   a. Gmax: Less than 200.
   b. Head Injury Criteria: Less than 1000.
2. Flammability (ASTM D2859): Pass.
3. Tensile Strength (ASTM D412): 60 psi (413 kPa).
4. Tear Resistance (ASTM D624): 140%.
5. Water Permeability: 0.4 gal/yd2/second.
6. Accessibility: Comply with requirements of ASTM F1951.

1.5 SUBMITTALS

A. General: Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Proce-dures Section.

B. Product Data: Submit manufacturer's product data and installation instructions.

C. Verification Samples: Submit manufacturer's standard verification samples of 9" x 9" (229 x 229 mm) minimum.

D. Quality Assurance/Control Submittals: Submit the following:
1. Certificate of qualifications of the playground surfacing installer.

E. Closeout Submittals: Submit the following:
1. Warranty documents specified herein.

1.6 QUALITY ASSURANCE

A. Qualifications: Utilize an installer approved and trained by the manufacturer of the playground surfacing system, having experience with other projects of the scope and scale of the work described in this section.

B. Certifications: Certification by manufacturer that installer is an approved applicator of the playground surfacing system.

C. International Play Equipment Manufacturers Association (IPEMA) certified.

1.7 DELIVERY, STORAGE & HANDLING

A. General: Comply with Division 1 Product Requirement Section.

B. Delivery: Deliver materials in manufacturer's original, unopened, undamaged containers with identification la-bels intact.

C. Storage and Protection: Store materials protected from exposure to harmful environmental conditions and at a minimum temperature of 40 degrees F (4 degrees C) and a maximum temperature of 90 degrees F (32 degrees C).

D. Specifier Note: In article below, state physical or environmental limitations or criteria for installation such as weath-er, temperature, humidity, ventilation or illumination required for proper installation or application.

1.8 PROJECT/SITE CONDITIONS

A. Environmental Requirements: Install surfacing system when minimum ambient temperature is 40 degrees F (1 degree C) and maximum ambient temperature is 90 degrees F (32 degrees C). Do not install in steady or heavy rain.

1.9 WARRANTY

A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.

B. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under contract documents.

C. Proper drainage is critical to the longevity of the PlayBound Poured-in-Place surfacing system. Inadequate drainage will cause premature breakdown of the poured system in affected areas; and void the warranty.
   1. 1. Warranty Period: Extreme-10 (when aliphatic urethane for the top surface is specified): 10 years from date of com-pletion of work. DD

PART 2 - PRODUCTS

2.1 POURED-IN-PLACE PLAYGROUND SURFACING SYSTEM

A. Manufacturer: Surface America, Inc.
   1. Contact: PO Box 157, Williamsville, NY 14231; Telephone: (800) 999-0555, (716) 632-8413; Fax: (716) 632-8324; E-mail: info@surfaceamerica.com; website: http://www.surfaceamerica.com.
      a. Proprietary Products/Systems. Poured-in-place playground surfacing system, including the following:
         1) PlayBound Poured-In-Place Primer:
            a) Material: Urethane.
         2) PlayBound Poured-in-Place Basemat:
            a) Material: Blend of 100% recycled SBR (styrene butadiene rubber) and urethane.
            b) Thickness, Reference Critical Fall Height Plans: 1 1/4" for 4' critical fall height, 2" for 5' critical fall height, 2 1/2" for 6' and 7' critical fall heights, 3" for 8' critical fall height, 3 1/2" for 9' critical fall height, 4" for 10' critical fall height, 5" for 12' critical fall height, 6" for 13' critical fall height.
            c) Formulation Components: Blend of strand and granular material.
         3) PlayBound Poured-In-Place Top Surface:
            a) Material: Blend of recycled EPDM (ethylene propylene diene monomer) rubber and aromatic or aliphatic ure-thane binder.
            b) Thickness: Nominal 1/2" (12.7 mm), minimum 3/8" (9.5 mm), maximum 5/8" (15.9 mm).
            c) Color: Reference Plans for custom color blends.
            d) Dry Static Coefficient of Friction (ASTM D2047): 1.0.
            e) Wet Static Coefficient of Friction (ASTM D2047): 0.9.
            f) Dry Skid Resistance (ASTM E303): 89.
            g) Wet Skid Resistance (ASTM E303): 57.

2.2 PRODUCT SUBSTITUTIONS

A. Substitutions shall meet or exceed product warranty and provide equal matches to color spectrum as noted on plans. Substitutions must meet or exceed critical fall height requirements and basemat thicknesses shall be adjusted per the new manufactures requirements.

2.3 MIXES

A. Required mix proportions by weight:
   1. Basemat: 16+% urethane (as ratio: 14% urethane divided by 86% rubber). 14% urethane, 86% rubber (based on entire rubber & urethane mix).
   2. Top Surface: 22% urethane (ratio: 18% urethane divided by 82% rubber). 18% urethane, 82% rubber (based on entire rubber & urethane mix).

2.4 SUBBASE

A. Concrete Subbase
1. Reference Specification: 32 1314
a. Concrete Strength: 4000 PSI
b. Finish: Medium Broom

B. Crushed Stone
1. Quarry process, crushed limestone,
a. ¾ inch, angular, no fines to allow for drainage

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Comply with the instructions and recommendations of the playground surfacing manufacturer.
1. Landscape Architect to be present at time of installation.

3.2 SUBBASE PREPARATION

A. Concrete
1. Contractor to install concrete base in accordance with Specification 32 1314.

B. Crushed Stone
1. Grade subgrade to plan, compact to 95% proctor.
2. Install geotechnical filter fabric and drainage gravel. Compact drainage gravel to 95% proctor, 4 inch lifts – max.
3. Place crushed stone in 4 inch lifts, compact to 95% proctor.
a. Do not exceed 10 inches of base.
b. Compact stone to a smooth and continuous shape per plans.

3.3 EXAMINATION

A. Substrate preparation must be in accordance with surfacing manufacturer's specification. New asphalt must be fully cured – up to 30 days. New concrete must be fully cured – up to 7 days.

B. Landscape Architect to review and confirm grades are per plan. Once approved the drainage test may take place, see below.

C. Proper drainage is critical to the longevity of the PlayBound Poured-in-Place surfacing system. Inadequate drainage will cause premature breakdown of the poured system in affected areas; and void the warranty.
1. Contractor to verify drainage system is functioning as intended and provide photographic and video proof. Landscape Architect to be present during testing. Testing to include the use of a sprinkler system to flood the area with an equal amount of water equivalent to 2 inches of rain per hour for a time period of one hour. Photographs shall be taken prior, during, immediately after, and 2 hours after the drainage test. Photos shall document the drainage system properly managing the water. If system if found to be improperly installed or modifications shall occur to mitigate the issues and an additional test shall take place until all issues are remedied.

3.4 PREPARATION

A. Surface Preparation: Using a brush or short nap roller, apply primer to the substrate perimeter and any adjacent vertical barriers such as playground equipment support legs, curbs or slabs that will contact the surfacing system at the rate of 300 ft2/gal (7.5 m2/L).

B. Specifier Note: Coordinate article below with manufacturer's recommended installation requirements.

3.5 INSTALLATION

A. Do not proceed with playground surfacing installation until all applicable site work, including substrate preparation, fencing, playground equipment installation and other relevant work, has been completed.

B. Basemat Installation:
1. Using screeds and hand trowels, install the basemat at a consistent density of 29 pounds, 1 ounce per cubic foot (466 kg/m3) to the specified thickness.
2. Allow basemat to cure for sufficient time so that indentations are not left in the basemat from applicator foot traf-fic or equipment.
3. Do not allow foot traffic or use of the basemat surface until it is sufficiently cured.

C. Primer Application: Using a brush or short nap roller, apply primer to the basemat perimeter and any adjacent vertical barriers such as playground equipment support legs, curbs or slabs that will contact the surfacing system at the rate of 300 ft2/gal (7.5 m2/L).

D. Top Surface Installation:
1. Using a hand trowel, install top surface at a consistent density of 58 pounds, 9 ounces per cubic foot (938 kg/m3) to a nominal thickness of 1/2" (12.7 mm).
2. Allow top surface to cure for a minimum of 48 hours.
3. At the end of the minimum curing period, verify that the top surface is sufficiently dry and firm to allow foot traffic and use without damage to the surface.
4. Do not allow foot traffic or use of the surface until it is sufficiently cured.
5. Specifier Note: Specify provisions for protecting work after installation but prior to acceptance by the owner. Coordinate article below with Division 1 Execution Requirements Section.

3.6 PROTECTION

A. Protect the installed playground surface from damage resulting from subsequent construction activity on the site.

END OF SECITON 32 18 16.13

SECTION 32 31 11- GATE OPERATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUBMITTALS

A. Product Data:
   1. Manufacturer's schedules, charts, literature, and illustrations indicating the performance, fabrication procedures, product variations and accessories indicating material compliance and specified options.
   2. Manufacturer's installation instructions.

PART 2 - PRODUCTS

2.1 MOTOR OPERATION FOR GATES

A. Electric Sliding Cantilever Gate Operation:
   1. Basis of Design: SlideSmart DC 15 as manufactured by HySecuirty.
   2. Features:
      a. Duty Cycle: Continuous.
      b. Drive: Electromechanical.
      c. Gate Length Max: 40 Ft.
      d. Gate Weight Max: 1500 lb.
      e. Pull Force: 300 lb.
      f. Operating Voltage: 24 VDC.
      g. Communication: USB, RS-232, RS-485.
      h. Input Voltage: 208-230V 50/60 Hz
      i. Finish: Zinc plated chassis; molded polyethylene cover.
      j. ETL Listed (UL 325): Usage Class I, II, III, IV.

2.2 ACCESS CONTROL EQUIPMENT

A. Card reader systems
   1. Programmable stand-alone.
   2. Computer programmed (Windows software available).
   3. Proximity type (No-Touch).

B. Intercom for voice communication.

C. Hard wired control stations of all types lockout switches and best-cored key switches available.

D. Hold open key switches.

E. Hardwired detection devices for "free exit"
   1. Loop detectors.

F. Radio Frequency Devices
   1. Receivers.
   2. Transmitters.
   3. Keypads.

4. Multiple channels.
5. Programmable In or Out of system.
6. Long Range.
7. Key chain type.
8. Passive Identification Devices.

G. Emergency Vehicle Access (Fire, Police, etc.)
1. Strobe detector.
2. Siren Operated.
3. Police band RF operated.

H. Digital lighted keypads
1. Stand-alone.
2. Computer programmed.
3. Multiple security levels.
4. With Intercom.
5. Wireless.

2.3 GATE SAFETY

A. Gate edges to reverse or stop the gate.

B. Magnetic vehicle detectors.

C. Yellow strobe lights.

D. Audible warning.

E. Signage warning signs custom language types available.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify areas to receive fencing are completed to final grades and elevations.

B. Ensure property lines and legal boundaries of work are clearly established.

3.2 INSTALLATION

A. Install in a workmanlike manner in conformance with manufacturer’s printed instructions and details.
Anchor or install electric operator on a concrete foundation. Using 1/2x41/2 Hilti Quick bolt concrete stud type anchors.

B. Have at least 2 years previous experience in gate operator installations.

C. Installer must provide service after the sale and be able respond in a reasonable time should trouble occur.

D. Installer must provide references from job of a like nature.

E. Must provide drawings showing layout and typical locations for all equipment that is being supplied.

F. License electrician must perform all electrical connections.

G. Supply electrical power to operator through its own dedicated circuit breaker.

3.3 CLEANING

A. Clean up debris and unused material, and remove from the site.

B. Operators are intended for use in controlling vehicular traffic and are not intended to be used by pedestrians or to control pedestrian traffic. Always install a separate pedestrian man gate.

END OF SECTION 32 31 11

SECTION 32 31 19 - DECORATIVE METAL FENCES AND GATES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Decorative aluminum fences.
   2. Gates.

B. Related Requirements:
   1. Section 03 30 00 - Cast-in-Place Concrete.
   2. Section 31 23 16 - Excavation.

1.3 REFERENCE STANDARDS

A. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes; 2017.

B. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

C. ASTM F2408 - Standard Specification for Ornamental Fences Employing Galvanized Steel Tubular Pickets; 2016.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to start of work of this section; require attendance by affected installers.

1.5 SUBMITTALS

A. Refer to Section 01 33 00 - Submittal Procedures for submittal procedures.

B. Product Data: Submit manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

C. Shop Drawings:
   1. Indicate plan layout, spacing of components, post foundation dimensions, hardware anchorage, gates, and schedule of components.

D. Manufacturer's Installation Instructions: Indicate installation requirements, post foundation anchor bolt templates,..

E. Manufacturer's Qualification Statement.

F. Installer's Qualification Statement.

G. Project Record Documents: Accurately record actual locations of property perimeter posts relative to property lines.

H. Field Inspection Records: Provide installation inspection records that include post settings, framework, fittings and accessories, gates, and workmanship.

I. Manufacturer's Warranty.

J. Maintenance Materials: Furnish the following for Owner's use in maintenance of project:
   1. Refer to Section 01 60 00 - Product Requirements for additional provisions.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer Qualifications: Experienced with type of construction involved and materials and techniques specified and approved by fence manufacturer.

1.7 DELIVERY, STORAGE AND HANDLING

A. Store materials in a manner to ensure proper ventilation and drainage. Protect against damage, weather, vandalism and theft.

1.8 WARRANTY

A. Refer to Section 01 77 00 - Closeout Procedures for additional warranty requirements.

B. Correct defective Work within a five year period after Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Specifications are based on the products identified as Basis of Design. Manufacturers listed whose products meet or exceed the specifications are approved for use in the Work. Other manufacturers must have a minimum of five (5) years' experience manufacturing products meeting or exceeding the specifications and comply with Division 01 requirements regarding substitutions to be considered.
   1. Decorative Aluminum Fences and Gates:
      a. Alumi-Guard: www.alumi-guard.com/#sle.
      b. Ameristar Perimeter Security, USA: www.ameristarfence.com/#sle.
      c. Ideal Aluminum Products: www.ideal-ap.com/#sle.
      d. Knotwood, a brand of OmniMax International: www.knotwood.com/#sle.
      e. Superior Aluminum Products, Inc: www.superioraluminum.com/#sle.
      f. Ultra Aluminum Manufacturing Inc: www.ultrafence.com/#sle.
   2. Specialty Hardware:
      a. DAC Industries, Inc; Detex Exit Bar: www.dacindustries.com/#sle.

B. Substitutions: Refer to Section 01 25 13 - Product Substitution Procedures.

2.2 FENCES

A. Fences: Complete factory-fabricated system of posts and panels, accessories, fittings, and fasteners; finished with electrodeposition coating, and having the following performance characteristics:

B. Electro-Deposition Coating: Multistage pretreatment/wash with zinc phosphate, followed by epoxy primer and acrylic topcoat.
   1. Total Coating Thickness: 2 mils (0.058 mm), minimum.

C. Aluminum: ASTM B221.
   1. Tubular Pickets, Rails and Posts: 6005-T5 alloy.
   2. Extrusions for Posts and Rails (Outer Channel): 6005-T5 alloy.
   3. Extrusions for Pickets and Rail (Inner Slide Channels): 6063-T5 alloy.

D. Fasteners: ASTM A276/A276M, Type 302 stainless steel; finished to match fence components.

2.3 ALUMINUM FENCE

A. Decorative Aluminum Fence System: Provide fence meeting the Test Load and Coating Performance requirements of ASTM F2408 for Industrial class.
   1. Fence Panels: 8 feet (1.8 m) high by 6 feet (1.8 m) long.
      a. Posts: Aluminum extrusions; 2-1/2 inches (63 mm) square.
      b. Rails: Extruded aluminum channels.
      c. Pickets: Extruded aluminum tubes.
         1) Style: Pickets with finial extend above top rail.
      d. Fasteners: Manufacturer's standard stainless steel bolts, screws, and washers; factory finish fasteners to match fence.

e. Accessories: Aluminum castings, extrusions, and cold-formed strips; factory finished to match fence.
f. Color: To be selected by Architect from manufacturer's standard range.
g. Basis of Design:
1) Ameristar Perimeter Security, USA; Aegis Plus Majestic: www.ameristarfence.com/#sle.

B. Decorative Aluminum Post-and-Rail Fence and Swinging Gates:
1. Posts: Aluminum extrusions; 4 inches (101 mm) square.
2. 3/16 inch minimum
3. Color: Black.
4. Products:
a. Alumi-Guard, Post and Rail Fences; Chariot 2 - Rail: www.alumi-guard.com/#sle.

C. Decorative Aluminum Cantilever Gates:
1. Gate Panels: Manufacturer's standard decorative aluminum fence panels.
2. Description: 9 inch square tube frame.
3. Height and Length: Refer to Door Schedule.
4. Hardware:
a. Latch: Manufacturer's standard mechanism; factory finished galvanized steel.
b. Truck Assembly: Manufacturer's standard, self-aligning, wheeled truck assembly supporting weight of gate plus 2,000 pound (910 kg) reaction load; provide number of truck assemblies per gate recommended by manufacturer.
c. Guide Wheel Assembly: Manufacturer's standard, adjustable, dual wheel assembly; provide number of guide wheels per gate recommended by manufacturer.
5. Operation: Manual.
6. Color: Manufacturer's standard, factory applied-Black.

2.4 SPECIALITY HARDWARE

A. Rollers: Finished to match fence components.
1. Load Rating: 500 pounds (227 kg).
2. Groove: Flat.
3. Material: Steel.
4. Bearings: Ball.
5. Mounting: Center.
6. Brackets: Round.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Set fence posts in accordance with the manufacturer recommended spacing.

C. When cutting rails immediately seal the exposed surfaces by:
1. Removing metal shavings from cut area.
2. Apply zinc-rich primer to thoroughly cover cut edge and drilled hole; allow to dry.
3. Apply two coats of custom finish spray paint matching fence color.
4. Failure to seal exposed surfaces in accordance with manufacturer's instructions will negate manufacturer's warranty.

D. Excavate post holes in accordance with Section 31 23 16.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch (6.3 mm).

B. Maximum Offset From Indicated Position: 1 inch (25.4 mm).

C. Minimum Distance from Property Line: 6 inches (152 mm).

3.5 FIELD QUALITY CONTROL

A. Refer to Section 01 40 00 - Quality Requirements for additional requirements.

B. Layout: Verify that fence installation markings are accurate to design, paying attention to gate locations, underground utilities, and property lines.

C. Post Settings: Randomly inspect three locations against design for:
   1. Hole diameter.
   2. Hole depth.
   3. Hole spacing.

D. Fence Height: Randomly measure fence height at three locations or at areas that appear out of compliance with design.

E. Workmanship: Verify neat installation free of defects.

3.6 CLEANING

A. Clean jobsite of excess materials; scatter excess material from post hole excavations uniformly away from posts. Remove excess material if required.

B. Clean fence with mild household detergent and clean water rinse well.

3.7 CLOSEOUT ACTIVITIES

A. Refer to Section 01 77 00 - Closeout Procedures for closeout submittals.

B. Refer to Section 01 79 00 - Demonstration and Training for additional requirements.

3.8 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair, or replace damaged products before Date of Substantial Completion.

END OF SECTION 32 31 19

SECTION 32 33 13 - SITE BICYCLE RACKS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Exterior bicycle racks.

1.2 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete: Mounting surface for bicycle racks.

B. Section 05 50 00 - Metal Fabrications: Custom metal outdoor furnishings.

C. Section 32 13 13 - Concrete Paving: Mounting surface for bicycle racks.

D. Section 32 33 14 - Site Bicycle Lockers.

E. Section 32 33 15 - Site Bicycle Shelters.

1.3 PRICE AND PAYMENT PROCEDURES

A. See Section 01 23 00 - Alternates for product alternatives affecting this section.

B. This section describes a base bid product; refer to Section _____ for an alternative product.

C. This section describes an alternative product; refer to Section _____ for the base bid product.

1.4 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2020.

C. ASTM A269/A269M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service; 2015a (Reapproved 2019).

D. ASTM A312/A312M - Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes; 2021.

E. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2021a.

F. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2020.

G. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2015.

H. ASTM C33/C33M - Standard Specification for Concrete Aggregates; 2018.

I. ASTM C150/C150M - Standard Specification for Portland Cement; 2020.

J. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete; 2010a (Reapproved 2016).

K. ASTM C330/C330M - Standard Specification for Lightweight Aggregates for Structural Concrete; 2017a.

L. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements; 2016.

1.5 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

C. Shop Drawings: Indicate size, shape, and dimensions, including clearances from adjacent walls, doors, and obstructions.

D. Selection Samples: For each finish product specified, color chips representing manufacturer's full range of available colors and patterns.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Handle racks with sufficient care to prevent scratches and other damage to the finish.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Exterior Bicycle Racks:
1. American Bicycle Security Company: www.ameribike.com/#sle.
2. BRP by Bison, Inc: www.brpbybison.com/#sle.
3. Columbia Cascade Company: www.timberform.com/#sle.
4. Highland Products Group, LLC: www.indoorbikeracks.net/#sle.
5. Huntco Supply, LLC: www.huntco.com/#sle.
6. MADRAX, a brand of Graber Manufacturing, Inc: www.madrax.com/#sle.
7. Neenah Foundry, a division of Neenah Enterprises, Inc: www.nfco.com/#sle.
8. Reliance Foundry Co. Ltd: www.reliance-foundry.com/#sle.
9. Saris Infrastructure: www.sarisinfrastructure.com/#sle.
10. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 BICYCLE RACKS

A. Exterior Bicycle Racks: Device allows user-provided lock to simultaneously secure one wheel and part of the frame on each bicycle parked or racked.
1. Style: Serpentine rack formed from a continuous round pipe.
2. Capacity: Nine bicycles.
3. Mounting, Ground: In-ground anchor.
4. Finish: Powder coat, maintenance-free and weather-resistant.
5. Color: As selected by Architect from manufacturer's standard range.
6. Accessories: Surface flange cover.

B. Materials:
1. Pipe: Carbon steel, ASTM A53/A53M, Schedule 40.
2. Pipe: Stainless steel, ASTM A312/A312M, Type 304, Schedule 40S.
3. Tube: Carbon steel, ASTM A500/A500M.
4. Tube: Stainless steel, ASTM A269/A269M, Grade TP304, seamless.
5. Bar, Round and Flat, Carbon Steel: ASTM A36/A36M.
6. Bar Round and Flat, Stainless Steel: ASTM A666, Type 304.
7. Molded or Extruded Plastic: 100 percent, high-density, UV stabilized polyethylene.
8. Precast Concrete:
    a. Cement: ASTM C150/C150M, Portland Type I - Normal; white color.
    b. Concrete Materials: ASTM C33/C33M aggregate, water, and sand.
    c. Reinforcing Steel: ASTM A615/A615M, deformed steel bars; unfinished, strength and size required by precast unit design.
    d. Concrete Mix: Minimum 5000 psi (34 MPa), 28 day strength, air entrained to 5 to 7 percent.
    e. Air Entrainment Admixture: ASTM C260/C260M.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine surfaces to receive bicycle racks.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory conditions before proceeding.

C. Do not begin installation until unsatisfactory conditions are corrected.

3.2 PREPARATION

A. Ensure surfaces to receive bicycle racks are clean, flat, and level.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install level, plumb, square, and correctly located as indicated on drawings.

C. In-Ground Anchor Installation:
   1. Prepare holes in size according to manufacturer’s instructions.
   2. Place anchoring bolts through the holes in pipe.
   3. Lower rack into holes, ensuring the bottom of lower bends are at least 1-1/2 inch (38 mm) from the ground.
   4. Place concrete.
   5. Level rack before concrete sets.
   6. Support until dry.

D. Post-Installed Anchors: Comply with ICC-ES AC308.

E. Surface Flange Installation: Anchor bicycle racks securely in place with 1/2 inch (13 mm) by 4 inch (101 mm) anchor bolts through flange holes.

F. Freestanding Installation: Place in location indicated on drawings.

3.4 CLEANING

A. Clean installed work to like-new condition. Do not use cleaning materials or methods that could damage finish.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION 32 33 13

This page intentionally left blank

SECTION 32 91 00 - SOIL PREPARATION

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:
1. Furnish components of the planting mediums.
2. Testing and/or certifications of components
3. Mixing of planting mediums.
4. Transporting mediums as required.
5. Weed Control

B. Related Sections:
1. Finish Grading - Section 31 22 15
2. Sprinkler Irrigation System - Section 32 84 00
3. Lawns and Grasses - Section 32 92 00
4. Planting - Section 32 93 00

1.2 QUALITY ASSURANCE

A. Certificates of Inspection: Certificates of inspection required for transportation shall accompany invoice for each shipment of materials. File copies of certificates with Landscape Architect after acceptance of material.

B. Testing:
1. Chemical and Physical - All soil components shall be tested by one of the following testing laboratories for conformity to the specifications:

   Texas Plant and Soil Lab
   5115 West Monte Cristo
   Edinburg, Texas 78539
   (956) 383-0739

   A&L Plains Agricultural Laboratories, Inc.
   302 34th Street
   Lubbock, Texas 79404
   (806) 763-4278

   Soil and Plant Laboratory, Incorporated
   Post Office Box 153
   Santa Clara, California 95052
   (408) 243-0330

2. Biological:
   Soil Food Web, Inc.
   1128 NE 2nd Street Suite 120
   Corvallis, Oregon 97330
   www.soilfoodweb.com
   (541) 752-5066

3. If herbicide contamination is suspected, then a radish/rye-grass growth trial must be performed.

4. For delivered material, test one grab sample for each fifty (100) cubic yards of bulk material delivered to the site.

5. Testing will be at the expense of Contractor.

6. Deviations greater than plus or minus twenty (20%) percent from control data may be grounds for rejection of mixes tested. Non-conforming materials shall not be used. Materials which do not conform to standards specified herein shall be removed from the site.

1.3 SUBMITTALS:

A. Furnish copies of manufacturers literature, certifications, sources, samples**,** or laboratory analytical data for the following items:
1. Existing soil testing data
2. Organic Amendments and Fertilizers
3. Planting Soil
4. Topsoil.
5. Sand.
6. Native Mulch (composted).
7. Compost.
8. Herbicides
9. Pre-Emergent Herbicides

PART 2 PRODUCTS

2. 1 PLANTING SOIL:

A. Grading:

Sieve Size	Percent Passing Sieve
25.4 mm (1")	95-100
9.51 mm (3/8")	85-100
53 Micron (270 mesh)	10- 30

B. Chemistry - Suitability Considerations:
1. Salinity: Saturation Extract Conductivity (ECe x 103 @ 25 degrees C.) less than 2.2 mmhos/cm.
2. Sodium: Sodium Absorption Ratio (SAR) less than 9.0.
3. Boron: Saturation Extract Concentration less than 2.0 ppm.
4. Reaction: pH of Saturated Paste: 6 - 7.5.

C. Pests:
The population of any single species of plant pathogenic nematode: Fewer than 500 per pint of soil (confirm by biological testing).

D. Fertility Considerations:
Soil to contain sufficient quantities of available nitrogen, phosphorus, potassium, calcium, and magnesium to support normal plant growth. In the event of nutrient inadequacies, provisions shall be made to add required materials to overcome inadequacies prior to planting.

E. Source of above shall be approved and conformity of material shall be laboratory verified for each 100 cubic yards of material delivered to the site.

F. Percentage of Organic Matter: Min. 4-8%

G. Physical Soil Parameters
1. Clay: 5-25%
2. Silt: 25-50%
3. Sand: 25-50%

2.2 ON SITE MATERIAL:

A. Specified backfill mixes shall consist of on site material generally conforming to the requirements in this specification.

B. Test on site topsoil from designated stockpile area or borrow site for conformity to this specification. Submit test to Landscape Architect for verification and alteration of components.

2.3 WOOD RESIDUALS:

A. Source:
Shall be non-composted and/or stockpiled, and not have been chemically treated or dyed.

B. Physical Properties - Grading:

U.S. Sieve Dry Weight Percent Passing

3/8"	100
1/4"	90 - 100
No. 8	70 - 100
No. 35	0 - 30

C. Organic Content by Ash Analysis:

90 - 100 Percent Dry Weight

D. Chemistry Range:

1. Saturation Extract Conductivity (ECc) Nil - 3.5

2. Reaction (pH) 6-8

E. Salinity: Maximum saturation extract conductivity 3.5 millimhos per cm @ 25 degrees centigrade.

2.4 SAND:

A. Physical Properties - Grading:

U.S. Sieve Percent Passing

No. 4 100

No. 10	95 - 100
No. 18	90 - 100
No. 35	65 - 100
No. 60	0 - 50
No. 140	0 - 20
No. 270	0 - 7

B. Chemistry: Range:
1. Saturation Extract Conductivity (ECc) Nil - 3.0
2. Sodium Absorption Ratio (SAR) Nil - 6.0
3. Boron - ppm in saturation extract solution Nil - 3.0
4. Reaction (pH) 6.0 - 7.5
5. Available calcium - sodium acetate extractable - ppm dry weight Nil – 4000
6. Soluble-Salt Content: 1 to 2dS/m measured by electrical conductivity
7.

C. Coarse Sand – concrete sand

2.5 COMPOST:

Made from recycled natural materials screened to 1” minus (for soil additive). On the Solvita compost maturity test score, must score a value of 5 or higher for tilling into the soil and be a minimum of 6 months old and fully composted. Supplied by Nature’s Way Resources, Inc., Conroe, Texas or approved equal.

A. Chemical components:
1. pH - 6.0-8.0
2. Nitrogen – 30 ppm or higher
3. Phosphorus – 150 ppm or higher
4. Potassium – 400 ppm or higher
5. Calcium – 3000 ppm or higher
6. Magnesium – 250 ppm or higher
7. Salinity – 2500 ppm or lower
8. Zinc – 6 ppm or higher
9. Iron – 25 ppm o higher
10. Manganese – 16 ppm or higher
11. Copper – 0.4-2.0 ppm
12. Sodium – 1000 ppm or less
13. Sulfur – 25 ppm or higher
14. Boron – 2 ppm or higher

B. Biological components:
1. Bacteria – minimum of 150 micrograms per gram of soil of total bacteria
2. Fungus – minimum of 150 micrograms per gram of soil of total fungus
3. Protozoa
   a. flagellates – 10,000 units per gram of soil
   b. amoebae – 10,000 units per gram of soil
   c. ciliates – 20 units per gram of soil

2.6 CHEMICAL ADDITIVES (OR EQUIVELANTS):

The following soil components listed may have a particular application specified within this Section. Some of the soil components included shall be applied at rates determined by the soil tests called for under other paragraphs of this Section or as a result of soil tests. Some

of the components may not be required by the soils tests. All additives shall be the slow release type.

A. Ground Limestone: Agricultural limestone containing not less than eighty five (85%) percent of total carbonates, ground to such fineness that fifty (50%) percent will pass a 100 mesh sieve and ninety (90%) percent will pass a 20 mesh sieve.

B. Dolomite Lime: Agricultural grade mineral soil conditioner containing thirty five (35%) percent minimum magnesium carbonate and forty nine (49%) percent minimum calcium carbonate, 100 percent passing #65 sieve. Kaiser Dolomite 65 AG or approved equal.

C. Gypsum: Agricultural grade product containing eighty (80%) percent minimum calcium sulphate.

D. Iron Sulphate (Ferric or Ferrous): Shall contain thirty (30%) to thirty five (35%) percent iron, thirty five (35%) to forty (40%) percent sulphur and be supplied by a commercial fertilizer supplier.

E. Sulphate of Potash: Agricultural grade containing fifty (50%) percent to fifty three (53%) percent of water soluble potash.

F. Single Superphosphate: Commercial product containing nineteen (19%) to twenty (20%) percent available phosphoric acid.

G. Ammonium Sulphate: Commercial product containing approximately twenty one (21%) percent ammonia.

H. Calcium Nitrate: Agricultural grade containing fifteen and one-half (15 1/2%) percent Nitrogen.

I. I.B.D.U. (Iso Butyldiene Diurea): Commercial product containing thirty one (31%) percent Nitrogen.

J. Soil Sulphur: Agricultural grade sulphur containing a minimum of ninety six (96%) percent sulphur.

K. Iron Chelate Micronutrient: Sequestrene - 330 Fe; 0-0-0; ten (10%) percent Fe; Ciba-Geigy Company.

2.7 FERTILIZERS AND NUTRIENT AMENDMENTS: all 100% organic

A. Fertilizer: MicroLife organic fertilizer as supplied by San Jacinto Environmental Supplies, Houston, Texas or approved equal.

B. Minor and Trace Elements: Humates Plus 0-0-4 as supplied by San Jacinto Environmental Supplies, Houston, Texas or Green Sand as supplied by Nature's Way Resources, Inc. or approved equals.

PART 3 EXECUTION

PLANTING

3.1 LAWN AND NATIVE SEED AREAS – Hydromulch and Sod

A. After finish grade approval and before laying sod or spreading seed apply:

1. 2” layer of compost uniformly across area
2. 20# of MicroLife 6-2-4 fertilizer per 1,000 sq. ft.
3. 10# of MicroLife humates plus 0-0-4 trace elements per 1,000 sq. ft.
4. After laying sod or spreading seed, foliar spray the entire area with 8ox of MicroLife Super Seaweed mixed with a gal of water. Each gallon of mix to cover 1,000 sq. ft.

B. Disk or till into the soil to a depth of 2”-4” until the amendments are fully incorporated before seeding and/or planting (See Section 32 92 00).

3.2 SHADED GROUNDCOVER AREAS

A. After finish grade approval apply:
1. 1” layer of Compost uniformly across area
2. 3” (in) Planting Soil
3. 40# of MicroLife ultimate 8-4-6 fertilizer per 1,000 sq. ft.
4. 10# of MicroLife humates plus 0-0-4 trace elements per 1,000 sq. ft.

B. Disk or till into the soil to a depth of 4” until the amendments are fully incorporated before groundcover planting (See Section 32 92 00).

3.3 TREE PLANTING AREAS (Within Tree Excavation Pit)

A. After finish grade approval before mulching apply:
1. Backfill with a 50/50 blend of existing topsoil and Planting Soil
2. For every 15 gal. tree size, add 6 oz. MicroLife Ultimate 8-4-6
3. 3 oz of JRM Mycorrhizal Tree Transplant
4. 2 oz of MicroLife Super Seaweed mixed with a gal. of water. Use 2 gal. of mixed solution per 15-gal. tree size

3.4 SUNNY GROUNDCOVER AND PERENNIAL AREAS

A. After finish grade approval apply:
1. 4”(in) Planting Soil
2. 40# of MicroLife ultimate 8-4-6 fertilizer per 1,000 sq. ft.
3. 10# of MicroGro Granular per 1,000 sq. ft.
4. 2 oz of MicroLife Maximum Bloom 3-8-3 mixed with a gal. of water as a new plant/root stimulator. Water soak the area sufficiently to get uniform saturation.

B. Disk or till into the soil to a depth of 6” until the amendments are fully incorporated before planting (See Section 32 93 00).

3.5 SHRUB PLANTING

A. After finish grade approval before mulching apply:
1. 4”(in) Planting Soil
2. 40# of MicroLife ultimate 8-4-6 fertilizer per 1,000 sq. ft.

B. Disk or till into the soil to a depth of 6” until the amendments are fully incorporated before planting (See Section 32 93 00).

3.6 EXISTING TREES (12”+ cal.)

A. Once a year treatment

1. 2 gal. of MicroLife Bio-Matrix 7-1-3
2. 6 oz of JRM Mycorrhizal Injectables per 100 gal. of water

WEED CONTROL/TREATMENT

A. All site locations to receive planting where weeds exist, shall be treated with post-emergent herbicide.
   1. Repeat treatment as required to ensure that no weeds are present at the beginning of work on the landscape planting of the Project.

B. Weeds shall not be present at the date of inspection for Substantial Completion of the Project and at the conclusion of the maintenance and establishment period following acceptance of the Contractor's work.

C. Post-emergent weed treatment includes:
   1. Removal of weeds and other undesirable ground cover vegetation in turf/grass and planting areas shall be accomplished a minimum of 14 days prior to soil preparation for planting operations.
   2. Care shall be taken not to affect existing trees, shrubs, and plants on and near the site.

D. Pre-Emergent Herbicide treatment:
   1. Apply per manufacturers distribution rate prior to mulching and directly after mulching.
   2. Snapshot, Princep or Specticle are approved Pre-Emergents. Contractor to submit product for approval.

END OF SECTION 32 91 00

SECTION 32 92 00 - LAWNS AND GRASSES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes
1. Hydromulch Seeding and Soil Supplements
2. Dry Application Seeding.
3. Solid Sod Installation

B. Related Sections
1. Finish Grading - Section 31 2215
2. Planting - Section 32 9300
3. Landscape Maintenance - Section 32 9400

1.2 QUALITY ASSURANCE

A. Source:
1. Seed: The Owner's representative shall be furnished a signed copy of statement from vendor, certifying that each container of seed delivered is labeled in accordance with the Federal Seed Act and is at least equal to requirements previously specified. Seed analysis shall be furnished prior to commencement of planting operations. Each lot of seed may be resampled and retested in accordance with latest Rules and Regulations under the Federal Seed Act at the discretion of the Owner's representative. If these tests reveal the seed to be below the specified pure live seed content, the Contractor shall be required to plant additional seed to compensate for the deficiency at no additional cost to the Owner. The State Seed Laboratory will conduct the seed retests. Allowance will be made for the actual pure live seed content of the specified grasses in determining the actual planting rate.

B. Inspections:
1. Make written request for inspection after seeding operations have been completed. Such inspection is for the purpose of establishing the Maintenance Period.
2. Submit written requests for inspections to the Owner's representative at least 7 days prior to anticipated inspection date.

1.3 SUBMITTALS

A. Furnish required copies of manufacturers literature, certifications, or laboratory analytical data for the following items:
1. Seed source. (Certification)
2. Fiber mulch. (Laboratory analytical data)
3. Tank mix fertilizer. (Certification or laboratory analytical data)
4. Topdress fertilizer. (Certification)

1.4 MAINTENANCE BY THE CONTRACTOR (refer to section 32 94 00)

1.5 FINAL ACCEPTANCE

A. Work under this Section will be accepted by Owner's representative upon satisfactory completion of all work, but exclusive of re-application under the Guarantee Period. Final Acceptance of lawn or prairie establishment shall be as follows:

1. For Sod: Complete lush cover with no brown sections or cracks showing. Sod shall have established to the extent that satisfactory capillary action between the sod and soil has been established.
2. For Lawn Seed: 95% uniform coverage of grass in excess of 1" height. No bare spots of greater than 2 square feet will be accepted.
3. For Native Seed: 90% coverage of plants in excess of 6" height. No bare spots greater than 2 square feet will be accepted.
4. The Owner's representative and/or Owner shall interpret the above. Upon Final Acceptance, the Owner will assume the responsibility for maintenance of the work.
5. If the seeding season for Native Grass Mix is missed due to the wrong season for proper germination and grow-in, the contractor is required to return to the project site and apply seed the following appropriate season at no additional cost to the owner. **Native seed shall be installed March-June.**

PART 2 - PRODUCTS

2.1 SEED

A. All seed used shall be labeled in accordance with U.S. Department of Agriculture Rules and Regulations under the Federal Seed Act. All seed shall be furnished in sealed standard containers unless exception is granted in writing by the Owner's representative. Seed which has become wet, moldy, or otherwise damaged in transit or in storage will not be acceptable.

B. The minimum percentage by weight of pure live seed in each lot of seed shall be as follows and seed shall be planted at the rate per acre indicated under pure live seed required per acre.

Kind of Seed	Minimum % Pure Live Seed Required	Pounds Pure Live Seed Required Per Acre
MEADOW MIX TALL (By Native American Seed)	95	20
MEADOW MIX SHORT (By Native American Seed)	95	20
COMMON BERMUDA	95	20

Note: % Pure Live Seed = % Purity X % Germination

C. Weed seed shall not exceed 10% by weight of the total of pure live seed and other material in the mixture. Johnson grass, nut grass, or other noxious weed seed will not be allowed.

D. If Native American Seed Mixes seeding seasons are missed the contractor will be required to seed Perennial Rye at a rate of 15 pounds per acre and return the following season to install the specified grass at no cost to the owner.

2.2 FERTILIZER FOR TANK MIX

A. MicroLife Multi-Purpose 6-2-4, pelleted, uniform in composition, free-flowing, and suitable for application with approved equipment. The fertilizer shall be delivered to the site in bags or other convenient containers, each fully labeled, conforming to the applicable state fertilizer laws, and bearing the name or trademark and warranty of the producer.

2.3 WOOD CELLULOSE FIBER MULCH

A. Wood Cellulose fiber mulch, for use with the hydraulic application of grass seed and fertilizer, shall consist of specially prepared wood cellulose fiber. It shall be processed in such a manner that it will not contain germination or growth inhibiting factors. It shall be dyed an appropriate color to allow visual metering of its application. The wood cellulose fibers shall have the property of becoming evenly dispersed and suspended when agitated in water. When sprayed uniformly on the surface of the soil, the fibers shall form a blotter-like groundcover which readily absorbs water and allows infiltration to the underlying soil. Weight specifications from suppliers for all applications shall refer only to air dry weight of the fiber, a standard equivalent to 18% moisture. The mulch material shall be supplied in packages having a gross weight not in excess of 100 pounds and be marked by the manufacturer to show the dry weight content. Suppliers shall be prepared to certify that laboratory and field testing of their product has been accomplished and that it meets all of the foregoing requirements.

2.4 WATER

A. Drinkable, directly from local utility supply.

2.5 SLURRY MIX COMPONENTS PER ACRE

A. Wood Cellulose Fiber Mulch 2,000 pounds

B. Grass Seed (as specified)

C. Fertilizer (13-13-13) 800 pounds

2.6 SOD

A. One year old sod, ref. planting schedule for sod selection. Sod shall be dense with the grass having been mowed at 1" height before lifting from field. All grown on fumigated soil. Sod shall be in vigorous condition, dark green in color, free of disease and harmful insects. Do not stack for more than 24 between time of cutting and time of delivery. Owner's representative reserves the right to reject any sod deemed unacceptable for installation.

2.7 TOPDRESS FERTILIZER

A. (Delayed Application) Complete fertilizer, 50% of the nitrogen shall be derived from natural organic sources or urea-form. Available phosphoric acid shall be from superphosphate, bone, or tankage. Potash shall be derived from muriate of potash containing 60% potash. Apply at rate to achieve 1.5 # N/1000sf.
1. 16% Nitrogen
2. 6% Phosphoric Acid
3. 8% Potash

2.8 TOPDRESS MIX

A. Topdressing under existing trees shall be:
1. 2/3 Cubic Yard Planting Soil-Ref. 32 9100
2. 1/3 Cubic Yard Sand-Ref. 32 9100

PART 3 - EXECUTION

3.1 HYDROMULCH SEEDING OF BERMUDA GRASS AND PRAIRIE SEED ON PREPARED FINISHED GRADE

A. Bed Preparation:

1. Ref. Soil Preparation 32 91 00
2. Rake or Harrow 3”-4” deep

B. Hydroseeding:
   1. Immediately after the finished grade has been approved, begin hydroseeding operation to reduce excessive weed growth.

C. Perimeter Sodding:
   1. Install two courses of sod at perimeter of area to receive hydroseeding. Install in compliance with requirements of “SODDING ON PREPARED FINISHED GRADE” requirements below.

D. Special Mulching Equipment and Procedures:
   1. Hydraulic equipment used for the application of fertilizer, seed, and slurry of prepared wood fiber mulch shall have a built-in agitation system with an operating capacity sufficient to agitate, suspend, and homogeneously mix a slurry containing up to 40 pounds of fiber plus a combined total of 70 pounds of fertilizer solids for each one 100 gallons of water. The slurry distribution lines shall be large enough to prevent stoppage. The discharge line shall be equipped with a set of hydraulic spray nozzles, which provide even distribution of the slurry on the slopes to be seeded. The slurry tank shall have a minimum capacity of 800 gallons and shall be mounted on a traveling unit which may be either self-propelled or drawn with a separate unit which will place the slurry tank and spray nozzles within sufficient proximity to the areas to be seeded so as to provide uniform distribution without waste. The Owner’s representative may authorize equipment with smaller tank capacity provided that the equipment has the necessary agitation system and sufficient pump capacity to spray the slurry in a uniform coat.

E. Mixing:
   1. Care shall be taken that the slurry preparation takes place on the site of the work. The slurry preparation should begin by adding water to the tank when the engine is at half throttle. When the water level has reached the height of the agitator shaft, good re-circulation shall be established and seed shall be added. Fertilizer shall then be added, followed by wood pulp mulch. The wood pulp mulch shall only be added to the mixture after the seed and when the tank is at least one-third filled with water. The engine throttle shall be opened to full speed when the tank is half filled with water. All the wood pulp mulch shall be added by the time the tank is two-thirds to three-fourths full. Spraying shall commence immediately when the tank is full. The operator shall spray the area with a uniform, visible coat by using the green color of the wood pulp as a guide.

F. Application:
   1. Obtain approval of hydromulch area preparation from the Owner’s representative prior to application.
   2. Operators of hydromulching equipment shall be thoroughly experienced in this type of application. Apply specified slurry mix in a motion to form a uniform mat at specified rate.
   3. Keep hydromulch within areas designated and keep from contact with other plant material.
   4. Slurry mixture which has not been applied within 4 hours of mixing shall not be used and shall be removed from the site.
   5. After application, do not operate equipment over the covered area.
   6. Immediately after application, thoroughly wash off any plant material, planting areas, or paved areas not intended to receive slurry mix. Keep all paved and planting areas clean during maintenance operations.

7. Refer also to the maintenance portion of this Section.

G. Unseeded Areas: Reseed unplanted areas with the specified grasses at no additional cost to the Owner.

3.2 DRY APPLICATION SEEDING FOR NATIVE GRASS/BERMUDA GRASS MIXES

A. Seed Bed Preparation:
1. Ref. Soil Preparation 32 91 00
2. Rake or Harrow 3”-4” deep

B. Seeding:
1. Plant seed with a broadcast seeder or a Culti-packer seeder. Plant grass seed no deeper than ¼ inch and the distance between rows 12 inches or less. Distribute seed evenly.
2. Roll the planted seedbed with a Culti-packer immediately after seeding and prior to applying mulch cover.
3. Seed may be broadcast by hand for small areas or areas inaccessible to seeding equipment, as approved by the Engineer. Areas seeded by hand shall be rolled or lightly compacted, if possible.

C. Mulching:
1. Spread straw or hay mulch on seeded areas with a slope steeper than 8H:1V immediately after application of seed.
2. Apply straw or hay mulch at a rate per acre of 2000lbs., to create a uniform mat of coverage a minimum of ½ inch thick to protect the seedbed.
3. Secure straw or hay mulch with hydromulch or other approved methods.
   a. Apply a hydromulch, consisting of a homogeneous aqueous mixture of recycled paper fiber, water and tackifier or soil stabilizer, to achieve a rate of 1,000 pounds of paper fiber mulch per acre over the straw mulch. Apply guar gum tackifier at a minimum rate of 50 pounds (dry weight) per acre.
   b. Application rate for other tackifier or soil stabilizer compounds shall be in accordance with the manufacturer’s recommendations and approved by the Engineer.

3.3 SODDING ON PREPARED FINISHED GRADE

A. Bed Preparation:
1. Ref. Soil Preparation 32 91 00
2. Immediately after the finished grade has been approved, begin sodding operations to reduce excessive weed growth. If sod bed is dry immediately prior to sod installation, dampen surface with a fine mist of water.

B. Installation:
1. Lay sod so that adjacent strips butt tightly with no spaces between strips. Lay sod on mounds and slopes with strips parallel to contours. Stagger joints. Sodded areas shall be flush with adjoining seeded areas. At walks and pavements lay one strip of sod parallel to pavement and make cuts at this strip. At back of curb there shall be a double sod strip totaling 36” so that it can be maintained with a 36” wide mower deck.
2. Tamp and roll sod thoroughly to make contact with sod bed.
3. Peg sod on slopes three to one or steeper with pegs driven through sod into soil until pegs are flush with turf. Space pegs 18” on center. Pegs shall be 1" square by 6" pine or 6" lengths of lath.
4. Water sod thoroughly immediately after fertilizing.

5. Roll sod with 200 lb ballast roller immediately after sod has been installed and watered.

3.4 CLEAN UP

A. Keep all areas of work clean, neat, and orderly at all times. Keep all paved areas clean during lawn installation operations. Clean up and remove all deleterious materials and debris from the entire work area prior to Final Acceptance to the satisfaction of Owner's representative.

3.5 INSPECTIONS

A. Make written request for inspection prior to seeding and after areas have been seeded and sodded.

B. Submit requests for inspections to Owner's representative at least 2 days prior to anticipated inspection date.

END OF SECTION 32 92 00

SECTION 32 92 23
SODDING FOR EROSION CONTROL

1. DESCRIPTION:

"Sodding for Erosion Control" shall consist of providing and planting Bermuda grass or other acceptable sod along or across such areas as are designated on the plans and in accordance with specification requirements herein outlined.

2. MATERIALS:

The sod shall consist of live, growing Bermuda grass or other acceptable sod secured from sources where the soil is fertile. Bermuda sod shall have a healthy, virile root system of dense, thickly matted roots throughout the soil of the sod for a thickness of at least three inches (3"). St. Augustine sod shall have a healthy, virile root system of dense, thickly matted roots throughout the soil of the sod for a minimum thickness of one inch (1"). The Contractor shall not use sod from areas where the grass has been thinned, nowhere the grass roots have been dried out by exposure to the air and sun to such an extent as to damage its ability to grown when transplanted. The sod shall be free from noxious weeds or other grasses and shall not contain any matter deleterious to its growth or which might affect its subsistence or hardiness when transplanted. Unless the area has been closely pastured, it shall be closely mowed and ranked to remove all weeds and long-standing stems. Sources from which sod is to be secured shall be approved by the Engineer.

Care shall be taken at all times to retain the native soil on the roots of the sod during the process of excavating, hauling, and planting. Sod material shall be kept moist from the time it is dug until planted. When so directed by the Engineer, the sod existing at the source shall be watered to the extent required prior to excavating.

2.1 Planting Season:

All planting shall be done between the average date of the last freeze in the spring and six weeks prior to the average date for the first freeze in the fall according to the Texas Almanac or U.S. Weather Bureau for the area in which the project is located, except as specifically authorized in writing.

2.2 Fertilizer:

Fertilizer shall conform to the requirements of Texas Department of Transportation Standard Specification Item 166, "Fertilizer." The fertilizer shall be standard pelleted or granulated commercial fertilizer supplied separately or in mixture containing the percentages of total nitrogen, available phosphorus acid, and water-soluble potash at the rate of 13-13-13. The fertilizer shall be applied at the rate of three hundred (300) pounds per acre.

2.3 Straw Mulch:

Straw mulch shall be oat, wheat, or rice straw, prairie grass, Bermuda grass, or other hay approved by the Engineer. The hay shall be free of Johnson grass or other noxious weeds and foreign materials. It shall be kept in a dry condition and shall not be molded or rotted.

2.4 Asphaltic Material:

Asphaltic material shall be of the type and grade shown on the plans and shall conform to the requirements of Texas Department of Transportation Standard Specification Item 300, "Asphalts, Oils, and Emulsions."

3. CONSTRUCTION METHODS:

After the designated areas have been completed to the lines, grades, and cross-sections shown on plans and as provided for in other items of this contract, sodding of the type specified shall be performed in accordance with the requirements hereinafter described.

3.1 Watering:

The sodded areas shall be watered at such times and in the manner and quantity as directed by the Engineer.

3.2 Finishing:

Where applicable, the shoulders, slopes and ditches shall be smoothed after planting has been completed and shaped to conform to the desired cross-sections. Any excess dirt from planting operations shall be spread uniformly over adjacent areas or disposed of as directed by the Engineer so that the completed surfaces will present a neat appearance.

4. SPOT SODDING:

4.1 Bermuda:

Furrows parallel to the roadway and approximately five inches (5") deep and eighteen inches (18") on centers shall be opened on areas to be sodded. In two furrows adjacent to the roadways, sod shall form a continuous row not less than three inches (3") wide. In all other furrows, sod approximately three inches (3") square shall be placed on fifteen inch (15") centers.

Unless otherwise indicated on the plans, fertilizer shall be applied uniformly in the furrows or rows in accordance with the applicable provisions of Texas Department of Transportation Standard Specification Item 166, “Fertilizer.”

4.2 St. Augustine:

Prior to planting, the area to be sodded shall be reshaped by blading or other approved methods to the final finish desired. St. Augustine grass sod shall be not less than three inches (3") square and shall be planted on a maximum of eighteen inch (18") centers. Planting of the sod may be in furrows of uniform depth or in holes of like depth. Sod shall be placed so that when it has been firmed against the bottom of the furrow or hole, the top of the sod shall not be more than 1/2 inch below finished grade. Soil shall be firmed against all sides of the sod and covering of the sod will not be permitted except for small amounts of soil incidental to raking or leveling provided the quantity of soil is not enough to hinder growth in the opinion of the Engineer. Unless otherwise indicated on the plans, fertilizer shall be applied uniformly in the furrows or holes in accordance with the applicable provisions of Texas Department of Transportation Standard Specification

Item 166, "Fertilizer."

5. BLOCK SODDING:

At locations shown on plans or where directed, sod blocks shall be carefully placed on the prepared areas. The fertilizer shall then be applied in accordance with the applicable provisions of the Item, "Fertilizer" and thoroughly watered. When sufficiently dry, the sodded area shall be rolled or tamped to form a thoroughly compacted, solid mat. Any voids left in the block sodding shall be filled with additional sod and tamped. Surfaces of block sod, which, in the opinion of the Engineer, may slide due to the height and slope of the surface or nature of the soil, shall upon direction of the Engineer, be pegged with wooden pegs driven through the sod blocks into firm earth sufficiently close to hold the block sod firmly in place. Edges along curbs and drives, walkways, etc., shall be carefully trimmed and maintained until accepted.

6. GRASS RETARDS:

Trenches shall be excavated across the side ditches or along the side or back slopes to the lines and dimensions shown on plans. After the trenches have been prepared, they shall be filled with sod blocks to an elevation flush with the adjacent ground surface. The fertilizer shall then be applied in accordance with this section. When sufficiently dry, the sodded area shall be rolled or tamped to form a thoroughly compacted, solid mat. Any voids left between the sod blocks shall be filled with additional sod and tamped.

7. BROADCAST SPRIGGING:

Except on areas recently loosened by construction, all ground on which sprigging is to be placed shall be loosened by disking or other approved methods to a depth of not less than four inches (4"). All large clods shall be pulverized and boulders, rocks or other debris shall be removed as directed. The Contractor shall take full advantage of weather conditions, but the work may be suspended when, in the judgment of the Engineer, the continuation of the same may result in unfavorable planting conditions.

The sod source shall be disked in two directions, cutting the sod thoroughly to a depth of approximately four inches (4"), which shall be the maximum depth of excavation. The disked sod may be windrowed, or otherwise handled in a manner satisfactory to the Engineer. Sod material shall be loaded in such manner as to avoid taking soil containing no roots. The material shall be rejected if not kept in a moist condition.

The sod shall be uniformly spread over the prepared area at the rate of approximately one (1) cubic yard per twenty-four (24) square yards of area. Fertilizer shall be uniformly distributed over the area in accordance with the applicable provisions of the Item, "Fertilizer". The area shall then be disked immediately in order to thoroughly incorporate the grass with the soil. Then the area shall be finished in accordance with Article 3 and the planted area shall be rolled with a corrugated roller of the "Cultipacker" type. All rolling of slope areas shall be on the contour.

8. MULCH SODDING:

The sod source shall be disked in two directions, cutting the sod thoroughly to a depth of not less than four inches (4"). Sod material shall be excavated to a depth of not less than four inches (4") or more than ten inches (10"), being careful to avoid having soil containing no grass roots. The disked sod may be windrowed, or otherwise handled in a manner satisfactory to the Engineer.

The material shall be rejected if not kept in a moist condition.

Prior to placing mulch sod, the cut slopes shall be scarified by plowing furrows four inches (4") to six inches (6") deep along horizontal slope lines at two foot (2') vertical intervals. Excavated material from the furrows shall not protrude more than three inches (3") above the original surface of the cut. Fertilizer shall be distributed uniformly over the area in accordance with the applicable provisions of the Item "Fertilizer". The sod shall then be dumped upon the prepared area and spread uniformly to the required approximate thickness shown on plans.

Any section not true to lines and cross-sections shall be remedied by the addition of sod material or by reshaping the material to meet the requirements of "Finishing" in Article 3. After the sod material has been spread and shaped, it shall be compacted with a corrugated roller of the "Cultipacker" type. All rolling of slope areas shall be on the contour.

9. STRAW MULCH:

Where applicable, "Spot Sodding", "Broadcast Sprigging" and "Mulch Sodding" shall have straw mulch spread uniformly over the area indicated on plans or as directed by the Engineer. The rate of application shall be 1-1/2 to 2 tons of hay or 2 to 2-1/2 tons of straw per acre. A mulching machine approved by the Engineer shall be equipped to inject asphaltic material uniformly into the straw as it leaves the equipment at a rate of 0.05 to 0.10 gallons of asphalt per square yard of mulched area or as directed by the Engineer. If the straw and asphalt are placed by hand, then the rate of application for asphalt shall be approximately 0.15 gallons per square yard of mulched area.

10. MEASUREMENT:

Work and acceptable material for "Spot Sodding", Block Sodding", "Grass Retards", "Straw Mulch", will be measured by the square yard complete in place. Work and acceptable material for "Broadcast Sprigging" and "Mulch Sodding" will be measured by the square yard complete in place.

11. WARRANTY:

The contractor will guarantee a ninety-five percent (95%) cover of grass species planted. The Contractor will not have liability if the stand of grass is destroyed by a natural disaster, such as a flood.

END OF SECTION

SECTION 32 93 00 - PLANTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Plants.
2. Tree stabilization.
3. Tree-watering devices.
4. Landscape edgings.
5. Landscape mulches and gravels

B. Related Requirements:
1. Section 32 9200 "Lawns and Grasses" for turf (lawn) and meadow planting, hydroseeding, and erosion-control materials.
2. Section 32 9100 “Soil Preparation”

1.2 COORDINATION

A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
2. Plant Photographs: Include color photographs in digital format of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.
3. Irrigation inspection tube and cap materials.
4. Fertilizer tablets for tree installation

B. Samples for Verification: For each of the following:

1. Mulch: 1-quart volume of mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.

2. Planting Soil Mix: 1-quart volume of mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
3. Weed Control Barrier: 12 by 12 inches.
4. Edging Materials and Accessories: Manufacturer's standard size, to verify color selected.
5. Tree Staking Materials and Accessories: post, hose, and webbing (sample of each)

1.4 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.

1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
2. Experience: Three years' experience in landscape installation in addition to requirements in Section 01 4000 "Quality Requirements."
3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
4. Personnel Certifications: Installer's field supervisor shall have certification in one of the following categories from the Professional Landcare Network:

    a. Landscape Industry Certified Technician - Exterior.
    b. Landscape Industry Certified Interior.
    c. Landscape Industry Certified Horticultural Technician.

5. Pesticide Applicator: State licensed, commercial.

B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.

1. Selection of plants shall be made by Architect, who tags plants at their place of growth before they are prepared for transplanting.

C. Plant Material Observation: Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1. Notify Architect of sources of planting materials seven days in advance of delivery to site.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.

C. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.

D. Handle planting stock by root ball.

E. Store bulbs, corms, and tubers in a dry place at 60 to 65 deg F until planting.

F. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

G. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

H. Deliver plants after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.

1. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
2. Do not remove container-grown stock from containers before time of planting.
3. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.6 FIELD CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

B. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.7 WARRANTY

A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.

2. Warranty Periods: From date of Substantial Completion.

a. Trees: 1 year.
b. Shrubs, Vines, Ornamental Grasses, Ground Covers, Biennials, Perennials, and Other Plants: 1 year
c. Sod:1 year
d. Annuals: Three months.

3. Include the following remedial actions as a minimum:

a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.
d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch in diameter; or with stem girdling roots are unacceptable.

B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.

D. Annuals: Provide healthy, disease-free plants of species and variety shown or listed, with well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery.

2.2 FERTILIZERS

A. Trees: Ref 32 9100 “Soil Preparation” for fertilizer selection

B. Shrub, groundcover, annuals and perennials: MicroLife all organic fertilizer as supplied by San Jacinto Environmental (713) 957-0909. Apply at mfg. max. recommended rates. Ref. Section 32 9100- “Soil Preparation”

2.3 MULCHES

A. Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:

1. Type: Hardwood mulch
2. Grind: 1.5”x2”max, Double Ground
3. Color: Natural (Brown)
4. Depth: 1.5” min 3.5” maximum

B. Compost: Ref 32 9100 “Soil Preparation”

2.4 WEED-CONTROL BARRIERS

A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.

B. Miriafi 140 NL as manufactured by Nicolon Mirafi Group, Pendergrass, GA, (888) 795-0808 or approved equal.

2.5 PESTICIDES

A. General: Pesticide registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer. Cross reference with 32 9100-Soil Preparation

C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.6 TREE-STABILIZATION MATERIALS

A. Stakes and Guys:

Contractor shall use staking materials necessary to meet requirements of specifications, subject to approval:

1. Tree Stakes: 7' & 8’ long steel T-post weighing 1.33 pounds per foot.
2. Paint for Stakes: Pittsburgh Paint No. 515-5 Stonehenge Greige.
3. Tie Webbing: Tree Tie Webbing by AM Leonard-Green
4. Rootball Fixing Sub Surface Anchors: Platipus Anchors RF2P 3-Leg

2.7 LANDSCAPE EDGINGS

A. Concrete Edging: Ref. Materials Schedule

2.8 MISCELLANEOUS PRODUCTS

A. Root Barrier: Black, molded, modular panels manufactured with 50 percent recycled polyethylene plastic with ultraviolet inhibitors, 85 mils thick, with vertical root deflecting ribs protruding 3/4 inch out from panel, and each panel 24 inches wide.

B. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.

C. Burlap: Non-synthetic, biodegradable.

D. Planter Drainage Gravel: Washed, sound crushed stone or gravel complying with ASTM D 448 for Size No. 8.

E. Planter Filter Fabric: Nonwoven geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.

F. Mycorrhizal Fungi: Dry, granular inoculants containing at least 5300 spores per lb of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb of ectomycorrhizal fungi, 33 percent hydrogel, and a maximum of 5.5 percent inert material.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive plants for compliance with requirements and conditions affecting installation and performance.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Do not mix or place soils and soil amendments in frozen, wet, or muddy conditions.
3. Suspend soil spreading, grading, and tilling operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable, and which is too dusty.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.

D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

E. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

F. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

3.3 PLANTING AREA ESTABLISHMENT

A. Loosen subgrade of planting areas to a minimum depth of 8 inches. Remove stones larger than 1 inch in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

1. Apply fertilizer directly to subgrade before loosening.
2. Thoroughly blend planting soil off-site before spreading.

    a. Delay mixing fertilizer with planting soil if planting will not proceed within a few days.
    b. Mix lime with dry soil before mixing fertilizer.

3. Spread planting soil to a depth indicated on the Drawings.

    a. Spread approximately one-half the thickness of planting soil over loosened subgrade. Mix thoroughly into top 2 inches of subgrade. Spread remainder of planting soil.

B. Finish Grading: Grade planting areas to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

D. Application of Mycorrhizal Fungi: At time directed by Architect, broadcast dry product uniformly over prepared soil at maximum application rate recommended by manufacturer.

3.4 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are not acceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
1. Excavate at least 12 inches wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
2. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
3. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
4. Maintain required angles of repose of adjacent materials as shown on the Drawings. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
5. Maintain supervision of excavations during working hours.
6. Keep excavations covered or otherwise protected when unattended by Installer's personnel.
7. If drain tile is shown on Drawings or required under planting areas, excavate to top of porous backfill over tile.

B. Follow Soil Preparation Execution. Ref. 03 9100

C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.

1. Hardpan Layer: Drill 6-inch- diameter holes, 24 inches apart, into free-draining strata or to a depth of 10 feet, whichever is less, and backfill with free-draining material.

D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

A. Before planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

B. Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

C. Set balled and burlapped stock plumb and in center of planting pit or trench with root flare 2 inches above adjacent finish grades.

1. Use Blended Planting Soil for backfill. Follow Soil Preparation Specification. Ref. 329100
2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Follow Soil Preparation Specification. Ref. 039100 for fertilization.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.

D. Set balled and potted, and container-grown stock plumb and in center of planting pit or trench with root flare 2 inches above adjacent finish grades.

1. Use Blended Planting Soil for backfill. Follow Soil Preparation Specification. Ref. 329100
2. Carefully remove root ball from container without damaging root ball or plant.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Follow Soil Preparation Specification. Ref. 039100 for fertilization.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.

3.6 TREE, SHRUB, AND VINE PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.

B. Prune, thin, and shape trees, shrubs, and vines as directed by Architect.

C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.

D. Do not apply pruning paint to wounds.

3.7 TREE STAKING

A. Staking of trees is to be used by the Contractor, who will be responsible for material remaining plumb and straight for all given conditions through the guarantee period. Tree support shall be done as outlined on the following tables.

B. Staking shall be completed immediately after planting. Plants shall stand plumb after staking.

C. Stake all trees in accordance with the following table:

Tree	Stakes	Stake Size
15-45 Gal. and B&B under 3”	2	6 ft Post
65 Gal. and B&B 3”& larger	3	7 ft Post

D. Locate first stake on prevailing windward side of tree and as close to the main trunk as is practical, avoiding root injury. Stakes shall be driven at least 18" into firm ground.

E. Tie tree to stake using approved tree tie. Tie shall be located midway within tree crown or at a location approximately 2/3 of the overall height of the tree. Locate tie just above major side branch in order to deter slippage of tie.

F. Locate second stake opposite first. Secure with one tie opposite upper tie at first stake.

G. Auxiliary stem stakes shipped with trees shall be secured as above after shipping.

3.8 ROOT-BARRIER INSTALLATION

A. Install root barrier where trees are planted within 60 inches of paving or other hardscape elements, such as walls, curbs, and walkways unless otherwise shown on Drawings. Deep Root 24-2 or approved eq.

B. Align root barrier vertically and run it linearly along and adjacent to the paving or other hardscape elements to be protected from invasive roots.

C. Install root barrier continuously for a distance of 60 inches in each direction from the tree trunk, for a total distance of 10 feet per tree. If trees are spaced closer, use a single continuous piece of root barrier.

1. Position top of root barrier flush with finish grade.
2. Overlap root barrier a minimum of 12 inches at joints.
3. Do not distort or bend root barrier during construction activities.

4. Do not install root barrier surrounding the root ball of tree.

3.9 GROUND COVER AND PERRENIAL PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on the Drawings

B. Use planting soil for backfill. Follow soil preparation execution. Re. 329100

C. Dig holes large enough to allow spreading of roots.

D. For rooted cutting plants supplied in flats, plant each in a manner that will minimally disturb the root system but to a depth not less than two nodes.

E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.

F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.10 PLANTING AREA MULCHING

A. Mulch backfilled surfaces of planting areas and other areas indicated.

1. Trees and Tree-like Shrubs in Turf Areas: As indicated on the Drawings or 3”depth
2. Organic Mulch in Planting Areas: As indicated on the Drawings or 3”depth
3. Mineral Mulch in Planting Areas: As indicated on the Drawings

3.11 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings. Spray or treat as required to keep trees and shrubs free of insects and disease.

B. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.

C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

D. Reference the Maintenance Specification 329400 for further information.

3.12 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents in accordance with authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Pre-Emergent Herbicides (Selective and Non-Selective): Apply to tree, shrub, and ground-cover areas in accordance with manufacturer's written recommendations. Do not apply to seeded areas. Ref. 32 9100-Soil Preparation for clarifications.

C. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations. Ref. 32 9100-Soil Preparation for clarifications.

3.13 CLEANUP AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition.

B. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

C. After installation and before Substantial Completion remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

3.14 DISPOSAL

A. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

END OF SECTION 32 93 00

SECTION 32 94 00 - LANDSCAPE GROUNDS MAINTENANCE FOR NINETY (90) DAYS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS: The Drawings, Division 0 and Division 1 apply to work under this Section.

1.2 SCOPE OF WORK:

A. Work included in Base Bid:

1. Monitoring adjustment and minor repair of the landscape irrigation system.
2. Mowing, edging and trimming of lawn areas.
3. Mowing of Love Grass and Native Grass Plantings
3. Pruning and trimming of plant materials.
4. Weed, cultivating and cleaning of planting beds, turf areas, and Native grass areas..
5. General site clean up; removal of trash and products of maintenance.
6. Applications of fertilizers, ant control, insecticides and herbicides.
7. Pruning and trimming of trees.
8. Mulching trees, shrubs, groundcovers and seasonal color.
9. Extra services as needed.

B. Work Not Included in Base Bid: (Extra Service)

1. Street cleaning - other than that required as a result of maintenance operations.
2. Replacement of plant material - other than that required under the one year warranty requirement.
3. Compost amendment application
4. Aerating lawn areas.
5. Overseeding with cool-season grasses.
6. Application of pre/post emergents.
7. Additional clean-up and/or plant material replacement relating to natural weather events including hurricanes, tornadoes, severe thunderstorms, major rain events causing flooding, freezing temperatures, ice/ice storms, extended periods of draught and snow.

1.3 EXTRA SERVICES:

The intent of the ninety day maintenance period is to provide a comprehensive maintenance program to include all required services, except those services specifically excluded, to perform the work for the stated time period.

1. All services not included in the list of Base Bid items shall be considered 'extra services" and will be charged for separately according to the nature of the item of work. The consent and authorization of the Owner’s representative or their authorized representative must be obtained prior to the performance or installation of such "extra services" items and prior to purchase of any chargeable materials.

2. Such work may include replacement of dead plant materials other than what is already covered under the warranty period, major repairs of irrigation system, by-products of vandalism or other contracts or other site related work.

3. Application of pre/post emergents.

4. Authorized extra services work must be summarized weekly and submitted with receipts to the Owner's representative.

5. The Owner's representative is not bound by the specifications or contract to utilize the landscape maintenance contractor in the performance of "extra services" work.

6. The landscape maintenance contractor shall coordinate his activities with other contractors on the site so as to not hinder the performance of any work.

6. Authorized charges for extra work will be paid per the General Conditions of the Contract.

1.4 SUBSTITUTIONS:

A. Specific reference to manufacturer's names and products specified in this Section are used as standards, but this implies no right to substitute other material or methods without written approval of the Owner's representative. Such permission must be secured without additional cost to Owner's representative.

B. Installation of any approved substitution is Contractor's responsibility. Any changes required for installation of any approved substitution must be made to the satisfaction of and without additional cost to Owner's representative.

1.5 INTENT OF THE MAINTENANCE PROGRAM:

It is the intent of the maintenance program is to provide the Owner's representative with a project site that is attractive in appearance and keep all plant materials and lawns in a healthy and vigorous condition.

1.6 THE CONTRACT:

This Maintenance Contract is a period ninety days. The Contract can be terminated with cause.

1.7 CONTRACTORS PERFORMANCE:

The Contractor shall perform all work required once per week or as often as necessary to fulfill the spirit and intent of the Contract. The workmen shall be dressed in company uniforms and all required PPE (Personal Protective Equipment), and neat in appearance, perform their work in a professional manner, keep noise to a minimum and stage their work from a location on the site out of the way of the mainstream of the users. In general, the Contractor's presence on the site shall be as inconspicuous as possible.

1.8 COMMENCEMENT OF THE MAINTENANCE PERIOD:

This maintenance period shall become effective at the date of Substantial Completion.

1.9 NEGLECT AND VANDALISM:

1. Turf, shrubs, trees or plants that are damaged or killed due to contractors operations, negligence or chemicals shall be replaced at no expense to the Owner's representative. If plant damage or death is caused by conditions beyond the contractor's control, replacement shall be at the Owner's representative's expense.

2. Sprinklers or structures that are damaged due to the contractor's operations must be replaced by the contractor promptly. Likewise, damage to the irrigation system by others shall be corrected immediately by the contractor, at the Owner's representative's expense.

3. All water damage, either natural or man-made, resulting from contractor's neglect shall be corrected at the contractor's expense.

4. All damage to or thefts of landscaping and irrigation installations not caused or allowed by the contractor shall be corrected by the contractor at the Owner's expense upon receipt of written authorization to proceed.

1.12 EMERGENCIES:

1. The Contractor shall answer emergency or complaint calls within twelve (12) hours and corrective action shall be complete within twenty-four (24) hours.

2. The Contractor shall answer emergency calls regarding the Landscape Irrigation system failure or need of repair, and take corrective action within eight (8) hours. Such work, unless caused due to neglect on the part of the Landscape Maintenance Contractor, shall be considered "Extra Services".

1.13 JOB CONDITIONS:

A. Contractor shall be familiar with all site conditions.

1.14 RESTRICTIONS:

A. Do not use growth regulators or growth retardants or any chemicals that will have adverse effects on the organic fertilizers and soil conditioners utilized for this project.

PART 2 - PRODUCTS AND MACHINERY

2.1 MATERIALS:

Materials listed under this Section are expressly requested for use and does not prohibit or restrict the Contractor from providing other materials not listed in order to complete the work required herein.

1. Pre-Emergence Weed Control: Shall be Surflan A.S., Atrazine 4L or approved equal.

2. Post-Emergence Weed Control: Shall be Trimec Lawn Weed Killer, Sedge Hammer, Vantage, Image or approved equal.

3. Sufactant: Spreader Sticker shall be used with both pre and post emergence herbicides.

3. Herbicide: Shall be "Round Up", by Monsanto, St. Louis, Missouri.

4. Insecticide: Shall be Shall be "Astro Insecticide" as manufactured by FMC Corporation, Agricultural Products Group, 1735 Market Street, Philadelphia, PA 19103 (800.321.1362) or approved equal.

5. Fire Ant Control: Ortho Orthene Fire Ant Killer.

6. Compost: Made from recycled natural materials screened to 1" minus (for soil additive). On the Solvita compost maturity test score, must score a value of 5 or higher for tilling into the soil and be a minimum of 6 months old and fully composted. Supplied by Nature's Way Resources, Inc., Conroe, Texas or approved equal.

7. Fertilizer: FERTILIZERS AND NUTRIENT AMENDMENTS:

   A. Fertilizer: MicroLife Hybid 20-0-5, MicroLife Ultimate 6-2-4, and MicroLife Humates Plus 0-0-4 as supplied by San Jacinto Environmental Supplies, Houston, Texas or other approved equal supplier.
   B. Contractor shall keep all empty bags with certificates intact and submit them to the Owner's representative.
      1. Submission of empty fertilizer bags is required to verify operation has been performed as specified.
   C. Humate Soil Conditioner: Vigoro modified humate, Earthgreen Menefee Humate, Humate International AG 16-35 or approved equal.
   D. Aerated Compost Tea: Natures Own or approved equal.

8. Tree Deep Feeding Fertilizer: Shall be Aerated Compost Tea with mycorrhizal fungi manufactured by Natures Own, MicroGrow or approved equal

9. Fungicide: Shall be "Systemic Fungicide" with Benomyl by Greenlight Products, San Antonio, Texas 78217, and/or Cleary Chemical 3336 WP "Turf and Ornamental Fungicide.

10. Fertilizer for annuals/perennials:

    Nelson ColorStar Plus 19-13-6 with Fungicide

    Foliar spray Maximum Blooms 3-8-3 Organic liquid color fertilizer

11. Soil Drenching Material: Shall be "Sub Due 2E", by the Agricultural Division of Ciba-Geigy Corporation, Greensboro, North Carolina 27409.

12. Mulch: Shall be equal to that already in use at the site. Shredded hardwood bark for groundcover areas.

13. Tree Stakes and Guys: Shall match those in use at the site.

2.2 MACHINERY:

Machinery requirements listed under this Section are not intended to be restrictions of specific manufacturers or models unless so stated. Specific mention of manufacturers is intended as a guide to illustrate the final product of maintenance operations desired.

1. Lawn Mowers: Shall be of the rotary type in good working order, finely tuned to protect the lawn from excessive exhaust fumes. Blades shall be sharp to reduce shredding of the cut grass blades.

2. Lawn Edgers: Shall be of a rigid or flexible blade type that will produce a fine clean edge where lawns meet walkways, pavements or curbs.

3. Fertilizer Spreaders: Cyclone type spreader or equal. No visible underlapping of applications will be permitted.

4. Deep Root Feeder: Shall be the Ross type by Ross Daniels, Incorporated, Des Moines, Iowa 50265.

5. Pruning Tools: Shall be maintained in good working order, cutting edges shall be sharp. Disinfect all tools when used for the removal of diseased limbs.

PART 3 - EXECUTION

3.1 LANDSCAPE IRRIGATION SYSTEM:

The Contractor shall monitor and program the automatic controlling devices to proceed optimum moisture levels in all planted areas.

1. Irrigation cycles shall be set to take place prior to sunrise (usually 4:00 - 5:00 am) unless otherwise instructed by the Owner’s representative, except during visits of grounds maintenance personnel; during such visits the irrigation system may be operated as desired by those personnel.

2. Do not program controllers operating on the same water meter to water during the same time period so as to prevent over-draft of water meters. Do not switch controller to "off" at any time, except as required for testing and for maintenance operations.

3. Complete sprinkler system servicing shall be performed as required to maintain sprinklers in correct operating condition, including all required labor. Monitor and inspect sprinklers once a month or upon request of the Owner’s representative. This check shall include visual "inspection" of all accessible components of the irrigation system including but not limited to controllers, remote control valves, quick couplers and heads.

4. Adjust sprinklers to avoid damage to automobiles, signs and also adjust heads to keep water off the street and sidewalks. Make repairs and alterations to the sprinkling system and water lines. All sprinklers repairs such as cleaning of heads or breaks caused by the Contractor shall be the Contractor's responsibility.

5. Minor repairs: Contractor shall make necessary repairs under $300.00 without Owner’s representative's approval to maintain operation of the system.

6. Replacement materials throughout the system shall be as specified in Section 02810.

3.2 TREES MAINTENANCE:

A. Contractor shall maintain staking and guying of trees at all times and shall be responsible for any damage to trees or plant materials caused by chafing or breakage of foliage or limbs coming in contact with stakes or ties. Replace broken plant stakes and ties and bent stakes as needed. If ties are too tight, they must be replaced or adjusted. If stakes are not needed, remove.

B. Trees that may require guys, stakes or special care during the winter winds and rains shall receive the required care prior to the time of rains and high winds to insure that no damage results to the plant material.

C. All suckers shall be continually removed from trees.

3.3 SEASONAL AND PERENNIAL FLOWERS:

A. The maintenance contractor shall continually maintain seasonal flower beds in all contract areas.

B. Complete weeding, trimming, edging, and cultivation of all flower beds as required to keep the beds free of weeds, to promote growth and maintain neat, orderly appearance. As flowers cover open soil, cultivating shall be discontinued.

C. Maintenance shall include:

1. Pinching of blooms and pruning of dead or damaged foliage.

2. Fertilize in alternate months with organic fertilizer. (RE: PART 2)

3. Apply supplemental organic fertilizer to keep each type of seasonal flower performing at its optimum level.

4. Spraying or dusting for disease or insect control as a preventive or corrective measure.

5. Seasonal Color Change out: seasonal color change out after the initial planting (Extra Service) by the installing contractor.

D. Fertilizer for annuals/perennials: Add ColorStar Plus 19-13-6 with Fungicide at the manufacturers recommended rate and feeding schedule. Foliar spray Maximum Blooms 3-8-3 Organic liquid color fertilizer (6 ounces per 1000 sq ft) & Garlic Oil (1 ounce per 1000 sq ft) mixed together with water and sprayed every 30 days.

3.4 HEDGE MAINTENANCE:

A. Edge, weed, fertilize and cultivate all hedge beds in accordance with Schedule.

B. Pruning of shrubs should create a uniformly dense plant, trapezoid in shape. Height as approved by Owner's representative. Selectively thin and tip back annually. Prune to enhance natural branching effect of plants. Do not change shape of shrubs by pruning.

3.5 GROUNDCOVER BEDS:

A. Complete weeding, trimming, edging, and cultivating of all groundcover as required to keep the beds free of weeds, to promote growth and maintain neat, orderly appearance. As groundcovers cover open soil, cultivating shall be discontinued.

B. Groundcover beds bordering on paved surfaces must be edged as needed to retain a neat edge. Do not trim vertically so as to expose stems and thatch.

C. Fertilize all groundcovers with complete commercial fertilizer four times per year. (Extra Service)

D. Replant all damaged or thin areas in groundcover beds at direction of the Owner's representative, at proper spacing.

E. Slopes of 2:1 ratio, or steeper, shall not be cultivated due to erosion nuisance, unless otherwise instructed to cultivate by the Owner's representative.

3.6 TURF MAINTENANCE:

A. Mowing: During periods of mild weather, mow at one and one-half (1 1/2") inches but during hot weather, the cut should be not lower than two (2") inches from the soil. Regular weekly mowing is required. Never scalp the lawn or cut more than one half the existing top growth in one mowing. Remove or catch the clippings, never allowing clippings to remain on lawn surface more than four (4) hours.

Allow grass to grow up to but not over sprinkler heads. Trim grass around heads with a circular sprinkler head trimmer. DO NOT USE LINE TRIM AROUND SPRINKLER HEADS.

B. Watering: Provide a regular, deep watering program. The established turf should not be kept wet but should dry out somewhat between waterings. A twice weekly watering is good under regular conditions, but if it is hot or windy, water more often. In very hot weather, a fast watering with fine spray will cool the turf zone and can supplement the regular, deeper watering program. In shaded areas caused by trees or shrubs, water more frequently because of the competition for soil moisture. If lawn wilts (shows grey-brown) water more frequently.

C. Lawn Fertilizer: Analysis based upon soil sample.

March 1	MicroLife Hybird 20-0-5 applied at manufacturer's maximum recommended rate.
May 25	MicroLife Humates Plus 0-0-4 at manufacturer's maximum recommended rate.
July 18	Same as the March application.
October 11	MicroLife (6-2-4) at manufacturer's maximum recommended rate.

D. Weed Control: Contractor shall use extreme care in the use of chemicals for weed control. Before such applications are made, the turf should be well established and in a vigorous condition. Broadleaf weeds such as malva, dandelion and plantain can be controlled with

applications of selective and recommended herbicides. Always follow label directions fully and carefully; wash sprayer carefully after using herbicides.

E. Insects: Control insects with regular applications of commercial insecticides at the manufacturer's recommended rate. Spray for insects once a month from mid-spring through summer as a preventative measure.

F. Diseases: When they first appear, spray for diseases with an approved commercial fungicide strictly according to the manufacturer's recommendations.

3.7 NATIVE GRASSES MAINTENANCE

A. Native grass mixes – Twice annually on or about June 1st and January 1st
B. Above grasses shall be mowed to a 6” height.

3.8 CONTROL OF NOXIOUS WEEDS (Johnson Grass, Nut Grass, Poison Ivy, and other Noxious Weeds.)

A. Noxious weeds shall be killed by using "Round Up" or other spray as approved by Owner’s representative. Spray only foliage of grass to be eradicated, as this spray will kill any plant that it contacts.

B. Irrigation to sprayed area should remain "off" for a period of three days following spray application. Repeat spray as required to kill completely.

C. Apply pre/post-emergent weed killer as per manufacturer's recommendation as required by the "Schedule" and approved by Client prior to application.

C. Weeds 30” or taller shall be removed/eradicated in Native Grass zones.

3.9 USE OF HERBICIDES, INSECTICIDES, AND STERILANTS:

A. The Contractor is hereby granted permission to use such herbicides, insecticides, and sterilants as it may find necessary and advantageous in its grounds maintenance activities. Herbicides, insecticides, and sterilants, must be used responsibly and in conformance with Federal, State, and Local laws and regulations. The Contractor assumes all liability for damage and/or injury resulting from accident or misuse of these products and/or equipment. The Owner’s representative retains the right to prohibit the use of any herbicide, insecticide, and sterilant that he may judge to be undesirable for any reason.

B. Products leaving an undesirable residue or odor (i.e., weed oil) shall not be used.

C. The Owner’s representative shall be notified prior to application and advised of any danger associated with the use of these products (i.e., to avoid personal contact with sprayed areas, etc.).

D. Apply insecticides as needed to protect all plant materials from damage. The insect control program shall include slugs and snails and advance preventive spraying for twig borers. The Contractor shall be responsible for the choosing of chemicals and insecticides he uses and shall be accountable for any misuse of same.

E. Apply the proper fungicide, herbicide and pesticides for the control of pests, weeds and plant diseases or treat cuts on exposed surfaces of trees or shrubs for disease and pest control on turf, plants and trees.

3.10 GENERAL CLEAN UP:

A. The Contractor shall dispose of all waste materials or refuse from his operations legally off the property except where agreement is reached with the Owner's representative.

B. All plant growth shall be prevented in any cracks in walks or within paved areas.

C. Leaves, papers, grass clippings or other debris shall be removed at least weekly or at each visit from all areas.

D. Trash receptacles shall be checked regularly and emptied, and trash removed from the site frequently enough so that trash never overflows the receptacles. Trash receptacles shall be lined with black plastic bags which shall be emptied and removed from the site daily.

PART 4 - SCHEDULE

4.1 SCHEDULE:

The Schedule as included herein shall govern the work. Should the Contractor require an alteration of the Schedule, contact the Owner's representative.

JANUARY: WEEKS 1, 2, 3, 4

TURF

The turf shall be watered as needed. Turf shall be raked during the latter part of the month, to remove thatch. Mow turf for the first time in week 4.

TREES, SHRUBS, AND VINES

Trees shall be pruned except flowering trees and flowering shrubs which shall be pruned after flowering. Do not change shape of tree, prune to enhance shape. Pre-emergent herbicides shall be applied if approved by Client. Weed beds as required.

FEBRUARY: WEEKS 1, 2, 3, 4

TURF

The turf shall be watered as needed. Turf shall be raked during the latter part of the month, to remove thatch. Mow turf weeks 2 and 4.

TREES, SHRUBS, AND VINES

Continue pruning trees. Apply tree fertilizer to established trees. Deep root feeding is method to use during this period. Iron and other elements shall be applied if needed. Fertilize acid loving plants as called out under "Material Used". Do not fertilize flowering shrubs until blooming is completed.

MARCH: WEEKS 1,2

TURF

Turf shall be mowed in week two. Mowing shall not remove more than one-quarter (1/4") inch off existing height. First application of fertilizer (Microlife Hybid 20-0-5) shall be applied at manufacturer's maximum recommended rate. Water thoroughly after applying fertilizer. Mow first; then fertilize.

TREES, SHRUBS, AND VINES

Check Plants for adequate watering to prevent any winter damage. Water if necessary. Prune dead wood as required. Continue to weed beds.

Mulch shall be placed in all beds, a two (2") inch to three (3") inch layer over existing mulch if mulch is not adequate. Dead vines should be removed. Flowering plants should be fertilized only after blooming.

MARCH: WEEKS 3, 4

TURF

Mow as required; still only one-quarter (1/4") inch off existing growth. Water as required. Weed control should be continued. Replace any winter damaged sod at this time.

TREES, SHRUBS, AND VINES

Inspect evergreens for insects and diseases, spray as required. Spray for borers. Continue to weed beds. Fertilize trees and flowering shrubs if they have buds.
Application should be 10-8-4 at a rate of ten (10) pounds per 1,000 square feet. Acid loving plants should be given special attention as called out in "Material Used".

APRIL: WEEKS 1, 2, 3, 4

TURF

Mowing should be continued; begin cutting one and one-half (1 1/2") inches to two (2") inches above grade. Water as required.

TREES, SHRUBS, AND VINES

Flowering plants should be through flowering and ready to be pruned and fertilized, if not already completed. Prune remaining dead wood from trees, shrubs, and vines, retaining natural shape. Continually remove all suckers on base of trees.

MAY: WEEKS 1, 2

TURF

Mowing shall continue once a week. During this period, it is important to note the soil moisture. Grasses may have been actively growing for about two and one-half (2 1/2) months, and need to be watered thoroughly.

TREES, SHRUBS, AND VINES

Inspect evergreens for mites and borers and spray as required. Inspect plants for scale insects and spray as required. Inspect flowering trees for powdery mildew and apply fungicide as required. Apply herbicide to shrub beds as required, using the same materials as in early spring. Weed beds as required. Water established trees at a rate of two (2") inches per week.

MAY: WEEKS 3, 4

TURF

Mow as required. Second application of fertilizer (Microlife Humates 0-0-4) shall be applied at manufacturer's maximum recommended rate. Water thoroughly after applying fertilizer. Mow first; then fertilize. Particular attention shall be directed to the amount of water applied to turf.

TREES, SHRUBS, AND VINES

Continue to check plants for pests and control as required. Water any established plants as needed. Pruning shall cease until Fall. Apply fertilizer to acid loving plants again.

JUNE: WEEKS 1, 2, 3, 4

Mulching trees, shrubs, groundcovers and seasonal color.

NATIVE GRASSES

Native grasses and love grass shall be mowed.

TURF

Mowing shall continue once per week. As the temperature rises, the mower should be raised one-half (1/2") inch to one (1") inch higher to maintain a good thick stand of grass. Inspect lawn for disease and inspect pests; apply fungicide only if necessary. Be alert for brown patch, Bermuda decline and chinch bugs in Bermuda sod. Watch Bermuda for bare spots and underwatered areas.

TREES, SHRUBS, AND VINES

Maintain adequate moisture for newly planted trees, shrubs, and vines. Water any established plants as needed. Do not fertilize any wood plants until cooler weather. Continue to check plants for pests and control as required. Weed beds as required.

JULY: WEEKS 1, 2, 3, 4

TURF

Mow weekly, maintain previous months height. Avoid watering in the middle of the day. Check turf for disease again, especially chinch bugs. Third application of fertilizer (Microlife Hybid 20-0-5) should be applied at manufacturer's maximum recommended rate. Apply recommended controls as necessary.

TREES, SHRUBS, AND VINES

Maintain adequate moisture for newly planted trees, shrubs, and vines. Water any established plants as needed. Do not fertilize any woody plants until cooler weather. Continue to check plants for pests and control as required. Weed beds as required.

AUGUST: WEEKS 1, 2, 3, 4

TURF

Mow weekly. Continue to irrigate as needed to keep turf from being stressed by lack of water. Inspect lawn for diseases. Apply necessary chemicals if needed; use caution.

TREES, SHRUBS, AND VINES

Continue to check trees, shrubs, and vines for adequate moisture around rootballs. No pruning shall be done during this period. Check all trees, shrubs, and vines for possible disease and insects, spray if necessary. Second application of fertilizer should be spread at manufacturer's maximum recommended rate.

SEPTEMBER: WEEKS 1, 2

TURF

Mow weekly. At this time lower mower to one and one-quarter (1 1/4") inches to one and one-half (1 1/2") inches. Irrigate as needed.

TREES, SHRUBS, AND VINES

Maintain adequate moisture for newly planted trees, shrubs, and vines. Water any established plants as needed. Root feed trees again. Acid type fertilizer and iron should be applied to trees, shrubs, and vines.

SEPTEMBER: WEEKS 3, 4

TURF

Mow weekly. Watch turf for diseases, apply chemicals as required.

TREES, SHRUBS, AND VINES

Maintain adequate soil moisture for all trees, shrubs, and vines. Prune only if necessary. Continue to check for any pests or disease, apply chemicals as required.

OCTOBER: WEEKS 1, 2, 3, 4

TURF

Mow weeks 1, 2 and 4. Watering can be reduced at this time. Continue to check for diseases. Fourth application of fertilizer (MicroLife 6-2-4) shall be applied at manufacturer's maximum recommended rate. Mow first; then fertilize. Water thoroughly after applying fertilizer. Turf should be thick and healthy for winter months. Overseed with annual rye grass at the rate of four (4) pounds per 1,000 square feet (only if requested by the Owner).
TREES, SHRUBS, AND VINES

Check trees for proper fertilization. Apply necessary elements, if inadequate. Pruning can be started lightly at this time. Weed beds as required. A two (2") inch layer of mulch shall be added on top of existing mulch.

NOVEMBER: WEEKS 1, 2, 3, 4

TURF

Mow weeks 2 and 4. Water less at this time.

TREES, SHRUBS, AND VINES

Examine plants for pests and spray as required. Do not use pesticides unless necessary. Weed beds as required.

DECEMBER: WEEKS 1, 2, 3, 4

NATIVE GRASSES

Native grasses and love grass shall be mowed.

TURF

Last mowing shall be performed during first 2nd week of month. Rake leaves as required.

TREES, SHRUBS, AND VINES

Remove leaves from beds. Weed beds as required. Check plants for diseases, spray as required.

END OF SECTION 32 94 00

SECTION 32 94 43 - TREE GRATES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cast metal tree grates.
2. Metal frames and accessories.

1.2 DEFINITIONS

A. ADA: Americans with Disabilities Act.

1.3 REFERENCE STANDARDS

A. General: Use most current standard, unless otherwise indicated by specific date.

B. ASTM International:

1. ASTM A36 - Standard Specification for Carbon Structural Steel.
2. ASTM A48 - Standard Specification for Grey Iron Castings.
3. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
4. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
5. ASTM A536 - Standard Specification for Ductile Iron Castings
6. ASTM B26 - Standard Specification for Aluminum-Alloy Sand Castings.
7. ASTM B584 - Standard Specification for Copper Alloy Sand Castings for General Applications.
8. ASTM E303 - Standard Test Method for Measuring Surface Frictional Properties Using the British Pendulum Tester

C. American Welding Society:

1. AWS D1.1 - Structural Welding Code - Steel.
2. AWS D1.2 - Structural Welding Code - Aluminum.
3. AWS D1.6 - Structural Welding Code - Stainless Steel.

D. California Department of Health Services:

1. CA/DHS/EHLB/R-174 - Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers, including 2004 Addenda.

E. SSPC: The Society for Protective Coatings:

1. SSPC - Steel Structures Painting Manual.

2. SSPC SP 10 - Near-White Blast Cleaning.

F. Military Standardization Documents:

1. MIL A-8625 - Anodic Coatings for Aluminum and Aluminum Alloys.
2. MIL PRF-24712A - Coatings, Powder.

1.4 COORDINATION

A. Coordinate Work of this Section with:

1. Placement of frames.
2. Size of cast-in-place curb and pavement openings.
3. Placement of in-ground light fixtures.
4. Plant irrigation systems and controls.

1.5 SUBMITTALS

A. Product Data: Indicate compliance with applicable Reference Standards.

B. Shop Drawings: Indicate details of each type and size of grate, component supports, anchorages, openings, perimeter construction details, and tolerances.

1. Where custom design or layout has been furnished by the Design Professional, submit CAD file, in addition to other Drawings, to indicate compliance with design intent.
2. Where intent of Design Professional cannot be met due to size, material, or casting limitations, clearly indicate exceptions on Submittal documents.

C. Samples: Submit [two] 2 cast metal samples, 12 by 12 inch in size, illustrating finish, color, and texture.

1.6 QUALIFICATIONS

A. Welders and Welding Procedures: AWS D.1 qualified within previous 12 months for employed weld types.

1.7 WARRANTY

A. Provide manufacturer’s standard one-year 1-year warranty on products and assemblies.

1.8 EXISTING CONDITIONS

A. Field Measurements: Verify field measurements of existing trees or obstructions affecting tree grates prior to fabrication. Indicate field measurements provided by General Contractor or other parties on Shop Drawings

PART 2 - PRODUCTS

2.1 PERFORMANCE AND DESIGN CRITERIA

A. General: Conform to local code(s) as indicated on Drawings for applicable loads.

1. Except where required by Authority Having Jurisdiction (AHJ), provide tree grates for pedestrian live load only, 100 lbs./sq. ft.

2.2 TREE GRATES

A. Manufacturers:

1. Streetlife; contact Janet Chen @ 484 544 3132
2. Or approved equal.

2.3 SUSTAINABILITY CHARACTERISTICS

A. Material and Resource Characteristics:

1. Recycled Content Materials: Furnish materials with minimum of 80 percent recycled metal content.

B. Indoor Environmental Quality Characteristics:

1. Paints and Coatings: Maximum volatile organic compound content according to product and testing requirements of CA/DHS/EHLB/R-174.

2.4 GRATE MATERIALS

A. Cast Iron: ASTM A48, CL 30 or better.

B. Cast Ductile Iron: ASTM A536; alloy 65-45-12

C. Cast Aluminum: ASTM B26; alloy #535, marine grade.

D. Cast Bronze: ASTM B584 silicone bronze alloy C87500.

2.5 TREE GRATES

A. Size: As indicated on Drawings.

B. Basis of Design Pattern: square by Streetlife (ref. materials schedule for pattern).

C. Number of Sections per Set: As indicated on Drawings.

D. Tree Opening: As indicated on Drawings.

1. Expanded Tree Opening: Fabricate round openings with break-out rings to allow tree growth up to 4-inches.

E. Accessory Openings: Number and locations as indicated on Drawings.

F. Frames:

1. Mild Steel: ASTM A36, raw/unfinished.
2. Welding Materials: AWS D1.1, type as required for materials being welded.
3. Not required.

2.6 FABRICATION

A. Fabricate tree grates to accommodate design loads and to sizes indicated.

B. Fabricate support framing for openings as required. Coordinate locations with fixtures, controls, and penetrations as indicated on Drawings.

C. Fabricate grates to comply with ADA for maximum opening size, offset of surfaces, and slip resistance. Grates shall have a minimum slip resistance (Pendulum Test Value) of 5.5 or better, per ASTM E303.

1. Provide grates with enhanced heel-proof design, with no opening wider than 1/4-inch.

D. Removable Panels: With vandal-resistant fastening hardware, recessed finger lift rings and handles.

2.7 GRATE FINISHES

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Cast Iron:

1. Baked-on oil finish.

2.8 ACCESSORIES

A. Vandal Resistant Bolts: Stainless steel, 1/4 x 20 fasteners; minimum 2 per casting. Prefabricate frames with fasteners where shown on Shop Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that overall opening sizes and dimensional tolerances are acceptable.

B. Verify that fixtures placed by other trades are completed, and that openings and penetrations are accurately positioned.

C. Verify that planting and irrigation work is complete, including removal of excess soil material and trash from tree grate opening.

3.2 INSTALLATION

A. For cast-in-place frames, furnish to entity responsible for adjacent curbs or pavements.

B. Ensure trees are planted with top of root ball 6 inches below bottom of support framing to mitigate root ball heaving of grate as tree grows.

C. For field-anchored frames, anchor by expansion bolts to prepared openings using anchors of type and number recommended by manufacturer.

D. Ensure that top of frame and tree grate is no greater than 1/8-inch higher or lower than adjacent pavement surfaces.

E. Place tree grates securely in prepared openings, with no warping or slippage.

F. Secure where indicated, or as needed to prevent movement. Allow for maintenance removal.

3.3 TOLERANCES

A. Maximum Space Between Adjacent Sections: 1/4-inch.

B. Maximum Variation from Top Surface Plane of Adjacent Sections: 1/8-inch.

3.4 PROTECTION AND CLEANING

A. Protect completed tree grates until time of Substantial Completion.

B. Clean damaged coatings according to manufacturer recommendations.

C. After frames are installed, but prior to grate installation, keep soil around trees clear from debris, runoff, or anything that will inhibit proper development and growth of the tree.

END OF SECTION 32 94 43

SECTION 33 10 00
WATER DISTRIBUTION SYSTEM CONSTRUCTION

1. DESCRIPTION:

These specifications shall govern the furnishing and placing of water distribution lines, fittings, valves, fire hydrants, and other appurtenances. The pipe and accessories shall be installed in accordance with the requirements of these specifications at the locations and depths indicated on the plans, and shall be of the classes, sizes, and dimensions shown thereon. The installation of pipe shall include all joints, connections to new or existing pipes, and installation of all fittings, valves, fire hydrants, and appurtenances. The specific type materials permitted for this project are indicted on the plans, in the Special Conditions, and/or as specified in the Bid Proposal.

2. MATERIALS:

2.1 4" Through 48" Ductile Iron Pipe Fittings for Ductile Iron Pipe M.S. - 1001

2.1.1 All Ductile Iron Pipe shall be designed in accordance with ANSI Standard A21.50-1976 (AWWA C-150-1976), or the latest revision thereof, Method of Design. Ductile Iron Pipe shall be thickness class 50, pressure rated for 200 PSI in Type II Laying Condition with 2 to 15 feet of cover, unless otherwise indicated on the plans or in the special provisions of the specifications.

2.1.2 Ductile Iron Pipe shall be manufactured in accordance with ANSI Standard A21.50-1976 (AWWA C-151-1976) or the latest revision thereof.

2.1.3 Fittings for Ductile Iron Pipe shall be either Cast Iron or Ductile Iron and shall conform to body thickness and radii of curvature revision thereof.

2.1.4 Pipe and fittings shall be cement mortar lined and seal coated in accordance with ANSI Standard A21.1971 (AWWA C-104-1971), or the latest revision thereof, for standard thickness. The exterior of the pipe shall have a bituminous coating approximately one (1) mil thick.

2.1.5 Pipe and fittings noted on the plans and in the special provisions of the specifications to be supplied with a Polyethylene Lining of 20 mils (0.20") thickness shall be United State Pipe and Foundry Company's Polylined Pipe. The lining shall be suitable for service at operating temperatures up to 180 degrees F. The lining shall be a blend of High-Density and Low-Density Polyethylene Powders complying with ASTM D-1248 compounded with carbon black to provide resistance to ultraviolet rays during storage above ground. To provide uniform fusing of the Polyethylene Powders and proper bonding to the Ductile Iron Pipe, the pipe shall be preheated in a furnace to an adequate temperature.

2.1.6 Pipe and fittings which are to be supplied uncoated and/or unlined or with any special lining or coating will be indicated on the plans and/or covered in special provisions of the specifications.

2.1.7 Joints for Pipe and Fittings:

a. Push-on joints shall be Tyton Joint and shall conform to ANSI Standard A21.11-1976, Section 11-2.3 (AWWA C-111-1976 Section 11-2.3) or the latest revision thereof. All required lubricant shall be included with the pipe and/or fittings.

b. Mechanical joints shall conform to ANSI Standard A21.11-1976 (AWWA C-111-1976) or the latest revision thereof. All required bolts, nuts, glands, and gaskets shall be alloy steel (Corten or US alloy type) and be cathodic to ductile iron and cast iron.

c. Flanged joints for pipe shall conform to ANSI Standard A21.15-1975 (AWWA C-115-1975) or the latest revision thereof. Flanges shall be class 125 drilled and faced in accordance with ANSI Standard B16.1. Required nuts, bolts, and gaskets are to be included with pipe and/or fittings.

2.1.8 Pipe and fittings shall contain no more than 8% lead.

2.2 Poly-Vinyl Chloride Pipe:

2.2.1 Materials for pipe and couplings shall be from clean virginal Type I, Class I, Grade I, PVC according to ASTM D1784 and meeting AWWA C900 Standards for Poly-Vinyl Chloride (PVC) pressure pipe, 4" through 12" for water and to be furnished in cast-iron pipe equivalent outside diameters with rubber-gasketed separate couplings as listed in the Standard.

2.2.2 Pressure Classes of 150 psi and 200 psi shall be furnished.

2.2.3 Pipe shall be furnished in 20' laying lengths.

2.2.4 All fittings for PVC pipe shall be ductile iron.

2.2.5 Plastic pipe shall bear the NSF-pw seal and shall conform to the requirements of ANSI/NSF Standard 61.

2.2.6 Pipe shall comply with applicable American Water Works Association Standards.

2.2.7 Pipe and appurtenances shall be new and shall not have been used for any purpose other than the conveyance of drinking water.

2.3 Copper Tubing:

2.3.1 Materials for copper tubing to be used for underground service shall conform to ASTM Class "A" and Federal Specification WW-T-799, Type "K".

2.3.2 Tubing shall be furnished as follows:

a. 3/4" through 1" - 60' coils.
b. 1-1/4" through 2" - 20' straight length.

2.4 Gate Valves:

2.4.1 Cast iron body conforming to AWWA C500-61 standard.

2.4.2 Double disc type with non-rising stem.

2.4.3 Bell end joints, push-on or mechanical joint for CI & AC.

2.4.4 Two inch square operating nut.

2.4.5 Vertical without bypass for 4-16".

2.4.6 Horizontal with enclosed steel bevel gears and standard size bypass for 20-24".

2.4.7 Two valve operating wrenches shall be delivered to owner prior to start up.

2.4.8 Direction of opening to be specified in special provision. Valves shall be installed in "closed position".

2.5 Tapping Valves:

2.5.1 Tapping valves shall meet all requirements of gate valves listed above except for type of joints.

2.5.2 Inlet joints shall be flanged and drilled for Class 125 (ASA B 16.1 - 1960) and shall have machined projection to mate with the tapping sleeve for alignment purposes.

2.5.3 Outlet shall be either hub-end push-on type, or mechanical joint as specified.

2.5.4 Outside flange shall be drilled (or slotted) to meet standard Mueller (tap) tapping machine Model Nos. CL-1 or CC-25 or CL-25.

2.6 Tapping Sleeve:

2.6.1 Tapping sleeves shall be of the split sleeve type with flange tapping outlet. Flange shall be drilled to match Class 125 (ASA B 16.0 - 1960) and shall have a machined recess to mate with the machined projection on the tapping valve for alignment purposes.

2.6.2 Tapping sleeve bodies shall be of cast iron material with mechanical joints for use on cast iron pipe and mechanical joint ends for use on asbestos-cement pipe, except as noted below.

2.6.3 Welded steel tapping sleeve bodies may be used in lieu of cast iron for the following sizes with the following specifications:

a. Approved sizes shall range from 6" x 4" upward, but no "size-on-size" sleeve will be permitted (i.e. 4" x 4", 6" x 6", etc.). To accomplish size-on-size connections, the next smaller tap may be made and an LEB increaser used. Where fire service from 6" main is approved, a cast iron split sleeve only will

be permitted.

b. Body shall be of heavy welded steel construction.

c. Top half of body shall be grooved to permanently retain a neoprene O-ring seal against the O.D. of the pipe.

d. Bolts and nuts shall conform with the latest published AWWA Standard C500, Section 9, and shall be coated with a 100% vinyl resin (or be of corrosion resistant material).

e. Finish on the tapping sleeve shall be 100% vinyl resin on all surfaces with a minimum thickness of ten mils.

f. Finish seal from backfill shall be made by completely encasing the tapping sleeve with sheet vinyl of eight mil thickness.

g. Steel tapping sleeve shall be Smith Blair No. 622 or an approved equal.

2.7 Valve Boxes:

2.7.1 All buried valves to be provided with valve box.

2.7.2 Standard CI screw adjustable height for required bury, 5" minimum diameter.

2.7.3 Cover marked "Water".

2.7.4 Minimum thickness of 3/16" at any point.

2.7.5 Coated with asphaltic paint inside and out.

2.8 Flushing Valves and Fire Hydrants:

Fire hydrants shall be compression type traffic model cast iron body, fully bronze mounted, suitable for working pressure of 150 psi, and shall conform to the provisions of the latest revision of AWWA C502 specification. Each hydrant shall be factory tested to a hydrostatic pressure of 300 psi with valve in both the open and closed positions. The direction of opening nut shall be counter-clockwise and shall be cast on the head of the hydrant. Hose nozzles shall be bronze or non-corrosive metal and threads shall be national standard. The main valve opening shall be either five and one-fourth (5-1/4) inches in diameter or six and one-fourth (6-1/4) inches in diameter as shown on the plans. Hydrants shall have mechanical joint shoes for six (6) inch or eight (8) inch mains as shown on the plans, one four and one-half (4-1/2) inch steamer connection, and two and one-half (2-1/2) hose connections. All nozzle caps shall be provided with gaskets. Bury length shall be three and one-half (3-1/2) feet unless otherwise noted on the plans. Hydrants shall be provided with "dry top" which prevents stem threads from contacting water, and "break-off" type barrel and stem.

Special nozzles may apply if so stated in the Special Conditions. Hydrants shall be painted with shop coating in accordance with AWWA C502 specification. Final coats of paint will be applied by Owner. Fire hydrants shall be Mueller Improved, or approved

equal.

2.9 2-Inch Blowoff Valve Assembly:

All two inch (2") blowoff valve assembly shall have 2-1/8 inch valve opening and shall have one full 2-1/2 inch hose outlet. Bottom connection shall be 2-inch standard thread or 2-inch bell bottom as specified on the plans.

2.10 Water Meters: (For Individual Houses Only)

All water meters shall be standard make 5/8" x 3/4", AWWA approved specifications for measuring water for domestic use, furnished complete with couplings, with round reading register in U.S. gallons. Make and type of meter shall meet the approval of the Engineer.

2.11 Water Meter Boxes:

All meter boxes to be of concrete construction of adequate size for installation of 5/8" x 3/4" standard AWWA water meter, with easy opening reading lid, being lockable.

3. CONSTRUCTION METHODS:

3.1 Location of Water Lines:

Distance of water lines to property lines shall be indicated on the plans. Parallel water and sewer lines shall be spaced not less than nine (9) feet apart horizontally unless water tight sewer joints are provided as indicated on sewer detail plan sheet.

All pipe shall be installed in accordance with the manufacturer=s instructions and the details.

3.2 Excavation:

3.2.1 All excavations are to be by the open-trench method, unless the inspector orders that certain sections of the mains are to be laid in tunnels or bored.

3.2.2 The minimum width of the bottom of the trench shall be such that there will be six inches space on each side between the pipe and the walls of the trench. The width of the trench at the surface is not to be less than at the bottom.

3.2.3 When excavating machinery is being used, the same shall cut the trench to a grade slightly higher than the bury indicated by the proposal and the trench shall then be fine graded.

3.2.4 The trench must be opened and excavated to the finished grade at all times for a distance of at least 50 feet in advance of the last made-up joint. Water mains into which the mains under construction are to be connected must be definitely located well in advance of such connection to allow for possible adjustment of alignment and/or grade.

3.2.5 Bell holes must be excavated in advance of placing the pipe. Materials used shall be placed at locations so as not to interfere unnecessarily with the use of the

streets by the public, and not more than two street intersections shall be closed at any time. The street surface along the line of the trench must be kept free of surplus spoil. Any amount of trench left open in excess of that required to facilitate hydrostatic testing may be ordered closed by the inspector or Engineer.

3.2.6 The expense of restoring the original condition of improved property in connection with grass, shrubs, or any other improvements must be borne by the Contractor. All trees adjacent to the trench must be protected and the trees on public or private property must not be cut unless permission, in writing, is granted.

3.3 Rock Excavations:

No rock is anticipated and no extra compensation will be allowed for rock excavation.

3.4 Crossing State Highways and Railroads:

When water lines cross highways, railroads, or town streets under the jurisdiction of the State Highway Commission or other public body or corporation, the Engineer shall secure permission from the controlling authority before installing such lines. A copy of this written permission must be filed with Owner before Contractor works on the right-of-way of such State roads or streets. The Contractor will be required to furnish a release from said controlling authority before final acceptance of the work.

3.5 Pipe Crossing Trenches:

Where any pipe crosses a trench, such as sewer pipe, water or gas pipe having an exposed joint in the trench, it must be supported entirely at the Contractor's expense with a reinforced concrete beam constructed in the following manner: A trench under said cross pipe shall be opened up to a point varying from two (2) to six (6) feet back from the sides of the main trench, as the Engineer may direct so that a timber box may be placed around the pipe and supported by two (2) struts, one on each side of the trench, and resting on a plank across the bottom of the trench, underneath the water line and of such dimensions as is necessary, in the opinion of the Engineer to properly support the ends of the beam and pipe which it carries. The width of this box shall be twice and the depth shall be three times the outside diameter of the pipe supported, and the top shall be placed level with the top of the pipe. The box shall then be filled with 3,000 psi concrete with a sufficient number of bars of reinforcing steel placed one (1) inch above bottom of box extending the entire length thereof, to provide an area of steel equal to one percent of the sectional area of concrete in the beams. The timber used as forms and struts must be left in the trench. Such concrete will be paid for at the price bid for 3,000 psi concrete.

Should it become necessary to change the position of such pipe, conduit, or structure, the Engineer shall at once be notified of the locality and circumstances and shall thereupon give directions as to what shall be done, and the Contractor shall conform thereto, and shall be paid (upon the estimate of the Engineer) for materials furnished and for the labor performed upon such change in so far as it may be additional to that contemplated. The Contractor shall be responsible for injuries to persons and property for all damage to any pipe, conduit, sewer, or other structure injuriously affected by the work and the Owner shall not be liable therefor.

3.6 Tunnel Construction:

3.6.1 When a water or sewer main crosses a paved roadway having a concrete base, the main shall be laid in a tunnel whenever, in the opinion of the Engineer, the cut is sufficient for tunneling. Openings for removing the excavated material and for placing the pipe shall be made at the locations designated by the Engineer. The tunnel must be sheeted solid on both sides and top and each side supported on a piece of lumber laid longitudinally on the bottom of the trench, but this support must not be wide enough so as to pass under the pipe.

The tunnel shall not be backfilled until after the section of the mains passing through the tunnel has been subjected to a pressure test and has received the approval of the inspector. When backfilling a tunnel, the space between the sheeting and the pipe shall be rammed, in an approved manner, with earth, gravel, or concrete. If concrete is used, 3,000 psi concrete shall be used.

3.6.2 Should the surface over a tunnel settle during the maintenance period of the water main contract, the Contractor or his sureties must pay for the necessary repairs. Should the street settle prior to the time that the final estimate has been paid, then same may be retained until repairs have been made.

3.6.3 Should the Contractor be instructed to lay the mains in tunnels under trees, sidewalks, driveways, and other such surface or subsurface obstructions, there will be compensation for this work or for furnishing and placing the specified sheeting and bracing, according to the appropriate proposal items.

3.7 Sheeting and Bracing Timber:

Where necessary in the Engineer's opinion, the sides of the trench or other excavation shall be braced and rendered secure to the satisfaction of the Engineer.

In sewer trenches and other excavations having vertical sides, sheeting and bracing necessary to support the sides of the excavation in a vertical plane shall be installed.
After the excavation has been backfilled and water tamped, steel or other sheeting may be pulled, otherwise sheeting and bracing, once installed, may not be removed without the consent of the Engineer.

3.8 Backfilling Trenches:

Trenches shall be backfilled as follows:

3.8.1 Normal: Selected material shall be deposited in four inch layers and hand tamped between the sides of the trench and the pipe and over the pipe for at least six (6) inches above the top of the pipe.

3.8.2 Under Pavement: For trench through existing or future asphaltic concrete, concrete, asphalt-topped concrete, flexible base with asphalt topping, shell or gravel surfaces, either public or private roads or streets, place sand-cement backfill above the bedding and initial backfill to bottom of pavement or base. Cement stabilized backfill will be paid extra at unit price specified in the Bid Proposal.

3.9 Surplus Earth:

Any surplus excavated material shall be disposed of on site as directed by the Engineer. If the Engineer notifies the Contractor that the Owner does not have use for this material, it shall become the property of the Contractor to dispose of as he wishes without injury to the Owner or any individual.

3.10 Street Surfaces:

In all streets, the surface of the trenches after being refilled, dried, and settled, shall be finished in the most workmanlike manner without needless delay and shall in every respect be equal in quality, character, material, and workmanship to the street improvements existing over the line of the trench immediately prior to making the excavation. The expense of restoring the streets must be included in the price bid per linear foot for mains, except as otherwise provided herein. All concrete paving, road gravel, and road shell ordered placed on streets will be paid for at the unit price bid.

On gravel, shell, and asphalt surfaced streets, the trench shall be filled as otherwise specified up to within eight (8) inches of the surface of the street. The trench shall then be filled with gravel or shell, as ordered by the Engineer, to a point approximately one (1) inch higher than the street level. After all other work is completed and before the job is finally accepted, the Contractor shall go back and place such additional gravel or shell as is ordered by the Engineer. Road gravel or stabilized shell shall be paid extra for at the unit price bid in the proposed schedule.

On concrete streets the trenches shall be filled as otherwise specified within six (6) inches of the surface of the street, and then filled with road gravel or shell to a point approximately one (1) inch higher than the street level. After all other work is completed, the Contractor shall go back and remove sufficient shell and install six (6) inches of concrete as ordered by the Engineer. The concrete used shall be paid for at the unit price bid in the proposed schedule.

On asphalt surfaced streets, the gravel or shell base shall be placed as stated above. At such time as directed by the Engineer, the gravel or shell base shall be leveled smooth approximately one (1) inch below the existing asphalt surface. The new asphalt pavement shall then be placed and rolled or tamped to a smooth and even surface.

3.11 Crossings to be Kept Open:

At such street crossings and other intermediate points as may be designated by the Engineer, the trenches shall be bridged in such proper and secure manner as to prevent any serious interruption of travel upon the roadway and sidewalks, the cost thereof to be borne by the Contractor.

3.12 Clean-Up:

Contractor's equipment, surplus material and surplus earth shall be removed from the job following the final test of mains and all street surfaces replaced before the final estimate will be approved.

3.13 Laying Pipe:

In general, the bottom of the trench shall be shaped to give full support to the lower quarter of each pipe. If the foundation is rock or other hard material, a bed of sand or suitable earth shall be placed upon the subgrade and well compacted. The thickness of the bed shall not be less than two (2) inches nor more than six (6) inches.

If the foundation is of such material or if conditions are such that the pipe cannot be otherwise properly supported, or if the load on the pipe so requires, a concrete cradle as hereinafter specified shall be provided. In all cases, water shall be kept out of the trench until the masonry or jointing material has sufficiently hardened. The pipe shall be laid to grade shown on the plans or as directed by the Engineer. Each pipe shall be inspected for defects prior to being lowered into the trench and shall be carefully cleaned in both bell and spigot. Pipe laying shall proceed up-grade with spigot ends pointing in direction of flow. Pipes shall be laid so that each pipe shall rest upon the full length of its barrel with depressions excavated to accommodate bells. Any defective pipe laid or any pipe which has had its grade of joint disturbed after laying shall be taken up and replaced.
Before jointing, the inside of the bells and outside of the spigots shall be dry and clean. The joint shall be made as recommended by the manufacturer of the joint material. Water shall not be allowed in the trenches while the pipes are being laid. The Contractor shall not open up more trench than the available pumping facilities are able to de-water, to the satisfaction of the Engineer. Bells shall be entirely free of water when joints are made, regardless of the type of joint, and no water shall be allowed to rise over the joint until it has set.

3.14 House Connections:

House connections to main pipe shall be made by tapping the main and installed corporation cock of the size designated. The corporation cock shall be screwed securely into position. The copper service, polyethylene or butylene pipe shall be connected to the corporation cock and laid in accordance with the specifications contained herein for laying pipe.

3.15 Installing Water Meters and Meter Boxes:

Water Meters: The ground shall be excavated to such depth that the top of the box is flush with normal ground level. The tail piece of the meter shall be inserted into the service lines as near to the curb cock as possible, or directly into the curb cock. The meter shall then be set in such position that the bottom of the meter is at lest two (2) inches above ground. The house side of the meter shall then be connected to the service line running to the house. It is essential that the meters shall be set plumb and in line with the service line and all connections made in a neat, workmanlike manner.

Meter Boxes: The meter box shall be set on firm ground so that the top of the meter box is flush with the ground surface, and the box is level and plumb. Ground shall be carefully backfilled and tamped around the meter box so as to leave a neat appearance.

3.16 Setting Fire Hydrants:

Fire hydrants shall be set where shown on the plans or ordered by the Engineer.

Excavate underneath the drain outlet of each fire hydrant a space twelve (12) inches square and six (6) inches deep and fill with gravel. Place the gravel up around bottom of the flushing hydrant not less than three (3) inches above the drain outlet. Not less than two (2) cubic feet of gravel shall be placed around each flushing hydrant. The gravel shall be carefully covered with a layer of one ply roofing paper before trench around the hydrant is refilled. All hydrants shall be carefully blocked and placed to prevent expansion of stubline from water pressure. See plan sheet for blocking details.

3.17 Flushing and Sterilizations:

3.17.1 All water lines shall be carefully cleaned on the inside before installation and as the lines are installed, there shall be placed in the lines one can (3-3/4#) of Perchloron or HTH, or equal, for each 2,000 lineal feet of four (4) inch, six (6) inch, and eight (8) inch lines, or 6,000 lineal feet of two (2) inch lines. The Contractor shall test all lines for proper sterilization in the presence of Engineer and deliver or have results sent to office of Engineer. Chlorine gas shall be acceptable for sterilization.

3.17.2 For this project, all mains shall be sterilized with a minimum chlorine contact time of 24 hours.

3.17.3 All lines shall be flushed at a minimum velocity of 3 feet per second in the line at all blow-offs and dead-ends.

3.17.4 After flushing and before placing mains in service, samples shall be collected for bacteriological analysis to check the efficiency of the disinfection procedure, which shall be repeated if contamination persists. Tests shall be collected at a rate of one sample per 1,000 feet of line laid, at sampling points approved by the Engineer.

3.17.5 All water lines and appurtenances shall be disinfected in conformance with AWWA C-651 standards prior to being placed into service.

3.18 Thrust Blocking:

All water lines shall be thrust blocked at bends, tees, caps, plugs, and fire hydrants to prevent movement of lines under pressure. The blocking shall be 3,000 psi concrete and shall completely fill the space between the solid ground and the fitting to be anchored in such manner that the pipe and the fitting joints will be accessible for repairs. Thrust blocking shall be installed at all points designated by the Engineer with no extra payment.

3.19 Testing of Water Mains:

a. After the pipe has been laid and partially backfilled, excepting at joints, all newly laid pipe shall, unless otherwise specified, be subjected to hydrostatic pressure 150 pounds and not less than 150% of the maximum anticipated sustained operating pressure.

b. Each valved section of pipe shall be slowly filled with water and the specified test pressure shall be applied by means of a pump connected to the pipe in a satisfactory manner. The Contractor will furnish, install, and operate, at his expense, the

necessary connections, pump, meter, and gauges. Evidence of the condition of the pump must be provided to the Engineer prior to testing.

c. Each section of pipe shall be tested just prior to chlorination. Before applying for the specified pressure test, all air shall be expelled from the pipe. Should the taps at points of highest elevation be required to accomplish this, then same will be installed by, and at the expense of, the Contractor.

d. All joints showing visible leaks discovered in consequence of this pressure test shall be removed and replaced by the Contractor with sound material and the test shall be repeated until satisfactory to the Engineer.

e. All pressure tests shall be performed using a minimum pressure of 150 psi at the highest point in the line. The time of the testing shall be a minimum of 4 hours.

f. The allowable leakage for P.V.C. and D.I. pipe shall be computed in accordance with AWWA C-605 (current) and shall not exceed the gallon per hour per 1,000 feet rate listed in the table below:

Pipe Size (Inches)	Allowable Leakage
2	0.16
4	0.33
6	0.49
8	0.66
10	0.82
12	0.99
16	1.32

For all diameters, the allowable leakage, Q, shall not exceed:

Q = L * D * (P □ 0.5) /148,000
for L = length of pipe per test in feet, D = nominal diameter of pipe in inches, and P = test pressure (150 psi minimum).

g. Where practicable, pipe lines shall be tested in lengths between line-valves or plugs of no more than 1,500 feet.

h. If the leakage exceed the allowable rate, repairs must be made and the test must be redone until each segment passes the test.

i. All visible leaks at exposed joints, and all leaks evident on the surface where joints are covered, shall be repaired and leakage minimized, regardless of total leakage as shown by test.

j. All pipe, fittings, and other materials found to be defective under test shall be removed and replaced at the Contractor's expense.

k. Lines which fail to meet the tests shall be repaired and restored as necessary, until test requirements are complied with.

4. METHOD OF MEASUREMENT

4.1 Pipe:

Water pipe shall be measured by the linear foot of each size and class of pipe complete in place accordance with these specifications. Such measurement shall be made along the central axis through all valves and fittings from end of line to end of line. Where spurs, braces, or connections to existing pipe lines are involved, measurement of the spur or connecting pipe shall be made from the point of intersection of the central axis.

4.2 Wet Connections:

Wet connections shall be measured separately according to size main involved.

4.3 Valves:

Gate valves, air valves, and check valves shall be measured as each individual valve of each size, completely installed with valve box and concrete bedding as shown on the plans.

4.4 Fire Hydrants:

Fire hydrants shall be measured as each individual hydrant of the sizes shown on the proposal, completely installed in accordance with the plans.

4.5 Fittings:

Fittings shall be measured by the ton (2,000 pounds) as computed from theoretical weights listed in AWWA C110-64 (ASA A21.10) specification.

END OF SECTION

SECTION 33 33 13
SANITARY SEWER SYSTEM MATERIALS AND CONSTRUCTION

1. GENERAL:

This item is a general specification which applies to the furnishing of all plant, labor, equipment, appliances, and materials in performing all operations in connection with installing sanitary sewer lines and appurtenances with dimension, strength, and location in accordance with the plans and these specifications.

2. MATERIALS:

(Type materials permitted for this project are specified on the Plans, Special Conditions, and/or Bid Proposal.)

2.1 Ductile Iron Pipe:

2.1.1 Conformance to USA Standard A 21.51 and A 21.52.

2.1.2 Joints shall be Mechanical Joints (Type III); or boltless gasket similar to those known as "Bell Tite", "Tyton", or "Fastite" or equal.

2.2 Polyvinyl Chloride Pipe:

2.2.1 Polyvinyl Chloride Gravity Sewer Pipe and fittings shall meet the requirements of: ASTM Specification D-3034 (SDR 26), type PSM Polyvinyl Chloride (PVC) Sewer Pipe and fittings. Gaskets meet the requirements of ASTM F744, Fluid-Tite or approved equal.

2.2.2 All pipe and fittings shall be made from PVC components as defined and described in ASTM D-1784 for Rigid Poly (Vinyl Chloride), compounds and chlorinated poly (Vinyl Chloride) compounds.

2.2.3 Pipe and fittings shall be installed in accordance with ASTM D-2321. Only Class I, I, III, and IV embedment materials will be considered suitable.

2.2.4 The Contractor shall submit to the Engineer for approval a complete set of specifications and manufacturer installation recommendation prior to shipment or installation of these materials.

2.3 Force Mains:

2.3.1 Ductile Iron - Same specification as for water mains.

2.3.2 Polyvinyl Chloride - Same specification as for water mains.

2.4 Manholes:

Construction materials to be used in manholes may be of one of three different types, as approved by the Engineer or as specified in the Special Conditions, Bid Proposal or plans. These types are:

a. Fiberglass Manhole (if allowed for project - see construction notes.)

b. Precast Concrete Manhole

c. Monolithic - Cast-in-Place Concrete

Specific instructions on each type manhole as follows:

2.4.1 Fiberglass

Materials:

a. Manhole: Manufactured reinforced fiberglass plastic as manufactured by Owens/Corning; ARMCO or approved equal.

b. Cast Iron: ASTM A-48, Class No. 20, cast iron. Make cast iron manhole frames and covers to dimensions shown on detail drawing. Casting free from sand or blowholes and other defects. Holes in cover to be free from plugs and burrs. Machine bearing surfaces of manhole frames and covers to obtain even bearing. Cast wording "Sanitary Sewer" or "Storm Sewer", as applicable, on covers. Use Vulcan Number S.VM 19 (Mod - 32" cover) for sanitary sewers or approved equal.

c. Brick: ASTM C-32, Grade NA, except that not more than 16 percent (by weight) maximum individual brick absorption permitted when submerged in water for 24 hours. It must be thoroughly dry prior to placing in water. Use only first quality, solid, hard-burned, uniformly shaped bricks. Make bricks, if used, homogeneous and uniformly burned.

d. Sewer Pipe and Fittings: Same as pipe specified for sewer.

e. Mortar: ASTM C-270, Type S (A-2) using Portland Cement.

f. Aggregate for Mortar: ASTM C-144.

g. Concrete: See Concrete Specifications.

h. Reinforcing Steel: See Steel Specifications.

Construction Methods:

a. Construct manholes on concrete foundation of shape and size indicated for type manhole required. Unless otherwise indicated on the plans, use standard manhole. Make foundation minimum of 8 0inches in thickness, below the bottom of the sewer pipe O.D., except if manhole is over 12 feet deep, make foundation 12 inches thick below the bottom of the sewer pipe O.D.

b. Cut reinforced fiberglass manhole base to accommodate size sewer pipe as indicated on the plans. Maximum tolerance for cut out is 1/2 inch greater than required opening. Base shall be embedded in concrete foundation to a

minimum depth of 6 inches. Place base and foundation as soon as practicable after sewer line is completed through manhole location. To get proper seal where manhole cut out fits over pipe, fresh concrete which is monolithic with slab concrete must be used as shown on outside of manhole. Manholes will be rejected if this seal is not made when the slab is poured and manhole is replaced. Grout with a cold joint between grout and concrete slab is not acceptable.

c. Where main sewer (lowest line) passes straight through manhole or degree of deflection of main sewer is less than five degrees, and no other line or stub-out is shown entering manhole below center line of main sewer, lay sewer continuously through manhole. After manhole walls have been completed, break out and remove top half of barrel of sewer pipe that was previously laid through manhole. Use concrete with 1 inch mortar topping and construct invert as shown.

d. Where main sewer (lowest line) alignment deflects greater than five degrees at manhole or where another sewer or stub-out enters at or below center line of main sewer, terminate main sewer pipe laying in such a manner that ends of pipe protrude inside of manhole. Construct invert with concrete and top with 1 inch of mortar. Shape invert for smooth flow across floor of manhole and slope side as shown to obtain proper contour.

e. Install stub-outs, where shown, to line and grade. Use one full joint of pipe, of size indicated, for stub-out. Seal stub-out with plug. Install plug in such manner as to prevent seepage or leakage through stub-outs. Installation of plug shall be such that it may easily be removed in the future without damaging bell or groove end of stub-out.

f. Where sewer pipe for drop connection enters manhole at other than bottom cut out, a saddle type connection to manhole for pipe size will be provided as shown. Connections depending upon grout for sealing will not be allowed.

g. Manholes shall be installed as one basic unit. Contractor is responsible for verifying correct manhole depth before construction. Initially, manhole tops shall not be less than 6 inches nor greater than 18 inches from final grade. If manholes are relocated in field because of unforeseen conflicts, Contractor is responsible for correct depth of manhole. Manhole tops shall be set as follows:

(1) Developed Areas: Set manhole tops 3" higher than existing elevation of natural ground or other final grade when specified by Engineer.

(2) Undeveloped Areas: Set manhole tops flush with paved surfaces and 1" higher than shoulder and/or proposed final grade elevations in easements or other unpaved areas. Where manholes are located in bottom of ditches either set manhole top, Vulcan Foundry VM-17, or equal Neenah Casting flush with ditch bottom and seal with solid cover, or set 12-inches above ditch bottom and reshape ditch around manhole. Engineer will

specify grade for tops of all manholes.

h. Where drop connections into manholes are required, construct inside drops of 4-inch pipe for six and eight inch sewer lines, and inside drop of 6-inch pipe for ten through fifteen inch diameter sewers. Inside drop connections shall consist of saddle connection with two feet of pipe stub, tee faced vertically down inside manhole connected to stub, riser pipe, and 90 degree elbow at base of stack. Outside stack shall consist of saddle connection on manhole with two foot stub of pipe, tee in sewer line faced vertically down, riser stack, 90 degree elbow at base of stack and joint of pipe into manhole.

   Construct drop connection at time manhole is constructed, being certain to grout bottom manhole connection of drop in same manner prescribed for main sewer. If sewer is not to be immediately connected into drop connections, plug drop in same manner as plugged stub-outs.

i. Backfill around manholes and drop connections immediately after mortar and concrete have set. Place backfill around manhole evenly in 12-inch layers and in such manner that no torque is applied to the manhole.

j. Where proposed sewer line connects to an existing manhole at or near manhole invert, reshape invert of existing manhole so that no turbulence is created in manhole as a result of the connection.

2.4.2 Precast Concrete:

Materials:

a. Manhole: Manufactured by concrete plant with mesh reinforcing in 12", 24", or 36" rings.

b. Cast Iron: Rings and covers shall be in accordance with ASTM A-48, Class No. 20, cast iron. Castings will carry wording "Sanitary Sewer" on covers. Use Neenah or approved equal.

c. Brick: Same as Fiberglass above.

d. Sewer and Pipe Fittings: Same as pipe specified for sewer.

e. Mortar: ASTM C-270, Type S (A-2) using Portland Cement.

f. Aggregate for Mortar: ASTM C-144.

g. Concrete: See Concrete Specifications.

h. Joint Gasket: Joints between adjacent precast section shall be rubber gasket in accordance with manufacturer's requirements. All joints to be sealed water-tight.

2.4.3 Construction Methods: Construction using precast concrete manholes will follow the general procedures as shown under the fiberglass manholes. All

precast concrete manholes shall be constructed in accordance with the detail shown on the plans.

2.5 Monolithic Cast-in-Place Concrete Manholes

2.5.1 Materials:

a. Cast Iron: Same as fiberglass or precast concrete.

b. Sewer Pipe and Fittings: Same as specified for sewer.

c. Mortar: ASTM C-270, Type A (A-2) using Portland Cement.

d. Aggregate for Mortar: ASTM C-144.

e. Concrete: See Concrete Specifications.

2.5.2 Construction Methods:

Construction using Monolithic Cast-in-Place concrete manholes will follow the general procedures as shown under the Fiberglass Manhole. All Monolithic Cast-in-Place Concrete Manholes shall be constructed in accordance with the detail shown on the plans.

2.6 Cleanout Structures:

The Contractor shall construct cleanouts where shown on the plans and as specified. These shall consist of a 6-inch riser pipe laid on an angle on undisturbed natural ground. All backfill around and above the pipe shall be machine tamped in layers not exceeding 3 inches in depth so that no settlement shall occur after the cleanout is constructed. The base of the cleanout shall be laid in Class A concrete, and its size, shall be not less than that shown on the plans. Other construction details casting shall conform to the cleanout detail shown on the plans.

2.7 Connections:

Drop connections shall be constructed in accordance with plans and these specifications for materials and construction. The connection shall include the indicated fittings and necessary quantity of Class A concrete.

Service outlets shall consist of a standard wye and 45 degree bend and necessary vitrified clay sewer pipe to reach the property line, or as shown on the plans, plugged at the end and sealed with approved hot-poured joint compound. If required by the Engineer, the Contractor shall raise the lateral by means of a stack or steeper grade at the main. Stacks shall be installed in separate excavations, outside the trench wall of the sewer main. The wye, bend and lateral pipe shall be encased in Class A concrete of four inch minimum thickness outside the pipe. At the time of construction, the Engineer will designate the locations of the service outlets and the depth to the top of the lateral pipe, if depth is not indicated on the plans. The minimum depth of cover over the end of the lateral pipe shall be four feet.

2.8 Cleanout Covers:

Cleanout covers shall be of the best quality gray cast iron meeting the requirements of Federal Specification QQ-I-652. Unless otherwise specified, the cover shall be free from perforations and shall conform to the cleanout detail in the drawings.

3. CONSTRUCTION METHOD:

3.1 Location of Sewer Lines: Location of sewer lines with respect to property lines will be indicated on the plans. Parallel water and sewer lines shall be spaced not less than nine feet apart horizontally unless water tight sewer joints are provided as indicated on sewer detail plan sheet.

3.2 Excavation: Except as otherwise specified or shown on the plans, all sewers shall be constructed in open cut trenches with vertical sides. Where machines other than ladder type trenching machines are used, excavated material composed of large chunks and clods shall not be used for backfilling and such material shall be disposed of by the Contractor and other suitable material for backfill shall be provided without additional expense to the Owner.

Trenches for pipe sewers smaller than 30-inch shall have a width below the top of the pipe bell or other joint of not less than the outside diameter of the pipe plus 12 inches and not more than the outside diameter of the pipe plus 18 inches. Trenches for pipe sewers 30 inches and larger shall have a width below the top of the pipe plus 16 inches and shall be wide enough to permit making up the joints but shall not be wider than the outside diameter of the pipe plus 24 inches.

No excavated material shall be deposited on the gravel, shell, asphalt, concrete, or other paved area of any roadway or sidewalk, or on any lawn, garden, or shrubbery, and such material shall be handled in such a manner as not to obstruct drainage. Where necessary for compliance with this provision, the material shall be hauled.

Where necessary in the Engineer's opinion, the sides of the trench or other excavation shall be braced and rendered secure to the satisfaction of the Engineer.

In sewer trenches and other excavations having vertical sides, sheeting and bracing necessary to support the sides of the excavation in a vertical plane shall be installed.

After the excavation has been backfilled, compacted, or water tamped, steel or other sheeting may be pulled, otherwise sheeting and bracing, once installed may not be removed without the consent of the Engineer.

3.3 Rock Excavation: No rock is anticipated and no extra compensation will be allowed for rock excavation.

3.4 Crossing State Highways ad Railroads: When sewer lines cross highways, railroads, or streets under the jurisdiction of the State Highway Commission, or other public body or corporation, the Owner will secure permission from the controlling authority before doing any work on the right-of-way of such roads or streets. A written release must be given by the controlling authority before final acceptance of the work.

3.5 Pipe Crossing Trenches: Where any pipe crosses a trench, such as sewer pipe, water or gas pipe, having an exposed joint that will not safely span the trench without danger of breaking, it must be supported with a reinforced concrete beam constructed in the following manner: A trench under said cross pipe shall be opened up to a point varying from two (2) to six (6) feet back from the sides of the main trench as the Engineer may direct, so that a timber box may be placed around the pipe and supported by two (2) struts, one on each side of the trench, and resting on a plank across the bottom on trench, underneath the line and of such dimensions as is necessary, to properly support the ends of the beam and pipe which it carries. The width of this box shall be twice and the depth, not to exceed 12", shall be three times the outside diameter of the pipe supported. The box shall then be filled with Class "A" concrete with a sufficient number of bars of reinforcing steel placed one (1) inch above bottom of box extending the entire length thereof, to provide an area of steel equal to one percent of the sectional area of concrete in the beams. The timber used as forms and struts must be left in the trench.

Should it become necessary to change the position of such pipe, conduit or structure, the Engineer shall be notified at once of the locality and circumstances and shall thereupon give directions as to what shall be done, and the Contractor shall conform thereto, and shall be paid (upon the estimate of the Engineer) for materials furnished and for the labor performed upon such change, insofar as it may be additional to that contemplated. The Contractor shall be responsible for injuries to persons and property, for all damage to any pipe, conduit, sewer, or other structure injuriously affected by the work, and the Owner shall not be liable thereof.

3.6 Tunnel Construction

3.6.1 When a water or sewer main crosses a paved roadway having a concrete base, the main shall be laid in a tunnel whenever, in the opinion of the Engineer, the cut is sufficient for tunneling. Openings for removing the excavated material and for placing the pipe shall be made at the locations designated by the Engineer. The tunnel must be sheeted solid on both sides and top and each side supported on a piece of lumber laid longitudinally on the bottom of the trench, but this support must not be wide enough so as to pass under the pipe. When backfilling a tunnel, the space between the sheeting and the pipe shall be rammed, in an approved manner, with earth, gravel or concrete. If concrete is used, 3000 psi concrete shall be used and the unit bid price for such material will be paid. Should gravel be specified, the Owner will pay twice the price bid for gravel as placed on the street and lumber will be paid for at its bid price.

3.6.2 Should the surface over a tunnel settle during the maintenance period of the water or sewer main contract, the Contractor or his sureties must pay for the necessary repairs. Should the street settle prior to the time that the final estimate has been paid, then same may be retained until repairs have been made.

3.6.3 Should the Contractor be instructed to lay the mains in tunnels under trees, sidewalks, driveways and other such surface or subsurface obstructions, there will not be any additional compensation for this work or for furnishing and placing specified sheeting and bracing.

3.7 Backfilling Trenches: Trenches shall be backfilled as follows:

3.7.1 Normal: Selected material shall be deposited in 6" layers and hand tamped between the sides of the trench and the pipe and over the pipe for at least 6" above the top of the pipe and compacted to 90% density the full depth of the trench where water is available and water settlement of earth backfill is permitted, water shall be applied in a manner which will provide effective settlement of the backfill with a minimum amount of water. In no case shall the trenches be permitted to overflow or water be wasted. Settlement by water puddling shall not be done until after trench has been backfilled to or above the ground surface. Water shall be introduced into the bottom of the trench through a long pipe nozzle, so that disturbance of any tamped material below will be held to an absolute minimum. Backfill material to compensate for settlement below surface grade shall be added as necessary and settled during puddling operations.

3.7.2 Under Pavement: For trench through existing or future asphaltic concrete, concrete, asphalt-topped concrete, flexible base with asphalt topping, shell or gravel surfaces, either public or private roads or streets, place sand-cement backfill in pipe zone to bottom of pavement or base. Cement stabilized backfill will be paid at unit price specified in the Bid Proposal.

3.7.3 Backfill Settlement: The Contractor shall be responsible for all settlement of backfill which may occur within a period of one year after the date of final completion of the contract under which the backfilling work was performed. The Contractor shall make, or cause to be made, all necessary backfill replacements and repairs or replacements appurtenant thereto, within 30 days after notice by the Engineer or Owner.

3.8 Surplus Earth: Any surplus excavated material shall be disposed of onsite as directed by the Engineer. If the Engineer notifies the Contractor that the Owner does not have use for this material, it shall become the property of the Contractor to dispose of as he wishes without injury to the Owner or any individual.

3.9 Street Surfaces: In all streets, the surface of the trenches after being refilled, dried, and settled, shall be finished in the most workmanlike manner without needless delay and shall in every respect be equal in quality, character, material, and workmanship to the street improvements existing over the line of the trench immediately prior to making the excavation. The expense of restoring the streets must be included in the price bid per linear foot for mains, except as otherwise provided herein. All concrete or asphaltic cement paving ordered placed on streets will be paid for at the unit price bid.

On gravel, shell, and asphalt surfaced streets, the trench shall be filled as otherwise specified up to within 4 inches of the surface of the street. The trench shall then be filled with gravel or shell, as ordered by the Engineer, to a point approximately 1 inch higher than the street level. After all work is completed and before the job is finally accepted, the Contractor shall go back and place such additional gravel or shell as is ordered by the Engineer. Gravel or shell shall be paid for at the units prescribed in the proposed scheduling.

On concrete streets the trenches shall be filled as otherwise specified within 4 inches of the surface of the street, and then filled with road gravel or shell to a point approximately

1 inch higher than the street level. After all other work is completed, the Contractor shall go back and remove sufficient shell and install 6 inches of concrete as ordered by the Engineer. The concrete used shall be paid for at the unit price bid in the proposed schedules.

On asphalt surfaced streets, the gravel or shell base shall be placed as stated above. At such time as the gravel or shell base shall be leveled smooth approximately one inch below the existing asphalt surface, the new asphalt pavement shall then be placed and rolled or tamped to a smooth and even surface.

3.10 Clean-Up: Contractor's equipment, surplus materials and surplus earth shall be removed from the job following the final test of mains and all street surfaces replaced before the final estimate will be approved.

3.11 Laying Sewer Pipe:

3.11.1 After the trench has been carefully graded, same must receive the approval of the inspector before any pipe is placed therein. Each piece of pipe shall be examined for defects, cut to the correct lengths, and the interior surface and the bell and spigot thoroughly cleaned of all foreign material prior to placing same in the trench in an approved manner. The pipe, valves, fittings, etc., shall be adjusted so as to be at their proper locations and then each spigot properly fitted into position. Each length of pipe shall rest on the bottom of the trench throughout its entire length.

3.11.2 Whenever the laying of pipe is discontinued for the day or for an indefinite period, a cap or plug shall be tightly placed in the end of the last pipe laid.

3.11.3 Instructions for jointing pipes with special couplings shall be in strict conformity with the Manufacturer's printed instructions.

3.11.4 Should a damaged piece of pipe furnished by the Contractor be placed in the sewer line, the Contractor shall furnish at his expense all labor and materials required for removing and replacing the defective pipe.

3.12 Force Main Thrust Blocking:

All force main lines shall be thrust blocked at bends, tees, caps, plugs, and fire hydrants to prevent movement of lines under pressure. The blocking shall be 3,000 psi concrete and shall completely fill the space between the solid ground and the fitting to be anchored in such manner that the pipe and the fitting joints will be accessible for repairs. Thrust blocking shall be installed at all points designated by the Engineer with no extra payment.

3.13 Pipe Not To Be Laid Until Inspected: No pipe shall be laid until same has been inspected and accepted by the Engineer.

Unless requested by the Contractor and approved by the Engineer, no pipe shall be laid within ten (10) feet of the excavating. Pipes having any defects which do not cause their rejection shall be so laid as to bring these in the top half of the sewers; and, if the bell or spigot be broken, the defective place must be liberally covered with cement mortar, reinforced with a piece of pipe or pipe-ring.

3.14 Adjustments: The pipes and specials shall be so laid in the trench so that, after the sewer is completed, the interior surface thereof shall conform accurately to the grades and alignments fixed and given by the Engineer.

The pipe shall be laid accurately to line and grade, with the spigot end down-stream entering the barrels to full depth and in such manner to not drag earth into the annular space. All adjustments to line and grade of pipes laid directly upon the bottom must be done by scraping away or filling the earth in under the body of the pipe and not by blocking or wedging up. All sewers must be laid in a perfectly straight line, so that a light can be seen from one manhole to the other even for the smaller size of sewers, and the Contractor will not be authorized to deviate from the given line without the authority of the Engineer. Before laying, the interior of the bell shall be carefully wiped smooth and clean, and the annular space shall be free from dirt, stone or water.

4. FIELD PERFORMANCE AND ACCEPTANCE:

4.1 Low Pressure Air Test: Maximum allowable infiltration or exfiltration shall be 200 gallons per inch of diameter per mile of sewer pipe per day. The joints shall be tight, and visible leakage in the joints or leakage in excess of that noted above shall be repaired at the Contractor's expense by any means found necessary. The pipe shall be tested in sections as directed by the Engineer. Exfiltration testing shall be used. The line shall be filled to a height of 2 feet above the inside of the top of pipe. The drop in water level in the downstream manhole over a two-hour period shall be used to compute the exfiltration. Final payment will not be made until each section passes the above testing procedure.

Air testing may be used as an option to water testing. While air testing may be used for final acceptance, should the air test fail, then a water test shall be performed in order to determine if the water leakage is no greater than specified in the above paragraph. The minimum time requirements for air testing for the 0.5 PSIG Pressure Drop, from 3.5 PSIG, to 3.0 PSIG, shall not be less than that shown in the following table:

Pipe Size (In.)	Time
4	2-1/2 Minutes
6	4 Minutes
8	5 Minutes
10	6-1/2 Minutes
12	7-1/2 Minutes
15	9-1/2 Minutes

4.2 Leakage Testing for Manholes:

4.2.1 After completion of manhole construction, wall sealing, or rehabilitation, but prior to backfilling, test manholes for water tightness using hydrostatic or vacuum testing procedures.

4.2.2 Plug influent and effluent lines, including service lines, with suitably-sized pneumatic or mechanical plugs. Ensure plugs are properly rated for pressures required for test; follow manufacturer=s safety and installation recommendations. Place plugs minimum of 6 inches outside of manhole walls. Brace inverts to prevent lines from being dislodged when lines entering manhole have not been backfilled.

4.2.3 Vacuum Testing:

(1) Install vacuum tester head assembly at top access point of manhole and adjust for proper seal on straight top section of manhole structure. Following manufacturer=s instructions and safety precautions, inflate sealing element to recommended maximum inflation pressure; do not over-inflate.

(2) Evacuate manhole with vacuum pump to 10 inches mercury (Hg), disconnect pump, and monitor vacuum for time period specified in the Manhole Vacuum Test Time Table.

(3) If drop in vacuum exceeds 1 inch Hg over specified time period tabulated above, locate leaks, complete repairs necessary to seal manhole and repeat test procedure until satisfactory results are obtained.

Manhole Vacuum Test Time Table

Depth in Feet	Time in Seconds by Pipe Diameter		
	48"	60"	72"
4	10	13	16
8	20	26	32
12	30	39	48
16	40	52	64
20	50	65	80
24	60	78	96
*	5.0	6.5	8.0

*Add T times for each additional 2-foot depth.

(The values listed above have been extrapolated from ASTM C924-85)

4.2.4 Perform Hydrostatic Exfiltration Testing as Follows:

(1) Seal wastewater lines coming into manhole with internal pipe plug. Then fill manhole with water and maintain it full for at least one hour.

(2) The maximum leakage for hydrostatic testing shall be 0.025 gallons per foot diameter per foot of manhole depth per hour.

(3) If water loss exceeds amount tabulated above, locate leaks, complete repairs necessary to seal manhole and repeat test procedure until satisfactory results are obtained.

4.3 Testing of Force Mains:

4.3.1 After the pipe has been laid and partially backfilled, excepting at joints, all newly laid pipe shall, unless otherwise specified, be subjected to hydrostatic pressure 150 pounds and not less than 150% of the maximum anticipated sustained operating pressure.

4.3.2 Each valved section of pipe shall be slowly filled with water and the specified test pressure shall be applied by means of a pump connected to the pipe in a satisfactory manner. The Contractor will furnish, install, and operate, at his

expense, the necessary connections, pump, meter, and gauges. Evidence of the condition of the pump must be provided to the Engineer prior to testing.

4.3.3 Each section of pipe shall be tested just prior to chlorination. Before applying for the specified pressure test, all air shall be expelled from the pipe. Should the taps at points of highest elevation be required to accomplish this, then same will be installed by, and at the expense of, the Contractor.

4.3.4 All joints showing visible leaks discovered in consequence of this pressure test shall be removed and replaced by the Contractor with sound material and the test shall be repeated until satisfactory to the Engineer.

4.3.5 All pressure tests shall be performed using a minimum pressure of 150 psi at the highest point in the line. The time of the testing shall be a minimum of 4 hours.

4.3.6 The allowable leakage for P.V.C. and D.I. pipe shall not exceed the gallon per hour per 1,000 feet rate listed in the table below:

Pipe Size (Inches)	Allowable Leakage
2	0.16
4	0.33
6	0.49
8	0.66
10	0.82
12	0.99
16	1.32

For pipe diameters greater than sixteen (16) inches, leakage shall not exceed the rate of 0.08275 multiplied by the nominal pipe diameter inch.

4.3.7 Where practicable, pipe lines shall be tested in lengths between line-valves or plugs of no more than 1,500 feet.

4.3.8 If the leakage exceed the allowable rate, repairs must be made and the test must be redone until each segment passes the test.

4.3.9 All visible leaks at exposed joints, and all leaks evident on the surface where joints are covered, shall be repaired and leakage minimized, regardless of total leakage as shown by test.

4.3.10 All pipe, fittings, and other materials found to be defective under test shall be removed and replaced at the Contractor's expense.

4.3.11 Lines which fail to meet the tests shall be repaired and restored as necessary, until test requirements are complied with.

END OF SECTION

SECTION 33 41 00
STORM SEWERS AND APPURTENANCES

1. SCOPE:

This specification covers storm sewers, culverts, manholes, headwalls, inlets, junction boxes, and miscellaneous items indicated in connection with the storm sewer system, complete. Excavation, backfilling, and other earthwork operations are specified under section entitled "Excavation, Trenching, and Backfilling Requirements".

2. GENERAL:

Pipe shall consist of the materials specified in this specification and in the same manner indicated on the drawings. Pipe shall be laid true to the grades shown on the drawings. Any line in which opening or faulting of the joints occurs during backfill or before final inspection and acceptance, such that infiltration of materials or a change in flow characteristics results, must be repaired or replaced to the satisfaction of the Engineer. Under no circumstances shall pipe be laid on unsuitable soft material, and no pipe shall be laid when trench conditions or weather are unsuitable for such work. Full responsibility for the diversion of drainage during construction shall be borne by the Contractor. Any section of the pipe already laid that is found to be defective or damaged shall be taken up and re-laid or replaced as directed by the Engineer, without additional cost to the Owner.

New manholes and inlets shall be precast concrete structures as manufactured by Hanson Pipe & Precast, Oldcastle Precast, or approved local equivalent.

Headwalls, inlets, and the miscellaneous alterations and extensions to existing drainage structures shall be constructed of the materials specified in this specification and in the drawings and shall conform to the dimensions, locations, and elevations shown on the drawings.

3. MATERIALS:

3.1 Corrugated Galvanized Metal Pipe: Shall be asphalt coated, as manufactured by Armco Drainage and Metal Products, Inc., or an approved equal and shall conform to the requirements of the Texas Department of Transportation Standard Specification Item 460. Thickness of metal, diameter and coating to conform to the plans.

3.2 Concrete Pipe for Storm Drains: Pipe for storm drains shall be reinforced concrete pipe (RCP), ASTM C76, not less than Wall B, Class III, unless otherwise indicated on the drawings or proposal. No concrete pipe shall be delivered to the site of the work until control cylinders representing such pipe shall have attained a compressive strength of at least 80% of the specified minimum strength.

3.3 Concrete Box Sections for Storm Drains: Box sections for storm drains shall be reinforced concrete box (RCB) manufactured in accordance with ASTM C850 (HS20 Loading), unless otherwise required. No concrete box sections shall be delivered to the work site until control samples representing such box sections have attained a compressive strength of at least 80% of the specified minimum strength.

4. INSTALLATION:

4.1 Laying Pipe: The laying of pipes on the prepared foundation shall be started at the outlet end with the spigot or tongue ends pointing in the direction of flow and shall proceed toward the inlet end with the abutting sections properly matched, true to the established lines and grades. The Contractor shall furnish and place in position all the necessary batter boards for controlling the work. The batter boards shall be of sufficient size timber and shall be substantially supported. The boards and all location stakes must be properly maintained in place. The Contractor shall also furnish, at his own expense, good sound twilled lines for use in giving lines and grades and the necessary plummets and graduated poles of a form approved. Contractor's use of laser equipment for grades is acceptable.

Proper facilities shall be provided for hoisting and lowering the sections of pipe into the trench without disturbing the prepared foundation and the sides of the trench. The ends of the pipe shall be carefully cleaned before the pipes are placed. As each length of pipe is laid, the mouth of the pipe shall be protected to prevent the entrance of earth or bedding material. The pipes shall be fitted and matched so that when laid in the bed they shall form a smooth, uniform conduit. Shape trench bottom and perform excavation as specified under the specification entitled "Excavation and Site Work".

4.2 Jointing: Unless otherwise specified, the following method of jointing for bell-and-spigot and tongue-and-groove pipe shall be used.

4.2.1 Cold Compound Joints, Tongue-and-Groove Joints: Pipe bells and the outside of the spigot ends shall, while dry, be completely coated with joint primer. This coating shall be applied sufficiently in advance so that the primer will be thoroughly dry when the pipe is laid. Pipe 24 inches and larger shall be primed at the point of manufacture. Apply a fillet of compound on the bottom half of the inside of the bell, press enough dry twisted jute into the compound to pass around the pipe and lap at the top and shove home the spigot of the pipe. Bring the jute around the pipe, firmly caulk into place. The jute should be sufficient to fill 1/4 of the depth of the bell. Fill the remaining 3/4 of the depth of the bell with compound, taking care to leave no voids and provide sufficient compound to form a fillet sloping 45 degrees from the outer end of the bell to the barrel of the next pipe.

Compound used for these joints shall be a well-known brand of materials of proven worth, uniform in consistency and approved by the Engineer as being equal to Talcote No. 052 or Gulf States No. GS 702 or 722. Primer shall be of the type recommended by the manufacturer of compound used.

5. MATERIALS FOR DRAINAGE STRUCTURES:

5.1 Concrete: Unless otherwise specified, concrete and reinforced concrete shall conform to the requirements for concrete under specification "Concrete", including the requirements for materials, proportions, mixing, placing, finishing, protection, curing, and the furnishing and construction of forms. The concrete covering over steel reinforcing shall be not less than 1-1/2 inches. When concrete is deposited directly against the ground, the covering will be at least 3 inches between the steel and the ground. Expansion joint filler material shall be formed by bituminous type conforming to AASHTO Specifications M-33 or rubber gasket joint if required by the local jurisdiction or the plans.

5.2 Mortar: Mortar for pipe joints and connections to other drainage structures shall be composed of one part by volume of Portland cement and two parts of sand. The Portland cement shall conform to the requirements of ASTM C-150, Type I. The sand shall conform to the requirements of AASHTO Specification M-45. Hydrated lime may be added to the mixture of sand and cement in an amount equal to 10% of the column of cement used. Hydrated lime shall conform to the requirements of ASTM Specifications C-207, Type S.

The quantity of water in the mixture shall be sufficient to produce a stiff workable mortar, but shall in no case exceed 6 gallons of water per sack of cement. Water shall be clean and free of injurious acids, alkalis, and organic impurities. The mortar shall be used within 30 minutes from the time the ingredients are mixed with water. The inside of the joint shall be protected for such a period as is necessary to obtain satisfactory curing.

5.3 Concrete Blocks: Concrete blocks shall conform to ASTM C-90, Type U-1.

5.4 Brick: Common brick conforming to the requirements of Federal Specifications SS-B-656, Class H, laid up in the specified mortar, may be used in lieu of concrete in the construction of sidewalls below the cover, where indicated on the drawings.

5.5 Cast Iron: Cast iron shall conform to ASTM Specification A-48 for Class 20 gray cast iron. Cast iron shapes shall conform to the dimensions shown and shall be clean and perfect, free from sand or blow holes, or other defects. Manhole steps shall conform to dimensions on drawings.

END OF SECTION

SECTION 33 71 74 - ELECTRICAL UTILITY SERVICES - UNDERGROUND

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes arrangement with Utility Company for permanent electric service; service provisions; and secondary service entrance from Power Company.

B. Coordination: Contractor shall be responsible for all coordination required for utility installation, connections and inspections.

1.3 REFERENCES

A. Section 26 05 50 - Basic Electrical Materials and Methods.

1.4 SYSTEM DESCRIPTION

A. Utility Company: CenterPoint Energy

B. System Characteristics: 480Y/277 volts, three phase, four- wire, 60 Hertz.

C. Service Entrance: Underground.

D. Underground Service Provisions: Underground service entrance to building service entrance equipment.
   1. Utility Service-Entrance Conductor Connection: At Utility Company's pad-mounted transformer.

1.5 SUBMITTALS

A. Submit utility service outlet agreement including Utility Company prepared installation drawings.

1.6 QUALITY ASSURANCE

A. Install service entrance in accordance with Power Company's Rules and Regulations.

B. Maintain one copy of each document on site.

1.7 COORDINATION

A. Coordinate with Utility Company, relocation of overhead or underground lines interfering with construction.

PART 2 - PRODUCTS

2.1 METERING EQUIPMENT

A. Coordinate with Power Company and provide equipment, conduits, manholes and equipment pads in accordance with Power Company directions.

2.2 CABLE TAP BOX

A. Submit two (2) copies of drawings of proposed cable tap box to the designated representative of the Electric Utility for approval prior to fabrication of cable tap box.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Arrangements with Power Company shall be made to obtain permanent electric service to the Project.

B. Provide primary service entrance conduits from Power Company terminations. Power Company will connect conductors to transformer and provide primary cables.

C. Provide secondary service entrance conduits and wire from Power Company transformer to building service entrance equipment.

D. Provide raceway enclosures and attachment for metering equipment as required by Electric Utility.

E. Install cast-in-place concrete pad for Utility Company transformer.

3.2 CABLE TAP BOX

A. Conduit Between Transformer and CTB:
   1. Electric Utility requires conduits from padmount transformer to cable tap box. Install conduits in concrete ductbank from secondary opening of the transformer pad to the utility side of the cable tap box. Coordinate conductor installation with Utility Company.
   2. Prior to pouring concrete for conduit between transformer pad and cable tap box pad, obtain inspection and approval of trench by Electric Utility.

B. Conduit Between CTB and Building: Provide underground conduit and cable from tap box to main switchboard. All underground conduit shall be encased in reinforced concrete.
   1. Cable Termination: Terminate all cables on customer side of CTB with NEMA-pattern, two-hole, compression lugs.

3.3 CUSTOMER FAULT PROTECTION

A. General: Provide the following information for each service entrance overcurrent protective device. Electric Utility may furnish forms to be filled out or otherwise stipulate format of submittal. Provide information noted herein plus other items noted in Electric Utility drawings and specifications. Submit all data at least 30 days prior to service cut-in date. Contractor shall obtain device settings from submitted coordination study or, when

coordination study not required, as recommended by manufacturer of actual equipment installed on job site.

B. Coordination Study: Refer to Section 26 20 00 to determine if coordination study is required. When a coordination study is required, Contractor shall obtain and furnish a copy to the Electric Utility. Settings for main circuit breaker(s) shall be taken from coordination study and identified to Electric Utility.

3.4 PRIMARY DUCTBANK INSTALLATION

A. Routing: All proposed conduit for Electric Utility primary cables shall be installed in straight runs, unless otherwise indicated on Electric Utility drawings. Any conduit bends shall be installed with a 20 foot minimum radius, unless indicated otherwise on Electric Utility drawings. Conduit turn-ups into equipment pads and pole pedestals shall have a minimum five (5) foot radius. Conduit turn-ups (bends) determined by Electric Utility to be wrinkled, crumpled, or creased shall be replaced by the Contractor. Any deviations from these requirements shall have written approval from the Electric Utility prior to installation.

B. Conduit: During installation, the minimum depth for a conduit run shall be referenced to the final grade. Type EB rigid PVC conduit encased in red concrete, six (6) inches Inside Diameter. Slope as directed by Electric Utility.

C. Pulling Ribbon: Provide a 3/4 inch duct ribbon with numerical footage markings (Neptco #WP-2500P, or equivalent acceptable to the Electric Utility) in each conduit installed. This pulling ribbon shall extend a minimum of seven (7) feet beyond the end of the conduit.

D. Survey Wire: Provide a #14 American Wire Gage (AWG) or larger aluminum or copper 600 volt insulated conductor in the middle conduit. This conductor shall be electrically continuous from end-to-end of each ductbank. Conductor will facilitate surveying of the ductline by the Electric Utility. Take adequate measures to assure the conductor will be in place until all necessary surveying is completed.

E. Plugs: Conduit ends shall be plugged with a duct cap or other type capping device. The use of rags to plug conduits is prohibited. If the conduit is installed in stages, keep each section of conduit capped until the new section is installed. If, prior to Electric Utility using any conduit, the conduit is found to be blocked, the Contractor shall remove the obstruction, at Contractor expense.

F. Concrete: All cold joint concrete pours shall have four #5 rebar in place before any new concrete is poured; 3 feet-0 inches in length, exposed 1 foot-6 inches.

G. Ductbank Clearance:
1. Customer ductbank or any other non-electric utilities shall not be routed beneath pads for Electric Utility equipment (except for stub-up of Customer secondary ductbank).
2. Hold a one (1) foot minimum vertical clearance between Electric Utility ductbank and all other facilities.
3. Hold a five (5) foot minimum horizontal clearance between Electric Utility ductbank and other facilities running parallel to the ductbank.
4. Electric Utility will not allow joint trenching between electric ductbank and any other underground utilities.

H. Terminal Pole: Delay installation of approximately the last 20 feet of primary conduit

installation until the terminal pole location has been staked by the Electric Utility. Install conduit stub at the terminal pole only after the pole has been set by the Electric Utility. Securely brace the pole before trenching up to it. Contact Electric Utility to obtain schedule and any required observations by E.U. personnel.

I. Slack Secondary Conductor: When Contractor installs secondary conductor from the pole mount transformer to the building service entrance equipment, pull at least seven (7) feet of slack cable. This slack cable will be used by Electric Utility to make cable terminations onto lugs in transformer secondary compartment. Furnish compression body lug to Electric Utility for each service entrance cable.

J. Manholes: Provide manholes per Electric Utility Standards and one 5'x8' manhole per 300 linear feet of primary ductbank.

3.5 INSPECTION

A. Customer Installed: All customer-installed facilities to be used by Electric Utility shall be inspected by the Electric Utility after the conduit is installed, pads are formed, reinforcing rods installed and other work performed, but prior to the pouring of concrete. Contact Electric Utility at least 24 hours in advance, week days, regular business hours, non-holiday.

B. Final Inspection: Final on-site inspection will be made by Electric Utility to verify that all customer installed facilities are in accordance with Electric Utility service agreement specifications and terms and conditions. The customer (or customer's contractor) will be advised of any needed corrections and changes. Perform all corrections and changes as directed by Electric Utility at no additional cost to the Owner

END OF SECTION 33 71 74

SECTION 41 22 13.19 - JIB CRANES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes: Freestanding, mast-mounted jib cranes with a 360 degree rotating boom.

B. Related Sections
   1. Section 03 30 00 “Cast-in-Place Concrete”.
   2. Section 05 12 00 “Structural Steel Framing”.
   3. Section 05 50 00 “Metal Fabrications”.

G. Society for Protective Coatings (SSPC)

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: A company with more than 10 years of experience successfully designing and manufacturing cranes and material handling solutions.

B. Cranes shall be designed, fabricated, and installed in accordance with ANSI B30.11, MH27.2, OSHA 1910.179, and applicable building codes and regulations.

C. Applications where cranes will be used in potentially hazardous environments or explosive environments require special consideration. These conditions must be disclosed to the crane manufacturer.

D. Applications where cranes will be used in essential facilities for groups such as emergency services, military, and communications or those located within 15 kilometers of known seismic sources require special consideration. These conditions must be disclosed to the crane manufacturer.

E. If crane design must conform to standards other than building code and ANSI, crane modifications may be required and must be coordinated with crane manufacturer.

F. Installer Qualifications: A company that is acceptable to the crane manufacturer and with at least five years of experience assembling and installing cranes for multiple applications. Installer must be able to:
   1. Perform welding using certified operators in accordance with AWS D1.1.
   2. Bolt connections in accordance with torque tightening procedures specified in AISC Manual, Part 5.
   3. Clearly label crane with rated load capacity with label visible from floor level and loading position
   4. Perform OSHA Load Test Certification

1.5 SUBMITTALS

A. A complete list of all items proposed to be furnished and installed under this Section.

B. Manufacturer's specifications, catalog cuts, and other data to demonstrate compliance with the specified requirements.

C. Shop drawings indicating crane configuration and dimensions

D. Manufacturer's recommended installation procedures which, when approved by the Architect, shall be the basis for inspecting and accepting or rejecting actual installation procedures used on the Work.

E. The Contractor shall be responsible for coordinating all Work of this section.

F. Manufacturer's warranty

G. Manufacturer's Operation and Maintenance Manual

1.6 PRE-INSTALLATION CONFERENCE

A. Refer to Section 01 31 13 "Project Coordination".

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store products indoors and protect from moisture, construction traffic, and damage.
   1. Store products in manufacturer's packaging until ready for installation.
   2. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer

B. Store solvent-based materials in accordance with applicable regulations.

1.8 WARRANTY

A. Included warranty on manufacturer's standard form and outlining the manufacturer's agreement to repair or replace assemblies and components that fail in materials and/or execution within warranty period from date of substantial completion.
   1. Warranty shall cover ten (10) years or twenty thousand (20,000) hours for manual push-pull Crane products to cover defects in materials and execution.
   2. Warranty shall cover two (2) years or 4 thousand (4,000) hours for motorized tractor products.

PART 1 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Specifications are based on Spanco Freestanding Jib Cranes.
   1. Spanco: Morgantown, PA 19543; (800) 829-2080; www.spanco.com

B. Products of manufacturers listed which meet or exceed the specifications are approved for use on the Project. Other manufacturers must have a minimum of five (5) years' experience manufacturing products meeting or exceeding the specifications and comply with Division 01 requirements regarding substitutions to be considered.

2.2 PERFORMANCE REQUIREMENTS

A. Crane shall be designed, fabricated, and installed in accordance with ANSI B 30.11 and OSHA 1910.179

B. Crane shall be designed for Class C Normal / Industrial service as defined:
   1. Equipment is used where operational time is up to 100 percent of the work period and lifted load is at 50 percent or below rated capacity
   2. Equipment is used where operational time is less than 50 percent of the work period and lifed load is greater than 50 percent of rated capacity.
   3. Applications involving vacuums, magnets, and other high impact lifters are considered severe usage and require special design considerations

C. Coverage: Crane shall provide coverage of circular area of 25 foot radius.

D. Capacity: 1,000 lbs.

2.3 SYSTEM COMPONENTS

A. Materials: ASTM A36 steel with finished ends and surfaces

B. Crane (41 22 13.19.JC1):
   1. Freestanding, Mounted jib crane
   2. Rotating boom with 360-degree rotation and will not drift when at rest
   3. Mast:
      a. Stationary steel pipe perpendicular to boom
      b. Mast top plate and pivot pin to receive head assembly
   4. Head Assembly
      a. Construction: Standard plate, angles, and channels to ensure minimum deflection and maximum rigidity
      b. Plate: Reinforced using angles to limit compression and buckling stresses
      c. Lower Trunnion Roller Assembly: Mounted on a channel, which transfers the load to the top of the box
      d. Designed to inhibit dislodgement due to upward and forward motion while allowing .
      e. Utilize a Timken tapered roller bearing provided with grease fitting for proper lubrication.
      f. Welded steel plate and channel fabrication fitted over mast, bolted to boom, and designed to transfer boom load to mast and rotate.
      g. Bearings shall be designed for 5000-hour, B-10 design lift.
      h. Allow for installation of head prior to boom attachment and provide maximum hoist lift.
         1) Top pivot bearing assembly: Designed to connect head assembly to mast and transfer load from boom. Weight bearing channel connects the sides of the head assembly and contains tapered roller bearings that allow for easy rotation.
         2) Retaining clip: Inserted through mast pivot pin above weight bearing channel to prevent accidentally dislodging head assembly.
         3) Trunnion roller assembly: Designed to rotate around mast and transmit moment force from boom to mast. Includes trunnion rollers with tapered bearings held in steel channel with bolts. A mast that is less than 18 inches in diameter will have two rollers, and larger masts will have four rollers. Assembly rotates around mast with full roller face contact. Roller surface is sufficiently large to prevent cutting into mast. Cranes with small rollers or cams requiring wear band on mast are not acceptable.
   5. Trolley:
      a. Basis of Design: Manual Trolley as manufactured by Spanco.
         1) Features:
            (a) Adjustable Flange Widths.
            (b) Side Plate Material: Cast Iron.
            (c) Crown Wheels.
   6. Electric Chain Hoist:
      a. Basis of Design: Electric Chain Hoist as manufactured by Spanco.
         1) Features:
            (a) Capacity: 1-Ton

(b) Push Button Pendent
(c) Grade 80 Chain.
(d) Power: 480 V 3 phase power.
(e) Power Cord and power cord length of 3 feet.

2) Coordinate with mechanical engineer.

C. Crane shall be designed for minimum effort manual rotation.

D. Crane shall be designed to manually move load with maximum force to load weight ratio of 1/100.

E. Maximum deflection shall be L/150

F. Operating temperature range shall be 5 to 200 degrees F (-15 to 93 degrees C)

G. The Crane's structural design shall be based upon the following:
1. Hoist and Trolley: Live load capacity plus 15 percent
2. Impact: Live load capacity plus 25 percent
3. Inertia forces from crane and load movement
4. Live load capacity equal to net rated hook load

2.4 SHOP FINISHING

A. Standard Paint Colors
1. All runways and structural supports are to be shop painted in a standard color selected by the Architect from the manufacturer's line of standard colors.
2. All bridges are to be painted safety yellow.

B. Surface Preparation and Painting Procedures
1. Follow the standards of the Society for Protective Coatings (SSPC) for all product surface preparation.
2. Deburr, descale, and wash components prior to painting.
3. Coat all components with a semi-gloss enamel to a minimum dry-film thickness of three mils.

PART 1 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions under which Work of this Section will be performed. Correct conditions detrimental to the proper and timely completion of the work. Do not proceed until satisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install the Work of this Section in strict accordance with the approved shop drawings, the original design, and all pertinent regulations and codes, anchoring all components firmly into position for long life under hard use.

B. Install products in accordance with manufacturer's instructions.

C. Do not install products under environmental conditions outside of manufacturer's absolute limits.

3.3 TESTING

A. Upon completion of the installation, and as a condition of its acceptance, provide all necessary equipment and personnel and perform all tests required. Secure all required approvals from agencies having jurisdiction.

3.4 ADJUSTING AND CLEANING

A. Fit, align, and adjust crane level and plumb

B. Verify that crane operates smoothly and in accordance with manufacturer's specifications

C. Provide any required lubrication and other preparation as required prior to use.

D. Clean any excess lubricants and dirt from unit.

3.5 DEMONSTRATION

A. Instruct the Owner's personnel in proper operation and maintenance of units.

END OF SECTION 41 22 13.19
